YEVPATORIYA (**Eupatoria**; in Jewish sources the Tatar name of the city Göslöw [Koslov] is also found), city on the western shore of the Crimean peninsula, Ukraine. A large Jewish community existed there under Tatar rule from the 15th to 18th centuries. The Russian conquest at the end of the 18th century caused much suffering to the Yevpatoriya community, many of whom fled to Turkey. At the time of the Russian annexation of Crimea there remained approximately 100 Karaite families and a few Rabbanites (Tatar-speaking *Krimchaks). During the 19th century the Karaite community in Yevpatoriya became the largest in Russia and the spiritual center of the Karaites. The chief Karaite *ḥakham* of Russia had his seat in Yevpatoriya. His status as leader of the community was recognized by the Russian government in 1837. A Hebrew Karaite press (Göslöw press) was established there in the 1830s and functioned until the 1860s. Abraham *Firkovich published the works of the early Karaites there. A school for cantors, headed by the Karaite Hebrew author Elijah *Kazaz, was established in 1894. There was a magnificent Karaite synagogue in Yevpatoriya, and the community had a museum and library containing many rare manuscripts and books. In 1897 the community numbered 1,592 Rabbanites (mainly of Lithuanian or Ukrainian origin) and 1,525 Karaites (together forming 18% of the total population). There were pogroms in Yevpatoriya in 1905. After the 1917 Revolution, the last Karaite *ḥakham* moved to Constantinople. The Jewish population (both Rabbanite and Karaite) numbered 2,409 in 1926 (10.6% of the total). Toward the end of the 1920s several Jewish agricultural settlements were established northeast of Yevpatoriya. After Crimea was occupied by the Germans, at the end of 1941, the Rabbanite Jews in Yevpatoriya were murdered, but the Karaites escaped, not being regarded as Jews.

[Yehuda Slutsky]

YEVREYSKI KOMISSARIAT (Jewish Commissariat). The central commissariat for Jewish national affairs was a government organ of the Soviet regime for carrying out the nationality policies of the Communist Party among Jews. The Jewish Commissariat functioned from January 20, 1918, through April 1924 (alongside commissariats of other national minorities) within the framework of the People's Commissariat for Nationalities Affairs headed by *Stalin. Simon *Dimanstein was appointed commissar of the Jewish Commissariat with the left Socialist-Revolutionary I.G. Dobkovsky serving as his deputy. A number of returning emigrés and anarchists alienated from Russian Jewry who had joined the Bolsheviks worked in the Jewish Commissariat. Until mid-1918 the left *Po'alei Zion, headed by Tzevi Fridlander, also participated in the work of the Jewish Commissariat. Only a few Jewish writers (including Samuel *Niger and Daniel *Charney) cooperated with the Jewish Commissariat in publishing its organ – the first Soviet newspaper in Yiddish *Die Warheit* ("Truth") which appeared from March 8 to August 1, 1918. A group was established within the Jewish Commissariat to work with the impoverished segment of the Jewish population. A department of culture and education headed by N.O. *Buchbinder controlled Jewish schools; it had its own, *Evreyskaya tribuna* ("Jewish Tribune," 1918, nos. 1–4). During 1918, 13 local Jewish commissariats were established (in Vitebsk, Eltse, Mogilev, Perm, Tambov, and elsewhere). Under the influence of proponents of autonomy (mainly from Po'alei Zion), the central Jewish Commissariat, through its newspaper, called for the establishment of local Jewish councils (soviets) or Jewish sections attached to local soviets "to strengthen the Soviet authorities and combat the national bourgeosie" and also able to convene an all-Russian conference to determine the forms of organization of Jewish life in Soviet Russia and for electing a commissar for Jewish affairs. Following the July 1918 congress of Jewish communities which met in Moscow with the participation of representatives of various Jewish political parties, the Jewish Commissariat rejected the idea of democratic Jewish autonomy. The election by the congress of a central bureau to coordinate the work of Jewish institutions led to repression by the Soviet authorities. All non-Bolsheviks were removed from the Jewish Commissariat. There was established the *Yevsektsiya (Jewish Section) of the Communist Party which in close cooperation with the Jewish Commissariat submitted to Party control the resolution of all problems of Soviet Jewish life.

At the first conference of the Jewish Commissariat and the Yevsektsia (in October 1918 in Moscow) there were officially chosen a commissar of the Jewish Commissariat (Dimanstein) and a board of the Commissariat which was charged with liquidating all institutions of the Jewish community. The decree closing down the Center Bureau of Jewish Communities and transferring all communal resources and property to local Jewish commissariats was published in June 1918 but the closure of synagogues and the liquidation of communal institutions, *yeshivot*, *ḥadarim* (traditional pri-

mary schools), and schools with instruction in Hebrew began earlier (in Orel, Perm, and other cities).

As early as 1918 the Jewish Commissariat published the anti-Zionist brochure of Z. Grinberg *Die zionistn oif der Idisher Gas* ("The Zionist on the Jewish Street"). In the Jewish Commissariat circular of July 23, 1919, on the closing of communal institutions Dimanstein announced the impending liquidation of *Tarbut, *He-Halutz and other Zionist "bourgeois organizations." Nevertheless, the Jewish Commissariat hardly fought against Zionism, for which it was criticized in the Communist Party press. At the insistence of the Yevsektsiya the Jewish Commissariat declared Hebrew a "reactionary language" and on August 30, 1919, the People's Commissariat of Education banned the teaching of Hebrew in all educational institutions. Books in Hebrew then began to be removed from libraries.

As the Bolshevik doctrine of the transformation of the peoples of the Soviet state into a "single Soviet nation" became more dominant, the functions of the Jewish Commissariat as a government organ became correspondingly more narrow. In late 1918 the handling of issues of Jewish culture and education was transferred to the Yevburu (the Jewish Bureau), a body attached to the People's Commissariat of Education, and other areas of work with Jews were included in the sphere of activity of the appropriate commissariats. In January 1919 local Jewish commissariats were transformed into Jewish departments attached to provincial committees of the Communist Party and in early 1920 the Jewish Commissariat became a department of the People's Commissariat for Nationality Affairs. Both theoretical and practical guidance in regard to measures to "Sovietize" the labor and culture of the Jews of the Soviet Union were concentrated in the hands of the Yevsektsiya.

[*The Shorter Jewish Encyclopaedia in Russian*]

YEVSEKTSIYA (plural *Yevsektsii*), Jewish sections of the propaganda department of the Russian Communist Party from 1918 to 1930. *Lenin, the founder and leader of the Communist Party, denied that the Jews were a living nation and saw assimilation as the progressive solution to the Jewish problem in Russia. This view gained currency in party circles as a result of the debate between the Russian Social-Democrats and the *Bund at the beginning of the 20th century. When the Communist Party took power in November 1917, however, it was faced with the fact that millions of Jews, speaking their own language and maintaining their own social institutions, existed in Russia, and with the necessity of establishing some temporary agency to deal with them until such time as they had assimilated among their neighbors. In January 1918 a "Jewish Commissariat" headed by S. *Dimanstein was created, and Jewish sections (*Yevsektsii*) were organized in local party branches on the model of the national sections which were then being established to direct party work among other non-Russian peoples.

The first conference of the Jewish sections and representatives of the Jewish Commissariat in the provinces took place in Moscow in October 1918; their function was defined as the propagandizing of Yiddish-speaking workers and the establishment of the "dictatorship of the proletariat" among the Jews. It was strongly emphasized that the Jewish sections had no national goals and that Yiddish was to be simply regarded as a necessary means of communication with the Jewish masses, on no account valuable in itself. The conference decided on "systematic destruction of Zionist and bourgeois institutions," with the *kehillot*, *hadarim*, Hebrew schools, and Zionist parties heading the list. A central bureau headed by S. Dimanstein was elected. At the second conference, which was attended by representatives of communist parties and related organizations from the Ukraine and Belorussia, economic activity among the Jews was decided upon. The essential aim of this economic activity was the cooperative organization of "semi-proletarian elements" (i.e., craftsmen and artisans), and the mass settlement on the land of erstwhile Jewish merchants, deprived of their means of livelihood by the revolution.

During the same year a considerable proportion of the Jewish left-wing parties joined the Jewish sections as organized bodies or as individuals. At the third conference (July 1920), which represented 1,743 active members, 34 of the 84 delegates were erstwhile Bundists, 11 were previously United Socialists ("Fareynikte"), and 7 were previously members of *Po'alei Zion. The heads of the Jewish sections kept a close watch on the ex-members of these Jewish parties to see that no hint of their Jewish national allegiance was introduced into their new party work. Fear of being accused of "nationalistic and Zionist deviations" was so pervasive in the Jewish sections that they were wary of endorsing any comprehensive plan for Jewish rehabilitation in Russia, even when put forward by such outstanding Communist leaders as Kalinin, Smidovich, and *Larin. The third conference decided that the Jewish sections were no more than "technical [Communist] Party tools." At this time head offices were established in the Ukraine and Belorussia. Active in the Jewish sections besides Dimanstein were A. Merezhin, M. *Rafes, M. *Frumkin ("Esther"), M. Levitan, M. *Litvakov, A. *Tshemeriski, and M. Kipper.

With the help of government agencies, the police, and the internal security forces, the *Yevsektsiya* initiated and executed the liquidation of Jewish *kehillot*, the confiscation of synagogue buildings, the closing of yeshivot, *hadarim*, and Hebrew schools, the closing of libraries, and the banning of books. They fought the remnants of Jewish political and cultural organizations to the bitter end (*He-Ḥalutz, *Habimah, Left Po'alei Zion) or attempted to take them over (Kultur Lige, *ORT). The destruction of the existing Jewish framework was accompanied by attempts to create a Jewish Communist culture; a Jewish press in Yiddish, headed by the dailies *Der Emes* (Moscow), *Der Shtern* (Kharkov), and *Oktyabr* (Minsk), which had a circulation of 27,000 at the end of the 1920s, was founded; publishing houses which printed books in tens of thousands of copies were established; a network of primary

and secondary schools was created; and a few departments of Jewish culture were even created in institutions of higher learning. In 1924 the Jewish sections were made responsible for integrating "classless elements" into the Soviet economic system by directing them to industrial and agricultural labor. A public company "OZET" ("Land Cultivation Company") was set up under the direction of the Jewish sections to assist in the Jewish settlement project. Cultural work was intensified, and Yiddish became the official language in trade unions and youth and women's organizations with a predominantly Jewish membership.

Attempts were made to adapt Soviet institutions in towns with large Jewish populations in order to serve the Jewish public in their mother tongue. The Jewish sections were also made responsible for bringing the problems involved in their activities among the Jewish population before the central and local Communist Party committees. Territorial programs for Jewish settlement on the land were put forward; this culminated in the proclamation of *Birobidzhan in the Far East as an area of Jewish settlement (1928). Contrary to their initial "technical" program, the Jewish sections began to serve also as consolidatory factors in Jewish life. At the council of Jewish sections in 1926 a struggle between different trends took place. The council expressed reservations both with regard to the assimilationists in the Communist party, who saw any separate work among the Jewish population as a nationalist deviation, and with regard to those who saw the work of the Jewish sections as "a way of preserving the Jewish people"; it redefined the sole function of the Jewish sections as the introduction of socialism among the Jewish masses.

While the revolution had created the conditions for the agricultural settlement of Jews and the consolidation of some of them as a separate national unit in a separate territory, the great majority of Jews were to find the solution to their social and economic problems in the transition to heavy industry, and were inevitably to assimilate among the masses of non-Jewish workers. When Soviet policy swung leftward at the end of the 1920s, the fate of the Jewish sections was sealed. In January 1930, within the context of the general liquidation of the national sections of Communist Party institutions in the Soviet Union, it was decided to liquidate the Jewish sections. Jewish section activists in practice continued to work among the Jewish population until 1934, but the scope of their work became more and more limited. The imprisonment and liquidation of Jewish section activists, which began in 1934, continued until the late 1930s and was accompanied by the gradual liquidation of educational and cultural institutions and other achievements of Jewish autonomy; their liquidation was completed by the end of the 1940s.

°YEVTUSHENKO, YEVGENI ALEXANDROVICH

(1933–), Soviet Russian poet. A prolific author of topical verse, Yevtushenko became one of the standard-bearers of the liberal Soviet intelligentsia during the years following Stalin's death. After the appearance of his first poems in 1949, Yevtushenko chose subjects that were, for the most part, expressions of revolt against the traditions of the Stalin era. Though a non-Jew, Yevtushenko also wrote the most famous single poem of the Holocaust: *Babi Yar* (first published in *Literaturnaya Gazeta*, Sept. 19, 1961, see *Babi Yar). This short but moving description of the site of the Nazi massacre of Kiev's Jews and of the thoughts that the site evoked in the poet unleashed a furious controversy. Neo-Stalinists accused Yevtushenko of a variety of crimes, the most dangerous being the insinuation that antisemitism continued to exist in the U.S.S.R., and that the Jews were martyred by the Nazis not merely as Soviet citizens, but also as Jews – a fact carefully silenced by official Soviet historiography. Russian public opinion was sharply divided. To be for or against Yevtushenko was tantamount to being a foe or an advocate of antisemitism. As if to underline the fact that the choice of *Babi Yar's* theme was no accident, Yevtushenko returned briefly to the subject in his long narrative poem, *Bratskaya GES* (1967; *The Bratsk Station*, 1966), in which one of the protagonists is Izi Kramer, a Jewish survivor of a Nazi camp, now an engineer in Siberia, who continues to be haunted by his tragic past. In 1963, Yevtushenko published *A Precocious Autobiography*, which contains his account of the writing of *Babi Yar*, and the general antisemitic mood of the young Stalinists. In 1970 a new collection of his poems was printed in Russia which omitted *Babi Yar* and some of his most outspoken anti-Stalinist poems.

[Maurice Friedberg]

YEZD, city in central Iran, probably built by Yazdegerd I (399–420). That Yezd was a center of Jewish scholars in the early Middle Ages is attested by a ninth-century Hebrew manuscript of the Later Prophets with masoretic notes which was found there; it is one of the oldest known biblical manuscripts composed by Persian Jews. The Yezd community's spiritual leader, Mulla Or Sharaga, (d. 1794), who is mentioned in a few Judeo-Persian letters of the early decades of the 19th century, maintained close contacts with the Jews of *Meshed. In 1928 an *Alliance Israélite Universelle school was established in the city. Jews from Yezd were among the earliest immigrants to Palestine and many families settled, mainly in *Safed and

*Jerusalem. In 1948 there were about 1,000 Jews in Yezd and in 1973 fewer than 400; it was reported that after the 1979 Islamic revolution only five families remained.

YEZIERSKA, ANZIA (1885?–1970), U.S. novelist. Anzia Yezierska was reared in an Orthodox home in Russia and was taken to New York at the age of 16. Her life was a mixture of poverty (which she emphasized through her novels) as well as education and literary attainment. Her experience of conditions on the Lower East Side of New York gave authenticity to her first collection of short stories, *Hungry Hearts* (1920), which established her reputation as a realist. Its success raised her for a short time from poverty in New York to riches in Hollywood, but unable to endure that life for long she returned to New York.

Her subsequent books, which also dealt with the adjustment of the Jewish immigrant to American life, were *Salome of the Tenements* (1923); *Children of Loneliness* (1923); *Bread Givers* (1925): *Arrogant Beggar* (1927); and *All I Could Never Be* (1932). In later life she reassessed the traditional values rejected in her youth and found that they gave a heightened meaning to life. Her autobiography, *Red Ribbon on a White Horse*, appeared in 1950.

Remarkably, she had a love affair with John Dewey, whom she met in 1917 at Columbia University. Their affair was brief, and he spurned her. Their relationship occupies Norma Rosen's novel *John and Anzia: An American Romance* (1989).

Fortunately, her works have been rediscovered, especially by feminists. Yezierska's portraits of strong, self-willed women helped a new generation of readers understand both the constraints placed upon Jewish women and the vitality needed to break the bonds of custom.

[Sol Liptzin / Lewis Fried (2ⁿᵈ ed.)]

YEZIRAH, SEFER (Heb. סֵפֶר יְצִירָה; the "Book of Creation"), the earliest extant Hebrew text of systematic, speculative thought. Its brevity – no more than 1,600 words altogether even in its longer version – allied to its obscure and at the same time laconic and enigmatic style, as well as its terminology, have no parallel in other works on related subjects. The result of all these factors was that for more than 1,000 years the book was expounded in a great many different ways, and not even

the scientific investigations conducted during the 19ᵗʰ century succeeded in arriving at unambiguous and final results.

Sefer Yeẓirah is extant in two versions: a shorter one which appears in most editions as the book itself, and a longer version which is sometimes printed as an appendix (for the important differences between the two versions, see A. *Epstein, in: MGWJ, 37 (1893), 266). Both versions were already in existence in the tenth century and left their imprint on the different types of the numerous manuscripts, the earliest of which (from the 11ᵗʰ century?) was found in the Cairo *Genizah* and published by A.M. Habermann (1947). In both versions the book is divided into six chapters of *mishnayot* or *halakhot*, composed of brief statements which present the author's argument dogmatically, without any explanation or substantiation. The first chapter in particular employs a sonorous, solemn vocabulary, close to that of the *Merkabah literature. Few biblical verses are quoted. Even when their wording is identical, the different arrangement of the *mishnayot* in the two versions and their resultant altered relationship one with the other color the theoretical appreciation of the ideas.

Contents and Structure

The central subject of *Sefer Yeẓirah* is a compact discourse on cosmology and cosmogony (a kind of *ma'aseh bereshit*, "act of creation," in a speculative form), outstanding for its clearly mystical character. There is no foundation for the attempts by a number of scholars to present it as a kind of primer for schoolchildren (e.g., S. Karppe, *étude sur la nature et les origines du Zohar* (1901), 16 ff.), or as the first Hebrew composition on Hebrew grammar and orthography (according to P. Mordell). The book's strong link with Jewish speculations concerning divine wisdom is evident from the beginning, with the declaration that God created the world by means of "32 secret paths of wisdom." These 32 paths, defined as "ten *Sefirot beli mah*" and the "22 elemental letters" of the Hebrew alphabet, are represented as the foundations of all creation. Chapter 1 deals with the *Sefirot* and the other five chapters with the function of the letters. Apparently the term *Sefirot* is used simply to mean "numbers," though in employing a new term (*sefirot* instead of *misparim*), the author seems to be alluding to metaphysical principles or to stages in the creation of the world.

The use of the term *Sefirot* in *Sefer Yeẓirah* was later explained – particularly in Kabbalah literature – as referring to a theory of emanation, although the book does not mention that the first *Sefirah* itself emanated from God and was not created by Him as an independent action. The author emphasizes, though ambiguously, the mystical character of the *Sefirot*, describing them in detail and discussing the order of their grading. At least the first four *Sefirot* emanate from each other. The first one is the "spirit (*ru'aḥ*) of the Living God" (the book continues to use the word *ru'aḥ* in its dual meaning of abstract spirit and air or ether). From the first *Sefirah* comes forth, by way of condensation, "one Spirit from another"; that is first the primal element of air, and from it, issuing one after

the other as the third and fourth *Sefirot*, water and fire. From the primal air God created, or "engraved" upon it, the 22 letters; from the primal waters, the cosmic chaos; and from the primal fire, the Throne of Glory and the hosts of the angels. The nature of this secondary creation is not sufficiently clear because the precise terminological meaning of the verbs employed by the author – e.g., engraved, hewed, created – can be interpreted in various ways. The last six *Sefirot* are of a completely different nature, representing the six dimensions (in the language of the book the *keẓavot*, "extremities") of space, though it is not expressly said that they were created from the earlier elements. Even so it is emphasized that the ten *Sefirot* constitute a closed unit, for "their end is in their beginning and their beginning in their end" and they revolve in each other; i.e., these ten basic principles constitute a unity – although its nature is not sufficiently defined – which is not considered as identical with the divinity except insofar as the first stage of its creation expresses the ways of divine Wisdom.

The author, no doubt intentionally, employs expressions borrowed from the description of the *ḥayyot* ("living creatures") who carry the Throne of Glory in the chariot (*merkavah*; Ezek. 1), and seems to be establishing a certain correlation between the "living beings" and the *Sefirot*, describing the latter as the king's servants who obey his commands and prostrate themselves before his throne. At the same time they are also the dimensions (*amakim*) of all existence, of good and even of evil. The fact that the theory of the significance of the 22 letters as the foundation of all creation in chapter 2 partly conflicts with chapter 1 has caused many scholars to attribute to the author a conception of a double creation: the one ideal and pure brought about by means of the *Sefirot*, which are conceived in a wholly ideal and abstract manner; and the other one real, effected by the interconnection of the elements of speech, which are the letters. According to some views, the obscure word "*belimah*," which always accompanies the word *Sefirot*, is simply a composite, *beli mah* – without anything, without actuality, ideal. However, judging from the literal meaning, it would seem that it should be understood as signifying "closed," i.e., closed within itself. The text offers no more detailed explanation of the relationship between the *Sefirot* and the letters, and the *Sefirot* are not referred to again. Some scholars have believed that two separate cosmogonic doctrines basically differing from one another were fused in the book, and were united by a method resembling neo-Pythagorean theory current in the second and third century B.C.E.

All the real beings in the three strata of the cosmos: in the world, in time, and in man's body (in the language of the book: world, year, soul) came into existence through the interconnection of the 22 letters, and especially by way of the "231 gates"; i.e., the combinations of the letters into groups of two representing the possible roots of the Hebrew verb (it appears that the author held that the Hebrew verb is based on two consonants). The logical number of 231 combinations does not appear in the earliest manuscripts, which fixed 221 gates or combinations, and which are enumerated in a number of

manuscripts. Every existing thing somehow contains these linguistic elements and exists by their power, whose foundation is one name; i.e., the *Tetragrammaton, or, perhaps, the alphabetical order which in its entirety is considered one mystical name. In chapters 3–5 the 22 basic letters are divided into three groups, according to the author's special phonetic system. The first contains the three matrices – *immot* or *ummot* (meaning elements, in the language of the Mishnah) – *alef, mem, shin* (אמש), which in turn represent the source of the three elements mentioned in a different context in chapter 1 – air, fire, water – and from these all the rest came into being. These three letters also have their parallel in the three seasons of the year (according to a system found among Greek and Hellenistic writers) and the three parts of the body: the head, torso, and the stomach. The second group consists of seven "double" letters, i.e., those consonants which have a hard and soft sound when written with or without a *dagesh* (*bet, gimmel, dalet,* and *kaf, pe, resh, tav*). The presence of the letter *resh* in this group gave rise to various theories (cf. S. Morag, in: *Sefer Tur-Sinai* (Torczyner; 1960), 207 – 42). Through the medium of the "double" letters were created the seven planets, the seven heavens, the seven days of the week, and the seven orifices of the body (eyes, ears, nostrils, mouth), and they also allude to the basic opposites (*temurot*) in man's life. The 12 remaining "simple" letters (*ha-peshutot*) correspond to what the author considers as man's chief activities; the 12 signs of the zodiac in the heavenly sphere, the 12 months, and the 12 chief limbs of the body (*ha-manhigim*). In addition he gives also a completely different phonetic division of the letters, in accordance with the five places in the mouth where they are articulated (gutturals, labials, velars, dentals, and sibilants). This is the first instance in which this division appears in the history of Hebrew linguistics and it may not have been included in the first version of the book. The combination of these "basic letters" contains the roots of all things and also the contrast between good and evil (עֹנֶג וְנֶגַע, *oneg ve-nega*).

There is an obvious connection between this linguistic-mystical cosmogony, which has close parallels in astrological speculation, and magic which is based on the creative, magical power of the letters and words. In fact it might well be said that *Sefer Yeẓirah* speaks of "the letters in which heaven and earth were created," as according to the Talmud, Bezalel, the architect of the tabernacle, possessed the knowledge of their combinations (Ber. 55a). From this point stem the ideas connected with the creation of the *golem by an ordered recitation of all the possible creative letter-combinations. Whether *Sefer Yeẓirah* itself initially was aimed at magical ideas of this type is a subject on which opinions differ, but it is not impossible. According to a talmudic legend (Sanh. 65b) R. Ḥanina and R. Hoshaiah (fourth century) used to occupy themselves with *Sefer Yeẓirah*, or – as an ancient variant has it – with *Hilkhot Yeẓirah*; by means of it a "calf three years old" was created for them, which they ate. Whether these *Hilkhot Yeẓirah* are simply the book in question or its early version cannot be decided for the moment, but it must be stressed that accom-

panying the very earliest texts of *Sefer Yeẓirah* were introductory chapters emphasizing magical practices which are presented as some kind of festive ritual to be performed on the completion of the study of the book (Judah b. Barzillai's commentary, 103–268).

Time of Composition

*Zunz (GV 175), *Graetz in his later works, *Bacher, Bloch, and others were of the opinion that *Sefer Yeẓirah* was composed in the period of the *geonim*, around the eighth century. This dating was in line with the general tendency of those scholars to assign a late date to the composition of the mystical works on the mysteries of the creation and Merkabah, a trend which modern scholarship can no longer uphold. They also talked of hypothetical Arab influence (which was not actually proved). In his early work on Gnosticism and Judaism (1846), Graetz tended to correlate the time of its composition with that of the Mishnah or the beginning of the period of the Talmud, and this view was shared by Abraham Epstein, Louis Ginzberg, and others, who dated its composition between the third and sixth centuries. Leo *Baeck tried to prove that *Sefer Yeẓirah* was written under the Neoplatonic influence of Proclus, possibly in the sixth century. The Hebrew style, however, points to an earlier period. Epstein already proved its proximity to the language of the Mishnah, and additions can be made to his linguistic proofs. The book contains no linguistic form which may not be ascribed to second- or third-century Hebrew. In addition, a number of links with the doctrine of divine wisdom and with various Gnostic and syncretistic views indicate an earlier period; analogies between *Sefer Yeẓirah* and the views of Markos the Gnostic of the school of Valentinus had already been noticed by Graetz.

The doctrine of the *Sefirot* and the language system hint at neo-Pythagorean and Stoic influences. Stoic is the emphasis on the double pronunciation of "*bagad kafat.*" Some of the terms employed in the book were apparently translated from Greek, in which the term στοιχεῖα indicates both elements and letters; this duality finds its expression in the Hebrew term *otiyyot yesod* ("elemental letters"), i.e., letters which are also elements. The material which F. Dornseiff (*Das Alphabet in Mystik und Magie*, 1925) collected from the linguistic mysticism of Greek syncretism contains many parallels with *Sefer Yeẓirah*. Illuminating, in this connection, is *Sefer Yeẓirah*'s view of the "sealing" of the six extremities of the world by the six different combinations of the name YHW (יהו) which (unlike in the Bible) occurs here as an independent, fundamental Name of God, playing the part of its corresponding name in Greek transcription ἰάω, which is extremely frequent in the documents of the Gnostics and in religious and magical syncretism. The idea that every act of creation was sealed with the name of God is one of the earliest tenets of Merkabah mysticism and is already found in *Heikhalot Rabbati* (ch. 9); in Gnostic systems and some which are close to Gnosis this name has its function in establishing the cosmos and in defining fixed boundaries for the world. Combinations of this name, which in Greek

consists of vowels and not of consonants, appear frequently in Greek magical papyri. The author of *Sefer Yeẓirah* did not yet know the symbols for the Hebrew vowels and in place of the Greek vowels he employed the Hebrew consonants יהו, which are both vowel letters and components of the Tetragrammaton. There is common ground here between the speculations of *Sefer Yeẓirah* and the projections of Gnostic or semi-Gnostic speculations on the fringe of Judaism or outside it during the early centuries of the Common Era. It is difficult to decide whether the ten *Sefirot* or the rules of the 32 paths have to be explained or understood in the spirit of the Gnostic aeon doctrine or in that of the Pythagorean school, both views being possible. The function of the letters of the Hebrew alphabet in the construction of the world is mentioned in an ancient fragment from *Midrash Tanḥuma* dealing with the creation: "The Holy One, Blessed Be He, said: 'I request laborers.' The Torah told Him: 'I put at Your disposal 22 laborers, namely the 22 letters which are in the Torah, and give to each one his own'" (E. Urbach, in: *Koveẓ al Yad*, 6 (1966), 20). This legend is extremely close to the basic idea in *Sefer Yeẓirah*, chapter 2, and it is impossible to know which was the earlier.

To sum up, it may be postulated that the main part of *Sefer Yeẓirah*, though it contains post-talmudic additions, was written between the third and sixth centuries, apparently in Palestine by a devout Jew with leanings toward mysticism, whose aim was speculative and magical rather than ecstatic. The author, who endeavored to "Judaize" non-Jewish speculations which suited his spirit, presents a parallel path to Jewish ecstatic Gnosis of the *Heikhalot* type of literature, which has its roots in the same period. This "Judaizing" is also apparent at the end of the book, which presents Abraham, the first to believe in the oneness of God, as the one who first studied the ideas expressed in the book and actually practiced them – maybe an allusion to the use of magic mentioned above. From this derived the late view claiming Abraham as the author of the book, called in several manuscripts *Otiyyot de-Avraham Avinu*. The attribution of *Sefer Yeẓirah* to R. *Akiva only makes its appearance in the Kabbalah literature from the 13th century onward, no doubt in the wake of the late Midrash *Otiyyot de-Rabbi Akiva*.

Commentaries on *Sefer Yeẓirah*

The earliest reference to *Sefer Yeẓirah* appears in the *Baraita di-Shemu'el* and the poems by Eleazar ha-*Kallir (c. sixth century). Later on the book was of great importance both to the development of Jewish philosophy before *Maimonides and to the Kabbalah, and scores of commentaries were written on it. *Saadiah Gaon explained the book (at the beginning of the tenth century) as an early authoritative text. On the basis of the longer version which was at his disposal he introduced changes and new divisions. The Arabic text with a French translation by M. *Lambert was published in Paris in 1891. Saadiah's commentary was translated into Hebrew several times from the 11th century onward and had a considerable circulation (Mss. in Munich and Paris). In 955/6 the commen-

tary on the short version by Abu Sahl *Dunash ibn Tamim was made in Kairouan. Parts of this Arabic original were discovered in the Cairo *Genizah*, and it was preserved in various editions originating from a later revision and an abbreviated form of the original version, mainly in different Hebrew translations. One of these was published by M. *Grossberg in 1902. The commentary was apparently based on the lectures of Isaac *Israeli, Abu Sahl's teacher. G. *Vajda made a detailed study of this commentary. A third commentary from the tenth century was written in southern Italy by Shabbetai *Donnolo and published by D. *Castelli in 1880, with a comprehensive introduction. The most important of all literal commentaries is the one composed at the beginning of the 12th century by Judah b. Barzillai of *Barcelona, published by S.Z.H. Halberstamm (Berlin, 1885). *Judah Halevi commented on many parts of the *Sefer Yeżirah* in his *Kuzari* (4:25). Abraham *Ibn Ezra's commentary on the first chapter, which was known to Abraham *Abulafia, was lost, as were some other commentaries from the 11th and 12th centuries, including one by the rabbis of Narbonne. In the 11th century poems were even composed on the doctrines of *Sefer Yeżirah*, e.g., by Ibn *Gabirol (ed. by Bialik and Rawnitzki pt. 2, no. 58) and by Żahallal b. Nethanel Gaon (Davidson, in: HUCA, 3 (1926), 225–55 and additions by E. Baneth, in: MGWJ, 71 (1927), 426–43).

A great many commentaries on *Sefer Yeżirah* were written within the circles of the *Ḥasidei Ashkenaz, among them that of *Eleazar b. Judah of Worms which was published in its entirety in Przemysl in 1889, and one later attributed to Saadiah Gaon (from the beginning of the 13th century), of which only a part is printed in the usual editions; also noteworthy is the commentary by *Elhanan b. Yakar of London (c. 1240), edited by G. Vajda (in: *Kovez al Yad*, 6 (1966), 145–97). The number of commentaries written in the spirit of the Kabbalah and according to the kabbalists' conception of the doctrine of the *Sefirot* comes close to fifty. The earliest of these, by *Isaac the Blind, is also one of the most difficult and important documents from the beginnings of Kabbalah. It is published at the end of G. Scholem's lectures on *Ha-Kabbalah bi-Provence* (1963). The commentary of Isaac's pupil *Azriel b. Menahem of Gerona appears in the printed editions as the work of *Naḥmanides. The actual commentary by Naḥmanides (only on the first chapter) was published by G. Scholem (in: KS, 6 (1930), 385–410). Almost the entire commentary by Abraham *Abulafia (Munich Ms. 58) is contained in the *Sefer ha-Peli'ah* (Korets, 1784, fols. 50–56). This kabbalist, in one of his works, enumerates 12 commentaries which he studied in Spain (Jellinek, *Beit ha-Midrash*, 3 (1855), 42). From the 14th century come the comprehensive commentary by Joseph b. Shalom *Ashkenazi, written in Spain and erroneously attributed in printed editions to R. *Abraham b. David (G. Scholem, in: KS, 4 (1928), 286 ff.); the commentary by Meir b. Solomon ibn *Sahula of 1331 (Rome, Angelica library, Ms. Or. 45); as well as the *Meshovev Netivot* (Ms. Oxford) by Samuel *Ibn Motot. Around 1405 Moses *Botarel wrote a commentary citing a considerable number of false quotations from his predecessors. A number of commentaries were composed in Safed, among them one by Moses b. Jacob *Cordovero (Ms. Jerusalem) and by Solomon Toriel (Ms. Jerusalem). From then on commentaries in the spirit of Isaac *Luria proliferated; for example, by Samuel b. Elisha Portaleone (Ms. Jews' College, London), by David *Ḥabillo (Ms. of the late Warsaw community); from among these the commentary by *Elijah b. Solomon, the Gaon of Vilna (1874), and the book *Otot u-Mo'adim* by Joshua Eisenbach of Prystik (Pol. Przystyk; 1903) were printed.

Printed Editions and Translations

Sefer Yeżirah was first printed in Mantua in 1562 with the addition of several commentaries, and has since been reprinted a great many times, with and without commentaries. In the Warsaw 1884 edition – the most popular one – the text of some commentaries is given in a considerably distorted form. *Sefer Yeżirah* was translated into Latin by the Christian mystic G. *Postel and printed even before the Hebrew edition (Paris, 1552). Another Latin edition with commentaries was published by S. Rittangel in 1652. Translations appeared, mostly with commentaries, in English, by I. Kalisch (1873), A. Edersheim (1883), W. Westcott (1911), K. Stenring (1923), Akiva ben Joseph (*The Book of Formation*, 1970); in German by J.F. von Meyer (1830), L. Goldschmidt (1894; which, quite unfoundedly, professes to give a critical Hebrew text), E. Bischoff (1913); in French by Papus (1888), Duchess C. de Cimara (1913); in Italian by S. Savini (1923); in Hungarian by B. Tennen (1931); and in Czech by O. Griese (1921).

YEŻIV PITGAM (Heb. יְצִיב פִּתְגָּם; "true and strong is the proverb"), name of a *reshut* in Aramaic for the morning service of the second day of *Shavuot. It is found in the Ashkenazi ritual only, and is recited after the reading of the first verse of the *haftarah*. *Yeżiv Pitgam* is similar in theme and style to the Aramaic hymn *Akdamut*, which is recited on the first day of Shavuot. It describes the majesty of the Divine revelation at Mount Sinai and concludes with a prayer for Divine grace and protection for the keepers of the Torah. *Yeżiv Pitgam* consists of 15 verses, the initial letters forming acrostically the author's name: Jacob b. R. Meir Levi. Some authori-

ties identify the author with Jacob b. Meir (of Orleans), the grandson of Rashi.

YIDDISHER KULTUR FARBAND (YKUF), a U.S. association for preserving and developing Yiddish culture in Yiddish and in English. Yiddisher Kultur Farband was founded in 1937. Other branches of the international YKUF were established in various countries, among them the English branch, which was still active in 1971. The organizing meeting was an international congress of Yiddish culture, the first to be held; about 100 delegates attended, 11 from the United States. The first chairman of YKUF was the writer A. *Mukdoni; the secretary (to 1957) was Zishe *Weinper, a poet and an efficient fundraiser for YKUF. Financial support also came from the Jewish People's Fraternal Order.

YKUF established the monthly *Yiddishe Kultur* in 1938 and Nachman Meisel, who had edited a Yiddish literary magazine in Poland, became its editor (to 1964). In 1970 the journal appeared seven times a year and its editor was Itche Goldberg. Until 1971 YKUF published over 250 books, including Yiddish fiction and poetry, memoirs, history, and anthologies. With the passing of a generation of secular Yiddish speakers, the activities of the Kultur Farband slowed and the organizational activities atrophied. In 2006 Itche Goldberg, at over 100 years of age, led its limited activities.

YIDDISH LANGUAGE, language used by Ashkenazi Jews for the past 1,000 years. Developed as an intricate fusion of several unpredictably modified stocks, the language was gradually molded to serve a wide range of communicative needs. As the society which used it achieved one of the highest levels of cultural autonomy in Jewish history, the Yiddish language too became an unusually vivid record of Jewish cultural specificities.

The Speech Community

From its beginnings in the tenth century and until the end of the 18th, Yiddish was the virtually uncontested medium of oral communication among Jews from Holland to Ukraine, from Livonia to Romania, as well as in the Ashkenazi communities in Italy, the Balkans, Palestine. Alongside Hebrew, it was also an important medium of literary and other written communication (see *Yiddish Literature). Then, in response to the Emancipation, there arose a strong interest in converting Ashkenazi society from the use of Yiddish to that of other, non-specifically Jewish vernaculars. This striving, successful in most of the German-language sphere and in Holland, had only marginal effects in Eastern Europe. There, on the contrary, the number of Yiddish speakers increased rapidly as the Jewish population burgeoned, and a new flowering of Yiddish literature, contemporary with the rebirth of Hebrew literature, took place. The great migratory movements of the late

19th and early 20th centuries caused the Yiddish community to expand among Ashkenazi immigrants around the world (South America, U.S., Canada, Australia, etc). The development of an active press, a theater, secular educational systems through the secondary-school level, teacher training institutes, and research institutions caused the language to be utilized in a great variety of new functions. Official prohibitions on the public use of Yiddish virtually disappeared in Europe after World War I; in some areas, notably in former U.S.S.R., the language was even granted official status.

NUMBER OF YIDDISH SPEAKERS. The actual number of Yiddish speakers at any time is difficult to calculate because of poor or non-comparable statistics; the best estimates on the eve of World War II reckon with 11 million speakers. This number was drastically reduced by the Holocaust and by a massive shift to other primary languages. In the Americas and in Israel, the shift seems to have been largely voluntary, although encouraged by official organs; in former U.S.S.R., it was coupled with severe, official repressive measures – the closing of schools and other institutions in the 1930s, the liquidation of literature, press, and theater in 1949, with only a limited revival in the post-Stalin period. However, among traditionally multilingual Ashkenazi Jews everywhere, knowledge of Yiddish, at least as a second language, continues to be widespread. In fact, while the use of the language as a primary vernacular has been declining, interest in it, both sentimental, seriously intellectual and in universities, has been rising. Yiddish language is still spoken in the ultra-Orthodox world and among secular Jews in the main communities in the world. This development must be related to the growing ability of Jews in many parts of the world to integrate their European past with the modern European, American, or Israel culture. Thus the measurement of the present knowledge of Yiddish, and its novel place in the Jewish cultural economy, requires tools far subtler than those of ordinary censuses.

MODERN STANDARD YIDDISH. Over the centuries, Yiddish in its vast territorial scattering became regionally differentiated, but for written communication fairly uniform standards were maintained. This was true of the old literary language, which held sway until the early decades of the 19th century, and is true again of Modern Standard Yiddish, which developed as a supraregional formation from the middle of that century. The worldwide relative homogeneity of standard Yiddish is all the more remarkable in view of the fact that it developed without the aid of coercive forces such as are usually provided by a national state (especially through a unified school system); what uniformity there is must be attributed to the sheer centripetal, nation-forming will of the speech community. As in other languages, written usage has been standardized more fully than spoken discourse. However, with the literary language as a basis, standards of orthoepy have also evolved. (In some countries the theater cultivated a pronunciation tradition separate from that which prevailed in public life and in the Yiddish schools.) The structural sketch in the following

sections is based mainly on the standard language, with only passing references to regional variations.

Sound System

In the main, the Yiddish sound system has been determined by those German dialects which contributed the bulk of its basic lexical stock. The language thus has a distinctive expiratory stress, which, though its place in a word is not fully predictable, nevertheless functions in several characteristic distributions. Secondary stresses seem to be less prominent than in German – possibly as a result of Slavic influence. The vowel system is of the triangular type, with three degrees of opening and two positions of articulation:

$$
\begin{array}{ccc}
i & & u \\
e & & o \\
& a &
\end{array}
$$

The most frequent diphthongs are made up of *I* following *e, a,* or *o.* Glottal stops generally do not occur. Consonants form a highly symmetrical array:

$$
\begin{array}{cccccc}
m & n & n' & & & \\
b & d & d' & & g & \\
p & t & t' & & k & \\
v & z & z' & ž & r & \\
f & s & s' & š & x & h \\
l & l' & & & &
\end{array}
$$

Unlike German, the subseries of stops and fricatives are distinguished not by tenseness, but by voicing – probably an influence of the Slavic languages, which also contributed the palatal order. Unlike German, too, is the occurrence of voiced consonants at the ends of words. The influx of vocabulary from Hebrew-Aramaic and Slavic sources has created numerous word-initial clusters unknown in standard or dialectal German (*bd-, px-,* for example).

Regional varieties of Yiddish display much richer vocalic distinctions ranging from an opposition between short, open *i* and long, close *i,* to patterns with full parallel sets of short and long vowels. Also to be found in the dialects are front rounded vowels (*ü*) and diphthongs ending in *-w.* In the matter of consonants, on the other hand, it is the standard language which seems to incorporate the richest distinctions. Some regional varieties lack the *h* phoneme, some distinguish fewer palatals, and some, in Western Yiddish, collapse the voice distinction. The articulation of *r* fluctuates regionally between apical and uvular.

An important though still little studied feature of the Yiddish sound system consists of its intonational resources. Numerous syntactic-semantic distinctions are capable of being systematically conveyed by the melodic modulation of sentences.

Writing System

The graphic basis of Yiddish writing is the Hebrew *alphabet, with some standardized diacritics: אַ, אָ, בֿ, וּ, יִ, יי, כּ, פּ, פֿ, שׂ, and תּ. Most words of Hebrew-Aramaic origin retain the traditional orthography; the rest of the vocabulary is rendered in a system

with generally excellent one-to-one correspondence between sounds and letters or letter groups, but retaining, of course, the traditional Jewish conventions, such as those concerning final shapes of letters and initial silent א. (The letters ת, שׂ, כ, ח, ב, and ת occur only in words of Hebrew-Aramaic origin.) In the course of its evolution, Yiddish has witnessed the increasingly systematic use of א for *a* and latterly also for *o,* although the specialization of אַ and אָ is of mid-19th century origin. The use of ע as a vowel symbol – apparently an Ashkenazi invention, already attested in the 14th century – also became systematized in the course of time. The representation of diphthongs and unstressed vowels, and the conventions on word separation, have varied considerably through the centuries.

The present-day orthographic standards were promulgated in 1936. Although some publishing houses have not yet adhered to them in all details, the actual variations are relatively minor. In the first half of the 20th century, the historical-etymological spelling of words of Hebrew-Aramaic origin was abandoned in various countries, on grounds either of anti-traditionalistic ideology or of linguistic rationalism; here and there the tradition has been reinstituted. In former U.S.S.R. the use of special shapes of final letters was reintroduced in 1961.

Grammar

The basic grammatical plan of Yiddish follows the German model, but a number of important innovations have developed. In syntax, the word order of main and subordinate clauses has been made uniform; the distance between nouns and their determiners, as well as between the subparts of verb phrases, has been decreased. On the other hand, new word order devices for expressing continuity of discourse and for the de-emphasis of epithets have emerged. The nominal system continues to be characterized by four cases and three genders; the genitive, however, has blossomed into a possessive while losing most other functions; after prepositions, the accusative has been eliminated. The German distinction between a weak and strong adjective inflection has been virtually abandoned, while a new distinction between inflected predicate adjectives has evolved. Many nouns have been distributed among the (mostly inherited) patterns of pluralization. The formation of diminutives, among adjectives as well as nouns, has flourished, apparently with a push from the Slavic languages. In the verb, all tenses and moods except the present indicative have come to be formed analytically. A fairly systematic distinction between perfective and imperfective aspect, as well as numerous new aspect-like and voice-like categories, has been developed in a completely un-German direction. The present participle of verbs, too, has been assigned novel functions. The morphological details of the conjugation have in many instances been subject to innovation, and new classes of periphrastic conjugation, especially for verbs of Hebrew origin, have grown up.

Of the regional variations in the grammar of colloquial Yiddish the most significant are related to changes in the case and gender system. In Central as well as in Northeastern Yiddish (see below dialectical differences) the distinction between

dative and accusative has collapsed. In the northeast, this has been accompanied by a radical restructuring of the gender system, leading to an abandonment of the historical neuter and the evolution of a new system of four quasi-genders with a high degree of semantic motivation. In general, it appears that the eastern dialects have been the most innovating; it is there that the novel use of inflected adjectives in the predicate and the "sensitivity" of verbs to aspect distinctions have progressed farthest.

VOCABULARY. Yiddish vocabulary is characterized by its multiple origins: German, Hebrew-Aramaic, Romance, Slavic, and "international."

USE AND FUSION OF SEVERAL STOCKS. The mechanical attribution of Yiddish words to ultimate etymological sources, however, yields a highly unrealistic view of the specificities of the language. Thus the word *mentsh* is formally related to German *Mensch*, but some of its important meanings ("employee"; "reliable, mature person") are specific Yiddish innovations which are obscured when the German original of the "outer form" of the word is recalled. Similar reservations apply to vocabulary of other sources. Thus, in *unterzogn* ("breathe into a person's ear"), the prefix and stem remind one of German *unter* and *sagen*, but German *untersagen* has no corresponding meaning; the sense of the Yiddish word can be explained much better as a "loan translation" of a Slavic prefixed verb (cf. Ukrainian *pid-skazaty*). In many common words, such as *oyszogn* ("to disclose") neither German nor Slavic languages provide an explanation of the Yiddish phenomenon. In short, the complex fusion of the several stocks and the rise of purely internal innovation is as important a principle in the formation of Yiddish vocabulary as the multiplicity of its origins.

It is also important to bear in mind that only a restricted portion of the stock languages has been utilized in Yiddish. For example, German has hundreds of stems which are completely unattested in Yiddish (e.g., *schweifen, Laster, fade*). Likewise, Yiddish has adopted from Hebrew *maskem* (*zayn*) and *muskem* (*vern*) "agree," "be agreed upon"; it has taken *madrekh* (*zayn*) "(to) guide," but not the expected *mudrekh* (*vern*) "(to be) guided." The actual vocabulary of Yiddish therefore stands out as a concrete historical formation against the background of its potential sources; the end product could not, as it were, be predicted from knowledge of the ingredients. Yiddish has also preserved elements from the stock languages which have died out in their original habitats; examples related to German are *shver* ("father-in-law"), *eydem* ("son-in-law").

Contrary to a widely held popular view, elements of Yiddish vocabulary have no functions which can be strictly correlated with their respective origins. Thus, material of Hebrew-Aramaic descent is found to have festive, neutral, or even vulgar connotations, depending on the individual word. To be sure, some topical domains have favored vocabulary from a particular source (e.g., rabbinical learning, from Hebrew-Aramaic; agriculture, from Slavic), but individual items have been redistributed in many cases.

The nature of the fusion process makes it difficult to calculate the proportions of vocabulary contributed by various stocks. This task is further complicated by the existence of "blends" such as *mefunitse* ("fastidious woman"), in which one word points in two historical directions simultaneously, *mefunak*, from Hebrew and-*itse*, from Slavic.

German, Romance, and Slavic Contributions. With reference to the German contribution to Yiddish vocabulary, it must be pointed out that no single form of German served as the source, but that Yiddish drew upon a *sui generis* combination of medieval city dialects. For the better part of a century, it was customary among linguists to derive the Germanic vocabulary of Yiddish from Middle High German. A more critical stance has recently led to the unearthing of significant dissimilarities between the German component of Yiddish and the language of German courtly poetry.

The Yiddish words of Romance origin, though nowadays few in number, are of considerable prominence in the language (e.g., *léyenen* "read," *bentshn* "bless"). They are venerable vestiges from the earliest stages of the language, when it was still forming on the lips of immigrants into Germany from the Romance lands (see below, Historical Development).

The Slavic languages have contributed not only thousands of lexical items but also numerous productive patterns for the formation of new words. Within the Slavic component, the most prominent part has been played by Polish, Ukrainian, and Belorussian; the oldest contacts with Czech, and the most recent ones, with Russian, have left far less numerous traces. The impact of non-Slavic languages in Central and Eastern Europe – Hungarian, Romanian, Lithuanian, and Latvian – has on the whole been of a strictly regional nature and has not penetrated the common literary language. In some cases, various Slavic languages contributed competing words (e.g., *pyeshtshen* "pamper," of Polish origin coexisting with *pesten*, of Ukrainian descent); in other cases, a single word has become diffused throughout Yiddish (e.g., *blondzhen* "stray," from Polish), or semantic specializations, a priori unpredictable, have emerged (e.g., *plónte(r)n* "confuse" < Pol., *pla tac, pluten* "act in light-minded manner" < Ukr., *plutaty*).

INTERNATIONAL COMPONENT. The "international" component of Yiddish, no less than the others, must be understood in its specificities. Thus, *fabrík* ("factory"), in a German-like form, has displaced older *fábrike*, of Polish-Russian origin; on the other hand, *relígie* ("religion"), which resembles the Slavic forms (cf. Pol., *religia*), has completely driven out the German-derived *religión*. The presence of *eyrope* ("Europe") side by side with *nevróz* ("neurosis"), in which the same Greek diphthong is represented alternately by *ei* and by *ev>*, illustrates different routes of importation, one via west European, the other Russian. As in so many other languages, "Neo-Latin" terminology has not only been adopted, but has also stimulated the development of parallel coinages out of native

resources *shédredik* ("vertebralis"); *iberklangik = supersonish* ("supersonic").

Dialectical Differences

The bulk of Yiddish dialectological research, since its beginnings in the 1880s, has been concerned with phonological differences between the dialects. This concern is understandable not only in the light of the predominant interest in sound laws among several generations of linguists, but also in view of the diversity of vowel developments in Yiddish together with the regularity of this diversification.

While the main contours along which the European Yiddish language territory is divided have been known for some decades, no definitive hierarchy of dialect divisions could be obtained on the basis of phonological evidence alone. In recent years, the materials available to dialectology have been greatly enriched, especially in domains other than phonology, and a new impetus has developed toward the re-investigation of the geographic diversification of Yiddish, with increased attention to settlement history and mutual cross-influences among regions.

WESTERN AND EASTERN YIDDISH. The overriding dichotomy of the old Yiddish language territory in Europe is into a western and an eastern wing. The western half, roughly covering Holland, Alsace-Lorraine, Switzerland, and most of Germany, is also associated with peculiarities in synagogal ritual in the pronunciation of the Hebrew liturgy, and with folk customs unknown in the east. Among the lexical boundaries between east and west are *davnen/orn* ("pray") and *sider/tfile* ("prayer book"). Phonologically, Western Yiddish as a whole can be distinguished by the occurrence of /ā/ long in such words as / kāfn flās / *koyfn fleysh* ("buy meat"). Western Yiddish itself is, however, far from homogeneous. Some of its subregional differences can be explained as latter-day adjustments of a once more uniform language to local forms of German; it is apparent, however, that other forces, internal to the Jewish community, have also been at work in the formation of the Western Yiddish dialectal landscape.

Between west and east, the countries south of the Carpathian Mountains occupy a midway position. The western part – Bohemia, Moravia, west Slovakia, west Hungary – are characterized by a Yiddish dialect which was, on the whole, lexically east European but phonologically West European. The Yiddish of the eastern part – the Hungarian lowlands, Transylvania, and Carpathorussia – can be understood as a fusion of the west-Transcarpathian dialect with dialects brought by ḥasidic immigrants from Galicia.

DIVISIONS OF EASTERN YIDDISH. Within the eastern wing of Yiddish territory there is a salient three-way division, in which the southeast (roughly, Ukraine, Romania, and parts of eastern Galicia) occupies a pivotal position between the northeast (Belorussia, Lithuania, Latvia) and the center (Poland proper, western Galicia). Using the phrase *koyfn fleysh* once more as a criterion, we find it in the form / kejfn flejš / in the northeast, / kojfn flajš / in the center, and in the "compromise" version / kojfn flejš / in the southeast.

The split between the Northeast and the rest of East European Yiddish must have begun even before the middle of the 16th century along the dividing line between the Kingdom of Poland and the Grand Duchy of Lithuania. The relatively self-contained nature of these two basins of Jewish colonization, as well as the possibly disparate origins of colonists entering each basin, are likely causes of the early differentiation. A separate issue is the "intermediate" quality of Southeastern Yiddish between that of the Northeast and the Center. It may be related to the mid-16th century re-orientation of the area from Lithuanian to Polish allegiance; on the other hand, we must also reckon with the possibility that the old common non-Lithuanian Yiddish has been more faithfully preserved in the southeast, whereas in Poland it has evolved further under the differential impact of fresh immigration and influence from the west. The separation of historical strata in the formation of such dialectal entities as Belorussian Yiddish and the sorting out of boundary phenomena everywhere into those which were imported and those which were formed in situ, are among the problems with which Yiddish dialectology is preoccupied.

Historical Development

The historical study of Yiddish is hampered by a shortage of texts from the earliest periods and by the highly convention-

Reconstucted Proto Yiddish Vowel[1]	Western Yiddish	Eastern Yiddish			Examples

[1] The conventional labeling of the reconstructed vowels corresponds to the increasingly widespread usage in current linguistic literature (see bibliography). The pairs of forms separated by the diagonal solidus represent subdialectal variants.

alized nature of the literary language in which so many of the surviving texts are written. In consequence, many supplementary methods must be used. Reports of contemporaries, both Jewish and non-Jewish, must be sifted; inferences from general historical facts must be coupled with deductions from such knowledge as we have of the history of the stock languages. Above all, reconstructions from attested forms of modern spoken Yiddish must be used as correctives to the interpretation of texts.

PERIODIZATION. It is safe to say that no event was more decisive in the development of Yiddish than its movement into a Slavic environment and its withdrawal from the reach of German norms. It was under Slavic influence, above all, that aspects of the grammatical system were restructured and that "normal" genetic relation of Yiddish to German was weakened. It is only fitting, therefore, that the periodization of the history of Yiddish reflect this realization. The most widely accepted scheme uses the approximate years 1250, 1500, and 1700 as the major turning points.

EARLIEST YIDDISH. The period of Earliest Yiddish, until 1250, is the time before Slavic contact was established. It is in this period that Jews from northern France and northern Italy, speaking a language they called Laaz, established their first bridgeheads in German-language territory in the kingdom of Loter (i.e., Lotharingia). There is reason to believe that they were simultaneously exposed to more than one variety of Christian German, and it is plausible that their speech remained, for many generations, rife with phonetic and lexical imports from the Laaz language, even though the number of surviving vestiges has constantly been reduced. It is in this period, too, that the old Diaspora pattern of reaching into the sacred language for additional vocabulary, along with the custom of writing the vernacular in the Jewish script, must have been transferred from the Laaz areas to Ashkenaz. Although we have no continuous texts from this period, it seems likely that at this early time the basic fusional formula for the subsequent utilization of multiple stocks was already established. Through the use of indirect evidence, it is even possible to discern the effects on Earliest Yiddish of specific historical developments, such as the increasing isolation and mobility of Jews during and after the Crusades, or the changes in the Hebrew tradition associated with the arrival of Babylonian teachers in Ashkenaz.

OLD YIDDISH. It is in the Old Yiddish period (1250–1500) that Yiddish speakers made contact with Slavs and Slavic-speaking Jews – first in southeastern Germany (*Bavaria*) and Bohemia, then in Poland and still further east. Large numbers of new communities were founded in the new environment and existing communities speaking Knaanic (a Slavic-based Jewish language) were converted to Yiddish. In this period, too, even before the development of printing, a relatively uniform literary language developed. Although many more documents have perished than survived, the language is now amply attested in various stylistic ramifications – in poetry, in *taytsh-khumesh* (Bible translation), and the official records of communal scribes.

MIDDLE YIDDISH. The next period, Middle Yiddish (1500–1700), is marked by the vigorous expansion of eastern Ashkenaz and consequently by the withdrawal of an increasing proportion of Yiddish speakers not only from continuous German territory, but also from the vicinity of German-speaking cities in the east. The linguistic monuments of this period, including numerous volumes of narrative and expository prose, make the evidence increasingly richer. Private letters, verbatim testimony of witnesses, and comical verse for the first time offer the modern scholar an insight into spoken usage, while the detailed comparison of variants in repeated editions of stock works enables us to reconstruct some of the diversities and changes of the language in that period. However, the continuing uniformity of the written language and the shortage of texts of East European provenance hides from view the crucial processes of dialectalization and Slavization which must have gone on at the time.

MODERN YIDDISH. The Modern Yiddish period, after 1700, witnessed a slow but almost fatal decline of Yiddish in the West. The old literary standard, increasingly remote from the living speech of the East European majority, finally collapsed, and a new standard, on an Eastern Yiddish base, began to form about 1820. For some decades, there was uncertainty about the dialectal base and the authoritativeness of literary German models; with the development of a press and a self-conscious literature in the 1860s, however, a supradialectal formation with only limited reliance on German patterns gained rapid ascendancy. The use of the language in organized social movements and in quickly accelerating literary activity reached a high point of self-consciousness in the *Czernowitz Yiddish Conference of 1908. The subsequent introduction of Yiddish as a medium of school instruction, of scholarly research, and of regional administration contributed to the lexical expansion and stabilization of the language. Modernistic poetry was particularly imaginative in exploring the Yiddish potential of enrichment from within.

YIDDISH AND HEBREW. The preceding discussion has sketched the important role played by the sacred language in the formation of Yiddish and in the determination of its graphic image. A few more detailed points may now be taken up separately.

The principal strata of the learned tradition from which Yiddish has drawn have been the Pentateuch, the daily prayers, and the technical discourse of the yeshivah. Because the boundary lines between biblical Hebrew, mishnaic Hebrew, and Aramaic were only vaguely observed in rabbinical use of the sacred language, it is more accurate to speak of the "Hebrew-Aramaic" than of the "Hebrew" stock in the formation of Yiddish. In most recent times, of course, Palestinian and Israel Hebrew have exerted an influence on Yiddish, both within the country

and abroad; Yiddish now has such doublets as (traditional) *alíe* ("call to read a lesson from the Torah in the synagogue"), and (modern) *aliá* ("immigration to Palestine/Israel").

HISTORY OF HEBREW-ARAMAIC-YIDDISH CONTACT. Although more or less the same stock has at all times been available in its entirety to all Ashkenazim, the entry of a particular form from Hebrew-Aramaic into Yiddish must be regarded as a concrete historical event in place and time. Thus, there are words of Hebrew-Aramaic origin which have become current in some regions but are unknown in others (*rak>*, "continuously," in Northeast Yiddish, *ives*, "biting words," in Alsace). There are also marked regional differences in the forms or Hebrew-Aramaic words merged into Yiddish which are unrelated to the systematic dialectal differentiation of Yiddish (e.g., *nadn* "dowry" in Central and Southeast Yiddish, *nadán* in Northeast and Transcarpathian Yiddish, *nedunye* in most of Western Yiddish). A further argument for the concrete historicity of Hebrew-Aramaic-Yiddish contact is the fact that early Yiddish texts contain forms of Hebrew-Aramaic origin which have since become extinct in the language (e.g., *mekabets zayn*, "go begging").

WHOLE AND MERGED HEBREW. Hebrew-Aramaic elements which entered Yiddish have, of course, been subjected to the phonological and grammatical norms of the recipient language; this has differentiated many of them from their equivalents within Ashkenazi Hebrew proper. The result of this distinction is described by the pair of technical terms, Whole Hebrew and Merged Hebrew.

Some of the peculiarities of Merged as opposed to Whole Hebrew, such as the shift of the stress or the neutralization of unstressed vowels, are accounted for by the exigencies of Yiddish phonological and grammatical structure. But there are other peculiarities, not explainable in such a way, which are of particular value in elucidating the outlines of rabbinical Hebrew as a distinct historical branch of the sacred language. Quite a few forms suggest caution against oversimplified conceptions of Hebrew historical grammar. Significant, too, are discrepant treatments of individual Merged Hebrew words and the re-systematization of such discrepancies into new patterns.

The existence of synonym pairs, of which one member is of Hebrew-Aramaic origin and the other stems from elsewhere, has endowed some domains of Yiddish vocabulary with a double register characteristic of Jewish Diaspora languages. To be sure, the semantic or stylistic difference between the members of the pairs is not always the same: in *seyfer*, *shulkhn* (as against *bukh*, *tish*) the reference is to a book of traditional Jewish content and to the ritual synagogue table for unrolling the scroll of the Torah (sacred vs. profane); in *akhlen*, *eynaim* (as against *esn*, *oygn*), the Hebrew-origin term connotes crassness and vulgarity; in *mashtin zayn*, "urinate," *aver*, "bad odor," the Hebrew-origin terms function as euphemisms for their synonyms of other origins.

YIDDISH INFLUENCE ON HEBREW. For many centuries Yiddish has been exercising a reverse influence on Hebrew. Rabbinical writings of the 13th century already contain turns of phrase which would be unintelligible except as loan translations from Yiddish, and, as time went on, the recourse to Yiddish as a source both of direct borrowing and of calquing, increased. This pattern led to easily parodied excesses in ḥasidic literature, but was utilized moderately and creatively in the shaping of modern literary Hebrew by Sholem Yankev *Abramovitsh (Mendele Mokher Seforim) and his contemporaries. In the revived spoken language of Palestine and Israel, Yiddish has had a profound impact not only on the phonetic structure of the language, but also on the developing distinction between perfective and non-perfective verbal constructions, in the fashioning of new idioms, and in the vocabulary of slang. The patterned difference between what may be called Merged Yiddish and Whole Hebrew has made possible previously unavailable stylistic distinctions.

History of Yiddish Studies

Yiddish studies go back to the 16th century, when German humanists saw in the script and in certain aspects of the vocabulary and grammar of this language a convenient bridge to the learning of Hebrew. In the subsequent period Yiddish also attracted the attention of theologians concerned with missionizing among the Jews, and of police officials and others interested in cryptic Jewish speech and Yiddish as a source of German thieves' cant (see *Avé-lallemant). The science of Judaism in the 19th century paid only scant attention to Yiddish, and the developing Germanic philology was slow in coming to appreciate the historical significance of this language. The foundations of a modern scholarly approach to Yiddish were laid by scattered individuals – L. *Saineanu in Bucharest, who furnished the first dialect monograph, and A. *Landau in Vienna, who set an example in matters of text editing, scholarly commentary, etymology, and the study of the subtle but pervasive impact of Slavic. In the first two decades of the 20th century Yiddish studies remained the domain of private persons with varying levels of university preparation. A new beginning was made in the 1920s with the founding of institutions devoted, partly or completely, to the study of Yiddish: chief among them were the institutes affiliated with the Ukrainian and Belorussian academies (Kiev and Minsk) and the *YIVO (Yiddish Scientific Institute) in Vilna. These institutions became the centers of large-scale, systematic collecting of material and of the preparation of capital works such as dialect atlases and dictionaries. The serial publications established by these institutes provided a forum for the printing of text editions, collections of folk language, and analytic studies. Systematic training of aspirants in Yiddish studies became available for the first time. The several institutes also played the role of normative authorities, first with respect to orthography, and eventually also in some areas of terminology.

The suppression of Jewish scholarship by the Soviet regime and the Holocaust brought about the almost complete

annihilation of scholarly personnel and collections. The American branch of yivo, however, became the focus for its post-war reorganization and that of Yiddish studies. A new phenomenon, almost without precedent before World War ii, was the introduction of Yiddish into the curricula of universities. The development of advanced Yiddish studies at the Hebrew University in Jerusalem created a fresh opportunity for coordinating Yiddish studies with training in other Judaica, while the activities centering around Columbia University in New York helped to integrate Yiddish linguistics with general linguistics on a broader scale than before. A renewed interest in Yiddish studies has also been in evidence in Western Europe, especially in western Germany, France, Netherlands, in Eastern Europe and in America.

[Uriel Weinreich]

YIDDISH LITERATURE.
This articles is arranged according to the following outline:

INTRODUCTION

Yiddish is one of a number of languages that Jews have assimilated into their culture from their foreign environment during their long exile (see *Jewish Languages). These languages were "Judaized" and, at least initially, served primarily as a means of everyday communication. They were regarded as of lower status than the ancient and holy language, Hebrew, which enjoyed almost exclusive dominance in the realms of religious ritual and scholarship. Yiddish, developing and flourishing side by side with the Hebrew-Aramaic which continued to be the unifying medium of communication among Jews of all lands of the dispersion, is unique. While Judezmo (popularly known as *Ladino), *Judeo-Arabic, *Judeo-Persian, and other Jewish languages also developed a linguistic identity, a rich folklore, and a variety of literary genres, none can claim as copious and diversified a literature as that which flourished in Yiddish, nor did any of them reach the geographical spread of Yiddish, nor equal it in number of speakers. During the second half of the 19th century at the latest, all the literary genres found in modern European literature had also become vehicles of expression in Yiddish.

A parallel may be drawn between the relationship of Latin literature to the vernaculars of medieval Christendom in European literature and that of Hebrew to Yiddish in Jewish culture. The transition of Yiddish from a medium of daily communication and a popular literature to a comprehensive and highly developed literary and intellectual vehicle of creativity was complex. Hebrew, it was formerly thought, was the sole medium of reading and writing of the intellectual strata of Jewish society until the 19th century. Yiddish, it was said, catered only to the masses, answering mainly the spiritual needs of the less educated, especially women. Hebrew writings expressed the highest aesthetic, intellectual, social, and religious ideals of the society; Yiddish literature, it was assumed, answered the needs of the untutored and of women. Yiddish literature until the end of the 18th century, it was formerly thought, consisted either of educational material written by intellectuals or popular works by writers from the readers' own social class. This schema ignores the best of both early Yiddish (i.e., Old and Middle Yiddish) literature and the flowering of a sophisticated Yiddish literature in northern Italy in the late 15th and 16th centuries. As regards women, there is clear evidence that they made up a sizable portion of the reading audience of early Yiddish texts; some were also active participants in the printing industry, whether as typesetters, printers, or authors.

With the rise of the *haskole* [*Haskalah] movement at the end of the 18th century, modern Yiddish literature gradually developed into an independent medium in all modes of intellectual and artistic expression. By the end of the 18th century,

the conventional and standardized Yiddish literary language which had attained its most definite form in the 16th, or at the latest in the early 17th century, had become stereotyped. Spoken and literary Yiddish differed widely, the latter having been maintained almost solely to answer the need for a uniform written medium understood by Yiddish speakers of Western and Eastern Europe. Literary Yiddish had become an artificial language. The end of the 18th and beginning of the 19th centuries saw the birth of a literary language based on the Yiddish dialects of Eastern Europe. At the same time, Yiddish almost ceased to be a creative medium in Western Europe, the Haskalah movement and emancipation having encouraged linguistic assimilation. West European Jewish writers adopted European languages as media of expression, a process that affected East European Jewry much later.

Extant pre-18th century manuscripts, printed books, and small pamphlets are sadly lacking in many spheres, a natural outcome of the persecutions, expulsions and wanderings forced upon European Jewry. This dearth is also due to an attitude to Yiddish, a legacy of previous generations that saw only Hebrew as holy and of value. Modern research into early Yiddish literature started shortly before World War I. The results published in the 1920s and 1930s need to be revised because of the ideological concepts and methodology then current, because of important texts discovered since, and because of more recent studies. This state of affairs is no less true regarding modern Yiddish literature, a field in which relatively little scholarly research has been done. The following survey could well be reshaped by future findings.

UNTIL THE END OF THE 18TH CENTURY

The Bible in Yiddish Literature

From its beginning Yiddish literature was largely based on the Bible and its interpretations, talmudic legends, and midrashim. For centuries, efforts were made to impart Bible knowledge in Yiddish, as evidenced by glosses in margins of Hebrew manuscripts (at least from the 12th century), manuscript glossaries for individual books of the Bible, and works such as *Mirkeves haMishne / Seyfer R' Anshl* [*Mirkevet ha-Mishna – Sefer R' Anshl*, Cracow, 1534], a dictionary and concordance for the entire Bible, which is the first known Yiddish printed book. In some manuscripts traces have been found of interlinear translations that simulated the syntax, grammar and semantics of the Hebrew original. Complete translations of the Pentateuch were published in Constance (1544), Augsburg (1544), and Cremona (1560). Translations were made of single books of the Bible, e.g. Psalms (Venice, 1545), and of the entire Bible (Amsterdam, 1676–9, 1679).

This literary creativity in Yiddish continued earlier oral efforts by the Jewish settlers of southern Germany who had adopted the local vernacular. The traditional oral study of the Scriptures in Yiddish among descendants of these German Jews in Israel and in the U.S. is a living assertion of the earlier creative process. In modern times, the threads of this literary expression were taken up by Sholem Yankev *Abramo-

vitsh (Mendele Moykher-Sforim/Mokher Seforim], Y.L. Perets (*Peretz), Khayim Shoys [Ḥayyim Schauss], and others, in their translations of individual books of the Bible, and by *Yehoash [Yehoyesh / Solomon Bloomgarten) in his translation of the entire Scriptures. Yehoash's work is standard among secular Jews in the Yiddish-speaking world (latest revised edition 1941; online "yivo" edition at *Di Velt fun Yidish* website). (To grasp the status accorded to this poet until recently in the Yiddish world, see the special Yehoash issue of *Di Goldene Keyt* 72 (1971)). The poetic translation of Yitskhok Katsenelson (Itzhak *Katzenelson) in the early 1940s in the Warsaw ghetto placed the Bible in the forefront again as a source for Yiddish literary inspiration.

Yiddish scriptural translations closely adhered to the text, usually rendering it literally. By drawing on the traditional Hebrew biblical commentaries, the Yiddish translations gained authority. The process of translation was to render into Yiddish each Hebrew word of the original by a parallel Germanic component, despite the fact that many of the Hebrew words in the text were understood by all Jews and in use in Yiddish. For a long time, translators of the Bible followed a definite structure and linguistic pattern in consequence of which idioms, stylistic and linguistic forms no longer used in the spoken language were preserved in the oral and written study of the Bible. The sanctity of the Hebrew original imputed to these early translations explains why these archaisms were preserved, becoming a main source for stylization in modern Yiddish literature.

EPIC. The 14th century marked the beginning of Yiddish rhymed biblical tales. (Christian rhymed versions of the Bible are almost all psalters). In the Cambridge University Library manuscript T.-S. 10K22, from the Cairo *Genizah, the stories of Abraham, Joseph, and Moses (written *ca.* 1382) are in verse. The epic poem about the binding of Isaac (*Akeyde* [*Akedah]) seems to have been very popular for centuries and has been preserved in various manuscripts and printed texts up to the 18th century. The Book of Esther and the midrashim based on it, also in great demand, are known to have been rendered into Yiddish in poetical form from the 15th century onward. This literary activity reached its zenith in the *Shmuel Bukh* ("Book of Samuel," Augsburg, 1544) and *Melokhim Bukh* ("Book of Kings," Augsburg, 1543), biblical epics believed by some to have been written in the 15th century. Later works structurally imitated these earlier compositions, e.g., *Joshua* (Mantua, 1562/64), *Judges* (Mantua, 1564), *Isaiah* (Cracow, 1586), and *Daniel* (Basel, 1557). The metrical structure common in popular German epic poetry (four lines of six stresses with a prominent caesura in each line and an *aabb* rhyme scheme) was adopted, sometimes with the acrostic and strophe of the Hebrew *piyyut* (e.g., the rhyme scheme *aaaa* in the poem on the sacrifice of Isaac). The style and structure of these poems reflect cotemporal German poetic conventions.

In these mainly anonymous poetic adaptations, the original Bible story was embellished with talmudic legends and midrashim to augment the narrative element of the tale. The poets, possessing as they did profound knowledge of the Hebrew sources, were faithful to the content and spirit of these additions. We can assume that this literary creativity was, *inter alia*, born of the need to produce an offset and possible substitute for the alien "fictitious" adventure stories which had spread to the Jewish public. Except for some isolated works and poetic adaptations, written as late as the 17th century, e.g., *Kehiles Yankev* [*Kehilas Ya'akov*, Fuerth, 1692], this type of literary activity ceased. From the end of the 16th century it made way for homiletic prose, whose subjects and themes were culled from the same sources.

HOMILETIC PROSE. The *Tsenerene* (*Ze'enah u-Re'enah*) by R. Jacob b. Isaac Ashkenazi of Janow was a very popular work in the genre of homiletic prose. A miscellany of tales, homilies, midrashim, and exegetical comments woven around a Yiddish rendering and paraphrasing of the Pentateuch, the *haftoyres* [*haftarot*] and the *megiles* [*megilot*], the work is written in a lively, simple, and flowing style. The commentaries and midrashim supplementing and expounding the selected biblical passages were well known. The work is assumed to have appeared first in the 1590s. (The first preserved unicum was apparently published at Hanau, 1622, but was preceded by at least three editions which have been lost.) Reprinted up to the present, it has gone through over 210 editions. Another work ascribed to Rabbi Jacob b. Isaac Ashkenazi, *Seyfer haMagid* [*Sefer haMagid*], popular for generations, is a translation of *Neviim* [Prophets] and *Ksuvim* [Hagiographa] printed alongside the Hebrew text with a paraphrase of Rashi's commentary. Published at the beginning of the 18th century under the title *Magishey Minkhe* [*Magishey Minkha*] with an edition of the *Khumesh* [Pentateuch] written in the same style, the book became increasingly popular. It may be assumed that the widely-read works of R. Jacob b. Isaac Ashkenazi helped perpetuate the archaic style dominating Yiddish literature until the end of the 18th century, a style which ignored the developments in the spoken tongue, especially the changes that occurred in Yiddish in Eastern Europe. The 1786 Lemberg re-edition of the *Tsenerene* systematically repatterned the language to conform to modern Eastern Yiddish [Kerler 1999, p. 100]. Though lacking exegetical and homiletical originality, this prose is faithful to the Hebrew-Aramaic sources that the contemporary Jewish community at large knew well. Its novelty lies mainly in the popular style and the new literary forms into which the ancient cultural treasures were cast.

DRAMA. Yiddish biblical drama, adapting Scripture stories more freely than any of the other genres, appeared on the Yiddish literary scene at the latest by the 17th century. This late date (in comparison to European literatures) may be due to the ban imposed by the rabbis on the theater, in force particularly in medieval Europe where the Christian Church controlled drama. The establishment of professional theatrical companies and troupes in Germany in the 17th century led to

the secularization of the theater and to the relaxation of the ban, thus making way for the Yiddish drama. The latter confined itself, however, to biblical subjects: *Akheshveresh Shpil* ("Ahasuerus Play," earliest ms. 1697, printed text Frankfurt am Main, 1708); *Mekhires Yoysef* ("Selling of Joseph," Frankfurt am Main, before 1711); *Dovid un Golyes* ("David and Goliath," Hanau, 1717); and *Moyshe Rabeynu Bashraybung* ("Moses Our Teacher Description," mid-18th century).

Yiddish biblical drama shows clear influences of the non-Jewish theaters of the time, mainly in the setting and in the introduction of comic characters. Although non-Jewish plays on the same themes may have served as models and sources for Yiddish drama, all elements or motifs that were incompatible with the Jewish outlook were replaced by material culled from midrashim which added rich dialogue to the original biblical story. The midrash thus was a vital literary source whose wealth of subjects, themes, and actual language lent a note of originality to the development of the biblical themes in the dramas. Generally presented at Purim when prohibitions and bans were relaxed, these plays fit the festive mood of the holiday. The oral tradition of the *Purim shpiln* ("Purim plays"), also including dramatic works on other biblical themes, bears clear traces of these early 17th and 18th century Yiddish dramas. The tradition was alive in Eastern Europe up to World War II, and in the isolated instance of the Bobover ḥasidim is still alive today.

Liturgy

The canon of Jewish liturgy had become fixed before Yiddish literature developed, and this may be the reason there was little original prayer and religious lyrical writing in Yiddish. The earliest Yiddish verse (preserved in the Worms *makhzer* [*Makhzor*, high-holiday prayer book, 1272] reads: "gut tak im betag shevayr dis makhzer in bes hakneses trag" ("May the person who carries this holiday prayer book to the synagogue be blessed"). This benediction, found only in this source, was merely an embellishment and did not form part of the standard liturgy. Most of the liturgical activity was in translation. From the 15th century onward, Yiddish translations of individual prayers and of entire prayer books were well known and current in the Jewish community; the first printed Yiddish prayer book (Ichenhausen, 1544) contains prayers for the entire year. However, the main function of translations of prayers into Yiddish was to aid understanding of the Hebrew-Aramaic texts; according to tradition, they alone were acceptable for devotional service.

In Yiddish, however, there were spheres in which to express religious feelings and devotion. The *tkhine*, a non-standard prayer of individual and private supplication adapted for various purposes, is outside the body of the liturgical canon. Mainly considered prayers for women, *tkhines* are often attributed to women authors. Written mainly in prose, these supplications are characterized by simplicity and emotionality. They are found as early as the 16th century in printed Yiddish texts, sometimes in prayer books with Yiddish translations.

They were widely published in small books and in special collections that are still printed today.

Yiddish religious poetry also found an outlet in those ceremonies which did not yet have a set of fixed rules and customs governing them, mostly ceremonies conducted specifically in the home (Sabbath and festival meals, the Passover *seder*, weddings and circumcisions). By the 15th century, not only were popular Hebrew *piyyutim* and hymns translated into Yiddish, but Yiddish poems were specifically composed for such celebrations and festivities. Bilingualism characterized this poetry: some of the poems were written both in Hebrew and in Yiddish so that the entire company might fully participate. Contrary to the Hebrew text, which in accordance with the tradition of the Hebrew *piyyut*, was studded with learned quotations, the Yiddish text was characterized by poetic simplicity and vivid descriptions directly reflecting the times and mores. Structurally, this Yiddish poetry is marked by a symbiosis of two strophic forms drawn from two separate literary sources: the strophe of the Hebrew *piyyut*, adapted to the linguistic peculiarities of Yiddish, and the German strophe, particularly that of the folk song. The Yiddish poems were often written and adapted to German folk melodies popular among Jews (e.g., a Hebrew and Yiddish song in honor of the Sabbath sung to the melody of the German *Herzog Ernst*, as early as the middle of the 15th century). This poetry was also a vehicle for various types of parodies that were especially popular at Purim.

Ethical Literature

This wealth of Yiddish literary activity developed directly and naturally out of an established and organized Jewish society whose way of life was in no small measure influenced by a didactic literature consisting of books of customs (*mineg* (*minhog*)), and ethical conduct (*muser* (*musor*)). The Yiddish literature on traditional conduct mainly instructed the Jewish community in how to behave during synagogal worship and at domestic festivities and religious ceremonies. Custom books in Yiddish are found in early manuscripts which, with the dissemination of the art of printing, were frequently reprinted, with only minor changes, up to the end of the 18th century. In his *Early Yiddish Texts* (*text no. 31*), J.C. Frakes edits an excerpt from a north Italian manuscript of a book of customs (Paris, Bibliothèque Nationale, ms. hébr. 586, fos. 117r–118r; dated 1503). The first printed Yiddish comprehensive guide to customs appeared at Mantua in 1590.

Ethical writings were one of the most important genres in early Yiddish insofar as numbers of exemplars actually read. In a simple and clear style easily understood by the average person, they taught ideal religious and social behavior for the individual and society as a whole. This literature denounced (often excessively) any conduct which deviated from the standards of the authors. The ethical writings, also based on accepted Hebrew sources, were to a large extent translations of Hebrew ethical literature, e.g., *Seyfer Mides* ("Book of Qualities" [Sefer Midot], Isny, 1542), the first comprehensive

printed Yiddish ethical work translated and published before the Hebrew text *Orkhes Tsadikim* ("Way of the Just," Prague 1581). [See L. Prager & B.S. Hill, "Yiddish Mss. in the British Library," in: *The British Library Journal*, 21/1 (Spring 1995), 86–8 and footnote 39; see also EJ 12: 1458–60]. *Lev Tov* ("Good Heart," Prague, 1620) and *Simkhes HaNefesh* ("Joy of the Soul" [Simkhas HaNefesh], first part Frankfurt, 1707; second part, containing a collection of poems and hymns including the music, Fuerth, 1727) were two original Yiddish ethical works, well known in Jewish society and often reprinted.

The many parables and exemplary tales included in ethical writings established a close link between this literature and the *exemplum and *hagiography. Traces of the first written Yiddish exempla and hagiographies, the origin of which was undoubtedly in homily and oral literary traditions, e.g., folklore, are contained in a number of tales found in scattered manuscripts and small books (most of which are lost) appearing in Venice in the middle of the 16th century. The story titles point to the decisive influence that the Hebrew legend had on this literature. The *Mayse Bukh* ("Story Book" [Ma'aseh Book]), which was first published in Basel in 1602, is a comprehensive compilation of 257 stories based largely on talmudic and midrashic tales, though some are culled from other sources. Direct influences of the novella and the folktale, genres current in contemporaneous non-Jewish European literature, can be detected in many of the narratives; others are hagiographical accounts about *Khsidey Ashkenaz* [Khasidey Ashkenaz] with the obvious time gap between contemporaneous life and historical and legendary memories. These hagiographical tales are also comprised in the *Mayse Nisim* ("Miracle Tales" [Ma'aseh Nissim], Amsterdam, 1696) and are found in a number of small works in which local legends, whose protagonists are prominent historical figures, are developed. The principal purpose of exemplum and hagiographical literature was didactic and it formed the mainstream of Yiddish narrative prose up to the end of the 18th century.

The *Mayse Bukh* also testifies to Yiddish fable literature, although the first extant works in that genre are found in the much earlier Cambridge *Genizah* manuscript of 1382. The fables are free translations into Yiddish from fables of the time known originally in Hebrew, often with a modified moral. The *Ki Bukh* ("Book of Cows") is the first Yiddish collection of fables (the first edition apparently at Verona, 1595; a slightly revised reprint appeared at Frankfurt, 1697, under the name Moses Wallich). Eli Katz in his splendid critical edition indicates that "What distinguishes the tone" of the latter from its sources or possible influences "is its hominess": the stork in the first fable prepares *kreplekh*; the crow in the second fable blesses the new moon. A translation of the Hebrew *Mishlei Shu'alim* ("Fox Tales") appeared at Freiburg in 1583.

Although virtually all Yiddish authors prior to the second decade of the 20th century commanded both Hebrew and Yiddish to some degree, and though there are numerous Hebrew works printed with their translations in Yiddish, the intimate relationship between the two languages is best seen in the too little understood organically dual Hebrew and Yiddish poem such as the early 17th debate poem, a distinct kind of *muser* writing, *Seyfer Mase u-Merive* [Sefer Masso u-Merivo] ("Essays and Disputations," 1627) by R. Aleksander ben Isaac Pfaffenhofen. This rhymed bilingual poem contains an intricately developed disputation between poverty and richness in rhymed Hebrew and Yiddish parallel texts. Evidence points to the author's intention to publish, but it was not until 1985 that the rare Bodleian manuscript was "redeemed" in a scrupulously edited edition by Chava Turniansky. Bilingual Hebrew/Yiddish poems date from the 14th to the 18th centuries in genres such as wedding song, Sabbath hymn, debate poem, and ethics poem.

"Historical" Songs and Writings

Up to the end of the 18th century, current historical events and contemporary Jewish life found expression mainly in long narrative poems called *lider*, which were put to music. This type of poem resembles the popular German *historische Lieder* (long poetic narratives on current events). *Megiles Vints* ("Vinz Scroll," a bilingual poetic work in Hebrew and in Yiddish) by Elkhonen Heln is one of the earliest extant poems of this type. It describes the sufferings of the Jews of Frankfurt am Main during the Fettmilch riots (1612), how Fettmilch and his rabble forced them to leave the city, and their eventual return. The 40 or so extant historical *lider* (from the beginning of the 17th to the end of the 18th century) – some of them bilingual with parallel Hebrew texts – are remnants of a poetry very popular in its time. The variety of topical subjects that found expression in this verse published in small cheap pamphlets close to the time of the events they describe point to its functional merit both as public commentary and news. The poems describe expulsions, blood libels, massacres, and natural calamities in the life of Ashkenazi Jewry from Vilna in the north to Ofen in the south, from the Ukraine in the east to Holland in the west.

The authors often showed a highly developed historical sense. A vehicle of communication on current historical events, these *lider* were at the same time emotionally charged, a reaction to contemporary non-Jewish literature of the same kind which described the same events in the form of anti-Jewish accusations. Elements of the ancient *kina* ("lamentation") and the Hebrew *piyyut* ("liturgical hymn") can be clearly discerned, as well as stylistic and structural forms adopted from German poetry of the genre. The poetry also contains balladic elements and is occasionally interspersed with lyrical digressions. As far as can be ascertained from the extant poetry, the writers seem to come from the lower echelons of Jewish leadership, and the events related were thus seen and expressed in the light of norms found in popular ethical literature. Most of this poetry has little literary merit, but measured against the background of Yiddish literature of the 17th and 18th centuries, its value is to be found in its originality and its ability to depict vividly the historical present – at that time hardly expressed in any other literary genre. The art, though slightly

modified, was alive in Eastern Europe up to World War II. Its final remnants, preserved by survivors of the Nazi concentration camps and the ghettos, were gleaned from the last transmitters of this oral tradition of the "historical" *lid*.

Also very popular in Yiddish were historical writings, a literature almost entirely translated from Hebrew. *She'eris Yisroel* (Amsterdam, 1743), an original work by Menakhem Man *Amelander, was one of the few exceptions. It was written as a sequel to the Yiddish translation of *Josippon (first printed in Yiddish in Zurich in 1546, and thereafter in numerous editions). Included in this literature somewhat arbitrarily since it fits neatly into no one genre is an untitled and quite extraordinary work that is conventionally (although inaccurately) referred to as the *Zikhroynes* ("Memoirs") of Glikl bas Leyb (since 1898 conventionally known as Glikl Hamil or *Glueckel of Hameln, 1645–1719). A widow with many children, Glikl by force of character and sagacity overcomes the many difficulties that she encounters in her long life. Hers is a timeless work of ethics and moral edification which – almost incidentally – also vividly describes the writer's life and illuminates the Jewish and general society in which she lived.

Transcriptions of German Works

Jewish authors and readers were familiar with certain types of German literature as evidenced by linguistic and stylistic conventions and structural patterns and forms found in poetical adaptations of biblical tales and other types of Yiddish poetry taken from German verse. Thus German popular literary works were well known and understood among Jews in German-speaking countries, despite the fact that their language was not exactly identical with that of their environment. Until the beginning of the Haskalah (middle of the 18th century) this literature was transmitted mainly orally or by transcription of the works into the Hebrew alphabet. While the majority of Jews were able to read and write Hebrew, they were not able to read the Roman alphabet (*galkhes*), especially those circles that were most attracted to secular German literature.

The art of transcription into the Hebrew alphabet thus became prominent in Yiddish literature. Traces of the many German works transcribed can be found in manuscripts from the 14th century onward (*Dukus Horant* / "Duke Horant" in the Cambridge *Genizah* manuscript of 1382) and in printed works until the 18th century. German works that reached the Jewish reader were generally restricted to those popular with the German lower classes. Among these there was a popular folk literature, especially the folk song, which is extant in modified form and preserved even in collections of East European Jewry (compiled and written down from the oral tradition from the end of the 19th century). The early transcribed literature includes fantastic adventure tales which in many cases may be seen as folk literature and, from the end of the 16th century, a popular genre known in German literature as the *Volksbuch* ("chapbook"). Some of the transcriptions come from a written source while others were drawn from oral tradition. Slanders against Jews were excised from most of these works, the Jew-

ish transcriber usually trying to expunge anything that was liable to offend the Jewish reader. Occasionally, however, accusations against Jews and other derogatory remarks are left in the transcribed version.

Transcriptions into the Hebrew alphabet adhered to certain methods that can be roughly reduced to the following: (1) excision of Christian religious references; (2) use of opprobrious expressions common among Jews for Christian terms and objects (such as *tifle* [contemptuous term for "church"] instead of *kirche* ["church"] in *Dukas Horant*); (3) use of neutral expressions for religious terms (e.g., "glaykh bay den tor" instead of "in di kirkhn" in *Sheyne Magelone* ("Beautiful Magelone," Fuerth, 1714); (4) the Judaization of Christian terms (*shul* ["synagogue"] instead of *kirkhe* in *Zibn Vayzn Maynster Bikhl* ("Book of the Seven Wise Masters," Basel, 1602). One method was not necessarily used consistently in any one transcription, nor was one method prevalent at a given period. In most works, the transcriber applied all the possibilities mentioned, while in others, not even the Christian terms were deleted.

A number of these works transcribed from writings whose roots were in the German environment presented literary problems beyond that of transcription and the changes made to Christian references. Such a work is the Yiddish *Kinig Artis Houf* ("King Arthur's Court," earliest manuscript from the 15th–16th century), whose sources are not known and which was later (17th century) adapted in *ottava rima*, imitating Elye Bokher's [Elijah Baḥur *Levita's] poetic adaptations from Italian (see below).

"Secular" Yiddish Literature in Italy

The growth rate of an original "secular" literature in Yiddish may possibly have been slowed by the great ease with which Jews were conversant in German literature. Thus the end of the 15th century and the 16th century were a flourishing period in Yiddish literature among the Jews of northern Italy. These Ashkenazi immigrants cut off from the German environment retained Yiddish as a living tongue at least until the late 16th century. The outstanding creative mark of the period is the original "secular" Yiddish literature to which it gave birth. Many Yiddish works in manuscript were produced and a variety of Yiddish books was published in such cities as Venice, Cremona, Mantua, and Verona. Though rooted in non-Jewish sources, the Yiddish writings were not transcriptions but original works whose vitality survives to the present day.

One of the major Jewish writers of the time in Italy was Elye Bokher [Elijah Baḥur Levita] who, until the end of the 18th century, was the central figure in Yiddish literature. A Hebrew scholar in the fields of grammar, linguistics, and Bible, and a friend and teacher of Christian humanists, he was a man of comprehensive and deep knowledge in a number of intellectual and cultural spheres. He was a versatile poet, sensitive to poetic form with which he experimented freely. Undoubtedly, not all of his Yiddish works have survived. Among his extant writings is his translation of the Book of Psalms (first printed

in Venice in 1545), two poetic pasquinades, and the romance *Bovo d'Antona* ("Bovo of Antona," written in 1507, first printed at Isny, 1541, and known as the **Bove Bukh* in later editions). Either Elye Bokher or a disciple of his composed *Pariz un Viene* ("Pariz and Viene," Sabbioneta, 1555/6; first extant ed. Verona, 1594). Only recently has a complete copy of the text been discovered (Verona, Biblioteca del Seminario Vescovile, Fonds Venturi, no. 192) which has clarified much concerning both the period and the genre (see the exemplary edition by Ch. Shmeruk in collaboration with E. Timm [1996]). Adaptations from popular Italian stories, these romances point to the authors' complete freedom in the treatment of their material, made possible by the rendition into a language alien to the sources and by adaptation of the content for the Jewish reader. This literary freedom was, however, limited for the transcriber of German writings and for the translator (including Elye Bokher) of the sacred or semi-sacred Hebrew sources.

Elye Bokher reduced the *Bovo d'Antona* narrative from the 1,400 stanzas of the Italian source to 650 stanzas in the Yiddish, eliminating some of the erotic elements and including his own original additions – sometimes in a lyrical, sometimes in a delicately humorous vein. He also Judaized his characters at times, as transcribers from Roman into Hebrew script had occasionally done before him. While in the works of the latter, the Judaized material – whether situation or character – was sporadic, random, and out of context, Elye Bokher exploited the technique to create comic effects that formed a natural and integral part of the whole. His readers did not find it strange that medieval knights and kings good-humoredly observed Jewish customs and manners.

While the two works, which imitate the style and form of the sources, were written in *ottava rima*, the author felt that Yiddish was not easily adaptable to the Italian models. In the process of adapting the *Bovo d'Antona*, he developed an original stanza whose rhyme scheme was that of the *ottava rima* (*ababab cc*) and which had alternate masculine and feminine rhymes. In this stanza, by skillfully integrating the natural accentuation of the Yiddish language and the syllabic principle governing the Italian language, he invented an exact iambic meter (in which the *Pariz un Viene* was also later composed), anticipating similar developments in other European literatures. Elye Bokher's poetic language is vivid and rich, and his rhymes are varied, partly because he included rhyme schemes from German, Hebrew, and Italian. Yiddish rhyme, usually based on a single component of the language, thus broke with the traditional conventions.

Despite the popularity of the *Bove Bukh* (known in corrupted texts in Eastern Europe up to the 19th century), Elye Bokher's Yiddish literary efforts did not substantially influence the development of Yiddish literature. This has been attributed to the decline of Yiddish in Italy at the beginning of the 17th century and to the cultural environment of the other European Ashkenazi communities which, until the beginning of the 19th century, was not receptive to a poet of Elye Bokher's caliber.

Until World War I

Two Haskalah comedies written in the 1790s by Isaac Euchel and Aaron Wolfsohn mark the end of Yiddish literature in Western Europe. While in the 19th and 20th centuries parodies of German literature were written in Western Yiddish (generally transcribed into the Roman alphabet), they are marginal phenomena among Jews who, as readers and writers, had become integrated into German culture. The groups of Yiddish writers in Berlin and Vienna after World War I are branches of the Yiddish literature that developed in Eastern Europe.

The desire to eliminate the popular Yiddish *Purim shpil*, stemming from an open disdain for the "corrupt" language, Yiddish, was one of the reasons that prompted the writing of the two aforementioned comedies. In the plays only the undesirable characters speak Yiddish, while the laudable characters speak, or at least try to speak, a "proper" language, i.e., "pure" German. It is doubtful whether the educational aims of Euchel or Wolfsohn achieved anything with regard to the language problem. These comedies were, in fact, a manifestation of the assimilative tendencies which were crystallizing at the time – irrespective of the desires of these authors – and which ultimately brought about the extinction of Yiddish literature in Western Europe. The society denied the very right of the language to exist and used it only for jokes – and even then only so long as there were Jews who could understand the puns and were still familiar with the environment from which they were becoming progressively estranged.

There was a symbolic and highly significant difference in principle between the comedies written in Germany and those of the East European Haskalah, written in Yiddish, even though the latter may have been written under the influence of the former, and both had similar aims. This type of comedy became one of the accepted genres in modern Yiddish literature in the 19th century. From the anonymous comedy *Die Genarte Velt* ("The Deluded World," 1816?), the comedies of Shloyme Etinger [S. *Ettinger] and Yisroel Aksnfeld [I. *Axenfeld], to the plays of Sholem Yankev *Abramovitsh [Mendele Moykher-Sforim/Mokher Seforim] and Avrom Goldfadn [A. *Goldfadn], this type of drama not only fulfilled the authors' aims of disseminating the ideas of the Haskalah and modernizing Jewish society in Eastern Europe, but also facilitated (though not always deliberately or consciously) the transition of Yiddish literature from a folk literature to a modern one.

HASKOLE (HASKALAH). Although the *maskilim* ("enlighteners") in Eastern Europe disapproved of Yiddish in principle and used it only as a medium for the dissemination of their ideas among the masses who understood no other language, their use of the language came to serve as the basis for the development of a modern literature. An important, perhaps decisive, factor was the realization that the character and expressive power of the language were compatible with the environment. Yiddish was an effective tool for Haskalah writers

who were unable to express themselves with the same ease and effectiveness in Hebrew, although in principle that language remained the ideal.

This response, often unconscious, to the possibilities of Yiddish may clearly be seen in the writings of Mendl Lefin [Mendel *Levin (Lefin)], Yoysef *Perl (beginning of the 19th century), and in later authors (up to the beginning of the 20th century) who wrote in Hebrew and Yiddish. Until the second half of the 19th century, no Jewish writers used the non-Jewish languages current in Eastern Europe, and until World War I, only a fairly narrow stratum of the Jewish intelligentsia had a thorough command of these languages.

The literature written in East European Yiddish – from the period of the Haskalah comedies to that of the wide geographical expansion of Yiddish literature in the late-19th and the 20th centuries, both in the countries where it took shape and in those lands to which the emigrants brought it – has been an arena fraught with tensions and metamorphoses. The turbulence endemic to Yiddish literature stems from a variety of sources: consciousness of the social and national purpose of Yiddish literature in describing the fundamental internal changes in Jewish society since the beginning of the 19th century; resistance to hostile external forces; the attitude to the Yiddish language itself, and to Jewish culture as a whole, especially to Hebrew and Hebrew literature; and its relationship to modern trends in Western literatures. All these elements constituted the background and motivating force for the rapid development of Yiddish literature.

From its inception, Yiddish literature in Eastern Europe saw the clash between Ḥasidism and Haskalah, one that assumed various forms in the course of time and continues to this day. Ḥasidism represents a mystical, romantic approach to life, while the Haskalah in all its variations is fundamentally rationalist and in its literary expression "realistic."

ḤASIDISM. Ḥasidism from the 18th century tried to renew Jewish religious and social life on a mystical and emotional basis and created a literature of its own in Yiddish. In comparison with Hebrew ḥasidic literature, Yiddish ḥasidic literature is limited in scope and in its forms of expression. However, it is of immense importance as a direct source for all genres of modern Yiddish literature. The latter was nourished by its spirit, its outlook, and its characteristic narrative themes.

Ḥasidism produced two basic types of stories: (1) Hagiographies that glorified the founders and leaders of Ḥasidism by describing their marvelous deeds. The first important collection of this type, *Shivkhey haBesht* ("The Praises of the Baal Shem Tov," 1815), is derived from oral traditions in Yiddish which were first collected and committed to writing in Hebrew. Immediately translated into Yiddish in three independent versions, the work started a chain of hagiographical oral and written literature which influenced Yiddish prose and poetry until the period of the Holocaust. (Yitskhok Katsenelson's poem on the rabbi of Radzyn, written in the Warsaw Ghetto in 1942/43, was based on authentic stories of this kind current at the time in the ghettos of Poland.) (2) Religious, mystic stories of which the tales of R. *Naḥman of Bratslav are among the most remarkable in all of Yiddish literature. Composed between 1806 and 1809, these tales appeared in a bilingual version (Yiddish with a Hebrew translation) in 1815. They are an original manifestation of religious mysticism in the garb of symbolist fiction and are the only works of their kind in Yiddish literature. Some of the themes are drawn from folk literature and anticipate important motifs of modernism which later appeared in Yiddish literature: the dichotomy in the soul of modern man between simple and unquestioning faith on the one hand, and rationalism and rationalization of life on the other. Within the ḥasidic movement itself, the narrative genre of the school of R. Naḥman had no successor. However, with the advent of modern symbolist trends in Yiddish literature in the late 1890s, his tales were a source for the works of Y.L. Perets, D. *Ignatoff, Der *Nister, and others.

STRUGGLE BETWEEN HASKALAH AND ḤASIDISM. The struggle against Ḥasidism and its literature – and, in a large measure, against its Yiddish narrative literature – was one of the main objects of Yiddish Haskalah writings in Eastern Europe. The anti-ḥasidic motif is a characteristic feature of satirical Haskalah literature (Yisroel Aksnfeld, Y.Y. Linetski [I.J. *Linetzky], and others) which included both parodies and deliberately confusing versions founded on ḥasidic literature itself (Y. Perl). For a fairly long period, the aggressive bias and open didacticism of the mainstream of Haskalah Yiddish literature limited its artistic possibilities for satire on the one hand and artificial pathos on the other. These works included, it is true, the poetical and dramatic writings of Sh. Etinger, in which the tendentious aims of the Haskalah were not particularly virulent, as well as the numerous stories of Ayzik-Meyer Dik [Isaac Meyer *Dick], which are a connecting link between the traditional didactic and ethical tales and the trends of the Haskalah. The real turning point, however, in the one-sided outlook of the Haskalah came in the works of Sh.Y. Abramovitsh.

SHOLEM YANKEV ABRAMOVITSH (MENDELE MOYKER-SFORIM). Abramovitsh's great talent and artistic power enabled him to rise above his original declared motives as an adherent of the Haskalah. Despite the pungent satirical elements which are especially apparent in his early works, he drew a complex and unbiased picture of a way of life and a gallery of characters of which he had previously disapproved. He was perhaps the first Yiddish Haskalah writer who ceased to attack Ḥasidism, and to describe the movement and its problems in his work. The Haskalah, in its beginnings and its later simplistic forms, concentrated on the internal struggle within Jewish society. The struggle was rooted in the naive expectation that the authorities in each country would support its aim of breaking down the barriers between the Jew and his environment in return for their readiness to give up specific Jewish characteristics. Abramovitsh marks a change in this attitude.

The allegorical *Di Klyatshe* ("The Nag," 1870) forms a turning point in Abramovitsh's writings. He was disappointed in his expectations of external support, as well as profoundly conscious of the uniqueness of the Jews, which he believed should be sustained. His view found expression in an active and comprehensive criticism of failings in Jewish society, which he already at that stage regarded as the outcome of conditions forced upon the Jews because of their status within a hostile Christian society. This attitude is one of the most characteristic elements of his later work and the reason why he rewrote earlier stories after the 1870s. He wanted to balance the grotesque, which was derived from the earlier satirical themes, with pathos and emotionalism. Despite the satire and the grotesque, his work is an unrivaled realistic reflection of a stable Jewish way of life which disintegrated with bewildering rapidity and whose very existence became problematic for his successors. His language and style were forged out of varied literary traditions and based on a combination of two basic dialects of the spoken language, northern and southern. They thus form a uniform literary language and are a turning point in Yiddish literature, one that led ultimately to modernization and integration with general literary trends. That change occurred in Abramovitsh's later years, and he neither participated in nor encouraged it.

The same factors that led to the change in his outlook and manner of writing also brought new trends of thought to the fore in East European Jewry, and, at the same time, new trends and elements in its literature. These can be seen in the poetry of Sh.*Frug, who moved from Russian to Yiddish. He introduced into Yiddish poetry both modern lyricism in nature poetry and an individual character. A poet of strong national feelings, he gave expression to modern national trends, Zionism, and the beginning of the labor movement. Toward the end of the 19th century, these became the main foci of activity among the intelligentsia within Jewish society and sparked its modern literature in Hebrew and Yiddish.

THE LABOR MOVEMENT. While modern Hebrew literature developed in the wake of Zionism, which was its principal spiritual mainstay, the ideological affinities of Yiddish literature were more complex. The founders and leaders of the Jewish labor movement, most of whom came from the intelligentsia, had adopted the co-territorial language. They soon realized the need to conduct their propaganda in Yiddish in order to disseminate their views more effectively. Before long, however, Yiddish became for the labor movement not merely an instrument but a cultural asset of national and intrinsic value, especially in its non-Zionist sections. Yiddish and its literature thus received from the labor movement an ideological background giving wide and dynamic public support which it had previously lacked, despite its development in Abramovitsh's time and sporadic declarations in its favor from the beginning of the 19th century (Y.Sh. Bik and Y.M. *Lifshits) which had been of scant practical value.

The adherence of the Jewish masses to the labor movement and its propaganda methods at the time, created a new trend in Yiddish literature which closely bound education with revolutionary propaganda. The writers of this trend expressed and emphasized the sufferings of the Jewish worker, both as worker and Jew, and summoned him to struggle against his exploiters within and without and to sacrifice himself for social, political, and national liberation. The Yiddish poetry of previous periods, which rarely succeeded in rising above the level of popular entertaining verse (e.g., Binyomin-Ze'ev Eyrenkrants [Benjamin (Wolf) *Ehrenkranz], M. *Gordon, Elyokum Tsunzer [E. *Tsunser] and to some extent, Avrom Goldfadn and Y. *Gordin) was now supplemented by a new poetry. Though still primitive in expression and limited in its imagery and symbolism – which were borrowed and adapted to the phraseology of the labor movement – it was inspired by a powerful faith and inner fervor. The most successful of this poetry was written in the U.S. as early as the 1890s by Moris Vintshevski [M. *Vinchevsky], Moris Roznfeld [M. *Rosenfeld], D. Edelshtat, and Y. *Bovshover; it also reached the labor movement in Eastern Europe and served it well.

While in the U.S. Yiddish poetry was largely dominated by social considerations and what remained of popular entertaining verse, the main feature of Yiddish prose was the straightforward description of the life of the immigrants, mingled with sentimental nostalgia for the lands of their origin (e.g., Z. *Libin). In theater, the struggle continued between the music hall and the beginnings of artistic drama (e.g., Y. *Gordin and L. *Kobrin). In Eastern Europe, on the other hand, the position was already more complex during the 1890s, which, up to World War I, was dominated by the ramified and highly influential work of Sholem-Aleykhem (*Sholem-Aleichem) and Y.L. Perets, who are rightly regarded, with Abramovitsh, as the classic authors of Yiddish literature.

Both Sholem-Aleykhem and Perets went through the growing pains of the Haskalah, but for both it was a passing phase at the beginning of their literary careers. Both of them – particularly Perets – sympathized with the rise of the Jewish labor movement while responding to the problems raised by other Jewish national movements. The distinctive feature of both authors, however, was their success in resisting the restraint of ideological trends that might have fettered their artistic freedom. Although both were involved with the sufferings and problems of their generation, each in his own way refused to surrender to the conventions, or to the demands and criticisms of politicians and critics who wanted to restrict the function of Yiddish literature to that of an instrument for education and the realization of social and political ends.

SHOLEM-ALEYKHEM. Although Sholem-Aleykhem (*Shalom Aleichem) was successful both in the novel and in drama, his great and unique talent was manifested mainly in the direct narratives of his various heroes: the monologues of Tevye der Milkhiker ("Tevye the Dairyman"), the letters of Menakhem-Mendl, the stories in the first person of Motl

Peysi dem Khazns ("Motl Peysi the Cantor's Son") and the short stories in which the narrator himself "disappears," and the flow of his heroes' voice is given free rein. His attitude toward the gallery of characters he created, personae that seem to have been taken directly from life, with all their sublime, crooked, and comic features, is one of tolerance, devoid of overt preaching or censure. Even in the tragic situations in which he often placed his characters, he did not lose the capacity to laugh and amuse, although he might have to do so in pain and sorrow. Sholem-Aleykhem's humor and the gripping situations depicted in his stories often obscure the more complex elements in his works, which led to criticism of him for flippancy and shallowness. The journalistic topicality, to which he sometimes gave way because of his newspaper work, became outdated. Sholem-Aleykhem himself realized this, and toward the end of his life he revised his works published over several decades, abridged them, and succeeded in raising his characters to the level of universal figures independent of their origins in time and place.

Menakhem-Mendl, as revised in 1910, is a condensed treatment of material, mainly topical, which had been written around this character since 1892. Sholem-Aleykhem's capacity for self-control, which is outstandingly displayed in this book, shows him as a great artist with a sober and highly developed critical sense. From the beginning of his literary career he did much to develop the literary taste of the Yiddish reading public in his struggle against vulgar popular books which were widespread at the time (though modern critics are far more appreciative of Shomer than Sholem-Aleykhem was in his vituperative *Shoymers Mishpet* ("Shomer's Trial," 1888), and in his editing and publication of the first literary collections in Yiddish (*Di Yidishe Folksbibliotek* / "The Jewish Popular Library, 1888/89). Sholem-Aleykhem's most important contribution, however, was his original literary work. It educated readers from all sectors of Jewish society and attracted them to Yiddish literature. He is still the most popular Jewish author, both in the original and in translation, though it is impossible fully to convey his rich, idiomatic, colorful, and variegated style in any language but Yiddish.

Y.L. PERETS. The work and significance of Sholem-Aleykhem's contemporary Y.L. Perets (I.L. *Peretz) are of a very different kind. Perets's literary heritage comprises poetry, drama, stories, and essays in both Hebrew and Yiddish. His most important contribution as an author consists of his short stories in both languages and his poetical plays in Yiddish. Drawing on folktales and ḥasidic stories, Perets created for himself and many of his successors new patterns in the Yiddish short story. He presented in a modern and artistic form the wealth of tales which had been current in the written and in the oral tradition in a primitive form without damaging their spirit and character. In his ḥasidic tales, Perets started the neo-ḥasidic trend in Yiddish and Hebrew literature, a trend which, in its various developments, has not yet ceased. None of his successors, however, has matched his capacity not only to pres-

ent the plot element in the stories faithfully, but also to give them a form appropriate to their source. Much in his stories expresses his own ideas and they contain significant layers of ambiguity, ambivalence, and paradox.

Perets's main work in the last ten years of his life was in the field of drama. The final versions of his last two plays, *Di Goldene Keyt* ("The Golden Chain," 1911/12) and *Bay Nakht Oyfn Altn Mark* ("At Night in the Old Market Place," 1914/15), which are among his most important works, reveal despair and disappointment at the solutions presented to the modern Jew by the ideologies of his day. In this mainly pessimistic view of life, the only spark of hope Perets sees is in the return to the traditional ways of Judaism, but even this possibility is presented together with a clear and penetrating perception of the destructive forces working against it. Perets was the only Yiddish author before World War I who dared to undertake such a trenchant self-examination. Although they were based on a neo-Romantic style and symbolism, his plays, especially *Bay Nakht Oyfn Altn Mark*, came close to expressionism, which found its way into Yiddish poetry after his death.

Unlike Abramovitsh and Sholem-Aleykhem, Perets had an affinity for modern trends in general world literature, especially Polish neo-Romanticism. He always succeeded, however, in preserving the Jewish character in his work, and drew his themes from Jewish cultural and traditional sources. He was admired by many of his contemporaries, who began to write under his inspiration and his guidance and in the course of time continued, each in his own way, to expand and deepen the modern elements in Yiddish literature, while constantly wrestling with the problems of their own society (e.g., D. *Pinski, Sh. *Asch, Y.M. *Vaysnberg, A. Reyzn (*Reisen), H.-D. *Nomberg, M. Boreyshe, Y.Y. *Trunk, and many others). Despite differences of opinion in the evaluation of Perets as writer and teacher, he is still a point of departure and a model for Yiddish writers of various camps. Authors like Kh.N. Byalik [*Bialik], Y. Shteynberg [*Steinberg], and S.Y. *Agnon, whose main work was in Hebrew, also wrote in Yiddish, parallel with and in continuation of the tradition of Abramovitsh and Perets.

Several processes vital for the future development of Yiddish literature reached their peak in 1908. A conference in support of Yiddish took place in Czernowitz; a literary journal called *Literarishe Monatshriftn* ("Literary Monthly") appeared in Vilna; and *Di Yugend* ("Youth"), the first organ of a group called Di Yunge ("The Young Ones"), appeared in New York. The aim of the two periodicals was to renew Yiddish literature along the lines of European symbolism.

The *Czernowitz conference had the important effect of increasing confidence, self-respect, and a consciousness of the status of Yiddish literature as a modern literature among authors and readers. At the same time, however, following the attempt of several extremists to have Yiddish (as opposed to Hebrew) proclaimed as *the* national language of the Jews, the conference intensified the rift between the two literatures of the one people, which, until then, had been used together

by most Ashkenazi authors. Furthermore, in certain situations – among Yiddish authors adherent to the non-Zionist labor movement and in the Soviet Union after the revolution – these extremist views led to a deliberate denial of Jewry's vital sources and subsequently to a simplified evaluation of the traditional cultural heritage. This linguistic strife has left its marks, though its extremism has abated since World War II.

A number of young writers centered around the two above-mentioned periodicals with the declared purpose of severing Yiddish literature from its commonly accepted mission of raising the cultural level of the masses and providing them with material for edification and entertainment. Under the influence of contemporary trends in world literature, as well as disappointment with social and national ideologies, they demanded the recognition of the rights of Yiddish literature as an independent artistic domain. Some of the younger writers in the U.S., who were themselves recent immigrants from Eastern Europe, also demanded the integration of Yiddish literature and authors in their new home, with all that this implied in adaptation to the new landscape and the speedier rhythms of life in prose and verse. Individualism, aestheticism, pessimism, eroticism, the development of new verse forms, and a new sensibility to life are among the distinguishing characteristics of the young writers associated with these periodicals and of the broad literary periphery that came under their influence without actually joining their groups.

Until the end of World War I, this trend produced many poets in various countries who reinvigorated Jewish poetry with new images and new meters, expanded the range of its subject matter, and wrote lyric poems on a standard not below that of other contemporary literatures. D. Aynhorn (*Einhorn), L. *Naidus, Sh.-Y. *Imber, *Mani-Leyb, I.J. *Shvarts, M.L. *Halpern, H. Leyvik (*Leivick), A. *Margolin, D. Hofshteyn (*Hofstein), Z. Landoy (*Landau), R. Ayzland (*Iceland) – each having an individual poetical style – are a few of the poets in the flood of modern Yiddish poetry which reached its full strength only after World War I. At the same time, Yiddish prose underwent a significant change. The impressionistic style of D. *Bergelson and L.*Shapiro, the symbolist tales (based on the Jewish narrative tradition) of Der *Nister and D. *Ignatoff, the deep-rooted vitality of J. *Opatoshu, the new American scene in the stories of A. *Raboy, all contribute to the modernization process. The plays of Sholem *Ash and Perets Hirshbeyn [*Hirschbein], which laid the foundations for an artistic repertoire in the Yiddish theater, also belonged to the new developments of this period.

Most of the authors who started on symbolist lines in deliberate opposition to the subordination of literature to social ideologies did not generally remain faithful to the literary doctrines which they adopted. In the course of time they found their way to themselves and their environment and helped develop the special character of modern Yiddish literature. They remained alive to the problems of the generation which was struggling under the burden of internal conflicts affecting them as Jews and as inhabitants of the modern world. Per-

ets had expressed doubts in his first Yiddish work (Monish, 1888) as to whether the Yiddish language had the capacity to express sublimity and subtlety, the abstract and the spiritual, or whether it was limited to describing in concrete terms the Jewish way of life and the idiomatic pungency of popular speech. These apprehensions disappeared entirely at the time of World War I and were replaced among Yiddish authors by a confidence in the capacity of the language to prove itself in any field of artistic and literary expression.

After World War I

The three decades following the outbreak of World War I were highly dramatic for the history of modern Yiddish literature. These years saw World War I, the revolutions and pogroms in Russia, migrations and changes of regime, World War II, and, above all, the Nazi Holocaust, which brought East European Jewry, almost the only source for Yiddish authors, to the brink of extinction. These events were the background for transformations in the development of Yiddish literature, which itself directly expressed all facets of the tumultuous period. The continual spread of Yiddish literature and the increased importance of its centers overseas extended its horizons.

At the same time, especially after the Holocaust, emigrant authors were torn between their emotional attachment to the ruined lands of their origin and their aspiration to be integrated in their new homes and establish a new generation of authors there. Before World War I, Yiddish literature was basically bilingual; many authors wrote in both Yiddish and Hebrew and many readers understood both languages. After the death of Perets (1915), Sholem-Aleykhem (1916), and Abramovitsh (1917), this close bond was severed, and no successor arose with the influence and prestige able to bridge the gap. Despite the great tension throughout the period in all centers of Yiddish literature and the constant and drastic decline in the number of readers, the stock of authors and literary output increased. There were important artistic achievements, new depths were plumbed and new literary territory was conquered.

POETRY. While prose dominated Yiddish literature before World War I, in the postwar period it met with competition from poetry. Expressionistic and other verse tendencies showed themselves immediately after World War I along parallel lines in the three main centers of Yiddish literature: the Soviet Union, Poland, and the U.S. Despite differences in temperament and direct reference to the places where it was written, the poetry possessed a common linguistic medium and cultural background. The poets whose works filled *Eygns* (1918, 1920) in Kiev, *Shtrom* (1922–24) in Moscow, *Yung-Yidish* (1919) in Lodz, *Khalyastre* in Warsaw (1922) and Paris (1924), *Albatros* in Warsaw (1922) and Berlin (1923), *In Zikh* (1920–39) in New York, and similar periodicals elsewhere, sought new forms of poetical expression to convey new experiences. The younger generation of poets had endured the ravages of World War I and the revolutions and pogroms in Eastern Europe. Urbanization for them had become inevi-

table. Their basic attitudes and religious beliefs, which had previously begun to crumble, now seemed to be completely shattered. The strong feeling that these traumas could not be given adequate poetic expression with the means previously regarded as acceptable in Yiddish poetry gave rise to the new poetry, with its free rhythms, which broke the bonds of the conventional, constricting metrical forms and challenged all the conventions of society, Jewish tradition, and the entire self-destructive human race.

At the same time, this verse was saturated with contradictions. Despair and anger, oaths and imprecations, unbelief and deliberate obscurity, eroticism bordering on pornography and exhibitionism, and reverence for vitality and all-conquering technology, which are outstanding features in the work of most of these poets, patterned one side of the coin; the obverse revealed lyrical sensitivity, a readiness – even a yearning – for new solutions, and a nostalgia for the "antiquated" ways of life. This poetry gave voice to the fear of loneliness in the oppressive and overwhelming big city which crushes personality and offers no security. It differed from contemporary non-Jewish work, which is similar in its main tendencies, by close attention to specifically Jewish images and associations drawn from the resources of a Jewish tradition which was visibly breaking up.

One outstanding expression of this poetry of contradictions and inner conflicts was the work of Perets *Markish. In one and the same period, Markish wrote *Volin* ("Volyn," 1939), an idyllic poem of nostalgia for the region of his birth and its Jews, *Di Kupe* ("The Heap," 1921), a poem full of anger, profanity, and unbelief, written as a reaction to the pogroms in the Ukraine, as well as urbanistic poetry packed with new and bold imagery, with a new poetic rhythm, as in the Warsaw collection *Radio* (1922) and in his Paris poems (1922–23). Dating from the same period are his sonnet cycle *Fun der Heym* ("From Home," 1922–24) and *Zkeynes* ("Old Women," 1926), restrained works revealing great epic skill in the closed metrical structure of which this representative of Jewish expressionism was particularly fond.

Among those who belonged to these trends were the introspective poets who founded the *In Zikh* group: A. *Glants-Leyeles, Yankev Glatshteyn [Jacob *Glatstein], and N.-B. *Minkoff in New York; the expressionists U.-Tsvi *Grinberg, M. *Ravitsh, M. *Broderzon, and M. *Kulbak in Poland; and L. *Kvitko, D. *Hofshtein, A. *Kushnirov, and E. *Fininberg in the Soviet Union. They were joined by poets who identified themselves wholly or partially with the new poetic current. As the first impulse died down in the 1920s, the expressionistic tenor grew less extreme, but it left traces on the whole of Yiddish poetry.

THE SOVIET UNION. The desire for solutions, for identification, and for belonging led many of the poets of this generation to the belief that the Soviet Revolution could solve both the social and the national problems of humanity. Most of the Jewish writers in the Soviet Union – including those who left it after the Revolution and returned a few years later – as well as many in Poland, Romania, the U.S., and other centers of Jewish literature, attached great hopes to the Soviet regime. They believed in the continued development of a secular Jewish culture in Yiddish, which took the form in the U.S.S.R. of a school network with Yiddish as the language of instruction, research institutes, theaters, and ramified publishing activity, established with governmental and public finance during the 1920s. As early as the 1930s, however, these expectations were disappointed with the decline and contraction of this cultural activity which, it had been hoped, was to serve as a firm basis for the development of Yiddish literature. Even worse was the constant ideological pressure which was exerted on Yiddish literature, as on other national literatures in that country, because of the Communist Party's desire to transform literature into a propaganda medium and its demand for loyalty to the constantly changing political line, including the struggle against "deviations" which mostly were regarded as "nationalist" and "chauvinist." Yiddish writing and cultural institutions were also impoverished by their forced severance from Hebrew language and literature, from the Jewish past, and even from contemporary Yiddish culture and literature in other countries (unless their content was completely identified with the Soviet regime).

Ideological pressures and incarceration behind the frontiers of the Soviet Union not only limited the opportunities of Yiddish literature but, in practice, annulled some of its great achievements for the sake of a programmatic, declarative, unambiguous, shallow poetry and a prose obedient to the "principles" of socialist realism. Yiddish literature was also affected by the arrest and liquidation of some of its most important writers who had lived and worked in most of the geographical areas from which modern Yiddish literature had emerged. Among those who disappeared or were silenced even as early as the 1930s was the lyricist Izi *Kharik, although he was faithful to the revolution. Moyshe *Kulbak was distinguished not only for his poetry but also for his modernistic prose and drama while he still lived in Poland (until 1928). Kulbak completed and published in the Soviet Union his novel *Zelmenyaner* (1: 1931, 2: 1935) – one of the most original works in Soviet Yiddish prose and the only one with topical, satirical, and grotesque elements.

After a brief lull at the end of the 1930s and the comparative freedom of expression which reigned during World War II, in the course of which Yiddish authors were permitted to express their emotions at the catastrophe which was destroying millions of their people, all remnants of Yiddish cultural activity were suppressed in the Soviet Union by the end of 1948. Most of the Yiddish authors were imprisoned and accused of anti-Soviet and Jewish "nationalist" activity. On August 12, 1952, the most important Yiddish authors were executed. Among the victims during those years were: Perets Markish, whose extensive literary heritage included poems giving powerful expression to sincere and sublime social and national feelings, side by side with expressive lyrical verse,

and who managed before his arrest to embody his lament for the Holocaust of World War II in wide-ranging epic verse in his book *Milkhome* ("War," 1948); D. Hofshteyn (*Hofstein), one of the most important lyric poets; L. *Kvitko, a poet who expressed himself in a most original manner in the 1920s and was later distinguished for his children's verse; I. *Fefer, one of the leading representatives of the ideological tendencies of Soviet Yiddish poetry; D. *Bergelson, the former impressionist, a talented novelist and short story writer. Another victim of the first rank was Pinkhes Kahanovitsh, known by his curious pseudonym Der *Nister ("Hidden One"), outstanding until 1929 for his original symbolist stories, who, after seeking new paths that would placate Soviet criticism, started writing his novel *Di Mishpokhe Mashber* ("The Mashber Family," vol. 1 (Moscow, 1939; New York. 1943); vol. 2 (New York, 1948)); he managed to publish two volumes of this extensive, quasi-realistic epic, in which he diagnosed the disintegration of late 19th-century East European Jewish society. Among the victims of the last liquidation was the lyric poet and talented dramatist, Shmuel *Halkin, who came out of prison a sick man and died a few years after his release.

POLAND. Poland, with its periphery in Romania in the south and Lithuania in the north, was the main center of Yiddish literature in this period. Independent and vital, it was the main source from which Yiddish literature overseas could draw after World War I. Most characteristic of the literary center in Poland is the natural growth of Yiddish literature in its Jewish community that, with its long history and tradition, still largely preserved its Jewish character. Even among those social circles in Polish Jewry which abandoned the tradition of their fathers in its religious manifestations, there were sincere efforts to find ways of ensuring the continued survival of the new Jew. For a considerable part of the community and its authors, the very existence of a modern Yiddish literature expressed an attachment to tradition which had assumed a new form in their time. In Poland, Yiddish folklore lived in all its forms. The popular literature of previous generations, both religious and secular, was alive, and new works of the same type were born. Under the aegis of this cultural continuity, the new literature in Yiddish became a vital community asset and was regarded as worthy of admiration and subject for lively discussion. Despite the natural antagonisms between generations, differences in taste and attitude, parents and children in Poland still sat together to read Yiddish literature.

Yiddish literature in Poland was characterized by a rich variety of ideological, political and literary trends, temperaments and forms of expression during the brief period that preceded the destruction of Polish Jewry. The novelists and short-story writers whose careers started before World War I – H.D. *Nomberg, Z. *Segalovitsh, I.J. Trunk, Y.M. Vaysnberg, and others – continued to write, and they were joined by a younger generation – M. Burshteyn, Y. Grin, Sh. *Horontchik, E. *Kaganowski, I.J. *Singer and his brother Y. *Bashevis-Singer, A. Katsizne [*Kacyzne], L. Olitsky, Y. *Perle, L.

*Rashkin, Y. *Rabon, Y. *Warshavsky, M. Altman in Romania, Y. Kaplan in Lithuania, and others. Their prose was realistic, with strong tendencies to naturalism. Their trials and tribulations as Jews were almost their principal subject.

Yiddish poets appeared in all parts of Poland: Z. Bagish, Y. *Emiot (Goldwasser), B. *Heller, M. Knapheys, L. Kenigsberg (*Koenigsberg), Y. Kirman, K. Lis, K. *Molodowsky, L. Morgentay, B.L. and M. *Olitsky; Y. *Rubinshtein, S. *Shayevitsh, Kh. Semyatitski [*Siemiatycki], M. Shulsteyn, Y. *Shtern, M. Ulyanover [*Ulianover], S. Zaromb, A. Tseytlin [*Zeitlin], and others. Distinctive tones were added by poets from Galicia, Romania, and Bessarabia: Y. Ashndorf [*Ashendorf], L. Bartish, N. *Bomze, Ade [Ada] Cohen, M. Gebirtig, Y. Groper, B. Horovits [*Horowitz], R. Zhikhlinski [*Zychlinska], M. Karats, Y.Y. Lerner, D. Fogel, Y. Gotlib [J. *Gottlieb], R.*Korn, M. Saktsier, Y. Shudrick, Y. Shternberg [J. *Sternberg], M. Shiml, B. Shnaper [*Schnapper], and from Lithuania, N. Dimantshteyn. The *Yung Vilna* group, which was formed in the 1930s included H. Glik [*Glick], Ch. *Grade, S. *Kaczerginsky, A Sutskever [*Sutzkever], E. Vogler, L. Volf [*Wolf], and others. These (and other) poets represent a broad spectrum of poetical work on a high standard, from the simple, lively poem to intellectual poetry in search of meaning, trenchant in its images and personal symbols, and characterized by great skill in composition and linguistic innovation.

It is difficult to evaluate the achievements of this flood of creative activity, especially as many of the writers fell victim to the Holocaust in their youth before reaching the age at which they would likely have published their best work and before collecting in book form work scattered in periodicals. Others perished before they had developed their talents to the full. Nevertheless, mention should be made of several points specific to Yiddish literature in Poland and the neighboring countries between the two world wars, particularly of new departures created against the background of the cultural continuity from which they sprang.

The great Yiddish lyric poet Itsik *Manger came to Poland from Romania and during his Polish period wrote his major works, *Medresh Itsik: Khumesh-Lider* ("Itsik's Midrash: Pentateuch Poems," Warsaw, 1935) and *Megile-Lider* ("Scroll Songs," Warsaw, 1936), which constitute a continuation of the tradition of poetical adaptations from the Scriptures. The main novelty of these poems is the transference of the biblical characters, together with their actions, to the neighborhood, milieu, conceptions, and idiomatic – often regional – language of the East European Jews. Manger's *Medresh*, in a simple meter close to that of the folk song, is full of humor and rich in imagination, charming with its graceful and melancholy strains. M. Ulyanover, who perished in the Lodz ghetto, wrote modern poems in the tradition of the *Tkhine* and of traditional religious poetry: *Mayn Bobes Oytser* ("My Grandmother's Treasure," Warsaw, 1922).

E. Shtaynbarg [*Steinberg] in Romania cultivated the fable in Yiddish and achieved a high level of virtuosity in this traditional literary genre that he based on the Jewish milieu

and its deeply rooted cultural traditions. A. Tseytlin, who fought against the expressionists, though he too shared similar tendencies, found in Jewish mysticism sources of inspiration for his poetry and plays. The poetry of Y. Shtern [I.*Shtern], who was associated with the expressionists, is imbued with a pantheistic sensitivity and a longing for religious faith based on an emotional attachment to the teachings of R. *Naḥman of Bratslav. Kh. Grade, in his poem "Musernikes" ("Moralists," 1939), brought to Yiddish literature the world of the seminary students and the traditional scholarship of the *Misnagdim*, who until then had received only marginal attention in Yiddish. Y. Bashevis-Singer found in *Der Sotn fun Goray* ("Satan in Goray," 1932) new solutions in the consolidation and stylization of popular narrative literature. Tseytlin, Manger, and Sutskever also ventured at stylized adaptations of the language and forms of pre-18th century Yiddish poetry. This introversion and deliberate return to earlier literary traditions was a new trend in Yiddish literature, one not fully realized before the Holocaust, which destroyed the communities that gave birth to the Yiddish works in which the tendency was so clearly marked.

There was a wide range of writing in the ghettos of World War II where many authors were incarcerated. Only a small part of the work of the writers killed by the Nazis has survived, having been saved with great devotion and almost by miracle. Among those are the prose fragments by Y. Perle (Warsaw ghetto), stories by Y. *Shpigl (Lodz ghetto), the poems of S. Shayevitsh (Lodz ghetto), a few poems by M. Gebirtig (Cracow ghetto), Hershele Danilevits (Warsaw ghetto), and H. Glik (Vilna ghetto). Above all, the songs and poems, biblical plays, and diary of Yitskhok Katsenelson, who continued the tradition of writing in Hebrew and Yiddish both in the Warsaw ghetto at the brink of death and in the Vittel camp, are an authentic testimony from the valley of death, standing beyond any mere literary evaluation. Ghetto literature found its most agonizing expression in Katzenelson's great lament "Dos Lid fun Oysgehargetn Yidishn Folk" ("The Song of the Murdered Jewish People") which was completed in the concentration camp at the beginning of 1944, in full and appalling knowledge of the destruction of Polish Jewry.

A few writers, like A. Sutskever, R. Briks, and Y. Shpigl – who personally witnessed the destruction of their people, but survived – embody in their work from the ghetto period and the years following the liberation (which is also overshadowed by the Holocaust) the continuity and endurance of Yiddish literature in the face of the extinction which overcame its most vital center, Polish Jewry.

THE UNITED STATES. The most important branch of Yiddish literature outside Eastern Europe between the two world wars was in the United States, especially in New York, where the leading Yiddish writers outside Eastern Europe were concentrated. The literary traditions of the 1890s were represented by older dramatists and novelists like D. *Pinski, O. *Dimov, and A. *Reisen, the poet and short-story writer; the members of the *Di Yunge* group, most of whom had abandoned the symbolist outlook after World War I, continued to write; for many years the founders of the *In Zikh* group and their associates maintained their contacts and in 1929 the *Proletpen* organization, which for a short time united the authors of the communist camp, was established. From time to time other sporadic groupings of writers with similar literary, social, and political outlooks arose, but they did not persevere even in maintaining joint periodicals. These external manifestations, however, which are sometimes regarded as a sign of the vitality of Yiddish literature in the U.S., are of secondary importance in comparison with the great achievements of the writers themselves.

In American Yiddish poetry of this period we find the rich lyricism and longings for redemption in the poetic and visionary dramas of H. Leyvik [*Leivick]; the imaginative poetry of M.-L. *Halpern, A. *Glanz-Leyeles, and Y. Glatshteyn [*Glatstein], with its variety of conflicts; the profound enquiry into personal and national problems in the poetry of M. Boreyshe [*Boraisha], with its broad epic scope; the identification with the landscapes of the U.S. in the narrative and idyllic poetry of Y.Y. Shvarts [I.J.*Schwartz]. We must take into account the poetry of E. Oyerbakh [*Auerbach], B. Alkvit, B.Y. Byalostotski [B.J. *Bialostotzky], A. Berger, A.-M. Dilon [*Dillon], Ts. Drapkin [C. *Dropkin], R. Ayzland [*Iceland], L. Faynberg [*Feinberg], Al. Guria (G. Grafshteyn), H. Gold, E. Grinberg [*Greenberg], Y. Heshels, M. Yofe, A. *Katz, Y. Kisin, B. Kopshteyn, H. Kuperman, Z. Landoy [*Landau], B. *Lapin, R. Ludvig [*Ludwig], A. Lutski [*Lutzki], A. Lyesin [*Liessin], *Mani-Leib, A. *Margolin, L. Miler [*Miller], N.B. Minkof [*Minkoff], M. *Nadir, A. Nisenson [*Nissenson], G. Prayl [*Preil], H. Rosenblat [*Rosenblatt], Y.[J.] *Rolnik, S. *Shvarts, Y.Y. Segal, E. Shumyatsher [*Shumiatcher], A. Stoltsnberg, F. Shtock, A.B. Tabatshnik [*Tabachnik], A. Tverski, Y. Teler [I. *Teller], M.Z. Tkatsh [*Tkatch], R. Veprinski, Z. Vayner [Weiner], B. Vaynshteyn [*Weinstein], Y.A. Vaysman, Yehoyesh (*Yehoash), N. *Yud, and many others, the clear personal imprint of whose work distinguishes most of them and places Yiddish poetry in the U.S., especially its great lyrical works, above and beyond the limitations of any literary or ideological school with which they may have identified at any particular time. Yiddish writing in the U.S. also excelled in the novel and the short story: the historical novels and tales of Y.[J.] *Opatoshu; the wide-ranging fiction of the immensely popular and much translated Sh. Ash [*Asch]; the great descriptive powers of Z. Shneyer [Shneur] and Y.Y. Zinger [I.J. *Singer]; the stylized prose of L. *Shapiro; and the works of D. *Ignatoff, M.D. Aplboym [Appelbaum], F. Bimko, B. Glazman, B.*Demblin, N. Brusilov, S. Miler [*Miller] and Y. Roznfeld [J. *Rosenfeld]. Notable, too, is the prose of the distinguished poet Y. Glatshteyn [J. *Glatstein].

While the main external influences on Yiddish literature in other centers had been European – especially that of modern literature in the Slavic countries – in the U.S. these were supplemented by "Anglo-Saxon" influences. The U.S. scene, the

great city as an intensive poetic experience, and, in prose, the Americanization of the immigrants – both mainly against the background of New York – are also distinctive features of this period in U.S. Yiddish literature. At the same time, all these local elements were strongly affected by traditional influences and by the problems and tendencies of Yiddish literature in Eastern Europe. The same applied to other centers of immigration nurtured by further waves of immigrant writers and readers. The writers who came from Eastern Europe, who established and still maintain Yiddish literature in its dispersions, did not have the satisfaction – with few isolated and insignificant exceptions – of witnessing the growth of a new generation of Yiddish authors and readers among the native-born children of the immigrants. As a result of the movement of the immigrants and the inability to establish a new generation of readers and writers, Yiddish literature in the U.S. and other overseas countries has continued to be dependent on the countries of its origins. A fervent desire to strike deeper roots in the new centers and important literary achievements which testify to the partial attainment of this aim have not altered this fact.

This problem has been even more obvious since World War II and the destruction of East European Jewry. The authors feel a growing bond with the vanished communities in which they were born – a need to grasp the full meaning of all that was involved in the old Jewry of Europe and erect a monument to its memory, or a desire to find a direct expression for the events themselves. Hence there has again been an increase in the proportion of prose, in the form of numerous books dealing with memories of the past, as well as novels and stories with an obvious autobiographical element. With all the differences in style and narrative skill in this memoiristic literature, there is a palpable effort to remain simple, eschewing novelty or surprise in structure or in narrative point of view beyond the unconcealed "I" of the author or the anonymous narrator whose identity is clear. Parallel with this tendency in prose is a similar tendency in poetry to forego experimentation or innovation and to return to closed metrical forms. This verse also deepens and fully exploits the linguistic and stylistic resources and the mainly traditional imagery which had been mastered by modernistic Yiddish poetry from the beginning of the 20th century.

The works of the authors who reached the U.S. from Poland immediately before, during, or after the war period and who followed these tendencies, mark the most important achievements of this literary center. Paramount among them are the autobiographical epic *Poyln* (7 vols., 1944–57) by Y.Y. [I.J.] Trunk, which sums up, with reverence and nostalgia, the life of the last generations in Polish Jewry. The narrative is also a stylized retelling of the folk literature in which the memory of the Holocaust is a dominant theme. The prose and narrative poetry of Kh.[Ch.] Grade perpetuates the memory of his home city, Vilna, with its many strata and internal conflicts, its spiritual greatness and material poverty. The novels and stories of Y. Bashevis (Isaac *Bashevis Singer) have revealed

a new Polish Jewry, one in the grip of lusts and superstitions, together with its inner light and messianic yearnings.

Branches of Yiddish literature multiplied in all the countries to which Jews emigrated from Eastern Europe. Centers such as Berlin and Vienna in the 1920s, or Germany, Austria, and Italy after World War II were clearly transitory from the beginning and disappeared after a few years. Other branches in Europe, in Canada, Latin America (Argentina in particular), South Africa, and Australia, though much shrunken, still exist. The above-mentioned problems of Yiddish literature apply to countries of immigration as well, perhaps even more markedly than to the U.S.; their achievements, especially after World War II, are largely the work of refugee authors from Central or Eastern Europe.

PALESTINE / ISRAEL. Even though Hebrew was the sole recognized language in the resettlement of Palestine, a branch of Yiddish literature was established there quite early. Yiddish writing in the Ashkenazi community in Palestine dates back at least to the 16th century in the form of letters preserved in the Cairo *Geniza*. There were special works in Yiddish in the 17th and 18th centuries describing Erets-Yisroel (*Geliles Erets-Yisroel* [Galilot Erets-Yisrael], "Districts of the Land of Israel," 1635; *Yedey Moyshe* [Yedey Moshe], "The Hands of Moses," 1769), which were followed, at the beginning of the 20th century, by travelogues of Erets-Yisroel by Sh. Ash [Asch] and Yehoyesh [Yehoash] The first signs of writing in Yiddish for its inhabitants in modern times, however, may be seen in the appearance of the periodical *Di Roze* (1877). This and other periodicals that succeeded it, as well as the few books and brochures of various ideological leanings that were published in the country up to World War I do not form links in a continuing chain. It is only after World War I that there emerged in Palestine a group of authors who devoted themselves to Yiddish. They adhered generally to the labor movement and tried, despite the vigorous antagonism to Yiddish among the majority of the new Jewish community, to maintain a distinctive literary movement through a series of literary periodicals and the publication of books by local Yiddish authors. While this activity was long marginal in relation to the major centers of Yiddish literature in Eastern Europe and the U.S., Yiddish creative activity steadily grew after World War II and the establishment of the State of Israel and *changes in the status and importance of this new center became visibl*e.

It is natural that Yiddish literature in Israel should be more closely attached to the recent past in Eastern Europe than contemporary Hebrew writing, which has already produced several generations of authors who, born and bred in the country, have lost contact with their parents' milieu and traditions. At the same time, Yiddish literature in Israel has developed a new and immediate tie with the new homeland, nourished by and based on former traditions in Jewish culture. The landscape and rebuilding of the country served as the central element in the work of Y.[J.] *Papiernikov]. The most veteran of these poets, he had been writing in the coun-

try since the 1920s. The efforts of the *khalutsim* ("pioneers") and life in the *kibbutz* ("collective settlement") have found original expression in the poems of A. *Shamri and A *Lev. New dimensions in the attachment to the Land of Israel as the momentous realization of the resurrection of the generation which directly experienced the Holocaust appear in the post-1947 poems of A. Sutskever. This feeling is characteristic not only of Yiddish literature written within the State of Israel, but is also a prominent theme in the works of many Yiddish writers who, having visited the country, write about it from abroad.

From the 1940s, a varied group of authors lived in cities and kibbutzim in Israel. Among them were: R. *Basman, Y. Birshteyn, H. *Binyomin, S. Berlinski, T. Ayznman, M. Gorin, Y. *Hofer, B. Heler [*Heller], M. *Yungman, L. Olitski [*Olitzky], R. Potash, R. Fishman, A.-M. Fuks [*Fuchs], Ka-Tsetnik [*Ka-Zetnik] (Dinur), Y. Kaplan, A. *Karpinovitsh, M. Mali, M. Man [Mann], Y. Mastboym [J. *Mastbaum], L. Rokhman [*Rochman], Hadase [Hadassah] *Rubin, A. Ribes, Y. Stol, S. Shenhud, A. *Shpiglblat [Spiegelblatt], S. Vorzoger. In 1971 they were joined by poets who came from the U.S.S.R. – R. Boymvol, Y. *Kerler, and Z. Telesin. Though younger on the average than in other centers, at the turn of the century most of the above-named were no longer among the living and the youngest were well into their seventies.

The 1970s and After

For more than a decade after the "liquidations," no original Yiddish works were published in the Soviet Union, but between 1959 and 1970 a few dozen books were issued; from 1961, the literary periodical *Sovetish *Heymland* appeared in Moscow. Despite the obvious talent of some of the contributors to this periodical who survived the "liquidations," there does not seem to be a single writer among them of the stature of their masters and colleagues who met their death during Stalin's last years. *Sovetish Heymland* ceased to appear in 1991 but was soon followed by *Di Yidishe Gas*, also edited by Aaron *Vergelis (1993–97). Morally discredited by many in the Yiddish world, Vergelis continues to have his defenders who see him as an outstanding if difficult and complex personality who made extreme compromises to keep Yiddish writing alive in the Soviet Union.

A small group of writers held their ground in Poland after the Holocaust and continued to bring out a few publications. There too, however, with its small Jewish community, Yiddish literature was a rootless remnant of the pre-Holocaust period and was, to all intents and purposes, completely destroyed in the wave of antisemitism inspired by the Polish government after the Six-Day War. Dozens of authors from Poland and Romania succeeded in leaving these lands during the late 1960s. They reinforced the overseas branches as a continuation of the postwar stream of emigration. However, the Holocaust and the liquidation of Jewish culture in the Soviet Union at the end of 1948, following upon the closing of Russia's gates from the 1920s to the 1970s, blocked the poten-

tial human and cultural resources from Eastern Europe which have been almost solely responsible for maintaining the new branches. While in the beginning of the 19th century Yiddish literature was transferred from Western to Eastern Europe, its main centers today remain the U.S. and Israel, reinvigorated as in past decades by East European emigrants who had preserved their connections to Yiddish language and literature. Yiddish letters in the early 21st century are still being fed by the influx to Israel during the 1970s of Yiddish writers from Eastern Europe.

[Chone Smeruk / Leonard Prager (2nd ed.)]

While much of the world tended to forget about or simply ignore the Holocaust for many decades following World War II, the subject continued to be (or became) a primary focus for Yiddish writers everywhere, who have in the ensuing decades produced documentary evidence, memoirs, reports, diaries, fiction, poetry, and other writings directly or indirectly related to the Holocaust. As a result, no serious and comprehensive research on the Holocaust may avoid a profound engagement with this massive corpus of Yiddish-language material now available in published form or in archives.

The dedication of the Leyvik House in Tel Aviv in 1971 by the Israeli prime minister, Golda *Meir (a Yiddish-speaking immigrant from the U.S.), held out the hope of a united Yiddish international community transcending old ideological blinkers. But these blinkers were still in place when Israel's leading Yiddish poet Avrom Sutskever in greeting the World Conference for Yiddish in Jerusalem in 1976 expressed the hope on the opening page of *Di Goldene Keyt* (vol. 90 (1976)) "az tsuzamen mitn tkhies-hameysim funem folk un zayn tate-loshn, vet oykh oyfgeyn in fuler prakht, vi a regn-boygn nokh a regn fun trern-zayn mame-loshn" ("that together with the rebirth of our people and its father-tongue, will also rise in its full splendor, like a rainbow after a rain of tears – its mother-tongue"). Expressions such as these brought tears to the eyes of many, but momentous changes were not to follow.

Nonetheless, all three Yiddish publishers in Tel Aviv – Perets, Hamenora, Yidish Bukh – were active; Yiddish writers from the Diaspora continued to settle in Israel; and Yiddish found a warm home at the Hebrew University where Dov *Sadan and Chone *Shmeruk and their students were changing the face of Yiddish studies, in league with the Columbia University disciples of father-and-son, Max and Uriel *Weinreich and their students at leading universities the world over. This academization has continued and has prospered, but in August 2005 at the 14th World Congress of Jewish Studies in Jerusalem, Israeli Yiddish scholars were barely a quorum among the 1,200 participants. On the other hand, while aware of their small numbers, they knew, too, that they represented a recognized and valued discipline in the larger Judaica Studies universe.

With the influx of established Yiddish writers from Eastern Europe throughout the 1970s, Israel replaced the U.S. as the center of Yiddish literary creativity. The integration of

these writers into the new environment is reflected in their increasing use of Israeli themes. The earlier writers preferred to settle in the Tel Aviv area, where the three major Yiddish publishing firms were situated, and where the most prestigious Yiddish literary organ, the quarterly *Di *Goldene Keyt* ("The Golden Chain"), was published (1949–95). But in the 1970s writers from Eastern Europe began settling in Jerusalem, making it an ever-growing focal point of Yiddish literary activity.

Yerushalaimer Almanakh ("Jerusalem Almanac"), founded in 1973 as the organ of the Jerusalem Yiddish Writers' Association by Yoysef *Kerler (ed.-in-chief, 1973–98), with co-editors David *Sfard (1974–82) and Efroyim Shidletski (1982–92), continued to expand from year to year. The founding editor's son, Yiddish poet and scholar Dov-Ber Kerler (co-editor, 1993–98, and current editor), edited vol. 27 (2003). Twenty-seven substantial volumes in 30 years under conditions of uncertain funding is no small achievement. The 27th volume was issued in partnership with Vilna University's Vilnius Yiddish Institute and the Yung-Yidish ("Young-Yiddish") Center in Jerusalem, both financially vulnerable institutions. However, perusal of the list of contributors to the last issue yields enough names of younger writers to assure that at least for another decade or two there will be no shortage of Yiddish-writing authors. The older readership, of course, continues to decline and the recruitment of a generation of young readers is slow and uncertain.

In 1977 the Yiddish Cultural Association in Jerusalem established the Hurvits Prize for the publication of Yiddish manuscripts by new immigrants. The first work chosen was Meyer Yelin's *Blut un Vofn* ("Blood and Weapons," 1978), sketches and short stories based on the author's experiences and observations in the Kovno ghetto, continuing in the spirit of his earlier volume of short stories, *Der Prays fun Yenem Broyt* ("The Price of That Bread," 1977). His was a fairly typical case of a Soviet writer who emigrated to Israel, became acclimated after the usual immigrant's absorption difficulties, and both published books in Yiddish and saw some of his work translated into Hebrew.

The 1970s could also boast of a thriving literary journal in Tel Aviv, the quarterly *Bay Zikh* ("At Home") that was founded in 1972 as the organ of new-immigrant writers, the work of 13 of whom filled the first issue; subsequent issues included contributions by long-time residents in Israel. The Prime Minister's Prize for Yiddish Literature, established by Golda Meir during her premiership, was awarded in 1976 to the much-honored Avrom Sutskever, and in the following year to the editor of *Bay Zikh*, Yitskhok Yanasovitsh, for his three volumes of essays, *Penimer un Nemen* ("Faces and Names," 1971–5). The journal expired in 1989; its publisher was the Komitet far yidishe kultur in Yisroel ("Committee for Yiddish Culture in Israel").

The Israel Yiddish Writers Association gave recognition and awards in 1976 to Hadase *Rubin, Yosl Lerner, and A. *Shpiglblat, and in 1977 to Ovadye Fels, Nakhmen Rap, Sh.

Roytman, and Y. Kaplan. Rap's short stories and sketches, *In Veg tsum Altn Man* ("To the Old Man," 1976), and Roytman's sonnets and lyric poems on Israel, *Mayn Yisroeldik Shoyferl* ("My Israeli Shofar," 1976) deal with contemporary themes, whereas Kaplan's short stories, *Tsaytnshnit* ("Harvest of an Era," 1976), reflect nostalgia for a destroyed Jewish world that barely survives in Jerusalem's Mea She'arim quarter.

Among the most prestigious Israeli Prizes for Yiddish literary and other arts is that named after the great lyric poet Itsik Manger. Its recipients are among the finest Yiddish talents of the period: in 1976 poets Arye *Shamri and Leyzer Aykhenrand; in 1977 poets Hirsh Osherovitsh and Yankev-Tsvi Shargel and the Montreal novelist Yehude Elberg; in 1978 poets Uri Zevi *Greenberg (who wrote in Hebrew and Yiddish), Meyer Shtiker, U.S.-born Rokhl Fishman, novelist Eli *Shekhtman, essayist and editor Mortkhe Shtrigler (Mordecai *Strigler), and famed singer Nehamah *Lifshitz; in 1979 Shloyme Rotman, Shimshen Meltser, Shloyme Shenhod, Avrom Zak and novelist Khave Roznfarb [*Rosenfarb]. In 1980 Tsvi Ayznman, Yitskhok Yanasovitsh, Nakhmen Rap and Shimen-Yisroel Dunski won the prize.

Within a few years after arriving in Israel from the Soviet Union, Hirsh Osherovitsh published several volumes of verse, including *Gezang in Labirint* ("Songs in the Labyrinth," 1977) which consisted almost entirely of poems about Israel which he was unable to publish in the Soviet Union, even though he had served on the editorial staff of *Sovyetish Heymland*; in Paris in 1977 he garnered the Ganopolski Prize. Yehude Elberg, a survivor of the Warsaw ghetto and best known for his novel on the subject *Oyfn Shpits Fun a Mast* ("On the Tip of a Mast," 1974), published in 1976 a collection of his stories *Tsevorfene Zangen* ("Scattered Stalks") that were indeed scattered among periodicals. Eli *Shekhtman, recognized as the foremost novelist among the Soviet immigrants (recipient of the Zhitlovski Prize in 1976, the Eliezer Pines Prize in 1977 and the Itsik Manger Prize in 1978) published Erev ("On the Eve"), his prose epic of Russian-Jewish life from 1905 through the 1970s (first published in a censored version, Moscow 1965), then later in a complete version, Tel Aviv, vols. 1–4, 1974; vols. 5–6, 1979; vol. 7, 1983), followed by *Ringen oyf der Neshome* ("Links on the Soul," 4 vols. 1981–8), and *Tristia* ("Sadness," 1996).

Mordekhay Tsanin, founding editor of Israel's Yiddish newspaper (a weekly now) *Letste Nayes* ("Last News"), a heroic figure in the struggle for Yiddish in Israel, was also a novelist and essayist of distinction. From 1966 to 1985 he published his *Artopanus Kumt Tsurik Aheym* ("Artopanus Returns Home"), a series of six historical novels centering about Artopanus, the wandering Jew, and covering 2,000 years of Jewish experience. The fourth of these books, *Di Meride in Mezhibozh* ("The Revolt of Mezhibozh," 1976), deals with the rise of the Ḥasidic movement in the 18th century. (Tsanin also compiled useful Hebrew–Yiddish (1960) and Yiddish–Hebrew dictionaries (1982)).

The Mendele Moykher-Sforim Prizes for Yiddish Literature established in 1976 by the Tel Aviv Municipality were

awarded to the poet Bunem Heler [*Heller] and the prose writer Avrom *Karpinovitsh. In the same year the Yankev Glatshteyn Prize of the World Jewish Culture Congress was awarded to the novelist of the Holocaust Yeshayohu *Shpigl and the poet and literary critic Yitskhok Goldkorn. Within a few years after arrival in Israel, Meyer Kharats published four volumes of verse, including *Shtern oyfn Himl* ("Stars in the Sky," 1977). In 1976 he had been encouraged by receipt of the Yankev Fikhman Prize for Literature; the essayist and authority on the folklore of the Hebrew alphabet Eliezer Lipiner won this prize in 1977. The Czernowitz poet and painter Khayim Zeltser published *Fun Heymishn Brunem* ("From My Fountain," 1976), his second volume of poetry since his arrival in Israel. These include satiric ballads, poems of his suffering under the Soviets and of his new life in Israel.

Moyshe Yungman's lyrics *In Land fun Eliyohu Hanovi* ("In Elijah's Land," 1977); Kalman Segal's narratives, *Aleynkeyt* ("Loneliness," 1977); Efroim Roytman's poems, *Di Erd Zingt* ("The Earth Sings," 1977); Motl Saktsier's lyrics, *Mit Farbotenem Blayer* ("Forbidden Writings," 1977); Rokhl Boymvol's songs of nostalgia and reborn hope, *Fun Lid tsu Lid* ("From Song to Song"); and Rokhl Oyerbakh's [*Auerbakh] reminiscences of the Warsaw Ghetto, *Baym Letstn Veg* ("The Last Road," 1977) are among the rich crop of Yiddish books issued in Israel in 1977, a fairly typical year in the 1970s and 1980s.

Prizes, both for their material and their morale value have always been important in Yiddish literary life, but no award aroused as much interest as did the 1978 Nobel Prize for literature. The entire Yiddish world was cheered when Yitskhok Bashevis (known in America as Isaac Bashevis Singer) won this prize, the first and only time a Yiddish author had been so honored. Yet among a coterie of sophisticates, it was murmured that the prize was not for the Yiddish Bashevis, but for the translated, reworked, Americanized Singer, a perspective argued in *The Hidden Isaac Bashevis Singer* (2002), edited by Seth Wolitz. This line of research had been initiated by Chone Shmeruk who, to cite a single instance, pointed to the censored Jesus reference in Saul *Bellow's generally outstanding translation of "Gimpl Tam," a classic tale misleadingly titled in English "Gimpel the Fool." However, no one who knows Yiddish well, literary gossip aside, can deny the rapid-fire, word-and tone-accurate storytelling genius of Bashevis aka Singer, who was by no means a simple creature.

Yiddish literature continued to age in the 1980s. Almost all its writers were born before the destruction of the Yiddish heartland in Eastern Europe; readers also became fewer. The Yiddish press diminished. The most prestigious daily, the New York *Forverts* (Jewish Daily Forward) was converted in 1982 to a weekly after 85 years of existence. The repertoire of ever fewer theatrical performances consisted of older plays and nostalgic musicals. Novelists, except in Israel, preferred as subject matter the longed-for, destroyed world of yesteryear. Aging survivors of ghettos, Nazi concentration camps, and Soviet gulags published memoirs and narratives of their ex-

periences or participated in Yisker (Yizkor, Memorial) books about perished Jewish communities.

Heroic efforts were made to slow down the decline of Yiddish creativity. Grants, prizes, and awards for Yiddish books multiplied. The World Council for Yiddish and Jewish Culture looked back in 1986 on a decade of support for Yiddish writers, publishers, and journals. Its bilingual annual, *Gesher-Brikn* ("Bridges") featured since 1983 translations of Hebrew works into Yiddish and of Yiddish works into Hebrew. Its monthly organ, *Yidish Velt* ("Yiddish World"), coordinated worldwide Yiddish activities since 1985. In New York the *Biographical Lexicon of Modern Yiddish Literature*, initiated in 1954 by the Central Yiddish Culture Organization (CYCO) was completed in 1981. By then, none of the early editors and administrators (Shmuel *Niger, Yankev Shatski, Moyshe Shtarkman, Yankev Pat, and Khayim Bas) was alive. However, the editors of the final volume, Berl Kagan, Yisroel Noks, and Elye Shulman, succeeded in enlisting 32 writers from all continents for the project, whose eight volumes gave bio-bibliographic entries of more than 7,000 Yiddish writers of the 19th and 20th centuries. In Buenos Aires, Shmuel Rozhanski [Rozhansky] completed in 1984 the editing of the 100 volumes of Masterpieces of Yiddish Literature. The first volume, in 1957, dealt with the pioneer of Yiddish poetry and drama Sh. Etinger (Solomon *Ettinger). The 100th volume bore the symbolic title *Tsu Nayem Lebn* ("Toward A New Life") and consisted of poems, tales, and essays which could serve to counteract the prophets of doom as regards the future of Yiddish.

The 1980s and 1990s may have seen the continued shrinking of the secular Yiddishist community, but significant writing continued to be published, and not only in New York and Tel Aviv. Seven volumes of *Bukarester Shriftn* were completed between 1978 and 1984. Of this annual's editors, Y. Karo, Spanish civil-war veteran Khayim Goldnshteyn and, especially, Volf Tambur, attracted attention with their stories and novels. Leyzer Aykhnrand maintained a lonely Yiddish vigil in Switzerland, where his last poems appeared in 1984, shortly before his death. Yiddish creativity in France was impoverished by the death in 1981 of M. Shulsteyn and B. Shlevin, but the Paris newspaper *Unzer Vort* continued to appear until 1996. In 1980, M. *Waldman published his poems of four decades, *Fun Ale Vaytn* ("From All Distances") and was awarded the Manger Prize in 1983. M. Ram published her short stories *Shteyner* ("Stones") in 1981, was translated into Hebrew and won the Manger Prize in 1984. In 1983 the novelist Y. Finer (pen name of Yitskhok Burshteyn) completed his fictional trilogy *Tsvey Mishpokhes* ("Two Families"). A veteran of the French underground during World War II, much of Finer's fiction deals with the encounter between Polish Jew and native Frenchman. In England, the death in 1983 of Joseph Leftwich and A.N. *Stencl, and in 1984 of Jacob Meitlis removed three strong pillars of Yiddish literature and scholarship and led to the discontinuance of *Loshn un Lebn*, which Stencl had founded and edited since 1946.

In South Africa, the *Yidishe Tsaytung*, edited by Levi Shalit, ceased publication in 1985 but *Dorem Afrike*, edited by Zalmen Levi, continued as the literary organ of the Yiddish writers until 1991. Two of the leading South African Yiddish writers, David *Fram and David Volpe [*Wolpe] continued to publish: Fram's book of poems *A Shvalb Oyfn Dakh* ("A Swallow On the Roof") appeared in 1983 and Volpe published his collected essays in 1984. In Australia, *Melburner Bleter* served as the sole literary organ for its few Yiddish writers, but Yitskhok Kahn won wider recognition with his essays and Sheve Glas-Viner with her ghetto tales. In Canada, Kh.- L. Fuks [*Fox] edited in 1980 a literary lexicon encompassing 422 Canadian writers in Yiddish and Hebrew.

The closing down of *Di *Goldene Keyt* in 1995 created a vacuum not only in Israel where it was published, but in the entire sparse but far-flung Yiddish world. The brave continuance of such serious journals as *Tsukunft* and *Yidishe Kultur* in New York and *Yerusholaimer Almanakh* in Jerusalem only partially filled the void. In 2000 an Israeli government-subsidized *Natsyonal Instants far Yidisher Kultur* ("National Instance for Yiddish Culture") supported the Tel Aviv literary quarterly – which does not actually appear four times a year – *Toplpunkt* ("Colon"), where the last crop of Soviet-born authors to reach Israel met individual young Yiddish authors from around the world. Nos. 1–5 were edited by Hebrew poet and translator Ya'akov Beser and co-edited by Yisroel Rudnitski, the latter becoming editor with No. 6 (Winter 2003).

Aleksander *Shpiglblat wrote his fine account of his family's incarceration in Transnistria during World War II, *Durkhn Shpaktiv fun a Zeyger-Makher* ("Through the Eye Piece of a Watch Maker," 2000). Two years later this former member of Sutskever's *Di Goldene Keyt* editorial staff published *Bloe Vinklen–Itsik Manger, Lebn, Lid un Balade* ("Blue Corners–Itsik Manger, Life, Song and Ballad"), an informal critical biography of fellow Romanian Itsik Manger and one of the most readable Yiddish books of the year. Shpiglblat is now devoting himself to fiction, having published the three-story collection *Shotns Klapn in Shoyb* ("Shadows Knock on the Window," 2003) and *Krimeve; An Altfrenkishe Mayse* ("Krimeve; An Old-fashioned Story," 2005).

Not all Yiddishists are pessimistic as to the fate of Yiddish. It is increasingly recognized that in the urban enclaves of some ḥasidic sects in London, New York, Jerusalem, Bene-Berak, Antwerp – and rural Kiryas Yoyl [Kiryat Yoel] and New Square – and elsewhere, there is an actual increase in the population of native-speakers of Yiddish. The reading interests (beyond religious texts) of these communities are increasingly being served by a small but growing ḥasidic publication industry that now annually produces scores of novels (including historical novels, adventures tales, even spy thrillers), story collections, children's books, and textbooks, in addition to numerous orthodox newspapers and periodicals that include serial narratives (see "Ḥasidic Lierature" under *Ḥasidism). While the literary quality of these texts has indeed improved over the course of recent years, it is nonetheless currently quite impossible to imagine that anything like the development of post-Enlightenment secular Yiddish literature out of traditional Ashkenazi society might recur in this 21st century Orthodox environment. It is in any case still too early to know what kind of literature can develop in such parochial confines and whether it might be valued beyond the borders of those communities (i.e. among secular Jews, where there is, after all, an ever diminishing audience capable even of reading the texts).

Yiddish creative writing of high quality was not rare in the first decade of the 21st century – against a background of more or less habitual prognostications of the death of the language. In Israel the nonagenarian Avrom Sutskever continued to write. A collection of his poems in Hebrew translation *Kinus Dumiot* ("A Gathering of Silences," 2005) received national attention and reviews in the media. Leading Hebrew-language authors and critics participated in this warm reception, a sign of an altered attitude to Yiddish generally as well as reaffirmed recognition of a poet who had lived in Israel for over half a century and was by virtue of *oeuvre* as well as of residence a pillar of Israeli literary culture.

In mid-2005 the veteran Yiddish weekly *Forverts*, edited in New York by a small, relatively young, and highly motivated staff, is electronically reproduced in Israel and distributed so as to arrive, for instance, at a Haifa subscriber's mailbox on Friday morning, with enlarged font to accommodate the elderly, and containing – in addition to news about Yiddish culture the world over – a novel in parts that is well written and worth reading. A number of literary journals continue to appear. There is a strong interest in translating Yiddish books and many high-quality translations have appeared. While there are few Departments of Yiddish in the world, lone Yiddish scholars grace departments of Jewish Studies or of German in leading universities. Conferences of specialists meet to explore central themes such as the shtetl in Yiddish life and letters, Yiddish literature and the Left, or a single important figure like Bashevis or Bergelson. Such symposia and seminars define the Yiddish scene at the beginning of the 21st century.

One needs to consider not only journals in Yiddish, but those in other languages that are devoted in whole or in part to the study of Yiddish literature. Since 1981, *Prooftexts: A Journal of Jewish Literary History*, edited by Alan Mintz and David Roskies, has brought a hitherto rarely encountered sophistication and seriousness to the understanding of Yiddish and Yiddish-related texts. The journals *Polin, Shofar,* and *Jewish Social Studies* have published significant research on Yiddish literature. *Jiddistik Mitteilungen; Jiddistik in Deutschsprachigen Laendern* is an unfailingly informative German-language bulletin for the field of Yiddish studies. Since 1993, the University of Haifa, with the cooperation of Tel Aviv and Bar-Ilan Universities, has issued a Hebrew-language journal which attempts in many ways to be a revived Hebrew version of the old *Yivo-Bleter – Khulyot: Dapim le-Mekhkar be-Sifrut Yidish ve-Zikoteha le-Sifrut Ivrit* ("Links: Pages for the Study of Yid-

dish Literature and its Connections to Hebrew Literature") (also spelled *Chulyot*) issued its ninth volume in 2005. The journal has been well received in the Israeli academy, but it must be admitted that the pool of contributors is somewhat narrow and will probably remain so unless Israeli universities prove more welcoming to Yiddish studies than they have been up until now.

The opening years of the 21st century proved receptive to new and revisionist perspectives. Conferences, as mentioned above, have convened to air large themes. In this atmosphere, Yael Chaver could write, "The mainstream culture created a historiography that suppressed the Yiddish culture imported into Palestine with the pioneers who were nurtured in it. However, not only did this culture continue to survive but it also produced significant original work" (See "Outcasts Within: Zionist Yiddish Literature in Pre-State Palestine," *Jewish Social Studies*, 7/2 (2001) 39–66). Dan Miron pitted himself against widespread clichés regarding the greatest of Yiddish comic writers, Sholem-Aleykhem, urging us to look more deeply at the writings of a comic master (*Ha-Ẓad ha-Afel be-Ẓeḥoko shel Shalom-Aleykhem* ("The Dark Side of Shalom-Aleykhem's Laughter")). Almost four decades earlier Miron in his still central study, *A Traveler Disguised* (1968) had altered the way we see Abramovitsh. Among Yiddish linguists there is much debate still as to the origins of Yiddish; Hebrew linguists continue to assess the precise role and weight of Yiddish in the formation of modern Israeli Hebrew. We can expect a new generation of Yiddish scholars to ask new questions and formulate innovative replies.

Much of the life of Yiddish today is "lived" on the internet, where Yiddish has colonized very effectively. The "surfer" interested in Yiddish needs simply to type the word "Yiddish" to be ushered into a cybernetic universe where in addition to a few quality way stations there are also shoddy stops, established by presumably well-intentioned persons who believe they are serving a positive cause but merely misrepresent a language which has its rules and a culture which is immensely rich and not to be summed up in clichés or slogans. It is now possible to communicate in Standard Yiddish (Yiddish with all the correct vocalization) on the internet, to publish listservs and electronic journals, to access rare digitized books in the comfort of one's study. The single most important listserv in the field of Yiddish is Mendele, whose existence began in 1991, followed in 1997 by its literary supplement *The Mendele Review*, now in its ninth year. The website *Di Velt Fun Yidish* ("The World of Yiddish") provides both text and audio of classic Yiddish texts, as well as the entire *Tanakh* ("Hebrew Bible") in the outstanding translation of the famed Yiddish poet Yehoyesh (Yehoash, born Solomon Bloomgarten). This site will trace the development of Yiddish Bible translation from its beginnings in the Old Yiddish period until today. It also boasts a compendious index to all the works of the classic author Sholem-Aleykhem (Shalom Aleichem) and an index (in Hebrew) to Droyanov's classic 3-volume anthology of Jewish humor.

The riches of Yiddish literature are available to all. Will they be claimed?

[Sol Liptzin / Leonard Prager (2nd ed.)]

CONTEMPORARY ḤASIDIC YIDDISH LITERATURE

Ḥasidic Yiddish print culture remains rooted in tradition with religious books at its core, but as ḥasidim adapt to contemporary needs and technologies, the range of commercial publications in Yiddish has expanded to include in-house products that accommodate urban and suburban demands for information and entertainment and thus deter temptation from outside sources. Some ḥasidic sects, such as Satmar, Bobov, Belz, Ungvar, Tash, Skver, and others, have made a conscious decision to use Yiddish as a means of maintaining cultural continuity (in contrast to the Chabad (Lubavitch) and the non-ḥasidic Litvish community). The audience for Yiddish publications is thus a relatively small subset of the overall Orthodox population, most of whom use English and Hebrew as vernaculars. While spanning many countries, the niche market for Yiddish publications is highly localized in a few subculture enclaves, mainly in the New York area and in Israel. Writers and illustrators are from within the community, and publications both capitalize on a *heymish* ("homey") quality and are carefully controlled by rabbinic authorities.

Publishers and distribution systems are small in scale, located mainly in Williamsburg and Boro Park, Brooklyn, and in outlying suburbs of New York City (e.g. Monsey, Kiryas Joel, and New Square). Besides marketing to local readers, they also distribute to Israel, Europe (Antwerp and London), and even Australia and Argentina, either by direct shipment or through a network of local and chain bookshops that cater strictly to ḥasidim. Distribution is also becoming available via the Web, although Yiddish-speaking ḥasidim generally have less Web access than other Orthodox populations. While bookstores stock primarily Hebrew *sforim* for men, small sections for women include Yiddish publications, consisting especially of reprints of Yiddish classic women's texts that have been available for centuries: the *Tsene Urene, musar* (moral) works, and assorted prayer books, in addition to inspirational literature, guides to behavior, and more practical books, as women readers crave reading material of a lighter nature. Some Yiddish publications are translations from Hebrew, while others are Yiddish originals. Despite the fact that entertainment and fiction has traditionally been discouraged, scores of lively novels have appeared in recent decades. The ḥasidic taste for the dramatic has encouraged historical fiction, exotic travel literature, and indeed spy novels. Thus, in *Geknipt un Gebindn* ("Knotted and Bound," Brooklyn: Mekor Chaim Press, 1995), Hayim Rozenberg embellishes a true story of an adopted girl in secular Israel who, with the help of a Christian clerk in the U.S., finds her birth mother and her true religious identity. Soon after the destruction of the Twin Towers, a collection of tales of escape and divine intervention appeared: *Himl Signaln in Teror Geviter; Nitsulim un Martirer in der Shoyderlekher Tragedye in Amerike; der September 11*

("Signals from the Sky in Terror; Victories and Martyrs in the Terrifying Tragedy in America on September 11"). Of course the Holocaust is also an important subject: *Antlofn Di Letste Minit: 1944-1945* ("Escaped at the Last Minute: 1944-1945") by the very popular and prolific writer Yair Weinstock, who produces lengthy thrillers at a rapid pace.

The significance of periodicals in Yiddish literature has not been limited to the secular community, and thus serialized fiction has long thrived in ḥasidic weeklies such as *Der Yid* (Brooklyn; primarily Satmar readership), where the factual history of a kidnapped ḥasidic boy in embellished form appeared as a series, *Vu iz Yosele?* ("Where is Yosele?"). Such series function to promote sales as well as prevent temptation by outside sources of entertainment. Other ḥasidic periodicals published in Brooklyn include *Der Blatt* (for the Satmar faction in Kiryas Joel), the Lubavich-sponsored *Algemeyner Zhurnal*, the weekly *Di Tsaytung* (in English on the masthead: "News Report: The Yiddish Newspaper of Record. Brooklyn"), *Der Blick*, *Dos Yiddishe Vort* from Agudat Israel, and *Di Wokh*, all with local news, weather, and traffic for the New York area, but also including international politics and ḥasidic affairs. The magazines, *Der Yidisher Shtral* ("The Jewish Ray") and *Di Yidishe Likht* ("The Jewish Light") are long-established Israeli publications with items of interest to a range of readers. In the U.S., the most widely read magazine is *Mallos*, a professionally produced, wide-ranging cultural quarterly that features articles of religious history and doctrine, a children's section (*Shtayg Hekher* / "Climb Higher"), a section for housewives, and a column called *Mame Loshn* ("Mother Tongue"/"Yiddish"), on Yiddish etymology and usage, a new phenomenon in a community that does not produce Yiddish dictionaries or grammars (although one commonly finds D.M. Harduf's Yiddish-English dictionary (1993) and occasionally even Uriel Weinreich's dictionary (1968) in ḥasidic households). A new Hebrew translation of Yiddish sayings ("Yiddish the Holy Language") also indicates this shift in attitude to Yiddish among Hebrew-reading ḥasidim.

Yiddish literature for school-age children includes inspirational biographies, simplified religious books, and school books. The Satmar girl's school *Beys Rokhl* has published a series of readers in Yiddish, used in Israel as well as Brooklyn, e.g. *Der Inhalt fun Megiles Ester* ("The Content of the Esther Scroll," Beys Rokhl, Brooklyn, 1983). There is also a multi-volume *Entsiklopedye far Yugnt* ("Encyclopedia for Young People," Israel, 1999), as well as Yiddish math books for girls, and board games in Yiddish, like *Handl Erlikh* ("Deal Honestly"), a spinoff of "Monopoly" that emphasizes charity. The market for preschool children is vast, and includes colorful, glossy picture books and coloring books. Among the many popular items is the series *Mitsve Kinder* ("Good Deed Kids"), one volume of which elucidates *Greytn zikh Tsum Shabes* ("Preparations for the Sabbath"), with cassette tapes (Hamatic Press, Brooklyn). A series of colorful books for girls that reinforce their roles in domestic life (by an author who signs herself "Leyele's mother") is produced in Modi'in, Israel. A series

for boys (produced in Israel and widely marketed) focuses on miracle-working holy men: *Dertseylungen fun Tzadikim* ("Tales of Saints"), such as *Der Prinz is Gevorn a Yid* ("The Prince Became a Jew," Sifrut Machanayim, Israel). *Nitz Dayn Moyekh* ("Use your Brain," Roebling Distributors, Brooklyn) is a series of Yiddish activity books. Both boys and girls learn their highly differentiated daily routines through stories and adventures, as in *Broynem Ber un Teg fun di Vokh* ("Brown Bear and the Days of the Week," Midos Publishers, Brooklyn). For younger children there is series of coloring books by Nachem Brandwein in Yiddish and English that teaches holidays, blessings, and events.

While some secular Yiddishists deny that contemporary Yiddish-language stories, songs, novels, and periodicals produced by the ḥasidim constitute *belles lettres*, one detects over the course of the last 15 years a growing, albeit unacknowledged, attention to "literary" concerns such as structure, form, and style in ḥasidic fiction. A century and a half ago, modern Yiddish literature developed gradually, haltingly, but directly out of the core of traditional Ashkenazi culture. Whether the similar traditional community of 21st-century ḥasidim will eventually produce literature that appeals to a readership beyond its own cultural borders (if such a readership even exists by that time) remains to be seen. If there is to be Yiddish literature in the future, however, it currently seems unlikely that it can come from any other source.

[Miriam Isaacs (2nd ed.)]

YIDDISH RESEARCH AFTER THE HOLOCAUST

Coming to Terms with the Loss

In the late 1950s, with the first indications in the United States that Yiddish would be given academic status, the poet H. Leivick gave a speech in which he warned of the fate of the language as follows: "I said to myself: look, Yiddish and its literature are soon to reach the upper echelons. But isn't there some fear stirring in your heart, since at the same time Yiddish is departing from the lower echelons of the people?" (H. Leivick, Eseyen un Redes (1963), 105). Leivick's words at the time were echoed widely since they gave precise expression to what seems even now to be the paradoxical fate of Yiddish: the language whose exponents were so proud of its being a language of the masses and of its wide usage, characteristics which made it a bridge between different Jewish communities, is fast disappearing from the marketplace and byways of life, and only small, specialized groups work towards maintaining it. As expected, Leivick concluded his speech with a plea not to accept this situation, and to try to preserve Yiddish as a spoken language for the Jewish people in the Diaspora. But this call, and many others like it, fell on deaf ears. The decline of Yiddish as an everyday language is an ongoing process that seems irreversible. Only among groups of the ultra-Orthodox does Yiddish preserve its status as a spoken language, as another component conferring a unique quality on this way of life that is impermeable to changing times. The Yiddish which until a generation ago was heard in the streets

of New York and Buenos Aires, Kiev and Paris, Tel Aviv and Melbourne has retreated to much more limited pockets: it has become the possession of aging groups of speakers, and in the best of cases is the object of yearning of a few of their children or grandchildren, whose ears still catch a Yiddish song and enjoy it, even though in most instances they no longer speak the language fluently. How can one maintain the treasures of the spoken language and pass on its flavor, nuances, and subtleties to a generation that no longer speaks it? This almost Sisyphean aim was and remains one of the main goals of research on Yiddish, which has exercised more than two generations of scholars.

Those who took up this burden, propelled by a deep sense of urgency, were that very generation for whom Yiddish occupied a central place in its cultural world and served as its prime channel of cultural expression: those Jewish intellectuals who were educated in Eastern Europe, although a large part of their research work was carried out elsewhere. The first to sense that time was running out and to gear up for the task of collecting and preserving Yiddish intensively, even at the beginning of the 20th century, were the folklorists (see also below). In other disciplines one must note the linguists Solomon Birnbaum, Judah A. Joffe, Yudel Mark, Max and Uriel Weinreich, the historian Jacob Shatzky, and the literary critics Nahum Baruch Minkoff and Samuel Niger. Some of them did not have formal academic training, and their ongoing work was not carried out in the framework of any academic institution at all; there is no doubt that this deficiency has left its traces in their work, but they did nevertheless have one decisive advantage – intimate acquaintance with the deepest levels of the language and all of its complex byways as well as rootedness in the world from which the new cultural identity of Yiddish had developed and grown. Both the capabilities and limitations of this generation can be seen in an important post-Holocaust project intended to perpetuate Yiddish literary activity: in 1956 the first volume of the *Leksikon fun der Nayer Yidisher Literatur* ("Biographical Dictionary of Modern Yiddish Literature") was published in New York and only a full generation later, in 1981, was the undertaking completed. A supplementary volume was published in 1986 by Berl Kagan. These books are brimming with rich, varied material that makes them a primary resource for anyone dealing with this field. However, the bibliographical underpinning is often lacking, and many biographies were written without proper critical perspective. The deaths of the original editors, Niger and Shatzky, prior to the appearance of the first volume left a decided gap that could not be filled as the work progressed. Thus, the reader can easily see through the course of the volumes just how pressing the hour was with regard to comprehensive projects such as these in the field of Yiddish.

That same generation that grew up against a natural backdrop of Yiddish can claim to its credit after the Holocaust two first-rate lexicographical projects. In 1950 the YIVO Institute for Jewish Research in New York, the leading center for Yiddish scholarship, sponsored the publication of *Der Oytser*

fun der Yidisher Shprakh ("The Thesaurus of the Yiddish Language") by Nahum (Nokhem) Stutchkoff (ed. Max Weinreich; reprinted 1991). This was the first collection of the lexical treasurehouse of the language, including words, idioms, and sayings, listed according to themes, as a thesaurus. Then, once the rich corpus of the Yiddish language had been gathered in a much more valuable manner than any previous dictionary of the language, the need was felt even more urgently for additional works. The material that Stutchkoff had collected did indeed serve as the cornerstone for a multifaceted lexicographical undertaking, *Groyser Verterbukh fun der Yidisher Shprakh* ("Great Dictionary of the Yiddish Language"), the first volume of which appeared in 1961 under the editorship of Judah A. Joffe and Yudel Mark. After the death of Joffe, Mark became the sole editor. Towards the end of his life he transferred the project from New York to Jerusalem, and after his death a fourth volume (1980) appeared, after which no more have as yet been published. The four current volumes have some 80,000 lexical entries, words, expressions, and sayings, completing the entries for the letter *alef.* On the surface one might think that this project is still near the beginning, but because the *alef* is employed for a number of the most common functional, grammatical particles in Yiddish, particularly as the prefix of many verb roots, it is reasonable to assume that the volumes now available contain about one-third of the entire vocabulary of Yiddish. These volumes are impressive testimony to the ability of a generation of researchers who grew up within the world of Yiddish to interpret and explain its finest nuances to the point of unlocking the hidden treasures of the spoken language. Even when it might at first glance seem that the editors have sometimes listed a meaning for a word that adds nothing to the previous definition, it turns out that they have discerned an additional shade of meaning that otherwise would have escaped the user and become irretrievable. If one compares the method of definition of entries in the *Groyser Verterbukh* to that employed in similar dictionaries in other languages, it is immediately noticeable that the editors did not limit the definitions, which generally turned out better than expected, for the overly lengthy definitions contain invaluable linguistic and cultural information and turn these volumes into a first-rate document of the widely variegated world of Yiddish speakers throughout its history and in its different centers.

Yet, in certain areas faults resulted from the lack of a research base broad enough for such a comprehensive project. Since Yudel Mark was Lithuanian, in many instances there is a noticeable lack of attention to other dialects of Yiddish, particularly the documentation of Polish Yiddish. There are also gaps in citations from literary material, which are, additionally, inconsistent. Moreover, the editors faced an almost insurmountable difficulty inherent in the language and the conditions under which it developed. Yiddish developed everywhere by contact with the surrounding languages, absorbing from them various influences and many words – some that took root in the language and others that soon fell into

disuse. In the distribution of Yiddish outside Eastern Europe, the speakers borrowed from English, Spanish, French, and Modern Hebrew, from where some of the words also entered the written language, especially in newspapers not attentive to a literary standard. The editors of the dictionary faced a serious problem in deciding what standard to apply to such words – to include a great many or to exercise caution in listing words taken from the surrounding languages, whose place in normative, literary Yiddish is doubtful. In most instances the editors dealt with these words quite generously, frequently "hosting" them, although in many cases, such decisions are debatable. Following the death of Yudel Mark the dictionary project was continued jointly by a number of academic institutions: Columbia University, the City University of New York, and Hebrew University in Jerusalem, in association with YIVO. Such cooperation was intended to insure the completion of this enormous undertaking and offer future generations a rich lexical panorama of the language at its different historical periods and stylistic registers, thus rescuing them from extinction. Although no new volumes have appeared in a quarter-century, it is to be hoped that this essential reference tool will yet be completed, since this is a task whose importance and urgency are almost impossible to overstate.

Yet, even the completion of this huge project would not comprehensively account for spoken language usage. The variety of dialects in Yiddish is basic to the language at every level: phonologically, semantically (in different areas different words were used to name the same object), and grammatically. The documentation of this great linguistic richness was the primary goal of *The Language and Culture Atlas of Ashkenazic Jewry*. The aims, scope, and methodology of this project were determined by Uriel Weinreich in 1959, and work was continued after his untimely death in 1967 under the direction of Marvin I. Herzog at Columbia University. Dozens of informants were carefully chosen in order to give balanced representation to the geographical distribution of Yiddish. They were given a detailed questionnaire to complete, the answers to which document a broad range of the aspects of language use and the varied ways in which it expresses the lives of its speakers. It is obvious that the *Atlas* drew most of its material from Eastern European speakers, but it also documented the remnant of the spoken language from the Western Europe (Holland, Alsace and Switzerland), and the data gathered now indicate links, which have not as yet been sufficiently studied, between different centers of Yiddish over a broad territorial range. As time passes and surviving native speakers become both fewer and ever more distanced from the language as it was spoken in its natural setting, the value of the oral documentation increases. The first volumes of the *Atlas* began appearing in 1992, published jointly by YIVO in New York and Max Niemeyer Verlag in Tuebingen, Germany. Three volumes had appeared as of 2005.

By the end of the 20th century most assumed that it was no longer possible to document the Yiddish language from East European speakers *in situ*. Yet the U.S.-born linguist Dovid *Katz, who had been the central figure in Yiddish studies in Oxford, England, for over a decade, relocated to Vilnius (Lithuania; formerly Vilna) in 1999 and began conducting interviews with elderly Jews throughout Lite (the Yiddish designation for the Jewish conception of Lithuania, which includes the Baltics, Belarus, northeastern Poland, and a portion of the extreme northern Ukraine). The information thus gathered by Katz and his students will no doubt prove important to future researchers.

Another area of research that is nearing the zero hour for collection efforts is the study of every aspect of Yiddish folklore – folksongs, sayings, jokes, folktales, folkplays (the *Purim shpil* / "Purim play"). The situation certainly became more urgent after the Holocaust and its consequent linguistic assimilation; although early researchers in Yiddish studies already noted that urgency. Even prior to World War I Y.L. Cahan wrote, in the introduction to a large collection of Yiddish folksongs that he had gathered and published, of the slow decline of the genre, particularly in the large cities, to the point that "it seems to me that it will not be long before the original folksong will become a thing of the past" (Y.L. Cahan, *Shtudyes vegn Yidisher Folksshafung* (1952), 10). If this were true at a time when the sounds of Yiddish were heard everywhere in Jewish Eastern Europe, it is quite obvious how much more pressing the preservation of Yiddish folklore has become in recent decades. New methodologies and technologies now make possible more accurate documentation. Thanks to the efforts of Ruth Rubin, Eleanor Gordon Mlotek, Barbara Kirshenblatt-Gimblett, and others, we now have hundreds of recordings and texts of Yiddish folksongs which are housed in numerous collections in Canada, the U.S., and Israel. The Jewish Folksong Archives, founded by Meir Noy, which is located at Bar-Ilan University, contain cardfiles with detailed information on thousands of songs in Hebrew and Yiddish, on the lyricists, melodies, and place of publication. In the subfield of the study of folktales, the leading institute is the Israel Folktale Archives at Haifa University which sets down the stories of the various Jewish ethnic communities. Unfortunately a large part of the material from East European informants was documented not in the Yiddish original but in Hebrew translation. The publication of Beatrice Silverman Weinreich's *Yiddish Folktales* (1988) made available in English a selection of material collected by YIVO's Ethnographic Commission in the 1920s and 1930s.

The study of East European Jewish music was given an important boost in the 1980s with the founding of YIVO's Max and Frieda Weinstein Archive of Recorded Sound, which assiduously preserves all genres of East European Jewish music, re-recording them using modern technologies (*Klezmer Music 1910–1942*, compiled and annotated by Henry Sapoznik (Folkways Records FSS 34021)). Its work went beyond the area of pure collecting: as young musicians in the United States and eventually around the world rediscovered *klezmer* (East European Jewish instrumental folk) music, they turned to the archives with requests for texts and melodies in order to build

their repertoire. By the late 1990s this surge of interest led to a wave of new scholarly work on Yiddish music, as well as the reissue of historic recordings collected as early as 1912–14 on the famous ethnographic expeditions led by Sh. Ansky (*Treasures of Jewish Culture in Ukraine* (Vernadsky National Library of Ukraine, 1997)). The "people of the book," which already for the most part cannot read what was written in the language it spoke until two or three generations ago, now maintains its link to Yiddish through the sounds of its music. As knowledge of the language continually declines among the children and grandchildren of its speakers, the Yiddish song at times becomes the only link to that memory.

One response to declining Yiddish literacy has been to produce works about Yiddish in more widely known languages. In 2002 the YIVO Institute began work on a multivolume encyclopedia of Jewish life in Eastern Europe. Once completed this work will likely stand as a definitive reference tool on the history and culture of Yiddish-speaking Jewry, while its English-language format reflects the shift away from Yiddish as a Jewish *lingua franca* predicted by Leivick nearly a half-century before. The YIVO Encyclopedia is the most ambitious of recent works built on the underlying assumption that the golden age of Jewish creativity in Yiddish is at an end and that the time has come to take stock of its achievements. Since the pioneers of the field saw Yiddish as the living tongue of the Jewish masses, they placed much emphasis on disciplines such as demography, pedagogy, and sociology that focus on contemporary issues, as well as on the study of the spoken language. By the end of the 20th century there was a shift towards Yiddish research in a retrospective mode, with more work done from a historical perspective and less in the social sciences. The study of Yiddish language use among the ḥasidim, the only group to continue to speak Yiddish in large numbers, remains an exception to this rule and a promising area for future research.

The Organizational Framework

NEW CENTERS OF YIDDISH STUDIES. In the period between the two World Wars, when Yiddish cultural activity in all of its manifestations reached its zenith, the Soviet Union was the only country in which Yiddish was granted a recognized status by research institutes and university-level academic institutions. This situation drew scholars from other countries, such as Max *Erik and Meier *Wiener, who hoped to pursue their research uninhibitedly in Russia. But reality upset their dreams and ideological pressure, persecution, and arrests limited the development of their talents, although much of their work in the fields of linguistics, literature, and folklore have even up to the present constituted a touchstone for generations of scholars. Conversely, in Poland and in the U.S., where millions spoke Yiddish, recognition of the language in an academic forum remained a distant, unrealistic dream.

Thus, intensive research on Yiddish outside the borders of Russia was concentrated between the two World Wars in an institution established at the initiative of Yiddishist circles.

The YIVO Institute for Jewish Research originated with the memorandum "Vegn a Yidishn Akademishn Institut" ("On a Yiddish Academic Institute") circulated by the linguist Nahum (Nokhem) *Shtif in 1925 in Berlin, which was then the center for the Jewish intellectuals who had left Russia in the early years of the Revolution. But it eventually became clear that the institution could not exist in a western cosmopolitan city that lacked a significant pool of enthusiasts and willing hands to do the work, a pool that might be found – or so they hoped – among Yiddish speakers. The institution established its headquarters in Vilna, "Jerusalem of Lithuania," a city with a glorious historical tradition and only weak signs of linguistic or cultural assimilation. Branches of YIVO were active in other countries and cities, particularly in New York. After the outbreak of World War II and the destruction of the Vilna headquarters, the New York branch became the new headquarters of this institution, due in large part to the intensive work of Max *Weinreich, a central figure in YIVO from its establishment, who had managed to escape Europe at the beginning of the war and to reach the U.S. After the war both patience and faith were necessary even to hope for the continuation of research on Yiddish. Of the Jewish communities of Eastern Europe, particularly Poland, there remained but a few glowing embers. The institutes for Yiddish research in Russia had suffered greatly during the purges at the end of the 1930s and the Nazi occupation; what little remained after the Holocaust was destroyed along with the other familiar manifestations of Jewish culture by the end of 1948. Yet, a number of scholars who had managed to flee in time from the Holocaust and reach safety, such as Max Weinreich and Yudel Mark, dedicated their lives to serving as a real link between the two periods and the two totally differing cultural milieux, prewar Eastern Europe and postwar America. They strove to continue their research activities in places that seemed somehow inappropriate. At the end of the 1940s, the first significant attempts were made at blazing a trail for the study of Yiddish at universities in the U.S. A few years later saw the founding of two university frameworks for Yiddish instruction and research that were of signal importance, in Israel on the one hand, and in the U.S. on the other. In 1951 the Yiddish Department was established at Hebrew University in Jerusalem under Dov *Sadan, and in 1953 Uriel Weinreich, the son of Max *Weinreich, was appointed to the Atran Chair of Yiddish Language, Literature, and Culture at Columbia University in New York. Many of their students and their students' students today teach Yiddish in leading academic institutions in the U.S. and Israel.

After the deaths of Max and Uriel Weinreich two projects were undertaken that symbolize the desire for continuity and renewed growth in a research field that had suffered so much from the vicissitudes of Jewish history in the preceding decades. In 1968 the YIVO Institute for Jewish Research established the Max Weinreich Center for Advanced Jewish Studies, which provided a framework for graduate and post-doctoral training in the fields of Yiddish and East European Jewish studies. The same year Columbia University in cooperation

with YIVO established the Uriel Weinreich Program in Yiddish Language, Literature and Culture, an intensive, comprehensive program that annually enables students of every level to make their first acquaintance with Yiddish and its literature and to continue on to more advanced studies. The success of this program prompted other institutions to follow in its footsteps. In the 1990s Oxford was the site of an intensive summer language course, which was essentially transplanted to Vilna with Dovid Katz's relocation there; another such program rotates triennially among Paris, Strasbourg, and Brussels.

In 2005 the Weinreich Program shifted its affiliation to New York University, mirroring YIVO's relocation in 1999 to the Center for Jewish History, a new facility housing several Jewish institutions near NYU's Greenwich Village campus. By this time the Weinreich Center had ceased to offer graduate classes, a gap partly filled since 1999 by the International Research Seminar in Yiddish Culture, led by Avrom Novershtern and David Roskies and held every other summer in New York and Israel alternately. This program conducted entirely in Yiddish provides students with an introduction to the various fields of Yiddish studies, yet as a two-week course it cannot replace the curriculum once offered by the Weinreich Center. The fate of the Weinreich Center reflects a general trend at YIVO, which by the 1990s largely abandoned its advocacy of Yiddish as a vehicle of academic discourse and its sponsorship of original research. Instead it came to function primarily as a facilitator and disseminator of scholarship, emphasizing its unparalleled library and archival collections as well as publications in English often based on material from those collections. The growth of Jewish Studies programs across the United States has partially addressed this lacuna, as the teaching of Yiddish language and culture – in English – became increasingly common on American campuses.

In the U.S. at the start of the 21st century, institutions with faculty positions dedicated to Yiddish include Columbia University, Harvard University, Indiana University, the Jewish Theological Seminary, New York University, and Ohio State University; at Columbia and Ohio State it is possible to receive a degree in Yiddish Studies. Moreover, with the growing acceptance of Yiddish as a subject of study, the language is also taught in Jewish Studies programs at the University of California at Berkeley, the University of Michigan, the University of Texas at Austin, and many others. The emphasis in the U.S. is on the research and teaching of modern Yiddish literature and of historical aspects of Yiddish culture, the latter often carried out within departments of history.

The study of Yiddish in all its aspects – earlier and modern literature, language, and folklore – developed at Hebrew University in Jerusalem under Dov *Sadan, his successor Chone *Shmeruk, and their students Chava Turniansky and Avrom Novershtern. With Shmeruk's death and Turniansky's retirement, the Yiddish Department continues to train graduate students but is much diminished in its scope. Programs for the teaching of Yiddish and its literature now exist at other Israeli universities, however, such as the Rena Costa Centre

for Yiddish Studies at Bar-Ilan University. In Germany interest in the field, primarily the study of Old Yiddish literature, flourished with the establishment of chairs of Yiddish at the universities in Trier (1990) and Dusseldorf (1996). The Medem Library in Paris, led by Yitskhok Niborski, continues to function on a high level with an active program of classes and publications in both Yiddish and French.

In the late 1980s and 1990s Oxford, England, became a prominent center of Yiddish studies under the leadership of Dovid Katz and his students, training a generation of young scholars, producing a series of books and journals in Yiddish and English, and sponsoring an intensive summer language course and academic conference. By the end of the century this had all come to an end, with the Yiddish faculty dispersing to take up positions elsewhere, and the program was rebuilt on only a modest scale.

The collapse of the Soviet Union opened new possibilities for Yiddish studies, as formerly unknown materials came to light and as new contacts were made with the surviving Jewish communities of Eastern Europe. Project Judaica, founded in 1991 by the Jewish Theological Seminary, YIVO, and the Russian State University of the Humanities in Moscow, first introduced the study of Yiddish to post-Soviet Russia. After departing Oxford, Dovid Katz settled in Vilna, where he founded the Vilnius Yiddish Institute in 2001 and began a new course of research, teaching, and publishing. These programs have given students in the region the opportunity to study the language and its culture, although the most promising have pursued their training in Israel or the U.S.

THE NEW IDEOLOGICAL CONTEXT. Before the Holocaust, studies of Yiddish and its literature were marked by ideological clashes that were at times quite severe, particularly between those working in the Soviet Union on the one hand and YIVO affiliates in Poland and the United States on the other. In the wake of World War II and the establishment of the State of Israel, longstanding tensions between Yiddishists and Hebraists became increasingly irrelevant, while the rift between Communists and their opponents faded with the end of the Soviet Union. These developments paved the way for a fresh look at topics formerly considered ideologically suspect or at best unimportant, including the comparative study of Yiddish and Hebrew literature and Yiddish culture among Orthodox Jewish communities. The work of both Soviet Yiddish activists and their Communist sympathizers abroad has also been subject to new research, enhanced by material made available in former Soviet archives. These trends can be seen as the fulfillment of the inclusive vision of Jewish culture formulated by such pioneering scholars as Max Weinreich and Dov Sadan, whose work is discussed below.

This is not to imply that the field has been without conflict in recent years. Benjamin Harshav's *The Meaning of Yiddish* (1990) stirred controversy with its stance that Yiddish should be treated as a dead language, demonstrating that the question of its status as a spoken vernacular can still arouse

strong emotions. Linguists such as Paul Wexler and Dovid Katz have put forth new controversial theories on the origins of the Yiddish language and its Ashkenazi Jewish speakers, and Katz rejected the unified Yiddish orthography developed by YIVO to devise his own. Some of Katz's ideas are incorporated in *Words on Fire: The Unfinished Story of Yiddish* (2004), which despite its idiosyncrasies is to be welcomed as the first overall history of Yiddish culture in English. Nevertheless, as ideological orthodoxies have broken down, Yiddish scholars now work in a variety of conceptual contexts, ensuring cross-fertilization and the introduction of new methodologies such as the perspective of gender studies which has proven a useful tool of analysis. But any advantages inherent in the situation are dependent upon the ability of those in the field to maintain a common framework of reference, while recognizing the achievements of the past and the value of innovation.

Yiddish Research in the Previous Generation: Concepts and Achievements

THE NEW CULTURAL CONTEXT. Throughout its history Yiddish was the language of a minority group that maintained within itself a very high degree of internal unity. It is therefore not surprising that the history of both the language and its literature serves as an illustrative example of the complex, tense relations between internal traditions and external influences; parallel phenomena can also be discerned in the development of Yiddish research. Until the beginning of the 20th century, few scholars of Yiddish spoke or published in Yiddish. This is true certainly for the non-Jews such as J. Johann Christoph Wagenseil and J. Schudt as well as for those who turned to Yiddish for pragmatic reasons (including missionaries). Even the outstanding scholars of the *Wissenschaft des Judentums*, Leopold Zunz and Moritz Steinschneider, fell into this category. Only at the beginning of the 20th century, with the growing awareness of the cultural value of Yiddish, did there begin to develop in Eastern Europe the study of Yiddish in Yiddish; this process reached its high point with the work carried out between the two World Wars, in Russia on the one hand, and at YIVO on the other. The scholars for whom Yiddish was both a native language and the language in which they published their academic studies considered themselves participants in a wide-ranging cultural creativity that included schools, newspapers and journals, publishing, and theater. It is difficult to name many individuals from this period whose sole occupation was scholarship: they were also active in Jewish political parties, journalism, literary criticism, and the teaching of Yiddish in secondary or higher education. They particularly liked to emphasize the fact that whereas their predecessors had approached Yiddish from the outside, simply as a "dry" object of research, they saw it as a living possession of the people which they nurtured within the framework of an entire range of cultural activity. It is no wonder then that parts of their work seem overly "forced" to contemporary readers, as writing that integrated research with journalism and attempted to promote a clearly defined ideological posi-

tion. This is true mainly for work carried out in Russia, particularly in the 1930s, where writers were forced to add references to Lenin and Stalin, interpolations that were obligatory in almost any scholarly article. But even to the scholars whose goal was scholarly objectivity, it was clear that their work fit into a wider cultural context.

This cultural context was utterly destroyed by the Holocaust, by the annihilation of Jewish cultural institutions in Russia, and by linguistic assimilation in both East and West, particularly in the U.S. and in Israel. A Yiddish-speaking folk, functioning both as the potential addressees of, and the ideological frame of reference for, scholarly work on Yiddish and in Yiddish, no longer existed. Also gone was the network of schools that had needed terminology in Yiddish for every subject, from physics to psychology. With the teaching of the language gradually diminishing, the issues of normative standards, which in their time had led to great controversies, were no longer pressing: for example, the question whether or not it was necessary to strive for a universally accepted pronunciation. The abandonment of Yiddish as a spoken language necessarily led to a great decline in the field of study and interest on the part of researchers. But the new cultural situation, in which other forces were created for the maintenance of Yiddish in a bilingual or multilingual framework, led scholars to emphasize other aspects and to raise new questions. As in any field of research in the humanities, in this instance, too, the present was leaving its mark on the approaches used to study the past.

THE ACHIEVEMENT OF MAX WEINREICH. The career of Max Weinreich well illustrates this process. Upon his arrival in the U.S. in 1940 he immediately understood how different the new cultural context was in which he had to work; in his lectures and letters he repeatedly compared and contrasted Jewish New York and Vilna, the city that he had left before the war. But such a comparison could only reinforce his own ever-growing awareness that the few elements still shared by the two communities upon his arrival in New York were eroding right before his eyes. Thus Weinreich faced a difficult challenge: the drastic and painful change in cultural context from prewar Vilna to postwar New York necessitated a conceptual and even ideological reorganization. In this regard there is in Yiddish scholarship no more fascinating document than Weinreich's magnum opus, *Geshikhte fun der Yidisher Shprakh* (4 vols., 1973; partial Eng. tr., *History of the Yiddish Language*, 1980; a complete English translation forthcoming from YIVO and Yale University Press will finally make the full scope of this study accessible to a wider audience). This great synthetic work depicts the history of Yiddish in a wide cultural framework. The book itself is noteworthy first and foremost for its advances in research, but some of its more subtle dimensions are just as valuable: on the one hand, its ideological premises and the conclusions drawn from them, and on the other – a feature that seems superfluous – the style and method of approaching the material. On every page of the book the reader

can palpably feel that in this case the method of exposition has its own latent significance; Weinreich's style attempted most earnestly to combine the rich vitality of the spoken language with characteristics of scholarly usage, which demands precision and nuance. In his search for a method to formulate his statements, Weinreich did not employ ready-made models from English or German, because he believed that such an academic work as this in Yiddish had to be read differently. Thus his work became a wonderful revelation of the combination of the folk and academy, of Yiddish scholarly and of the hidden richness of the spoken language. The backbone of the book is the discussion which provides abundant examples of the mutual relations between language and culture. Weinreich expresses and summarizes the ideas of scholars who preceded him, defining Yiddish as the language of "the Way of the Shas [Talmud]," i.e., of the traditional Ashkenazi way of life. In light of this definition, readers can only wonder (and become ever more convinced as they read further) whether Weinreich is implicitly questioning the possibility of maintaining Yiddish in the Diaspora among secular Jews outside of its natural cultural framework. But it is striking that Weinreich, the scholar who once subscribed to secular Yiddish ideologies, does not raise this problem explicitly. His detailed discussion of the link between Yiddish and Yidishkayt raises many problematic questions that cannot be avoided by the sensitive reader, but they remain outside of the scope of this comprehensive work. In the section preceding the discussion of more specific aspects of research, Weinreich for the first time set up a broad, conceptual framework of great significance for dealing with all of the languages of the Jews, thereby laying the foundations for a new area of research: the interlinguistics of Jewish languages, which in recent years has become of greater interest. Weinreich showed, with a great many examples, how Yiddish had become a fertile field for the melding of the languages of the surrounding environment – Romance languages, German, and Slavic languages – along with *loshn koydesh* ("the holy tongue"), which was given special status in traditional Jewish society. The nature of Yiddish as a fusion language of various linguistic elements is not, therefore, simply a linguistic fact, but a multidimensional intersection of language and culture. A large part of Weinreich's book is devoted to the description and analysis of the phenomenon of bilingualism and multilingualism among Ashkenazi Jewry, as well as members of other Jewish groups – between Hebrew and the spoken language of the Jews or between those languages and the co-territorial non-Jewish language. Thus Weinreich's work is outstanding in its decidedly interdisciplinary nature. His discussions and analysis of purely linguistic data touch on and illuminate other areas as well, such as the history of the Jews, folklore, literary history, and sociolinguistics.

BILINGUAL DICTIONARIES. An illustrative albeit paradoxical example of the possibilities and limitations simultaneously at hand in the new cultural situation in Yiddish scholarship is the work that by its very nature aimed at bridging cultures –

bilingual dictionaries. Such dictionaries were always the high road for Yiddish lexicography, because they were intended initially to answer practical needs, namely to teach European languages to Yiddish-speakers. By contrast Uriel Weinreich's *Modern English–Yiddish Yiddish–English Dictionary* (1968), which is clearly one of the most important Yiddish lexicographical undertakings of its period, addressed first and foremost the needs of the user desiring to acquire Yiddish as an active language. Towards this end Weinreich gives a detailed and normative grammatical description of each Yiddish lexical item, a description that has no parallel in any earlier dictionary of the language. However, the bilingual format of the dictionary limited the scope of the entries. Thus students in need of a reference tool to help them understand Yiddish literary texts must turn to Alexander Harkavy's older *Yiddish–English–Hebrew Dictionary* (1928; reprinted with a new introduction in 1988). Weinreich intended his dictionary to be used both by active Yiddish speakers and by passive readers of the language, and each audience is equally well served by this excellent work, although the latter audience in fact outnumbers the former; additionally, its needs are not adequately met in a work of limited scope that tries to cater to two audiences. Weinreich's dictionary has been supplemented by several specialized lexicographical studies by Mordkhe Schaechter (*English–Yiddish Dictionary of Academic Terminology* (1988), *Pregnancy, Childbirth, and Early Childhood: An English–Yiddish Dictionary* (1991), and *Plant Names in Yiddish* (2005)) and two important reference works published by the Medem Library: Yitskhok Niborski's *Verterbukh fun Loshn-Koydesh-Shtamike Verter in Yidish* ("Dictionary of Words of Hebrew and Aramaic Origin in Yiddish," 1997; 1999²) and the bilingual Yiddish–French Dictionary of Niborski and Bernard Vaisbrot (2002). All these include entries for terms lacking in Weinreich and Harkavy, and all are the products of meticulous research. At least for Francophone Yiddish readers, the Niborski/Vaisbrot dictionary has effectively replaced Weinreich for most purposes.

RESEARCH ON OLD AND MIDDLE YIDDISH LITERATURE. The study of early Yiddish literature – the corpus of works written up to the end of the 18th century – is one of the oldest branches of Yiddish scholarship, extending back to the period of the *Wissenschaft des Judentums*, and in some sense even back to the Humanist period. In this field contemporary scholars can draw on the achievements of the past, creating a certain continuity in the research tradition, yet the difference in cultural context has led to new emphases in research and to a different general perspective.

When the *Cambridge Codex of *ca.* 1382 (the earliest extensive codex in Yiddish) was published, it aroused controversy between the Germanist, J.W. Marchand, and Max Weinreich [J.W. Marchand, review of *The Oldest Known Literary Documents of Yiddish Literature*, L. Fuks (ed.), *Word*, 15 (1959), 383–94; M. Weinreich, "Old Yiddish Poetry in Linguistic-Literary Research," in: *Word*, 16 (1960), 100–118. This

controversy has been analyzed extensively by Jerold C. Frakes in his *The Politics of Interpretation: Alterity and Ideology in Old Yiddish Studies* (1988)]. At issue was whether to identify the texts in the manuscript as German literature written in the Hebrew alphabet or as Yiddish literature, despite the fact that the language displays few features distinct from co-temporal German. The dispute was based less on the linguistic facts than on the interpretive context in which the researcher tried to explain them. In this regard their disagreement was the forerunner of two contemporary trends in the study of early Yiddish, for there are indeed discernible two different cultural contexts for this discipline: the Germanist scholars at the University of Trier (pioneered by Hans Peter Althaus, Walter Roll, Erika Timm, and now continued by Simon Neuberg) is particularly noteworthy for careful editing and philological analysis of texts (despite the severe limitations imposed by their publishing the texts in an overtly Germanizing Roman transcription); they naturally contribute to the understanding of phenomena of early Yiddish literature by virtue of their approach and training as Germanists. By contrast, among the scholars in Jerusalem (formerly led by Ch. Shmeruk and his student Ch. Turniansky, and now continued by S. Zfatman) a different methodological perspective has been developed, which mainly stresses the internal Jewish context of the works in Old Yiddish literature and the close relations with Hebrew works of the same period, a contact whose most noticeable manifestation is the bilingual text – a work written simultaneously in Hebrew and in Yiddish. Interestingly, the current chair of Yiddish studies in Dusseldorf, Marion Aptroot, trained in Oxford, combines the philological thoroughness of the Trier Germanists with the attention to the Jewish cultural context characteristic of the Jerusalem scholars of early Yiddish (cf. J. Michman and M. Aptroot (eds. and tr.), *Storm in the Community: Yiddish Political Pamphlets of Amsterdam Jewry, 1797–1798* (2002)).

In the first comprehensive works on the history of early Yiddish literature, written in the 1920s and 1930s by Max Erik, Max Weinreich, and Israel Zinberg, the ideological tendency of the writers was clearly discernible in their special appreciation of the "secular" aspects in Old Yiddish works [M. Erik, *Di Geshikhte fun der Yidisher Literatur: Fun di Eltste Tsaytn biz der Haskole-Tkufe* (1928; rpt. 1979); M. Weinreich, *Bilder fun der Yidisher Literaturgeshikhte* (1928); I. Zinberg, *Di Geshikhte fun der Literatur bay Yidn*, 6 (1935), (rpt. 1943; Engl. trans. 1975)]. Ch. Shmeruk thoroughly revised this approach in his book *Sifrut Yiddish: Perakim le-Toledoteha* ("Yiddish Literature: Chapters of its History," 1978; rev. Yid. tr. 1988), which is based on a much wider corpus, including texts discovered in the decades before its publication (the most significant being the Cambridge manuscript mentioned above). He analyzed Old Yiddish literature with regard to its status and role in traditional Ashkenazi society, where the sharp division made between the "secular" and the "religious" by his predecessors proves quite artificial. The new conceptual system stresses the centrality of the Bible as a source and inspiration for early Yiddish literature, and understanding its importance reveals the mutual link between genres previously considered distinct – direct translations of the Bible, paraphrases of the Bible, homiletical works (which gave early Yiddish literature its most popular book, the *Tsenerene* (**Ẓe'enah u-Re'enah*)), biblical epic poetry, and plays based on biblical themes which were presented as *Purim-shpiln*. In his studies of early Yiddish literature Shmeruk cited phenomena parallel to those that Weinreich noted in the history of the language itself: traditional Jewish society, from which Yiddish language and literature developed, did not absorb cultural artifacts from environments that were external to its autonomous way of life. Instead, such cultural elements first passed through a process of "Judaization," which neutralized of their Christian components. This multifaceted process is an outstanding example of the productive meeting of internal traditions and external influences that characterize every aspect of the Yiddish language and its literature. In addition to the discovery and publication of hitherto unknown texts and the enrichment of our bibliographical knowledge, this period of scholarship built up a new conceptual system that aims at properly describing the cultural complexity of Old Yiddish literature.

At the start of the 21st century, the linguistic focus of early Yiddish studies in Europe has broadened to include aspects of communal history, for example in the work of Marion Aptroot and Shlomo Berger on Amsterdam Yiddish publications of the early modern period. In Jerusalem, following Shmeruk's death and Turniansky's retirement, only Zfatman continued her teacher's legacy. Meanwhile, two important publications marked a major advance for the field: the first comprehensive survey of the period in seventy years appeared in Jean Baumgarten's *Introduction to Old Yiddish Literature* (orig. French ed. 1993; ed. and tr. Jerold C. Frakes, 2005). Perhaps more significant is the publication of Frakes' nearly 900-page anthology, *Early Yiddish Texts, 1100–1750* (2004), whose scope, comprehensive notes, and carefully edited texts in the original alphabet make this a landmark work in early Yiddish studies.

MODERN YIDDISH LITERATURE – REAPPRAISING CLASSICAL TEXTS. Dov Sadan, the founder of the Yiddish Department at Hebrew University in Jerusalem, presented an all-encompassing concept of Jewish literature in his comprehensive essay, "*Al Sifruteinu*" ("On Our Literature," 1950), which conceives Jewish literature as a single, broad, many-branched corpus, which includes texts in Hebrew and Yiddish, as well as the works of Jewish authors who wrote in other languages for Jewish readers. One discerns Sadan's striving for totality not only with regard to the languages of modern Jewish literature, but also the mutual relations between its various spiritual trends; while most of his predecessors considered modern literature in Hebrew and in Yiddish as the product of the Haskalah movement and a clear manifestation of the penetration of Jewish society by modernization, Sadan broadens the canvas and attempts to encompass all of modern Jewish intellectual

creativity in all of its interwoven manifestations and roots, as they develop from the Haskalah, Ḥasidism, and the rabbinical works of the *misnagdim*. Thus Sadan's broad comprehensive conception deliberately raises doubts as to the legitimacy of privileging secular *belles lettres* above all the rest of the Ashkenazi cultural heritage.

This thesis of an underlying unity in Jewish literature was one of the bases of the comprehensive work by Israel Zinberg, *Geshikhte fun der Literatur bay Yidn* (8 vols. in 10, 1929–37; Eng. tr., *History of Jewish Literature*, 12 vols., 1973–78). Despite the difficult conditions under which Zinberg wrote his work in Leningrad, cut off from other scholars and from the literature of the West, he conceived of a most comprehensive plan for his endeavor, which was to describe Jewish literary creativity in the medieval and modern periods in all languages and genres. Due to his imprisonment and exile, however, he did not manage to complete this wide-ranging work, and its final volume (which was discovered and published in 1965) only reaches the period of the flourishing of the Haskalah in Russia (the 1860s). It was thus Dov Sadan and his students who took upon themselves the task of applying the integrative approach to modern Yiddish literature.

In this context it is natural that the main author to benefit from new exploration of his work would be the bilingual writer S.Y. *Abramovitsh, better known by the persona fabricated in his writings, Mendele Moykher Sforim. To be sure this "split" between the biographical writer and his literary persona was the focal point of the study by Dan Miron, *A Traveler Disguised: A Study in the Rise of Modern Yiddish Fiction in the Nineteenth Century* (1973; reissued 1996), which was based on research directed by Max and Uriel Weinreich. In the first part of his book Miron summarizes the ambivalent position demonstrated by the Haskalah towards Yiddish: despite the fact that most *maskilim* had a contemptuous attitude towards the language, some of them nonetheless laid the foundations of modern Yiddish literature. On this basis Miron articulates the literary and cultural circumstances and conditions in which the young *maskil* Abramovitsh turned to writing Yiddish, to which end he created his most central, vital character – Mendele, who appears in his works in a wide range of incarnations and roles – as the publisher of works given to him, as a Yiddish translator, as a good listener to stories told in his presence, and even as a protagonist in his own right. Miron's study deals with the point where the influence of ideological positions on the act of literary creation becomes discernible, and he proves how the problematic status of Yiddish and the difficulties with which its authors struggled led directly to refined, complex artistic solutions. In 2000 a volume of Miron's studies appeared under the title *The Image of the Shtetl and Other Studies of Modern Jewish Literary Imagination*, further acquainting the English reader with his wide-ranging achievement.

Ch. Shmeruk's *Peretses Yiesh-Vizye* ("Peretz's Vision of Despair," 1971), treats another aspect of the tension between literature and ideology as manifested in I.L. Peretz's symbolist drama, *Baynakht oyfn Altn Mark* ("At Night in the Old Market Place"), where many characters from both the world of the living and the dead express their existential thoughts and doubts while appearing one night against the background of a typical market square familiar from the Jewish milieu of Eastern Europe. Critical reviews in Yiddish perceived the play as a pivotal expression of Peretz's attitude toward a wide range of Jewish ideologies – from the Haskalah to the workers' movements. They felt that his position was exhausted in the final sentence of the play, "in shul arayn!" ("To the synagogue!"), which was taken as a call to return to a traditional Jewish way of life. Shmeruk concurs in essence that the play should be read in a contemporary ideological context, but his tracing of the sources of the various interwoven motifs and allusions reveal many shades of meaning that had gone unnoticed before.

PUBLISHING IN YIDDISH STUDIES. Scholars devoted serious and continuous efforts to publishing selected Yiddish literary texts. Among the most outstanding achievements of this kind, one must mention the anthology *A Shpigl oyf a Shteyn* ("A Mirror on a Stone," ed. Ch. Shmeruk, 1964; 1988²), which includes poetry and prose by 12 Yiddish authors who perished in the Soviet Union. The Yiddish Department of Hebrew University in Jerusalem publishes a series of books, one of whose goals is to collect the Yiddish works of bilingual authors who are known today mainly through their works in Hebrew; in this framework have appeared writings of S.Y. *Agnon, M.Y. *Berdyczewski, Uri Zevi *Greenberg, and Jacob *Steinberg. Likewise, selected works by Isaac Bashevis *Singer, Abraham *Sutzkever, Itzik *Manger, and Israel *Rabon have been published.

For most of the post-Holocaust period, the premier journals for Yiddish studies were the YIVO-*Bleter* ("YIVO Pages"), founded in 1931, and *Di *Goldene Keyt* ("The Golden Chain"), founded in Israel in 1949 by the poet Avrom Sutzkever. Yiddish academic publishing enjoyed a modest upswing in the early 1990s with the revival of the sporadic YIVO-*Bleter* and the founding of several Yiddish journals in Oxford. However, *Di Goldene Keyt* ceased publication in 1995, followed three years later by the Oxford imprints. In addition, journals such as the YIVO *Annual*, which was revived from 1990 to 1996, and *Khulyot* ("Links," 1993–present) created a forum for Yiddish scholarship in English and Hebrew respectively.

In another sign of this linguistic shift, interest among a wide audience in modern Yiddish literature has given rise to an ongoing trend of translations, mainly into English and Hebrew, but also into French, German, Spanish, and other languages. The bibliography by Dina Abramowicz in 1968 listed 247 titles of books translated from Yiddish into English, beginning in 1945 (*Yiddish Literature in English Translation* (1968); idem, *Yiddish Literature in English Translation: List of Books in Print* (1976)), and today that list could be significantly expanded. The awarding of the Nobel Prize to Isaac Bashevis Singer in 1978 increased interest in his works in particular,

and in Yiddish literature in general. The New Yiddish Library, sponsored by Yale University Press and edited by David Roskies, has published fresh translations of the modern Yiddish classics and promises to acquaint the English reader with previously inaccessible Yiddish works. In the realm of historical study, YIVO has published translations of important material from its collections, such as the autobiographies of Jewish youth collected in the 1930s and Herman Kruk's diary of the Vilna ghetto (cf. J. Shandler (ed.), *Awakening Lives: Autobiographies of Jewish Youth in Poland Before the Holocaust* (2002) and H. Kruk, *Last Days of the Jerusalem of Lithuania: Chronicles from the Vilna Ghetto and the Camps, 1939–1944*, ed. Benjamin Harshav and trans. Barbara Harshav (2002)).

One of the main demonstrations of this trend is the appearance of two bilingual anthologies which strove to offer the best of Yiddish poetry to a new generation of readers: *American Yiddish Poetry: A Bilingual Anthology*, edited by Benjamin and Barbara Harshav (1986), and *The Penguin Book of Yiddish Verse*, edited by Irving Howe, Ruth R. Wisse and Khone Shmeruk (1987). The bilingual format of the two anthologies makes them the first collections of this type, and it demonstrates that the editors aimed for a varied audience: both the student and the reader of Yiddish literature in the original, as well as the English reader who did not know Yiddish. A comparison of the two volumes is interesting because of the differing approaches of the editors: the Harshavs emphasize the literary achievements, multifaceted quality, and uneasy path of modernism in Yiddish poetry in its most important center, the U.S., and thus their anthology can serve as an excellent introduction for the reader interested in this important branch of modern Yiddish literature; the editors of the *Penguin Book of Yiddish Verse*, which offers a selection of Yiddish poetry of the last one hundred years from the entire Yiddish world, aimed at a wider audience, and their selections were guided more by thematic concerns. They assumed that contemporary interest in Yiddish poetry is based primarily on its Jewish content and its ability to express and describe a world that no longer exists. The selections offered by these two books, therefore, reflect two different, complementary approaches towards the question of how to understand and appreciate the great heritage of Yiddish literature today, while demonstrating the multiplicity of approaches and contexts in which research and teaching in this field are conducted.

Scholars and students of Yiddish studies, who are relatively few in number and widely dispersed across the globe, are perennially frustrated by the difficulties of gaining access to books long out of print, while the costs of printing new works can be prohibitive. The National Yiddish Book Center, which began by accepting donations of Yiddish books collected *en masse* worldwide and selling them to interested libraries and individuals, has revolutionized access to Yiddish materials with its Steven Spielberg Digital Yiddish Library, which produces on-demand reprints of available Yiddish texts. Modern technology has proven a boon in other ways as well. The *Index to Yiddish Periodicals*, a database developed at Hebrew University in Jerusalem, allows researchers to search the content of many important journals, while the on-line forum *Mendele* connects Yiddish specialists around the globe. Such innovative tools, as well as a pluralism of views and methodologies, promise new achievements as scholars continue to develop the various fields of Yiddish research in the 21st century.

[Abraham Novershtern / Cecile Esther Kuznitz (2nd ed.)]

BIBLIOGRAPHICAL SURVEY

Interest in the study of Yiddish language and literature was first displayed by Christian scholars of the 16th–18th centuries (Buxtorf, Wagenseil, Schudt, and others) few of whom, however, had any functional knowledge of either the language or its literature. Their relevant texts concerning Yiddish are edited, translated into English, and analyzed by (1) J.C. Frakes, *Christian Humanists and the Study of Yiddish in Early Modern Europe* (2006). Modern research into Yiddish literature had its proper beginnings in the German *Wissenschaft des Judentums* school of the 19th century. It was primarily M. *Steinschneider who laid the foundations of Yiddish bibliography and, incidentally, also set the end of the 18th century as the limit for the study of Yiddish literature by future exponents of the *Wissenschaft des Judentums*, completely disregarding the new literature that was then being created in Eastern Europe. It was not until the beginning of the 20th century that scholars of East European extraction extended the scope of research to include modern Yiddish literary works.

The methods employed in research on, and criticism of, Yiddish literature do not differ in their essentials from any other modern criticism and literary research. To a certain degree, however, the study of Yiddish literature has until the 1990s lagged behind in adopting more advanced methods. Until World War II such study was characterized by its unwarranted dependence upon the traditional methods of German literary studies and concepts, especially with regard to early Yiddish literature. Furthermore, as a result of its close connections with certain ideologies and preconceived views, the study and criticism of Yiddish literature has retained some undeniable traces of tendentiousness. Those scholars who had inherited the mantle of the German *Wissenschaft des Judentums* tended to overemphasize the relationship between German and Yiddish literature in order to provide evidence of Jewish participation in German culture, or even of a German-Jewish symbiosis. This tendency was revived by modern German scholars. Their interest also centered upon early Yiddish literature, in view of the importance for German studies of pre-modern German texts preserved in the Hebrew alphabet. On the other hand, scholars and critics of Yiddish literature who belonged to the Yiddishist camp and as such had close connections with Jewish labor ideology tended to exaggerate the "secular" basis of early Yiddish literature. With regard to modern literature, Yiddishist scholars sometimes preferred ideological evaluation to aesthetic criticism and study of form. The establishment of a chair of Yiddish literature at Hebrew University in Jerusalem in 1951 paved the way for a renewal of

Yiddish literary studies consciously liberated from the limitations imposed upon them by the tendentiousness of the past and, to some degree, the present also. In recent decades, the study of Yiddish literature and culture is found in a variety of academic disciplines in the Humanities and Social Sciences.

Students of all periods and facets of Yiddish literature should have recourse to a few valuable reference works which, while not specifically devoted to literature, soon prove themselves indispensable. These include the pioneering pamphlet of (2) Uriel and Beatrice Weinreich, *Yiddish Language and Folklore* (1959) and its sequel (3) *Yiddish Linguistics; A Multilingual Bibliography* (1988), edited by Joan G. Bratkowsky. To this may be added (4) *Yiddish Linguistics; A Classified Bilingual Index to Yiddish Serials and Collections 1913–1958* by D.M. Bunis and A. Sunshine (1994). Yiddish studies have so proliferated in recent years that it is useful to have a general guide as well. (5) C.E. Kuznitz's "Yiddish Studies," in Martin Goodman (ed.), *The Oxford Handbook of Jewish Studies* (2002), 541–71 is remarkably comprehensive and insightful.

Up to the End of the 18th Century

The scholar and lay reader interested in Yiddish literature up to the end of the 18th century has to accept the fact that the material available (manuscripts, books, printed pamphlets) is marked by wide gaps in many fields. The erstwhile existence of many Yiddish works is known only from evidence found in secondary sources. See (6) Ch. Shmeruk, "Reyshuta shel ha-Proza ha-Sipurit be-Yidish u-Merkaza be-Italya," *Sefer Zikaron leArye Leona Carpi* (1967). Yiddish books and pamphlets dating back to the 16th, 17th, and 18th centuries are largely unica, existing in single copies only. The most comprehensive collection of manuscripts and books from this period is found in the David Oppenheimer collection, now a part of the Bodleian Library at Oxford University. The Bodleian Hebrew-alphabet (i.e., including but not restricted to Yiddish) manuscript collection is catalogued by (7) Adolf Neubauer, *Catalogue of the Hebrew Manuscripts in the Bodleian Library* (1886; 1994; supplement M. Beit-Arié and R.A. May, 1994), while the Hebrew-alphabet printed books are catalogued by (8) M. Steinschneider, *Catalogus librorum hebraeorum in bibliotheca bodleiana*, 2 vols. (1852–60; 1998), and (9) A.E. Cowley, *A Concise Catalogue of the Hebrew Printed Books in the Bodleian Library* (1929; 1971). Smaller collections, as well as important single manuscripts and books, are to be found in libraries throughout Europe, Israel, and the U.S. An older introduction to the more significant collections of specifically Yiddish books, as well as a bibliography of publications on Yiddish literature up to 1912, is included in (10) Ber Borokhov, "Di Bibliotek fun Yidishn Filolog," *Pinkes* (1913).

A useful bibliography of printed Yiddish works is still (11) M. Steinschneider, "Jüdisch-Deutsche Literatur," in: *Serapeum* (1848–49; 1961), although it is in many respects quite unreliable. Concerning Yiddish manuscripts, their publication and the references to them in various studies, (12) C. Habersaat, "Repertorium der jiddischen Handschriften," *Rivista degli studi orientali*, 29 (1954), 53–70; 30 (1955), 235–249; 31 (1956), 41–49, represents a useful, though difficult, source. Vast collections of early Yiddish texts have been made accessible in facsimile editions via several microfilm publications: (13) Ch. Shmeruk (ed.), "Research Collections on Microfiche: Jewish Studies, Yiddish Books" (1976 ff.); (14) H. Bobzin and H. Suess (eds.), *Sammlung Wagenseil* (1996); (15) H. Suess and H. Troeger (eds.), *Die Hebraica und Judaica der Sammlung Tychsen der Universitaetsbibliothek Rostock* (2002). Digitalized facsimiles of the extensive Hebrew-alphabet collection of the Universitaetsbibliothek, Frankfurt am Main, are available online: http://stub.semantics.de/jd/templates/template.xml?Sprache=eng&js=yes&Skript=Home

Recent decades have seen the discovery of numerous unknown or up to that point incomplete early Yiddish texts; further such discoveries may well still come to light. An outstanding example is the Yiddish rhymed couplet of 1272 found in the Worms *makhzor*, published and analyzed in (16) D. Sadan, "*Ketovet Rishona be-Yidish Kedumah be-Maḥzor Vermeyza*," in: *Kiryat Sefer* 38 (1963), 575–76; (17) M. Vaynraykh, "A Yidisher Zats fun far Zibn Hundert Yor," in: *Yidishe Shprakh* 23 (1963), 87–93 (correction in vol. 24 (1964)), 61–62. The most significant find was the Cambridge University Library manuscript from the Cairo *Genizah*, dated ca. 1382, known already before World War II, but not published until (18) L. Fuks, *The Oldest Known Literary Documents of Yiddish Literature* (c. 1382), 1–2 (1957); (19) *Dukus Horant*, ed. P.F. Ganz, F. Norman, W. Schwarz. (with excursus by S.A. Birnbaum) (1964); (20) H.J. Hakkarainen, *Studien zum Cambridger Codex T-S. 10. K. 22*, 3 vols. (1967–73). The definitive scholarly edition of the codex is (21) E. Katz (ed.), "Six Germano-Judaic Poems from the Cairo Genizah" (Diss. UCLA, 1963). The scholarly controversies surrounding the texts of the Cambridge manuscript (e.g. linguistic and cultural identity of the texts) are comprehensively treated by (22) J.C. Frakes, *The Politics of Interpretation: Alterity and Ideology in Old Yiddish Studies* (1989).

Other discoveries include: the recognition of several dozen glosses in the commentaries of Rashi (11th century) as examples of early Yiddish (see (23) E. Timm, "Zur Frage der Echtheit von Raschis jiddischen Glossen," in: *Beitraege zur Geschichte der deutschen Sprache und Literatur,* 107 (1985), 45–81); a complete text of the renaissance epic, *Pariz un Viene* (Verona, 1594), and the magnificent fable collection of the *Ki-bukh* (Verona, 1595). Such discoveries of early Yiddish texts have transformed the study of early Yiddish by extending the beginnings of Yiddish literature back to a much earlier date and by appreciably broadening its scope far beyond the narrow confines imagined by older scholarship. A radical change is thus called for in the hitherto available and accepted descriptions of early Yiddish works in the standard histories of early Yiddish literature: (24) Elazar Shulman, *Sefat Yehudit-Ashkenazit veSifruta* (1903; 1913); (25) M. Erik, *Vegn Altyidishn Roman un Novele* (1926); (26) M. Erik, *Di Geshikhte fun der Yidisher Literatur fun di Eltste Tsaytn biz der Haskole Tkufe* (1928); (27) M. Vaynraykh [Weinreich], *Bilder fun der Yidisher Literatur*

Geshikhte (1928); (28) Y. Tsinberg [Zinberg], *Di Geshikhe fun der Literatur bay Yidn*, 9 vols. (1929–37; Heb. tr. (1956–60); Eng. tr., 1972–78, esp. vol.. 6 of the Yid. ed.

These works have shortcomings which must be taken into account: the paucity of specific preliminary studies upon which they are based; the lack of a detailed and comprehensive investigation of the relationship between Yiddish and Hebrew literature on the one hand, and German literature on the other; failure to examine the role of Yiddish and Yiddish literature in the broad scope of Jewish culture of the period; and absence of detailed analysis of the nature of the literary genres. Considerable doubt must also be expressed about the "Spielmann" theory of the historical outlines of Yiddish literature, a theory borrowed by Erik and Weinreich from antiquated German literary research and grafted onto Yiddish literature without proper foundation; see: (29 Kh. Shmeruk, "Di Naye Editsye funem Altyidishn Mlokhim-Bukh," *Di Goldene Keyt* 59 (1967) and (30) Ch. Shmeruk, "Can the Cambridge Manuscript Support the Spielman Theory in Yiddish Literature?" in: *Studies in Yiddish and Folklore* (1986), 1–36. Detailed studies of specific works can teach us much, as in (31) M.I. Goldwasser, "Azhoras Noshim": a Linguistic Study of a Sixteenth-Century Yiddish Work (1982).

The lack of up-to-date scholarly surveys of the period has been satisfied by (32) Ch. Shmeruk, *Sifrut Yidish: Perakim leToldoteha* (1978; rev. Yid. tr.), (33) *Prokim fun der Yidisher Literatur-Geshikhte* (1988), and especially (34) J. Baumgarten, *Introduction à la littérature yiddish ancienne* (1993; rev. ed. and tr. by J.C. Frakes, (35) *Introduction to Old Yiddish Literature*, 2005). The recent anthology edited by (36) J.C. Frakes, *Early Yiddish Texts 1100–1750* (2004) provides critical editions of more than a hundred texts representing the broad scope of extant genres from this period (including many of the early texts discussed in the present entry), along with extensive bibliography of scholarly studies; it thus appreciably lessens the scholarly dependence on earlier, methodologically often problematic anthologies, such as: (37) J.C. Wagenseil, *Belehrung Der Jüdisch-Teutschen Red-und Schreibart* (1699); (38) J.J. Schudt, *Jüdische Merckwürdigkeiten*, III. *Theil* (1714); and (39) M. Grünbaum, *Jüdisch-deutsche Chrestomatie* (1882), as well as the first sections of: (40) *Antologye Finf Hundert Yohr Idishe Poezye*, ed. M. Basin, 1–2 (1917); (41) E. Korman *Yidishe Dikhterins, Antologye* (1928). The complex socio-linguistic development of the modern Yiddish literary language is comprehensively analyzed by (42) Dov-Ber Kerler, *The Origins of Modern Literary Yiddish* (1999).

Studies of Bible translations, Bible exegesis, and poems based on the Bible and midrashim, including texts, are included in: (43) W. Staerk and A. Leitzmann, *Die Jüdisch-Deutschen Bibelübersetzungen von den Anfängen bis zum Ausgang des 18. Jahrhunderts* (1923); (44) N. Leibowitz, *Die Übersetzungstechnik der Jüdisch-Deutschen Bibelübersetzungen des 15. und 16. Jahrhunderts* (1931); (45) Sh. Noble, *Khumesh-Taytsh* (1943); (46) Sh. Birnboym, "Zeks Hundert Yor Tilim Oyf Yidish," in: *For Max Weinreich…* (1964); (47) M. Apt-

root, "Bible Translation as Cultural Reform: The Amsterdam Yiddish Bibles 1678–1679" (Diss., Oxford, 1989); (48) L. Landau, "A Hebrew-German Paraphrase of the Book of Esther," *Journal of English and Germanic Philology*, 18 (1919); (49) M. Stern (ed.), *Lieder des Venezianischen Lehrers Gumprecht von Szczebrzeszyn (um 1555)* (1922); (50) L. Landoy, "Der Yidisher Medrash Vayosha," *Filologishe Shriftn* 3 (1929); (51) F. Falk (ed.), *Das Schemuelbuch des Mosche Esrim Wearba*, I–II (1961); (52) L. Fuks, *Das Altjiddische Epos Melokhim-Bukh*, I–II (65); (53) P. Matenko and S. Sloan, "The Akeydes Yitskhok," in: *Two Studies in Yiddish Culture* (1968); see also the studies of the Cambridge Genizah manuscript (18–22). The identity of the genre of epic on biblical themes as specifically *midrashic* (and not *biblical* as such) was worked out by (54) D. Sadan, "The Midrashic Background of 'The Paradise' and its Implications for the Evaluation of the Cambridge Yiddish Codex (1382)," in: *The Field of Yiddish*, 2 (1965), 253–62, and (55) W.O. Dreessen, "Midraschepik und Bibelepik," *Zeitschrift fuer deutsche Philologie*, 100 (1981), 78–97.

Texts of the early Yiddish plays are included in the magisterial collective volume: (56) Ch. Shmeruk (ed.), *Maḥazot Mikra'iyyim be-Yiddish (1697–1750)* (1979), that also provides a broad survey of the history and function of drama in Ashkenaz; see also (57) E. Butzer, *Die Anfaenge der jiddischen purim shpiln in ihrem literarischen und kulturgeschichtlichen Kontext* (2003). Earlier discussions include: (58) Y. Shiper, *Geshikhte fun Yidisher Teater-Kunst un Drama*, 1–3 (1923–28); and in the first chapters of (59) B. Gorin, *Di Geshikhte fun Idishn Teater* (1929); on contemporary ḥasidic Purim plays, see (60) Ch. Shmeruk, "Ha-Shem ha-Mashma'uti Mordekhai-Markus: Gilgulo ha-Sifruti shel Idiyal Ḥevrati," in: *Tarbiz,* 29 (1959) and (61) Shifre Epshteyn (Shifra Epstein), *Donyel-Shpil beKhsides Bubov* (Eng. title: *The Daniel-shpil in the Bobover Hasidic Community*) (1998).

On Elye Bokher, see (62) G.E. Weil, *Élie Lévita, humaniste et massorète* (1963); (63) J. Joffe (ed.), *Elye Bokher: Poetishe Shafungen in Yidish, 1* (1949); (33) Ch. Shmeruk, *Prokim* (1988), 97–120, 141–56; (35) J. Baumgarten, *Introduction* (2005), 163–206. (64) *Pariz un' Viene* is edited by Ch. Shmeruk (1996), and he is the subject of an innovative literary analysis by (65) A. Schulz, *Die Zeichen des Körpers und der Liebe: "Paris und Vienna" in der jiddischen Fassung des Elia Levita* (2000).

Texts of songs and hymns can be found in: (66) F. Rosenberg, "Über eine Sammlung Deutscher Volks-und Gesellschaftsliedern in Hebräischen Lettern," *Zeitschrift für die Geschichte der Juden in Deutschland*, 2 (1888), 3 (1889); (67) L. Löwenstein, "Jüdische und Jüdisch-Deutsche Lieder," in *Jubelschrift… I. Hildesheimer* (Berlin, 1890); (68) Y. Shatski (ed.), *Simkhes HaNefesh fun Elkhonen Kirkhon* (1926); (69) Ch. Shmeruk, "The Earliest Aramaic and Yiddish Version of the 'Song of the Kid' *(Khad Gadye),*" *The Field of Yiddish*, 1 (1954); (70) Kh. Shmeruk, "Velkher Yontef Iz Der Bester?," *Di Goldene Keyt* 47 (1963); (71) A. Yaari, "Gilgulo Shel Shir beYidish al Aseret haDibrot," *Kiryat Sefer* 41 (1966).

The *Ma'ase-bukh* has been translated into English by (72) M. Gaster, *Ma'aseh Book,* 1–2 (1934); into German by (73) Ulf Diedrich (2003), both based on the Amsterdam edition of 1732; and into French (with facing page facsimile of the *editio princeps* of 1602) by (74) Astrid Starck, *Un beau livre d'histoires / Eyn shön Mayse bukh*, 2 vols. (2003). See also (75) J. Meitlis, *Das Ma'assebuch, Seine Entstehung und Quellengeschichte* (1933) and (76) I.Z. Sand, "A Linguistic Comparison of Five Versions of the Mayse-Bukh," *The Field of Yiddish*, 2 (1965).

Fictional prose is discussed in (77) Y. Rivkind, "Di Historishe Alegorye fun R' Meyer Sh"ts," *Filologishe Shriftn* 3 (1929); (78) Kh. Shmeruk, "Ha-Sipurim al R' Adam Ba'al Shem ve-Gilguleihem be-Nuskho'ot Shivkhei ha-Besht," *Tsion* 28 (1963). The *Ki-bukh / Seyfer Mesholim* has been translated (with facsimile) by (79) A. Freimann, *Die Fabeln des Kuhbuches*, 2 vols. (1926) and (80) E. Katz, *Book of Fables; The Yiddish Fable Collection of Reb Moshe Wallich* (1994). See also (81) S. Tsfatman, *Bein Ashkenaz le-Sefarad – Le-Toledot ha-Sippur ha-Yehudi bi-Ymei ha-Beinayim* (1993) and (82) E. Timm, "'Beria und Simra': Eine jiddische Erzaehlung des 16. Jahrhunderts," in: *Literaturwissenschaftliches Jahrbuch*, n.s. 14 (1973), 1–94.

Most of the early Yiddish historical songs were listed in chronological order by (83) M. Steinschneider, *Die Geschichtsliteratur der Juden* (1905). The function of such songs is analyzed by (84) Kh. Turniansky, "Yiddish 'Historical' Songs as Sources for the History of the Jews in Pre-partition Poland," in: *Polin*, 4 (1989), 42–52. Editions of representative texts are (85) R. Ulmer (ed.), *Turmoil, Trauma and Triumph: the Fettmilch Uprising in Frankfurt-am-Main (1612–1616)* (2001) [= *Megiles Vints*]; (86) S. Neuberg (ed.), *Das Schwedesch lid* (2000). The relationship of Yiddish drama to German drama is analyzed in (56), of poetry in (66), of prose, in: (87) A. Paucker, "Yiddish Versions of Early German Prose Novels," in: *Journal of Jewish Studies*, 10 (1959).

The Arthurian legends in Yiddish are the subject of (88) L. Landau, *Arthurian Legends or the Hebrew-German Rhymed Version of the Legend of King Arthur* (1912) [with ed.], (89); R.G. Warnock, "The Arthurian Tradition in Hebrew and Yiddish," in: *King Arthur Through the Ages* (1990), 1:189–208 and (90) A. Jaeger, *Ein juedischer Artusritter* (2000). The problems posed by this type of adapted literature were also discussed in connection with the Cambridge manuscript.

The prosody of Yiddish poetry comes in for incidental treatment in general summaries and in connection with the publication of texts; it is dealt with specifically in (91) B. Korman, *Die Reimtechnik der Estherparaphrase Cod. Hamburg 144* (1930), and (92). Hrushovski, "The Creation of Accentual lambs in European Poetry and their First Employment in a Yiddish Romance in Italy (1508–09)," in: *For Max Weinreich…* (1964).

Modern Literature

Until recently modern Yiddish literature lacked proper treatment in works based on modern methods of research and criticism. Much of the published material is confined to bibliography, biography, impressionistic criticism influenced by current events, eulogies, personal memoirs, introductions to the collected works of individual authors, and anthologies. There is an urgent need for critical editions of the literary works of this period; even the works of such authors as S.Y. Abramovitsh, Y.L. Perets, and Sholem-Aleykhem have not been published in complete and authoritative editions.

(93) The biographical encyclopedia by Z. *Rejzen, *Leksikon fun der Yidisher Literatur, Prese un Filologye*, 1–4, Vilna, 1928–29, which contains basic bibliographical data, and (94) *Leksikon fun der Nayer Yidisher Literatur,* 1–8 (1956–81) are useful guides for initial information about modern Yiddish writers. These works are supplemented by (95) Berl Kagan's *Leksikon fun Yidish-Shraybers* (1986). For bibliography, recourse may be had to the chapters on Judeo-German, Yiddish biography, and bio-bibliography in: (96) Sh. Shunami, *Mafteakh haMaftekhot* (1965). The following work (97) Y. Gar and F. Fridman, *Bibliografye fun Yidishe Bikher Vegn Khurbm un Gvure* (1962) is an important source for the literature of the Holocaust and postwar period.

The principal summaries of modern Yiddish literature are: (98) L. Wiener, *The History of Yiddish Literature in the Nineteenth Century* (1899); (99) M. Erik, *Etyudn tsu der Geshikhte fun Der Haskole, 1789–1881* (1934); (100) M. Viner, *Tsu Der Geshikhte fun der Yidisher Literatur in 19tn Yorhundert*, 2 vols. (1940; 1945–6. These may be complemented by (101) A.A. Roback, *Contemporary Yiddish Literature* (1957), and (102) S. Liptzin, *The Flowering of Yiddish Literature* (1964), and (103) *The Maturing of Yiddish Literature* (1970), as well as the sections on Yiddish literature in volumes 7–8 of (28) and in the additional volume 9 of that work: (104) Y. Tsinberg, *Di Bli-Tkufe fun der Haskole*, vol. 10 (1966). (105) *A Bridge of Longing; the Lost Art of Yiddish Storytelling* (1995) by David G. Roskies is an acute study of Yiddish narration focused on the central figures Nakhmen *Bratslaver, Ayzik-Meyer *Dik, Perets, Sholem-Aleykhem, Der Nister, Itsik Manger and Yitskhok Bashevis [Singer]. (106) The same scholar's earlier *Against the Apocalypse: Responses to Catastrophe in Modern Jewish Culture* (1984) is a seminal work in Yiddish as well as Holocaust studies. (107) Dovid Katz's *Words on Fire: the Unfinished Story of Yiddish* (2004) is a highly individual, footnote-free popular though learned survey.

Among the collections of critical articles and studies, mention should be made of (108) Sh. Bikl, *Shrayber fun Mayn Dor*, 1–2 (1958; 1965); (109) Y. Glatshteyn, *In Tokh Genumen*, 1–5 (1947; 1956; 1960; 1963); (110) A. Tabatshnik, *Dikhter un Dikhtung* (1965); (111) N. Mayzil, *Noente un Vayte*, 1–2 (1929–30); (112) N. Mayzil, *Forgeyer un Mittsaytler* (1946); (113) N. Mayzil, *Noente un Eygene* (1957); (114) N.-B. Minkov, *Zeks Yidishe Kritiker* (1954); (115) Sh. Niger, *Geklibene* Shriftn, 1–3 (1928); (116) Sh. Niger, *Dertseylers un Romanistn*, 1 (1946); (117) Sh. Niger, *Bleter Geshikhte fun der Yidisher Literatur* (1959); (118) D. Sadan, *Avney Bedek* (1962); (119) D. Sadan, *Avney Miftan*, vol. 1 (1962); (120) Sh.- L. Tsitron, *Dray Literarishe Doyres*, 1–4 (1931; 1922); (121) B. Rivkin, *Undzere Prozaiker* (1951).

Comprehensive anthologies include (122) Z. Rejzen, *Fun Mendelson biz Mendele* (1923); (123) N. Shtif, *Di Eltere Yidishe Literatur, Literarishe Khrestomatye* (1929); (124) A. Goldberg, *Undzer Dramaturgye, Leyenbukh in der Yidisher Drame* (1961). The following are anthologies in Hebrew translation: (125) *Akhisefer, Maasef leDivrey Sifrut… veTargumim min haShira haIdit*, ed. Sh. Niger and M. Ribilov (1944); (126) *Al Naharot Tisha Makhzorey Shira miSifrut Yidish*, ed. and tr. Sh. Meltser (1956); (127) M. Basuk, *Mivkhar Shirat Yidish, leman Y.-L. Perets ad Yameinu* (1963). In English translation there are a number of anthologies of prose. (128) I. Howe and E. Greenberg (eds.), *A Treasury of Yiddish Stories* (1953; paperback, 1958) has achieved classic status and may be credited more than any other single volume with bringing Yiddish fiction to the admiring attention of several generations of non-Yiddish-speaking readers. (Noyekh Miller and Leonard Prager have collected and published the Yiddish originals of the entire anthology on the Mendele website under the rubric "Onkelos"). The formidable editorial team composed of the brilliant essayist and critic of literature Howe and the Yiddish intellectual and poet Greenberg compiled a parallel volume (129), *A Treasury of Yiddish Poetry* (1969); an important bilingual anthology of Yiddish poetry (130) is *The Penguin Book of Modern Yiddish Verse*, ed. I. Howe, R.R. Wisse, and Ch. Shmeruk (1987). The 39 poets included in this volume were by the editors' collective judgment admitted to membership in an as yet undeclared poetic canon. Yiddish literature in the U.S. is treated in the following works: (131) K. Marmor, *Der Onheyb fun der Yidisher Literatur in Amerike, 1870–1890* (1944); (132) N.-B. Minkov, *Pionern fun Yidisher Poezye in Amerike*, 1–3 (1956); (133) A. Shulman, *Geshikhte fun der Yidisher Literatur in Amerike, 1870–1900* (1943); (134) N. Shteynberg, *Yung Amerike* (1917; 1930²); (135) B. Grobard, *A Fertl Yorhundert* (1935); (136) B. Rivkin, *Yidishe Dikhter in Amerike* (1947); (137) B. Rivkin, *Grunt-Tendentsn fun der Yidisher Literatur in Amerike* (1948); (138) A. Pomerants, *Proletpen* (1935). (139) The entire Yiddish *oeuvre* of Menke Katz translated by Benjamin and Barbara Harshav is presented in *Menke* (2005), introduced by Dovid Katz with a monographic survey of 20th-century Yiddish literary politics in New York.

Anthologies of American Yiddish literature are: (140) *Antologye, di Idishe Dikhtung in Amerike biz Yohr 1919*, ed. D. Landoy (1919); (141) *In Zikh, Antologye* (1920); (142) N. Shteynberg's miscellany *Idish America* (1929) gives a good sense of the literary scene at the time; (143) *Hemshekh-Antologye, fun Amerikaner Yidisher Dikhtung, 1918–1943*, ed. M. Shtarkman (1945); (144) *Amerikaner Yidishe Poezye*, ed. M. Basin (1940); (145) N. Mayzil, ed. *Amerike in Yidishn Vort – Antologye* (1955) is a thematic anthology of America in Yiddish literature in translation; and (146) H. Goodman (ed.), *The New Country, Stories from the Yiddish about Life in America* (1961). (147) Benjamin and Barbara Harshav's *American Yiddish Poetry / A Bilingual Anthology* (1986) is an outstandingly designed book and its translations with the participation of K. Hellerstein, B. McHale, and A. Norich set new standards in the demanding

art of poetry translation. (148) The sumptuous two-volume folio *Yiddish Literature in America 1870–2000, Anthology*, ed. E.S. Goldsmith (1999), with its generous allotment of space for all its authors, is a retrospective exhibition.

A bibliography of Yiddish literature in the Soviet Union is included in (149) *Pirsumim Yehudiim beVrit haMoatsot 1917–1960, Reshimot Bibliografiyot*, compiled Y.Y. Kohen, ed. Ch. Shmeruk (1961); (150) A. Abtshuk, *Etyudn un Materyaln tsu der Geshikhte fun der Yidisher Literatur-Bavegung in FSSR 1917–1927* (1934) is of great documentary value for the first ten years of the Soviet regime. The Soviet approach to Yiddish literature in the U.S.S.R. is given in the following collations of criticism: (151) M. Litvikov, *In Umru* 1 (1919), 2 (1926); (152) Y. Bronshteyn, *Atake* (1931), while the non-Soviet approach is to be found in (153) Sh. Niger, *Yidishe Shrayber in Sovyet-Rusland* (1958) and (154) Ch. Shmeruk, "Twenty-Five Years of *Sovetish Heymland* – Impressions and Criticism," in: Y. Ro'i and I. Beker (eds.), *Jewish Culture and Identity in the Soviet Union* (1991), 191–207; a short summary in English is (155) Ch. Shmeruk, "Yiddish Literature in the U.S.S.R.," in: *The Jews in Soviet Russia since 1917*, ed. L. Kochan (Oxford, 1970). See also (156) S. Wolitz, "The Kiev-Group (1918–1920) Debate: The Function of Literature," in: *Yiddish*, 3 (1978), 97–106.

The main anthologies of this literature are (157) *Oyf Naye Vegn, Almanakh, Draysik Yor Sovetish-Yidish Shafn* (1949), and (158) *Dertseylungen fun Yidishe Sovetishe Shrayber* (1969), both edited in the Soviet Union; (159) *A Shpigl oyf a Shteyn, Antologye Poezye un Proze fun Tsvelf Farshnitene Yidishe Shraybers in Ratn-Farband*, ed. Ch. Shmeruk; selected by B. Hrushovski, A. Sutskever and Ch. Shmeruk (1964; rev.ed.1988); (160) *Lo Amut Ki Ekhye, 24 Sippurim mi-Sifrut Yidish be-Vrit ha-Mo'azot* (1957), an anthology of Hebrew translations. See also (161) I. Howe and E. Greenberg (eds.), *Ashes Out of Hope – Fiction by Soviet Yiddish Writers* (1977).

Yiddish literature in Poland after World War I is treated in (162) Y.Y. Trunk, *Di Yidishe Proze in Poyln in Der Tkufe tsvishn Beyde Velt-Milkhomes* (1949); (163) B. Mark, *Umgekumene Shrayber fun Getos un Lagern* (1954). Anthologies of this literature from Poland are: (164) *Antologye fun der Yidisher Proze in Poyln Tsvishn Beyde Velt-Milkhomes (1914–1939)*, ed. Y.Y. Trunk and A. Tseytlin (1946); (165) B. Heler, *Dos Lid Iz Geblibn, Antologye, Lider fun Yidishe Dikhter in Poyln*, *Umgekumene Beys der Hitleristisher Okupatsye* (1951).

Other East European centers of Yiddish literature are the subject of (166) M. Naygreshl, "Di Moderne Yidishe Literatur in Galitsye," *Fun Noentn Over* (1955); (167) Sh. Bikl, "Vegn dem Onhoyb fun der Moderner Yidisher Literatur in Rumenye," *Shmuel Niger-Bukh* (1958); (168) *Oyfshtayg, Zamlbukh: Hundert Yor Yidishe Literatur in Rumenye*, ed. Meyer Rispler.

Anthologies in Israel of Yiddish literature include: (169) *Vortslen, Antologye fun Yidish Shafn in Yisroel / Poezye un Proze* ed. A. Shamri (1966); and (170) M. Khalmish, *Mi-Kan u-mi-Karov, Antologyah shel Sipurei Yidish be-Erez-Yisrael mi-Reishit ha-Me'ah ve-ad Yameinu* (1966); (171) *Yidish-Literatur in Medines-Yisroel / Antologye*, 2 vols. (1991) [edited by H. Os-

herovitsh, Sh. Vorzoger, M. Yelin, E. Podriatshik, M. Tsanin]
[single selections of 204 writers who lived in Israel with brief
bio-bibliographical introductions and photographs].

The lack of adequate attention to Yiddish women authors
has been belatedly and partially addressed in the anthology
of short story translations: (172) *Found Treasures / Stories
by Yiddish Women Writers*, ed. F. Forman, E. Raicus, S. Silberstein Swartz, and M. Wolfe (1994). (173) Kathryn Hellerstein has translated and commented upon a wide selection of
Kadya Molodowsky's poems in her *Papirene Brikn* (1999), with
Yiddish original facing English translation. Dafna Clifford
has written perceptively about Esther Kreitman, the relatively little-known sister of the famous Singer brothers: (174)
"From Diamond Cutters to Dog Races: Antwerp and London
in the Work of Esther Kreitman," in: *Prooftexts*, 23 (2003),
320–37.

Specific problems in poetics and prosody are studied in
the following works: (175) D. Hofshteyn and P. Shames, *Teorye fun Literatur, Poetik* (Kharkov 1930); (176) N. Stutshkov,
Yidisher Gramen-Leksikon (1931); (177) A. Vaynraykh, "Vegn
Filtrafikn Gram," *Yidishe Shprakh* 15 (1955); (178) U. Weinreich,
"On Cultural History of Yiddish Rhyme," *Essays on Jewish
Life and Thought* (1959); and (179) B. Hrushovski, "On Free
Rhythms in Yiddish Poetry," *The Field of Yiddish*, 1 (1954).

The quality of translations of Yiddish literature into English has improved in the past decade and with it the quality of
anthologies of Yiddish literature in English translation. (180)
Hugh Denman lists 90 anthologies of Yiddish literature in
English (in *The Mendele Review*, 8.08, July 29, 2004), including one of short fiction edited by the veteran anthologist of
Yiddish Joachim Neugroschel. No earlier short story collection
approaches the breadth of (181) *No Star Too Beautiful* (2002),
which gives recognition to older Yiddish literature. Neugroschel includes extracts from the *Mayse-bukh* and *Tsenerene*, and
stories by Anski, Asch, Bashevis, Bergelson, Bimko, Dik, Dinezon, Elye Bokher, Ettinger, Avrom Karpinovitsh, Glikl, Kipnis,
Kobrin, Rokhl Korn, Kulbak, H. Leyvik, Linetski, Abramovitsh, Nakhmen of Bratslav, Perets, Der Nister, Nomberg, Yoysef Perl, Yeshue Perle, Pinski, Avrom Reyzn, Khave Roznfarb,
Yoyne Roznfeld, Lamed Shapiro, Sholem-Aleykhem, Spektor,
Y.-Y. Trunk, and others.

Translation continues to be a challenge to students of
Yiddish, who inevitably encounter the half-truth that Yiddish is untranslatable. In a recent effort at rendering Abramovitsh (whose Yiddish, it is claimed, was already somewhat
archaic a century ago) freshly and engagingly, the late Ted
Gorelik in translating *Fishke the Lame* "conveys the intricacies of Abramovitsh's Yiddish diction by echoing the dialects
found in English novels of the 18th and 19th centuries by such
authors as Laurence Sterne and Charles Dickens, whose work
influenced Abramovitsh." On the other hand, Hillel Halkin, a
veteran translator of Hebrew in particular, "strikes a balance
between archaic and modern elements of style." (182) S.Y.
Abramovitsh, *Tales of Mendele the Book Seller*, ed. D. Miron
and K. Frieden (1996), lxii.

YIDDISH THEATER, FOLKSBIENE.

New York City's
Folksbiene Yiddish Theater, which the *New York Post* called
"one of the city's most remarkable cultural institutions," is
America's sole surviving professional Yiddish theater and the
longest continuously producing Yiddish theater company in
the world. When Folksbiene was founded in 1915 on the Lower
East Side, New York City boasted 14 other Yiddish theater
companies. True to its name (the People's Stage) the Folksbiene Yiddish Theater is dedicated to producing shows and
events that are socially relevant and that foster understanding
and cohesion within the broader Jewish community.

From 1915 to 1998 the Folksbiene existed under the auspices of the *Workmen's Circle/Arbeter Ring as a semi-professional company, serving an immigrant community and
presenting literary Yiddish plays as well as plays from the
world repertoire in Yiddish translation. In 1998 Folksbiene's
board of directors ushered in a new era by replacing the
company's management and instituting a new mandate to
modernize the company and expand the audience beyond
its strictly Yiddish-speaking core constituency. Its mission is
twofold: to be the custodian of a rich cultural legacy, while
developing new works that will add to this legacy. Zalmen
Mlotek, noted conductor and Yiddish music specialist, took
over the leadership and brought in new and innovative programming.

The Folksbiene became independently incorporated, employed a fully professional staff and performers, and provided
English and Russian translations for non-Yiddish speakers. By
the fall of 2004, the Folksbiene had ushered in a dramatic expansion of its programming, producing a year-round schedule
of mainstage productions and a wide array of other music, literary, and theatrical events. More and more theatergoers with
no previous exposure to Yiddish culture flock to the theater to
sample all the excitement. In an effort to continue this growth,
the Folksbiene instituted an Outreach Program to bring Yid-

dish performance to communities outside of New York City. Looking forward, the Folksbiene is in the process of establishing itself as a national membership organization and has raised $1.9 million toward building a permanent home.

[Zalman Mlotek (2nd ed.)]

YIDISHER KEMFER ("Jewish Fighter"), U.S. Yiddish Labor Zionist publication. Founded in Philadelphia in 1906 as an organ of Po'alei Zion in America, the *Kemfer* appeared as an irregular weekly in New York from 1907 to 1923, as a biweekly from 1924 to 1931 (during which period it was called *Yidisher Arbeter*), for many years thereafter a weekly, then in 1990 a biweekly and, since the mid-1990s, as a bimonthly magazine. Initially sponsored by the Labor Zionist Organization-Poale Zion, later under the auspices of the Jewish National Workers Alliance (renamed the Farband Labor Zionist Order in 1950), and since the mid-1960s by the Labor Zionist Alliance's "Labor Zionist Letters." During its long history, it was edited by such distinguished figures as Kalman *Marmor, David *Pinski, Ber *Borochov, Joel *Entin, Chaim *Greenberg, and Mordechai Strigler. It was for many years an international center for Labor Zionist thought and one of the most eminent Yiddish political and social journals in the United States and indeed in the world. From 1963 through 1995, under Strigler's tenure, the *Kemfer* published such renowned authors as Jacob Glatstein, Chaim Grade, H. Leivik, Abraham Reizen, and Isaac Bashevis Singer. From the summer of 1998, it was edited by Jacob Weitzner.

[Hillel Halkin / Arieh Lebowitz (2nd ed.)]

YIDISHE SHTIME, a daily paper published in Kovno (Lithuania). Founded in 1919, it was published by the General Zionist Organization of Lithuania, but became the acknowledged organ of the whole of Lithuanian Jewry. At first the paper consisted only of two small sheets, but from the end of 1920 it ran to eight pages on weekdays and 12 or more at weekends and on holidays. The first editor was L. Garfunkel, who was succeeded in 1921 by A. Elyashiv. R. Rubinstein was chief editor from 1923 and was largely responsible for developing the newspaper and giving it high standing. From time to time *Yidishe Shtime* had regular supplements, such as *Hed Lita* ("Echo of Lithuania") which appeared weekly in Hebrew; *Die Welt*, an illustrated weekly printed in Berlin; and *Musu garsas* ("Our Voice") in Lithuanian. In June 1940, with the invasion of Lithuania by the Russians, the paper and its printing press were nationalized and turned into an organ of the local Jewish Communists. Rubinstein, the editor, was dismissed, imprisoned soon after for the "crime of Zionism," and sent to a concentration camp in northern Russia. The paper survived only a short time until the appearance of the official Communist Yiddish journal, *Kovner Emes* ("Kovno Truth").

[Leib Garfunkel]

YIDISHES TAGEBLAT, New York Yiddish daily newspaper. Founded by K.H. *Sarasohn in 1885, it was regarded as the first Yiddish daily in the world, although it did not publish daily (excluding Saturday) until 1894. The *Tageblat* continued publication until 1928, when it was amalgamated with the *Morning Journal* [*Morgen zshurnal*]. Its first editor was M. Jalomstein, who was succeeded in 1892 by Johann (John) Paley, under whom the newspaper became extremely influential, circulation figures ranging from 30,000 at the end of the century to 70,000 in 1913. The paper had an anti-socialist policy, later taking a more progressive trend but without departing from its position as spokesman for Orthodoxy and the maintenance of Jewish customs, literature, and language.

YIGDAL (Heb. יְגְדַּל; "May He be magnified"), opening word of a liturgical hymn based upon the Thirteen Articles of Faith enumerated by Maimonides. Its authorship is attributed to Daniel b. Judah, a *dayyan* in Rome in the first half of the 14th century. It is also ascribed to Immanuel (b. Solomon) of *Rome, the author of the *Maḥbarot* (see: *Maḥbarot Immanu'el ha-Romi*, ed. by D. Yarden, 1 (1957) 90–93; esp. 90 no. 422). *Yigdal* is metrically constructed and has a single rhyme throughout. Although other poetical renditions of these principles of faith were composed during this period, only *Yigdal* became incorporated into the daily liturgy. In the Ashkenazi ritual, it is usually printed at the start of the daily *Shaḥarit* service, but recited as in the Sephardi, Italian, and Yemenite rituals only at the conclusion of the Friday and festival evening services. Ḥasidim do not recite this hymn at all. The Ashkenazi hymn consists of 13 lines, one for each creed. The Sephardi version, on the other hand, contains 14 lines; the final line of this version is: "These are the 13 bases of the Jewish faith and the tenets of God's law."

English translations of *Yigdal*, retaining the rhyme, have been composed, such as that of Alice Lucas (1852–1935). Her rendition begins:

> The living God we praise, exalt, adore!
> He was, He is, He will be evermore!
> No unity like unto His can be:
> Eternal, inconceivable is He.

It concludes:

> He at the last will His anointed send,
> Those to redeem, who hope, and wait the end.
> God will the dead to life again restore.
> Praised be his glorious Name for evermore! (Hertz, Prayer, 7).

[Aaron Rothkoff]

Musical Rendition

The many melodies for *Yigdal* seem to have been composed, evolved, or adapted more or less independently in each lo-

cal community. Where the Ashkenazi custom prevails, and also in Yemen, the melodies of *Yigdal* are generally based on the prayer mode and, in this sense, tend toward standardization and a lack of individuality. In the Sephardi Diaspora, however, *Yigdal* has a great number of distinct tunes; none of them seems to be particularly old and all of them draw strongly upon the reservoir of free paraliturgical and secular tunes available within the community and from the surrounding population (such as folk song and military marches). The only element common to most of these is the character of the melodies, which, together with the way in which they are sung by the congregation, combines the moods of pride and cheerfulness.

One *Yigdal* melody has achieved particular fame – the so-called "Leoni *Yigdal*". It is attributed to Meyer Leon, called Leoni, who was *ḥazzan* at the Duke's Place synagogue in London (Ashkenazi). Thomas Olivers, a Wesleyan minister, heard Leoni sing this *Yigdal* there; he decided to render the hymn into English and to introduce it into Christian worship together with its melody. (In another version of the story Olivers first translated the text and then went to Leoni to ask for "a synagogue melody to suit it.") Olivers' version, *The God of Abraham Praise*, first published in 1770, became popular immediately, and is sung to this day in the Anglican service as a processional or general-purpose hymn (*Hymns Ancient and Modern Revised*, no. 637, pp. 868–70). It has also been taken into the hymnals of several other English-speaking Protestant denominations. A.Z. *Idelsohn attempted to relate the Leoni *Yigdal* in a large comparative table to a number of Spanish, Basque and Polish folk songs, to a Sephardi melody for the *piyyut Lekh le-Shalom Geshem u-Vo le-Shalom Tal*, and also to the melodies of the Zionist hymns *Dort wo die Zeder* and *Ha-Tikvah*, together with the well-known motive from Smetana's *Moldau*. Not all of the comparisons in the scheme are musicologically valid. In any case, Idelsohn's main objective here, which was to prove the "Jewish roots" of *Ha-Tikvah*, has been invalidated by the discovery of its true antecedents (see *Ha-Tikvah).

YIḤUS (Heb. יחוס, biblical Heb. יחוש; "genealogy"), common term for family records, derived from the root יחס ("relationship"). The term is first found in the later books of the Bible, where it means genealogical lists (e.g., 1 Chron. 9:1, "So all Israel were reckoned by genealogies"). After the return from the Babylonian exile, genealogies were evidently important because those who could not bring evidence of their ancestry, for example, were excluded from the priesthood (Ezra

2:62; Neh. 7:64). The word retained this meaning in the talmudic period where mention is made of a *Megillat Yuḥasin* ("Book of Genealogies"), a commentary on Chronicles whose loss was considered "to have impaired the strength of the sages, and to have dimmed the light of their eyes" (Pes. 62b), where it is related that Simeon b. Azzai said, "I found a book of genealogical records in Jerusalem" (Yev. 49b). The importance of *yiḥus* is revealed in the statement of R. Ḥama b. R. Ḥanina that "When the Holy One, blessed be He, causes His Divine Presence to rest, it is only upon families of pure birth (*mishpaḥot meyuḥasot*) in Israel" (Kid. 70b). There seems, however, to have been some attempt to counter the importance attached to *yiḥus*, as is revealed by such statements as "the learned *mamzer* takes precedence over the ignorant high priest" (Hor. 3:8). In later Jewish tradition considerable importance was attached to *yiḥus* in the matter of arranging marriages (see Sh. Ar., EH chaps. 2–6). Lists of genealogical records were even printed with the express purpose of tracing the *yiḥus* of particular families. Examples of these are to be found in Ḥ.N. and D. Magid's *Mishpaḥat Ginsburg* (1899); S.Z. Kahana's *Anaf Eẓ Avot* (Cracow, 1903); and A. Epstein's *Mishpaḥat Luria* (Vienna, 1901). It was considered particularly valuable to be able to trace one's lineage back to King David. In the introduction to *Migdanot Eli'ezer* (1895), Rabbi E. Ḥarlap of Poland published a family tree showing his descent from King David.

See *Genealogy, *Zekhut Avot, *Family.

YIḤYE, ISAAC HA-LEVI (1867–1932), selected as last chief rabbi of Yemenite Jewry, pupil and grandson of R. Shalom Manẓurah. Yiḥye was known for his Torah learning as well as for his understanding of worldly affairs. Appointed *av bet din* of *Sanʿa in 1901, he became chief rabbi of *Yemen in 1905, holding this position until his death. His rabbinical appointment corresponded with one of Yemenite Jewry's most difficult periods – following upon the war and the severe famine which struck the country in 1903–04. After this the community numbered only a third of its previous size. He reorganized the survivors and restored its religious and communal institutions, both internally and externally with regard to its relations with the central government.

Yiḥye's activities spread throughout Yemen, and by means of emissaries and rabbis he was vigilant in Torah and religious matters throughout the exile; in the fields of education, the rabbinate, matrimony and *takkanot* affecting society. Together with the heads of the Sanʿa community, he strove to found a modern school in the capital. For this purpose they entered into lengthy negotiations with the *Alliance Israélite Universelle, but for various reasons the plan did not materialize. As *av bet din*, his responsa were sent to all parts of Yemen. His numerous activities include the rescue of orphans from conversion and the smuggling of them into Palestine, and his purchase of the land of the Jewish district in Sanʿa from the hands of the Muslim waqf. Yiḥye also maintained contact with the Zionist organization in Palestine and assisted the immigration

of Yemenite Jews. As official representative of the Jews, he was treated with honor and respect in the court of the imam and in government circles. He succeeded in using his influence for the benefit of his community.

[Yehuda Ratzaby]

Yiḥye's son, R. SHALOM ISAAC HA-LEVI (1891–?), was *av bet din* and chief rabbi of the Yemenite Jews in Israel (1925–1961) and took part in the educational activities of his community. He was also helpful in editing the responsa of R. Yiḥye *Sāliḥ (parts 1–2, 1946; part 3, 1965) to which he wrote the introduction. In 1955 he edited the Mishnah *Berakhot*, with the commentary of R. Obadiah of *Bertinoro, in Yemenite vocalization.

YINNON (Indelman), MOSHE (1895–1977), Hebrew and Yiddish journalist. Born in Poland, Yinnon was active in the Zionist movement, contributed to the Hebrew press, taught Hebrew, and served as a member of the editorial staff of the Yiddish paper *Haynt*. For a number of years he also edited the Hebrew weekly *Hadoar* in New York City. In 1940 he emigrated to Palestine where from 1943 to 1956 he was editor of the publishing house Mosad Bialik.

[Eisig Silberschlag]

YISHTABBAḤ (Heb. יִשְׁתַּבַּח; lit. "Praised"), first word and the name of the blessing which concludes the *Pesukei de-Zimra* section of the morning service. *Yishtabbaḥ* is referred to in the Talmud as "the benediction of song," where it is designated as a conclusion of the *Hallel* recited during the Passover *seder* (Pes. 118a; Rashbam ad loc.). The blessing is one of praise for God, declaring that unto Him "song and praise are becoming, hymn and psalm, strength and dominion, victory, greatness and might, renown and glory, holiness and sovereignty, blessings and thanksgivings from henceforth even for ever" (Hertz, Prayer, 107).

Its author is unknown, although some attribute it to a certain Solomon, interpreting שְׁמָךְ לָעַד מַלְכֵּנוּ הָאֵל (*Shim-kha la'ad Malkenu ha-El*) as an acronym of his name. Others explain this *notarikon* as being in honor of King Solomon (*Abudarham ha-Shalom* (ed.) Jerusalem (1959), 64). The Zohar places great stress on the proper recitation of this prayer since its 13 individual praises of God activate the 13 attributes of God (Zohar, Ex., 132a). *Yishtabbaḥ* should be recited while standing (Sh. Ar., OḤ 53:1 and *Taz* ad loc.), and it is forbidden to interrupt or converse during this portion of the service (*ibid.*, 51:4; cf. 54:3). Following *Yishtabbaḥ*, half-*Kaddish* is recited to separate the *Pesukei de-Zimra* from the *Shema* and its benedictions which follow.

YIVO (acronym for **Yidisher Visnshaftlekher Institut**) **INSTITUTE FOR JEWISH RESEARCH**, the principal world organization conducting research in *Yiddish and about the history and culture of Yiddish-speaking Jewry. Until 1955, its English designation was the Yiddish Scientific Institute. YIVO sought from its inception to collect and preserve material mirroring Jewish life and to study various Jewish problems objectively and empirically. In this endeavor, YIVO was guided by three basic principles: (1) the peoplehood of Jews, especially as united by the Yiddish language; (2) the enrichment of the life of that people by means of Jewish scholarship; and (3) the application of the most modern methods of research in the quest for a better understanding of Jewish identity and Jewish group phenomena.

The original proposal for a Yiddish academic institute was initiated by Nahum (Nokhem) *Shtif and published in the pamphlet *Di Organizatsye fun der Yidisher Visnshaft* ("The Organization of Yiddish Scholarship," 1925). Shtif argued that Jews should participate in scholarly research in their own language, and that the results of world scholarship be made available to those Jews unfamiliar with languages other than Yiddish. Noting the achievements of various scholars during the preceding decade in new areas of Jewish research, he proposed an institution that would coordinate, conduct, and disseminate such research, as well as standardize the Yiddish language, collect relevant library and archival materials, and train young scholars. Shtif's plan was approved at a meeting organized by Max *Weinreich and Zalman *Rejzen in Vilna on March 24, 1925. The decision to begin work was made later that year at a conference in Berlin held August 7–12, 1925. Although the official seat of the institute was in that German city, Vilna was the most active center of YIVO's work and eventually the location of its headquarters. An American branch was founded in October 1925 and subsidiary branches or support groups were also active in locales around the world including Argentina, Austria, Brazil, Chile, England, Estonia, France, Latvia, Romania, and Palestine. After the outbreak of World War II the American branch, earlier known as the Amopteyl (Amerikaner Opteylung) took over the central direction of the institute (1940).

In the period before World War II YIVO's research was conducted through four sections: (1) History, directed by Elias *Tcherikower and including Simeon *Dubnow, Raphael Mahler, Emanuel *Ringelblum, Ignacy Schipper, and Jacob *Shatzky; (2) Philology, directed by Max *Weinreich and including Y.L. *Cahan, Zelig *Kalmanovitch, Samuel (Shmuel) *Niger, Noah *Prylucki, and Zalman *Rejzen; (3) Economics and Statistics, directed by Jacob *Lestschinsky and including *Ben-Adir, Boris Brutzkus, Julius Brutzkus, Liebman *Hersch, and Mark Wischnitzer; and (4) Psychology and Education, directed by Leibush *Lehrer and including Abraham *Golomb, H.S. Kasdan, Lyuba Konel, Herts Kovarski, and Roza Simkhovitsh. Publications were in Yiddish with summaries in English, German, or Polish. These included each section's series of *Shriftn fun Yidishn Visnshaftlekhn Institut* ("Writings of the Yiddish Scientific Institute," 1925–40), the journal *Yivo-Bleter* ("YIVO Pages," 1931–), and the newsletter *Yedies fun Yivo* ("YIVO News," 1925–). A Bibliographic Center, Library,

and Archives collected historic and contemporary research material. Correspondents in Yiddish-speaking communities throughout the world, but most especially in Eastern Europe, were encouraged to study local folkways and to assemble material of historical and cultural significance to send to the institute. YIVO's Vilna period reached its peak with two international conferences organized in 1929 and 1935, which were attended by leading scholars from around the world. In the 1930s Max Weinreich, YIVO's dominant figure, increasingly emphasized the study of Jewish sociology and economic life. In 1934 the institute initiated the Division of Youth Research and the Aspirantur, a training program for young scholars. An Art Section was created the following year and YIVO's efforts to standardize Yiddish spelling finally reached fruition in 1936. By 1939 YIVO had amassed one of the world's largest Judaica collections, including books, press, theatrical memorabilia, photographs, manuscripts and letters of famous personalities, and sundry items connected with Yiddish culture.

After the German invasion of Vilna during the Holocaust, the Nazis established a sorting center for looted Jewish property in the YIVO building in March 1942. They forced YIVO staff members to select the most valuable items to be sent to Germany and attempted to destroy the rest, but many Jews smuggled or hid important items. At the war's end the YIVO headquarters in Vilna was completely destroyed and the New York branch was declared the institute's new center. The materials sent to Germany and some hidden in Vilna were recovered and sent to New York in 1947.

In 1955 YIVO moved to a building at 86th Street and Fifth Avenue and changed its English name to the YIVO Institute for Jewish Research. In this period YIVO pioneered the academic study of the Holocaust and gave increasing attention to the lands to which East European Jews had immigrated, especially to the problems of Jewish acculturation in the U.S. Yiddish writers, scholars, and Jewish communal bodies added to YIVO's collections, while the acquisition of records from the American Jewish Committee and the Hebrew Immigrant Aid Society (HIAS) made YIVO a major center for the study of American Jewish history. The institute also sponsored annual conferences, exhibits, classes, and seminars, which served as a forum for the exchange of ideas and enriched the Jewish cultural scene. Participants in YIVO's Research Planning Commission, organized by Max Weinreich in 1962, included Michael Astour, Gerson D. *Cohen, Alexander Ehrlich, Marvin I. Herzog, and Uriel *Weinreich, with Joshua A. *Fishman as chairman. Major research projects inaugurated by the Commission included: the Interplay of Social and Political Factors in the Struggle of a Minority for its Survival and Creative Development; the Jews of Poland, 1919–1939; and the History of the American Jewish Labor Movement. YIVO sponsored research conferences on the German-Imposed Jewish Councils during World War II; Multilingualism and Social Change: Perspectives on Yiddish; and Economic Aspects of Jewish Life in Poland between the two World Wars. In 1970 the Commission

was expanded into a Commission of Research and Training under the chairmanship of Nathan Reich.

Despite the continued leadership of Max Weinreich until his death in 1969, there was a dwindling number of scholars fluent in Yiddish, and the compromise with English became increasingly more pronounced. In 1968 YIVO founded the Uriel Weinreich Program in Yiddish Language, Literature, and Culture, an intensive summer language course; and a graduate component, the Max Weinreich Center for Advanced Jewish Studies. These programs played a crucial role in transmitting knowledge of the Yiddish language and of East European Jewish culture to young American-born scholars, many of whom became leaders in Jewish Studies programs then developing on campuses across the U.S.

YIVO's post-war publications include such standard reference works as Uriel Weinreich's *College Yiddish* (1949) and *Modern English-Yiddish Yiddish-English Dictionary* (1968) and Max Weinreich's *Geshikhte fun der Yidisher Shprakh*, 4 vols. (1973; partial Eng. tr. *History of the Yiddish Language*, 1980). YIVO created the journal *Yidishe Shprakh* ("Yiddish Language," 1941–86), edited by Yudel *Mark and later Mordkhe Schaechter, to treat problems of standard Yiddish. *The YIVO Annual of Jewish Social Science* (later the *YIVO Annual*, 1946–96), whose founding editor was Shlomo Noble, originally included mainly translations from YIVO's Yiddish publications; later volumes contained an increasing proportion of original contributions, especially on Jewish life in America. Under YIVO's auspices, the Yiddish Dictionary Committee was established in 1953 to gather, define, and publish Yiddish lexicographical treasures. Four folio volumes of the *Groyser Verterbukh fun der Yidisher Shprakh* ("Great Dictionary of the Yiddish Language") appeared between 1961 and 1980 (comprising *only* the letter alef), although the project was no longer affiliated with YIVO by the latter date. Bibliographies listing books, journals, articles, and reviews published by YIVO appeared in 1943 and 1955.

In the 1980s YIVO created the Max and Frieda Weinstein Archive of Recorded Sound and the Yiddish Folk Arts Program (popularly known as KlezKamp, later run independently), which played a central role in the revival of *klezmer* (East European Jewish folk) music. With the advent of Perestroika YIVO learned that part of its pre-war collection had survived in Soviet Lithuania, and the archival materials were brought to New York and duplicated in 1995–96. Together with the Jewish Theological Seminary of America and the Russian State University of the Humanities in Moscow, YIVO created the first Jewish Studies program in the former Soviet Union, Project Judaica. In 1992 the first volumes of *The Language and Culture Atlas of Ashkenazic Jewry* appeared, a massive project begun by Uriel Weinreich in 1959 to record Yiddish dialects. YIVO's library and archives continued to expand, in particular with the acquisition of the Bund Archives of the Jewish Labor Movement (1992), while the publication of *The Yiddish Catalog and Authority File of the YIVO Library* (1990) and *The Guide to the YIVO Archives* (1998) greatly improved access to the collections. The 1994 bombing of the AMIA Jewish community

center in Buenos Aires severely damaged YIVO's branch there, which had been run independently since World War II. Members of the institute's New York staff traveled to Argentina to assess the damage and offer assistance. In 1999 YIVO relocated to the Center for Jewish History, a facility at 15 West 16ᵗʰ Street in New York housing several Jewish research institutions. At the start of the 21ˢᵗ century YIVO's Library and Archives contained more than 350,000 volumes and 10,000 linear feet of archival material, the world's largest collections documenting Yiddish culture and the experience of East European Jews and their descendants.

[Sol Liptizin / Cecile Esther Kuznitz (2ⁿᵈ ed.)]

YIZḤAKI, ABRAHAM BEN DAVID (1661–1729), rabbi, halakhic authority, and kabbalist. Born in Jerusalem, Yiẓḥaki was the grandson of the kabbalist, Abraham b. Mordecai *Azulai, and son-in-law of Abraham Israel Zeevi, a scholar of Hebron. He studied Talmud under Moses b. Jonathan *Galante, and Kabbalah together with Joseph Bialer, grandfather of Ḥ.J.D. *Azulai. He was chief rabbi of Jerusalem, *Rishon le-Zion*, by 1708, and held the position until his death. He also headed a yeshivah. Among his disciples were Moses *Ḥagiz, Isaac ha-Kohen *Rapoport, and Isaac Zerahiah Azulai.

At the beginning of his rabbinate, the inhabitants of Jerusalem suffered from the heavy burden of taxation placed upon them by the government. To ameliorate the situation, Yiẓḥaki went to various European countries and to Turkey as an emissary of the community (1709–16). In 1708, as head of the Jerusalem rabbis, he signed a declaration against the Shabbatean Nehemiah *Ḥayon, and during his journey he vigorously opposed the propaganda conducted by Ḥayon and Miguel Abraham *Cardozo. On reaching Amsterdam in 1712, he encouraged Moses Ḥagiz and Ẓevi *Ashkenazi (Ḥakham Ẓevi) to oppose Ḥayon, who came to Amsterdam in 1713. His father, David Yiẓḥaki, on the other hand, was a foremost supporter of Shabbetai *Ẓevi. On returning to Jerusalem, Yiẓḥaki devoted himself to teaching and writing. Some time later, when the situation of Jerusalem deteriorated and his safety was endangered, he was compelled to flee to Hebron, but later returned to Jerusalem, where he died. He was the author of the responsa *Zera Avraham* (2 pts.; Smyrna and Constantinople, 1732–33).

[Avraham Yaari]

YIZḤAKI, DAVID (c. 1615–1694), rabbi and halakhic authority of Ereẓ Israel. Yiẓḥaki was born in Salonika, where he studied under Elijah Gevartil, and later immigrated to Ereẓ Israel. He married the daughter of the kabbalist Abraham b. Mordecai *Azulai of Hebron, but appears to have lived in Jerusalem from 1661 to 1665. During the stay of *Shabbetai Ẓevi in Jerusalem (1662–65), Yiẓḥaki was attracted to him and became one of his most devoted followers. He was in Egypt in 1665 and, though at first shaken by Shabbetai Ẓevi's acceptance of Islam in 1666, he remained loyal to him. He presumably returned to Ereẓ Israel but left again in 1666 or 1667 and stayed for some time in Adrianople, where he studied under Shabbetai Ẓevi. After the widespread adoption of Islam in Salonika by the followers of the false messiah in 1683, however, Yiẓḥaki appears to have forsaken the movement completely. He returned to Jerusalem and in 1672 was appointed a *dayyan* in the *bet din* of Moses *Galante (Ha-Magen), after whose death in 1689 he acted as the leading rabbi of Jerusalem, where he died. His sons were Abraham *Yiẓḥaki, one of the leading persecutors of the Shabbateans, and Isaac Yiẓḥaki, a Jerusalem scholar.

[Abraham David]

YIZHAR, S. (originally **Yizhar Smilansky**; 1916–2006), Hebrew author who belongs to the first generation of native Israel writers. Born in Reḥovot into a family of writers (see *Smilansky), Yizhar taught at the Ben Shemen youth village and at a Reḥovot secondary school, fought in the 1948 War of Independence, and was a member of the Knesset (Mapai-Rafi) from its inauguration until 1967, when he gave up his seat because of an extended sojourn abroad. Holding a Ph.D. from the Hebrew University, he taught literature and education and was professor at Tel Aviv University.

Yizhar was the first prose writer born in Ereẓ Israel to render into aesthetic experience his profound awareness of the local landscape and scene, and his stories evolve entirely against a Palestinian background. These qualities can already be detected in his first story, *Efrayim Ḥozer la-Aspeset* (published in *Gilyonot* 6, 1938). His characters, imbued with his own deep attachment to the land, are steeped in their immediate surroundings.

His early writings were influenced by the internalized reflective prose rhythms of Uri Nissan *Gnessin and his later works by Joseph Ḥayyim *Brenner's quest for moral truth beyond the pretense of daily convention. Yizhar's distinctive prose style won him his place in Israel literature and is primarily responsible for his influence on the younger Hebrew writers. His lyrical sentences, characteristic of the internal

monologue, dominate his early stories, while in later works, particularly in the novel *Yemei Ziklag* (1958), he displays a flexibility of language which blends the internal monologue with dialogue, and long descriptions of nature with short rapid passages of action. Yizhar's thorough command of literary Hebrew, his proclivity for linguistic precision, and his ability to draw on contemporary Hebrew without being ensnared by the slang of the moment won him general acclaim. He has, however, been criticized for sacrificing the narrative and plot development to a display of linguistic dexterity and versatility.

Yizhar's characters, mainly youths born in Erez Israel, are involved in a dynamic situation in which they are torn between conflicting moral values. They are faced with the dilemma of whether to follow the dictates of their immediate society (the kibbutz, a group of fighters) or those of their conscience and at the same time strive to preserve their individuality. The tension between these two polar values is sharply delineated in *Sippur Ḥirbet Ḥizah* (1949) and *Ha-Shavui* (1949), two short stories written after the War of Independence, in which Yizhar describes the moral dilemma of the protagonist, a young Israel soldier, who does not dare to revolt against the military authority whose amoralism he rejects. Spurred on by his sensitivity to the suffering of others and his own strong sense of justice, he wants to protest but is paralyzed because he does not wish to lose the esteem of his companions. The inner revolt of the hero (or anti-hero) of *Sippur Ḥirbet Ḥizah* against the expulsion of Arab farmers from their home village is particularly poignant because he sees an injustice perpetrated by Jews, sons of a people that has long suffered from exile and persecution. In *Ha-Shavui*, the anti-hero realizes only too well that he and his friends are sinning against the simple village shepherd whom they hold prisoner for no particular military reason, but merely to relieve their boredom and the humdrum life in a dugout. The protagonists of both stories are unable to adduce enough counterarguments against the collective action, and neither dares to disobey an order or to depart from the accepted framework.

These stories aroused a storm of protest when they appeared. Yizhar was the first writer sharply to reveal the other face of the War of Independence which, though just in itself, inevitably led to moral corruption of victor and vanquished alike. The author, however, was not so much concerned with presenting the clash of two opposing moral systems as with the portrayal of the tragic dilemma reflected in the struggle within the soul of the hero, a character who recurs in all his stories. While fully aware of the moral problems he was posing, Yizhar seemed to be incapable of investing his protagonists with decisive and permanent force of action.

Yemei Ziklag, a panoramic war novel, presents a wider scope of the problems and moral contradictions with which the heroes contend. The narrative is a description of the combat experiences of a group of soldiers stationed in a dugout in the south, near the Negev, during a seven-day period of the War of Independence. The theme, the spontaneous reaction of the young fighters to war and its inherent fear of death, also nurtures a strong protest against the ideological and moral values bequeathed to them (the first generation of native-born sons) by the "pioneer generation." The heroes, and apparently the writer himself, see the secular socialist credo as empty of meaning and incapable of forming a moral bulwark on which to lean during their grave internal conflict, born out of war and the simple fear of death. This protest, however, even when expressed most sharply and daringly, is not a philosophy out of which they can formulate their true attitude to war or can understand why they continue to fight and do not flee. Yizhar explains their protest against war and the fear of death and their compulsion to continue fighting as the results of immediate reflexes, and not actions rooted in moral truth or ideal. The narrator fully realizes the weakness of his answer to the moral dilemma and hints at some possible solution lying beyond the scope of knowledge of the protagonists. In the final analysis, however, he admits that there is no answer and that the only way out lies in the renewal of man's rapport with the universe that surrounds him.

The rhythms of his rich prose infuse his minutely detailed recording of natural, technical, or psychological data with a rare lyricism. Yet his love of descriptive writing slows up his narrative flow and weakens the structure of his plot. B. Kurzweil has pointed out this inherent weakness in *Yemei Ziklag*, which essentially remains a short story extended into a novel by long and repetitious passages of lyrical prose. He has also suggested that Yizhar's catalog of characters is drawn from the rather narrow world of his contemporaries whose experience – at least as Yizhar has described it – is too limited to afford a background for a full-scale novel.

After 30 years of self-enforced silence, Yizhar published several prose works in the 1990s, many of them autobiographical stories of recollection, reflecting on pre-state Israel. *Mikdamot* (*Foretellings*, 2005), depicts a boy growing up in a Jewish farming community in Palestine and in the growing city of Tel Aviv. The boy's sensual experiences coalesce with the adult's conscious reflection on past experiences. *Zalhavim* (1993), a novel, describes an afternoon spent by three teenagers, the author being one of them, in a tangerine grove during the 1930s and focuses on adolescence, the erotic appeal of the earth and the complex relations between fathers and sons. Followed by a collection of stories, *Zedadi'im (Asides*, 1996), Yizhar published in 1996 the collection *Ezel ha-Yam*, three novellas in which the sea becomes a metaphor for the ambigious relationship between man and the universe. The novel *Malkomiyyah Yefeifiyyah* ("Lovely Malcomiah," 1998) is yet another story of adolescence amidst the sights and smells of nature. A shy Erez Israeli youth falls in love with the beautiful, much admired Shula. It is not the plot, but the precise, fine observation of nature, the sensual and lyrical description and the many-layered poetic idiom which typify Yizhar's later prose. Among his other works are *Be-Faʾatei Negev* (1945); *Ha-Ḥorshah Asher ba-Givah* (1947); *Shishah Sippurei Kayiz* (1950), two volumes of stories for youth; *Be-Raglayim Yeḥefot* (1959), and *Gilui Eli-*

yahu (1999). Yizhar also wrote articles and essays on political and public affairs. The Collected Works appeared in 1996. Yizhar was awarded the Brenner Prize, the Agnon Prize, as well as the prestigious Israel Prize for literature (1959). *Midnight Convoy and Other Stories* appeared in 1969. Stories were translated into various languages and are included in anthologies, as for example "Habakuk" in: G. Abramson (ed.), *The Oxford Book of Hebrew Short Stories* (1996). For information concerning translations, see the ITHL website at www.ithl.org.il.

[Matti Megged / Anat Feinberg (2nd ed.)]

YIZKOR (Heb. יִזְכּוֹר; "He shall remember"), opening word of the memorial prayer, said for departed close relatives on the last day of Passover, Shavuot (the second day in the Diaspora), Shemini Aẓeret, and the Day of Atonement. The word is popularly applied to the whole **Hazkarat Neshamot* service.

YIZRE'EL (Heb. יִזְרְעֶאל), kibbutz in northern Israel at the foot of Mt. Gilboa affiliated to Iḥud ha-Kevuẓot ve-ha-Kibbutzim. In the War of Independence the strategically situated Arab village of Za'rīn served as a vantage point from which Arab units harassed Jewish settlements in the Harod Valley and tried to block communications with nearby Afulah. A *Palmaḥ group took the village in an attack on May 30, 1948. A few weeks later a group of Israel-born youth established the kibbutz on the abandoned site. Immigrants from Australia and other English-speaking countries later joined the kibbutz. Farming was highly intensive, based on field crops, almonds orchards, fishery, poultry, and dairy cattle. The kibbutz owned Maytronics for the manufacture of advanced pool-cleaning equipment and Yizrael Tamuz for cables, wires, electronic enclosures, and packaging. In the mid-1990s the population was approximately 515, dropping to 464 in 2002.

[Efraim Orni / Shaked Gilboa (2nd ed,)]

YOD (Heb. יוֹד, יוד; י), the tenth letter of the Hebrew alphabet; its numerical value is therefore 10. The Proto-Canaanite form of this letter was a stylized pictograph of a hand (= yad) with forearm ﬞ, ﬞ. In the 11th and 10th centuries B.C.E., the yod developed into 𐤆 which basically did not change in the

Hebrew (𐤆, 𐤆, 𐤆), Samaritan (𐤉), and Phoenician (𐤉, 𐤉) scripts. However, the Aramaic cursive reduced it as follows: 𐡉 → ᘔ → ᐤ → ᐧ and in the fourth and third centuries B.C.E. two variants evolved. One resembles the numeral "2" ᐧ and the other has an inverted-v form ᐧ. While the Nabatean developed the 2-shaped yod 𐢓 (which turned into the Arabic ya ى), the Jewish script adopted the inverted-v shape and preserved the small size of the letter (ᐧ → י), so it could be distinguished from the longer waw. From the old Phoenician yod, the Greek iota and the Latin "I" developed. See *Alphabet, Hebrew.

[Joseph Naveh]

YOFFE, ALTER (fl. early 20th century), Zionist Socialist living in Dvinsk. An early member of the Zionist Socialist movement before its division into political parties, he was co-founder of the *Vozrozhdeniye group. He published a pamphlet *Di Ikorim fun Tsionism far Yidishe Arbeter* ("The Principles of Zionism for Jewish Workers"), justifying the class struggle in the Jewish economy and recommending Jewish participation in the general struggle only to the extent that it benefited the Jewish proletariat. Yoffe decided to become a laborer and worked in a furniture factory. He established the first group of worker Zionists in Dvinsk. At the beginning of 1905, he was a co-founder of the territorialist *Zionist Socialist Workers' Party and a member of its first central committee. After the 1905 Revolution, he immigrated to the United States, where he became a lawyer and a member of the Socialist Party.

[Mendel Bobe]

YOFFE, MORDECAI (1899–1961), Yiddish poet, translator and literary critic. Born in Dusetos (Dusiat, near Kovno, Lithuania), the son of a village rabbi, Yoffe had both a traditional and a secular education. He began his literary career in Odessa before returning to Kovno; in 1927 he immigrated to Canada, and in 1937 to New York. Between 1953 and 1961 he moved to Israel and back to New York twice. He strove to be a literary intermediary between Hebrew and Yiddish.

His essays on Hebrew writers were collected in *Ringen in der Keyt* ("Links in the Chain," 1939). His translations of Hebrew poetry, to which he devoted most of his creative years, appeared in four volumes (1935, 1939, 1948, and 1958). While accurate in form, they suffer from uniformity. Yoffe's last publication was the anthology *Erets Yisroel in der Yidisher Literatur* ("Palestine in Yiddish Literature," 1961), which includes selections from 94 Yiddish poets.

[Melech Ravitch / Jerold C. Frakes (2nd ed.)]

YOFFEY, family of rabbis and scholars in Russia, England, and Israel. JOSEPH BEN MOSES YOFFEY (Joffe, or Jaffe;

1845–1897), born in Ukmerge (Vilkomir), Lithuania, was rabbi of Pokroy (1874), Salant (1883), and Gorzhd (1886). An ardent supporter of Ḥibbat Zion, he opposed the use on Sukkot of citrons grown outside Ereẓ Israel. In 1881 Yoffey published *Yosef Be'ur*, a commentary on Song of Songs, and in 1890 he wrote *Ahavat Ẓiyyon vi-Yrushalayim*, a three-part work opposing Orthodox anti-Zionism (abridged edition, 1891; full version, 1946). He immigrated to England in 1893 and was appointed rabbi of the Central Synagogue in Manchester. He published *Alim li-Terufah*, a versified ethical work (1895); many responsa (e.g., *Divrei Yosef*) and sermons remain in manuscript form. His son-in-law, ISRAEL JACOB BEN ABRAHAM HA-KOHEN YOFFEY (1874–1934), also born in Ukmerge, succeeded him as rabbi of the Central Synagogue at the age of 23. He founded the Manchester yeshivah and revitalized the *talmud torah*. Together with Rabbi H. Hurwitz of Leeds he organized in 1911 the first conference in England of Eastern European rabbis, with the aim of uniting them. He also convened the first conference of religious Zionists in England (1918), becoming one of the leaders of the Mizrachi movement. He died in Alexandria, Egypt, on the way to Ereẓ Israel. His works are mainly in the field of homiletics, with some *halakhah*. They are *Keneset Yisrael* (1910), *Teḥiyyat Yisrael* (1927), and *Shofar Yisrael* (1931).

His son, JOSEPH MENDEL YOFFEY (1902–1994), born in Manchester, achieved distinction in medicine, and was active in Jewish communal life. Three-times Hunterian professor in the Royal College of Surgeons (London), he was professor of anatomy at Bristol University (1942–67) and dean of the medical faculty. His publications include *Quantitative Cellular Haematology* (1960), *Bone Marrow Reactions* (1966), *Lymphatics, Lymph, and the Lymphomyeloid* (1970; in collaboration). Yoffey settled in Israel in 1967 and became visiting professor of anatomy at the Hadassah Hospital in Jerusalem.

YOFFIE, ERIC H. (1947–), U.S. rabbi and leader of the Reform movement. From 1996 Yoffie served as president of the Union of American Hebrew Congregations (UAHC), the congregational arm of the Reform Jewish movement in North America. He was the first president of the organization who was completely a home-grown product of the movement. Raised in Worcester, Massachusetts, where his family was active at Temple Emanuel, Yoffie became a national vice president of the North American Federation of Temple Youth (NFTY). He graduated from Brandeis University – Phi Beta Kappa, magna cum laude – in 1969 and was ordained at the Hebrew Union College-Jewish Institute of Religion in 1974. As a young rabbi he served congregations in Durham, North Carolina, and Lynbrook, New York. In 1980 Yoffie joined the UAHC staff as regional director of the Midwest Council, in 1983 he became executive director of the Association of Reform Zionists of America, and in 1992 he was named vice president and director of the Social Action Commission. He was elected UAHC president in 1996 after the retirement of Rabbi Alexander M. Schindler in a seamless transition. In 1999, the *Forward* newspaper ranked Yoffie first in the list of top Jewish leaders, referring to him as a "tribune to the next generation."

The signature to Yoffie's presidency was a fusion of the Reform movement's commitment to social justice and Israel and, at the same time, to such internal issues as promoting adult Jewish literacy and spirituality among Reform leaders and throughout the movement as a whole. Calling for "Torah at the center," Yoffie has used his "bully pulpit" at the union's biennial conventions to launch a series of initiatives to strengthen congregational life in areas of communal worship, adult and religious school education, and Jewish camping. Under his leadership, the union added three camps in the U.S. and Canada. Continuing Schindler's support for outreach programs to intermarried couples, Yoffie urged Reform Jews to invite the non-Jewish spouses in interfaith families to convert to Judaism.

During his presidency, the union moved its longtime New York City headquarters from Fifth Avenue and 65th Street (across the street from Congregation Emanu-El) to more modern and spacious offices at 633 Third Avenue. Proceeds from the sale of the former building were used to fund programs for strengthening the religious foundations of Reform Jewish identity. He also threw his leadership behind a controversial campaign to change the name of the 120-year-old organization from the Union of American Hebrew Congregations to the Union for Reform Judaism (URJ). This effort, which had failed repeatedly over the years, succeeded at the organization's 2003 Biennial in Minneapolis.

An outspoken champion of liberal values, Yoffie sharply criticized the administration of President George W. Bush and the U.S. Congress for awarding tax cuts to the rich at the expense of the poor, and for government efforts to break down the wall separating church and state. In opposition to the religious right, he has defended reproductive rights for women and equal justice for gays and lesbians. He was the only national religious leader to address the Million Mom March in May 2000, urging sensible gun control. In 2004 after the Presbyterian USA voted to divest from certain companies doing business with Israel, Yoffie strongly protested the move but organized high-level meetings with mainstream Protestant leaders and intensified the union's efforts in the area of interfaith relations on both the national and local level. An ardent Zionist who reads the Hebrew press daily, Yoffie has expanded the union's work to strengthen Progressive Judaism in Israel, and has been a strong advocate of Jewish religious pluralism in the Jewish state. Reflecting on the work of the URJ, Yoffie has stated: "We are a union of Jews committed to a particular vision of Jewish life: to spirituality, Torah, and social justice – the highest ideals of Reform Judaism."

[Aron Hirt Manheimer (2nd ed.)]

YOKE (Heb. עוֹל).

In the Bible

The yoke was usually made from a circular wooden halter which was placed on the animal's neck, and harnessed to a plow, cart, or other vehicle. Pegs, two on each side, with the neck of the animal between them, were tacked to the halter from underneath. A harness which encircled the neck of the animal from underneath was attached to these pegs. The remaining parts of the harness which were connected to the cart, plow, or other vehicle were connected to the halter of the yoke itself. The ordinary yoke was designed for two animals, but yokes for only one animal were also common.

The yoke was a symbol of servitude in the Bible. In order to emphasize the weight of oppression, the yoke is sometimes described as of iron (Deut. 28:48). It was also a symbol of the burden of slavery or taxes upon the people (I Kings 12:11), while freedom from oppression was described in poetic and prophetic literature as the breaking of the yoke (Jer. 5:5).

Jeremiah was commanded to go about Jerusalem wearing a yoke on his neck, as well as to send yokes to the kings of the neighboring countries, to indicate that they, together with Judah, should submit themselves to Babylonian rule. At the dramatic public disputation in the Temple with *Hananiah, the son of Azzur, the prophet of Gibeon, the latter broke the yoke which Jeremiah was wearing as a sign that "I will break the yoke of the King of Babylon," while Jeremiah prophesied that in place of the yoke of wood there would come a yoke of iron (Jer. 28).

[Ze'ev Yeivin]

In Rabbinic Literature

In rabbinic theology the yoke is a metaphor of great importance. It is the symbol of service and servitude, and in accordance with the principle that the Jew should be free from servitude to man in order to devote himself to the service of God, the "yoke of the kingdom of man" is contrasted with "the yoke of the kingdom of heaven." The doctrine is fully enacted in the statement of *Neḥunya b. ha-Kanah: "Whoever takes upon himself the yoke of the Torah, they remove from him the yoke of government and the yoke of worldly concerns, and whoever breaks off the yoke of the Torah, they place on him the yoke of government and the yoke of worldly concerns" (*Avot* 3:5). The "yoke of the Torah" here presumably refers to the duty of devoting oneself to study but "yoke" is used in a more specific and restricted sense. The proclamation of the unity of God by reading the *Shema is called "accepting upon oneself the yoke of the kingdom of heaven," while the acceptance of the fulfillment of the Commandments as a whole, referred to in the second paragraph of the *Shema.* is called "accepting the yoke of the Commandments," and it is this which determines the order of the paragraphs. In *Avot* 6:6 the phrase "bearing the yoke with one's fellow" means "sharing his burdens."

[Louis Isaac Rabinowitz]

YOKOHAMA, city in Japan. Opened to foreign trade by Japan in 1859, Yokohama soon blossomed into the country's ma-

jor port. Among the Westerners who settled here were Jewish merchants and professional people, some of whose graves may still be seen in the city's old cemetery, dated 1869 and 1870. The first organized community was established in 1917, mainly for the purpose of helping the approximately 5,000 Russian Jewish migrants, mainly women and children, who, on their way to join their menfolk in the U.S., were held up in Japan by a change in the American visa regulations. This community continued to exist until 1923, but after the earthquake in that year the majority of Yokohama Jews moved to Kobe. Although some returned, no community was reestablished. During the years of the American military occupation of Japan (1945–52), Yokohama became a center of Jewish life because of the presence of numerous American Jewish soldiers and sailors in the area. Since then the small number of American and European Jews have continued to reside as individuals in the city. Its Jewish cemetery is still used by the Tokyo Jewish community.

YOMA (Aram. יוֹמָא), fifth tractate in the order *Mo'ed*, in the Mishnah, Tosefta, and Jerusalem and Babylonian Talmuds. In the Jerusalem Talmud, in manuscripts of the Mishnah and the Tosefta, and in the geonic literature, the tractate is given its Hebrew name, *Yom ha-Kippurim* ("Day of Atonement"), or briefly, *Kippurim* ("Atonement"). In the Babylonian Talmud, however, it was called *Yoma* ("the Day"), or *Seder Yoma* ("the Order of the Day"; cf. Yoma 1:3), and it may be that its early name was *Seder Yom ha-Kippurim* ("Order of the Day of Atonement"). Of the eight chapters contained in the Mishnah, only the last one deals with the laws of the fast. The first seven describe in a dramatic yet simple style the service of the high priest in the Temple in the order of its performance. This part of the Mishnah does not contain many differences of opinion, and it is distinguished by its uniformity and the continuity in its exposition of the high priest's service, with only a few interruptions regarding incidental details.

There are considerable parallels in the contents of tractates *Yoma* and *Tamid – some even verbatim – although each tractate gives details not found in the other. The statement of Johanan, "Who taught *Yoma*? Simeon of *Mizpah" (Yoma 14b), is not to be regarded as tradition, since its purpose was merely to resolve a contradiction between the two tractates. All that Johanan wishes to convey is that those *halakhot* of the daily sacrifice which appear in *Yoma* and differ from those in *Tamid* were taught by Simeon of Mizpah, who lived in the generation before the destruction of the Temple. At any rate, it is evident that the Mishnah has preserved *halakhot* which belong to an early period, and it follows that the tractate was composed early. Apparently they had already begun to teach and arrange the *halakhot* of the service of the Day of Atonement close to the destruction, but the editor of the Mishnah had before him a source (apparently from the generation before his) in which the early material was intermingled with later additions. The second part of the Mishnah – chapter 8 – is a composite of various sources. The Mishnah concludes with

the declaration of R. Akiva, "Happy are you, Israel! Who is it before whom you are cleansed, and who is it that cleanses you? Your Father who is in Heaven." The glowing terms in which this is expressed is possibly a polemic against the Christian belief in cleansing through Jesus.

The Tosefta of *Yoma* consists of four chapters (though one manuscript has five, the second chapter being divided into two), of which the Tosefta chapter 4 is parallel to chapter 8 of the Mishnah, and Tosefta chapters 1–3 correspond with 1–7 of the Mishnah. However, the nature of the first part of the Tosefta differs completely from that of the Mishnah. Not only does the Tosefta not contain a continuous description of the order of the service, but it is quite impossible to understand the Tosefta without the Mishnah. The editor of the Tosefta made use of various sources, many of which contained only short *beraitot* that revolve around and are dependent on the Mishnah, such as those opening with the interrogatives "why" (1:1, 4, 8), "how" (1:5), or "which" (1:9). This portion also contains *halakhot* that are parallel to, or add to, the Mishnah, but has only a few sources that contain material not found, in whole or in part, in the Mishnah (e.g., 1:17–19; 2:5–8). On the other hand it contains many *aggadot* and examples which preserve important historical traditions about personalities and events of the Temple period (1:4; 6, 12, 14, 21, 22, et al.). The end of Tosefta *Shekalim (3:25–27) is apparently the beginning of Tosefta *Yoma*, omitted from it by copyists in error and appended to *Shekalim*. In contrast to the dependence of the first part of the Tosefta upon the Mishnah, the independence of its last chapter is conspicuous. It contains many sources which are almost entirely independent of the Mishnah, and the order of its *halakhot* differs from that of the last chapter of the Mishnah.

Yoma includes a number of beautiful aggadic passages. In the first chapter there is the well-known one: "Why was the first Temple destroyed? Because of the prevalence of three evils: idolatry, immorality, and bloodshed… But why was the Second Temple destroyed, seeing that the people occupied themselves with the Torah and its precepts and practiced benevolence? Because of the prevalence of hatred without cause. Thus you may learn that groundless hatred is of equal gravity to the three sins of idolatry, immorality and bloodshed" (9b). In chapter 7, on the verse (Ex. 25:11) "Within and without shalt thou overlay" (the ark with gold), Rava scholar" (72b), R. Meir used to say, "Great is repentance, for on account of an individual who repents, the sins of all the world are forgiven" (86b).

It was translated into English by I. Epstein in the Soncino edition of the Talmud (1938).

YOM HA-ZIKKARON (Heb. יוֹם הַזִּכָּרוֹן; "Remembrance Day"), memorial day observed for those who fell on active service in the Israel War of Independence and subsequently. It is observed on Iyyar 4th (the day before *Independence Day) in solemn civil, military, and religious ceremonies throughout Israel. It begins at sunset and concludes with a siren blast as the stars appear the next day to usher in Independence Day. Memorial candles are lit in army camps, schools, synagogues, and public places, and flags are flown at half-mast. Throughout the day ex-servicemen and soldiers serve as guards of honor at war memorials in all towns and villages, and the families of the fallen participate in memorial ceremonies at military cemeteries. By law, all places of entertainment are closed on the eve of *Yom ha-Zikarron*, and broadcasting and educational bodies are required to stress the solemnity of the day. During the morning a siren marks a two-minute silence, which brings all activity to a standstill. The Israel rabbinate has prescribed special prayers for the previous Sabbath and for *Yom ha-Zikkaron*. They include the recital of Psalms 9: "For the leader, on the death of the son," and 144: "Blessed be the Lord, My Rock, who traineth my hands for war and my fingers for battle."

[Aryeh Newman]

YOM KIPPUR KATAN (Heb. יוֹם כִּפּוּר קָטָן; lit. "minor day of atonement"), the eve of the new month which became for the pious a day of fast and repentance. The custom of keeping Yom Kippur Katan is a late one, and is not mentioned in the Shulḥan Arukh. It began among the kabbalists of *Safed in the second half of the 16th century and is first spoken of by Moses *Cordovero. The waning of the moon was conceived by the kabbalists as a symbol of the exile of the *Shekhinah* ("Divine Presence") and the diminution of the power of holiness during the Exile, and its renewal as a symbol of the return to perfection in the age of Redemption. They based this conception on the talmudic legend according to which God had said to Israel: "Bring atonement upon me for making the moon smaller" (Ḥul. 60b). In addition to the reading of the Torah and other prayers and *seliḥot*, customary for a fast day, special *seliḥah* were written for the afternoon prayer (*Minḥah*) of Yom Kippur Katan. They are based on the themes of Exile and Redemption. The special service *Tikkun Yom Kippur Katan* was first printed in *Sha'arei Ẓiyyon* (Prague, 1662) by Nathan Nata *Hannover. Later it appeared in different versions and in special books which were very popular until the 19th century. The *tikkun* (special prayer) in *Ḥemdat Yamin* is particularly well known. The first halakhic reference to Yom Kippur Katan appears in *Bayit Ḥadash* by Joel *Sirkes. The celebration of Yom Kippur Katan became widespread because of the many commendations by Isaiah b. Abraham *Horowitz in *Shenei Luḥot ha-Berit*. Later the custom became popular among the pious who observed this day as though it were sanctioned by *halakhah* without any connection with *Kabbalah.

YOM KIPPUR WAR.

Introduction

In September 1973, indications were already noted by Israel Intelligence of a buildup both on the Egyptian and Syrian fronts. These were passed off as routine major exercises which had been taking place at frequent intervals along the borders, and particularly along the Suez Canal front. This appraisal tallied with the assessment of Israel Intelligence that the Arab armies were not yet ready for a major all-out war, and that their leadership was not capable of launching it. This estimate was aided by a highly effective deception plan which was mounted by the Egyptians and the Syrians parallel to the actual military preparations which were set afoot. Nevertheless, the indications on the front gave concern to the Israel High Command, with the result that during the ten days preceding Yom Kippur, the armored forces of Israel, both on the northern and on the southern fronts, were doubled as a precautionary measure.

The week preceding Yom Kippur was one of preoccupation with the decision of Chancellor *Kreisky to close the Schoenau Castle transit camp for emigrants from the U.S.S.R. en route to Israel (see under *Austria). Golda *Meir, prime minister of Israel, who was at a meeting of the Council of Europe in Strasbourg, proceeded to Vienna in an endeavor to persuade Chancellor Kreisky to change his policy, but to no avail. On the evening of her return to Israel on Wednesday, October 3, the Cabinet met, the sole subject of discussion being the crisis with Austria.

On Thursday, October 4, intelligence was received about the departure of Soviet families from Egypt and Syria. This, coupled with the very heavy concentrations of troops along the borders of Syria and Egypt, indicated that a very serious situation had developed. A Cabinet meeting was called for midday on Friday, October 5, in Tel Aviv, at which part of the Cabinet participated. Apart from minor unit mobilization and preparations in the standing army, particularly the Air Force, and cancellation of leave in the army generally, no major mobilization took place.

On Saturday, October 6, Yom Kippur Day, at 4.00 A.M., intelligence was received which confirmed finally that war was about to break out on Yom Kippur Day. Consultations thereupon took place between the Minister of Defense, the Prime Minister, the Chief of Staff, and other staff officers. At approximately 10.00 A.M. total mobilization of the armed forces of Israel was authorized.

The information received that morning from reliable intelligence sources had indicated that the Arab attack would take place at 6.00 in the evening. At 2.00 in the afternoon, however, the Syrian and Egyptian armies attacked simultaneously with their total forces. Thus began the Yom Kippur War.

Throughout the holy day of Yom Kippur, Israel mobilized her forces. One of the miscalculations made by the Arabs was to launch the war on this day when all the manpower of the country was available either at home or in synagogue, and Israel thus saved many valuable hours of mobilization which were to prove vital at a later stage.
On the Northern Front

On the northern front the battle began with air attacks and a heavy artillery bombardment by the Syrians of the Israel front line and Israel headquarters. Three Syrian infantry divisions moved across the line and hundreds of Syrian tanks deployed to attack the Israel positions. Behind these three Syrian divisions were deployed two armored divisions ready to follow up. The Israel line was held by a series of fortifications acting as outposts and observation points and supported in each case by a small force of tanks. This line held: apart from a position on Mount Hermon, not one fortification was captured, though three were evacuated under orders. Tales of incredible bravery were to emerge from the heroic stand of the forces in the fortifications along the Israel line. (See Map: Syrian Attack and Map: Israeli Counter Offensive).

Shortly after the opening of the battle, the GOC Northern Command, Major General Yiẓḥak Ḥofi, divided the Golan Heights front into two sectors, the northern sector from the town of Kuneitra (al-Qunaytira) northward, and the southern sector from Kuneitra southward. By Sunday morning, October 7, Major General Raful Eitan was in command of the division controlling the northern sector and Major General Dan Laner of the southern sector. On the eve of Yom Kippur the General Staff had moved the Seventh Armored Brigade up to the Golan Heights. Thus the battle opened with an Israel force of approximately 180 tanks holding the line against a major Syrian armored assault which was later to develop into an attack of some 1,400 tanks. Israel's Seventh Brigade was deployed in the northern sector with another in the southern sector. The major Syrian thrust came unexpectedly against the southern sector, where this Brigade with a small number of tanks withstood the assault of some 600 Syrian tanks. In the northern sector the first wave consisted of some 250 tanks, the Third Syrian Armored Division being held in reserve. With the opening of the assault, Syrian helicopters landed on Mount Hermon and infantry forces transported by them attacked the position. Within a matter of hours the position, which consisted of barely a section of fighting troops was overrun and taken.

Heavy fighting developed in the southern sector with platoons of the Israel army battling against entire Syrian battalions. Again and again the battle was decided by the sheer force of numbers, with hundreds of Syrian tanks pouring into the sector. Part of the Israel forces withdrew to the area of Naffāḥ. In the northern sector, the Seventh Brigade blocked the enemy advance throughout the fighting. By the night of 6th/7th October, there were Syrian forces on the routes leading to the Sea of Galilee, and their advance elements had reached

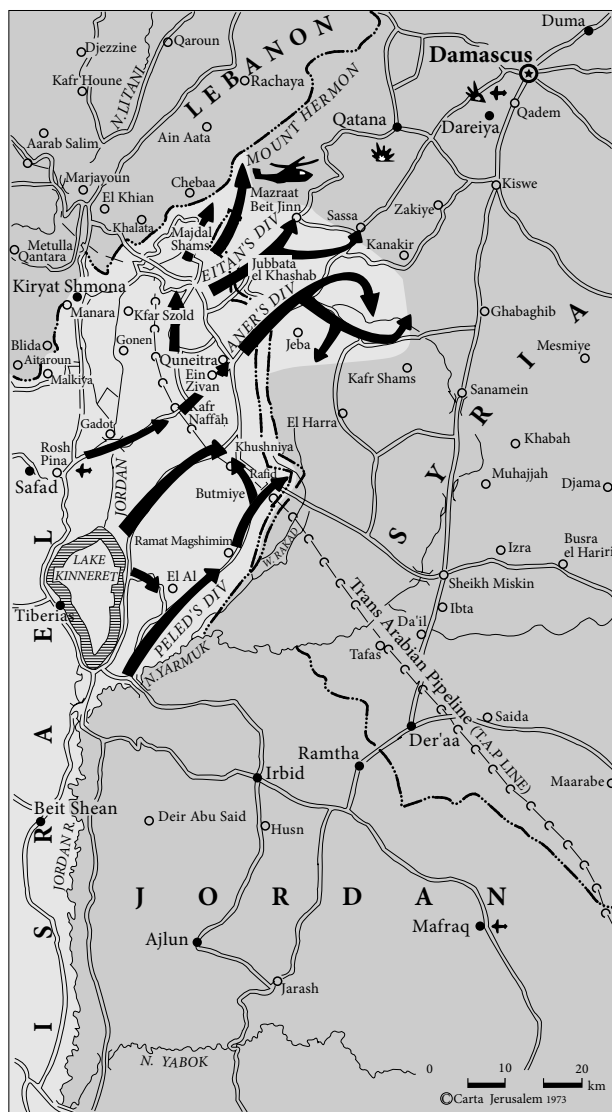
to within 800 meters of the moshav of El Al overlooking the Sea of Galilee.

However, the main battle was joined in the area of Naffāḥ, where the Syrians developed a major thrust. On the Yahūdiyya road, they reached to within 10 kms. of the point where the Jordan enters the Sea of Galilee. On the central route the Syrian forces reached the area of the Naffāḥ camp. On Sunday, October 7, heavy fighting continued all along the line with serious losses being sustained by both sides. At this stage, Northern Command was reinforced by a division commanded by General Moshe ("Musa") Peled. It was resolved that with this new force, Northern Command would move over to a coun-

terattack on Monday, October 8. Peled's division took over responsibility for all the forces on the El Al route and the route parallel to it, both leading to the Rafid crossroads.


By this time, the Brigade in the southern sector had ceased to exist. Both the brigade commander and his deputy were killed, and both battalion commanders had been wounded.

On Monday, October 8, General Peled's division launched the counterattack on the Al Al road against two Syrian tank brigades which had reached to within seven miles of the Sea of Galilee. A heavy battle raged along this route between El Al and Rafid on Monday, October 8, and Tuesday, October 9. By Wednesday, October 10, at 10.00 A.M., the Israel forces had driven the Syrians back to the cease-fire line, inflicting very heavy casualties on them.

On the Seventh Brigade front in General Eitan's divisional area, both sides had fought to a standstill and were

wavering, when one of the Israel positions behind enemy lines, which had held out throughout the fighting and was surrounded by the Syrians, reported that the Syrian supply trains were withdrawing. The Syrian attack had been broken. In the area facing the Seventh Brigade, known as the Valley of Tears, north of Kuneitra, some 300 Syrian tanks and armored personnel carriers, abandoned and burnt out, were mute testimony to the incredible bravery which had given this victory to Israel arms.

General Laner's division maintained the pressure around the area of Naffāḥ and along the Tapline route by which the major Syrian effort had advanced. This division gradually cleared the area around Naffāḥ and the area between it and the village of Khushniya which had already been established as a major Syrian supply base and headquarters. General Laner's forces, pushing in a south-easterly direction, gradually drove the Syrian forces back from the area of Naffāḥ towards Khushniya. At this point – on Tuesday, October 9, and Wednesday, October 10 – a two-divisional effort, that of General Laner from the north and General Peled from the south, boxed in the Syrian forces in the general area of Khushniya and destroyed a considerable number of tanks in very heavy fighting. By Wednesday, October 10, General Laner's forces too had reached the "purple line" which was the 1967 cease-fire line on the Golan Heights, and the Syrian forces had either been destroyed or driven out of his divisional area.

On Monday, October 8, units of the Golani Brigade attempted to recapture the Mount Hermon position which had been lost on the 6th, but the attack failed, with considerable losses. Thus by Wednesday, October 10, the Syrian forces had been driven entirely from the Golan Heights, and Israel forces had closed in on the cease-fire line along its entire length.

On the following day, Thursday, October 11, the Israel counterattack into Syria was launched. The operation began at 11.00 A.M. when General Eitan's division, including the Seventh Brigade, broke into the Syrian position in the area of Jubāta, while General Laner's division attacked along the heavily fortified main route to Damascus. General Eitan's division broke through according to plan. General Laner's division also broke in along the main route as planned, but his first brigade ran into a very heavy antitank screen which had remained behind on the ground, undetected. When this brigade was held up the support brigade followed through and took the village of Khan Arnaba. The third brigade followed through along the main Damascus route.

On Friday, October 12, the forces of General Eitan operating in the northern sector reached the village of Mazraat Beit Jinn and established defense positions there. The Seventh Brigade was repulsed in its attempt to take the hill of Tel Shams. To the south, General Laner's division widened its area of penetration as it advanced toward Kanakir. As the division moved towards Kanakir the Iraqi forces which had entered Syria reached the area of battle, the first of its two armored divisions moving forward towards the flank of General Laner's advancing division. General Laner, standing on a hill and directing the bat-

tle, saw the Iraqis advancing in clouds of dust across the plain from the southeast. He withdrew his division from the attack and prepared to meet them. Receiving an additional brigade from General Peled's division just in time, he created an armored box into which the Iraqi forces moved unsuspectingly. The battle commenced at 3.00 in the morning. The attack was smashed and the Iraqi forces withdrew, leaving some 80 destroyed tanks on the field of battle. The Israel forces exploited their success and reached the area near Kafr Shams.

On Saturday, October 13, parachute forces captured the vital hill of Tel Shams suffering only four wounded in the battle.

The Syrians developed a counterattack in the area of Beit Jinn on the main route linking Sassa and Tel Shams. In the meantime, the 40th Jordanian armored brigade had entered Syria, and basing itself on Tel Harra, supported the Iraqi forces on their left flank in the counterattacks which were mounted.

General Laner's division counterattacked and captured two very important dominating hills, Tel Aleika and Tel Antar. Counterattacks were mounted in turn by the combined Arab forces – Syrians, Iraqis, and Jordanians – but the Israelis now held a very strong line which the Arab forces failed to penetrate. In the battle which raged in the Iraqi sector, approximately 100 Iraqi tanks were hit with some 80 destroyed, and approximately 40 Jordanian tanks were hit of which 30 were destroyed.

On October 21/22 the Israel forces again mounted an operation to recapture the Mount Hermon position.

Units of a parachute brigade were helicoptered to a point above the Syrian Hermon position while units of the Golani brigade moved up from below. The paratroopers took all their targets. Golani forces moved along three routes, but when they entered battle, the nature of the terrain and the comparatively large enemy force scattered over the hillside endangered their operation. The brigade commander and the battalion commander were wounded and the situation was critical. Additional forces were transported by helicopter to the Golani attackers and the paratroopers began to move down from the captured Syrian position. At the critical moment the operations officer of the brigade took command and organized the assault, and finally broke the enemy in a very costly counterattack.

On October 22, at 10.00 A.M., Mount Hermon was recaptured.

In the battle for the Golan Heights and the attack into Syria the Syrian army lost approximately 1,100 tanks. Some 867 tanks were identified in the Golan area inside the cease-fire line, including a large number of the latest model T62 Russian tanks. Approximately 3,500 Syrians had been killed, and some 370 prisoners taken.

The battle for the Golan Heights was replete with incidents of great bravery and human tenacity. The Israel forces, pitched against a Syrian army whose soldiers fought well, revealed a genius for improvisation. But for this, the Golan
Syrian Front. Situation at the time of cease-fire, October 1973

Heights would have been overrun. At all stages the Israel Air Force fought to support the ground forces and at a later stage began to engage strategic targets within Syria. By the end of the first week most of the Syrian Air Force had been destroyed and ceased to be an element on the field of battle. Furthermore, the Syrian missile system was to a great degree destroyed. Thus Israel's Air Force was free to deal with strategic targets deep in Syria, particularly in the ports on the Mediterranean and in Damascus and other cities.

The Israel forces concluded the battle holding the strategic heights of Mount Hermon which dominate the en-

tire area between the battlefield and the capital, Damascus, and positions as far eastward as Tel Shams, in an area which placed the outskirts of Damascus within range of Israel artillery. This was the situation when the Syrian command finally agreed to a cease-fire as requested by the Security Council on October 22.

In the battle for the Golan Heights, the situation had been saved by the self sacrifice and bravery of the two brigades on the two sectors, coupled with the standing army units in the fortifications which held along the cease-fire line. Their heroic stand enabled Northern Command to mobilize the reserve

forces and, despite the overwhelming odds and the initial success of the vast forces of the Syrian army, to mount a counterattack already on the third day of the battle and to drive out the Syrian forces from the Golan Heights two days later. The battle of the Golan Heights will become a classic both as a major armored battle and as a battle of improvization and tenacity leading to the success which placed Israel's forces well on the road to Damascus.

The Egyptian Front

The Egyptian assault on the Bar-Lev line in the area of the Suez Canal came as a complete surprise to the Israel forces, which comprised less than 500 troops manning a line some 100 miles long. At 2.00 P.M. on Yom Kippur, October 6, five Egyptian infantry divisions moved simultaneously across the Suez Canal – some 70,000 troops against less than 500. A clever plan of deception had been prepared which led the Israel command to believe that all the preparations which were readily visible were in fact part of a major exercise. The Israel line was subjected to intense shelling and at the same time Egyptian planes went into action. The forces under General Mandler rushed to occupy the positions which they were due to reach at 4.00 P.M., but by this time Egyptian infantry had crossed the Canal, bypassing the widely dispersed Israel fortifications in the Bar-Lev line, and had deployed in the positions prepared for the Israel tanks on the east bank of the Suez Canal. As the Israel armored forces approached their previously prepared positions in order to engage the enemy crossing the Suez Canal, they were met by a hail of anti-tank Sagger-type missiles fired by the Egyptian troops already in position on the east side of the Canal. These missiles caused heavy casualties to the Israel tanks making the initial assault.(See Map: Egyptian Attack and Map: Israel: Counter Offensive).

In the course of the night of October 6/7, the Egyptians ferried five divisions of infantry across the Canal together with their armor and by means of highly effective and very flexible Russian bridging equipment were able to establish adequate bridges across the Canal to keep their forces supplied. They set up three major bridgeheads across the Canal; one in the north basing itself on the area of Qantara, one in the center basing itself on the area of Ismailia, and the third in the south in the area of the Great Bitter Lake and Suez. The northern effort was under the command of the Egyptian Second Army, the southern under the command of the Egyptian Third Army.

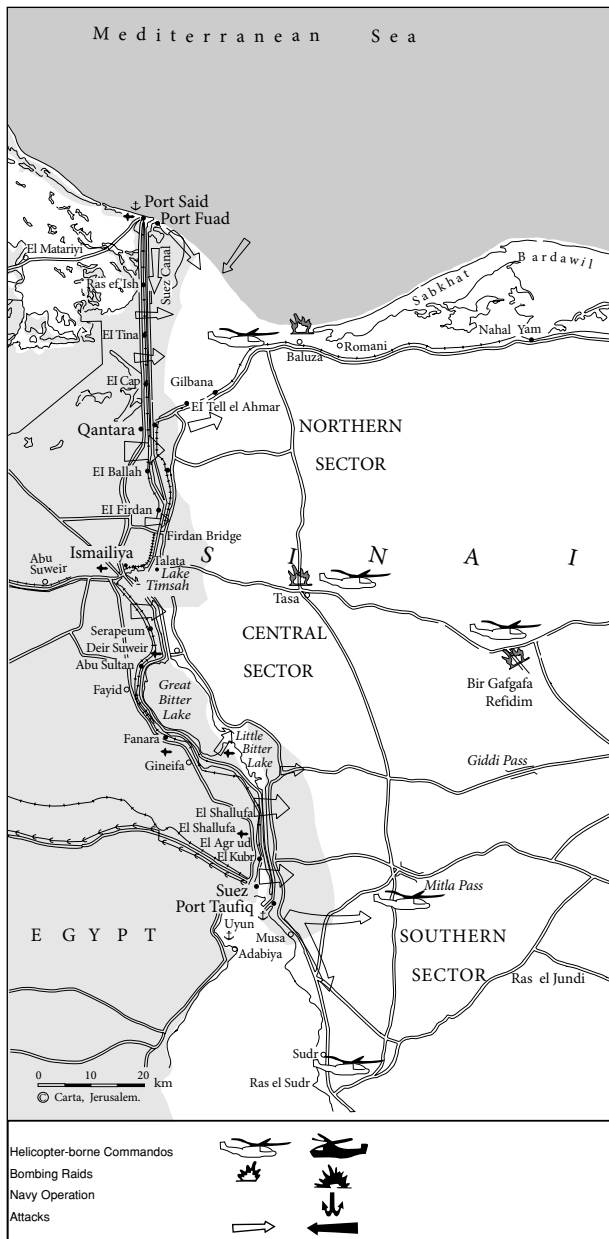
The Israel forces continued to battle in order to contain the initial attack of the Egyptians, and the fortifications along the line continued to hold out on the morning of October 7. The main efforts of the Israel forces were directed towards holding a line along the second line of fortifications some 10 kms. from the Suez Canal, and preventing the Egyptians from enlarging their bridgeheads. An Egyptian effort was mounted on a number of occasions southwards along the Gulf of Suez in the direction of the oilfields of Abu Rudeis, but as in each case this effort required the Egyptian armor to leave the cover of their antiaircraft missile system, the Israel Air Force drove the Egyptian armored forces back, inflicting on them heavy casualties.

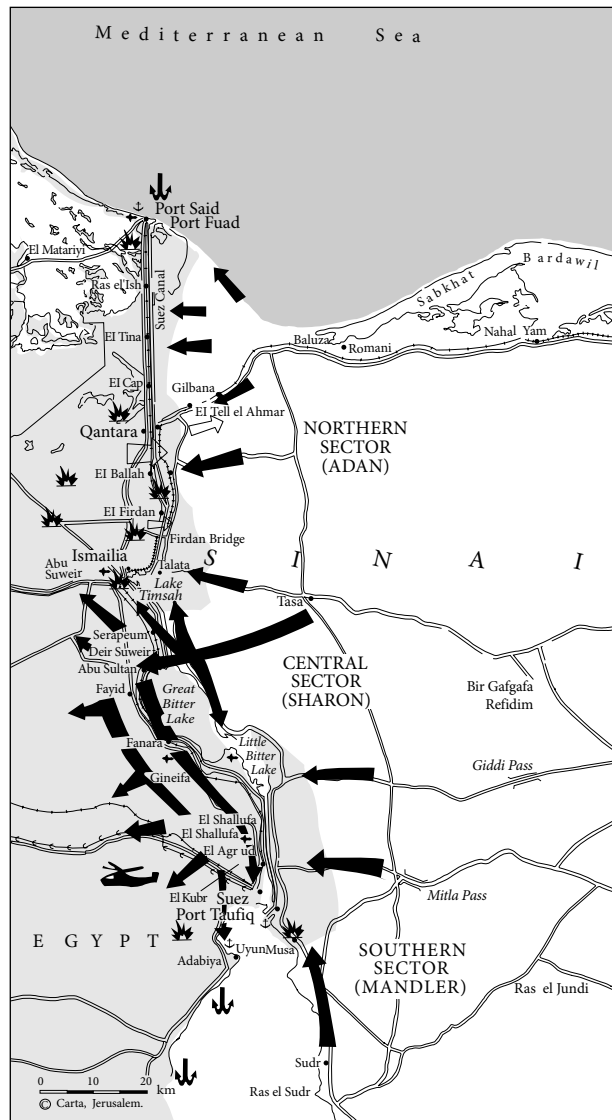
The entire Egyptian operation, against which the Israel Air Force mounted attack after attack in an endeavour to destroy the bridges and upset the crossings, was carried out under cover of a dense antiaircraft missile system which caused heavy casualties to the Israel Air Force, particularly because it forced the Israel planes to fly low to avoid the missiles and brought them within range of the conventional antiaircraft guns. The Israel forces that attempted to reach the units besieged in the fortifications of the Bar-Lev line in order to relieve them suffered very heavy casualties. Most of the line had either been captured or abandoned by the third day of battle. The most northerly position in the area of Baluza succeeded in holding out during the whole war and was never taken by the Egyptians. The most southerly position, at Port Tewfik, held out for most of the week, the defenders fighting a very brave battle and surrendering only when they had run out of ammunition, food and medical supplies.

On Monday, October 8, the area was divided by General Gonen, GOC Southern Command, into three divisional areas: the northern division commanded by Major General Adan, the central sector by Major General Sharon and the southern sector by Major General Mandler. On that day, Major General Adan's forces mounted an attack towards the area of the Firdan bridge opposite Ismailia. This attack was held by the Egyptians and General Adan's forces were unable to advance. Pitched battles continued, with the Egyptians throwing heavy infantry concentrations against the Israel armor with a view to inflicting casualties on them by use of antitank missiles. The Israel forces quickly adapted themselves to this new type of warfare, and tactics which they developed limited the losses sustained by this weapon.

Forces under General Sharon managed to reach the water's edge at the northern end of the Great Bitter Lake but the Israel General Command elected to remain in a holding position in preparation for the major armored assault which they expected would develop as soon as the two armored divisions held back in Egypt, the Fourth Division in the south and the Twenty-First Division in the north, moved across the Canal.

On Sunday, October 14, the Egyptian army mounted a major tank offensive and a heavy tank battle raged all day long, with the Egyptian army endeavoring to break out at four different points. The major battle was mounted against General Sharon's forces, in the central sector, where some 110 Egyptian tanks were destroyed in the course of the day. The northern division commanded by General Adan and the southern division commanded by General Mandler were likewise engaged in battle, with a determined attempt being made by the Egyptian Third Army to break out southward along the Gulf of Suez toward the oil fields. This attempt was foiled by the Israel Air Force which destroyed the greater part of an Egyptian brigade. In all, during October 14, the Egyptians lost over 200 tanks in the assault, which failed to achieve any advance.

Egyptian Attack, 6 October 1973


Israeli Counter Offensive


A debate had been in progress in the Israel Command as to the advisability of launching the planned attack across the Suez Canal in order to counter the Egyptian forces which were on the east bank. The chief deterrent factor had been the fact that the two main Egyptian armored divisions, the Fourth and the Twenty-First, were on the west bank. But as soon as they crossed to the east bank and were committed in the battle of October 14, it became apparent to the Israel Command that the time had come to mount the counterattack. Accordingly preparations were made to break through to the Canal at a point already planned in advance at the northern end of the Great Bitter Lake.

This task was assigned to General Sharon's division. On the night of October 15/16, parachute forces led his division

across the Canal and established themselves in Egypt on the west bank. On the following day they were joined by elements of an armored brigade which began to widen the perimeter. Taken by surprise, the Egyptian forces on the west bank of the Canal did not offer much determined opposition. There were considerable delays, however, in clearing the area of the corridor to the Canal. Although in preparation for the crossing General Sharon's forces had reached the water's edge, the area through which they maneuvered had not been cleared of Egyptian forces and when the problem arose of resupply and moving down the bridges to the Canal it was found that the Egyptians were in a position to hinder any advance toward the Canal. General Adan's division, which had been designated to follow through after the bridges had been laid across the Canal, was therefore obliged to postpone its operation and engage the enemy in the area of the breakthrough to the Canal so as to create a corridor, widen it and mop up enemy units. At

the same time an Egyptian armored brigade moved up from the area occupied by the Third Army along the Great Bitter Lake. General Adan's forces lay in wait and destroyed it. General Sharon's forces by this time were being reinforced on the west bank of the Canal, and with General Sharon in command of the forces both on the east bank and the west bank, they began to push northwards. One of the fiercest battles of the war was fought at the northern part of the corridor leading to the Canal, in a region known as the Chinese Farm.

In the meantime, despite very intense Egyptian bombardment, artillery barrages and air attacks, bridging equipment was brought up and two bridges were thrown across the Canal.

On October 16 and until midday on the 17th, General Adan's forces engaged in heavy battle and cleared the main routes to the bridging areas as well as the corridor leading to the bridges. His forces crossed the bridges which had been thrown across the Canal on the night of October 17/18, their first mission being to destroy as many antiaircraft missile sites as possible and to advance in the general direction of the Geneifa Hills. His forces broke out and began to fan out southward. On the same night Egyptian commando battalions counterattacked from Ismailia southward against the parachute brigade which had crossed the Canal initially, but they were driven back. Large-scale air battles developed in the meantime with the Israel Air Force achieving complete superiority.
Egyptian Front. Situation at the Time of Cease Fire, October 1973

In the course of the fighting at the end of the first week, Major General Mandler was killed and his brigade was taken over by Major General Kalman Magen.

On October 19 in the evening, General Magen's division crossed the bridges.

Thus the attack on the Israel bridgehead developed, while for two days, until October 18, the Egyptians believed the Israel report that this was a task force designed solely for the purpose of attacking the Egyptian missile sites. There was lack of coordination between the Egyptian Third Army and Second Army, of which the Israel forces took advantage. By October 19 there were already three Israel divisions on the west bank of the Suez Canal. General Sharon's force was obliged to fight through the cultivated area created by the sweet-water canal in the general direction of Ismailia while at the same time endeavoring to remain parallel to the Israel forces on the east bank of the Canal which encountered very heavy opposition from the Egyptian Second Army units. General Adan's forces were ordered to advance in the direction of Geneifa-Suez, while clearing the area of the west bank of the Bitter Lake and the west bank of the Canal itself. General Magen's forces swept inward in a broad arc to the west of Jebel Geneifa directed towards the port of Adabiyah on the Gulf of Suez. General Sharon, who by this stage had advanced some six kilometers northwards from the bridges, began to widen his bridgehead and to push towards Ismailia. By October 22, he had pushed northward to the water purification plant of the town of Ismailia. His forces also attacked northward on the east bank of the Suez Canal in an endeavor to clear the area between the Great Bitter Lake and Lake Timsah. They managed to advance only part of the distance, however, and were not successful in clearing the remainder of that area.

General Adan continued southward along the Suez Canal between the Bitter Lakes and the town of Suez. His forces were in constant contact with the Egyptian forces along the Canal and also with the Egyptian forces operating from the east bank. General Magen reached the Cairo-Suez road and cut it early on October 22.

The Security Council, which had been hastily convened by the Soviet Union, met on October 21 and called for an immediate cease-fire, to come into effect at 5.58 P.M. on October 22. The cease-fire was accepted both by Egypt and Israel, but by the time it came into effect, the Egyptian Third Army found itself cut off and surrounded. Fighting continued after the beginning of the cease-fire primarily because units of the trapped Egyptian Third Army fought desperately to break their way out of the Israel vice, which was tightening. Israel forces counterattacked, and were engaged along the front by Egyptian artillery from all the sectors. General Magen's forces consolidated their gains, closing the ring by taking the Red Sea fishing port of Adabiyah in the Gulf of Suez. General Adan cleared the entire water edge and reached the outskirts of the town of Suez.

The fighting continued in the Suez area. Israel forces, assuming that the fighting was over, moved into the town of Suez, but came up against strong Egyptian points of defense which inflicted heavy casualties on them.

The fighting finally ended on October 24 with the Egyptian forces holding two major bridgeheads on the eastern bank of the Suez Canal to an average depth of about 10 kms., and with the Israel forces occupying some 1,600 sq. kms. of territory inside Egypt from the outskirts of Ismailia in the north to Mount Ataqa and the port of Adabiyah in the south and reaching, at the most westerly point, within some 70 kms. of Cairo. Moreover, Israel had cut off the Egyptian Third Army (comprising some 20,000 troops and approximately 300 tanks) on the east bank of the Canal opposite the town of Suez, and indeed, but for the Security Council resolution calling for a cease-fire, the Egyptian Third Army was doomed and could have been wiped out by the Israel forces within a matter of days.

Thus the war concluded on the Egyptian front, with the Egyptians celebrating the fact that they had achieved an initial success in crossing the Canal and in maintaining bridgeheads on the east bank of the Canal. On the other hand, the Israel forces had effected a counterattack which had given Israel a military situation constituting a good bargaining position with a view to future negotiations.

In the battle with Egypt over 1,000 Egyptian tanks were destroyed and vast quantities of equipment were taken in addition to 8,000 prisoners. Some 240 Israel prisoners were taken and these were exchanged for the 8,000 Egyptian prisoners following the cease-fire agreement signed with Egypt.

Naval Operations

At the outset of the war, the Egyptian navy had blockaded the Straits of Bab el-Mandeb, preventing commercial shipping from entering the Red Sea and reaching Israel's ports. The Israel presence at Sharm el-Sheikh enabled the Israel navy to effect a counter blockade in the Gulf of Suez which obstructed all Egyptian activity in the Gulf and which prevented the supply of oil to Egypt from her own oil wells in the Gulf of Suez.

A naval battle developed between the Egyptian and Syrian navies and a modern Israel navy equipped with missile ships, some of which had been built in Israel, and all equipped with Israel-built missiles. In a number of battles, the first missile battles in naval history, in which both the Syrian and Egyptian navies were engaged, the Israel navy destroyed most of the Syrian navy and part of the Egyptian navy and gained complete control of the seas, both in the Mediterranean and in the Red Sea. The Israeli naval operations were characterized by daring and initiative.

The Cease-Fire

On October 22 the United Nations Security Council passed Resolution 338 calling upon all parties to cease all firing and immediately thereafter to begin the implementation of Security Council Resolution 242 of 1967 in all its parts. It also decided that immediately and concurrently with the cease-fire, negotiations should start between the parties concerned un-

der appropriate auspices, with the aim of establishing a just and durable peace in the Middle East.

On November 11 the cease-fire agreement was signed between Egypt and Israel at Kilometer 101 on the Suez-Cairo Road. This agreement made arrangements for the supply of food, water and medical equipment to the beleaguered town of Suez and for the provision of non-military supplies to the Third Army on the east bank of the Suez Canal. It also made initial provisions for the exchange of all prisoners of war. These arrangements were honored, as was an unwritten undertaking that the blockade of the Straits of Bab el-Mandeb would be lifted.

The Geneva Peace Conference opened on December 21 with the participation of Egypt, Jordan and Israel, under the auspices of the United States and the Soviet Union.

Strategic Considerations

The Yom Kippur War has changed many concepts about modern warfare. It was the first time in history in which a naval missile battle took place. The effect of the antitank missile in the field of battle was much discussed, but as the fighting developed, the Israelis found a solution to this problem. It would appear that the conclusions drawn on this subject were very greatly exaggerated.

On the other hand, the efficacy of the sophisticated anti-aircraft missiles, such as the SAM6 Russian missile supplied to the Egyptians and Syrians, proved to be very considerable, and had an important bearing on the course of the air war.

From a purely military point of view, the war which began under the worst possible circumstances that Israel could have envisaged and under the most promising circumstances that the Arab forces could have hoped for and for which they had prepared, resulted in a victory for Israel's forces. As the war developed, the degree of Russian connivance which was evidenced by the major Russian air and sea lifts mounted immediately after the commencement of hostilities in order to resupply the Egyptian and Syrian armies, became increasingly apparent.

To counter this massive Russian air lift and in order to preserve the balance of forces, the United States mounted an air lift to resupply the Israel forces, which had expended a considerable quantity of ammunition and had sustained comparatively heavy losses in the fighting.

The losses in lives in the Yom Kippur War on both sides were heavy: 2,522 Israelis and an estimated 15,000 Egyptians and 3,500 Syrians were killed.

For the political and other aspects of the war, see *Israel, State of: Historical Survey.

[Chaim Herzog]

YOM TOV BEN ABRAHAM ISHBILI (**Asbili;** i.e., of Seville; known as Ritba – from the initial letters of his Hebrew name **R**abbi **Y**om **T**ov **B**en **A**braham; c. 1250–1330), Spanish talmudist. Famous already in his youth as a scholar, he studied in Barcelona under *Aaron ha-Levi of Barcelona and Solomon b. Abraham *Adret, and was mentioned in an official document of 1280 of the kingdom of Aragon as a *ḥakham* and *dayyan* of the community of Saragossa. Even during the lifetime of his teachers, questions were addressed to him for he was regarded as among the leading Spanish rabbis. When the king's bailiff in Saragossa asked his opinion about the protests of the local Jews against the excessive privileges of the wealthy families Alconstantini and Eleazar, he, despite his youth, condemned their domineering behavior and abuses, whereupon they attacked and seriously injured him.

After the death of his teachers, he was regarded by Spanish Jewry as its spiritual leader. When the community of Daroca introduced certain decrees, it was stated that this was done "in the name of R. Asher [b. Jehiel] and in that of R. Yom Tov b. al-Ishbili" (Resp. Ritba, no. 159). His *bet din* was referred to by contemporary rabbis as "the great and excellent *bet din*" (*ibid.*, no. 43). In his humility, he would apologize if he thought he had used somewhat harsh language in writing to anyone who disagreed with his views (*ibid.*, no. 208). He devoted himself also to the study of philosophy, in particular Maimonides' *Guide of the Perplexed*, acquiring a thorough knowledge of it and comparing its translation with the Arabic original. He also studied the works on logic of the Provencal scholars Samuel ibn Tibbon, Jacob Anatoli, and Gershom b. Solomon.

Yom Tov regarded Nahmanides as "a faithful shepherd" and declared it to be "the glory of the scholars of our land" that they received their Torah from him (*ibid.*, no. 208). Nevertheless he published a work (*Sefer ha-Zikkaron*) in defense of the *Guide of the Perplexed* against Naḥmanides' criticism of it in his commentary on the Pentateuch. In this work Yom Tov did not hesitate to declare that Naḥmanides "went much too far in saying of a great man brimful of the wisdom of the Torah and fully versed in all knowledge that his are empty words." He added that most of Naḥmanides' criticisms originated from his deficient knowledge of philosophical works, and that, not having adequately studied the *Guide*, he was unable to grasp its inner meaning and purpose (*Sefer ha-Zikkaron*). In this defense, Yom Tov did not attempt to blur the dividing line between "the path of truth" followed by Nahmanides and that "of logic" followed by Maimonides, but expressed the view that the latter's course "is very correct according to his outlook," while the former's "is more correct according to his." Generally Yom Tov reaffirms: "there are 70 ways in which the Torah can be interpreted, all of them the words of the living God." Even where he disagrees with Maimonides and accepts the view of Nahmanides, he declares that "all his [Maimonides'] statements are for the sake of Heaven and characterized by great wisdom" (*ibid.*).

Yom Tov's reputation rests upon his novellae to the Talmud, *Ḥiddushei ha-Ritba*. He apparently began writing them from the direct dictation of his teacher Aaron ha-Levi (*Ḥiddushim* to BB 63b, ed. by M.Y. Blau, vol. 1 (1952), 250). When, however, he realized that the work would be inordi-

nately long, he decided to make an abbreviated version. There is even a possibility that he wrote a third "version" to some tractates. These facts give rise to a difficult and complicated literary problem, his novellae to the different tractates being of different "types," and therefore not always of the same quality. It is sometimes very hard to identify them with certainty. His novellae are, in general, very rich in early source material: tosafistic, Spanish, Provençal, and geonic, and display a considerable originality, though he is very much under the influence of his two great teachers.

His novellae have been published many times, and in different editions. Their first editions are: *Berakhot* (1968); *Shabbat* (1967); earlier works on this tractate which purported to be *Ḥiddushei Ritba* were ascribed to him erroneously; *Eruvin, Ta'anit, Mo'ed Katan, Ketubbot* (Amsterdam, 1729; *Pesaḥim* (1864) is not his); *Sukkah* (in *Sheva Shitot le-ha-Rashba*, Constantinople, 1720; wrongly ascribed to Solomon b. Adret); *Rosh Ha-Shanah* (1858); *Yoma* (Constantinople, 1754); *Megillah* (in David Hayyim Samuel Hassan, *Kodshei David*, Leghorn, 1792); *Yevamot* (Leghorn, 1787); *Gittin* (Salonika, 1758); *Kiddushin*, in the very rare edition of the tractate of Sabionetta, 1553, and afterward Berlin, 1715; *Bava Batra* (1952–54); *Bava Meẓia* (1962; the earlier editions are not his); *Makkot* (in *Ḥamishah Shitot*, Sulzbach, 1769); *Ḥullin* (Prague, 1735); *Niddah* (1868 – chapter *Tevul Yom*; in *Ha-Segullah*, 4, Jerusalem, 1937). His other works include: a commentary on *Hilkhot Nedarim* by Naḥmanides (in *Ishei ha-Shem*, Leghorn, 1795); *Hilkhot Berakhot* (at the end of Ḥayyim Isaac Musafia's responsa *Ḥayyim va-Hesed*, 1844); Responsa (ed. by Y. Kafaḥ, 1959); *Sefer ha-Zikkaron* (by S.H. Halberstamm, in *Ḥiddushei ha-Ritba al Niddah*, 1868; critical edition by K. Kahana, 1956); a commentary on the Passover *Haggadah* in *Peh Yesharim* (1838); *Perush al Hilkhot ha-Rif*, in manuscript: *Sefer ha-Derashot*, his homilies, now lost.

[Ephraim Kupfer]

A complete edition of Ishbili's responsa, edited by Y. Kafaḥ, was first published in 1959. The Institute for Research in Jewish Law of the Hebrew University has now published the first volume of a comprehensive historical index to those responsa (together with that of the responsa *Zikhron Yehudah* of *Judah ben Asher, the son of *Asher b. Jehiel) under the editorship of M. Elon. The volume is the second in the series of the indexes to the responsa literature. The first volume, that of the responsa of Asher b. Jehiel, consisted for the most part of indexes to the legal matters in these responsa and their sources in biblical, talmudic, and post-talmudic literature. The present volume consists of an exhaustive historical introduction, and the subject matter is arranged under different headings, such as the political, juridical, and social status of the Jews as revealed in the responsa, communal organization, family and social life, economic life, realia, etc.

YOM TOV OF JOIGNY (d. 1190), talmudist, exegete, and synagogal poet. He was a disciple of Rabbenu *Tam of Troyes, the grandson of Rashi. Toward 1180 he settled in *York, probably under the aegis of *Josce, the leader of the community. His halakhic decisions are reported in the *Mordekhai* of *Mordecai b. Hillel (Ket., no. 198) and elsewhere; he was also known as a commentator on the Bible, and he engaged in anti-Christian polemics. Several of his religious poems are preserved, including a ballad-like strophic elegy on the Blois martyrs of 1171, *Yah Tishpokh Ḥamatkha*, written in Andalusian style; each of the four strophes has an allusion to some aspect of the death of the martyrs, asking God to intervene in favor of His people and avenge these deaths. He mentions in particular the names of two of the martyrs, Yehiel and Yekutiel, who had been, like himself, students of Rabbenu Tam. He is also the author of the hymn *Omnam Ken, for the eve of the Day of Atonement, one manuscript version of which embodies the name Yom Tov in the last verse. He is said to have inspired the heroic mass-suicide of the Jews of York when they were beleaguered in the castle on the Sabbath before Passover in 1190. He and Josce were the last to die.

YONATH, ADA (1939–), Israeli chemist. Born in Jerusalem, Yonath received her B.Sc. in chemistry in 1962 and M.Sc. in biochemistry in 1964 from the Hebrew University of Jerusalem. After completing her Ph.D. studies at the Weizmann Institute of Science, Reḥovot, Israel, in 1968 she conducted postdoctoral studies at the Pittsburgh Carnegie-Mellon University and at the Massachusetts Institute of Technology.

In 1970, Yonath joined the Chemistry Department of the Weizmann Institute and established what was for almost a decade the only protein-crystallography laboratory in Israel. In 1984 she was promoted to associate professor and in 1988 she became a full professor. She was the head of the Structural Chemistry Department (1989–90) and the Structural Biology Department (1992–94). From 1988 she was director of the Helen & Milton A. Kimmelman Center for Biomolecular Structure and Assembly and of the Joseph & Ceil Mazer Center for Structural Biology at the Weizmann Institute, where she became the Martin S. Kimmel Professor of Structural Biology. Between 1986 and 2004, in addition to being a faculty member of the Weizmann Institute, she headed the

Max Planck Research Units for Ribosomal Structure in Hamburg, Germany.

Prof. Yonath spent most of her scientific career working to unravel the structure of the ribosome, the cell's "protein factory" which synthesizes proteins according to genetic code instructions. Her 20-year research efforts included pioneering technical advances such as cryo-bio-crystallography, which revolutionized structural biology worldwide. Her studies culminated in 2000 when she determined the structures of the two ribosomal subunits, an accomplishment ranked by the prestigious *Science* magazine as among the most important scientific developments of the year. She then revealed the modes of action of over a dozen antibiotic families, thus paving the way for structure base drug design.

Yonath was a member of the Israeli Academy of Science and Humanities, the U.S. National Academy of Sciences, the European Academy for Science and Art, the EMBO, and of the International Academy of Astronautics. She was the winner of the 2002 Israel Prize in chemistry. She was also the recipient of the First European Crystallography Prize, the Kolthof Award for Outstanding Research in Chemistry, the Kilby International Award, and the Harvey Prize.

[Bracha Rager (2nd ed.)]

YONATHAN, NATHAN (1923–2004), Hebrew poet. Yonathan was born in Kiev, in the Ukraine, came to Israel as a child, and grew up in kibbutz Givat ha-Sheloshah and later in Petaḥ Tikvah. For nearly 40 years he lived in kibbutz Sarid and later in Tel Aviv. He studied Hebrew and general literature, taught in high schools and at university, and was for many years chief editor of Sifriat Po'alim Publishing House and a member of the board of directors of the Israel Broadcasting Authority. Yonathan began publishing poetry in 1940 and his first collection *Shevilei Afar* ("Paths of Dust") appeared in 1951. This was followed by some 20 collections, including *El ha-Nirim ha-Aforim* ("Unto the Furrows Grey," 1954), *Shirim be-Arov ha-Yam* ("Poems at Sea Dusk," 1972), *Ḥofim* ("Shores," 1983), and *Shirim be-Ahavah* ("Poems with Love," 1990). Yonathan was one of the most popular Hebrew poets, not least because so many of his poems were set to music (For instance, *Ḥofim*, *Yesh Peraḥim*, *Ne'esaf Tishrei*, *Shenei Alonim*). His lyrical verse, describing the nature and landscape of Erez Israel, the sea, the rivers, the fauna and flora, is associated with the best of "Israeliness." The private self is nonetheless present in many of Yonathan's poems. Particularly moving are the poems of loss and bereavement he wrote after the death of his son Lior on the first day of the Yom Kippur War ("Poems to Lior," 1974). Yonathan also wrote prose and four books for children, including *Bein Aviv le-Anan* ("Between Spring and Cloud," 1959) and *Lilakh mi-Kevuẓat Ilanot* ("Lilach of the Ilanot Group," 1963). He received many prizes, including the Bialik Prize and the Brenner Prize. An English collection titled *Stones in the Darkness* appeared in 1975. Individual poems have been translated into diverse languages and information concerning translation is available at the ITHL website, www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

YORK, English cathedral city and the principal city in the north of England during the Middle Ages. Jewish capitalists settled there in the middle of the 12th century and attained considerable prosperity. The leaders of the community were Benedict, *Josce, noted for his patronage of scholars, and the tosafist *Yom Tov of Joigny. Benedict and Josce represented the York Jews in the deputation which waited on Richard I at his coronation in September 1189. In the ensuing riots Benedict was seriously wounded and died of his injuries on his homeward journey. In the following March anti-Jewish rioting broke out in York and the Jews, headed by Josce, were allowed by the sheriff to take refuge in the royal castle known as Clifford's Tower. Suspecting the latter's intentions, they later excluded him, were besieged by the mob, and committed mass-suicide rather than submit (*Shabbat ha-Gadol*, March 16/17, 1190). The victims included Josce, R. Yom Tov, and the tosafist Elijah of York. A poignant elegy on the massacre was composed by *Joseph b. Asher of Chartres. A community was reestablished early in the 13th century though it never regained its former importance. The most important Anglo-Jewish magnate of the reign of Henry III, *Aaron of York, archpresbyter of the Jews of England (1236–43), was the son of the Josce mentioned above. The community's cemetery, originally shared with those of *Lincoln and *Northampton, was at a place still known as Jewbury.

York was one of the cities in England which had an *archa and it remained a Jewish center until the expulsion of 1290, when the financial magnate Bonamie of York was given a safe-conduct and was permitted to settle in Paris. A few Eastern European Jews settled in York at the end of the 19th century, and a small congregation has existed since 1892. In 1968 it numbered 45 out of a total population of 106,010, while the 2001 British census found 191 declared Jews by religion. There is an Orthodox congregation. A plan in 2002 by the local council to build a shopping mall adjacent to Clifford's Tower was opposed by the *Board of Deputies of British Jews and the local community.

[Cecil Roth]

YORK-STEINER, HEINRICH ELCHANAN (1859–1934), Zionist publicist and author. Born in Senica (Hungary; now Slovakia), York-Steiner entered business in Vienna in his early youth. Self-educated in literature and art, he went to the U.S., returned to Vienna in 1884, and became director of a publishing house and an editor. After the appearance of *Der Judenstaat*, he joined Theodor *Herzl and became an ardent Zionist. He participated in the March 1897 conference that decided to convoke the First Zionist Congress and was responsible for the technical preparation of the central Zionist organ, *Die *Welt*. At the First Zionist Congress (1897) he submitted, on behalf of the organization commission, the proposals for adapting the constitution of the World Zionist Movement to the legislative requirements of various countries. These proposals became the basis of the Statute of the Zionist Organization. At the Sixth Zionist Congress in Basle (August 1903) he was an outspoken opponent of the *Uganda Scheme. While in Rome, York-Steiner heard about the disappointing results of Herzl's visit there. He called on the papal secretary of state in February 1904 and was finally authorized to state that the Apostolic See would not object to Jewish settlement in Palestine on humanitarian grounds. He published a report on the interview in *Die Welt* (no. 14, 1904).

After Herzl's death York-Steiner fought for strict adherence to Herzl's political Zionism and strongly opposed the gradual expansion of Zionist activities to other spheres in the Diaspora according to the *Helsingfors Program (1906), as well as premature, unorganized settlement in Erez Israel. When the practical Zionists attained the leadership of the movement, he left it (1911). During World War I he visited the U.S. on behalf of the Austrian Freemasons to seek the immediate cessation of hostilities. In the late 1920s he joined the *Revisionist movement, but was no longer active. He settled in Palestine in 1933, having visited the country repeatedly since 1898.

Among his publications are *Kuenstlerfahrten vom Atlantischen bis zum Stillen Ozean* (New York, 1883); *Anti; Croccolos Synagoge; Der barmherzige Bruder* (three stories, 1895); *Mutter Eva* (1897); *Der Talmudbauer* (1904); *Der hohe Kurs* (1908); *Bedeutet der Krieg einen Ausnahmszustand?* (1915); *Vom sterbenden Geld* (1921); *Die Kunst als Jude zu leben* (1928), containing many biographical notes and reminiscences; and "Aus Herzl's letzter Zeit" (in Tulo Nussenblatt, *Zeitgenossen ueber Herzl*, 1929, 213–17). He also published many articles in various Jewish and Zionist magazines.

[Oskar K. Rabinowicz / Archiv Bibliographia Judaica (2ⁿᵈ ed.)]

YOSE (first half of the fourth century), Erez Israel *amora*. Although always mentioned in the Jerusalem Talmud without patronymic, he is to be identified with R. Yose b. Zevida (Men.

70b: cf. TJ, Ḥal. 1:1, 57c). He transmitted the teachings of Ilai, Ze'ira, and Jeremiah. Yose became a close associate of R. *Jonah, and their joint teachings and discussions fill the pages of the Jerusalem Talmud just as those of Abbaye and Rava characterize the Babylonian Talmud. Yose and Jonah together attended weddings (TJ, Ber. 6:5, 10c), visited the sick (TJ, Shab. 6:9, 8c), and comforted mourners (TJ, Sanh. 6:12, 23d). They also were lifelong business partners in the production of wine (TJ, Ma'as. Sh. 4:9, 55b). When informed of the death of Yose's son, Jonah fasted the rest of the day (TJ, Ned. 8:1, 40d). Yose and Jonah permitted the baking of bread on the Sabbath when compelled to do so at the time of Ursicinus' campaign in Israel in 351 (TJ, Shev. 4:2, 35a). Later they were respectfully greeted by Ursicinus when they went to meet him in Antioch (TJ, Ber. 5:1, 9a). After R. *Ammi moved his academy to Caesarea, Yose and Jonah succeeded to the rectorate of the academy at Tiberias. They had many disciples, some of whom became the leaders of the next generation. Among Yose's prominent students were his own son, Eleazar, and Mani, the son of Jonah. Following Jonah's death (TJ, Ma'as. Sh. 4: 9, 55b) Yose was acknowledged as the leader of Palestinian Jewry, and he received inquiries from as far away as Alexandria, Egypt (TJ, Kid. 3:14, 64d). He sent a detailed calendar to Diaspora Jewry, cautioning them to continue to observe the second day of the festivals (TJ, Er. 3:9, 21c: cf. Beẓah 4b). He was so esteemed by his generation that upon his death his students who were kohanim defiled themselves by carrying his bier (TJ, Ber. 3:1, 6a).

BIBLIOGRAPHY: Hyman, Toledot, 713–7; Ḥ. Albeck, *Mavo la-Talmudim* (1969), 334f.

YOSE BAR ḤANINA (second half of the third century), Palestinian *amora*. Yose was an important member of the academy of Tiberias and was called a "great man" by R. Assi (BK 42b). He was a pupil-colleague of Johanan with whom he sometimes disagreed both in *halakhah* and *aggadah*. His intimacy with Johanan is emphasized in the story told by Ze'ira that Yose b. Ḥanina appeared to him in a dream and told him that he was seated next to Johanan in the Garden of Eden (BM 85b). This intimacy is the cause of some confusion in the sources and in some sayings it is not clear which of them was the author. However, the view that Yose b. Ḥanina was ordained by Johanan on the recommendation of Simeon b. Eliakim is based on an error in the text of the Babylonian Talmud (Sanh. 30b). The correct text in the Jerusalem Talmud makes it clear that Yose b. Ḥanina recommended Simeon b. Eliakim for this purpose to Johanan. Yose b. Ḥanina was a *dayyan* and Rava said of him that "he penetrated to the inner spirit of the law" (BK 39a). As a *dayyan* he was renowned for his leanings toward compromise rather than the application of the strict letter of the law and his plea to the contending parties was that they should not stand upon their legal rights but go "beyond the line of justice" (TJ, BM 6:8, 11a). The Babylonian Talmud has a rule that wherever it says "they ridiculed it in the west" (Erez Israel) the reference is to Yose b. Ḥanina (Sanh. 17b). He was also a great aggadist and apparently an

outstanding preacher; he said "whosoever discourses on the Torah in public and his words are not as sweet as honey to his audience… it were better that he had not spoken" (Song R. 4, no. 1). There is probably a personal element in his statements, "Love unaccompanied by reproof is not love" and "reproof leads to love" (Gen. R. 54:3).

Very little is known of the events of his life. He was apparently wealthy (BB 90b), and his children died during his lifetime (Ta'an. 13b). The suggestion that he was the brother of Ḥama b. Ḥanina is a mere conjecture. Among his important pupils was Abbahu; however, his sayings are transmitted by many others. He taught *beraitot*, and as a result, although he was not a *tanna*, his name was attached to halakhic Midrashim, though a *tanna* called Yose b. Ḥanina is also mentioned (Epstein, Tanna'im, 630).

BIBLIOGRAPHY: Bacher, Pal Amor, 1, 2, 3; J.S. Zuri, *Yose bar Ḥanina me-Keisarin* (1926); Z.W. Rabinowitz, *Sha'arei Torat Bavel* (1961), 443–4; Hyman, Toledot, s.v.; H. Albeck, *Mavo la-Talmudim* (1969), 185–6; Epstein, Mishnah, 307–10.

YOSE (Issi) BEN AKAVYAH (second century C.E.), *tanna*. According to a tradition in the Babylonian Talmud (Pes. 113b), he is identical with Joseph of Huẓal (in Babylonia), Joseph the Babylonian, Issi b. Gur Aryeh, *Issi b. Judah, Issi b. Gamaliel, and Issi b. Mahalalel. The Jerusalem Talmud (BK 3:7, 3d) also identifies him with Yose Kittunta, of whom the Mishnah states that with his death the pious men (*ḥasidim*) came to an end (Sot. 9:15). Bacher disputes these identifications, and regards Issi b. Judah in particular as distinct from Yose b. Akavyah but identical with R. Yose b. Judah "of the Babylonian village" who deprecated study from young teachers, preferring instead "old, experienced masters" (Avot 4:20).

Yose's preference for older teachers is paralleled by the respect in which he held old people in general. In contrast to those rabbis who interpreted Leviticus 19:32, "You shall rise up before the hoary head" as referring to scholars, Yose explained it according to its literal sense (Kid. 32b). He also maintained that honoring one's father takes precedence over the performance of a precept which could be carried out by others (Kid. 32a). He stated that anyone superior in even a single accomplishment should be honored (Pes. 13b) and regarded the premature death of scholars as a divine punishment for lack of self-respect (ARN 29, p. 88). In line with R. Eliezer's opposition to the education of women (Sot. 3:4), Yose excluded daughters from the commandment that a man should teach the Torah to his children (Sif. Deut. 46). In accordance with the ancient practice, he interpreted Deuteronomy 23:26 as applying to anyone, while other rabbis, aware of economic realities, restricted the right of picking ears of grain to laborers employed by the owner of the field (BM 29a). Likewise he insisted on the literal meaning of Exodus 21:14 to include non-Israelites under the provisions of the law of murder (Mekh. Nezikin 4). Yose summed up in brief, pointed phrases, the accomplishments of the leading contemporary scholars (Git. 67a). He took extreme care to check his traditions, and was highly praised by R. Eleazar b. Shammua (Men. 18a). To aid his memory, Yose wrote important traditions in private "secret scrolls" (Shab. 6b) which were not meant for dissemination. He failed to attend *Yose b. Ḥalafta's college for three days because Yose had failed to explain the reasons for his statements (Ned. 81a). Yose was also an expert in biblical exegesis, and his statement that "there are five verses in the Torah, the syntactical construction of which is undecided" (it being uncertain whether a word be read with the first or second section of the verse; Mekh. Amalek 1, Yoma 52a–b, et al.) was incorporated in the masorah.

[Moses Aberbach]

YOSE BEN AVIN (fourth century), Palestinian *amora*. Yose b. Avin is frequently mentioned in the Jerusalem Talmud and is one of the last scholars referred to there by name. He was a pupil of Yose of Yokrat and later of Assi (according to the reading of Dik. Sof., Ta'an. 23b). Although he frequently transmitted the words of his predecessors, no one, apart from the anonymous "rabbis of Caesarea" (TJ, Shab. 8:1, 11a; et al.), transmitted sayings in his name. According to one tradition (Yev. 45b) he was also in Babylonia, and statements of his are cited in the Babylonian Talmud, though his name is often interchanged with that of his contemporary, Yose b. Zevida. Similarly, in the Palestinian Talmud he is cited as transmitting Babylonian teachings (TJ, 1:2, 60b) and customs (TJ, Pes. 10:2, 37c). There is great confusion in the sources about his exact dates, and some scholars are of the opinion that there was more than one *amora* *Avin (or Ravin). His son Samuel is also mentioned (TJ, Dem. 4:3, 24a) as well as his son-in-law, Hillel (TJ, Ber. 2:5.5a).

BIBLIOGRAPHY: Frankel, Mevo, 102a; Hyman, Toledot, s.v.; Z.W. Rabinowitz, *Sha'arei Torat Bavel* (1961), 444–47: H. Albeck, *Mavo la-Talmudim* (1969), 336–37.

YOSE BEN DORMASKOS (second–third century C.E.), *tanna*. "Dormaskos" refers to his birthplace, Damascus, as he himself stated (Sif. Deut. 1). The Aramaic form Darmesek occurs also in the Bible (I Chron. 18: 5–6; in Kid. 39a the reading is "ben Durmaskah"). Yose is mentioned once only in the Mishnah (Yad, 4: 3; cf. Tosef., Yad. 2:16), not as the author of a halakhic statement, but as transmitting information from the academy of Jabneh to Eliezer b. *Hyrcanus in Lydda. Yose b. Dormaskos tended to follow the plain meaning of the Bible and explicitly dissociated himself from farfetched interpretations. He used to say with regard to these interpretations "Why do you distort the verses?" (Sif. Deut. 1). Most of his sayings are in *aggadah* (Mekh. Shirah 2, et al.). One *baraita* (Ḥul. 67b) which states in his name that the leviathan is a clean fish is also based upon a biblical verse. Another *halakhah*, that "the law of *orlah does not apply outside Ereẓ Israel", he transmitted in the name of Yose *ha-Gelili (Tosef., Or. end).

BIBLIOGRAPHY: Hyman, Toledot, s.v.

[Jacob Eliahu Ephrathi]

YOSE BEN ḤALAFTA (mid-second century C.E.), *tanna*; the R. Yose mentioned in the Talmud without patronymic. Yose was one of the leaders of the generation after the persecutions which followed the Bar Kokhba War. He was born in *Sepphoris, where his father was one of those who instituted *takkanot* there after the destruction of the Temple (Tosef., Ta'an. 1:14). Yose studied under his father and transmitted some of his teachings (Kelim 26:6; et al.). He also studied under *Johanan b. Nuri in Galilee (Tosef., Kelim, BK 6:4; et al.), and under *Tarfon in Judea (*ibid.*, Shev. 4:4). His main teacher, however, was *Akiva in whose name he frequently transmits *halakhot*, and it was said generally: "R. Akiva his teacher" (Pes. 18a). The Babylonian Talmud numbers him among his last pupils who "reestablished the Torah" (Yev. 62b) and according to one tradition he was ordained by *Judah b. Bava (Sanh. 14a). Other traditions report that he participated in all the conventions of scholars "at the close of the period of persecution," in the valley of Bet Rimmon, in Usha, and in Jabneh (TJ, Ḥag. 3:1; Ber. 63b). During the persecutions he endangered his life to fulfill the precept of circumcision and fled to Asia or to Laodicea (BM 84a: TJ, Av. Zar. 3:1). He followed in the footsteps of his father in Sepphoris in introducing *takkanot* (Sanh. 19a), in giving practical instruction (see Er. 86b), and in preaching in public (Sanh. 109a).

Yose's *bet din* in Sepphoris was reckoned among the most outstanding in Ereẓ Israel (Sanh. 32b). Yose and Judah are frequently found together with the *nasi*, Simeon b. Gamaliel both at Usha and during his various travels (Tosef., Ber. 5:2; *ibid.*, Suk. 2: 2; et al.), and Simeon b. Gamaliel quotes him (Meg. 6b). His influence was still felt in the council chamber during the time of Judah ha-Nasi, the son of Simeon, who withdrew his own view in favor of that of Yose (Shab. 51a), and spoke of him with exceptional respect (Git. 67a). The Talmud states that the *halakhah* was established in accordance with the view of Yose wherever his associates disagreed with him (Er. 46b). Yose is mentioned several times in all the tractates of the Talmud with the exception of *Bikkurim*, *Hagigah*, *Horayot*, and *Me'ilah*, and in the *beraitot* his *halakhot* are frequently given.

His sayings in the *aggadah* are not numerous. Some 16 conversations with gentiles have been ascribed to him, especially those with "a certain matron." Many aggadic sayings quoted in his name deal with theological and cosmological problems, and noteworthy in this connection is his explanation of the name *Makom* ("place") for God: "The Holy One is the place of the world, but the world is not His place" (Gen. R. 68:9). Among others are his sayings: "The Divine Presence never descended to earth, nor did Moses and Elijah ever ascend on high" (Suk. 5a); "On what does the world rest? On the pillars… the pillars upon the waters… the waters upon the mountains… the mountains on the wind… the wind upon the tempest… the tempest is suspended on the arm of the Holy One" (Ḥag. 12b). In opposition to the view of others, Yose held that "man is judged each day" (Tosef., RH 1:13). Yose transmitted many reminiscences and historical traditions of the generations close to him and of the time of the Temple.

In his *aggadah* too an important place is given to determining the chronology of the events in Scripture and to the interpretation of the historical material of the scriptural books. The *baraita*, *Seder Olam*, dealing with chronology, apparently had its origin in his school, as testified by Johanan (Yev. 82b). Many traditions record his unpretentious ways and his relations with his fellow men, as well as his piety (Shab. 118b; TJ, Ber. 3:4). Yose is the earliest scholar of whom it is related that he was worthy of having the prophet Elijah reveal himself to him regularly in order to teach him (Ber. 31; et al.). Of his private life, it is reported that he obtained his livelihood by tanning (Shab. 49a–b). He left five sons, all scholars, the best known of them being *Ishmael and *Eleazar.

[Shmuel Safrai]

YOSE BEN JOEZER OF ZEREDAH (first half of the second century B.C.E.), together with his colleague, *Yose b. Johanan of Jerusalem, the first of the *zugot. Both were disciples of *Antigonus of Sokho. Zeredah, his place of origin, is in the south of Samaria. He was the *nasi* of the Sanhedrin and his colleague was the *av bet din*. They are recorded as having "decreed uncleanness upon gentile countries and upon glassware" (Shab. 14b–15b, TJ, Shab. 1:7, 3c; Pes. 1:6, 27d; Ket. 8:11, 32c). Apparently the main reason for the first decree was to prevent or discourage emigration from Ereẓ Israel. The suggestion that the second decree was for economic reasons is very doubtful. It is probable that it was merely one of the stringencies introduced into the laws of ritual uncleanness and cleanness during the time of the Second Temple. They were the first to differ in the well-known dispute about *semikhah (the laying on of hands upon sacrifices during the festival), Yose b. Joezer holding that it should not be performed and Yose b. Johanan permitting it (Ḥag. 2:2). Because of their profound erudition and piety both Yoses were called "the grape clusters," and it was said that when they died "the grape clusters ceased" (Sot. 9:9; cf. Tosef., BK 8:13; Tem. 15b).

It is related of Yose b. Joezer "that he was the most pious in the priesthood, yet his apron was [considered] *midras* (uncleanness) for [those eating] hallowed things" (Ḥag. 2:7). The Mishnah (Eduy. 8:4) relates of him: "Yose b. Joezer of Zeredah testified concerning the *ayil kamẓah* locust that it is clean … and that one who has definitely touched a corpse is unclean. And they called him Yose the permitter." It is noteworthy that this testimony – the first mentioned in the sources (see *Eduyyot*) – is in Aramaic, typical of authentic Second Temple traditions. His statement in *Avot* (1:4), however, is in Hebrew: "Let thy house be a meeting place for scholars; sit amid the dust of their feet; and drink in their words with thirst." The Midrash (Gen. R. 65:22) relates that Yose was sentenced to death by crucifixion. On the way to his execution his nephew, Yakum of Zerorot, who is usually identified with the wicked priest *Alcimus, encountered him and taunted him. Alcimus

repented and committed suicide. This story, however, does not agree with the description of the death of Alcimus in I Maccabees 9:55–56. The Talmud (BB 133b) relates that Yose gave all his property to the sanctuary and bequeathed nothing to his son because of his unworthy conduct.

[Moshe David Herr]

YOSE BEN JOHANAN HA-TANNA OF JERUSALEM, colleague of Yose b. Joezer of *Zeredah, and one of the *zugot. He is almost invariably mentioned together with his colleague. Yose b. Johanan's maxim in *Avot* (1:5) is: "Let thy house be wide open; let the poor be members of thy household; and engage not in much gossip with women."

[Moshe David Herr]

YOSE BEN JUDAH (second century C.E.), *tanna*. Yose was the elder colleague of Judah ha-Nasi (see Pes. 112b) with whom he held halakhic discussions (Shab. 18a) and whom he accompanied on his tours of the country (Ned. 62a; Gen. R. 76:8). Yose's statements are cited a number of times in four of the six orders of the Mishnah but not in *Zera'im* and *Tohorot*. Many of them are cited anonymously, whence his designation in the Babylonian Talmud, "*stimata*" (Er. 38 b; et al.). Yose is very frequently mentioned in all six orders of the Tosefta. Most of his statements belong to *halakhah* and only a few are in *aggadah*, the best known being that which tells about the two ministering angels who accompany a man when he returns home from the synagogue on the eve of the Sabbath (Shab. 119b). Well known too is his apothegm: "Let your 'yes' be righteous and your 'no' be righteous" (BM 49a). It is possible that Simeon b. Judah was his brother.

BIBLIOGRAPHY: Epstein, Tanna'im, 172–4; Hyman, Toledot, s.v.

[Israel Moses Ta-Shma]

YOSE BEN KIPPAR (end of the second century C.E.), *tanna*. Yose's name does not occur in the Mishnah, but only in the Tosefta and in *beraitot*. He transmits many sayings in the name of Eleazar b. *Shammua (TJ, Shev. 2:4, 33d. Bezah 4:2, 62c; et al.) and some scholars are of the opinion that whenever he transmits in the name of R. Eleazar without a patronymic the reference is to Eleazar b. Shammua. Yose is the first known emissary sent from Erez Israel to Babylon in order to collect money and offerings for the benefit of the scholars of Erez Israel. He was accompanied by his colleague Dostai b. Yannai, and on account of this mission became involved in a dispute with the local people (Nehardea, in the TB) who demanded the return of their money and even took it back from him by force and under torture (TJ, Git. 1:6, 43d; Git. 14b). According

to a passage in the Talmud (Ber. 63a), Yose b. Kippar was sent with "the grandson of Zechariah b. Kebutal" to Babylon in order to dissuade Hananiah, the nephew of Joshua b. Hananiah, from intercalating the year outside Erez Israel. This incident occurred shortly after the Bar Kokhba revolt in 135 C.E. and therefore the chronology makes it difficult to ascribe the incident to him. Consequently some scholars are of the opinion that the reading is a mistake for Yose b. ha-Kappar (see Dik. Sof. 1c.). The Jerusalem Talmud also (ed. 6:13, 40a) specifies the names of other emissaries regarding this incident, and his name does not occur there.

BIBLIOGRAPHY: Hyman, Toledot, 732–3.

[Israel Moses Ta-Shma]

YOSE BEN KISMA (first half of the second century C.E.), *tanna*. Yose lived apparently in Tiberias (Tanḥ. B. Gen. 166; Yev. 96b). An autobiographical story is told of his preferring to live in a place of Torah rather than have all the silver, gold, and precious stones in the world (Avot 6:9). The Palestinian Talmud transmits a tradition in which Yose ben Kisma appears in the company of the fourth generation *tannaim* Eleazar and Yose (TJ Shek. 2:5, 47a). No halakhic statements are transmitted in his name. In the *aggadah* of the Babylonian Talmud, Yose is described as having held that one should submit to Roman rule, and according to this tradition he did not give up this view even during the time of the Hadrianic persecutions. It is related that when he was ill, *Ḥanina b. Teradyon went to visit him. Yose said to him: "Ḥanina, my brother, do you not know that it is Heaven that has ordained this nation to reign? For though she has laid waste His house, burnt His Temple, slain His pious ones, and caused His choice ones to perish, still is she firmly established! Yet, I have heard that you sit and occupy yourself with the Torah, address public assemblies, and keep a scroll of the law in your bosom." Ḥanina replied: "Heaven will have mercy." "I," remonstrated Yose, "am telling you plain facts and you say, 'Heaven will show mercy!' It will surprise me if they do not burn you together with the scroll of the Law." Nevertheless, Yose looked forward to the redemption and believed that Israel would fall into the hands of the Parthians (Sanh. 98a–b). It was said that within a few days Yose b. Kisma died, and all the great men of Rome went to his funeral and made great lamentation for him (Av. Zar. 18a).

[Moshe David Herr]

YOSE BEN MESHULLAM (end of the second century C.E.), *tanna*. Yose was the colleague of Abba Yose b. Dosai and Simeon b. *Eleazar. He transmitted *halakhot* in the name of his brother Nathan (Tosef., Dem. 3: 1). Yose, who belonged to the intimate circle of Judah ha-Nasi, is referred to by name only three times in the Mishnah (Ter. 4:7; Bek. 3:3 and 6:1). It can be proved, however, that several of the anonymous statements in the Mishnah are according to him. He and Simeon b. *Menasya headed the "holy *congregation" of Jerusalem (TJ,

Ma'as. Sh. 2:10, 53d) who ate ordinary food in ritual purity and divided their day into three: one-third for study, one-third for prayer, and one-third for work (Eccles. R. 9:9).

[Israel Moses Ta-Shma]

YOSE BEN YOSE (fourth or fifth century C.E.?), the earliest liturgical poet known by name. *Saadiah mentions him as foremost among the famous poets of antiquity (Arabic introduction to the *Iggaron*, and Hebrew translation, ed. A. Harkavy, in *Zikkaron la-Rishonim ve-Gam la-Aharonim*, 5 (1891), 50 f.). Of the many theories about him, the only one that appears tenable is that his native country was Palestine, as it has been established beyond doubt that the oldest *piyyut* was developed in that country. Even in the early Middle Ages, nothing was known of the period and the circumstances of his life. He is sometimes called *ha-yatom* ("the orphan") apparently because he bore the name of his father. Others called him "high priest" from which it would seem that he was believed to have lived in the times of the Temple, while others identify him with the *amora* Yose b. Yose. He probably flourished as early as the fifth or even the fourth century. Since these dates cannot be definitely determined, it is not certain whether he is to be regarded as the originator of the artistic *piyyut* or as reliant upon older models no longer extant. Despite his dependence on the picturesque style of the Midrash and occasional neologisms, Yose's language is distinguished by its purity and its lofty poetic diction. He is the only non-Spaniard whose verses Ibn *Janah quotes in his dictionary as ideal models (*Sefer ha-Shorashim* (Berlin, 1893), 305, 419).

Large parts of his compositions have been preserved in the *genizah*, and have been published by M. Zulay and E. Fleischer. A. Mirsky has edited and annotated all his preserved liturgical poems (1977²). Among the unpublished texts of the *genizah* are some which were apparently composed by Yose.

The following poetical compositions are attributed to Yose:

(1) The so-called *Teki'ata* of the German ritual, consisting of three sections appended to the prayers *malkhuyyot*, *zikhronot*, and *shofarot*.

(2) At least three versions of the *Avodah, namely:

(a) *Azkir Gevurot*, for the *Shaharit* of the Day of Atonement (Rosenberg), M. Sachs, *Kovez Ma'asei Yedei Ge'onim Kadmonim* (Berlin, 1856), 1–9, 85–87; H. Brody-M. Wiener, *Mivhar ha-Shirah ha-Ivrit* (1934), 26–36; A. Mirsky, *Piyyutei Yose ben Yose*, 127 ff.; with English translation: T. Carmi, *The Penguin Book of Hebrew Verse* (1981), 209 ff.; M.D. Swartz and J. Yahalom (eds.), *Avodah: An Anthology of Ancient Poetry for Yom Kippur*, 295 ff.

(b) *Attah Konanta 'Olam be-rov Hesed* used in the old French ritual in the Middle Ages, later preserved in the ritual of *Apam, the text of which was published in Rosenberg's *Kovez* II, 111–5 as well as in S.D. Luzzatto's Italian *mahzor* (Leghorn, 1856); A. Mirsky, *Piyyutei Yose ben Yose,* 178 ff.; M.D.

[Jefim (Hayyim) Schirmann / Angel Sáenz-Badillos (2ⁿᵈ ed.)]

YOSE BEN ZIMRA (second century C.E.), Erez Israel scholar belonging to the last generation of *tannaim* and the first generation of *amoraim*. According to one tradition, Yose was a

priest (Yoma 78a). His daughter married the son of R. Judah ha-Nasi (Ket. 62b). His halakhic sayings are few, most of his dicta belonging to the sphere of *aggadah*, and they occur in the Talmuds and the Midrashim (and once even in the *Mekhilta). His sayings are usually transmitted in his name by Johanan and, particularly, by Eleazar b. Pedat. His statement "If all the inhabitants of the world were to assemble, they could not create a single gnat and put life into it" (TJ. Sanh. 7:19, 25d), directed against sorcerers and magicians, was used against the alleged miracles of sectarians, apparently Christians, who were very common in Erez Israel in his day. He particularly censured talebearers and scandalmongers, whom he compared to those who deny the very foundations of religion (Ar. 15b).

He interprets the word *va-yiven* in Genesis 2:22 to indicate that "woman is endowed with more understanding (*binah*) than man" (Gen. R. 18:1).

[Moshe David Herr]

YOSEF, OVADIAH (1920–), Israeli rabbi. Yosef was born in Baghdad, but when he was four years old he was taken to Jerusalem. At the age of 20, he was ordained rabbi by Ben-Zion Meir *Ouziel. In 1945 he was appointed a *dayyan* in the *bet din* of the Sephardim in Jerusalem. In 1947 he was elected head of the *bet din* of Cairo and deputy chief rabbi of Egypt. During the period of his rabbinate in Egypt he displayed great courage and national pride; he refused to issue proclamations against the State of Israel, forbade contributions for military equipment for the Egyptian army, and also insisted on his right to preach in Hebrew. In 1950, he returned to the young state of Israel and was appointed a member of the rabbinical court of Petaḥ Tikvah and of Jerusalem (1958–65). In 1965 he was appointed a member of the Supreme Rabbinical Court of Appeals in Jerusalem, and in 1968, Sephardi chief rabbi of Tel Aviv-Jaffa. On October 16, 1972, Rabbi Yosef was elected Sephardi chief rabbi of Israel (*rishon le-Zion*), a position he held until 1983.

In 1984, with the encouragement of Lithuanian leader R. Eleazar Menahem *Shach, who had in effect become his mentor, Yosef founded *Shas as an ultra-Orthodox political party aiming to redress the wrong of Eastern underrepresentation in Israeli public life. Shas became a major force in Israeli politics, with a peak of 17 seats after the 1999 Knesset elections and its own school system, El ha-Ma'ayan. With the rise of Shas and as its spiritual leader, Yosef became one of the most prominent and influential figures in the country, given to scathing and often crude pronouncements about the secular world, and in particular Israel's Supreme Court. However, Yosef was also a pragmatist, and though he had fallen under the sway of R. Shach and made his followers part of the closed Lithuanian yeshivah world where secular studies and secular employment were anathema, his own background in the more open society of Eastern Jews, where assimilation was

not feared and vocational training was the norm, had made him relatively liberal in his outlook. Thus, in 1979, Yosef consented to serve as president of a rabbinical seminary attached to Bar-Ilan University which would be combined with a B.A. program in the Humanities and Jewish Studies – a kind of Israeli Yeshiva University. However, the outcry in the ḥaredi world of R. Shach and a campaign of pressure and threats caused R. Yosef to back down and repudiate the project. The break with R. Shach came when R. Yosef supported the peace process and permitted Shas to join the Rabin government in 1992. Shas subsequently joined the Netanyahu government in 1996 and then the Barak government in 1999 after reaching its high-water mark of 17 Knesset seats. Since that time, Shas has slipped at the polls and more often than not found itself bypassed in government coalitions, which together with the general recession has had an effect on the funds channeled into its pet projects and led to the near bankruptcy of its school system. Politically it has moved to the right, opposing the 2005 disengagement from the Gaza Strip.

A prolific writer of halakhic works, Yosef published his first work, *Yabbi'a Omer*, at the age of 18 on themes in tractate *Horayot*, and he used the same title for many subsequent collections of responsa (which appeared in Jerusalem in 1954, 1956, 1960, 1964, and 1969). A second set of responsa was published under the title *Yeḥavei Da'at*, and his rulings were codified in *Yalkut Yosef*. In 1970 he was awarded the Israel Prize for Torah literature. He also wrote *Ḥazon Ovadyah* (1952), on the Passover *Haggadah, in two sections: one halakhic and the other homiletical. The second part was published in an enlarged second edition (1967). Yosef's works are distinguished by their erudition. He is at home both with the Sephardi and Ashkenazi authorities to whom he gives equal weight. His rulings are clear and direct. In general he inclined to leniency in his rulings. Yosef also headed the yeshivah Torah ve-Hora'ah – the Tel Aviv branch of the yeshivah Porat Yosef – as well as the institute for *dayyanim* established by him in Tel Aviv. Among his best-known rulings were those collectively recognizing the *Beta Israel as Jews and affirming the permissibility of giving up land in Erez Israel in exchange for peace.

[Itzhak Alfassi / Fred Skolnik (2nd ed.)]

YOSE HA-GELILI (beginning of the second century C.E.), *tanna*, one of the scholars of *Jabneh. As his name indicates, Yose came from Galilee (Er. 53b). His teachers there are unknown, but at an early age he went to Jabneh, where he made a great impression in his discussions with Tarfon and Akiva – who also later were his chief disputants (Zev. 57a; et al.). His relations with Akiva were at first those of pupil and teacher, but in the course of time he became his colleague, even saying to him: "Akiva, even if you carry on all day I shall not heed you" (Sifra 6:23; Men. 89a). Akiva held him in high regard,

and said: "Not for everyone [would I withdraw] but for you, who are Yose ha-Gelili." His name is not mentioned in the tractate *Eduyyot* because he was still young when the *halakhot* detailed there were established. His *halakhot* are scattered throughout the Talmud, but mainly in the order *Kodashim*. Generally he does not interpret the scriptural verses according to their literal meaning, and in the *aggadah* he inquires as to the intent of the verse. His permanent place of residence is not known. In Tiberias he studied together with Simeon b. Ḥanina (Sif. Zut. to Num. 19:4) and he was also in the south – when he accompanied Tarfon, Eleazar b. Azariah, and Akiva to comfort Ishmael – in Jabneh, and in Lydda, where Tarfon lived.

According to a talmudic tradition, his wife was a shrew and he was persuaded by his colleagues to divorce her, but after the divorce he acted generously toward her and supported her and her second husband, who became blind (TJ, Ket. 11:3). He had three sons: Eliezer, Ḥanina, and one who died during his lifetime. He was also regarded as a wonder-worker whose prayers for rain were effective. Because of the similarity of names some of his statements are confused with those of *Yose b. Ḥalafta and vice versa. Nothing is known of his disciples, and those who transmitted statements in his name are few: Judah b. Ilai, Eleazar b. Shammua, Nathan, Simeon b. Eleazar, anti *Yose b. Dormaskos. Yose ha-Gelili apparently died before the Bar Kokhba War (132–135 C.E.), and according to a medieval tradition his tomb was located near Safed in Galilee.

[Israel Moses Ta-Shma]

YOSE HA-KOHEN (end of the first century C.E.), *tanna*. Yose, a pupil of *Johanan b. Zakkai, was known for his piety and his teacher designated him a "*ḥasid*" (one of exceptional piety; Avot 2:8). It is related of him that he never sent a letter through a gentile lest he forward it on the Sabbath (Shab. 19a). His piety is also discernible in his apothegm: "Fit yourself to study Torah for it will not come to you as a heritage; and let all your actions be for the sake of heaven" (Avot 2:12). In answer to the question as to "the good way to which a man should cleave" Yose ha-Kohen answered that a man should maintain good neighborly relations (Avot. 2:9). Like most of the *ḥasidim* of the Talmud Yose was not conspicuous in his teaching and very little is known about it (Eduy. 8:2). Yose plays a significant role in the later amoraic versions of the stories concerning early tannaitic involvement in the study of *Merkabah mysticism, along with Simeon ben Nethanel (TJ, Ḥag. 2:1, 77a), or according to another tradition with *Joshua b. Hananiah (TB, Ḥag. 14b). These traditions, however, probably do not preserve authentic historical information about Yose himself or his historical period. Some identify Yose ha-Kohen with Yose Kittunta, of whom it is said that when he died, piety ceased (Sot. 9:15). On the other hand it is certain that he is not to be iden-

tified with the Joseph ha-Kohen mentioned in several places (Mik. 10:1; et al.) without the title "Rabbi."

YOTVATAH (Heb. יָטְבָתָה), kibbutz in southern Israel, in the Arabah Valley 26 mi. (40 km.) N. of Eilat, affiliated with Iḥud ha-Kevuẓot ve-ha-Kibbutzim. Yotvatah was founded in 1951 as a *Naḥal outpost by Israel-born graduates of youth movements and later joined by pioneers from various countries. Nearby is the Yotvatah playa and one of the largest springs of the southern Arabah, from which the principal water supply was first drawn to Eilat. Situated at an isolated spot near the Jordanian frontier, Yotvatah suffered from frequent enemy attacks. In 2002 its population was 576. It developed methods for progressive oasis farming, producing mainly out-of-season vegetables and flowers, dates and other tropical fruit, etc. Yotvatah ran a dairy for pasteurized milk products, but also sold other products, such as fruit juices. In 1998 part of the dairy was sold to the Straus company, a large family-owned food enterprise. The kibbutz experimented with hydroponics and was active in regional nature research. It set up a small wildlife reserve. The name Yotvatah is biblical (Jotbath; Num. 33:33; Deut. 10:7).

[Efraim Orni]

YOUNG, ALEC DAVID (1913–2005), British aeronautical engineer. Young was born in London and educated at the Central Foundation School before graduating in mathematics from Cambridge University (1935). After postgraduate research in aeronautics he joined the scientific staff of the Royal Aircraft Establishment, Farnborough (1936–46) followed by the College of Aeronautics, Cranfield (1946–54) where he was professor and head of the department of aerodynamics. Between 1954 and 1978 he was professor, head of the department of aeronautical engineering and vice principal (1966–78) of Queen Mary College, University of London, dean of the university faculty of engineering (1962–66), and from 1978 emeritus professor. His research interests included aircraft design, boundary layer problems, and innovative work on the design of ejector seats, parachutes, and jet engines. He made major contributions to elucidating the cause of the Comet crash (1954) and the Munich air disaster involving the Manchester United football team (1958). His many honors include the Order of the British Empire (1964), the Royal Aeronautical Society Gold Medal (1972), election to the Royal Society of London (1973), and the Roy Medal from the International Council for the Aeronautical Sciences (1994). He served as consultant to the Haifa Technion, with which he had strong ties.

[Michael Denman (2nd ed.)]

YOUNG, DAVID IVOR, BARON YOUNG OF GRAFF-HAM (1932–), British businessman and politician. Lord

Young of Graffham was born in London, the son of a flour merchant, and the brother of Stuart *Young, who became the chairman of the BBC. Lord Young was educated at a London public school, Christ's College, Finchley, and London University. He became a solicitor and then entered business life, serving as an executive at Great Universal Stores from 1956 to 1961 and as chairman of Eldonwall Ltd. Margaret *Thatcher appointed him to head the Manpower Services Commission from 1982 to 1984, which was concerned with reducing Britain's high unemployment rate. In 1984 she made Young minister without portfolio in her government, with a life peerage. Lord Young was then appointed to Thatcher's cabinet, serving as employment minister in 1985–87 and trade minister in 1987–89. Later he held a variety of senior business appointments and was chairman of Cable & Wireless Ltd. in 1990–95. He was also active in Jewish affairs, serving as president of Jewish Care from 1990. Young is the author of an account of his time in government, *The Enterprise Years: A Businessman in Politics* (1990).

[William D. Rubinstein (2nd ed.)]

YOUNG, JAMES E. (1951–), U.S. Holocaust scholar. Born in California, educated at the University of California, Santa Cruz (B.A. 1973, Ph.D. 1983) and the University of California, Berkeley (M.A. 1976), Young taught at Bryn Mawr College (1983–84), New York University (1984–88), and from 1988 at the University of Massachusetts, Amherst, where he was named professor of English and Judaic Studies and chair of the Department of Judaic and Near Eastern Studies. He was a visiting professor at the universities of Washington, Harvard, and Princeton, and a lecturer at other universities and public forums. He was a fellow of the YIVO Institute for Jewish Research and the Institute of Contemporary Jewry at the Hebrew University, and received fellowships or grants from the Guggenheim and Littauer foundations, the National Endowment for the Humanities, and other scholarly support organizations. Young served on the boards or advisory committees of the New England Holocaust Memorial Committee, the State Museum at Terezin, the International Auschwitz Council of the Polish Ministry of Culture, and the commission for the Holocaust memorial in Berlin, as well as consulting with other national and municipal memorial authorities. He was the curator of "The Art of Memory" exhibition at the Jewish Museum in New York in 1994 and is the editor-in-chief of the *Posen Library of Jewish Culture and Civilization*, a multivolume collection of primary sources, documents, texts, and images sponsored by the Posen Foundation.

Young's scholarly work focused on historical memory and memorialization, and in particular the aesthetics and politics of Holocaust memorials, on which he is a recognized authority. Young's insight that "the motives of memory are never pure" informs his examination of the ways in which contemporary political commitments and exigencies shape what is remembered and how it is memorialized, and how a memorial may become part of a reductive political mythol-

ogy. He proposes that the "countermonument" – a work of art that interrogates and undermines intended, official meaning – is the best guarantor that viewers will experience a more genuine sense of historical memory not entirely mediated by a heroic or redemptive national narrative. Young examined the process of representing the Holocaust both in personal literary and artistic works and in official public memorials in Poland, Germany, Israel, and elsewhere. His principal publications are *Writing and Rewriting the Holocaust: Narrative and the Consequences of Interpretation* (1988), *The Texture of Memory: Holocaust Memorials and Meaning* (1993), *Holocaust Memorials in History: The Art of Memory* (edited, 1994), *At Memory's Edge: After-Images of the Holocaust in Contemporary Art and Architecture* (essays, 2000). He contributed essays to a number of collected volumes and published numerous articles and reviews in academic as well as less scholarly journals and newspapers.

[Drew Silver (2nd ed.)]

YOUNG, STUART (1934–1986), British public servant. The son of a North London flour merchant, Young entered accountancy at 17, and at 23 was senior partner of his own firm, specializing in corporate finance. He entered British public life as appeals chairman of European Architectural Heritage Year 1975, subsequently becoming a member of the Historic Buildings Council, a trustee of the National Gallery, and a leader of the Architectural Heritage Fund. In 1983 he became the youngest chairman of the governors of the British Broadcasting Corporation. Appointed with a view to the use of his accountancy skills for the internal reorganization of the BBC, he became a champion of its independence from government. An active Zionist from 1950, Young volunteered his services in the 1967 Six-Day War, took a leading part in the raising of funds for Israel, and became president of the Joint Israel Appeal in Britain. Among many other communal appointments, he planned the reorganization of Anglo-Jewish welfare services as chairman of the Central Council for Jewish Social Service. He died of lung cancer at the age of 52.

[Vivian David Lipman]

YOUNG ISRAEL, NATIONAL COUNCIL OF, an umbrella organization for 146 Orthodox congregations with approximately 25,000 member families in North America. Its sister organization, Yisrael Hatzair – the Young Israel Movement in Israel – has more than 50 synagogues under its aegis. It is headquartered in New York City with regional offices in Florida, California, New Jersey, and Jerusalem. At the beginning of 2006, Shlomo Z. Mostofsky was national president and Rabbi Pesach Lerner was executive vice president.

The National Council's stated mission is to "broaden the appeal of the traditional community synagogue as the central address for Jewish communal life by providing educational, religious, social, spiritual, and communal programming," and

also offers synagogues interest-free loans to use for organization and expansion.

The National Council perceives itself as a grass roots association directed by input from lay leadership, including the national board, delegates from each branch synagogue, branch rabbis and presidents and professional staff. The organization holds an annual national banquet, rabbinic and lay leadership conferences, political missions to Washington, D.C., and various rallies and other events to keep members involved and inspired. Among the programs are synagogue support services; the Council of Rabbis; youth programs; rabbinic training and placement; *kashrut* education and services; the American Coalition for Missing Israeli Soldiers; the Eretz Yisrael Commission; the Samuel Zucker Synagogue Revolving Loan Fund; the Women's Division; Lay Leadership Development; Senior League; and various publications (*Viewpoint Magazine*, weekly *Divrei Torah Bulletins*).

The organization was founded about 20 years after the massive flood of Jewish immigrants arrived in New York in the late 19th century to provide a bridge between the old Jewish world and America by creating a positive Orthodox synagogue experience for the immigrants' growing group of Americanized children. Among its founders was Mordecai Kaplan, then an Orthodox rabbi, who saw in the Young Israel a vehicle for strengthening the Jewish identity of the American-born and/or English-speaking young Jews. Sermons were in English, not Yiddish, and there was no charge for honors in the synagogue. The immigrants began to establish their American lives, but it was difficult for observant Jews to get jobs if they refused to work on Shabbat. By then, these Jewish parents, who struggled to lift themselves from poverty, wanted desperately for their children to become economic successes accepted into American society while maintaining traditional practice. It was an almost impossible demand. Yiddish was the lingua franca in most Orthodox synagogues, and the atmosphere was very Eastern European, so that these English-speaking first-generation American Jews began to avoid going to traditional synagogues, because they simply could not connect, and became classic "High Holy Day Jews."

To combat this growing problem, in 1912 15 young men and women decided to form Young Israel on the Lower East Side of Manhattan. Their first activities offered a series of Friday night lectures, presented in English, on Jewish topics. By 1915, they had established a prototypical congregation that would attract young American Jews, did not demand payment for any synagogue honors, and structured itself as a Jewish community center to service a diverse group of Jews within the realm of traditional Jewish observance.

The organization today sets minimum halakhic requirements for *meḥiẓah*, a practice that put it at odds with the ou, which in the 1950s was less stringent regarding the separation of men and women, a practice that has changed as Orthodoxy moved rightward. Young Israel does not allow synagogue parking on the Sabbath and Jewish holidays and requires that all synagogue officers in member congregations be Orthodox Jewish Sabbath observers. The National Council of Young Israel's mission further states:

> The aims and purposes of the organization shall be to foster and maintain a program of spiritual, cultural, social and communal activity towards the advancement and perpetuation of traditional Torah-true Judaism; and to instill into American Jewish youth an understanding and appreciation of the high ethical and spiritual values of Judaism and demonstrate the compatibility of the ancient faith of Israel with good Americanism.
>
> The organization shall promote cooperation among the constituent branches now existing and which may hereafter be formed, establish a close bond of kinship to the end that their individual and common problems may more easily be solved, and act as the federated and central body for the Young Israel Movement so that its influence as a force in Jewry may be felt and recognized in America and the world over.

[Jeanette Friedman (2nd ed.)]

YOUNG JUDAEA, U.S. Zionist youth organization. Founded in 1909 Young Judaea drew its members from Jewish students. The original group was led by Emanuel *Neumann. It formulated as its goals the advancement of the cause of Zionism; furthering the mental, moral, and physical development of Jewish youth; and the promotion of Jewish cultural ideas in accordance with Jewish tradition. It was affiliated with the *Zionist Organization of America and published a journal, the *Young Judaean*, originally edited by Henrietta *Szold. In 1940 it came under the jurisdiction of the American Zionist Youth Commission, a joint effort of *Hadassah and the ZOA and in 1967 became the sole responsibility of Hadassah. The first settlers in Israel from the Young Judaea movement arrived during World War I, among them members of the *Jewish Legion. At its peak of membership (1948) Young Judaea had over 30,000 members, but along with other Zionist groups in the U.S. it suffered a decline in membership following the establishment of the State of Israel. Each year thousands of young people age 8–18 attend its clubs, conventions, activities, and six summer camps including Tel Yehudah, the movement's senior leadership camp in Barryville, New York. Its Year Course program, founded in 1956, brings more than 400 young people annually to Israel during a "gap year" between high school and college, for a 10-month program of study, community volunteering, and intense engagement with Israeli society. A variety of other programs involve visits to Israel for high school and college students. The Hamagshimim program is for college students up to age 30. In 1973 a group of its members founded kibbutz Keturah in the Aravah.

[Ramie Arian (2nd ed.)]

YOUNGMAN, HENNY (1906–1998), U.S. comedian. Youngman was born in England to Russian-Jewish parents Jacob Youngman (né Yonkel Jungman) and Olga Chetkin. His parents were naturalized American citizens when they met on New York's Lower East Side. They married in 1904 and went to England on their honeymoon, returning to the United

States when Youngman was six months old. The family lived in Brooklyn, and Youngman attended school at PS2, where he was a notoriously difficult student. His first taste of comedy came during high school, when he was hired to fill in for Jewish comedians who refused to work on Yom Kippur. However, Youngman was dragged off stage halfway through his routine at the request of his father, who wanted him back in synagogue. Later expelled from Manual Trades High School, Youngman finished his studies at Brooklyn Vocational Trade School. Youngman started out as a bandleader for the Swanee Syncopators and worked the Borscht Belt hotels; between sets he walked the hotels as a *tummler*. One night at the Nut Club in Pinedale, New Jersey, the club manager asked Youngman to fill in for a headliner who had not shown up. Youngman's comedy act was a hit and he was hired on as the club's comic for two weeks. He continued performing stand-up in New York at bar mitzvahs and nightclubs, and spent his after-hours hobnobbing with celebrities and journalists, including Walter *Winchell, who gave Youngman the moniker "King of the One-Liners." Youngman's delivery was rapid-fire as he often dished out a dozen one-liners in less than a minute. By the 1940s, he was performing six-minute routines on the radio for *The Kate Smith Show*. One evening Youngman was desperately trying to learn his lines shortly before a live broadcast when his wife and her friends came backstage. He took his wife by the elbow, led her to an usher and uttered for the first time his most famous line, "Take my wife … please." In 1973, Youngman published his first autobiography, *Take My Wife … Please! My Life and Laughs*, followed by *Take My Life, Please!* (1991). He also penned a variety of joke books, including *Henny Youngman's Greatest One-Liners* (1970), *Insults for Everyone* (1979), *Take My Jokes, Please!* (1983) and *Take my Wife, Please!: Henny Youngman's Giant Book of Jokes* (1998). Although he made numerous television appearances as a regular guest on such shows as Johnny Carson's *Tonight Show* and *Hollywood Squares*, he spent most of his career touring the world, even performing for Britain's Queen Elizabeth. Youngman was working a twice-nightly show in late 1997, when he contracted a flu which eventually developed into pneumonia, from which he succumbed several months later.

[Adam Wills (2nd ed.)]

YOUNGSTOWN, iron and steel producing center in N.E. Ohio; the general population in 2004 was 77,713; Jewish population estimated at 3,200, a significant reduction from the Jewish population of the 1970s, but one that is proportionate to the general decline of Youngstown's population. An early historical account indicates that some Jews settled in Youngstown in 1826, but the first name of a Jewish settler on record is that of Jacob Spiegel in 1837. The first Jewish immigrants came from Alsace, Bavaria, and central Germany; a second wave was from Hungary and Romania; while early in the 20th century there was yet another heavy influx from Poland and Russia. After World War II several hundred refugee families from Europe were absorbed by the local Jewish community.

The earliest Jewish settlers in Youngstown were mostly merchants, though some were also involved in the founding of the local steel industry. Over the course of the 20th century, however, Jews tended to move upward from small retail businesses – whereas there were once over 100 Jewish grocers in Youngstown, in 1970 there were only a few – into the professions and such fields as steel, aluminum, and plastics fabricating plants, wholesale distributorships, and insurance agencies. In 1970 most heads of families were owners of, or employees in, business and industry. In recent decades the percentage of Jewish professionals declined slightly, as young people graduating college tended to settle elsewhere, in larger urban areas.

The oldest existing congregation in Youngstown in 1970 was Rodef Sholom (Reform), founded in 1867. Three other congregations existed as well: Children of Israel (traditional Orthodox), founded in 1892; Temple Emanu-El (modern Orthodox), founded by Russian and Polish immigrants in 1906; and Temple Anshe Emeth (Conservative), founded in 1924. Several congregations organized early in the 20th century disappeared when their congregants moved from the neighborhoods in which they were established.

From the mid-1960s, most of the Jewish population of Youngstown has moved to the northern and southern suburbs of the city. The community was organized around the Jewish Federation, created in 1935, and the Jewish Community Center, built in 1953. Federation agencies included the Jewish Community Center, a Family and Children's Service, a Community Relations Council, and Heritage Manor, a home for the aged. The 1960s witnessed growing coordination between the congregations and the Jewish Community Center in cultural and youth activities. The community was served by a local paper, the *Youngstown Jewish Times*.

Jews held a wide variety of cultural, civic, and philanthropic positions in Youngstown life, yet for the most part they continued to be excluded from active participation in the local "power structure." No Jews held (1970) executive posts with any of the big national steel companies operating in Youngstown, few ran for public office, and fewer still were elected. From the 1970s the steel companies switched much of their operations overseas, and there are fewer barriers to Jewish participation in the life of the community.

There are four congregations in Youngstown: a Chabad congregation, Children of Israel; a Reform congregation, Rodef Sholom; a Conservative congregation, Ohev Tzedek Shaarei Torah; and a congregation that lists itself as Conservative and Reform, Temple El Emeth. Among the newer activities of the community is an annual Jewish film festival.

[Harry Alter / Michael Berenbaum (2nd ed.)]

YOUTH ALIYAH (Heb. עֲלִיַּת יְלָדִים וָנֹעַר, Aliyyat Yeladim va-No'ar; "Children and Youth Aliyah"), a branch of the Zionist

movement founded for the purpose of rescuing Jewish children and young people from hardship, persecution, or deprivation and giving them care and education in Ereẓ Israel. It is administered as a department of the *Jewish Agency and supported by voluntary contributions. Youth Aliyah started its activities in Germany on the eve of the Nazis' rise to power and saved many children who had to leave their families or were orphaned by the Holocaust. It extended its work to other countries when the need arose and, particularly after the establishment of the State of Israel, looked after many young people entrusted to its care by new immigrant parents already in the country. It developed its own methods for bringing up young people in youth communities in kibbutzim or in its own centers and children's villages. Between the start of the movement in 1933 and the end of 1970, Youth Aliyah cared for about 140,000 young people, of whom 125,000 received residential care: 44% from Europe and the Americas, 41% from Asia and North Africa, and 15% from families already in Israel.

In 1932 Recha *Freier, a rabbi's wife in Berlin, conceived the idea of taking Jewish young people doomed to idleness in Germany and bringing them up in Palestine. She contacted the *Histadrut, which proposed absorbing them in kibbutzim. The first group of 12 young people was sent out in October 1932 to the *Ben Shemen youth village, and on January 30, 1933, the day Hitler became chancellor, the Juedische Jugendhilfe organization was founded, with the cooperation of Jewish youth movements in Germany, to carry on the work.

In the same year the 18th Zionist Congress in Prague decided on the establishment of a department for the settlement of German Jews and the leadership of the department's Youth Aliyah office was entrusted to Henrietta *Szold, with the assistance, in matters of finance, of Georg *Landauer. In February 1934 the first large group of young people, numbering 60, arrived at the kibbutz En-Harod. A few months later the first religious group was sent to Kevuẓat Rodges, near Petaḥ Tikvah. By the middle of 1935, 600 had been accommodated in 11 kibbutzim, four agricultural schools, and two vocational training centers. In 1935 Hans *Beyth, a youth movement leader, became Henrietta Szold's chief assistant and at the end of the year Hadassah undertook the responsibility for financial support of Youth Aliyah. After the Nazi conquest of Austria and Czechoslovakia its work was extended to cover these countries. The need for the rescue of Jewish children from Europe became even more obvious and urgent after the burning of the synagogues and the drastic anti-Jewish measures in Germany in November 1938. By the outbreak of World War II more than 5,000 had been brought to Palestine – two-thirds from Germany, one-fifth from Austria, and the rest from other countries. For lack of immigration certificates, another 15,000 were sent to Western European countries, especially Britain.

In the early years of World War II (1940–42) it was almost impossible to bring children from Europe and in 1941 Youth Aliyah began to undertake the care of young people already in Palestine. In the same year the first children arrived from Oriental countries (mainly Syria), about 1,000 of them crossing the Palestine frontier illegally. In 1943, 800 children from Poland, who had reached Persia via the Soviet Union and were accommodated in a refugee camp in Teheran, were taken to Palestine. There was a heated controversy in the *yishuv* over the education of these children, most of whom were orphans, religious circles demanding that they be given a specifically religious upbringing. The Jewish Agency finally ruled that those over 14 should choose for themselves and younger children should be brought up according to the way of life of their parents.

After the war, soldiers of the *Jewish Brigade and emissaries from Ereẓ Israel sought out children in Europe and collected them in transit centers set up by Youth Aliyah, the American Jewish *Joint Distribution Committee, *OSE, and local organizations. Between 1945 and 1948, Youth Aliyah brought over to Palestine about 15,000 children from Europe, mostly survivors of the Holocaust. Many of them arrived illegally and were deported by the British authorities to camps in Cyprus, where a youth village, an imaginative institution that prepared thousands of young people for life in Israel, was established at the beginning of 1947.

With the establishment of the State (1948), Youth Aliyah opened wide its doors to child immigration and care. Its leadership passed to Moshe *Kol, who held the post until 1966, when he joined the Israel government and was succeeded by Yiẓhak Artzi. In 1968 the post was entrusted to Yosef Klarman. Between 1948 and the end of 1970, 93,500 young people passed through its hands – about 52% of them coming from Asian and North African countries, 31% from Europe and the Americas, and 17% from Israel (mostly of African and Asian origin).

Religious youth are brought up in youth villages and institutions, including yeshivot, and in religious kibbutzim, belonging to all trends in religious Jewry. Forty percent of Youth Aliyah wards are accommodated in religious centers. In 1958 Youth Aliyah was awarded the Israel Prize for education for its humanitarian, social, and educational achievements.

Educational Methods

Successive waves of immigration brought in very varied types of children, differing widely in origin, previous education, and social, economic, and cultural background, many of whom had undergone traumatic experiences before their arrival. Youth Aliyah's aim, moreover, was not merely instruction and physical welfare, but education in the widest sense of the term in order to enable the child to find his place and play his part in a new and dynamic society. It was necessary, therefore, to develop new educational methods and forms of youth care, a task that demanded acute pedagogical insight and much initiative and innovation. To integrate the children into the social fabric of the new environment and at the same time give them individual attention, Youth Aliyah utilized two distinctive instruments: the *ḥevrat no'ar* (youth community) and the *madrikh* ("guide," counselor, or youth leader).

The *ḥevrat no'ar* became the characteristic educational unit of Youth Aliyah. It comprised about 40 young people who

stayed together for two to four years until the age of 17–18 and constituted a self-contained social group with a large measure of internal autonomy. It might be attached to a kibbutz, which thus became an "educational settlement," or be part of a youth village or other educational institution directly managed by Youth Aliyah. The young people generally devoted four hours to work on the farm or in the workshop and four to study, in addition to communal and group activities.

Each ḥevrat noʾar had a *madrikh* and a *metappelet* (house mother) who helped the young people to tackle their personal, emotional, educational, and social problems as individuals and as a coherent and self-disciplined group. In the early years most of the *madrikhim* were temporary, coming from the kibbutzim for a spell of duty, but considerable efforts were made to enhance the status and standards of their vocation as a branch of the teaching profession. Seminaries for Youth Aliyah *madrikhim* and teachers were conducted in coordination with the Ministry of Education and Culture, especially its agricultural education division. Many graduates of Youth Aliyah have become *madrikhim*.

From 1949 onward, the proportion of children from African and Asian countries – mostly from underprivileged homes – rose until in 1953 they constituted 80% of the total. After a study of the problems involved in the care and education of these children, Youth Aliyah educators were able to confirm that there were no "ethnic" causes for their apparent backwardness, which was the result of generations of poverty and neglect. Specially graded curricula were devised for these children, textbooks and teaching materials were designed for the purpose, and teachers were given special guidance in this type of work.

At the beginning of the 1970s, Youth Aliyah was an educational, rather than a rescue organization, bringing up young newcomers from developed countries, as well as from areas of distress. Many were accommodated in youth villages, receiving education on the secondary level – vocational, agricultural, or academic – enabling some of them to prepare for matriculation and – if fit – go on to one of the universities. There was a scholarship fund for gifted children. Youth Aliyah's educational system was recognized by the Ministry of Education and Culture and controlled by its own inspectors. At the Ne'urim-Hadassah center, a joint venture of Youth Aliyah and Hadassah, a large variety of special vocational training courses were held. At Ramat Hadassah and Kiryat Ye'arim there were special courses for educationally backward and emotionally disturbed children. There were also medical and child guidance services.

For children in development areas living with their parents (mostly new immigrants), Youth Aliyah has established day centers in new towns and villages, which it runs jointly with the Jewish Agency and the ministries of Labor and Education. In 1970 there were 15 of these centers, giving a full day's vocational training and general education to more than 1,000 children aged 14–16 who had failed to gain admission to local post-primary schools or had dropped out before completing the course. There were also advanced one-year courses

for graduates of the centers (some of them at Ne'urim). Youth Aliyah *ulpanim* were established for young immigrants aged 16–17½. A late innovation was the establishment of foreign-language courses at which young people from abroad can complete their secondary education in their native language up to matriculation standard and at the same time learn Hebrew and Jewish subjects.

Of the 125,000 children and young people taken in by Youth Aliyah up to the end of 1970 (in addition to some 15,000 in day centers), 9% came from Western Europe, 33% from Eastern Europe, 2% from the Americas, 21% from Africa, 20% from Asia, and 15% from Israel. During the year 1970, 1,351 new wards were received: 29% from Israel, 19% from African countries, 19% from Mediterranean countries, 11% from the Americas, 9% from Eastern Europe, 8% from Western Europe, and 5% from other Asian countries. On Jan. 1, 1971, Youth Aliyah had 7,551 wards under its care: about 70% in its 80 residential institutions, 19% in 150 kibbutz centers, 6% at special courses, and 5% at *ulpanim*. In addition, 1,631 young people attended day centers for youth, making a total of 9,182 under Youth Aliyah's care. Youth Aliyah graduates made up over 10% of Israel's Jewish population between the ages of 15 and 50 (50 being more or less the age of the earliest wards in 1971). They are about 20% of the membership of the kibbutzim and 30% in religious kibbutzim.

Youth Aliyah also found many non-Jewish supporters who were impressed by its work, including personalities like Eleanor Roosevelt, who was its World Patron. It is affiliated to various international organizations and is an active member of the International Federation of Children's Communities (FICE) and the International Union for Child Welfare.

Later Developments

From the early 1970s Youth Aliyah accepted large numbers of Israeli-born children. By 1978, nine out of every ten Youth Aliyah students were Israeli-born, from families in distress. During the 1970s Youth Aliyah absorbed many immigrants from the Soviet Union and from Iran. With Operation Moses in 1984, approximately 3,000 Ethiopian children entered Youth Aliyah institutions. During the 1990s Youth Aliyah absorbed many children from the Soviet Union, due to Operation Exodus and subsequent waves of immigration from the CIS, from Ethiopia, through Operation Solomon, and from war-torn Yugoslavia and Eastern Europe.

After 60 years of existence, Youth Aliyah had approximately 300,000 graduates. In 1993–94, out of a total number of 14,000 students, 7,000 were Israeli, 5,200 were Ethiopian immigrants, and 1,800 were immigrants from other countries; 73% of the students were in 70 residential and youth villages, 19% were part of 70 youth groups in kibbutzim, and 8% were in 15 youth day centers. In 2005 it operated five big youth villages for 1,000 native-born Israelis and new immigrants and provided short-term programs to another 12,000.

YOUTIE, HERBERT CHAYYIM (1904–1980), U.S. papyrologist. Youtie, who was born in Atlantic City, joined the faculty of the University of Michigan in 1929 and was appointed research professor of Greek papyrology in 1946. He was generally considered to be the world's leading authority in nonliterary papyrological matters. From the late twenties he devoted himself to the editing of Greek papyri, primarily those that were found at the Michigan excavations in Karanis, Lower Egypt. In addition to publications of particular groups of papyri – *Papyri and Ostraca from Karanis* (1944), *Archive of Aurelius Isidorus* (1960) – Youtie concerned himself with elucidating the theoretical principles necessary to the modern editor of a papyrus text in order to ensure accuracy and reliability, in his *Textual Criticism of Documentary Papyri*, edited by E.G. Turner (1958). He also wrote *The Papyrologist: Artificer of Fact* (1962); *Scriptiunculae* (1973); and *Scriptiunculae Posteriores* (1981).

His wife, LOUISE CANBERG YOUTIE (1909–2004), was a well-respected decipherer of papyri at the University of Michigan and worked closely with Herbert.

YOVEL, YIRMIYAHU (1935–), Israeli philosophy scholar. Yovel was born in Haifa. He received his B.A. degree in 1959 and his M.A. in 1964 in philosophy from the Hebrew University of Jerusalem. In 1965 he studied philosophy at the Sorbonne and in 1966 moved to Princeton University. In 1968 he received his Ph.D. in philosophy with a dissertation on Kant's metaphysics. In 1966 he joined the department of philosophy at the Hebrew University. In 1972 he became the head of the department. In 1976–78 and 1982–92 he was director of the Bergman Center for Philosophical Studies and in 1992–98 he was chairman of the center. In 1984 he became a professor, and in 1998 he retired. During the 1970s Yovel was a visiting professor at Princeton and the Sorbonne and during the 1980s and 1990s he visited several other universities. In 1986 he founded the Spinoza Institute in Jerusalem, where he led several international symposiums on Spinoza's thought and additional conferences in various fields such as state and religion, identity and tolerance, and religion and secular culture. In the mid-1980s he was appointed chairman of the editorial board of *Iyyun*, the Hebrew journal of philosophy. Yovel was active as a journalist. In 1960–64 he edited the daily news broadcasts of Israeli Radio. During the 1967 Six-Day War he was a military correspondent on the Sinai front. In 1967 he was one of the founders of the Israel Broadcasting Authority and for two terms served on its council. In 1968 he edited the first political documentary for Israeli TV and during the 1973 Yom Kippur War he was a military correspondent on the Egyptian front.

From 1975 to 1978 he hosted a TV show called *The Third Hour* on social issues. From 1967 he also wrote columns for *Haaretz* and *Yedioth Aharonoth*. Yovel was also a political activist. In 1977 he established the 77 Group inside the Labor Party, which he left in 1978. In 1982 he opposed the Lebanon War and spoke out on behalf of peace with the Palestinians. Yovel published many books, among them *Kant and the Renewal of Metaphysics, Kant and the Philosophy of History, Spinoza and Other Heretics,* and *Dark Riddle: Hegel, Nietzsche, and the Jews*. In 2000 he received the Israel Prize for philosophy.

[Shaked Gilboa (2nd ed.)]

YOZEROT (Heb. pl. יוֹצְרוֹת, sing. יוֹצֵר, *yozer*), a series of *piyyutim* inserted in the benedictions which precede and follow the **Shema* of the morning prayers. *Yozer,* the designation of the first *piyyut* (also called *guf ha-yozer*), came to refer to the series as a whole. The name is taken from the opening line of the first benediction before the *Shema: Yozer or u-vore ḥoshekh* etc…. ("Who createst light and formest darkness"). The *yozer* is considered one of the earliest forms of *piyyut*, though it is later than the *kerovah*. The first *paytanim* who composed *yozerot* were Eleazar b. Eleazar *Kallir and Joseph b. Nissan of Shaver Kiriathaim. Fragments of *yozerot*, however, were found in the Cairo *Genizah* and their literary structure testifies to their having been composed during "the period of the anonymous *piyyut*." This form of *piyyut* was widely known in Middle Eastern countries from the 9th to the 11th centuries. During this period 15 *paytanim* composed full series of *yozerot* for each of the weekly Torah portions. In Europe the *yozer* was also considered to be the acceptable form of *piyyut*. The *yozerot* series was initially intended to replace the established versions of the *Shema* blessings. With time, however, passages of the *yozerot* were integrated into the *Shema*. The series thus came to adorn the benedictions and all the other essential passages of the prayer, specifically: *Ha-Kedushah de-Yozer* and two verses from *Shirat ha-Yam* ("The Song of the Sea," Ex. 15:11 and 18) which were to be recited before *Birkat ha-Ge'ullah*.

The classical series of the *yozerot* consists of seven component parts: (1) The *yozer* or *guf ha-yozer* which concludes with the reciting of the first verse of the **Kedushah*. (2) The *ofan*, the name being derived from the opening lines of the permanent prayer after which it was inserted. The *ofan* served as a bridge between the first and the second verse of the *Kedushah*. (3) *Ha-me'orah*, occasionally referred to in the *Genizah* as *me'orot*. It is named after the text of the concluding benediction, *yozer ha-me'orot*, and ends with the first benediction before the *Shema*. (4) The *ahavah*, taken from the second benediction before the *Shema* which immediately follows it (*ha-boher be-ammo Yisrael be-ahavah*) and with which it concludes. (5) The *zulat*, occasionally referred to as *zulatkha* in the *Genizah* (named after the conclusion of the standard verse of the prayer and inserted after it at a later period). In the *Genizah*, it also appears as *emet*, a title derived from the opening lines of the aforementioned text. It concludes with the first of the verses of *Shirat ha-Yam; Mi kamokha*. (6) *Mi*

kamokha which concludes with the second of the verses of the *Shirat ha-Yam Adonai Yimlokh*. (7) *Adonai malkenu*, named after the permanent text which, according to the Eastern ritual, is recited at this point. It ends with the benediction that concludes the *Shema: Gaʾal Yisrael*. The last section was divided into two by the Eastern *paytanim* (9th to 11th centuries): *Adonai malkenu and ve-ad matai*. In Europe, the section is named after the concluding benediction: *Geʾullah*. In the Eastern series, the *yoẓerot* for the regular Sabbath, and occasionally also those for the festivals, incorporate the opening section of the weekly reading or holiday portion into the body of the *yoẓer*; in the *zulat*, the *haftarah*. Around the tenth century, the Oriental *paytanim* introduced their *yoẓerot* with short opening *piyyutim* called *maẓdar* (introduction). In the ancient Ereẓ Israel ritual the *yoẓerot* for the morning prayers in which the *Kedushah de-Yoẓer* is not recited (on weekdays, including special weekdays such as Ḥanukkah, Purim, Rosh Ḥodesh, and *ḥol ha-moʾed*, and on fast days) consisted only of five parts (without *guf ha-yoẓer* and the *ofan*). Among the components of the Oriental *yoẓerot*, only *guf ha-yoẓer, ofan*, and *zulat* are of any structural length; the other parts of the *yoẓerot* are short. In the European *yoẓerot*, all the component parts developed into separate and comprehensive *piyyutim*. In Spain the *Mi kamokha* was developed monumentally. The Italian and Ashkenazi (German) *paytanim* often omitted the *meʾorah*, the *ahavah*, and the passages that follow the *zulat* from their series of *yoẓerot*. Several European *paytanim* composed segments of the *yoẓerot* for various occasions, without carefully integrating them into complete series.

[Ezra Fleischer]

°**YSANDER, TORSTEN** (1893–1960), Swedish theologian and scholar of *Ḥasidism. Ysander, a bishop in the Church of Sweden (1936–59), was appointed chaplain to the king in 1939. In 1922 he traveled to the Ukraine and Poland to meet sectarians and Ḥasidim; under the guidance of Jewish friends, he visited the ḥasidic communities in Warsaw and Cracow. The trip strengthened his theory on the dependence of early Ḥasidism on the Russian sectarians, especially the Khlysty, Skoptsy, Molokane, and Dukhabors. His views on the Ḥasidism of *Israel ben Eliezer Baʾal Shem Tov are summarized in his *Studien zum bʾeštschen Ḥasidismus in seiner religionsgeschichtlichen Sonderart* (1933). According to Ysander, such Ḥasidism, its customs, dances, songs, mannerisms during prayer, and the institution of the *ẓaddik*, were very similar to Russian sectarian practices. As Ḥasidism became established, it ceased to be a revolutionary sect, and its similarity to the sectarians diminished but never disappeared. Contemporary Ḥasidism only slightly resembles its origins.

[Yaffa Eliach]

YUD, NAHUM (pseudonym of **Nahum Yerusalimchik**; 1888–1966), Yiddish poet and fabulist. Born in Mogilev province (Belorussia), he received both a traditional and secular education. Although he wrote first in Russian, he subsequently turned to Yiddish while in Warsaw. His first Yiddish poems appeared in 1913 in the anthology *Nisn*, and he wrote for the periodical *Haynt*. When he immigrated to the U.S. in 1916, he was already known in many Yiddish journals, including *Tsukunft, Tog*, and *Kinder Tsaytung*, was a regular contributor to *Forverts*, and published in *Fraynd* and *Der Groyser Kundes*. Yud is especially known for his fables, anthologized in children's textbooks and other collections. His books include *Fablen* ("Fables," 1918), *Lider* ("Poems," 1924), and *In Likhtike Minutn* ("In Bright Moments," 1932).

[Israel Ch. Biletzky / Lily O. Kahn (2nd ed.)]

YUDAN (fourth century C.E.) Palestinian *amora*. Yudan was a pupil of Abba (TJ, Ket. 2:4, 26c). He had halakhic discussions with Yose, head of the academy of Tiberias, and transmits many of the dicta of his predecessors, both *tannaim* and *amoraim*. Among those who turned to him with questions was also Mani, the son of Jonah, head of the Tiberias academy who figures prominently in the Jerusalem Talmud (TJ, Kid. 2:6, 62d). Mention is made of Yudan fleeing to Noy (Naveh, Nineveh) in Transjordan, which may have been in 351, during the Roman persecutions of Ursicinus, the commander of the army of Gallus (TJ, Ket. 11:1, 34b). He is not mentioned at all in the Babylonian Talmud but many of his statements, both in *halakhah* and *aggadah*, are found in the Jerusalem Talmud and the Midrashim.

In his homilies Yudan strove to encourage his contemporaries who were persecuted by the Christian kings of Rome, using parables with which he described God's profound participation in Israel's troubles and comforting them with a promise of the impending redemption (Mid. Ps. 20:1). His statement, "The redemption will not come to this nation at one time, but little by little… now they are in great distress and if the redemption were to come all together they would not be able to bear great salvation… therefore it will come little by little and grow gradually greater" (*ibid.* 18:36), may possibly be connected with the temporary respite during the reign of Julian the *Apostate. He comforted his contemporaries by assuring them that their distress in this world would assure their deliverance in the world to come, putting forward an *a fortiori* argument. "Scripture states (Ex. 21:27) 'And if he smite out his bondman's tooth or his bondwoman's tooth, he shall let him go free for his tooth's sake.' If a slave gains his freedom for the loss of his tooth, or a single limb, how much more will this be the case with one assailed by suffering in his whole body" (Gen. R. 92:1). Noteworthy is his statement: "Whosoever supplies the righteous with bread is as though he fulfilled the whole Torah" (*ibid.* 58:8).

[Yitzhak Dov Gilat]

YUDELOVITZ, ABRAHAM AARON (1850–1930), rabbi. Born in Navardonik, Byelorussia, he studied with his uncle Rabbi Meir and then at the *Volozhin yeshivah. He was ordained by Rabbi Yom Tov Lippman of Bialystok. He published his first book, *Alim le-Mivḥan*, at the age of 21. He held a number of rabbinical positions in succession and served as rabbi of Salov, Kosnitza, Constantin, Turov, and Kapulia before becoming chief rabbi of Manchester, England, in 1898.

He published seven volumes of responsa, *Beit Av*, from 1896 onward and attended the Sixth World Zionist Congress where he opposed the Uganda proposal. After a half dozen years in Manchester, he immigrated to the United States, first for a congregation in Boston and shortly thereafter to teach at Rabbi Isaac Elchanan Theological Seminary and then in 1906 as rabbi of Bayonne, New Jersey. He then returned to New York to be rabbi of the Eldridge Street Beit Midrash Hagadol. He never affiliated with Agudath Harabonim but instead belonged to Agudath Ha-Rabbonim ha-Ma'atifim, of which he became president. He continued to publish, including five volumes of *Derash Av*. He also inaugurated a short-lived Torah journal, *Ha-Mizpeh*, of which six volumes appeared. His most controversial rabbinical decision in 1927 permitted a woman to appoint an agent on her behalf for *ḥalizah* to cancel the levirate marriage. He was roundly criticized by the authorities of his time and his reputation was severely damaged. He died three years later and many of the luminaries would not attend his funeral.

YUDGHAN (**Yehuda**; 8th century), sectarian of *Hamadan (Iran). A pupil of *Abu ʿĪsā al-Isfahānī, Yudghan claimed to be a prophet of his followers, the Yudghanites, who believed that he was the Messiah. The* Karaite historian Jacob al-*Kirkisānī writes in his *Book of Gardens and Parks* (938) that the Yudghanites "prohibit meat and intoxicating drinks, observe many prayers and fasts, and assert that the Sabbath and holidays are at present no longer obligatory." The Muslim historian Al-Shahrastani relates in his *Book of Religions and Sects* (1128) that Yudghan believed the Torah to have an external and internal meaning, a literal and an allegorical interpretation, but different from that held by the *Rabbanite Jews. The Karaite exegete Japheth b. Ali (last third of the tenth century) states that the Yudghanites considered the holidays as mere symbols and asserted that after the destruction of the Temple many laws were no longer obligatory. It is a matter of controversy whether the Yudghanites are referred to by *Saadiah b. Joseph Gaon in his book *Beliefs and Opinions* in which he mentions "certain people who call themselves Jews and maintain that the promises

and consolations of the prophets refer to the time of the Second Temple." It is also a matter of controversy whether the scholar *Judah ha-Parsi (Judah the Persian), against whom Abraham *Ibn Ezra (12th century) argues in his works, is identical with Yudghan. A small number of Yudghanites still lived in *Isfahan in the year 938. In addition to the Yudghanites, Japheth b. Ali mentions another sect, the Shadganites, about whom nothing is known. Al-Shahrastani mentions a pupil of Yudghan, Mushkha, who fell in battle against his adversaries. Some Mushkhanites believed that Muhammad was a prophet sent by God to the Arabs and others but not to the Jews because they already have their Holy Scriptures.

YUDIKA (**Yudis** (**Judith**) **Tsik**; 1898–1988), poet. She was born in Gorzhd (Gargzdai), Lithuania. Poverty forced her family to send Tsik to live with an aunt in Eastern Prussia, then annexed to Germany. At the outbreak of World War I, at the age of 16, she was imprisoned in a German labor camp as an enemy alien. Released a year later, she took refuge in Sweden, then lived in various cities throughout Lithuania, Russia, and the Ukraine, supporting herself as a teacher in girls' schools and workers' dormitories. In 1917, while living in Yekaterinoslav (Dniepropetrovsk), Ukraine, she became acquainted with the poet Moishe *Teitsh, and under his influence began writing in Yiddish using the pen name Yudika. She attained considerable success, publishing in periodicals and anthologies; these early poems were collected in *Naye Yugnt* ("New Youth," 1923) and *Mentsh un Tsayt* ("Person and Time," 1926). She married and in 1926 had a son. In 1929 she immigrated to Toronto, Canada, with her son but without her husband, and there became an important member of the proletarian school of Yiddish writers, a purely Canadian movement of the 1930s and 1940s. While working in factories to support herself and her son, her poetry was published in journals in Canada and the U.S. Her books of this era are *Vandervegn* ("Migrant Roads," 1934), *Shpliters* ("Splinters," 1943), and *Tsar un Freyd* ("Trouble and Joy," 1949). Her political radicalism is evident in her poetry, much of which, however, is less polemic than might be expected. Her work includes lyric and narrative forms and is concerned with the upheavals facing Jewish life in the old world as well as the new.

[Faith Jones (2nd ed.)]

YUDKIN, JOHN (1910–1995), British physician and nutritionist. The son of Russian Jewish parents who fled from pogroms to London, Yudkin was born in London and educated

at Cambridge University. He was professor of physiology at Queen Elizabeth College, London, from 1945 to 1954 and then professor of nutrition – the first such appointment in Britain – at the same institution from 1954 to 1971. Yudkin became internationally known for his attacks on sugar as a leading cause of obesity and disease and for his pioneering emphasis on a proper diet and lifestyle as an antidote to disease. He is the author of such well-known works as *Pure, White and Deadly: The Problem of Sugar* (1972) and *This Nutrition Business* (1977). His works drew concerted attacks from the sugar lobby but were significant in the contemporary emphasis on a healthy lifestyle. Yudkin was a member of the board of governors of the Hebrew University of Jerusalem.

[William D. Rubinstein (2nd ed.)]

YUDKOVSKY, DOV (1923–), Israeli journalist. Born in Poland, Yudkovsky spent 33 months in Auschwitz from where he escaped twice, in each case being recaptured. He reached Palestine, where his cousin, Yehudah *Mozes, publisher of *Yedioth Aharonoth*, made him head of the newspaper's Jerusalem office. After the so-called putsch in which Dr. Azriel *Carlebach, the editor, and most of the newspaper's staff left to found the new newspaper *Maariv*, Mozes appointed Yudkovsky the paper's news editor, and in 1953 managing editor for news. Yudkovsky conceived the newspaper as "the people's newspaper," and notwithstanding its tabloid appearance, filled it with editorial content of interest also to readers from the professional classes. By the mid-1970s *Yedioth Aharonoth* had taken the lead in the circulation war with *Maariv*, credit for which went partly to Yudkovsky's news editorship. In 1984 Yudkovsky was appointed by publisher Noah Mozes one of the newspaper's two directors. But after Arnon ("Noni") Mozes became the publisher following the death of his father, Noah, and sought to centralize his control, Yudkovsky was dismissed in 1989. He then represented the Israeli interests of British media mogul Robert *Maxwell, who appointed him editor-in-chief of *Maariv*. Regarding *Maariv* as a somewhat dull, middle-class newspaper, Yudkovsky sought to liven it up by installing an ultra-modern color press. In 1992 he left the paper and became one of the founders of Koteret, a private college situated in Tel Aviv for journalism training. In 2000 he won the Sokolow prize for journalism and in 2003 the Israel Prize in media.

[Yoel Cohen (2nd ed.)]

YUGOSLAVIA ("Land of the Southern Slavs"), until 1991 a Socialist Federated Republic in S.E. Europe, in the Balkan Peninsula. The various elements of which Yugoslav Jewry was composed after 1918 (i.e., those of Serbia and the Austro-Hungarian countries) were distinct from one another in their language, culture, social structure, and character according to the six separate historical, political, and cultural regions of their origin. These regions were Serbia; Slovenia; Croatia, Slavonia, and Dalmatia; Bosnia-Herzegovina; Macedonia; and Vojvodina. Croatia, Slovenia, Bosnia-Herzegovina, and Macedonia

declared their independence in 1991. Serbia and Montenegro became the Federal Republic of Yugoslavia in 1992.

Until 1918

SERBIA. There were some Jews in Pannonia in Roman times. Jews seem to have reached *Belgrade and there were also traces of a Jewish population along the banks of the Danube during the tenth century. Some Jews penetrated into Serbia from Macedonia. During the ninth and tenth centuries many of the Serbians converted to Christianity. The faith of the new Christians at that time was an amalgamation of Christianity, Judaism, and paganism. Benjamin of Tudela, the 12th-century traveler, also mentions the influence of the Jews on the inhabitants of the Balkans. At the time of the conquest of Serbia by Sultan Murad in 1389, the Jews engaged in the sale of salt. Under Turkish rule the Jews of Belgrade played an important part in the trade between northern and southern Turkish provinces which passed through Belgrade. During the period of the Austrian rule over northern Serbia from 1718 to 1739, the government's attitude toward the Jews was generally good. During the Serbian wars of independence (1804–30), some of the Jews fled from Belgrade and in 1807 founded a community, which numbered 280 persons in *Zemun. The Jews supplied arms to the revolutionary army. However, the independence movement, which fomented rebellions against the Turks from time to time, frequently attacked the Jews. In 1831 the Serbian government decreed certain limitations on the crafts in which the Jews were engaged. In 1845 they were excluded from tailoring and shoemaking. During the reign of Milosh Obrenovich, the prince of Serbia, there was a favorable change in the condition of the Jews. However, with the ascent of the Karageorgevich dynasty in 1842, which supported the interests of the Serbian merchants who envied their Jewish rivals, the condition of the Jews took a turn for the worse. A decree of 1856 forbade the Jews to reside in the provincial towns. There were then 2,000 Jews in Serbia. About 1,000 of them settled in Belgrade, while the rest were dispersed in other towns. When Prince Milosh returned to power in 1858, the condition of the Jews temporarily improved. However, during the reign of his son, Prince Michael (1860–68), who was also influenced by the Serbian merchants, the persecutions were renewed. An expulsion decree of 1861 against 60 Jewish families of Šabac was changed during the same year into another decree which authorized the Jews – and this only in their places of residence – to practice the same professions as they had engaged in before February 28, 1861. The Jewish merchants, also in their places of residence, were authorized to trade in raw materials and foodstuffs. These rights, however, could not be transferred to their successors. Concerning real estate, the new decree confirmed a former one which prohibited the purchase of property in the provincial towns.

After the assassination of Michael and the enthronement of Milan Obrenovich, the Serbian parliament voted the emancipation of all citizens, but at the same time confirmed the restrictive decrees of 1856 and 1861. In 1873 the Jews were

expelled from the towns of Šabac, Smederevo, and Požarevac. The treaty of Berlin of 1878 accorded civil and political equality to the Jews of Serbia, but it was only in 1889 that the Serbian parliament proclaimed the complete equality of all Serbians without distinction of origin and religion and abolished the restrictive decrees of the previous years. In 1895 there were 5,102 Jews in Serbia, 5,729 in 1900, and 5,000 in 1912. The number of Jews who participated in the Balkan Wars (1912–13) was 500. During the Serbian-Bulgarian war of 1913 and World War I many Jews were decorated.

SLOVENIA. Jews lived in Slovenia from the 13th century until they were expelled in 1496 by Emperor Maximilian I of Austria. The biggest rabbinical center was at Maribor (Marburg) in the Styria district. Maribor had a "Jewish Street" as early as 1277 near the river Drava (Drau) and a synagogue inside the walled city. Rabbi Israel *Isserlein taught there. His official title was "Landesrabbiner fuer Steiermark, Krain, und Korushka." He was succeeded by his pupil R. Joseph b. Moses. Other Jewish communities existed at Ptuj (Poetovia), Celje, Radgona, and Ljubljana. Jews were engaged in viticulture, and traded in horses and cattle.

CROATIA, SLAVONIA, AND DALMATIA. The Croats, who penetrated into the N.W. Balkans in the seventh century and established a kingdom in the tenth, found there several Jewish communities. In the letter of Ḥisdai ibn Shaprut (5:10) to Joseph the king of the Khazars, there is a mention of the "king of the Gebalim" who sent a deputation, which included Mar Saul and Mar Joseph, to Caliph Abdurrahman III of Cordoba. The "king of the Gebalim, the Slavs," whose country bordered that of the Hungarians, was Krešimir, king of Croatia. The messengers informed Ḥisdai that Mar Amram of the court of the Khazar king had come to the land of the "Gebalim." There is little information on the Jews of Croatia from the 10th to 15th centuries. Some Jews lived in the Croatian capital *Zagreb in the 13th and 14th centuries, when they had a chief entitled "magistratus Judaeorum," and a synagogue. Others settled between the Sava and Drava (Drau) and Danube rivers during the 15th century. As long as the economy of the country required the presence of the Jews, they lived there without hindrance. As soon as they were superfluous, they were persecuted and driven out. The Jews were expelled from Croatia and Slavonia in 1456. Croatia together with Hungary passed to the Hapsburgs in 1526, and no Jews lived there for the next 200 years.

Toward the end of the 18th century, Jews from Hungary, Bohemia, Moravia, and especially Burgenland (east Austria) resettled there. In 1776 Jews came to *Osijek and in 1777 to Varaždin and a limited number to Zagreb. At that time there was also a Jewish community in Zemun. R. Judah b. Solomon Ḥai *Alkalai (1798–1878), who lived there from 1825 to 1874, also propagated the ideals of the movement for the settlement of Ereẓ Israel in Šabac and Belgrade. A census of the Jews in 1773, during the reign of Maria Theresa, revealed only 25 fam-

ilies. It was only after the publication of the *Toleranzpatent in 1782 by Emperor Joseph II that the situation improved and more Jews arrived from the north and the south. The right of residence was granted in 1791. Further rights were granted in 1840, but the "tolerance tax" remained in force. The Jews of Croatia and Dalmatia only received their full emancipation in 1873. Until 1890 the community of Osijek was the most prominent, but from that year the community of Zagreb, founded in 1806, became the leading one. In 1841 an Orthodox congregation was founded in Zagreb. The Jews of Croatia were mostly merchants and some were artisans.

Jews arrived in Dalmatia with the Roman armies. In Solin (Salona), in the vicinity of *Split (Spalato), there are remains of a Jewish cemetery of the third century. There was a Jewish community in Solin until 641, when Solin was destroyed by the Avars. During the Middle Ages, the Jews of Split and Ragusa (*Dubrovnik) engaged in commerce and especially in the brokerage of the trade between Dalmatia and Italy and the Danubian countries. Under the autonomous republic which was established in Dubrovnik during the 15th century, the Jews lived in relative tranquility. The Christian clergy, however, attempted to oppress them and succeeded in spreading *blood libels in Dubrovnik in 1502, 1622, and 1662. During the 16th century, refugees from Spain and Portugal settled in Dalmatia. When Pope Paul IV expelled the Jews from Ancona in 1556, a considerable number of them requested asylum in Dubrovnik. These included the physician *Amatus Lusitanus and his friend the poet Didacus *Pyrrhus, both Marranos. In 1738 the condition of the Jews in Dalmatia deteriorated. The Jews of Split lived in a ghetto until the arrival of the French in 1806. In 1906 the Austro-Hungarian government passed a law which defined the status of the Jewish communities of Croatia, Slavonia, and Dalmatia. In 1870 there were already 10,000 Jews in Croatia, Slavonia, and Dalmatia; 13,488 in 1880; and 17,261 in 1890. After World War I there were 20,000 Jews in Croatia, Slavonia, and Dalmatia.

BOSNIA-HERZEGOVINA. One of the republics in central Yugoslavia with the largest Muslim population (750,000). There is no evidence of the existence of a Jewish community in Bosnia before the expulsion of the Jews from Spain. Tombstone inscriptions prove the existence of Jews in *Sarajevo in 1551. A special quarter was allocated to them later in the 16th century and they lived there until the conquest of the town by the Austrians in 1878. During the rule of Daudji Pasha, who was appointed in 1635, the relations between Turkey and Venice became strained. This had an adverse effect on the commerce of the local Jews. During the siege of Ofen in 1686 many Jews fled to Sarajevo, including Ẓevi Hirsch *Ashkenazi (Ḥakham Ẓevi), who was appointed ḥakham there. A change for the worse in the situation of the Jews of Sarajevo occurred in 1833. It was only after payment of a heavy ransom that the Jews were saved from the danger of riots and blood libel. The laws of 1839, 1856, and 1876, which granted the Jews of Turkey equality of rights with the other citizens, also applied to the

Jews of Bosnia. From then onward, some Jews were elected to the Ottoman parliament in Constantinople and the municipal councils. In 1876 Yaver Effendi Barukh was sent to the parliament as the representative of Bosnia. Isaac Effendi Shalom was a member of the *Majlis Idareh* ("Advisory Council to the Vali"). Upon his death, his place was filled by his son Solomon Effendi Shalom, who was also a representative in the parliament. Two Jewish delegates were sent to the Landstag which was opened in 1910. Besides Sarajevo, there were also Jewish communities in the towns of *Travnik, *Banja Luka, Bijeljina, and others. The following data are available on the number of Jews in Bosnia from the end of the 18th century. There were 1,500 Jews in 1780; 8,213 in 1895; 10,000 (Sephardim) in 1923; 13,701 in 1926; 14,000 in 1941 (together with Herzegovina); and 1,298 in 1958. In addition to the Nazis and the Ustaše who were active in Bosnia in World War II, the former mufti of Jerusalem, Ḥājj Amīn al-*Husseini, succeeded in enlisting the support of local authorities in the expulsion of the Jews from the province and their extermination.

MACEDONIA. The earliest Jewish presence was really in Macedonia and Dalmatia. Philo mentions the Jews of Macedonia in *Embassy to Gaius* (*Legatio ad Gaium*), translated into English by F.H. Colson (1962), par. 281, while the apostle Paul delivered sermons in its communities (Acts 20:1–2). A Greek inscription on a pillar of the church – a former synagogue – in Stobi (in the vicinity of the town of Bitolj (*Monastir)) and now preserved in the national museum of Belgrade, serves as evidence of the Jewish settlement during the second and third centuries. In it, Claudius Tiberius Polycharmos relates his Jewish way of life. During the Middle Ages, Jews lived in Bitolj (Monastir), Skoplje, *Ochrida, and Struga. During the reign of the Serbian emperor Stefen Dushan there is a mention of Jewish farmers in Macedonia (conquered by Dushan in 1353). During the 14th century, the renowned grammarian Judah (Leon) Moskoni, whose version of Josephus was published in Constantinople in 1510, lived in Ochrida. During the 16th century there were Jewish communities in *Skoplje, Bitolj, *Niš, Smederevo, and Požarevac. At the time, Skoplje was a commercial center. The Jews traded in wool clothes, "kachkaval" cheese, and also engaged in commerce between Salonika and Constantinople on the one hand and Western Europe on the other. In 1680 *Nathan of Gaza died in Skoplje. His admirers made an annual pilgrimage to his tomb. When the armies of Leopold I approached Skoplje in 1689, the Jews hurriedly abandoned the city. Their synagogues were burnt down and the wall surrounding their quarter also was destroyed by the flames. The Jewish population of Štip was of Salonikan origin. During the 17th and 18th centuries, R. Abraham Motal ha-Paytan ("the hymnologist") and R. Reuben b. Abraham, who wrote the work *Derekh Yesharah* (Leghorn, 1788) and in Ladino *Tikkunei ha-Nefesh* (Salonika, 1765–75), lived in this town. At the time of the upheavals in Turkey which preceded the Balkan Wars, more Jews settled in Macedonia.

VOJVODINA. This was an Austrian frontier region and the residence of Jews was prohibited there. Jews first settled in Vojvodina during the 18th century, but they were exceptions. Most Jewish communities were founded in the 1840s. The Jews of Vojvodina engaged in commerce and in import-export trade. Before World War II there were 19,200 Jews in Vojvodina (Bačka, 14,800; Banat, 4,400). In 1952 there were Jewish communities in *Novi Sad, 275; *Subotica, 403; *Sombor, 46; Senta, 28; and Pančevo, 34, following immigration to Israel by most of the survivors of the Holocaust.

After 1918

With the establishment of the Yugoslav kingdom, about 100 Jewish communities (with 70,000 Jews) were included in the new state. The Jews generally belonged to the middle class, but there were also impoverished communities, such as that of Bitolj. The Jews were well represented in industry, commerce, and artisan activity. They also held an important place in the banking business. There were some professions, such as the army officers, cadres, the upper government services, and journalism, from which the Jews were almost totally absent. The Jews of Croatia and Slavonia were under the cultural influence of Germany and Hungary and surpassed their coreligionists of the other Yugoslav provinces in the economic and cultural spheres. The Jews of Macedonia maintained their Oriental character and their economic and cultural standards were somewhat backward in comparison to the remainder of Yugoslav Jewry. There was a marked Hungarian influence among the Jews of Vojvodina. The Jews did not hold a prominent place in political life, although there were some influential members in the parties. De Majo, an advocate of Belgrade, was elected in 1927 for one term to the parliament (Skupshtina).

Antisemitism as an organized movement was nonexistent. After World War I, some signs of it appeared, but the situation improved again. The Karageorgevich dynasty and the Orthodox Church evinced a favorable attitude toward the Jews. The antisemitic sentiments really originated in Croatia and Slavonia. In Vojvodina, there was some hostility toward the Jews who had been Austro-Hungarians before the war and thus were considered to be the representatives of the alien Hungarian culture.

THE ORGANIZATION OF THE JEWS. The unification of the variegated Yugoslav Jewish population was not easy. Yugoslav Jewry did not form a single unit. In the southern districts, from the Sava and Danube rivers and further, there were essentially Sephardim, while the other provinces were mainly inhabited by Ashkenazim. The Sephardim generally adhered to their Oriental manner of life and the Ladino language, while some others were influenced by the speech and culture of the southern Slavs. In 1939 there were about 43,000 Ashkenazim and 29,000 Sephardim in Yugoslavia. They lived in 121 communities. At a meeting of the communities which was convened in Osijek in 1919, the "Federation of Jewish (Religious)

Communities" was founded. It received government recognition and its activities extended to the fields of religion, culture, and education. In 1923 the chief rabbinate was founded and an association of rabbis was formed. The final status of the communities was confirmed in 1929. The separate union of Orthodox communities, which had refused to join the federation of the communities, also received legal recognition at that time. The Orthodox union consisted of 12 communities and numbered 3,426 in 1935. The spiritual head of the Jewish population was the chief rabbi, Dr. Isaac Alkalay (he held office from 1924 to 1941), who was appointed by the king and resided in Belgrade. The chief rabbi was equal in status to the Orthodox patriarch, the Catholic archbishop, and the Muslim *reis ul-Ulema*. He was also a member of the Yugoslav senate.

EDUCATION AND CULTURE. There were Jewish elementary schools, which had existed before the Yugoslav kingdom, in the towns of *Zrenjanin, Osijek, *Sarajevo, Senta, *Zagreb, and *Zemun. The government prohibited the opening of new elementary schools. In Vojvodina there were yeshivot in Senta, Subotica, Kanjiža, and Ilok. Jewish children attended the general schools, in which two hours weekly were allocated for Jewish religious studies. From 1928 to 1941 there was a seminary in Sarajevo for the training of ḥakhamim and teachers on a secondary school level. Among the scholars and authors mention should be made of Lavoslav Šik, a historian of Yugoslav Jewry, the poet Hinko *Gottlieb, and Siegfried Kapper. An important place in Yugoslav literature was held by Isak *Samokovlija, a Bosnian novelist who died in 1955. The headquarters of the Zionist Organization were in Zagreb, where newspapers and periodicals were published.

STATISTICS. In 1926 there was a Jewish population of 73,267 and in 1935, 70,000. According to the census of 1939, there were 71,000 Jews. The decrease in the number of Jews in Yugoslavia can be explained by the increase of *antisemitism in Europe.

[Simon Marcus]

Holocaust Period

In April 1941, Yugoslavia was occupied by German, Hungarian, Italian, and Bulgarian troops. It was divided into several parts: Serbia and the Banat came under direct German military administration; Hungary reoccupied some of the areas it had ceded to newly formed Yugoslavia after World War I; Bulgaria took over Macedonia; and Italy extended its rule over Dalmatia and Montenegro. Most of the remaining territory – Croatia, Bosnia, and Herzegovina – was formed into a new "Independent State of Croatia."

SERBIA AND THE BANAT. On the day after the occupation of Belgrade (April 13, 1941), German troops, assisted by "*Volksdeutsche*" (local Germans), ransacked the Jewish shops. Within a week, the Jews were ordered to register with the police, and eventually 9,145 Jews, out of a total prewar population of about 12,000, were registered. The Jews were removed from public service. The yellow *badge was introduced, and

Jews were drafted into forced labor. About 3,500 to 4,000 males from the age of 14 to 60 were forced to clear the buildings that had been razed by the bombardment, while women aged 16 to 40 were given menial tasks in the German military installations. A special police detachment was formed to deal with the Jewish population. A "Jewish Organization" (Jevrejska Zajednica) was created to attend to the needs of the Jewish population. The Nazis forced the organization to collect contributions from the Jews and provide hostages to ensure Jewish compliance with their orders. After the German invasion of the U.S.S.R., the occupation regime became even harsher. In one incident alone, at the end of July, 120 Jewish hostages were shot to death (in the village of Jajinci, near Belgrade). In the Banat, which had a large German minority, after robbing the Jews of all their property and belongings the Nazis placed them in camps and a few weeks later (in September 1941) deported them to Belgrade, adding another 2,500 people to its destitute Jewish population. By the end of September, all Jewish men aged 16 and above were put into a concentration camp, situated in Topovske Šupe, a Belgrade suburb.

Felix Benzler, German consul in Belgrade, and Edmund Veesenmayer, from the German Foreign Office, demanded the concentration of "at least" 8,000 men on an island in the Danube delta and their liquidation there and asked for appropriate pressure on the German military authorities. Adolf *Eichmann was consulted on the matter and proposed the immediate execution of the Jews. He dispatched Franz Rademacher to Belgrade who discovered that of the 8,000 Jewish men, 2,000 had already been shot and there were only about 4,000–5,000 left. He arranged for their execution "by the end of the week" (October 1941). Between Aug. 25 and Oct. 18, 1941, all Jewish men in Nazi hands – those who had been put on forced labor (about 3,000), the deportees from the Banat, and any others that the Nazis had succeeded in apprehending – were concentrated in the Topovske Šupe camp and in the nearby Banjica camp. The massacre began in the early part of September. Day by day, groups of Jews, ranging from 100 to 300, were taken out of the two camps, ostensibly for work in the fields. In fact a total of 4,500 were shot to death, the scene of the crime being either Jajinci or some other site on the opposite bank of the Danube. A group of Jewish refugees from Germany, Austria, and Czechoslovakia who had been on their way to Palestine in September 1940 had been stranded on the Danube for lack of a seaworthy boat to continue their voyage. They had found temporary refuge in the Yugoslav town of Šabac, but when the Nazis occupied the country they were all interned (together with 63 local Jews). Originally their number was 1,300, but 200 refugees, mostly children, had received immigration certificates to Palestine and had departed. In October 1941, all the men were taken to the Danube village of Zasavica and shot; the women and children were deported to the Sajmište camp in Zemun near Belgrade. In February 1942 they were loaded into closed trucks and were gassed while en route to Jajinci. Not a single person escaped from this

camp, and the fate of its inmates was reported by a few Jewish women, wives of gentiles, whom the Nazis had released. In August 1942 a German report stated that the "problem of Jews and gypsies had been solved; Serbia is the only country where this problem no longer exists."

THE INDEPENDENT STATE OF CROATIA. The new Independent State of Croatia (NDH) was headed by Ante *Pavelić, leader of the Ustaše movement, who had been in exile in Italy and Germany and had developed relations with the Nazis. For the Jews, the four years of his rule in Croatia were marked by savage cruelty and terror. Within a few days of the occupation of Zagreb, the Germans, the local Nazis, and the Ustaše combined to deprive the Jews of their property and their status. Nuremberg-style laws were enacted as early as April 30, 1941, followed by the removal of Jews from all public posts and the

introduction of the yellow badge. On August 27, a decree was issued expropriating all Jewish-owned real estate, and two months later the Jews were ordered to hand over all other valuables in their possession. In Osijek, a levy of 20,000,000 dinars was imposed upon the Jews within three days of the occupation of the city; in Zagreb, the Ustaše arrested the wealthy Jews in May and kept them hostage until a ransom equivalent to 100 kilograms of gold was provided for their release. Synagogues, cultural institutions, and even Jewish cemeteries were razed by the Ustaše as soon as it came to power.

Early in May 1941, the first concentration camp was established in the Danica factory, in the village of Drinja, near Koprivnica. Mass arrests of Jews were stepped up after the outbreak of the German-Soviet war (June 1941), and a number of additional concentration camps were established in Jasenovac, Stara Gradiška, Loborgrad, and Djakovo. A temporary

camp, at Jadovno near Gospić, served as one of the early ex-termination camps. By July 1941 all the inmates of the Danica camp had been murdered, and by August the inmates at the Jadovno camp had suffered the same fate. The main, and most notorious, of the Croatian concentration camps was situated near Jasenovac, a town on the Zagreb-Belgrade railroad. This camp remained in existence throughout the period of Croatian "independence," and tens of thousands of people were murdered there, among them about 20,000 Jews. It was to these camps that the Jews of Croatia proper were deported. Exact figures are not available, but it is estimated that by the end of 1942, 5,000 Jews had been deported. Further deportations took place as late as 1944. The Jewish communities continued to exist, although they were now largely made up of persons with only one Jewish parent, who were protected by law; Jewish partners of mixed marriages were also saved from deportation due to the efforts of the Catholic Church, and especially the papal nuncio. (About 1,000 such persons survived in Croatia.)

Bosnia and Herzegovina, which were incorporated into "independent" Croatia, had a prewar Jewish population of about 14,000. When the Germans occupied Sarajevo (April 17, 1941), one of their first acts was to set fire to the Sephardi synagogue in the city, the finest structure of its kind in the Balkan countries. They were assisted in this act of vandalism by local Muslims, who, under the influence of their spiritual leaders, were generally hostile to the Jews and willingly collaborated with the Nazis. Hājj Amīn al-Husseini, the ex-mufti of Jerusalem, went especially from Berlin to Sarajevo in order to give his blessing to the Bosnian Muslim division named "Handjar" (Sword), which was among the Croatian puppet state's contributions to the German war machine. This division effectively fought on the eastern front against the Soviet Union, incorporated in the ranks of the Wehrmacht. In the wake of an act of sabotage that occurred at the end of July, nine of the leading Jews of Sarajevo and 12 prominent Serbs were arrested, and within a few days the police announced their execution by a firing squad. Mass deportations began on September 3, when 500 Jews were dispatched to a camp at Kruščica near Travnik; a second transport to the same location took place a few days later. On Oct. 19, 1941, in celebration of "Germany Day," 1,400 Jews were arrested in Sarajevo. Although the community commissars (a Serb and a Muslim) succeeded in getting a few of the Jews released, the community as a whole was panic-stricken and made strenuous efforts to escape. About 1,600 made their way to Italian-occupied Mostar. The largest roundup of Jews was organized by the Germans on Nov. 15–16, 1941, when 3,000 Jews were deported to Jasenovac. Women and children from Bosnia and Herzegovina were taken to the Loborgrad and Djakovo camps. By the end of August 1942, some 9,000 Jews had been deported, and only 120 were left. In the fall of 1941 the Kruiščica camp was liquidated, the men being sent to Jasenovac and the women to Loborgrad. A year later, the Loborgrad camp suffered a similar fate, and those who had survived the first year were now dispatched to the Auschwitz death camp.

The Jewish community of Osijek had been tricked by the Ustaše into building its own ghetto in a factory near the village of Tenje. When the job was completed, the Jews of Osijek and the surrounding area were crowded into the factory, where they lived for a period of two months. In August 1942, the surviving inmates were transported to Jasenovac and Auschwitz. By April 1945, only a little more than 1,000 Serbs and Jews were still alive in the Jasenovac camp. On April 22 they were all crowded into a single factory building to await their death. In a final desperate effort, some 600 of the prisoners broke the gates and attacked the Ustaše guard; for most of them, the effort was in vain, and only 80 saved their lives, among them 20 Jews. The Stara Gradiška camp, a "branch" of Jasenovac, "specialized" in women and children, and no less than 6,000–7,000 children, according to one report, were put to death there. The German consul in Zagreb, Siegfried Kasche, and police attaché Hans Helm reported to Berlin on April 18, 1944 that "Croatia is one of the countries in which the Jewish problem has been solved."

VOJVODINA (BAČKA AND BARANJA). In Vojvodina, occupied by Hungarian troops, the fate of the Jews (and, to a certain degree, the local Serbs) was no different. In Subotica, the main city in Bačka, 250 persons were killed in the first days of the occupation. In Novi Sad, the first slaughter took place on the third day of the occupation, when 500 people, both Jews and Serbs, were murdered. The Jewish community was threatened with deportation to Croatia unless it made an immediate payment of 50,000,000 dinars; after great efforts, 34,000,000 were raised. Altogether, about 3,500 people were killed in Vojvodina in the initial stage, among them 150–200 Jews. Concentration camps were established in various places (Subotica, Stari Bečej, Ada, Odžaci, Bažka Topola), and some 2,000 Jews passed through these camps in the first two months of the occupation. In January 1942, a clash between resistance fighters and a Hungarian troop detachment caused the death of four Hungarian soldiers, and in reprisal 1,000 men, women, and children were rounded up and shot to death. Among the victims of this slaughter were 100 Jews. A few weeks later, a similar action took place at Novi Sad, where 870 Jews – almost a fifth of the total Jewish population of the city – in addition to 430 Serbs were murdered. Thousands more were brought to the banks of the Danube to suffer the same fate when a dispatch from the Hungarian military authorities arrived to put an end to the mass killing.

In 1942 the Hungarians ordered the formation of forced labor battalions into which all Jews and Serbs between the ages of 21 and 48 were drafted. Some 4,000 Jews from Bačka and Baranja were conscripted into the battalions; 1,500 were sent to the Ukraine, near the front, where they succumbed to disease and starvation or were murdered. Only 20 of the entire group survived the ordeal. The others were sent to Hungary and Serbia, where they were put to work in copper mines and on the railroads, together with about 6,000 Hungarian Jews. In spite of the harsh conditions to which they were exposed, they

managed to survive for a while. The end came in March 1944, when Hungary was taken over by German forces. On September 17, a transport of 3,600 Jews from the Bor mines (where the labor battalions were concentrated) was dispatched in the direction of Belgrade; about 1,300 prisoners were murdered or died en route and the rest were deported to Germany. A short while later a second transport of 2,500 Jews, which included a large contingent of Vojvodina Jews, was organized. Some of these managed to escape, and several hundred were liberated by Tito's partisans, finding refuge with the population in Serbia and the Banat. The rest of the Jews from Bačka and Baranja were deported on April 25–26, 1944. About 4,000 Jews from the area of Novi Sad were interned at Subotica, while the Jews from the eastern part of Bačka were dispatched to a camp in Baja (Hungary); in May 1944, the group from Subotica was also sent to Baja. Eventually all the inmates of the Baja camp (as well as those of the Bačka Topola camp) were deported to Auschwitz.

MACEDONIA. The majority of Macedonian Jews were concentrated in three cities: in Skoplje (3,795 Jews, including 300 refugees from Belgrade); Bitolj (Monastir; 3,350); and Štip (550). Direct control of the area was in Bulgarian hands, and for the first 18 months persecution of the Jews did not go beyond confiscation of property, forced contributions, and personal insults. In August 1942, a group of 50 refugees from Belgrade was handed over to the Gestapo, which deported them to the Banjica camp; on Dec. 3, 1942, they were put to death in Jajinci. At the beginning of January 1943, further restrictions were imposed on the Jews, and two months later all of the Jewish population of Macedonia was placed in a temporary concentration camp in the "Monopol" tobacco factory near Skoplje. On March 22 a transport of 2,338 Jews was dispatched to the death camps in Poland, followed a week later by two more transports, numbering 2,402 and 2,404 people. Only about 100 Jews returned to Macedonia from these transports. About 150–200 Sephardi Jews were recognized by the Spanish government as Spanish nationals and were not deported; about 120 Jews fled to Albania, and some joined the partisans.

ITALIAN-OCCUPIED AREAS. Compared to the other parts of occupied Yugoslavia, the area under Italian control was a haven for the Jews. In spite of constant pressure by German diplomats – including Kasche, the German consul at Zagreb – the Italians refused to accede to demands to deport Jews and, for a while at least, regarded any measure discriminating against the Jews as incompatible with the honor of the Italian army. Originally there were a small number of Jews in this area, but soon it became a refuge for Jews from Bosnia and Croatia. In August 1941, according to a German estimate, there were between 4,000 and 5,000 Jews in Dubrovnik and Mostar. By November 1941, the Italians went as far as establishing camps for the Jewish refugees, interning refugees from Bosnia and Herzegovina in Kupari (near Dubrovnik) and Jews from Croatia in Kraljevica. In Split there were 2,000 refugees, in addition to 415 local Jews; 500 were sent to the island of Korčula

and 1,100 to Italy (mostly to the Ferramonti internees' camp). In June 1943, 2,650 Jewish inmates of camps in Dalmatia were deported to the island of Rab. In all the camps, the Italians extended humane treatment to the Jews.

In September 1943, after the Italian capitulation, Tito's partisan army evacuated 2,000 refugees from Rab; able-bodied men joined the partisans, while the old men, women, and children found refuge in northern Dalmatia. About 300 people – the old and sick, women and their small children – remained on the island, and when the Germans invaded it, in March 1944, they were deported to Auschwitz. A similar fate overtook the Jews in Split. On Sept. 28, 1943, all adult men were interned, and after a while they were deported to Sajmište, where they were all murdered. In March 1944, 300 women and children were deported from Split to Jasenovac where they died.

JEWISH PARTISANS. Yugoslav Jews took an active part in the fight against the Nazis and played a leading role among the organizers of Tito's revolt. Ten Jews were named as national heroes of the resistance. No exact figures are available for the number of Jews who fought with the partisans, because they did not enlist as Jews, and in the early stage no family names were recorded. With one exception, there were no Jewish units. After the war, however, the Federation of Yugoslav Jewish Communities was able to identify 2,000 Jewish names among the members of Tito's formations.

Shortly after the occupation of Belgrade, *Ha-Shomer ha-Ẓa'ir put itself at the disposal of the Communist Party and helped organize the resistance. The first secret radio in Zagreb was operated by two Jewish brothers and the first act of sabotage in Vojvodina was carried out by youngsters of the Jewish youth movement. Individual Jews committed acts of sabotage, and in August 1942 the first group joined the partisans. A Jewish partisan unit was formed in the fall of 1943 from among the Jews evacuated from the Italian camp on the island of Rab. Composed of 250 men, the unit suffered heavy losses in the fighting against the Germans: its ranks were decimated, and the survivors were incorporated into other units. The most prominent Jewish resistance fighter was Moša *Pijade, who became one of Tito's four vice presidents after the liberation.

Contemporary Period

From the end of 1944, when Yugoslavia was liberated, about 14,000 Jews returned to the cities from their places of hiding, the partisan areas, and prison camps. The Federation of Jewish Communities officially reestablished its activities on Oct. 22, 1944, a few days after the liberation of Belgrade, when its surviving chairman, Friedrich Pops, reopened its office. Fifty-six Jewish communities were reconstructed, and the federation, with the aid of the American Jewish *Joint Distribution Committee (JDC), engaged in a variety of welfare projects, including the reopening of the home for the aged in Zagreb, extending material aid to the needy who began to return to their daily lives, etc. It also reestablished its ties with the *World Jewish Congress and other Jewish organizations.

Upon the establishment of the State of Israel (1948), the Federation sought and received permission from the Yugoslav authorities to send material help and organize Jewish emigration to Israel. From the end of 1948 until 1952 about 8,000 Jews, who were allowed to take their property with them, left for Israel. After 1952 the number of Jews remained almost unchanged at 6,500–7,000, of whom 6,200–6,500 were registered in 38 communities. In 1968 there were 1,552 Jews in Belgrade, 1,359 in Zagreb, 1,095 in Sarajevo, 1,320 in six communities (each of which had more than 100 members), 911 in 28 local and district communities (some of which had less than ten members), and another 220 scattered throughout the country. The structure of Yugoslav Jewry is revealed by censuses taken in 1952 and 1957. The first census covered 6,250 Jews who were registered in communities. Of these, 43% were male and 57% female; about 50% were Sephardim (especially in Serbia and Bosnia) and the rest were Ashkenazim (mostly in Croatia and Slovenia). Of the children, 591 were under the age of seven, 818 were in elementary school, 325 were in high school, and 247 were in institutes of higher learning. Among the adults, there were 12 apprentices in various fields, 221 doctors (military and civilian), 41 pharmacists, 21 veterinarians, 82 engineers, 46 technicians, 54 teachers in schools of higher learning, 48 teachers and educators, 27 lawyers, 12 judges (and 33 others held law degrees), 31 journalists, 875 in different branches of administration, 247 economists and administrators in economic enterprises, 4 agronomists, 231 artisans, 33 writers and artists, 73 army officers (not counting medical personnel), 5 noncommissioned officers, 233 on pension, 136 with no profession, 277 in various other professions, 1,435 housewives, 314 elderly people without pensions, 106 chronically ill, 45 seriously crippled, and 257 did not supply details on their professional status. The census of 1957 covered 6,691 Jews including 137 women per every 100 men (contrasted with an average of 106 women per 100 men in the general population). The number of children (up to age 18) was 25.1% of the Jewish, and 38.7% of the total population.

The activities of the Federation of Jewish Communities were founded upon the 1953 law that regulated the activities of religions and churches in Socialist Yugoslavia. But religious life was only part, and not necessarily the outstanding part, of Jewish community life. In 1952 the Federation deleted the word "religious" from its title and the title of the communities associated with it. The communities thus viewed themselves as national Jewish entities, preserving their ties with worldwide Jewish organizations and various bodies in Israel. This attitude was made possible by the liberal Yugoslav policy on the question of nationalities and the support of widespread circles in Yugoslavia for Judaism and for Israel. The Federation devoted much of its efforts to Jewish education. Kindergartens were established in a number of cities (and still functioned in 1969, in Belgrade and Zagreb); youth centers and sections for women, whose activities were directed by appropriate national boards, were set up in some communities; the larger communities reestablished their libraries; and an historical museum was established in Belgrade, including an institute for research on the history of Yugoslav Jewry, in which non-Jewish scholars also participated. Jewish youths were sent to Jewish seminars and studies abroad, and every year summer camps involved between 350 and 400 youth on various levels. Choirs in Belgrade and in Zagreb cultivated Israel and Hebrew music, both religious and secular.

There is special concern regarding the preservation of cemeteries of historic significance and the orderly liquidation of cemeteries and other property of communities which could not be preserved or were displaced by urban-renewal projects. Some synagogues were handed over to local cultural institutions and serve as cultural houses and museums. About 30 monuments have been erected to the victims of World War II in cemeteries and public places.

The Federation of Jewish Communities publishes a monthly organ and an annual *Jevrejski Almanah*. The first almanac appeared in 1954, the seventh, for 1965–67, in 1968. The almanacs cover historical and current-affairs material as well as literary works about the Holocaust. The Jewish youth publish an organ titled *Kadimah*. For a number of years a calendar printed in Serbo-Croatian was put out (containing prayers printed in Latin characters) by the only rabbi (ḥakham) to have survived the Holocaust, Menahem b. Abraham Romano (1882–1968) of Sarajevo. In 1952 the Federation published a book titled *Crimes of the Fascist Conquerors and their Collaborators Against the Jews in Yugoslavia*, whose second edition includes a summary in English. The Federation also published a number of basic Jewish books including a translation of a short history of the Jewish people by S. *Dubnow with an epilogue that carries on his concept of the Jewish nation with a Marxist interpretation.

The position of religion in community life weakened. In the community organizations committees for religious affairs have tried to satisfy the needs of the community as much as possible. On holidays the communities often celebrated with communal prayers and meals. No one was left to replace Rabbi Romano upon his death. Religious life was supplemented by observance of days of remembrance, especially for the victims of the Holocaust. Representatives of Yugoslav Jewry participate in many Jewish world conferences. Their ties with Israel were demonstrated – with the agreement of Yugoslav authorities – by fund raising for the Martyrs Forest and the forest in memory of Albert *Vajs (Weiss; 1905–1964), successor to Pops as chairman of the Federation, and mutual visits by delegations of youth and others. After 1966 the Federation expanded its ties with Jewish communities in Eastern European countries. Mutual visits were frequent, not only on occasions of celebration, such as the 400th anniversary of the establishment of the community in Sarajevo (October 1966), but also for discussions on practical matters. Even the Israel-Arab *Six-Day War (1967), which brought about Yugoslavia's one-sided position and the severance of diplomatic relations with Israel, did not change this situation. The Federation's activities were not restricted from above, although it took

upon itself specific restrictions in its relations with the State of Israel.

[Cvi Rotem]

In the early 1980s the Jewish population of Yugoslavia was estimated at approximately 5,500, the majority of whom resided in Belgrade, Zagreb, and Sarajevo. Although the regime in Yugoslavia was authoritarian, its internal structure was the most liberal of all Eastern European countries, and the Jewish community enjoyed freedom both with regard to the organization of communal life and the conduct of religious and cultural activities, and most notably with regard to the community's ties with international Jewish organizations. Thus delegates from Yugoslavia regularly participated in the conventions of the World Jewish Congress, the World Conference of Synagogues and Kehillot, etc. From all parts of Yugoslavia, 28 community heads participated in a seminar and study tour in Israel (Oct. 19, 1976–Nov. 2, 1976), organized by the Jewish Agency.

Though not a member of the Warsaw Pact, and with a foreign policy independent of Moscow, since 1967 Yugoslavia adopted an extreme anti-Israel policy with regard to the Middle East conflict. It was the foremost defender and militant champion of sanctions against Israel in all international forums, including the UN and its agencies.

[Eliezer Palmor]

The violent breakup of Yugoslavia which began in 1991 and the bloody civil war that accompanied it had far-reaching and traumatic effects on the 5,000 to 6,000 Jews who lived in the country. Until the division of the country, Yugoslav Jews had belonged to communities joined in autonomous republic-wide organizations which in turn were members of a nationwide Federation based in Belgrade.

Most Jews were concentrated in the capital cities of three of the republics: Zagreb, capital of Croatia, with about 1,200 Jews; Sarajevo, capital of Bosnia-Herzegovina, with about 1,000; and Belgrade, capital of Serbia and also the federal capital, with about 1,500 Jews. The remaining Jews lived in much smaller scattered communities, mostly in Croatia and Serbia's Vojvodina province. Fewer than 100 Jews lived in Slovenia, and only 100 in Macedonia.

There was little overt antisemitism, and the rate of intermarriage was high. Through the 1980s participation grew in wide-ranging programs and activities run by the Federation and the individual communities (with the help of international Jewish philanthropic organizations). These included a summer camp on the Adriatic Sea, annual Maccabi sports competitions, old-age care facilities, women's and youth groups, and educational programs including religion classes, Hebrew classes, and the first Jewish kindergarten in Yugoslavia in more than a decade, which opened in Zagreb, the most active community, in 1989. Yugoslavia had only one rabbi – Belgrade-based Cadik Danon – but by the late 1980s one young man was in Israel studying to become a rabbi, and several others were training as cantors or lay leaders for religious services.

Yugoslavia's Jews also maintained close ties with various international Jewish organizations, and by the late 1980s Yugoslav government officials also met with Jewish and Israeli representatives. At a meeting in New York in July 1987, Yugoslav leader Lazar Mojsov told World Jewish Congress president Edgar Bronfman that he would "work toward better relations with the Jewish world as a whole and with the State of Israel."

A landmark cultural event was a major exhibition on the Jews of Yugoslavia that opened in Zagreb in April 1988 and then was shown elsewhere in the country, attracting tens of thousands of visitors, before going on to the United States and Israel. Belgrade's first Holocaust memorial (aside from memorials in the Jewish cemetery) was dedicated in 1990; it was by the Jewish sculptor Nandor Glid.

The mounting separatism and ethnic tensions that came to the fore in the late 1980s had their effect on the Jewish communities. Some Jews felt that Serbian overtures to Israel including the formation in 1989 of a Serbian-Jewish friendship society and the twinning of various Serbian-Israeli cities were mainly aimed at courting world Jewry to give support to Serbia in its opposition to any decentralization of the state. A leader of the tiny Jewish community in Slovenia warned of possible antisemitism after a youth magazine published *Protocols of the Elders of Zion* in 1990. In Zagreb, Jewish leaders at the end of 1990 expressed concern that Croatian nationalism might prompt a resurgence of antisemitism, but later threw support behind the Croatian government when it seceded from Yugoslavia and became embroiled in civil war.

When the civil war broke out following Slovenian and Croatian secession in the summer of 1991, the status of Jewish communities again became a political issue. Serbs and Croats attempted to discredit each other with accusations of antisemitism. In early 1992 Klara Mandic, a founder of the Serbian-Jewish Friendship Society, visited the United States and in a series of lectures and articles charged the Croatian government of Franjo Tudjman with reviving fascism and antisemitism and planning "genocide" against Serbs in Croatia. Nenad Porges, president of the Zagreb Jewish community, countered by accusing Serbs of antisemitism and expressing support for the Tudjman government.

The civil war led to great suffering and destruction, particularly after fighting spread from Croatia to Bosnia-Herzegovina. Jews had to flee their homes along with hundreds of thousands of other citizens, and Jewish monuments and property were damaged or destroyed along with countless other buildings. Among them, the medieval synagogue in Dubrovnik was damaged by bombs; the Jewish community center in Osijek was hit by shelling; and Serbian fighters used the ancient Jewish cemetery overlooking Sarajevo as a position from which to fire onto the city. In Zagreb, terrorist bombs in August 1991 wrecked the Jewish community offices and prayer hall and also damaged the Jewish cemetery.

Starting in April 1992, the American Jewish Joint Distribution Committee carried out daring air and overland evacuations of almost the entire Jewish population of Sarajevo.

Almost from the beginning of the civil strife, communications between Zagreb, Sarajevo, and Belgrade were difficult or cut altogether. Local Jewish communities became fully autonomous and ultimately independent as the former Yugoslav republics became independent. In Zagreb, gala celebrations in September 1992 marked the reopening of the Jewish community center and prayer hall after a full-scale restoration, partially funded by local authorities, following a terrorist bombing of the year before.

[Ruth E. Gruber]

In the years that followed the breakup of Yugoslavia the Federation of Jewish Communities in Belgrade, although diminished, continued to function, arranging cultural events and publishing Jewish material. In Zagreb, capital of Croatia, a Coordinating Committee headed by Dr. Ognjen Krauss was formed. The Kehillah is now called Zidovska opcina and is similarly active in all fields of Jewish life, especially in publishing cultural reviews and books on historical subjects. In Ljubljana, capital of Slovenia, there exists a Judovska skupina, a small congregation. In Sarajevo, the community, now called Jevrejska zajednica and headed by Jacob Finci, operates from the Ashkenazi synagogue. In Skopje, capital of Macedonia, Jews are organized under the name of Evreiska zajednica. Representatives of these organizations occasionally meet in European Jewish forums abroad and once a year in Dalmatian (Croatian) summer resorts.

Estimated population figure in the early 2000s were as follows: Bosnia-Herzegovina 500, Croatia 1,700, Macedonia 100, Serbia and Montenegro 1,500, Slovenia 100.

[Zvi Loker (2nd ed.)]

Relations with Israel

Between the end of World War II, which saw the creation of Yugoslavia as a Communist federal republic, and the establishment of the State of Israel in 1948, the Yugoslav attitude to Palestine Jewry was friendly and found expression in allowing passage to thousands of "illegal" immigrants to Palestine. From the Yugoslav point of view, this formed part of the anti-imperialist struggle. In 1947 Yugoslavia was elected a member of the 11-nation Special Commission on Palestine (UNSCOP). Its representatives declared their understanding for Jewish aspirations to independence, but eventually took a stand for a binational state, and in the UN Assembly, in November 1947, Yugoslavia did not vote for the partition resolution. However, following the proclamation of the establishment of the State of Israel, Yugoslavia recognized the new state on May 19, 1948; full diplomatic relations and the first trade agreement were quick to follow. The majority of Yugoslav Jews, survivors of the Holocaust, were permitted to go to Israel in 1948–49. In the years 1949 to 1954 relations were cordial. Political, social, and cultural ties were developed through exchange of delegations, as, e.g., between the Socialist Union and Mapai, the Yugoslav trade unions and the Histadrut, and through manifold activities of the respective legations at Belgrade and Tel Aviv.

Although Yugoslav diplomacy was not, even before 1956, generally favorable to Israel's stand in the Arab-Israel conflict, it did preserve a fairly balanced attitude until then. On Sept. 1, 1951, its representative voted, in the Security Council, for free navigation for all nations in the Suez Canal, a resolution hailed at the time as a victory for Israel. Marked deterioration on the Yugoslav side came after the Bandung Conference in 1955 and Yugoslav premier Tito's policy of assembling, and possibly leading, a group of "nonaligned" nations, together with Egypt's president Gamal Abdel Nasser, and Jawaharlal Nehru, prime minister of India. As Tito's collaboration with Nasser went ahead, relations with Israel became cooler. Another important factor in the changed Yugoslav attitude was the improvement of relations between Yugoslavia and the Soviet Union from May 1955. During the Sinai crisis (1956), Yugoslavia adopted an extremely hostile attitude to Israel. It thereafter slowed down and finally stopped most of the positive aspects of bilateral cooperation. Apart from trade, only personal contacts between Jews were permitted to continue. Yugoslavia supported the Arab stand against Israel in all spheres, save for economic boycott.

Yugoslav policy in the Middle East gradually evolved into a completely one-sided, pro-Arab position, culminating in its branding Israel as the "aggressor" in the Six-Day War (June 1967), severing diplomatic relations concurrently with other Communist countries (Romania excluded), and open advocacy of Egyptian-Arab extremist viewpoints. However, the sympathies of the Yugoslav people still seemed to incline toward Israel.

By 1971, the only aspect of Yugoslav-Israel relations which continued unaffected was in the sphere of trade, although Yugoslavia unilaterally suspended, in April 1970, the payments' agreement. Commercial ties started modestly in 1949, with a few hundred thousand dollars' worth of exchange both ways, and grew steadily; at the time of the signature of the third trade agreement in 1966 they had reached six million dollars. Trade was still growing in 1971, being fairly balanced. Yugoslav firms were represented in Israel, and there seemed to be a common understanding to continue with mutually useful trade exchanges.

The main items imported by Israel from Yugoslavia were meat, wood, furniture, boxes for packing citrus, metal products, and sugar. Its exports were cement, citrus fruits and concentrates, phosphates, tires, textile rayons, and plastic products.

[Zvi Loker]

A slightly more favorable tone toward Israel's rights was, however, expressed by the late President Tito during his visit to Romania (Dec. 3–4, 1977), when he said: "Israel exists for many years as a genuine fact, is recognized by the UN and is a member of it; any other view would be unrealistic. Thus, all the Arab states must recognize Israel as a state." Although Yugoslavia had not restored diplomatic relations with Israel broken after the Six-Day War in 1967, commercial and cultural ties as well as cooperation in the areas of sports and tourism

burgeoned during the 1980s. Slovenia's Adria Airlines established direct flights to and from Israel in 1989.

During the 1990s Israel established diplomatic relations with the independent states of former Yugoslavia.

Musical Life

The many pictures of shofars discovered on ceramics at the archaeological site in Celarevo on the Danube river (seventh–ninth century C.E.; Khazars?) may indicate the presence of Jewish settlements and were the first pictures of the noted Jewish instrument in this part of Europe. This necropolis is unique for the Balkans and Panonia.

Ancient Jewish communities also existed on the shores of the Adriatic Sea (Split). There is no information about the music of these communities. There is also no information about the Jews of Dubrovnik who settled there from the 12th century C.E.

In the 16th century, a large community of Sephardim immigrated to the Balkans' parts of the Ottoman Empire up to Sarajevo. They learned synagogue music at a school founded by Rabbi David Jakov Pardo in the second half of the 18th century. Basic research on this musical tradition was done between the two world wars by Isak Hendel, Erik Elisha Samlaich, Zhiga Hirschler, and others. Unfortunately, most of the researchers lost their lives during the Holocaust, and the texts and musical transcriptions were lost as well.

From the studies of the contemporary musicologists Cvjetko Richtman (1902–1990), who was the founder of the Institute for the Study of Folklore in Sarajevo, his daughter Dunja Richtman (1970–), and particularly the basic studies of Ankica Petrovic (1978–) on the musical tradition of the Sephardim in Bosnia-Herzegovina, one can infer that there is a great difference between the sacred and the secular music of the Bosnian Sephardim. In this tradition, the melodies of their secular "romances" (*romantigas*) were influenced by medieval Spanish music, while their sacred music preserved more ancient roots from the pre-Ottoman and pre-Arab era. (see also *Greece and *Ladino (Romancero)). A great number of Jewish music documents are archived in the Jewish Museum of Belgrade.

At the time of the national resurgence, the pioneers of "classical music" were of a Jewish origin, both among the Croats (Vatroslav Lisinski, born Fux, 1819–1854) and the Serbs (Josif Schlezinger, 1794–1870). However, there are no Jewish elements in their music.

In the first half of the 20th century, the most prominent Jewish composers in Yugoslavia were Rikard Schwarz, Zhiga Hirscher, Pavao Markovac, Oskar Jozefovich, Robert Herzl, Erih Elisha Samlaich, and Lavoslav Grinski. All of them were killed during World War II.

Among the survivors who immigrated to the United States were the baritone and composer Aaron Marko *Rothmueler (1908–1993), who also wrote *The Music of The Jews* (1958), and the eminent musicologist Dragan Plamenac

(1895–1983), known for his studies on music of the 14th and 16th centuries. Among the composers and performers who immigrated to Israel were Paul Raphael Sterk (1904–1979), who composed the symphony *City of David*; Uri Givon (1912–1974), who produced numerous arrangements of Jewish and Israeli songs and compositions; Reuven Yaron, who was brought to Palestine as a child in 1943, studied with M. *Seter, and was killed at the age of 23 in the Sinai Campaign of 1956. His compositions were highly esteemed.

Among the notable performers between the two world wars were pianist Ernest Krauth, conductor Milan Sachs, and violinist Mary Dragutinovic. In the field of light music Abraham Kupferberg and Raphael Blam distinguished themselves.

After World War II Bruno Bjelinski, Miroslav Spieler, Ruben Radica, Dubravko Detoni, and Enriko Josif were active as composers, and performers included singer Breda Kalef, conductor Oskar Danon, violinist David Kamhi, and pianist Andreja Preger.

YUGOSLAV LITERATURE. The Serbs, Croats, Slovenes, Macedonians, Hungarians, and other ethnic groups that constitute the population of former Yugoslavia all have their own distinct cultural traditions, and it is therefore merely for the sake of convenience that they are associated under the heading Yugoslav Literature. The earliest literary activity in the "land of the southern Slavs" (dating back to the ninth century) was the result of the educational and missionary work of Cyril of Salonika and his brother Methodius, Cyril having devised the Slavic (Cyrillic) alphabet still used, within Yugoslavia, by the Serbs and Macedonians (see *Bulgarian Literature).

Biblical and Hebraic Influences
The Bible has been translated and referred to by the southern Slavs since the beginning of their cultural history. The first translation of the Old Testament, by Cyril and Methodius, was intended for the Slavs of Macedonia and according to tradition was based on the original Hebrew. The earliest complete translation, however, was that of Primož Trubar, a Slovenian Protestant, in the late 16th century. Two versions of the Reformation period were a Croatian Lutheran Bible (1562–63) and Juri Dalmatin's Protestant Bible and Psalter (1584), which marked the beginnings of Slovenian literature. Among the translations of the 19th century, a period of national and cultural revival, were those of Matija Petar Katanić in Croatia (1813) and Djura Daničžć in Serbia (1865), both Orthodox. Two 20th-century versions are the (Orthodox) Bible of 1932–33 and Petar Vlasić's Serbo-Croatian Bible (1923–25). In Serbia, biblical tales (such as the "Book of Adam") and religious plays were written during the Middle Ages and until the period of the Turkish invasion in the mid-15th century. Biblical themes were also current in 15th-century Croatian literature. The Hebraic and Greek biblical traditions persisted in Old Slavonic literature and flourished under Byzantine influence among the southern Slavs. Biblical subjects were later popular during the Serbian literary revival in the 19th century. At the beginning of the 18th century, Gavril Stefanović Venclović of Srem translated some 20,000 pages of this old literature into vernacular Serbian.

However, original works on Old Testament themes have been traced to the Renaissance era, when the Croatian poet and humanist Marko Marulić wrote the allegorical Neo-Latin epic *Davidiadis libri XIV* and the first Croatian epic on a religious subject, *Judita* (1501), which was intended to arouse national feelings against the Turkish overlord. Another writer of the 16th century, the Montenegrin poet Mavro-Nikolo Vetranović of Ragusa (Dubrovnik), wrote an outstanding verse play about Abraham, *Posvetilište Abraamovo*, and the apocryphal drama, *Suzana čista*. After a lapse of almost three centuries, the epic tradition was revived by the Serbian writer Milovan Vidaković, who published his *Istorija o prekras-*

nom Josifje (1805) and the apocryphal *Mladi Tovija* (1825). Vidaković, who also wrote the epic *Putešestvije u Jerusalim* (1834), was followed by several other writers: Laza Kostić, a Serbian poet; Petar Petrović Njegoš, vladika (prince-bishop) of Montenegro, the greatest Montenegrin poet; and Silvije Strahimir Kranjčerić, a Croatian poet of Sarajevo. Biblical elements are prominent in the works of all three, Njegoš having composed the epic *Luča mikrokozma* (1845; *The Rays of the Microcosm*, 1953), which betrays the influence of Dante, Milton, and Byron, and Kranjčerić having written *Mojsije*, a poem about the Lawgiver. This interest in biblical subjects was maintained in the 20th century. Miroslav Krleža, the outstanding contemporary writer in Croatia, published dramas on Adam and Eve and Salome, while his colleague and fellow radical, August Cesarec, wrote "Israel's Exodus and Other Legends" on the eve of World War II. Old Testament themes have also inspired two studies of Moses (1932, 1938) by Aron Alkalaj; "King David," a drama by the Belgrade writer, artist, and stage director Raša Plaović; and *Vreme čuda* ("Time of Wonders," 1965), by the Serbian Borislav Pekić which was inspired by biblical legends.

There have been no Yugoslav translations of talmudic and later Jewish religious literature and these have therefore exerted no influence on the local culture. In the 16th century, however, Croatian humanism produced an outstanding scholar in Matthias Flacius Illyricus (Vlachich), a Protestant theologian and philologist who became professor of Hebrew at the University of Wittenberg in 1544. A violent controversialist and fanatical anti-Catholic, he published many scholarly works including a linguistic dictionary of the Bible, *Clavis Scripturae Sacrae seu de sermone sacrarum literarum* (Antwerp, 1567; Basle, 1623). The *Wandering Jew theme also appeared in Yugoslavia with the epic *Ahasver* (1946) by the left-wing Croatian poet and politician Vladimir Nazor. As to classics of modern Jewish literature, works by writers such as Shalom Aleichem and Sholem Asch have been translated from the Yiddish, as have other works by Jewish writers in other languages, notably Isaac Babel, Saul Bellow, Heinrich Heine, and André Schwarz-Bart, all popular among Yugoslav readers and critics.

[Ana Shomlo-Ninic]

The Image of the Jew
In the areas constituting former Yugoslavia, Jews have not, in general, provided writers with a major literary theme. There were two basic reasons for this: the Jewish population was always limited, inconspicuous, and largely cut off from gentile society; and, in the ethnic, religious, and cultural mosaic formed by this Balkan region, a crossroads and battlefield of many nations, native writers in search of the exotic or colorful had no need to seek out the Jew. Until the Holocaust Jews were central characters only in works by Jewish authors. Subsequently they also became an accepted subject for non-Jews.

In the rich folk literature which survived well into the 19th century, the Jews who appear have no individuality and, under the influence of Christian polemical writings, they are

often presented as "cursed" and cruel, objects of hatred and derision. Exceptionally, one folk song contains cautious praise for the young Jewess who wishes to marry the exalted hero, Kraljević Marko. During the Renaissance period, Dalmatian poets (e.g., Marulić) adapted biblical and apocryphal subjects and New Testament material, but did not associate the Hebrews of the past with the Jews of their time. Instead, they tended to regard the people of Israel as a symbol of their own nation in its fight against the Turks and as exemplifying the general struggle of humanity. Jewish figures appeared in very few comedies, one being the anonymous *Jerko Škripalo* presented in Dubrovnik during the 18th century, and then from a positive point of view. Serbian and Croatian authors of the 19th-century Romantic school scarcely mentioned contemporary Jews, but when they did, they used them to describe their own situation, as in August Šenoa's *Vječni Žid* ("The Eternal Jew"), or else to express general ideas (as in S. Kranjčević's *Mojsije*, and Vladimir Vidrić's *Dva levita*). Before the First Zionist Congress the Slovenian ex-priest Anton Aškerc published a mordant poem ("Natanova prikazen") about an old rabbi who bewails the homelessness of his people; in answer, the patriarch Abraham assures him that, since the whole world owes money to the Jews, the world is their homeland. In Slovenia, France Pršéren wrote a poem ("Judovsko dekle") about a young Jewess who falls in love with a Christian, but abandons him because of the religious barrier.

With the advent of the realistic novel at the end of the 19th century, the Jew began to figure in the role of the shopkeeper or publican who precipitates the collapse of rural society, as in Josip Kosor's *Rasap* ("Disintegration," 1906), or as a moneylender; always a secondary figure, bereft of individuality, the Jew was invariably presented in an unfavorable light, often with pronounced antisemitic overtones. The Croatian Miroslav Krleža, a militant leftist author and playwright, scattered antisemitic remarks throughout his works, although he placed such comments in the mouths of degenerate, negative types. Otherwise Krleža merely produced the image of a revolutionary, cosmopolitan Jew, oblivious to patriotism or any sense of national identity. Between the world wars the figure of the Jew was mainly the concern of Jewish writers, some of whom restricted themselves to a Jewish readership (e.g., Hinko *Gottlieb). The humorist Zak *Konfino introduced the little Sephardi communities of the Serbian countryside, and Isak *Samokovlija wrote about the ordinary Sephardi Jew of Bosnia. Both writers familiarized the general public with Jewish types whom they presented in an attractive literary style. During and after World War II, dozens of Jewish and non-Jewish authors became preoccupied with the fate of Yugoslav Jewry in verse, drama, and fiction. Since in most cases these works were inspired by actual events, the characters appearing in them acquired a seal of authenticity. The Jew now appeared not only as the innocent victim of Nazi-Fascist bestiality, but also as a courageous fighter who lays down his life to avenge his people or to free his country. This tide, which is still in full spate, carried with it many Jewish and non-Jewish authors

of the older generation impelled to supply testimony about the Jewish tragedy, as well as innumerable younger writers for whom the subject served as a powerful literary incentive.

The image of the Jew acquires a classic dimension in the works of the Serbian Nobel Prize winner Ivo Andrić, especially in the two novels which he wrote in German-occupied Belgrade. Within the general racial and cultural panorama of *Travnička hronika* ("The Chronicle of Travnik," 1945) he described the *Athias family's way of life and tribulations, typical of the Sephardi refugees in Western Bosnia at the beginning of the 19th century. These exiles from the West are thrown into the Orient, which corrupts and degenerates them without destroying their self-respect. In *Na Drini ćuprija* ("The Bridge over the Drina," 1945) Andrić affectionately described a beautiful and energetic Ashkenazi Jewess of Tarnow who runs a tavern in an East Bosnian townlet at the close of the 19th century. There the clash of the old and the new provides an anvil for her own achievements and failures. In his short stories, *Pripovetke* (3 vols., 1924–36; *The Pasha's Concubine and Other Tales*, 1969), Andrić described other Jewish figures in a realistic but sympathetic manner. Always deeply involved in their surroundings, they nevertheless keep their distance, either of their own free will or from compulsion.

[Cvi Rotem]

The Jewish Contribution

Although there have been Jewish communities in Macedonia and Dalmatia for 2,000 years or more, the earliest record of Jewish literary activity in the territory of former Yugoslavia dates only from the mid-16th century. The Neo-Latin poet Didacus *Pyrrhus, a Portuguese refugee known also as Flavius Eborensis, Pyrrhus Lusitanus, and Diego Pires (originally Isaiah Cohen), settled in Dubrovnik (Ragusa), where he continued to write verse. After 1492 many Spanish exiles fled to Bosnia (then part of the Ottoman Empire) and settled in Sarajevo, where they were made welcome. However, their new cultural milieu, by contrast with Western Europe, was so low that they virtually ceased to foster scientific and scholarly pursuits. The first Bosnian Sephardi of literary note was the 17th–18th-century Sarajevo kabbalist Nehemiah Hiyya *Ḥayon. With the appointment of David Samuel b. Jacob *Pardo as rabbi of Sarajevo (1765), Jewish studies were revived, flourishing under his son, Isaac Pardo, and under Meir Danon, Eliezar Jichac Papo, and Eliezer Shem-Tov Papo (all 19th century), of whom the last two published works in Ladino as well as Hebrew.

In 1526 Jews were banned from Croatia for more than two centuries; their resettlement dates from the 18th century. Among the newcomers were many intellectuals, notably Siegfried (Vítezslav) *Kapper, an eminent Czech poet who at one time lived in Karlovac and promoted international interest in Croatian and Serbian poetry. From the beginning of the 20th century, Jewish newspapers and magazines such as *Židovska smotra, Gideon* (later titled *Ha-Noar*), *Ha-Aviv* (for youngsters), and *Ommanut* began regular publication. There were two important publishers: Lavoslav Hartman (1813–1881), who issued the first Croatian translations and editions of world

classics, and Geca Kon (1873–1941) of Belgrade, who headed the largest Yugoslav publishing house in the period between the world wars. In Belgrade, as in Sarajevo, the first Jewish writers were rabbinic scholars, and secular literature, reflecting the prevalent Sephardi culture, was mainly written in Ladino until World War I. In the late 1830s, during the reign of Prince Miloš, who was sympathetic to the Jews, Hebrew printing began to develop in Serbia; Hajim Davićo was the pioneer Jewish writer in the Serbian language in the late 19th century. During the 1880s many new Jewish literary associations, newspapers, and periodicals in Ladino, Yiddish, German, Hungarian, and Serbo-Croatian were established, including *Jevrejski Glasnik, Zajednica, El amigo del pueblo*, *Pasatiempo* (Belgrade), and *Alborada* (Sarajevo). Jovan Mandil (1873–1915), a lawyer and journalist of Šabac, Serbia, was the correspondent of the Belgrade dailies *Pravda* and *Beogradske novine*, as well as the founder and chief editor of *Bitoljske novine*. The founder of Sarajevo's first Ladino newspaper, *La Alborada* (1900–01), a scientific and literary weekly, was Abraham Kapon (1853–1930), an author and editor whose works included two dramas, *El Augustiador* (1914) and *Shivat Sion* (1921), a volume of *Poesias* (1922), and translations. Many of his unpublished manuscripts were lost during World War II.

Later Trends

Early in the 20th century numerous Jewish writers and translators introduced Serbian, Croatian, and Bosnian readers to the classics of world literature. Prominent among them were Benko Davičo (brother of Hajim Davićo), who translated Heine; Lav Grin (Ilko Gorenčevi), the art critic; Paulina Loebl Albala; David Pijade, who published original fiction and a translation of Oscar Wilde's *Picture of Dorian Grey*; Bukić Pijade; and Haim Alkalaj.

An entire tradition of *Ladino romances, proverbs, and folklore had been transmitted orally from the late 15th century onward, and, during the 1930s, some Sephardi writers in Yugoslavia tried to revive this culture and to set it down in writing. In this regard the work of Laura Papo Bohoreta, a poet, playwright, and novelist, was especially significant. She published *Ojes mios, La pasiensia vale muche, Tiempos pasados*, and *Avia de ser*, and also wrote a study of the Sephardi woman which was translated into Spanish (1931). Bohoreta died in the Holocaust. Active in the same field was the Hispanicist Kalmi Baruh (1896–1945), born in Sarajevo, whose research in Spain during the late 1920s was later recalled by his friend and compatriot, Ivo Andrić (in: *Jevrejski almanah* (1959/60), 213–5). Baruh devoted much of his time and energy to the study of the Ladino language and the Ladino "romances" of Bosnia (*Jevrejsko-španski idiomi*); and his many essays and studies relating to Ladino culture and Spanish writers were partly republished in *Eseji i članci o španskoj književnosti* ("Essays and Articles on Spanish Literature," 1952). Baruh died shortly after his liberation from the Bergen-Belsen concentration camp.

Jewish Themes

In Serbo-Croatian literature proper, Jews achieved promi-

nence only after World War I. So far as specifically Jewish themes and interests are concerned, the two most important Yugoslav authors were Isak Samokovlija, who wrote only of Sephardi life in Bosnia, and the Zionist poet and author Hinko Gottlieb, who wrote fiction on World War II themes and died in Israel. Other Jewish writers active in the period between the world wars included the poet and editor Samuel *Romano, who translated modern Hebrew verse and prose works, and Stanislav Vinaver. Among the promising young authors who died in the Holocaust were two cousins from Novi Sad: Vitomir Jovanović (pen name of Viktor Rozencvajg), who issued a verse collection, *Naš život* ("Our Life"); and Nenad Mirov (pen name of Alfred Rozencvajg), whose collected poems appeared in *Dve duše* ("Two Souls"), *Kroz jadilovce klance* ("Through the Gorges of Pain"), and *Tri prema jedan za poeziju* ("Three to One for Poetry").

Apart from the versatile author and humorist Žak Konfino, some of whose works deal with Sephardi life in Serbia, most contemporary Jewish writers in Yugoslavia (among whom several have achieved considerable importance) are remote from Jewish tradition and show little interest in either Sephardi or Ashkenazi themes. Outstanding among these was the Communist poet and novelist Oscar *Davičo, whose anti-Zionist and anti-Israel bias was shared by the eminent art historian and essayist Oto Bihalji *Merin. The latter's brother, Pavle Bihalji, a leading publisher, fell victim to the Nazis in 1941. Two authors whose literary career began well before World War II were the poet and playwright Miroslav Feldman and the novelist and literary scholar Ervin *Šinko. The older generation of modern writers was also represented by the Zagreb poet and translator Ina *Jun-Broda, who settled in Vienna and published Serbo-Croatian works in German translation; Julija Najman, who translated from the French and wrote fiction on Jewish themes; and Jožef *Debrecenji, a native of Budapest, who wrote in Hungarian as well as Serbo-Croatian. One of the most translated Yugoslav writers was Erih Koš (1913–), who published novels and short stories, and satires such as *čudnovata povest o kitu velikom takođe zvanom veliki Mak* (1960; *The Strange Story of the Great Whale, also known as Big Mac*, 1962). Other works by Koš include the novel *Il tifo* (1958), an allegory on the tragic aspects of war. Among the leftist social writers who were first active between the world wars were Šinko, Bihalji Merin, and the psychiatrist Hugo Klajn (1894–1981), who taught at the Belgrade Academy of Dramatic Arts and wrote *Šekspir i čovječanstvo* ("Shakespeare and Mankind," 1964).

In the course of the German occupation of Yugoslavia during World War II, the vast majority of the Jews perished and the traumatic effect of this disaster had profound literary repercussions. Personal experiences as a survivor of Auschwitz dominate the works of Djordje *Lebović, who dealt with the concentration camp theme in dramas such as *Nebeski odred* ("Commando Heaven," 1959), *Do viđenja druže Gale* ("Goodbye, Comrade Gal," 1961), and *Haleluja* (1965). Other authors who tackled the same subject included Frida

Filipović (1913–), who published fiction and translations from the French; the poet, novelist, and children's writer Ivan Ivanji; the novelist Danilo Nahmijas; Julija Najman; and Jožef Debrecenji, whose novel *Hideg krematórium: Auschwitz regénye* ("The Cold Crematorium," 1950) first appeared in Hungarian (in Yugoslavia) and was later translated into other languages. Two other works about the Holocaust period by postwar writers were the novels *Testament* by Stevan Kvazimodo, and *Pod žutom trakom* ("Under the Yellow Badge") by Andrija Deak. Two authors of the younger generation who displayed a nostalgic interest in the Jewish tradition were Filip David and Danilo Kiš (1935–1989), whose novels include *Psalm 44* and *Bašta, pepeo* ("Garden, Ashes," 1965).

After 1945 and throughout the 1950s and 1960s, Jewish writers continued to play an important part in Yugoslavia's cultural life as editors and contributors of leading newspapers and periodicals, theater managers, and writers for radio, television, and the motion picture industry. Many of them gained the highest literary awards. *Jevrejski almanah*, the annual publication of the Federation of Jewish Communities in Yugoslavia, promotes the work of aspiring young writers and also contains essays and other contributions by eminent Jewish and non-Jewish authors.

Katan Ben-Zion, *Presence and Disappearance – Jews and Judaism in Former Yugoslavia in the Mirror of Literatures* (Heb., 2002).

YUḤASIN (Heb. יְחֻסִין), laws dealing with the determination of an individual's personal status and its legal consequences insofar as such a status derives from a person's particular parentage. From the beginning of Jewish history, the ascertainment of an Israelite's **yiḥus*, i.e., genealogy or pedigree, was considered of utmost importance, as is evidenced in Scripture (Num. 1:2, 18 and *Rashi* ad loc.; Ezra 2:59–63; 8:1). According to the Talmud, a person's *yiḥus* was also of importance with regard to the amount of the "main" (or statutory) **ketubbah*, as for a certain period of time it was ruled that it should be increased beyond the regular minimum in the case of the daughters of priests and of other distinguished families (Ket. 12a–b and Tos. ad loc., s.v. *bet din shel kohanim*).

Determination of Paternity

A person's *yiḥus* obviously cannot be established unless the identity of his parents is known. Identifying the mother generally presents no difficulties but to identify the father it is necessary to distinguish between the offspring of a married and an unmarried woman.

The offspring of a married woman is presumed to have been fathered by her husband, according to the rule that the majority of cases is to be followed, since for the most part a woman cohabits with her husband (Ḥul. 11b; Sh. Ar., EH 4:15). Therefore if the husband denies paternity the onus is on him to rebut this presumption; he will succeed in his claim if he

can prove that factually the child cannot be his, for example, if he was away from his wife and never saw her for an unbroken period of at least 12 months prior to the birth of the child (Sh. Ar., EH 14). When a child is born less than 12 but more than 10 months after the husband's separation from the child's mother, the matter will depend on the facts in each case (although the matter is not undisputed in the codes; see Sh. Ar., EH 14 and *Ḥelkat Meḥokek* to 10 and 11): if on the evidence of the mother's conduct there is reason to suspect that she has committed adultery, the court will not be bound by the usual presumption and may decide that the husband is not the father of the child (*Rema*, EH 14); if, however, there is no basis for any such suspicion, it may possibly be held – unless there is some evidence to the contrary – that the fetus tarried in its mother's womb beyond the normal pregnancy period (270 days) and the court may rule that the husband is the father of the child.

The presumption of paternity does not apply where the husband expressly denies it and there is no evidence that he has cohabited with his wife during the relevant period. It must be clear, however, that his denial is based on his own conviction and not on mere speculation, and is in no way contradicted by his own conduct, e.g., if hitherto he has admitted his paternity – expressly or by implication. This *halakhah*, known as *yakir* ("acknowledge"), is based on Deuteronomy 21:17, from which it is deduced that the husband may acknowledge and designate a particular son as his firstborn, in preference to other sons born to his wife after their marriage, even if such a son is younger than the others – the husband thus implicitly declaring that the other ones are not his, but are **mamzerim* born to his wife through **adultery (Kid. 74a; Sh. Ar., EH 4:29; PDR 3:97–108). The husband's declaration of a son's bastardy, however, is not believed if the son already has sons of his own, since because of the rule that the son of a *mamzer* is also a *mamzer* this would taint them with bastardy as well, and the Torah has not conferred so wide a power upon the husband (Sh. Ar., EH 4:29). On the other hand, as long as the husband himself does not deny paternity, the wife's declaration that he is not the father of her child will not be accepted as sufficient to exclude the husband's paternity, and this is so even if a third party admits to being the father of the child (Sot. 27a; Sh. Ar., EH 4:15; *Rema*, EH 26:29; see also PDR 7:281, 289). Various questions arise in the case of a child born as a result of **artificial insemination.

In the case of the offspring of an unmarried woman the onus is on the child to prove (through his mother) that the defendant is his father. This is so not only because here the presumption of paternity as in the case of a married woman is inapplicable, but also because the mere fact that the defendant and the child's mother had sexual relations does not necessarily warrant the inference that the defendant is its father (Yev. 69b; Resp. Ribash, nos. 40 and 41). Differing opinions are expressed in the codes on how paternity is to be proved. In the Shulḥan Arukh it is laid down as *halakhah* that the defendant's paternity may only be proved by his own admission (EH 4:26

and *Rema* thereto; Resp. Ribash, *ibid.*). Such an admission need not necessarily be expressed and it is sufficient if facts can be established concerning the defendant's conduct from which an admission of his being the father may be inferred: e.g., his taking the mother to a hospital for her confinement, or paying the hospital bill for the mother or the child, etc. (Resp. Rosh 82:1; *Oẓar ha-Posekim* EH 4, no. 108, 4).

Rules of *Yuḥasin*

The following four categories of offspring are to be distinguished: offspring of parents married to each other; offspring of parents not married to each other; offspring of parents of whom only one is Jewish; and offspring of unknown parents.

OFFSPRING OF PARENTS MARRIED TO EACH OTHER. A child born to a marriage which is valid and not originally prohibited between the parties (see *Marriage, Prohibited), is *kasher* (of unimpaired status), i.e., his (or her) marriage is permitted to any *kasher* Jewess (or Jew; Kid. 69a; Sh. Ar., EH 8:1). Such a child takes the father's status, not that of the mother, in accordance with Numbers 1:2, 18 (and *Rashi* ad loc.; Sh. Ar., EH 8:1). Thus, the son of a priest and an Israelite woman will be a priest and one born of an ordinary Israelite and the daughter of a priest will be an ordinary Israelite. If the marriage of the parents is valid but originally prohibited, the child's status follows that of the tainted parent (Kid. 66b; Sh. Ar., EH 8:4). Hence the offspring of a marriage of which one party is a *mamzer*(*et*), will also be a *mamzer* (Kid. 66b; Sh. Ar., EH 4:18); similarly, the son of a priest and a divorcée is called a *ḥalal* (חלל), i.e., profaned, and is unfit for the priesthood, while the daughter of such a marriage is called a *ḥalalah* (חללה) and can not marry a priest (Lev. 21:7; Kid. 77a; Sh. Ar., EH 7:12 and 8:4). Since the laws of the priesthood apply only to priests of unimpaired status (*kesherim*) there is no prohibition against a *ḥalal* marrying a divorcee (Sh. Ar., EH 7:20). Except in matters of priesthood, the *ḥalal* suffers no defect in status and he or she is allowed to marry an Israelite woman or man of unimpaired status (Sh. Ar., EH 8:2). A marriage between such parties not being prohibited, their offspring follows the father's status; i.e., the daughter of an Israelite and a *ḥalalah* is not profane and is permitted to be married to a priest, but the daughter of a *ḥalal* and an Israelite woman is also a *ḥalalah* and so must not marry a priest (Kid. 77a; Sh. Ar., EH 7:16).

OFFSPRING OF PARENTS NOT MARRIED TO EACH OTHER. The mere fact that a child is born out of wedlock does not taint his personal status, nor is he thereby rendered unfit for the priesthood (Yev. 59b–60a; Sh. Ar., EH 6:8). Even though it prohibits fornication, which is punishable with *flogging (Yad, Ishut 1:4), Jewish law, unlike other legal systems, does not render a child illegitimate, with its rights affected, merely because it is the issue of an extramarital union. The sole legal difference – in the present context – between such a child and one born of parents married to each other concerns the question of proving paternity (see above). Upon proof of paternity, the status of a child born out of wedlock is determined in the same manner as if it were born to parents married to each other. This applies only if (at the time of conception) there existed no legal impediment to a marriage between the parents of the child. However, if the parents were not in a position to contract a valid marriage with each other even if they had wished to do so, because their cohabitation would have amounted to incest (including adultery) according to the Torah (i.e., a union between parties prohibited to each other according to biblical law and for whom the punishment is *karet or death), the child will be a *mamzer* and his status thus impaired (Kid. 66b; see *Marriage, Prohibited).

OFFSPRING OF PARENTS OF WHOM ONLY ONE IS JEWISH. Here the rule is that the child takes his mother's status (Kid. 66b; Sh. Ar., EH 4:19). Accordingly, the offspring of a non-Jew and a Jewess is a Jew and is legitimate, subject to the limitation that a priest should not marry such a daughter, or unless the mother is herself a *mamzeret*; in this case the child is a *mamzer*, and this is so even if the Jewess is a married woman whose adulterous relations with a Jew would have made the child a *mamzer* (Sh. Ar., EH 4:19 and 4:5 with commentaries). On the other hand, the offspring of a Jew and a non-Jewish mother is not a Jew, regardless of the will of the parents, since the matter is determined by the objective facts alone. The child therefore can become Jewish only by first being a *proselyte, in the same way as any other non-Jew. Here the status of the father is totally irrelevant and the child, after proselytizing according to Jewish law, will assume the status of a legitimate Israelite like all other proselytes; even if his father is a *mamzer* this will not affect the status of the proselyte child (Kid. 66b, *Rashi* ad loc.; Sh. Ar., EH 4:20). For the case of a child when either one or both of its parents is unknown see *Mamzer.

The State of Israel

Questions of *yuḥasin* and paternity are apparently regarded as matters of personal status within the meaning of Act 51 of the Palestine Order in Council (1922), and therefore are governed by the personal law of the parties concerned – Jewish law in the case of Jews. The Supreme Court of Israel, however, has so far refrained from adopting a clear stand on the matter and has left it as a *quaere* (PD 5 (1951), 1341 ff.; 17 (1963), 2751, 2755). On the question of under what circumstances the offspring of a Jew and a non-Jewish mother can be registered as a Jew for the purposes of the population registration law – registration which in itself does not serve as proof that the person registered is a Jew – the Supreme Court has held, by a majority of five judges to four, that the subjective declaration of the parents should suffice unless it is obviously incorrect (PD 23, pt. 2 (1969), 477–608). With regard to the modes of proof of paternity of a child born of an unmarried mother, the Supreme Court has decided that the general rules of evidence and not the rules of Jewish law shall apply (PD 5 (1951), 134 ff.).

[Ben-Zion (Benno) Schereschewsky]

Those Not Allowed to "Enter the Lord's Congregation" According to Biblical Law and the Rabbinical Solutions

The Torah (Deut. 23:4–9) lists certain nations from which no individual may be accepted as an Israelite: Ammonites, Moabites, Egyptians, and Edomites. With regard to the first two, the biblical prohibition applies across the board, with no limitation in time or number of generations, and is justified by observing that "they did not receive you [the Israelites] with food and water along the way when you left Egypt […] and they hired Balaam son of Beor, from Pethor of Aram Naharaim, to curse you." Regarding the latter two nations, the prohibition is limited to just two generations, so that a third-generation descendant of an Egyptian or of an Edomite could be accepted as a Jew.

Moreover, the prohibition against the Ammonites and Moabites was restricted by tannaitic authorities to males alone (Mish., Yev. 8:3). According to the Talmud (Yev. 76b–77a), this law originated in the court of Samuel the Prophet, who announced this decree before he went to anoint David, a descendant of Ruth the Moabite, as king. Another *mishnah* (Yadayim 4:4) describes a dispute among the late first-century *tannaim* as to whether the ban was still in effect in their day. The controversy is settled with Rabbi Joshua's view prevailing: "Sennacherib came and mixed up [the identity of] all the nations"; hence, the Ammonites of their time were not those Ammonites whose acceptance into the Jewish community is prohibited by the Torah. The established *halakhah* holds, with respect to all four of the aforementioned nations, "Once they… have become commingled with the other permitted nations, they all became permitted" (Maim., Yad, Bi'ot Asurot 12:25), and therefore are "immediately permitted to enter into the Lord's congregation."

Efforts by the Rabbis to Avoid Determining *Mamzer* Status

To the above laws should be added the general principle that a person is presumed to be of fit and proper lineage, even if the factual truth is that he does suffer from some taint. The Mishnah cites a tradition stating that "Elijah will not come [in the future] to declare the pure, impure – nor to declare the impure, pure; nor to distance those who are near or to draw near those who were distanced, but only to distance those drawn near by force and to draw near those distanced by force" (Eduyot 8:7). R. Obadiah of Bertinoro interprets the citation as meaning that Elijah will only distance those who are publicly known to be tainted but were forcibly intermingled among the Jewish people, "but where there is a tainted individual in a particular family, but this is not publicly known, due to the family having intermingled [into the Jewish community], Elijah will let it remain so and let the family retain its presumption of legitimacy." On the basis of these statements, Rabbi Moses Isserles rules (Sh. Ar., EH 2:5) that, in a case in which it becomes clear to someone that one of the ancestors of a given family was a *mamzer*, he is not at liberty to reveal this: "but rather he should let the family continue to be assumed to be as fit and proper, since all families that have assimilated into the Jewish people will be fit and proper in the future." For an extensive discussion of this issue, see **Mamzer*.

Tissue Typing and the Establishment of Paternity in the State of Israel

The Talmud (BB 58a) records a case where a man learned that nine of his children were *mamzerim* and only one of them was his real child. Before his death, he bequeathed his property to his real child, but he did not know which one was the real child. When the case was brought before R. Bana'ah, he ordered a test to determine which son, according to his characteristics, was the legitimate heir. *Sefer Ḥasidim* (§232) describes a method, considered scientific by the standards of the time, for determining paternity. Rabbi Samuel Strashun (*Hagahot ha-Rashash*) comments on the above talmudic source that Rabbi Bana'ah nevertheless refrained from employing the "scientific" test mentioned in *Sefer Ḥasidim*, because by doing so he would have revealed that the other sons were *mamzerim*.

With the development of scientific means for identifying family relations by genetic testing of tissues, these principles have become more significant. Rabbinical courts have considered the validity of a scientific test that produces results that contradict juridical presumptions of Jewish law, such as the one mentioned above, that "most acts of intercourse are attributed to the husband." Rabbi Shlomo Dikhovsky (File 866/41 13 PDR, 51) rules that one must accept tissue typing intended to establish paternity for purposes of ruling on child support payments (see **Maintenance*), but for establishing *mamzerut* one may disqualify reliance on tissue typing because it is not infallible (p. 60). In a number of cases, the Rabbinical Court of Appeals has ruled that, even for determining maintenance payments, tissue typing to establish paternity may not be used as an absolute criterion, but there is need for supporting evidence as well.

This question was brought before the Israeli Supreme Court (CA 548/78, *Sharon v. Levi*, 35 (1) PD 736 per Justice Menahem Elon), that ruled that in Israeli courts tissue typing for establishing paternity should be admitted as evidence. The court emphasized, however, that:

> Tissue-typing would not, in every case, establish paternity. Moreover, in certain instances the court may decide not to make use of this test, when the test is liable to label a minor as "tainted," e.g., when a married woman claims that while she was married she became pregnant by someone other than her husband, and that the person by whom she became pregnant is the father of her child. If true, this statement would result in the minor being stigmatized as a *mamzer*. In this or in similar cases involving the establishment of status, proof provided by tissue-typing is insufficient to establish paternity (p. 748 of decision).

Thus, in such cases, paternity is to be established based on the juridical presumption that "most acts of intercourse are ascribed to the husband." This ruling is based on Jewish law's sensitivity to a person being stigmatized and branded with *mamzer* status, coupled with the halakhic principles of making

various legal presumptions in order to avoid such stigmatization. Further on its ruling, the court cites some of the above-cited Jewish law sources on which it based its ruling.

In another ruling (CA 1354/92, *Attorney General v. Anon.*, PD 48(1) 711, Justice Menahem Elon) based on these considerations, the court ruled that, even when both parents give their consent to tissue typing for establishing the parenthood of a minor, such a test should not be conducted if it may endanger the minor's best interests, inter alia raising doubts about his legitimacy, and that these interests supersede the interest in investigating the truth.

The court added (pp. 739–40) that, although the rabbinical courts have no reason to suspect that such testing would fix an individual's status as a *mamzer*, since only rabbinical courts have the authority to do so, there are two reasons for discouraging such testing: first, acceptance of such findings in a civil court might socially brand the minor – itself a sufficient reason for prohibiting the testing. Second, there is no certainty that the rabbinical court might not change its stance and decide to recognize such results as sufficient to supersede the juridical presumptions cited above:

> Since no one can assure us that if the test is in fact performed and it indicates that the mother's husband is not the father of the minor, a rabbinic court might not accept these results and rule accordingly. As we have seen, the *halakhah* relies on various presumptions and fictions to preclude the tainting of a child as a *mamzer* by reason of his married mother having been impregnated by someone other than her husband. But as we noted, according to the *halakhah* as well, when it is clear that the child cannot be the offspring of the mother's husband, as in a case in which it has been proved that for 12 months there were no relations between the husband and wife, even the *halakhah*, for lack of alternative, declares the offspring a *mamzer*. Thus, several rabbinical courts have ruled against relying on tissue typing for proving paternity (p. 740). (See *Mamzer.*)

Establishing Maternity

With the development in the 1970s and 1980s of techniques for in vitro fertilization, discussion began as to how to decide who is to be considered the mother of a person conceived though such artificial fertilization, in the case where the fertilized egg has been implanted in the uterus of a different woman. Because no direct response to this question can possibly be found in the classic sources of Jewish law, halakhic authorities sought guidance from indirect sources, and even from non-legal sources, as to whether maternity is to be considered a function of pregnancy and birth or of the genetic source of the egg.

There is no uniformity of halakhic opinion on this point. Some have ruled that the genetic mother is the mother, but a majority of the authorities who have addressed the question hold the opinion that the surrogate mother – the mother in whose uterus the fertilized egg was implanted and where it developed until the child's birth – is the mother with regard to all legal entailments (Rav Z.N. Goldberg, *Teḥumin* (1984), 248–59; Rav A.Y. Halevi Kilav, *ibid.*, 260–67; Rav Z.N. Gold-

berg, *ibid.*, 268–74; Rav. E. Waldenberg, Resp. *Ẓiẓ Eliʿezer,* vol. 20 no. 49). Evidence for this is adduced from the law cited in the Talmud (Yev. 97b) whereby twin males born to a woman who converted to Judaism during her pregnancy are ineligible to marry each other's wives (see *Incest), in accordance with law pertaining to Jewish brothers. This proves that the act of birth creates maternity, for were it not so then the twin children would have been considered their mother's sons from the moment of conception, prior to her conversion, the conversion would have nullified that relationship, and they would not have been considered brothers.

In the State of Israel, the Agreements Relating to the Carrying of Embryos (Approval of the Agreements and Status of Offspring) Law – 1996 establishes a presumption that the birth mother is the mother, and only after the child is delivered to the intended parents do they, by means of a court-issued parenthood decree, become the child's parents for all intents and purposes, even when the fertilized egg originated with the intended mother. Notwithstanding, the law in question (§12 (b)) states that the parenthood decree does not effect any change in the laws of what is permitted or forbidden regarding marriage and divorce.

YULEE, DAVID LEVY (1810–1866), U.S. senator. Yulee, who was born David Levy in St. Thomas, West Indies, was taken to the U.S. by his father in 1818. After being educated at Norfolk, Virginia (1819–27), he managed one of his father's Florida plantations. He then moved to St. Augustine, Florida, where he studied law. After admission to the Florida bar (1832), Levy was appointed clerk to the territorial legislature. During the Seminole wars, he became known as a vigorous defender of white settler rights. He was subsequently elected to the legislative council (1836) and to the legislature (1837), and served as a delegate to the Florida constitutional convention (1838). From 1841 to 1845 Levy was the Florida territory's delegate to Congress, where he vigorously campaigned for Florida's admission to the Union. Upon its admission in 1845 he was elected its first senator, the first Jew in the U.S. Senate. In 1846 Levy legally assumed the name of Yulee soon after his mar-

riage to the daughter of ex-governor Wickliffe of Kentucky, and his children were subsequently brought up as Christians. Yulee served as chairman of the Senate Naval Committee in 1846 where he advocated the acquisition of ironclad vessels and opposed the abolition of flogging as a naval punishment. He was defeated for election in 1851, was reelected in 1855, and served until 1861 when he resigned his seat. Although Yulee was a vigorous supporter of slavery and secession, his participation in the Civil War was limited to service in the Confederate Congress. In 1865 he was appointed by the governor of Florida to a commission charged with seeking Florida's readmission to the Union. Before the commission reached Washington, Yulee was arrested and interned in Ft. Pulaski. After his release a year later, he retired from politics and dedicated himself to the highly lucrative business of rebuilding Florida's ruined railway system.

YULY (**Aben-Yuly**, **Yulee**, **Levy-Yuly**), Moroccan family whose first known member was R. SAMUEL LEVY ABEN-YULY (d. after 1740), scholar, financier, and statesman. He was one of the Jewish favorites of the sultan Moulay Ismāʿil (1672–1727) and the counselor and then all-powerful secretary of the sultan Moulay Abd-Allah (1729–1757), who appointed him *nagid of Moroccan Jewry. He added the name Yuly, the initial letters of "they shall come and bow down before Thee," Ps. 86:9, to his original name Levy. He died in *Meknès. His son, JUDAH ABEN-YULY, was one of the founders of the Jewish community of *Mogador, where he was appointed "merchant of the sultan" about 1767. Samuel Aben-Yuly's brother, JUDAH LEVY-YULY (d. after 737), was a powerful international merchant in *Salé and *Rabat, where he also managed the financial interests of various sultans and as head of these communities was known as *sheikh*. His serious conflicts with the rival *Ben-Kiki family disturbed the communities of northern *Morocco for a long time.

His son, ELIJAH LEVY-YULY (d. c. 1799), also held the position of "merchant of the sultan" in Mogador and *Tangier; at the end of Muhammad b. Abd-Allah's reign (1757–1790) he became a vizier, in which function he wielded extensive political influence. Samuel *Romanelli, who was acquainted with him and refers to him simply as Elijah Levy, criticizes him at length in *Massa ba-Arav* and asserts that, in order to escape the death penalty which was decreed against him by the sultan Moulay Yazīd (1790–1792), he converted to *Islam, only to die a few months later. Elijah, in fact, took refuge in England, where he died a Jew. His son, MOSES LEVY-YULY (b. c. 1782), who was born in Mogador, left England for the island of St. Thomas in the Caribbean in 1800. He amassed a considerable fortune in the wood trade and in 1816 established himself in Havana (Cuba), where he became an army purveyor. In 1819 he settled in Florida, becoming an influential pioneer when he set up immense plantations. His son David *Yulee

was the first U.S. senator from Florida and the first U.S. senator of Jewish origin.

R. SAMUEL BEN BARUCH LEVY ABEN-YULY (d. after 1840) was *dayyan* in Meknès, Tangier, and then Gibraltar. He wrote two works on various religious subjects, *Hadar Zekenim* ("Splendor of the Elders") and *Kol Kallah* ("Sound of the Rabbinical Assembly," 1835), and traveled to Leghorn, where he published R. Pethahiah *Berdugo's *Rosh Mashbir* (1840). R. SOLOMON LEVY ABEN-YULY and R. JOSEPH LEVY ABEN-YULY of Meknès were among the most influential religious leaders of Moroccan Jewry before 1850. SAMUEL LEVY-YULY (1798–1872), born in Mogador, was sent to London as ambassador of Morocco and held this position until 1825. He was a business partner of Judah Guedalla of London and died in Portsea, England. JUDAH LEVY-YULY (1805–1878), born in Portsea, was an influential and wealthy merchant and one of the defenders of the rights of the Jews in Morocco. When Mogador was bombarded by the French in 1844, he was one of the most active organizers of the committee which was formed in London under the presidency of Sir Moses *Montefiore and Baron Anthony Rothschild to bring relief to the town and reestablish its Jewish community. He died in Mogador.

[David Corcos]

YUNGE, DI ("The Young Ones"), American-Yiddish literary movement. Di Yunge was formed (1907) of young immigrant writers who professed themselves literary orphans and sought to create a new path in Yiddish literature. Eschewing the efforts of *Sweatshop Poetry, which preceded them on the literary scene, Di Yunge advocated literature as the communication of impressions rather than concepts and called for the creation of art for its own sake, the highlighting of the voice of the individual, the maintenance of stillness and silence in literature, and a stress on *shtimung* ("mood"), while aiming to emancipate Yiddish literature from didactic moralizing, sentimentality, and propagandizing. Di Yunge published their works in the existing Yiddish press, but also founded many of their own literary journals, including *Yugnt* ("Youth," 1907–8), *Troymen un Virklekhkayt* ("Dreams and Reality," 1909), *Literatur* (1910), *Fun Mentsh tsu Mentsh* ("From Person to Person," 1915), *Ist Brodvey* ("East Broadway," 1916), and, their most successful and sustained periodical, *Shriftn* ("Writings," 1912–26). In addition to publishing original fiction, poetry, and literary and social criticism, Di Yunge sought to enrich the canon of Yiddish literature through translations of masterpieces of foreign literature. Their most ambitious project was their eight volume *Di Verk fun Haynrikh Hayne* ("The Works of Heinrich Heine," 1918). Poets associated with this movement included Moshe Leib *Halpern, *Mani-Leib, Zishe *Landau, Reuben *Iceland, Moses *Nadir, Berl *Lapin, J.J. *Schwartz,

Joel Slonim, M. *Bassin, and A.M. *Dillon. Novelists and short story writers included David *Ignatoff, Isaac *Raboy, Joseph *Opatoshu, and M.J. *Haimowitz. Writers who contributed to later phases of the movement included Menahem *Boraisha, Ephraim *Auerbach, B.J. *Bialostosky, A. *Nissenson, Naphtali *Gross, and Z. *Weinper, and H. *Leivick. The dominance of Di Yunge was not effectively challenged until the rise of *Inzikhizm after World War I.

YUNGMAN (**Youngman**, **Jungman**), **MOSHE** (1922–1982), Yiddish poet. Born in Khodorov, Galicia (Ukraine), Yungman worked in Soviet peat camps during World War II. Thereafter he led Zionist youth groups in Italy and immigrated with them to Palestine in 1947. Yungman's first poems appeared in postliberation Yiddish refugee periodicals in Rome and Munich. Later he often contributed to literary journals in Israel, Paris, New York, and Buenos Aires and was among the founding editors of *Yung-Yisroel* (Haifa, 1954–7). His first book of poems, *In Hinerplet* ("In a Daze," 1947), includes the allegorical pageant "Rosh Ha-Shanah," which was performed in refugee camps. His poetry, celebrating both a world lost and a new world being built, was collected in several volumes, among them: *In Shotn fun Moyled* ("In the Shadow of the New Moon," 1954), *Vayse Toyern* ("White Gates," 1964), *Mayn Tatns Parnoses* ("My Father's Jobs," 1981). He translated some of his poems and several works of contemporary Yiddish writers into Hebrew, and a volume of poems of A. *Shlonsky, *Lider* (1971), from Hebrew into Yiddish.

YUNG-VILNE ("Young Vilna"), Yiddish literary group, introduced in the daily *Vilner Tog* in 1929 with the headline: "Young Vilna Marches into Yiddish Literature." It aroused excitement through its miscellanies (*Yung-Vilne*, 1934–36), its contributions to local and international Yiddish journals, and individual books of verse and fiction. Principal members included poets Chaim *Grade, Shimshon Kahan, Peretz Miransky, Abraham *Sutzkever, Elkhanan Wogler, and Leyzer *Wolf, prose writers Shmerke *Kaczerginski and Moyshe Levin, and artists Bentsie Mikhtom and Rokhl Sutzkever. Dozens more were associated with the group, whose members were united by generation, place, a shared humanistic orientation, and the encouragement of local intellectuals like Zalman *Rejzen and

Max *Weinreich. A Yung-Vilne evening in the Vilna ghetto, the participation of several members in the partisan underground, and the accomplishments of Grade and Sutzkever as leading postwar Yiddish writers assure that Yung-Vilne will be remembered as one of the great incubators of Jewish creativity in interwar Poland.

YUSHKEVICH, SEMYON SOLOMONOVICH (1868–1927), Russian playwright and novelist. An Odessa physician, Yushkevich published his earliest work in 1897 and was encouraged by Maxim *Gorki to write about Jewish life in Russia. In his plays and narrative works he often contrasted poor, but virtuous, Jews with their wealthy, but vulgar, coreligionists.

Yushkevich's plays include *Golod* ("Hunger," 1905), *Dina Glank* (1906), and *Komedia o svadbe* ("The Comedy of Marriage," 1911); and his other works include *Yevrei* ("Jews," 1903), stories; *Khaimka i Yoska* (19052); and *David Levin* (1918). A 14-volume edition of his works appeared in 1914–18. Yushkevich also wrote plays in Yiddish, some of which – such as the highly successful *Miserere* (1910) were also published in Russian (1923). After immigrating to the U.S. in 1920, Yushkevich contributed to the New York Yiddish press and published the novels *Epizody* (1923), which dealt with the Russian civil war, and *Leon Drey* (3 vols., 1928). He died in Paris, and a collection of his works appeared posthumously in 1927.

YŪSUF AS'AR YATH'AR DHŪ NUWĀS (MASRŪQ), the last (13th) and most famous king of the Ḥimyarī kingdom of *Yemen (522–525/530 C.E.–637–640/645 Ḥimyarī Era), who adopted Judaism in 380 C.E. Nothing is known about this important historical figure from any Jewish source, and nothing has been preserved in the historical memory or in the oral and written tradition of the Jews of Yemen themselves. All that was known about him originated in contemporary biased – clearly anti-Jewish – Christian literature in various languages and religious trends. These traditions also found their way into Arabic historical literature by means of South Arabian sources. But the updated epigraphic research since the end of the 19th and the middle of the 20th century, enabled scholars to better understand the story of the Jewish king. The first trustworthy depiction was given by H.Z. Hirschberg (1946), and later by Christian Robin (2003, 2005, and 2006). In the Ḥimyarī inscriptions the Jewish king is mentioned as Yūsuf As'ar Yath'ar *malik kull al-shu'ūb* (king of all nations), but in the Arabic historical sources he is known as Dhū Nuwās. Scholars differ about the meaning of the nicknames *Dhū Nuwās* and

Masrūq. Regarding the first, the common explanation refers to his alleged braids or ponytail, while other say that he was first the *qayl* (king) prince of a small locality named *Nuwās*. As to the second nickname, *Masrūq*, some say that it has the same meaning (the common one) of *Dhū Nuwās*, used by the Najrānīs, while other claim it is a disgraceful nickname used by his opponents: the wicked, the abominable or the killer.

Yūsuf was a descendant of the *tuba'* (royal) family of a Ḥimyarī dynasty, but he was not the son of his predecessor Ma'dīkarib Yu'fūr (519–522). He took control of the kingdom about June 522, after the death of the king who was placed on the throne by the Christian kingdom of Aksūm in Abyssinia. Some sources state that he was the successor of Rabī'ah, a member of the same dynasty; but some scholars believe he was a usurper. Judaism had already been adopted in the Ḥimyarī kingdom by the reformer king Abūkarib at the end of the fourth century, as proved by the total disappearance from that time of polytheistic divinities from the Ḥimyarī inscriptions and the multiplicity of Ḥimyarī Jewish inscriptions along with a complete absence of Christian inscriptions until 530. But Yūsuf himself had converted to Judaism, already prior to his accession to the throne, although there is a tendency in modern Arabic research to deny his Jewish conviction and to allege that he was Nestorian, namely Unitarian Christian (al-Faraḫ, 750), against all unequivocal evidence of epigraphy. However, Yūsuf's policy was to unite all the princely factions in his territory into one Jewish kingdom. After seizing power, Yūsuf revolted against Abyssinia, seeking to throw the foreign Ethiopian invaders out of Yemen. According to Christian sources (Syriac and Greek), as well as early Arabic sources, he conducted a fanatical policy of forced conversion to Judaism; he captured the Ethiopian garrison in the capital of Ẓafār (125 km south of *San'a) and burned the church there as well as other Christian churches in the country, such as that of Makhāwān (modern Mochā). Then he annihilated the Christian population connected with Aksūm and Byzantium, particularly in the coastal areas and in Najrān. But later Yemeni-Muslim scholars of the 10th–12th centuries offer a different story. They write about two Dhū Nuwās, one who indeed destroyed the Christians, and the other, who lived 400 years earlier and was a great king.

Two Christian contemporary sources, the Syrian 'Book of the Himyarites' (*Ketava de-Ḥimyarayya*) and the epistle of Simon of Beit Arsham, relate that Yūsuf maintained political relations with the *ḥakhamim* of *Tiberias, two of whom negotiated with the Christians who were besieged in Ẓafār. Basing himself on this information, Hirschberg put forward the theory about a Jewish international coalition of Mar Zutra, a scion of King David and direct successor to the position of exilarch in Babylonia who had immigrated to Tiberias and was backed by the Persian kingdom, and the Jewish king of Ḥimyar against Christian Byzantium and its allies in the kingdom of Aksūm and in Yemen.

The greatest event of his reign is the capture of Najrān, the large Monophysite Christian stronghold in northern Yemen. Christian sources quote John of Ephesus that Dhū Nuwās decided to persecute the Christians living in his kingdom as a response to the persecution of his co-religionists in their kingdoms, especially in the Byzantine Empire, and that after taking control of the town he burned its Christian residents. The first quoted number of dead in those sources was relatively small – 200 – but in the course of time it was gradually inflated and under their influence (also in Arabic sources, which were separated from the events by hundreds of years), rose to 70,000. Some scholars believe that there is also an allusion to the burning of the Christians in Najran in the *Koran (Sura 85:4–5).

The fall of Najrān and the alleged massacre of its Christians caused an enormous shock in the Christian world, which issued a call for a war of vengeance. Patriarch Timothy of *Alexandria wrote a letter to the Ethiopian emperor Ella Aṣbaḥa III Caleb urging an aggressive action against the Jewish Ḥimyarī king, and the Byzantine emperor Justin I offered the use of 60 ships. The Ethiopian forces, led by Caleb himself, started a crusade and were eventually victorious in a great battle on the shore of Zabīd in 525. Yūsuf, who despite his endeavors could not secure any allies from among the enemies of the Byzantine Empire or from among the local chiefs, was defeated and fell on the battlefield. A South Arabian legend, later infiltrated into modern Jewish literature (Friedberg 1893/9), relates that Yūsuf sprang into the sea astride his horse and was drowned. But in 1931 the German archaeologists Rathjens and Wissmann unearthed his tomb in Ghaymān, southeast of *San'a. Yemen, however, remained a restless province, and Caleb soon granted it independence under the Christian prince Abraha (535–565). Ḥimyar remained under the control of Aksūm until the conquest of the country by the Persian Sassanids c. 570/5.

During the 1950s five inscriptions were discovered within the proximity of Najrān, referring to Yūsuf with clear Jewish elements, all of them from June–July 523 (Ry 508, Ja 1028, Ry 507, Ry 513, Ry 515). These inscriptions enriched the information about the Jewish king. Three of them were written by Sharaḥbīl Yaqbul, the commander of the royal army and a member of the Dhū Yazan family. The two other were written by other officers of the same army. From Ry 507 and Ja 1028 we know the Arabic names of Yūsuf: *As'ar* and *Yath'ar*. The inscriptions Ry 507 and Ja 1028 provide interesting details, like the submission of military units from Najrān. It is hinted that the king suspected the Monophysite Christian community in Najrān of treason. Indeed, the agitation against the king in Najrān was effective and an open revolt broke out. A number of Jews in the town were killed, and its inhabitants openly refused to obey the king's orders. On this occasion Yūsuf would not forgive the inhabitants of the town and he set out to conquer it. The Christian sources concede that the king proposed peace in exchange for the submission of the town and that it was only after he realized that his offer went unheeded that he started to fight.

The Jewish elements are: "*lhn* for *Elohim* (Ry 508, Ja 1028), *Yosef* the name of the king (Ry 508, Ja 1028, Ry 507), *Rb-hd* or *Rb-hwd* – the God of the Jews (Ja 1028, Ry 515), and *Amen* (Ry 513). According to Ch. Robin (2006), however, the depiction of the victories of Yūsuf on his Christian opponents and the destruction of the churches in Ẓafār and Makhāwān (Ry 507, Ry 508, Ja 1028) was the main goal of the inscriptions, intimidating the rebellious Christian Najrānīs. This interpretation of the inscriptions that the conflict between Yūsuf and the residents of Najrān was basically political contradicts the strong impression received from Christian and Arabic sources that it was religious. Robin conjectures that Yūsuf was much less radical than Abūkarib in his religious politics. He just wanted a Jewish government without requesting to establish the organization maintained by Abūkarib. For him his opponents were first of all those foreign powers – Byzantium and Aksūm – who wanted to dominate Yemen, using the Christian Ḥimyarīs, and not Christians as a whole. Yūsuf's ambitions were more political and military than religious.

[Yosef Tobi (2nd ed.)]

YZRAELY, YOSSI (1938–), theater director and poet, professor in the theater department of Tel Aviv University. Yzraely was born in Jerusalem. After obtaining his diploma from the London Academy of Dramatic Art, Yzraely continued his B.A. studies at Bristol University, and completed his Ph.D. at Carnegie Mellon University in Pittsburgh. He wrote his doctoral thesis on Vakhtangov's staging of *The Dybbuk*. Yzraely taught and directed from 1969. Yzraely served twice as artistic director: at the Habimah National Theater, from 1975 to 1977, and at the Khan Theater in Jerusalem, from 1984 to 1987. In both cases his artistic direction was impressive, albeit controversial. He was a full professor in the Department of Theater Arts at Tel Aviv University, and between 1982 and 1989 he was visiting professor at Carnegie Mellon University in Pittsburgh. Between 2001 and 2005 he published five books of poetry.

Yzraely's first professional directing in Israel was Shlonski's *Uẓ-Li Guẓ-Li* at the Cameri Theater in 1965, which was a great success; the critics hailed the birth of a new theater director. This success was repeated in the productions that followed: Strindberg's *The Creditors* (Zavit Theater, 1966), Mrozek's *Striptease* (Zavit Theater, 1967), Beckett's *Waiting for Godot* (Habimah Theater, 1969), A.B. Yehoshua's *Night in May* (Bimot Theater, 1969), and Seneca's *Medea*. In all of these performances Yzraeli's directing method was based on a personal reading of the text and on the creation on stage of a powerful visual metaphor that brought to life his interpretation of the text with the aid of the actors' movements and gestures, the stage design, the music, and the lighting.

In 1972 Yzraely directed Dan Almagor's adaptation of ḥasidic tales *Ish Ḥasid Hayah* (*Only Fools Are Sad*, Bimot Theater, 1972). The performance enjoyed great success and led to a series of very personal interpretations of Jewish material on the stage. Thus, Yzraely adapted Agnon's novels for the theater while keeping the epic components of the narrative and using theatrical images to enhance the dramatic situations; *Hakhnasat Kallah* (*Bridal Canopy*, Habimah National Theater, 1972), *Sippur Pashut* (A *Simple Tale*, Habimah National Theater, 1979), *Temol Shilshom* (*Yesterdays*, Habimah National Theater, 1982), and *Tehillah* (Khan Theater, 1984) were very powerful performances in which Yzraely established an idiosyncratic theatrical language. He also adapted for the stage Rabbi Nachman of Bratzlav's tales *The Seven Beggars* (Khan Theater, 1979), and a theatrical collage, *Nothing Is More Whole than a Broken Heart*, based on Rabbi Nachman of Bratzlav's dreams, prayers, and tales (State Theater, Heidelberg, Germany, 1981, and Berlin Festival, 1982).

Yzraely is also internationally known for his *mise en scène* of classical drama: Sophocles' *Antigone* (Kresge Theater, Pittsburgh, 1990), *Oedipus* (Haifa Municipal Theater, 1992), Shakespeare's *King Lear* (Shakespeare in the Park Festival, Delaware Park, Buffalo, New York, 1983), *Measure for Measure* (Three Rivers Shakespeare Festival, Pittsburgh, 1985), *Anthony and Cleopatra* (Three Rivers Shakespeare Festival, Pittsburgh, 1989), *Romeo and Juliet* (Shakespeare in the Park Festival, Delaware Park, Buffalo, New York, 1993), and Corneille's *The Illusion* (an adaptation of *L'Illusion Comique*, Khan Theater, Jerusalem, 2002). Yzraely is a specialist in Ibsen's drama. His performances of *Peer Gynt* (Habimah National Theater, 1971), *The Enemy of the People* (Habimah National Theater, 1976), *Little Eyolf* (Khan Theater, Jerusalem, 1987), and *The Wild Duck* (Beer Sheva Municipal Theater, 1987) sought the points of connection between realism and symbolism. In 1987, Yzraely was given the Ibsen Medal by the mayor of Skien, Norway, for his distinguished presentations of Ibsen's plays.

Yzraely's international directing career started at the same time as his Israeli career. From 1966 he directed in Manchester, London, Heidelberg, Berlin, Pittsburgh, Buffalo, and New York. He received important awards and prizes for his performances: the award (twice) for best original production of the year from the Israel Ministry of Education and Culture (for *Utz-Li Gutz-Li* and *Ish Ḥasid Hayah*) and the David's Harp Award (for *Ish Ḥasid Hayah* and for *A Simple Tale*). In 1982 he was chosen by the Pittsburgh press as best director of the year for his staging of *Ghost Sonata*, and in 1986 he was chosen as best director of the year by the Pittsburgh *Post-Gazette* for his staging of *Measure for Measure*.

BIBLIOGRAPHY: G. Kaynar, *Interview with Y.Y.*, in: *Teatron 02* (June 2002), 64–73; idem, "Translation as Realization of Scripted Actions and Staging Metaphor: Y. Yzraely's Reading of Ibsen's *The Lady from the Sea*," in: *Assaph*, 16 (2000), 44–64.

[Nurit Yaari (2nd ed.)]

The letter "Z" used as an "S" at the beginning of the phrase Stetit Salomon ante altare. The illumination shows King Solomon holding his scepter. Detail from a book of homilies, France, 1170. Cambrai, France, Bibliothèque Municipale, Ms. 528, fol. 249v.

ZA-ZY

ZABARA, NATAN (1908–1975), Russian Yiddish novelist and playwright. Zabara was born in Rogachev, Belorussia. In the late 1920s he studied at the Institute of Jewish Culture associated with the Ukrainian Academy of Sciences. He began publishing in 1930 and wrote *Radioroman* ("Radio Novel," 1932) about the development of new military technology: novels about the happy life of Soviet Jews, such as *Nilovka* ("Nilovka," 1938), books of essays such as *Mensh un zeitn* ("Peoples and Times," 1938), a novel, *Hein vert geboyrn a velt* ("Today a World is Born," 1965: Russian trans. 1968), reflecting his front-line experience during World War II and his experience as a correspondent for the Soviet press in post-war Germany, and his novel-chronicle *A Poshete Mame* ("An Ordinary Mama," 1967) about G. Chudnovskiy, the first Soviet commander of the Winter Palace and red commissar of the city of Kiev.

Between 1950 and 1956, like the majority of the surviving Jewish cultural figures in the Soviet Union, Zabara was in jail and in prison camp (in Kolyma). He arranged Passover eve services (*sedarim*) for Jewish youth and introduced them to their national traditions and culture. On regaining his freedom, he became one of the first underground teachers of Hebrew in Kiev.

His uncompleted three-part historical novel *Galgal Ḥozer* ("All Repeats Itself," Moscow, 1979) aroused the interest of Jewish readers far beyond the borders of the Soviet Union. The work presents a broad panorama of Jewish life of the Middle Ages – depicting Jewish writers, poets, scholars, philosophers, and patrons of the 13th–14th centuries. Zabara often introduced into his novel sayings and legends taken from ancient sources, often citing them in Hebrew or Aramaic, then translating them into Yiddish. The publication of this was an exceptional event in official, i.e. published, Soviet Jewish literature, which generally avoids works reflecting Hebrew cultural creativity.

[*The Shorter Jewish Encyclopedia in Russian*]

ZABLUDOW (Pol. **Zabludów**), town S.E. of *Bialystok, in N.E. Poland. Jewish settlement in Zabludow began to develop

toward the end of the 15th century. The wooden synagogue, built in 1646 and restored in 1765, is one of the best examples of the type in Poland. An important commercial center, Zabludow was the venue of the meetings of the Council of Lithuania (see *Councils of Lands) in 1664 and 1667. The Russian conquest in 1660 caused terrible suffering to the community. The minute book *(pinkas)* of the community, containing its records from 1650 to 1800, and of the burial society (1701–1819) are extant. The Jewish population increased from 831 in 1764 to 2,621 by 1897 (68.6% of the total population). During the 19th century weaving and tanning industries developed in Zabludow. Owing to deteriorating economic conditions, however, many Jews immigrated to the United States between 1905 and 1925. Zabludow reverted to Poland after World War I. In 1939 the community numbered about 2,000. During World War II, the Jews of Zabludow were mobilized by the Germans for work in the tanneries. On November 2, 1942, they were deported to the death camp at *Treblinka.

[Yehuda Slutsky]

ZABOLOTOV (Pol. **Zablotów**), town in Ivano-Frankovsk (Stanislav) district, Ukraine. The Jewish settlement in Zabolotov developed in the 18th century, and by 1764 there were 986 Jews in the town. From 1772 till 1918 the region was part of the Austrian empire. In the early 19th century there was a strong ḥasidic trend in the community, due mainly to David Hager (d. 1848; see *Kosov), who founded a rabbinic dynasty centered in the town. The *Baron de Hirsch Foundation established a school and a bank. The Jewish population numbered 1,730 (49% of the total) in 1880; 2,009 (50%) in 1890; 2,092 (49%) in 1900; and 2,171 (46%) in 1910. Toward the end of World War I many Jews left Zabolotov because of antisemitic attacks. In 1921 there were only 1,454 Jews (41%) left. Between the world wars the town was under Polish administration.

[Shimshon Leib Kirshenboim]

Holocaust Period

Under Soviet rule (1939–41) the town's Jewish institutions were disbanded. Early in July 1941 Hungarian forces took Zabolotov. The Ukrainians organized pogroms against the Jewish inhabitants. The town passed to direct German rule in September 1941. The Germans imposed a *Judenrat, headed by Neta Feliks, but he was removed shortly after for refusing to fulfill German orders. On Dec. 22, 1941, the authorities carried out an *Aktion* against the Jews, killing and burying 900 Jews in trenches on the road to Trojce. About 100 Jews were shot in the town itself. This was followed by the deportation of 250 Jews on April 11, 1942, to an unknown destination. On April 24 orders were given for the general evacuation of the remaining Jews to the ghetto in *Kolomyya within a three-day time limit. The mass exodus of inhabitants was averted

for a few days by the payment of a sum of money, but afterward everyone moved, except for 20 persons designated as "indispensable," who were allowed to stay. In the Kolomyya ghetto the refugees underwent starvation and suffered from disease. About 250 Jews working in the vicinity of Zabolotov were again allowed to live in the town, and were exempt for the meantime from deportation. On Sept. 7, 1942, the remainder of the Jewish community of Zabolotov, along with all the Jews in that district, were sent to Snyatyn. They were all deported to the *Belzec extermination camp. The Zabolotov Jews in Kolomyya were liquidated along with the other inmates of the Kolomyya ghetto in an *Aktion* in January 1943.

Societies of former residents of Zabolotov function in Israel and the U.S.

BIBLIOGRAPHY: B. Wasiutyński, *Ludność żydowska w Polsce w wiekach XIX i XX* (1930), 124; R. Mahler, *Yidn in Amolikn Poyln in Likht fun Tsifern* (1958), index; *Ir u-Metim: Zabolotov ha-Mele'ah ve-ha-Ḥarevah* (Heb. and Yid., 1949), a memorial book.

ZABRZE (from 1915 to 1945, **Hindenberg**), industrial city in Katowice province, Poland. The Jews who first settled in Zabrze at the beginning of the 19th century belonged to the congregation of neighboring *Beuthen. An independent community was established in 1872. A synagogue was erected in 1865 and a cemetery opened in 1871. In 1931 there were 1,200 Jews living in Zabrze out of a total population of 70,000. The community was annihilated by the Nazis. The new community formed after World War II consisted mainly of Jewish repatriates from Russia.

ZACH, NATHAN (1930–), Hebrew poet. Born in Berlin, Zach was taken to Palestine by his parents in 1935 and grew up in Haifa. He studied at the Hebrew University and began publishing poetry in the early 1950s in the new journal *Likrat* ("Towards"), which he edited together with Benjamin Hrushovski. A leading member of a group which sought to free Hebrew poetry from pathos, ideological encumbrance, and an over-symbolical texture, he was also active in founding the journal *Akhshav*. In the early 1960s he edited (together with Ori Bernstein) another new journal, *Yokhani*. From 1968 to 1979 he lived in England and completed his Ph.D. thesis on English Literature at the University of Essex. After his return to Israel, he lectured at Tel Aviv University and was appointed professor at Haifa University. His first collection, *Shirim Rishonim* (1955), was followed by *Shirim Shonim* (1961), *Bi-Mekom Ḥalom* (1966), *Kol he-Ḥalav ve-ha-Devash* (1966), and *Nathan Zach* (1962), a selection of his poetry together with critical notes by the editor, Dan Tsalka. Later collections include, among others, *Ẓefonit Mizraḥit* ("North by Northeast," 1979), *Anti-Meḥikon* ("Hard to Remember," 1984), *Keivan she-Ani ba-Sevivah* ("Because I Am Around," 1996) and *Ha-Zamir Kevar Lo Gar Po* ("The Nightingale No Longer Lives Here," 2004). No doubt one of the seminal voices in contemporary Hebrew poetry, a writer who had a decisive influence on other, also younger poets, Zach's nonsymbolic, nonallusive diction

marks a conscious break from the literary tradition, particularly from the poetic expression of A. *Shlonsky and N. *Alterman. Zach's oeuvre displays a variety of themes and genres and an astounding virtuosity of language, avoiding sentimentality and highlighting simple imagery. Full of humor, irony, and sophistication, and characterized by dramatic immediacy, his poems contemplate the transience of relationships, the folly of humans, love and death. Repetitions, wordplay, and a distinct rhythmic quality typify many of his poems. Together with Rashed Ḥussein he translated Arabic folk songs, *Dekalim u-Temarim* (1967). Zach also published *Zeman ve-Ritmus ezel Bergson ve-ha-Shirah ha-Modernit* (1966) and a collection of essays, *Kavei Avir* ("Airlines," 1983); he edited the selected works of Ya'akov *Steinberg (1963). His book *Mot Imi* ("The Death of My Mother," 1997) is an impressive, moving homage to his mother, combining prose and poetry, the descriptive and the meditative. Bodily decrepitude and mental frailty are central themes in the book, as well as the portrayal of the mother, of Italian origin, as a stranger in a country which was to be her home. Zach also published a number of books for children, including *Ha-Nesher ha-Gadol* (2001) and *Devorah, Devorah* ("Devorah, the Bee," 2001). Together with poet Moshe Dor, Zach edited the anthology *The Burning Bush: Poems from Modern Israel* (1977). He also translated several plays for the Hebrew stage, by Max Frisch and Bertolt Brecht. He was awarded the Bialik Prize (1982), the Israel Prize (1995), and the Acum Prize for his life work (2003). Several collections appeared in translation: *Against Parting* (1967), *The Static Element* (1982), *Lost Continent* (French: 1989), *Selected Poems* (Italian: 1996; 1998), *Collected Poems for Children* (Italian: 2003). In 2004, Zach received an honorary doctorate from the University of Geneva for "his contribution to the renovation of the poetry of the second half of the twentieth century." A list of his poems translated into English appears in Goell, Bibliography, 1790–93, and further information is available at the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

ZACHARIAS, JERROLD REINACH (1905–1986), U.S. physicist and educator. Born in Jacksonville, Florida, Zacharias joined the staff of the Massachusetts Institute of Technology Radiation Laboratory in 1940. He spent 1945 at Los Alamos working on the atomic bomb project, and in 1946 was appointed professor of physics and director of the nu-

clear science laboratory at M.I.T., where he pursued research on the radio frequency spectra of atoms. This led to the development of an atomic clock, the first practical atomic frequency standard.

In 1956 Zacharias founded the now internationally known Physical Science Study Committee to devise more effective methods for the teaching of physics. He was named institute professor and director of the Education Research Center at MIT in 1968. He was coauthor of *Medical Education Reconsidered* (1966).

ZACHARIAS, JOHN (1917–), Swedish stage director. At the Boulevard Theater, Stockholm, 1947–50, Zacharias directed *Thieves' Carnival* by Jean Anouilh and *Crimes and Crimes* by August Strindberg. In 1950 he became head of the City Theater of Helsingborg, and in 1953 head of the City Theaters of Norrköping and Linköping, a position he retained for 25 years. Among his most successful presentations were *Drei Groschen Oper*, *The Diary of Anne Frank*, *The Oppenheimer Case*, and *Fiddler on the Roof.*

ZACUTO, ABRAHAM BEN SAMUEL (1452–c. 1515), astronomer and historian. His ancestors were French Jewish exiles who had come to Castile in 1306. In his biblical and talmudic studies he was instructed by his father and R. Isaac *Aboab II, and he attended the University of Salamanca, where he specialized in astronomy and astrology, subsequently becoming a teacher in these fields. At the behest of the bishop of Salamanca, Gonzalo de Vivero, who was his patron and admirer, Zacuto wrote his major astronomical work, *Ha-Ḥibbur ha-Gadol* (1473–78). At this court, Zacuto engaged in astronomical research and writing until the prelate's death in 1480. The bishop, in his will, requested that all of Zacuto's Spanish writings be compiled and bound in one volume and placed in the cathedral library. Zacuto continued his astronomical researches in the service of Don Juan de Zuñiga, grand master of the Order of Knights of Alcántara, and settled in Gata in the province of Cáceres. Under his aegis, he wrote his book on the influence of the stars, *Tratado breve en las influencias del cielo*, to which he appended a treatise on solar and lunar eclipses, *De las eclipses del sol y de la luna*. The work was apparently written in Hebrew, but is extant only in its Castilian translation (published by J. de Carválho in 1928; see bibl.). In 1492, when the Jews were expelled from Spain, Zacuto emigrated to Portugal, where he was appointed court astronomer by King John II. The king's successor, Manuel I, confirmed the appointment. Before sending Vasco da Gama on his sea voyage to India (1496), the king sought the advice of Zacuto, who then lived in the city of Beja, on a calculation of the position of the stars. He foretold the success of the expedition and that the Portuguese would conquer a large part of India. He also instructed the sailors in the use of his newly perfected *astrolabe, his tables, and maritime charts, with which Da Gama's ships were equipped. Da Gama himself also consulted Zacuto in Lisbon before he set sail. In 1497, when King Manuel

forced all Jews in his country to convert, Zacuto left Portugal and went to North Africa. Twice he and his son Samuel were taken prisoner, but they finally reached Tunis. In 1504, during his sojourn in Tunis, he completed the *Sefer ha-Yuḥasin* (last edition 1963), a book of genealogies, on which he had worked for many years.

Zacuto's achievements in astronomy were many: his astrolabe of copper, the first of its kind (previously they had been made of wood), enabled sailors to determine the position of the sun with greater precision; his astronomical tables, based on the Alphonsine tables, were an improvement on the latter. They permitted sailors to ascertain latitudes without recourse to the meridian of the sun, and to calculate solar and lunar eclipses with greater accuracy. While frequently quoting his predecessors, Zacuto also draws attention to their deficiencies. Proudly he asserts: "I, Abraham Zacuto, the author, have corrected all the books (containing the Alphonsine tables) in accordance with the tables that I have prepared, and my tables circulate throughout all Christian and even Muslim lands" (*Yuḥasin*, 222a). Zacuto's astronomical findings played an important role in the Spanish and Portuguese discoveries. Columbus used his tables on his voyages, and on one occasion they were instrumental in saving him and his crew from certain death. Knowing from the Zacuto tables that a lunar eclipse was imminent, Columbus threatened the natives that he would deprive them of the light of the moon as well as of the sun. (A copy of the tables, with Columbus' notes, is preserved in Seville). Zacuto's astronomical work *HaḤibbur ha-Gadol* (the Hebrew original is extant in several manuscripts) enjoyed a wide reputation during his lifetime.

In 1481, it was translated into Spanish by Juan de Salaya, who had been professor of astrology and of logic at the University of Salamanca. (In 1931, F. Cantera Burgos published Salaya's translation together with his own, which is based on the original.) His pupil Joseph (Vizinus) Vicinho translated an abridged version of *Ha-Ḥibbur ha-Gadol* into Latin, under the title *Almanach perpetuum celestium motuum*, and then rendered the Latin into Spanish (both were published in Leiria in 1496). Vicinho's version is the only Spanish incunabulum published in Portugal. The two translations were republished by the Portuguese government in 1915 and 1922. In 1496, a revised Latin version of the *Almanach*, edited by Alfonso de Córdova, appeared in Venice. Vicinho's Spanish translation, transliterated into Hebrew characters and entitled *Be'ur Luḥot Kevod Rav Avraham Zakkut* by *Daniel b. Peraḥyah ha-Kohen, was published in the latter's *She'erit Yosef* (Salonika, 1568). The publication was mainly for the Spanish exiles. An Arabic translation of the *Almanach* is extant in Milan (Ms. Ambrosiana 338). *Ha-Ḥibbur ha-Gadol* or sections of it are referred to in Hebrew literature under various titles: *Ha-Ḥibbur ha-Gadol*, *Be'ur Luḥot*, *Luḥot Temidim*, *Tekufot u-Mazzalot*, *Tekhunot Zakkut*, *Almanak*, and *Almagest*.

Sefer ha-Yuḥasin, a work composed in the spirit of the writings of his predecessors (e.g., R. *Sherira b. Ḥanina Gaon,

R. Abraham *ibn Daud, author of *Sefer ha-Kabbalah*, Maimonides and others who had written introductions to the Talmud), intended to outline the historical development of the Oral Law and to establish the chronology of the Jewish sages who had transmitted it. Meant for scholarly study by students of Jewish lore, and to stimulate debate, this work at times elucidates a particular law for the specific purpose of fostering greater faith. The originality of the research is mainly contained in the first two treatises of his book, which cover the period of the Second Temple, the Mishnah, and the Talmud. From the standpoint of completeness, these treatises are superior to anything written by Zacuto's predecessors and they laid the foundations for scholarly research by succeeding generations. In numerous passages, he takes issue with Maimonides and R. Abraham ibn Daud, to whose writings he refers as *Kabbalat he-Ḥasid*. Chapters three and four of *Sefer ha-Yuḥasin* discuss the succession of the *savoraim*, the *geonim*, and the rabbis. (In his treatment of the material Zacuto, by and large, follows the line of thought of Abraham ibn Daud.) Chapter five expounds the epoch from the beginning of the rabbinic period in Europe until the author's time (the period of the expulsions from Spain and Portugal). In the latter treatise, Zacuto bases himself on a Hebrew chronicle which was also the groundwork of similar writings by *Joseph b. Ẓaddik of Arévalo and *Abraham b. Solomon of Torrutiel (there is no reason to assume that the latter's work was known to Zacuto). A large part of the treatise, however, is original research and analysis, based on later rabbinic literature. Zacuto incorporated in the chapter the well-known story about the appearance of the *Zohar in Spain, by Isaac b. Samuel of Acre. The author disregarded the critical conclusions that might be drawn from the story and confirmed the belief that the disciples of *Simeon b. Yoḥai had compiled the Zohar. Consequently he relied on the Zohar in matters of *halakhah* and history. The sixth chapter is a chronological outline of the history of various nations and the scientific research and inventions carried out by their scholars. This treatise is based on Latin and Spanish works. While Zacuto's approach to astronomy is scientific in these analyses, his views are restricted by Jewish tradition and *aggadah*. He also seems careless and disparaging in his examination of gentile lore. The advantage in its study he saw mainly in that "it greatly assists the Jews dwelling among Christians to argue with them about their religion." *Sefer ha-Yuḥasin* was first published by Samuel Shalom (Constantinople, 1566) together with an introduction and notes by the editor, as well as a Hebrew translation of Josephus' *Contra Apionem*. It was next published in Cracow (1580–81) with the notes of Moses b. Israel *Isserles, and several times thereafter. In modern times, the work was published by Z.H. *Filipowski (1857) from an Oxford manuscript. It was reprinted (1925, 1963[2]) by A.H. *Freimann, together with a biographical and critical introduction, and with corrections and notes that had appeared after Filipowski's publication. The complete sixth chapter, as previously published by A. *Neubauer, is also included.

Little is known of the last years of Zacuto's life. In 1513 he was in Jerusalem and stayed at the yeshivah of R. Isaac Sholal, where he compiled an almanac "in the holy tongue." Various passages in *Sefer ha-Yuḥasin* testify to his interest in the burial sites of the pious in Erez Israel. In 1515 Zacuto was in Damascus. An eschatological passage prophesying the coming of the redemption in 1524 is found in a manuscript ascribed to Zacuto. There is, however, no substantiating evidence that Zacuto was still alive close to that date.

[*Encyclopaedia Hebraica*]

ZACUTO, MOSES BEN MORDECAI (c. 1620–1697), kabbalist and poet. Zacuto, who was born into a Portuguese Marrano family in Amsterdam, studied Jewish subjects under Saul Levi *Morteira (an elegy on the latter's death by Zacuto was published by D. Kaufmann in REJ, 37 (1898), 115). He also studied secular subjects. According to tradition, he later fasted 40 days "in order to forget the Latin language." He was a student in the *bet midrash* of Amsterdam and in his youth traveled to Poland to study in the yeshivot there. Zacuto was attracted by Kabbalah and refers in his letters to his teacher Elhanan, perhaps "Elhanan the kabbalist," who died in Vienna in 1651. He moved to Italy, remaining for some time in Verona. From 1645 he lived in Venice and served for a time as a preacher under Azariah *Figo. Afterward, he became one of the rabbis of the city and a member of the Venetian yeshivah. Between 1649 and 1670 he was proofreader of many books printed in Venice, especially works on Kabbalah. He edited the *Zohar Ḥadash* in 1658, and also wrote many poems for celebrations and special occasions. Zacuto tried to acquire the manuscripts of the Safed kabbalists, especially those of Moses *Cordovero and the different versions of the works of Ḥayyim *Vital. He befriended the kabbalist Nathan Shapiro of Jerusalem and the old kabbalist Benjamin ha-Levi, who served as an emissary from Safed in Venice for two years (1658–59).

At the outset of the Shabbatean movement, Zacuto tended to give credence to the messianic tidings, but he was opposed to innovations such as the abolition of *tikkun ḥazot* ("midnight prayers") and other customs. In the spring of 1666, in a letter to Samson Bachi, he took a positive but cautious stand in favor of the movement, mainly supporting its advocacy of repentance. After the apostasy of *Shabbetai Ẓevi he turned his back on the movement and joined the other Venetian rabbis in their action against *Nathan of Gaza when he came to Venice in the spring of 1668. At the same time he openly opposed the Shabbateans in a letter to Meir Isserles in Vienna, and in subsequent years rejected Shabbatean propaganda, despite the fact that his favorite students *Benjamin b. Eliezer ha-Kohen of Reggio and Abraham *Rovigo were among the "believers" (*ma'aminim*). Relations between Zacuto and these two disciples became strained because of their differences, when, for example, the Shabbatean scholar Baer Perlhefter came to Modena and Rovigo supported him. The Shabbateans on several occasions criticized Zacuto, whose conservative temperament displeased them. In 1671 he was invited to serve as rabbi in Mantua, but he did not go until 1673, remaining there until his death. He enjoyed great authority as the chief of the contemporary Italian kabbalists and corresponded with kabbalists in many places. He never realized his desire to settle in Erez Israel.

Zacuto's published exoteric works include his commentary on the Mishnah, *Kol ha-Re-Me-Z*; he was known throughout his life as Re-Me-Z, from his initials (Rabbi Moses Zacuto). Part of the work was published in Amsterdam in 1719. Ḥ.J.D. *Azulai, in his *Shem ha-Gedolim*, noted that the manuscript was twice as long as the printed edition. A collection of halakhic responsa was published in Venice in 1760. A commentary on the Palestinian Talmud is lost. His major activity, however, was in Kabbalah. Zacuto opposed the mingling of the kabbalistic system of Cordovero with that of Isaac *Luria which was then current in some circles (Tishby, in: *Zion*, 22 (1957), 30) and for this reason he criticized Solomon Rocca's *Sefer Kavvanat Shelomo* (Venice, 1670) even though he composed a poem honoring the author (see Zacuto's *Iggerot*, letters nos. 7, 8). He went over the entire corpus of Luria's and Vital's writings and added many annotations under the name *Kol ha-Re-Me-Z* or the abbreviation *Ma-Za-La-N* (*Moshe Zakkut Li Nireh* – "It seems to me, Moses Zacuto"). Many of them are collected in the books *Mekom Binah* and *Sha'arei Binah* of Isaac Ṣabba (Salonika, 1812–13) and they have partly also appeared in different editions of the works of Vital and Jacob *Ẓemaḥ. Zacuto wrote at least two commentaries on the *Zohar. In the first, he continued *Yode'ei Binah* begun by his contemporary Joseph *Ḥamiẓ (up to Zohar I, 39). Here, Zacuto used many commentaries from the school of Cordovero, the commentary *Ketem Paz* by Simeon *Labi and the first commentary of Ḥayyim *Vital. The printed part contains the commentary up to Zohar I, 147b (Venice, 1663). For unknown reasons it was never circulated. One copy is extant in the library of the *bet din* in London, but there exist complete manuscripts (e.g., British Museum, Ms. Add. 27.054–27.057). *Mikdash ha-Shem*, his second commentary on the Zohar, was written for the most part according to the Lurianic Kabbalah, and was published in abridged form in the *Mikdash Melekh* of Shalom *Buzaglo. The complete commentary is found in the

Oxford manuscripts Opp. 511, 512, 513, 515, 516, 517. *Mezakkeh ha-Rabbim* (Oxford, Bodleian Library, Ms. Opp. 120), though ascribed to him, was not written by him. A long kabbalistic responsum to the rabbis of Cracow on the copying of Torah scrolls, *tefillin*, and *mezuzot* was published several times, in *Mekom Binah*, in *Kiray Sefer* by Menahem Meiri (pt. 2, 1881, 100–8; separately, Berdichev, 1890). Zacuto arranged *tikkunim* ("special prayers") for several religious ceremonies according to Kabbalah. These were often reprinted and had great influence, especially on the religious life in Italy. They include *Sefer ha-Tikkunim* (a *tikkun* for the eve of Shavuot and Hoshana Rabba; Venice, 1659), *Mishmeret ha-Ḥodesh* (*ibid.*, 1660), *Tikkun Shovavim* (the initials of the first six sections of Exodus), i.e., a *tikkun* for fasts undertaken in expiation for nocturnal ejaculations (*ibid.*, 1673), and *Tikkun Ḥaẓot* (*ibid.*, 1704). All these were arranged under the influence of Benjamin ha-Levi and Nathan Shapiro.

A major part of Zacuto's poetry is devoted to kabbalistic subjects, such as his poems in the book *Ḥen Kol Ḥadash* (Amsterdam, 1712), and in *Tofteh Arukh* (a description of hell; Venice, 1715; see below). Besides this he arranged voluminous *collectanea* on kabbalistic subjects. The first was *Shibbolet shel Leket*, on all the books of the Bible (Scholem, *Kitvei Yad be-Kabbalah*, 1930, p. 153, para. 107). This was followed by *Remez ha-Romez* on numbers, *gematria, and explanations of Holy Names according to numerology (Ms. British Museum, Margoliouth 853); *Erkhei Kinnuyim*, selections from the Lurianic Kabbalah in alphabetical order (complete in Ms. Jerusalem 110). Parts of this work were published at the end of *Golel Or* by Meir *Bikayam (1737) and at the end of Bikayam's *Me'ir Bat Ayin* (1755). Another anthology, in alphabetical order, was published as *Em la-Binah*, part of his *Sha'arei Binah* (1813). *Shorshei ha-Shemot*, also called *Mekor ha-Shemot*, is a collection of practical Kabbalah according to the order of the magical "names." This work was widely circulated in manuscript and went through several versions by North African kabbalists. A complete manuscript is in Jerusalem (8° 2454). Essays on kabbalistic subjects have remained in several manuscripts; also a number of important collections of Zacuto's letters are preserved, e.g., Budapest 459 (in his own handwriting); Jerusalem 8° 1466; British Museum Ms. Or. 9165 (in his handwriting); Jewish Theological Seminary, N.Y. Mss. 9906 and 11478; and in the Eẓ Ḥayyim Library in Amsterdam, C15. Only a few were published in *Iggerot ha-Re-Me-Z* (Leghorn, 1780).

[Gershom Scholem]

Yesod Olam

Zacuto was the author of the first biblical *drama in Hebrew literature, *Yesod Olam* (ed. D.J. Maroni, 1874; ed. A. Berliner, 1874). The play was not published during the author's lifetime, apparently because it comprised only part (estimated at one-third) of a projected lengthy work portraying Abraham in the major stages of his life as a righteous man on whom the entire world rests. Only the first part (and perhaps not all of it) was finished; this deals with the midrashic legend of the shatter-

ing of the household idols in Terah's home, the trial before King Nimrod, Abraham's deliverance from the fiery furnace, and the death of Haran. The play was written according to the classical rules of dramatic theory as they had developed in the 16th and early 17th centuries, but no particular model can be discerned. The author maintained the three unities – of plot, time, and place – even to extremes. No stage effects were introduced and therefore leading characters speak lengthy monologues. The plot is simple and concentrates on the best-known details of the legend while omitting all the minor ones. The hero, Abraham, is portrayed as an exalted and philosophic personality against whom the idol worshipers and the hedonists rebel. The philosophy of the play is rationalist-humanist and Abraham's views are remarkably similar to those of Maimonides; there is no trace of kabbalistic influence.

The style too is classical and the play is composed almost entirely in sonnets. Sentences are generally short and comprehensible, but the language is flowery. Though the vocabulary is largely drawn from the Bible, Zacuto does not hesitate to use talmudic idioms. No details exist from which the exact date of composition can be determined. However, it is clear that Zacuto wrote the play before he became a kabbalist of the Lurianic school. The play treats at length the theory of the immortality of the soul, which is rejected by Nimrod and his sages while Abraham defends it. This is clearly an echo of the dispute over the views of Uriel da *Costa, who angered Sephardi Jewry by his denial of the immortality of the soul. This fact supports the view that the play was written before 1640.

Tofteh Arukh

When he lived in Italy, Zacuto wrote his great dramatic poem, *Tofteh Arukh*. It appears that this work was inspired by Dante's *Divine Comedy*, as the subject matter is the afflictions of the soul in hell. In the opening verses, the dead man recounts his last illness and the arrangements for his burial. Afterward follows the episode of *ḥibbut ha-kever* ("tribulations in the grave"). The angel Duna commences the judgment and trial and with the aid of his angels drags the dead man through the seven sections of hell, showing the terrible punishments suffered by sinners. The conclusion is a description of the difference between the fate of sinners and that of the righteous, and toward the end the angel and the dead man praise God as the true judge. The poem consists of 185 rhymed stanzas of five verses each. The author employs many homonyms, assonances, and word plays, to an extent that becomes tedious. The work attained great popularity, especially among groups of kabbalists, such as *Ḥadashim la-Bekarim*. After its publication (Venice, 1715), a sequel titled *Eden Arukh* was written by Jacob Daniel Olmo. Since the second edition (1743) the two poems have been published together.

ZACUTUS LUSITANUS (**Abraham Zacuth**; 1575–1642), physician. Born in Lisbon into an illustrious Marrano family and a descendant of Abraham ben Samuel *Zacuto, Zacutus became an important figure among Jewish physicians and had a large practice. His non-Jewish name was Manuel Alvares de Tavara. In 1625 he moved to Amsterdam, where he openly returned to Judaism, was circumcised, adopted the name Abraham, and began to use the name Zacuth in his writings. He engaged in fruitful scientific activity, and published many medical books. His main strength is revealed in his accurate clinical descriptions of plague, diphtheria, exanthematous diseases, and malignant tumors; he was one of the first to describe blackwater fever.

His works were collected in two folio volumes, published posthumously in Lyons (1642). They include *De Medicorum Principum Historia* – a systematic description of all diseases, as investigated by physicians of preceding generations; *Introitus Medici ad Praxin* – 80 principles for the physician in his behavior at work; *Zacuti Pharmacopéa* – a compendium of pharmacy, listing also the new drugs imported from Latin America; *Praxis Historarium* – a survey of diseases in internal medicine; *Praxis Medica Admiranda* – a collection of selected rare cases. He anticipated discoveries that appeared in later medical literature, such as Jacksonian epilepsy as well as stomach disease accompanied by dark vomits (apparently peptic ulcer), which he treated with aluminum silicate. Although his writings were intended for a general readership, they included some autobiographical details which emphasized his Jewish origin.

[Joshua O. Leibowitz]

ẒADDIK (Heb. צַדִּיק; lit. "righteous man"), the title applied to an individual who is considered righteous in his relations with God and man. Noah is described as "righteous and wholehearted" (Gen. 6:9), and the Bible is replete with praises of the *ẓaddik*. Acting justly is the *ẓaddik*'s greatest joy (Prov. 21:15), and the righteous man is considered an abomination to the wicked (Prov. 29:27). The righteous live by their faith

(Hab. 2:4), and when their number increases the people rejoice (Prov. 29:2). There are whole generations that are righteous (Ps. 14:5), and in the future the entire Jewish people will be righteous and thereby merit inheriting the land forever (Isa. 60:21). The *ẓaddik* will be rewarded with material prosperity, and his merit will endure forever (Ps. 112:3; Prov. 11:31). Even if he stumbles seven times, he will still rise up again (Prov. 24:16), and God will not suffer the righteous to famish (Prov. 10:3) or be forsaken (Ps. 37:25).

Nevertheless, the Bible also recognizes that there are *ẓaddikim* who undergo tribulations. Abraham pleaded against the possibility that the righteous would perish along with the wicked (Gen. 18:23), and Habakkuk described the wicked swallowing up the righteous (Hab. 1:13). Ecclesiastes also probed this dilemma, remarking that "there is a righteous man that perisheth in his righteousness, and there is a wicked man that prolongeth his life in his evil-doing" (Eccles. 7:15).

The rabbis described the righteous as individuals whose behavior went beyond merely fulfilling the letter of the law (BM 83a and Rashi ad. loc.), and as being scrupulous in monetary matters (Sot. 12a). One passage, however, suggests that the *ẓaddik* is on a lower level than he "that serveth God" (Mal. 3:18, and see Ḥag. 9b). According to one interpretation, Noah is only considered a *ẓaddik* because his moral standards were higher than those of his depraved generation (Gen. 6:9; Sanh. 108a; i.e., it was a relative and not an absolute standard). The rabbis praised the righteousness of the *ẓaddikim* as being greater than that of the ministering angels (Sanh. 93a), and held that if the *ẓaddikim* desired, they were capable of creative acts similar to those of God (Sanh. 65b). It was believed that the *ẓaddik* could annul the decrees of God (MK 16b), and that he is constantly remembered for a blessing by virtue of his good deeds (Prov. 10:7; Yoma 38b). The rabbis attributed the barrenness of the matriarchs to God's desire to hear the prayers of the righteous before he would bless them with children (Yev. 64a). It is because of the merit of the *ẓaddikim* that the world exists (Yoma 38b), and God will never destroy the world as long as there are 50 righteous people alive (PdRE, 25; cf. Gen. 18:26). People are divided into three classes: the completely righteous, the completely wicked, and the intermediate class (RH 16b; cf. Ber. 61b); although the verse "For there is not a righteous man upon the earth, that doeth good, and sinneth not" (Eccles. 7:20) implies that the concept of the completely righteous is purely theoretical. The completely righteous are immediately inscribed in the Book of Life on Rosh Ha-Shanah and they are similarly forthwith inscribed for everlasting life on the Day of Judgment (RH 16b).

For the concept of the *ẓaddik* in Ḥasidism, see *Ḥasidism. For the concept of the thirty-six *ẓaddikim* who inhabit the world in every generation, see *Lamed Vav Ẓaddikim.

[Aaron Rothkoff]

ẒADDIK, JOSEPH BEN JACOB IBN (d. 1149), philosopher and poet. Little is known of his life. From 1138 ibn Ẓaddik held the position of *dayyan* in Cordoba. He exchanged verses with

*Judah Halevi and was in contact with Moses *Ibn Ezra, his contemporaries, and wrote liturgical poetry which won praise from Judah *Al-Ḥarizi. His treatise on logic has been lost. His main philosophical work is preserved in a rather clumsy Hebrew translation replete with arabisms, under the title *Sefer ha-Olam ha-Katan* ("Book of the Microcosm") whose translation M. Steinschneider attributes to Nahum ha-Maʿaravi. The Hebrew text has been edited by A. Jellinek (1854) and by S. Horovitz (1903). Maimonides speaks highly of the author, whom he remembers from his early days in Cordoba, and describes his book as one of great significance, although he acknowledges that he had not seen it. Other medieval writers who quote it include David *Kimḥi, *Jedaiah ha-Penini, and Meir *Aldabi.

The *Microcosm* is purported to have been written in answer to a disciple's question as to what constitutes the "everlasting good and the state of perfection" to be pursued by man according to the teachings of the philosophers. The author is motivated to reply to this question by his desire to offer guidance to his generation, which he sees sunk in "the deep sleep of lethargy" and "drunk with the passions of this world," and which "retains of Judaism but the name and of humanity but the corporeal form." Like the Islamic "*Sincere Brethren" and ibn *Gabirol, he declares the "knowing of God and the doing of His will" to be the twin roads leading to man's ultimate felicity. As for a knowledge of God, it is best obtained by way of self-knowledge, seeing that man is but a microcosmic replica of both the corporeal and spiritual worlds. Thus, by self-inspection "man may climb the ascending stages of knowledge until he reaches the divine knowledge… for by arriving at a knowledge of his intelligent soul, he will achieve the knowledge of its Creator." The title of the book thus indicates its central theme. In treating it, the author shows himself to be steeped in the neoplatonic tradition.

The work is divided into four "discourses." The first deals with epistemology, ontology, and the nature of the corporeal world as well as of the human body. The second elaborates the microcosm theme and describes the nature of the vegetative and animal souls, life and death, sleep and the waking state, the rational soul, the intellect, and the spiritual world. In these two discourses the neoplatonic outlook is predominant. The remaining two discourses follow the pattern of *Kalām theology in that the third deals with the principles of theology, especially the unity and attributes of God; the fourth deals with "serving and disobeying God" and "reward and punishment." The work as a whole thus reflects the two then prevailing trends, *neoplatonism and Kalām.

In his theory of knowledge ibn Ẓaddik says of the senses that they perceive only the accidental qualities (the "shells") of things, whereas the intellect knows the genera and species, i.e., true nature of things which lies in their "spiritual being." There are two kinds of knowledge: self-evident and demonstrative. Like *Saadiah Gaon, he admits that tradition is also a source of true knowledge. Following Plotinus, he speaks of the rational soul as a "stranger in this corporeal world… where-fore men can make themselves understood to one another only through the medium of speech," whereas the souls in the celestial spheres do not require such a medium. In his ontology he follows Isaac *Israeli and ibn Gabirol in assuming that (spiritual) matter and form are constituent elements of the spiritual world. Consequently, the duality of matter and form applies to both corporeal and spiritual beings. All beings, furthermore, are composed of substance and accidents. Matter is potential substance which becomes actual substance only when clothed with form. All natural bodies are composed of the elements, and are therefore subject to generation and corruption. The human body participates in the nature of minerals, plants, and animals. Hence in men are found the courage of the lion, the timidity of the hare, the meekness of the lamb, and the cunning of the fox. His description of man's superiority over the animals (the "balance" of the four elements, upright stature, etc.) closely resembles Israeli's treatment of the subject in his *Treatise on the Elements*. Man is a "celestial plant," hence his head, which is his "root," is directed heavenward.

While the analogy between the human body and the corporeal world is manifest to everybody, the analogy between the soul and the spiritual world can be discerned only when the "veil of (spiritual) blindness" is removed. The rational soul is not corporeal. Ibn Ẓaddik's four proofs in support of this argument are derived, for the most part, from Plotinus. The rational soul is a spiritual substance. The body is not its place, but it is the "place" of the body. God created it from nothing in order that "it may proclaim His works and indicate His existence." He interprets Aristotle's definition of the soul in a neoplatonic sense (as did Isaac Israeli before him): The soul is a substance (not an accident) giving perfection to a natural body which is an instrument (of the function of the soul) possessing life potentially; this substance is the cause of perfection in man by virtue of the fact that it is the cause of life in the hereafter. The rational soul, which is "like a king" and which is destined to lead man to his eternal bliss, receives its "light" from the Intellect, the "matter" of which is the "perfect light and clear splendor" which "emanates from the power of the Creator, without an intermediary." This is a literal quotation from Israeli's metaphysical doctrine, which is itself derived from a pseudo-Aristotelian neoplatonic treatise describing the coming-into-being of the Intellect. His dependence on Israeli is pronounced in this as well as in other matters.

In his Divine attributes he takes issue with the Kalām version, and following largely *Baḥya ibn Paquda's view of the unity of God and the exclusively negative sense of all qualities predicated of the Divine essence, he admits only "attributes of action," and holds that God's essence is "incomparable and unknowable." "The eternal will of God" created the world, and the notion of time is inapplicable to this act. Creation is to be attributed "to God's abundant goodness and mercy and to nothing else." Non-recognition of God's goodness is tantamount to the denial of God. Gratitude is the first duty which religion prescribes. From Saadiah, ibn Ẓaddik adopts the dis-

tinction between the commandments of reason and those of revelation. But even the latter contain some profound, secret, and subtle meaning, as e.g., the commandment of the Sabbath, which teaches "that the world came into being by an act of Creation"; moreover, the Sabbath symbolizes the future world: for example, just as man will have nothing to eat on the Sabbath unless he has prepared the Sabbath meal during the week days, so he will have no share in the future world unless he prepares himself in this world with good deeds.

ZADIKOW, ARNOLD (1884–1943), German sculptor and medalist, killed by the Nazis. He was born in Kolberg, Germany, and lived mainly in Munich and Rome, settling in Paris in 1932. His work as a sculptor was smooth, serene, and highly finished. One of Zadikow's sculptures, the figure of the young David, was exhibited in the middle of the entrance hall of the Jewish Museum in Berlin in 1933. He continued his artistic work even when imprisoned in Theresienstadt, where he died.

[Jihan Radjai-Ordoubadi (2nd ed.)]

ZADKINE, OSSIP (1890–1967), sculptor. Born in Smolensk, Russia, Zadkine studied in London. After serving as a stretcher-bearer in the French army in World War I, he resumed his career in Paris. When the Nazis invaded France in 1940, Zadkine took refuge in the United States and taught at the Art Students League in New York. During this time his work was symbolic of the war period, and included "The Prisoner," "The Phoenix," and "The Warrior." After the war he returned to Paris. In his early years, Zadkine was a cubist, but in the early 1920s he felt restricted by the cubist indifference to human beauty. He then developed a freer and more baroque style. His work is more closely linked to tradition than that of most other members of the cubist generation. Features derived from African primitive art blend with those inspired by classical sculpture. His themes are frequently based on Greek mythology or stimulated by figures from literature and from the Jewish and Christian religions ("Job and His Friends," "David," "The Good Samaritan," "Christ"). He achieved world fame with his sculpture, "The Destroyed City," unveiled at Rotterdam in 1953. This monument, which rises 20 feet, is in the form of a mutilated giant, arms upheld in agony, and symbolizes the ruthless bombardment of the Dutch port city by German planes in 1940. Zadkine, whose preferred media were wood and bronze, produced numerous drawings and lithographs, as well as designs for tapestries. His autobiography, *Le Maillet et le ciseau; souvenirs de ma vie*, was published in 1968.

[Alfred Werner]

ZADOK (Heb. צָדוֹק, "righteous"), priest in the time of king *David. Zadok established a high priestly dynasty which continued until approximately 171 B.C.E., both in the First and Second Temple periods. He first appears, together with *Abiathar, as the priest in charge of the Ark at the time of Absalom's revolt (II Sam. 15:24–37). He and Abiathar joined David in his flight from Jerusalem, carrying the Ark with them, but the king ordered them to return to the capital to inform him of events in Absalom's court. There they had freedom of movement and were able to deliver messages to David about the rebels' intrigues (*ibid.* 17:15ff.). After Absalom's death, Zadok and Abiathar acted according to a message sent to them by David requesting them to suggest to the people that the king should be called back (*ibid.* 19:12–13). They are mentioned next to each other in both lists of David's chief officials (*ibid.* 8:17; 20:25), where Zadok is always mentioned before Abiathar. They are heard of again in the story of the dynastic struggle in David's last days (I Kings 1–2). When *Adonijah plotted to usurp the throne, Zadok remained faithful to David, while Abiathar joined the usurper (*ibid* 1:7,8). When David became aware of the plot, he instructed Zadok and *Nathan the prophet to anoint *Solomon king (*ibid.* 32ff.). For his loyal service in anointing Solomon, Zadok was made chief priest (*ibid.* 2:35), while Abiathar was deposed from the priesthood and banished to Anathoth (*ibid.* 2:26–27). Zadok must have died shortly afterwards, for he is never again mentioned and in the list of the main officials, which was compiled in the middle of the reign, it is his son Azariah who holds the title of priest (I Kings 4:2; the mention of Zadok and Abiathar in verse 4 is probably an interpolation).

Origin

The question of Zadok's origin is extremely obscure, for there is no clear and accurate picture of his background in the Bible. In the narrative he appears, as it were, from nowhere. In II Samuel 8:17 he is called the "son of Ahitub" and seems to be connected with the House of *Eli, but this verse is clearly the result of a textual corruption. Indeed, the prophecy of I Samuel 2:27–36 (cf. I Kings 2:27) makes it clear that the House of Zadok was considered to have supplanted the House of Eli. Nor are the genealogies in Chronicles and Ezra (I Chron. 5:27–34; 6:35–38; 24:3; Ezra 7:2), which treat Zadok as a descendant of the Aaronide house of Eleazar, any more reliable, for they repeat the error of II Samuel 8:17. Zadok thus remains without a genealogy in the ancient texts.

It seems likely, however, that the reason David made Zadok an equal to Abiathar, who had served him loyally from the time of his break with Saul, is connected with the

position occupied by Zadok before he entered the service of David. Several hypotheses have been consequently advanced about his origin:

a) Zadok was the priest of *Gibeon, where the Tabernacle stood (cf. II Chron. 1:3), while Abiathar served before the Ark at Jerusalem (Auerbach; Grintz). This hypothesis is based on I Chronicles 16:37 ff., where the two are mentioned as the principal sanctuaries in David's time. In support of this theory it is pointed out that after the exile of Abiathar not only was Zadok made the sole chief priest, but Solomon went to Gibeon to sacrifice (I Kings 3:4).

b) Zadok was appointed priest already by Saul, replacing Abijah (= *Ahimelech; cf. Jos., Ant., 5:350; Wellhausen).

c) The proper name Ahio in II Samuel 6:3–4 should be read as *'aḥiw*, "his [Uzzah's] brother," this nameless brother being Zadok (Sellin, Budde). According to this theory Zadok served the Ark at Kiriath-Jearim and afterwards remained at Jerusalem, as one of the two men who carried the Ark (*Uzzah would have been replaced by Abiathar; II Sam. 15:29).

d) Since Zadok does not appear until after the capture of Jerusalem and since his genealogy is not given, he may have been a priest of Jebusite Jerusalem before the conquest by David (Rowley). According to this theory, David permitted him to retain his priestly function in order to help reconcile the old inhabitants to their new master.

It is safer to admit that Zadok's origin is unknown; it can be assumed that he was indeed of levitical origin, though not from the same branch as the house of Eli.

The House of Zadok

I Chronicles 5:34–40 gives a list of the successors of Zadok as head of the priesthood in Jerusalem. It contains eleven names from *Ahimaaz (Zadok's son) to Jehozadak. This gives exactly 12 generations of priests from the building of the Temple under Solomon to its reconstruction after the Exile. The list of Zadok's ancestors given immediately before, in I Chronicles 5:29–34, also contains exactly 12 generations from the erection of the Sanctuary in the desert to the building of the Temple; and 12 generations of 40 years corresponds exactly to the 480 years in I Kings 6:1 as the period from the Exodus to the erection of the Temple. This symmetry is deliberate, and other parts underline the artificial nature of the list. Ahimaaz was undoubtedly Zadok's son (II Sam. 15:36), but Azariah was another son of Zadok, not his grandson (as I Chron. 5:35 states). Moreover, the list is incomplete; though it contains some names which are found elsewhere in the Bible (Azariah, II Kings 4:2; *Hilkiah, II Kings 22:4; *Seraiah, II Kings 25:18; Jehozadak, Hag. 1:1), it omits *Jehoiada (II Kings 12:8), Urijah (or *Uriah; II Kings 16:10; Isa. 8:2), and at least two others who are mentioned in the narrative part of Chronicles itself (II Chron. 26:20; 31:10). Another difficulty is that the series Amariah-Ahitub-Zadok recurs in identical form among the immediate ancestors of Zadok (I Chron. 5:33–34) and among his descendants (verses 37–38). The list, however, seems to express a real fact, namely the continuity of Zadok's line,

but it cannot be used as the basis of a detailed history of his house.

J.M. Grintz attempted to reconstruct a list of the high priests by comparing those mentioned in Josephus (Ant., 10:152) with those retained in *Seder Olam Zuta* 5–6. He claims that the list he obtained by this process is authentic and that those names which appear in the list, but not in I Chronicles, represent a lineage other than that of the House of Zadok. This new, otherwise not attested, dynasty (probably of the House of Abiathar) began to serve, according to Grintz, in the Temple after Solomon's death, but was deposed during the reforms of King *Josiah, being, as it seems, suspected of idolatrous inclinations.

J.R. Bartlett, on the other hand, doubts that the high priests of Jerusalem were directly descended from Zadok. He claims that they were rather appointed in each case by the kings, on the basis of merit. According to this view, the term "House of Zadok" was fixed only in Josiah's time, in order to distinguish between the Jerusalemite priests and the priests of the high places.

The fortunes of the House of Zadok after the Exile are reflected in the position given to them in the books of Ezekiel and Chronicles. In Ezekiel 40–48, the exiled Zadokites expect as reward for their faithfulness that they alone shall perform the priestly functions in the new temple; the rest of the levites are to be reduced to the status of servants. The Book of Chronicles shows that after the return this program was not put into practice.

In the Second Temple period, the House of Zadok retained the high priesthood continuously until the Hasmonean revolt. In the Book of Nehemiah (12:10 ff.) there is a list of high priests from *Jeshua to *Jaddua, i.e., down to the time of Darius II (cf. Neh. 12:22), or until about 400 B.C.E. This list may be incomplete, and it presumes that the succession always passed from father to son; yet it does collect the information given in Nehemiah, and the name before the last (*Johanan, 12:22) is found in the Elephantine papyri as the name of the high priest in 411 and again in 408 B.C.E. (Cowley, Aramaic, 30:18; 31:17).

There is no information about the following century and a half. After this, Josephus and the Book of Maccabees make it possible to trace the line from Onias *I in the middle of the third century B.C.E. to Simeon the *Just and to Onias *III, who held the office of high priest when Antiochus Epiphanes succeeded to the throne c. 175 B.C.E. His son, Onias *IV, was too young to succeed to his father's office, to which *Jason (II Macc. 4:7,20) and *Menelaus (II Macc. 4:23–26; though not a priest) were successively appointed by bribing the Seleucid ruler to appoint them. After the death of *Alcimus in 159 B.C.E., the office remained vacant for seven years (Jos., Ant., 12:413, I Macc. 9:54–57), until the Maccabean *Jonathan was nominated high priest by Alexander Balas. But only in the early years of *Simeon, Jonathan's successor, was the high priesthood irrevocably transferred from the Zadokites to the Hasmoneans. This seems to have given the appropriate oc-

casion for the crystallization of the *Dead Sea Sect (see, e.g., Cross). The sect probably originated with a group of priests deeply disturbed by prevalent trends, especially in the high priesthood. The Hasmoneans were considered usurpers and the sect maintained the exclusive right of the Zadokites to fill the high priestly office.

Meanwhile, Onias IV had been conveyed by, or had gone with, a number of those who remained loyal to his father's memory to Egypt, where he obtained permission (c. 154 B.C.E.) from the Egyptian king to rebuild a disused temple at *Leontopolis (On) and to appoint "priests of his own race" to serve it (e.g., Jos., Ant., 12:388; 13:62, 79, 185). This last statement can refer only to priests of his own Zadokite family as distinct from the contemporary Hasmonean line in Jerusalem. This Zadokite priesthood presided over the temple at Leontopolis until it was closed by Vespasian in 73 C.E. (Jos., War, 7:433–646).

[Yuval Kamrat]

ZADOK (late first century B.C.E. and early first century C.E.), Palestinian *tanna*. Zadok was of priestly descent, and is known to have officiated in the Temple. On one occasion, when two priests disputed the right of precedence in offering a sacrifice and one stabbed the other, Zadok quietened the excited congregation by delivering an address, taking as his text Deuteronomy 31:1 (Tosef. Yoma 1:12). In the later talmudic *aggadot* about the destruction of Jerusalem, Zadok is described as having foreseen the destruction of the Temple, and fasted for 40 years in an attempt to prevent it. According to these traditions, his exertions so weakened him that *Johanan b. Zakkai found it necessary to ask Vespasianus, the Roman commander, to supply a physician for him (Git. 56b; Lam. R. 1:5). After the fall of Jerusalem, Zadok joined with other scholars at *Jabneh, where he issued the few halakhic decisions which are recorded in his name (Eduy. 7:1–5). He seems to have been on terms of personal friendship with *Gamaliel, and held an honored place in his Sanhedrin, where he sat on the patriarch's right (TJ Sanh. 1:7, 19c). The Talmud relates that he once spent a Passover in Gamaliel's house (Pes. 76a) and, together with Eliezer b. Hyrcanus and Joshua b. Ḥananiah, was invited to a banquet which the patriarch gave in Jabneh. On that occasion, he expressed his disapproval of the elaborate manner in which their host was praised by his colleagues, who compared the manner in which he served his guests to that of Abraham

as described in Genesis 18:8. Zadok exhorted them to praise God instead (Kid. 32a).

Talmudic tradition reports that although Zadok was a pupil of the school of Shammai, he always made halakhic decisions in accordance with the teachings of the school of Hillel (Yev. 15b). He also taught *aggadah*, and the *Pirkei de-Rabbi Eliyahu* ascribes to him sayings concerning the fallen giants, the sacrifices of Cain and Abel, and the Flood. In private life, Zadok was renowned for his piety. Johanan b. Zakkai states that had there been but one other like him the Temple would not have been destroyed (Lam. R. 1:5). His most famous maxim was, "Do not make learning a crown with which to make yourself great, nor a spade with which to dig" (Avot 4:5).

Zadok II

Zadok II was the son of Eliezer and grandson of the above. According to one account, he was taken captive to Rome, where he was sold to an aristocratic household. He was granted his freedom when he refused to marry one of his mistress' beautiful slaves, pleading that he was a member of both a priestly and an influential Jewish family (Kid. 40a).

BIBLIOGRAPHY: Bacher, Tann; Hyman, Toledot, 34–36.

ZADOK (Wilkenfeld), ḤAIM JOSEPH (1913–2002), Israeli attorney and politician, member of the Third to Ninth Knessets. Zadok was born in Rava-Roska in Poland. He attended a Polish gymnasium in Rava-Roska, and later studied philosophy and Jewish Studies at Warsaw University. He was a member of the Gordonia Movement in Poland, and of the Hitaḥadut-Poʿalei Zion party. Zadok immigrated to Palestine in 1935 and received a law degree from the Government Law School in Jerusalem. He served with the *Haganah and Jewish supernumerary police until 1945, and as an officer in the Israel Defense Forces during the War of Independence. In the first Israeli government formed in 1949 he was appointed deputy attorney general, and in 1952 opened a private law practice, in which he remained until 1974, with an intermission in 1965–6.

Zadok was first elected to the Third Knesset in 1955 on the Mapai list. In the Fourth and Fifth Knessets he served as chairman of the Knesset House Committee, and in the Seventh and Eighth Knessets as chairman of the Knesset Foreign Affairs and Security Committee. He served as minister of commerce and industry in the course of the Sixth Knesset, from 1965 to 1966, resigning in November due to differences of opinion with Minister of Finance Pinhas *Sapir. He was appointed minister of justice in the government formed by Yitzhak Rabin in June 1974, serving for a period also as minister for religious affairs. Zadok was elected to the Ninth Knesset in 1977, but resigned in January 1978, returning to his private law practice but continuing to be active in the Israel Labor Party and in various public activities.

From 1964 to 1974 Zadok served as chairman of the Executive Committee of the Hebrew University, and from 1978 to 1980 he lectured there.

In 1971 he wrote, with Avraham Ben-Naftali, *Sidrei Shilton u-Mishpat* ("Government and Justice Procedures," 1971), and in 1978 he published *Sugyot ba-Mimshal be-Yisrael* ("Government Issues in Israel").

[Susan Hattis Rolef (2nd ed.)]

ZADOK (Isaac) BAR MAR YISHI (Ashi) (also known as **Mar Zadok**), *gaon* of Sura 816–818. Only a few of Zadok's responsa have been preserved, but most of his decisions, halakhic judgments, and ordinances, for example, the imposition of an oath upon a defendant who denies a claim on land (*takkanot shevu'ah al kefirat karka'ot*), were handed down by his successors in the gaonate. The *geonim* speak of Zadok with much reverence, *Amram, for instance, calling him "our master, who enlightens us." *Naḥshon Gaon was his son.

[Meir Havazelet]

ZADOK HA-KOHEN RABINOWITZ OF LUBLIN (1823–1900), ḥasidic *ẓaddik*, talmudic scholar, halakist, philosopher, kabbalist, and prolific author. He was born in Kreuzburg (Krustpils), Courland. His father, R. Jacob ha-Kohen, a Lithuanian rabbi, had a positive attitude toward Ḥasidism. R. Zadok was orphaned as a young child and raised by his uncle, R. Joseph ben Asher, a student of R Ḥayyim ben Isaac *Volozhiner. He was recognized as a prodigy from a young age, and known as the "*illui* of Krinik." After traveling throughout Poland and meeting various rabbis (seeking their endorsement on the *me'ah rabbanim* permit) he became a ḥasid and disciple of R. Mordecai Joseph Leiner of *Izbica Lubelska. After R. Leiner's death (1854) R. Zadok approved his close friend, R. Judah Leib *Eger, as the new *rebbe,* while he studied and wrote in piety and seclusion for more than 30 years. Following Eger's death (1888) R. Zadok was persuaded by the ḥasidim to become a *rebbe.* Although he refused to have his writings published during his life, he indicated before his death that he wanted them published posthumously. Most of those that were not in print before the Holocaust were destroyed in the Lublin ghetto. Extant from his writings are such early works as *Sikhat Malakhei ha-Sharet* (1929); halakhic responsa, including responsa to famous rabbis, collected in *Tiferet Ẓevi* (1909) and elsewhere; other halakhic writings; and books of ḥasidic teachings, from his first and best-known ḥasidic book, *Ẓidkat ha-Ẓaddik* (1902), through *Resisei Layla* (1913), *Maḥashavot Ḥaruẓ* (1912) and more, to later works such as *Dover Ẓedek* (1911), *Likkutei Ma'amarim* (1913), *Takkanat ha-Shavin* (1926), *Yisrael Kedoshim* (1928), and *Pokad Akarim* (1922). His late ḥasidic sermons were collected in the five volumes of *Peri Ẓaddik* (1901–24). His writings are deep and flowing, combining sharp intellectual analysis with ḥasidic psychological and mystical sensitivities, and a scholarly interweaving of a wide range of talmudic, halakhic, mystical, kabbalistic, ḥasidic, and philosophical sources. Among his main topics are the unity of God, psycho-spiritual growth, determinism,

and sin (expanding on the teachings of R. Leiner), the Oral Law, the significance of the Jewish calendar and holidays, and topics in historiosophy, psychology, hermeneutics, and linguistics. His writings influenced many thinkers, including R. Elijah Dessler, author of *Mikhtav me-Eliyahu*; R. Isaac Hutner, author of *Paḥad Yiẓḥak*; and R. Gedalya Shorr, author of *Or Gedalyahu*.

[Amira Liwer (2nd ed.)]

ZADOKITES (Heb. *benei Zadok*; "sons of Zadok"), the *Qumran community's description of its members, especially its priestly members. The community conceived part of its duty to be the continuation of the functions assigned in the Torah to the Zadokite priesthood. The passage in Ezekiel 44:15 ff., where the privilege of approaching God is reserved for "the priests, the levites, the sons of Zadok" because they remained faithful when the other priests went astray, is interpreted in the Zadokite Admonition as a reference not to one class but to three, indicated by the repetition of the conjunction "and"; "the priests and the levites and the sons of Zadok" (CD 3:21 ff.). "The priests are those who turned from impiety in Israel and went out of the land of Judah; the [levites are those who] joined (*nilvim*) with them; the sons of Zadok are the elect of Israel, called by name, who arise in the latter days" (CD 4:2–4). Within the community the framework of priests and levites was maintained, (a) to teach Torah (Mal. 2:7); (b) to undertake what service was possible while the pollution of the Temple by the illegitimate, non-Zadokite, high-priesthood (from 171 B.C.E. onward) prevented them from ministering in it; (c) to make preparation for the day when they would resume the full service of God in a purified temple. In the *Manual of Discipline initiates into the community place themselves "under the authority of the sons of Zadok, the priests, who keep the covenant" and follow the interpretation of the law of Moses revealed to "the sons of Zadok, the priests" (1QS 5:2, 9); here the designation is more expressly confined to the priesthood within the community. "The sons of Zadok, the priests" have a similar authoritative role in the Rule of the Congregation (1QSa 1: 2, 24; 2: 3). The idea that the *Teacher of Righteousness himself was called Zadok (so H.J. Schoeps) is speculative, as is a suggested connection with *Zadok the Pharisee who was Judah the Galilean's comrade-in-arms in 6 C.E. (Jos., Ant., 18:4,9–10).

Its Meaning (1966), 91 ff., 165 ff.; H.J. Schoeps, *Urgemeinde, Judenchristentum, Gnosis* (1956), 71 ff.; G.R. Driver, *Judaean Scrolls* (1965), 226 ff.; North, in: *Catholic Biblical Quarterly* (1955), 164 ff. (in spite of the similarity of name, to call these Zadokites "Sadducees" is misleading).

[Frederick Fyvie Bruce]

ZADOK THE PHARISEE (early first century C.E.), founder, together with *Judah the Galilean, of the "fourth philosophy" among the Jews of the late Second Temple period (see *Sicarii). This "philosophy" was, in effect, the theoretical basis and justification of the Jewish rebellion against the Romans, and according to Josephus was first introduced by Zadok and Judah during the assessment of Jewish property by the Syrian governor Quirinius (6 C.E.). This assessment, claimed the two rebels, amounted to no less than the enslavement of the Jewish people, and inasmuch as "God alone is their leader and master," there was no alternative but to make a bid for independence. Josephus stresses the zeal which Judah and Zadok inspired in the young, and attributes to them the subsequent strife leading up to the rebellion.

[Isaiah Gafni]

ZAFRANI, HAIM (1922–2004), Jewish scholar, writer, educator, and historian. Haim Zafrani was born in Mogador, *Morocco, where from 1939 to 1962 he taught school and became general supervisor of Arabic in the schools of Morocco. He was also the representative of the *Alliance Israélite Universelle in the country. In 1962 he moved to France where he held the chair in Hebrew at the Ecole Nationale des Langues Orientales Vivantes in Paris from 1962 to 1966 and worked at the Centre National de la Recherche Scientifique (CNRS), also in Paris, from 1966 to 1969. From 1975 he held the chair in Hebrew at the University of Paris VIII, where he was chairman of the department of Hebrew language and Jewish civilization from its establishment in October 1969. Zafrani's studies include the preparation of a critical edition and French translation of the Bible. This is part of a group project involving researchers from Paris, Jerusalem, Tel Aviv, Morocco, and *Egypt. Zafrani also studied and conducted research into the kabbalistic texts and mystical traditions of the Jews of the Maghreb. He published numerous books and many articles on Hebrew, Judeo-Arabic, and Judeo-Berber linguistics, and on Jewish thought in the Muslim West and in Islamic countries. Among his works are *Mille ans de vie juive au Maroc* (1982; Hebrew 1986) and *Kabbale. Vie mystique et magie* (1986), *Poésie juive en Terre d'Islam* (1977; translated into Hebrew), *Littératures dialectales et populaires juives en Occident Musulman* (1980); *Juifs d'Andalousie et du Maghreb* (1996; Spanish 1994); *Two Thousand Years of Jewish Life in Morocco* (2005; French 1998; Spanish 2001); *Ethique et mystique, Judaïsme en terre d'Islam. Le commentaire kabbalistique du "Traité des Pères" de J. Bu-Ifergan* (1991–2002); *Le monde de la légende: littérature de prédication juive en Occident musulman* (2003).

[Gideon Kouts / Sylvie Anne Goldberg (2nd ed.)]

ZAGARE (or **Zhagare**; Pol. **Zagory**; Yid. **Zager**), town in N. Lithuania on the border between Lithuania and Latvia. It had two separate Jewish communities: Old Zager and New Zager. New Zager was founded at the beginning of the 18th century by Jews who settled on the lands of the nobleman Umjastowski, after oppression by the townspeople. According to the census of 1766, there were 840 Jews in Old Zager and 313 in New Zager. As a result of its proximity to *Courland, Zagare became one of the first centers of the Haskalah movement in Russia and gained renown as "a town full of scholars and scribes." The *maskilim* circle of Zagare, which at the beginning of the 19th century was concentrated around the person of Ḥayyim Zak, became known as "the scholar of Zagare." On the other hand, Zagare was influenced by the centers of traditional Jewish learning of Lithuania; the majority of the Jews remained faithful to tradition and two yeshivot existed in the two parts of the town. Noted personalities born in Zagare include R. Israel *Salanter, Senior *Sachs, Raphael Nathan *Rabbinovicz, the *Mandelstamm family, K.Z. *Wissotzky, J. *Dineson, and the bibliographer A.S. *Freidus. The Jewish quarter in Zagare was among those damaged in 1881 in the outbreak of conflagrations which swept the Lithuanian communities as an accompaniment to the pogroms in southern Russia. After World War I, during the existence of independent Lithuania, this community declined. The Jewish population of the two communities numbered 5,443 in 1897 (c. 68% of the total) and 1,928 in 1923 (41%). After the German occupation of Lithuania in 1941, a ghetto was set up in the town, in which Jews from the neighboring localities were also interned. At the beginning of October 1941, the inhabitants of the Zagare ghetto were murdered.

[Yehuda Slutsky]

ZAGREB (Ger. **Agram**), capital of the Croatian Republic, formerly Yugoslavia. The first Jews known to have lived in Croatia, and probably in Zagreb, were Mar Saul and Mar Joseph, King Krešimir's emissaries to ʿAbd al-Raḥman III, the caliph of Cordoba in the tenth century. *Ḥisdai ibn Shaprut asked them to convey a message to Joseph, king of the Khazars, on the shores of the Caspian Sea. During the 13th century Jews went to Zagreb from France, Malta, and Albania. Some Jews lived there by the end of the 14th century. The city chronicles of Zagreb for 1444 mention a *domus judaeorum* (community house or synagogue). Little, however, is known about Jewish life and activities, except that they were merchants and moneylenders and that they came from Hungary, Burgenland, or Moravia. In 1526 an expulsion order by Ferdinand I, which was linked to the conversion of most of Croatia into a "military zone," put an end to medieval Jewry's existence in Zagreb, and for more than two centuries no Jews lived there or frequented the city.

New Jewish settlers arrived in Croatia in the mid-18th century from Bohemia, Moravia, and Hungary and about 50

families lived in Zagreb in the 1840s. The community was officially founded only in 1806. In 1841 a smaller Orthodox community came into being. The *ḥevra kaddisha* was established in 1859. The first rabbi of the Zagreb community was Aaron Palota (1809–1849). In 1867 the new synagogue was inaugurated (it was completely demolished in 1941 by the pro-Nazi Ustashe). The building was constructed by Franjo (Francis) Klein, one of the important builders of Zagreb. The spiritual leadership of the community was in the hands of Rabbi Hosea Jacoby for 50 years, and under his guidance a school and a *talmud torah* were opened and religious life was organized. A new cemetery was built in 1878. The philanthropist Ljudevit Schwarz was the prime mover in establishing a Jewish home for the aged; it still functioned in 1970 as the Central Jewish Home for the Aged in Yugoslavia, and was assisted financially by the American Jewish Joint Distribution Committee. Jacques Epstein founded the first public assistance body in Croatia, the Association for Humanism. In 1898 a union of Jewish high school students was created, and became a training ground for future communal and Zionist leaders.

Antisemitism and Croat Nationalism

Croatian representatives were opposed to the official recognition of Jewish civil rights, which were not established until 1873. In 1858 there was a blood libel in Zagreb, and merchant and artisan guilds at times incited the population against the Jews, creating dangerous situations. Jews had to apply to Ofen (Buda), the Hungarian capital, or to the imperial chancery at Vienna, to seek safeguards and protection; later, they also had to apply to the Croat nationalist leader (of the so-called Illyric movement), Ljudevit Gaj.

It is noteworthy that individual Jews already sympathized with the Croatian revival in its early stages (Eduard Breier, Dr. Siegfried Kapper), while others were among the ideological or political leaders of modern Croat nationalism (Isaiah (Joszua) Frank, an apostate, and the lawyer Dr. Hinko Hinković). Frank's name was adopted by the separatist party, whose members were known as "frankovci" (followers of Frank); the same party later became violently fascist and antisemitic under Pavelić and his Ustashe.

Communal Life

The main body of Zagreb Jewry remained aloof from local politics, dedicating themselves to the internal affairs of the community, which became the largest in Yugoslavia. Between the two world wars Zionism drew a strong following in Croatia, and Zagreb was chosen as the headquarters of the Zionist Federation, which was led by Alexander *Licht. The Zagreb community also maintained a number of associations: a Maccabi sports club, a choir, women's and youth organizations, and a union of Jewish employees. The leading Jewish periodicals in Yugoslavia, such as the Zionist weekly *Židov* ("Jew"), were published in the city. Jewish contribution to the development of Zagreb was manifold. Jews were among the pioneers in export (wine and lumber) and local industry (furniture, beer, streetcars, etc.). Lavoslav (Leopold) Hartmann, the first librar-

ian in Croatia, organized lending libraries, and also founded a printing press.

Jews also made a major contribution to science: the first chairman of the community, Dr. Mavro (Maurice) Sachs, was among the founders of forensic medicine in Croatia, and David *Schwarz, who lived most of his life in Zagreb, invented there the first rigid airship. Jews who were prominent in the arts included the painter Oscar Hermann; the sculptor Slavko Bril; the pianist Julius Epstein; and the bandmaster Anton Schwarz. A Jewish art monthly, *Ommanut*, was published there for five years (to 1941), ceasing with the Nazi invasion. Zagreb occupied a central position in the Yugoslav Jewish community. About 12,000 Jews lived there in 1941 after an influx of refugees from Germany, Austria, Czechoslovakia, and later Hungary. Following the German occupation of Zagreb in April 1941, Jews were persecuted, seized for forced labor, and murdered, with survivors sent to Jasenovac and Auschwitz at the end of 1942 and the beginning of 1943. The remnant reestablished the community after the war.

Rabbis Gavro Schwarz and Miroslav (Shalom) Freiberger, both victims of the Holocaust, were initiators of Jewish historical studies. In 1970 the Jewish population of the city was 1,200. After the secession of Croatia from the Yugoslav federation in 1991, a "Coordinating Committee" was formed consisting of a dozen congregations, with an Orthodox rabbi, Kotel Dadon, heading the Zagreb branch. The community, now calling itself Zidovka Opcina published a journal and literary magazine. A Documentation Center headed by Dr. Melita Svob deals with the claims of Holocaust survivors and the collection and publication of statistical and historical evidence. Around 1,000 Jews remained in the early 2000s.

[Zvi Loker]

ZAHALON, Sephardi family, which after the expulsion from Spain settled in Italy and in Near Eastern countries. Many of them were scholars, rabbis, and physicians. ABRAHAM BEN ISAAC ZAHALON (16th century) was a talmudic scholar and kabbalist. He wrote *Yad Ḥaruzim* (Venice, 1595), a work on the calendar, and *Yesha Elohim* (*ibid.*, 1595), a commentary on the Book of Esther. In the introduction to his *Marpe la-Nefesh* (*ibid.*, 1595), a moralistic work based on kabbalistic principles, he complained that he had to travel much, wandering from place to place to find his livelihood. He completed this work in Baghdad in 1593.

JACOB BEN ISAAC ZAHALON (1630–1693) was born in Rome, where he also received a medical education and the degree of *artium ac medicinae doctor* at the university. In 1682 he became rabbi of Ferrara. His best-known work is *Oẓar ha-*

Ḥayyim (Venice, 1683), a manual of medicine, which was the third part of a greater work, *Oẓar ha-Ḥokhmot*. It was divided into 13 parts, the last part, on mental diseases, remaining unpublished because of lack of funds. With the medical information, he also stresses the ethical side of medical practice, gives practical advice to physicians, and urges them to recite weekly the physician's prayer he had composed. In addition he wrote *Margaliyyot Tovot* (*ibid.*, 1665), an abridgment of the *Hovot ha-Levavot* of Baḥya ibn Paquda in 30 parts so that one may read a part a day and complete it monthly. Each part ends with a prayer. In the introduction he mentions eight of his works that were in manuscript. He also wrote a number of responsa which are found in *Teshuvot ha-Remez* of Moses *Zacuto, in the *Paḥad Yiẓḥak* of Isaac *Lampronti, and in *Afar Ya'akov* of Nathaniel Segre. He also translated into Hebrew a work of Thomas Aquinas. Jacob was the first in Italy to stress the value of preaching in the synagogue. On November 18, 1656, during the plague in Rome, when the synagogue was closed, he preached from a window to an assemblage on the street. Many of his sermons are extant in manuscript. The *Margaliyyot Tovot* contains a prayer for preachers.

MORDECAI BEN JACOB ZAHALON (d. 1748), his son, succeeded him as rabbi in Ferrara. He was also a physician. He wrote responsa, which were published under the title *Meẓiẓ u-Meliẓ* (Venice, 1715); some of them also appear in the *Paḥad Yiẓḥak* and the *Shemesh Ẓedakah* of Samson Morpurgo. He composed a number of *piyyutim*, some of which were included in the service of the Ferrara synagogues. He also wrote *Megillat Naharot* (n.p. 1707), the story of the deliverance of the Jews during a great flood in Ferrara.

YOM TOV BEN MOSES ZAHALON (1559–1619/20) was one of the distinguished rabbis of Safed. He was ordained by R. Jacob Berab II (the grandson of Jacob *Berab I). He served as an emissary of that town between 1590 and 1600, visiting Italy and Holland. After returning to Safed, he was sent to Egypt and Constantinople, where he wrote some 600 responsa, many of which were published by his grandson Yom Tov b. Akiva, a rabbi in Constantinople in the second half of the 17th century, who appended to the volume his own novellae to chapters five and six of *Bava Meẓia* (Venice, 1694). Of interest are Yom Tov b. Moses' responsa to some of the communities of the Orient who sought his advice. Though himself a Sephardi, in a controversy between Sephardim and Ashkenazim he took the part of the Ashkenazim. Though a student of Joseph Caro, when the Shulḥan Arukh appeared, he disapproved of it, attacking it as a work for children and laymen.

Of his books the following should be especially noted: 1. *Magen Avot*: Commentary on *Avot de–Rabbi Natan* (in the Oxford Bodleian Ms.). 2. *Lekaḥ Tov*: Commentary on the Scroll of Esther (Safed, 1577). This was the first book published in Safed; it was published for a second time in a photocopied edition (Jerusalem, 1976). This work contains a long commentary on the sages' sermons on the Scroll of Esther, constituting both a literal and homiletic interpretation. 3. Novellae on tractate *Bava Kamma*. Chapters 5–6 were printed at the end of his responsa (Venice, 1964). 4. A total of 296 of his responsa were printed by Rabbi Yom Tov ben Akiva Ẓahalon in the Venice edition; another 240 responsa can be found in the Oxford Ms. and were published by the Jerusalem Institute (Jerusalem, 1980–81) in two volumes. The responsa deal mostly with subjects pertaining to *Hilkhot Even ha–Ezer and Ḥoshen Mishpat* in the Shulḥan Arukh. Yom Tov Ẓahalon's responsa were accepted as law. They contain historical information and details of customs and reforms in Safed and the Ashkenazi and Sephardi communities in Jerusalem, particularly the inferior position of the latter in comparison with the Ashkenzi community when it came to the distribution of charitable donations.

Ẓahalon reveals himself as forceful, uncompromising and sometimes sharp-tongued, though he tends to accept the opinions of earlier sages. He often disagrees with the rulings of Joseph Caro in the Shulḥan Arukh but also explains at times the language and reasoning of the Shulḥan Arukh.

[Isaac Klein / Yehoshua Horowitz (2nd ed.)]

ZAIẒOV, RINA (1932–2005), Israeli pediatrician who specialized in blood disorders and malignancy in childhood. She received her M.D. from the Hadassah Medical School of the Hebrew University of Jerusalem (1959) and trained in pediatrics in the U.S., where she developed her lifelong interests. She returned to the Beilinson Medical Center in Petaḥ Tikvah (1966) and became director of the national center for pediatric hematology and oncology (1973–97), professor of pediatrics in the Sackler faculty of medicine of Tel Aviv University (1988), and Josefina Maus and Gabriela Cesarman-Maus professor of pediatric hematology and oncology (1992). She established the department that became Israel's national center for treatment and research in blood disorders and malignant diseases in childhood. The center provided the most advanced methods of diagnosis and treatment, and support for patients and their families. She made major internationally recognized contributions to many clinical and laboratory and epidemiological research programs concerning genetic disorders of blood production, leukemia, lymphomas, bone tumors, tumors of the nervous system, and the genetic disorder Gaucher's disease. Her enthusiasm and humanity were also reflected in the comprehensive program for treatment and support that she established in the community. She had formidable teaching and organizational skills, recognized in her contributions to many national and international committees concerned with organizing clinical care, research, and education. From 1998 she was chairman of Kuppat Ḥolim's program for services in

pediatric hematology and oncology. Her many honors included the Geifman Prize for developing pediatric oncology in Israel (1978), the First Prize for Research of the Childhood Leukemia and Lymphoma Conference (2000), the Kadezky Award for oncology research of Tel Aviv University (2001), and the Israel Prize for medical research (2005).

[Michael Denman (2nd ed.)]

ZAK, ABRAM (d. 1893), Russian financier. Zak was born in Bobruisk. An autodidact, he achieved great proficiency in mathematics and foreign languages. He occupied high posts in various financial institutions, and as chairman of the board of the Discount and Loan Bank of Petersburg, he made it the most powerful financial institution of the Russian capital. Zak was often consulted by the State Council and other official bodies on questions of finance, economics and railroad exploitation. He was offered the post of assistant minister of finance with the promise of promotion if he would convert to Christianity, but he refused. He was a member of the Jewish delegation to Czar Alexander III after the pogroms of 1881. He was active in the Jewish community and a member of the *Society for the Promotion of Culture among Jews, distinguishing himself by the great support he gave to Jewish students. Like many of the wealthy Jews of Russia he was opposed to Jewish emigration from Russia and to the establishment of a Jewish National Home.

BIBLIOGRAPHY: Weisenberg, in: YE 7, 659–60; E. Tcherikower, in: *Yidishe Shriften* 3 (1939), 109, 120; L. Greenberg, *The Jews in Russia*, 1 (1944), 173; *ibid.*, 2, (1951), 173.

ZAK, EUGEN (1884–1926), French painter. Born in Poland, he went to Paris in 1901. He was not influenced by the various new trends in painting, but rather harked back to Poussin and the Florentine masters. He endowed his subjects with an unobtrusive stylization and a subtle idealization.

ZAKEN MAMRE (Heb. זָקֵן מַמְרֵא; lit., "rebellious elder"), a scholar who disobeys a decision of the supreme *bet din* in Jerusalem. Its basis is to be found in the Bible: "If a case is too baffling for you to decide… you shall promptly repair to the place which the Lord… will have chosen and appear before the levitical priests, or the magistrate… and present your problem. When they have announced to you the verdict… you shall act in accordance with the instructions given you… And should a man act presumptuously and disregard [them]… that man shall die" (Deut. 17:8–12). There were three courts in Jerusalem; one used to sit at the entrance of the Temple Mount, another at the door of the Temple court, and the third in the Chamber of Hewn Stone (in the *Temple). Each of the first two courts consisted of 32 members, and the third was the supreme *bet din* – the Great *Sanhedrin of 71. If a scholar gave a decision and his colleagues in his town disagreed with him, he and his colleagues were obliged to go to Jerusalem for direction. At first they went to the court at the entrance to the Temple Mount, and each one expressed his opinion. If possible,

they reached a decision, but if not, they turned to the second court. If this could not give a decision either, they and the members of the court which had not reached a decision appeared before the Great Sanhedrin in the Chamber of Hewn Stone. If the scholar then returned to his town and ruled or acted in opposition to the view of the supreme *bet din*, he was considered a *zaken mamre* and liable to the death penalty; however, if he merely taught as heretofore but without giving a practical decision, he was exempt (based on the text, "And should a man act presumptuously" (Deut. 17:12; Sanh. 11:2)).

A *zaken mamre* was not liable to the death penalty unless he was an ordained scholar, who was fit to pass judgment and whose decision had validity. His defiance of the supreme *bet din* had to be in a matter which if done willfully carried with it the penalty of *karet, and if done inadvertently a sin-offering, or in a matter that if done deliberately would lead to a transgression carrying with it the same penalties, for instance, a disagreement on the intercalation of the year that would lead to leaven being eaten during Passover (Sanh. 87a; Maim., Yad, Mamrim, 3:5, 4:2). A *zaken mamre* is liable to the death penalty when he disagrees about a matter whose basis is in the written Torah and whose explanation is from the *soferim ("scribes"), or about a *halakhah* given to Moses at Sinai, or about something derived from the 13 hermeneutical principles (see *Hermeneutics) whereby the Torah is interpreted, but not when he disagrees on a law of rabbinic provenance which has no basis in the Torah (Maim., *ibid.*, 1:2).

[Abraham Arzi]

ZAKHO (**Zakhu**), town in the province of *Mosul in Iraqi *Kurdistan; location of an ancient Jewish community. During the 18th century Zakho was led by the *nasi* Sheikh Eliah the goldsmith. In 1827 there were 600 Jewish families, some of whom were wealthy. They earned their livelihood from raising cattle, as weavers and goldsmiths, and in other crafts as well. They had an old synagogue, followed ancient customs, and spoke Jabal (mountain) Aramaic. In 1848 *Benjamin II found 200 Jewish families in Zakho, some of whom were engaged in commerce and others in weaving. Most of them were wealthy. In 1880 there were 400–500 houses, half of which were owned by Jews. During the same year the town was ravaged by famine and a large section of the population, including many Jews, died. In 1881, 300 Jewish families lived in a special quarter; their political situation and security were in a very precarious state. In 1884 there were 510 Jews, among them merchants, spice dealers, and sheep breeders. In 1888 there were 1,500 Jews. In 1891 the Muslims attacked the Jewish community, looting the houses of the Jews, and set fire to one of the synagogues which was burned down together with its Scrolls of the Law. In 1892 the persecutions intensified. Jews were murdered; heavy taxes were imposed on members of the community; they were required to pay ransom, and many were arrested and tortured. The Tigris overflowed its

banks and destroyed 150 Jewish houses; many Jews drowned and synagogues were destroyed.

In spite of all this, there were 300 Jewish families in the town in 1893 and 2,400 Jews in 1906. After World War I their situation improved. They had two large old synagogues; on one of them was an inscription dating from 1780. According to the official census of 1930, there were 26,835 inhabitants, including 1,471 Aramaic-speaking Jews. The decline of the economic standing of northern Iraq following the opening of the Suez Canal in 1869, which shifted the commercial pathway from the overland route (from Europe to India via Aleppo in Syria and northern Iraq) seems to have caused emigration to Baghdad and Palestine. The Jews of Zakho started to emigrate to the Holy Land in the middle of the 19th century, with *aliyah* intensifying after World War I. In the census of 1947 their number had decreased to 1394. They lived in a special quarter and most of them engaged in commerce. When the Iraqis opposed Zionism their situation deteriorated. Jews from Zakho were the first to emigrate to Palestine after 1920. Many settled in *Jerusalem, where they engaged in manual labor as porters, donkey drivers, stonecutters, builders, stone hewers, etc. Six thousand settled there before the establishment of the State of Israel. They built special quarters for themselves, such as Zikhron Yosef, Zikhron Ya'akov, Sha'arei Raḥamim, and others. With the establishment of the state, all the remaining Jewish inhabitants of Zakho emigrated to Israel.

The poetry of the Zakho Jews was published by J.J. Rivlin in *Shirat Yehudei ha-Targum* (1959).

[Abraham Ben-Yaacob / Nissim Kazzaz (2nd ed.)]

ZAKHOR (Heb. "Remember"), black Judaizing movement in Mali comprising around 1,000 people. It was founded in Timbuktu in 1993 by the Malian historian Ismael Daidé Haïdara, whose followers claim to be the offspring of Saharan Jews. In a manifesto published in 1996, the members of Zakhor recognize themselves as Jews and declare themselves to be descendants of the Jews of Touat. The Touat, the region at the limit of the Sahara in western Algeria, was, up to 1492, inhabited by Jews involved in trans-Saharan trade. At that time, Sheikh Abd el Krim el Meghili, a scholar and a mystic, exterminated them and ordered the destruction of their synagogues at Siljimassa and Tamentit.

According to Zakhor, some of the Jewish survivors from Touat, following the routes of caravans, took refuge with other Jews settled along the Niger, but their safety was only temporary. Soon afterwards, in 1493, under the influence of the same el Meghili, Askyia Muhammad the Great, the ruler of this region, introduced an edict for the eviction of the Jews of the Songhai. They apparently found themselves in the position of choosing either to renounce their faith or to die. Haïdara, the leader of Zakhor, noted that "the Jews could not go fur-

ther, in front of the great Nile of the Arabs [that is, the river Niger]. They stopped facing the Koran and the sword. They converted." This was how, he concluded, the black Jews became Muslims. Today, the members of Zakhor portray themselves as a small, early Jewish population which is said to have been superseded by the subsequent Islamic community, with only tiny remnants of Judaism surviving. The heads of the families who founded Zakhor relate that the three families constituting their community from the 16th century, the Levite Kehaths, now named Kati, the Cohens and the Abanas, were not in fact the first Jewish inhabitants of these regions.

In the 11th century, el Bakri and el Idrissi, the great Arab historians and geographers, referred to the presence of populations "who read the Tawrat" in what would become Mali. Abraham *Cresques, the famous Majorcan Jewish geographer, upon establishing the Catalan Atlas, in 1375, presumably located Mali and its emperor, on the basis of information from his Malian co-religionists. Leo Africanus who visited this region in the first part of the 15th century, the Tarikh el-Sudan of the 15th century, and the Tarikh el-Fetash of the 17th century, the essential corpus of sources of information about medieval western Africa, mentioned the presence of Jews in the region of Gao and Tendirma.

Under the aegis of UNESCO, the gradual discovery at Timbuktu of old manuscripts, some of which date back to the 13th century, constitutes an unpublished scientific treasure trove likely to bring much information about the possible settlement of Jews in this area.

ZALCSTEIN, GECL (1773–1841), dealer in books and ancient Polish manuscripts. A follower of the ḥasidic leader *Jacob Isaac ha-Ḥozeh of Lublin, Zalcstein opened a book and antique shop in Warsaw around 1800. On his many visits to the Polish aristocracy he obtained ancient manuscripts and books, thus acquiring an extensive knowledge of Polish works. He aided the historian J. *Lelewel and the bibliographer K. Świdziński in their research, and through his devoted assistance the libraries of the University of Warsaw and other academic institutions were enlarged. His shop became a meeting place for Polish intellectuals. In 1831 Zalcstein founded a mirror factory and transferred the management of his bookshop to his son, LEIB, a Kotsk ḥasid. After a few years of meager success Zalcstein closed the factory and returned to man-

aging his bookshop. In the 1830s, because of his connections with Polish intellectuals, he was suspected of subversive activities by the Russian authorities. His wife took over the shop after his death, and his son Leib engaged independently in book-selling and publishing from 1820 until his death in 1860. His annual *Kalendarz Astronomiczny i Gospodarski* ("Astronomic and Economic Calendar") appeared for 40 years and was a pioneering work of agronomical information in Poland. Zalcstein's younger son, JONAH BAER, also opened a bookshop, and descendants of the Zalcsteins were prominent booksellers, publishers, and antique dealers in Warsaw in the 1920s.

ZALESHCHIKI (Pol. **Zaleszczyki**), town in Tarnopol district, Ukraine. In 1765 there were 344 Jews who paid the poll tax. The local Jews engaged in small trade and crafts, and later they participated in the resort business. The Jewish population numbered 4,424 (71% of the total) in 1880, and 3,382 (62%) in 1910. There was a strong ḥasidic influence in the community.

[Shimshon Leib Kirsheboim]

Holocaust Period

During the period of Soviet rule (1939–41) all communal activity was prohibited. In the first days after the outbreak of war between Germany and the U.S.S.R. (June 22, 1941), Jews were attacked by the local German population. On Nov. 14, 1941, the first *Aktion* took place and about 800 Jews were killed. Jewish youth were sent to a forced-labor camp in Kamionka. On Sept. 20, 1942, the order was given for all the Jews to move to the Tluste (Tolstoye) ghetto within 24 hours. From there part of the Jews were sent to the *Belzec death camp; others were sent to work camps in the area, while a few tried to find refuge in the surrounding forests. The community was not reconstituted in Zaleshchiki after the war.

ZALUDKOWSKI, ELIJAH (1888–1943), *ḥazzan and writer. He was a son of the well-known ḥazzan of Kalisz, Noah Zaludkowski (1859–1931), known as "Reb Noaḥ Lieder." Elijah studied with his father and other ḥazzanim, and also at conservatories in Milan and Berlin. He held posts as ḥazzan in Warsaw, Vilna, and Liverpool, England, and in 1926 went to the U.S. where he officiated in New York and Detroit. Zaludkowski wrote *Di Kultur-Treger fun der Yidisher Liturgie* (1930), containing useful biographies of famous ḥazzanim, and published his father's and his own liturgical compositions in *Tefillat Noʾaḥ va-Avodat Eliyahu*.

ZAM, ZVI HERZ (1835–1915), Russian soldier; the only Jewish officer in the czarist army in the 19th century. Born in Gorengrod, Zam was taken from his home when he was 12 and trained at the *Cantonist military institute at Tomsk. He was posted to an infantry regiment, and, following the introduction of national conscription in 1874, was permitted to enter the cadets' school. He rose to become vice captain (*shtabskapitan*) but was placed in command of the worst company in his regiment at the orders of the war minister, who expressed surprise that a Jew who had remained faithful to his religion should serve as an officer. Within a year Zam had made his company the best in the regiment, but not until 1893, just before his retirement after 41 years in the czarist army, was he promoted to full captain. Zam took an active part in Jewish affairs and was instrumental in providing synagogue facilities for Jewish soldiers.

ZAMARIS (**Zimri**; late first century B.C.E.–early first century C.E.), Babylonian Jew. Zamaris fled from Parthian Babylonia with a retinue of 500 horsemen and mounted archers, as well as his family. He had taken refuge in Syria, when *Herod heard of his presence. Desirous of strengthening Jewish settlement in *Trachonitis and of creating a buffer zone, Herod offered land to Zamaris, who was not to be taxed. The Babylonians settled and built a village, *Bathyra, which served as a shield both for the Jewish settlements and for the pilgrims from Babylonia traveling to Jerusalem for the pilgrim festivals. Zamaris' son Jacimus organized a bodyguard for the Herodian family. His son Philip remained a close associate of Agrippa. Some are of the opinion that the *Benei Bathyra, who held high office in the administration of the Temple, came from these Babylonian settlers of Bathyra. In any event, it is clear that the Babylonian Zamaris had mastered Parthian military tactics and that his followers (who included mounted archers) were excellent soldiers. Zamaris must have held a substantial place in the Parthian feudal structure. His flight has nothing to do with Parthian "antisemitism," for in this same period other Jewish grandees held considerable power in the empire. Zamaris may have fallen victim to the complex intrigues surrounding the disputed Arsacid throne.

[Jacob Neusner]

ZAMBIA (formerly **Northern Rhodesia**), Central African republic. The two earliest Jewish settlements in Northern Rhodesia were in Livingstone and Broken Hill. When the railway reached Victoria Falls in 1905, there were enough Jews in Livingstone to start a congregation. By 1910, when the first Jewish wedding in Northern Rhodesia was celebrated, the congregation had 38 members. Jewish pioneers did much to open up the country, developing the cattle trade and ranching. Maurice

Rabb, Harry Wulfsohn, Len Pinshow, Hanan Elkaim, and the Susman brothers, Elie and Harry, were just some of these Jewish immigrants whose enterprise and initiative laid the foundations of the modern-day Zambian economy. The Susman Brothers, who arrived in 1900, were the first to develop large-scale wagon and river transport to Barotseland. Just before 1914, they pegged the Nkana copper mine but could not float a company to open it because the mine was in tsetse fly country. They sold their claim for £250 to what is now the largest copper mine in Zambia. Sir Edmund *Davis, Solly *Joel, and Sir Ernest *Oppenheimer were prominent in developing copper mining. Abe Galaun (1914–2003) arrived in Zambia just before the outbreak of World War II and became a dominant force in the country's meat and dairy business to the extent that Zambian President Kenneth Kaunda dubbed him "the man who feeds the nation." Galaun was involved in a wide range of charitable enterprises and his extensive contribution to Jewish communal life included founding the Council for Zambia Jewry. In 1921, out of a total Jewish population of 110, 48 lived in Livingstone, 11 in Broken Hill, and 25 in Lusaka. In succeeding years the Jewish population grew slowly, increased mainly by refugees from Nazi Germany in the late 1930s. As happened in neighboring Southern Rhodesia and the Belgian Congo, there was a substantial influx of Sephardi immigrants, largely from the Greek island of Rhodes. With the development of the copper mines in the north and the general growth in population and commerce, the Jewish population reached a peak of about 1,200 in the middle 1950s; most lived in Lusaka and the copperbelt centers of Kitwe, Ndola, Mufulira, Chingola, and Luanshya, in each of which there was a small but organized Jewish congregation. After 1960 numbers declined. In 1968, the estimated figure was 500, excluding some 200 on short-term contracts with Solel Boneh (the construction company of the Israel labor federation) and other overseas enterprises. Younger people tended to leave, and most of the older school-age groups were sent to Rhodesia or South Africa for their education. In communal and Zionist affairs Zambian Jewry remained linked until the late 1960s with the Central African Jewish Board of Deputies and Zionist Organization. Thereafter, the Council for Zambia Jewry, after 1993 through its affiliation to the *African Jewish Congress, oversaw the community's affairs. Before Zambia's independence in 1964 Jews played an active role in local government. Jewish mayors served in Livingstone, Broken Hill, Kitwe, and Luanshya. In the political field Sir Roy *Welensky was the leading figure in Northern Rhodesian politics from the 1930s until the Federation was set up in 1953, when he moved to *Salisbury (today Harare) as deputy prime minister; M.G. Rabb was a member of the legislative assembly from 1959 to 1962, and S.W. *Magnus was a member of parliament from 1962 to 1968, when he resigned to become a judge of the high court. As happened in South Africa, some Zambian Jews were active in resistance politics on behalf of the disempowered black majority in the pre-independence era. Most noteworthy of these was Lithuanian-born Simon Zukas, who played an important part in

Zambia's independence struggle in the postwar era and in 1952 was in fact exiled on this account by the colonial government. Zukas returned to Lusaka after 1962 and later served as agriculture minister in President Frederick Chiluba's first cabinet (1991). A number of South African Jews who were prominently involved in the struggle against apartheid in their home country, amongst them Joe *Slovo, Ronnie *Kasrils, and Ray Alexander, were based in Lusaka for the greater part of their years in exile before returning to South Africa after 1990. The Zambian Jewish community steadily dwindled in the post-independence era. About 50 Jews remained in 2004, most of them living in Lusaka. Zambian Jewry in the early 2000s comprised a small core of long-term "settlers" and more transient residents engaged in trade, commerce, agriculture, and the professions. The community comes together for religious services on the High Holidays and Passover, as well as for Israel's Independence Day and other Israel-related events. There are eight Jewish cemeteries scattered around the country, and they are maintained by the remaining members of the community, in consultation with the African Jewish Congress.

[Maurice Wagner / David Saks (2nd ed.)]

ZAMBROW (Rus. **Zambrov**), town in Bialystok province, N.E. Poland. The few Jews who lived in Zambrow in the early 18th century were not organized into a community being under the jurisdiction of that of *Tykocin (Tiktin). A ḥevra kaddisha was established in Zambrow in 1741, but the Jews buried their dead in the cemetery of the neighboring community of Yablonka. In 1765, 12 Jews living in Zambrow and another 462 in the surrounding villages paid the poll tax. In 1808 the Jews of Zambrow numbered 80 (13% of the total population), and in 1837, 320 (31%). A Jewish cemetery was consecrated in the town in 1828, and in 1830 an organized community with a synagogue, *mikveh*, and permanent religious officials were established. At first the members of the Jewish community engaged in the timber and grain trade, and kept inns. From the middle of the 19th century Jewish occupations included raising horses, cultivation of orchards, crafts, and petty trade. In 1857 the community numbered 1,022 (63% of the population). In 1890 the local cemetery was enlarged. A *kasher* kitchen was opened for the hundreds of Jewish soldiers attached to the battalions stationed there. About 400 Jewish houses were destroyed in a great fire in 1895. In 1905–06 Jewish youths and workers, organized within the *Bund, the *Zionist Socialist Workers' Party ("ss") and the *Po'alei Zion, staged a number of strikes in the textile factory and the sawmills. R. Lipa Ḥayyim held rabbinical office in the town from the 1850s until his death in 1882. He was succeeded by his son-in-law, R. Dov Menahem Regensberg, who held the position for several decades.

In 1921 there were 3,216 Jews (52%) living in Zambrow. Between the two world wars, branches of all the Jewish parties were active in the town. An elementary Yiddish school named after Ber Borochov was established in 1919. It was followed by

a Hebrew school and a Zionist kindergarten in 1921. R. Shlomo *Goren, Israeli rabbi, was born in this town.

[Arthur Cygielman]

Holocaust Period

Under Soviet administration (1939–41) great changes were introduced affecting Jewish life. All activities of a political or Zionist nature were suppressed, and private enterprise was terminated. Jewish refugees arrived from Ostrow Mazowieck and were offered assistance by the Jewish community. A great number of these refugees were exiled to the Soviet interior. In the spring of 1941 the young Jews were drafted into the Soviet army. After the war between Germany and the U.S.S.R. broke out (June 22, 1941), the town fell to the Germans. A Judenrat was set up on German orders, headed by Gerszom Srebrowicz. It tried to alleviate the suffering of the community, but when it did not comply with all the German demands it was disbanded and a new Judenrat was set up, headed by a man who did not belong to the local community. The first *Aktion* was carried out on Aug. 19, 1941, in which about 1,500 persons were murdered in the region of Szumowo. During a second *Aktion* on Sept. 4, 1941, 1,000 persons were put to death in the locality of Rutki-Kosaki. At the end of December 1941 about 2,000 Jews were forced into a ghetto and subjected to starvation. Typhus epidemics broke out, and the hospital set up to aid the population worked ceaselessly. People began fleeing to the forests in an attempt to join the partisans. The severe conditions of the forest, as well as the antisemitic attitude of the partisans, forced many Jews to return to the ghetto. Nevertheless, some Jews were able to join partisan units which operated in the area of the Pniewa forest. Many of them were killed by members of the Polish underground Armia Krajowa. In November 1942 about 20,000 Jews from Zambrow and the vicinity were rounded up and interned in a former army camp. On Jan. 12, 1943, their transport to Auschwitz began in batches of 2,000 a night. Two hundred elderly and sick were poisoned and disposed of locally. After the war, only a few survivors from Zambrow and the vicinity remained. Others returned from the Soviet Union. Most of the survivors left again for Bialystok and Lodz, and later left Poland. Societies of emigrants from Zambrow were established in the U.S., Argentina, and Israel. A memorial book, *Sefer Zambrov*, in Hebrew and Yiddish with English summary, was published in 1963.

ZAMBROWSKI, ROMAN (1909–1977), Polish Communist politician. Zambrowski joined the Communist youth movement as a young man, becoming its first secretary and its representative on the central committee of the Polish Communist Party. He also represented the Polish Communists on the executive committee of the Youth International in Mos-

cow. He was arrested several times by the Polish authorities and imprisoned, among other places, in the notorious Bereza Kartuska concentration camp. During World War II Zambrowski lived in the Soviet Union and became one of the chief organizers of the Union of Polish Patriots sponsored by the Soviet authorities. He took an active part in the formation of Polish army units which fought alongside the Soviet army. His special responsibility was the appointment of political staff attached to these units, and he was a member of the Communist central bureau at Polish army headquarters. After World War II Zambrowski became head of the Polish United Workers' Party. He was a member of the Political Bureau of the Polish government and between 1956 and 1963 was secretary of the party's central committee. For a short time he occupied the post of minister for state control. In 1964, after a quarrel with the group in power led by Wladyslaw Gomulka, he was removed from leading positions in the party and government. During the antisemitic campaign launched by the Polish authorities after the *Six-Day War (1967) he was publicly accused of revisionism and sympathy for Zionism and retired from public life.

[Abraham Wein]

ZAMENHOF, LUDWIK LAZAR (1859–1917), Polish philologist and creator of Esperanto. Born in Bialystok, Zamenhof studied medicine and specialized in ophthalmology. He acquired his interest in philology from his father, who was a language teacher. For several years Zamenhof engaged in research work in the Yiddish language and began to write a Yiddish grammar, which was not completed. From his youth he had contemplated the idea of creating a simple international language which would facilitate and advance relations and mutual understanding between nations. In 1878, he completed the writing of the first pamphlet which contained the fundamentals of the new language. It contained only 900 root words and a grammar with 16 rules. It was published in 1887 under the title *Lingvo Internacia* ("International Language"). Zamenhof signed it with the pseudonym "Doktoro Esperanto" ("Dr. Hopeful"), hence the name of the language. At first Zamenhof encountered opposition and mockery, but he succeeded in gaining numerous enthusiastic supporters in every country, including renowned thinkers and scientists. Zamenhof published translations from German, English, and Russian literature, as well as from the Bible, in order to prove that Esperanto, in spite of its simplicity, could become a literary language. In 1905, in France, he convened the first international congress of Esperantists. In 1910, when the sixth congress was held in Washington, Zamenhof visited the United States and delivered a series of lectures in Esperanto. Two statues were erected in Zamenhof's honor in Poland – one in Warsaw (1928) and the other in Bialystok (1934), his native town. Zamenhof remained close to Jewish problems. He was one of the first members of Ḥovevei Zion, and in 1901 published a pamphlet, *Der Hilelismus*, where he presented Judaism as the philosophy of humanism. He published an Esperanto textbook in Hebrew.

Zamenhof 's Greatness* (1959) (=Universal Esperanto Association, Document RDC/6–2).

[Max Wurmbrand]

ZAMENHOF, STEPHEN (1911–1998), U.S. biochemist. Born in Warsaw, the nephew of Ludwik *Zamenhof, he went to the U.S. in 1939. He worked at Columbia until 1964, when he became professor of microbial genetics and biological chemistry at the School of Medicine of the University of California at Los Angeles. His 250 scientific papers were concerned with nucleic acids, enzymes, growth hormones, immunology, and genetics. He wrote *The Chemistry of Heredity* (1959).

ZAMIR, ITZHAK (1931–), Israeli jurist. Born in Warsaw, Poland, Zamir came to Palestine in 1934. He studied law at the Hebrew University of Jerusalem (M.Jur.) and the London School of Economics (Ph.D.). He was a law professor and director of the Institute for Legal Research and later dean of the Law Faculty at the Hebrew University. From 1978 to 1986 he was attorney general of the State of Israel, and from 1994 to 2001 a justice of the Supreme Court of Israel. He was also founding dean of Haifa University School of Law, president of the Israel Press Council, chairperson of the Israel Council on Tribunals, president of the Israel Association of Public Law, and chairperson of various other public committees.

Zamir wrote several books and many articles in Hebrew and English on various legal subjects as well as articles in the daily press. Among his books are *The Declaratory Judgment* (1962, with Lord Woolf) and *Administrative Power* (Heb., 1996). In 1997 he received the Israel Prize for legal scholarship. Throughout his career Zamir has been a staunch advocate of pluralism, tolerance, and egalitarianism.

[Leon Fine (2nd ed.)]

ZAMORA, city in León, N.W. Spain. Its ancient Jewish community was founded in the same period as those of *Nájera and *Salamanca. The date when the Jewish quarter was erected is not known. It was situated outside the city walls on the site known as Vega, where there was a separate group of houses, as well as the synagogue of the quarter and the Jewish cemetery. Throughout the period of the community's existence, there were three synagogues, one of which was registered in the office of Sancho IV, in 1283.

In 1313 a *Church Council held in Zamora adopted a series of decisions relating to the Jews: Jews were excluded from state functions; the edicts enforcing the wearing of a distinctive *badge were to be maintained, as also those concerning payment of the tithe to the church, the interest rate, and the transfer of newly built synagogues to the possession of the state, among other measures. These decisions of the council influenced the decisions of the Cortes which was convened in that year.

There is no information available on how the persecutions of the Jews in Spain of 1391 affected those in Zamora, but they undoubtedly resulted in conversions and apostasy. The amount of tax which the community paid declined.

During the 1470s and 1480s R. Isaac b. Moses *Arama preached in Zamora. In 1485 an order issued by John II was confirmed; it exempted the Jews of Zamora from providing accommodation for public personalities, with the exception of the king, the queen, and the members of the royal council. In that year Saul Saba – a brother of Abraham *Saba, and a renowned kabbalist and preacher – was condemned to death in Zamora, but details of the accusation and the trial are not known. In 1490 a unique lawsuit concerning a Jewess of Zamora was brought before the crown; she accused Jacob ibn Meir, the son of Isaac of Valladolid, an inhabitant of Zamora, of having ravished her and promising to marry her, and of not keeping his promise. In 1490 the community of Zamora, with that of Seville, contributed toward the redemption of the Jewish captives who had been taken in *Málaga. In 1491 the community paid a sum of 100,650 maravedis toward the war with Granada, in conjunction with a number of communities in the area.

In 1492, following the edict of expulsion from Spain, the Jews of Zamora went to Portugal, and the property of the community and the exiles was handed over to the prosecutor of Saragossa.

At the end of 1492 Zamora became a transit center for Jews who returned from Portugal to Spain in order to convert to Christianity. Several exiles from Zamora achieved fame during the 16th century for their activities in Jewish centers in the Ottoman Empire, of whom the most renowned were Jacob ibn *Ḥabib and Levi b. *Ḥabib.

[Haim Beinart]

ZAMOSC (Pol. **Zamość**), city in Lublin province, E. Poland. The first Jews to settle in Zamosc were Sephardim who had been encouraged by the founder of the city, Jan Zamojski, to make it their home in 1588. The synagogue they built was notable for its richly ornamented interior. However, after a single generation the community ceased to exist. Ashkenazi Jews began to settle in Zamosc at the beginning of the 17th century, and during the *Chmielnicki massacres of 1648–49, Zamosc became a refuge for thousands of Jews in the vicinity; many died of hunger and disease while the city was under siege. In 1765, 1,905 Jews were recorded in Zamosc and in the communities within its jurisdiction. During the period that the city was under Austrian rule (1794–1809), the Enlightenment movement (see *Haskalah) found adherents in Zamosc. At the beginning of the 19th century, Joseph Zederbaum (father of Alexander *Zederbaum, editor of the Hebrew newspaper

Ha-Meliẓ), and the scholar and educator Jacob *Eichenbaum were leaders in the city's Haskalah circles. The poet and physician Solomon *Ettinger lived in Zamosc, and the author I.L. *Peretz was born and raised there. A center of rabbinical learning as well as of Haskalah, Zamosc was noted for its many public and private libraries. *Ḥasidism spread to the city during a later period.

Under Russian rule the number of Jewish inhabitants in Zamosc grew from 2,490 in 1856 to 7,034 in 1897 (50% of total), and to 9,000 in 1909 (about 63% of the total population). At the beginning of World War I many inhabitants left the city, since it was located on the Austro-Russian front line. After the war the community was reorganized. It numbered 9,383 in 1921, 10,265 in 1931, and 12,000 in 1939. Between the two world wars a Hebrew school existed in Zamosc as well as a Jewish-Polish secondary school. A local Jewish newspaper *Zamoscer Shtime* was published in the city.

[Yehuda Slutsky]

Holocaust Period

After a few days of heavy bombardment, which especially damaged the Jewish quarter, the German army entered Zamosc on Sept. 14, 1939. Immediately after capturing the city, the Germans organized a series of pogroms, motivated in part by the desire to loot Jewish property. On Sept. 26, 1939, the Germans left Zamosc and the Soviet army entered, but handed the city back to the Germans two weeks later, in accordance with the new Soviet-German demarcation line. About 5,000 Jews left the city at the time that the Soviet army withdrew. The remaining Jewish population suffered Nazi brutality and persecutions, like the rest of the Jews throughout Lublin province.

In October 1939 the Germans selected a *Judenrat and forced it to pay a "contribution" of 100,000 zlotys ($20,000) and the daily delivery of 250 Jews for hard labor. In December 1939 several hundred Jews expelled from *Lodz, Kalo, and *Wloclawek in western Poland were settled in Zamosc. Early in the spring of 1941 an open ghetto was established around Hrubieszowska Street, and the first deportation from Zamosc took place on April 11, 1942 (on the eve of Passover). The entire Jewish population was ordered to gather in the city's market, whereupon gunfire was directed at the crowd killing hundreds on the spot. About 3,000 Jews were forced to board waiting trains which took them to *Belzec death camp. From May 1 to 3, 1942, about 2,100 Jews from *Dortmund, Germany, and from Czechoslovakia were taken to Zamosc. Almost all of them were deported to Belzec on May 27 and murdered. The third mass deportation started on Oct. 16, 1942. All Jews were again ordered to gather in the city's market, and afterward were driven to *Izbica, some 15½ mi. (25 km.) from Zamosc. Many were shot on the way, and the rest, after a short stay in Izbica, were deported to Belzec and murdered. In this deportation the Jews offered passive resistance and hundreds went into hiding in prepared shelters. The Germans brought in Polish firemen to open the shelters by destroying the walls and re-

moving other obstacles. Several hundred Jews were discovered in hiding and imprisoned for eight days in the city's cinema hall without food or water; then all those who were still alive were brought to the Jewish cemetery and executed.

A few hundred Jews fled to the forests. Most of them crossed the Bug River, made contact with Soviet guerrillas in the Polesie forest, and joined various local partisan groups. After the war some 300 Jews settled in Zamosc (270 from the Soviet Union, and 30 survivors of the Holocaust in Zamosc), but after a short stay they all left Poland.

In 1950 a memorial to the Jewish martyrs of the Holocaust from Zamosc was erected in the Jewish cemetery of the city.

BIBLIOGRAPHY: *Zamosc bi-Geònah u-ve-Shivrah* (1953), memorial book; M.W. Bernstein (ed.), *Pinkes Zamosc, Yisker-Bukh…* (Yid. 1957); Klausner, in: *He-Avar*, 13 (1966), 98–117; BŻIH, 21 (1957), 21–92.

ZAMOSC, DAVID (1789–1864), Hebrew writer and teacher. Educated in his native Kampen, Poznan, until the age of 13, he then moved to Breslau, where he studied under his uncle, acquired a secular education, and taught for ten years. In 1820, having won a large sum in a lottery, he went into business, but returned to literary and teaching activities after he lost his capital. His poems, stories, plays, translations, and compilations were written mainly for children and schools. His play, *He-Haruz ve-he-Azel, O Yad Haruzim Taàshir* ("The Diligent Man and the Lazy Man, or the Hand of the Diligent Will Enrich," Breslau, 1817), is the first modern Hebrew play written for children. Through its allegorical characters – the diligent man, the rich man, the lazy man, and Satan – Zamosc tried to instill moral values into the young.

His other works include: *Pillegesh ha-Givah* (Breslau, 1818), a historical play; *Tokhahat Musar* (Breslau, 1819, 1946²), a translation of J.H. Campe's moral catechism, *Theophoron*, written in a didactic narrative style, with the Hebrew appearing opposite the original German; *Resisei Meliẓah* (Dyhernfurth, 1820–22; 2 vols.: one consisting of poems and letters, both original texts and German and Hebrew translations; the other of poems by other writers); *Toàr ha-Zeman* (Dyhernfurth, 1821), a play on problems of his time; *Mafteàh Beit David* (Breslau, 1823), 100 epistles with a German glossary; *Meẓiàt Amerikah* (Breslau, 1824) and *Rabinsonder Yingere* (Breslau, 1825), adaptations of works by J.H. Campe; *Aguddat Shoshannim* (1827), poems and various aphorisms; *Halikhot Olam* (1829), a play; *Esh Dat* (1834), a textbook divided into three parts:

(1) reading exercises in German and Hebrew and a translation of the play *Eldad ve-Tirẓah*;

(2) entitled Ohel David, dealing with Hebrew grammar based on the works of Ben-Zeèv, Gesenius, and others; and

(3) entitled Shirei David, consisting of miscellaneous poems; *Nahur me-Eden* (1837), a Jewish history for children "with questions and moral thoughts, including a short poem at the end of each chaplet"; a translation of *Roòt Midyan O Yaldut*

Moshe by S.F. de Genlis (1843); and various poems dedicated to friends, princes, and kings. He also contributed to *Bikkurei ha-Ittim*, the Hebrew annual (Vienna, 1821–31).

[Getzel Kressel]

ZAMOSC, ISRAEL BEN MOSES HA-LEVI (also **Segal**; c. 1700–1772), talmudist, mathematician, and one of the early Haskalah writers. Zamosc was born in Bóbrka (near Lvov) to an undistinguished family and studied in Zamosc, where he also taught at a yeshivah. His first published work is *Neẓaḥ Yisraʾel* ("The Eternity of Israel"; written c. 1737): while essentially devoted to traditional *sugyot*, it is innovative in that it interprets numerous Talmudic passages from a mathematical and astronomical viewpoint. Zamosc proclaims his fidelity to Maimonides and gives reason priority in interpreting tradition. He thus argued that the rabbis of the Talmud held true scientific views, so that, if interpreted correctly, even seemingly "odd" statements in the Talmud turn out to be consistent with science; by contrast, he boldly took to task venerated Talmud commentators who held, for example, that the earth was flat. Conservatives rightly identified this work as subversive and dubbed it *Reẓaḥ Yisraʾel* ("The Assassination of Israel"). The scientific knowledge displayed in *Neẓaḥ Yisraʾel* is astonishingly broad but outdated (his authorities are Aristotle and Ptolemy): it is drawn exclusively from Hebrew books, almost all medieval. (The only exception is Joseph Delmedigo's *Sefer Elim* (1629), on which Zamosc wrote a commentary, now lost.) The exceptional availability of books in Zamosc, many in manuscript, is perhaps a consequence of the earlier presence there of Sephardi Jews, brought in by its founder, Jan Zamoyski (1541–1605). Israel Zamosc had followers and allies, among them Joel b. Uri Baʾal Shem (the younger). The town of Zamosc became a center of early Haskalah a generation later. In Zamosc, Israel composed a number of further works, of which the (geocentric) astronomical treatise, *Arubbot ha-Shamayim* ("The Windows of the Heaven"), is the only one to survive (in manuscript). His predilection for science notwithstanding, Israel Zamosc was conventional in his respect for the Kabbalah.

In 1741 Zamosc went to Frankfurt an der Oder, where he had *Neẓaḥ Yisraʾel* published. He then settled in Berlin, where he taught Hebrew, science, and Jewish philosophy to Aharon Zalman Gumpertz (1723–1769) and Moses Mendelssohn (1729–1786), thus exerting a formative influence on two important figures of the early Berlin Haskalah. He studied (with Mendelssohn's help) German elementary books of science.

In 1744 Zamosc published in Jessnitz his (commissioned) commentary on *Ruaḥ Ḥen* ("A Spirit of Grace"), a 13th-century anonymous popular introduction to philosophy and science. In addition to simple textual interpretations, Zamosc "comments" on the Aristotelian principles in the medieval text by exposing totally incompatible findings of recent – namely, Wolffian – science. The "small animals" observable through a microscope in a droplet of semen elicit his exclamation,

"How awe-inspiring is this statement, which our forefathers did not fathom." The new knowledge grounded in experience opened new unexpected horizons, refuting at the same time entrenched (Aristotelian) beliefs and thus undermining traditional authority, including that of Maimonides. Zamosc's is a subversive commentary: a venerated, authoritative text was used to legitimate the introduction of new ideas into a conservative community. This new literary genre was to be employed by later *maskilim*. Yet Zamosc's reception of the new science was limited to its descriptive aspects, and he failed to grasp mathematical physics or to accommodate contemporary philosophy.

The breakdown of all received verities weakened Zamosc's commitment to Maimonides' philosophy and hence to reason and science. Zamosc's views became more conservative and fideist: the commentary on *Ruaḥ Ḥen* paradoxically both exposes recent science and signals its author's turn toward the authority of traditional, including kabbalistic, texts. During the third, conservative, period of his life, spent between Berlin and Brody, Zamosc wrote two further (posthumously published) commentaries on medieval classics, which now accompany the traditional editions of these two works: *Oẓar Neḥmad* ("A Lovely Treasure"), on the *Kuzari*, and *Tuv ha-Levanon* ("Lebanon's Best"), on *Ḥovot ha-Levavot* ("The Duties of the Heart"). Although in these commentaries Zamosc replaced certain outdated medieval scientific ideas with facts from modern science, he held that belief and revelation are superior to reason and science. In 1764 Zamosc contacted Jacob Emden (1697–1776) on matters of *halakhah*.

In an unknown period, Israel Zamosc also wrote *Nezed ha-Demaʾ* ("A Pottage of Tears"; published posthumously: Dyhernfurth, 1773), a bitter, pessimistic social criticism written in rhymed prose. Its obscure style and intertextual allusions have led to a dispute over the target of its critique. Some scholars have interpreted it as a fierce attack on the ḥasidic movement, which was then becoming prominent: it contains most of the claims against the Ḥasidim used by later opponents – e.g., the allegations that Ḥasidim fostered ignorance, were prone to drunkenness, made unjustified innovations in religious practice, and misled simple people. Other scholars see in *Nezed ha-Demaʾ* a critique of contemporary Jewish society generally. Perhaps the truth is in between: the work may have been written over a long period of time, so that some passages have a particular target, whereas others are unspecific social criticism, of the kind Zamosc had expressed already in his youth.

Zamosc, who often oscillated between a tone of melancholic discouragement and elation, saw himself as a reformer of the spiritual cum social state of contemporary Jews: he was not only enlightened, but also sought to enlighten his audience. In his last years, he was venerated as an erudite *maskil* in Brody, where he died on April 20, 1772. Later *maskilim* and secular historians rightly gave him a place of pride in the history of the Haskalah. At the same time, Orthodox circles have

hailed him as the author of two classic commentaries on standard works of Jewish thought.

ZAMZUMMIM (Heb. זַמְזֻמִּים), the name given by the Ammonites to the inhabitants of the Transjordanian territory whom they dispossessed (Deut. 2:20). They were part of the nation of giants known as *Rephaim, who formed the ancient population of Transjordan (Deut. 2:10–12, 20–23). The Zamzummim are often identified with the people called Zuzim, mentioned as one of the nations defeated by Chedorlaomer and his allies in Transjordan (Gen. 14:5; Rashi, Gen. 14:5), since the same peoples listed in Deuteronomy 2 are listed in Genesis, with Zuzim substituted for Zamzummim. Some modern scholars explain the name Zamzummim as "to talk gibberish" (cf. Ar. *zamzama*). In the midrashic literature, Zamzummim (interpreted as meaning "great masters in war") is one of the seven names given to the offspring of the alliances between the Canaanite women and the angels (Gen. R. 26: 7; see Gen. 6:1–4).

[Gershon Bacon]

ZAND, MICHAEL (1927–), philologist of Persian. Zand was born in Kamenets-Podolski, but was taken to Moscow in 1930. In 1937 his father was killed during the Stalin purges. Zand studied at the University of Moscow and then, when he could not find employment because of his "background," he moved to Stalinabad (now Dushanbe), where he did research at the Tajik Academy of Sciences from 1951 to 1957. In that year, following the posthumous "rehabilitation" of his father, he returned to Moscow, where he became head of the philological department and member of the editorial board of *Narody Azii i Afriki*, the leading Soviet journal of Oriental studies. In 1962 he became a research worker at the Institute of Oriental Studies, U.S.S.R. Academy of Sciences, and in 1964 consulting editor of the *Soviet Literary Encyclopedia*. Having made more than one attempt to leave for Israel, he became involved in the late 1960s in the dissent movement of Soviet intellectuals and in those circles which, despite official disap-

proval, spread knowledge of Judaism and Israel among Jewish youth.

In 1971 Zand was detained for having led a public demonstration in Moscow of Jews desiring to leave for Israel. His detention became the object of a protest movement addressed by scholars and learned institutions in many countries to the Soviet authorities. He was allowed to leave for Israel that year and was appointed professor of Persian and Tajik literature at the Hebrew University and in 1975 was appointed head of its department of Iranian and Armenian Studies at the Institute of Oriental and African Studies.

Among Zand's publications are *Six Centuries of Glory* (Moscow, 1967) on the history of Persian literature (Persian translation, 1972) in English and in Hebrew; *Jewish Culture in the Soviet Union* (with Ch. Schmeruk, 1973); and *Bukharan and Mountain Jews* (with M. Altshuler and Y. Pinkash, 1973). He was editor (with A. Tartakower and M. Zahave) of *Hagut Ivrit bi-Brit ha-Moaẓot,* studies on Jewish themes and contributions to Hebrew literature by contemporary Russian Jewish scholars (1976). Some of his Hebrew poems, under the pseudonym Menaḥem de-Razin, were sent clandestinely from the U.S.S.R. to Israel and published there.

[Shaul Shaked]

ZANGWILL, ISRAEL (1864–1926), English author. Born in London of a poor Russian immigrant family, Zangwill was first raised in Bristol and then educated at the Jews' Free School in the East End of London and at London University, where he graduated with honors in 1884, and became a teacher. He began his literary career with humorous short stories, but his early life had given him material for work of a far more serious kind. Sensing that he would one day wish to record the world of East London Jewry in novel form, he carefully noted down his early observations and any chance incidents or anecdotes that came his way. These notebooks formed the basis of his "ghetto" novels. Underlying Zangwill's work was also a serious intellectual and spiritual concern with Jewish existence in the Diaspora. This was reflected in the essay on Anglo-Jewry which he contributed to the first volume of the *Jewish Quarterly Review* in 1889. In this article he laid powerful emphasis on the permanent significance of Judaism as a revealed religion; but he also confessed that, in the light of modern skepticism and as a result of the emancipation of the Jews and the breakdown of the ghetto system, Judaism was no longer a viable faith. The Jew, he wrote, was "like a mother who clasps her dead child to her breast and will not let it go." There is a paradox here which indeed runs through Zangwill's life and work. He was passionately devoted to the values of the Jewish past as enshrined in the ghetto, but at the same time he sought to escape from what he felt to be the ghetto's restrictiveness. Like all his major characters, Zangwill was a child of two worlds. The *Jewish Quarterly Review* article attracted the attention of Judge Mayer *Sulzberger of Philadelphia and, as a result, Zangwill was invited to write a novel for the Jewish Publication Society of America. This was the genesis of his in-

ternationally successful *Children of the Ghetto* (1892), which records the history of the Ansell family – clearly a reflection of the history of his own family, with Zangwill himself projected as Esther Ansell, the heroine. *Children of the Ghetto* is a mixture of comedy, pathos, trivial episodes, and serious questioning of the nature of Judaism. From a formal and tonal point of view, it is an incompletely unified novel, but it has an epic range and depth and clearly penetrates to the tragedy – as well as the comedy – of Jewish life. All the characters, including the heroine, seek to escape from the ghetto and its religious and social forms, but they nearly all wander back in the end, returning to its spiritual comforts. Among the comic characters is the ghetto poet Melchizedek Pinchas – actually an unflattering pen portrait of Naphtali Herz *Imber, author of *Ha-Tikvah. Dreamers of the Ghetto* (1898) consists of a series of sketches based on the lives of historical figures, including the author's father, Moses Zangwill (who ended his days in Jerusalem), Benjamin *Disraeli, Heinrich *Heine, Ferdinand *Lassalle, *Shabbetai Zevi, and Baruch *Spinoza. Most of these men were also affected by the tragic duality of Jewish existence and sought to find some way of mediating between the living inheritance of Judaism and the powerful attractions of the world outside; but, in contrast to the main figures in *Children of the Ghetto*, they nearly all chose the road of apostasy. Other ghetto studies are *The King of Schnorrers* (1894), a hilarious, if imaginary, account of London Jewry in the 18th century; *Ghetto Tragedies* (1893); and *Ghetto Comedies* (1907). Many of these shorter pieces are of only ephemeral significance, but some generate the full power of Zangwill's major work, as for instance "The Diary of a Meshumad" in *Ghetto Tragedies*. This tells the story of the inner conflicts of a Russian Jew, married to a non-Jewess and living his Judaism secretly within himself. Zangwill also wrote many novels without any Jewish content at all. They include *The Master* (1895), the story of an immigrant child from Canada who finally succeeds in becoming a famous artist; *The Mantle of Elijah* (1900), about the events of the Boer War; and *Jinny, the Carrier* (1919), a novel set in mid-19th-century rural England. These now have only historical interest. He also wrote several plays, including *The War God* (1911); *The Cockpit* (1921); and *The Forcing House* (1922). *The Melting Pot* (1909), a drama about Jewish settlement in America, had a long run on Broadway, but its theme ("America is God's crucible, the great melting-pot where all the races of Europe are melting and reforming") was, perhaps, exaggerated. In this work he coined the phrase "the melting pot" to describe America and its immigrants, a phrase which has become proverbial. Zangwill abandoned the idea within a few years. Except for this latter attempt, his plays were not greatly successful on the stage, and his last years were embittered by frustrating struggles with unsympathetic producers. Zangwill also wrote one of the great classics of the "locked room" detective story, *The Big Bow Mystery* (1891).

Zangwill's interests were by no means confined to literature. He took an active part in public questions, including women's suffrage and, during World War I, pacifism. It was

to him that *Herzl came in 1895, introducing himself with the words: "I am Theodor Herzl. Help me to rebuild the Jewish state." A year later Zangwill enabled Herzl to address his first London audience, and to that rally of the Maccabeans in 1896 the beginnings of British Zionism may be traced. Zangwill immediately saw the significance of Zionism and became a follower of Herzl and also became a friend of Max *Nordau, whose *Degeneration*, when the English version appeared in 1895, had made a deep impression on him. He joined the Maccabeans' pilgrimage to Erez Israel in 1897 and attended the First Zionist Congress as a visitor. More interested in Jewish nationhood than in the Jewish land, he abandoned official Zionism when the Seventh Zionist Congress (1905) rejected the *Uganda offer. He then founded the Jewish Territorial Organization (see *Territorialism), dedicated to the creation of a Jewish territory in some country that need not necessarily be Palestine. He threw himself into this project with characteristic zeal and energy, recruiting for it the support of the first Lord *Rothschild and of the U.S. philanthropist Jacob *Schiff. The movement's only substantial achievement was the settlement of several thousand Jews in *Galveston, Texas, in the years before World War I. With the issue of the *Balfour Declaration in 1917, Zangwill temporarily returned to his Zionist faith. He became disillusioned, however, as a result of the difficulties encountered by the settlers in Palestine and the opposition of the Arabs and, in his final years, returned to his belief in a territorial solution for the Jewish problem outside Palestine. It is possible to discern a connection between Zangwill's Jewish novels and his political efforts for I.T.O. (see Territorialism). In both, the reality of a Jewish organic existence in the Diaspora is central. A self-governing Jewish territory would be a kind of super-ghetto, perpetuating what was presumably best in the ghetto system without the necessity for a radical spiritual readjustment such as a Jewish renaissance in the Holy Land seemed to demand. Yiddish was, for Zangwill, the true repository of Jewish culture. It is interesting that "ITO land" was not Zangwill's only solution for the Jewish problem. Along with it he paradoxically entertained another idea almost its antithesis: the melting away of Jewish separatism and the absorption of Judaism into a new religion of the future, which would embody the best of Hebraism, Hellenism, and Christianity. Such ideas are set out in his plays *The Melting Pot* and *The Next Religion* and in a number of occasional essays printed at different times.

Zangwill was a brilliant and witty speaker and could always draw a capacity audience of London's Jews. Some of his best-known aphorisms were: "A chosen people is really a choosing people," "Every dogma has its day, but ideas are eternal," and "The history of the ghetto is from more than one aspect the story of the longest and bravest experiment that has ever been made in practical Christianity." His major essays on the Jewish question are collected in *The Voice of Jerusalem* (1920), which contained such biting remarks as: "If there were no Jews, they would have to be invented, for the use of politicians – they are indispensable, the antithesis of a

panacea; guaranteed to cause all evils." A further collection of *Speeches, Articles and Letters* was issued in 1937. Zangwill also contributed several verse translations of portions of the liturgy, which ingeniously preserved the original's acrostic and rhyming schemes, to an edition of the *Festival Prayer Book* (1904, and several editions); and he translated a selection of the poems of Ibn *Gabirol in 1903. But his genius did not lie in poetry: his true bent was for comedy and for eloquent narrative and expository prose. His major works were translated into about 20 languages. In 1903 Zangwill married Edith Ayrton (1875–1945), the daughter of a distinguished physicist and the stepdaughter of a Jewish woman, Phoebe Marks Ayrton, herself a distinguished physicist. Edith Zangwill was a noted novelist in her own right.

His younger brother, LOUIS ZANGWILL (1869–1938), wrote under the pseudonym "Z.Z." and achieved some success with his first novel, *A Drama in Dutch* (1894). His other works include *The Beautiful Miss Brooke* (1897), *Cleo the Magnificent* (1898), and a study of the dramatist Richard *Cumberland (1911). Louis Zangwill was, in his earlier years, a chess champion and a gifted mathematician. Israel Zangwill's son, OLIVER LOUIS ZANGWILL (1913–1987), was professor of experimental psychology at the University of Cambridge from 1952 until 1991. He wrote several books on psychology, amnesia, and animal behavior.

[Harold Harel Fisch]

ZANOAH (Heb. זָנוֹחַ), name of two biblical cities in Judah.

(1) A town "in the Lowland" near Zorah, Jarmuth, and Adullam (Josh. 15:34). It is mentioned in the list of Judean cities with Adullam and Lachish (Neh. 11:30). The inhabitants of Zanoah and their leader Hanun were among those who rebuilt the walls of Jerusalem in Nehemiah's time (Neh. 3:13), and it may be conjectured, therefore, that Zanoah was a center of secondary rank in its district, probably that of Keilah. In the time of Eusebius (Onom. 92:13), Zanoah was a village within the boundaries of Eleutheropolis (Bet Guvrin) on the way to Ailia (Jerusalem). The site is identified with Khirbat Zanūʿ between Beth-Shemesh and the valley of Elah, where pottery of the Late Bronze and Iron II ages, as well as remains from later periods, was found. According to the Mishnah, the quality of the fine flour of Zanua was unsurpassed (Men. 8:1; corrected Mss.).

(2) A Judean city in the mountain region, in the same district as Maon, Carmel, Ziph, and Juttah (Josh. 15:56). Therefore, it was probably to the S.E. of Hebron, but the exact site is unknown.

An agricultural moshav with the name Zanoah, originally of Yemenite Jews, mostly new immigrants, was established south of Beth-Shemesh in 1950. Later the Yemenites were replaced by North African Jews, mostly from Morocco. Its population in 1969 was 318. In the mid-1990s the population was approximately 340

[Michael Avi-Yonah]

ZANTE (Gr. **Zakynthos** or **Zakinthos**), city on the island of Zante, the main southernmost island of the Ionian Islands of Greece. Moses *Basola, who passed through Zante in 1522, found about 30 Jewish families and a synagogue. *Elijah of Pesaro mentions in 1563, 20 heads of families of Sicilian and Portuguese origin, mostly wealthy merchants engaged in maritime trade between Venice and Constantinople. The Jews lived in a ghetto which was closed at night. From 1518 they had to wear the Jewish *badge.

The first known rabbi of the community was Joseph Formon, born at Serrai (Seres), in Macedonia, who headed a rabbinical school before being appointed to Zante. During the 17th century R. Jacob b. Israel ha-Levi was the rabbi of Zante. In 1686 the Jewish community numbered about 1,000 people. There was a *blood libel in Zante in 1712. There were two synagogues in the town, one named the Zante Synagogue and the other Candia. The latter was built in 1699 by natives of Candia at a slight distance from the ghetto, destroyed in 1712, and rebuilt in 1716. The Jews engaged in crafts and commerce. As a result of the blood libels and the decline in commerce, they abandoned the town. After some time Jews from Corfu, Crete, Constantinople, Izmir, and other places settled in Zante. They lived under the English from 1815–64. It was forbidden for them to belong to artisan guilds and trade associations and to take part in the political life of the island. In 1891 the Jewish population numbered between 200 and 300. During the Corfu blood libel and ensuing riots of that year, violence erupted in Zante. Although the troops defended the Jews, the mob attacked four Jewish families outside of the Jewish ghetto. Four people were killed, and 11 were injured. One soldier was killed defending the Jews and three Christians were killed when the troops shot at the crowd to defend the Jews.

At the outbreak of World War II the Jewish population numbered 270. With the German occupation many of them sought refuge in the mountains, some 70 to 80 remaining in the town. When on September 9, 1943, the Germans demanded that the Jews of Zakynthos be drafted for forced road work, they were quickly represented by the Righteous Gentiles Metropolit Chrystostemos and mayor Lukas Karrer (the Jewish community president being incapable of doing so), and relieved of the arduous task. The German commander Lut demanded Jewish communal lists, but the two dignitaries claimed that they were the only Jews on the island. The

Jews dispersed throughout the island and until the liberation, some 30 of them died of starvation. A deportation boat arrived from Corfu, but there was no room to add local Jews; the Jews were still dispersed, however, in the countryside villages. The Jews were never deported and though there are numerous theories, none have ever been proven or documented. They include Lut's having a Greek girlfriend who influenced him not to harm the Jews, EDES leader Katevatis threatening Lut continuously with revenge if the Jews were deported, and Metropolit, claiming to have known Hitler from their student days in Munich, reportedly sending a telegram to Hitler requesting him not to deport the Jews. Even at the end of the German occupation in August 1944, Jews were still being pursued in the most remote corners, and not arresting and deporting the Jews of Zakynthos is a highly unusual phenomenon in Nazi-occupied Greece and Europe.

The convoy of Jews that was sent from Corfu to death camps in Poland in June 1944 was too large to permit a halt in Zante and so the Jews there were saved. Those who had fled subsequently returned in September of that year, but shortly afterward a large number of them immigrated to Erez Israel on the illegal immigration boat *Henrietta Szold* in August 1946. They were stopped by the British in the Bay of Haifa and deported to Cyprus, but allowed to come to Erez Israel in December 1946. In 1948 there were 70 Jews in the town, but after the 1953 earthquake most of the Jews left for Athens or Israel. In the 1980s the last Jew died, and the Greek Board of Jewish Communities in Athens oversaw the synagogues and cemetery.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

ZAPHON (Heb. צָפוֹן), city of the tribe of Gad, listed with Succoth and, as the enumeration of cities in Joshua 13:27 goes from south to north, apparently situated to the north of the latter. The name also appears as that of a family in the genealogy of Gad (Gen. 46:16, as Ziphion; Num. 26:15, as Zephon). The city may have been occupied earlier than the Israelite period, as is indicated by its name, which recalls the Canaanite deity Baal-Zephon; it is possibly mentioned in one of the el-Amarna letters (no. 274) as well. Some scholars assume that Jephthah resided there, for the Ephraimites, in their quarrel with him, gathered at Zaphon. Where the Hebrew text relates that Jephthah was buried "in one of the cities of Gilead" (Judg. 12:7), the Septuagint reads "in his city, Zaphon." In the Jerusalem Talmud (Shev. 9:2, 38d), it is identified with Amtan (Amathus), present-day Tell ʿAmmātā in the Wadi Rājib,

but possibly this is due to confusion between a distinguishing epithet and the city name: this particular Zaphon was known as "Zaphon near Amathus." Josephus calls it Asophon; it was there that Alexander Yannai suffered defeat at the hands of Ptolemy, king of Cyprus (Ant., 13:338). Basing his position on the talmudic equation, Glueck identifies it with Tell al-Qaws, a prominent and strategically strong position, about three mi. (5 km.) north of Tell Deir (Dayr) ʿAllā, the assumed site of *Succoth. Pottery on the surface of the tell ranges from late Chalcolithic through Early Bronze Age I–II, Middle Bronze I, Late Bronze II, and Iron Age I–II. The later Zaphon may have been located at Khirbat Buwayb, about 1.4 mi. (2.25 km.) west-northwest of Tell al-Qaws. Albright, however, identifies the ancient site with Tell al-Saʿīdiyya, farther to the northwest on the Wadi Kafranjī, near the Jordan (on the excavations of this mound, see *Zarethan).

[Michael Avi-Yonah]

ZAPOROZHE (before 1921 Alexandrovsk), city in Zaporozhe district, Ukraine. The Jewish community increased with the rapid development of the town in the late 19th century and in 1897 numbered 5,290 (28 percent of the total population). In 1881 there was an outbreak of *pogroms in the town, whence they spread to the surrounding towns and villages. In 1905 there were again severe pogroms. The Jewish population in 1926 numbered 11,319 (20.3 percent of the total). The growth of the city attracted many thousands of Jews from the impoverished townlets of western Ukraine and Belorussia. In 1932 there were 20,000 Jews in Zaporozhe, of whom about half were industrial workers. It is estimated that this number at least doubled in the period before World War II, which was a time of rapid development for the city of Zaporozhe (whose total population rose from 56,000 in 1926 to 289,000 in 1939). During the German occupation in World War II the Jews who did not succeed in escaping were murdered. In 1959 the Jews numbered 17,400 (4 percent of the total population). There was no synagogue, but *kasher* poultry was available. There was a Jewish section in the general cemetery, and on the outskirts of the city a Jewish mass grave dating from the German massacres.

District of Zaporozhe

Between 1846 and 1855 ten Jewish settlements were founded in the district of Zaporozhe. In 1908 they cultivated 309,000 acres. These settlements were incorporated in 1928 within the Jewish autonomous region named Nei-Zlatopol after the largest settlement. The Jewish population of the district numbered 7,500 (50 percent). The Jewish settlements were destroyed during the German occupation.

[Yehuda Slutsky]

ZARASAI (under the czarist regime **Novoaleksandrovsk**), city in N.E. Lithuania. In independent Lithuania the city was first called Ežerenai and was a district center. In 1838 there were 146 Jews there, among them five merchants; by 1847 the number of Jews had risen to 453. The town's geographic position, near Dvinsk (*Daugavpils), on the main Petersburg (Leningrad)–Warsaw–Berlin highway, had a favorable influence both on its general development and on the growth of its Jewish population; by 1897 there were 3,348 Jews in the town (53% of the total population). During World War I most of the Jews there fled to other parts of Russia, and not all returned to the town after the war. When Lithuania became independent, Zarasai was cut off from its hinterland, with disastrous consequences both for its economy and size of its population; by 1923, the Jewish population had decreased to 1,329 (35% of the total population). The community was composed largely of shopkeepers and artisans, but there were also some professionals. A number of Jewish secular and religious institutions of learning were supported by the community. In World War II, shortly after the Germans attacked the U.S.S.R., Zarasai was occupied by the German army. On Aug. 26, 1941, 8,000 Jews from Zarasai and surrounding communities were taken to a forest near Dusetai and murdered there.

ZARCHI, ASHER (1864–1932), Orthodox rabbi. Born in Kovno, Lithuania, Zarchi later attended the well-known yeshivah of Volozhin. He married in 1883, continued his Talmud studies, and received rabbinic ordination from Rabbi Isaac Elhanan Spektor, the communal rabbi of Kovno, along with Rabbi Isaac Meir of Slobodka and Rabbi Chaim Segal of Yanova.

Zarchi immigrated to the United States in 1891 and served as pulpit rabbi in the Brownsville section of Brooklyn for a year, after which he moved to Des Moines, Iowa, where he was the only Orthodox rabbi. Zarchi played a central role in establishing America's first Orthodox rabbinic union, the Agudat ha-Rabbonim. He helped prepare its initial mission statement. Zarchi stayed in Des Moines until 1903, when he was invited to move to Louisville, Kentucky, by that city's *Vaad Ha-Ir*, to become its community rabbi. Zarchi did not serve any particular pulpit in Louisville but rather served the needs of the entire community.

In Louisville, Zarchi was responsible for *kashrut* supervision and communal charities. He was also the main Hebrew teacher in a small school at the Beth Hamidrash Hagadol. Zarchi was instrumental in forming the Louisville Hebrew School and as chief rabbi of the city, he often traveled to inspect Midwestern mills that prepared flour for *matzah* baking as well as manufacturing plants in Cincinnati, where he gave kosher supervision for Crisco.

Zarchi's life work included articles of Talmud commentary and Jewish law that appeared in such journals as *Ha-Ivri,*

Ha-Pisgah, and *Ha-Measef.* He also contributed essays to the encyclopedic work, *Ozar Yisroel,* which was edited by Rabbi Judah David Eisenstein. Zarchi died on June 24, 1932. He had no children. In 1946, the Jewish National Fund of Louisville helped establish an Israeli settlement in his memory and named it Naḥalat Zarchi.

[Lynne Schreiber (2ⁿᵈ ed.)]

ZARCHI, ISRAEL (1909–1947), Hebrew novelist and editor. Born in Jedrzejow, Poland, Zarchi immigrated to Erez Israel in 1929, worked as a laborer, and studied at the Hebrew University (1932–37). He wrote mainly about life in Erez Israel. The pain and anguish that accompanied the efforts of the *ḥalutzim* to acclimatize themselves and take root in Erez Israel are major themes in his works.

His novels include *Olamim* (1933); *Yamim Yeḥefim* (1935); *Ha-Neft Zorem la-Yam ha-Tikhon* (1937); *Har ha-Zofim* (1940); *Beit Savta she-Ḥarav* (1941); *Erez Lo Zeru'ah* (1946); *Kefar ha-Shillo'aḥ* (1948); a short story collection, *Ha-Ḥof ha-Nikhsaf,* was published posthumously (1950). He translated works by S. Maugham, J. Conrad, and H. von Kleist, and was one of the editors of *Yalkut Yerushalmi le-Divrei Sifrut* (1942). A. Barshai edited a collection of Zarchi's stories, *Yalkut Sippurim* (with an introduction and a bibliography, 1983). For a list of English translations of his stories, see Goell, Bibliography, 82.

ZARCHIN, ALEXANDER (1897–1988), Israeli engineer and inventor. Zarchin was born in Zolotonosha in the Ukraine. After graduating from the Leningrad Technical Institute, he was a member of its staff until 1934. He was imprisoned for a time in a labor camp. He took out patents for evaporative drying, distillation, separation of oxygen from air, and, more importantly, for a freezing process for desalination of water. Zarchin went to Palestine in 1947. His desalination process was developed in Israel and used experimentally to supply water to the town of Eilat.

[Samuel Aaron Miller]

ZARCO, JUDAH (16ᵗʰ century), rhetorician and poet. Born on the island of Rhodes, Zarco subsequently lived for some time in Salonika. There he became a member of the Ḥakhmei ha-Shir ("Masters of Poetry"), who held competitions in the art of poetry and who also composed epigrams, poems, and works of rhetoric for various occasions. While still in Rhodes, Zarco had already written love poems and rhetorical works; and when he came to Salonika, he was received with great respect and was extolled by the local poets for his inventiveness.

Zarco composed a *maqāma* entitled *Leḥem Yehudah* (Constantinople, 1560), which he dedicated to the "Maecenas"

Abraham ibn Ḥen. It was published only once and is today a rarity. Its contents run as follows: A certain king had an exceedingly beautiful daughter. He shut her up and took great care that no lover should have access to her. Five princes came and attempted with the help of a certain wise man to enter the locked palace. They disguised themselves and entered, each one in a different manner, and one of them was successful in his stratagem. Zarco took great pains to compose a complicated acrostic that runs the entire length of the *maqāma*, and which has no parallel; but his work was not of the same quality as that of the famous writers of *maqāma*.

BIBLIOGRAPHY: A.M. Habermann, *Toledot ha-Piyyut ve-ha-Shirah* (1970), 232 f.; idem, in: J. Zarco, *Leḥem Yehudah* (1970), introduction; Davidson, Oẓar, 4 (1933), 392 f.

[Abraham Meir Habermann]

ZAREPHATH (Heb. צָרְפַת), Phoenician city situated between Tyre and Sidon and dependent on the latter. According to the papyrus Anastasi I, which dates to the time of Ramses II (13th century B.C.E.), it was located between Sidon, Ush (Palaetyrus), and Tyre. The prophet Elijah was commanded to go to Zarephath during the great drought in the reign of Ahab (I Kings 17:9–24). There he was met by a widow whom he nourished, miraculously, throughout the barren period; he later revived her dying son. This miracle made a great impression on later generations: it was mentioned in Jesus' discourse at Nazareth (Luke 4:26) and was represented in the wall paintings in the synagogue at *Dura-Europos. Zarephath is mentioned as the farthest limit of Canaan in Obadiah 1:20. In 701 B.C.E. Sennacherib took the city in his campaign against the rebellious cities of Phoenicia and the land of Israel. Josephus locates it between Sidon and Tyre (Ant., 8:320; as Sarept). According to Pliny, purple dye was produced there (5:70). Eusebius refers to it as a "most famous village" (Onom. 162:1). In Byzantine times it was called "large village," and the Aramaic name for it was "the long village" (*Qrita arikta*), probably because it extended for some distance along the seashore. It is so named on a detached fragment of the Madaba Map, in an account of the miracles of the saints Cyrus and John (*Patrologia graeca* 87:3636), and in the *Life of Petrus Iberus* (ed. Raabe, 111, 114). In crusader times, it was a walled village, a fief of Sayette (Sidon) and the seat of a bishop, known as Sarepta. It is now called Ṣarafand, a village on the shore, about 9 mi. (15 km.) south of Sidon, with a tomb of al-Khaḍr (Elijah), which probably replaced the church dedicated to the prophet which was mentioned by Theodosius (*Itinera Hierosolymitana …*, ed. Geyer, 147) and Antonius (*ibid.*, 160). The name is also used in Hebrew for France (which in medieval times excluded Provence).

BIBLIOGRAPHY: R. Dussaud, *Topographie historique de la Syrie…* (1927), 42; Abel, Geog, 2 (1938), 449; M. Avi-Yonah, *Madaba Mosaic Map* (1954), 77.

[Michael Avi-Yonah]

ZARETHAN (Heb. צָרְתָן), site near Adam, mentioned in the account of the damming of the Jordan (Josh. 3:16) and in that of the flight of the Midianites (Judg. 7:22; as Zererah). Beth-Shean, in Solomon's fifth district, is described as being "beside Zarethan, beneath Jezreel" (I Kings 4:12), but most scholars emend this passage by transposing Zarethan to the end of the verse, thus placing it at the farthest limit of the district near Jokneam (Tell al-Mazār?). Solomon had the vessels of the Temple cast between Succoth and Zarethan (I Kings 7:46; II Chron. 4:17, as Zeredah). The identification of the place is in dispute, some scholars placing it west of the Jordan, others placing it to the east of the river. Of the latter, Mazar identifies it with Tell Umm Ḥamād, a large settlement between Adam and Succoth, while Glueck has suggested Tell al-Saʿīdiyya farther to the north, which, however, Albright identifies with *Zaphon. Excavations directed by Pritchard at Tell al-Saʿīdiyya revealed the remains of a Canaanite occupation, as well as an Israelite city (tenth-eighth centuries B.C.E.) with a casemate wall 17 ft. thick, remains of houses with pillared courts, a weaving room with 72 loom weights, and an Iron Age I staircase, roofed over and arranged in two passageways led by 84 steps from the city to the spring. Other finds include early Bronze Age, late Bronze Age and early Iron Age tombs, one of a woman with jewelry, including 575 beads.

[Michael Avi-Yonah]

ZARETZKI, ISAAC (1891–1956), Yiddish linguist and author. Born in Pinsk, he studied mathematics at Derpt University (now Tartu, Estonia) in 1913–17 and published studies on geometric terminology in Yiddish (1923) as well as Yiddish translations of mathematics (1921) and algebra (1924) textbooks. Zaretzki's major contribution, however, was in the field of Yiddish linguistics. After the 1917 Revolution he joined the Jewish Labor *Bund and then the Communist Party (1918), which he left in 1921. He was briefly head of the Jewish Department of the People's Commissariat for Education in Moscow (1920). As the central figure in the movement for a reformed Yiddish orthography, Zaretzki wrote a number of books and articles on the subject, which later received government sanction, becoming the official Yiddish orthography of the Soviet Union, one of whose striking characteristics is the abandonment of the traditional spelling of Yiddish words of Hebrew-Aramaic origin. In the early 1930s he advocated introducing the Latin alphabet for Yiddish, but did not find many supporters among his fellow language-planners.

A leading methodologist in Yiddish language teaching, Zaretzki wrote a number of books in this field while pursuing extensive and intensive research into Yiddish grammar, especially syntax, and was noted for his penetrating observations and generalizations. Foremost among his numerous publications in this field is *Praktishe Yidishe Gramatik* ("Practical Yiddish Grammar," 1926, 1927[2], rev. ed. 1929 under the title *Yidishe Gramatik* ("Yiddish Grammar")). From 1928 he

taught Yiddish linguistics at the Second Moscow State University, later transformed into the Moscow Teachers' Training Institute. When the Yiddish department was closed (1938), he became a university lecturer of general and Russian linguistics. He died in Kursk, Russia.

[Mordkhe Schaechter / Gennady Estraikh (2nd ed.)]

ZARISKI, OSCAR (1899–1986), U.S. mathematician. Zariski was born in Kobrin, Russia, His father was a talmudic scholar who died when Zariski was two, leaving his mother Hannah to support seven children. She did this by running a store, and in fact the family became one of the richest in Kobrin. In 1927 Zariski won a scholarship to Johns Hopkins University in the U.S., where he was professor of mathematics from 1937 to 1945. He was then professor at the University of Illinois and finally at Harvard. Zariski's contribution to mathematics was mainly in the fields of algebraic geometry, modern algebra, and topology, and he is known particularly for his work on algebraic surfaces. Zariski received a Guggenheim fellowship in 1939–40. He was president of the American Mathematical Society in 1969–70 and was editor of the *American Journal of Mathematics*. Among his books are *Commutative Algebra* (2 vols., 1958–60) with P. Samuel; and *Algebraic Surfaces* (1935); he edited the work of R. Dedekind, *Essenza e significato dei numeri* (1926).

[Maurice Goldsmith]

ZARITSKY, MAX (1885–1959), U.S. labor leader. Zaritsky was born in Petrikov, Russia, and was taken to the U.S. in 1905. He became active in the cap and millinery workers' union, rising to president by 1919. Thereafter, he fought to establish union standards throughout the chaotic trades, succeeding with the aid of the New Deal. He was responsible for stabilization and union-management cooperation in his industry. Active in pressuring labor support for national unemployment insurance and for AFL-CIO unity, his socialist heritage was tempered as head of the United Hat, Cap, and Millinery Workers. While ousting Communist influence from his union, he never abandoned the hope for independent labor political action. In 1936 he helped establish the American Labor Party and was a presidential elector for Franklin D. Roosevelt. After 1944 he joined the Liberal Party. A labor Zionist, Zaritsky believed in a Jewish state. As chairman of the American Jewish Trade Union Committee for Palestine, Zaritsky worked, after World War II, on behalf of unrestricted immigration to Palestine and for an independent Jewish Commonwealth. His papers are in Tamiment Library, New York University.

[Kenneth Waltzer]

ZARITSKY, YOSSEF (1891–1985), Israeli painter. He was born in Borispol, near Kiev, and studied until 1914 at the Academy of Art in Kiev. He then lived in Moscow. In 1923, he went to Palestine, settling in Jerusalem, where he was one of the initiators of the first exhibition of Palestinian artists. In 1927, Zaritsky moved to Tel Aviv, where in 1947–48 he was one of the founders of the "New Horizons" group. Zaritsky was the first Israel artist to hold a one-man show in an important art center, the Stedelijk Museum, Amsterdam, in 1955 – the year he was awarded the Israel Prize. His temperament and his feeling for color led him to concentrate on landscapes. Between 1923 and 1945 he painted mostly in watercolor. Zaritsky's work underwent "periods," each of which has its special characteristic. There are the watercolors of Haifa, Jerusalem, and Safed (1923–26), which contain carefully blended color harmonies as well as sketches in which patches of violent color are applied to the drawing; the "Views over Ramat Gan" (1936–38) show great feeling for composition. His series of "Zikhron Ya'akov" (1939–40) and still lifes (1945) are stages in an evolution toward abstraction. Lastly, his large oils in the "Yehiam" and "Amsterdam" series (1954–55) synthesize all the elements of the evolution, in both brushwork and balance of color. Zaritsky's indirect influence through his pupils Avigdor Stematsky and Yehezkel Streichman contributed to the birth of an abstract-lyricist movement after 1948. This dominated young Israel painters for many years.

[Yona Fischer]

ZARKO (**Zarka**), **JOSEPH BEN JUDAH** (14th–15th centuries), Hebrew grammarian and poet in *Spain and *Italy. Zarko was one of the pupils of Profiat *Duran. Apparently in consequence of the 1391 persecutions in Spain he wandered to various towns of Italy, and in 1413 he lived in Pisa and subsequently in the towns of Modena, Ferrara, Cento, Ancona, and Mantua. He apparently died in Mantua. In Italy he engaged in writing and was supported by wealthy patrons, such as Jehiel b. Mattathias of *Pisa and the brothers Isaac and Mordecai *Finzi of Mantua. In practice he was one of the disseminators among the Jews of Italy of the Hebrew poetry and grammatical studies that had developed in Spain.

He was the author of *Rav Pe'alim*, written in 1429, a grammar of the Hebrew language which was frequently copied; and *Ba'al ha-Lashon*, a Hebrew dictionary after the manner of the *Sefer ha-Shorashim* of David *Kimḥi. Poems and letters of his are also extant. Some scholars have erroneously identified him with Joseph b. Isaac Zarko, the teacher of Abraham Portaleone.

[Abraham David]

ZARZA, SAMUEL IBN SENEH (14th century), Spanish philosopher. Although there is little information on Zarza's life, it is known that he lived in Palencia, in Castille, in the second half of the 14th century. Samuel Shalom, the first printer of *Sefer ha-Yuḥasin* (1566), maintains in his notes to

that work that Zarza was burned at the stake by the tribunal of Valencia, having been accused by Isaac *Campanton of denying creation. However, historians have proved that this is only a legend.

Zarza wrote a philosophical commentary on the Pentateuch titled *Mekor Ḥayyim* ("Fountain of Life," Mantua, 1559), containing an epilogue in which he described the sufferings of the Jews of Castile during the period of the civil wars between King Pedro and his brother Henry (see Baer, Urkunden, 2, pt. 1 (1936), no. 209). In 1369 he wrote a philosophical commentary on various *aggadot* called *Mikhlal Yofi* ("The Perfection of Beauty," Bodleian Library, Seld. Arch. A. 65). In an introduction to this latter work Zarza wrote that in Toledo alone 10,000 Jews were killed during the period of these civil wars. In *Mekor Ḥayyim*, Zarza mentioned four other works that he wrote that are no longer extant: *Tohorat ha-Kodesh, Eẓe ha-Dat, Ẓeror ha-Mor*, and *Magen Avraham*. Poems in Zarza's honor were written by Solomon Reubeni of Barcelona and Isaac ibn *Al-Ḥadib.

Zarza's philosophical thought is typical, in many respects, of a group of thinkers in his immediate and more distant areas, including Solomon Al-Constantini, Solomon Franco, Shem Tov ibn Shaprut, and Shem Tov ibn Major. Like some of the Torah commentaries of this circle of colleagues, Zarza's *Mekkor Ḥayyim* is both a commentary on the Torah and a supercommentary on Abraham Ibn Ezra. The commentary, interesting in its own right, is also important on account of the variety of sources cited, including fragments of the lost Bible and *aggadah* commentaries of Shem Tov ibn *Falaquera. Zarza's philosophy combines the views of Ibn Ezra and Maimonides. For example, he adopted the Maimonidean negative divine attributes and Aristotelian conception of God as thought itself, while at the same time he adopted Ibn Ezra's Neoplatonic cosmology, combining such terms as "universal soul" and Active Intellect. Zarza also displayed a broad view of astral magic, according to which the Torah's commandments are vessels for attracting astral "spiritual influence" (*ruḥaniyut*). This combination of diverse elements from Maimonidean Aristotelianism, Neoplatonism, and astral magic was characteristic of the 14th-century Neoplatonic school in his area of which Zarza was a major figure.

[Dov Schwartz (2nd ed.)]

ZARZAL (ZARZAB), ABRAHAM IBN (14th century), Spanish physician and astrologer. Zarzal was favored by Sultan Muhammad IV of Granada. The previous court physician Pharez b. Abraham ibn Zarzal was possibly his father. When the sultan's minister, Reduan, was assassinated, Zarzal, fearing he might be implicated, fled to Castile. Here his reputation as a physician and astrologer, together with the recommendation of the sultan, with whom King Pedro of Castile was on friendly terms, led to Zarzal's appointment to the court of Castile as physician and astrologer. There he worked from 1350 to after 1369.

[Nathan Koren]

ZASLAVSKY, DAVID (1880–1965), Russian journalist and publicist. An early opponent of the Bolsheviks, he became one of their most zealous defenders and propagandists. He studied law at the University of Kiev, and in 1903 joined the *Bund, writing manifestos which led to his imprisonment for short periods by the czarist police. He took up journalism in 1904 and was a correspondent for liberal dailies in Yiddish and Russian. In 1917 he was a Bund delegate to the Workers' Councils and opposed the Bolsheviks. When the Bolsheviks seized power in October, he left for Kiev, but acknowledged his error when the Bolsheviks occupied Kiev. In 1920 he published an open letter in which he "confessed" his anti-Bolshevism. In 1925 he published another letter in which he tried to "atone" and asked to be accepted into the Communist Party, but he was allowed membership only in 1934. From 1926 he was a political writer for *Izvestiya*, and from 1928 until the end of his career, for *Pravda*. During the period of the Ribbentrop-Molotov pact he included attacks on the Jews in his articles on international affairs. During World War II he was a member of the Jewish *Anti-Fascist Committee; he was not arrested in 1948/49 with most of the other members of the committee. Zaslavsky was unsparing in his attacks on "deviationists," among them Boris *Pasternak for his novel *Dr. Zhivago*. After the establishment of the State of Israel he was one of its most violent critics in his editorial and feuilleton writing. He studied the treatment of Jews in Russian literature and concluded that it was antisemitic.

Zaslavsky wrote biographies of Plekhanov and Lassalle (1925) and an account of the U.S. Civil War (1926). A collection of his articles was published in 1960 under the title *Day by Day*. Zaslavsky admitted that the Communists had only partially solved the Jewish problem in the U.S.S.R.

ZASLOFSKY, MAX ("**Slats**"; 1925–1985), U.S. basketball player and coach, member of the NBA's Silver Anniversary Top 25 Team. A native of Brooklyn, New York, Zaslofsky was an all-scholastic player at Thomas Jefferson High School. He graduated during World War II, and served for two years in the U.S. Navy. After his discharge, Zaslofsky attended St. John's University for a year, where he helped the Redmen to the NIT with his effective two-hand set shot and solid overall court presence. Already 21 years old and married, Zaslofsky chose

to turn professional in 1946, playing for the Chicago Stags of the newly formed BAA, which three years later became the NBA. Chicago, led by Zaslofsky's offense, topped the Western Division, and in the playoffs upset Coach Red *Auerbach's heavily favored Washington Capitols before bowing out to the Philadelphia Warriors in the championship. At the end of his rookie season, Zaslofsky was named First Team All-NBA, the youngest player ever to receive that honor (21 years 4 months). In the 1947–48 campaign, Zaslofsky was first in the league in total points (1,007), second in points per game (21.0), and led Chicago to a quarterfinal victory over Boston in the playoffs before losing to Baltimore in the semifinals. In his third season with Chicago, Zaslofsky was again among the top five in most offensive categories. In his last year with Chicago, Zaslofsky led the NBA in free-throw percentage, shooting 84.3 percent. Zaslofsky was named First Team All-NBA each of his four years with Chicago. When the Stags folded in 1950, the now coveted Zaslofsky was won in a mini-lottery by the New York Knicks, whom he immediately helped to two consecutive NBA finals in 1951 and 1952, and was named a starter on the 1952 NBA All-Star East team. Zaslofsky was traded in 1953 to the Fort Wayne Pistons, and the following year he went to the Baltimore Bullets and Milwaukee Hawks before returning to Fort Wayne. During that 1954 season, Zaslofsky became the first of only five NBA players to score 20 or more points in a game for three different teams in the same season. Zaslofsky led the 1954–55 Pistons team to the NBA finals, and contributed to their repeat trip to the finals the following year. When he retired in 1956, Zaslofsky was the third highest scorer in the NBA, with nearly 8,000 points. He came out of retirement in 1967 to coach the New Jersey Americans of the American Basketball Association. The team narrowly missed the playoffs after having to forfeit a tiebreaker game. Zaslofsky retired from coaching the following season. In 2002, the staff of ESPN voted Zaslofsky one of the top ten players in NBA history not to be included in the Hall of Fame.

[Robert B. Klein (2nd ed.)]

ZASTAVNA, town in Chernovtsy district, Ukraine, in N. *Bukovina; until World War I in Austria and between the two world wars in Romania. Jews probably settled in Zastavna toward the end of Moldavian rule in the area; at the beginning of the Austrian conquest there were already Jews in the town. According to the Austrian census, they numbered 17 in 1774 and 33 in 1776. An organized community was established in the early 19th century, though tombstones in the cemetery attest to a regular community life before that period. A Jewish elementary school was established in 1919, and a synagogue built in 1926. In Zastavna, as in other communities of Bukovina. *Ḥasidism had a considerable influence. A Zionist organization was established in Zastavna in 1905. Jews took part in the municipal elections and for some time a Jew was mayor. The Jews in Zastavna were mainly engaged in commerce and crafts, but toward the end of Austrian rule also included wealthy landowners and industrialists (in sugar

and alcohol manufacture). The community of Zastavna had jurisdiction over 29 nearby villages, where Jewish landowners were also living. At the beginning of World War I, in 1914, many of the Jews living in Zastavna escaped to Vienna, and most did not return.

Holocaust and Contemporary Periods

In World War II, during the Holocaust period (1941–44) the 635 Jews in Zastavna, like other Jews in Bukovina, were deported to *Transnistria. After the war about 120 survivors returned, but their number gradually diminished through emigration to Israel and elsewhere. By 1971 no Jews remained in Zastavna.

[Yehouda Marton]

ZATEC (Czech **Žatec**; Ger. **Saaz**), town in N.W. Bohemia, Czech Republic. Jews settled in Zatec before 1350. The burghers of Zatec sought to expel them in the early 16th century, but the king did not consent. However, after the publication of the Bohemian expulsion decree of 1541, the burghers attacked the Jews and drove them out of town. Jews did not return until the second half of the 19th century; two Jewish families lived in Zatec in 1852. A cemetery was opened in 1869 and a synagogue built in 1872. The Jews were mainly engaged in the trade and export of hops, an economic activity of national importance. In 1921 the Jewish population numbered 1,082, but by 1930 their number had declined to 760 (4.2% of the total population). The community was destroyed during the Holocaust. In the 1960s the cemetery was still in existence.

[Jan Herman]

ZAVA'AT RIBASH, ḥasidic work; full title, *Ẓava'at Ribash ve-Hanhagot Yesharot* ("The Testimony of Ribash [Rabbi Israel Ba'al Shem] and Upright Rules of Conduct"), published in Zolkiew in 1793. (Another Zolkiew edition, which may be earlier, is undated.) The title page ambiguously states that the manuscript was in the possession of the editor, Isaiah of Yanov. Although, on the basis of the title, it was widely believed that the work is the ethical will of Israel Ba'al Shem Tov, Shneur Zalman of Lyady writes: "The truth is that this is not his ethical will and that he made no such will before he departed this life. It is rather a collection of his sayings compiled by others. Although these were insufficiently skilled in translation, the authentic meaning is conveyed" (*Tanya, Iggeret ha-Kodesh*, No. 25). The title of the work is derived from the opening sentences: "It is a command (*ẓava'ah*) of the Ba'al Shem that one must be wholehearted in the service of God." The editor remarks that he has included in the anthology some teachings of Dov *Baer, the Maggid of Mezhirech. In fact, the majority of the teachings recorded are from the school of the Maggid. The work bears a strong resemblance to other collections of ḥasidic material, such as *Likkutei Yekarim* and *Maggid Devarav le-Yaakov*, the same sayings appearing in

all these works, though not in the same order or with exactly the same wording.

The work contains the basic ideas of Hasidism, stressing in particular the idea of *devekut*, attachment to God in the mind at all times. Man should cultivate an attitude of equanimity, being indifferent to both the praise and blame of others, and be so devoid of any desire for physical pleasure that it makes no difference to him whether he eats delicacies or coarse, unpalatable food (Nos. 2 and 10). God wishes to be served in many different ways. Even when a man converses with others, his mind can be on God and perform "unifications" (*yiḥudim*) (No. 3). Weeping is an evil. God must always be served in joy. To weep is only advantageous when it is the result of joy in man's attachment to God (No. 45). The fear of God without the love of God is tantamount to melancholy. It is wrong to be overscrupulous in considering how best to serve God. One should be so full of joy at the very opportunity of serving Him that one has neither time nor inclination to ponder over the "how" and "what" of worship (No. 110).

The accusation by the *Mitnaggedim* that *Ẓava'at Ribash* discourages the study of the Talmud is unfounded. However, it is true that *devekut* is the book's ultimate ideal, to which even Torah study is subordinate. The work not only demands of the student of the Torah that he pause frequently during his studies to engage in *devekut*, but states explicitly that the study of the Torah is not an aim in itself but is for the purpose of attaining *devekut* (No. 29). Moreover, prayer is held to be superior to Torah study, a reversal of the traditional scale of values: "The soul declared to the Rabbi [the Ba'al Shem Tov] that the reason the things on high were revealed to him was not because he had studied much Talmud and the Codes, but because of his prayers, which he recited with powerful concentration. That is why he attained such a high rank" (No. 41).

As one of the earliest printed ḥasidic works, *Ẓava'at Ribash* especially aroused the ire of the *Mitnaggedim*. The book was publicly burnt in Vilna at the instigation of Elijah ben Solomon *Zalman, the Vilna Gaon and, according to a ḥasidic tradition, in Prague, by order of Ezekiel *Landau. A ban on the book was declared in Cracow, together with other ḥasidic *bikhlekh* ("booklets"). The work is one of the most popular of ḥasidic writings. The anthology *Sefer Ba'al Shem Tov* (Lodz, 1938), which quotes ḥasidic teachings in the form of a running commentary to the Pentateuch, manages in the course of the book to quote the whole of *Ẓava'at Ribash*. Schochet lists 34 separate editions prior to his own.

[Louis Jacobs]

ZAVIM (Heb. זָבִים; "Sufferers from Flux"), ninth tractate in the order *Tohorot* in the Mishnah; there is no *Gemara* either in the Babylonian or in the Jerusalem Talmud. The scriptural basis of this tractate is Leviticus 15:1–15, which speaks of the ritual impurity of the *zav*, i.e., a man who has a running issue (probably gonorrhea), and describes in great detail how anybody and anything coming into contact in any manner (directly or indirectly) with the *zav* contracts impurity. Mishnah *Zavim* consists of five chapters.

Chapter 1 discusses the significance of the frequency, intensity, and continuity of the discharge in determining whether the person concerned is considered definitely a *zav* in terms of Leviticus 15:1–15, or whether he is afflicted with a lesser degree of impurity (e.g., a *ba'al keri*, one who suffered an accidental discharge of semen, in terms of Lev. 15:16). Chapter 2 first lists the categories of men to whom the law of running issue applies (including, for example, slaves, minors, and even eunuchs) and then discusses the seven ways of examining a suspected person to ascertain whether or not he is really a *zav*. The last paragraph touches on the difficult problem of *midras* (lit. "treading"), denoting the very high degree of impurity ("father of uncleanness") imparted by a *zav* to a thing on which he stands, sits, lies, etc. (without touching it) and which this thing in turn imparts to a person (including his garments) who stands, sits, lies, etc., on it. The "thing" in question here is called *mishkav* ("couch"), but the law of *midras* would apply to anything used for standing, lying, or sitting on, or for any other relevant activity (e.g., leaning, riding, etc.).

Chapters 3–4 discuss various cases of *midras* in contrast to cases of *hesseṭ* (lit. "shaking"), i.e., the lesser degree of impurity imparted by the *zav*'s moving a person or object without touching him or it, or by the *zav*'s being moved in the same manner. For example, if a *zav* rides with another person on a beast, even if their garments did not touch, an uncleanness of the *midras* category is imparted to the other person. Instances of *hesseṭ* mentioned are, for example, the sitting of the clean and unclean on a beam not firmly fixed, or if they pull a rope in opposite directions. Chapter 5 at first continues the subject of *hesseṭ*, but then discusses different aspects of the impurity of a *zav*, partly in comparison with other kinds of impurity. The last paragraph deals with rabbinical stringencies regarding the imparting of uncleanness to *terumah*. A point to which particular attention may be drawn is that holy books which touch *terumah* make the latter unclean. The apparently strange practice of the priests of storing their holy food next to scrolls of Holy Scripture should be set against the background of this remarkable regulation. It was out of concern not for the holy food, but for the Holy Scriptures, lest they become damaged by proximity to food, that the regulation was made, thus preventing the placing of holy food near books (Shab. 14a).

Mishnah *Zavim* is mainly of ancient origin (Epstein, Tannaim, 96). *Mishnah* 3:1 is its only *Mishnah* discussed in the Babylonian Talmud (BM 105b). Several sources can be detected in *Zavim*. Epstein (Tannaim, 64) attributed chapter 5 (except for *mishnayot* 4–5) to R. Joshua b. Hananiah, and *Mishnah* 1:1 to Akiva's earlier view, which he later changed (cf. Tosefta 1:4–6). *Mishnah* 1:2 is according to the view of R. Meir, while the corresponding passage in the Tosefta 1:8 stems from R. Judah, who refers to Meir in his work as "a certain

disciple." The Tosefta contains several topics not mentioned in the Mishnah, such as the discussion on the *zav, zava*, and the leper in chapter 3, on the defiling caused by idol worship in 5:6–8, and the topic of *yayin nesekh* ("wine used in idol worship"). One passage of this Tosefta (1:5) discloses the origin of the *mishnayot* of Akiva: "As R. Akiva stood before his disciples classifying the *halakhot*, he said: Let anyone who knows a reason or law [pertaining to the topic at hand], arise and speak… R. Simeon then spoke in his presence… whereupon [Akiva] said: Not everyone who jumps up [to state a *halakhah*] is to be praised, unless he gives the reason thereof." An English translation is in Danby's *Mishnah* (1933).

[Arnost Zvi Ehrman]

ZAWIERCIE (Rus. **Zavertse**), city in Katowice province, S. Poland. Jews settled in Zawiercie in the latter half of the 19ᵗʰ century when the city underwent rapid industrial development. Zawiercie was then in Congress Poland. Jews came to the city from the communities of *Radom, *Belchatow, *Wielun, and Wloszczowa, and became mechanics, smiths, tailors, weavers, clerks, bookkeepers, and tradesmen. In the last third of the century wealthy Jews established a glassworks, an iron foundry, machine, and textile factories. The Gincberg brothers invested 3.5 million rubles in a cloth factory which employed over 200 Jewish workers. There were 1,134 Jews in Zawiercie in 1887 (27% of the total population), and 3,158 (18.5%) in 1897.

At first there was no organized community life in the city and the Jews relied on the services of the neighboring community of Kromolow. The first local synagogue was built in the 1880s. The ḥasidic movement exerted a strong influence on the community. In 1915 Zawiercie was declared a municipality and there followed a period of intense communal development. The Zawiercie community numbered 6,095 (21%) in 1921, and 5,677 in 1931. Between the world wars there were two Jewish schools.

[Shimshon Leib Kirshenboim]

Holocaust Period
On the outbreak of World War II there were about 7,000 Jews in Zawiercie. On Sept. 2, 1939, about 2,000 Jews fled the city just before the entry of the German army. After entering the city, the Germans ordered all Jewish males from ages 17 to 50 to assemble in the city's market. They were all arrested and tortured for 9 days. On May 10, 1940, about 600 Jews from the Zaolzie region of Czechoslovakia were forced to settle in Zawiercie. A ghetto was established there in the summer of 1940. In November 1940 about 500 young Jews were deported to forced labor camps in Germany, where almost all of them perished. In May 1942 about 2,000 Jews were deported to Auschwitz and murdered there. On Aug. 26, 1943, the ghetto was liquidated, and almost all remaining Jews were deported to Auschwitz and murdered. During this deportation over 100 Jews were shot on the spot for offering passive resistance. About 500 Jews were left in the newly established local forced-labor camp, which was in turn liquidated on Oct. 17, 1943. The Jewish community was not reconstituted in Zawiercie after the war.

ZAY, JEAN (1904–1944), French socialist politician. Born in Orleans, Zay joined the Radical Socialist Party in his youth and was elected a deputy in 1932. He became undersecretary of state in 1936 and was appointed minister of national education in Léon *Blum's Popular Front government in the same year. He held this position in successive governments until 1940, despite bitter criticism of his support for the republican cause in Spain. Following the fall of France, Zay was arrested and held in prison, and was summarily executed on June 20, 1944.

ZAYIN (Heb. זַיִן ;ז), the seventh letter of the Hebrew alphabet: its numeral value is therefore 7. The earliest form of the *zayin,* in the c. 1500 B.C.E. Proto-Sinaitic inscriptions, consisted of two parallel strokes ⸗, which were later joined by a third stroke. In the tenth century B.C.E. the letter was relatively high I (thus also in the Archaic Greek script), but later became squat. In the Hebrew script it was written → , which developed into Samaritan , while in the Phoenician script it turned into **z** (cf. Greek and Latin "Z") and . In the Aramaic script it was written as a wavy line ~ which later dropped its extremities \ and then it turned into a vertical stroke ι. The vertical *zayin* was preserved in both the Nabatean and Jewish scripts. In Arabic – in order to distinguish it from the *ra* – a diacritic point was added to the *za* ; in the Jewish script, as the vertical stroke was interchangeable with the *waw,* a rightward hook was added to the letter top. From this form the ז developed. See *Alphabet, Hebrew.

[Joseph Naveh]

ẒAYYAḤ (Ẓiyyaḥ), JOSEPH BEN ABRAHAM IBN (16ᵗʰ century), rabbi and kabbalist. Ẓayyaḥ was apparently born in *Jerusalem. There he completed his *Even ha-Shoham* in 1538. From Jerusalem he went to *Damascus to serve as rabbi of the Mostarabian (the native Jewish) community but paid frequent visits to Jerusalem. He was regarded in his time as an important *posek*. A number of his responsa have been published in some of his contemporaries' collected responsa, such as those of Joseph *Caro, Moses di *Trani, *Levi b. Ḥabib, and others who were on friendly terms with him. A number of his works have remained in manuscript, including a large collection of responsa, two of which were published by S. *Assaf (see bibliography). From one of them it can be inferred that he took an active part in the dispute in *Safed on whether scholars should be exempted from taxation, and he was among those who upheld the exemption.

Three of his kabbalistic works are known: *Even ha-Shoham* (Jerusalem National Library, Ms. 416), in which the author with great profundity combines the kabbalistic doctrine of combination of letters of the alphabet (*ḥokhmat ha-ẓeruf*) with that of emanation (*aẓilut*), a work which was popular among Yemenite Jews; *Ẓeror ha-Ḥayyim* (London, Jews College, Ms. 318), a curious commentary to the *Oẓar ha-Kavod* of Todros *Abulafia. He dedicated both these works to Abraham de *Castro, who was leader of the Jews in Egypt. The third work, *She'erit Yosef* (Vienna, Ms. 260), was compiled in Jerusalem in 1549 and is a kind of supplement to and commentary on his *Even ha-Shoham*. This work is apparently mentioned in the *Torat ha-Kena'ot* of Jacob *Emden (Lemberg, 1870, p. 69), where he states that Nehemiah *Ḥayon took a number of ideas from the *She'erit Yosef* and made wrong use of them.

[Abraham David]

ZBARAZH (Pol. **Zbaraż**), town in W. Ukraine (formerly in E. Galicia). Jews were living there at the end of the 15ᵗʰ century. The cemetery dates from 1510. According to a document of 1593 the city and its entire revenues were leased to Jews and Christians jointly. The Jewish community expanded in the 17ᵗʰ century and a synagogue was erected. The siege on Zbarazh by *Chmielnicki in 1649, its capture by the Turks in 1676, and the *Haidamak raids of 1708 caused terrible suffering to the community. There were 910 Jewish inhabitants in 1765. The number increased under Austrian rule after 1772, reaching 2,896 (35% of the total population) in 1900. The 1931 census records 3,000 Jewish residents. Two followers of Judah *he-Ḥasid originating from here were Isaiah of Zbarazh and his son. Zbarazh was also the birthplace of the folk poet B.Z. *Ehrenkranz.

[Max Wurmbrand]

Holocaust Period

During World War II the Jewish population reached 5,000 with the arrival of refugees from western Poland. After the German occupation, the Jewish survivors from Skalat, Grzymalow, and Podwoloczyska were brought into Zbarazh. On July 4, 1941, a pogrom was carried out and the first Jews were killed. On Sept. 6, 1941, the Jewish intellectuals were ordered to present themselves before the Nazis; 70 persons were murdered in the Lubieniecki forest. In the spring of 1942 some 600 sick and aged persons were marched off toward Tarnopol and murdered on the way. Other Jews were deported to the labor camps of *Kamenka-Bugskaya and Zborow. On Aug. 31–Sept. 1, 1942, an *Aktion* took place and hundreds of persons were deported to the *Belzec extermination camp. Hermann Mueller, head of the Gestapo at Tarnopol, directed the murder of the Jews of Zbarazh. On Oct. 20–22, 1942,

1,000 Jews were deported to Belzec and Lvov Janowska camp. On Nov. 8–9, 1942, a group of more than 1,000 Jews was deported to Belzec. On April 7, 1943, hundreds of Jews were put to death near the city. The ghetto established in the autumn of 1942 was demolished on June 8, 1943. Some Jews hid in the Polish village of Kretowce. Some 60 Jews from the city survived the Holocaust.

ZBITKOWER, (Joseph) SAMUEL (1730s–1801), Warsaw merchant, banker, and army purveyor. He settled in Warsaw in 1757 and displayed great ability and initiative in the development of varied types of trade and industry, including timber haulage, working the salt mines, preparation of leather, operating a slaughterhouse, exercise of the monopoly on *kasher* meat, and the operation of brick kilns and a brewery. Because of his great wealth, evidenced by his ownership of houses in Warsaw and estates in the surroundings, as well as through banking operations, he established good connections with ruling circles – Poles, Russians, and Prussians. In 1773 he received through the minister Poniński the title "Elder of the Jews," which gave him the authority to farm taxes and was exploited by him to extort money from the rich men of the community.

In 1788 Zbitkower was appointed *parnas* of the Warsaw suburb of Praga, and in 1796 submitted a petition for the suburb to be granted the status of a separate community. He also received the right to establish a cemetery in Praga, which still has the tombstone describing his achievements. The quarter in which he lived was called Szmulowizna after him. Zbitkower's ability to adapt himself to political change enabled him to obtain the position of official contractor to the Russian army of occupation, and also helped him in supplying the Polish fighters during the *Kosciuszko revolt, Tales were related about his generous actions and his readiness to save Jews from the danger of war and capture. His third wife, JUDITH LEVY of Frankfurt, was well known for her learning and proficiency in German and French, and this enabled her to aid her husband in his connections with members of the government. Despite his poor education, *Zbitkower managed to serve as *shtadlan* for the Jewish community, thanks to his official connections. After his death his widow and his son BEREK amassed great riches. He was the ancestor of the Berkson (or Bergson) family; his great-grandson was the philosopher Henri *Bergson.

ZBOROV (Pol. **Zborów**), city in Tarnopol district, Ukraine. The Jewish community had considerable influence in Zborov in the 17ᵗʰ century. The peace treaty signed in Zborov in

1649 between John II Casimir and the Cossack rebel *Chmielnicki forbade Jews to live or work at *arenda (leaseholding) in the same towns in which Cossack troops were encamped. In 1689 King John III Sobieski gave the Jews rights equal to those of other citizens of the town, with the provision that all legal cases between Jews and gentiles be tried in government courts. Four market days were arranged each year to stimulate economic growth, and Jews were allowed to operate taverns if gentiles did not claim this privilege for themselves. There were 655 Jews in Zborov in 1765; 2,109 (54% of the total population) in 1880; 1,873 (46%) in 1890; 2,080 (40%) in 1910; and 1,184 (32%) in 1921. In the early 19th century Zevi Hirsh of Zborov (d. 1841) influenced the community toward Ḥasidism. In 1930 the Jewish quarter was damaged extensively by fire.

[Shimshon Leib Kirshenboim]

Holocaust Period

On the outbreak of World War II, there were about 1,800 Jews in Zborov. In July 1941 an *Aktion* took place and 850 Jews were killed. In September or October 1942 some of the Jews were deported to the *Belzec death camp. The ghetto was liquidated in April–June 1943. A number of Jews were imprisoned in a forced-labor camp in Zborov established at the end of 1941. This camp was liquidated in July 1943 when all its inmates were killed. After the war the Jewish community of Zborov was not reconstituted.

ZDUNSKA WOLA (Pol. **Zduńska Wola**), district capital in the province of Lodz, Poland. In 1788 the owners of the town erected at their own expense a wooden structure to serve as a synagogue to encourage Jewish settlement. Of the 32 families who lived there in 1778, 11 were Jewish, eight of whom earned their livelihood as craftsmen and three in commerce. In addition to the taxes owed to the crown, every Jewish family had to pay 16 to 50 zlotys annually to the owners of the estate. The Jewish community body also had to pay an annual rent of 130 zlotys for the synagogue. In 1825 the settlement was granted municipal status and at the same time the residence rights of the Jews were limited to two streets. In 1827 there were 468 Jews (17% of the total population) in the town. In the 1830s, when Jewish financiers took the initiative of opening a wool-cloth industry (with manufacture on a contractual basis), some of them were authorized to erect stone houses beyond the Jewish streets. During the second half of the 19th century Jewish merchants became pioneers in the manufacture of cotton cloth. The rapid industrialization of Zdunska Wola attracted Jews from the surrounding towns as well as from Lithuania. In 1857 the number of Jews had risen to 1,676 (26% of the population), and in 1897 to 7,252 (46% of the total). The majority were engaged as craftsmen, particularly as weavers. At the beginning of the 20th century a class of Jewish industrial workers had already developed.

Until 1828 the community of Zdunska Wola was subject to the jurisdiction of the *Lask community. In 1825 a cemetery was established which was enlarged in 1850. During the 1840s a *bet midrash* was founded, and in 1852 the old wooden synagogue was replaced by a large one with funds contributed by Feibush Opatowski. The community's first rabbi, Levi Cybis, was appointed in 1825. During the tenure of office of Levi Isaac Fleischer (from 1873), Gur and *Aleksandrow Ḥasidism gained ground, while among the Jews of Lithuanian origin *Haskalah was the prevailing influence. Eliezer *Kaplan taught in the secular Jewish schools founded at the beginning of the 20th century.

In 1921 there were 7,885 Jews (42% of the total population) living in the town. Between the two world wars, the community maintained a Hebrew *Tarbut school, an elementary school of the CYSHO (see *Education), a *Beth Jacob school for girls, and a *talmud torah*. The Jewish population numbered 8,819 in 1931. From 1931 antisemitism began to spread in the town, particularly among the German population. In 1936 there was even an attempt to stage a blood libel.

[Arthur Cygielman]

Holocaust Period

There were close to 10,000 Jews, comprising nearly 50% of the total population, in Zdunska Wola at the outbreak of World War II. The German armies entered on Sept. 6, 1939, and immediately destroyed the synagogue and burned all the liturgical objects. In October, in retaliation for the alleged killing of a German policeman, over 3,000 Jews were arrested and kept in prisons in Sieradz for several days. During this *Aktion* many Jews were maltreated and some killed. The extortion of large sums of money and the eviction of Jewish families from predominantly non-Jewish districts followed. In the spring of 1940 a ghetto was formed on the outskirts of the city and over 8,000 Jews were crowded inside. In the meantime the number of Jews in Zdunska Wola increased as a result of the transfer of various groups from other towns and villages in western Poland annexed by Germany. A series of workshops was organized in the ghetto for furriers, tailors, shoemakers, and knitters. Their products were bought by the German army at a low price. On the outskirts of the ghetto Zionist youths received agricultural training on a farm. They helped supply the ghetto with vegetables and milk. In the summer of 1941 the Germans raided the ghetto to collect able-bodied men for labor camps in the Poznan district. Over 1,000 men were seized, with the cooperation of the Jewish police. In 1942 two public executions took place in which ten Jews accused of smuggling were hanged. The Germans picked the festivals of Purim and Shavuot for that purpose. The ghetto was finally liquidated on Aug. 23–24, 1942. The first *Selektion* was carried out in the ghetto and the second in the Jewish cemetery. Over 1,000 able-bodied Jews were sent to *Lodz ghetto, 550 Jews were murdered on the spot, and between 6,000 and 8,000 were transported to the death camp at *Chelmno. Throughout the existence of the Judenrat, its chairman Jakub Lemberg

was held in great esteem for his courageous and selfless leadership in which he often risked his life. He also was murdered during the liquidation of the ghetto.

ZEALOTS AND SICARII.

Introduction

This article deals not only with the group of fighters for the freedom of Israel known from *Josephus as the "Zealots," but includes in its survey other groups with similar aims, particularly the Sicarii.

Judea differed from the other provinces in the east of the Roman Empire in that it never resigned itself to Roman rule and did not willingly become integrated into the Imperial system. From the beginning of the Roman conquest its history was one of bitter struggle accompanied by revolts against the Imperial power. Although there were revolts in the Western parts of the Empire too (in Britain and Gaul and by the Batavi), these were not as frequent and they generally occurred in the early stages of Roman occupation and on the frontiers of the Empire. In Judea, however, a province that lay in the heart of a vital area, between Syria and Egypt, relations with the Roman authorities were in a state of almost continuous tension from the period of *Pompey and *Gabinius until after the *Bar Kokhba War.

The causes of this tension are to be found first and foremost in the religious-ideological conflict between the belief of the Jews in the doctrine that they were the Chosen People and therefore unique and the bitter fact that they were forcibly subjected to the rule of an idolatrous empire which accorded divine honors to its emperors. This empire was the complete antithesis of the spiritual conception and way of life of the Jews, and the tension found its resolution in the strengthening of a messianic-eschatological faith at the center of which stood the hope of the revival of the glory of Israel and the downfall of "the kingdom of arrogance." The intensity of this feeling and these yearnings increased with the passage of time and was nurtured by the deterioration in relations between the Roman administration of the province, which gave its support to non-Jewish elements and based itself on them, and the Jews, as well as by the spiritual and social developments within the Jewish community itself. In the year 66 c.e. the great majority of the people supported the revolt against the procurator Florus, some enthusiastically and some with reservations; only a minority, such as *Agrippa ii, were prepared to employ force to suppress the uprising while it was still in its initial stages. The ferment, however, was provided by certain groups among the Jews which developed a specific and definite ideology of objection in principle to Roman suzerainty. Other elements attached themselves to these groups, and their activism was no less positive despite the fact that the principles upon which they based themselves were less clearly defined.

The essential lines of the ideological currents, activities, and main divisions of the Jewish freedom fighters at the close of the Second Temple period can only be drawn in a general way. Fate has willed it that the main source of knowledge of this remarkable phenomenon – the ideology of Jewish liberty in this period – was their inveterate and uncompromising opponent, Josephus. Josephus not only wrote his most important work on this subject, *The Jewish War*, as the official historian of the Flavian dynasty and with personal reasons for denigrating the image of the rebels against Rome; he also developed a theory according to which the extremist elements among them, who constituted only a minority of the people, dragged in their wake the whole Jewish population in the direction of an insane rebellion. Josephus almost completely ignored the messianic-eschatological aspects of the struggle. Nevertheless, even from his prejudiced and one-sided account, something of the ideals which animated the Jewish warriors in their struggle against Rome emerges.

The "Fourth Philosophy" and the Sicarii

In Book 7 of *The Jewish War* (253–74) Josephus distinguishes in a general way between the various parties which took part in the resolute stand against Rome. In respective order, he mentions the Sicarii, the followers of *John of Giscala, the soldiers of *Simeon bar Giora, and finally the Zealots. The main distinctions are exemplified also in incidents which he describes in his detailed description of these sects in the earlier books of *The Jewish War*. Both references help towards an understanding of events. As stated, the Sicarii are mentioned first in the general summary in Book 7. Elsewhere Josephus describes the emergence of this extreme freedom group against the background of the establishment of the Province of Judea, which was connected with the census instituted by *Quirinius, the legate of Syria, in the year 6 c.e. (Ant. 18:4–10). The census was a profound shock to the Jewish people as a whole and it was only after considerable effort that the high priest at the time, Joezer ben Boethus, succeeded in quietening the emotions aroused among the majority of the people. Nevertheless, *Judah the Galilean of Gamala in Gaulanitis joined forces with *Zadok the Pharisee to issue a call for armed revolt, since in their eyes the census represented outright slavery. In their speeches they went so far as to declare that God would come to the aid of those who did not spare themselves in the struggle. According to Josephus, Judah and Zadok were the founders of the "Fourth Philosophy," the other three being the *Pharisees, the *Sadducees, and the *Essenes. After they acquired a great number of followers they involved the Jewish body politic in uprisings and sowed the seeds of the future catastrophes which were to overwhelm the Jewish people. Later on, after he gives a description of the "three philosophies," Josephus returns to Judah, whom he refers to simply as "the Galilean," and gives a succinct account of his "philosophy." According to him the adherents of this philoso-

phy agree in general with the Pharisees, and are distinguished from them only by their unbounded love for freedom and by the fact that they accept God as their only master and leader. They are freely and readily prepared to submit to even the most horrible of deaths and to see their relations and friends tortured rather than accept human domination. Josephus even emphasizes that this resolute determination of theirs is widely known and therefore there is no fear that the truth of what he says will be challenged; on the contrary, he is afraid that he may not have sufficiently emphasized their indifference to torture (Ant. 18:23–5).

In *The Jewish War* (2:117–8) only a precis is given of this. The census of Quirinius is not even mentioned in this connection – only that *Coponius was sent as governor to Judea. During his years of rule a Galilean called Judah incited the people to revolt against the Romans and accused them of cowardice for consenting to pay taxes to the Romans and tolerating the rule of man when their only ruler was God. This man Judah was a "sage" (σοφιστής) and the founded a sect which was entirely different from all the other sects. Zadok the Pharisee is not mentioned at all in the *War*; nor does Josephus mention in this work that, apart from their principle of freedom, the philosophy of the Zealots was identical with that of the Pharisees. Nowhere does he mention the end of Judah the Gaulanite, or Galilean; only in the New Testament (Acts 5:37) is it stated that he was put to death by the Romans.

It seems reasonable to accept the theory of those scholars who identify Judah the Gaulanite with Judah ben Hezekiah, who headed the revolt in Galilee against Varus after the death of *Herod in 4 B.C.E. (Ant. 17:271–2; War 2:56). Thus Judah assembled a large number of followers and attacked the royal palace in *Sepphoris, the capital of *Galilee. According to Josephus he had aspirations to the throne of Judea. And whereas he gives the details of the fate which befell the other leaders of rebellion at that time, such as Simeon of Transjordan and *Athronges and his brothers, and the manner in which the rebellions were suppressed, he is completely silent about the fate of Judah. It would appear that he escaped and reemerged ten years later, by which time his ideology had already been worked out and disseminated among the whole people. The father of this Judah was that *Hezekiah who rose to fame as a fighter and leader in the forties of the first pre-Christian century, during the rule of Julius Caesar, and was executed by Herod at the beginning of his political career when he was appointed governor of Galilee. His execution produced a wave of bitterness in Judea and even resulted in Herod's being summoned before the Sanhedrin in Jerusalem.

Of Hezekiah we are told that he was active in the area bordering on Syria and that his execution by Herod was greeted enthusiastically by the Syrians (War 1:204–5; Ant. 14:159–60). This is easily explained on the assumption that Hezekiah was a native of Gamala in the Gaulanitis, as is mentioned explicitly with regard to Judah, the father of the Fourth Philosophy.

Hezekiah and his son were the founders of a dynasty of leaders of an extremist freedom movement, a dynasty which

it is possible to trace until the fall of *Masada and the final crushing of Jewish opposition to Rome. They, the proponents of the Fourth Philosophy, were the first to raise the standard of revolt against the Roman Empire and were the last of those who waged the battle in Erez Israel itself and preached rebellion throughout the length and breadth of the Diaspora. Among the descendants of Judah was *Eleazar b. Jair, the commander of Masada. Eleazar and his men are usually called Sicarii (Σικάριοι) by Josephus, and the same historian also explicitly identifies the Sicarii with the fomenters of unrest after the census of Quirinius (War 7:252–5): "This fortress was called Masada; and the Sicarii who had occupied it had at their head a man of influence named Eleazar. He was a descendant of the Judas who, as we previously stated, induced multitudes of Jews to refuse to enroll themselves when Quirinius was sent as censor to Judea. For in those days the Sicarii banded together against those who consented to submit to Rome and in every way treated them as enemies, plundering their property, rounding up their cattle, and setting fire to their habitations, protesting that such persons were nothing but aliens who so ignobly sacrificed the hard-won liberty of the Jews and admitted their preference for the Roman yoke."

In consequence of this, it should in general be assumed that when Josephus refers to the Sicarii, the reference is to the successors of Judah the Gaulanite, the upholders of the extremist ideology. Apart from the quotation given above in which he identifies the fomenters of unrest in the time of Quirinius with the Sicarii, the first time he feels the need to employ the term Sicarii is against the background of the events during the procuratorships of *Felix (52–60 C.E.) and *Festus (60–62). The word itself is a Latin one, and Josephus points out that it was given to them because of the dagger (*sica*) which they carried concealed in their garments and with which they were accustomed to dispose of their enemies (War 2:255, Ant. 20:186). It is clear that such a pejorative name was first given to them by their Roman opponents.

The name Sicarii appears for the period of the procuratorship of Felix only in *The Jewish War* (2:254–7). They are mentioned there as a new phenomenon and in this context Josephus does not give the connection between them and the Fourth Philosophy. It would appear that the novelty consisted in the technique which they employed to dispose of political opponents. According to Josephus they used to choose particularly the festivals: they would mingle with the crowds and put their opponents to death without any possibility of being identified. Their first victim was *Jonathan (b. Anan), who had previously been high priest. His murder is also described in the parallel passage of the *Antiquities* (20:162–66), where it is stated that it was carried out under the influence of the procurator Felix, who was interested in getting rid of Jonathan by means of the "bandits" (λησταί). Hence no one was punished for the murder of Jonathan. "The 'bandits' adopted the custom of coming to Jerusalem during the festivals and concealing their weapons in the same way and carrying out their crimes." Thus, in the *Antiquities* Josephus describes

the same system and methods as he does in the *War* against the background of the procuratorship of Felix, but without mentioning the same Sicarii. In both works Josephus refrains from presenting any ideological explanation of the stimulus behind these acts. The first time Josephus explicitly mentions the Sicarii in the *Antiquities* is during the procuratorship of Festus (Ant. 20:186–7), and he goes on to describe their activities against the background of the procuratorship of *Albinus (62–64 C.E.). During that procuratorship the Sicarii adopted a new tactic of seizing hostages in order to obtain the release of their comrades who had fallen into the hands of the Romans. It was thus that they seized the secretary of *Eleazar, the son of the previous high priest, *Ananias, who served as "captain of the Temple" (στρατηγός τοῦ ἱεροῦ) and sent a message to Ananias that he would be released only in exchange for ten of their men who were being held by Albinus. When they succeeded in this, others were captured and held as hostages and similarly released in exchange for other Sicarii (Ant. 20:208–10).

The New Testament also mentions the Sicarii during the procuratorship of Felix (Acts 21:38). According to this reference the Roman officer Claudius Lysias was of the opinion that *Paul was identical with an Egyptian visionary who had led 4,000 Sicarii into the wilderness. It is, however, highly doubtful if there is any justification for assuming any connection between the Egyptian prophet and the adherents of the Fourth Philosophy.

The few references to the Sicarii in the Talmud already belong to the period of the war itself. First there is the Mishnah (Makhshirim 1:6): "It once happened that the men of Jerusalem hid their fig-cakes in the water because of the Sicarii, and the sages declared them not susceptible [to ritual uncleanness]." Similarly in *Avot de-Rabbi Nathan* (7 p. 20, version (B), ed. Schechter, 1945²): "When Vespasian came and surrounded Jerusalem… the Sicarii took the initiative and set fire to all the granaries." In Eccles. R. to 7:12 there is mention of Ben Batiaḥ, "the head of the Sicarii in Jerusalem," and to the same category of information belongs the story of *Abba Sikra, the leader of the *biryonim*, the son of the sister of Rabban *Johanan b. Zakkai (Git. 56a).

As is evident from the interchange of Sicarii and Zealots (*Kanna'im*) in the text of *Avot de-Rabbi Nathan*, and as one can also infer from the use of the name Sicarii in Acts, it is by no means certain that in the talmudic passages the word necessarily refers to the Fourth Philosophy and to the adherents of the Galilean dynasty. It is possible that the word is sometimes used more flexibly than in Josephus.

The suggestion has also been put forward that the "Galileans" mentioned by Epictetus (Arrian, Discourses 4:7, 6) are in fact the disciples of Judah the Galilean, but the accepted view which identifies them with the Christians seems more reasonable.

In the period between the census and the outbreak of the Great Revolt the descendants of Judah are mentioned only once. Two of his sons are referred to – Jacob and Simeon, who were crucified by the procurator Tiberius Julius *Alexander between 46 and 48 C.E. (Ant. 20:102). There is no information as to the activities for which they received this punishment, or whether their area of operation was Galilee or Judea. It is clear, however, even in the absence of such information, that they stood at the center of the rebel activities, and when the opportunity presented itself with the outbreak of the Revolt, *Menahem, one of the descendants of Judah, took a leading part in the events.

After the offering of the daily sacrifice for the welfare of the Emperor was discontinued on the initiative of Eleazar the son of Ananias, and fighting was raging in the streets of Jerusalem between the rebels and those who strove for peace with the Romans, the peace party being aided by the soldiers sent by Agrippa II, there was created a situation whereby the royal troops held control of the Upper City while the rebels were in control of the Temple and the Lower City. The outcome was decided when many of the Sicarii joined forces with the rebels. The army of Agrippa was routed and his opponents broke through into the Upper City and set not only the royal palace on fire, but "eager to destroy the moneylenders' bonds, and to prevent the recovery of debts, in order to win over a host of grateful debtors and to cause a rising of the poor against the rich, sure of impunity," they also burned the archives. This passage seems to point to the extremist social ideology of the Sicarii under the leadership of Menahem.

The fortress of *Antonia also fell to the rebels and a siege was laid to the palace of Herod. At this stage, however, a schism took place. Menahem, who had already gained control of Masada, acquired a rich booty of weapons with which he armed his adherents. He then began to act as the sole leader of the revolt. "He returned like a veritable king to Jerusalem, became the leader of the revolution, and directed the siege of the palace."

Menahem captured the palace of Herod with the exception of the three towers (Hippicus, Phasael, and Mariamne) in which the Roman soldiers took refuge. It was at this time that the former high priest Ananias and his brother were captured and put to death by Menahem's men. His ambition, which apparently had a messianic-eschatological character, aroused the opposition of the other rebels commanded by Eleazar the son of Ananias. They attacked him when he was dressed in royal robes and accompanied by his admirers. In the fight Menahem was placed at a disadvantage. He himself escaped to the Ophel, but was captured and put to death. A similar fate overtook his associates, of whom the most prominent was *Absalom. Many of the Sicarii were killed and a siege was laid to those who hid themselves. Some of them, under the leadership of Eleazar b. Jair, a member of the family of Judah the Galilean, found refuge in Masada, which, as stated, had earlier been captured by Menahem (War 2:422–48).

From this time on the Sicarii ceased to be the guiding factor in the events in Jerusalem. Nevertheless, they continued to exist and it was they who were destined to be the last to hold aloft the standard of rebellion. Although they were no

longer in control of Jerusalem and it is not possible to ascribe predominance to them in any part of Jewish Erez Israel apart from Masada, it can be stated with near certainty that many of them continued their activities in other parts of the country and were a factor in the incitement of the people. It is possible to see evidence of this in the explicit and detailed information given of the activities of the Sicarii when, after the destruction of the Temple, they fled to Egypt and Cyrenaica. It is certain that these refugees did not come from Masada nor belong to the soldiers of Eleazar b. Jair, since those all met their end at Masada. These men were completely consistent in their outlook, following the principles of Judah the Galilean, just as before their flight to Egypt and Cyrenaica they had clung to them in Jerusalem and elsewhere in Erez Israel. In addition, the considerable number of the warriors who fought under Simeon bar Giora at the time of the siege is easily explained on the assumption that many Sicarii were included in his army, since they felt themselves more in sympathy with him than with the other leaders in besieged Jerusalem. Their extreme social views bridged the gap between them and Simeon. It might be added that the impression that the Sicarii were an influential factor in besieged Jerusalem is gained to some extent from the above-mentioned talmudic sources. The group of Sicarii who formed a unit under the leadership of Eleazar b. Jair – that group to which Josephus consistently gives the name Sicarii – entrenched itself in Masada and the sphere of its operations was confined to the adjacent area, and there is mention of their attack on En-Gedi (War 4:398–405). When Simeon bar Giora was forced to leave the vicinity of Jerusalem owing to the pressure of Anan ben Anan, he found a temporary refuge with the Sicarii in the wilderness of Judea. They refused, however, to join him in major exploits which would take them far away from their secure base in Masada (War 4:503–7) and there is no further mention of them by Josephus until after the destruction of the Temple. The recent excavations at Masada revealed many potsherds on which the names of the Masada fighters appear. From these sherds one learns of their conscientious observance of the commandments of the Torah, finding expression in such things as their meticulous adherence to the laws of the tithe. Masada is also the only place apart from *Qumran where fragments have been found of the *Dead Sea sect (a scroll of the Sabbath Sacrifice). It seems that its source was the people of Qumran who joined the warriors of Judea at some stage of the war, although one is not entitled to identify the members of the sect, on this account, with the Sicarii or the Zealots. It is a fact that the Essenes participated in the Great Revolt. It was the second senatorial governor of the province of Judea, *Silva, who decided finally to stamp out the last vestiges of Jewish resistance and to capture the last stronghold of the Jews. After all hopes of maintaining this position had failed, and the Romans were poised to storm it, the defenders took the decision to immolate themselves rather than fall into the hands of the Romans. This decision to commit mass suicide was in keeping with the tradition of the Fourth Philosophy. For many of them the choice was in fact between death through torture by the Romans or taking their own lives. Others without doubt had to choose between the difficult alternative of accepting Roman domination, which in their eyes amounted to "Desecration of the Divine Name" (see *Kiddush ha-Shem) and death. But even those who might have been prepared to accept Roman rule and make a public declaration to that effect could only look forward to cruel slavery, while a life of shame faced the women. It is true that Jewish soldiers had been placed in a similar situation in other localities in Erez Israel, and yet only in isolated instances does one hear of suicide in preference to captivity. Thus there is reference to the suicide of the last defenders of *Jotapata, as well as of many of the defenders of Gamala (War 4:79), the city of origin of Judah, the spiritual father of the movement. Josephus also tells of the two priests Meir the son of Bilga and Joseph the son of Dalaeus who threw themselves into the flames of the Temple, and that the survivors of the Zealots sought their death in the field of battle after the capture of the city. Dio Cassius also reports the suicide of many of the defenders of the Temple.

In this mass suicide the essential principle of the Fourth Philosophy undoubtedly played an important role. They faced the danger of transgressing their religious faith, since in their eyes recognition of Roman rule was tantamount to idolatry. The choice before them therefore was not different in essence from that which faced the Jewish communities of the Rhineland in the First Crusade of 1096 or the martyrs of York in 1190.

The two speeches of Eleazar b. Jair in which he urged his followers to put an end to their lives bear the genuine stamp of the Greek rhetoric of the period of the Roman Empire, and it is not difficult to detect in it characteristic ideas taken from Greek philosophy and literature; at least the Stoic tradition recognized the legitimacy of suicide. But in addition to this it contains also the specific ideas of the Fourth Philosophy as indeed Eleazar b. Jair could give expression to it at that fateful moment. There is also in it something of the historical philosophy of Josephus himself as it finds expression in the *War* generally. Already at the beginning of his speech Eleazar emphasizes the essential idea which inspired him and his men not to become subservient to the Romans or to any man but only to God himself (War 7:323–5): "Long ago, my brave men, we determined neither to serve the Romans nor any other save God, for He alone is man's true and righteous Lord; and now the time is come which bids us put that resolution to the test by our actions. In this crisis let us not disgrace ourselves. We who in the past refused to submit even to a slavery involving no peril, let us not now, along with slavery, deliberately accept the irreparable penalties awaiting us if we are to fall alive into Roman hands. For as we were the first to revolt, so are we the last in arms against them. Moreover, I believe that it is God who has granted us this favor, that we have it in our power to die nobly and in freedom – a privilege denied to others who have met with unexpected defeat" (War 7:407–19).

The influence of the Sicarii refugees was not confined to Egypt. It also embraced the city of *Cyrene and other cities of

the Libyan Pentapolis. A certain Jonathan, a weaver by trade, was active in these cities, influencing many of the Jews belonging to the lower classes in Cyrene to follow him to the wilderness where he promised to show signs and wonders, and here also the local Jewish authorities intervened and brought about his arrest by the Roman governor Catullus (War 7:437–40).

As to the extent to which these Sicarii refugees and those who were influenced by their views were a long-range factor in the developments which took place in the lands of the Hellenistic Diaspora, particularly in Egypt and Cyrenaica in the years prior to the revolt during the reign of Trajan and which was its cause, it is difficult to give an answer in the complete absence of sources.

To sum up: it was the outlook of Judah of Gaulanitis and his successors which constituted the most extreme expression of opposition to Roman rule and of Jewish independence. The yearning for the redemption of Israel was the heritage of virtually all sections and classes of the people, but among the adherents of the Fourth Philosophy it led them to immediate action and an activism which knew no compromise, as well as to the recognition that divine aid would come to the energetic and the bold. Acknowledgment of Roman rule was tantamount in their eyes to an affront to divine rule and constituted *Ḥillul ha-Shem*. Consequently they maintained adamantly that it was essential to come out openly in war against Roman rule and also to compel those who disagreed with them to join the struggle. The Hasmoneans in their time had taken up arms when the situation became impossible and the danger of extermination threatened the Jewish faith, but only when the opportune moment came did they act to realize the ancient aspirations of the people for political freedom. The freedom fighters of the school of Judah of Gaulanitis, on the other hand, raised the banner of freedom and opposition to mortal rule without taking account of the realities of the situation. Their ideas fell on fertile ground as a result of the developments which had taken place in the province of Judea and in Jewish society during the last years of the Second Temple period. The eschatological tension which was characteristic of that generation fitted in exactly with the Fourth Philosophy. Nevertheless, only a small number of the fighters for the freedom of Judea during the Great Revolt accepted the specific ideology of the Sicarii of the school of Judah or of the Zealot priests of Jerusalem, between whom and the Sicarii one can posit only a hypothetical connection, as will be seen below. It can also be assumed that, among other groups, the question of leadership and the realization of the eschatological hopes of Menahem constituted from the outset an obstacle to complete identification with the ideology of the Sicarii.

The Zealots of Jerusalem

Among many scholars and in general works one frequently finds that the extreme wing of the freedom fighters which crystallized in the period immediately prior to the destruction of the Temple is identified with the Zealots (Ζηλωταί, *Kanna'im*). Judah of Gaulanitis is regarded as the founder of the Zealots,

who are identified as the proponents of the Fourth Philosophy. In the original sources, however, no such identification is anywhere clearly made, and the question is hardly raised of the relationship between the Sicarii, the upholders of the Fourth Philosophy, and the Zealots. Josephus himself in his general survey of the various groups of freedom fighters (War 7:268–70) enumerates the Sicarii first, whereas he mentions the Zealots last. "In this lawlessness the so-called Zealots excelled, a class which justified their name by their actions; for they copied every evil deed, nor was there any villainy recorded in history that they failed to emulate zealously. And yet they took their name from their professed zeal for virtue, either in mockery of those they wronged, so brutal was their nature, or reckoning the greatest of evils good." In presenting the events themselves Josephus first mentions the Zealots in connection with the composition of the temporary government in Jerusalem under the leadership of Joseph ben Gorion after the victory over *Cestius Gallus in the year 66 C.E. Josephus explains why *Eleazar b. Simeon, who distinguished himself in the fighting against the Romans, undoubtedly playing a decisive role, and took possession of most of the booty and the treasury of Cestius Gallus, was not appointed to the government. He explains that he was passed over "because they observed his despotic nature and that the Zealots under him conducted themselves like his bodyguard" (War 2:564). One gains the impression that Josephus is referring here to the Zealots who placed themselves under Eleazar's command as a phenomenon which had existed for some time and does not therefore realize that the reader has not heard of their appearance before.

Despite the fact that Eleazar b. Simeon was temporarily overlooked and not included either in the government of Jerusalem or in the list of the area commanders of the country who were appointed after the victory over the governor of Syria, he nevertheless maintained his decisive influence. In the words of Josephus, "Gradually, however, financial needs and the intrigues of Eleazar had such influence with the people that they ended by yielding the supreme command to him" (War 2:565). Josephus returns to the Zealots in his description of the subsequent events at the end of Book 2 (651) against the background of the preparation for the war against the Romans in 66–67 and underlines the antagonism which existed between Anan b. Anan and those called the Zealots. This latter name becomes more frequent in the context of the fratricidal war which broke out in Jerusalem after the war in Galilee. The war approached Jerusalem towards the end of 67 C.E.; the Roman army was already in control of *Jabneh and *Ashdod and large numbers of refugees and fighters streamed from the different places to the capital and joined the extreme elements there (War 4:138). These reinforced units began to take action against the moderate elements who until then had been in control of the city, particularly against individuals who were suspected of wishing to come to terms with the Romans. The first victim was a certain Antipas, who belonged to the house of Herod and tried to stop the rebels at the outbreak of the revolt. Together with two other members of the

royal family he was imprisoned, and shortly afterwards they were put to death. The extremists took a revolutionary step in abolishing the system which had been established since the time of Herod and reserved the *high priesthood to a number of families which in effect constituted the priestly oligarchy. This privilege had not been abolished even in the time of *Agrippa I. The high priesthood had continued to alternate between these oligarchic houses; from time to time the transfer was accompanied by reprehensible dealings, such as the bribery of the appointing authorities. In the years immediately preceding the Revolt the right of appointment was entrusted to Agrippa II, and the last high priest appointed by him was *Mattathias, the son of Theophilus II. It was now decided to introduce a complete democracy in the high priesthood and to choose by *lot. The lot fell upon Pinḥas (*Phinehas) b. Samuel of Kefar Havta. With the aim of portraying this change in the blackest of colors Josephus states that Pinḥas was "a man who not only was not descended from high priests, but was such a clown that he scarcely knew what the high priesthood meant. At any rate they dragged their reluctant victim out of the country, and dressing him up for his assumed part, as on a stage, put the sacred vestments upon him and instructed him as to how to act in keeping with the occasion. To them this monstrous impiety was a subject for jesting and sport, but the other priests, beholding from a distance this mockery of their law, could not restrain their tears and bemoaned the degradation of the sacred honors" (War 4:139–57). This Pinḥas is also mentioned in the talmudic sources, according to which he was a stonemason by trade, but they add that he had married into the House of Hillel. The view expressed by some scholars that this appointment constituted the restoration of the ancient glory of the high priesthood, since he belonged to the House of Zadok, in whose hands the high priesthood had been until the appointment of the Hasmoneans, is highly doubtful and there is nothing to support such a suggestion in the extant sources.

In his actual description of these events, the arrest and execution of the three members of the Herodian house and the revolutionary change in the selection of the high priest, Josephus does not mention the Zealots as such. The subsequent account, however, establishes it as a certainty that it was they who acted as the instigators. At the assembly called at the insistence of the most important of the previous high priests, under the influence of these events, *Joshua b. Gamla and Anan b. Anan castigated those present for their indifference and explicitly incited them against the Zealots. In other words, they attributed to them those actions which they were denouncing. It is in this context that Josephus for the first time explains the name Zealot, which henceforth he uses frequently, "for so they called themselves, as though they were zealous in the cause of virtue and not for vice in its basest and most extravagant form" (War 4:161).

The existing leadership in Jerusalem decided to embark upon an open struggle against the attempts of the Zealots to seize the reins of power. Numbered among these chief oppo-

nents, in addition to Joshua b. Gamla and Anan, were Goryon b. Joseph and *Simeon b. Gamaliel (War 4:159). In a rousing address Anan incited the citizens of Jerusalem against the Zealots who had fortified themselves in the Temple, and the Temple Mount was besieged. The struggle was decided in favor of the Zealots only with the entry of thousands of Idumeans into Jerusalem who ranged themselves on the side of the Zealots (War 4:162–304).

The Zealots were now in control of Jerusalem (winter of 67–8 C.E.) and their chief opponents were put to death, among them Anan b. Anan, Joshua b. Gamla, Goryon b. Joseph, and the commander *Niger from Transjordan. Meanwhile, however, a split took place between the Zealots and the Idumeans (War 4:305–65).

At this stage of events John of Giscala was in alliance with the Zealots, although Josephus does not mention his activities either with regard to the fight which took place in Jerusalem or the execution of the leading opponents of the Zealots. It is possible that John contented himself with giving aid to them without involving himself personally in the fight against those with whom he had previously cooperated. The Zealots and John of Giscala were now the two main powers in Jerusalem, but this situation changed fundamentally when Simeon bar Giora wrested control of the Upper City and portions of the Lower City. As a result the capital was divided into three parts. Eleazar b. Simeon continued as the commander of the Zealots, fortifying himself and his men particularly in the Temple. They maintained their hold there as a result of a topographical advantage which made up for their numerical inferiority compared with the men of John (War 5:5–10). After the appearance of *Titus before the walls of Jerusalem in the spring of 70, however, John took the bold step of adding the Zealots to his command; using the excuse of the Festival of Passover, according to Josephus, he infiltrated his armed men into the Temple area and thus established his domination over them (War 5:98–105). From this time onwards the Zealots were under the overall command of John in the same way as the Idumeans accepted the command of Simeon bar Giora. Both of these groups, however, continued to maintain their separate identity (War 5:250) and in the battles which raged between the Romans and the Jews during the siege the Zealots, distinguishing themselves by their courage, achieved a prominence comparable to those who belonged to the other camps (War 6:92, 148).

The sources are silent as to the fate of Eleazar b. Simeon and *Zechariah b. Avkilus, the principal leaders of the Zealots. It would appear that they were killed, or died, before the final fall of the Temple. Of at least one of the outstanding Zealot fighters during the siege, Judah b. Ari, it is known that he escaped from Jerusalem and that many of the fighters rallied around him. In the forest of Jardes they were encircled by a unit of Roman cavalry, while the infantry were cutting down the trees to blaze a trail through the forest. All the Jewish fighters, among whom there must have been many of the Zealots from Jerusalem, fell in the battle, including their Zealot com-

mander Judah (War 7:210–15). Their end was more similar to that of the Sicarii – despite the fact that it was not actually a case of mass suicide but the fall of heroes in the field of battle – than to the fate of Simeon bar Giora or John of Giscala, who fell alive into the hands of the Romans.

There seems little reason to doubt that the priests of Jerusalem were the fomenting element among the Zealots. Their essential base was always the Temple Mount and at least two of their principal leaders, Eleazar b. Simeon and Zechariah b. Avkilus, were priests (War 4:225). To them one may add, as will become clear below, *Eleazar b. Hananiah. Josephus also testifies that three more of their leaders were notables in Jewish society, "Judas the son of Chelcias, and Simon son of Esron, persons of might, along with a man of some distinction, Ezechias of Chobari" (War 5:6).

It would even appear that the very name *Kanna'im* has a priestly connection, in that they consciously regarded themselves as the spiritual descendants of the "Kanna'i" par excellence of Jewish tradition, Pinḥas (*Phinehas) the son of Eleazar (Num. 25:11).

As has been seen, at least immediately after the Roman victory in *Beth-Horon, the *Kanna'im* emerge as a recognized and definite factor, but it is possible to go further back and see as an act of the Zealots the decisive step which from the formal point of view marked the outbreak of the Revolt – the cessation of the daily sacrifice in honor of the Roman Emperor at the instigation of Eleazar b. Hananiah (War 2:409). It appears that despite the fact that he belonged to high priestly circles, his sympathies were all with the *Kanna'im*. It is not out of place to note that according to the talmudic tradition (Git. 56a) this symbolic and decisive act is connected with an individual who is known from Josephus as the second most prominent leader of the Zealots after Eleazar b. Simeon, namely Zechariah b. Avkilus: "Through the scrupulousness of R. Zechariah b. Avkilus our sanctuary was destroyed, our Temple burnt, and we ourselves were exiled from our land." The suggestion that the Zealots received considerable support from Bet Shammai has been put forward in the past and there is undoubtedly some basis for it.31 A consideration of the activity of Bet Shammai at the beginning of the Revolt as described in the halakhic sources fits in perfectly with what has been assumed as the ideology of the *Kanna'im*. Is it, however, possible to see the activities of the *Kanna'im* as the expression of a defined current and a consolidated group in the period prior to the Revolt?

It is certain that Josephus, the primary and most important source, and the only one to describe the ideologies of the Jews at the close of the Second Temple, does not employ the word Zealots at all in respect to the previous events. One cannot, however, infer far-reaching conclusions from this silence, since even at the beginning of the Revolt he does not mention the formation of the sect, and it is only casually that he notes the connection between Eleazar b. Simeon and the *Kanna'im*, referring to them consistently only from Book IV of the *War* onwards. However, even the other sources shed

little light on the subject. The reference of *Avot de-Rabbi Nathan* to them (ARN[1], ed. Shechter, 6, p. 32) is already to the days of the war and the siege of Jerusalem, while the statement of the Mishnah (Sanh. 9:6), "If a man stole a sacred vessel or cursed by *kosem*, or made an Aramean woman his paramour, the Zealots may fall upon him," is directed more to a way of life than to a group with a definite ideology. On the other hand, more weight can be given to the name Zealot given to Simeon, one of the disciples of Jesus, in Luke and Acts (Luke 6:15, Acts 1:13).

Nevertheless, without coming to any definite conclusion with regard to the first appearance of this name, the question can be raised of the initial emergence of an ideology firmly maintained by a specific group and active in the life of the Jews during the Second Temple period.

The historians of the 19th century took it as a fact that the Zealots were identical with the adherents of the Fourth Philosophy, and therefore constituted a division of the same movement to which the Sicarii belonged. This opinion was widely accepted by various scholars. On the other hand, in the 20th century certain scholars flatly denied any connection between the adherents of the Fourth Philosophy and the Zealot ideology, and even the emergence of a specific Zealot faction in the period preceding the Revolt. It must, in fact, be conceded that there is no clear evidence in the sources of any connection between the Fourth Philosophy and the Zealots during the Revolt, especially as the interpretation given to the sole reference to the followers of Menahem as "Zealots" (War 2:444) is open to doubt.

Despite this, however, there appears to be a certain connection between the two and the assumption, though far from decisive, is a reasonable one. As mentioned above, Josephus (Ant. 18:4; cf. 18:9) mentions as the two founders of the Fourth Philosophy Judah of Gamala in Gaulanitis and Zadok the Pharisee. Both the name Zadok and his appellation as a Pharisee suggest, on the one hand, that he belonged to the priestly circles and, on the other, that he was a well-known sage. In a hypothetical manner one can posit this Zadok as the formulator of that ideology which later characterized the Zealots of Jerusalem during the Revolt, whose leaders were the priests of the Temple and who were close to the Bet Shammai.

This assumption of a certain connection between the Zealots and the Fourth Philosophy also serves better to explain the decisive importance which Josephus ascribes to the Fourth Philosophy, on which he places the chief blame for the chain of disasters which befell the Jewish people, culminating in the destruction of the Temple. The limitation of the members of the Fourth Philosophy to the Sicarii, whose activity was impressive, in fact, only at the beginning of the Revolt, and even then it was not they who were responsible for the cessation of the daily sacrifice for the welfare of the Emperor, raises the question as to why Josephus found it necessary to underscore with so much emphasis the fateful guilt of the men of the Fourth Philosophy, to make it appear that they were responsible for all the disasters. It is perhaps possible here to add

the two different versions of *Avot de-Rabbi Nathan*, in which Zealots are mentioned in one and the Sicarii in the other, and their mention in juxtaposition in the statement of the Church Father Hippolytus, although the passage is far from clear. And lastly, it should be mentioned that neither Zealots nor the Sicarii were prepared to be captured alive by the Romans.

In the light of these considerations it appears that one can posit, albeit with some caution, the hypothesis that there was indeed a certain connection and cooperation between the founders of the Zealots and of the Sicarii during the census of Quirinius, and that from the outset the difference between these two movements was a tangible one. This difference found its expression in the decisive schism which took place during the Revolt after a brief period of cooperation at its beginning.

What then was it that differentiated the Zealots from the Sicarii and the other groups who fought against the Romans for the freedom of Judea? The differences can be enumerated as follows:

1. Whereas the Sicarii obtained their initial inspiration from Gaulanitis and Galilee in the north, the Zealots were directed by a group of priests in Jerusalem, and it was the Temple which was their main stronghold.

2. The Sicarii continued to be loyal to the dynasty of Judah the Galilean, their last leaders being Menahem and Eleazar b. Jair, who were scions of that house; in contrast the Zealots showed no particular loyalty to any house or dynasty.

3. The Zealots were not of the opinion that the eschatological hopes of the Jews found their expression in the person of any of their leaders. Although Eleazar b. Simeon emerges as their outstanding leader, other leaders worked together with him, and the impression gained is that of collective leadership. Side by side with him stood personalities like Zechariah b. Avkilus and the brothers Simeon and Judah, the sons of Ari.

Simeon bar Giora

The program of the Zealots included the reform of the institution of the high priesthood. As soon as they were able to do so they went to the extreme in the direction of democratizing this office by completely abolishing the high priestly oligarchy which had stamped its impression on Jewish society from the time of Herod and, as mentioned above, chose the incumbent by lot. In the siege of Jerusalem during the spring and summer of 70 C.E., however, the leaders of the Sicarii are conspicuously missing, and the leaders of the Zealots were relatively unimportant; although prominent in the affairs of the capital, they did not hold the most important posts. The two commanders in besieged Jerusalem until its fall at the hands of Titus were *Simeon bar Giora of Gerasa and *John of Giscala. It is possible to a certain extent to trace the connections of Simeon with the Sicarii in Masada, as well as to detect the bond that was established during a certain period between John and the Zealots of Jerusalem. Nevertheless it is completely out of the question to maintain that Simeon definitely belonged to the Sicarii or that John became a member of the Zealots. All that

it is possible to establish is that there was a certain identification between Simeon bar Giora and the Sicarii as regards their social outlook and that at a certain stage during the struggle John came to recognize clearly that the Zealots were his true allies in a consistent and effective stand against the Romans. Both Simeon and John are mentioned side by side with Eleazar b. Simeon as the commanders in Jerusalem, not only by Josephus but by the Roman historian Tacitus, who enumerates Simeon first and Eleazar last. Titus also regarded Simeon bar Giora as the leading commander and it was he who was chosen by the Romans to exemplify an enemy commander and lead the triumphal procession in Rome. The elevation of Simeon to the position of commander-in-chief was surprising when one takes into consideration his lowly origin and the existence of other individuals more firmly rooted in the tradition of an anti-Roman ideology. Internal developments in Jewish Ereẓ Israel and the abolition of the influential institutions which existed at the beginning of the Revolt, coupled with the charismatic personality of Simeon, go a long way towards explaining his advancement. It would also appear that from the outset Simeon exemplified the strength of certain rebel elements in Jewish Transjordan, an area which had already shown its love for freedom after the death of Herod, when uprisings which broke out in Ereẓ Israel were crushed out by Varus, governor of Syria. From Jewish Transjordan also came one of the important commanders at the outbreak of the Great Revolt, Niger (War 2:520, 566), a man with an outlook and social connections completely different from those of Simeon. The source of Simeon's strength, however, was by no means confined to Transjordan and gradually he became the spokesman of great masses throughout Jewish Ereẓ Israel. Despite the fact that there is no proof that Galileans joined his forces to any extent, it appears that his influence was decisive in the villages of Judea and Idumea. The suggestion has already been put forward that many of the Sicarii joined him – namely, those who did not fortify themselves in Masada. With the murder of Menahem and the departure of Eleazar b. Jair to this isolated stronghold they had lost their traditional leadership. It is a fact that no less than 10,000 out of the 23,400 fighters who defended besieged Jerusalem were directly under the command of Simeon, and to them are to be added 5,000 Idumean soldiers who were associated with them, as against only 6,000 men under the direct command of John of Giscala and 2,400 Zealots who accepted the leadership of Eleazar b. Simeon (War 5:248–50). It thus emerges that under Simeon there were about two-thirds of the total of the defenders of Jerusalem, and the Romans were naturally justified in regarding him as the commander of the enemy forces. As his name indicates, he was descended from proselytes, and he came from *Gerasa, an important Hellenistic city in Transjordan. The ruins of Gerasa and the inscriptions discovered there distinguish it from all the cities in the country and reveal the quality of its life as a Hellenistic city influenced by its Oriental background. Simeon was a young man when the Revolt broke out and was distinguished by his physical

strength and courage (ἀλκῇ δὲ σώματος καὶ τόλμῃ διαφέρων War 4:504). Simeon first acquired fame by his actions against the Roman army which had advanced against Jerusalem under the command of Cestius Gallus. He attacked them from the rear as they were making their way to the ascent of Beth Horon and carried away many of their pack animals as spoil to Jerusalem (War 2:521). When local commanders were appointed to the various districts of Erez Israel by the temporary government, neither Simeon nor the chief hero of the fray, Eleazar b. Simeon, was among them. Already then Simeon had gathered around him many of the rebels in the most northerly toparchy of Judea, that of Acrabatene. In his activities in that area the extreme social policy of Simeon and his followers already became evident. According to Josephus he did not content himself with attacking people of wealth; he even subjected them to physical torture. When Anan b. Anan, who was at that time the central figure in the temporary government in Jerusalem, sent an army against him Simeon apparently could not maintain his position against the authorities in Jerusalem and escaped south to Masada, and henceforth Idumea became his field of action (War 2:652–54), whereas in Jerusalem itself and in the northern part of Judea access was barred to him as long as the temporary government, which had been set up immediately after the victory over Cestius Gallus, was in control.

At first Simeon was regarded with suspicion by the Sicarii in Masada, a fact which proves that under no circumstances can he be regarded as having been one of them. According to Josephus he was permitted access only to the lower part of the fortress. They nevertheless cooperated with him in the raids which he made in the vicinity, since they saw in him "a man of congenial disposition, and apparently to be trusted." New opportunities opened for him, however, when Anan b. Anan fell into the hands of the Zealots. In addition, he increased the number of his followers by proclaiming the emancipation of all slaves (War 4:503–6). His influence spread over all parts of Judea, in the north as well as Idumea, and the masses flocked to his banner, with the result that "his was no longer an army of mere serfs or brigands, but one including numerous citizen recruits, subservient to his command as to a king" (War 4:510). Simeon's growing influence throughout Judea and Idumea brought him into conflict with the Zealots in Jerusalem and with John of Giscala, to whom it became evident that he was depriving them of any hold in Judea beyond the capital. The opponents of the Zealots who escaped from Jerusalem, whatever their ideological outlook might be, found refuge with Simeon (War 4:353). An attempt of the Zealots to restrain Simeon was unsuccessful, but Simeon did not consider his army sufficiently strong to wrest control of Jerusalem, and instead he first tried to bring Idumea under his influence. His attempt to gain control of Herodion ended in failure, but he did succeed in conquering Hebron (War 4:510–37).

Meanwhile the tension between Simeon and the Zealots increased. The latter took Simeon's wife captive in the hope of exerting pressure against him, but, confounded by Simeon's furious reaction, they released her (War 4:538–44) and the conflict in Jerusalem paved the way for Simeon. It would appear that the impetus to invite him to Jerusalem as a counterweight against John and the Zealots came from the Idumeans, and in Nisan (Xanthicus) of 69 C.E. Simeon arrived at the gates of Jerusalem and gained control of a large section of the capital, though his attempt to force the Zealots out of their stronghold in the Temple Mount ended in failure (War 4:566–584). He continued, however, to hold sway over the whole of the Upper City and part of the Lower City, establishing his headquarters in the Tower of Phasael (War 5:169). During the period of the siege Simeon took the initiative in arranging a truce with John of Giscala with the aim of cooperation against their common enemy (War 5:278) and henceforth fought shoulder to shoulder with him. On the other hand he dealt harshly with the upper classes, whom he suspected of collaboration with the Romans. Among those put to death by him were Mattathias b. Boethus and three of his sons (War 5:527–33, 6:114), and he took part together with John in the defense of the Temple before it was destroyed by fire (6:72).

Simeon bar Giora, in contrast to the Sicarii in Masada and the Zealot leaders in Jerusalem, who either committed suicide or fell in the field of battle, did not die during the war. He was taken alive by the Romans and Titus even issued an order to save him for the triumph which he was going to organize in Rome (War 7:25–36). He was sent to his death in that triumph amidst the applause of the Romans, in accordance with Roman custom.

Simeon was beyond doubt the most charismatic figure among the leaders of the Revolt. According to Josephus, his soldiers were prepared to go through fire and water for him (War 5:309) "and his was no longer an army of mere serfs or brigands, but one including numerous citizen recruits, subservient to his command as to a king" (War 4:510). Simeon was first and foremost the leader of the lower classes in Transjordan, Judea, and Idumea. It would be difficult to accord Simeon the epithet of "sage" as Judah and Menahem, the leaders of the Sicarii, are referred to (σοφισταί), nor did his influence and prestige obtain any support from the tradition of a family which for generations had been held in esteem by the people.

The sources are almost completely silent with regard to individual figures who belonged to the camp of Simeon. There is mention of his nephew Eleazar, who distinguished himself in battle (War 6:227), and one of his outstanding aides was Hanan of Emmaus. Nothing, however, is known of the origin or social affiliations of the others, such as Ardala (6:360), Castor (5:322), Judah b. Judah (5:534), Judah b. Mareotes (6:148), Simeon b. Hosaiah (6:148), or Malachi (6:92). One can point to a number of the prominent lines of Simeon's social policy: his vigorous activity against the propertied classes already in the first stage of the war and his emancipation of the slaves. Side by side with these one must underscore the special relationship which he had with his followers.

In accordance with his policy in *The Jewish War*, Josephus tends to ignore the messianic-eschatological element in the Great Revolt. Nevertheless, messianic hopes were associated with Simeon and, as has been stated, in one place (War 4:510) Josephus points out that he was obeyed like a king. There is also a basis for the suggestion that there is a connection between the coins bearing the inscription "*Li-Ge'ullat Ẓiyyon*" ('To the redemption of Zion') and the eschatological hopes which were reposed in the personality of Simeon bar Giora. If, therefore, with regard to social outlook Simeon was close to the general spirit of the Sicarii, there was nevertheless room for disagreement between them in the question of the leadership, since many of the Sicarii found it difficult to recognize the leadership of someone who did not belong to the family of Judah the Galilean. Nevertheless the differences were straightened out to some extent as a result of the absence of a recognized Sicarii leader in Jerusalem after the death of Menahem. Nor should one overlook the fact that whereas the Sicarii leaders, Judah and Menahem, were "sages," the impression gained of Simeon is that of a man who could under no circumstances be regarded as such according to the ideas prevailing in the Second Temple period. The personality of Simeon bar Giora fits in well with the picture one has of many of the popular leaders in the preceding period, during the disturbances which took place after the death of Herod. As is known, at that time there appeared, in addition to Judah b. Hezekiah, who was active in Galilee and conquered Sepphoris, a number of other leaders whose field of action was Jewish Transjordan and Judea itself. One of them was Simeon, the slave of Herod, who was distinguished by his handsomeness, his physical stature and bodily prowess. He assumed the crown and gathered around him a number of followers who proclaimed him king. He also set on fire and looted the royal palace in Jericho. Simeon himself met his death in battle together with his supporters, most of them from Perea (Ant. 17:273–77, War 2:57–59).

Similar to Simeon's conduct and activities were those of another rebel against Herod's son, Athronges, a shepherd by calling and of lowly origin, who also distinguished himself in stature and courage. He also aspired to the throne and, aided by his four brothers, crowned himself. According to Josephus he took a determined line against the Romans as well as against the members of the Herodian house. He made Jews as well as non-Jews suffer if it was to his advantage. Of his activities his attack upon a Roman troop in *Emmaus is mentioned and thus his field of action was in the west of Judea. His activities came to an end as a result of the efforts of Archelaus after he had consolidated his position as ethnarch of Judea (And. 17:278–84; War 2:60–64).

There is a parallel between such figures as Simeon the slave of Herod, Athronges, and Simeon bar Giora. All of them were of lowly origin and all three aspired to the throne, and it is almost certain that this aspiration was connected with the messianic expectations which had become widespread among the people at the time and in the case of all of them these expectations had a social character.

John of Giscala

To an entirely different social milieu belonged *John of Giscala (Gush Ḥalav in Galilee). Josephus, who is practically the sole source for him, displays a special animosity towards the personality of John. Whereas with regard to the individuals and the principles which animated the other freedom fighters he reveals an ideological opposition and blames them for the catastrophes which followed, and, as the near-official historian of the Flavian house he was obliged to denounce them with every kind of denunciation, with regard to John his criticism reveals a profound personal animosity. The roots of this animosity, which runs like a scarlet thread throughout the *War*, and even more so in his autobiography, the *Life*, are to be found mainly in his experiences while serving as commander of Galilee, where John was the most determined and unwavering of his opponents and did everything to have him deposed. This is undoubtedly the source of that hostility and the difference between his description of John and that of the other rebel leaders. The characteristics of John as presented by Josephus (War 2:585–88) reveal such unmistakable signs of contemporary rhetoric as to remind Thackeray, one of the most brilliant students of Josephus, of the description of Catilina by the Roman historian Sallust. "Poor at the beginning of his career, his penury had for a long time thwarted his malicious designs; a ready liar and clever in obtaining credit for his lies, he made a merit of deceit and practiced it upon his most intimate friends; while affecting humanity, the prospect of lucre made him the most sanguinary of men; always full of high ambitions, his hopes were fed on the basest of knaveries. For he was a brigand, who at the outset practiced his trade alone, but afterwards found for his daring deeds accomplices, whose numbers, small at first, grew with his success. He was, moreover, careful never to take into partnership anyone likely to fall an easy prey to an assailant, but selected good, strapping fellows, with stout hearts and military experience." Nevertheless, even Josephus does not attempt to implicate John as one of the inciters of the rebellion against Rome, as a person whose destructive ideology, on the lines of the Fourth Philosophy, was a factor in bringing about the conflagration. John is not mentioned at all as one of those who raised the standard of revolt against the Romans at its outset. On the contrary, when he saw that some of the inhabitants of Gush Ḥalav (*Giscala) were influenced by the ferment, he essayed to restrain them and demanded that they remain loyal to Roman rule (Life, 43). The developments which took place in Galilee, however, as in other regions, in the relations between the Jews and their non-Jewish neighbors caused him to change his attitude. Gush Ḥalav itself was attacked by those non-Jews, who wrought havoc in it. John, who was already then a central figure in the town, armed his followers and made a counterattack against those who had caused the destruction in his town. He gained ascendancy over them and erected a wall around Gush Ḥalav to protect it against similar assaults in the future (Life 44–45). It is also stated that John amassed a fortune through his successful business dealings, which were connected with the sale

of the abundant olive oil from Galilee to the Jews of adjacent Syria who refused to use non-Jewish oil.

Josephus testifies that John maintained close contacts with influential circles in the important cities of Galilee such as Gabara, where one of his friends, Simeon, was active (Life 124) and *Tiberias. An important accretion of strength came to him from Jewish refugees from *Tyre (Life 372). Among his friends in Jerusalem was numbered Simeon b. Gamaliel (Life 192). In two parallel narratives in the *War* and in his *Life* Josephus gives the details of John's activity in Galilee prior to the appearance of the Roman army there under Vespasian in 67 C.E. Naturally his description revolves around the personal relations between himself and John. The latter even attempted to influence the leaders of the revolt in Jerusalem to depose Josephus from his post as commander of Galilee. The *Life* in particular gives details of this; of special importance in this episode is the revelation of the close relations and complete mutual understanding which existed between John and Rabban Simeon b. Gamaliel. According to Josephus, Simeon on his part exercised his influence on the former high priests Anan b. Anan and Joshua b. Gamla to come out against Josephus and four emissaries were sent to Galilee for the purpose of deposing him. Their mission ended in complete failure, however, and Josephus continued to serve as commander of Galilee (Life 189–335).

A close examination of Josephus' accounts in his two works gives rise to serious doubts about their credibility, both with regard to the events in Galilee in general and his relationship with John in particular. Two things, however, are clear. One is that John played a leading role in the opposition to Josephus in Galilee and the other is that he cannot under any circumstances be regarded as the mouthpiece of the radical elements. It is known that he maintained excellent relations with Simeon b. Gamaliel, and his opposition to Josephus received the approval of Anan b. Anan.

It fell to John's lot to be the last of the fighters of Galilee. Whereas Josephus surrendered in Jotapata and the last Jewish strongholds in Galilee were captured by the army of *Vespasian and their defenders put to the sword or taken prisoner en masse, John succeeded in escaping from Gush Ḥalav at the head of his men and making his way to Jerusalem (War 4:84–111).

In Jerusalem John at first enjoyed prestige as the outstanding fighter against the Romans and the open opponent of Josephus, who had failed in the defense of Jotapata and whose surrender to the Romans cast suspicion on all his previous conduct of the war. As against this, the success of John in extricating himself with all his men, and bringing them to aid in the defense of Jerusalem, stood out prominently. The fact that he was at the head of an armed force wholeheartedly devoted to him, and subject to his personal command, gave him an advantage over all the other leaders in Jerusalem. The possibility that other refugees from Galilee joined him, since it is a fact that many Jews from Galilee fought in the defense of Jerusalem, including no less than

2,000 from Tiberias alone (Life 354), should be taken into consideration. After his arrival in Jerusalem, John maintained his old ties with the existing Jewish leadership. On the other hand, however, he benefited from the influence of Zealot circles who opposed that leadership, since they saw in him a man of energy and an uncompromising fighter against the Romans. According to Josephus he infused a spirit of courage and hope in the inhabitants of Jerusalem, "extolling their own power, and ridiculing the ignorance of the inexperienced; even had they wings, he remarked, the Romans would never surmount the walls of Jerusalem, after having had such difficulty with the villages of Galilee and having worn out their engines against the walls" (War 4:126–7). When the conflict broke out in Jerusalem between the Zealots and the traditional leadership under Anan b. Anan, John still belonged to the party of Anan but, in consequence of the prestige he enjoyed also among the Zealots, he was chosen by Anan as the intermediary between him and them. According to Josephus he betrayed Anan and it was he who encouraged the Zealots to call upon the Idumeans for aid against the existing leadership (War 4:208–23). Reference has already been made above to the development of the relations between John and the Zealots of Jerusalem which brought about close military cooperation between his men and the less numerous Zealots. In point of fact it was only the appearance of Simeon bar Giora which prevented the concentration of the high command in besieged Jerusalem in the hands of John. After his entry into the capital Simeon remained his sole rival and both served as commanders in the city.

Josephus consistently attempts to place the blame for the desecration of the Temple squarely on the shoulders of John. According to him John requisitioned the wood which had been stored for Temple purposes in order to erect towers for military purposes (War 5:36). When he and his men seized control of the Temple from Eleazar and the Zealots, not only did they exploit the Passover for their own purposes, but the majority of his men were not even ritually clean when they penetrated the Temple precincts (War 5:100), and he concludes, "For he had unlawful food served at the table and abandoned the established rules of purity of our forefathers" (War 7:264). The main purpose of these accusations was to put John in as bad a light as possible. John fulfilled a task of primary importance in the defense of the fortress of Antonia. After its fall he sought refuge in the tunnels, but finally met a fate similar to that of Simeon bar Giora and fell into the hands of the Romans, unlike the Sicarii and the Zealots. But whereas Simeon was put to death by the Romans, John was sentenced to life imprisonment (War 6:434).

John of Giscala represents an outstanding example of the spread of the ideal of liberty into the widest sections of the people. A moderate and peace-loving man from Galilee, an intimate of Rabban Simeon b. Gamaliel and not unacceptable to the ruling oligarchy of the high priesthood (Anan b. Anan), he joined the revolt out of the necessity of the situation at the same time as even the recognized leaders of Jewish society (the heads of Bet Hillel and the high priestly circles)

were swept into it by the general enthusiasm. In the course of events, when he came to Jerusalem after the collapse in Galilee, he felt a spiritual affinity to the Zealots there and joined them in their war against the existing leadership, but there is no need to assume that there was any decided ideological identification on his part with the Zealots.

Despite all of Josephus' attempts to besmirch him more than all the other individuals who were active at that period in Jerusalem, he hardly ascribes to him any special acts of cruelty, as he does to Simeon bar Giora. Nor is there any evidence of a socialistic revolutionary outlook or messianic-eschatological ideology in his personality. Nevertheless he was filled with the conviction that God would defend His city (War 6:98–99).

Although it cannot be denied that the picture given here of the various currents in the Jewish freedom movement is to a considerable extent hypothetical, one thing is nevertheless indisputably clear, namely, that the unifying factors among them outnumbered the divisive ones. From this point of view there is perhaps some justification for the view of those historians who are accustomed to speak generally of a Zealot movement which fearlessly raised the standard of revolt against the Roman Empire when it was at the height of its power.

[Menahem Stern]

Later Scholarship

The above classic article by Menaham Stern is reprinted unchanged because it remains the best ordering and interpretation of evidence in Josephus and in Christian, rabbinic, and pagan sources on the rise and spread of the Jewish revolutionary movements from the first century B.C.E. to the aftermath of the destruction of Jerusalem in the 70s C.E. This brief supplement is intended only to clarify, expand, and update certain aspects.

The only point in Stern's article which has to be corrected in light of subsequent scholarship is the final, concluding statement that "the unifying factors among [the Jewish revolutionary groups] outnumbered the divisive ones." Scholars today tend rather to see myriad partisan rivalries and societal fissures in Judea as contributing factors to the outbreak of the rebellion and the massive extent of the destruction it brought. Josephus has succeeded in obscuring the number and variety of revolutionary movements and leaders, and the ancient authors of the other sources had no interest in providing better information. But it seems clear now that the incidental mention of different rebels in Josephus and the New Testament, and the proliferation of small militia-type groups during Josephus' term as general in the Galilee, provide a glimpse into a much wider phenomenon. Moreover, these groups tended to compete with each other more often than they combined to oppose Roman rule in Judea. The chief victims of the Sicarii were all Jews, the recorded activity of other militants seems to have claimed mostly Jewish victims, and the in-fighting in the Galilee and Jerusalem not only resulted in high numbers of casualties but seriously hobbled the Jewish defensive strategy against the Roman attack. Josephus records in disgust

and horror that the Sicarii primarily terrorized Jewish opponents, "saying that they were no different from non-Jews" (*allophyloi*): this redefinition of one's kinsmen as foreign is a psychological and rhetorical tactic typical of intense internal conflict.

Connected with this theme, recent work has also favored the picture of wide and enthusiastic participation by the Jewish upper classes in the rebellion. The Jewish ruling class was a heterogeneous group, whose members were in constant tension with each other and with the less privileged groups in Jewish society; this has been especially emphasized in recent studies of patronage in the countryside of Judaea and Galilee. Aristocrats formed their own factions or joined existing ones in order to gain control of the revolt and maintain their status and position overall. Their failure to unify as a class contributed to the widening fractures in Jewish society, and encouraged Rome to view the revolt as a grave threat. Just before the war, "a kind of enmity and factionalism broke out among the high priests and leaders of the Jerusalem populace" who joined hands with "the boldest revolutionaries" to carry out their high-level power feuds (Ant. 20:180, cf. Pes. 57a). Many aristocrats were to be found in the ranks of Simeon bar Giora's organization, and some of John of Gischala's closest associates, before he betrayed them, were also of the ruling class. Eleazar, son of the high priest Hananiah and *sagan* of the Temple, was apparently a member of or very close to the priestly party of the Zealots. And significantly, the first revolutionary government formed in Jerusalem in 66 C.E. and lasting about six months was composed of high priests, noble priests, and lay nobility: the roster of noble rebels is long. These rebellious aristocrats joined the struggle for a variety of motives, including desire to protect their local power and influence, a feeling of genuine outrage at abuses by the Roman procurators, and infection by the messianic fervor and eschatological hopes pervading Judea before the war (which was not, despite conventional belief, limited to the less educated masses).

At the same time, recent work has tried to illuminate, from very uncooperative sources uninterested in the topic, the social and economic hardships and struggles which contributed to the formation and continuing activity of revolutionary groups and the outbreak of rebellion. The aristocrats' inability and the Romans' conspicuous unwillingness to help control what was apparently a festering economic crisis, punctuated by periodic famine and agricultural failure (only dimly perceived in the literary and archaeological evidence), obviously drove some to join anti-establishment movements large and small. But this factor can be overstated, for economic destitution did not always lead to political rebellion; there is no reason to think that the economic situation in Judea was worse than in other peaceable areas of the empire, and the echoes of the slogans and platforms espoused by the Jewish rebel groups have nothing to do with economic injustice. Despite the fact that economic grievance indisputably contributed to the appeal of revolution, especially to the destitute and dispossessed, there is no sound basis for the model of the Jewish rebellion

as two rebellions in one, an economic uprising by the peasant against the propertied classes and a national uprising against a foreign empire. Motives were complex, varied, combinatory, changing, and often indistinguishably tangled.

When social hierarchies weaken and the state power proves inefficient, banditry often arises (especially when socio-political instability is exacerbated by economic hardship). Brigandage and piracy were a problem which accompanied the Roman Empire throughout its entire history, particularly in peripheral, less fully Romanized, and less stable areas. The rebels in first-century Judea are routinely labeled *leistai*, "brigands," by Josephus, and there is little doubt that this quasi-legal label, applied indiscriminately to both prominent named and smaller unnamed bands, reflects the official Roman perspective, which viewed political upstarts as no more than criminals and troublemakers to be exterminated, and treated them accordingly. Josephus, when he became a historian, found that this attitude conveniently reflected his personal animus against the militant groups, especially when they attacked wealthy local magnates (but he also absurdly calls his personal enemy John of Gischala a *leistes*, even though John was well-to-do and well-connected, War 2:587). But the term may conceal a much more complex reality than can be teased out of the sources, and much recent work has been devoted to distinguishing between common criminals and "social bandits" on Hobsbawm's model. The problem is one of perception. Josephus' *leistai* did not of course present themselves as common robbers, nor were they perceived as such in the popular imagination, even less so by the other individuals whom they recruited to their ranks. Moreover, whatever "social bandits" existed in Judea seemed to have been infected by, and in turn to have exploited, the growing popular outrage against the Roman Empire and concomitant spreading messianic ideology. Social banditry is (according to the model) a rural phenomenon, yet some of the main revolutionaries – especially the Zealots – seem to have been active in an urban setting. Careful distinctions have to made, and the concept of social banditry as a political act will be found to apply only to the partially visible groups who make brief and enigmatic appearances in the sources. The concept contributes very little to understanding the Zealots and Sicarii, who were selective groups founded and led by literate ideologues who engaged in overtly political terror; the Zealots, as Stern has made clear, were a highly specialized group of mostly priests.

No writings by the Zealots or Sicarii have survived to round out and deepen the picture, no genuine voice of a revolutionary ideologue can be heard directly; belief and actual rhetoric must be filtered out of the considerable distortions and omissions of the existing sources. It remains true that "… there is no direct expression outside Josephus of the ideology of revolt" (Rajak 2002, 177). Yet much recent scholarship has attempted to appreciate the full force of the messianic character and apocalyptic beliefs and professions of many of the revolutionaries, and their impact on the prewar Jewish population at large. The scant indications in Josephus of the messianic nature

and eschatological message of many of the rebels – the Sicarii if not the Zealots, and the many "prophets" and unnamed militants mentioned by Stern – combined with the relatively substantial but enigmatic corpus of apocalyptic and messianic texts from the period (e.g., *Psalms of Solomon*, *Assumption of Moses*, *Sibylline Oracles* III and IV, et al.), have been marshaled to create a picture of pervasive messianism throughout Palestinian Jewish society in the first century. But, except for the messianic texts from Qumran (of which the sectarians played no known role in the war), it is not possible to associate any known apocalyptic text with a revolutionary group. Nor should one expect to do so. There is no reason to believe that known groups such as the Zealots or even the Sicarii with their "fourth philosophy," or unnamed groups, wrote their own manifestos or inspirational texts. Messianists who repeated the widely known prophecy of the next world ruler arising from Judea (recorded by Josephus, War 6:312) needed to cite no more than Numbers 24:17, or the eschatological visions in the book of Daniel. It can be said from the available evidence that messianic hopes affected all societal sectors, definitely motivated many of the revolutionary groups agitating for war with Rome, and drove the diehards in Jerusalem to expect salvation until the very end. On the other hand, Josephus tried to demonstrate in his life and writings that it was possible to be a strongly believing Jew and accept accommodation with the Roman Empire, postponing eschatological hopes for an undetermined, distant future.

ZEBAH AND ZALMUNNA (Heb. צַלְמֻנָּע ,זֶבַח), two Midianite kings. The Israelites under the leadership of Gideon won a decisive victory over the Midianites. Oreb and *Zeeb, two princes of Midian, were captured and slain (Judg. 7:15–25). With the complete destruction of the Midianite forces, the Israelites were free of the terrors of yearly raids and crop stealing by the peoples from the east (Judg. 6:2–6). Gideon, however, was not satisfied. He was determined to find and kill Zebah and Zalmunna, two other Midianite kings who had managed to survive the great defeat and had fled eastward into the desert. This was a personal quest by Gideon, however, in order to exact revenge for the murder of his brothers, and he did not have the support of the tribes in this expedition. With his 300 men, he managed to rout the surviving Midianite forces and capture Zebah and Zalmunna. Gideon offered the privilege of executing blood revenge to his young son Jether, but the scared youth could not bring himself to draw his sword (Rashi, Judg. 8:20). Zebah and Zalmunna asked Gideon to execute them, so that they would die at the hands of a kingly person like themselves (Judg. 8:4–21; Ps. 83:12).

Y. Kaufmann maintains that Gideon thought his brothers were still alive, otherwise the question "Where are the men…?" (Judg. 8:18) would make no sense. In the same verse he emends הרגתם ("you killed") to נהגתם ("you captured"; cf. Gen. 31:26; Deut. 28:37), as better fitting the meaning of the text. Gideon had heard only of his brothers' capture by the Midianites, and it was from the answer of Zebah and Zalmunna that he learned of their deaths.

ZEBIDAH, family of *paytanim* that appears in several places in the *Genizah (Judah, Yose his brother, Abraham b. Judah, Isaac and Jacob b. Isaac). The head of the family and its most important *paytan* seems to have been Judah, author of a *kerovah* for the Intermediate Sabbath of Passover, published by I. Davidson (JQR, 21 (1930/31), 255, 266–75). A second signature to this *kerovah*, "*Yehudah mi-Berutah me-Ḥaleb Asah*," would indicate that the family came originally from Syria, some living in Beirut and some in Aleppo. The founder of the family must have lived, at the latest, in the 11th century.

[Menaḥem Zulay]

ZEBULUN (Heb. זְבֻלוּן ,זְבוּלֻן ,זְבֻלֻן), tenth son of Jacob and the sixth born to him by Leah (Gen. 30:19f.). The tribe of Zebulun is named after him. It was divided into three clans: Seredites, Elonites, and Jahleelites (Num. 26:27) after the three sons of Zebulun (Gen. 46:14). At the census taken in the Plains of Moab the number of men in the tribe over 20 years of age and fit for military service was 60,500 (Num. 26:27). Zebulun held a major position among the tribes of Galilee; it was settled more securely than the others. Unlike the case of the tribes of Asher
Territory of the tribe of Zebulun. After Y. Aharoni, Lexicon Biblicum, *Tel Aviv, 1965.*

and Naphtali who continued to "dwell among the Canaanites" (Judg. 1:32f.), among Zebulun the Canaanites constituted a minority: "the Canaanites continued to dwell among them" (Judg. 1:30). The tribe was very active in the campaigns of the period of the Judges. The victorious army in the battle by the wadi Kishon was formed of men of Zebulun and Naphtali (Judg. 4:6, 10). Deborah praised them as "a people that put its life in jeopardy to the point of death…" (Judg. 5:18). The men of Zebulun also took part in the Midianite war (Judg. 6:35). The judge Elon was a Zebulunite (Judg. 12:11), as was probably Ibzan of Beth-Lehem (in Galilee in the territory of Zebulun, Josh. 19:15), whom the text juxtaposes with Elon (Judg. 12:8–10).

The importance and strength of the tribe of Zebulun in the period of the united kingdom is also indicated by the mention of Zebulun's army as the largest of the western tribal armies that fought under King David (I Chron. 12:34 [33]). Isaiah mentions the land of Zebulun after the collapse of the kingdom of Israel (8:23 [9:1]). Apparently, it suffered less than other regions during the destruction of the kingdom of Israel. The Zebulunites were not uprooted and were probably the core of the remnant that survived the Assyrian campaigns in Galilee (II Chron. 30:6). Consequently, the last Davidic kings were careful to maintain their ties with the people of Zebulun who were among those who made the pilgrimage to celebrate Hezekiah's Passover in Jerusalem (II Chron. 30:10–11). Manasseh, king of Judah, married Meshullemeth of Jotbah (II Kings 21:19), which, according to S. Klein, was Yotbat-Yodpat (referred to by Josephus as Jotapata), in the land of Zebu-

lun, and her son Amon succeeded Manasseh as king in Jerusalem. Amon's son, King Josiah, also married into the tribe of Zebulun; his wife Zebudah, the mother of King Jehoiakim, was a native of Rumah in the Valley of Beth-Netophah (II Kings 23:36). This is the regnant view, though S. *Mowinckel, in the Norwegian Bible translation, and H.L. Ginsberg, *Marx Jubilee Volume* (1950), 350f. n. 12 prefer to restore the Judean town names Juttah (יְטָה, יוּטָה; Josh. 15:55; 21:16) and Dumah (דוּמָה, var. רוּמָה; Josh. 15:52) respectively.

It has been shown that the populous Jewish community in Galilee in the period of the Second Temple centered around Sepphoris, Jotapata, and the Valley of Beth-Netophah. In all likelihood it was the remnant of Zebulun together with what was left of other tribes, Babylonian returnees, and some Judeans who, together, formed the nucleus of Jewish Galilee which lasted over 1,000 years. The sages were particularly sympathetic toward the tribe of Zebulun, mainly because many of the centers of learning after the destruction of the Temple, such as Bet She'arim and Sepphoris, were in the land of that tribe. The generosity of the wealthy Galileans in supporting the colleges and sages is reflected in rabbinic legends about Issachar and Zebulun (see *Issachar, in the *Aggadah*).

ZEC, PHILIP (1909–1983), British illustrator and cartoonist. Zec was born in London, the son of an immigrant rabbi and tailor from Russia. He was educated at the St. Martin's School of Art, London. In the 1930s he became one of the most famous poster artists in England, producing the famous poster for the *Flying Scotsman* train and other well-known advertising designs. From 1937 until 1961 he was the chief political cartoonist for the pro-Labour *Daily Herald*, depicting Hitler and the Nazis as strutting buffoons. Zec's most controversial cartoon appeared in 1942. It depicted a torpedoed sailor on a raft and stated below, "The price of petrol has been increased by one penny – Official." The implication, that war profiteering was the official policy of the British government, infuriated many in Parliament. Zec's original caption had been entirely different; the offending words were added by the newspaper. Zec is regarded as among the handful of great British political cartoonists of his time. He served as a director of the *Jewish Chronicle*.

ZECHARIAH (Heb. זְכַרְיָה; "YHWH has remembered"; end of ninth century B.C.E.), the priest, son of Jehoiada. According to II Chronicles 24:20–22, Zechariah admonished the people

in the courtyard of the Temple. They plotted against him and stoned him at the command of *Joash, king of Judah. The latter had forgotten that Jehoiada, Zechariah's father, had once saved his life and made him king (II Chron. 22:11ff.). As Zechariah died he said: "May the Lord see it, and avenge it." (The historicity of the incident is questioned by H.L. Ginsberg.) The tombstone over the alleged grave of Zechariah son of Jehoiada stands in the Valley of Kidron opposite the Temple Mount in Jerusalem.

[Yehoshua M. Grintz]

In the Aggadah
The *aggadah* about the murder of Zechariah in the Temple concerns Zechariah the son of Jehoiada (II Chron. 24:20ff.); but in some of the sources he is confused with Zechariah the prophet (Zech. 1:1; Ezra 5:1) and also with the Zechariah mentioned in Isaiah 8:1. The *aggadah* magnifies the crime which was committed by the king and the people: "Seven transgressions were committed by Israel on that day" (Lam. R., Proem 23), among them that he was slain on the Day of Atonement which happened to fall on the Sabbath. Not content with the punishment which King Joash suffered according to the biblical story (II Chron. 24:23ff.), the *aggadah* tells that after the slaughter in Jerusalem and its environs, Nebuzaradan found the "blood of Zechariah bubbling up." When he inquired as to the nature of this blood, he was first told that it was the blood of sacrifices; but when he investigated and found it not to be so, they admitted whose blood it was. Nebuzaradan said "I will appease him" and he stood and killed in cold blood the members of the Sanhedrin, the priestly class, and the rest of the people – a total of 94,000; but the blood still seethed until Nebuzaradan angrily rebuked Zechariah saying "Do you want me to destroy them all?" Then the blood stopped seething (Git. 57b; Sanh. 96b; Lam. R. *ibid.*; also on Lam. R. 4:13, TJ, Ta'an. 69a–b; Sanh. 96b; cf. also Matt. 23:35f.). According to some of the versions, Nebuzaradan was so impressed by this example of divine justice that he repented his own misdeeds and was converted to Judaism. Thus the murder of Zechariah was the direct cause of the destruction of the Temple and all the suffering connected with it. Although the story refers explicitly to the First Temple, it seems meant to explain the destruction of the second one, for which no obvious reason was apparent. Hence it is quite plausible that the *aggadah* has in mind similar incidents which happened prior to the destruction of the Second Temple, such as the murder by John Hyrcanus of his brother during the sacrificial service (Jos., Ant., 11:300) or the slaying by Zealots of an innocent citizen, called Zechariah(!), in the Temple (Jos., Wars, 4:335).

ZECHARIAH, king of Israel, son of Jeroboam II. Zechariah succeeded to the throne after his father's death in 743 B.C.E.

He was assassinated six months later by *Shallum of Jabesh, who seized the throne for about one month (II Kings 15:8–13). It is not possible to determine the reason for his assassination, but presumably it was prompted by external political circumstances.

[Yehoshua M. Grintz]

ZECHARIAH, son of Jeberechiah, one of the two "faithful witnesses" to *Isaiah's prophecy when he wrote on a sheet "to *maher-shalal-ḥash-baz*" and named his newborn son Maher-Shalal-Hash-Baz ("Plunder hastens, booty speeds"), as a sign that "before the boy knows how to call 'Father' and 'Mother' the wealth of Damascus and the spoils of Samaria shall be carried off before the king of Assyria" (Isa. 8:2–4). There is no other unequivocal reference to Zechariah but, since the father of the prophet *Zechariah had the same name (Berechiah) as the father of this Zechariah, and since several scholars attribute the last six chapters of the Book of Zechariah to an earlier, First Temple prophet, there is a theory that the Isaiah witness is that mysterious prophet. It has also been suggested (by Z. Jawitz) that this is the same Zechariah who instructed Uzziah king of Judah "in the fear of God" (II Chron. 26:5). It is more likely that he is to be identified with Zechariah the father-in-law of King Ahaz (II Kings 18:2; II Chron. 29:1).

[Yehoshua M. Grintz]

ZECHARIAH, the eleventh book of the Twelve Minor Prophets. While the book is attributed to one prophet, in style and content it is clearly separated into two parts:

(1) Chapters 1–8 are written with the return from Babylonian Exile as background, and the name of the prophet and the dates of his prophecy are clear;

(2) Chapters 9–14 are of an eschatological nature and are written in an obscure style with allusions to unclear backgrounds. Contemporary commentaries tend to treat *Haggai-Zechariah 1–8 together, and separately from Zechariah 9–14.

Zechariah 1–8
The introduction to the book attributes the work to Zechariah son of Berechiah son of Iddo the prophet (Zech. 1:1, and 1:7). The prophet's name is mentioned elsewhere in the Book (7:1, 8). He is mentioned as well, along with *Haggai, in Ezra 5:1; 6:14, where he is referred to as the son of Iddo, rather than grandson. In Nehemiah 12:4 and 16, mention is made of a priest named Zechariah of the family of Iddo, who may be Zechariah the prophet. Three of Zechariah's prophecies are dated between the second and fourth years of Darius' reign (520–18 B.C.E.; 1:1, 7; 7:1). This makes Zechariah a contemporary of Haggai. The Talmud (TJ, RH 1:1, 66b) considers the beginning of Zechariah's prophecy to predate Haggai, although in at least one of his prophecies (8:9–13), he appears to refer to concerns of Haggai as matters which preceded him (Haggai

1:2–11; 2:15–19). In all probability, therefore, he was a younger contemporary of Haggai (cf. Zech. 2:8, where he is called *na'ar,* "lad"). The chronological headings of Haggai-Zechariah 1–8 are more detailed than earlier books of the Bible, so much so that we can see that they cover a period of less than two and a half years in the reign of Darius I the Great (522–486). Haggai and chapters 1–8 of Zechariah seem to be part of the same redactional effort. Zechariah sees himself in the line of the preexilic prophets (*ha-nevi'im ha-rishonim*; Zech. 1:4; 7:4, 12), whose words of warning were fulfilled over the doubts of the people to whom they were addressed. From the fact that Yahweh's words of doom and destruction of Judah and Jerusalem conveyed by the prophets were fulfilled, Zechariah concludes that Yahweh's promises to do good for Judah and Jerusalem will likewise be fulfilled (Zech. 8:14–15). Indeed, in response to the question of whether the fasts commemorating the disasters of the earlier sixth century should continue to be observed (Zech. 7:3), the prophet responds that these days will be turned into festivals (Zech. 8: 18–19). In contrast to some of the pre-exilic prophets, he is an enthusiastic supporter of the temple (Zech. 2:16), to which he refers as "Yahweh's palace" (*hekal* YHWH; contrast Jer. 7:4 in which that characterization is termed *sheker,* "a lie"), to Mount Zion as the holy mountain and Jerusalem as the city of truth in which YHWH dwells; a holy land (Zech. 2:16; 7:3). Like the pre-exilic prophets he calls for social justice, honesty, and equity and regard for the poor and defenseless (Zech. 7:8–10; 8:16–17). Zechariah makes much use of symbolic visions, seeing in them a connection between the visionary and real objects, by blurring the time and location. Unlike the visions of the pre-exilic prophets, the visions of Zechariah are accompanied by direct or indirect explanations made by the angel who speaks to him, and who serves as an intermediary between the prophet and God. The angel also serves to transmit prophecies from God to the prophet (see below).

Chapters 1–6 contain eight visions (among which some other fragments are inserted; see below). In the first of these (1:8–17), Zechariah one night sees a man astride a red horse standing among myrtle trees "in the depths," or, perhaps, "in the shadow." Behind him are red, sorrel, and white horses. Replying to the prophet's question, the angel explains that the horses symbolize messengers sent throughout the world by God to see what is transpiring (cf. Job 1:7). The image is probably based on the Persian surveillance system. They return with the information that all is tranquil. The angel, apparently disappointed, perhaps because the disturbances following the death of the Persian emperor Cambyses (530–522) had raised hopes of independence among the subject peoples of the empire, prays for the rebuilding of Jerusalem and the cities of Judah which have aroused God's anger for "these seventy years"; the Lord replies that He is jealous for Jerusalem and Zion, and will return to them. In the second vision (2:1–4), which continues along the lines of the first, the prophet sees four horns (like those of a siege ram butting against a wall), which represent the nations that destroyed Jerusalem. Zech-

ariah then observes four craftsmen who go to cut the horns down, i.e., who restore the city. In the third vision (2:5–9), a man sent to measure Jerusalem with a measuring rod is sent away by an angel who states that Jerusalem does not need a man-made wall: it will be inhabited without walls, God being the wall about "the multitude of men and cattle therein." The fourth vision (Zech. 3), the only vision in the Hebrew Bible in which a historical character appears, takes place in heaven, where a court is in session. The accused is the high priest Joshua and the prosecutor is the Satan (Heb. *ha-satan* as in Job 1; a title, not yet a proper name). God rebukes the Satan: "Joshua is a brand saved out of fire" and is not to be harmed. An angel orders that Joshua's filthy garments, symbolic of his human impurity, be replaced with robes and a clean turban. He promises Joshua that if he will walk in the ways of God, keeping His charge, he will have "free access among these that stand by," i.e., among the angels (cf. the symbolic purging by which *Isaiah is qualified to participate in the deliberation of the heavenly council; Isa. 6:1–8). In vague language, the angel prophesies that God will bring "My servant the Branch" (see Zech. 6:12; Cf. Jer. 23:5–6; 33:15–16), a reference to Zerubabel, grandson of the Davidic King Jeconiah deposed in 597. He shows Joshua a stone with seven eyes. The vision is interrupted by an inserted oracle to Zerubabel, promising that it is he who will complete the temple and triumph in his mission through the agency of the divine spirit rather than through military force as might have been hoped during the period of the empire's unrest (cf. Hag. 2:20–23). Following the insertion, the eyes in the stone are symbolically explained (Zech. 4:10b) as the seven eyes of YHWH, which range through all the earth. The prophet then observes a golden lampstand with a bowl above it and seven lamps upon it, and "each of the seven with seven spouts, for the lamps which are on top of it" (see illustrations in IDB 3:66; Meyers and Meyers, pl. 12–14). Two olive trees, one on each side, have branches, which serve as conduits to empty the golden olive oil through two golden *ṣantərot* (?). The two olive trees represent "the two sons of oil who stand by the Lord (*adon*) of the whole earth," i.e., Joshua and Zerubbabel, who will rule jointly and by their close association with Yahweh represent fertility and prosperity (Meyers and Meyers 1988, 276). The prophet sees two more visions (Zech. 5), which are also related to each other. A large scroll, perhaps inscribed with a curse, perhaps the Torah, flies through the air, symbolizing the curse which will fall upon a thief or one who swears falsely. He then sees a tub/container (?) (Heb. *efah*) containing a seated woman, who is being carried "between earth and heaven" to the land of Shinar, i.e., Babylon, by two winged women. A lead disc is thrown over the mouth of the tub and seals it. The angel explains that the woman symbolizes wickedness, which is being expelled to a distant place. The final vision (6:1–8) resembles the first one: four chariots, harnessed to horses of various colors appear between "mountains of brass." They represent the four winds of heaven, which leave after presenting themselves to the Lord, in order to fulfill their task on earth.

The visions are accompanied by a fragment relating a dramatic act of Zechariah (6:9–15). The prophet is ordered to take silver and gold from Heldai, Tobijah, and Jedaiah, who recently returned from the Exile, and to bring it to Josiah son of Zephaniah (the craftsman?) who will make crowns from it. One crown is to be placed on Joshua's head and the other, apparently, is to be reserved for "the Branch" (Zerubbabel), who he prophesies, will build the Temple and "shall bear glory, and shall sit and rule upon his throne." The high priest will stand by his side "and the counsel of peace shall be between both." The crowns are said to have been placed in the Temple as a memorial and to have remained there throughout the period of the Second Temple (Mid. 3:8). The prophet closes with words regarding proselytes who will be brought to the Lord in the end of days.

In chapters 7 and 8, Zechariah turns from matters directly concerning the returning exiles to eternal prophetic concerns. The returning exiles had asked the priests and prophets in Jerusalem if they were still obligated to observe the four fast days connected with the destruction of Jerusalem. Zechariah raises the question of the fundamental purpose of divine worship (cf. Isa. 58). The basic point is not fasting, but ethical conduct – "honest justice… judgment… mercy, and compassion" (7:9), "the honest and equitable justice" (see 8: 16; see *Peace). Transgressing these precepts had brought "wrath," while keeping them would lead to redemption and to the conversion of fasts into occasions of joy and gladness. The point then is to "love honesty and equity" (8:19). Again, he ends with a vision of "many peoples and mighty nations" recognizing the Lord, and turning to Israel to accompany her in the "search for the Lord of hosts in Jerusalem" (cf. Isa. 2).

Zechariah's central themes in chapters 1–8 do not differ significantly from those of the prophets who preceded him. In a sense, their words, to which he regularly alludes, are already Scripture for him. He esteems the Temple service, and at the same time considers the observance of the precepts of righteousness, truth, and peace most important. Jerusalem is God's chosen city and He is jealous for its honor. The future of the non-Jewish nations is also concerned with the city, for they will eventually seek Yahweh and pray to him. They will acknowledge that God (*elohim*) is with the Jews (Zech. 8:20–23). One innovative aspect of Zechariah's prophecy is the special importance he accords to the high priest. This is a result of the changed circumstances of the Persian period, in which it appeared that the Davidic monarchy would not be restored. The prophetic compromise was a dyarchy, in which Zerubabel and Joshua would each sit on a throne (Zech. 6:13) and that "'a counsel of peace' would exist between them," an outcome which failed to materialize. Zechariah, like later *apocalyptic, makes use of an angel, who instructs the prophet, explaining the strange and wondrous visions which the latter does not comprehend. Much in the fashion of the apocalyptists, Zechariah sees angels standing in God's presence, though he does not see God Himself, as previous prophets had dared (I Kings 22:19; Isa. 6:1–2). Zechariah's language in describing the visions is prosaic and dry, and occasionally even confused; however, some prophetic passages, such as 2:10–17, do rise to lyricism.

Zechariah 9–14

The entire second section of the book (chapters 9–14) lacks any mention of the prophet's name and period. Chapter 9 begins with the word *massaʾ* ("an oracle"), as does chapter 12. The first half of the chapter (vs. 1–8) contains prophecies of divine punishment of Israel's neighbors: Hadrach, Damascus, and Hamath, all in Syria; Tyre and Sidon; and the Philistine cities of Ashkelon, Ekron, and Ashdod. All are to be destroyed or annexed to Israel. The second half (vs. 9–17) is a prophecy of redemption for Israel: a savior-king will come to Zion to save all "the poor as well as the one who rides an ass, yea a colt, foal of a donkey" (Tur-Sinai; Held). He will put an end to war in Ephraim and Jerusalem, "and he shall speak peace unto the nations, and his dominion shall be from sea to sea." He speaks of the return from captivity, the war of the sons of Zion against the sons of Javan, and God's appearance in battle to save His people.

In chapter 10 the prophet belittles teraphim and diviners as sources of aid. Only the Lord can produce "showers of rain." He mentions God's wrath at "the shepherds," and goes on to describe the victorious battle of the houses of Judah and Joseph against their enemies. He describes the ingathering of exiles from Egypt and Assyria "into the land of Gilead and Lebanon," and the humbling of Egypt and Assyria. In chapter 11 he returns to his prophecy of divine punishment of the evil "shepherds" (cf. Ezek. 34). He himself is called upon to feed some flocks, using two staves, which he names "Pleasant" and "Binders." He (or God?) cuts off three shepherds in one month. It can be understood from what follows that the nation loathes him, paying him 30 pieces of silver, an ancient idiom for a trifling amount, going back to Sumerian (Reiner). He takes this silver and at God's command throws it into the temple for use by the potter. (These verses inspired Matt. 26:15; 27:3–5.) He then announces the breaking of "the brotherhood between Judah and Israel." He prophesies the rise of a "foolish shepherd" who will neglect the flock, and he curses him strongly.

Chapter 12, like chapter 9, opens with the word *massaʾ* ("an oracle"). Jerusalem will be besieged by many nations, but Yahweh having made Jerusalem into a cup of reeling, these attackers together with their horses will be struck with confusion and madness. In another image, Yahweh makes Jerusalem into a burdensome stone, which cuts anyone who carries it off. In yet a third image of Judah harming all who attack her, Yahweh will make the clans of Judah into a wood-burning brazier or a torch set to a sheaf and they will consume their attackers "on the right and on the left." The next several verses are highly problematic. They seem to indicate some tension between Jerusalem and the Davidides on the one hand and the "tents of Judah" on the other (12:7–8). Verses 10–12 refer to widespread mourning over one who was stabbed, comparable to the loss of a firstborn son or to the mourning over/at

Haddad Rimmon in the Valley of Megiddo. Chapter 13 tells of a fountain of purification, which will be opened for the house of David and the inhabitants of Jerusalem. The names of the idols will be cut off from the land, and the "unclean" spirit will be swept out of the land. Reflecting the new phenomenon that the divine word should be sought in a limited corpus of Scripture, the writer predicts that Yahweh will also remove prophecy from the land. A prophet will be stabbed by his parents for prophesying. Prophets will deny their vocation by attributing to horsing around any wounds that might be taken as a sign of ecstatic behavior. Once again a flock and a shepherd who will be punished are mentioned. Two parts of the nation "shall be cut off and die," and the remaining third will be purified like silver and gold: "They will call my name and I will answer them; I will say 'That is my people,' and they will say, 'Yahweh is my God,'" an exchange drawn directly from Hos. 2:25.

Chapter 14 begins with a siege of Jerusalem. First, Yahweh brings the gentiles to Jerusalem to make war against it. The city is conquered and plundered, half of the people going into exile. The gentile victory though is short-lived because Yahweh himself will go forth to battle the nations; He will first set his feet on the Mount of Olives and it will be split across from east to west. Then one part will shift north and the other south, creating a huge gorge. The Valley in the Hills (Wadi Kidron?) will be stopped up the way it was in the earthquake of the eighth century in King Uzziah's reign. On a day known only to Yahweh, there will be one continuous day, neither day nor night. On that day fresh water will flow from Jerusalem, part of it to the Dead Sea and part of it to the Mediterranean all year round. Yahweh will be King over all the land (*kol ha-areẓ*) of Israel; others "all the earth"), there will be one Yahweh with one name (i.e., no more Yahweh of Samaria, Teiman, etc.) Then all the land (*kol ha-areẓ*) will become (depressed) like the Arabah, so that Jerusalem (in fulfillment of Isa. 2:2) will be raised, after which it will be secure (Zech. 14:11). Having rearranged the topography, Yahweh is now ready to smite all the peoples who attacked Jerusalem at his invitation, as well as their mounts, with a plague that rots their skin, eyes, and tongues (vss. 12, 15). A panic from Yahweh will fall upon all. Judah will join in the fighting and the wealth of all the nations will be gathered to Jerusalem (vs. 14). Finally, every survivor among the nations struck by Yahweh will make an annual pilgrimage to Jerusalem to bow down to Yahweh and to celebrate the Feast of Booths; if not, they shall have no rain. Egypt, which depends on the Nile rather than rainfall, will be punished in some other way if they fail to make the pilgrimage. All of Jerusalem will be pure. "Holy unto Yahweh" will be inscribed on everything from bells on horses to metal pots.

Chapters 9–14 are unclear, and the historical allusions they contain remain contested. There is no apparent temporal connection between them and the contents of the earlier chapters of the book. The two sections differ both in form and style. Much of earlier scholarship concentrated on ana-

lyzing the text into sources without attempting to account for why the sources were combined. Contemporary scholarship attempts both. First, 9–14 is now generally subdivided into 9–11 and 12–14, each headed "Oracle, word of Yahweh." But whereas the first heading indicates that the word is directed against various foreign nations, the second is directed against Israel. Though the material is diverse there are several themes in common: military conflict, criticism of leadership, and Jerusalem's future prosperity (see Petersen). There are various reasons why chapters 9–14 were combined with 1–8. For one, both sections contain strange visions. More important, both sections promise the future glory of Jerusalem. Chapter 8:20–23 speaks of all the peoples coming to Jerusalem to seek Yahweh, while chapter 14 concludes with all the nations coming annually to Jerusalem to bow down to Yahweh and to celebrate the Feast of Booths. Jerusalem. As is true of the other late biblical books, both sections of Zechariah constantly quote earlier Scripture, reinterpret it, or allude to it, a process commonly but inaccurately called "intertextuality." (For Zech. 1–8 see Boda; for Zech. 9–14, see charts in Meyers and Meyers 1993, 40–43).

Zechariah in Later Sources

In the Aramaic section of the Book of Ezra (5:1), Zechariah is cited together with Haggai as one of those supporting the building of the Second Temple in the early days of Darius. One passage in Zechariah (1:3) appears to have been quoted in Malachi (3:7). At a later period, some translations of the Bible credited Zechariah with the authorship of several psalms at the end of the Book of Psalms. The Greek translation credits him with Psalms 137 and 138, and in collaboration with Haggai, with 145 through 148; the early Latin version with 112; the Vulgate with 112 and 146, done jointly with Haggai; and the Syriac version in the Polyglot Bible with 126, and 145 to 148. The "addendum" to the Syriac also dates these psalms and describes their use in the Temple. Christianity made much use of Zechariah 9–14, which is the most quoted of the Hebrew prophets in the Gospels, and is second only to Ezekiel in its influence on the Christian apocalypse Revelation. The author of Matt. 23:25 confused our prophet with Zechariah b. Jehoiada of II Chr. 24:20–22, while Matt. 27:9 quotes Zech. 11:12–13, but mistakenly attributes it to Jeremiah.

[Yehoshua M. Grintz / S. David Sperling (2nd ed.)]

In the Aggadah

Zechariah was one of the three prophets to accompany the Exiles who returned from Babylon to Jerusalem; his contribution to the subsequent rebuilding of the Temple consisted of his testimony regarding the site of the altar (Zev. 62a, and Rashi, loc. cit). He prophesied together with Haggai and Malachi, in the second year of the reign of King Darius (Meg. 15a). He could interpret difficult scriptural texts (Er. 21a–b), and he helped Jonathan b. Uzziel to compose the Targum to the prophets (Meg. 3a). Like Haggai and Malachi, he received his learning direct from the early prophets (ARN 1:1). He is identified with Zechariah Meshullam (Neh. 8:4), and was so called

because his conduct was blameless (*mushlam*; Meg. 23a). It was only after the death of these three prophets that the Holy Spirit departed from Israel (Yoma 9b).

ZECHARIAH AL-ḌĀHIRI

ZECHARIAH AL-ḌĀHIRI (1519?–1589?), author in *Yemen. A well-known scholar and *dayyan*, Zechariah was well versed in Hebrew and Arabic literature and in philosophy. He traveled widely, journeying to Erez Israel in 1567 and becoming acquainted with scholars there. During the Turco-Yemenite war (1568–73), he was imprisoned, together with the rest of the Jewish community, in *Sanʿa. In prison he wrote his best-known work, *Sefer ha-Musar,* consisting of 45 sections (*maḥbarot*), influenced in subject matter by the *maqāmāt* of Al-Ḥariri and the *maḥbarot* of *Al-Ḥarizi and *Immanuel of Rome. The book includes amusing folklore, animal fables, and riddles, as well as moral and admonitory tales, and contains poems praising particular books and their authors. However, the most important part of the work is the author's description of his travels in Erez Israel, Egypt, Syria, Iraq, Turkey, Persia, and India, and of contemporary events in Yemen. Zechariah described the scholars and systems of learning of the yeshivot of Erez Israel, including that of *Tiberias, which was supported by Gracia *Nasi, and that of Joseph *Caro in *Safed. Among the notables of Safed whom he mentions are Moses of *Trani and Moses *Cordovero. In Erez Israel Zechariah widened his knowledge of *Kabbalah, and later was instrumental in diffusing the Zohar and other kabbalistic works in Yemen. *Sefer ha-Musar* is an important source of information on the Jewish communities of the period, throwing special light on the political, spiritual, and cultural situation of Yemenite Jewry.

Zechariah also wrote *Ẓeidah la-Derekh*, a commentary to the Pentateuch (published with the text, 1964), and several works on *halakhah* and *aggadah*.

[Yehuda Ratzaby]

ZECHARIAH BEN AVKILUS (first century C.E.), scholar in the generation of the destruction of the Second Temple. Zechariah was known for his piety and humility, and his conduct was even relied upon to determine the *halakhah* (Tosef., Shab. 16:7). The famous statement ascribed to R. Johanan in TB Git. 56a (cf. Lam. R. 4:23), "The humility of R. Zekharia b. Avkulas destroyed our Temple, burned our Holy of Holies, and exiled us from our land," is in fact a slightly expanded version of the statement of the *tanna* R. Jose found in Tosefta Shab. 16:7 (see: *Five Sugyot*, 106–11), and provided the starting point for the later talmudic tradition which described in great detail the way in which Zechariah's behavior served as an immediate cause of the outbreak of the Roman War. When the rabbis were inclined to overlook the blemish in the animal offered as a sacrifice by the Roman government, in order not to offend Rome, Zechariah objected; and when they proposed that *Bar Kamẓa be put to death to prevent his informing against them to the government, he again objected. The Romans regarded the refusal to offer up the sacrifice as a sign of rebellion on the part of the Jews against the empire and the Roman War broke out, which resulted in the destruction of the Temple.

[Zvi Kaplan]

ZECHARIAH BEN BARACHEL (12th century), head of the *Baghdad academy. R. Zechariah was born in *Aleppo, where his father was the leader of the community. While still in Syria, R. Zechariah was renowned for his erudition and "he taught them most of the Talmud by heart." When he went to Baghdad, the head of the academy R. *Samuel b. Eli gave him his learned daughter in marriage, appointed him *av bet din* of the yeshivah, and empowered him to "designate scribes, *ḥazzanim*, community emissaries, and heads of communities." During the same year (1190), R. Zechariah traveled to the communities of Babylonia and Syria in order to raise funds for the academy. After the death of his father-in-law in 1193, he succeeded him. During his visit to Baghdad, R. Judah *al-Ḥarizi described him as "powerful in Talmud, respected, God-fearing, and pious" (*Taḥkemoni*, ed. by A. Kaminka (1899), 190).

[Zvi Meir Rabinowitz]

ZECHARIAH BEN SOLOMON-ROFE (**RaZaH**; known in Arabic as **Yahya ibn Suleiman al-Tabib**, first half of 15th

century), Yemenite scholar and physician. Zechariah lived in *Sanʿa, *Yemen. His midrashic anthology of the Torah and *haftarot, Midrash ha-Ḥefeẓ*, compiled in 1428, is considered one of the most important Yemenite Midrashim. The *Midrash ha-Gadol* is the main source of his work. He was also influenced by *Maimonides' philosophical opinions. All the sources are in Hebrew and Aramaic; he enlarges upon the ideas and comments on them in Arabic.

Zechariah also wrote a commentary, *al-Durrah al-Muntakhabah* ("The Choicest Pearl"), on the *Midrash ha-Gadol*. His admiration for Maimonides is also expressed in several works which he wrote on Maimonides' books: (1) *Sharḥ al-Ḥigbur,* comments in Arabic on the unknown sources of *Yad ha-Ḥazakah* and *Sefer ha-Mitzvot*; (2) an explanation for Maimonides' commentary on the Mishnah, set out in the form of questions and answers; (3) a commentary in Arabic on *Moreh Nevukhim*. His own medical work, *al-Wājiz* ("the Compendium"), consists of three parts and includes the anatomy of the human body, a detailed list of various diseases, and a description of their cures by the use of herbs and other remedies. Two of his works, which were written at the request of his pupils, indicate that he taught in public. Of his works, only the commentary on the *haftarot* (1950) and the Midrash on Song of Songs (1962) have been published.

[Yehuda Ratzaby]

ZECHARIAH MENDEL BEN ARYEH LEIB (d. after 1707), rabbi and author. He was born in Cracow, where his father was rabbi of the community. On his father's death in 1671 Samuel *Koidonover was appointed to succeed him, while Zechariah Mendel was appointed rabbi of the main synagogue. Some time after 1674 he was appointed rabbi of Tvrobin and from 1691 to 1700, he was rabbi of Belz. Zechariah was an active member of the *Council of Four Lands; his signature appears on *takkanot* of the council issued during the years 1688–1700.

He was the author of *Baʾer Heitev* on the Shulḥan Arukh, *Yoreh Deʾah* (in Sh. Ar., Amsterdam, 1754) and *Ḥoshen Mishpat* (in Sh. Ar., *ibid.*, 1762), a digest of the halakhic comments on the Shulḥan Arukh, similar to the commentaries of the same name by Judah b. Simeon *Ashkenazi or Tiktin on *Oraḥ Ḥayyim, Yoreh Deʾah*, and *Even ha-Ezer*, by Isaiah b. Abraham on *Oraḥ Ḥayyim*, and by Moses b. Simeon *Frankfurter on *Ḥoshen Mishpat*. Later editions of the Shulḥan Arukh generally contain Zechariah Mendel's *Baʾer Heitev to Yoreh Deʾah* and *Ḥoshen Mishpat* and that of Ashkenazi to *Oraḥ Ḥayyim* and *Even ha-Ezer*. Zechariah's son JOSEPH was *av bet din in* Bychawa, Jaslo, and Lublin.

[Abraham David]

ZEDAKAH (Heb. צְדָקָה; "righteous act," or "charity"), word derived from the root צדק ("to be correct"). In the Bible, it is variantly used: as righteousness, in the sense of "piety" (Gen. 15:6); as justice (Amos 5:7; 6:12); as right in one's claims (II Sam. 19:29); and, in the plural, as righteous acts (Judg. 5:11; I Sam. 12:7; Jer. 51:10). In later Hebrew literature, it more generally came to mean "charity," implying "acts of justice" but was distinguished from *gemilut ḥasadim* ("acts of kindness"). In the liturgy of Rosh Ha-Shanah and the Day of Atonement, *ẓedakah*, along with "repentance" and "prayer," is said to "avert the evil decree."

ZEDEKIAH (Heb. צִדְקִיָּה, צִדְקִיָּהוּ; "YHWH is my righteousness"), the third son of Josiah (I Chron. 3:15) and the last king of Judah (597/6–587/6 B.C.E.). Zedekiah was 21 years old when he ascended the throne. His mother was Hamutal the daughter of Jeremiah of Libnah (II Kings 24:18; Jer. 52:1). His original name, Mattaniah, was changed to Zedekiah by *Nebuchadnezzar king of Babylonia when the latter appointed him king in place of his brother's son (II Kings 24:17). The change of name is a symbolic expression of Zedekiah's political status as a vassal of the king of Babylonia. Echoes of the vassal pact made between Babylonia and Judah are found in Ezekiel 17:12–14.

From *Jehoiachin, Zedekiah inherited "a humble kingdom" (Ezek. 17:14), a country that was small and weak, subject to a foreign yoke, and divided within. Nebuchadnezzar's campaign against Jehoiakim and Jehoiachin his son brought in its wake the destruction of many cities in Judah, which Zedekiah was prevented from refortifying properly. With Jehoiachin there went into exile some of the honored ones of the country, an important part of the veteran leadership, and many of the craftsmen and experts. Israel's neighbors, especially the Edomites, taking advantage of the difficult position of the kingdom of Judah, made attempts to invade its territory. Ostraca from Arad reveal echoes of the danger that threatened the settlements in the south of Judah from the Edomites. Furthermore, after the exile of Jehoiachin, the kingdom of Judah was under the leadership of inexperienced soldiers and civilians, some of whom were disposed to adventures. Zedekiah himself was not the right leader at the right time. He did not possess those qualities with which he could have prevented the situation from deteriorating to its bitter end – the destruction of the state, of Jerusalem, and of the Temple. The Bible describes him as lacking self-confidence, irresolute, vacillating, Zedekiah was a weak ruler, unsuited for the difficult conditions of the time. Disposed to listen to the advice of *Jeremiah the prophet and not rebel against Babylonia, nevertheless, fearing the princes, he followed their wishes and renounced his allegiance (Jer. 38:5). Zedekiah's position was not an easy one. He ruled only by grace of the king of Babylonia, and Jehoiachin, the preceding king, lived in exile and continued to bear the title of king of Judah even while in Babylonia. There were circles in Judah who hoped for Jehoiachin's return to Jerusalem and for his reappointment as king of Judah (Jer. 28).

During his first years, Zedekiah bore the yoke of Babylonia loyally. It was only in the fourth year of his reign (594/3 B.C.E.) that he showed a tendency to throw off that yoke. In Jeremiah 27 (in verse 1, the reading should be Zedekiah instead of Jehoiakim; cf. 28:1) it is reported that representatives of Edom, Moab, the Ammonites, Tyre, and Sidon assembled in Jerusalem to confer and revolt against Babylonia. The arrival in Jerusalem of the emissaries of the different countries may indicate that Zedekiah took a notable part in initiating the revolt. To the kings subject to Babylonia, that year may have seemed a suitable one for an attempt to throw off the Babylonian yoke; either because of the internal unrest prevailing in Babylonia in 595/4 B.C.E., which is evident from the Babylonian Chronicle, or because of the accession of Psammetichus II to the throne of Egypt (595–589). For reasons that are not clear, the rebellion did not take place. Nebuchadnezzar apparently became acquainted in time with the plot that was being hatched against him and nipped the revolt in the bud by undertaking a campaign to Syria (in 594 B.C.E., according to the Babylonian Chronicle). To this, apparently, belongs the information about the delegation sent by Zedekiah to Nebuchadnezzar to express loyalty (Jer. 29:3), and it is not impossible that he himself journeyed to the king of Babylonia to humble himself before him and express loyalty to him (Jer. 51:59).

The final rebellion of Judah against Babylonia broke out in 589/8 (II Kings 24:20). What prompted Zedekiah to rebel in that year is not clearly known. It is, however, reasonable to assume that he acted not only from a desire to satisfy the wishes of his army commanders, who favored the throwing off of the yoke of Babylonia, but also in coordination with and support of Hophra (589–570), king of Egypt (cf. Jer. 44:30). Echoes of the conspiracy of Judah with Egypt occur in Ezekiel 17 and in Ezekiel's prophecy against Egypt (Ezek. 29). The *Lachish Letters also clearly show that Judah had close ties with Egypt, for important princes of Judah went to Egypt. Letter no. 4 (Rainey, 266–67; COS III, 80) states: "The commander of the host, C[on]iah son of Elnathan, has come down in order to go into Egypt." This army commander undertook a mission to the pharaoh of Egypt on behalf of Zedekiah. Tyre may also have been involved in the revolt, if the statement quoted by Josephus (Apion 1:15ff.) on the siege of Tyre by Nebuchadnezzar king of Babylonia which lasted 13 years can be assigned to this period. It is not impossible that Ammon may also have been a party to the revolt, in view of what is said in Ezekiel 21:24–25 and the subsequent murder of *Gedaliah the son of Ahikam by *Baalis the king of Ammon. At the height of the rebellion, Zedekiah made a covenant with the people "that everyone should set free his Hebrew slaves, male and female, so that no one should enslave a Judite his brother" (Jer. 34:9–11). This act may attest the enthusiasm that came upon various circles among the people during the rebellion. It was, however, not long before all those who had previously been freed were once more enslaved (Jer. 34:11).

The failure of the rebellion was foreseen. Nebuchadnezzar was at the pinnacle of his power, and a treaty of two or three states was unable to oust Babylonia from Syria and Palestine. The internal position in Judah was very grave. The nation was divided about its relations with Babylonia. There were circles that were disposed to rely on Egypt and throw off the yoke of Babylonia. Those who incited the people to rebellion and instilled confidence in them, a confidence that was false, were the army commanders and the prophets, referred to by Jeremiah as prophesying lies. These prophets promised the people that neither sword nor famine would come to Jerusalem and that God would help them in their distress (Jer. 14:13; 21:2). Jeremiah refuted the words of the prophets, prophesied sufferings for the people, and uttered a grievous prophecy on Jerusalem and its Temple (7:14–15; 34:21–22). According to Jeremiah, the fate of the nation had already been determined for destruction, in consequence of its moral and religious sin (6:13; 7:17–19, et al.). Because of his warnings and rebukes, Jeremiah, as well as all those who had similar ideas, were persecuted by the princes and the false prophets (Jer. 26).

The Babylonian answer was not long in coming. Nebuchadnezzar went to Syria and established his camp at Riblah in the land of Hamath (II Kings 25:6, 20; Jer. 39:5), while troops of Chaldeans made their way southward, and laid siege to Jerusalem. The siege lasted for about two and a half years, from Zedekiah's ninth year, in the tenth month, on the tenth of the month, until the city was breached in his 11th year (587 to 586 B.C.E.), in the fourth month, on the ninth of the month (II Kings 25:1–4; Jer. 39:1–2; 52:4–7).

There is no explicit information on the help extended to Judah by the neighboring countries except Egypt. Hophra, king of Egypt, sent a force to help Judah. The Chaldeans besieging Jerusalem withdrew before the Egyptian auxiliary force and lifted their siege of the city (Jer. 37:5; Ezek. 17;29–32; cf. Lam. 4:17). When the Egyptian force returned to Egypt, the Babylonian forces renewed the siege of Jerusalem. At the same time, the Chaldeans, attacking the hill country and the Shefelah, captured the fortified cities of Judah one by one (Jer. 44:2). In Jeremiah 34:7 it is stated that "the army of the king of Babylon fought against Jerusalem and against all the cities of Judah that were left, Lachish and Azekah; for these were the only fortified cities of Judah that remained" (see also Jer. 44:2). In Lachish Letter no. 4 the commander of one of the strongholds writes to the commander of Lachish: "And let [my lord] know that we are watching for the signals of Lachish, according to all the indications which my lord hath given, for we cannot see Azekah." It has been argued that this letter reflects the moment when Azekah, too, fell and the signals from it ceased, but this is unlikely (Begin). Archaeological excavations of the tells to the south of Jerusalem show that many cities, such as Lachish, Beth-Zur, Ramat Raḥel, and Tell Bet Mirsim, were destroyed at this period. The Lachish ostraca reflect the tension and straits of Judah during the last days. Letter no. 6 (Ahituv, 48) indicates that some of the people "were weakening hands," i.e., spreading discouragement about the rebellion. This tallies to a great extent with Jeremiah 38:4, according to which the princes blamed Jeremiah for "weakening the hands" of the

soldiers. Jeremiah himself was suspected of treachery when he tried to go over to the land of Benjamin (Jer. 37). He urged the people to give up the fight and surrender to the Babylonians (21:8–10); and indeed some of the people deserted to the Chaldeans (38:19). Zedekiah was not only unable to inspire and encourage the people at this fateful hour, but was afraid of them and in the power of the princes. He himself was not wholeheartedly in favor of the rebellion against Babylonia. If Zedekiah did not abandon Jerusalem during the siege itself, it was because he feared the Judites who were already in the camp of the Babylonians (Jer. 38:19). At the same time, many refugees from the provincial cities had come to Jerusalem, where the situation became intolerable because of the severe famine (Jer. 37:21; 52:6; II Kings 25:3).

When the city was breached on Tammuz 9 (587 or 586 B.C.E.), Zedekiah fled, together with the aristocrats of Jerusalem, toward eastern Transjordan, but was captured in the neighborhood of Jericho and brought to Riblah. There his sons were killed before his eyes, after which he was blinded and sent in chains to Babylonia, where he died (II Kings 25:4–7; Jer. 39:4–7; cf. Ezek. 12:1–14). In the month of Av, on the seventh of the month, Nebuzaradan (Akkadian: Nabû-zēr-iddina), "the captain of the guard" (the Hebrew, a translation of the Akkadian title, literally means "chief cook") came to Jerusalem, demolished the city, burnt the Temple, and took many of the people captive (II Kings 25:11; cf. Jer. 52:29–30). The nobility of Jerusalem were brought to Riblah, where they were executed (II Kings 25:8–21).

[Bustanay Oded]

In the Aggadah
Despite the fact that Nebuchadnezzar demanded that Zedekiah swear fealty to him on a Torah scroll, he did not keep faith and soon rebelled against him (PR 26:129). Nor was this his only treachery toward his overlord. Once he surprised Nebuchadnezzar in the act of eating flesh cut from a living hare. The king adjured him not to relate what he had seen, but Zedekiah reported it to the neighboring kings (Ned. 65a; Tanh. B., Ex. 33). Zedekiah was duly punished for his unfaithfulness. When Jerusalem fell, he tried to escape through a cave extending from his house to Jericho, which tradition identifies with the "Cave of Zedekiah" in Jerusalem. God sent a deer into the Babylonian camp, and in pursuit of the animal the soldiers reached the opening of the cave at the very moment when Zedekiah was leaving it (Rashi, II Kings 25:4). Nebuchadnezzar justified the cruel punishment he meted out to Zedekiah and his sons (II Kings 25:7) because the Jewish king had sinned both according to the laws of God and the laws of the state (PR 26:131a). Nevertheless, Zedekiah did possess virtues. He is particularly praised for having Jeremiah rescued from the mire (MK 28b). God wanted to reduce the world to chaos because of the misdeeds of his generation, but when he considered Zedekiah his anger subsided (Ar. 17a). Jeremiah's prophecy that Zedekiah would "die in peace" (34:5) was fulfilled in that he outlived Nebuchadnezzar, although he died shortly after (MK 28b). He was mourned as the king who rep-

resented "the residue of all the previous generations" (Seder Olam R 28). Royalty in Israel is compared to the moon. The bright light of Solomon's reign, which was like the moon at its zenith, gradually waned until it was extinguished with the blinding of Zedekiah (Ex. R. 15:26).

ZEDEKIAH, the name of several biblical figures.

(1) The son of Chenaanah, one of the prophets of Samaria in the time of *Ahab king of Israel and *Jehoshaphat king of Judah (I Kings 22; II Chron. 18). Zedekiah appears to have been one of the court prophets dependent upon the king and in consequence strove to win Ahab's approval by prophesying what he wished to hear – that he would be successful in the battle of Ramoth-Gilead. For this purpose he even made horns of iron and said: "Thus says the Lord, 'With these you shall push the Arameans until they are destroyed'" (I Kings 22:11). According to the Bible, his words were contrary to those of *Micaiah son of Imlah, a prophet of the Lord, who prophesied defeat for the armies of Israel and Judah. Thereupon Zedekiah obsequiously smote Micaiah on the cheek and presented him as a false prophet, saying: "How did the Spirit of the Lord go from me, to speak to you" (I Kings 22:24; cf. II Chron. 18:23). In reply, Micaiah prophesied to Zedekiah: "Behold, you shall see on that day when you go into an inner chamber to hide yourself" (I Kings 22:25; cf. II Chron. 18:24).

(2) The son of Maaseiah, mentioned together with Ahab son of Kolaiah in Jeremiah (29:21–23). Both were accused by Jeremiah of performing folly in Israel, committing adultery with their neighbors' wives, and speaking in the name of God lying words which He did not command them. Jeremiah prophesied that Zedekiah and Ahab would be punished at the hands of the king of Babylon, and that their fate would serve as a symbol among the exiles of Judah who would say: "The Lord make you like Zedekiah and Ahab, whom the king of Babylon roasted in the fire" (29:22). The background of Jeremiah's prophecy appears to be the support given by Zedekiah and Ahab to opposition to Babylon, in contrast to Jeremiah's view on this matter.

(3) *Zedekiah, king of Judah.

[Hanoch Reviv]

ZEDERBAUM, ALEXANDER (pseudonym **Erez**, "cedar" = Zederbaum; 1816–1893), a pioneer of Jewish journalism in Russia. Born in Zamosc, Poland, he moved to Odessa in 1840, taking an active part in Jewish affairs there and becoming a favorite of the local authorities. He received a permit to publish *Ha-Meliz, the first Hebrew weekly in Russia, and began publication in 1860. Two years later he published Kol Mev-

asser, a Yiddish supplement to *Ha-Meliẓ*. Leading Hebrew writers of the day contributed to the papers, which supported the Haskalah movement, opposed Ḥasidism, and kept their readers informed of current events in the Jewish and non-Jewish world. In 1871 Zederbaum transferred *Ha-Meliẓ* to St. Petersburg and began publication of a Russian-language weekly entitled *Vestnik Russkikh Yevreyev* ("Russian Jewish Herald"). Financial difficulties led to the closing of both papers in 1873. Zederbaum renewed publication of *Ha-Meliẓ* in July 1878, during the Russo-Turkish War. He transferred his permit for a Russian-language newspaper to a group of Russian-Jewish intellectuals, who then produced *Razsvet. In 1881 he began to publish the Yiddish newspaper, *Yidishes Folksblat*. He was an enthusiastic supporter of the Ḥibbat Zion movement from its inception, and its members were among his contributors. The actual editing of *Ha-Meliẓ* in this late period was done by Hebrew writers such as J.L. *Gordon (1880–83 and 1885–88), and A.S. *Friedberg (1883–86). From 1886 *Ha-Meliẓ* appeared as a daily. Zederbaum edited and wrote the leading articles for his newspaper. Though his articles were pompous and verbose, their content greatly appealed to his readers. He was a liberal editor, permitting contributors to express views he opposed, but adding his dissent in a footnote.

Zederbaum published several books in Hebrew and Yiddish, including *Bein ha-Meẓarim* (Odessa, 1864); *Keter Kehunnah* (Odessa, 1868), essays consisting mainly of anti-ḥasidic polemics; and *Di Geheymenise fun Berditshov* (Odessa, 1870). His many detractors accused Zederbaum of dilettantism and a negative attitude toward his collaborators, but in perspective Zederbaum may be viewed as a pioneer of Hebrew journalism who, despite the prevailing political and cultural conditions of Jews in 19th-century Russia, succeeded in creating Hebrew and Yiddish literary platforms where most of the contemporary writers in these languages were able to express themselves.

[Yehuda Slutsky]

ZEDNER, JOSEPH (1804–1871), German bibliographer. Zedner, born in Glogau, taught at a Jewish school in Strelitz, Mecklenburg, and was a tutor in the home of the book dealer and publisher Adolph Asher (1800–1853) of Berlin before becoming a bookseller himself. In 1846 he was appointed translator and later assistant librarian in the Hebrew division of the British Museum, London, a post he held until 1869 when he retired to Berlin. He supplied Leopold *Zunz and Moritz *Steinschneider with a great deal of bibliographical information. His main work was the *Catalogue of the Hebrew Books in the Library of the British Museum* (1867). He also edited Abraham Ibn Ezra's commentary on the Book of Esther (1850).

[Alexander Tobias / Gregor Pelger (2nd ed.)]

ZE'EIRA (in TB Zeira; c. 300 C.E.), *amora*. Ze'eira was a Babylonian *amora* but later immigrated to Ereẓ Israel. His name is one of the most frequently mentioned in both the Babylonian and Jerusalem Talmuds. Hundreds of dicta in his name are transmitted by many different scholars. He studied in the academy of Sura under Huna and in Pumbedita under Judah b. Ezekiel (Ber. 39a). He transmitted many of the teachings of these rabbis, as well as those of their teachers Rav and Samuel and other great Babylonian *amoraim*. While still in Babylon he evinced a special interest in the teaching of the Palestinian *amoraim* and would request persons going on a visit there to clarify *Johanan's views on certain halakhic matters (Er. 80a; BM 43b). When he was preparing to go to Ereẓ Israel he avoided his teacher, R. Judah, who was opposed to this step (Shab. 41a; Ket. 110a–111a), and left without informing him. It is stated that in his great love for Ereẓ Israel and eagerness to be there, he crossed the Jordan fully clothed (TJ, Shev. 4:9, 35c); another version is that he crossed on a narrow bridge holding onto a rope stretched across the river, maintaining: "How can I be sure that I am worthy to enter a place that Moses and Aaron were not vouchsafed to enter?" (Ket. 112a). In Ereẓ Israel he attended the school of Johanan in Tiberias (Kid. 52a; Nid. 25b). It is related that he underwent 100 (some say 40) fasts in order to forget the Babylonian method of study so that it should not interfere with his absorbing the system prevalent in Ereẓ Israel (BM 85a). He studied under the greatest *amoraim* of Ereẓ Israel in that generation, including Eleazar, Ammi, and Assi. He praised Ereẓ Israel and its teaching, saying: "The very atmosphere of the Land of Israel makes one wise" (BB 158b); "Even the ordinary conversation of the people of the Land of Israel requires study" (Lev. R. 34:7). In Ereẓ Israel Ze'eira obtained *semikhah* and received the title "rabbi." He was meticulous in the care he took both to receive and transmit halakhic traditions (Ber. 28a; Er. 46a; et al.). His chief pupil was *Jeremiah b. Abba.

Ze'eira was reckoned among "the pious ones of Babylon" (Ḥul. 122a) and there are several stories told testifying to his piety when in Ereẓ Israel. Thus it is related that he showed friendship to lawless men who lived in his neighborhood in order to lead them to repentance (Sanh. 37a). To the question of his pupils: "By what virtue have you reached a good old age?", he replied: "Never in my life have I been harsh with my household; nor have I stepped in front of one greater than myself; nor have I meditated on the Torah in filthy alleys; nor have I walked four cubits without *tefillin*; nor have I ever slept, or even dozed in the *bet ha-midrash*; nor have I ever re-

joiced at the downfall of my fellow or called him by his derogatory nickname" (Meg. 28a). Another of his dicta was: "A man should not promise something to a child and not keep the promise because he will thereby teach him to lie" (Suk. 46b). Apparently Ze'eira returned to Babylon for some time (Shab. 14a–b), but returned to Erez Israel where he died. The Talmud gives one of the eulogies delivered at his funeral: "The Land of Shinar [Babylon] was his home of birth; the Land of Glory [Israel] reared her darling to fame; woe is me, says Rakkat [Tiberias] for she has lost her choice ornament" (MK 25b). The Babylonian Talmud sometimes mentions in addition to R. Ze'eira an *amora* Rav Zeira. Some assert that he was another *amora* (living at the beginning of the fourth century C.E.). Others maintain that both refer to the same *amora*, who, like all Babylonian *amoraim*, had the title "Rav" before he went to Erez Israel, whereas after he immigrated to Erez Israel and was ordained there, he was referred to as Rabbi Ze'ira (Ket. 43b; Men. 40b; see Rashi Tos. *ibid.*).

[Zvi Kaplan]

ZE'ENAH U-RE'ENAH (Heb. צְאֶנָה וּרְאֶנָה; lit. "Come and See"; Yid. pronunciation *Tsenerene*; title taken from the Song of Songs, 3:11), an exegetical rendering in Yiddish of the Pentateuch, the *haftarot*, and the Five Scrolls. Composed at the end of the 16th century by Jacob b. Isaac *Ashkenazi, it gained universal acceptance among Ashkenazi Jewry. Used primarily by women as reading matter on the Sabbath, it has retained its great popularity up to the present day. The work consists of discourses on selected topics or passages from the weekly portion of the Pentateuch, the *haftarot*, and the Scrolls, the method used being a combination of *peshat* ("literal exegesis") and *derash* ("free interpretation"), interwoven with legends from the Midrash and other sources, stories, and topical comments on moral behavior. The author used numerous sources of which some are cited by name, including *Rashi, Baḥya b. *Asher, and *Naḥmanides. It seems, however, that the major source was the commentary on the Torah by Baḥya; a considerable part of the interpretative material was taken directly from that commentary, rather than from the original sources, and the construction of the interpretative passages in *Ze'enah u-Re'enah* also bears a striking resemblance to that employed by Baḥya. No definitive study has yet been made of the sources employed by the author and the manner in which he made use of them; it is clear, however, that he edited and adapted them at will. Generally he avoids the kabbalistic or philosophical passages that are found in his sources; he uses Yiddish throughout (rather than quoting the Hebrew original) and his aim is to provide an easily comprehensible interpretation, interspersed with story elements.

Ze'enah u-Re'enah became a book for women, but this, notwithstanding the feminine form of its name, was not the original intention: the frontispiece on the oldest extant edition states that "this work is designed to enable men and women…

to understand the word of God in simple language." Like *Meliz Yosher*, the other homiletic work by the author, it aimed at both men and women. The date and place of publication of the first edition of *Ze'enah u-Re'enah* are not known; the oldest existing edition – of 1622 – is from Basle (although it was actually printed in Hanau); the frontispiece of this edition reveals that it was preceded by at least three other editions, one printed in Lublin and the other two in Cracow, and that by 1622 these earlier editions were already out of print. Over 210 editions have since appeared, first in Central Europe, then in Eastern Europe, and finally also in the U.S. and Israel.

The various early editions show few linguistic differences, but in the 18th-century editions these became so numerous that *Ze'enah u-Re'enah* became a kind of laboratory for the Yiddish language. The 19th-century editions also contain textual variations, which sometimes bear the imprint of a particular ideological trend in Judaism (mainly of Haskalah and Ḥasidism). Various parts of *Ze'enah u-Re'enah* were translated into other languages. The first was a translation into Latin of the weekly portion, *Bereshit*, by Johannes Saubertus (Helmstadt, 1660, cited in Wolf, Bibl. Hebr. III, 474). The Book of Genesis was translated into English by Paul Isaac Hershon (London, 1855), as was the Book of Exodus, by Norman C. Gore (N.Y., 1965). There are two German translations of Genesis, one by Sol Goldsmidt, published in *Mitteilungen zur Juedischen Volkskunde* (Vienna, 1911–14) and the other by Bertha Pappenheim (Frankfurt, 1930); the chapter "Destruction of the Temple" (which in *Ze'enah u-Re'enah* follows the Scroll of Lamentations) was also translated into German by Alexander Eliasberg (Berlin, 1921). There are also many adaptations of *Ze'enah u-Re'enah*, varying in the degree of their faithfulness to the original, such as *Tsenerena in Nayer Bearbaytung*, by Judah ha-Kohen Kraus (Pecs (?), 1891); *Tsenerena, Kommet und Shaut!*, by David Schweitzer (Fuerth, 1861); and *Ze'enah u-Re'enah* by Herz Homburg, which did not see print and parts of which were recently discovered in manuscript. The title "*Ze'enah u-Re'enah*" was also used for various works, one of these a sort of anthology on subjects from the Pentateuch, by Emmanuel Hecht (St. Wendell, 1862?); another is a collection of sermons by Liebman Adler (Chicago, 1887). These two works were written in German; there is also a French-language "*Ze'enah u-Re'enah*," a textbook on the weekly portion and the *haftarot*, by Alexander Créhange (Paris, 1846).

Sefer ha-Maggid, a Yiddish work on the Prophets and Hagiographa similar in nature to the *Ze'enah u-Re'enah,* was also attributed to Ashkenazi; however it has now been conclusively proven that he was not the author (see Lieberman, bibl.).

[Chava Turniansky]

ZE'EV WOLF OF ZHITOMIR (d. 1800), ḥasidic preacher, disciple of *Dov Baer, the Maggid of Mezhirech. His book, *Or ha-Me'ir* (Korets, 1787), is important for its wealth of material on the history of Ḥasidism and teachings of its founders. R. Ze'ev criticized the behavior of the *zaddikim* of his day who had abandoned simple living for luxury. An opponent of noisy prayer, he contended that one should pray with *kavvanah*, with the object of elevating one's thoughts and realizing one's insignificance: "One ought to pray with fear and reverence and stand upright and not be heard, and only move the lips" (*Or ha-Me'ir, Terumah*).

[Zvi Meir Rabinowitz.]

ZE'EVI, ISRAEL BEN AZARIAH (17th century), rabbi and emissary. Born in Salonika, Ze'evi settled in *Jerusalem, where he suffered under the harsh regime of the Turkish governor Ibn Faruk. In a halakhic correspondence with Joseph b. Moses *Trani (later of *Safed and then Constantinople), he described the sufferings of the Jerusalem community, in particular their financial plight (*Responsa Maharit* 2, *Ḥoshen Mishpat*, no. 60). Ze'evi was one of the signatories of a 1646 *takkanah* (regulation) exempting scholars from taxes. He also wrote a number of approbations (*haskamot*) and twice undertook missions on behalf of the Jerusalem community, visiting *Turkey and the Balkan countries. His great-grandson, ISRAEL B. BENJAMIN ZE'EVI (d. 1731), was rabbi of *Hebron for about 30 years and head of a yeshivah founded by the wealthy Abraham Pereira of Amsterdam, and visited Constantinople in 1685 as an emissary of *Hebron. He was the author of *Orim Gedolim* (Smyrna, 1758), consisting of talmudic novellae, sermons, and responsa.

BIBLIOGRAPHY: Frumkin-Rivlin, 2 (1928), 14 f.; E. Rivlin (ed.), *Ḥorvot Yerushalayim* (1928), 41, 45 f.; Yaari, Sheluḥei, 266–7.

[Abraham David]

ZE'EVI, REḤAVAM ("**Gandhi**"; 1926–2001), Israeli military commander and politician, member of the Twelfth to Fifteenth Knessets. Born in Jerusalem, Ze'evi went to the regional school at Givat ha-Sheloshah. From 1936 to 1944 he was active in the Ha-Maḥanot ha-Olim youth movement, and in 1944 joined the *Palmaḥ, where he got the nickname "Gandhi," for his emaciated appearance. In the War of Independence he was the intelligence officer of the Yiftaḥ brigade. In later years he served as operations officer on the Northern Front, intelligence officer in the Southern Command, and commander of the Golani regiment. In the early 1960s he attended the Command

and Staff College of the U.S. Army. In 1964 Ze'evi received the rank of major general, and served as commander of the Central Command, and in 1968 was appointed head of the Operations Branch. A week before the Yom Kippur War he retired from the IDF, but returned to active service during the war in the Operations Branch. During his military career he gained a reputation for his flamboyancy and directness.

In 1974 Ze'evi was appointed adviser to Prime Minister Yitzhak *Rabin and in 1975–77 as the prime minister's advisor on intelligence matters. In 1981 he was appointed director of the Land of Israel Museum in Tel Aviv, serving in this capacity for 10 years, during which he developed the museum but was also criticized for his management of it.

In 1985 Ze'evi started to speak publicly of the need to encourage a voluntary transfer of the Palestinian population from the West Bank and Gaza Strip. Prior to the elections to the Twelfth Knesset in 1988 he established a political party called Moledet. Moledet gained two seats in the Twelfth Knesset, three in the Thirteenth, two in the Fourteenth. In the elections to the Fifteenth Knesset Moledet ran as part of the National Union list.

After the breakup of the National Unity Government in 1990, Ze'evi joined the government as minister without portfolio and member of the Security Cabinet in February 1991, causing an uproar within the Likud, since some of its leading members felt that his views were too extreme. However, less than a year later he left the government, against the background of Prime Minister Yitzhak *Shamir's decision to participate in the Madrid Conference on Peace in the Middle East.

In the course of the Thirteenth Knesset he was one of the strongest opponents of the Oslo Accords in the Knesset, but he strongly condemned Rabin's assassination. He was also one of the mourners of former Major General and MK Mattityahu Peled, despite Peled's left-wing views and his membership in a mixed Jewish-Arab party. In general Ze'evi remained attached to all his former colleagues – including Rabin and Peled – with whom he had served in the Palmaḥ. However, in the Thirteenth Knesset he hit the headlines primarily due to his quarrels with the other two members of his party, one of whom he called "a clown," and the other a "UFO," and bitter verbal exchanges with some of the Arab Knesset Members. Ze'evi did not join the government formed by Binyamin *Netanyahu in 1996, supporting the government from the outside. As a member of the National Union he joined the government formed by Ariel *Sharon in March 2001 and was given the Tourism portfolio. In the periods when he was not a member of the government, he served on the Knesset Foreign Affairs and Defense Committee and on the House Committee. He was murdered by Palestinian terrorists in the Hyatt Hotel in Jerusalem on October 17, 2001. Though Ze'evi's political positions were condemned by many, he was held even by his opponents in high esteem for his integrity and decency. After his murder, his son Palmaḥ contended for the leadership of Moledet, but Rabbi Binyamin (Benny) *Elon was elected.

Ze'evi edited and brought to print a translated series of historical travel books published between 1982 and 1995 by the Ministry of Defense. He also edited, by himself and with others, numerous books relating to geographical locations in Erez Israel, and military issues.

[Susan Hattis Rolef (2nd ed.)]

ZEFIRA, BRACHAH (c. 1911–1990), Israeli singer. Born in Jerusalem of Yemenite parentage, but orphaned early, Brachah Zefira spent her childhood in various foster families and became familiar with the different musical heritages of the Jewish and Arab communities. Educated at the *Me'ir Shefeyah Youth Aliyah Village, she went to Europe at the beginning of the 1930s to study singing and acting. In Berlin she met Nahum *Nardi (to whom she was married for a time) who helped shape her style, and was in turn influenced by her. Returning to Palestine, she met the new immigrant composers such as Paul *Ben-Haim, Oedoen *Partos, Alexander Uriyah *Boscovitch, Marc *Lavry, and Menahem *Avidom, to whom she introduced the musical style of the Orient on which they sought to base their work. They arranged many of her songs, composed songs especially for her, and even used some of her songs in their own compositions. She also influenced some of the younger composers. Through her personal appearances and broadcasts, Brachah Zefira, an alto, became the first national folk singer of the *yishuv*. The personal style which she created was compounded of Yemenite, Palestinian-Sephardi, and Arabic elements. In the 1950s, Brachah Zefirah took up abstract expressionist painting.

[Avner Bahat]

ZEHAVI, DAVID (1910–1977), Israeli composer born in Jaffa to parents who had arrived from Romania in 1899. At age 14 Zehavi joined a group of Ha-No'ar ha-Oved, which set up a new agricultural community, kibbutz Na'an (1930). There, in addition to farming, he conducted sing-along sessions. He was the first composer born in Erez Israel, and as such he ranks among the founding fathers of the Israeli folk song together with *Admon, *Ze'ira, *Nardi, and others. In 1927 he composed his first published song, "*Orḥah ba-Midbar*" ("Caravan in the Desert"), whose opening line "*Yamin u-Semol*" ("From right to left …") is often quoted as the title. He composed some 400 songs altogether; 250 of them appeared in print. Many of his songs are considered to be among the best in Hebrew song, such as "*Halikhah le-Kesaria*" (or "*Eli Eli Shelo Yiggamer le-Olam*" ("On the Road to Caesarea," or "My God, My God, Let It Never End"), "*He-Ḥalil*" ("The Flute"), the Palmaḥ song "*Hen Efshar*" ("How Can It Be Possible"), "*Yesusum Midbar*" ("Let the Desert Rejoice"), "*Niggunum*," "*Male'u Asamenu Bar*" ("Our Silos Are Filled with Grain"), and dozens more. In fact, songs make up most of his musical output. He wrote most of them for sing-along performances. Kibbutz members often wrote the lyrics for these songs.

His songs have been published in hundreds of booklets, usually for sing-along evenings, with or without the musical score. They have been recorded by hundreds of singers and ensembles. The publishing house of the cultural wing of the Histadrut has published four collections of his songs: *Song Collection* (1954), *Second Song Collection* (1962), *A Song for David* (1978), and *David Zehavi – Let It Never End* (1981).

David Zehavi also wrote five cantatas for chorale, for soloists, and for a small ensemble. These cantatas, born of scenes of kibbutz life, were composed and performed on the kibbutz.

[Nathan Shahar (2nd ed.)]

ZEICHNER, OSCAR (1916–), U.S. historian. Born in New York City, Zeichner taught at City College, New York, where he became professor of history in 1960, and dean of graduate studies in 1968. After he retired from teaching, he was named professor emeritus of history. His principal interest was the colonial period of American history, and his best-known work is *Connecticut's Years of Controversy, 1750–1776* (1949). He served as president of the Association for the Study of Connecticut History (1975–76); was a member of the American Historical Association for more than 50 years; and was a member of the executive committee of American Professors for Peace in the Middle East.

[Ruth Beloff (2nd ed.)]

ZEID, ALEXANDER (1886–1938), pioneer of the Second Aliyah and one of the founders of the *Ha-Shomer defense organization. Born in Balagansk, Siberia, at the age of 13 Zeid settled in Vilna, where he joined the Zionist labor movement. In 1904 he was one of the first pioneers of the Second Aliyah to reach Erez Israel, where he worked as an agricultural laborer and wagoner in Rishon le-Zion and Petaḥ Tikvah. In Zikhron Ya'akov he was wounded by Arab marauders, and he then worked for some 18 months as a stonemason in Jerusalem. In 1907 he was one of the seven founders of the secret defense organization *Bar Giora, which served as the nucleus of the Ha-Shomer organization, established at Mesḥa (Kefar Tavor) in 1909. Zeid devoted himself to the organization until his death. In 1916 he joined a group of Ha-Shomer veterans who settled in Upper Galilee on the Ḥamara lands near Metullah (now Kefar Giladi). Ten years later he left Kefar Giladi and moved to Tel Ḥai and thence to Sheikh Abrek in the Jezreel Valley to take charge of the guard duty of all the neighboring settlements on behalf of the *Jewish National Fund. Time and again, Zeid was involved in dangerous situations but never abandoned his post, even when wounded by Arab rioters in 1932. He was one of the first to discover the caves near Sheikh Abrek and one of the organizers of the archaeological excavations that revealed the *Bet She'arim necropolis of the mishnaic period. He was killed by Arabs while on guard in 1938. At the site of his death a statue of Zeid on horseback was erected, and the nearby settlement of Givat Zeid, founded in 1943, was named after him. His diaries were edited by E. Smoli under the title *Ḥayyei Rishonim* (1942).

BIBLIOGRAPHY: B. Habas, *Alexander Zeid* (Heb., 1938); M. Smilansky, *Mishpaḥat ha-Adamah*, 4 (1953), 239–49.

[Gedalyah Elkoshi]

ZEIRA, MORDECHAI (1905–1968), composer. Zeira was born in Kiev, Ukraine, and went to Erez Israel after having been arrested in 1924 as a member of a Zionist youth organization. He joined the *Ha-Shomer Ha-Ẓa'ir pioneers' group in Jabneel and worked in road building, fishing, and construction work. Drawn to the theater and impressed by the songs of J. *Engel, he went to Tel Aviv in 1927 and joined the studio of the Ohel Theater. About 1928 Zeira went to Jerusalem for regular music studies with S. *Rosowsky, making his living as a laborer at the Dead Sea Works. In 1933 he settled permanently in Tel Aviv, where he was an employee of the Palestine Electric Corporation, steadily refusing to have his livelihood depend on his compositions. With the outbreak of World War II, Zeira joined an army troupe which entertained Jewish soldiers in the allied forces.

Zeira wrote several hundred songs, of which more than 50 achieved a permanent and beloved place in the cultural heritage of modern Israel. The main influences evident in his work are those of the East European cantorial and Ḥasidic idioms as well as the Russian Romances and revolutionary songs, with the Near Eastern environment as a more covert but nevertheless subtly integrated element. Most important was his own extraordinary gift for melody, lyricism, and emotional intensity, and he may be called the greatest among the creators of the Israel song.

[Bathja Bayer]

ZE'IREI ZION (Heb. צְעִירֵי צִיּוֹן, "Young Men of Zion"), Zionist and moderate socialist labor movement, active mainly in Russia. The movement dates from approximately 1903, although its ideological roots go back to previous theories, as e.g., those of Nachman *Syrkin and even Moses *Hess. The year 1903 was one of traumatic experiences and reevaluations in Jewish and Zionist history. The hopes of achieving charter rights to settle Erez Israel were dashed; the *Uganda Scheme controversy led to the secession of the *Territorialists from the Zionist movement and the consolidation of the opposition to *Herzl (the Ẓiyyonei Zion); the outbreak of the *Kishinev pogrom (1903) had a shock effect on the Jewish people and brought many to realize the urgency of the Zionist solution.

Against this background and the existence of an expanding revolutionary movement, Ẓe'irei Zion groups began to emerge almost simultaneously throughout Russia. In the beginning they had neither a formal program nor a socialist "scientific basis," but an unwritten platform was common to all these groups: practical, constructive Zionism based on personal fulfillment through *aliyah*, pioneering, the use of Hebrew, support for the interests of the working masses, participation in the struggle to liberate Russia from czarist autoc-

racy, participation in the struggle for equal rights and national autonomy for the Jews of Russia, the organization of self-defense, and socialist aspirations. The movement's approach to socialism and Zionism is best explained by the statements of Yosef *Sprinzak and Syrkin. The former stated: "We are socialists for the future. With the creation of an independent… new reality in Erez Israel, it will be possible for us to be socialists." In the words of Syrkin: "The ways and means of realizing Zionism are different from those of any other movement of national liberation, which depends on the political power of the oppressed classes, for the Zionist movement must first create the economic power which will then be transformed into political power."

Ẓe'irei Zion devoted itself from the start to practical activities – from collecting funds in *Jewish National Fund boxes to personal fulfillment through *aliyah*. Members of the movement filled the ranks of the Second Aliyah, bringing with them the values of self-labor, collective and cooperative settlement, equality, mutual aid, defense, etc. The settlement in Erez Israel of a Ẓe'irei Zion group from Homel in 1904 is generally regarded as the beginning of the Second Aliyah. Their arrival coincided with the first signs indicating that the Uganda Scheme crisis – emigration from Erez Israel and suspension of settlement work – was wearing off, and they played a vital role in improving the mood in the *yishuv*. Together with workers who arrived before them, they organized the Histadrut ha-Po'alim ha-Ẓe'irim be-Erez Israel, which became the *Ha-Po'el ha-Ẓa'ir Party in October 1905.

Ẓe'irei Zion continued its activities in the Diaspora, mainly in Russia (including Poland and Lithuania). *He-Ḥalutz was founded in Odessa in 1905, and in 1906 a conference of the Bilu'im Ḥadashim (an organization founded by Ẓe'irei Zion in response to Josef *Vitkin's historic call for *aliyah*) was held. The program of the Bilu'im Ḥadashim was very similar to that of the U.S. He-Ḥalutz founded during World War I by David *Ben-Gurion and Izhak *Ben-Zvi and that of the all-Russian He-Ḥalutz established on Joseph *Trumpeldor's initiative after World War I. The alliance between Ẓe'irei Zion and He-Ḥalutz reached its high point during the time of the Third Aliyah.

The Ẓe'irei Zion movement continued to grow without a formal program, but a center was established in 1905 in Kishinev, where a large and powerful local society existed. In the same year, a countrywide conference was held with the aim of consolidating the movement organizationally and ideologically. The latter goal was not realized, however, until the second conference in Kishinev (1906) adopted the Kishinev Program in the following terms: Zionism strives for the renaissance of the Jewish people in Erez Israel; Zionism is borne by working masses; the main motivating forces in Zionism are economic, cultural, and national-political; the concentration of the masses of the Jewish people in their homeland until they constitute a majority there and normal conditions for their free and independent development are created is the solution to the Jewish problem.

In 1910 a Russian-Polish conference of Ẓe'irei Zion took place in Lodz. Like all its predecessors, this meeting was illegal, but unlike them it was discovered by the czarist police and most of the delegates were arrested. Despite the arrests, or perhaps because of them, the conference strengthened the movement by ideological clarification (in the spirit of Ha-Po'el ha-Ẓa'ir) and organizational consolidation. In 1912 an all-Russian conference was held in Minsk. On its agenda were organizational questions, *aliyah*, He-Ḥalutz, and *hakhsharah*, and the convening of a world conference, which was to be held in Vienna in August 1913 to coincide with the 11th Zionist Congress. This meeting of 56 participants in the Zionist Congress (30 from Ẓe'irei Zion organizations in the Diaspora and 26 of Ha-Po'el ha-Ẓa'ir from Ereẓ Israel) laid the foundations for a world federation of Ẓe'irei Zion with permanent connections with Ha-Po'el ha-Ẓa'ir. A prolonged discussion and resolutions on the movement's attitude toward socialism led to disappointment and secessions on both the left and right. The delegates elected a central board to be located in Bialystok and decided to adopt the fortnightly Hebrew paper *Shaḥarit* in Odessa as the movement's organ and to transfer it to Warsaw.

In April 1914 an all-Russian council was held in Vilna, the last before the outbreak of World War I. The main subjects for discussion at this meeting were the condition of the labor movement in Ereẓ Israel, pioneering *aliyah*, and cultural activities. The liberation from the czarist regime by the February Revolution of 1917 caused great ferment among Russian Jews, who then prepared themselves to build their national autonomy in democratic Russia and at the same time to expand their Zionist activities. Ẓe'irei Zion became a mass movement as tens of thousands from all parts of the country swelled its ranks.

The second all-Russian conference of Ẓe'irei Zion, which took place in Petrograd on May 18–24, 1917, was a great event in Jewish life. Three main trends struggled to dominate the conference: socialist, moderate labor, and popular democratic. The presentation of the socialist case was very impressive, but the movement was not prepared to adopt a full-fledged socialist program and declared itself to be the Ẓe'irei Zion Popular Faction in the Zionist Organization in Russia. After the conference Ẓe'irei Zion acted as an independent party and grew rapidly. The party's center in Petrograd was later transferred to Kharkov after the October Revolution and from there to Kiev, which was not yet under Soviet rule. From then on the movement's activities were mainly concentrated in the Ukraine during a period filled with hope of Jewish national autonomy, but mainly dominated by the threatening storm of pogroms. Ẓe'irei Zion then played an important role as organizer of the Jewish *self-defense units and of extensive cooperative enterprises. Its main activities, however, were concentrated on the pioneering *aliyah* movement, promoted through the He-Ḥalutz conference in Kharkov (1918).

At the third conference of Ẓe'irei Zion, which took place in Kharkov in May 1920, the Popular Faction decided to become the *Zionist Socialist Party – zs, whereas the "right-

wing" faction seceded and joined Ha-Po'el ha-Ẓa'ir, establishing with it the *Hitaḥadut in Prague (1920).

ZE'IRI (third century), Babylonian *amora*, also known as Ze'iri b. Hinena (Hinna) in the Jerusalem Talmud. He was born in Babylon but went to Ereẓ Israel in his youth, where he studied under *Hanina b. Ḥama. He later taught in Ḥanina's name that the Messiah would not appear until all the "arrogant ones" had disappeared (Sanh. 98a). His main teacher, however, was *Johanan, whose teachings he later transmitted (e.g., Av. Zar. 53a). Johanan even offered Ze'iri his daughter's hand in marriage. When he declined on the ground that he preferred to marry a woman of Babylonian birth rather than of Palestinian, Johanan retorted, "Our learning is suitable, but our daughters are not?" (Kid. 71b). While in Palestine, Ze'iri was captured by highwaymen and R. Ammi and R. Samuel attempted to attain his release. While they were negotiating with the leader of the brigands, news arrived of neighboring bloody gang warfare, and in the confusion Ze'iri escaped (TJ, Ter. 8:10, 46b; *Penei Moshe* (ad. loc.)). Ze'iri was highly regarded as an expounder of the *beraitot*, and Rava remarked that "every *baraita* not explained by Ze'iri was not truly explained" (Zev. 43b). He eventually returned to Babylon where he taught the Palestinian traditions in the academy of Nehardea (Ḥul. 56a; Ber. 22a). His closest pupil was Ḥiyya b. Ashi (Shab. 109a; Yoma 77b). Others who transmitted his teachings were R. Ḥisda (Ber. 43a), Rabbah (Ned. 46a), R. Joseph (Ned. 46b), Rav Judah (Av. Zar. 61b), R. Naḥman (Av. Zar. 61b), and R. Giddal (Men. 21a).

ZEIT, DIE ("The Times"), Yiddish daily newspaper published in London. It was founded in 1913 by Morris *Myer, an immigrant from Romania who had been a prominent Jewish socialist, journalist, and orator. In the first few years the paper served mainly the working class Jewish movements, but Myer changed his views and actively supported the Zionist movement and especially Po'alei Zion. Between the wars the paper gradually took on a more general character and began to publish religious articles. In the early 1920s, there was another rival newspaper (*Di Express*) which however only lasted a few years; thus the *Zeit* was the only Yiddish daily in the whole of Great Britain, although it later became a weekly. With the death of Myer in 1944 the paper was carried on by his son, Harry Myer (1903–1974), but the decline in the number of Yiddish-speaking readers made it difficult for the paper to continue, and it finally closed in 1950. It was the last Yiddish daily in Great Britain.

[Moshe Rosetti]

ZEITLIN, AARON (1898–1973), Hebrew and Yiddish writer. The son of Hillel *Zeitlin, he grew up in Gomel, Vilna, and Warsaw. His early poetic works were lyrical; later, philosophic concepts appeared in his verses, and then followed an attempt to express mystical religious insights within formal rhythmic structures. A philosophic aesthete deeply rooted in Jewish tradition and mysticism, Zeitlin's lyrics are often contemplative liturgic hymns. Well versed in world literature, Zeitlin wrote with equal facility in Hebrew and Yiddish. His early Hebrew poems and essays appeared in the periodicals *Ha-Tekufah* and *Ha-Shiloʾaḥ*. His first volume of Yiddish lyrics *Shotns Oyfn Shney* and his longer poems *Metatron* were published in 1922. Four years later he became literary editor of the Warsaw Yiddish daily *Unzer Ekspres*. Zeitlin's poems are filled with visions of true and false messiahs. His drama *Yakob Frank* (1929), written in Yiddish, dealt with two conflicting approaches to God, the one espoused by the God-seeker Jacob *Frank, a disciple of the false messiah *Shabbetai Ẓevi, and the other by the God-finder *Israel Baʾal Shem Tov, founder of Ḥasidism. Another drama was *Brenner* (1929), whose protagonist was J.H. *Brenner, the Hebrew poet who in his younger years had come under the influence of Hillel Zeitlin and was later murdered in the Jaffa pogrom of 1921. Zeitlin's play, *In Keynems Land* ("In No Man's Land"), appeared in Warsaw in 1938. He prophetically described the sadism of the German militarists and warned of the horrors to follow. When the catastrophe came, he was saved; in the spring of 1939, Maurice *Schwartz invited him to New York for the Yiddish Art Theater's premiere of his play. The war prevented Zeitlin's return to his family, all of whom were killed by the Nazis. As contributor to the New York Yiddish daily *Jewish Morning Journal* and professor of Hebrew literature at the Jewish Theological Seminary of America, Zeitlin profoundly influenced the American Jewish scene after World War II. His Hebrew essays, poems, and lectures during his frequent visits to Israel similarly influenced Hebrew literature. A novel set in Palestine, *Brenendige Erd* ("Burning Earth," 1937), dealt with *Nili, the World War I Jewish espionage group. His dramatic poem *Bein ha-Esh ve-ha-Yesha* ("Between Fire and Deliverance," 1957) focused on the destruction of European Jewry. Zeitlin's collected poems, *Gezamelte Lider* (vols. 1 and 2, 1947, vol. 3, 1957), contained the revised versions of the verse he wished to see preserved.

ZEITLIN, HILLEL (1871–1942), author, thinker, and journalist. Born in Korma, Belorussia, Zeitlin received the education of a *Ḥabad Ḥasid; self-taught in secular studies, he became troubled by matters of religion and faith. His first work, *Ha-Tov ve-ha-Ra* (in *Ha-Shiloʾaḥ*, 5, 1899), was pessimistic in tone and was followed by monographs on Spinoza (1900) and

Nietzsche (in *Ha-Zeman*, 1905). Zeitlin was disappointed by secular culture and longed for celestial beauty, a longing expressed in *Maḥashavah ve-Shirah* (2 vols., 1911–12). Shocked by the pogroms in *Kishinev in 1903, he reveals his unceasing anxiety for the survival of the Jew in *Al ha-Zevaḥ* (*Ha-Zeman*, 1905). Out of profound reflection on the fate of the Jew, he returned to religion and came close to Orthodox Judaism, to whose literature he gave a new character. From 1906 he worked for *Haynt* and *Der Moment*, writing for 36 years on both minor topics and serious ones. From 1914 he immersed himself in mysticism and published "visions" in *Ha-Tekufah*. In "*Al Gevul Shenei Olamot*" (*Ha-Tekufah*, 4 (1919), 501–45) he discusses "the origins of mysticism in Israel" on the hypothesis that Judaism is mystical and not rational, concluding, against most scholarly opinions, that Moses de Leon was merely the final editor of the *Zohar, who set forth the teaching of the Zohar in its four subjects – the human body, the soul, the spheres, the Divine – and not the original author. Zeitlin translated the Zohar into Hebrew and wrote a commentary on it, of which only the introduction was published. He became active in the cause of propagating Judaism, publishing *Der Alef-Beys funem Yudentum* ("The Alphabet of Judaism," 1922), in which he establishes a Jewish outlook on the world against a scientific background, as well as books on Ḥasidism, on R. *Naḥman of Bratslav, and on Ḥabad. During his last years, when he foresaw the Holocaust, he called for repentance with enormous fervor – in pamphlets, in speeches, and in organizing special groups of *mekhuvvanim* ("purposeful ones"). Once more despairing, he gave expression to his loneliness in the book containing his last confession, *Demamah ve-Kol* (1936). Zeitlin died a martyr's death, garbed in *tallit* and *tefillin*, on the way to Treblinka on the eve of Rosh Ha-Shanah.

[Symcha Bunim Urbach]

ZEITLIN (Zeitlis), JOSHUA (1742–1822), scholar and *shtadlan*. Born in Shklov, Russia, Zeitlin was the disciple of R. Aryeh Leib *Gunzberg, author of *Shaʾagat Aryeh*. When the region of Belorussia was annexed by Russia (1772), he became one of the wealthiest merchants in the area and his affairs extended beyond its borders. Under the patronage of Prince Potemkin he was a purveyor and contractor for the government in the regions of "New Russia" which were then transferred from Turkish rule. After the death of Potemkin (1791) Zeitlin retired from business affairs and acquired estates with over 900 serfs. He built himself a palace on the estate of Ustye, to the east of Shklov, where he housed a vast library. Many scholars and researchers, including Menahem Mendel *Levin and Baruch *Schick, frequented his estate. He supported *Elijah b. Solomon the Gaon of Vilna in his dispute against the Ḥasidim and he wrote *Haggahot Ḥadashot* ("New Notes"), on the *Sefer*

Mitzvot Katan, published in the Kopys (Kapust) edition of this work (1820).

[Yehuda Slutsky]

ZEITLIN, SOLOMON (1892–1976), U.S. scholar of post-biblical literature. Zeitlin, born in Russia, studied in Dvinsk and was influenced by the Ragoshover Illui (R. Joseph Rozin) and R. Meir Simḥah Ha-Kohen. In 1908 he attended the Institute of Baron David *Guenzberg in St. Petersburg, where his roommate was Zalman (Rubashov) *Shazar. Enrolling at the Ecole Rabbinique, Paris, in 1912, Zeitlin received ordination and a doctorate in theology there. His article on "Les 'dix-huit mesures'" was published in REJ, 68 (1914), 22–36. Immigrating to the U.S. during World War I, Zeitlin received a Ph.D. at Dropsie College, Philadelphia, in 1917; his dissertation was on *Megillat Taʾanit as a Source for Jewish Chronology and History in the Hellenistic and Roman Periods* (1922). Zeitlin taught first at Yeshiva College, New York, then became professor of rabbinics at Dropsie College in 1921. As an outstanding authority on the Second Commonwealth period, he wrote over 400 articles and books in the fields of rabbinics, Josephus, the Apocrypha, and Christianity.

Zeitlin's assertions that the so-called Christ passage in Josephus was not authentic but only an interpolation by Eusebius, contrary to the opinion of most scholars, gained him early scholarly fame (JQR 18 (1927/28), 231–55).

His main concern was the analysis of tannaitic sources and the recognition of a clear distinction in historic eras before and after the Temple destruction; differentiating institutions, laws, and concepts.

Zeitlin was the main protagonist against dating the Dead Sea Scrolls in the intertestamental period. His understanding of the continuity of history is reflected in studies on the sources and nature of the teachings of Saadiah Gaon, Maimonides, Rashi, and other sages to ascertain the halakhic process in Judaism. He was the author of many basic writings on Josephus, on Jewish historiography and law, on the crucifixion of Jesus (*Who Crucified Jesus?…*, 1964⁴) and on halakhic traditions. He was editor of the *Jewish Quarterly Review* and editor in chief of the Jewish Apocryphal Literature Series. He was also instrumental in organizing the American Academy of Jewish Research in the U.S. Zeitlin's two volumes on the *Rise and Fall of the Judean State* (1968²) present a definitive view of the Second Temple era, and include comprehensive rabbinic, non-rabbinic, and classical sources. An original and fearless scholar, he stressed that the scholar must not allow theological bias, which often influences writings on the Second Temple era and the Dead Sea Scrolls.

BIBLIOGRAPHY: S.B. Hoenig, *Solomon Zeitlin: Scholar Laureate; an Annotated Bibliography 1915–1970 With Appreciations of His Writings* (1971); *ibid.*, in: JBA, 29 (1971/72), 94–100.

[Sidney B. Hoenig]

ZEITLIN, WILLIAM (**Zeʾev**; c. 1850–1921), bibliographer. Born in Gomel, a member of the Zeitlin family of Shklov, he began at an early age to write poems and to translate from Russian. In the early 1870s he went to Germany to study. After several efforts at creative writing, he turned to bibliography, becoming an outstanding expert, especially in those fields which he pioneered, such as contemporary Jewish literature, the Haskalah, and Zionism. His major work, *Bibliotheca Hebraica Post-Mendelssohniana* (1891–95), in which he lists the Hebrew Haskalah literature from its beginnings to the end of the 1880s, still remains an invaluable aid for the study of that literature. In this book, published in German, only the titles of the works are listed in Hebrew. He also published lists of pseudonyms, the death dates of scholars and writers, and similar material. In *Ha-Maggid* (1873), 5–6, he published, in Hebrew, the first bibliographical article on the Hebrew press.

[Getzel Kressel]

ZEKHUT AVOT (Heb. "Merit of the Fathers"), the doctrine that progeny benefit from the righteousness of their forebears. The exact nature of this concept is a question of great complexity. Some of the references to it would indicate that it is a form of reward granted to the ancestors or an expression of divine love for them; others seem to regard it as a benefit emanating from the superabundance of the ancestors' merit, with little regard for the deserts of the offspring; and yet other sources tend to view it as a spiritual gift to the progeny, who, in turn, must be spiritually qualified to receive it.

The Patriarchs

The idea of merit of the fathers is often mentioned in the Bible and rabbinic literature in relation to the Patriarchs Abraham, Isaac, and Jacob, and in some sources, to the Matriarchs and other biblical heroes as well. There are many instances in the Bible of Israel's being favored, not because of its own merits, but because of those of the Patriarchs, e.g., "And because He loved your fathers, He chose their offspring after them; He Himself… led you out of Egypt" (Deut. 4:37). Similarly, the memory or deeds of the righteous forefathers are often invoked in prayers for the forgiveness or welfare of their descendants, for instance, Moses' supplication after the sin of the golden calf, "Remember your servants, Abraham, Isaac, and Jacob…" (Ex. 32:13), and Solomon's plea, "Remember the good deeds of David Thy servant" (II Chron. 6:42). This practice has been a part of Jewish prayer throughout the ages. The daily and holiday prayer books contain numerous appeals based on the righteousness of the Patriarchs. Prominent among them is the evocation of the heroic sacrifice of Isaac, especially in the liturgy of Rosh Ha-Shanah.

Rabbinic literature contains many statements to the effect that the merit of ancestors affects the welfare of their descendants. Thus it is held that because Judah saved Tamar from burning, his descendants Hananiah, Mishael, and Azariah were saved from the fiery furnace (Sot. 10b). Similarly,

Aaron had descendants who deserved to die, but were spared because of his merit (Yoma 87a). Even within the period of the Patriarchs, it is maintained, the principle of merit of the fathers was operative. The prayer of Isaac to be blessed with children was considered more efficacious than that of his wife Rebekah, because he was not only a righteous man himself but also the son of a righteous man, while his wife Rebekah, although saintly herself, was the daughter of a wicked man (Yev. 64a).

Other Righteous Ancestors

In the rabbinic view, the doctrine of the merit of the fathers relates not only to the Patriarchs and other biblical heroes but also to each man's righteous ancestors. Thus, in the view of R. Akiva, "The father transfers to his son beauty, strength, wealth, wisdom, and length of years" (Eduy. 2:9). Others limit R. Akiva's view, holding that these bounties accrue to the son only as long as he is a minor; thereafter, he attains them only as a result of his own goodness (Tosef. Eduy. 1:14). In another application of the principle the rabbis interpret 1 Chronicles 7:40, "all these were the children of Asher, heads of the fathers' houses, choice and mighty men of valour, chief of the princes…," as indicating that only those who were descendants of an unblemished ancestry were permitted to serve in David's army, so that "their merit and the merit of their ancestors would sustain them" (Kid. 76b). Still another example is the declaration of R. Gamaliel, "Let all men who labor [as leaders] with a community, labor for the sake of Heaven, for the merit of their fathers sustains them" (Avot 2:2). It is related that R. Eleazar b. Azariah was selected as head of the academy over other candidates of equal qualifications, because as a descendant of Ezra, he enjoyed the merit of the fathers.

Qualifications of Efficacy

Despite these and other examples which emphasize the power of ancestral merit, according to many rabbinical sources, merit of the fathers is not effective in all instances. Thus, the wicked king Manasseh is excluded from the world to come, even though his father was the pious Hezekiah, for "a son imputes merit to a father, whereas a father does not impute merit to a son, as it is written 'None can deliver from my hand' [Deut. 32:39]" (Sanh. 104a). Similarly, "R. Kahana taught, let not a man say for the sake of my righteous brother or father I shall be saved, for Abraham could not save his son Ishmael, nor Jacob save his brother Esau… as it is written, 'no man can by any means redeem his brother'[Ps. 49:8]" (Yal. Ps. 46). Thus ancestral merit alone, unaccompanied by the good deeds of the descendants, cannot be relied on, at least not for salvation of the soul, this being primarily a matter of personal attainment (cf. commentary of *Torah Temimah* to Deut. 32:39). This accords with the well-known statement of Hillel, "If I am not for myself, who is for me" (Avot 1:14), which in another source goes on to read, "If I have not gained merit for myself in my own lifetime, who will gain it for me?" (ARN[1] 1:27). Elsewhere (Sot. 10b) the Talmud relates that David interceded on behalf of Absalom and that through this prayer Absalom was raised

from Gehenna to Paradise. Some medieval commentators explained this story as implying that it is not the good deeds of the father that save the son but the prayer that accompanies them (Sot. *ibid.*); in the case of David it was not so much his merit as his prayer that succeeded.

Termination of Patriarchal Merit

There is a statement in the Talmud (Shab. 55a; Lev. R. 36:6) to the effect that the merit of the Patriarchs has come to an end, though the exact date of its cessation is a matter of dispute. This being so, the rabbis conclude, Israel can rely exclusively on God's unending mercies (*ibid.*). Some commentators of this talmudic passage pointed out the difference between the covenant and the merits of the patriarchs: even though the merit of the fathers may have come to an end, the covenant with the fathers has not, for it is eternally binding; and the liturgical evocations of the fathers refer essentially to the everlasting covenant with them.

Guilt of Ancestors

Related to the notion of imputed merit is the concept of inherited guilt. The source for this is the verse in the Ten Commandments… "Visiting the guilt of the fathers upon the children upon the third and fourth generation of those who reject Me; and showing mercy to the thousandth generation of those who love Me and keep My commandments" (Ex. 20:5, 6). Elsewhere in the Bible the opposite doctrine is expressed: that guilt is individual and does not pass from one generation to another. "Parents shall not be put to death for children, nor children be put to death for parents; a person shall be put to death for his own crime" (Deut. 24:16). The contradiction between these two verses is resolved by the talmudic sages who suggest (Ber. 7a; Sanh. 27b) that descendants suffer for the sins of their forebears only when they themselves perpetuate the same evil deeds (see Targum Onkelos and commentary of Rashi, Ex. 20:5). This view is even more sharply stated by other rabbis who reject the view of inherited guilt, declaring (Mak. 24a) that Moses' decree "visiting the guilt of the father upon the children" was abrogated by Ezekiel's statement "the soul that sinneth, it shall die" (Ezek. 18:4); according to one 18th-century commentator (Maharsha, Mak. *ibid.*), this implies that even when the sons perpetuate the parental sins, they suffer only their own guilt, not that of their parents.

[Joshua H. Shmidman]

ZELDA (**MISHKOVSKY**) (née **Schneurson**; 1914–1984), Israeli poet. Born in Chernigov, Ukraine, where her father was a rabbi, Zelda was brought to Ereẓ Israel in 1925 and settled in Jerusalem, where she received a religious education. In 1950 she married Ḥayyim Mishkovsky, who died in 1970.

Zelda Mishkovsky published poems in various periodicals over the years, but her first collection in book form ap-

peared in 1967 (*Pena'i*). Her second volume (*Ha-Karmel ha-i-Nir'eh*, 1971) consists of poems written in a relatively short period and are mostly connected with her husband's death. Her *Al Tirḥak* (1974) contains 25 poems, followed by *She-Nivdelu mi-Kol Merḥak (*1984). The collected poems (*Shirei Zelda*) were published in 1985.

Zelda's poems aroused considerable interest and surprise on account of her integration of religious verse rooted in the traditional Jewish world with a completely modern sensitivity. Many of the poems describe her relationship with God and details of religious life. In her poems, which are in no way dogmatic, themes dealing with details of religious observance, appear side by side with more universal themes, such as death, immortality, and man's place in the universe. Some of them reveal occasional clashes between the traditional Jewish world and the secular environment, manifested in the juxtaposition of religious symbols and modern objects. In their tone the poems combine naiveté and sophistication.

Some of the characteristics of her poetry establish an interesting connection between her and the Hebrew poetry of the 1960s and 1970s. Thus, like the modern Hebrew poets, she emphasizes the importance of sense perception in the structuring of her inner world: colors, smells, and tastes are factors determining her emotions and moods. These colors and tastes generally pertain to the natural world (smell of flowers, taste of fruit), and in this, too, she is part of the modern school, with its inclination toward nature and the primal in the midst of busy modern life. This is related to a longing for a magic, visionary world which is sometimes identified with the world of childhood. Another common characteristic is the unusual tendency toward the wild and the asocial.

Her books have been hailed by critics and have achieved great popularity. She was the recipient of a number of literary prizes, including the Bialik Prize for literature in 1978. Individual poems have been translated into diverse languages. For information see the ITHL website at www.ithl.org.il.

[Abraham Balaban]

ZELDIN, ISAIAH (1920–), founding rabbi of Stephen S. Wise Temple in Los Angeles, creator of the largest Jewish day school within an American Reform congregation, founding dean of the Los Angeles campus of the Hebrew Union College–Jewish Institute of Religion. A visionary, he is the example par excellence of the rabbi as institution builder and leader.

Born in Brooklyn to Russian immigrant parents, his earliest influences rooted him deeply in the life of the Jewish people. His father was a Zionist, a Yiddishist, and a Hebraist, who wrote for both the Yiddish and Hebrew press. Zeldin's parents decided that they would raise their children speaking only Hebrew in the home. In high school he lobbied for the addition of Modern Hebrew to the curriculum. Later, he convinced Brooklyn College, where he earned his bachelor's degree, to accept Modern Hebrew as a legitimate, officially recognized foreign language.

In 1933, at the age of 13, his father took him to a rally protesting the rise of Hitler. It was when he heard Rabbi Stephen S. *Wise address the rally that he decided to devote his life to the well-being and defense of the Jewish people. He was ordained rabbi (1946) by the Hebrew Union College in Cincinnati.

After serving as an assistant rabbi in Newark for two years, he was named assistant dean of HUC-JIR in New York, supervising the faculties of the Schools of Education and Sacred Music.

In 1953, he moved to Los Angeles to become the dean of the College of Jewish Studies, assembling an exceptional faculty, creating a School of Sacred Music and a large School of Education. Within one year, under his leadership, the college became the West Coast campus of HUC-JIR. Within five years he had created a Rabbinical School. Concurrently, he was regional director of the Union of American Hebrew Congregations, overseeing the creation of many new Reform congregations in the area. From 1958 to 1963 he served as rabbi of Temple Emanuel in Beverly Hills.

His greatest contributions to Jewish life were yet to unfold. In 1964 he founded Stephen S. Wise Temple, named for his teacher and mentor. Inspired by Wise's passionate Zionism, as well as his commitment to a rabbi's freedom to speak even the most unpopular of truths from the pulpit, Zeldin built his congregation from a small group of 35 members who met in a living room to a community of 3,500 member families. Respected and admired for his depth and breadth of knowledge, for the lively intellect he brought to the pulpit, as well as for his genuine warmth and engaging manner, his leadership was always marked by an innovative spirit and an uncanny understanding of the zeitgeist and the needs of his community. He set forth a bold vision that his congregants made their own.

When the temple acquired land, the first buildings he erected were classrooms. Jewish education was at the center of his vision. He created the largest synagogue pre-school in Los Angeles and went on to establish an elementary day school of nearly 700 students – all during years that the Reform Movement had not yet committed to the idea of day school education.

At age 70 – with all of his rabbinic colleagues long retired – he took on a challenge which would become the pinnacle of his achievements: the creation of a Jewish high school in which nearly 900 students study every day, the only such school to be operated by a Reform synagogue in North America. The synagogue and its education network – from Parent-

ing Center to pre-school, elementary and high school, as well as its adult learning Center for Jewish Life – are now located on three separate campuses spanning 30 acres.

Over the course of a rabbinic career spanning more than 60 years, his passion for Jewish life, the Jewish people, and Israel never waned. He never stopped building his congregation and its schools which serve as a model nation-wide. He continued to teach and write as he led and inspired.

[Eli Herscher (2nd ed.)]

ZELDOVICH, YAKOV BORISOVICH (1914–1987), Soviet astrophysicist; originally a specialist in nuclear physics. Zeldovich was born in Minsk and studied in Leningrad. From 1931 he worked at the Institute of Chemical Physics of the Academy of Science of the U.S.S.R. During World War II he contributed research to the war effort. He later worked at the Institute of Cosmic Research at the Space Research Institute of the Soviet Academy of Sciences in Moscow (ASUSSR), and from 1964 at the Academy's Institute of Applied Mathematics. In 1958 he was made a member of the Academy of Sciences. Professor at the University of Moscow from 1966, he was one of the founders of contemporary theories of combustion, detonation, and shock waves and the author of a number of works on the theory of the last stages of the evolution of stars and galaxies which involved the theory of general relativity and the theory of gravitational collapse. He has also proposed a number of experiments and methods for verifying cosmological theories. Zeldovich was awarded a Lenin Prize, four Stalin Prizes, and three times hailed as a Hero of Socialist Labor.

[*The Shorter Jewish Encyclopaedia in Russian*]

ZELECHOW (Pol. **Zelechów**), town in Warsaw province, Poland. Jewish settlement in the town dates from the 17th century. Zelechow was celebrated for the high-quality footwear produced there. The ḥasidic rabbi, *Levi Isaac of Berdichev, officiated there from 1772 to 1784. The character of the little town is graphically conveyed in the works of two Yiddish authors who were born there, I.M. *Weissenberg and the poet Y. *Lerer (see bibliography). After the establishment of the Polish republic in 1918, the economic position of Zelechow deteriorated with the loss of the Russian markets. The Jewish inhabitants of Zelechow and district numbered 1,464 in 1765, 2,317 in 1856, 4,930 in 1897 (70% of the total population), and 5,500 on the eve of World War II.

[Yehuda Slutsky]

Holocaust Period

The German army entered Zelechow on Sept. 14, 1939, and on the next day the Nazis burned the synagogue. During 1940–41 over 2,000 Jews, mostly from the surrounding smaller places, were forced to settle in Zelechow. In the fall of 1940 an open ghetto was established there. On Sept. 30, 1942 (during Sukkot), the ghetto was liquidated and all its inmates were transferred to the *Treblinka death camp and exterminated there. Only a few hundred Jews managed to flee. Many of them

organized small Jewish partisan units or joined mixed Polish-Jewish-Russian units that were active in the vicinity until the liberation in July 1944. No Jewish community was reconstituted in Zelechow after the war. Organizations of former Jewish residents are active in Israel, the United States, Brazil, and Argentina.

ZELENKA, FRANTIŠEK (1904–1944), Czech architect and stage designer. Zelenka was responsible for the design and decor of a great number of original productions in the Czechoslovak National Theater and the Municipal Theater of Prague. His wit found highly successful expression in modern versions of comedies by Molière and Shakespeare and brought him ultimately to the most popular satirical theater of Czechoslovakia, the Osvobozené Divadlo (Liberated Theater). Here he became permanent stage designer for the famous comedies of Voskovec and Werich. After the German occupation of Prague, Zelenka was deported to Theresienstadt, from where he was sent to Poland in 1944 but died on the way. While in Theresienstadt, he showed great resourcefulness in designing theatrical performances for the camp inmates, among them a Czech baroque folklore play about Queen Esther. Zelenka also helped to organize the Jewish Museum in Prague.

[Avigdor Dagan]

ZELIZER, NATHAN (1907–2001) U.S. Conservative rabbi. Zelizer was born in Poland and immigrated to the United States in 1921. He earned a B.S. from New York University in 1929 and an M.A. from Columbia University in 1930; in 1931, he was ordained at the *Jewish Theological Seminary. He became rabbi of Congregation Tifereth Israel in Columbus, Ohio, where he was to spend his entire career (1932–73, emeritus until his death) – or so it seemed at the time of his retirement. Arriving at a synagogue whose membership had been decimated by the Depression, he breathed new life into the congregation: under his leadership, it eventually grew from under 50 to 1,100 families. He took a sabbatical from his congregation in order to volunteer as a military chaplain, serving in the Pacific with the U.S. Navy.

Returning to Tifereth Israel after the war, Zelizer developed Jewish educational programs and became involved in civic affairs. Starting in 1947, Zelizer served as a chaplain for the Jewish mental and penal wards of the state of Ohio as well as for the Veterans Administration Hospital in Chillicothe, Ohio. He developed a close relationship with Governor Frank Lauche, asking him to reduce prison sentences for those he believed could be rehabilitated; inmates freed with his help continued to write him over the next 40 years in appreciation for what he had done. During the 1950s, Zelizer served on the Columbus Rent Advisory Board and founded the first Senior

ZELOPHEHAD

Citizens Center in Ohio, where the elderly were able to spend time engaged in constructive activities. He also hosted a local radio and television show where he interacted with leaders of different religious groups about common challenges and projects; he was invited to speak at African-American and Catholic churches, earning the respect of non-Jewish clergy.

Perhaps Zelizer's greatest contribution to American Jewry came in the 1960s, when he persuaded one of the most prominent Jewish citizens in Ohio, Samuel M. *Melton, a director of Bethlehem Steel, to fund the Melton Research Center (later, Melton School of Education) at the Jewish Theological Seminary in New York City. A pilot program of the innovative new school was established at Tifereth Israel, which became a model educational center for Conservative synagogues. Some 35 individuals credited Zelizer with their career decisions to enter the rabbinate – including his own son, Gerald, who rose to become president of the *Rabbinical Assembly. As a result of his accomplishments, the city of Columbus selected Zelizer as one of its 10 leading citizens, and the Ohio Chamber of Commerce paid him to travel across the state and engage audiences in discussions of important civic issues.

Upon his retirement from Tifereth Israel, Zelizer moved to Boca Raton, Florida, where he was asked to serve as the part-time rabbi of Congregation B'nai Torah. Once again, he built up a sizable institution from practically nothing. When the congregation became too large for a part-time rabbi, he moved on to help found Temple Beth Zion in Royal Palm, Florida. When he left this congregation, he would spend weekends driving to Melbourne, Florida, where he served as the rabbi for Jewish participants in the NASA Space Shuttle project. Because of these activities, one rabbi called Zelizer the "Johnny Appleseed" of the American Jewish community.

In 1985, Zelizer joined forces with another small congregation that formed in Boca Raton to start a Conservative synagogue called Beth Ami. He played an instrumental role in building the Jewish community of Boca Raton, starting a community day school and founding the South County Rabbinical Association. In 1992, he finally decided to retire a "second time," at 87 years of age. On that occasion, the mayor proclaimed Nathan Zelizer Day in the city of Boca Raton.

[Bezalel Gordon (2nd ed.)]

ZELK, ZOLTAN (1906–1981), Hungarian poet. Zelk was one of the *Nyugat* literary generation, but only achieved a position of prominence in the 1950s. His collections of verse, of which several were published, include *Mint égő lelkiismeret* ("Burning Conscience," 1954) and *Zúzmara a rozsafán* ("Hoarfrost on the Rosebush," 1964). He also wrote some outstanding poetry for children. Though an orthodox Marxist, Zelk joined the 1956 revolution and subsequently served two years in prison.

ZELLERBACH, U.S. merchant family. Its founder, ANTHONY ZELLERBACH (1832–1911), was born in Bavaria and went to the United States, settling in Philadelphia, in 1846. In 1856 he

traveled to California and went to work for his elder brother MARKS (d. 1891), who was operating a bank at Moore's Flat in Nevada County. In 1868 he settled in San Francisco, and in 1870 established a small paper supply business, primarily dealing with printers. In 1882, with his son JACOB C. (b. 1864), he founded the firm of A. Zellerbach & Son. Another son, ISADORE (1867–1942), known as I.Z., came into the firm in 1887, and the youngest, HENRY (1868–1944), joined somewhat later. In 1907 the company was renamed Zellerbach Paper Company; I.Z. was president. After World War I the company expanded into paper towel milling and newsprint production, and the holding company Zellerbach Corporation was formed in 1928 for financing and administration, becoming through merger Crown Zellerbach Corporation. In 1937–38 the corporation became an operating company. With its international operations and the expansion of manufacturing and marketing into containers, flexible packaging, and other innovations, it became one of the largest paper manufacturers in the world, with sales in the billion-dollar range. The family remains active in its operations.

Members of the family have been active in civic, cultural, commercial, and community activities in the San Francisco area. They have been directors of Congregation Emanu-El of San Francisco, Mount Zion Hospital, the Concordia-Argonaut Club, the San Francisco Art Commission, and the San Francisco Symphony Orchestra. I.Z.'s son HAROLD LIONEL ZELLERBACH (1894–1978), a sales executive and executive committee member of the corporation, and board chairman 1956–1963, served as president of Congregation Emanu-El and was active in many other phases of Jewish community life in San Francisco. JAMES DAVID ZELLERBACH (1892–1963), I.Z.'s eldest son, president of the corporation from 1934 and chief executive officer from 1950, was appointed U.S. ambassador to Italy in 1956 after serving in 1945–48 on the International Labor Organization and in 1948–50 as chief of the Marshall Plan special mission to Italy. Harold's son WILLIAM J. served as president of Zellerbach Paper Company.

[Norton B. Stern]

ZELLICK, GRAHAM (1948–), British academic and university head. Educated at Cambridge and Stanford Universities, Zellick became a barrister and then a professor of law at London University (1982–98). From 1997 to 2003 he was vice chancellor (president) of the University of London. From 2003 he was chairman of the Criminal Cases Review Commission, which investigates alleged miscarriages of justice. For many years he was editor of *Public Law*. Zellick has been associated with a variety of Jewish and pro-Israel organizations.

[William D. Rubinstein 2nd ed.]

ZELOPHEHAD (Heb. צְלׇפְחָד), son of Hepher, descendant of Manasseh. He died in the wilderness without male issue (Num. 26:33; 27:1). His five daughters, Mahlah, Noah, Hoglah, Milcha, and Tirzah, requested of Moses that they be recognized as female heirs and granted their father's inheritance

of land. They pleaded that although their father had suffered the punishment of dying in the course of the desert wanderings, he had committed no exceptional sin, such as participation in the revolt of Koraḥ, that might merit the destruction of his "name." The case was decided by divine decree in favor of the daughters, and it led to the promulgation of legislation providing for the disposal of the property of a man who died without a male heir (*ibid.* 27:1–11). This ruling occasioned an inter-tribal problem in that, should Zelophehad's daughters marry outside their tribe, the estate would consequently pass into the possession of their husbands and the latter's tribes. By divine decision Zelophehad's daughters were required to marry within the tribe of Manasseh and, in fact, they were given to their cousins. To protect the total tribal inheritances, it was laid down that all heiresses must marry within their own tribe (*ibid.* 36:1–12).

It is of interest that although Zelophehad was descended from Gilead, his daughters received their patrimony from Joshua west of the Jordan (Josh. 17:3–6). In the Samaria Ostraca two of their names, Noah and Hoglah, appear as the names of districts within the territory of Manasseh.

In the *Aggadah*

Both Zelophehad and his father, Hepher, were among those whom Moses had led out of Egypt. Zelophehad himself was therefore entitled to three portions in Ereẓ Israel (two as the firstborn of his father, and one in his own right), and his daughters claimed all three portions when their father died (BB 122b). Moses had to refer this claim to God because, although aware of the general right of a daughter to inherit, he was unsure of their right to claim in addition the dual portion of their father's birthright (*ibid.*, 119a). Another opinion, however, is that Moses did not know whether God had forgiven Zelophehad for the sin on account of which he had died in the desert (Num. 27:3). It was only when God mentioned Zelophehad by name (*ibid.*, 27:7), that Moses knew that he had been forgiven (Zohar 3:157a). Zelophehad was neither one of those who murmured against God (Num. 11:1), nor one who joined the ten spies in their condemnation of Ereẓ Israel (*ibid.*, 14:1), since the participants in both these movements were automatically denied all rights of inheritance in Ereẓ Israel. This was also the punishment of the followers of Koraḥ (which is why Zelophehad's daughters specifically stated that their father did not participate in this sin; Num 27:3; Sif. Num. 133; BB 18b). Judah ben Bathyra maintained that Zelophehad was one of those who "presumed to go up to the top of the mountain" (Num. 14:44); while R. Akiva was of the opinion that it was he who gathered wood on the Sabbath (Num. 15:32; Shab. 96b), the two incidents being juxtaposed (BB 119a).

The daughters of Zelophehad are highly praised for their sagacity in presenting their problem at an appropriate moment, when Moses was expounding the laws of levirate marriage. They showed outstanding exegetic ability in arguing their own case. They are also praised for their virtue, and for the care with which they chose their husbands (BB 119b). Al-

though permitted to marry men from any tribe, they were so careful in their choice that even the youngest waited until she was 40 years old before finding a worthy husband (*ibid.*, 120a).

ZELOW, town in Lodz province, near *Lask, central Poland. Jews settled there in the second half of the 19th century and earned their livelihood mainly in the local textile factories. They numbered 922 (30% of the total) in 1897 and 1,816 (34%) in 1921. In 1939 there were approximately 3,500 Jews in Zelow comprising about 60% of the total population. The Germans entered Zelow on Sept. 6, 1939, and forced the Jewish community into a restricted zone in town. The number of Jews swelled to 6,000 with the influx of refugees from nearby towns. No formal ghetto was established, and the Jews could maintain a certain amount of illegal trade across the border of the General Government. Although the Judenrat supplied able-bodied workers to the German authorities, raids were carried out against people in the streets for forced labor. Prior to the final liquidation of the Jewish community of Zelow the Germans publicly executed ten Jewish prisoners and deported 245 able-bodied men to the *Lodz ghetto. In September 1942 the ghetto was liquidated. Some of the Jews were killed on the spot, others were transported to the extermination camp at *Chelmno, and a few hundred young people were sent to forced labor camps.

[Danuta Dombrowska]

ZELVA (Pol. **Zelwa**), town in Grodno oblast, Belarus. Jews were accustomed to visit the Zelva fairs from the end of the 15th century. A Jewish community, under the jurisdiction of the Grodno *kahal*, was established in the late 16th century. During the 18th century Jews traded at the local fairs, dealing in horses and in furs imported from Moscow. The lay and rabbinical leaders of Lithuania met at these fairs, and after 1766, when the Council of the Four Lands (see *Councils of the Lands) was disbanded, Zelva became the customary meeting place for rabbis of the region. Excommunications against the Ḥasidim were publicized here in 1781 and 1796, and a plan of action was drawn up to suppress the movement. In 1766 there were 522 Jews who paid the poll tax. In 1793 Zelva was annexed by Russia. There were 864 Jews in 1847, and 1,844 (66% of the total population) in 1897. Between the world wars Zelva was part of independent Poland and possessed *Tarbut and Yavneh schools. In 1921 the Jewish community numbered 1,319 (64%). The community was annihilated in World War II when Jews were executed by the Germans or sent to death camps, but dozens of young people managed to escape into the forest.

[Shimshon Leib Kirshenboim / Ruth Beloff (2nd ed.)]

ZEMACH, BENJAMIN (1903–1987), dancer, actor, choreographer, stage director and drama teacher. Born in Russia as the young brother of Nachum Zemach, the founder and leader of the Habimah theater in Moscow with whom he went to the U.S. in 1926. Zemach was active during the 1930s as dancer and choreographer in many progressive left-wing productions organized by such companies as the New Dance Group and other trade-unions-based artistic initiatives in New York during the Great Depression. He opened an independent modern dance school in Los Angeles. His choreographic work was based on Jewish as well as socially conscious themes. He choreographed several large-scale productions at the Hollywood Bowl and created the choreography for Max Reinhardt's film *The Eternal Road* (1936).

In 1971 he came to live in Israel, teaching and producing at the Kibbutz Seminar in Tel Aviv, choreographing for Inbal Dance Theater, finally settling in Jerusalem, where he died in 1987.

[Giora Manor (2nd ed.)]

ZEMACH, NAHUM (1887–1939), theatrical director, founder of *Habimah. Born in Volkovysk, he grew up in Poland and was a successful businessman in Moscow before devoting himself to literature and the theater. In 1912 in Bialystok (with Menahem *Gnessin), he assembled a group of Hebrew-speaking actors who performed *Dymov's *The Eternal Wanderer*, and in the following year he presented the play in Vienna to the members of the 11th Zionist Congress. The company was short-lived; but it was the forerunner of the company called "Habimah" which Zemach founded in Moscow in 1917 and which drew some of its actors from the Bialystok group. Zemach stayed with Habimah until 1926 when he took the company to the U.S. and decided to remain there. His pioneering work with Hebrew theater drew attention to Hebrew as a living language, and when Habimah performed *The Dybbuk* it also demonstrated the vitality of the modern Jewish literary movement. Zemach went to Palestine after Habimah had become established there and for a time directed the Beth-Am Theater. But he returned to the U.S. and in 1937 became manager of the Jewish Theater unit of the Federal Theater Project.

BIBLIOGRAPHY: M. Kohansky, *Hebrew Theater* (1969), index.

ZEMACH, SHLOMO (1886–1974), Hebrew writer. Born in Plonsk (Russian Poland), Zemach spent his youth on his father's estate in the village of Volka. In his youth he was attracted to Zionism, and together with some friends founded the Zionist society Ezra. At the age of 18 he immigrated to Erez Israel, where he became an agricultural worker. He was one of the founders of *Ha-Po'el ha-Za'ir in 1905. In 1909 he went to France. After studying literature and philosophy at the Sorbonne for three years, he attended the Higher Institute of Agriculture in Nancy and graduated as an agricultural engineer in 1914. On the outbreak of World War I he went to Poland and was obliged to remain there, within German-occupied territory, until 1918. He then left for Odessa, where he edited the periodical *Erez*, and engaged in other literary activities. In 1921 he returned to Erez Israel and taught agriculture at the Mikveh Israel school. From 1924 to 1933 he directed the training department of the agricultural experimental station run by the Zionist executive. In 1933 he founded the *Kadoorie Agricultural school and was its principal until 1937. It was only after his retirement that he began to devote himself exclusively to literary work.

Short Stories

Zemach began his literary career as a writer of short stories – one of the first to write about Erez Israel. He described the life of the villager. Averse by nature to idealizations and illusions, Zemach never wrote in a symbolic or allegorical fashion, nor did he make any attempt to depict abstract characters. There is a strong biographical element in his stories and his characters and events are presented within a limited, well defined range of time and place.

Zemach's uniqueness as a writer lies not so much in his narrative gifts as in an outlook which sublimates existence. A sober and discerning observer, lacking in illusions, he treats his heroes' foibles with gentle amusement. The Erez Israel stories that Zemach wrote at the beginning of the century are very different from the idyllic, folkloristic, superficial, and tendentious Zionist stories of other writers. He was able to rise above the eroding stream of life and to free himself in considerable measure from the "bonds of custom," a phrase which became the title of his article on the subject.

Novel

Zemach wrote one novel, *Eliyah Margalit* (1921), which describes the life of young Jewish intellectuals living in Paris during the pre-World War I period. The young men establish a national Hebrew circle, and they discuss the future of their people and the image of the Jew as he will be when he is privileged to live a normal life in Erez Israel. The hero, Eliyah Margalit, a painter, has not yet succeeded in freeing himself of the "burden of inheritance," the oppressiveness of his rigorous education, and the stifling influence of his hometown. He is thus impelled to preach extreme and self-contradictory revolutionary ideas, to rebel against traditional Judaism and demand that epicurean joy in life rule as the supreme value. He believes in the theory that the entire history of the Jewish people after the destruction of the Temple must be blotted out of memory; a new way of life must be created for the contemporary Jew, so that his heart and soul may be rejuvenated and he can live a normal healthy life. He wishes to pass over the hundreds of years spent in the Diaspora, so as to return to the ancient epoch and to the primary source of Judaism.

From the structural point of view, *Eliyah Margalit* is one of those romantic novels which end in inevitable disaster. The spirit of the age and the French background of the novel find expression in the temporary corruption of the hero who emerges from his experience utterly purged and purified. In this respect also Zemach was a pioneer, inasmuch as he was the first Hebrew writer to study the problem of decadence and its effect upon life.

Drama

Zemach's play *Tanḥum mi-Kefar Yano'aḥ* is on the face of it a historical drama. The events take place in the plain of Jericho and in the village of Janoah at the time of the establishment of the Essene sect. The ideas, however, apply to the present. Tanḥum is a young farmer who decides to join the Essene sect, and is followed by Miriam, a girl from his village. But he soon discovers that the strict laws of purification are neither in accord with his temperament nor with his opinions. He is a rebel by nature and dislikes those who are excessively righteous; he much prefers ordinary people, with all their weaknesses. He transgresses the custom of the sect when he shakes hands with a Jewish peddler, thus becoming "defiled by touch." He is unable to forgo reality for the sake of shutting himself away in an ideal world of abstinence and devotion to God. The Essenes accuse him of corrupting the brotherhood and causing defilement among them, and finally they expel him from the sect. Tanḥum and Miriam return to their village, where they are married. He proves himself when the time comes to defend his country and he fights the enemy at the head of the village youth. Zemach thus attempted to refute the view that morality and patriotism necessarily call for abstinence and asceticism, and he championed the individual who loves life but at the same time is ready to sacrifice it in the defense of his country.

Memoirs

Shanah Rishonah ("First Year"; 1952), a volume of memoirs about Zemach's first stay in Ereẓ Israel in 1904, lies on the borderline between fiction and documentary literature. Written in the 1950s, considerably removed in time from the actual events, the author with a critical and discerning eye selected the essential events and utterances that seemed to him the most characteristic, arranging them in such a way as to create a planned, well-designed, and meaningful picture. All the problems and crucial events of the Second Aliyah period are described and illuminated here with critical discernment. A. Zemach wrote down Shlomo Zemach's life story (*Sippur Ḥayai*, 1983).

Literary Criticism

Throughout his literary career Zemach wrote not only belletristic works but also literary criticism. From 1910 onward he systematically and seriously engaged in criticism, publishing scores of essays, articles, and reviews in different periodicals. These have been collected in part in *Be-Arẓot Nod* (1922), *Adam im Aḥerim* (1953), *Massah u-Vikkoret* (1954), *Sheti va-*

Erev (1959), *Eruvin* (1964), *Shettei ha-Mezuzot* (1965), and *Massot u-Reshimot* (1968). Ten essays on Bialik (*Al Bialik*) were published in 1978. Zemach regards criticism as "free evaluation, based on a literary truth (not the truth, just a truth), free from all mixture of secondary interests and having two points of departure whose influence is reciprocal, evolved and kept alive through the relationship between the author as agent who creates the work of art and the work of art as agent in that it reveals the author." True criticism derives from the critic's devotion to literature, his principal tools being the power of analysis and of expression. Zemach is totally opposed to the view that criticism is an inferior or parasitic genre of literature; he regards it as a form of literary creativity even though it does not come entirely from the world of feelings but applies logic as well as emotions.

A basic principle of Zemach's critical doctrine is the demand that contemporary Hebrew literature cultivate an attachment to the nation's traditions. He opposes literary phenomena that manifest imitation or detachment. It is the duty of contemporary Hebrew literature to return to its sources, to abandon imitation and foreign patterns and to seek genuine independence.

Throughout his career in criticism Zemach was a fighter. Already in his youth he attacked the "Mendele style" in Hebrew literature; he warned against the danger of "petty realism" involved in this school, demanding that prose should liberate itself from its ties with cultural patterns and soar to the heights of human thought and feeling. In "*Ha-Sifrut va-Ḥalifoteha*" (1926) Zemach maintained that the literature of Ereẓ Israel should broaden its themes, abandon Diaspora motifs, and have the courage to come to grips with the new reality in Ereẓ Israel. He regarded writing on the subject of Ereẓ Israel as a temporary measure. At the same time he rejected modernistic trends in Hebrew literature and remained faithful to traditionalism.

Zemach is perhaps the only contemporary Hebrew critic who attempted to formulate a theoretical basis for his work. He defined his view on the essence of the beautiful in art in the final chapter of *Al ha-Yafeh*. "I do not regard aesthetics as contemplation nor as an escape from the concrete world and an evasion of life; aesthetics is for me a continuation of human activity that transports the actual in nature to the actual in visions; and in the process of shifting, the actual is divorced from its dependence on nature and its laws. Certainly feeling pain, love – is as real as feeling stone, water, dust. Thus an abstract description does not exist. It is not figural, but consists of color splashes and geometric forms and these are real. We are not discussing the 'abstract' and the 'real' but the distinguishing force which gives them significance." *Ha-Seḥok* (1947) also deals with the theory of aesthetics.

For many years Zemach contributed to newspapers and periodicals. His main work as editor was in the periodical *Beḥinot* (1953–57), a platform both for the theory of criticism and for its practice. For a listing of Zemach's works in English translation see Goell, Bibliography, index.

[Abraham B. Yoffe]

ZEMAḤ, JACOB BEN ḤAYYIM (d. after 1665), kabbalist and physician. A member of a Converso family in northern Portugal, he first served as a physician. He decided to go to Ereẓ Israel and passed through Salonika where he studied Torah. Some time between 1610 and 1620, he settled in Safed and learned Talmud and Kabbalah. In approximately 1628 he left for Damascus, and studied the Lurianic Kabbalah under Samuel b. Ḥayyim *Vital. Around 1640 he settled in Jerusalem where he became one of the leading kabbalists. He was among the Jerusalem opponents of *Shabbetai Ẓevi who excommunicated him when he first claimed to be the messiah in 1665.

His many works, which are anthologic in character, lack originality and rely on *Ḥayyim Vital's Kabbalah. Nevertheless, his contribution to the literary consolidation of Lurianic Kabbalah is important, as are his citations of contemporary kabbalists, e.g., *Joseph ibn Tabul. In his introduction to *Kol ba-Ramah*, he complains that Lurianic Kabbalah is not much studied. Zemaḥ left many works, partly in manuscript. In the aforesaid introduction he gives details of his literary activities.

His works include: (1) introductions to and glosses on various works; (2) *Zohar ha-Raki'a* (Korzec, 1785), a commentary on sayings of *Sifra di-Ẓeni'uta*, and the *Idra* of the Zohar; (3) *Zer Zahav*, an explanation of every item in the *Oraḥ Ḥayyim* section of the Shulḥan Arukh according to the *Zohar and the Lurianic Kabbalah; (4) *Leḥem min ha-Shamayim* (Munkacs, 1905), a compilation of Lurianic customs of which the printed version differs from the manuscripts; (5) *Nagid u-Meẓavveh* (Amsterdam, 1712), an important anthology of Lurianic customs which served as the basis for *Shulḥan Arukh shel ha-Ari*. Due to frequent republication, many customs of Luria became widely familiar (the manuscript version is much longer than the printed one); (6) *Zemaḥ Ẓaddik* (Korzec, 1785), kabbalistic homilies; (7) *Kol ba-Ramah (ibid.*, 1785), a commentary on the *Idras*; here too the manuscript is longer than the printed version and is preceded by a very important introduction.

[Moshe Hallamish]

ZEMAḤ BEN ḤAYYIM, *gaon* of Sura (c. 889 to c. 895). Apart from the fact that he was the stepbrother and successor of Nahshon b. Zadok, there is virtually no biographical information concerning him. He is remembered principally for his reply to the question of the perturbed scholars of Kairouan, following the appearance of *Eldad ha-Dani in North Africa. In his responsum, he reassures them that although the customs reported by Eldad often appear at variance with accepted laws, they are not neccessarily heretical, some of the divergences being attributed to variations in local traditions or simply to the forgetfulness produced by a long and perilous journey.

[Meir Havazelet]

ZEMAḤ BEN PALTOI, *gaon* of Pumbedita (872–890), great-grandfather of *Sherira Gaon. Comparatively few of Ẓemaḥ's responsa are signed with his full name. Many more responsa were only signed Rav Ẓemaḥ, but several of these belong to him. Tradition has it that he was the first to compile a systematic dictionary of the Talmud. Not a single fragment of this work has been preserved, and even possible quotations from it are so equivocal that some modern scholars have denied its existence. The lexicon was evidently compiled in order to facilitate the study of the Talmud in lands distant from Babylonia. The lexicon was popular until the end of the Middle Ages.

[Meir Havazelet]

ZEMAḤ ẒEDEK BEN ISAAC (second half of tenth century), *gaon* of the Sura Academy in Baghdad from about 988 to about 997; descendant of R. *Ẓemaḥ b. Paltoi Gaon. R. Ẓemaḥ Ẓedek reopened the Sura Academy after it had been closed for some 45 years (after the death of R. Saadiah Gaon). In a letter of 953, attributed to Ẓemaḥ Ẓedek, which was probably sent to *Ḥisdai ibn Shaprut in Spain, the writer asked for contributions to the academies of Babylonia and appended a list of halakhic questions which had been addressed to Babylonian *geonim*. R. Ẓemaḥ Ẓedek maintained friendly relations with R. *Elhanan b. Shemariah of Egypt, with whom he had become acquainted when the latter had studied at Pumbedita under R. *Sherira Gaon and his son R. Hai Gaon. R. Ẓemaḥ Ẓedek gave his advice to R. Elhanan in questions concerning the nature and the unity of God.

[Abraham David]

ZEMARAIM (Heb. צְמָרַיִם), city belonging to the tribe of Benjamin and listed among the northern group of its cities next to Beth-El (Josh. 18:22). It probably gave its name to the Mount Zemaraim of II Chronicles 13:4, which was mentioned

in connection with a battle between Abijah of Judah and Je-roboam I on the border between Judah and Israel; the text presumes that the place was south of Beth-El. In Shishak's list of conquered towns, it comes after Gibeon and was probably the first Israelite city conquered after his assault on Judah. Zemaraim, therefore, was apparently a city and a mountain in the vicinity of Ramallah. Clermont-Ganneau has suggested that Ra's al-Zemara between al-Ṭayyiba and Rammūn is Mt. Zemaraim; for the city itself, Ra's al-Ṭāḥūna in al-Bīra has been suggested. The tell occupies one of the highest points in the area and has remains of fortifications and Iron Age pottery.

[Michael Avi-Yonah]

ZEMBA, MENAHEM (1883–1943), Polish rabbinical scholar. Zemba came from a poor ḥasidic family. While still a young man, he distinguished himself by his erudition in his approach to the study of the *mishnayot* and a freedom from *pilpul* for its own sake, which was prevalent in his time in Poland. He studied for 20 years, during which time he was supported by his wealthy father-in-law. On the death of his father-in-law (about 1917) Zemba was forced to take over the running of his business, but he was not successful and after years of hardship he agreed in 1935 to become a member of the Warsaw rabbinical council. Until then he had been active in the *Agudat Israel movement, was secretary of the Mo'eẓet Gedolei ha-Torah, and a member of the council of the Warsaw Jewish community. Zemba was one of the last Warsaw rabbis to remain in the ghetto after the first wave of extermination. At a meeting of its surviving leaders on January 14, 1943, he gave rabbinic approval for the uprising. In an inspiring address, he stated: "Of necessity, we must resist the enemy on all fronts.… We shall no longer heed his instructions…. Sanctification of the Divine Name manifests itself in varied ways. During the First Crusade, at the end of the 11th century, the Halakhah … determined one way of reacting to the distress of the Franco-German Jews, whereas in the middle of the 20th century, during the liquidation of the Jews in Poland, it prompts us to react in an entirely different manner. In the past, during religious persecution, we were required by the law 'to give up our lives even for the least essential practice.' In the present, however, when we are faced by an arch foe, whose unparalleled ruthlessness and program of total annihilation know no bounds, the Halakhah demands that we fight and resist to the very end with unequaled determination and valor for the sake of Sanctification of the Divine Name." On the eve of the revolt, Catholic circles offered their assistance to save the three remaining rabbis of Warsaw, but Zemba gave a ruling against it and died a martyr's death in the ghetto.

Zemba's works acquired great renown among students since they were an unusual amalgam of the dialectical approach common in Poland and the logical and penetrating method of the Lithuanian yeshivot. He published *Zera Avraham* (1920), responsa dialogue with R. Abraham Luftbehr (son-in-law of R. *Meir Simḥah ha-Kohen of Dvinsk); *Toẓe'ot Ḥayyim* (1921) on the Law of carrying on the Sabbath; *Oẓar ha-Sifri* (1929), *Oẓar ha-Sifra* (1960), and a number of articles which appear in various collections. The manuscripts of many other important works were lost in the Holocaust. Among these were *Menaḥem Yerushalayim*, on the Jerusalem Talmud; *Maḥazeh la-Melekh*, on Maimonides; four volumes of responsa; and a volume of sermons and dialectics which he had prepared for press. Zemba's remains were reinterred in Jerusalem in 1958.

[Aryeh-Leib Kalish]

ZEMER, HANNAH (1925–2003), Israeli journalist. Born in Bratislava, Slovakia, Zemer was imprisoned in the Ravensbrueck and Malchow concentration camps. She began her journalistic career in Europe, and after immigrating to Israel in 1950 she joined the *Omer* newspaper and subsequently *Davar*, the Histadrut trade union federation newspaper, serving as its Knesset correspondent, political correspondent, news editor, foreign correspondent in the U.S., chief editorial writer, and deputy editor. In 1970 she was appointed the newspaper's editor, thereby becoming the first woman to hold such a position in Israel. Post-Holocaust European Jewry and social welfare in Israel respectively were frequent subjects of her reporting and editing. Although not a feminist, she ensured that women journalists rose in the newspaper's ranks. Reporters enjoyed relatively wide freedom in their writing. Despite the paper's institutional ties to both the Histadrut and the Labor Party, and her own membership in the Labor Party executive, she withstood external pressures on the paper and its editorial staff, producing at times tensions between the Histadrut and the newspaper. Yet despite her stature as an editor, the 20 years she was at the helm was a period of decline for *Davar,* as for the party press as a whole. Circulation declined from 40,000 in 1970 to an estimated 16,000 in 1990, with much of its readership limited to Histadrut members from the secular Ashkenazi sector of the population. There was inadequate financial management, including a decline in advertising, and massive debts which reached NIS 20 million by 1990.

A popular lecturer, Zemer won a number of awards, including Woman of the Year (1978) for her work in communications, the Sokolow prize for journalism, the Herzl Prize, the Nordau Prize, and the Ted Lurie Prize. She sat on the boards of a number of national and Tel Aviv cultural and artistic institutions. She wrote *God Does Not Live There* (Heb.), a personal travelogue paying tribute to lost Jewish communities in Europe.

[Yoel Cohen (2nd ed.)]

ZEMIROT (Heb. זְמִירוֹת "songs").

(1) Term applied by Sephardi, Italian, and eastern communities to the biblical verses, psalms, and doxologies recited before the main part (**yoẓer, *Shema*, and **Amidah*) of the morning service. The terms *zemirot* and **Pesukei de-Zimra* ("Passages of Song"), its Ashkenazi equivalent, are used interchangeably by the authorities as early as **Abudarham* (14th century; cf. Sh. Ar., OḤ, 51:1, 8).

(2) In Ashkenazi usage, the table hymns sung during or directly after Sabbath meals. Their recitation was considered meritorious (מצוה) by the early authorities (cf. *Sefer ha-Ḥasidim*, ed. Wistinetzki, 722; *Or Zaruʿa*, 2:95). Three groupings achieved prominence and were printed in most prayer books:

(a) eight *zemirot* for the Friday evening meal (*Kol Mekaddesh Shevi'i, Menuḥah ve-Simḥah, Mah Yedidut, Mah Yafit, Yom Shabbat Kodesh, *Yah Ribbon Olam, Ẓur mi-Shello Akhalnu, Yom Zeh le-Yisrael*); the first five apparently date from the early Middle Ages, the last two from the 16th century;

(b) eight for the Sabbath noon meal (*Barukh Adonai Yom Yom, Barukh El Elyon, Yom Zeh Mekhubbad, Yom Shabbaton, Ki Eshmerah Shabbat, Shimru Shabbetotai, Deror Yikra, Shabbat ha-Yom la-Adonai*); 10th to 15th centuries;

(c) nine for the end of Sabbath (**Ha-Mavdil, Eliyahu ha-Navi, *Be-Moẓa'ei (Yom) Menuḥah, Ḥaddesh Sesoni, Agil ve-Esmaḥ, Elohim Yisadenu, Eli Ḥish Go'ali, Addir Ayom ve-Nora, Ish Ḥasid Hayah*); early to late Middle Ages. A number of these are to be found in **Maḥzor Vitry* (11th century) and some were also accepted by Sephardi communities who had their own traditional table hymns. The kabbalists, especially Isaac Luria, added new *zemirot*. Among Sephardi and Oriental Jewry the writing of this type of hymn has continued.

Designated for either home or synagogue, the *zemirot* are not a special literary category. Rather, they belong to the group of songs and liturgical poems called *zemer* or *pizmon* or *shevaḥot* by Sephardi communities; these are not recognized as obligatory prayer. Examples of these *zemirot* are the *bakkashot* ("requests") said each morning before prayer by Sephardi Jews (some of which are recited at meals by other communities) and the many songs dedicated to special occasions such as the Sabbath, festivals, marriage, circumcision, redemption of the firstborn son, *Zeved ha-Bat* (a Sabbath celebration for a newborn daughter), Simḥat Torah, the 15th of Shevat, Ḥanukkah, Purim, etc. Many have been printed in standard and holiday prayer books, while others have been published in collections such as *Shirim u-Zemirot* (Istanbul, 1539). Among collections with *zemirot* not found elsewhere are *Sefer Shir u-Shevaḥah* (1921, ed. by Rafael Ḥayyim Ha-Cohen, 561 songs), *Sefer Pizmonim* (1929, ed. by Mordekhai Ḥayyim Eliyahu Levi, 408 songs), *Sefer Shirim, Tehillat Yesharim ha-Shalem* (1954, ed. by Ẓalaḥ Manẓur, 373 songs).

BIBLIOGRAPHY: N. Ben-Menahem, *Zemirot shet Shabbat* (1949); Idelsohn, Liturgy, 80–83, 151–7; M. Zobel, *Der Schabbat* (1935), 182ff.; Elbogen, Gottesdienst, 81–87.

[Ernst Daniel Goldschmidt]

ZEMLYACHKA (**Zalkind**), **ROZALIYA SAMOYLOVNA** (other Party pseudonyms – **Samoylova, Demon, and Osipov**; 1876–1947), Soviet government and Party official. Born in Kiev, daughter of a merchant, she became a member of the Social-Democratic Party in 1896. In 1901 she was a representative of the newspaper *Iskra* in Odessa and Yekaterinoslav. After the Party split of 1903, Zemlyachka became a member of the Bolshevik Central Committee and in 1905 secretary of the Moscow committee of the Russian Social Democratic Workers Party, working in the Party's military organization.

She was arrested on a number of occasions. In 1909 she was secretary of the Baku Party organization and then spent some time abroad. In 1915–16 Zemlyachka was a member of the Moscow bureau of the Central Committee of the Bolshevik Party. During the February Revolution of 1917 she was secretary of the Moscow Committee of the Bolsheviks and participated in the armed seizure of power. From 1918 to 1920 she headed the political departments of the 8th and 13th armies and was the first woman in Soviet Russia to be awarded a medal (that of the Combat Red Banner). From 1920 to 1926 she occupied various Party posts, including, from Nov. 1920, that of secretary of the provincial Party committee in the Crimea where, together with B. *Kun, she carried out a policy of mass terror. From 1926 she was a member, deputy chairman, and then chairman of state and Party control organs. She was notorious for her merciless attitude in regard to Party purges and sanctioned repressions. From 1939 to 1943, in addition to serving in other capacities, she was deputy chairman of the Council of Peoples' Commissars of the U.S.S.R.

[Mark Kipnis and
The Shorter Jewish Encylopaedia in Russian (2nd ed.)]

ZEMUN (Ger. **Semlin**), town on the Sava river, opposite Belgrade; part of Yugoslavia from 1918. Under Austrian rule Zemun was part of the so-called military area and subject to special regulations. It was therefore difficult for Jews to gain a foothold there, but once they succeeded in settling, they enjoyed relative safety in this "protected doorway to the Balkans."

After the Austrian conquest of *Belgrade in 1717, some Jews from Austria and Germany settled there, but when Belgrade fell to the Ottoman Turks again in 1739, a group of 20 Jewish families fled to Zemun. A small but lively community was thus created inside Croatia, which was exclusively administered by Austrians in view of frequent wars and bargaining with the Turks. In 1746 the *Judengemeinde* was officially recognized, but Maria Theresa granted the first known written privilege to a Jew (Raphael Salomon) to live permanently in Zemun only in 1753. A few years later there was a *Judengasse* (Jewish street, quarter), synagogue, and Jewish school. Jews paid a contribution of 150 florins to the authorities and were goldsmiths, barrel makers, glassworkers, ironmongers, etc. They also traded with Austria; as merchants, they were in an unfavorable position compared with the Austro-Germans, Serbs, and Wallachians (they were forbidden to sell hides or

spirits, and the Serbian merchants' guild submitted a petition to the authorities to limit Jewish trade to scrap iron only). In view of their protected situation and due to the commercial importance of Zemun – despite restrictions – the community enjoyed a rare opportunity in being within "military areas," which were generally inaccessible to Jews. In 1772 a decree was issued permitting unlimited Jewish settlement –a striking proof of their usefulness. By 1773, however, the decree was revoked and residence was restricted for a long time to the descendants of the original Jewish settlers. Although checked in its growth, this first Croatian-based community – with its semiautonomous status – played an important role among Yugoslav Jewry.

After the Austrian occupation of Belgrade (1789), some Jews fled first to Zemun, where they found temporary asylum, and later went to Hungary. During an earlier siege of nearby Belgrade, many Jews were robbed and left homeless. On this occasion an aid committee was organized in Zemun and help was received from Hungary (Szeged, Budapest, Sombor, Baja), Croatia (Osijek, Varaždin), Transylvania (Temesvar), Austria (Vienna), and Germany (Leipzig). At the end of the 18th century there were 157 Jews in Zemun. In 1804 Jews manufactured ammunition for Serbian rebels ("first uprising" under Karageorge), and in 1806 Jewish craftsmen also did the same for the Turks, though under duress and surveillance. Almoslino, a Jew, was the Austrian diplomatic agent to the victorious *knyaz* (prince) Karageorge. During the first half of the 19th century 30 new families were granted rights to settle in Zemun, but others migrated to Bosnia. In 1862 the Zemun magistrate asked the military authorities to permit more Jews to settle within the city walls in order to promote trade and replace the war-torn city of Belgrade as a main trading center. Jews were still subjected to a special tax until the abolition of "military zone status" in 1871; in 1881 the "free city of Zemun" abolished all restrictions on Jewish settlers and was attached to the kingdom of Croatia-Slavonia. In 1918 Zemun became part of Yugoslavia

From 1825 to 1843 Judah Ḥai *Alkalai, the famous rabbi and precursor of Zionism, was community leader (*ḥakham*) of Zemun. Among the first group of "privileged Jews" were the ancestors of Theodor *Herzl; his grandfather, Simon Loew Herzl, was a follower of Rabbi Alkalai. He was imprisoned in 1849 for alleged Hungarian sympathies, but (according to the Belgrade City Archives, document no. 552) was released at the community's request in order to celebrate the Jewish holidays. Herzl's grandfather and grandmother (Rebecca, née Billitz) were buried at the Zemun cemetery, while his father Jacob, who was also born in Zemun, moved to Budapest.

In 1941 the community's 500 Jews and its institutions were quickly annihilated. Most of them perished in the barracks of the *saymishte* (fairground), which were prepared for an international exhibition. This was also used as a detention camp for Croatian Jews and others (see *Yugoslavia). Among those who were murdered was the writer and composer Erich (Elisha) Samlaić.

ZEMURRAY, SAMUEL (1878–1961), U.S. business executive. Zemurray, who was born in Kishinev, Russia, went to the U.S. at the age of 14. After working at several jobs, he became a banana peddler in Alabama at the age of 20 and quickly rose to wealth. He became co-owner of two tramp steamers, bought 5,000 acres of Honduras land, and formed the Cuyamel Fruit Company. In 1930 Zemurray sold Cuyamel to the competing United Fruit Company for 300,000 shares of the latter's stock, making him its largest stockholder. He retired from business in Louisiana, where he became a vigorous opponent of Huey Long. By 1932 the drastically depreciated value of United Fruit stock caused him to bid for company control. He subsequently became chief of operations, reorganized the company, and was elected president in 1938. In 1951 Zemurray, by then known as the "Banana King," retired to become executive committee chairman. During the early New Deal period, Zemurray was active in the formulation of Agricultural Adjustment Act (AAA) industry codes. He served as an adviser to the Board of Economic Welfare during World War II. During his career, Zemurray was probably the most enlightened of the big U.S. businessmen operating in Latin America. He endowed clinics, housing projects, recreation facilities, and schools for the workers on his Central American plantations at a time when such a course of action was considered visionary, if not lunatic. Zemurray, who was a friend of Chaim Weizmann, was a director of the Palestine Economic Corporation, a generous contributor to Zionist causes, and a supporter of the Weizmann Institute of Science.

ZENICA, town in central Bosnia on the Bosna River in a mining belt – where coal was extracted and iron and steel were produced – with corresponding industrial and commercial undertakings. Jews arrived during the 18th century. The oldest tombstone, dated 1747, attests to the Jewish presence at that time. A community was established in 1880 and a handsome synagogue in Moorish style was erected in 1903. In 1910 about 300 Jews lived there. Judah Montiiljo headed the community. Cantors were Moritz Altarac and Moritz Salom. The Zionist group was headed by Otto Loewy and Albert Ozmo.

During the Holocaust all the Jews perished. A memorial was consecrated in 1967. The synagogue was desecrated and plundered but survived; the building serves as a museum.

ZENKEVICH, LEV ALEKSANDROVICH (1889–1970); Soviet researcher in the fields of hydrobiology and inverte-

brate zoology. Zenkevich was born in what became known as Leninsk, Velograd Province. From 1927 he worked at the Institute of Oceanography of the Academy of Sciences of the U.S.S.R.; from 1930 he was a professor at Moscow University and a member of the Academy of Sciences. He studied the northern and eastern seas of the U.S.S.R., the Caspian Sea, and the Pacific Ocean from 1949 to 1952, heading scientific expeditions. From 1956 he was a member of the UNESCO committee on oceanic sciences and vice president of the special committee on oceanographic research of the International Council of Learned Societies. From 1961 to 1970 Zenkevich headed the oceanographic committee of the Academy of Sciences. He elaborated quantitative methods for studying ocean fauna and devised a theory of the biological structure of the ocean and the evolution of ocean fauna.

[*The Shorter Jewish Encyclopedia in Russian,* Jerusalem]

ZENO, PAPYRI OF, archives of Zeno. Zeno (third century B.C.E.), the son of Agreophontos, was a Greek from Caunus in southern Asia Minor, who settled in Egypt in the reign of Ptolemy Philadelphus (285–246 B.C.E.). There he entered the service of the finance minister, Apollonius, and as his right-hand man fulfilled various functions. He went on an economic mission to Erez Israel and in 259 accompanied his master on his journeys in Egypt itself. From 256 he managed Apollonius' estate in Faiyum and assisted in the development of Philadelphia in that nome. After the death of Ptolemy Philadelphus and the consequent decline of Apollonius' influence, he continued to live in Faiyum and to engage in economic enterprises there.

In 1915 Zeno's archives were discovered at the site of Hellenistic Philadelphia, east of Faiyum. Many hundreds of documents and private letters, as well as accounts, receipts, and contracts were brought to light and have found their way to museums and various universities (Cairo, Michigan, Columbia, the British Museum); the bulk of them have been published. Written for the most part in a better Greek and a more legible hand than in most papyri, these documents shed direct light on the life and activities of Zeno and his associates, and also give a general picture of the economy, administration, law, and mode of life in Ptolemaic Egypt in the middle of the third century B.C.E. They are especially clear on events in the nome of Faiyum, where at that time the land was being reclaimed for cultivation and was the scene of vigorous economic and administrative enterprises. The study of the Zeno documents has enriched the knowledge of the status of the Greek settlers who flocked from various places in the Greek world to seek a future for themselves amid the economic prosperity of Ptolemy Philadelphus' Egypt.

Among these documents are some that throw light on the life of the Jews in Faiyum in the third century B.C.E. In one account reference is made to the Jew Antigonus, in another to the Jewess Johanna, who was apparently in Apollonius' domestic service. An account dealing with bricks mentions the Sabbath, when, it seems, the foreman did not come to work. Among the papyri a memorandum addressed to Zeno by two Jewish tenant farmers (Alexander and Ishmael) mentions a Jewish guard, and has many other references to Jews.

Knowledge of Erez Israel under Ptolemaic rule has been greatly augmented from the account of Zeno's visit, when he traveled through much of the country, while his master Apollonius maintained many and varied contacts with Erez Israel, either in the discharge of his official duties or in the pursuit of his business interests. The Zeno papyri also reveal the existence in the country of Ammon of a military colony comprising men of different origin and headed by *Tobias the father of Joseph who is known from Josephus' *Antiquities*, Book 12. Tobias' influence is evident from his correspondence with Ptolemy and Apollonius found in the archives (257 B.C.E.). The papyri also give new information on the administration and economy of Erez Israel, the slave trade conducted there in which Zeno himself participated, the export of oil to Egypt, Apollonius' extensive estate in Bet Anat in Galilee, and Gaza as the harbor for the export of spices. One of the most interesting facts revealed by the papyri is the independent attitude adopted by village leaders in Erez Israel toward the royal administration; one of them, Yadus (Jaddua?) actually expelled from his village (in Judea or in Edom) the representative of the administration.

Most of the Zeno papyri have appeared in the following publications: C.C. Edgar, *Catalogue Général des Antiquités Egyptiennes du Musée du Caire: Zenon Papyri*, 5 vols. (1925–40); idem (ed.), *Zenon Papyri in the University of Michigan Collection* (1931); W.L. Westermann (ed.), *Zenon Papyri*, 2 vols. (1939–40) (Columbia papyri); "Società italiana per la Ricerca dei Papiri greci e latini," in: *Egitto: Papiri greci e latini*, 4–6 (1917–20); The Papyri about Jews have been published in: Tcherikover, Corpus, 1 (1957).

ZENODORUS (first century B.C.E.), tetrarch of *Trachonitis. Zenodorus leased the domain of Lysanias, who ruled over the land of the Itureans northeast of Galilee and who was put to death by Mark Antony. According to the inscription on his coins, Zenodorus was both tetrarch and priest. The area of his rule included Trachonitis, Auranitis, Bashan, Chalcis, and Paneas. As a punishment for his association with the robbers of Trachonitis, this territory, together with Auranitis and Bashan, was taken from him and transferred to Herod, who was charged with restoring security and order there. This aroused Zenodorus' hatred of Herod and he unsuccessfully attempted to damage Herod's relations with Rome. After the death of Zenodorus his other estates also passed to Herod.

ZENTRALE STELLE DER LANDESJUSTIZVERWAL-TUNGEN, organization dealing with Nazi crimes. The Zentrale Stelle der Landesjustizverwaltungen (Central Office of the Ministries of Justice of the Laender) at Ludwigsburg (Baden-Wuerttemberg) was established in 1958 by an agreement between the ministers of justice of the German Laender. It resulted from the realization that numerous Nazi crimes still remained unsolved and that the work of the various public prosecutors required coordination. Initially, the Zentrale Stelle was competent to deal only with Nazi crimes committed outside the borders of the German Federal Republic against the civilian population, especially the crimes of the *Einsatzkommandos* (special unit commandos) and crimes in concentration and death camps. Subsequently the Zentrale Stelle's sphere of activities was extended to include crimes against prisoners of war and crimes committed inside the territory of what is now the German Federal Republic, particularly by the leading organs of the Reich and Nazi Party. It was not authorized to deal with war crimes – crimes committed in the conduct of war that were unrelated to Nazi ideology. The Zentrale Stelle was not organized as an additional public prosecutor's office. Its task was to make the initial inquiries and submit its findings on particular crimes to the appropriate prosecutor's office, in accordance with existing German legal procedure. It was the duty of the specific public prosecutor to continue the investigation and to decide whether prosecution was warranted. Thus, the Zentrale Stelle was in the nature of a police bureau. It developed into an agency collecting Nazi documents with a bearing on possible criminal prosecution, and also supplied the names of the accused and the witnesses. Some 50 criminal lawyers and 15 crime experts were eventually seconded to the Zentrale Stelle by the Laender. In Israel a bureau for the investigation of Nazi crimes was set up at police headquarters in cooperation with the Zentrale Stelle. By 1985 the Zentrale Stelle had initiated more than 12,000 cases.

ZENTRALRAT DER JUDEN IN DEUTSCHLAND (Central Council of Jews in Germany), political umbrella organization of Jewish communities in Germany founded in July 1950 in Frankfurt-am-Main. It includes the Jewish state federations (*Landesverbaende*) and communities of the major cities, and was generally accepted as the representative of Jews in West Germany and, since 1990, in reunified Germany. The name signifies a break with the pre-Nazi self-designation of "German citizens of the Jewish faith." Reflecting both the experience of exclusion and the fact that most Jews in postwar Germany were not of German origin, it has re-mained unchanged throughout its existence. During its early decades its main tasks were the reconstruction of Jewish life and negotiations with German authorities concerning restitution. Since the 1990s, it has been occupied to a large extent with the integration of immigrants from the former Soviet Union.

Its seats have been Frankfurt, Duesseldorf, Bonn, and since 1999, Berlin. The governing body consists of the president, two vice presidents, and six additional members of the executive. Presidents of the Zentralrat were Heinz *Galinski (1954–63, 1988–92), Herbert Lewin (1963–69), Werner *Nachmann (1969–1988), Ignatz *Bubis (1992–1999), and Paul *Spiegel (2000–). In 2005, 87 Jewish communities belonged to the Zentralrat, consisting of about 110,000 members. For the first time, three Liberal Jewish state federations joined the Zentralrat in 2005. The Zentralrat oversees the Jewish Studies College in Heidelberg, the Central Archives for the Research of German Jewry in Heidelberg, and the Zentralwohlfahrtsstelle, responsible for social work. It also serves as the publisher for Germany's only weekly Jewish newspaper, the *Allgemeine Juedische Wochenzeitung*. In addition, it also initiated the annual Leo Baeck Award, whose recipients have shown special merits with regard to Jewish issues in Germany.

ZENTRALSTELLE DER FUERSORGE FUER KRIEGS-FLUECHTLINGE (Central Agency for the Care of War Refugees), set up in Vienna in World War I by the Austrian government to assist Jewish refugees fleeing before the Russian invasion of Galicia and Bukovina. Some of them had fled out of fear of Russian atrocities, and others had been evacuated by the army, often having been forced to relinquish their possessions. About half of the refugees had been left without means. In 1915 there were 137,000 refugees in Vienna, of whom 77,000 were Jews; the rest were Poles, Ukrainians, and some Italians. Large numbers were located also in Bohemia, Moravia, and Hungary, some in camps. The Zentralstelle was financed by the Austrian government, administered by the city of Vienna and directed by the Jewish member of the Vienna council, Rudolf Schwarz-Hiller, and supported by a staff of voluntary Jewish helpers. It provided the refugees with weekly allowances (according to the size of their families), shelter, clothing, nurseries, schools, medical and legal services, and a library and reading rooms. Its work was supplemented by various Jewish organizations. Initially conceived as a temporary measure, the Zentralstelle functioned until the end of World War I, when the situation deteriorated due to the food and housing shortage and to antagonism on the part of some of the local population.

ZENTRALWOHLFAHRTSTELLE DER DEUTSCHEN JUDEN (Central Welfare Organization of German Jews), founded in 1917 and composed of representatives of welfare bodies, communities, the larger German-Jewish organizations, and professional social workers. It gradually attained a leading position in Jewish welfare work and was recognized and supported by the German government, the *American Jewish Joint Distribution Committee, and the major German welfare bodies. In its first years the Zentralwohlfahrtstelle dealt with the havoc wrought by World War I and the ensuing inflation. It gradually extended its activities to new fields: tubercular cases, nervous and mental diseases, and juvenile delinquency. It initiated, advised, and helped organize regional and territorial organizations. In 1932, 212 institutions (including homes for the aged, asylums, hospitals, and schools) were under its supervision. One of its main duties was the care of Jews from Eastern Europe. It published a number of high-caliber periodicals on social, welfare, and communal work. The Nazi seizure of power in 1933 created a new situation in which the organization's activities consisted of emigration and retraining for occupations open to Jews, the awakening of Jewish consciousness, education, and Zionism. These challenges were met by the establishment of the Reichsvertretung, within which the Zentralwohlfahrtstelle continued to play an important role in the distribution of welfare funds, medical care, and aid. In 1951 the Zentralwohlfahrtstelle was reorganized with its seat in Frankfurt, and after 1990 became increasingly involved with Russian immigrants.

ZEPHANIAH (Heb. צְפַנְיָה), Judean prophet whose activity is dated to the reign of King Josiah (639–609). In addition to the usual mention of his father's name (Cushi), his ancestry is traced back four generations to *Hezekiah, possibly the king of that name. If so, Zephaniah was a distant relative of King *Josiah (cf. Zeph. 1:4). He lived in Jerusalem and prophesied there. It has been suggested plausibly that "Cushi" refers to the prophet's ultimate African origin in the area conventionally rendered "Ethiopia," but actually corresponding to contemporary Sudan (Rice). Note also the positive reference to *Cush in Zephaniah 3:10 (cf. Ps. 68:32).

Book of Zephaniah

DATE AND HISTORICAL BACKGROUND. The Book of Zephaniah is the ninth book of the Latter Prophets. The Qumran sectaries wrote a *pesher* (a commentary making use of fulfillment exegesis) on the book, relating it to their own times. The name צְפַנְיָה means "YHWH has hidden," or "YHWH has treasured." The genealogy given in Zephaniah 1:1 traces Zephaniah's ancestry back four generations to a certain Hezekiah, who some have identified with Hezekiah, king of Judah (715–687 B.C.E.), although this identification is sometimes doubted because Hezekiah is not referred to as king (Zephaniah's genealogy was already debated by medieval Jewish

commentators). According to the superscription, Zephaniah prophesied during the reign of King Josiah (640–609 B.C.E.). Some scholars would date the work during the reign of Jehoiakim (609–598 B.C.E.); others prefer postexilic dates or at least significant postexilic additions. Ben Zvi opts for an exilic or postexilic dating but despairs of recovering an original seventh-century Zephaniah, or his sayings. The present author is of the opinion that the basic material in Zephaniah corresponds well enough to the period of Josiah's rule, so that with the exception of some later interpolations, the traditional dating offers the best solution

An apparent 50 years' silence of prophetic inactivity is shattered by the forceful and articulate voice of Zephaniah. The long reign of Manasseh (687–642 B.C.E.) witnessed the promotion of cults of other divinities alongside Yahweh, a situation which the Hebrew prophets, with their zeal for the worship of Yahweh alone, opposed. The abuses attacked by Zephaniah in chapter 1, such as astral worship (1:4–5) and aping foreign customs (1:8–9), are largely those decried in Kings (II Kings 21:2–9; 23:4–7), which Josiah's reform (621 B.C.E.) sought to eliminate. The external situation was even more ominous. The breakup of the mighty Assyrian empire with the attendant cataclysmic upheaval was already causing a premonition of doom to pervade the international atmosphere. Such a time was propitious for a sensitive person, steeped in the cultic and literary traditions of his people, to arrive at a deepened meaning of the swiftly approaching Day of YHWH.

COMPOSITION AND STYLE. Despite recent attempts to fragment and/or rewrite the Book of Zephaniah, the overall structure of large units of the book as well as its rhetorical features argue strongly for the basic integrity of the work. The assumption that all passages of hope and eschatological statements must be postexilic is no longer tenable. In fact, there is little in the book that does not fit the historical period in question, nor is there serious internal inconsistency. The style exhibits the magnificent artistry of the author, who utilizes many poetic devices (see Avishur) and reaches sublime heights in the famous hymn concerning the "Day of YHWH" (1:15 ff.), "a day of wrath is that day." The Vulgate's translation of *yom evrah ha-yom ha-hu'* by "*dies irae dies illa*" inspired the medieval hymn "Dies Irae," which remains part of the Catholic Requiem Mass. The book also contains the beautiful "Zion Hymn" (3:14–17).

CONTENTS AND MESSAGE. Chapter 1 begins with a prophecy of total destruction (*asof, asef,* cf. Jer. 8:13) of all life and of the inhabitants of Judah and Jerusalem in particular. There is not one word of hope. No one is to be spared. The sin of the people, especially that of the leaders, is pictured in stark and graphic detail: they worship Baal and the host of heaven, they swear by their king (*malkam*; though a god rather than a human king may be referred to here), and turn away from following YHWH. This judgment speech is set within the framework of an ominous portrayal of "The Day of YHWH" in which Zephaniah carries further the concepts of Amos (5:18–20) and

Isaiah (2:6–22). This day, portrayed as the day of YHWH's sacrifice, will be a day of utter darkness and gloom, whose sound of howling and wailing stands in sharp contrast to the silence with which the people are called into YHWH's presence: "Hush before the Lord YHWH" (1:7).

Chapter 2 begins as an oracle of woe against Jerusalem and Judah (2:1–3), which continues the motif of a judgment by fire and calls upon the faithful to actively strive for justice, righteousness, and humility. Perhaps a remnant might be saved (cf. Amos 5:14–15). The warning and promise are supported by an oracle against the Philistines and other coastal people (2:4–7), whose destruction would mean salvation and pasturing for the remnant of Judah. This oracle begins and ends with a double use of roots (הִתְקוֹשְׁשׁוּ וָקוֹשּׁוּ – whose meaning is unclear – verse 1, and וְשָׁב שְׁבוּתָם, verse 7; cf. 1:2; 3:20). It may be closely related to the material in chapter 1, providing at least a ray of hope for the faithful remnant. The oracle against Moab and Ammon (2:8–11) is generally regarded as reflecting a later period. However, Moab had long been known for its pride (cf. Mesha Stele and Jer. 48:26–30), an evil which was of special concern to Zephaniah (cf. 2:3; 3:11–12). The chapter concludes with a short statement against Cushites, perhaps referring to the Cushites in Egyptian military service, and a detailed and vivid description of judgment against Assyria and Nineveh, an oracle which appears to have been uttered around the time of the destruction of Nineveh in 612 B.C.E.

Chapter 3 begins as an oracle of woe against Jerusalem and its leaders. This prophecy might very well have been written after the Deuteronomic reformation (621 B.C.E.) and before Josiah's death (609 B.C.E.), reflecting doubts concerning the depth of the reform, a view also expressed by Jeremiah. Following the accusation (3:1–7), the announcement (3:8–13) repeats the threat of total destruction (cf. 1:18), but is transformed by the rhetorical use of כִּי־אָז ("but instead") in verses 9, 11 into a salvation oracle. Zephaniah 3:9 makes use of the ancient Near Eastern motif that distant peoples spoke "twisted tongues" (CAD L, 213), and prophesies that all peoples will have clear speech so that all will call upon the name of YHWH and worship together at His holy mountain. The prophet then breaks into a joyous and exultant Zion hymn (3:14–17), rejoicing that YHWH, the King, in their midst, has taken away their sentence and given victory. His use of the Zion tradition emphasizes his belief that the future is in the hands of YHWH, who alone can change the nature of the people so that they can be humble and righteous (cf. Hos. 2:21–22). The chapter and the book conclude (3:18–20) with an ingathering of exiles, presumably a late addition, so that the people of YHWH might be restored and given fame and praise.

[Ivan Jay Ball, Jr. / S. David Sperling (2nd ed.)]

ZEPHANIAH BEN MORDECAI (16th century.), one of the first Karaite scholars from Lithuania. Zephaniah was a spiritual leader and served as a *ḥazzan* of the Troki community in the middle of the 16th century. He was a great-grandson of the scholar Samuel Politi from Adrianople (Turkey). Zephaniah was an authority on *halakhah* and established new regulations about calendation, which were accepted by part of the Karaites in Polish-Lithuanian communities. He was also a teacher of Torah and had many disciples, one of whom was the young Isaac ben Abraham *Troki. Zephaniah was the author of the following works: *She'elot u-Teshuvot be-Hilkhot Sheḥitah* (IOS B 563 (JNUL, mic. 53737)) about ritual slaughter; *Kiddush ha-Ḥodesh ve-Seder ha-Ibbur be-Kiẓẓur,* about calendation. He also composed several liturgical poems. According to A. *Firkovich, in 1528 Zephaniah asked King Sigismund I "to return him his fields and his lands, which had been granted to him by previous kings. The king satisfied his request, confirming his charter, and ordered his servants to return to Zephaniah all the fields which had belonged to him in the past (*Avnei Zikkaron*, (1872), 254), but we have no evidence from other sources confirming this information.

[Golda Akhiezer (2nd ed.)]

ZERAH (Heb. זֶרַח), name of five biblical figures. The etymology of the name is uncertain. It may mean "rising sun" or "brightness" or, possibly, "crimson" (see below).

1) One of the twins of *Tamar (Gen. 38:30; 46:12; I Chron. 2:4). The narrative relates that when the twins were being delivered, Zerah put out his hand and the midwife tied a crimson thread to it to signify his priority of birth. However, he withdrew his hand and his brother unexpectedly emerged. Because of this his brother was named *Perez (Gen. 38:27–30). The Bible seems to ascribe the name to the crimson thread attached to his hand. It has been suggested that Zerah is derived from *zeḥorita*, the Aramaic for *shani* ("scarlet thread").

This story closely resembles that of the twin birth of Jacob and Esau (Gen. 25:24–26), and probably is a variation of the same theme. Zerah became the eponymous ancestor of a Judahite clan, and the narrative of his birth may reflect the prior ascendancy of this clan over that of Perez, and its subsequent decline and supersession by Perez.

2) An Edomite chief descended from both Esau and Ishmael. His father Reuel was born of the marriage of Esau to Basemath, daughter of Ishmael. Zerah was the father of Jobab, an early Edomite king (Gen. 36:13, 17, 33; I Chron. 1:37, 44).

3) Son of Simeon and eponymous ancestor of a Simeonite tribe called the Zerahites (Num. 26:13; I Chron. 4:24). He is referred to as Zohar (Heb. צֹחַר) in Genesis 46:10 and Exodus 6:15.

4) A levite, grandson of Levi, of the family of Gershom (I Chron. 6:6, 26).

5) Zerah the *Cushite (II Chron. 14: 8ff.).

ZERAH BEN NATHAN OF TROKI (1578–1657/8), Karaite scholar. Zerah was born in Birzhe, Lithuania. At the age of five his parents sent him to study in Troki. His first teacher was his relative, Isaac ben Abraham *Troki, in whose house Zerah stayed. After his teacher's demise he studied with Troki's disciple – Joseph ben Mordecai *Malinovski. In 1618 he visited Constantinople for the purpose of study. He was interested in Kabbalah, practical mysticism, astronomy, astrology, mathematics, etc. He is mainly known through his correspondence (from 1620) with the famous Jewish scholar and kabbalist, Joseph Solomon *Delmedigo from Candia, who spent five years in Lithuania as a physician of Prince Krzysztof Radziwiłł. In his letters, Zerah complained that "he had neither friend nor teacher among the Jews," adding that he had important books from many countries in his library. His first letter to Delmedigo included questions on Kabbalah. Later he put to Delmedigo 12 major and 70 minor problems mainly relating to mathematics, astronomy, physics, and medicine. He also discussed "demons, amulets, divination, dreams, and secret remedies and the antithetical temperamental balance called in Greek 'sympathy' and 'antipathy'…" as well as theological problems such as the existence of God, Providence, Heaven and Hell, and Resurrection. These questions were published by Delmedigo in *Sefer Elim* (Amsterdam, 1629). His answer, entitled *Iggeret Aḥuz*, was published by Abraham Geiger in *Melo Chofnajim* with a German translation and notes (Berlin, 1840). Delmedigo's reply expressed his views on Kabbalah, drew Zerah's attention to a series of works on mathematics, philosophy, exegesis, and other subjects, and provided him with a list of his works. Zerah evinced an interest in Philo's writings and asked Delmedigo to translate for him a table of contents and some extracts from Philo from Latin into Hebrew.

Zerah corresponded with Karaite scholars and community leaders from different lands, such as the scholar Joseph ben Moses Maruli of Istanbul and David b. Joshua, a head of the Jerusalem Karaite community. He wrote a letter to *Manasseh Ben Israel after his acquaintance with a Latin work by Manasseh, from which a clergyman from Vilna translated some sections for him into Polish. Zerah offered Manasseh for publication at the latter's printing house in Amsterdam the book *Ḥizzuk Emunah* by Isaac ben Abraham Troki and the liturgical poem by Joseph ben Mordecai Malinovski *Ha-Elef Lekha*. Manasseh did not print the former, presumably because of the fear of censorship, and published the second in 1643.

Zerah wrote a kabbalistic commentary on Song of Songs (W. Nathansohn, Devir, second edition, Warsaw 1883, I, 222); a commentary on *Moreh Nevukhim* by Maimonides (IOS SPb B 383); a number of elegies and a large number of liturgical poems in Hebrew and the Karaite language, of which some were included in the Karaite prayer books.

[Yehuda Komlosh / Golda Akhiezer (2nd ed.)]

ZERAH THE CUSHITE (Heb. זֶרַח הַכּוּשִׁי), military commander who invaded Judah in the time of *Asa. According to a story, preserved only in II Chronicles 14:8–14, Zerah commanded a large army and 300 chariots against Judah and reached the environs of *Mareshah. The Judean army defeated and pursued him to Gerar, conquering the cities in the area and looting many sheep and camels. It has generally been contended by scholars that Zerah was Osorkon I, king of Egypt (c. 914–874 B.C.E.); but Osorkon, like his father *Shishak, was not a Cushite (Nubian) but a Libyan. Furthermore, there is no etymological connection between Zerah and Osorkon, and the characters of their armies were different. According to Albright, Zerah was the governor of a Cushite colony, which was established by Shishak after his campaign in Erez Israel. The settlement of Hamite elements near *Gerar in Philistia during the monarchy is also treated in I Chronicles 4:39–41 (according to the Septuagint; not Gedor as in Masoretic text). Nonetheless, it is more probable that Zerah was a Cushite chieftain from the vicinity of Gerar, who raided and plundered the surrounding areas. Thus, Habakkuk (3:7) mentions Cushite tribes with *Midian (cf. also Num. 12:1).

[Yehoshua M. Grintz]

In the *Aggadah*

Zerah was, for a short period, the owner of all the wealth in the world, which he acquired by capturing from Shishak (king of Egypt), those treasures which the king had taken from Rehoboam (I Kings 14:25ff.). These were the treasures which the Children of Israel had taken from the Egyptians at the time of the Exodus (Ex. 12:36). Ultimately, however, these treasures reverted to Asa, when he defeated Zerah the Cushite in battle (Pes. 119a).

ZERAHIAH BEN ISAAC BEN SHEALTIEL (**Gracian** (**Ḥen**)), philosopher, Bible commentator, and translator. Zerahiah was born in Barcelona to a prominent Jewish family, which for several generations produced rabbis and sages. In the last quarter of the 13ᵗʰ century he was active in Rome. The dates of his birth and death are not known; however, in 1290 he regarded himself as an old man, whose time had come to return to his birthplace and to be buried with his ancestors. Nothing is known about him after 1291.

Zerahiah arrived in Rome in the 1270s, where all his writings known to historians were composed in a 15-year period ending in 1291. In Rome he became a recognized authority in philosophy and in philosophical Bible exegesis, and for some years taught Jewish youth courses in Maimonides' *Guide of the Perplexed*. In contrast with the rabbinic leadership of the Barcelona community, which at that time was decisively influenced by the teachings of *Naḥmanides, the Jewish communal leadership in Rome was supportive of Zerahiah's rationalist-naturalist approach. His authority was recognized by such prominent communal leaders as Rabbi Shabbetai ben Solomon and Isaac ben Mordecai, the pope's physician; they also supported Zerahiah in his bitter controversy with Hillel ben Samuel of Verona over Hillel's conservative interpretation of Maimonides' philosophy. He seems to have been supported by Immanuel of Rome, who wrote a rhymed letter on his behalf to Hillel. Zerahiah thus found the cultural atmosphere of Roman Jewry congenial, but mocked the Ashkenazi Jews ("who never saw light in the sky").

Zerahiah's thought is largely based on the Jewish and Islamic philosophy he studied in Spain, and his writings only slightly echo scholastic concepts. The only Jewish thinker besides Maimonides whose thought Zerahiah knowingly uses was Samuel ibn *Tibbon. Zerahiah believed in the full harmony of Torah and science, or more precisely, between the esoteric meaning of the Torah and the exoteric doctrines of philosophy, a belief at the foundation of his exegetical approach to the Bible. His philosophical outlook was essentially Aristotelian, frequently in accordance with Ibn Rushd's commentaries. Nevertheless, on central ontological questions he took an independent stance. He strongly emphasized the transcendence of God, negating any relation between God and his creatures, but at the same time believed in the pre-existence of supreme "wisdom," a sort of logos originating in God, by means of which, and in cooperation with, the world was created. This "wisdom" is what established the cosmic order, the eternity of the species, and the fixed revolutions of the heavenly spheres. In this context, Zerahiah needed to employ the overtly Neoplatonic imagery of infinite emanation, by which

"wisdom" overflowed and filled the whole cosmos. He also adopted a Neoplatonic stance regarding the concept of time, understanding it as a hypostasis independent of bodies (apparently reflecting the influence of the *Liber de Causis* which he translated from Arabic into Hebrew). Zerahiah's concept of prophecy was influenced by the lost Arabic version of Aristotle's *Parva Naturalia*, a version which enabled him to adapt the belief in prophetic revelation in dreams to a philosophic conceptual framework.

Zerahiah sharply criticized the "popular religion" and the cultural world of the early kabbalists, and attacked the belief in magic, *gematria, reincarnation, and the real existence of Satan. His commentary to Job includes a naturalistic critique of Naḥmanides' thought, but he also frequently differed with more rationalist commentators like Abraham *Ibn Ezra and David *Kimḥi.

Zerahiah was the author of the following:

Original Works
1) Commentary on Proverbs (1288–89), published by I. Schwartz in *Ha-Shaḥar*, under the title *Imrei Da'at* (also known as *Imrei Shefer*) and republished as a separate edition in Vienna, 1871.
2) Commentary on Job (1290–91), published by Schwartz in *Tikvat Enosh* (1862; reprinted, Jerusalem, 1969).
3) Commentary on the Pentateuch, or on certain portions of it, which, however, is no longer extant.
4) Commentary (extant only in manuscript) on parts of Maimonides' *Guide of the Perplexed* (1:1–71 and other passages, especially the 25 propositions appearing at the beginning of Book 2).
5) Letters of Hillel ben Samuel of Verona and to Judah ben Solomon, printed in *Oẓar Neḥmad* (1857).

Translations of Philosophical Works from Arabic into Hebrew
1) Aristotle's *De Anima* (ed. G. Bos, Leiden, 1994).
2) Themistius' paraphrase of Aristotle's *De Caelo* (ed. S. Landauer, Berlin, 1903).
3) Averroes' Middle Commentary on Aristotle's *Physics*, *De Generatione et Corruptione*, and *Metaphysics* (all extant only in manuscript).
4) Al-Farabi's treatise on the nature of the soul (ed. Z.H. Edelman, *Ḥemdah Genuzah*, Koenigsburg, 1856, and by S. Rosenthal, Warsaw, 1857).
5) Pseudo-Aristotle, *Liber de Causis*.

Translations of Medical Works from Arabic to Hebrew
1) Galen's *De Causis et Symptonatibus* (extant only in manuscript).
2) Galen's *Katagene*, ch. 1–3 (extant only in manuscript).
3) Avicenna's *Canon* (unfinished; extant only in manuscript).
4) Maimonides' *Aphorisms* (extant only in manuscript).
5) Maimonides' *Treatise on Poisonous Drugs* (extant only in manuscript).

6) Maimonides' *Shorter Treatise on Sexual Intercourse* (ed. H. Kroner, Bopfingen, 1906).

ZERAHIAH BEN ISAAC HA-LEVI (known as **Ferrarius Saladi**; late 14th–early 15th century), rabbi of Saragossa and of all the communities of Aragon. A disciple of Ḥasdai *Crescas, he distinguished himself as a talmudist, preacher, physician, and translator, and was one of the leading Jewish participants in the disputation of *Tortosa. During his teacher's lifetime Zerahiah had already begun in his sermons to attack the rationalists who disagreed with R. Ḥasdai. While in Tortosa, he preached to the Jewish disputants in the synagogue. There is an account of this by Solomon ibn Verga: "The opening of his sermon was: 'the similar into the similar is healthy as is the opposite into the opposite' [a saying of Aristotelian origin], on which he delivered an excellent commentary [probably strongly anti-Christian] which can only be understood if heard directly. He completed his sermon with a prayer and supplication" (*Shevet Yehudah*, ed. by A. Shoḥat (1947), 97). During the disputation Zerahiah proved one of the most systematic, incisive, and trenchant of the debators. His comprehensive disquisitions there have been preserved in the Latin protocol of the disputation. This records that on March 16, 1414, Zerahiah presented the conclusions of the Jews on the dogmatic validity of the *aggadot* in which he concluded that the principles of the religion (*articuli legis*) come to the believer by way of faith and tradition alone and do not require any proof, whereas Scripture, as well as the teachings of the Talmud, have to be explained according to these principles; the Christians had also adopted this method. For the Jew, anticipation of the Messiah remains one of the fundamentals of his faith so long as the Jews continue in exile and without a king, and so long as many other conditions have not been fulfilled. Through this methodical and dogmatic approach, structured according to the system of Thomas Aquinas on the subject of the principles of faith, Zerahiah tried to remove the christological interpretation of talmudic *aggadot* from the Christian armory and to exclude the messianic principle of faith from the discussion.

[Haim Hillel Ben-Sasson]

ZERA'IM (Heb. זְרָעִים), the first of the six orders of the Mishnah, according to the traditional order as stated by R. Simeon b. *Lakish (Shab. 31a), who states that the order is called "Faith"; although from the words of R. Tanḥuma (Num. R. 13:15–16), it is possible to infer that according to another tradition, *Zera'im* is the second order. With the exception of the first tractate, *Berakhot*, all the tractates in *Zera'im* deal with the agricultural laws which obtain in the Land of Israel, and various suggestions have been put forward for the inclusion of *Berakhot*.

Zera'im contains 11 tractates in the following order: *Berakhot*, 9 chapters; *Pe'ah*, which treats of the gifts to the poor from the produce of the land, namely, gleanings, forgotten produce, and the corner of the field, 8; *Demai*, doubtfully tithed produce, 7; *Kilayim*, mixed species, 9; *Shevi'it*, the Sabbatical Year and the remission of debts, 10; *Terumot*, 11; *Ma'aserot*, 5; *Ma'aser Sheni*, 5; *Hallah*, 4; *Orlah*, 3; and *Bikkurim*, 3, making 74 chapters in all. This order departs from the accepted rule that the tractates are given in descending order of the number of chapters and, in fact, according to an early tradition *Shevi'it* and *Kilayim* come between *Terumot* and *Ma'aserot*. There is also evidence that *Demai* was placed between *Kilayim* and *Ma'aserot*. In the Tosefta to *Zera'im, Berakhot* has 6 (or 7) chapters; *Pe'ah* has 4; *Demai*, 8; *Terumot*, 10; *Shevi'it*, 8; *Kilayim*, 5; *Ma'aserot*, 3; *Ma'aser Sheni*, 5; *Hallah*, 2; *Orlah*, 1; and *Bikkurim*, 2. There is Jerusalem Talmud for the whole of the order *Zera'im*, but Babylonian Talmud only for *Berakhot*.

[Zvi Kaplan]

ZERBST, city in Saxony-Anhalt, Germany. A *Judenwinkel* (Jewish lane), which contained houses owned by both Jews and Christians, was mentioned in 1324. Shortly afterward, the Jews seemed to have been forced to move to the east side of the street, where they rented their homes from Christian landlords. A street once named Keverstrasse (*kever* = Heb. "grave"), situated outside the original city walls, may have received its name from a Jewish cemetery. After the establishment of the duchy of Zerbst-Anhalt in 1603, the dukes granted letters of protection to Jewish merchants. The modern community, founded in the mid-19th century, numbered 81 in 1880; 120 in 1932; 95 in 1933; but only 36 on September 1, 1939. It maintained a synagogue, cemetery, and school. During World War II, two forced labor camps were erected in the vicinity. In 1942, 34 of the 36 remaining Jews were deported to the east.

A plaque commemorates the destroyed synagogue and the former Jewish community. Another plaque, in the Jewish cemetery, honors the victims of *Kristallnacht*.

ZERED, brook or valley of (Heb. נַחַל זֶרֶד, Naḥal Zered), a river valley described as a camping place of the Israelites before the flanking movement which brought them to Jahaz (Num. 21:12). The crossing of the deep rift in the mountains made a deep impression on the Israelites, and this event served as a terminal point for the account of the wanderings in the desert after Kadesh-Barnea (Deut. 2:13, 14). In later Jewish literature, the Zered appears as the border of the area held by the returning exiles from Babylonia (Sif. Deut. 51, et al.). Eusebius mentions it but does not localize it (Onom. 92:10); the Madaba map, however, shows it clearly south of Kerak (Charachmoba). Most scholars identify it with the Wadi al-Ḥasā, which flows in a deep rift for approximately 28 mi. (45 km.) from east to west up to the Dead Sea. The shallow stream has a width of 8.7 yards (8 m.) and a capacity of 300–400 cu. m. per minute.

[Michael Avi-Yonah]

ZEREDAH (Heb. צְרֵדָה), home town of the Ephraimite Jeroboam the son of Nebat (I Kings 11:26). The reference to Zeredah in II Chronicles 4:17 is a corruption of Zarethan, according to the parallel verse in I Kings 7:46. In talmudic sources it is mentioned as the home town of Yose b. Joezer, an early *tanna* (c. 150 B.C.E.), who, with his colleague Yose b. Johanan, formed one of the *zugot* ("pairs") of Jerusalem (Avot 1:4; Eduy. 8:4; Sot. 9:9; Pes. 17b; Ned. 7:1, 40a; Tosef., BK 8:13). The accepted identification of Zeredah is with Deir Ghassāna in the district of Thamna, 16 mi. (c. 25½ km.) northeast of Lydda. The ancient name is preserved by the village spring, ʿAyn Ṣarīda, This area was originally part of Ephraim but was transferred to Judea, together with the rest of the district, in the time of Jonathan the Hasmonean. As such, it could well be the home town of the *tanna* Yose.

[Michael Avi-Yonah]

ZERUBAVEL (Vitkin), JACOB (1886–1967), leader of *Poʾalei Zion; author and journalist. Born in Poltava, Ukraine, Zerubavel at an early age joined Poʾalei Zion, which was established at that time by high school students. Together with Izhak *Ben-Zvi, he participated in organizing the self-defense that succeeded in preventing a pogrom in Poltava. In 1906, at the founding convention of Poʾalei Zion, he was elected to the central board. He helped Ber *Borochov publish an illegal newspaper and afterward moved to Vilna, with the other members of the central boards. There he was imprisoned for a year and a half, and after he was released Zerubavel left Russia and moved to Austrian Galicia. In Lemberg he was active on the editorial board of the newspaper *Der Yidisher Arbeter*

and also helped Borochov, who was in Vilna, to edit *Dos Fraye Vort*, which was printed in Galicia, smuggled into Russia, and distributed clandestinely. In 1910 Zerubavel settled in Erez Israel and was a member of the editorial board of *Ha-Aḥdut*, the Hebrew newspaper of Poʾalei Zion (together with Ben-Zvi, David *Ben-Gurion, and Raḥel Yannait *Ben-Zvi). He served as secretary of the central board of Poʾalei Zion. Upon the outbreak of World War I, he took on Ottoman citizenship, but because of his sharp criticism in *Ha-Aḥdut* of the persecution of the *yishuv* by the Turkish authorities, he was sentenced to prison; he succeeded in escaping, however, and was sentenced in absentia to 15 years of hard labor.

Zerubavel managed to arrive in the United States in 1915 and served on the editorial board of the organ of Poʾalei Zion there, *Der Yidisher Kemfer*. On the outbreak of the Russian Revolution (1917), he returned to Russia and was active in the National Jewish Council of the Ukraine. From 1918 to 1935 he was among the leaders of Poʾalei Zion in Poland (from the time of the split in the movement in 1920, he was the head of the central office of Left Poʾalei Zion).

He also edited the newspaper *Arbeter Tsaytung*, and was a member of the Warsaw community council. Zerubavel visited Palestine, but the British authorities would not allow him to remain there permanently. Only in 1935 did he receive an official immigration visa.

In Palestine Zerubavel was active in publishing Yiddish books and journals (such as the newspaper *Nayvelt*). He served on the Executive of the *Histadrut. During World War II he was a member of the Rescue Board (Vaʾad ha-Haẓẓalah). In 1948 Zerubavel was chosen a member of the Zionist Executive and headed the Department of Mediterranean Jewry. He played a role in the unification of Left Poʾalei Zion with *Aḥdut ha-Avodah and their integration with *Ha-Shomer ha-Ẓaʾir to form *Mapam. He was also among the founders of the Israel-U.S.S.R. Friendship League and edited its literary organ (in Russian). Zerubavel was active in the Yiddish Writers' Union in Israel and demanded an official status for Yiddish in the State of Israel. In 1951 he returned to work in the Histadrut as director of the Labor Archive.

Zerubavel's activities as a publicist and literary critic in Hebrew and Yiddish continued for 60 years. He published a book on Borochov (in Yiddish, 1926). During his final years he published two volumes of memoirs, *Alei Ḥayyim* ("Leaves of Life," 1960) and *Bi-Ymei ha-Milḥamah* ("During the War," 1966), impressions of his travels in Poland after the Holocaust, and impressions of his travels in the Soviet Union. In 1961 *Sefer Zerubavel* was published in honor of his 75th birthday, including appreciations of the author and a bibliography (covering more than 1,600 items).

[Getzel Kressel]

ZERUBBABEL (Heb. זְרֻבָּבֶל; Akk. Zēr Bābili, "scion of Babylon"). Usually recorded as the son of Shealtiel (Ezra 3:2, 8; 5:2;

Neh. 12:1; Haggai 1:1, 12, 14; 2:2, 23), he is mentioned once in a genealogical list as the first son of Pedaiah and the nephew of Shealtiel, the son of exiled King Jehoiachin (I Chron. 3:17–19). This may be the result of a lacuna in the text. Like some of the other Jewish leaders of the period – Sheshbazzar (Ezra 1:8), Mordecai, and Bilshan (Ezra 2:2 = Neh. 7:7) – he bore a Babylonian name, perhaps because of his contact with the Babylonian court (cf. I Esd. 3–5; Dan. 1:3 ff.). He worked in close collaboration with Joshua (Jeshua) son of Jehozadak the high priest as leader of the original caravan of repatriates (Ezra 2:2 = Neh. 7:7; Neh. 12:1) and as builder of the Temple, which frequently bears his name (see *Temple). Just as there is confusion about his genealogy, so is there uncertainty about the chronology of events and personalities involved in the reconstruction of the Temple. When in 520 B.C.E., Tattenai, governor of the Trans-Euphrates, inquired concerning who was responsible for building the Temple, the Jews responded that Cyrus had appointed Sheshbazzar as governor to carry out the task (Ezra 5:14–16). According to another account, however, the work was carried out by Zerubbabel, also entitled "governor" (Haggai 1:1, 14; 2:2, 21), and Joshua. The year date of the arrival of the caravan is not given, but it is said to have been in the seventh month (Tishri). The two leaders, in the face of opposition from the neighboring peoples, set up the altar, reinstituted the sacrificial cult, and offered the special sacrifices for Tabernacles. In the second month (Iyyar) of the second year of their arrival, they began the construction of the Temple proper and dedicated the laying of the foundation stone (Ezra 3). The offer on the part of the neighbors to participate in the task was rejected by the two leaders. The former thereupon put forth every effort to bring a halt to the building of the Temple, and work, in fact, did not resume in earnest until 520 (Ezra 4:1–5).

The divine encouragement necessary to bring about resumption of the work was provided by the prophet *Haggai, and a new foundation ceremony was held on Kislev 24 (December 17). On that day the prophet told Zerubbabel that the Lord was about to shake heaven and earth, overturn kingdoms, and make him like a "signet ring" (Haggai 2:18 ff.), thereby reversing the prophecy of Jeremiah against Jehoiachin (Jer. 22:24 ff.).

Following the lead of Haggai, Zechariah also encouraged the people to rebuild the Temple (Zech. 1:16). He too addressed both leaders, albeit individually, and there is some uncertainty as to the full import of his message. Zerubbabel is mentioned explicitly in only one passage (Zech. 4:6–10), but alluded to in two others (Zech. 3:8; 6:12). In the last two passages mentioned, Joshua is addressed. He is told that the Lord "will raise up for David a righteous Branch," again fulfilling a prophecy of Jeremiah (Jer. 23:5 f.; 33:14 ff.), who shall build the Temple, bear royal honor, and rule upon this throne. The (high) priest shall likewise rule and a peaceful relationship shall exist between the two. The first passage (Zech. 4:6–10) elaborates: Zerubbabel shall finish the work on the Temple and topple mountains, "not by might nor by power, but by My spirit, says the Lord of Hosts."

These messianic hopes came to naught. Neither Zerubbabel nor Joshua are mentioned by name at the dedication ceremonies of the Temple (Ezra 6:14 ff.), nor does Zerubbabel appear further in any official capacity. However, the name of Zerubbabel did not fade from the people's memory. It was early embellished in the apocryphal tale which placed the beginning of his activity in the reign of Darius as one of the king's bodyguards who outdid his companions in a battle of wits and thereby won the right to rebuild the Temple (I Esd. 3:1–5:6; Jos., Ant. 11:31–74). Although even Ezra is absent from Ben-Sira's list of worthies, Zerubbabel is fully praised along with Joshua and Nehemiah (Ecclus. 49:11 ff). In the medieval Ḥanukkah hymn *Ma'oz Ẓur* celebrating Israel's past redeemers, the "end of Babel (Babylon)," is associated with Zerubbabel.

[Bezalel Porten]

In the *Aggadah*

Zerubbabel was the grandson of Jehoiachin (PdRK 163). He is identified with *Nehemiah, the name Zerubbabel indicating his Babylonian birth (בבל זרוע; Sanh. 38a). He was born circumcised (ARN[1], 12) and was designated as one of the select servants of God (ARN[2], 43, 121). He later served as one of the members of the Great Synagogue (Introd. to Maim. Yad, 2a). He succeeded Daniel in the service of King Darius and occupied a higher position than all the other servants and officials. He was captain of the three who constituted the royal bodyguard. Once when the monarch slumbered, his guards resolved to write down what each considered the mightiest thing in the world. The first wrote down "wine," the second, "the king," while Zerubbabel wrote, "women are the mightiest in the world, but truth prevails over all." After he awakened, the king, preferring the answer of Zerubbabel, offered to grant any request he would make. Zerubbabel asked for nothing for himself, but asked permission of the king to restore Jerusalem, rebuild the sanctuary, and return the holy vessels. Not only did Darius grant these request, but also gave him letters of safe-conduct and conferred numerous privileges upon the Jews who accompanied him to Palestine (Josippon, Hominer ed. 3:16–20).

Like Daniel, Zerubbabel was also vouchsafed a knowledge of the secrets of the future. The archangel Metatron was especially friendly to him. Besides revealing the time at which the Messiah would appear, he also brought about an interview between the Messiah and Zerubbabel (Zerubbabel, ed. Jellinek, *Beit ha-Midrash*, 2 (1938), 54–57). Together with Elijah, Zerubbabel will also explain obscure Torah passages and reveal its mysteries in the time to come (Midrash in *Halakhot Gedolot*, ed. Hildesheimer, p. 223).

ZERUBBABEL, BOOK OF, a work describing the vision of Zerubbabel, last ruler of the House of David. In accordance with the dates given in the text for various stages of the re-

demption, this work was probably written at the beginning of the seventh century, at the time of the last victories of the Byzantine Empire over Persia (629). To one living in Ereẓ Israel at that time, it might have seemed that the last stage of victory over the Roman Empire and the Christian Church had arrived, and that the coming of the Messiah was imminent. Since no mention is made of the Arabs and Islam, whose invasion shortly thereafter (637) eclipsed these victories, it can be assumed that this is a pre-Islamic work.

Written in biblical style, especially as found in the visions of Ezekiel and Daniel, the book describes the revelation to Zerubbabel of the events of the End of Days by the angel Michael, or Metatron. Besides the figures of the Messiah son of Joseph and the Messiah son of David, which are standard in such apocalyptic writings, two new figures are introduced: Ḥephzi-Bah, the mother of Messiah son of David, who plays a prominent role in the messianic wars; and Armilus (probably Romulus), the enemy, who is depicted as a monster, son of Satan and of a stone monument of a woman. Both a Caesar and a pope, Armilus unites the powers of Augustus and Jesus, thus symbolizing material and religious evil combined. The victory of the Messiah and his mother over Armilus represents that of Judaism over the Roman Empire and the Christian Church. Since the story – a dramatic one of many wars and apocalyptic disasters – has no theological overtones, it was acceptable to every ideological movement of Judaism (except the followers of Maimonides).

Found in countless medieval manuscripts and printed in many different collections, the *Book of Zerubbabel* became the standard source for descriptions of the End of Days and of the coming of the Messiah. In addition, many Jewish thinkers were influenced by it, from Saadiah Gaon, who based a chapter of his *Emunot ve-De'ot* on it, to Nathan of Gaza, Shabbetai Ẓevi's prophet, who used it to prove that Shabbetai was the Messiah. The lasting hatred that Jews felt toward the Roman and Christians throughout the Middle Ages made this work popular for more than a thousand years after its composition.

[Joseph Dan]

ZEVAḤIM (Heb. זְבָחִים; "Animal Sacrifices"), first tractate in the order *Kodashim*, in the Mishnah, Tosefta, and Babylonian Talmud (there is no Jerusalem Talmud to *Kodashim*). Just as tractate **Ḥullin* is also called *Sheḥitat Ḥullin* ("The Slaughter of Profane Animals", i.e., for human consumption), so *Zevaḥim* has the alternate name *Sheḥitat Kodashim* ("The Slaughter of Sacrificial Animals") in the Talmud (BM 109b, etc.) and deals almost exclusively with the regulations for the slaughter of animals and birds for the Temple worship. The tractate consists of 14 chapters in the Mishnah and 13 in the Tosefta.

Chapter 1 deals with the validity of sacrifices offered up under incorrect designations. Chapters 2–4 deal with irregularities due either to unfitness on the part of those carrying out the rites, in the deed itself, or in the intention with which it was performed. Chapters 5 and 6 detail locations where the various sacrifices of the animals, birds, and meal offerings took place; the sprinkling of the blood of the animals and birds; and the manner of their consumption. Chapter 5 constitutes the basis of the whole tractate, giving a complete enumeration of all sacrifices, and for this reason it was included, from as early as the Seder of Amram *Gaon, in the introductory portion of the daily prayers. Chapter 7 deals with irregularities in the sacrifice of birds. Chapter 8 discusses the mixing up of sacrificial animals and of their blood and limbs after slaughter. Chapter 9 discusses the sanctity which articles incur by being placed on the altar or in the sacrificial vessels. Chapter 10 gives the order of precedence of the sacrifices. Chapter 11 deals with the washing of garments stained by the blood of sacrifices and the laws concerning meat boiled in the sanctified vessels. Chapter 12 is concerned with the rights of the priests to share in the sacrifices. The subject of the last two chapters is sacrifices offered elsewhere than in the Temple, including the Temple of *Onias and the *bamot* ("high places").

Most of the *tannaim* mentioned in the Mishnah belong to the post-Temple period, when the sacrificial system no longer obtained. They nevertheless studied it and even established the *halakhah*. Thus R. Simeon b. Azzai states "I have heard a tradition… that any animal offerings which must be consumed remain valid though slaughtered under a different name…" but the sages did not agree with him (1:3). Nevertheless, the Mishnah contains passages which belong to the Temple period. Although Mishnah 10:8 is given in the name of R. Simeon and the whole of chapter 10 is derived from his Mishnah, Epstein (Tannain 157) maintains that it belongs to the Second Temple period and was only reported by him. Similarly, 3:6 is given in the name of Judah b. Ilai, but it is actually from his teacher Eliezer b. Hyrcanus, who lived during Temple times, as can be seen by a comparison with Tosefta 3:6 (*ibid.*, 189 ff.). Mishnah 9:1 cites a law anonymously, and Joshua b. Hananiah and Rabban Gamaliel disagree as to its interpretation. *Tosafot* maintains that the law must therefore have been in existence prior to the recorded dispute, while Rashi is of the opinion that the law was no older than the dispute itself (cf. Halevy, Dorot 1. 5 p. 256 and Albeck, Mishnah (Ger.) p. 105).

The Tosefta includes several passages of aggadic material. Chapter 13 tells the history and laws of the *bamot* and sanctuaries which preceded Solomon's Temple. In 11:16 it tells about the *gedolei kehunnah* ("the leading priests"), who took the hides of the sacrifices for themselves. Despite measures taken to prevent this expropriation, the priests continued this practice until the people adopted the custom of specifically devoting the hides "to heaven." Tosefta 2:17 has an interesting description of the persistent questioning of Eleazar b. Shamua by one of his disciples until a law which had been overlooked was traced to its origin. Realizing that through this persistence on the part of the student his teaching had been restored to the college, Eleazar exclaimed: "Happy are you, the righteous

who love the Torah, as it is written, Oh how I love thy Torah! I meditate on it all day."

The *Gemara* contains comparatively little aggadic material. Worthy of mention is the statement "sacrificing without repentance is an abomination" (7b). Another saying speaks of the atoning powers attaching to the high priests' garments (88b). One passage lists the centers of worship before the building of Solomon's Temple (118b). The rabbis stated that the returning exiles built their bronze altar on the very site of the original altar destroyed by the Babylonians. They located it on seeing the angel Michael at worship near an altar which was still standing. According to Isaac Nappaḥa, however, they were assured of the spot when they saw the ashes of Isaac upon the ground as they walked (62a). *Zevaḥim* was translated into English by H. Freedman in the Soncino edition of the Talmud (1948).

[*Encyclopedia Hebraica*]

ZEVI, BRUNO (1918–2000), Italian architect, writer on architecture. He was born in Rome, studied at Harvard University, and on his return to Italy after World War II became a champion of Frank Lloyd Wright. He advocated Wright's organic approach to architecture rather than the rational approach then favored in Italy. Zevi was an active member of the Jewish community and president of the Rome Jewish maternity home from 1950. He was consultant on building problems in Israel. He wrote studies on Frank Lloyd Wright (1945), Erik Gunnar Asplund (1948), and Richard Neutra (1954). He edited and published *L'Architectura*, a monthly magazine. Zevi was appointed professor of modern architecture at Rome University in 1948.

ẒEVI HIRSCH FRIEDMAN OF LESKO (Pol. **Lisko**; d. 1874), Ḥasid, active in Lesko, S.E. Poland; son of Aaron of Ujhely (Satoraljaujhely; d. 1816). He made many journeys to visit the *zaddikim* of his time, studying mainly under Ḥayyim *Halberstamm of Zanz, who wrote an approbation to Ẓevi Hirsch's work *Akh Peri Tevu'ah* (Pt. I, 1875; Pt. II, 1876), consisting of homilies on the Pentateuch in which he quotes sayings of the Talmud, numerous teachings of the Tanya and of *Shneur Zalman of Lyady, and the Ḥasidim who preceded him, as well as works written on the Lurianic Kabbalah – the system of Isaac *Luria. Like other Ḥasidim, he considers Creation to be the result of *zimzum* (contraction of the Divine Emanation; see *Kabbalah). The resultant paradox is that this contraction must tolerate the dialectic duality of Good and Evil because though the world was created with justice (*din*) the actual creation shows mercy (*ḥesed*) to its creatures. Similarly, the evil inclination was created for the benefit of man "because the principal purpose of man's creation in the world is to have free choice and overcome his inclination" (ibid.). His work, *Sefer ha-Yashar ve-ha-Tov* (1880), contains homilies for the Sabbath and the festivals. Of his two sons-in-law, ḤAYYIM FRIEDLANDER OF LESKO (d. 1904) wrote *Tal Ḥayyim Berakhah* (1898), novella on tal-

mudic subjects, and *Tal Ḥayyim* (1909), homilies on the Pentateuch, and YOZEFA GOLDBERGER (d. 1908) was a *zaddik* and merchant.

[Esther (Zweig) Liebes]

ẒEVI HIRSCH OF NADWORNA (second half of the 18th century), ethical writer. Ẓevi Hirsch, who was *av bet din* of the community of Nadworna (Nadvornaya), Galicia, wrote a short ethical treatise, *Otiyyot Maḥkimot* ("Instructive Letters"), which consists of ethical advice arranged according to the letters of the alphabet.

The work was first published in Breznitz in 1796, but in an incomplete form; a second edition appeared in Nowy Dwor in 1799. In his preface to the corrected edition Ẓevi Hirsch's son explained that the first edition did not represent an accurate version of the original work, and that he was therefore republishing it from the actual manuscript of his father; he also added an appendix, *Millei de-Avot*, an ethical commentary on *Avot*.

ZEVIN, SOLOMON JOSEPH (1885–1978), rabbi and scholar. Born in Kazimirov near Bobruisk, Belorussia, Zevin studied at the Mir yeshivah under R. Elijah Baruch Kamai, and later at Bobruisk under R. Shemariah Noah Schneerson. At the age of 18, he began to correspond on halakhic subjects with some of the greatest contemporary scholars, such as Joseph *Rozin and Jehiel Michael *Epstein. Zevin was rabbi of several Russian communities, including Kazimirov, where he succeeded his father. On the eve of the establishment of the Soviet regime in Russia (1917–18), he participated in conferences and conventions in Vilna, Moscow, and Kiev, and was elected as a Jewish representative to the Ukraine National Assembly. The Soviet regime granted him, together with R. Yeḥezkel *Abramsky, special permission to edit and publish a monthly journal *Yagdil Torah*, devoted to religious and halakhic subjects. This appeared in Slutsk in 1928, but was discontinued by government order. In 1934 he succeeded in obtaining permission to immigrate to Palestine. Creator of a new halakhic Hebrew style, he was an original critic of contemporary halakhic literature. From 1936 to 1945 he published a weekly review of this literature and an appraisal of religious personalities, and also wrote on current halakhic problems and on halakhic aspects of the festivals. His published works (frequently reprinted) were *Ha-Mo'adim ba-Halakhah* (1944); *Le-Or ha-Halakhah* (1946); *Ishim ve-Shitot* (1952); *Soferim u-Sefarim* (3 vol., 1959), containing reviews of 200 books that appeared from 1938 to 1945; *Sippurei Ḥasidim* (2 vols., 1955–57); *La-Torah ve-la-Moadim* (1961). Zevin was editor of the *Enẓiklopedyah Talmudit* (Talmudic Encyclopedia), founded in 1942. The importance of his work lies in its effective and lucid mastery of the entire complex of talmudic literature. By its concise and informed treatment of the vast material, the *Enẓiklopedyah*

has influenced the curriculum in yeshivot and given the public an insight into the theory of the *halakhah*. Zevin received many literary prizes, including the Israel Prize for Religious Literature in 1959. He also served as president of Yad ha-Rav Herzog (Rabbi Herzog World Academy for Torah Research) in Jerusalem (1960–1978), and as a member of the supreme rabbinical council of Israel (1965–1978).

[Jehoshua Hutner]

ZEYER, JULIUS (1841–1901), Czech poet and author. Zeyer was born in Prague. Although his Jewish mother became an ardent Catholic, Zeyer always remained conscious of his Jewish origin, dreamed of visiting Palestine, and even learned Hebrew. Abandoning the traditional nationalist school of Czech 19th-century literature for a cosmopolitan outlook, in the epic verse, which was his major contribution to Czech literature, he characteristically used subjects from many countries. Jewish themes appear in much of his writing, beginning with the novel *Duhový pták* ("Rainbow Bird," 1874). His short story *Smrt Evy* ("Eve's Death") is based on the biblical account of Cain, and the collection of which it forms part, *Báje Šošany* ("Shoshanna's Tales," 1880), is set in the Frankfurt ghetto. He chose biblical subjects for two dramas: *Sulamit* (1883) and *Z dob růžového jitra* ("From the Times of the Rosy Dawn," 1888), the latter about Isaac's stay in Gerar (Gen. 26:1–12). Other short stories with Jewish themes are *El Cristo de la Luz* (1892), which deals with medieval Toledo, and *Asenat* (1895), a tale of Joseph in Egypt. Zeyer also wrote a number of poems on Jewish subjects.

Outstanding among his works of epic poetry are *Ossianův návrat* ("Ossian's Return," 1885); *Z letopisů lásky* ("From the Annals of Love," 4 volumes, 1889–92); and *Karolinská epopej* ("Carolingian Epic," 1896). His two most important prose works are the novels *Román o věrném přátelství Amise a Amila* ("The True Friendship of Amis and Amil," 1880) and *Jan Maria Plojhar* (1888).

[Avigdor Dagan / Milos Pojar (2nd ed.)]

ZGIERZ (Rus. **Zgerzh**), city in Lodz province, central Poland. Jews first settled there in the mid-18th century. There were nine Jews living in the city according to a census of 1765, and 12 in 1793. Their main sources of livelihood were the leasing of inns and the sale of alcoholic liquor. Their number had grown to 27 (5% of the total population) in 1808. The situation of the small Jewish settlement deteriorated following the restrictions imposed on the industrial cities by the government of Congress Poland. In 1824, by order of the Warsaw authorities, the Jews of Zgierz, with few exceptions, were compelled to move to a separate small quarter. There they numbered at first 30 families, increasing in the following 25 years to 400 families, although only 24 one-story houses were built in the quarter during that time. In 1851–55 a few streets were added to the Jewish quarter, and in 1862 the restrictions on residence were abolished completely. Jews were also discriminated against in an agreement signed on March 30, 1821, between the Polish administration and German immigrants, in which (paras. 38 and 39) Jews were prohibited from acquiring real estate in the new quarters and from manufacturing or selling alcoholic beverages in the whole city. This became the prototype for similar agreements with other towns.

Despite these restrictions the Jewish population grew, numbering 356 in 1827 (8% of the total) and 1,637 (20%) in 1857. According to data of 1848, 92 Jews engaged in crafts (46 tailors, 10 hatmakers, 11 in the foodstuff branch), and 43 in trading, while 46 were hired workers. In this period cotton and wool mills were founded by Jewish industrialists. An organized community functioned from 1824. A wooden synagogue was built in the 1840s, a *mikveh* and poorhouse were erected in the 1850s, and a large stone synagogue in 1860, followed by a large *bet midrash* in the 1880s. The first rabbi of the community, Shalom Ẓevi ha-Kohen (officiated 1827–77), founded a yeshivah. His son, Solomon Judah, author of *Neveh Shalom*, was rabbi from 1898 to 1940.

The first Jewish school with Russian as the language of instruction was founded in Zgierz in 1885. Toward the end of the 19th century several modern *ḥadarim* of the *Haskalah movement were organized, one by Jacob Benjamin Katzenelson, father of the poet Itzhak *Katzenelson. The Hebrew poet David *Frischmann was born in Zgierz. In 1912 the Yagdil Torah organization was founded, which supported many religious educational institutions. There were cultural associations for literature, art, drama and sport, and in 1911 a branch of *Ẓe'irei Zion was founded, which was active in the cultural sphere, stimulating interest particularly in the Hebrew language and press.

During World War I the Zgierz community instituted a special tax to provide for Jews in Zgierz suffering from hunger or disease. Conditions for Jewish workers in Zgierz were particularly poor, and the community administration sent an appeal (Sept. 28, 1920) to local Jewish industrialists to employ Jewish workers. Polish workers used antisemitic arguments to oppose Jewish industrialists who favored the employment of Jewish workers. The Jewish population numbered 3,543 in 1897, 3,828 in 1921, and 4,547 in 1931.

[Arthur Cygielman]

Holocaust Period

In 1939 there were 4,800 Jews in Zgierz (about 20% of the total population). Immediately after the German occupation persecution of the Jewish population began. On Dec. 27, 1939, about half the total Jewish population – some 2,500 persons – were expelled to the town of Glowno. The rest either managed to

escape or were deported across the border to central Poland. A few Jewish tailors and shoemakers, who worked for the Germans, were allowed to remain in the city. In January 1942 they were sent to *Lodz ghetto.

ZGURITSA (Rom. **Zgurita**), Jewish agricultural village in N. Moldova, in the region of Bessarabia. Zguritsa was founded in 1853 on an area of over 1,000 acres rented by settlers from Bessarabia. In 1878 the new owner, a Jew, canceled the lease of the estate and Zguritsa lost its status as a Jewish agricultural colony. Its residents were then registered as burghers. From 1890 to 1903 further Jewish settlement in Zguritsa was prohibited by virtue of the *May Laws issued on May 3, 1882. In 1897 Zguritsa's Jewish population was 1,802 (85% of the total population). In 1899, 36 families rented 370 acres in the area, mainly for growing vegetables. Agrarian reform in Romania in 1922 granted plots of land to 150 Jews of Zguritsa. In 1925 the 193 members of the local loan fund included 40 farmers, 25 artisans, and 113 tradesmen. In 1930 there were 2,541 Jews in Zguritsa (83.9% of the total population), supporting a kindergarten and an elementary school both of the *Tarbut organization.

[Eliyahu Feldman]

Holocaust Period
On July 3, 1941 after the outbreak of war, the village was shelled and houses were set on fire. Jews fled to the fields, where they were rounded up after two days by Romanian troops and kept under guard in the open. They suffered general maltreatment (especially the women), and in addition the soldiers practiced shooting, using Jews as their targets. A few days later the Jews were dispatched to *Transnistria and then sent back to Bessarabia, the sick, elderly, and the children dying on the way. Near Cosāuți all the young men were separated from the group, ordered to dig graves, and shot. Jews died every day from disease, hunger, and thirst. In the fall of 1941 they were sent back to Transnistria, and before crossing the Dniester 200 men were removed, ostensibly for work, and shot. The remaining Jews were taken to Tiraspol and Balta. Only a few survived the war.

ZHDANOV (until 1948 **Mariupol**), city in S. Stalino district, Ukraine. The Jewish community of Zhdanov was founded at the beginning of the 19th century and numbered 111 in 1847.

Owing to continuous Jewish emigration from the Lithuanian and Belorussian provinces to southern Russia, the Zhdanov community had increased by 1897 to 5,013 (16.1% of the total population). Seven Jewish settlements were founded in the surroundings of Zhdanov toward the end of the reign of Nicholas I, and by the end of the 19th century their population was estimated at over 3,000. Riots, which lasted three days, broke out in the city in October 1905. In 1926, 7,332 Jews lived in Zhdanov (18% of the city's total population). Jewish life was suppressed at that time. Immediately after the city's occupation by the Germans in October 1941, all the Jews were imprisoned in an ancient military camp outside the city and were shot on Oct. 18, 1941. In 1959 there were about 2,800 Jews (1% of the total population) in Zhdanov. A small synagogue was still functioning there in 1962. Most Jews left in the 1990s.

[Gedalyah Elkoshi]

ZHIDACHOV (Pol. **Żydaczów**) city in Drogobych district, Ukraine (formerly in eastern Galicia). Jewish settlement in Zhidachov began in a comparatively early period, as the existence of an ancient cemetery and wooden synagogue indicates, although no definite date is known. Records show 199 Jews living in Zhidachov in 1765, some 900 in 1910 (about a quarter of the total population), and 823 in 1931. Zhidachov was known for its dynasty of ḥasidic rabbis (*admorim*), descendants of Ẓevi Hirsch Eichenstein of Zhidachov.

Holocaust Period
At the outbreak of World War II there were about 1,000 Jews in Zhidachov, On Sept. 5, 1942, some of the Jews were deported to the *Belzec death camp. On Sept. 30, 1942, a number of them were expelled to *Stry and shared the fate of that community. The remaining Jews were imprisoned in a forced-labor camp in Zhidachov until its liquidation in August 1943. After the war, the Jewish community of Zhidachov was not reconstituted.

ZHIDACHOV, ḥasidic dynasty. The dynasty's founder and most outstanding personality, ZEVI HIRSCH EICHENSTEIN (1785–1831), was born in the village of Safrin, Hungary. In his youth he was known as a brilliant Torah scholar, and while still a young man, he devoted himself mainly to the study of the *Kabbalah. Under the influence of his brother, Moses of Sambor (d. 1840), he became a Ḥasid and the outstanding disciple of *Jacob Isaac ha-Ḥozeh ("the Seer") of Lublin. In addition, Ẓevi Hirsch studied with *Moses Leib of Sasov, whom he also considered to be his mentor, and with *Baruch of Medzhibezh, among others. Only after the death of Jacob Isaac of Lublin did he become the leader of a large ḥasidic community.

His unique approach to Ḥasidism, which aroused the opposition of other ḥasidic leaders, consisted in strengthening the kabbalistic-philosophical foundation of the movement. He wrote a number of important works on mysticism, and his disciples and followers were distinguished from other streams of Ḥasidism by their open and dedicated study of the system of Isaac *Luria, whose thought they considered to be a direct forerunner of Ḥasidism. Ẓevi Hirsch saw Ḥasidism as the means by which the ideals of the important later kabbalists could be put into practice, and, in addition, he maintained that no understanding of Ḥasidism was possible without a deep knowledge of Kabbalah.

Among his numerous disciples were his brother, Judah Ẓevi of Rozdol, and his nephew, Isaac Eizik of Komarno. The well-known *Malbim (Meir Leib b. Jehiel of Michael) studied Kabbalah under Ẓevi Hirsch. The 11th of Tammuz, the date of Ẓevi Hirsch's death, became a day of celebration, when his disciples, admirers, and the adherents of closely related ḥasidic sects made a pilgrimage to his grave. He was followed as leader of the Zhidachov dynasty by his brothers ISSACHAR LEIB (d. 1832) and MOSES OF SAMBOR, and then by his nephew, ISAAC EIZIK (1804–1872). Isaac Eizik, although a follower of a number of the great ḥasidic leaders of his generation, was primarily a devoted disciple of his uncle Ẓevi Hirsch. In addition, Isaac Eizik wrote ḥasidic works which are firmly based on a kabbalistic foundation and serve as a kind of bridge between Ḥasidism and Kabbalah. Isaac Eizik's sons and grandsons, who were rabbis and communal leaders in several places, continued the tradition of the dynasty, and were *admorim in several centers.

Among the works of Ẓevi Hirsch are *Sur me-Ra va-Aseh Tov* (1835), preface to *Peri Eẓ Ḥayyim; Peri Kodesh Hillulim* (1836), on *Peri Eẓ Ḥayyim; Ateret Ẓevi* (1836), on the Zohar; *Beit Yisrael* (1834), on the Pentateuch. A book about his life and work is M. Braver's *Ẓevi la-Ẓaddik* (1931).

The works of Isaac Eizik include: *Likkutei Maharia* (1890), on *Yalkut Shimoni; Likkutei Torah ve-ha-Shas* (1886). M. Braver's *Pe'er Yiẓḥak* (1928) treats of his life and work. The entire Zhidachov dynasty is covered in I. Craker's *Eser Kedushot* (1906), and R. Mahler's *Ha-Ḥasidut ve-ha-Haskalah* (1961), which contains an index.

[Adin Steinsaltz]

ZHIRMUNSKY, VIKTOR MAKSIMOVICH (1891–1970), Russian philologist. Zhirmunsky was born in St. Petersburg, the son of a Jewish physician. He finished Tenishev School (1908) and St. Petersburg University (1912), where he studied German and Romance philology. After graduate study in Munich, Berlin, and Leipzig, he was appointed *privat-docent* at St. Petersburg (1915) and professor at Saratov University (1917). In 1919 he was appointed to the Chair of Germanic Philology in St. Petersburg (later Leningrad) University. Zhirmunsky's earliest scholarly publications were devoted to German Romanticism and modern mysticism (*Nemetskiy romantizm i sovremennaya mistika*, 1914). His dissertation, *Religioznoye otrecheniye v istorii romantizma* ("Religious Renunciation in the History of Romanticism"), was published in 1919. A regular contributor to *Russkaya mysl, Severnye zapiski, Vestnik literatury,* and other periodicals, he published several penetrating and erudite essays on contemporary Russian and European literature. In 1919–21, Zhirmunsky was closely associated with the Society for the Study of Poetic Language (O POYAZ). His later dispute with some of its members (notably B. Eichenbaum) became an important landmark in the history of the Russian Formal School.

A remarkably versatile literary scholar and linguist, Zhirmunsky worked in such diverse fields as theoretical poetics, Russian and comparative literature, Germanic philology, dialectology, Turkic and Slavic folklore, etc. During the 1920s, he published monographs on the composition of lyrical poetry (*Kompozitsiya liricheskikh stikhotvoreniy*, 1921; reprinted 1970), history and theory of rythme (*Rifma*, 1923; reprinted 1970), metrics (*Vvedenie v metriku*, 1925, reprinted 1971), the Romantic tradition in Russia (*Bryron i Pushkin*, 1929, reprinted 1970), and Russian Symbolism (*Poeziya Aleksandra Bloka*, 1922; *V. Bryusov i naslediye Pushkina*, 1922). His collected essays appeared in 1928 as *Voprosy teorii literatury* ("Problems of the Theory of Literature," reprinted 1962). In spite of the political persecution to which Zhirmunsky was subjected for his book *Natsionalny yazyk i sotsialnye dialekty* ("National Language and Social Dialects," 1936), his definitive study of Goethe's influence on Russian literature and a historical grammar of the German language were brought out in 1937–38. During World War II, Zhirmunsky lived in Central Asia. His post-war publications include *Uzbekskiy narodny geroicheskiy epos* ("Uzbek Heroic Epos," 1947), *Kirgizskiy geroicheskiy epos Manas* ("Manas, the Kirghiz Heroic Epos," 1948, 1961), *Nemetskaya dialektologiya* ("German Dialectology," 1956); *Epicheskoye tvorchestvo slavyanskikh narodov i problemy sravnitelnogo izucheniya eposa* ("The Epic Art of Slavic Peoples and the Problems of Comparative Epic Studies," 1958), *Drama A.. Bloka "Roza i Krest"* (1964), etc. Zhirmunky's study of Anna Akhmatova's poetry was published posthumously in 1972.

His *Vredenie v metriku* has appeared in English under the title *Introduction to Metrics* (1965); also in English is his "On Rhythmic Prose," in *To Honor Roman Jakobson*, 3 (1967), 2376–88.

ZHITLOWSKY, CHAIM (1865–1943), Yiddish philosopher and writer. Zhitlowsky was the chief theoretician of *galut* ("Diaspora") nationalism and Yiddishism. Born in a small town near Vitebsk, Russia, he gave up his studies at 15 when he became a Socialist, and moved to Tula in Central Russia, where he joined the Narodniki, the anti-czarist populist movement. Engaged in propaganda among non-Jews, he was completely estranged from Jewish interests, but the pogroms of the 1880s brought him back to Vitebsk and to his Jewish roots. The Ḥibbat Zion movement, and particularly M.L. *Lilienblum, influenced him profoundly without converting him to Zionism. He believed that a full Jewish national life could be lived in the Diaspora. In 1886 he began research in Jewish history at St. Petersburg and in 1887 published his study in Russian on Judaism's historic destiny. A basic idea of this study was that the Jewish people in its difficult struggle for survival had become estranged from the historic ideals which had justified its existence. This study was violently attacked by S. *Dubnow in the Russian press, while the Hebrew press dubbed Zhitlowsky a Jewish antisemite and heretic. In 1888 Zhitlowsky left for Berlin and then moved to Zurich. He tried to convince the Russian Social Democratic leaders in exile of the desirability of issuing propaganda literature in Yiddish for the Jewish masses. He failed because these leaders, including the Jews among them, felt that publications in Yiddish might impede the complete assimilation of Jews to Russian ways. In his Zurich period, he also expressed his doubts as to the necessary connection between socialism and economic materialism. In 1892 he called upon Jewish intellectuals to return to their people, stating that not only equal civil rights but also equal national rights were needed for a Jewish resurgence, because Jews formed a distinct national group and must therefore strive for national emancipation. In 1893 he helped to found the Russian party of Socialist-Revolutionaries in exile and coedited its journal *Russky Rabochy.* He also founded a Jewish Socialist Union, which published socialist literature in Yiddish. He participated as a correspondent in the First Zionist Congress at Basle, 1897, but rejected Zionism as a reactionary movement dangerous for Eastern European Jewry. Only under socialism would Jews be redeemed as Jews and as workers. Jews need not emigrate to Zion. They could engage in productive labor and develop Jewish schools, universities, national and cultural institutions in their present countries. An article entitled "*Farvos Davke Yidish?*" ("Why Yiddish?"), written in 1897 and published in 1900, initiated his intensive activity as the theoretician of Yiddishism. He joined the *Bund in 1898, a year after its foundation, and published in its ideological organ *Der Yidisher Arbeter* his essay, "*Tsionizmus oder Sotsyalizmus*" (1899), in which he argued that socialism was not necessarily linked with faceless cosmopolitanism and nondescript humanity but afforded each nation an opportunity to develop its national uniqueness in multi-national states. The Kishinev pogroms in 1903 brought about a change of ideas and inclined him toward *Territorialism.

In 1904 Zhitlowsky arrived in the United States for a lecture tour on behalf of his Socialist-Revolutionary Party and stirred Jewish immigrant masses with his oratory. His lectures on "Jew and Man" and on "The Future of Peoples in America" opposed the melting-pot philosophy and advanced a United States of harmoniously functioning nationalities. These lectures converted many Yiddish-speaking cosmopolitan socialists into Jewish socialists. While in the United States, he became coeditor of the weekly *Dos Folk*, a territorialist socialist publication, in which he advocated a fusion of socialism and Jewish nationalism, of autonomy in the Diaspora and a Jewish territorial center. Returning to Europe, he was elected to the Second Russian Duma, and participated as chairman in the *Czernowitz Yiddish Conference of 1908. After 1908 he made his permanent home in New York, where he edited the monthly *Dos Naye Lebn* (1908–13), which was revived in 1922 with S. *Niger as coeditor. His two-volume work, *Di Filosofye, Vos Zi Iz un Vi Zi Hot Zikh Antvikelt* ("The Development of Philosophy," 1910), an outgrowth of lectures to American and Canadian audiences, was the first serious history of philosophy written in Yiddish. His *Gezamlte Shriftn* appeared in three editions (10 vols., 1912–19, 1929–32, and 1945–51). A Hebrew edition, *Ketavim*, with an introduction by R. Mahler, appeared in 1961. In 1914 Zhitlowsky visited Ereẓ Israel, became interested in Labor Zionism, and wrote pamphlets in the spirit of *Po'alei Zion. Returning to New York, he joined the staff of the Yiddish daily *The Day* and helped to found the *American Jewish Congress. He was an enthusiastic supporter of the establishment of the *Jewish Legion. Zhitlowsky translated Nietzsche's *Thus Spake Zarathustra* (1919) into Yiddish and wrote scholarly essays on Kant, Einstein, Job, and Faust.

In 1936 Zhitlowsky, who had been a lifelong, bitter foe of dogmatic Marxism and Bolshevism, was shocked into a more friendly attitude toward Soviet Russia by the ever increasing danger of Hitlerism. He endorsed Birobidzhan as the realization of his idea of a Jewish territory for productive Jewish masses. He justified Soviet actions, including the Moscow Trials of 1936. He considered the German persecution of the Jews as a punishment for the negative socioeconomic role played by the Jewish middle classes. As a result he became estranged from all except a pro-Soviet sector of his Jewish admirers during the last years of his life.

As the outstanding ideologist of Diaspora nationalism and Yiddishism, Zhitlowsky influenced the programs of all Jewish national parties, but only in his struggle against assimilationism was his influence profound and enduring, both in the former Russian Pale and among the American Jewish immigrants. More important than his theoretical justification for the existence of Yiddish was his practical application of Yiddish in his journalistic and scholarly style which delineated ideas and philosophical systems.

ZHITNITSKI, MARK (1903–?), Russian artist. Zhitnitski was born in Mogilev, Belorussia, and studied at the Moscow Art Institute from 1925 to 1932. From then until 1936 he worked as a book illustrator in Minsk, but in that year he was sentenced to ten years' hard labor in Siberia. Upon his release he resumed his artistic activity in Minsk for another three years, but was again exiled to Siberia. In 1956 he was "rehabilitated" and accepted as a member of the U.S.S.R. Artists Union. Many of his works have been acquired by Russian museums. Zhitnitski immigrated to Israel in 1971, and there completed a series of paintings entitled *Ha-Kotel ha-Maʾaravi* ("The Western Wall").

ZHITOMIR, city in Zhitomir district, Ukraine. Under Polish rule (until 1792) Jews were not authorized to live in Zhitomir, but some had settled there under the protection of government officials. In 1753 a *blood libel case was brought to court there; two Jews from the surrounding villages were executed and others were compelled to convert. In 1789 the Jewish community numbered 882, about a third of the total population. They comprised innkeepers, merchants, and craftsmen. When the city was annexed by Russia (1792), there were 1,300 Jews, and by 1847 their number had risen to 9,500. During this period, Ḥasidism spread to Zhitomir and *Zeʾev Wolf of Zhitomir was one of the disciples of the *Maggid of Mezhirech. With the establishment of the government-authorized rabbinical seminary there (1847), teachers and pupils of *maskilim* circles gathered in the city; they included H.S. *Slonimski, A.B. *Gottlober, and E. *Zweifel. In 1873 the rabbinical seminary was converted into a seminary for training teachers for the Jewish government schools. This seminary was closed in 1885. The first Jewish vocational school in Zhitomir was established in 1862 and enjoyed a good reputation, but it was closed in 1884 because the authorities believed that its instruction gave the Jews economic superiority over the Christians. *Mendele Mokher Seforim, A. *Paperna, and A. *Goldfaden also lived and studied in Zhitomir, and H.N. *Bialik (who was born in the village of Radi, near Zhitomir) spent his childhood there.

From the 1870s, the community shared in the general decline of the city following dispossession of the region's Polish landowners and the construction of the railroads, which initially bypassed Zhitomir. In 1897 there were 30,748 Jews who formed 46.6% of Zhitomir's total population; their number rose in 1910 to 38,427. Ninety per cent of those engaged in commerce were Jews, as were 60% of the city's craftsmen. In April 1905 pogroms broke out in the city at the government's instigation. The Jewish youth, Zionists and socialists, organized a *self-defense unit and fought with the rioters. About 15 Jews were killed, including the Russian student N. Blinov, who joined the Jewish self-defense action. Ten Jewish youths from the townlet of *Chudnov who were called in to assist the Jews of Zhitomir were murdered on their way there. In January 1919 pogroms were perpetrated by the Ukrainian army and a mob from the neighboring villages; 80 Jews lost their lives and much property was looted. In March 1919, after the soldiers of *Petlyura had captured Zhitomir from the Red Army, riots broke out and 317 Jews were murdered. At the time of the Polish conquest (1920), the Jews suffered from the brutality of the Polish soldiers. As soon as the Soviets gained control of the city, the organized community was liquidated and Jewish life disintegrated. In 1926 there were 30,000 Jews in the city (38% of the total population).

Many Jews fled from the city during the German occupation (1941). Those who remained, as well as many Jews from the neighboring townlets, were imprisoned in a ghetto and executed on Sept. 19, 1941. After the liberation of the city, thousands of Jews, former inhabitants as well as others, returned. According to the census in 1959, there were about 14,800 Jews (c. 14% of the total population) in Zhitomir, but the real number was probably closer to 25,000. There was a well-kept cemetery and a synagogue with a rabbi. During High Holidays thousands congregated in and around the synagogue. Yiddish was often heard in the streets. The synagogue building was ordered to be destroyed in 1962 to make way for a large apartment house, and the Jewish community rented a new apartment for its needs.

Until 1990, the city had approximately 12,000 Jews. After the Iron Curtain was lifted, thousands immigrated to Israel, the U.S., and Germany. Those that remained established congregations throughout the northern and western Ukraine. Zhitomir serves as the headquarters for 167 official congregations, 29 of which have their own synagogue and 28 that have their own daily Torah study groups. The Jewish community in Zhitomir itself has a synagogue, a community center, a *mikveh*, yeshivas, kindergartens, a day school, a university for men, a library, a soup kitchen, a women's club, a boarding house for boys and for girls, and a cemetery.

[Yehuda Slutsky / Ruth Beloff (2nd ed.)]

Hebrew Printing

The first Hebrew printing press in Zhitomir was established in 1804 by the wandering printer Ẓevi Hirsch b. Simeon ha-Kohen, who came from *Zolkiew (Zholkva), where he had worked as a typesetter. He had worked in the printing press in the town of *Nowy Dwor, and had subsequently possessed his own press in 1796 in Kopel, and in 1803–04 in Brezitz (Beresty). Ẓevi Hirsch had his printing press in Zhitomir until 1806, and during the three years of its existence at least nine books were published, five of which were ḥasidic and kabbalistic works. In 1847 a second printing press was established there by the three brothers Ḥanina Lipa, Aryeh Leib, and Joshua Heschel Shapira, sons of Samuel Abraham Abba

Shapira, the printer in *Slavuta. Until 1862 this was one of the only two Hebrew presses the Russian government permitted to operate in the whole of Russia, the other being in Vilna. This press had 18 hand presses and four additional large presses. In 1851 Aryeh Leib broke away and established his own printing press in Zhitomir. In these two establishments only sacred books of every kind were printed. During the years 1858–64 the press of the two brothers printed a beautiful edition of the Babylonian Talmud together with the *Halakhot* of Isaac *Alfasi, while between 1860 and 1867 Aryeh Leib printed an edition of the Jerusalem Talmud.

In 1865 a Hebrew printing press was established by Abraham Shalom Shadov, and in 1870 another one by Isaac Moses Bakst. In 1888 the Hebrew press of Brodovitz was founded, and in 1891 this passed into the possession of his successors. In c. 1890 a printing press was founded by Joseph Kesselman and in c. 1902 it passed into the possession of his widow Rachel, who entered into partnership with Elijah Feinberg. In these three presses all kinds of Hebrew and Yiddish books were printed.

ZHITOMIRSKI, ALEXANDER MATVEYEVICH (1881–1937), composer. Born in Kherson, Crimea, Zhitomirski studied violin with Mlynarsky in Odessa (1892–97) and with Prill in Vienna (1898–1900), where he also studied composition and piano. He graduated from the St. Petersburg Conservatory in 1910, and from 1915 to 1937 he taught there the theory of composition (from 1919 as professor). Among his students were such outstanding musicians as Andrey Balanchivadze, Mikhail Chulaki, Alexander Gauk, Khristofor Kushnarev, Alexander Melik-Pashaev, and Mikhail Yudin. His works include *Symphonic Poem* (1915); *Heroic Poem* for orchestra (1933); a violin concerto (1937); a string quartet (1927); *Elegy* for cello and piano; and songs to Russian, Yiddish, and French words. He was a member of the Society for Jewish Folk Music and collaborated with S. Kiselgov and P. Lvov in the publication of the Society's *Lider Zamlbukh* (1911, 1914²).

[M. Rizarev (2nd ed.)]

ZHMERINKA, city in Vinnitsa district, Ukraine. Before the 1917 Revolution it was a rural settlement in the province of Podolia. As it was an important railway junction (Kiev-Mogilev and Odessa-Lvov routes), a Jewish community developed there at the end of the 19th century. In 1897 there were 2,396 Jews (16.6% of the total population) in Zhmerinka. In 1903 it was excluded from the list of rural settlements where Jews were forbidden to reside. There were 5,186 Jews in the city (one-third of the total population) in 1926. During World War II Zhmerinka was incorporated into the Romanian oc-

cupation zone (*Transnistria). The Jews who had remained there and refugees from the surrounding district organized themselves into a community, and were joined by several hundreds of Jews who had been expelled from Romania. In June 1942 the Jews were concentrated within a ghetto, where they numbered 3,274. In March 1943 they were employed in forced labor at the railway station and in its vicinity. The Jews participated in the local partisan movement and in the battles for the liberation of the city in March 1944. In 1959 there were about 1,000 Jews (4% of the population) in Zhmerinka. Under the Soviet regime, the Jews gained notoriety for writing a letter to the newspaper *Pravda* in which they requested that the Russian authorities grant them permission to immigrate to Israel.

[Yehuda Slutsky]

ZHOLKVA (Pol. **Żółkiew**), city in Ukraine (formerly Galicia), renamed Nesterov in 1951. Jewish settlement in Zholkva began in the 16th century and the community became important; entries in its minute book *(pinkas)* commence from 1613. Thousands of Jewish fugitives took refuge in Zholkva during the *Chmielnicki massacres of 1648–49 and helped to defend it from the Cossacks, who agreed to lift their siege on the city on payment of 20,000 gulden. In the second half of the 17th century the community benefited from the general prosperity which Zholkva enjoyed as the patrimony of King John III Sobieski. A number of wealthy Jews with influence at court made their home in Zholkva. The magnificent fortified synagogue built in 1687 with the king's assistance, known as the "Sobieski Shul," was preserved until 1941. The favorable economic and cultural conditions which had made Zholkva one of the leading communities in the province of "Russia" (see *Councils of the Lands) came to an end in the second half of the 18th century; 2,100 Jewish inhabitants are recorded at this period, but in 1770 the city was devastated by a plague in which some 800 Jews died.

Leading members of the Zholkva community included John Sobieski's physician, Simḥah Menahem of Jona; the royal tax farmer Bezalel b. Nathan; the *parnas* Israel Isser b. Mordecai; and the *av bet din* Alexander *Schor. Between 1680 and 1730 Zholkva served as a center of the late Shabbatean movement in Poland (see *Shabbetai Ẓevi). Among the sectarians in Zholkva were Ḥayyim *Malakh, Fischel Zlochover, Isaac Keidaner, and Moses Meir Kaminski. At the end of the 18th century Zholkva became an important center of the Haskalah movement, particularly as Nachman *Krochmal lived there. Among scholars and writers of Zholkva in this period were Baruch Ẓevi Noy, principal of the Jewish-German school; Eliezer Favir, the Yiddish folklorist and author of the *Sippurei ha-Pelaʾot* (1800); and Samson ha-Levi *Bloch, author of the popular geographical work *Shevilei Olam*. Ẓevi Hirsch *Chajes acted as *av bet din* between 1828 and 1852. Many of the Zholkva community were occupied in the fur industry, which

began to develop in the 19th century and employed hundreds of workers. Emigré furriers from Zholkva, who acquired an international reputation, found their way to the great workshops of Paris, London, and Brussels. Educational and welfare institutions in Zholkva before World War II included a *talmud torah*, schools established by the *Tarbut and *Beth Jacob organizations, and orphanages which also provided vocational training. The annual budget of the community totaled 42,000 zlotys in 1937. The Jews in Zholkva numbered 4,100 (about half the total population) at the end of the 19th century; in 1931 there were 4,500.

[Aryeh-Leib Kalish]

Hebrew Printing

The first Hebrew press in the city was set up by the Amsterdam printer *Uri b. Aaron Phoebus ha-Levi in 1692 under license to John Sobieski. The first production appears to have been novellae by Samuel *Edels. For eight decades Uri Phoebus, his sons, grandsons, and other members of the family (Madpis, Grossmann, Rosanes) printed a great variety of books, covering all branches of Hebrew literature. Productions were generally of a high quality, with handsomely decorated title pages. The Letteris family, who were related to the Uri Phoebus clan, printed in the city from 1794 to 1828, moving their presses from *Lvov. In 1793 A.J.L. Mayerhofer obtained a printing license from the Austrian government, and he and his sons were active till 1830. Originally he was in partnership with M. Rubinstein, but they separated in 1797 and Rubinstein and his son continued on their own until well into the 19th century. Other Hebrew printers of importance in the 19th century were S.P. Stiller, who began work in 1859 and produced a Zohar (1862–64), and J.Z. Balaban, who established a press in 1862.

Holocaust Period

The Jewish population numbered over 5,000 in June 1941. After the outbreak of war between Germany and the U.S.S.R., the quick collapse of the Soviet front prevented Jews fleeing eastward from reaching safety. The Germans entered the city on June 28, 1941, and within a few days burned down its synagogues. Shortly thereafter, a *Judenrat was imposed by the Germans, headed by Febus Rubinfeld. The Germans imposed a "contribution" (fine) of 250,000 rubles, 5 kg. of gold, and 100 kg. of silver to be paid within three days. In early 1942 the Jewish population underwent registration which classified them into three categories: A – able-bodied for hard labor; B – capable of lighter work; C – "non-productive."

In an *Aktion* on March 15, 1942, the Germans rounded up 700 persons in the "C" category and dispatched them to the *Belzec death camp. The Judenrat meanwhile organized varied welfare activities to alleviate the suffering of the community. The Jews who escaped from the death train transports to Belzec were helped in particular. The train station in Zholkva served as a transit point for the death trains from the East. Although education of their children was prohibited, the Jews managed to set up a clandestine education program for

groups of six to eight pupils under 30 teachers. In a second *Aktion* on Nov. 22–23, 1942, 2,500 persons were shipped to Belzec. Numerous victims attempted escape from the trains; the rails were strewn with their corpses. Very few made their way back to the city. That month a ghetto was set up for the Jews of Zholkva and the vicinity – mostly from Mosty Wielkie, Dobroszyce, Kulikow, Glinsk, and Wola Wysoka. An epidemic broke out, with a mortality rate rising to 20 a day. On March 15, 1943, over 600 men were taken to the Janowska Street labor camp in Lvov. The Germans and their Ukrainian helpers broke into the ghetto on March 25, 1943, and the inmates were rounded up in Dominikanski Square and taken to Borek forest, about 2 mi. from the city, near the road to Kamenka Bugskaya; there they were murdered and buried in mass graves. One hundred men and 70 women were spared and sent off to the Janowska Street camp. Only 70 others, skilled craftsmen, were still left in Zholkva, interned in a building on Sobieski Street. Some of them were killed later. Zholkva was taken by Soviet forces on July 23, 1944. About 70 Jews survived the Holocaust.

ZHURAVNO (Pol. **Zurawno**), town in E. Drogobych district, Ukraine. In the early 18th century a Jewish community was organized in Zhuravno under the jurisdiction of the Lvov community. The Jews traded in wood and grain, and manufactured spirits. In 1765, 566 Jews paid the poll tax. The Jewish population numbered 2,197 (69% of the total) in 1880; 1,665 (61%) in 1890; 1,546 (53%) in 1900; and 1,338 (48%) in 1910. The hasidic movement of the nearby city of *Zhidachov greatly influenced the community. Between the world wars the town was included in Poland. In that period the Jewish population decreased, numbering only 867 (45%) in 1921.

[Shimshon Leib Kirshenboim]

Holocaust Period

On the outbreak of World War II there were about 1,300 Jews in Zhuravno. On Sept. 5, 1942, 500 Jews were deported to *Belzec death camp. On Sept. 29, 1942, the Jews were expelled to *Stry and shared the fate of that community. The remaining Jews were killed in Zhuravno in June 1943. After the war the Jewish community was not reconstituted.

ZIBA (Heb. צִיבָא), servant of the house of *Saul, probably the official keeper of the household. Ziba informed *David about the whereabouts of *Mephibosheth, the lame son of *Jonathan, when David sought to locate the surviving members of the house of Saul in order to show them kindness or to put them under surveillance (II Sam. 9:1–4). Ziba was appointed

the land administrator of Saul's private property which David restored to Mephibosheth. Consequently Ziba's household of 15 sons and 20 servants became servants of Mephibosheth (II Sam. 9:9ff.).

When David was forced to flee Jerusalem during *Absalom's rebellion, he was greeted by Ziba with essential food supplies (II Sam. 16:1ff.). Ziba made David believe that his master Mephibosheth willingly remained in the city in the hope that the throne would be restored to him (II Sam. 16:3). Consequently David transferred all of Mephibosheth's possessions to Ziba on the spot, as it was customary for kings to do with a rebel's property. After Absalom's rebellion was suppressed, Ziba recrossed the Jordan ahead of the king, and may have been of help in persuading the Benjamites to come to welcome David at the Jordan (II Sam. 19:18–19). Mephibosheth was also among those who came to greet the king, and he exposed his servant's duplicity to David, by explaining that he had intended to join David in his flight and that Ziba, taking advantage of his lameness, had made off with the already saddled asses. David, prompted by a feeling of gratitude to Ziba on one hand and a belief in the integrity of Mephibosheth's account on the other, ruled that Saul's property should be divided equally between the two (II Sam. 19:25ff.).

ZIDDUK HA-DIN (Heb. צְדּוּק הַדִּין; lit. "acknowledgment of [Divine] justice"), the term for the Jewish burial service. The service commences with the recitation of Deuteronomy 32:4, "The Rock! – His deeds are perfect, yea, all His ways are just…" and includes a reading of Jeremiah 32:19; Psalms 92:16; Job 1:21; and other verses. lt concludes with Psalms 78:38; Isaiah 25:8; the benediction "Who formed you in judgment…" and the *Kaddish le-Ḥadata*. On the days when *Taḥanun is not said, Psalm 16 replaces the opening verses in some rites. Various parts of the prayer are mentioned in the Talmud. Ḥanina b. Teradyon quoted the first half of Deuteronomy 32:4 before being executed by the Romans, his wife completed the verse, and his daughter recited Jeremiah 32:19 (Av. Zar. 18a). The special *Kaddish*, which includes references to Erez Israel and expresses a hope that the Temple may be rebuilt, is mentioned in *Soferim* 19:12. The benediction is cited in the Tosefta (Ber. 7:6 in a different version; cf. the *baraita* in Ber. 58b). The present form dates from the geonic period (Zunz, Lit Poesie, 21).

ŽÍDEK, PAVEL (1413–1471), Czech scholar and the first individual of Jewish origin to contribute to Czech culture. Žídek was baptized in his youth and raised as a Hussite but, while studying at Vienna, embraced Catholicism and became a priest. An outstanding scholar, he received doctorates at three universities, earning renown as well as enmity through his learned disputations at Prague, Breslau, and Cracow. Žídek's quarrelsome disposition drove him from place to place until he found refuge at the court of the progressive Czech king George of Podebrad. Žídek's one surviving work is his *Správovna* ("Administration," 1908), a book of suggestions to the king, which prescribes everything from the monarch's attire to the principles of good state administration. Žídek piously concludes that the king should join the Catholic Church, thus uniting all the Christians of his kingdom.

[Avigdor Dagan]

ŽIDOVSKÁ STRANA (Czech "Jewish Party"), national Jewish party in Czechoslovakia. It was founded at the first conference of nationalist Jewry held in the Czechoslovak Republic, convened in Prague on the initiative of the Jewish National Council at the beginning of January 1919. The party aimed to secure representation of the Jewish national minority in the institutions of the new state and the local authorities. The party was joined by Zionists of every trend, with the exception of *Po'alei Zion, which advocated independent political activity of Labor, and of Jews of nationalist outlook not within the Zionist Organization. The principal objective, to assure parliamentary representation for the Jewish minority, was not achieved from the beginning, although the Jewish Party gained about 80,000 votes in the first elections (1920) and almost 100,000 votes in the second (1925). This was because the election law stipulated that only a list that obtained 20,000 votes in at least one electoral district, or a sufficient number of votes for the election of a deputy in a district on the first ballot, could be represented. Since the Jews were dispersed throughout the state, they could, even theoretically, obtain this number only in one electoral district – and they failed to do so.

In the third elections (1929), the Jewish Party joined forces with the Polish minority party and thus succeeded in sending its first two deputies to parliament. These were Ludvik *Singer (after his death in 1931 replaced by Angelo *Goldstein) and Julius Reisz. At the fourth elections (1935), it was no longer possible to form a political Polish-Jewish alliance because the Poles had begun to adopt a hostile policy toward the Czechoslovak Republic. The Jewish Party concluded an elections agreement with the Czech Social Democratic Party, which included two representatives of the Jewish Party within its list. Although this decision won the acclaim of Po'alei Zion, it was criticized by conservative circles of the Jewish Party. In these elections Angelo Goldstein and Ḥayyim *Kugel were elected. The Jewish Party was also represented in the provincial diets of Moravia-Silesia and Slovakia, and in many municipal councils. Its outstanding leaders included, in addition to the parliamentary deputies, František Friedmann, Emil *Margulies, and Arnošt Frischer.

Although the party is regularly discussed as a single body, it actually represented three different sectors of Jewry, which in the political sphere also expressed local attitudes and interests. In the Czech-speaking lands (Bohemia, Moravia, and Czech Silesia), the Jews had experienced a long uphill struggle,

but by now it had reached a mature stage. In the Czechoslovak Republic, the Jewish Party embodied the desire of the middle class and the secular elements, who expected it to take care of the general needs of the Jewish population, as any Western European party does.

In Slovakia, the party upheld the local interests of the population regarding its religious and social needs. On a national level, it promoted ethnic-Jewish demands and fostered Zionist policies. In this endeavor it clashed with the leaders of the Czech countries; while devout Zionists, they misunderstood the desires of Slovak Jewry. The strength of Slovak Orthodoxy, hostile to Zionism and cherishing its own material and political interests, inhibited the abilities of the party in Slovakia. In Carpatho-Rus the party expressed the desire for modernization within a part of the Jewish masses. Zionism, especially among the youth, also expressed the desire to escape the squalid conditions of Carpatho-Rus. Here the party encountered stubborn opposition on the part of the Orthodox, headed by the ḥasidic rabbi of Mukachevo, Chaim Eleazar Shapira. In elections the Jewish Party, especially in the eastern parts of the Republic, was exposed to machinations and intrigue on the part of the Agrarian Party in cooperation with the Orthodox. There was also competition from Czech, German, and Magyar assimilationists. Another problem expressed itself in the conflict between the need for domestic policies ("Landespolitik") of the electorate and the Zionist desires of the ideological political elites of the party.

During World War II, Frischer represented the Jewish minority in the Czechoslovak National Council in Exile in London. When Czechoslovak independence was renewed after the Holocaust, there was no longer room for political activity by national minorities, and the Jewish Party was not reorganized.

[Chaim Yahil / Yeshayahu Jelinek (2ⁿᵈ ed.)]

ZIEGFELD, FLORENZ (1869–1932), U.S. showman. Ziegfeld, born in Chicago, started his career at the Chicago World Fair, 1893, and staged his first production in 1896 in New York. His star was Anna Held, whom he had brought from Europe and later married, and he publicized the show with front-page advertising, a device which subsequently became his hallmark. In 1907, after a visit to Paris, he launched the *Ziegfeld Follies* and presented new editions periodically until 1931. These extravaganzas included lavish arrays of beautiful showgirls and set the standard for Broadway musical revues. Ziegfeld became known as "the glorifier of the American girl" and "the apostle of the beauty show." His many other productions included *Showboat* (1927 and 1932) and *Rio Rita* (1927), which opened at the Ziegfeld Theater built for him by William Randolph Hearst. Ziegfeld's productions brought fame to many stars, including Eddie *Cantor and Will Rogers. The film *The Great Ziegfeld* told the story of his career.

[Lee Healey]

ZIEGLER, ARCHIBALD (1903–1971), painter and sculptor. Ziegler was born in London and belonged to the group of "second-generation" Anglo-Jewish artists. Following his first one-man exhibition at the Whitechapel Art Gallery in 1932, he was commissioned to execute a series of large murals at Toynbee Hall, the famous East London community and educational center. His only Jewish commission was for stained-glass windows at the Walthamstow and Leyton Synagogue, London. From 1938 he was a visiting lecturer at the St. Martin's School of Art. Ziegler was closely connected with the Ben Uri Art Gallery and Society, a unique center in London for Jewish art activities. He was principally a painter of landscape, a favorite subject being Hampstead Heath in London, where he lived. In his later years he took up sculpture and had considerable success as a portraitist; his bust of Norman Bentwich was presented to the Hebrew University, Jerusalem.

[Charles Samuel Spencer]

ZIEGLER, IGNAZ (1861–1948), scholar. Ziegler, who was born in Dolny Kubin, Slovakia, studied at the rabbinical seminary and the University of Budapest. During the period of his studies, he was influenced by the Reform movement and from 1888 served as liberal rabbi of Carlsbad, where he accomplished a great deal for the Jewish community. Ziegler sympathized with Zionism.

His research dealt with the Bible, Talmud and Midrash, Jewish religious philosophy, and Jewish history. In his most important work, *Die Koenigsgleichnisse des Midrasch* (1903), he dealt with the "parables of kings in the Midrash" in the light of the historical and factual reality of the Roman Empire. His other important works are: *Religioese Disputationen im Mittelalter* (1894); *Die Geschichte des Judenthums* (1900); *Die Geistesreligion und das juedische Religionsgesetz* (1912); *Dokumente zur Geschichte der Juden in Karlsbad (1791–1869)* (1913); *Das magische Judentum* (1923); and the two-volume *Die sittliche Welt des Judentums*, 2 vols. (1924–28).

[Moshe David Herr]

ZIFF, MORRIS (1913–2005), U.S. rheumatologist. Ziff was born in Brooklyn, New York, and earned his B.S. (1934) and Ph.D. (1937) in chemistry from New York University (NYU) where he was a postdoctoral research chemist with Erwin Chargaff (1939–41). The difficulties of pursuing a career in basic science persuaded him to obtain his M.D. (1948) from NYU Medical College where he worked as a clinical and research rheumatologist (1950–58) and was head of clinical research from 1952. In 1958 he moved to the University of Texas Southwestern Medical School in Dallas as professor of medicine and founding director of the Rheumatic Diseases Divi-

sion. He became an Ashbel Smith Professor (1981), the highest professorial rank in the university, and he remained chief of rheumatology until 1984. He was founding director of the Harold C. Simmons Arthritis Research Center (1983–84), and he continued his research and clinical activities as professor emeritus until 1999. Ziff pursued a career-long interest in the immunological and inflammatory mechanisms that affect joints in rheumatoid arthritis and are widespread in the body in other rheumatic diseases. He used his laboratory discoveries to develop tests of clinical value for diagnosis and assessing disease activity. His ideas inspired similar research in most major rheumatology centers in the world. His program of integrated laboratory and clinical studies also became an accepted model for organizing research in this field. His identification of cytokines as the factors that stimulate joint inflammation was an important contribution to the current development of monoclonal antibodies for controlling rheumatic diseases. In addition to his research skills, Ziff was an outstanding clinician and teacher. His extraordinary blend of scientific rigor, intellectual curiosity, and human sympathy inspired the 131 research fellows he trained to pursue similar, often outstanding careers throughout the world. His many honors included the Heberden Medal of the British Society for Rheumatology (1964), the Carol Nachman Prize (1974), the Bunim Medal of the Pan-American Congress of Rheumatology (1982), and the first Gold Medal of the American College of Rheumatology (1988).

[Michael Denman (2nd ed.)]

ZIFRONI, ISRAEL BEN DANIEL (16th century), Hebrew printer. Zifroni was a native of Guastalla, near Padua, Italy, and lived in Gazzuolo. In 1567 he worked as corrector in *Sabbioneta for Vicenzo Conti, who produced three works, among them Menahem b. Zeraḥ's halakhic compendium *Ẓeidah la-Derekh*. The period of his finest achievements was 1578–83, when among other works he printed a fine edition of the Talmud (1578–80) for Ambrosius Froben in *Basle, and a Pentateuch with *haftarot*, the Five Scrolls, etc. (1583) for Th. Guarin. Because of difficulties with the Basle city fathers, Froben and Zifroni printed some of their works in *Freiburg-im-Breisgau, such as Aaron of Pesaro's *Toledot Aharon*, Benjamin of Tudela's *Masot*, and a Judeo-German paraphrase of Berechiah ha-Nakdan's *Mishlei Shu'alim* (1584). Zifroni eventually returned to Italy, where he worked for Di Gara of Venice as corrector (from 1588). Zifroni's son MOSES ELISHAMA also became a Hebrew printer and was active in *Mantua for T. Ruffinelli and the brothers I. and S. Norzi (1593–97), after which he joined his father in Venice.

ZIKHRONOT (Heb. זִכְרוֹנוֹת; "remembrance" verses), name of one of the benedictions in the *Musaf* prayer of *Rosh Ha-Shanah. This section begins with *Attah zokher* ("Thou re-

memberest") and contains ten biblical verses (four from the Pentateuch, three from Psalms, and three from the Prophets) praising God who remembered, among other things, *Noah during the flood, the Israelites in Egyptian slavery, and His covenant with Abraham, Isaac, and Jacob. The prayer closes with a plea that God remember the binding of Isaac (see *Akedah), and, through Abraham's merit, bestow mercy upon his descendants. These *Zikhronot* verses express the most characteristic significance of Rosh Ha-Shanah, the Jewish New Year, as a "Day of Remembrance" (*Yom ha-Zikkaron*). At the end of their recital (as with the *Malkhuyyot* and *Shofarot* verses) the *shofar* is sounded. The reciting of the *Zikhronot* on Rosh Ha-Shanah is mentioned already in the Mishnah (RH 4:5–6) and is believed to have been part of the Rosh Ha-Shanah liturgy in the Temple.

ZIKHRON YA'AKOV (Heb. זִכְרוֹן יַעֲקֹב), village with municipal council status in N. Israel, on the southern spur of Mount Carmel. Founded in 1882 by Jews from Romania, it was one of the earliest settlements of the Ḥovevei Zion movement. Zikhron Ya'akov was initially called by the Arabic name of the site, Zammrin, which was erroneously supposed to be derived from "Shomron." The following year, Baron Edmond de *Rothschild took a personal and financial interest in the village and named it Zikhron Ya'akov ("Memory of Jacob") after his father, James de Rothschild. On his initiative wine grapes were introduced as a principal agricultural branch, and one of the two large wine cellars established in the country (the other is at *Rishon le-Zion) was built. After a short time, however, the vineyards were seriously hit by the *Phylloxera* pest, and the vines had to be replaced by strains introduced from America. In 1903 a convention of the Jewish settlers of Erez Israel was held at Zikhron Ya'akov to create a kind of Jewish umbrella organization. M.M. *Ussishkin addressed the meeting, at which the *Teachers Association (*Histadrut ha-Morim*) was founded. The physician Hillel *Joffe, known for his fight against malaria, lived in Zikhron Ya'akov, as did the botanist and agronomist Aaron *Aaronsohn and his sister *Sarah, who founded the secret *Nili intelligence group in World War I; their home was later turned into a museum. Zikhron Ya'akov started becoming a holiday resort in the late 1930s and 1940s. One of the first and important centers was the artists' rest home, Bet Dani'el (on the Bentwich-Lange-Friedlaender estate), which was named after the young pianist Daniel Friedlaender. In the first years of Israel's statehood the village expanded considerably when it absorbed many new immigrants. In 1950 Zikhron Ya'akov received council municipal status. In the 1960s, however, its population remained static, with 4,470 inhabitants in 1968. Farming, in which vineyards and other fruit orchards continue to be prominent, was important along with industry (the wine cellar, a hosiery plant producing for export, and smaller enterprises), tourism, and recreation. In

1963 a group of Christians from Germany established a closed community in the northern part of the town, run like a kibbutz and operating factories for air purification systems, blankets, and processed foods. In the mid-1990s the population of Zikhron Ya'akov expanded to approximately 8,090, rising further to 14,300 in 2002 with new neighborhoods coming into existence. The municipality developed the original first street of the moshavah into a tourist attraction.

In 1954 Baron de Rothschild's remains were transferred to a mausoleum, surrounded by beautiful gardens, at Zikhron Ya'akov. Also buried in the village is the labor leader David *Remez, who spent many years there as a pioneer and labor organizer, and in whose honor a large rest house of Kuppat Ḥolim, Bet Remez, is named.

[Shaked Gilboa (2ⁿᵈ ed.)]

ZIKLAG (Heb. צִקְלַג), town apportioned to the tribe of Simeon along with Hormah and Beth-Marcaboth (Josh. 19:5). It was later included in Judah where it was part of the first district, again with Hormah (Josh. 15:31). According to 1 Samuel 27:6, it was given to David, then a refugee from the persecution of Saul, by Achish, the Philistine ruler of Gath; therefore, at that time, it must have been within the orbit of Philistine power. lt was David's base till the time of the battle of Gilboa; after he was sent away from Aphek by the Philistines, he found the city burned by the Amalekites, whom he pursued and destroyed (1 Sam. 30). From Ziklag David sent the spoils from this battle to various cities in Judah and there he heard, on the third day after his return, the grievous news of the fall of Saul and Jonathan; after slaying the messenger, he made his famous lament there (11 Sam. 1:17 ff.). David was joined in Ziklag by his "mighty men" (1 Chron. 12:1 ff.) and from the city he went to claim the kingship of Judah. It was one of the places inhabited by Jews after the return from the Babylonian exile (Neh. 11:28). Eusebius locates the place in the Daromas (Onom. 156: 11). Most scholars, following A. Alt, have identified Ziklag with Tell al-Ḥuwaylifa, a prominent tell 20 mi. (32 km.) southwest of Hebron, in a pass on the fringe of the Judean mountains; as this site does not seem to fall within the area of Philistine domination, however, *Press and *Aharoni have suggested Tell al-Shariʿa further to the west, which others have identified with Gerar.

[Michael Avi-Yonah]

ZILBER, LEV ALEKSANDROVICH (1894–1966). Russian microbiologist, virologist, and immunologist. He was the brother of B.A. *Kaverin. Zilber graduated from St. Petersburg University in 1915 and Moscow University in 1919. He began to work at the Institute of Microbiology of the People's Kommisariat of Health in 1921.

Due to the fact that he was an honest and principled researcher, Zilber more than once suffered repression: between 1937 and 1939 and from 1940 to 1944, he was incarcer-ated in Soviet "corrective labor" camps. From 1939 to 1940 he headed the department of virology, and in 1945 the department of immunology and malignant growths at the Institute of Epidemiology and Microbiology of the Academy of Medical Sciences of the U.S.S.R. From 1945 he was a member of this academy. His scientific fields of interest encompassed the variability of microorganisms and immunology. In 1937 he described a previously unknown viral disease: Far Eastern tick elephantiasis. In 1945 he began elaborating a viral theory of the origin of cancer. He was awarded a Stalin Prize in 1946 and a joint State Prize posthumously in 1967, for the discovery of the pathogenesis of the Raus chicken sarcoma in other kinds of animals.

[*The Shorter Jewish Encyclopedia in Russian,* Jerusalem]

ZILBERTS, ZAVEL (1881–1949), composer, conductor, and ḥazzan. Born in Karlin, near Pinsk, Russia, Zilberts became his father's successor as ḥazzan upon the latter's death in 1895, and by the age of 18 he was singing his own compositions. After studying music at the conservatory in Warsaw, he became conductor of the famous Hazomir choral society in Lodz. Between 1907 and 1914 he was choir master in the Central Synagogue, Moscow. He returned to Lodz for another six years before emigrating to the U.S. in 1920. Striving for the establishment of a pure, unaccompanied choral style, he founded the Zilberts Choral Society in 1930 and became musical director of the Jewish Ministers-Cantors Association of America, composing a large number of liturgical pieces and choral arrangements for concert appearances organized by the Association.

His liturgical compositions were often based on motifs from biblical cantillations. His setting of *Havdalah* is widely known and has been sung and recorded by many ḥazzanim. Zilberts wrote the biblical cantatas *Jacob's Dream* and *Am Yisrael Ḥai*, and published *Neginot Yisrael* (1932) and *Music for the Synagogue* (1943).

[David M.L. Olivestone]

ZILBOORG, GREGORY (1890–1959), psychiatrist. Zilboorg was born in Kiev, Russia. He served as a physician in the Russian army, participated in the first revolution in Petrograd in 1917, and was secretary to the Ministry of Labor in the cabinets of Prince Lvov and Kerensky. He edited a daily paper in Kiev until the German occupation. Zilboorg was forced to leave Russia in 1919, when he settled in the U.S. He graduated from the Columbia College of Physicians and Surgeons, New York City, in 1926, and was at the Berlin Psychoanalytic Institute from 1929 to 1930. After 1931 he entered private practice in psychiatry and psychoanalysis. He was a member of the Committee for the Study of Suicide, assistant clinical professor of psychiatry in the New York Medical College, and

on the Consulting Delegation on Criminology to the United Nations.

Zilboorg's research and writings extend over several particular fields. His two major works were *The Medical Man and the Witch During the Renaissance* (1935) and *A History of Medical Psychology* (in collaboration with George W. Henry; 1941). His historical work was followed by *Mind, Medicine and Man* (1943), *Sigmund Freud* (1951), *The Psychology of the Criminal Act and Punishment* (1954), and *Freud and Religion* (1958). Among Zilboorg's shorter works three deal with suicide: *Suicide among Civilized and Primitive* (1936), *Differential Diagnostic Types of Suicide* (1936), and *Considerations on Suicide…* (1937). His paper "On Social Responsibility" in *Searchlights on Delinquency* (ed. K.R. *Eissler, 1948) provides an insight into Zilboorg's view of the role of psychoanalysis vis-à-vis the problems of society.

[Louis Miller]

ZILINA (Slovak. **Žlina**; Hung. **Zsolna**; Ger. **Sillein**), town in N.W. Slovakia. After the repulsion of the Tatar invasion in the 13th century, King Béla IV of Hungary elevated Zilina to the status of a royal city and invited Jews and Germans to the abandoned and depopulated town, granting them certain important privileges. The town later suffered severely from various vicissitudes and was repeatedly burned down; the town archives therefore retain no documents concerning Jewish life there in this period.

Many of the inhabitants were German settlers, and the authorities prevented Jews from settling in Zilina. Even the *Toleranzpatent* of Josef II did not alter the situation. In 1840 the Hungarian parliament permitted Jews to settle in most places, but Zilina authorities still tried to prohibit Jewish settlement. Jews settled in nearby villages, such as Rajec and Varin. After the prohibition was lifted in 1840, Jews moved to Zilina. A commercial crossroads, it attracted Jewish businessmen. In 1834 there were 13 Jews in Zilina; in 1840, there were 22; in 1880 there were 619; in 1910 there were 1,467; and in 1940 there were 2,919. Most were deported in 1942 to extermination camps in Poland. In 1947, there were 497 Jews living in Zilina. Some 700 local Jews survived the Holocaust.

In 1852 Jewish communal life began in the town. There was a small synagogue, a *ḥeder*, a *ḥevra kaddisha*, and a cemetery. In 1861 the synagogue was enlarged, and there was a school, a *mikveh*, and a kosher slaughterhouse. After Zilina became an important railway center, more Jews moved in. They established saw mills and textile factories. Through Jewish initiative, Zilina became the center of the Slovakian timber trade.

After the Jewish Congress of 1868, the congregation chose the Reform path until 1921, when several hundred formed an Orthodox congregation. In 1938 a small group of Ḥasidim established a place of prayer following *nusaḥ sefarad*.

The Jewish community became a center of political and cultural activity. With the foundation of the Czechoslovak state, a group of Jews asked to be recognized as Slovaks of the Mosaic creed. They were followed by intensive Zionist activity. The city became a leading center of the Jewish Party, and its candidate served a long stint as deputy mayor. The Zionist movement had a major branch in Zilina, which included several youth movements. The Maccabi sports organization was well established and boasted several national champions.

After the Munich treaty of September 1938, Slovak nationalists, mainly in the Hlinka Slovak People's Party, proclaimed autonomy for Slovakia within the Czechoslovak Republic. The proclamation took place in Zilina. On March 14, 1939, Slovakia proclaimed independence under the aegis of Berlin. The new state immediately embarked on persecuting Jews. All Jewish children were expelled from non-Jewish schools and autonomous Jewish institutions were outlawed. In 1940 many Jews were expelled from Bratislava, and some settled in Zilina. Thus the Jewish population rose to 3,500.

In March 1942 the deportation of Jews from Slovakia to extermination centers in Poland began. Being close to the Polish border and a central transportation hub, Zilina was the final preparation point for Poland-bound transports. The living conditions were so squalid and the Hlinka Guard so brutal that the state had to intervene. While waiting for their transport, the inmates were forced to work on building a soccer stadium, which is still in use.

In 1943–44 the remaining Jewish community helped Jewish refugees from Poland, who had crossed the Slovak border illegally, to cross the Hungarian border to safety. In August 1944 the Slovak Uprising began, and Zilina became a hiding place. Jews caught by the Germans were sent to Poland.

Zilina was liberated in spring 1945, and the small community attempted to rebuild its Jewish life. A synagogue was renovated, and the cemetery was cleaned up. A public kitchen distributed food to the homeless returnees and the Displaced Persons on their way home. Zilina also became a center of *"illegal" immigration (Aliyah B) on the way to Palestine.

The Zionist youth movements flourished, preparing their members for Palestine. In the cemetery a memorial to victims of the Holocaust was erected. In the 1950s the Jews suffered badly under the Communist regime. In 1967 there were 254 Jews in Zilina.

During the Prague Spring of 1968 whoever could leave the country did so; mainly the elderly remained. After the Velvet Revolution (1989), the community organized public life again. The Reform synagogue was sold and became a concert hall. June 17 is the memorial day of the Zilina congregation; in 2004 a memorial to the Jews who perished at the transportation center was erected, made of twisted railway tracks.

[Elieser Beck / Yeshayahu Jelinek (2nd ed.)]

ZILKHA, family of bankers originating in *Baghdad. KHEDOURY ZILKHA (1884–1956), a descendant of textile traders, founded the family banking house in Baghdad in 1899 with a capital of $250. Baghdad's rising importance as a communications and trading center contributed to his success as a banker. Under the threat of extortionists he left Baghdad in 1926 and as a result, interest rates rose considerably in the Baghdad bazaar. In 1927 Zilkha opened a bank in *Beirut, followed by branches in *Damascus (1935) and *Cairo (1937). In 1941 Zilkha settled in the United States where he and his four sons, MAURICE (1917–1964), ABDULLA (1913–), Ezra (1925–), and SELIM (1927–), began to operate a successful worldwide network of financing and foreign exchange operations. In 1950, however, the original Baghdad house was seized by the Iraqi government, and in 1956 the Cairo firm was expropriated by the Egyptian government.

[Joachim O.Ronall]

ZILKHA, NAʿIM (1879–1929), Iraqi lawyer. Zilkha started to practice law in his native *Baghdad in 1904. In 1908 he became a member of the Beirut Court of Appeals, retaining his post for over ten years and rising to deputy president of the court. Returning to *Iraq in 1921, he became deputy president of the *Basra civil courts, and in 1922 president of the Diyala Province civil courts. He was elected to the Iraqi House of Representatives in 1925 and remained a member until his death. He was one of the few young Jews in the Iraqi House of Representatives who had the courage to express opposition to the government. In 1925 he was also appointed lecturer at the Baghdad law school, and became active in the Jewish community council; he was elected chairman of the "Jeshmi Committee," in charge of the secular affairs of the Jewish community, and held this position until his death. He made attempts to introduce reforms in the life of the Jewish community and to restrict the influence of religious dignitaries and the rich; he succeeded in forcing Rabbi *Dangoor to resign from his post as head of the community. Zilkha's sudden death put an end to the reforms that he had initiated.

[Hayyim J.Cohen]

ZILPAH (Heb. זִלְפָּה), handmaid of *Leah and concubine of *Jacob. *Laban gave Zilpah to his daughter Leah as a handmaid on the occasion of Leah's marriage to Jacob (Gen. 29:24; 46:18). A parallel custom is attested in the *Nuzi Documents. When Leah ceased bearing children she presented Zilpah to her husband as a concubine (30:9; 37:2), just as her sister *Rachel had previously done with her own maid *Bilhah (30:3). Two sons, *Gad and *Asher, were born of the union between Jacob and Zilpah (30:10–13; 35:26). Sixteen descendants of Zil-

pah are listed in the Genesis genealogies (46:18). There is no further mention of Zilpah in the Bible.

ZIM, Israel Navigation Company Ltd., founded in June 1945 by the Jewish Agency, the Histadrut, and the Palestine Maritime League in order to build a merchant fleet that would make the prospective Jewish state independent of foreign shipping, as well as to exploit the sea as a source of income. The word *ẓim* means ships and appears in the Bible (Num. 24:24). The Jewish Agency held 45% of the shares, the Histadrut 45%, and the Palestine Maritime League 10%. Supreme control by the future state was ensured in the articles of the company by a governor's share that gave its owners public-political control. In 1959 the government became a one-third partner in the company; in 1965 its share rose to 80%. Zim's first ship, purchased in January 1947 in partnership with a British company, was the 3,500-ton *Kedmah*, which opened a passenger and cargo service between Haifa and Marseilles. After the establishment of the State of Israel, it became vital to transport immediately the mass of refugees from Europe. Zim then merged with Oniyyot u-Sefinot, a branch of the Mosad, the organization for "illegal" immigration, which at the time owned many boats that had been confiscated by the British authorities. Some of the vessels were found suitable for the transport of immigrants; others were used to form the Israel navy.

In 1951 Zim, for the first time, ordered two new cargo boats. After the reparations agreement was signed between Israel and West Germany, Zim received purchase credits and, between 1953 and 1955, ordered 18 new ships from German shipyards, including two passenger ships for its European lines, two passenger-cargo ships for the transatlantic line, and one tanker. Subsequently Zim had ships built in shipyards in Japan, France, Italy, Yugoslavia, Sweden, and Israel, and by the beginning of 1970 the company owned or operated 60 ships with a deadweight of 1,012,605 tons. In 1964 the 25,000-ton passenger ship ss *Shalom* began service on the Haifa-New York line. The management's decision to provide two kitchens on board – one for kosher and the other for non-kosher food – aroused a violent controversy, and eventually Zim had to operate the ship with only a kosher kitchen. The ship did not make a sufficient profit and was sold in 1967. The passenger service reached its peak in 1960 when four passenger ships were serving Zim. In 1967 Zim employed 3,400 sailors and shore employees. The expansion of maritime training facilities accompanied the development of the fleet. However, passenger service declined in the 1960s as elsewhere in the world and by 1970 Zim owned no passenger ships.

Zim then expanded its cargo lines and began operating specialized ships such as bulk carriers, refrigerated ships, and tankers. Another important field of activity was the operation of tankers carrying oil from Iran to Israel, and petroleum products from Israel to Europe. In the early 1970s Zim established ZCS – ZIM Container Service. The company ordered and built six ships, the first generation of large specialized container ships, as well as shore equipment and contain-

ers. During the early 1980s Zim faced another financial crisis, but eventually achieved a turnaround. The year 1985 marked the start of a new era for a leaner, more flexible, and more profitable Zim. In the early 2000s the company constituted an integrated international transportation system, combining a variety of transport-related activities and providing a wide range of services. Zim operates over 80 vessels of all types. Of these, 27 vessels are fully or partly owned and the rest chartered. In 2004 the Israeli government sold its shares (49%) in Zim to Israel Corporation, owned by the Ofer family, transforming Zim into a private company. Zim's ships maintain regular communications with most European countries, the U.S. and Canada, South America, West and East Africa, and countries in Asia, including Hong Kong, Japan, and Australia. The company's rapid and successful development attracted the attention of new countries in Africa and Asia, which invited the company to organize and run their shipping. The national shipping of Ghana and Burma were organized by Zim.

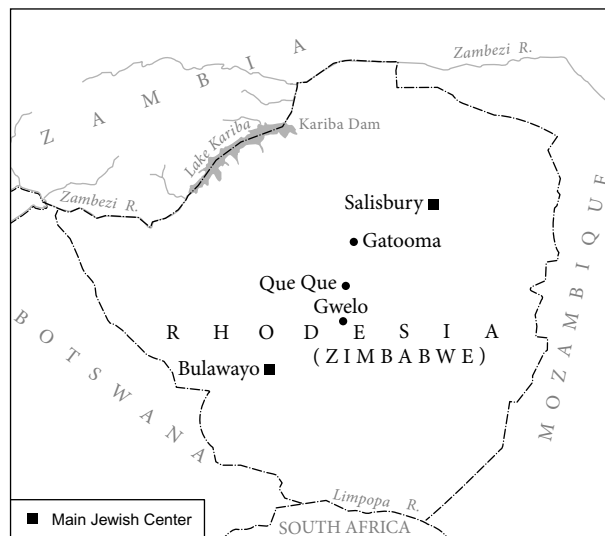
[Zvi Herman / Shaked Gilboa (2nd ed.)]

ZIMBABWE, formerly the British colony of Southern Rhodesia and, briefly, the Republic of Rhodesia. Organized Jewish life in Zimbabwe goes back to 1894 when about 20 Jews were among the purchasers of land in Bulawayo. They established a congregation there in that year, followed by another in *Salisbury (later renamed Harare) in 1895. A third congregation, which remained small, was established in Gwelo in 1901. Individual Jewish traders had penetrated north of the Limpopo 35 years earlier, and a number of Jews were in the occupation column that Cecil Rhodes sent to Salisbury in 1890 as well as in the fighting columns of 1893 and 1896. An important role in the development of Rhodesia was played by Alfred *Beit. The majority of the Jewish settlers were of Russian and Lithuanian origin, although later on an appreciable number of Sephardim came from the Aegean island of Rhodes. The earliest settlers came up from the south, some by way of the east coast through Portuguese Beira. Joe van Praag, who later became mayor of Salisbury, is known to have walked from Beira. There was a small influx of German refugees in the late 1930s, and during the period of prosperity after World War II a considerable number of South African and English Jews settled in Rhodesia. The Jewish settlers founded newspapers and were largely responsible for pioneering efforts in transportation systems, mining, the tobacco industry, cattle and produce marketing, furniture and clothing industries, and the hotel business. As the population began to grow and disperse, a number of synagogues were established. According to census figures, there were 400 Jews in 1900, 1,289 in 1921, 2,219 in 1936, 4,760 in 1951, and 7,060 in 1961. The two main Jewish centers were Bulawayo and Salisbury, with smaller congregations in Gatooma, Gwelo, and Que Que. After 1965, when the ruling white su-


Jewish communities in Zimbabwe (then Rhodesia), 1971.

premacist Rhodesian Front unilaterally declared Rhodesian independence in a bid to perpetuate white minority rule, the Jewish population declined precipitously. UDI resulted in Rhodesia's being increasingly isolated by the international community, and it inevitably led in due course to a long, ruinous civil war between the white minority regime and the various black liberation movements (1976–79). The Jewish population was approximately 5,500 in 1968 and barely a quarter that number 12 years later, when political power finally passed to the black majority. Rhodesia was renamed Zimbabwe and the country's inaugural elections were won by Robert Mugabe's ZANU-PF party. Emigrating Jews largely settled in neighboring South Africa, although a fairly substantial number went to Israel or the U.K. The Jewish population, together with that of the white minority, continued to shrink under Mugabe's increasingly authoritarian rule. In December 1987, only 1,200 Jews remained in Zimbabwe, two-thirds of whom were over the age of 65. Nearly all were living in Harare and Bulawayo, the former midlands communities of Gweru, Kwe Kwe, and Kadoma having by then ceased to function. During the mid-1990s, Zimbabwe entered a sustained period of economic and political turmoil, as Mugabe's ruling ZANU-PF party resorted to ever more totalitarian methods to remain in power amidst crumbling social services, food and other shortages, and hyper-inflation. In 2004, fewer than 400 Jews remained in the country. Despite the attrition, the Jewish communal infrastructure remained intact, with organizations like the Zimbabwe Jewish Board of Deputies, Central African Zionist Organization, women's Zionist groups, and the Union of Jewish Women still functioning. There were three synagogues, all Orthodox, of which two were in Harare and the other in Bulawayo. Sharon School in Harare, whose student body is now 90% non-Jewish, nevertheless provides some Jewish-related instruction for the community's few remaining Jewish children. Savyon Lodge, the Jewish Aged Home in Bulawayo, had

31 Jewish residents in 2004. With an average age of over 70 and no sign of any reversal in the near future of the country's ongoing implosion, Zimbabwe Jewry is today a community coming to terms with its own imminent demise.

[Maurice Wagner / David Saks (2nd ed.)]

ZIMBALIST, EFREM (1889–1985), violinist and composer. Zimbalist was born at Rostov on Don, Russia, and received his earliest musical training from his father, a conductor, before studying at the St. Petersburg Conservatory with Leopold *Auer. He made his European debut with the Berlin Philharmonic Orchestra in 1907. In 1911 he went to the U.S., making his American debut with the Boston Symphony Orchestra, and became one of the most prominent violinists on the U.S. concert scene. In 1914 he married the singer, Alma *Gluck, who died in 1938. In the same year he married Mary Louise Curtis, the founder of the Curtis Institute of Music, Philadelphia, of which he became director in 1941. Zimbalist specialized in the history of early violin music. He composed the opera *Landara* (1956), orchestral and chamber works, songs, and *One Hour's Daily Exercises for Violin* (1918). He left the Jewish faith.

EFREM ZIMBALIST JR. (1923–), U.S. actor, musician, and producer, was the son of Efrem Zimbalist by Alma Gluck but was not of the Jewish faith. He was born in New York where, in 1947 and 1950, he produced three operas by Gian-Carlo Menotti. The last, *The Consul*, won a Pulitzer Prize and the New York Drama Critics' Award. Early minor roles with the American Repertory Theater led to his Broadway debut in *Hedda Gabler* (1948). After the death of his wife in 1950, Zimbalist went into semi-retirement, working with his father. In 1954 he returned to acting, and as the lead in the television series "77 Sunset Strip," won popular acclaim.

ZIMMELS, HIRSCH JACOB (1900–1975), rabbi and scholar. Zimmels, born in Yavorov, Poland, lectured from 1929 to 1933 at the Juedisch-Theologisches Seminar, Breslau, and from 1934 to 1939 was rabbi of the Israelitische Kultusgemeinde, Vienna. Zimmels left Austria for England after the Nazi *Anschluss* in 1938, and in 1944 was appointed lecturer in Bible, Talmud, and Jewish history at Jews' College London. He became director of studies in 1961 and was principal in 1964–69.

Zimmels' published works, based mainly on his important research into responsa literature, include: *Beitraege zur Geschichte der Juden in Deutschland* (1926); *R. David ibn Abi Simra's (R.D.b.S) Leben und Lebenswerk* (1932); *Die Marranen in der rabbinischen Literatur* (1932); *Magicians, Theologians and Doctors* (1952); and *Ashkenazim and Sephardim* (1958).

[Alexander Tobias]

°**ZIMMERLI, WALTHER** (1907–1983), Swiss Bible scholar. Born in Schiers (Graubuenden), Zimmerli was professor in Zurich (from 1938) and Goettingen (from 1951). The subject of his research is expressed in the title of the collection of his articles *Das Alte Testament als Anrede* ("The Old Testament as a Harangue," 1956) and *Gottes Offenbarung* (1963). In his commentary on Ezekiel (2 vols., 1955–69), he explains in detail the message of the prophet in its historical-traditional context; the present Book of Ezekiel is the result of a later development of the prophetic word within an "Ezekielian school." In his commentary, Zimmerli applies the form-critical method, especially to the theologically significant formulas (e.g., "formula of self-introduction," "statements of realization," "word of proof").

One of his main interests is the marginal position of the Wisdom writings in relation to the theology of the Old Testament (*Zur Struktur der alttestamentlichen Weisheit*, in ZAW, 51 (1933), 177–204); his commentary on Ecclesiastes belongs in this context (*Das Buch des Prediger Salomo*, 1962). In various works Zimmerli deals with aspects of the theology of the Old Testament (*Das Gesetz und die Propheten*, 1963; *Der Mensch und seine Hoffnung im Alten Testament*, 1968; *Die Weltlichkeit des Alten Testaments*, 1971).

[Rudolf Smend]

ZIMMERMAN, CHARLES SASCHA (1897–1983), U.S. labor leader. Zimmerman, who was born in the Ukraine, came to the United States in 1913 and went to work in a New York City knee-pants shop. In 1916 he joined the International Ladies Garment Workers Union (ILGWU) and thereafter the Socialist Party. With the emergence of the American Communist movement after World War I he became a member of the Communist Party, whose faction in the ILGWU he led throughout the early 1920s. In 1926, a year after becoming union manager of the Communist-controlled New York Joint Board, Local 22, ILGWU, Zimmerman organized a general strike. Though he considered the management's eventual settlement offer to represent a substantial victory for the workers, the Communist Party forced a continuation of the walkout, which ended in defeat. The experience had a sobering effect. Zimmerman, although he remained in the Party for a few more years as leader of its Needle Trades Industrial Union, resigned in 1929 and in 1931 he led Local 22 back into the ILGWU. After his return to the ILGWU Zimmerman played an active role in the struggle against Communist influence in the labor movement. He was made vice president of the ILGWU in 1943, a post he long held. He was also active in the American Labor Party in New York State, until his resignation in 1946, after it veered to the left. After World War II, through his activities in the Jewish Labor Committee, Zimmerman was active in the cause of civil rights. In 1949 he became a leader of Amum-Israeli Housing Corporation, an enterprise in low-cost housing in Israel undertaken by the ILGWU and several other American unions.

BIBLIOGRAPHY: M. Epstein, *Jewish Labor in U.S.A.*, 2 vols. (1950–53), index; idem, *The Jew and Communism, 1919–1941* (1959), index.

ZIMMERMAN, HARRY M. (1901–1995), U.S. neuropathologist. From 1930 to 1943 he was professor of pathology at Yale. After World War II he became chief of laboratories of New York's Montefiore Hospital and clinical professor of pathology at Columbia's College of Physicians and Surgeons. From 1963 he was professor of pathology at Yeshiva University's Albert Einstein College of Medicine.

For many years Zimmerman was consultant in pathology and neuropathology to hospitals and institutes, including the Armed Forces Institute of Pathology in Washington, D.C. He was associate editor of the *American Journal of Pathology* (1943–53). He wrote many scientific papers, and coauthored the three-volume work *Neuroradiology Workshop* (1961–68).

[Fred Rosner]

ZIMMERMAN, SHELDON (1942–), U.S. Reform rabbi, administrator. Zimmerman was born in Toronto, Canada, and received his B.A. (1964) and M.A. (1965) from the University of Toronto. In 1970, he was ordained at *Hebrew Union College-Jewish Institute of Religion, which awarded him an honorary D.D. in 1995. Following ordination, he was appointed assistant rabbi of New York City's Central Synagogue, where he was elevated to the position of senior rabbi in 1972 (1972–85). He was also a member of the faculties of Hunter College (1966–69), Fordham University (1971–74) and the New York campus of HUC-JIR, where he taught liturgy and rabbinics (1980–85). Reaching out to those in need, he organized an interfaith coalition of churches with his synagogue and founded the first feeding program for the homeless in the mid-Manhattan area; he also welcomed the first Alcoholics Anonymous group ever to meet in a synagogue. In addition, he served on the national rabbinic cabinets of the United Jewish Appeal, the Jewish National Fund, and State of Israel Bonds, as well as on the boards of the World Center for Jewish Unity and the Synagogue Council of America. He was religious news commentator for the radio station WOR and moderator of the Message of Israel radio broadcasts started by Rabbi Jonah *Wise.

In 1985, Zimmerman became senior rabbi of Temple Emanu-El in Dallas, Texas (1985–96), where was also adjunct professor at Southern Methodist University and Perkins Theological Seminary (1986–89). His civic involvement included serving as chairman of the Interfaith Commission of the Jewish Community Relations Council and on the Committee on Institutional Ethics at Baylor University Medical Center as well as on the boards of Children's Medical Foundation, Jewish Federation of Dallas, and the Chaplains Advisory Board of SMU. He also served as alumnus in residence at HUC-JIR's Los Angeles (1985) and Cincinnati campus (1989).

In the Reform movement, Zimmerman served as president of two of the three cornerstones of Reform Judaism: the *Central Conference of American Rabbis and HUC-JIR. After serving as a member of the executive committee and board of trustees of the Union of American Hebrew Congregations, president of HUC-JIR's Rabbinical Alumni Association and co-chairman of the UAHC-CCAR Joint National Commission on

Outreach, he was elected vice president (1991–93) and then president (1993–95) of the CCAR. During his term of office, he was selected by President Clinton to be part of a delegation accompanying Vice President Gore to Warsaw to commemorate the 50th anniversary of the Warsaw Ghetto uprising and was invited to Jerusalem by President Ezer Weizman to participate in a conference of leaders of world Jewry.

In 1996, Zimmerman was named the seventh president of Hebrew Union College-Jewish Institute of Religion. He was credited with restoring prominence to HUC-JIR's faculty; also during his tenure, the Los Angeles school began ordaining rabbis – prior to that students could begin their studies on the West Coast – and would have to complete them in New York and Cincinnati. He resigned in 2000 after an investigation into his conduct as a rabbi several years earlier led to his suspension by the Central Conference of American Rabbis, which never made public the accusation but merely the verdict. Soon thereafter, he was appointed executive vice president of *Birthright Israel in 2001. In 2003, he became vice president of *United Jewish Communities' Jewish Renaissance and Renewal. He returned to the world of academia in 2006, teaching rabbinics at HUC-JIR.

Zimmerman is the author of three family prayer books for Sabbath and the festivals and co-editor of *The Threat of a Mixed Marriage – A Response*. He has contributed to a number of books, including *Alcoholism and the Jewish Community, Twelve Jewish Steps for Recovery* and *Healing of Soul, Healing of Body* – which were informed by his pioneering efforts as a founder of the Federation Task Force on Jewish Alcoholism and the support group JACS – and for which he received the first Marshall Hochhauser Memorial Award. He was also a member of the advisory board of Jewish Lights Publishing and of the publication committee of the Jewish Publication Society of America.

[Bezalel Gordon (2nd ed.)]

ZIMMERN, SIR ALFRED (1879–1957), English political scientist and an authority on international relations. Born in London, the son of a Jewish merchant (his mother was of Huguenot descent), Zimmern was educated at Winchester and Oxford, where he was fellow and tutor from 1904 to 1909. From 1919 to 1921 he held the chair of international relations at the University of Wales-Aberystwyth. In 1930 he returned to Oxford as professor of international relations. Zimmern held several important posts in the British government and was an adviser to the Ministry of Education and the Foreign Office. He was also deputy director of the League of Nations Institute of Intellectual Cooperation from 1926 to 1930 and was special adviser to UNESCO.

Zimmern's writings include *The Greek Commonwealth* (1931⁵); *The Third British Empire* (1934³); *The League of Nations and the Rule of Law, 1918–1935* (1939²); and *Spiritual Values and World Affairs* (1939). They reflected his understanding of the historic factor in the development of international relations and, as a result, his advice on foreign affairs

was sought by various governments. Though Zimmern was not connected with the Jewish community, *Weizmann consulted him on political questions. Zimmern was a lifelong advocate of the outlawing of war, enforced by international agreement, and was, in 1917, one of the first to suggest that war be outlawed by international treaty. He also believed in the inevitable progress of the human race, a proposition for which there was tragically little evidence during his lifetime. After 1947 he lived and taught in New England, dying in Connecticut.

ZIMRI (Heb. זִמְרִי; "my strength or protection [is the Deity]"), son of Salu, chieftain of a Simeonite ancestral house (Num. 25:14). The Israelites profaned themselves at Shittim by whoring with the Moabite women and by joining them in sacrifices to their god Baal-peor (Num. 25:1–2). Incensed, the Lord let loose a plague upon Israel (see Rashi, Num. 25:3) and ordered Moses to execute the ringleaders publicly (Num. 25:4). The earlier offense was further aggravated by Zimri, who brought a Midianite woman into his household (cf. Ibn Ezra, Num. 25:6) in full view of Moses and the assembled community who were bemoaning the plague. In an act of zeal for the Lord which became legendary (see I Macc. 2:26; IV Macc. 18:12), Phinehas son of Eleazar son of Aaron the priest killed both Zimri and the Midianite woman, Cozbi daughter of Zur, of a noble Midianite family. It was his action that turned away the wrath of God from the children of Israel. The plague ceased, but its victims numbered 24,000.

In the Aggadah

In midrashic literature the biblical events are further dramatized in that Zimri openly challenged Moses' leadership and the validity of the Torah. Zimri shamed Moses into silence by reminding him of the non-Israelite origin of his own wife Zipporah (although this was not really a sin since he had married her before the acceptance of the Torah at Sinai). It was Phinehas who prevented complete disaster. He remembered a law which Moses had forgotten in his confusion – that at that time an Israelite caught in the act of openly consorting with a foreign woman was liable to immediate execution by zealots. Advised by Moses to carry out this law, Phinehas executed Zimri and Cozbi, and the threat was ended (Sanh. 82a). In Josephus' amplified version of the story, Moses feared an open confrontation with the rebels and merely exhorted the people to remain faithful to God. Encouraged by his weak reaction, Zimri denounced the law as a tyrannical limitation of man's ability to act according to his own will. The quick action of Phinehas put an end to the rebellion (Jos., Ant., 4:141–56). Phinehas became a symbol for zealous action for the Lord, while Zimri became a symbol for the worst rebellion against God and his Torah: "Fear neither the Pharisees nor those who are not Pharisees, but those hypocrites who resemble Phari-

sees whose deeds are like the deeds of Zimri, yet they demand the reward of Phinehas" (Sot. 22b).

[Gershon Bacon]

ZIMRI (d. 885/4 B.C.E.), king of Israel. When Baasha's son *Elah had reigned only a few months, he was slain by Zimri, commander of half of the chariots. Upon taking power, Zimri executed all the males among the relatives and admirers of Baasha (I Kings 16:11), thus fulfilling the words of the prophet Jehu (I Kings 16:11–14). However, Zimri reigned only seven days, for *Omri, who was in command of the force that was laying siege to the Philistine town of Gibbethon, was proclaimed king by his men. He marched with them to *Tirzah, the royal residence of those days, which he captured without much difficulty. Before Omri reached the citadel in which the royal palace was situated, Zimri set fire to the palace over himself (I Kings 16:8–18). Though his reign was short, Zimri became a symbol of the slave who turns against his master. A generation later, when *Jehu assassinated *Jehoram, the last king of the House of Omri, the dowager queen *Jezebel mockingly addressed him as "Zimri, slayer of his master" (II Kings 9:30–31).

[Gershon Bacon]

ZINBERG, ISRAEL (**Sergei**; 1873–1939), historian of Hebrew and Yiddish literature. Born near Kremenets, Volhynia, into a maskilic family, Zinberg, a chemical engineer by profession and scholar by avocation, published his first work in the field of literary history in 1900 – a monograph, in Russian, on Isaac Baer *Levinsohn. Editor of, and chief contributor to, the Hebrew and Yiddish literature divisions of the Russian-Jewish encyclopedia (*Evreiskaia Entsiklopediia*, 16 vols., 1906–13), Zinberg served on its editorial board. Among the many Russo-Jewish periodicals and Yiddish publications to which he contributed were *Voskhod*, *Der Fraynd,* and *Di Yidishe Velt*, which he also helped to establish in St. Petersburg in 1912 (with S.*Dubnow and S. *Ginsburg). His monograph on old Yiddish literature appeared in *Istoriia evreiskogo naroda* (1914). In 1917, together with S. *Niger, Zinberg edited a Sholem Aleichem memorial volume. During these years he was active in the cultural life of St. Petersburg, wrote for newspapers, and gave lectures which prepared for his monumental *Geshikhte fun der Literatur bay Yidn* ("History of Jewish Literature," 9 vols. in 11, 1929–66), which chronicles Jewish literary creativity from the Spanish period to the end of the Russian Haskalah. In this monumental work, Zinberg displayed much scholarship, erudition, and originality both as critic and historian. Basing the study on primary sources, he combined the study of historical documents, social context, the primary centers of Jewish literature, and the languages used by the writers, and thus succeeded in giving a sense of the unity and diversity of Jewish cultural creativity and writing a readable

history, which has become a standard work in its field (Hebrew transl., 1955–60; English transl., 1972–78).

Arrested in 1938 and deported to Vladivostok, where he died the following year, Zinberg was "rehabilitated" by the Soviet government in 1956. At the time of his arrest his papers were confiscated. Discovered later among these papers at the Academy of Sciences in Leningrad was the manuscript of the first part of the final volume of his history. Entitled "The Flowering of Haskalah Literature in Russia," the manuscript, dealing with the early works of S.J *Abramovitsh (Mendele Moykher Seforim), Abraham Uri *Kovner, M.L. *Lilienblum, Isaac Meir *Dik, and I.J. *Linetzki, was published by YIVO and Brandeis University in 1966.

Among Zinberg's other works are *Proiskhozhdenie Sheiloka* ("The Origin of Shylock," 1902), *Zhargonnaia literatura i yego chitateli* ("Yiddish Literature and Its Readers," 1903), *Dva techeniia v evreiskoi zhizni* ("Two Trends in Jewish Life," 1905), and *Istoriia evreiskoi pechati v Rossii* ("History of the Jewish Press in Russia," 1915), a study covering the Hebrew, Yiddish, and Russian Jewish press. A selection of Zinberg's essays, *Kultur-Historishe Shtudien* ("Studies in Cultural History," 1949, ed. by Jacob Shatzky), which appeared in New York, contains original Yiddish essays as well as translations from Russian.

ZINNEMANN, FRED (1907–1997), U.S. film director and producer. Born in Vienna, Zinnemann went to Hollywood in 1929, worked as a script clerk, and in 1934 directed a full-length documentary, *The Wave*. Later he applied documentary techniques to feature films, and worked for M.G.M. until 1950, when he started on his own.

Among his most important films are *The Seventh Cross* (1944); *Act of Violence* (1949); *The Search* (Oscar nomination for Best Director, 1949); *The Men* (1950); *Benjy* (produced; Oscar for Best Short Documentary, 1951); *The Member of the Wedding* (1952); *High Noon* (Oscar nomination for Best Director, 1952); *From Here to Eternity* (Oscar for Best Director, 1953); *Oklahoma!* (1955); *A Hatful of Rain* (1957); *The Nun's Story* (Oscar nomination for Best Director, 1959); *The Sundowners* (produced; Oscar nomination for Best Picture and Best Director, 1960); *Behold a Pale Horse* (produced, 1964); *A Man for All Seasons* (produced; Oscar for Best Picture and Best Director, 1966); *The Day of the Jackal* (1973), *Julia* (Oscar nomination for Best Director, 1977); and *Five Days One Summer* (produced, 1982).

Among his many awards, Zinnemann received a Lifetime Achievement Award from the Directors Guild of America in 1970. His autobiography, *Fred Zinnemann: A Life in the Movies*, was published in 1992.

ZINOVIEV, GRIGORI YEVSEYEVICH (1883–1936), principal architect of the Communist International and its first chairman. He was Bolshevism's leading advocate of world revolution. He was born Grigori Yevseyevich Radomyslski in Yelizavetgrad (now Kirovograd), Ukraine. His bourgeois parents were Jewish, but Zinoviev, early in his youth, became completely assimilated to Russian life, particularly to the radical Marxist socialism then sweeping broad segments of the intelligentsia. He joined the Russian Social Democratic Workers Party in 1901, and its Bolshevik wing in 1903.

Having played an active role in the 1905 Revolution in St. Petersburg, he was chosen as a delegate to the Stockholm (Unity) Congress of the Social Democratic Party in 1906, where his powerful and inspiring oratory attracted immediate attention and assured him a prominent position in the Bolshevik hierarchy.

During the post-revolutionary period, Zinoviev shared *Lenin's exile and came to be the latter's closest collaborator, writing "everything that Lenin thought was required," whether it be "newspaper articles, circulars to party friends, resolutions, or brochures." He served as an editor of *Proletariy* and *Sotsial-Demokrat*, Bolshevik newspapers, and of *Kommunist*, a Bolshevik journal. In 1912 at the Prague Conference of the Bolsheviks, he was elected to their Central Committee

In the course of World War I, Zinoviev's close relationship with Lenin deepened. Jointly they published a landmark work, *Against the Tide*, attacking both the war and Social Democratic leaders who had supported the war; jointly, they organized the Zimmerwald (1915) and Kienthal (1916) Conferences of dissident Socialist groups; jointly, they rode the "sealed train" that took them back to Russia in April 1917, following the collapse of the czarist regime; and jointly, they went into hiding after the July uprising against the Provisional Government.

Zinoviev, panicking at a moment of crisis, split with Lenin in October on the question of the seizure of power. He feared that a Bolshevik coup at the time would lead to foreign intervention and a counterrevolutionary peasant uprising. Yet Zinoviev remained in the Central Committee of the party and continued to be one of its key figures until the middle of 1926. Early in 1922 he became a member of the all-powerful Politburo. In Petrograd he was the unchallenged "boss" both of the soviet and the party.

If Zinoviev had his hands on the levers of power within Russia, it was in Comintern activity that his influence was most strongly felt. Indeed, he was relieved of national administrative posts so that he might devote the maximum attention to the international revolutionary movement. Until November 1926 he was the chairman of the Comintern's executive committee and the driving force of its presidium. His ideological pronouncements constituted the major premises for the strategy and tactics of Communists everywhere. During 1919–20 his role was especially prominent, with the Comintern character and structure molded largely by him.

However, the retreat of the international revolutionary wave, beginning in 1921, dimmed his luster. The collapse of the "March Action" in Germany (1921), for which he was largely responsible, and the defeat of the revolution in Germany in October 1923, contributed to the decline of his international image. Yet his power within Soviet Russia was unquestioned. Following Lenin's death in January 1924, he joined with *Stalin and Lev *Kamenev to constitute the "Troika" of preeminent party leaders. Together, they drove Leon *Trotsky into political isolation.

The "Troika" foundered on Stalin's doctrine of "socialism in one country" and his aspiration for sole party leadership. Considering Stalin's doctrine a threat to world revolution, a capitulation to the peasants, and the beginning of "Thermidor," Zinoviev joined Trotsky in the "Joint Opposition" formed in July 1926. An intense struggle for power culminated in his complete defeat and ouster from the party in December 1927 at the 15th Party Congress. Zinoviev was a master of the art of intrigue, but found himself completely outmaneuvered by the general secretary of the party.

Seven years later, following the assassination of Sergey Kirov, Zinoviev was arrested. Stalin was now preparing to deliver the final blow to his political opponents and, in August 1936, the first of the "Great Purge" trials was held. Zinoviev, along with 15 colleagues, was formally arraigned on charges of having organized the "terrorist centers" that allegedly had plotted Kirov's murder. Public admissions of guilt by the accused were followed by death sentences, immediately carried out. Zinoviev's name disappeared down the "memory hole" to be resurrected only on occasion as a symbol of treachery.

Even after N. Krushchev's disclosures at the 20th Party Congress in 1956 which hinted that the Kirov murder may have been a frame-up, Zinoviev was not rehabilitated. Current official histories of the party mention his name but rarely, and then only to castigate him, although the 1936 charge of treason is no longer mentioned.

ZION (Mount Zion; also *Sion, Mountain of Zion*; (Heb. צִיּוֹן, הַר צִיּוֹן), hill and fortress in Jerusalem. The origin of the name is uncertain. Suggestions have included a rock, stronghold (צִיּוֹן), a dry place (צִיּוֹן), or running water (Hurrian: *ṣeya*). The name Zion was first used for the Jebusite fortress ("the stronghold of Zion"), on the southeast of Jerusalem, below the Ophel and the Temple Mount. On its capture by David it was renamed "City of David" (II Sam. 5:7; I Kings 8:1), and the name later included also the Ophel (Micah 4:8; Isa. 32:14). In poetry Zion was used by way of synecdoche for the whole of Jerusalem (Isa. 2:3; 33:14; Joel 3:5), and "daughter (or virgin) of Zion" referred to the city and its inhabitants (Isa. 1:8; 30:16; Songs 1:5). Zion

often referred by way of metonymy to Judea (Isa. 10:24; 51:11) or the people of Judea (*ibid.* 51:16; 59:20). Sometimes Zion referred simply to the Temple Mount (Joel 4:17, 21; Ps. 20:3) and it was this use that became the regular one by the Maccabean period, when the Temple Mount was called "Mountain of Zion" (ὄρος Σιων; I Macc. 7:32–33), as opposed to the lower city, the upper city, and Acra (on the southwestern hill of ancient Jerusalem). By Josephus' time "the stronghold" (of Zion; τὸ φρούριον) was identified with the upper city and the upper agora (Wars, 5:137; cf. Ant., 7:62), which included the sites identified at present with Mt. Zion, as well as David's Tower. By the first century C.E. the whole of that elevation, called Mt. Zion, was surrounded by a wall, part of which (in the southwest section) lay under the present city wall and part (its northern line) ran along the present King David Street, while the eastern wall ran through the present Jewish quarter. The fact that the Acra was situated at the northeast corner, and the royal palaces were there, probably encouraged the belief that Zion was to be identified with this area.

In the first century C.E. a small church was built on the southern end of the hill, and it was identified with the Coenaculum ("Room of the Last Supper"). In 1342 the Franciscans rebuilt it and this is substantially the building surviving to this day. The Franciscans were expelled by the Muslims in 1551 and were permitted to return and build a monastery near there only in 1936. This is the Church of the Dormition of Mary.

The Traveler from Bordeaux (333) cites that a single synagogue, one of the seven synagogues of ancient times, was left on Mr. Zion. This is confirmed by archaeological excavations performed at the northern wall of David's Tomb, where evidence for the existence of a late Roman synagogue was found, which seems to have been repaired during the reign of Julian the Apostate (361–3). The synagogue was associated with David as early as the fourth century, and by the tenth century his grave was located there, probably because of the biblical dictum that he was buried "in the city of David" (I Kings 2:10). It is believed by some that Saladin fortified the Coenaculum and David's Tomb by a wall in the 12th century, but the present city wall runs behind them. In 1524 the site was turned into a mosque of "the Prophet David." After 1948, when Mount Zion was the only section of east Jerusalem to remain in Jewish hands, David's Tomb was once again turned into a synagogue and became the most important pilgrimage center for Jews in Israel (see *Pilgrimage; *Holy Places). The archaeological remains of the Hellenistic Fullers' Quarter just south of the grave have been uncovered. Next to the tomb is "the Holocaust Chamber" dedicated to those who died under the Nazis. The name Zion also lent itself in modern times to organizations connected with Judaism or Jews, e.g., Zionism, Zion Mule Corps, etc.

ZIONISM.

This article is arranged according to the following outline:

THE WORD AND ITS MEANING

The root of the term "Zionism" is the word "Zion," which very early in Jewish history became a synonym for Jerusalem. It had a special meaning as far back as after the destruction of the First Temple in expressing the yearning of the Jewish people for its homeland. Thus "Zion" is found in the Psalms, "By the rivers of Babylon,/There we sat down, yea, we wept,/When we remembered Zion" (Ps. 137:1); in the prayer, "And let our eyes behold Thy return in mercy to Zion"; in the poem, "Zion! Wilt thou not ask if peace be with thy captives/That seek thy peace – that are the remnant of thy flocks" (Judah Halevi); and frequently elsewhere in religious and secular literature.

The modern term Zionism first appeared at the end of the 19th century, denoting the movement whose goal was the return of the Jewish people to Ereẓ Israel. It was coined by Nathan *Birnbaum in his journal *Selbstemanzipation* (April 1, 1890). Birnbaum himself explained the term (in a letter of Nov. 6, 1891) as the "establishment of an organization of the national-political Zionist party in juxtaposition to the practically oriented party that existed until now." The term was thus intended to express a political orientation toward Ereẓ Israel in place of the prevailing philanthropic approach. The extent to which the new word filled a need in the young movement can be gauged from the plethora of subtitles of *Selbstemanzipation* from its first appearance until the May 18, 1893 issue, when the definition "Organ der Zionisten" ("Organ of the Zionists") was adopted. However, despite the precise meaning which Birnbaum intended to convey by it, the terms "Zionism" and "Ḥibbat Zion" (see below) were still used interchangeably, and it was only gradually that the meaning of political Zionism,

as distinguished from its "practical," almost wholly philanthropic aspect, gained acceptance. This happened finally and unequivocally with the appearance of *Herzl.

Herzl, who knew nothing of the semantic developments of the word Zionism, first used it to denote philanthropic-supported small-scale settlement. It was only when preparations for the First Zionist Congress had commenced and when, at the last moment, two of the speakers at the Congress – R. Hirsch *Hildesheimer and Willy *Bambus, leading members of the *Esra Society – withdrew their participation, due to Herzl's explicit political orientation, that Herzl began to stress the importance of the "Zionist" Congress, to be distinguished from the Ḥibbat Zion movement. The Basle program adopted at the First Zionist Congress explicitly endorsed Herzl's political conception of Zionism. From then on, Zionist history was viewed as being divided into two epochs; Ḥibbat Zion up to the First Congress, and from then on "Zionism," i.e., political Zionism. This did not, however, put an end to the prolonged struggle between the two concepts inside the Zionist movement, between the "political" and the "practical" Zionists, each of whom regarded their approach to the realization of the Zionist aim as the genuine meaning of the term "Zionism." It was at the Eighth Zionist Congress (1907) that Chaim *Weizmann coined a new term, "synthetic" Zionism, which stipulated that the two approaches supplement each other and are in reality two sides of the same coin: political activity is meaningless unless it is based upon practical settlement in Ereẓ Israel, and settlement alone could not develop into desirable proportions without the support of political efforts.

[Gideon Kouts]

FORERUNNERS

On the threshold of modern times, as far as ethnic and historical consciousness is concerned, the Jews were better prepared for a national movement than any other ethnic group in Europe. Before this consciousness could become an ingredient of modern nationalism, it first had to undergo certain transformations. By the same token, however, all peoples had to undergo important changes in their attitudes before they could be caught up by a national movement; they had to elevate the attributes of their ethnic group to ultimate values. Jewish society achieved its nationalist transformation with the appearance of a modern idea, later called Zionism, which purged, so to speak, Jewish messianic belief of its miraculous eschatological elements and retained only its political, social, and some of its spiritual objectives. Even in this phase of development, however, Zionism leaned heavily on the old messianism and derived from it much of its ideological and even more of its emotional appeal (see *Messianic Movements). Yet all this was accomplished only at the end of the 19th and the beginning of the 20th century. Thus, in spite of the fact that the Jews preceded other nations in possessing the potentialities of nationalism, the development of the Jewish national movement in its Zionist form lagged behind that of most of the European nations.

The shattering of the traditional existence of European Jewry, as separate religious-ethnic entities somehow connected with the surrounding estate-structured, prenationalistic society, was followed by a transitional period that partly preceded and partly coincided with that of the forerunners of Zionism. This period was basically rationalistic, aiming principally at the integration of the Jews in the new, rapidly changing European society, but it simultaneously evolved certain features (particularly pronounced in the *Haskalah period), which were later absorbed into the stream of Zionist ideology. One of them was the revitalization and modernization of the Hebrew language, which eventually culminated in the historical achievement of Eliezer *Ben-Yehuda; another, the striving for economic "productivization." An additional trait of this period was the emergence of the politically minded Jewish leader who appraised the world around him realistically, in the light of a defined political activity.

One cannot, however, properly speak of "forerunners" of Zionism such as Rabbi Judah *Alkalai, Rabbi Ẓevi Hirsch *Kalischer, Chaim *Lorje, Rabbi Elijah *Guttmacher, Moses *Hess, and others, before the end of the 1850s or the beginning of the 1860s. Only then could they succeed in uniting the widely scattered adherents of their idea through mutual contact. The factor common to all, their faith that the future existence of the Jewish nation is conditioned by its return to the historical homeland, became a basis of social unity. The difference between the earlier period and the 1860s is not difficult to explain. The 1860s saw the completion of emancipation in most West European countries, and where it was not yet wholly accomplished, it was thought to be just round the corner. As long as the struggle for political equality of the Jews was going on, the idea of Jewish nationalism could not be tolerated, for the argument that the Jews are a separate national entity was one of the main weapons of the gentile enemies of emancipation. From the 1860s on, when the emancipation seemed all but completed, the idea of Jewish nationalism could be propagated as the next phase. Kalischer even suggested that Jewish nationalism was the natural continuation of the emancipation itself.

The old messianic idea, however, did not disappear completely under the impact of rationalism; it remained alive in the Jewish masses. As late as 1840, there was a widespread rumor in the Balkans and in Eastern Europe that the messianic year, which was destined to bring about the great turning point in Jewish history, had arrived. Many held this belief genuinely and were waiting in a state of mental agitation. For one of these believers, Rabbi Judah Alkalai (1798–1878), his messianic expectation became a point of departure for the transition from the traditional, miraculous messianism to a realistic one. This change of conception was caused by the coincidence of the messianic expectation with the rescue of the Jewish community in Damascus, which had been charged with ritual murder, by the two leading figures of French and English Jewry, Adolphe *Crémieux and Sir Moses *Montefiore. As the miraculous events of the redemption failed to appear, Alkalai

inferred that the rescue of this one community was a model for the messianic procedure. The future stages of redemption were to be achieved through similar activities of outstanding Jews. Alkalai was an undistinguished preacher of a little Sephardi community in Semlin, near Belgrade. Until the year of his newly found conviction, he was hardly known outside his limited circle, nor did he wish to be known. However, after he became convinced that the era of the Messiah had arrived and that the redemption would have to be achieved by human action, he felt compelled to convey this message to his fellow Jews. In the remaining 37 years of his life, not only did Alkalai publish numerous pamphlets and articles to spread his ideas, but he traveled on two occasions to Western Europe and later settled in Ereẓ Israel in order to convince Jews and non-Jews of the truth of his mission. He tried to induce people to join an organized resettlement of Jewry, or some part thereof, in their homeland and to equip themselves with the attributes of a modern nation. Although Alkalai began as a preacher imbued with the traditional, and especially kabbalistic, sources, he gradually acquired the elements of a modern national conception. He propagated the idea of Jewish national unity through an overall organization of world Jewry, with modernized Hebrew as its common language. Religion would also play its part in the new national life, but as the controversy between Orthodoxy and Reform grew, Alkalai sought a remedy to this in the idea of national unity.

Ẓevi Hirsch Kalischer (1795–1874) developed his ideas on similar lines. A German rabbinic scholar of Polish origin, he refused to accept any position in communal life. The great experience of his youth was the emancipation of the Jews in France and in the German countries at the time of Napoleon. He explained these events in terms derived from Jewish tradition. The emancipation, and even more the ascendance of Jewish individuals (e.g., the *Rothschilds) to unheard-of economic and political influence, appeared to him to be the fulfillment of the old prophecy of liberation which, according to Jewish tradition, was to terminate the exile. It is true that the prophecy was not yet realized, for it entailed the ingathering of the Jews to their homeland. Therefore, as early as 1836, Kalischer appealed to Meyer Anschel Rothschild to buy from Muhammad Ali the whole of Ereẓ Israel, or at least Jerusalem or the Temple area, so as to initiate the miraculous redemption "from below," and later he addressed the same request to Moses Montefiore. By interpreting the events of emancipation in terms of messianism, Kalischer simultaneously transformed these very terms. From the first stage of deliverance, which was brought about by human activity, he inferred the nature of the next stages, which were also to be achieved by human agency. Thus his interpretation of the emancipation led to the demand for the ingathering of at least some part of Jewry in Ereẓ Israel.

In order to place these theories in the correct perspective, one must bear in mind the underlying motives of their promoters. These theories of redemption were derived from a reinterpretation of the messianic tradition in the light of re-

cent historic experiences. In view of later developments, it is important to note that modern antisemitism was not among these experiences. The activities of Alkalai and Kalischer took place during the flourishing period of Middle European liberalism, e.g., between 1840 and 1875, when optimism about the possible integration of Jews into the life of European nations was almost universal. Certain obstacles to achieving full civil rights, as well as some signs of reservation in social rapprochement, were interpreted as residues of waning prejudices. Alkalai and Kalischer were among the optimists. Until the 1870s they never advanced the argument that Jews needed a country to secure their physical existence, which was later to become one of the main planks of Zionism.

The same can be stated about the motives of the socialist Moses Hess. Hess was not an Orthodox Jew but a social revolutionary and philosopher with a Hegelian tinge. His conversion to Jewish nationalism in the 1860s can be understood as the result of the unmaterialized social revolution. Hess based his Zionist ideas on the concept of a national spirit which permeated the life of the Jewish people. Since the dispersion, the "spirit" was embodied in the Jewish religious institutions, but as these institutions were rapidly disintegrating, the gradual disappearance of the Jewish spirit was the most probable – and the most lamentable – prospect. In order to rescue this spirit, the only solution was the reconstruction of national life in the ancient homeland. Hess's argument is phrased in terms of social philosophy, while the emotional climate was provided by resentment against the non-Jewish society which had frustrated the Jews' expectation of being treated as equals. In any event, any diagnosis excluding emancipation as a possible solution to the "Jewish problem" is absent from the theory of Hess, as it is absent from those of Alkalai and Kalischer. More obvious than in the theories of Alkalai and Kalischer is Hess's dependence on the general trend of nationalism in Europe. The use of such terms as "nationality," "national renaissance," and "creative genius of the nation" indicate the source of influence, i.e., romanticism, which provided all the national movements with their respective ideological tools. Hess's *Rome and Jerusalem*, as its title indicates, was written under the impact of events which had led to the unification of Italy in 1859. Hess expressly refers to this fact, calling the Jewish cause "the last national problem," after Italy had solved its own. However, impulses from non-Jewish sources can also be traced in the cases of Alkalai and Kalischer, as both use one characteristic argument in their appeal: Jews, who are the descendants of a holy and ancient nation, should not lag behind the newly created nations of the Balkans.

The real difference between Alkalai and Kalischer on the one hand and Hess on the other, is the spiritual background from which their respective drives stemmed. While the first two were originally steeped in the sources of Jewish tradition, including the Bible, Talmud, and Kabbalah, the last had only a faint idea of these sources from his childhood. He was influenced in his knowledge of Jewish history and its evaluation by the contemporary historian Heinrich *Graetz. However, the

fabric of Hess's outlook was woven out of strands which were of modern European, primarily Hegelian, origin. He was far from being a religious Jew, in any traditional sense, and, judging by his earlier activities and writings, he must be counted as one of those Jews who were absorbed by European movements and systems of thought.

Hess was the first figure in Zionist history who did not grow out of Jewish tradition. His Jewishness returned to him after a period of estrangement. Thus, Hess and his two contemporaries, Alkalai and Kalischer, prefigure the two main types of Zionism: one had to overcome the miraculous elements of traditional messianism; and the other, after having forsaken the tradition altogether, had to recover its cultural and political implications.

Attributing the emergence of the Zionist idea to the revitalization and modernization of the messianic utopia does not mean that the mere suggestion of regathering the Jews in their homeland was sufficient for initiating the movement. The historical connection between the Jews and their ancient homeland was indeed a conspicuous feature in Jewish, as well as Christian, tradition. The idea of the restoration of the Jews gained currency, especially in England, where the awakened interest in the Old Testament in the wake of the Puritan revolution strongly stimulated interest in the history of the Jewish nation (see Christian Zionism, below). Imaginative Jewish writers and social projectors also readvanced the idea of establishing a Jewish commonwealth, either in Palestine or elsewhere, with a view to solving the "Jewish problem." A case in point was the efforts of Mordecai M. *Noah, one-time consul of the United States in Tunis, who in 1825 issued an appeal to European Jewry to establish a Jewish state named "Ararat" on the Grand Island of the Niagara River. Noah later fostered the idea of the restoration of Palestine.

At first the general Jewish public either took almost no cognizance of these ideas and their promoters or reacted to them with mockery and derision. Alkalai, who had begun his activities 20 years earlier, succeeded in finding any substantial and lasting support only in the 1860s. From this time on, a connection can be perceived in the activities of the various early Zionists. The three great figures described here not only knew of each other, but also supported each other. They succeeded in founding a more-or-less interconnected society among themselves, together with other, less conspicuous personalities who were influenced by them or who had reached the same conclusions independently. Moreover, from the 1860s onward there is an uninterrupted development, and one may speak of historical causation as the ideas and activities of these early Zionists led the way to the full-fledged Ḥibbat Zion movement, founded in the 1880s under the impact of the Russian pogroms and the rise of modern antisemitism in Germany.

By and large, it cannot be said that the forerunners had succeeded in realizing something of their aim, i.e., the ingathering of Jews in their homeland. Until the 1870s, when anti-Jewish troubles began in Romania, there had been no Jewish exodus from any country in Europe. Instead of producing an idea in order to satisfy a need, the early Zionists were searching for a need which would correspond to their ideas. Kalischer seized any rumor of Jews wishing to emigrate as a God-sent opportunity to prove that people who were ready to go to Ereẓ Israel could be found. Thus he tried to refute the argument that his theory had no hold on reality, but he never tried to prove the social necessity or inevitability of his idea. The first real objectives of Zionism were realized only in the 1880s, when persecutions and defamation in Romania and bloody pogroms and civil disqualifications in Russia set many European Jews into motion.

[Jacob Katz]

ḤIBBAT ZION

*Ḥibbat Zion (Heb. "Love of Zion") was the ideology and movement whose aim was the national renascence of the Jews and their return to Ereẓ Israel. The movement in the 19th century flourished mainly in the large Jewish communities of Eastern Europe (Russia-Poland, Romania). The Ḥibbat Zion societies merged with the Zionist Organization upon its establishment by Theodor Herzl, although some of them continued their formal existence until World War I.

ROOTS OF ḤIBBAT ZION. The Ḥibbat Zion movement derived most of its ideas from the basic values of Jewish tradition: the sense of exile, the longing for redemption, and the religious and spiritual attachment to Ereẓ Israel. Most of the Jews of Eastern Europe, however, were distant from organized political and social activity, and their religious leaders – with a few exceptions – were even opposed to it on the grounds that the coming of the Messiah should not be urged by human endeavor (dehikat ha-keẓ) and that it constituted human interference in the ways of providence. The problems of the Jewish national renascence and the settlement of Ereẓ Israel were mainly discussed by individuals who were motivated to action by messianic visions or by the influence of the national awakening of European peoples. Ẓevi Kalischer and Judah Alkalai (see above) had propagated the idea of settling Ereẓ Israel as early as the 1840s and 1850s, and the former had initiated a consultation of several rabbis and representatives of the communities of Germany in 1860 in order to found a company for this purpose. Shortly after this conference Chaim Lorje of Frankfurt on the Oder founded the Jewish Company for the Settlement of the Holy Land. Neither propaganda nor these activities had any substantial effect on the public, however, just as scant attention was paid to Moses Hess's *Rome and Jerusalem* and David *Gordon's articles in *Ha-Maggid*, which supported the settlement of Ereẓ Israel. When the Ḥibbat Zion movement was founded, however, its religious sector was influenced by the ideas and the example of these first rabbis.

The public debate on the question of Jewish nationalism began at the end of the 1860s with the renewed strength of the movement for religious reform in Germany and Hungary. This movement called for the national and cultural assimilation of

the Jews and for a break with the national tradition by removing references to Zion and Jerusalem from the prayer book and basing the Jewish religion on its "eternal truths" alone. Peretz *Smolenskin was among those bitterly opposed to these trends, denouncing them in the monthly *Ha-Shaḥar* which he began publishing in 1868. He placed the Jews firmly among the peoples aspiring to national liberation. Eliezer *Ben-Yehuda's important articles "*She'elah Nikhbadah*" ("An Important Question") and "*Od Musar lo Lakaḥnu*" ("We Have Not Learned Our Lesson") in *Ha-Shaḥar* (1879), relating the national renascence in Ereẓ Israel to the revival of the Hebrew language as a spoken tongue, were an essential contribution to the crystallization of Ḥibbat Zion as an ideological trend.

BACKGROUND TO THE EMERGENCE OF THE MOVEMENT. The Ḥibbat Zion movement arose at a time when developments in Eastern European states were pressing large numbers of Jews to emigrate or engage in intensified social and political activity. At the same time leading advocates of the Enlightenment (*Haskalah) became disillusioned with their faith in the possibility of Jewish assimilation among the nations and were disappointed in their hopes to attain equal rights for Jews. A decisive force in this direction was the series of pogroms in *Russia after the assassination of Czar Alexander II (1881). The fact that the sincere aspiration of the *maskilim* and the Jewish youth to grow closer to the Russian people had been met with a wave of hatred and that the government had been quick to declare the pogroms as the "reaction of the people" to "Jewish exploitation" and had begun to impose severe restrictions on the sources of income, government posts, and admission to institutes of learning available to the Jews caused a severe ideological crisis among the *maskilim*. Many of those who had grown distant from their people began to return to it (visiting the synagogue, participating in fasts, etc.). Others who had previously pinned their hopes on the struggle to change the social system began to realize that this would not automatically answer the "Jewish question." Among those who advocated a national renascence, the realization became apparent that a spiritual and linguistic revival was not sufficient, and that they must set their sights on a real homeland, in which the Jews would not be regarded as aliens. The example of Germany, where a widespread antisemitic movement arose at the end of the 1870s, served as a warning and proof that neither Enlightenment nor emancipation was sufficient to guarantee the status of Jews in their countries of residence. Jewish writers and *maskilim* embarked on a penetrating discussion of antisemitism and its causes. The times, however, were unsuited to ideological discussions alone. The panic-stricken flight of thousands across the borders and the suffering of the refugees in the places where they were concentrated emphasized the need for a speedy and urgent "national solution."

THE BEGINNINGS OF THE MOVEMENT. The majority of the active Jewish public felt that the only solution was to leave Russia; only a small minority, mainly the wealthy and

their relatives, opposed emigration. Many societies, especially among the youth, were formed for this purpose, and there were many arguments between those who supported Ereẓ Israel as a "place of refuge" and those who favored the United States. Foremost among the Ḥovevei Zion – those in favor of going to "the land of our fathers," "to which we have historical rights" – was Moses Leib *Lilienblum, who was soon joined by Smolenskin, Leo *Levanda, and others. The journals *Ha-Shaḥar, Ha-Maggid, Ha-Meliẓ*, and *Razsvet* (in Russian) became the disseminators of the ideas of Ḥibbat Zion. Most of the Ḥovevei Zion societies, especially those of the young *maskilim*, advocated radical national programs. The students' society Aḥavat Zion, founded in 1881 in St. Petersburg, declared that "every son of Israel who admits that there is no salvation for Israel unless they establish a government of their own in the Land of Israel can be considered a member of the society." The charter of the *Bilu society stated: "The goal of the society is the politico-economic and national-spiritual revival of the Jewish people in Syria and Ereẓ Israel." Some of the societies regarded their aim as imminent *aliyah* to Ereẓ Israel, while others emphasized preparation and the propagation of the concept of the settlement of Ereẓ Israel among the people. All of them, however, agreed upon the means toward settlement as the acquisition of land (either granted by the Turkish government or purchased) and the creation of a class of Jewish farmers and artisans in the country.

Romanian Jewry was aroused by the idea of settling Ereẓ Israel. The Romanian government's devious disavowal of its explicit obligation – according to the decisions of the Congress of Berlin, 1878 – to grant equal rights to all its citizens and the dispossession of growing numbers of Jews from their sources of income had made the true value of those legal guarantees clear to many Romanian Jews and brought them face to face with emigration as the sole solution. At the end of 1881 there were over 30 societies for the settlement of Ereẓ Israel in Romania, and on Jan. 11–12, 1882, a conference of Ḥovevei Zion took place in Focsani and elected a central committee, with its headquarters in Galati. (See also below, Zionist Organization in Romania.)

PINSKER'S "AUTOEMANCIPATION." The new movement was provided with a systematic ideological basis by Leon *Pinsker in his *Autoemancipation*, which appeared in September 1882. Although initially he did not contemplate Ereẓ Israel as the most suitable territory for the Jewish state, he eventually joined the Ḥibbat Zion movement. He came into contact with societies in different localities, and after consultation with Lilienblum, Hermann *Schapira, Max *Mandelstamm, and others (in September 1883) a memorandum was sent out calling for the establishment of a central executive committee to be elected by a congress of delegates from all the Societies for the Settlement of Ereẓ Israel. Shortly afterward the Zerubavel society (with Pinsker as chairman and Lilienblum as secretary) was founded in Odessa and immediately became the central society of the movement; it was followed by the Warsaw so-

ciety, which was headed by Saul Pinḥas *Rabbinowitz and Isidor *Jasinowski.

SETTLEMENT ACTIVITIES. Many of the Ḥovevei Zion pinned their hopes on the support of the *Alliance Israélite Universelle and on other Jewish organizations. However, when these organizations searched for a haven for the refugees from Russia who were concentrated in Brody, they did not direct their migration to Ereẓ Israel at all: some were sent to the United States and some were returned to Russia. At the conference of delegates from various Jewish groups that met in Berlin in April 1882 to discuss the question of emigration, only Azriel *Hildesheimer came out in favor of settling the refugees in Ereẓ Israel, and his proposal was not met with sympathy. Representatives of the societies nonetheless went ahead, and in the spring of 1882 a considerable number of settlers began to reach Ereẓ Israel, prompting the Turkish authorities immediately to publish orders to forbid further entry. The Ḥovevei Zion turned for aid to their British sympathizer Laurence *Oliphant, and asked him to intervene with the Turkish government, but he had no influence in Constantinople. Among those who succeeded in reaching Ereẓ Israel in July 1882 were 14 members of the Bilu Society who had gone, without any property, to work as agricultural laborers.

Despite the Turkish ban on immigration, the foundations of Jewish agricultural settlement in Ereẓ Israel were laid in that year. In July 1882 Zalman *Levontin and his companions established Rishon le-Zion, and shortly afterward members of the Moinesti society from Romania settled in Rosh Pinnah (which had previously been settled and then abandoned by Jews from Safed). At the same time, the settlement in Petaḥ Tikvah, which had been founded by Jerusalem Jews in 1878 but had later been abandoned, was revived. At the end of 1882, a group of Romanian Jews settled in Zammārīn (later Zikhron Ya'akov). However, the meager resources of the new settlers, their lack of preparation, and the difficulty of local conditions worked against them, and soon after the establishment of the new settlements they were in need of help. It soon became apparent that the various societies in Russia and Romania were in no position to provide the required assistance, and Baron Edmond de *Rothschild was persuaded by Samuel *Mohilever and Joseph Feinberg (of Rishon le-Zion) to assist a group of Jewish farmers from Russia to settle in Ereẓ Israel (they later founded Ekron) and to take the settlement of Rishon le-Zion under his protection. In the course of time most of the settlements became sponsored by Baron de Rothschild; the exception was Gederah, which was founded by the Bilu'im in 1884. The regime of strict supervision of the settlers through the agency of Rothschild's officials was a constant source of friction and rebelliousness. Meanwhile, settlements continued to be founded until the end of the 1880s.

THE ORGANIZATION. Although it was clear to all the active members of Ḥibbat Zion that the movement had to be unified and organized, opinions differed on the form of organization. Younger and more radical elements demanded emphasis on the ultimate national aspirations and open opposition to the philanthropic organizations, while more bourgeois elements advocated moderation and supportive activities. The 100th birthday of Moses Montefiore provided the movement with a suitable occasion for convening all its active members, and the first conference of Ḥibbat Zion took place on Nov. 6, 1884, at Kattowitz (see *Kattowitz Conference). Thirty-five delegates participated in the conference; most of them were from Russian societies, and the rest were from Romania, Germany, England, and France. An account of the movement's achievements proved rather unimpressive. The great tide of Jewish emigration had been stemmed, and even the large Jewish organizations had abandoned hope of guiding and directing it; the Turkish government had closed the gates of Ereẓ Israel, and those few who had succeeded in reaching the country were considered infiltrators. It is therefore not surprising that the main value of the conference was its demonstration of the unity of Ḥibbat Zion and of the Jewish people as a whole. Pinsker hoped to attract Jewish personalities and organizations from the West into the movement. It was decided to call the organization Mazkeret Moshe be-Ereẓ ha-Kodesh and to establish a central committee with headquarters in Berlin, since conditions in Russia made legal activities on behalf of the movement impossible there; until the establishment of this committee, it was decided to set up a temporary committee in Odessa and a subcommittee in Warsaw. The resolutions accepted at the conference concerned mainly practical matters – organizational methods and ways of supporting the settlements. There was no mention, either in the debates or in the resolutions, of the major questions of national revival or the great national goal.

These concessions, however, were in vain. In Germany, not a single Jewish personality of any stature was found to head the proposed committee, and the resolution to establish a Berlin center was cancelled. Neither did other societies of Ḥibbat Zion that were founded in German and English towns succeed in achieving importance. Even the society in Kattowitz, which in 1883 had published the German-language movement organ, *Der Kolonist*, lost its importance. Only the student organization *Kadimah in Vienna, which published *Selbstemanzipation* from 1885 on, survived. The movement in Romania stagnated until the beginning of the 1890s, and the Russian societies were involved with minor affairs. The organization consolidated itself, however; there were almost 100 societies with a membership of approximately 14,000, which collected about 30,000 rubles a year from donations and another 20,000 rubles from various enterprises. Propaganda among the masses was emphasized; preachers (e.g., Ẓevi Hirsch *Masliansky and Judah Leib Yevzerow) and entertainers (e.g., Eliakum *Zunser) did much to spread the ideas of Ḥibbat Zion. Nonetheless, there was friction between the different societies, and opposition to the existing leadership emerged.

In June 1887 the Second Conference, this time of Ḥovevei Zion in Russia, met in Druskininki and resolved to call the movement Ḥovevei Zion. Mohilever attempted to impose an

Orthodox authority over the movement, but was foiled by younger representatives, such as Menaḥem *Ussishkin from Moscow, Ze'ev Berman from St. Petersburg, and Meir *Dizengoff from Kishinev. Pinsker was finally reelected to lead the movement, with six advisers, three of whom were famous rabbis: Mohilever, Naphtali Ẓevi Yehudah *Berlin, and Mordecai *Eliasberg. It was also decided to renew efforts to gain permission from the Russian government to organize the movement. In 1890 Alexander *Zederbaum, editor of *Ha-Meliẓ*, succeeded in obtaining government sanction for the Society for the Support of Jewish Farmers and Artisans in Syria and Palestine, which became known as the *Odessa Committee. The founding conference, which took place legally – for the first time – that year in Odessa, was attended by numerous delegates from all over Russia. Increased contributions enabled the establishment of the settlements of Reḥovot and Haderah (1890–91), the consolidation of Mishmar ha-Yarden, and provided support for the veteran settlements. An executive committee was set up in Jaffa under Vladimir *Tiomkin to supervise the distribution of support and the acquisition of land. The Esra Society in Berlin and other societies in Frankfurt, Paris, and London intensified their activities. The second "Russian Exodus," which took place after the expulsion of Jews from Moscow in 1891, led to increased *aliyah* and to speculation in land, and the Turkish authorities renewed their ban on immigration and settlement.

THE SPIRITUAL CENTER. The "practical" activities of Ḥibbat Zion gave rise to harsh criticism, especially on the part of *Aḥad Ha-Am. This criticism was partially inspired by Aḥad Ha-Am's view that Ereẓ Israel could not provide a solution for the masses of emigrants, but should rather serve as a "spiritual center" to unite all parts of the disintegrating nation. It was in this spirit that the *Benei Moshe society was founded. The crisis in settlement activities after the short-lived increase in *aliyah* at the beginning of the 1890s sowed fresh disillusionment in the ranks of Ḥibbat Zion and strengthened the influence of Aḥad Ha-Am, who had several supporters among the members of the Odessa Committee. Emphasis on the need for spiritual preparation brought about an intensification of the ideological and cultural activities of Ḥibbat Zion, especially after the founding of the Aḥi'asaf publishing house. Despite the importance of Aḥad Ha-Am's criticism, however, his approach could not serve as a basis for the activities of the movement. It is not surprising, therefore, that upon the appearance of Herzl and political Zionism, the vast majority of the Ḥovevei Zion societies joined the new Zionist Organization.

[Shmuel Ettinger]

IDEOLOGICAL EVOLUTION

THE SHOCK OF THE 1880S; POLITICAL ZIONISM. Modern Zionism began with need and in disillusion. The new thinking was a reaction to dramatic and tragic events in Russia. Czar Alexander II was assassinated early in 1881 by revolutionaries, among whom there was one young Jewess in a minor role.

Immediately thereafter a wave of pogroms spread all over the country. The physical results of the murder and pillage were dire, but the moral impact of these outrages was even more devastating. It was commonly believed that the perpetrators of these attacks were encouraged and even organized by governmental circles; it was certainly beyond doubt that the authorities did little to defend the Jews against the pillagers and murderers. What was perhaps even more upsetting, at least to elements of the advanced Jewish intelligentsia, was that many liberal and revolutionary circles did not defend the Jews but preferred to see in these outbreaks the first stirrings of social change, in which the Jews were being attacked for their supposed exploitation of the Russian peasants and laborers. The whole system of anti-Jewish restrictions had locked the Jews of Russia into a few miserable middleman occupations, in which they could not help but be "unproductive"; the Jews were as much victims as those whom they were supposedly victimizing. Yet all this was ignored by so advanced a group as the leaders of the populist (Narodnik) movement, even though there were some Jews among them, as they hailed the pogroms as the first necessary revolutionary convulsion.

The conclusion drawn on all sides from this shock was that there was no future for Jews in Russia in the existing regime. A segment of the Jewish intelligentsia turned to revolution and lost all hope in the possibilities of reform in the land. Great masses followed in the path of the substantial trickle of emigration that had begun in the 1870s, and, despairing of any economic future in Russia, they moved westward, chiefly to the United States. In the years between 1881 and 1914 some 2,600,000 Jews from Russia and its immediate neighbors immigrated to the "new land." Some contemporary figures, chiefly Leon Pinsker and Moshe Leib Lilienblum, drew other conclusions. They did not believe that hatred of Jews was limited to Russia alone, or that the problem was ultimately to be solved by emigration to friendlier countries or even by the achievement of emancipation in legal theory. The young Lilienblum was in Odessa in 1881 as an "enlightener," a *maskil*, completing his own secular education, in the certainty that the road to freedom for Jews required their westernization, which would then make them acceptable to "benevolent Russia." He was then also mildly socialist in his political outlook. But cowering before the pogrom mob, it became clear to him, as he was soon to write, that the revolution might take place and yet not bring freedom to the Jews; that they might still be excluded and hated even in a new order; and that the future of Jews lay in the restoration of Jewish nationhood. The more important, and more famous, immediate reaction to the pogroms and to the failure of hope which attended them, was that of an even more committed "enlightener," Leon Pinsker. He left Russia for Central Europe in those months to search for allies for his new views, which he published in German in a pamphlet called *Autoemancipation*. The simple assertion of this essay was that antisemitism, which he called Judophobia, was a permanent psychopathological phenomenon, not only a social one, so long as the Jews were a "ghost nation" – ev-

erywhere a minority and nowhere a normal national majority, everywhere "guests" and nowhere "hosts." Antisemitism was "xenophobia," the hatred of the stranger, but it differed from all the usual varieties of such tensions, if not in kind then in degree, as it was the longest lasting and most pervasive form of this malaise. In the light of pogroms Pinsker finally rejected the notion that any amount of change by Jews to make themselves over into the image of their gentile neighbors could finally gain them acceptance in the majority society. He thus agreed with the antisemites that by their ill-will they had proved their case, that the Jews were irretrievably and forever alien, and that the dream of assimilation was not possible, not because the Jews could not assimilate but because the majority would not let them. It followed rationally from these premises that the way to solve the Jewish problem was to remove the Jews from the places of their dwelling, from the situation of abnormality surrounded by hatred, to a territory of their own where they would become a normal nation. Such a place was not necessarily the land of the ancestors in Erez Israel, though Pinsker was aware that there were historic and emotional ties to the land, but rather the most readily available land that was suitable for settlement, preferably on the American continent, where Jews could develop their own autonomy. For all of his disbelief in the promise of the era of the emancipation that Jews would be personally accepted as equals in Europe, Pinsker's outlook was still emancipatory, still rooted in the desire to engineer the acceptance of the Jews as equals in the modern world. What was new was that Pinsker saw this world as consisting of nations which disliked foreigners, so Jews had to cease being foreign by becoming a proper nation. He was in the first stage of awareness that such national equality was not granted as a gift from on high, because the peoples were not generous, but rather as a result of the national effort of those who desired their national dignity.

Those to whom Pinsker turned in Western Europe showed sympathy for him, but thought that he had been totally unnerved by the sight of the pogroms in his country. In Russia itself the few who organized the Ḥibbat Zion movement in 1882 were motivated also by other impulses than the national theorizing of Pinsker. Their concerns were, like those of Alkalai and Kalischer of the previous generation, a blend of the older, religious longing for the messianic restoration of Zion and the new language of modern nationalism, allied to the notion that gradual settlement in Erez Israel was at least a step in the direction of the ultimate consummation. Pinsker reluctantly found in these groups the only possible adherents and he consented to become their leader. Aḥad Ha-Am, his younger contemporary who was to become the major ideologist of this strand of Zionism, insisted after Pinsker's death, and in contrast with Theodor Herzl, that Pinsker's major concerns had been "the revival of the spirit," i.e., the renaissance of the Hebraic culture in a modern key, and that he had never wavered from his commitment to Zion as the only possible land for the endeavor of a Jewish renaissance – and, for that matter, that Pinsker had never dreamt of more than

an elite, representative Jewish community in the Land. All this was fairly adequate as a statement of Aḥad Ha'am's own premises, but Theodor Herzl was thoroughly right in his assertion that, had he known of the existence of Pinsker's *Autoemancipation*, he would not have written *Der Judenstaat*. Herzl's views were indeed almost exactly those of his Russian predecessor.

It is now no longer believed that Herzl wrote *Der Judenstaat* in immediate reaction to the beginnings of the Dreyfus Affair, which he witnessed and on which he reported as the correspondent in Paris of the leading daily paper of Vienna. Herzl's shift from a fashionable journalist who believed in the assimilation of Jews into the majority culture had begun earlier, in reaction to renewed antisemitic agitation of the German-speaking world in the 1880s culminating in Karl *Lueger's appointment as mayor of Vienna on an antisemitic platform. Kaiser Franz Joseph had vetoed his election three times, but that such a party could prevail in cosmopolitan Vienna was a major shock. The beginnings of anti-Jewish agitation in the very home of the emancipation, Paris, where the French Revolution had first given equality to some European Jews in 1791, could only confirm that the trouble was real, and pervasive. Herzl was, if anything, even less involved in Jewish cultural concerns than Pinsker, who had been a leader of the "enlighteners" before his conversion to Jewish nationalism and had even so labored among his people in that period. What gave particular bite to Herzl's views was that he made no distinction, explicit or implicit, between "Eastern" and "Western" Jews. This (and not some intellectual belief in the indivisibility of the Jewish spirit) was the meaning, in the context of his thinking and writing in 1896, of his oft-quoted sentence, "We are a people – one people." What he saw was one Jewish situation all over the world, that of a national group which was an anomaly. His first thought had been that of total assimilation and at first he even fantasized about the possibility of leading all Jews to the great cathedral of St. Stephan in Vienna, where their baptism would make an end of antisemitism. He turned away from this "solution" (in which he had been preceded by such figures as David Friedlaender and Napoleon a century earlier, at the dawn of the era of emancipation) because he knew that it would not work, that antisemites hated Jews even after they were totally assimilated. Herzl therefore proceeded to argue in *Der Judenstaat*, exactly like Pinsker, that the essence of the Jewish problem was not individual but national and that the Jews could gain acceptance in the world only if they ceased being a national anomaly. He too spoke of the creation of a commission which would survey the possible territories on which the Jewish State would be founded, and he left open the question as to whether it would be better to opt for Palestine with its historic associations or for some vacant land in Argentina. Intellectually, what was original in Herzl's analysis was his dialectic use of the conception of antisemitism as a "reasonable" form of hatred of the unlike. Herzl argued, on the basis of his bold assertion that he alone understood this phenomenon correctly, that even antisemites

אדון נכבד!

ביום א׳ ב׳ וג׳ אלול ש״ז יתאספו חו״צ בכל הארצות לקונגרס־הציוני
בבאזל (בשוייץ). היום ההוא שבו יתאחדו אחינו המפוזרים בדעה אחת,
יהיה יום נצחון לתחית לאומנו. האספה בבאזל תהיה התחלת תקופה
חדשה בהתפתחות תנועתנו.

שם יספרו לנו אחינו מכל פנות הארץ ע״ד מצבם ומנומותיהם, שם יתברר
מה התנועה הציונית דורשת ממעריציה. שם תתברר ותתאחד פעולתנו,
שהיתה קרועה לכמה גזרים, ע״י הנהגה כוללת לכל סניפי העבודה. שם
תראינה עינינו קבוצי־גליות, שיתאחד כל הכחות לפעולות אחת, גדולה וכבירה.
הקונגרס שואף למטרות קרובות ואפשריות. כל הידיעות האחרות
על אדתיו קלוטות מן האויר. כל מעשי הקונגרס יהיו בפרסום גמור.
בוטחני והחלטתי לא תהיה שום התנגדות לחוקי איזו ארץ ולהנימותיע
האזרחיים. ביהוד אנחנו ערבים בזה, שכל מעשי האספה יהיו באופן
מקובל ומרוצה לחו״צ ברוסיא וממשלתם הרוממה.
בזה נבקש או׃:ר.אדון נכבד!את חברינו שבחוך, שתואילי
ולהשתתף באספתנו. הקונגרס הראשון שלנו הוא התל שהכל פונים אליו.
אוהבים ואויבים מחכים לו בעינים כלות.ולכן עלינו להראות לכלכי חפצנו
ברור ויכלתנו גדולה. שם לא ימלא הקונגרס את תפקידו, אז תבא עי״כ נסינה
לאחור בתנועתנו לזמן רב. והכל תלוי רק בהשתתפות מרובה של
אחינו ברוסיא, ששם רוב מנינינו.
אנו מקוים, שתדעו את חובתכם ותבאו לאספתנו. באספה אפשר יהיה
לדבר עברית. בבאזל יש אכסניא כשרה.
דבר בואך מהר נא להודיענו עפ״י הכתבת הנ״ל.

בשם "הועד להכנת הקונגרס הציוני״:

Dr. Marcus Ehrenpreis   Dr. Theodor Herzl
המזכיר   ראש־הועד

Buchdruckerei Max Brach, Diakovar. 2349.—97.

Invitation to the First Zionist Congress at Basle, 1897. It is signed by Herzl as head of the preparatory committee and Marcus Ehrenpreis as secretary. Jerusalem, Central Zionist Archives.

could and would be enlisted in laboring for a Jewish State, for it would help them solve problems that they had with Jews, who were "unnecessary" in the host societies and whose very existence disturbed social peace. Since he accepted without question that men were reasonable and not demonic (Herzl went so far as to say that the emancipation was basically irreversible), he could only presume that history would inevitably move forward and produce the only possible solution to the tension between the Jews and the majority society, a Jewish State.

The very nobility of his person, the appearance of a man who suggested the ancient prophet and seemed the equal of great statesmen of his own day, lent resonance to Herzl's words, and he was particularly moving to masses of Jews in Eastern Europe precisely because he was a "Westerner" come back to his people. His tactics were perhaps even more important as an original contribution to the formation of the Zionist movement. Into the teeth of the antisemites who had made the word "Jew" into an insult, and of the assimilationists who used such circumlocution as "Hebrew" and "Israelite," he spoke boldly of the *Judenstaat*, which means not "The Jewish State" but, literally, "The Jew State." He saw the Jewish question as an international political question to be attacked in the forum of international politics. He therefore organized the Zionist movement at the First Zionist Congress in 1897 in such fashion that the gathering had about it the aura of a Jewish parliament in session, and he made of his presidency of the movement something reminiscent of the role of a head of state or a prime minister. All of the new instruments that were created – the Zionist Congress as a political forum, the buying of the shekel as an act of allegiance to the national movement, a bank (The *Jewish Colonial Trust) to be financed by the buying of shares, and an official press in several languages to inform the adherents of the political activities of the central body and its principal leader – these did indeed constitute the adumbration of Herzl's bold assertion in his diary at the First Zionist Congress in 1897, "Here I have created the Jewish State."

In the few years that were given him at the head of Zionism, he held consistently, until near the very end of his days, to the line that only the attainment of a charter, of a political document granting Jews near-sovereign rights in the territory that they were to settle, was the first objective of Zionism. He therefore fought against turning the Zionist movement into an instrument of piecemeal settlement, and the aid that was given the early settlements in his lifetime, little though it was, was a concession that he made to his opponents in the movement, the "practical" Zionists.

Herzl bitterly opposed the turning of Zionism toward cultural endeavors either by linking it with the secular Hebrew revival or by coupling Zionism with the national religious orthodoxy of the Mizrachi faction which was arising near the end of his days. For that matter, even though he was himself a certain kind of aristocratic social reformer (he dreamt of a seven-hour day in the Jewish State and even wanted its flag to contain seven stars to mark this social advance), Herzl opposed the setting up of the Socialist faction within Zionism. For him the movement that he had created existed for one purpose: the translation of "a people without a land" to some "land without a people." He did indeed turn his first and major ongoing efforts toward negotiating with the sultan of Turkey for a charter for Jews in Palestine or in its immediate vicinity, but those who opposed him in 1903, when he wanted to accept the proposal of the British Government for a Jewish settlement in East Africa (see *Uganda Scheme), were not entirely wrong in remembering that Herzl's commitment to Zion was unlike theirs, and that on theoretical grounds he had always remained a Zionist created by the "plight of the Jews" (*Judennot*), and not by cultural commitment.

Nonetheless, the bulk of Herzl's followers, even though all assented to his political vision of a national movement treated as an equal among the powers of the world, came to his Zionism with less clear-cut, more complicated motivations. It was not only that individual parties and factions arose, each of which wanted the future Jewish State to take a certain shape and to be constructed consciously in such a direction. More fundamentally, the needs that Zionism served among the mass of its East European believers were not always identical with those which had moved Pinsker and Herzl.

CULTURAL AND "SYNTHETIC" ZIONISM. The basic distinction in contemporary polemics was made around the turn of the century by Aḥad Ha-Am: he refused to believe that it was humanly possible, even under the most favorable conditions, in the light of the Jewish birthrate, for the majority or even any substantial fraction of the Jews of the world to emigrate to their national homeland and thus significantly reduce the population in the Jewish Diaspora. He thus saw the "Jewish plight" as intrinsically insoluble by purely Zionist means, and the Jews could only do what they had already done in the Exile in bad times: either emigrate to more favorable countries, such as America, or temporize with the conditions in Russia. Aḥad Ha-Am himself did a bit of both, eventually emigrating to London, where he practically stopped writing but served in an important way as spiritual guide to the young Chaim Weizmann and a coterie of others. The fundamental problem of the modern age, and the one to which Zionism could indeed address itself, was the crisis not of the Jews but of Judaism, i.e., the rapid and radical disintegration of Jewish faith and identity that was going on everywhere. A secularist and positivist himself, Aḥad Ha-Am did not believe that the process of loss of religious faith was reversible. The function that revealed religion had performed in talmudic and medieval Judaism, that of guaranteeing the survival of the Jews as a separate entity because of their belief in the divinely ordained importance of the Jewish religion and people, it was no longer performing and could not be expected to perform. The crucial task facing Jews in the modern era was to devise new structures to contain the separate individuality of the Jews and to keep them loyal to their own tradition. This analysis of the situation implied, in its very first assertions, a view of Jewish history which Aḥad Ha-Am produced as undoubted and which has since become the common coin of secular Zionist and Israeli historiography: that the Jews in all ages were essentially a nation, and that all other factors profoundly important to the life of this people, even religion, were mainly instrumental values.

A thousand years earlier Saadiah Gaon (d. 942 C.E.) gave expression to the *raison d'être* of the Jew in the pre-modern era when he pronounced that "the Jewish people is a people only for the sake of its Torah," i.e., that Jews exist as the instrument of Judaism. To accept this definition in the modern age of disbelief would mean that contemporary Jews have broken radically with their past, that continuity no longer existed in Jewish history, and that whatever solution could be found for the present situation would address itself to masses of individuals who still bore the name "Jew," in varieties of suffering or quiet desperation and on various levels of pride or self-hatred, to help them make the best of their situation. Such an understanding of Jewish modernity could lead to an assimilationist conclusion, as it had throughout the 19th century. It could also support the basic thesis of Herzl that the Jews existed as a community in his day only because they shared a negative situation, antisemitism, and that this was the one problem which they could, in the here and now, solve together. Those who chose to deal with that problem only by national and

Extract from Herzl's diary for Sept. 3, 1897, after the First Zionist Congress: "In Basle I founded the Jewish State. ... Maybe in five years, certainly in fifty, everyone will realize it." Jerusalem, Central Zionist Archives.

political means would then be free to evolve whatever culture might suit them. This view of modern Jewish culture was maintained by Hebrew writers and ideologists, such as M.J. Berdyczewski, J.Ḥ. Brenner, and Jacob Klatzkin. They could accept neither Aḥad Ha-Am's notion of ongoing continuity in Jewish history nor, more fundamentally, his description of the "national spirit" as an authoritative guide and standard to which he attributed a majesty comparable to that which the religious had once ascribed to the God of revelation. Brenner regarded the national past and most of the Jewish heritage as weak, desiccated, cringing, and unworthy. There was thus created at the beginning of the 20th century, in part under the influence of Friedrich Nietzsche, a school of thought which wanted to create a Jewish state not only because there had already been a radical break with the Jewish past but in order to realize such a change. These writers wanted to establish a bold and earthy people, whose hands would not be tied by the rules of the rabbis or even by the self-doubts of the prophets. (This trend toward a total break was never attractive to more than a small minority among the Zionists, but it eventually evolved into a heresy to be represented by those few Israel writers and intellectuals who opposed the very notion and term of Jewish peoplehood and Zionism – and were called *"Canaanites."

Of all the schools of thought that were arising within the Zionist movement in its very first few years, Socialist Zionism was, at least in practice, the most important. In the work of its founding father, Nachman Syrkin, and a few years later, of the younger, Marxist, Ber Borochov, a socialist explanation of the "plight of the Jews" was constructed. In this view, the Jews were everywhere rejected aliens because their economic pursuits were "unproductive" or peripheral. For their masses were locked in the Pale of Settlement without any outlet into the modern development of the general society and its economy. They were middlemen, small craftsmen or *luftmenschen* who were not integrally bound to the roots and basic aspects of production and especially not to farming, modern industry, and other forms of primary economic activity. Socialist Zionists did not, of course, blame the Jews for this unhealthy

economic situation, for they knew that it was not only a result of many centuries of persecution and discrimination but also of the "judophobia" of the gentile peasants and workers who regarded the Jews as alien "exploiters" and unwanted competitors; the antisemitism which attacked Jews because of their marginal economic role was the source of the very phenomenon that it attacked. This vicious circle produced the "inverted pyramid" of the Jewish economy in the Diaspora, the phenomenon that Jews were fewest in production and became more numerous the further away one went from farms and factories. That was the cause of an inevitable process of mass flight from Russia, Romania, and other countries, which would, in the view of Borochov, eventually propel Jews toward the land within which a proper kind of national economy, a "normal" pyramid, would be created. However, the non-Marxist Labor Zionists, particularly those in Erez Israel, such as A.D. Gordon, who was influenced by Tolstoy, affirmed neither such a historical inevitability of a mass emigration to Erez Israel nor its socialist future, nor did they theorize about the need to create a Jewish national community as a necessary precondition for "healthy class straggle," which could not take place in the Diaspora where both Jewish workers and their employers were trapped by unhealthy circumstances. For Gordon and his pioneering disciples Zionism was an act of will, an affirmation about the dignity of physical labor and the rootedness of man in his own soil, of the desperate necessity to create a new Jewish man in the Land of Israel to replace the disfigured human being who had been shaped by his misery and alienation from nature in the Diaspora. The men of the Second Aliyah, the young pioneers who went to Erez Israel in the first decade of the 20th century, adhered in their majority to some version of the socialist Zionist faith and especially to the notion that the "new man" whom they were creating and exemplifying through themselves was the essential positive feature of Jewish history in the modern era. This group was eventually to become the dominant element among the founders of the State of Israel. It had no doubt from the beginning of its career that it was the creative center of the Jewish world and that, most immediately, the Zionist movement was important insofar as it made their image of the Jewish settlement in Erez Israel possible.

The major thrust of Zionism in the era immediately after Herzl was neither toward his purely political activity for the achievement of the "charter," nor toward small-scale settlement combined with cultural evolution; it was toward "synthetic Zionism." This term was coined by Chaim Weizmann, who had been a young opponent of Herzl in his lifetime and who succeeded to the acknowledged leadership of the movement by 1917, when the Balfour Declaration was obtained from the British Government as the result of prolonged negotiations during which he had been the central figure. Weizmann was, however, not alone in this shifting of the Zionist outlook and policy. Even Herzl's immediate heir in the presidency of the movement, David Wolffsohn, and most of those with whom he surrounded himself, especially Nahum Sokolow, were com-

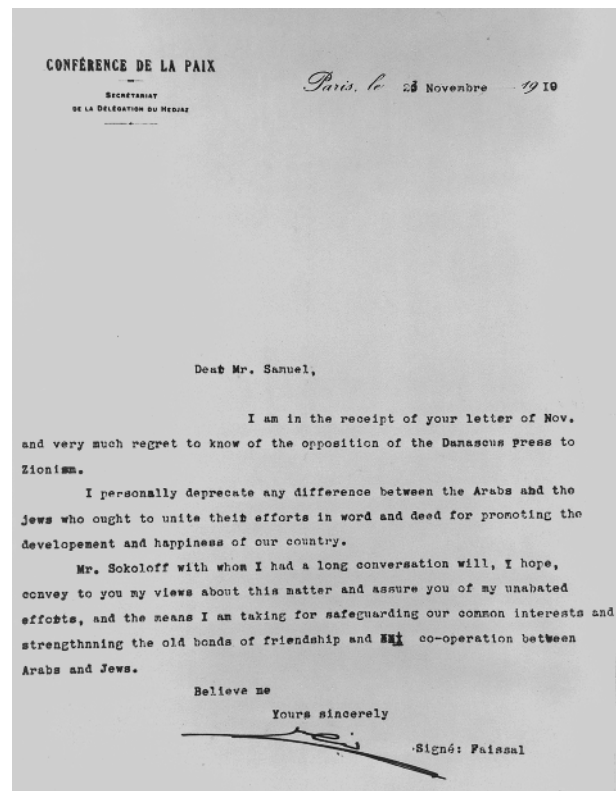
mitted or at least inclined to the cultural, Hebraic renaissance and to the gradual upbuilding of Jewish settlement efforts in Palestine as the ongoing immediate tasks of the movement, while continuing diplomatic efforts and hoping that the time would come when major political arrangements would be possible. Moreover, the very struggle for these achievements, the labor of securing, step after step, "one cow, one dunam" in the Land of Israel, or the laying of the foundations for an educational system in Hebrew culminating in the creation of the Hebrew University in Jerusalem, were the routine ongoing life of Zionism, while those who engaged in these daily endeavors continued to dream of the eventual Jewish commonwealth, to be achieved at some political turning point in history. The handful who were taking the lead in the early years of the century by going to Palestine were moved by visionary considerations, and they regarded themselves, and were regarded within the Zionist hinterland, as a kind of secular priesthood preparing the way for those who would follow. Even in the United States, where the Zionist movement consisted almost entirely of recent immigrants of the same origins as the pioneers in Palestine (so that these American Zionists were then not themselves candidates for joining the pioneer vanguard), the labor for Zion became a quasi-religious experience. Even those "Western" Jews in America who had become Zionists, because they said they wanted to extend philanthropic help to Jewish refugees who chose to go to Palestine, belonged to a generation in American life which was dominated, among both Jews and gentiles, by the "social gospel," the teaching that the meaning of religion is not in metaphysical faith or theology but in the work of social reform in this world. "Synthetic" Zionism thus provided those who adhered to it, everywhere, with such daily commandments as the collecting of money to help the Jewish National Fund purchase dunams for new settlers; with tales of courage and suffering by the pioneers in Palestine; with spiritual uplift at the sight of a cultural renaissance; and with the ultimate hope, sustained even in the decade between 1904 and 1914, that some great political event would come to pass.

The cultural and "synthetic" Zionists emphasized more than the purely "political" Zionists the activity called in Zionist debates *Gegenwartsarbeit*, i.e., "work in the present," in the Diaspora. They included in it not only the task to "conquer" the Jewish community councils, proclaimed by Herzl himself, but also the need for modernized Hebrew education, in new-type ḥadarim (called "ḥeder metukkan") and in secular-type schools; the establishment of Jewish athletic and sports clubs for the young (Bar Kokhba, later Maccabi, etc.); and, most important of all, the active participation, on separate Jewish tickets, in parliamentary and local elections, particularly in the Austrian Empire, in order to emphasize the existence of specific Jewish national interests in multinational states, crystallize the Jewish public around them and thus erect a barrier against political assimilationism.

Zionism was transformed into a mass movement and into a major political force by World War I. At the outbreak

of hostilities the seat of the Zionist executive was in the capital of one of the major warring powers – Berlin; and even though an office was soon established in neutral Copenhagen, there was no possibility of effective central direction in a situation in which major Jewish communities were on both sides of the line. The situation was all the more complicated by two facts: that Palestine was under the control of Turkey, which joined the Central Powers in 1915; and that the largest Jewish community in the world, and the one most disaffected from its own oppressive government, was in Czarist Russia, which was allied to the Western powers. The situation created complex interplays of political forces which resulted in such events as the partial expulsion and total harassment by the Turks in 1917 of the Jewish population of Palestine; the protection of Jews in Palestine by German influence in Turkey in order not to lose support of Jewish opinion in the world as a whole and especially in then neutral America; and, above all, the long deliberations which resulted in the publication by the British government on November 2, 1917, of the Balfour Declaration, in which it declared itself to be in favor of the establishment in Palestine of a Jewish national home, provided that the civil and religious rights of the non-Jews were not impaired. This act resulted from the desire of the British to appeal to U.S. Jewish opinion, whose support for the Allies was questionable until the U.S. entered the war at a very late stage in the British deliberations on Zionist aspirations, and to keep Russia in the war despite its revolutionary upheavals in 1917. Beyond these immediate purposes there was, however, a new atmosphere compounded out of markedly increased Jewish fervor for Zionism. This was a corollary to the rising nationalism among all peoples in Europe, including the Austro-Hungarian Empire, which the Allies were exploiting by promising such subject nations as the Czechs and the Poles their national freedom after the war. The self-determination of subject peoples was made into a central war aim by President Wilson when he announced his Fourteen Points.

LEGION AND SELF-DEFENSE. It was clear early in the war that this convulsion involving all the major European powers would inevitably lead to new political arrangements and thus give room for Jewish aspirations. Some of the Zionists, especially Joseph Trumpeldor, the Russian Zionist leader Vladimir Jabotinsky, and later also such young labor pioneers from Erez Israel as David Ben-Gurion and Izhak Ben-Zvi, believed that one way of making sure that Jews would be taken seriously at the peace table was to organize Jewish military units to fight on the side of the Allies. As a practical matter this was the way to enlist Russian Jews in the West, particularly in England, for while they would not return to their native land to fight for Russia, even if that had been possible, many were eager to enlist as Jews in the Allied cause. The British government was at first not overly enthusiastic or cooperative, but these efforts did result in the establishment of the Jewish Legion – the Zion Mule Corps, which fought at Gallipoli in 1915 and in the Jewish battalions which took the field in 1917. As military formations

they were of some importance, but their main significance was in the creation of the modern Jewish military tradition as a conscious national act. In the preparation of the claim for normal Jewish nationhood at the end of the war, something more than a symbolic army had fought beside the ultimate victors. Even earlier, with the very beginnings of Zionist settlement, Jewish armed guards (see *Ha-Shomer) had increasingly protected settlements against thieves and armed robbers. Both of these military traditions coalesced after World War I, when difficulties soon developed in Palestine between Jews and Arabs, into the creation of a semisecret Jewish self-defense organization, the Haganah. There was never sufficiently prolonged quiet in Palestine between the two world wars for Jews ever to be able to imagine that they would be safe without their own self-defense. By the late 1930s there was continuing open warfare between the Jewish and Arab communities, in which the British played an ambiguous role, at best, and in which the Jews could largely depend for their safety only on themselves. By this time *"illegal" immigration in the teeth of British restrictions had become a life-and-death matter for those Jews who could escape Europe. The Zionist movement as a whole, in all its factions, and not only the Revisionists, who had left the Zionist Organization because of its lack of militancy, was in a military struggle with both the Arabs and the British. There had thus evolved a new element which had been im-


Letter from Emir Feisal, head of the Arab delegation at the Paris Peace Conference, to Herbert Samuel, Nov. 23, 1919, expressing his positive attitude toward Zionism. Jerusalem, Central Zionist Archives.

plicit in the Zionist ideological vision of a normal nation: an increasingly independent military force, which, however small by international standards, was almost from its beginning a substantial power in the immediate region. The existence of armed strength added further "sovereign" dimensions of Jewish self-liberation to the vision of Zionism.

POST-WAR CONSENSUS AND DIFFERENTIATION. As World War I ended, the major arena of Zionist activity was, however, not in Erez Israel but in Paris, where the victors were meeting in 1919 to define the terms of peace. A variety of Jewish groups were officially in the lobbies of this conference. The most assimilated elements from France, England, and the United States would, for the most part, have preferred that the Jewish position at the Peace Conference be simply the demand for full individual liberty in all the states that were then being created in Central and Eastern Europe. The "Western" Jews were projecting the image of what they hoped was and would remain their own status, that of Frenchmen, Englishmen, or Americans who differed from others only in their private adherence to a differing religious faith. The Zionists, headed by Weizmann and Sokolow, came to Versailles to make sure that the intent of the Balfour Declaration (as they hopefully understood it to mean: an act pointing to the creation in measurable time of Jewish political independence in Palestine) would be incorporated in the peace arrangements. The delegates from Eastern Europe were mostly interested in insisting that such new states as Poland and Lithuania, and all the rest, be made to pledge the most solemn guarantees for the rights of national minorities within their borders. For Jews this meant self-definition as a national minority, parallel, for example, to the Ukrainians in Poland, with the right to conduct educational institutions with public money in their own national language, be it Yiddish or Hebrew; the right to self-governing community councils with status before the law; and, most sensitively, the right to appeal to the international community, which was seen to be represented by the League of Nations, over the head of the national government, if minority rights were violated.

There was internal struggle among these various parties in Paris. Out of their interaction there, and largely through the leadership of Louis Marshall, a kind of consensus was achieved which became the actual premise for all Jewish political life in the next decades, the interwar years. It was agreed that all would stand together for the minority rights of Jews in those countries in which the local Jewish population desired such a formulation of its identity. In practice this meant that the Jews of Eastern and Central Europe were publicly defined in new international arrangements as a separate people; for the Zionists this definition meant the possibility of struggling effectively within these Jewish national institutions to orient educational endeavors toward the new Hebraic culture and to prepare the hearts of the people to realize that only in complete national concentration in Erez Israel could there be a Jewish future. Throughout the 1920s and 1930s various

other factions were in combat with the Zionists within these new structures of the Jewish community. There was ongoing friction with assimilationist opinion, but this trend never achieved importance in the inner life of the East European Jewish communities outside the Soviet Union. The more serious battles were with the religiously orthodox, who were by then organized to a great degree around *Agudat Israel; this party found Zionism to be too secular. As a counterforce to these views the Orthodox wing of the Zionist movement itself, the Mizrachi, achieved particular importance during these years; it represented the possibility of a synthesis between the new national ideal of self-realization in Erez Israel, through cooperation even with nonbelievers who were laboring in the Zionist cause, and preserving and even refreshing traditional Judaism. The enemies of Zionism on the left were even more serious, because both the Jewish Socialist Bund and the Jewish elements within the mostly illegal Communist Party, in Poland and in several other adjacent countries, had substantial followings. The Zionists countered these visions of a new, revolutionary era by insisting, especially through their own socialist wing, that the new socialist society would have to be formed by the remaking of individual national societies and that, at least in the case of the Jews, rampant antisemitism, which had culminated in the mass slaughter of the Ukrainian pogroms in the post-revolutionary period and became a bitter reality in independent Poland, required that, whatever be the nature of the internal life of a Jewish independent society, the solution to the Jewish problem had to take a Zionist form. Several varieties of Zionist Socialism had been defined in the 1920s, ranging from moderate social democracy to the ultimately Marxist pro-communism of Ha-Shomer ha-Ẓa'ir.

Almost every one of these versions of Zionism, except for the most radical communist option, had existed as a school of thought and even as an organization, in some form, before World War I. However, these parties came to serious maturity in their encounter with the postwar realities: the internal struggles of East European Jewry and, of growing and soon of predominant importance, the battle for the definition of the life and character of the *yishuv*, the Zionist settlement in Palestine, as it increased tenfold, from roughly 60,000 in 1919 to 600,000, in the 1940s. In the interwar period a fully developed form of Jewish communal autonomy and self-government existed there, legally, in the *Keneset Yisrael with its executive body, the Va'ad Le'ummi, which was confirmed by the British Mandate Government and, extra-legally, in the internal discipline and cohesiveness of the Jews in the country. An even more important political process involved these very forces, both in the *yishuv* and among the Jewish masses of Eastern Europe, in their interaction in the World Zionist Organization. The League of Nations' Mandate for Palestine stipulated that an appropriate "*Jewish Agency" cooperate by right with the British authorities in the upbuilding of the Jewish national home, and the Zionist Organization, though obliged to seek the cooperation of non-Zionist Jews as well, was recognized as such an "agency." The most poignant problem during most

of those years was the question of Jewish immigration, which was always strictly limited by the British in reaction to Arab opposition and violent outbursts. The World Zionist Organization exercised effective control over the distribution of "certificates," that is, entry permits for new immigrants, up to the number permitted in any one year by the British. How these permits were divided in the Diaspora became a cause for impassioned struggle, both among the various Zionist factions which accepted the discipline of the world body and especially with the Revisionists, who regarded themselves as discriminated against. (This militant group eventually broke away, mainly for political reasons, and declared its Zionist independence in 1935.) The basic solution was an agreement to operate by the "party key," which meant that "certificates" were distributed on the basis of the respective strengths of the various parties in the world Zionist movement and especially in the nascent *yishuv*. The result was that the political composition of the Jewish community in Palestine remained remarkably stable despite the growth of its proportions. This party influence on immigration was part of a picture in which many of those who came, especially after 1933 in flight from Hitler – even though they were admitted as individuals and not as the holders of certificates – had also to find their way within a community which was dominated by parties. Kibbutzim, banks, educational facilities from university down to elementary school, jobs in the administration, and many other things besides were controlled or influenced by parties, which tended to be complete Jewish societies living side by side, each one involving most of the elements of human life, almost from the cradle to the grave. There were parties even before 1914, but in the 1920s the internal life of the Jewish community in Erez Israel had crystallized into the political parties, which largely exist to the present day. The forces which were contending over the nature of the new society were divided into three broad groups. The most powerful were the several kinds of Socialist Zionists, with their roots in the Second Aliyah, in the kibbutz movement, and in the labor unions, which had together formed the overarching organization of all the Jewish workers in Israel (later including Arabs also), known as the Histadrut. These forces strove for a socialist, economically egalitarian, secularist Jewish society. The central sector of the developing Jewish community consisted of middle-class elements. In part, and especially in the case of the first refugees to come from Germany after 1933, these forces consisted of people who arrived with some property. Not all those who came from Eastern Europe wanted to be pioneers in kibbutzim. Some had been accustomed to a middle-class, urban way of life and they wanted to live that way in the new environment. This middle-class group contained many General Zionists allied to the anti-Socialist Revisionists. On doctrinaire grounds they insisted with vehemence that the very future of the Jewish settlement depended on the releasing of the energies of free enterprise. There was one wing of General Zionists who refused to identify, both in Erez Israel and outside it, with any specific middle-class program in the country and who followed

the lead of Chaim Weizmann, in particular, in accepting economic and cultural support for the labor sector as well as for private enterprise. But another wing of the General Zionists clung to a more partisan view, so that a continuing battle was fought between Socialist Zionism and the middle-class groups. The tension was often sufficiently great for bitter accusations to be hurled. Such leaders as David Ben-Gurion, in his role as secretary general of the Histadrut, spoke for the Socialists in accusing the Revisionists of being "Fascists"; the partisans of Jabotinsky replied by charging that the Socialist Zionists were using their power not for the good of all but to increase their own political and organizational dominance.

Parallel with this quarrel there was continuing tension over the issue of religion. There had been Orthodox Jews of the old *yishuv* in some numbers in Erez Israel before the new Zionist immigration began, but the earliest arrivals after 1900 were in their overwhelming majority Socialist and secularist, and many of them were anti-religious in a doctrinaire way. The religious Zionist movement, Mizrachi, had indeed been founded in the early years of the century and it had existed as a trend even before, but its direct presence and influence on the life of the new Jewish community in Erez Israel began to be felt only after World War I. By then a labor wing of the religious party, the Ha-Po'el ha-Mizrachi, had arisen, and it proceeded to create its own kibbutz movement. Many of the middle-class immigrants who were arriving in the 1920s and 1930s were personally Orthodox, and they could not imagine a Jewish presence in the land which did not exemplify the values and practices of the religious tradition. Religious Jewry was led by the Ashkenazi Chief Rabbi, Abraham Isaac *Kook, until his death in 1935, who, though he was himself beyond party, was regarded as the spiritual voice and teacher of all religious Jews who accepted a Zionist vision. For Kook the new settlement in the Land of Israel was the "beginning of the redemption." Both his temperament and outlook were broad enough to embrace even the most partisan secularist as an instrument of the divine purpose. Those who followed him could accept such a notion in theory. In practice they were dedicated to the building of an institutional power base for religious Jews, so that they could compete as equals with the other groups and provide equal opportunity in the new country for those who shared the Orthodox religious faith. This body of opinion was deeply concerned that the total temper of the Jewish community should not be secularized. They did not want to become a religious ghetto in a non-religious Jewish society, and they believed that it was their duty to bring religion even to those who opposed it. Orthodox Jews in Palestine joined the battle, immediately after the beginning of the British Mandate government, for the ever wider influence of traditional Jewish practice on the life and the law of the *yishuv*. The struggle between the Socialist and the middle-class elements in Israel's society has been muted in the generation of statehood, for a mixed economy now prevails. The conflict over religion and its relationship to public life has, if anything, become sharper within the sovereign parliamentary life of the Jewish state.

BETWEEN POGROMS AND HOLOCAUST. Ideological stamps were thus deeply impressed on the Jewish community in Palestine. Great numbers of those who came in the 1920s and even in the 1930s chose their paths because they believed in some version of the Zionist vision and found in it their path toward national and personal realization. Nonetheless, the dominant element in creating many more candidates for immigration to Palestine than were ever permitted to arrive was not Zionist ideology, at least not in its cultural, "synthetic" form, but the growing horror of antisemitism, at a time when other doors to safety were closing or were entirely closed to Jews. The sense of disaster was already deeply embedded in the consciousness of European Jews by the events which followed right after the end of World War I. The far greater horrors of the Nazi Holocaust have by now half obscured the murder of about one hundred thousand Jews, including women and children, in the Russian-Polish borderland, where Ukrainian and counter-revolutionary Russian army units systematically engaged in killing Jews in the years 1919–21. These pogroms had a profound effect on the Jewish delegation in Paris, which agreed to plead unanimously for national minority rights because the hatred of Jews as Jews was so rabid in Eastern Europe. Moreover, major figures among Western Jewry increasingly became less doctrinaire. Men such as Louis Marshall could not accept the Zionist notion that all Jews everywhere belonged to a national entity other than that of the majority of the people in the political state into which they were born, and they could not therefore agree that Jews ought to be working for their ingathering in Zion. Nonetheless, such figures responded to the dire need of East European Jews both by trying to alleviate the immediate situation and by accepting that, on purely humanitarian grounds, those who wished to go to Palestine should be helped to do so. Even after the pogroms ended and a certain amount of surface stability was created in Eastern Europe, the largest community outside the United States, that of Poland, was increasingly harassed by a regime of economic exclusion and of *numerus clausus* at the universities and in the professions. Year by year the life of these Jews was becoming more unbearable, and there were occasional pogroms in Poland in the 1930s to underline their misery. The situation was only relatively better in some of the other countries in the area. The "non-Zionists," who were persuaded by Chaim Weizmann in 1929 to join with the Zionists on the basis of parity in creating the "enlarged" Jewish Agency, were moved by a sense of the direst Jewish needs and a growing undercurrent of fear of worse things to come. This, rather than Zionist ideology of any variety, was the dominant note in the development of Zionism itself even before Hitler appeared on the scene, and certainly after 1933.

The sense of need and foreboding had come to formal expression in Zionist thought immediately after World War I. Louis Brandeis, by then a justice on the Supreme Court of the United States, who had served as the leader of American Zionism during the war years, believed that, with the achievement of the Balfour Declaration, the political struggle of Zionism was over and that, henceforth, the Jewish settlement in Palestine should be fostered through the orderly processes of investment, on the highest principles of business accountability. This soon led to a shattering struggle with Weizmann, who continued to believe in the need for a movement of Zionist national consciousness. He wanted the Zionist movement to work toward a *yishuv* which would be a left-wing liberal, in part moderately Socialist, Hebrew-speaking society and he saw its embodiment mainly in the collective and cooperative enterprise of the labor pioneers who needed non-profitable funds, such as the *Keren Hayesod, to create their network of settlements and institutions. In short, Weizmann intended to realize the "synthetic" Zionism which he had defined in the days of his youthful opposition to Herzl. Both Brandeis and Weizmann, despite their differences, wanted to create the Jewish community in Palestine step by step, according to plan, with the presumption that there was time aplenty to do it. Right after World War I Max Nordau, the still-living colleague of Herzl, and later also Vladimir Jabotinsky, arose against such views. Nordau and Jabotinsky did not believe that the Jews of Eastern Europe would find safety in any years of seeming quiet that might follow after the Russian-Polish upheavals, and they were equally convinced that the British government, the holder of the Mandate, would find reasons of its own for making the large-scale immigration of Jews into Palestine an ever more difficult enterprise. Nordau proposed, melodramatically, that without any meticulous planning or preparation, or even arrangement for solid housing, Jews, mainly from the pogrom-afflicted areas, should be led in their hundreds of thousands simply to appear in Palestine. He agreed that many might suffer extreme hardship, but that it was better for that to happen than to wait for the slower horrors in Europe and the hardening of the anti-Zionist policy of the British. At least, this mass movement would immediately achieve majority status for Jews in Palestine and would assure possibilities for the future. This then wild idea of "catastrophic" Zionism was rejected but it remained dormant, and even in the quieter years of the 1920s it was the countertheme to the then dominant notion of "building step by step," according to plan. By the 1930s Jabotinsky and the Revisionists called for the implementation of the "Nordau plan" and for an orderly mass "evacuation" of East European Jewry. Though this call evoked bitter internal controversies among Zionists, Jewish need, and the growing foreboding of worse horrors to come, were ever more the driving force attracting support to Zionism as a solution all over the Jewish world, and beyond its confines.

RELATION TO THE ARABS. Until the immediate aftermath of the Balfour Declaration the Zionist movement had given little serious thought to the question of the Arabs residents in Palestine. Moses Hess in 1861, a generation before Herzl, had imagined that a highly Westernized element such as the Jews would be welcomed by the Arabs because of the leadership that Jews would provide in creating in the entire region an ad-

vanced economy and an advancing society. Chaim Weizmann took a comparable tack in 1919 in his encounters with the Arab leader of the time, the Emir Feisal, with whom he signed an agreement in this spirit. The theme was that Jews and Arabs proposed to be good neighbors. However, such figures as Feisal, who was from the *Hejaz, were alien to the immediate Palestinian Arab scene. The politically active elements in the local population were much more hostile and resentful. Despite large Jewish efforts toward conciliation, and the positive effect that such attempts did have on certain Arab circles, the dominant motif in Arab policy was to declare the Balfour Declaration to be an infringement on Arab rights and to insist that, at best, a limited Jewish minority could in the future live on Arab sufferance in the land. At every point in the interwar years at which Jewish immigration became of some consequence, there were Arab riots which invariably caused the British to issue further restrictions against the Jews. This became particularly marked in the decade after 1929, when there were major riots by Arabs. Zionism had thus, perforce, to define itself in much more complicated terms than those of a "people without a land on the way to a land without a people." The very example of its own energies and national purpose was helping to evoke some comparable national emotion among the Arabs in Palestine. In theory, throughout this period the bulk of the Zionist movement never surrendered the ultimate vision of a Jewish state, but the only wing of the movement which made of this the essence of its public position was the Revisionists. All the others concentrated on two immediate objectives: immigration, while trying not to displace Arabs in the process and to compensate generously the few displaced ones, feasible by constantly increasing the "absorptive capacity" of the land through new endeavors; and the devising of formulas for ongoing life together with the Arabs in which no absolute minority ceiling would be placed on the Jews. Among one group on the extreme left, the Marxist Ha-Shomer ha-Ẓa'ir, a bi-national state of absolute parity between Jews and Arabs was defined as its version of the political purpose of Zionism as a whole. A handful of Jewish pacifists of high station, led by such figures as Judah L. Magnes and Martin Buber, formed the *Berit Shalom program in the 1930s; they were willing to go even further than Ha-Shomer ha-Ẓa'ir in placating Arab fears for the sake of peace, but even they, like all the other Jewish groups or leaders (including Ben-Gurion), could find no Arab representatives of rank and power with whom to come to terms. Jewish misery was growing constantly in Europe and the need for mass immigration was ever greater. No Zionist group (and, for that matter, after the appearance of Hitler, no responsible non-Zionist body) could accept the halting of the growth of the *yishuv* even if it meant open hostility with the Arabs, and that is what it indeed meant by the mid-1930s and for the rest of the decade. Jews required freedom of immigration; Arabs demanded its absolute end. The British floundered in the middle, issuing "white papers" and setting draconian quotas on future Jewish arrivals. The situation could not last for all the positions were irreconcilable.

Throughout the years of the British Mandate of Palestine the government in London appointed a whole series of commissions, whenever conflict between Jews and Arabs broke out into open violence, in the vain quest of finding some acceptable compromise. Such efforts became more frequent in the 1930s, when the basic Jewish demand was, as it had to be, mass immigration which could not ever be restricted by Arab veto.

The logic of events, compounded out of the first years of Hitler and the increasing clashes in Palestine between Jews and Arabs, evoked the single most serious study of the Palestine question which was ever undertaken, that by the Royal Commission of 1936, chaired by Lord Peel. In its many hearings, some of them in no less impressive a place than the House of Lords in London, and others in Palestine itself, the major spokesmen of all varieties of Arab and Jewish opinion were heard. There was little essential difference among the views of the Zionist representatives, for even such old antagonists as Weizmann and Jabotinsky spoke in the same terms. Both emphasized the spiritual and cultural elements in Zionism, the vision of the movement of a "new Jew" who would be born in freedom to achieve his own proper dignity. However, the main theme, in the testimony of both, was the misery of Jewish life at that moment. Before the Peel Commission and later, at the Zionist Congress of 1937, when Weizmann proposed that the movement accept, in principle, the Commission's proposal to partition Palestine, he looked especially closely at the life of the Jews in Poland. He said openly that this community was doomed. A third of it, the old people, would no doubt die in Poland; for another third he had no hope; but it was the responsibility of all who could help to make it possible for the last third, the young people, to come to Palestine and start a new and decent life.

In this atmosphere the Peel Commission proposed the division of Palestine into three geographical entities: an Arab state, a Jewish one, and a large enclave, including Jerusalem, to be governed by the British. The proposed map was very nearly impossible, though, for it presumed the kind of goodwill between Jews and Arabs which, had it existed, would have made partition unnecessary. What the proposal did achieve, from the perspective of the Zionist movement, was the first formal suggestion by the ruling power that a Jewish state in at least part of Palestine was a realistic necessity; secondly, the proposal was based on the premise that Jews had a right, because of their need, to large new immigration into the land and that they could achieve this only if they were in political control of their own national destiny. The Zionist movement, after heated debate, which reflected the objections that the proposed state was unviable and that to accept it meant to give up the claim on the whole of the land, reluctantly accepted the partition proposal as a basis for discussion. The negotiations soon died, however, because the Arabs rejected the idea and the British, in the era of appeasement of Hitler, had no stomach for forcing any radical solution. On the eve of World War II, Zionism had, however, defined itself as charged

with the responsibility of creating or exercising, whether legally or illegally, as much independence as was necessary to do everything that was possible for the saving of Jews. This had become the dominant motif, and it had a directness and moral urgency which ever wider circles of Jewish and world opinion could not help but accept. The contrast between Jewish farmers in Palestine and their native-born sons, farming their fields and shooting back if necessary at Arab raiders, and the Jews being spat upon in Warsaw or sent to concentration camps, or worse, in Germany was, even before 1939, clear and unmistakable.

AFTER THE HOLOCAUST: "CATASTROPHIC" ZIONISM REVIVED. On the very eve of World War II the British government issued a White Paper in which, in effect, Jewish immigration was limited to a final 75,000. This meant that the Jews of Europe were being left to their destiny; the clear intent was to condemn the Jews in Palestine to be a permanent minority. The whole of the Jewish world was well nigh unanimous in its opposition, in declaring this act to be not only wrong but utterly devoid of moral or legal validity. Soon the war broke out and the Zionist movement, indeed the entire Jewish community everywhere, was inevitably on the side of the Allies. The Jews in Palestine soon tried to organize a volunteer force to fight with the British in the critical Middle Eastern arena, but, on the grounds of "parity," because no such volunteers were forthcoming from the Arabs, the offers were initially rebuffed. The Jewish Brigade eventually came into being. It played a military role especially in the campaign in Italy, but its most important achievement was that here, directly, much of the immediate foundation of the future army of Israel was laid. "Illegal" immigration had been going on straight through the war, for the Zionist movement as a whole had accepted the slogan of David Ben-Gurion: "To fight Hitler as if there were no White Paper and to fight the White Paper as if there were no Hitler." Some of the brutalities that the Nazis had perpetrated were to be seen in Italy, as the Jewish Brigade advanced within the Allied army; and as the war was ending, the men of the Brigade began the work of finding friendly out-of-the-way ports and cooperative officials elsewhere to make it possible to transport to Palestine those Jews who had survived. The armies on the eastern and the western fronts, and especially the Jews among them, were concurrently discovering the unspeakable crimes of Buchenwald and Auschwitz. Perhaps a million Jewish refugees were alive in camps in Europe in May 1945. All those who saw them were overwhelmed by one conviction – that they must be given the kind of new life where they could never again be the object of the horrors that had been done to them. The survivors themselves were most vocal everywhere that they had to be allowed to go to Erez Israel, to take their place in an independent Jewish state.

During the war years the Zionist movement itself had almost completely stripped away all tentativeness or vagueness from its ultimate aims and it had abandoned, at least for the moment, any public concern with the nature of the new Jewish society. That did not mean that within Palestine itself, and within the world Zionist movement, the various parties did not continue to jockey for control of whatever they could regarding resources and position, but from the mid-1930s onward these issues became ever more internal to the immediate scene in the *yishuv*. As a world movement Zionism spoke of "a home for the homeless," and the more bitter and obvious the homelessness was, the greater was the support for all the actions that this slogan required. By 1942 a Zionist conference, the most representative possible under the circumstances, met in New York at the Biltmore Hotel. It announced in the "Biltmore Program" that the "establishment of Palestine as a Jewish Commonwealth" was the war aim of the Jewish people. This program was tacitly adopted by non-Zionists as well. The many years when such words were not spoken even by most Zionists, for fear of complicating the immediate situation among Jews, Arabs and the British, had thus been ended. Within the next year or so, after a bitter battle within the ranks of American Zionism between those who were willing to wait for the end of the war and trust President Roosevelt, and those who believed that American public opinion needed to be enlisted on the widest possible basis, Abba Hillel *Silver emerged the victor over Stephen S. *Wise and, in 1943, Zionism in America entered a militant phase which continued until the State of Israel was achieved. Here, too, it was the growing knowledge and then the absolute certainty of what Hitler had been doing to Jews that made the Zionist demand for freedom, dignity, and independence a great force in American public life.

At the end of the war the Jews were indeed, as the anti-Zionist British foreign minister Ernest *Bevin said, "pushing to the head of the queue." No doors, not even those of the United States, were wide open to the refugees of the greatest single disaster that had ever befallen a people, and it was therefore inevitable that Palestine would have to provide the major part of the immediate solution. The British, weakened greatly by the war, were even less affected and less resolute than they had been in the 1930s; the Arabs were at least as intransigent; the Jews, both in Palestine and elsewhere, were at the highest point of outrage and self-assertion in their entire history. Many intricate maneuvers in Europe, Palestine, and the diplomatic centers of the world resulted finally in the great debate before the United Nations in November 1947 on the future of Palestine. The Jewish Agency, even though it was not a government, was admitted to the debate as the representative of the Jewish people; it stood solidly for the legal and moral right of those to whom promises had been made in the Balfour Declaration and who had suffered so greatly in the recent past to a state of their own in the land which had belonged to their ancestors and in which they had already created much in the 20th century. The end result was a decision reminiscent of the proposals of the Peel Commission a decade before – partition of the land in an unworkable map. This time, however, nothing prevented the formal declaration by the Jews of their own state on the appointed day, May

14, 1948 – neither the ambiguous attitude of the United States in the decisive stage nor the war against this new state which was begun by the Arabs both in Palestine and on its borders even before the formal declaration.

ZIONISM AND THE STATE OF ISRAEL. After the costly battles ended and the state was secure, and even as the war was still going on, refugees by the tens of thousands were brought into Israel. There was little surface difficulty in the immediate years after the achievement of statehood in defining the purpose of Zionism. The state was young, weak, and threatened; the refugees were many and in direst need. The purpose of Zionism, and of the Jewish world which it was by then leading, was to help root the state in secure ground, defend and explain it before world opinion, and either raise funds directly or provide inspiration for such endeavors. Almost immediately, however, the question of Zionist purpose and definition began to be a critical issue, first in isolated instances and then in prolonged debate which raged through the 1950s and into the 1960s. As early as 1949 there was a public break between David Ben-Gurion, the first prime minister of Israel, and Abba Hillel Silver, then the major Zionist figure in the Diaspora. The essence of the quarrel was the unwillingness of the government of the new state to accept any presumption of tutelage from the Zionist movement. Now that a state existed, Zionism could clearly no longer engage in the kind of international politics to which it had been accustomed. The fund-raising had increasingly been engaging Jews of all shades of opinion, and many of the richest and most generous were not Zionists, at least in the formal sense. The bodies which raised funds for Israel were not everywhere, and especially not in the United States, really under Zionist leadership. There were a number of attempts made by post-state Zionism in the Diaspora to define the ongoing purpose of the movement as the cultivation of Jewish national consciousness, the fostering of Hebraic education and the creation of a Jewish life which had as its emotional and spiritual center the life in Israel. Against this there stood, implacably, the figure of David Ben-Gurion, and the majority opinion in Israel which he led. He held that fund-raising and other forms of aid extended by Jews to Israel were an endeavor which was, and quite properly, common to the entire Jewish people. This entitled those involved to be considered "friends of Israel." A Zionist, in the proper sense of the term, could be only one who was preparing himself and his family, no matter how comfortable the society in which he was living, to come in measurable time as an immigrant to the new Jewish state. This outlook finally prevailed in international Zionist councils in the 1960s, and the seal was set on it with a proclamation in 1968 of the Jerusalem Program by the Zionist Congress (see below). In this document the acceptance of *aliyah*, of personal migration as the ultimate ideal, became a sine qua non of belonging to any recognized Zionist group.

It took two decades, however, for Zionists in the Western countries to be willing to reach such a conclusion. In the early years after the establishment of the State of Israel American Zionists in particular had argued that "America is different," that there is a distinction between a Diaspora where Jews were persecuted and the Diaspora of the free countries, where antisemitism was not a major factor and was not likely to increase, because of the rooted democratic tradition of a country such as America, which had no medieval past of hatred of Jews. The unwillingness to accept *aliyah* even as an ideal was ended in part by ongoing pressure from Israel opinion and in part by changing loyalties within American society as a whole, which was becoming less nationalist in the 1960s. The most important cause was, however, internal. During most of this era the president of the World Zionist Organization was Nahum Goldmann, and he became aware, soon after the heady days of the creation of the State of Israel, that intermarriage and spiritual and cultural evaporation were becoming a major threat to the survival of Jewish life in the free world. He argued that the task of the time was to prevent in the very age of Zionist achievement the rapid assimilation of world Jewry. Ever wider circles in the Jewish communities in the Western countries began looking to Israel, to various educational and work programs in the country, especially for young people from all communities of the Jewish world, to provide the occasion and the source for Jewish commitment. In such an atmosphere of growing concern for the Jewish continuity of hundreds of thousands of Jewish families all over the world, the notion that those who chose to live in Israel would certainly remain Jewish in a creative way conquered many previous reservations about *aliyah* as the ultimate personal ideal of a Zionist.

In the 1970s the world Zionist movement retained substantial functions in the upbuilding of Israel's society, both in the bringing of new immigrants, especially from lands where Jews are being persecuted, and in all other areas in which public funds from the Diaspora are properly spent. It continued to conduct and even to expand its endeavors in the strengthening of ties between Jews all over the world and those in Israel. Its governing body, still called the Jewish Agency, formally expanded again, in 1971, under the leadership of its chairman Louis Pincus, after the pattern of an earlier, practically abortive expansion in 1929, to include on the basis of parity representatives of the major Jewish pro-Israel fund-raising organizations everywhere in the world. In these new arrangements the World Zionist Organization and its Executive divested themselves, in favor of the new body, of direct responsibility for the financing and directing of *aliyah* from places of need and of the tasks which flow from this responsibility. Regardless of the formal changes, and even the increase in activities, the question of Zionist definition remains, however.

A major turning point was the Six-Day War in 1967. The days that led up to that event were filled with fear that a small state surrounded by enemies might become the object of a new holocaust. The swift and total victory evoked joy that Jews were now masters of their own destiny and recognized as such throughout the world. The Jewish Diaspora in all coun-

tries did not know how deeply it identified both with the fears and the triumphs of Israel until it was in the midst of the actual events. There then came an outpouring of money, political support of the most public kind, and volunteers, the equal of which had not been seen except briefly during the months of Israel's War of Independence. The years between 1948 and 1967, of continued integration of Jews into U.S. society, and into several West European countries, had not affected the strong emotions of self-identification and of identification with Israel which had clearly existed two decades before. Nowhere, during those days, did Jews hesitate to exert pressure on the governments of their countries of residence to support Israel. In France, where de Gaulle had reversed his previous policy and stood against Israel when war came, Jewish demonstrations in Paris evoked from him a remark about the Jews as an "elite people, sure of itself, and domineering." After the initial outrage over the negative rhetoric in which de Gaulle's opinion was couched, the Jews of the world were by 1967 willing to accept the proposition that Jews were indeed a community with opinions, ties, and characteristics which were distinct, and that the major contemporary affirmation of this Jewish distinctiveness was the whole set of relationships which involved all Jews in Israel. Zionism had thus finally succeeded in having the Jewish world accept the idea – and, what is more, feel deeply – that in the 20ᵗʰ century the Jews were a people and not only an international religious community, and that this people found its central expression in the renascent life in Israel.

TENSIONS IN THE U.S. AND THE U.S.S.R. In the last years of the 1960s two other events deeply affected the contemporary understanding of Zionism. In the United States this was the era of major social tension and Jews were not far from the center of all the problems. Race relations deteriorated by the latter years of the decade to physical confrontation and even armed clashes between blacks and whites. In all of the largest cities of the United States Jews had, for historical reasons (they were usually the last occupants of the neighborhoods into which blacks then moved), a substantial stake in the economy of the black ghetto, as storekeepers and landlords. They were often the most visible white men in the life of blacks in the north. In another dimension, younger, politically radical Jewish elements had been among the founders of the most activist movements of black protest, but, as black consciousness became ever more exclusivist, Jews and all other whites were systematically excluded from these movements. Certain administrations, such as that of the public school teachers in New York City, were dominated by Jews, and blacks began to fight hard to occupy their places. On a variety of levels the dream of peaceful integration was thus replaced by confrontation in the name of group identity and group interests. Within such an atmosphere many Jews were pushed toward identification with the specific interests of the Jewish community and its own peculiar destiny. The alternative for some of the young who had cut their teeth politically in the black movement, was to come to Israel.

There was no such direct correlation between the rising tempers over the war in Vietnam and Jewish consciousness. Young Jews were very prominent among the makers of the political protests which rocked the American campus in the late 1960s; but only a very few of those who chose not to fight in the war in Vietnam came to Israel. What was more fundamental was the growing disillusionment in all circles, not only Jewish ones, with the "American dream." For a person to emigrate from America to some less problematic, more satisfying place was now thinkable, and indeed some were even doing so. At such a moment the problem of "dual loyalty" which had troubled the past generation of Jews in America, their need to prove that it was not anti-American to care about Israel, or even to want to go and live there, was no longer of consequence. Fear for their future as Jews was not major, but some element of reaction to antisemitism was widespread. *Aliyah* from America, which neared 10,000 for the first time in the year 1970, was mostly, however, propelled not by the "push" of disappointment in American life, but by the "pull" of the attraction of Israel to Jews who wanted to live its kind of life, as the realization of their own Jewish identity.

In the late 1960s the Jews of the Soviet Union, who had remained inert on the surface under Stalinist persecution, began to assert their Jewishness and their identification with Israel in the most overt ways. The underlying factors here were the classic ones of bitter resentment that Russian Jews felt at the antisemitism which still existed in Soviet society and its administration after half a century of Bolshevik rule, coupled with a surprising amount of deep Jewish feelings, and especially of proud identification with Israel, which still persisted despite the absence for at least a generation of any Jewish schools or communal organizations – for even the communist schools and press in Yiddish had been destroyed under Stalin. In the Soviet Union, too, the Six-Day War had been a turning point. The government was on the Arab side and remained the chief protector and supplier of Egypt and of the most anti-Israel of the other Arab states. Official propaganda was violently anti-Israel, anti-Zionist with strong antisemitic overtones. The Jews of the U.S.S.R., through their most vocal elements, had, however, lost their fear of repression and proceeded to demand the right to leave and to go to Israel. A trickle of such immigration had been permitted by the Soviet authorities earlier and, spasmodically, it was renewed in 1968, even during the years of the most bitter vituperation of Israel by Soviet diplomacy and propaganda. The numbers of those who were permitted to leave reached relatively considerable proportions and the requests that were submitted by Jews were in the tens of thousands. Hebrew was being studied in semi-underground conditions and in many ways connection was maintained, amidst difficulty and some danger, with the Jews beyond the "iron curtain." The right of Soviet Jews to emigrate had become by the end of the decade an international issue of considerable magnitude. The activity on their behalf was widespread throughout the Jewish world, and it acted to recall many Jews who were themselves otherwise alienated,

to a sense of their own Jewish identity. In the Soviet Union itself this reassertion of Jewishness was clearly the harbinger of a new era of rebellious national consciousness after the two generations when cultural and linguistic de-Judaization was forced upon the Jews while the doors of gentile society to complete equality and assimilation were not opened to them. For Zionism the Jews coming out of the U.S.S.R. represented an element that had been aggrieved and had so strongly asserted itself as to be a classic fundamental assertion of Zionist theory: the assertion that in any social system the Jew would ultimately find himself in a situation different from that of the majority and discriminated against and that he would have to make his life in terms of that reality.

IDEOLOGICAL PROBLEMS IN ISRAEL. In Israel itself, the first generation of statehood produced essentially two sets of internal cultural problems. Both were not new; both were deeply embedded in tensions inherent in Zionism almost from the beginning. Religious and secular forces fought each other over the role that Jewish religion was to play in the life of the total community. For the religious such questions as whom one married, or whether public transport and all public services were to function on the Sabbath, were not matters of private conscience. They went to the very roots of the issue of why a Jewish state had to be created in Zion in the first place. It was to be something more than a refugee camp, or a large-scale attempt to create a "Jewish Albania." The purpose of this effort was to make it possible for a characteristic Jewish life in line with tradition to be lived in contemporary settings of one's own. Amid the secular forces the imposition by the State of the Orthodox religious rules on personal status, so that, for example, one was not free to marry out of the faith if one chose, or the legal definition of "who is a Jew" only by the norms of rabbinic law (so that children of gentile mothers born and raised in Israel as Jews were not so registered by secular law until 1970), raised great anger. In the view of the secular thinkers a modern state and society required an absolute separation between religion and public order. Another continuing battle was that between those who preferred to regard themselves as Israelis, with little concern or identification either with the Jewish past in the Exile or with the present-day Jewish majority in the Diaspora, and those who kept insisting that Jews in the new state were still primarily Jews and not Israelis. The events of 1967 and the rise of Jewish passion in Soviet Jewry effectively made an end to this latter debate. It became clear to almost everyone that Israel and the Jews of the world stood together in crisis; that even the Jews of the U.S., the richest of Diasporas, did not feel themselves as living on a different plane from the Jews in Israel; and that everywhere the rescue of the Soviet Jews was regarded as a prime purpose. The seal was thus set on a development which had begun with the very foundation of the State in one of its earliest constitutional acts, "the Law of Return," under which any Jew anywhere has the right to claim Israel citizenship upon arrival in the country and his right to immigrate into Israel is inalienable. The government of Israel had made it its duty to intervene diplomatically on behalf of Jewish communities in trouble, from the very beginning of its existence. Israel had never allowed any doubts to persist that the defense of Jewish interests all over the world was an integral element of its foreign policy. It had certainly presumed that world Jewry would stand with Israel and that its policies on all matters of major concern would parallel those of the State. In June 1967 these presumptions of world-wide Jewish support for Israel were fully realized. Soon thereafter there was another demonstration of the principle that defense of Jews all over the world was central to Israel's policy. It took the leading role in the battle which soon broke into the open for the rights of Soviet Jews.

Perhaps the most difficult, in the long run, of the problems of Jewish self-definition in Israel was its relationship to the Arabs. On the one hand there was lasting tension; on the other there was increased contact after 1967 and an ever greater straining to recognize and encounter Arabs as equal human beings. Here, too, the new generation was heir to a moral concern as old as the very beginnings of Zionism. At the beginning of the 20th century Aḥad Ha-Am had expressed the fear that the new Jewish settlement in Ereẓ Israel might be so constructed as to harm the Arabs and he had pleaded for sensitivity to this possibility. In actual day-to-day life throughout the years of Zionist immigration there were not only riots and battles but also friendships and accommodations between the two communities. Eventually every Zionist theory had had to face the question of the Arabs. The newest note after the Six-Day War was sounded by those intellectuals and politicians in Israel who saw the main road to peace in active consent and even cooperation by Israel in the establishment of Palestinian Arab independence in a part of the previous area of Palestine (including Transjordan).

Looking toward the last third of the 20th century, Zionism as an organized movement was weaker than it had been a generation before, but the result of its labors, the State of Israel, was strongly established. As an organization the world Zionist movement inevitably no longer occupied the central place in the Jewish world, for it had been replaced by the government of Israel, but Zionist sentiment now pervaded the whole of Jewish organized endeavor. The possibilities of substantial new immigration were again in view and the Zionist movement continued to assert that the encouragement of such processes was its most characteristic task. But the basic question that Zionism had posed when it first appeared, even before Theodor Herzl, still remained open – and embattled: What would be the nature of the new Jews and of the new Jewish society? To what degree would it be conventionally modern and Western and to what degree would it be connected with the classic Jewish past – or, for that matter, to what degree would the Jews in Israel "de-Westernize" in order, hopefully, to come to terms with the Middle Eastern world within which they were living? If, at the very least, there would be major Jewish communities in the Diaspora for a long time to come, and perhaps permanently, what was to be the continuing relationship between the

Jewish national community in Israel and that Diaspora? How, for that matter, was the continuity of Jewish loyalty in the far-off communities to be fostered and preserved? What, in short, was the new Jew, the Zionist and Israel successor to his ghetto ancestors, to be? In 1971 there were as yet no answers – but it was equally clear that these questions would continue to be wrestled with and lived through for many years to come.

NON-ZIONIST AND ANTI-ZIONIST TRENDS

Zionism, though initially a minority movement, became so central in Jewish thought that eventually the other Jewish ideological trends had to define themselves largely in terms of their attitude to the Zionist idea or to certain essential elements of it, as, e.g., the revival of Hebrew language and culture, the "fixation" on Erez Israel as the only territory for ingathering the Jewish mass migration, the national unity of Orthodox and secular Jews, etc.

AUTONOMISTS AND YIDDISHISTS. Before World War I the bulk of the Jews of the world were living in two multi-national empires, Russia and Austria-Hungary. In both of these regimes minority peoples were conducting struggles for their respective national autonomies. The situation of the Jews was different from that of all other minorities, for they were nowhere a majority in any particular piece of territory that was historically associated with their national identity. Nonetheless, Jews in these regions continued to speak a language of their own, Yiddish, and they were bound together by ties of history and culture and by a network of communal institutions. Zionism was not the only possible national movement among Jews. A variety of other ideologies and movements arose, which refused to accept the idea that Jews were in any sense alien to the places of their dwelling in Europe, or to believe that antisemitism could be ended only by mass emigration. These movements argued that Jews were one of the historic tribes of Eastern Europe, with as much right in the region as the Poles or the Ukrainians. The discrimination against Jews could, and should, be ended by a more vigorous battle for a just social order and by the achievement of national equality for all the national communities in the region. "To do battle at one's positions" was the slogan directed against the Zionists by such schools of thought. Most such non-Zionist nationalists regarded the Hebrew revival as a piece of romanticism and as disguised clericalism. In their view the spoken language of the people, Yiddish, was its natural contemporary speech. A healthy national life could be built only by strengthening that language and its literature and raising it in public esteem from the level of a dialect to that of a respected language.

The most important theoretician of Diaspora nationalism was the historian S. *Dubnow. He himself did not deny the importance of Hebrew, or of Russian, for he wrote all his life in both these languages as well as, of course, in Yiddish; nor did Dubnow deny that there was significance in the developing Jewish community in Palestine. In his historiography Jewish life had always found its leadership in some new emerging center of energies as an older community was declining. In his own day he saw Eastern Europe as the lead community, then erecting tributary centers in Palestine and the United States. He envisaged that Jews everywhere would labor to achieve nationally cultural autonomous institutions, including especially an educational system of their own in their own language. His spiritual disciples organized a party which labored for a system of "Sejms," Jewish "parliaments" or "diets," which should direct the affairs of the various Jewish communities and of the Jewish people as a whole. This principle of "autonomism" was adopted also by the Russian Zionists at their conference in Helsingfors (1906), when czarist Russia seemed to be on the threshold of genuine parliamentary democracy. They, however, regarded it not as an end in itself, but as an element of Zionist *Gegenwartsarbeit*: an instrument for Jewish social and educational activity with the clearly defined aim of ultimate migration and settlement in Erez Israel. Dubnow faced squarely the question that the national situation of the Jews in the Diaspora, in the minority everywhere, was an anomaly, but he did not arrive at the conclusion that this situation should be rectified by the creation of a Jewish commonwealth in Erez Israel. At the core of his outlook was the vision of a future for all humanity in which all of the historic nations would rise to a higher stage of existence in which they would be freed of their dependence on any particular land and would exist as communities on the basis of historic and cultural ties. The paradigm for such communities was what the Jews had become in the Diaspora after the beginning of the Exile; they had persisted in this new and higher form; and so Dubnow saw his vision of Diaspora Jewish national autonomism, or a formulation of the modalities of human association, to be the newest and most profound teaching by Jews for mankind.

There were other, more mundane versions of Diaspora nationalism. Several schools of thought, chiefly under the influence of Chaim *Zhitlowsky, were in favor of the centrality of Yiddish in the national Jewish experience and labored toward the recognition of that language, and of those who lived out their lives in it, as one of the several cultural linguistic communities of Eastern Europe, and of the Western world as a whole. This ideology was crystallized formally at a conference of Yiddishists in 1908 in *Czernowitz. Right after World War I this ideology was expressed by the foundation in Vilna, with branches in other parts of the Jewish world, of the Yidisher Visenshaftlekher Institut (*YIVO-Institute for Jewish Research), which survived World War II and now continues its scholarly and educational endeavors in New York.

The most important single movement to arise in Eastern Europe in the 1890s, in the very months when Herzl was appearing on the Jewish scene, was the Jewish Socialist Bund. This organization was created not primarily in reaction to Zionist stirrings but through tensions within the Russian revolutionary movement. Most of the young Jewish revolutionaries of the day were joining and taking prominent part in the various underground factions, but some began to feel that the Jewish workers could not be approached and made active in

the Jewish revolutionary cause except through Yiddish. The announced purpose of the founders of the Bund was thus not a Jewish national one, for initially they proposed only the temporary use of Yiddish as a means to the end of bringing the Jewish workers into the mainstream of the Russian revolution. Yet the gibe by no less a figure than Plekhanov, the father of Russian Marxism, that Bundists are "Zionists who are afraid of seasickness," soon acquired a measure of truth. A Yiddish-speaking party representing the revolutionary will of Jewish workers could not help but become aware that these workers had problems not only with their employers but also with gentile workers. Under the pressure of Zionists, and especially of socialist Zionists, the Bund moved in the direction of accepting the separate culture of Jews as a lasting value worth preserving through "personal cultural autonomy," i.e., the right of every individual to enjoy national, educational, and linguistic life in the framework of a legal minority organization. It clashed on this issue with its fellow social democrats, Jewish and non-Jewish, Menshevik and Bolshevik.

RELIGIOUS AND SECULAR ANTI-NATIONALISM. There were also anti-nationalist reactions to Zionism, and these were much more clearly occasioned by the fact that an organized Zionist movement had arisen. The First Zionist Congress had been intended for Munich and it did not take place there because most of the rabbinate of Germany made a public declaration against the movement, for it would, in their view, call into question the absolute loyalty and integration of Jews as a purely religious community in the European nations. Some 20 years later, in the debates within the British war cabinet which preceded the announcements of the Balfour Declaration, the only Jewish member of the cabinet, Edwin Montagu, argued along the same line, that the recognition of the Jews as a nationality with its homeland in Palestine would call into question his political identity as a British subject who was a Jew only by religion. In 1929 when a group of distinguished non-Zionists joined a reorganized and "enlarged" Jewish Agency for Palestine, on a plane of parity with the representatives of the World Zionist Organization, the non-Zionists maintained that their interest in the Jewish settlement in Palestine was philanthropic and not political, and they indeed remained opposed to any talks of an eventual Jewish state. In the 1940s in the United States anti-Zionist sentiment was represented at its most extreme by the *American Council for Judaism, which maintained not only that its members were Jews by religion alone but that their religion made it incumbent upon them to take only a universalist position, which meant in practice a pro-Arab and anti-Jewish nationalist view of their responsibilities. "Dual loyalty" worried wide circles of Jews, especially in the Western countries, in varying degrees into the 1950s. By then it had become generally accepted, as Nahum Goldmann maintained, that all men have many "loyalties" which live in some tension with each other. The purpose of at least the most extreme of these anti-Zionists was the rapid assimilation of Jews into the total population, and they op-

posed Zionism because they saw it as a stumbling block to this end.

Zionism was attacked from another side by schools of thought which found it too secular, too modern, and thus too destructive, in their view, of the traditional Jewish values. The religious forces which joined Ḥibbat Zion in the 1880s and which later formed the religious Zionist organization, the Mizrachi, during the first few years of the modern Zionist movement, were a small minority among the Orthodox. The overwhelming majority, especially in ḥasidic circles, saw in such human efforts for the restoration of Jewish nationhood an affront to the command to wait patiently for the Messiah. More seriously, they understood that the definition of Jewry as a modern nation, which meant in immediate Zionist practice that religious believers were to accept equality within Jewry with nonbelievers, portended the eventual end of the supremacy of the Orthodox faith within Jewry. On this point older believers in Eastern Europe found allies in some circles of Westernized Jewry, especially in Germany. Together these groups formed in 1912 the *Agudat Israel, which maintained a consistent involvement in the Jewish community in Erez Israel but was opposed to Zionism as too secular. Its main emphasis was on the defense of the Orthodox Jewish faith everywhere in the world.

TERRITORIALISM AND AGRICULTURAL SETTLEMENT. The movement that was closest to Zionism, *Territorialism, arose out of a split within the Zionist movement itself. In 1903 Herzl brought before the Zionist Congress the proposal of the British that the Jews be given land in East Africa for the development of their own autonomous community. The occasion for this proposal was the dire need of Russian Jewry, in the light of renewed pogroms, and the despair of quickly achieving from the Turks rights for settling Palestine. Thus it seemed that Herzl himself had "moved away from Zion" toward immediate, practical mass settlement to alleviate Jewish need. The proposal to examine the feasibility of the British offer won a bare majority at the last Zionist Congress presided over by Herzl, but it was overwhelmingly defeated after his death. Israel Zangwill, the writer who had been one of Herzl's first followers in England, left the Zionist Organization and founded the Jewish Territorialist Organization (ITO) in 1905. This and similar territorialist bodies continued into the 1930s and 1940s to search for a territory in some part of the world sufficiently empty and available to give the Jews room for the creation of their own national polity. These efforts never succeeded, but something very like what they intended was indeed realized by a non-ideological body, the *Jewish Colonization Association (ICA) which was founded in 1891 by Baron de Hirsch, one of the Jewish magnates to whom Herzl had turned and who had refused to join the Zionist endeavor. Agricultural colonies were created by this trust in several places in the United States and, especially, in Argentina. Though on the local level a kind of autonomous "all-Jewish" life did develop in some places on the American continent for one gen-

eration, they never coalesced into full-fledged "territorial" communities. Nowhere did these settlements survive the attraction for their young of higher education in the dominant language and the economic and professional opportunities of the cities.

SOVIET JEWISH CULTURE. In the first two decades after 1917, a kind of Jewish Communist nationalism arose and flourished in the Soviet Union and it was attractive to many Jews outside the borders of the U.S.S.R. But it was short-lived and took a tragic end. In reaction to the Jewish Socialist Bund and to the Zionists the young Stalin had declared in 1913 that there was no such thing as a united Jewish nation, for it lacked a land of its own. Only separate ethnic Jewish groups did exist and were doomed to disappear by assimilation. Nonetheless, during his early years in power he continued the policy of Lenin, to permit the Jews to organize a system of cultural life in Yiddish, provided the Jewish nationality, like all the others in the Soviet Union, made Communism the central political purpose of its cultural activity. Schools on all levels and even college courses in Yiddish were created in the 1920s. Hundreds of books were published and a press and theaters were encouraged. Additionally, with the help of such Western Jews as the Chicago millionaire, Lessing Rosenwald, who was opposed to Zionism, there was some settlement of Jews on the land in southern Russia and the Crimea. An even more grandiose attempt was made to create an autonomous Jewish region on a stretch of land in Siberia, *Birobidzhan. In the later 1930s and particularly after 1948 all of this, including Jewish cultural life in Birobidzhan, was brutally ended. But into the 1930s the reality of Jewish autonomy and the vision of state-sponsored Yiddish creativity in the Soviet Union, allied with its official outlawing of antisemitism, seemed to some Jews in the west, not only of the extreme political Left, an option to be preferred to Zionism. There is no longer any such ideology because repression in the Soviet Union has ended every genuine expression of Jewish life in that country. What existed there in the early 1970s was conducted as an act of semi-clandestine resistance to an unfriendly repressive regime.

[Arthur Hertzberg]

ZIONIST POLICY

Throughout the 19th century, and with increasing potency during the 20th century, nationalism emerged as probably the most powerful political force in Europe, the Americas, and later in Asia and Africa as well. It led to the dismemberment of established empires and to the unification of nations (Italy and Germany); it released creative forces hitherto often suppressed by foreign rule; but it also had other consequences: the identification of state and nation left little room for free and equal development of "minorities." Unlike the Greeks or Romanians, who lived on their own land, the Jews could not attain national self-determination by merely throwing off a foreign yoke. That these developments could not but affect Jewish thought was only natural.

Nineteenth-century Jewry carried very little political weight. Its strivings and efforts could only be of a religious, spiritual, or philanthropic nature. There was no lack of literary expression: countless pamphlets, memoranda, petitions, and sermons were bequeathed by men of renown and by anonymous writers in that century, as well as in earlier times. The general upheaval kindled new hopes. Not only Jewish names, such as Montefiore the magnate, Hess the socialist, and *Disraeli the statesman, are connected with that period, but also many gentile names, such as Lord Palmerston, Lord Shaftesbury, Ernest Laharanne, J.H. Dunant (father of the International Red Cross), and George Eliot. Gentile support for the idea of the Return to Zion reflected the realization that emancipation of the Jews was not enough, and that in addition to recognition of their civil rights, Jews were also entitled to the recognition of their rights as a nation. The sympathy of the few, however, was far outweighed by the hostility of the many. The old antisemitism had been reinforced by "scientific" racial teachings. The last two decades of the century saw the outburst of violent persecutions and pogroms in Eastern Europe, particularly in Russia. These were followed by a mass flight westward, especially to the U.S. The little that Ḥibbat Zion could do in the circumstances was totally inadequate. While hundreds of thousands surged through the gates of the New World, only hundreds succeeded in infiltrating through the more than half-closed doors of the ancient homeland. That these few would in time lay the cornerstone of the Jewish state could only be foreseen by dreamers and visionaries.

THE HERZL PERIOD. If Ḥovevei Zion had sought to reach their goal by quiet and modest labor, Herzl's aim was to achieve a dramatic *coup*, to secure vast funds in order to obtain a guaranteed political basis ("Charter") for a large-scale settlement of Jews. Securing the cooperation of Baron Hirsch or Baron de Rothschild and the consent of the sultan and the German kaiser looked like a shortcut to the goal. He believed that with "millions" it would be possible to obtain a charter or, with a charter, to obtain the millions. Hirsch and Rothschild had already been involved in assistance to Jews in the East in cooperation with the Alliance Israélite Universelle, which had established, inter alia, the first Jewish agricultural school near Jaffa in 1870. Rothschild extended a helping hand to the early settlements in Ereẓ Israel, and Hirsch had set up the Jewish Colonization Association (ICA) with an endowment hitherto unheard of in Jewish affairs. Herzl was received by Hirsch in June 1895 and the result was nil. It was after that interview that Herzl wrote *Der Judenstaat*.

The publication of this clarion call had several consequences. The Jewish national idea, hitherto discussed in small and uninfluential groups, became the subject of heated debate in wider circles. The excited support that came from various quarters – as well as criticism and derision – confirmed Herzl's instinctive feeling that the idea was viable. The territorial aspect also became clearer in his mind: it was to be the ancient

homeland and not Argentina or some other place. The keys to Palestine were to be found in Berlin and Constantinople. A man of action, Herzl took his first political steps. He began by seeking a way to approach William ii, and the initial results were not discouraging. Anxious to make rapid progress, however, he went to Constantinople (June 1896) in an attempt to see Abdul Hamid ii. This proved to be impossible, but Herzl spoke to a number of high officials and a minor order was conferred upon him in the sultan's name.

After further visits to London and Paris in search of political and financial backing, Herzl saw no alternative to organizing a mass movement. Support of a growing number of Zionist groups, especially of students and youth, and encouragement from some Jewish notables enabled him to brush aside the opposition of the assimilated and of rabbinical circles (even Ḥibbat Zion remained cool, fearing Baron de Rothschild's displeasure). The First Zionist Congress met in Basle, Switzerland, in August 1897 and, amid scenes of great enthusiasm, adopted the following formulation of its aim: "Zionism seeks to establish a home for the Jewish people in Palestine secured under public law." The Congress also created the instrument for the implementation of its plan: the World Zionist Organization. Herzl wrote in his diary the prophetic words: "In Basle I founded the Jewish State." And he added a forecast as to the date when the state will become a reality: "…maybe in another five years, at the utmost fifty years." It was 50 years later – almost to the day – that the highest international body, the United Nations, gave its stamp of approval.

One of Herzl's immediate aims – turning the Jewish problems into a "world political problem" – had been achieved in part by the discussions that took place at the Congress itself, in the press, and in the public. Herzl could not have known, for instance, that the German embassy in Berne sent to Berlin a not unsympathetic account of the proceedings, or that this account reached the kaiser's desk and evoked William's remarking that he is all for the Jews moving to Palestine, "the sooner the better." On the other hand, the German consul in Jerusalem made light of the Congress and characterized Zionist aims as utopian. There was to be a change in the kaiser's approach, however. Urged by the grand duke of Baden, one of the more liberal and influential princes in Germany, he reconsidered his previous attitude. On the eve of his visit to Constantinople and Jerusalem in 1898, the kaiser wrote to the grand duke that "the basic idea has interested me, indeed, moved me," and he had come to the conclusion that they were dealing with a "problem of far-reaching significance." Great importance was attached to Jews turning to Germany with gratitude, and he was ready to receive Herzl during his visit to Turkey.

Anxious to have the kaiser put in a good word for Zionism in his talks with Abdul Hamid, Herzl obtained a preliminary audience with William in Constantinople (Oct. 18, 1898) and it seemed that the kaiser had received in a positive spirit both his views and his plea. Von Buelow, the German foreign minister, showed little enthusiasm. It was decided that a Zionist delegation would be officially received by the monarch later, during his visit to Jerusalem. The second audience took place as planned (Nov. 2, 1898), but the spirit was almost totally different. It seemed that the kaiser mentioned the matter in his talks with the sultan, and the latter did not react. The final outcome of Herzl's tremendous effort had been deeply disappointing even though, on the credit side, the whole chapter added somewhat to Zionism's political weight in the eyes of the world, Jewish and non-Jewish.

In search of new approaches, Herzl sought contacts with England and even with Russia; nor was Constantinople written off as yet. Indeed, a new mediator – the Orientalist Armin *Vambery – succeeded in obtaining the decisive audience with Abdul Hamid himself (May 17, 1901); but it proved fruitless. Coupled with the disheartening difficulties on the way to establishing the financial instruments of the movement, which were intended to help in obtaining the charter (the Jewish Colonial Trust), it brought Herzl to the realization that the old road led nowhere and the search would have to turn to other areas, closer to Ereẓ Israel or further away.

England was the first to be approached, and the territory in question was around *El Arish, on the southern border of Ereẓ Israel. London was interested, as it sought to secure the eastern approaches to the Suez Canal. A commission of experts went out to explore the area, which, not unexpectedly, proved to be poor in agricultural land and water resources and could at best absorb a limited number of settlers. Herzl himself visited Cairo (in the spring of 1903) to negotiate with the British representative there, Lord Cromer, and with the Egyptian authorities, but he could not secure the main precondition for any attempt in El Arish – supplies of water from the Nile.

This episode did not sever the first links with London. The second, and more serious suggestion, to come from there related to Uganda. The name Uganda stood then for a number of tribal areas in East Africa where British penetration – first missionary, then commercial and military – went on through the 1870s and 1880s and originally did not prosper. In 1892 the British government decided to abandon the territory, but reversed itself under pressure of missionary and trade interests. Sleeping sickness killed about 250,000 people among the local tribes between 1901 and 1909. Herzl did not know those details when British Colonial Secretary Joseph Chamberlain first spoke to him about the place. Before the matter came up officially, he made another attempt to tackle the Palestine issue by trying to obtain Russian support. In August 1903, several months after the *Kishinev pogrom, he traveled to St. Petersburg and interviewed the notorious minister of interior Plehve (who was assassinated within less than a year) and the minister of finance Count Witte. Once again, the Russian government would not or could not help. On his return journey, he received official news of the new British proposal.

Uganda was not Zion, Herzl knew that and said so at the Sixth Zionist Congress, which met immediately after his visit to Russia. As long as Ereẓ Israel was not obtainable, however, the persecuted people needed a temporary asylum.

Opposition from the old, "pre-Herzlian" Zionists was to be expected, but it was sharper and more widespread than foreseen. In fact, it revealed an accumulation of old dissatisfactions in considerable sections of the movement, especially among the young. The affairs of Zionism were conducted in a way that was far from democratic. Had it produced results, the rank and file would have acquiesced; but all those comings and goings in spheres of "high diplomacy" led away from the main goal, which was Zion. The basic difference between the approach of the leadership and that of the critics became increasingly apparent. The "political Zionists" believed that immigration and settlement could only follow the grant of a "Charter," which would secure the rights of the Jewish people to the land; anything else would be "infiltration" doomed to fail. The "practical Zionists" believed that Jewish rights to Erez Israel were self-evident; immigration and settlement there could not be called "infiltration" and had to proceed under all circumstances. Both sides, however, were conscious of the political significance of the British proposal: at last a mighty world power had recognized the national aspirations of the Jews and was willing to extend a helping hand.

The Uganda Scheme became the Uganda crisis. The Sixth Zionist Congress did not reject the idea outright; with 295 delegates voting for, 178 against, and 132 abstentions, the movement formally accepted the leadership's proposal that a commission be elected to act in an advisory capacity when the Executive sent a mission to the area proposed by England. But the storm that broke loose came as a shock, and it was realized that it would be virtually impossible to proceed with the plan. There were also reports of strong opposition on the part of the British settlers in East Africa and criticism in England itself. Thus, the first debate on Zionism took place in the House of Commons in June 1904, with the participation of the prime minister, A.J. *Balfour and one of the opposition leaders, David Lloyd *George.

In the closing stages of the Zionist Congress, Herzl sought to conciliate the opposition and stressed his continued devotion to what he called "the only country where our people can find rest." But he felt that the breach could hardly be healed. After eight years of superhuman effort and tremendous personal sacrifices, he saw the end approaching. In a final spurt of energy he turned to Rome, where he was received at the beginning of 1904 by King Victor Emmanuel III and by Pope Pius X. The king displayed a warm interest, but there was not much that Italy could do. The pope was ice cold: "If you come to Palestine and settle your people there, we shall prepare churches and priests to convert them." Within a few months after these interviews, Herzl died.

THE TRANSITION PERIOD. That the political activities of the movement could, after the leader's death, no longer be conducted in the same centralized, personal way had been clear to all concerned. After the "natural" successor, Max Nordau, refused to take over, the task fell to another close friend, David Wolffsohn. But he was hardly a political leader, and if the in-

evitable change came but gradually, it was because the desire to remain faithful to "Herzlian Zionism" dominated the heirs to the leadership and because the main problem inherited by them, Uganda, called for immediate decisions. By then, neither side, the Zionists nor the British, were interested in proceeding with the project. A group of experts went to East Africa in December 1904 and reported in April 1905: the proposed area was not suitable for mass settlement. Meanwhile, practical work in Erez Israel gained priority even before any official change took place in the policy of the movement. One of the first visits paid by Wolffsohn was to Edmond de Rothschild, who promised to aid in practical undertakings in the country. Wolffsohn also visited Vambery, who was not optimistic. In his view, the best way for Zionists was to settle Palestine through quiet work within the existing laws. It was in this direction that the Zionist movement gradually veered after Herzl's death, though it never gave up the political element of its philosophy. The turning point came at the Seventh Zionist Congress (1905) which witnessed the first split in the movement when supporters of Uganda refused to concede defeat. They saw themselves as "territorialists," and with the gates of Erez Israel virtually closed, the "Ugandists" refused to reject a proposal made by a great power at a time when the need to find a refuge for the victims of persecution was at its highest.

The departure of the Ugandists, who established the Jewish Territorial Organization under the leadership of Israel Zangwill, was bound to weaken the movement. But it strengthened the "practical" wing in Zionism (led by M.M. *Ussishkin), which, for the first time, obtained representation on the Zionist Executive. The latter was now composed of three "political" Zionists, three "practical," and Wolffsohn as the balancing force. The controversy did not end at that, and difficulties arose when the territorialists sought to negotiate with governments. Tensions relaxed somewhat when the two organizations found themselves cooperating at a conference called by the Zionists (Brussels, January 1906) in order to discuss assistance to Russian Jews. This also produced meager results.

Wolffsohn and his advisers looked for new political initiatives, though this time – in accordance with an explicit ruling of the Seventh Zionist Congress – not beyond Erez Israel and "adjacent areas." El Arish and Sinai drew renewed attention; Syria and Mesopotamia were considered. Sinai was then causing difficulties between Constantinople and London, which wanted the Turkish-Egyptian border to be fixed as far away from the Suez Canal as possible. A suggestion that the establishment of a Jewish settlement in Sinai may serve as a "compromise" found no support. France displayed no interest at all; when Nordau sought its help on behalf of persecuted Jews in Russia, he was told that France cannot add to the many difficulties of an allied government.

There were other attempts, among them discussions with the foreign minister of the Netherlands about raising the problem of Jewish migration during the second Peace Conference

at The Hague. Another proposal spoke of calling a special international conference to deal with the subject. The Dutch thought that it would be appropriate for the initiative to come from England; London felt that a Dutch initiative would be better. A German official promised to take it up with his foreign minister, but no more was heard of it. In the meantime, a fleeting hope arose that it might be possible to renew some of the contacts with Turkey. The sultan's financial troubles were greater than ever, and his officials were looking for help. Twice during the year 1907 Wolffsohn visited Constantinople, and there were moments when he felt that "substantial" progress had been achieved. He no longer spoke of a "Charter" and concentrated on immigration and land acquisition. But the Turks needed vast sums of money, which were, as before, far above the financial ability of the Zionists. The results were therefore the same as during Herzl's desperate journeys. On the credit side, a start had been made for the opening of a bank in Constantinople (The Anglo-Levantine Banking Co.) in which the controlling interest was to be in the hands of the Jewish Colonial Trust (enabling it to appoint the bank's deputy director, who would represent Zionist interests, both financial and political).

THE YOUNG TURKS. When Wolffsohn next visited Constantinople, it was after the situation there had undergone a dramatic change. The revolution of the Young Turks (July 1908) brought to the fore new rulers and widespread hopes. It also restored a relatively liberal constitution; abolished the rule of corrupt palace cliques, of spying, and censorship; and established a parliament. Abdul Harold survived for another eight months and – after a briefly successful counter coup – was replaced by Muhammed V. The years that followed were turbulent and saw almost constant warfare, beginning with the Italian campaign in Tripolitania (1911–12) and through two Balkan wars (1912–13) to World War I and beyond. It was hardly a time for gaining sympathy for Zionism. Whatever progressive ideas the Young Turks may have had initially, chauvinistic tendencies soon prevailed among them. They rejected suggestions for a less centralized regime and for a degree of freedom for the minorities. As far as Palestine was concerned, they proved as inflexible as the rulers they displaced. Nevertheless, conditions of political work in Constantinople itself underwent a slight change.

The Zionist leadership sought to avail itself of the few opportunities that were now to be found on the Bosphorus, mostly for the purpose of explaining the aims and purposes of Jewish settlement in Erez Israel. With the opening of the Anglo-Levantine Banking Co., the post of deputy director was entrusted to Victor *Jacobson, a Russian Zionist with some experience in the Near East. Since the main task had been the proliferation of authoritative information, he was joined by another Russian Zionist, the journalist Vladimir Jabotinsky. A small Turkish publication in French was turned into a well-edited daily, *Le Jeune Turc*. Apart from propaganda, however, there was little that could be done in the political sphere. A

visit by Nordau, who had friendly ties with some of the Turkish leaders, produced no change. He was told that the Jews would be allowed to take part in the development of Turkey but would not be allowed to concentrate in any particular area, such as Palestine. Wolffsohn revisited Constantinople (June 1909) to review the situation. This was to be his last visit there. In 1911 he retired from the Executive and was replaced by Otto *Warburg, a "practical" Zionist, as chairman. This time Wolffsohn paid special attention to the attitude of Turkish Jews, of whom only a few showed interest in Zionism; others were indifferent or unfriendly. The community saw much infighting: between Sephardi and Ashkenazi leaders, between those influenced by the French-oriented Alliance Israélite Universelle and the adherents of the German-Jewish *Hilfsverein der Deutschen Juden. Prominent among the opponents were Chief Rabbi Haim *Nahoum (later chief rabbi of Egypt) and a Jewish member of parliament from Baghdad.

THE ARAB PROBLEM. The Arabs themselves had become a significant political factor. As one of the subject peoples, they had little direct say in the past. In Palestine difficulties arose, from time to time, between Jewish settlers and the local population in connection with land purchases, commercial competition, labor disputes, or robberies. Labor troubles multiplied after the Second Aliyah brought young pioneers who sought to "conquer" labor opportunities in all Jewish settlements. But there, as elsewhere in the empire, Arabs were dominated and roughly treated by Turkish officials. The Arab national movement was in its infancy. One of the few who thought of it was Ahad Ha-Am, who wrote as far back as 1891, in a famous article "Truth from Erez Israel":

"We abroad are accustomed to believe that Erez Israel is almost totally desolate at present… but in reality it is not so… Arabs, especially those in towns, see and understand our activities and aims in the country but keep quiet and pretend as if they did not know, and that because they don't see any danger to their future in our activities at present, and they try to exploit us, too, and profit from the new guests while laughing at us in their hearts. But if the time comes and our people make such progress as to displace the people of the country… they will not lightly surrender the place."

The situation began to change after the revolution of the Young Turks. There were some 60 Arabs and a couple of Jews in the parliament, which counted less than 300 members. The Arabs influenced policy (mostly through personal contacts), introduced interpellations, and, in 1911, initiated two full-fledged debates on the dangers involved in Jewish immigration and land acquisition. In one of these debates, the only speaker to refute their accusations was a Bulgarian Socialist member. Government spokesmen more than once made hostile statements stressing Zionist separatist aims. Zionist representatives sought to counteract the assaults by denying separatist intentions. Jacobson also sought to establish contact with Arab members of parliament. The latter feared that government leaders belonging to the Committee of Union

and Progress might be unduly influenced by Jews who were among the earliest supporters of the Committee. The Turkish authorities, on their part, chose to make promises to all and fulfilled very few of them.

Not many realized at the time that the struggles in which Turkey had been involved, in the Balkans and elsewhere, were but the opening skirmishes in an approaching world war. Though talk of "partition" of the Ottoman Empire was heard long before and early Zionism itself had been influenced by it, the Zionist movement had to base its day-to-day work on repeated assurances that it did not seek to harm the unity of that empire. When Turkey found itself at war with Italy in *Tripoli, Nordau supported a proposal that a unit of Jewish volunteers be organized to fight side by side with the Ottoman forces. Another Zionist suggestion later spoke of organizing a medical unit to help the Turks in the Balkans. When the veteran Zionist leader Jacobus *Kann of The Hague published a book about a visit to Erez Israel in which he openly stated that the ultimate aim of Zionism is the establishment of a Jewish state there, Jabotinsky, then in charge of Zionist press activities in Constantinople, vigorously protested to Wolffsohn and demanded the suppression of Kann's book.

This attitude did not seem too convincing to the Young Turks, while it made Zionism further suspect in the eyes of Arab nationalists. On the other hand, Zionist tactics were almost inevitably the outcome of the contradiction between the movement's immediate needs and its long-range goals. The immediate necessity was to preserve the existing *yishuv* and to increase, however slowly, the number of new immigrants and settlements. The hopes engendered by the changes in Turkey were soon reflected in growing Jewish activity: the number of settlements established in the years 1908–14 reached almost a dozen and a half. The same period also saw the opening in Jaffa of the Palestine Office of the Zionist Organization under Arthur *Ruppin, the foundation of Tel Aviv, and the formation of organized public bodies of the new *yishuv.* All these naturally strengthened Arab opposition and coincided with the formation of local Arab nationalist groups and the appearance of their first newspapers in the country. Though the stirrings among the Arabs found little reflection in the Jewish press, some Zionist leaders soon realized their importance, and as far back as 1908 Wolffsohn used an expression which was later to be repeated by others: Governments change, but the people remain.

During the last year before the outbreak of World War I the first Arab-Jewish contacts that could be seen as politically significant, were introduced. When the Young Turks started taking stringent measures for the "Ottomanization" of their empire, some of the active Arab nationalists were in search of allies. A few turned to the Jews, who, they hoped, could help them with the press and public opinion in Europe. A director of *Le Jeune Turc*, S. Hochberg, received an invitation to visit Beirut and Cairo in order to meet Arab nationalists. He went there, with Jacobson's consent and with the knowledge of the Young Turks, and, according to reports to his superiors, es-

tablished a measure of accord. The support of *Le Jeune Turc* had been promised for Arab aspirations, without prejudice to the unity of the empire, as well as help in the European press, while the Arabs undertook to drop their opposition to Jewish immigration and to support Arab-Jewish understanding. Some of this spirit was also reportedly felt at a conference called by the same Arab activists in Paris in July 1913. This time, Jacobson joined Hochberg in the talks but these were inconclusive, though only muted opposition to Jewish immigration was voiced at the conference.

Another attempt at Arab-Jewish understanding was made in 1914. Arab politicians were again in need of propaganda assistance and, in conversations with Zionists in Constantinople, concentrated on Jewish financial aid for the expansion of Arab education, large-scale public works in Arab regions, and preventing the dispossession of Arab *fellahin*. The latter point was met by suggestions that agriculture be intensified, thus making room for new settlers as well as for the existing farmers. Parallel with these conversations, other talks were conducted by Nahum Sokolow, member of the Zionist Executive, who visited Beirut and Damascus in May 1914. Arab participants in these talks suggested a joint conference to be convened later in the summer and attended by members of the Zionist Executive like Sokolow himself, and not by representatives unauthorized to take decisions. Some of the Arabs called for the assimilation of the Jewish settlers among the local majority through the establishment of mixed villages and mixed schools. In the meantime, heavy clouds covered the international horizon. The joint conference which was to meet at the beginning of July was postponed for a few weeks. But on July 28 the first shots of World War I rang out in the Balkans, and on November 5 Turkey became involved in the war on the side of Germany and Austria.

THE STRUGGLE FOR THE FUTURE. That the vast conflict was bound tragically to affect a people whose masses lived on both sides of the frontiers in regions which turned into battlefields soon became all too obvious. The Zionist movement, national in spirit but international in structure, was also bound to find itself in a precarious position. Its headquarters were in Berlin, but the majority of its followers lived in countries at war with Germany or neutral. There were suggestions that the central office should move to Scandinavia. British and U.S. Zionists wanted it transferred to the United States and placed under the leadership of Louis D. Brandeis. Russian Zionists feared that such a step would cause affront to Germany and further antagonize Turkey; they wanted a coordinating bureau in neutral Copenhagen. Thus the old central office remained in Berlin and its representatives stayed in Constantinople, their task more vital than ever: to see to it that the young *yishuv* weathers the storm. Two members of the Executive (Sokolow and *Tschlenow) were sent to London to take charge of political activities there, while another member, Shemaryahu *Levin, went to the United States. Nonetheless, one of the results of the fact that the Zionist headquarters never left Central Eu-

rope was the widespread and persistent impression that the movement was under German influence.

Whether Germany itself took it for granted was far less certain. Berlin never took Zionism seriously. Its international character had always been suspect. The recent struggle of the *yishuv* (1913) against German as the language of instruction in the German-Jewish Hilfsverein schools, including the newly founded Haifa Technological Institute, caused considerable irritation. Having achieved the huge political success of involving Turkey in the war as an ally, Berlin would do nothing to place any strain on the friendship. Repeated Zionist initiatives directed at obtaining Turkish – or at least German – expressions of sympathy for Jewish aims in Erez Israel were repeatedly rebuffed. Even where the proposals concerned the rights of Jews in Russian Poland, which was occupied by German troops (Count Bernstorff, German ambassador in Washington, urged his government to promise them equality of rights in the future), Berlin responded negatively, ostensibly because such a step could make it more difficult to achieve a separate peace with Russia at some later date.

Nonetheless, in the military and political vacillations that were to follow, the Germans sought to preserve the precarious status quo in and around Palestine, but even that proved difficult. Soon after the outbreak of hostilities, one of the most ruthless members of the Turkish ruling group, Jamal Pasha, assumed command in Syria and Palestine and began a series of expulsions, some of them explained as military measures, others as the result of the fact that many of the Jews in the country were foreign (mostly Russian), citizens. The grave danger to the very existence of the *yishuv* (which numbered about 85,000) alarmed not only the Zionists but Jewry as a whole. The largest Jewish community (Russia) could do little; its political influence was nil and it had been overwhelmed by its own huge refugee problem, created by the mass expulsion of Jews from the war zones by the Russian army command. There remained only one large section of the Jewish people not directly involved in the war. U.S. Jewry immediately offered a helping hand both to the Jewish victims of the fighting in Eastern Europe and to the *yishuv*. Furthermore, U.S. Jewry had political weight, and the United States was at the time represented in Constantinople by Henry *Morgenthau, who was willing to help. Coming on top of the Turkish atrocities, of which the Armenians were the main victims, reports of harassment in Erez Israel created an atmosphere that was harmful not only to Turkey but to its allies as well. One of the main aims of the Central Powers had been to keep the U.S. neutral. The unpopularity of czarist Russia in wide circles of the United States public played into their hands. There were also great economic interests involved in the struggle for U.S. sympathies. This helped to make the rulers of Turkey realize that turning Jewish Palestine into another Armenia by large-scale massacres may be too costly, and, although Jamal Pasha often acted on his own, the worst fears that were felt in the first months of the war only partly materialized. Before the end of 1915 the German ambassador in Constantinople, Count Met-

ternich, sent a confidential circular letter to his consulates in Turkey explaining their government's "friendly attitude" toward Jewry's aspirations concerning the raising of the spiritual and economic standards of the Jews living in the Ottoman Empire and furthering Jewish immigration and settlement there (Palestine was not mentioned); all this, of course, provided no harm was done to Turkish or German interests.

In the meantime, a Zionist political campaign was slowly gaining ground in Britain. It centered around a younger leader who had become prominent as one of the critics of Herzl's policies – Chaim Weizmann. One of his closest advisers was a much better known critic of Herzl – Aḥad Ha-Am. The political climate in England was unlike that of Germany. For a long time Britain guarded the integrity of the Ottoman Empire until the latter's misgovernment; the steady penetration of German interests into Turkey and the expansion of Britain' own interests in the Near East made that policy no longer tenable. The future partition of the vast Ottoman domains raised great problems and offered great opportunities, including some for the non-Turkish elements in the empire and for the Jews in Palestine. Weizmann was one of those who soon grasped the suddenly unfolding prospects. The history of his efforts is the history of the Balfour Declaration. It was a dramatic struggle in which the chief participants were outstanding leaders of the British government, foremost among them Balfour and Lloyd George, leaders of the Jewish community, split in their attitude to the very idea of a Jewish center in Palestine, and numerous other personalities. An early advocate of the idea was a member of the government, Herbert *Samuel. The search for an acceptable policy formulation proved to be a most complicated task, mainly because other Entente partners, above all France, were also involved.

When the first tentative approaches were made, the Zionists knew nothing of the secret negotiations between Britain and France, which resulted in the *Sykes-Picot Agreement of February 1916, that had already settled the future of Palestine. With the exception of a small enclave including Haifa, in which Britain had a long-standing interest, the country was to be placed under an international administration. Later, Russia was also promised large areas of Turkish territory. These undertakings tied Britain's hands when the discussions on Zionist proposals began making headway. But they also spurred interest. The creators of British policy in the Near East had always viewed France as an undesirable neighbor in the vicinity of Suez. An opportunity to reopen the question, especially as far as Palestine was concerned, increased that interest. The potential propaganda value in America and even in Russia, with their millions of Jews, was not overlooked. The Jews, on their part, were becoming more active in giving expression to their wishes and expectations. The British government consulted the government of the U.S., and obtained the support of Wilson and his administration for the pro-Zionist attitude of the British government. L. Brandeis and S. Wise played an important role in securing the U.S. support. As early as the first days of the war, before Turkey joined the Central Powers,

proposals were made that Jewish battalions be raised to fight for the liberation of Ereẓ Israel. In August 1914 London was visited by a well-known figure in the Russian revolutionary movement, Pinḥas *Rutenberg, who sought to obtain the support of Weizmann and others for this idea. In the meantime, young Jews expelled from Ereẓ Israel to Egypt began volunteering for service with the British forces, and the Zion Mule Corps was established in 1915 under British command with a former officer of the Russian army, Joseph Trumpeldor, playing a central role when the unit went to Gallipoli later in the year. This was but the beginning of the prolonged campaigning for the establishment of the Jewish Legion that was stubbornly pursued by Jabotinsky in London and took another two years to obtain its goal. Rutenberg, who went to the United States in 1915 for the same purpose, had been persuaded to postpone it because of the threat of Turkish retaliations in Palestine, and those who influenced him most were two labor leaders from Ereẓ Israel, David Ben-Gurion and Izhak Ben-Zvi, who later, however, in 1917, themselves promoted the idea of the Jewish Legion and joined its "American" battalion. Much of this activity, including Weizmann's political initiative, had not been authorized by the official supreme organs of the Zionist movement; a meeting of its General Council held in Copenhagen in 1916 resolved that the Executive may not negotiate with any country at war with Turkey.

The turning point on almost all the fronts came in 1917. The beginning of March brought the Russian Revolution which overthrew the czar and led, eight months later, to the overthrow of the revolutionary government itself and the establishment of the Soviet regime. April brought the American declaration of war on the Central Powers (but not against Turkey). Soon afterward permission was granted in London for enlistment in Jewish battalions. At the beginning of the same year, the British government, now led by Lloyd George, started "unofficial discussions" with the Zionists. One of the first obstacles that had to be removed was the previous commitment under the Anglo-French Sykes-Picot Agreement. Indeed, it was Sir Mark Sykes himself who conducted the discussions with representative Jews, and with his assistance important moves were made in Paris and Rome. On behalf of the Zionists, Sokolow conducted the negotiations there. This time, even the Vatican was less unbending. Benedict XV told Sokolow: "We shall be good neighbors." A short time later, Sokolow received from the French government assurances of "sympathy for your cause, the triumph of which is bound up with that of the Allies." It may have been a reluctant concession, but it opened the way for a decision by the British cabinet. Significantly, the most persistent opposition there came from Edwin Montagu, the Jewish secretary of state for India, but it could not overcome the equally great persistence of the prime minister and of the secretary of state for foreign affairs. Montagu succeeded, however, in delaying the approval of his government's pronouncement and in watering it down. On Nov. 2, 1917, the Balfour Declaration was issued.

WORDS AND DEEDS. The impact of the Balfour Declaration on Jewish public opinion was immediate, and enthusiasm spontaneous. In many lands there were huge demonstrations and processions displaying the Union Jack side by side with the Zionist flag. But the Jews in Germany and Austria could only celebrate between four walls, and in Russia there were by then large areas under Bolshevik rule or in a state of flux where open identification with an "imperialist power" became imprudent. If one of the purposes of the declaration had been to influence developments in Russia, it came too late, even assuming that Jewish opinion could have had any significant influence amid the political storms that were raging there. On the other side of the trenches, in Germany and Turkey, the semi-official reactions were unexpectedly mild. The German Foreign Ministry was unmoved; Zionist efforts in Berlin to obtain a similar declaration were rebuffed. But in December 1917, Talaat Pasha, one of the Turkish ruling triumvirate, told a Zionist correspondent of a prominent German newspaper that Turkey was favorably disposed to Jewish settlement in Palestine, that existing restrictions would be removed, and immigration would be free within the "limits of the country's absorptive capacity," and that Jews will have the right to free economic and cultural development and to local self-government in the framework of Turkish laws. After the publication of the interview, Jewish and Zionist representatives were called to the Foreign Office in Berlin and an undersecretary told them that his government welcomed Talaat's statement.

The general military situation at the time had not yet been viewed by the Central Powers as hopeless. Even Turkey was far from giving up the struggle, in spite of the British advance in Palestine, which caused, inter alia, the removal of Jamal Pasha (September 1917), but not before he hanged a number of Arab nationalists in Damascus. Turkey was pinning its hopes on a Russian withdrawal from the war, chances of a separate peace, or, at least, a relatively lenient treatment at a future peace conference. But 1918 brought the series of events that left no more illusions. Bulgaria collapsed at the end of September. A few days later came the disintegration of the Austro-Hungarian Empire. Turkey capitulated on October 20, and Germany herself, her power broken on the western front and her people rebelling, deposed the kaiser and signed an armistice on November 11.

Months before this denouement, the new Zionist leadership headed by Weizmann took the first steps toward the implementation of the Balfour Declaration. A *Zionist Commission for Palestine had been formed, including representatives from Britain, America, France, and Italy, and started out for Ereẓ Israel. Two representatives from Russia were elected, but their departure had been postponed. Before leaving, Weizmann was received by King George V. There were high hopes but few illusions. It had been difficult to obtain the international promise; turning it into a reality was bound to be much more difficult. The Turks were out; the Arabs felt immeasurably stronger; the British military administration was totally indifferent and often openly hostile. The Jewish people as a

whole had been greatly weakened by the war. Russian Jews were among the chief victims of the internal chaos that followed the October Revolution and of the civil war that was beginning to engulf most of Russia. Polish Jewry was in dire need of help. American Jews saw their most urgent task in rushing aid to Eastern Europe.

The arrival of the Zionist Commission in Ereẓ Israel in April 1918 opened three decades of incessant struggle. The commission's immediate task was to help in restoring the impoverished *yishuv* and preparing the conditions for future immigration. The almost totally negative attitude of the military authorities was a major obstacle, and it also impeded understanding with the Arabs. Contacts were established with Emir Feisal, about to become king of Syria. Weizmann's talks with him, first in Akaba and later in London and Paris, led to the signing of an agreement in January 1919 with Colonel T.E. *Lawrence acting as intermediary. But Feisal's hopes to remain in Syria had been frustrated. The French forced him to flee Damascus in 1920, and though he was compensated by the British, who secured his election as king of Iraq, his understanding with the Zionists remained a dead letter. The stormy events in the Arab world were bound to involve Palestine, to where they were soon directed – partly made to be directed – against the Jews. For the first time attacks were organized on a large scale. In the spring of 1920, Trumpeldor and seven others fell while defending Tel Ḥai in Upper Galilee. Within a few weeks Arab rioting in Jerusalem claimed further victims. Some of the organizers were sentenced to years of hard labor. For the sake of evenhandedness, Jabotinsky and members of the Jewish self-defense received similar treatment. Moreover, official explanations published by the British authorities made the Balfour Declaration look like a scrap of paper. The political pattern then established was to last until the end of British rule in the country.

Elsewhere on the political front things looked somewhat less dismal. Zionist leaders had been given an opportunity personally to present their case at the Paris Peace Conference. They also had a say in the lengthy process of drafting the League of Nations' Mandate for Palestine, even if many of their proposals had not been accepted. The Mandate itself had been entrusted to Britain at San Remo in 1920, although some British leaders wanted it to be taken on by a more than reluctant America. On June 30, 1920, Sir Herbert Samuel arrived in Palestine as its first high commissioner, with every goodwill to serve the people of Palestine as a whole, the Jewish National Home, and British interests. While he was taking the initial steps in establishing a civilian administration, Zionist leaders met in London for their first postwar conference, and the internal difficulties which dogged the movement from its early days again came to the surface. Instead of "political" and "practical" Zionists, it was "east" and "west" this time, symbolized to a great extent by two names: Weizmann and Brandeis. The former wanted a comprehensive program of action embracing political, economic, and cultural matters. His opponents viewed the political chapter as closed with the attainment of international recognition and approval of the Mandate; henceforth efforts were to be concentrated on economics, and particularly on fostering private enterprise. Those in Weizmann's camp proposed the establishment of a large foundation fund – Keren Hayesod – for the upbuilding of the National Home and for the encouragement of private initiative. The "Brandeisists" opposed it. There was a widespread feeling that unless Jewry put to good use the opportunities created by the wartime achievements, they might be irretrievably lost. But the general situation did not work in Zionism's favor, regardless of trend. The strongest appeals addressed to world Jewry evoked only a faint echo. The funds raised were miserably inadequate. Even the limited number of immigrants could not find immediate employment, and crisis chased crisis.

These difficulties opened new opportunities before the opposing side. Samuel's efforts to placate the Arabs were rebuffed. Winston *Churchill's efforts as head of the Colonial Office to do the same by making Feisal king of Iraq and Abdullah emir of eastern Palestine (called Transjordan) where the "Jewish clauses" of the Mandate were not to be applied, fared no better. Less than a year after Samuel's arrival, the country was shaken by the worst outbreak of Arab rioting yet seen there. Its political repercussions led to the publication (in June 1922) of the first of the series of *White Papers which undermined the foundations of what was intended to be the Jewish National Home. No concession, however, satisfied the Arab political leadership, which sought to stop all Jewish immigration and take over the government of the country through institutions with an Arab majority or by other means. This general erosion gave rise to great discontent within the Zionist movement. Weizmann was accused of not being strong enough in his dealings with the Mandatory government since he constantly insisted on Jewish-British relations based on mutual trust. Others accused him of extending too much support to the Zionist labor movement and to unsound economic policies. One of the opposition groups was led by Jabotinsky, who had been brought into the Executive in 1921 but resigned in 1923. Moreover, Brandeis laid down his post as honorary president of the Zionist Organization (June 1921), thus bringing U.S. Zionists into disarray for a number of years. For different reasons, Ussishkin was also soon to leave the chairmanship of the Zionist Executive in Jerusalem (which replaced the Zionist Commission). Even before that, there were changes in its Political Department whose first chief, Commander *Levi-Bianchini (Italian Jewry's representative on the commission) had been killed by Bedouin in an attack on a train near the Syrian border. His successor, M.D. *Eder (a former territorialist) returned to London in 1922, and Weizmann sent to Jerusalem a career officer with diplomatic experience, Lt. Col. F.H. *Kisch, who was to remain at his post for nine difficult years.

Seeking to break the vicious circle of economic predicaments and political setbacks, Weizmann and his colleagues decided to open a new page by bringing into the national effort

important non-Zionist elements in Jewry. The idea encountered strong opposition, mainly among those already opposed to Weizmann. However, after lengthy preparatory work, the first conference of the "enlarged" Jewish Agency met in Zurich in 1929 in the presence of a number of outstanding Jews of the generation, among them Albert Einstein, Leon Blum, Ḥ.N. Bialik, Shalom Asch, Louis Marshall, and others. The impression produced by this remarkable gathering had been powerful, and the hopes it reawakened were great. But the reaction in Palestine came almost immediately. After months of Arab incitement motivated by the most potent of weapons – Muslim religious hatred aimed at depriving the Jews of their traditional rights at the Western Wall – there came a wave of murderous attacks. The outbreak was followed by two inquiries. An international commission studied and reported on rights of access to the Western Wall, and a British commission reviewed the political aspects of the situation. The resultant White Paper (1930) issued by the colonial secretary, Lord Passfield (the Labour leader Sidney Webb), led to Weizmann's resignation as president of the Jewish Agency as a protest and a sign that the government can no longer expect his cooperation. A storm followed in the press and in the British Parliament. Official explanations were published by Prime Minister Ramsay MacDonald, but they could but slightly reduce the damage done. Weizmann's own position became untenable, and at the 1931 Zionist Congress Sokolow was elected president in his place. No essential change in the policy of the movement, however, followed. Indeed, Chaim *Arlosoroff, who took over the Jewish Agency's Political Department in Jerusalem from Kisch (who resigned before the Congress), had been Weizmann's devoted disciple. It was also the first time that a representative of Zionist Labour had been entrusted with the political portfolio, which was to remain in Labour hands. Furthermore, with Weizmann away from his old office in London, the center of Zionist policy-making gradually moved to Jerusalem, and this shift was virtually completed after Ben-Gurion joined the Executive in 1933.

Kisch was the model civil servant; Arlosoroff was the statesman-philosopher. Realizing that no change in the situation could be expected unless there was some progress toward a modus vivendi with the Arabs, Arlosoroff was determined to concentrate much of his work in this field. Consequently, he appointed Moshe Shertok (*Sharett) as secretary of the department for his knowledge of Arabic and his strong ties with the country. Arlosoroff's brief term, less than two years (he was murdered on the Tel Aviv seashore in June 1933), coincided with the first years of service of the British high commissioner, Sir Arthur Wauchope. The two established a sincere mutual understanding, and this played a part in government actions when, at the beginning of the Hitler regime, it became imperative that Palestine be opened to a large number of immigrants from Germany. Nonetheless, Arlosoroff also came to the conclusion that although there was no immediate alternative to the former political course of the movement, future alternatives had to be explored. He considered Revisionist demands

for a complete change of the system of government in Palestine as unrealistic. But the road hitherto followed, without greater political assistance from Britain and vast sums from the Jewish people, would clearly not bring Zionism nearer to its goal. The world situation also militated against it. In 1932 Arlosoroff foresaw a new international conflagration "in five to ten years." It was imperative to elaborate alternative, even "revolutionary," plans, while continuing to "muddle through." The ideas discussed in those days included plans for the division of the country into "cantons" on Swiss lines. This was an old suggestion made by Jacobson, then head of the Zionist Office at the seat of the League of Nations in Geneva. More radical proposals spoke of establishing a Jewish state in a part of the country where Jews formed a large section of the population (by then the *yishuv* counted about 180,000).

In spite of their vital importance, long-range issues had to give way to urgent current problems, and even these could not be adequately handled when the budget of the Political Department in Jerusalem amounted to $20,000 a year. The latest White Paper (1931) brought in its wake additional inquiries into the problems of land and absorptive capacity – or lack of it, according to British experts. The Jewish Agency tried to reopen the question of settlement in Transjordan; a group of influential sheikhs entered into negotiations with the Jewish Agency on the subject, presumably not without Emir Abdullah's knowledge. The British were adamant: Transjordan was to remain closed to Jewish settlement. Such policies could only weaken the position of the few Arab leaders who were inclined to some sort of understanding with the Jews. Desultory attempts to open discussions with them were made during those years by prominent *yishuv* personalities (J.L. Magnes, Rutenberg, Moshe *Smilansky) and, less important, by a small group called Berit Shalom, which was seeking a binational solution. They found, however, no one in the Arab camp able to enter into binding agreements. The mufti of Jerusalem, Ḥājj Amin al-*Husseini, intended to turn the Palestine problem into a general Muslim problem by calling a Muslim Conference in Jerusalem. Tension and agitation were also fostered by inciting broadcasts from Fascist Italy. In Egypt the beginning of the 1930s witnessed violent disturbances and a general strike in 1933. In the year 1937 independent Egypt was admitted to the League of Nations. The year 1936 saw a general strike in Syria, too, but French consent to grant Syria independence was later repudiated by Paris. Iraq, which joined the League of Nations in 1932, experienced a military coup in 1936. The examples proved infectious. In order to force the British to stop Jewish immigration and place Palestine under an Arab government, and also in order to subdue the moderates within the Arab camp itself, al-Husseini and his followers proclaimed an Arab national strike in 1936. It did not take long for what was supposed to be passive resistance to turn into open rebellion. An Arab Higher Committee was formed to conduct the struggle.

The inquiry instituted by the British this time was the most authoritative ever. A Royal Commission headed by Lord

Peel had been appointed, and before it left for its destination, unusually stringent measures were taken in Erez Israel to restore a semblance of order, with the aid of almost 20,000 British troops. Formally, the Arab leaders only stopped the strike when called upon to do so by the rulers of Iraq, Saudi Arabia, Yemen and Transjordan (Egypt was not among them), but later decided to boycott the commission because the government approved new immigration permits. The commission stayed in the country from November 1936 until the end of January 1937, and toward the conclusion of its hearings Arab representatives testified before it in compliance with another call from the same rulers. The Jewish Agency appeared before the commission in full force, headed by Weizmann who was again its president (reelected in 1935). Sittings were held abroad as well, and statements were heard from Jabotinsky and Samuel, among others. Politically, the results were more dramatic than after any previous inquiry. The commission concluded that the Mandate proved to be unworkable because it was impossible to secure even the minimum of mutual understanding between the two sections of the population necessary for its implementation. After analyzing the various proposals for finding a way out of the impasse, the commission chose partition: dividing the country into a Jewish state, an Arab state, and a mandated zone which was to include Jerusalem. The establishment of a Jewish state had thus become for the first time a proposal from a formal British body. What could not have been foreseen was that at least three other commissions would have to go into the matter and a second world war and the holocaust of European Jewry would be witnessed before the plan – largely modified – would be implemented.

The approaching war was casting ominous shadows. Britain could not face increased complications in a vital strategic region. Parliamentary reactions to the partition plan were unfavorable. Emir Abdullah stood to gain a great deal, for he could do in 1938 what he did in 1948 – take over the area allocated to the proposed Arab state. Abdullah's supporters were secretly with him, but for public consumption their attitude was negative. The Husseini camp was totally uncompromising and ready to renew the fight. Soon the government was compelled to take drastic steps, including the suppression of the Arab Higher Committee and the deportation of extremist leaders; some of them, including al-Husseini, had fled the country earlier. The riots continued, however, and to a large degree became an internecine Arab struggle, claiming numerous victims, mostly among the moderates. The fact that the Jews were also split in their attitude to the partition plan made Britain's retreat from the plan much easier. In spite of Weizmann and Ben-Gurion's pleading in its favor, only a vague compromise resolution could be forced through the Zionist Congress in 1937. By 299 votes to 160 it was agreed that the Executive should "ascertain" in discussions with the British "the precise terms for the proposed establishment of a Jewish State." The non-Zionist partners in the Jewish Agency were far more negative. They did not want a Jewish state; their decisions, including a request to the government to convene a conference of Jews and Arabs, made progress even more difficult.

In 1938 another commission visited Palestine. Though it was called the Partition Commission, there had been a widespread feeling even before it reached Jerusalem that its real purpose was to bury the plan. In the autumn it presented its report, which was negative. It was welcomed not only by Arabs, but also by anti-partition Zionists. But even before that happened, Hitler made his first decisive steps toward war: the annexation of Austria in April and the beginning of the destruction of Czechoslovakia in November. The same month also brought the *Kristallnacht* in Germany. By then the propaganda offensive of the Axis in the Near East had heightened. Anxiety among Jews abroad mounted and led, inter alia, to the presentation of a memorandum on the subject to President Roosevelt by 245 members of both Houses of Congress and 30 governors. In Poland a Jewish Emigration Committee was established under government pressure to seek new "territories"; a study mission went to Madagascar and returned with empty hands. Other territories were mentioned with little hope. By then, an air of inevitability began enveloping Europe and the world. No conditions could be less propitious for an attempt to achieve in 1939 what proved to be elusive before: a fair settlement.

Britain nonetheless considered that the urgent needs of the hour precluded further postponement. Taking up the suggestion that an Arab-Jewish conference be called, the British broadened the scope and invited, in addition to the parties to the conflict, representatives of Egypt, Iraq, Saudi Arabia, Transjordan, and Yemen. Inevitably, the inclusion of the Arab states almost led to a boycott of the conference by the Jews, but the situation was far too grave for that. The Jewish delegation was large and weighty; it included Zionists, non-Zionists, and Agudat Israel. With regard to the leadership of the Palestine Arab delegation, London began by declaring Amin al-Husseini persona non grata and ended by accepting his representative and kinsman, Jamāl al-Husseini, over the opposition of moderate Palestine Arabs. The augury was plain: no agreed proposal could come from such a gathering. The Arabs insisted on their full program: abolishment of the Jewish National Home, an end to Jewish immigration, and Arab self-government. There was no room for give and take. The government of Neville Chamberlain saw itself facing one overriding task: to prepare for the coming war with Hitler. The Arabs could be a menace; the Jews had no choice. Thus, a new White Paper was issued in May 1939. A Palestine state was to be established and the population was to be prepared for self-government over a ten-year period. The future constitution was to include safeguards for the holy places, for the special position of the Jewish National Home, and for British interests. Full independence was made conditional on the creation of good relations between Arabs and Jews. As to immigration, 75,000 Jews were to be admitted in the next five years, after which the continuation of immigration would depend on Arab consent. The regulation of land sales, or their banning in certain areas, was left in the hands of the government.

The White Paper was rejected outright by Jews and Arabs alike. There was sharp criticism in the British Parliament, and only the grave international situation gave the government the needed majority; Labour and some 20 Conservatives (including Churchill) voted against it. The strongest words came from the Mandates Commission of the League of Nations, which stated unanimously that the policy "was not in accordance with the interpretation which… the Commission had placed upon the Palestine Mandate." The matter was to come up before the Council of the League of Nations, due to meet in September, since a change in the terms of the Mandate called for the council's consent. The war started before it met, and the British government considered itself free to act. In the meantime, the extremist Arabs found themselves leaderless as al-Husseini and some of his associates were not allowed to return. This was used by the Arab moderates who saw a chance to gain both the leadership and a compromise that would give the Arabs most of what they wanted. The Jewish leaders in Palestine and abroad refused to cooperate with the British administration, and some extremist elements, mainly the underground *Irgun Ẓeva'i Le'ummi (IẒL), soon turned to the use of force. The Zionist Congress which met in Geneva on the very eve of World War II avoided taking dramatic decisions. With armies massing all over Europe and with the signature of the Molotov-Ribbentrop Pact, it was realized that both valor and wisdom would be needed in the coming struggle.

WAR AND HOLOCAUST. Even before the initial Axis successes brought a direct military threat to Palestine in 1940, tragedy befell European Jewry (see *Holocaust). Its unbelievable dimensions did not become known until later, but there were already large numbers of Jews fleeing from death and trying to reach Palestine. The immediate task was to help in their escape. Next to it was the need to mobilize the *yishuv* for the war. As had been the case a quarter of a century earlier, the British were reluctant to accept Jewish volunteers. Only the early defeats in North Africa weakened this reluctance, and by 1940 many thousands of Palestinian Jews enlisted. The *yishuv*'s economic potential also gradually became a factor of considerable value. The British did not forget their White Paper, however, and in February 1940 introduced crippling regulations concerning land transactions, which caused another bitter outburst on the part of the Jews. The immigration problem had taken on a different character. The British aim was to spread out the use of the 75,000 "certificates" over five years and – if possible – until the end of the war (although nobody could know when that would be). In any case, regular immigration was unlikely to continue under war conditions. Indeed, less than 20,000 immigrants – authorized and unauthorized – entered during the years 1940–42. Furthermore, the fact that the Chamberlain government fell in May 1940 and another administration took over, headed by Churchill and including a number of other friendly ministers, was bound to influence the general political climate.

As to the Arabs, the initial military successes of the Axis made them stake their future on its victory, and many were ready merely to wait for it. Hence the failure of Al-Husseini's call for an open rebellion. The fall of France in 1940 turned Syria and Lebanon into bases of subversion and February 1941 brought about a pro-German putsch in Iraq. Allied countermeasures prevented further deterioration. Al-Husseini turned up in Rome and Berlin in the autumn of 1941, and some Egyptian sympathizers of the Axis (including the future president of the UAR, Anwar Sadat) plotted with Axis men in North Africa. A slight change took place after Rommel's defeat in 1942. British efforts were largely directed at exploiting the improved situation, and in due course a policy of unifying the Arabs evolved, which led to the organization of the Arab League in 1945. Palestine Arabs were granted a voice in the league itself when it was organized, their cause having been included in its charter.

Among the Jews there was a feeling that somewhat friendlier winds were imperceptibly blowing in London. The immediate peril to the *yishuv* had receded, but the dimensions of the tragedy that befell European Jewry were gradually emerging. The need for immigration, and immigration itself, were again coming to the fore. Internal pressures were building up; the wartime "truce" between the British authorities and extremist elements was coming to an end; and violence erupted again in Palestine, this time initiated by the IẒL. The Zionist leadership found it necessary to clarify its own position and seek clarification of the position likely to be taken up by the Churchill government. Much of the thinking harked back to the Royal Commission's proposals, but the formulation adopted at a conference called by American Zionists at the Biltmore Hotel in New York in May 1942 claimed "that Palestine be established as a Jewish Commonwealth." This was later approved by the appropriate Zionist bodies in Jerusalem over the opposition of some of the former anti-partitionists. Outbursts of terror from Jewish extreme underground organizations, including the murder in Cairo of the British minister for the Near East, Lord Moyne, by members of *Loḥamei Ḥerut Israel (Leḥi), again increased the feeling of impending crisis.

YEARS OF DECISION. The end of the war in Europe in May 1945 was followed by the fall of Churchill. Labour, which replaced him, had in the past displayed great sympathy for Zionism, and its party conference had just confirmed its promise to help the development of the National Home by making room for it through "extending the present Palestinian boundaries, by agreement with Egypt, Syria, or Transjordan." The urgent need for action soon became clear with the disclosure that it was necessary to aid in the rehabilitation of hundreds of thousands of survivors of Nazi camps. This could only be done through Anglo-American cooperation. The United States had already become a factor in Middle Eastern affairs, militarily and economically. Now, because of its friendly ties with both Jews and Arabs, it was beginning to become involved politically as well.

In the days immediately following World War II, the voice of the American Jewish community on its own government carried much weight in Washington. This was the culminating point of a generation of sporadic political endeavor by the Zionist movement in America, which had resulted in 1924 in the U.S. government's formally approving the League of Nations Mandate for Palestine and its guarantee of Jewish national rights. Every president of the United States after Woodrow Wilson had made declarations favorable to Zionist aspirations, and the majority of Congress was moved several times to declare its pro-Zionist views, both officially in joint resolutions and informally. With the rise of Nazism, Zionist membership in the United States grew rapidly and the Zionist organizations became a prevailing influence in the community while also widening the circle of friends and supporters in the general community. During World War II there was lively and even bitter disagreement between those Zionists who followed Stephen S. Wise in being ready to rely on the goodwill of President Roosevelt and were therefore willing to remain relatively quiescent, and those led by Abba Hillel Silver, whose orientation was toward the opposition Republican Party and who believed public opinion had to be organized against the government in order to both save Jewish lives in Europe and realize Zionist aims after the war. These forces paved the road to the adoption of the Biltmore platform in 1942, which postulated Jewish independence as the Zionist war aim. Distrust in the goodwill of others and the desire for independence deepened while the news of the Holocaust continued to seep out of Europe. By the winter of 1943 Abba Hillel Silver replaced Stephen Wise as the head of Zionist political affairs and public relations in the United States. With the help of Emanuel *Neumann and a number of others, the American Zionist Emergency Committee, which Silver led, mounted a political offensive throughout the United States and prepared the ground both in the public mind and in political circles for U.S. support of Zionism against the continuing White Paper policy of the British government and for the establishment of a Jewish state. The Zionist forces had a substantial impact on the White House and on Congress, which were responsive to public protest and pressure mounted within the democratic process, and they thus managed (1947–48) to influence the policy of the U.S. government, despite the continuing opposition of the State Department.

The United States also had to shoulder most of the burden of aid to the vast numbers of *Displaced Persons in Europe. The Jewish Agency asked for an immediate grant of 100,000 immigration permits, but Britain, embroiled in a fierce election campaign, was incapable of acting. Two months earlier, a change of leadership had also taken place in the U.S. Roosevelt's successor, President Truman, was anxious to help, and one of his first steps was the dispatch of an envoy to DP camps. The latter recommended resettlement of 100,000 stateless Jews found in the western zone of occupied Germany, and pointed out that "Palestine is definitely… the first choice." This recommendation, with Truman's backing, was sent to London, but the new prime minister, Attlee, could not see his way to accepting it, proposing instead a joint Anglo-American investigation of the entire problem. This was agreed upon in October 1945.

Uncertainty and conflicting pressures had their most damaging effect in the Middle East itself. The Arabs saw new danger to their hopes, raised high by the 1939 White Paper. A reorganized Arab Higher Committee was soon established. The Arab states' position as founding members of the new United Nations gave them a feeling of being able to sway political developments. Now they were incensed by America, even more than by Britain. There were violent demonstrations and attacks on Jews and foreigners. On the other hand, the *yishuv* also found new strength in its very despair. Some 20,000 Jewish troops were beginning to return, well trained, many with war experience, having seen with their own eyes what happened to their brethren in Europe. They, and others in the *yishuv*, vowed "never again!" Acts of violence were becoming widespread. The Haganah, which in the past had concentrated on defense and on preparations for the day of decision, undertook action of its own. Soon the government, with all the forces at its disposal, found itself at war with the *yishuv*. The only respite came during the work of the Anglo-American Committee of Inquiry, whose prospects, however, were prejudiced in advance by the new British foreign secretary Ernest Bevin, who from the outset left little doubt of his hostility. The Labour government inherited a crushing burden of problems of which the Middle East was only one. Britain became unable to continue its imperial role. It was necessary to cut losses and safeguard only the most vital interests. Soon India was to be independent, after being split into two states, and other parts of the empire were to follow. So was Palestine, but at the end of 1945 and beginning of 1946 a way was still being sought to keep Britain in control. Under pressure of immigration needs, a provisional monthly "schedule" of 1,500 permits had been decided upon for the duration of the discussions and it was stated, for the first time, that any proposed settlement would be brought before the United Nations.

The work of the Anglo-American Committee, which started in Washington in January 1946, continued in London and in other places in Europe, then in Jerusalem, Cairo, and a number of other Arab capitals, and ended in Lausanne in March. It was conducted in a highly charged atmosphere. Large numbers of Jewish survivors of the Holocaust were being intercepted on the high seas by the British navy as "illegal" immigrants. Acts of violence in Palestine became a daily occurrence. So did Arab threats, especially after Husseini escaped from Germany on the eve of its surrender and appeared in Cairo. The Palestine Arabs mainly relied on the influence of the Arab states, whose willingness to assist them was proclaimed daily. It was inevitable that the inquiry should seek a compromise, and the final report turned not to partition but to its alternative: a bi-national Palestine state based on parity and under a United Nations trusteeship. To help in meeting pressing needs, 100,000 immigration permits were to be

issued, if possible in 1946, and future immigration was to be based on compromise.

With the exception of Washington, no interested party approved the recommendations. Britain's equivocations found expression in official statements and, even more, in Bevin's speeches. The Arabs saw their hopes for Arab rule in Palestine dashed. The Jews, though pleased by the opportunity of rapidly bringing in a large number of Displaced Persons, feared the prospect of unending strife with the Arabs and with the "Trustee," which they expected would be Britain. The breaking point was reached in June 1946, when, in a retaliatory action *Palmaḥ units destroyed a number of rail and road bridges in sensitive points, and the British government hit back by imposing a virtual siege on the *yishuv*: mass searches for arms and incriminating documents were carried out in hundreds of buildings, including the offices of the Jewish Agency; over 2,000 people, among them the members of the Jewish Agency and Va'ad Le'ummi executives, were arrested. The life of the *yishuv* had been dislocated. In time, some of the detainees were freed, but over 700, including Agency and Va'ad Le'ummi leaders, were interned. A short time later, ıʐʟ blew up a wing of the King David Hotel in Jerusalem, housing offices of the government secretariat. The casualties, belonging to all communities, were heavy. The *yishuv* was shocked, and the Jewish Agency condemned the deed. Meanwhile attempts were made in Washington and London to proceed with discussions about the results of their joint inquiry. Another committee, headed by Henry F. Grady (U.S.) and Herbert Morrison (Britain) found it more advisable to go back to the principles of territorial division. It suggested the establishment of a Jewish sector, an Arab sector, and a British sector, including Jerusalem and the Negev, as an intermediary stage that could eventually lead either to a unitary state, to a bi-national one, or outright partition. Administration of common interests such as defense, foreign relations, communications, etc., was to remain in the hands of a British high commissioner. During the initial five years, he was also to appoint presidents of the legislatures of the Jewish and Arab sectors, and his approval would be needed for new legislation. Immigration would also remain under his control after the agreed 100,000 were brought in with American help. The implementation of the scheme as a whole was made conditional on American participation and Arab-Jewish consent.

There was little to recommend this latest compromise, which contained most of the drawbacks of earlier suggestions. Washington withdrew from it almost immediately, and there was much criticism in London. The Arabs insisted on all their original demands, and the Jews refused to accept the plan. Again, London proposed a conference. The Jewish Agency was ready for it but not on the basis of the Morrison-Grady plan. The Arab Executive refused because its conditions (including the participation of Amin al-Husseini) were rejected. Thus, when the conference convened in September 1946, the main parties to the dispute were absent and only the British and Arab governments were represented. No progress could

be made, and Britain suggested that the discussions be temporarily suspended for a further attempt to bring in the parties concerned. This was to take place at the beginning of 1947 in order to enable the Jewish Agency to bring the matter before the forthcoming Zionist Congress. To make things easier, the interned Zionist and *yishuv* leaders and a number of other internees were released. By then the Jewish Agency had again disassociated itself from the acts of violence, which were continued, however, by ıʐʟ and Leḥi. Simultaneously, a number of Husseini's men were allowed to return to the country.

When the Zionist Congress met in December 1946 in Basle, it revealed a significant change in the internal situation. The Labour wing of the movement lost some ground, and within its ranks the activist elements had the upper hand. The American Zionists were led by Abba Hillel Silver, a supporter of a more determined policy. Furthermore, the Revisionists rejoined the Zionist Organization. As a result, the Congress refused to participate in the London talks, albeit leaving the door slightly ajar for later reconsideration. The idea of partition had enough support, but no initiative was to come from the Jewish Agency. Finally, the post of president had been left vacant, thus demonstrating the rejection of the Weizmann line. It was the absence of the Zionists that helped the Arab League persuade the Palestine Arab leaders to take their seats at the second round of the London talks in January 1947. An amended version of the Morrison-Grady scheme was put forward by Bevin, designed to meet some of the earlier criticism: cantonal self-government, for instance, in place of provincial authority; a shortened period of trusteeship; 100,000 immigrants in two years instead of one; and no partition. The Arab reply, however, was nevertheless a resounding no. This left things in a worse state than ever because it became obvious that the 1939 White Paper was also dead, a victim of the Holocaust, determined Jewish opposition, Arab conduct during the war and, finally, United States intervention. Left without an official policy, London turned to the United Nations on April 2, 1947. The purpose of this step was made clear in a statement before the House of Commons: "We are not going to the United Nations to surrender the Mandate. We are going to the United Nations setting out the problem and asking their advice as to how the Mandate can be administered. If the Mandate cannot be administered in its present form, we are asking how it can be amended."

THE UNITED NATIONS INVESTIGATES. Though this was the first time that the United Nations was to deal with the Palestine problem, the latter was not unknown to it. Preliminary skirmishes on the subject took place at the San Francisco Conference in 1945 and at the first session of the General Assembly in 1946, when Arab representatives attempted in vain to obtain decisions prejudicial to the Jewish position. The first special session of the General Assembly met between April 28 and May 15, 1947, with the purpose of "constituting and instructing a Special Committee to prepare for the consideration of the Question of Palestine at the second Regular Session"

(scheduled to open September 16). The five Arab delegations tried to alter the very purpose of the deliberations on the eve of the session by requesting to amend the subject of discussions by adding to the agenda an item entitled: "Termination of the Mandate over Palestine and declaration of its independence." As before, the Assembly rejected their request; it also refused to exclude from its discussions the problems of displaced Jews in Europe.

For the first time, representatives of the Jews and of Palestine Arabs were heard by the United Nations. When the question arose whether their spokesmen should be heard at a plenary meeting or at a meeting of the Assembly's political committee, Czechoslovakia and Poland, backed by the U.S.S.R., urged for a hearing in the plenary, while Britain and America viewed the committee as the appropriate place for statements by delegations that did not represent member states. The latter view prevailed. The Jewish Agency spokesmen were Ben-Gurion, Silver, and Shertok (Sharett). The Arab Higher Committee was represented by E. Ghouri and H. Kattan.

The burden of the Jewish case was summarized by Ben-Gurion, who told the committee: "… in Palestine you are faced not merely with a large and growing number of Jews, but with a distinct Jewish nation. There are Jews and Jewish communities in many countries, but in Palestine there is a new and unique phenomenon – a Jewish nation, with all the attributes and aspirations of nationhood." The Arab case was presented not only by the spokesmen of the Higher Committee but also by the five Arab member-states, and it was summarized by Ghouri: "We only request the application to us of the principles of the democracies. We are only asking for our national rights. It is… the determined and unequivocal will of the Arabs to refuse to consider any solution which entails or even implies the loss of the sovereignty to the whole or to any part of the country, or the diminution of such sovereignty in any form whatever."

Much of the discussion was procedural, and the great majority of the delegates avoided anything that could be seen as clear commitment to one side or the other. The representative of India (a Muslim) was one of those who did not conceal his leaning to the Arab side, nor did the representative of Turkey. The delegate of China spoke with feeling of "the tragedy of the Jewish people" which contributed so much to the world and which "deserves a national home of some sort, deserves a place it can call its own, in which it can live in happiness, free from social and political discrimination and free from the eternal fear of persecution." Sympathy for Jewish aspirations were expressed by Czechoslovakia and Poland, but the chief surprise came when the Soviet delegate explained the stand of his government. The Soviet regime had long been known for its extreme hostility to Zionism, but the opportunity to hasten the removal of Britain from an area of special interest to the U.S.S.R. was far too important to let that stand in the way. While supporting the Jewish Agency's request for a hearing, Andrei Gromyko spoke of the sufferings of the Jewish people

in Europe and said that it was "beyond description." "The fact that not a single Western European state" came to the help of the Jews "explains the aspirations of the Jews for the creation of a state of their own… It is impossible to justify a denial of this right of the Jewish people." The Mandate failed, and both Jews and Arabs call for its liquidation. The best solution would be "the establishment of an independent, dual, democratic, homogeneous Arab-Jewish state," but if that proved impossible "in view of the deterioration in the relations between the Jews and the Arabs," it would be necessary to consider "the partition of Palestine into two independent autonomous states, one Jewish and one Arab."

The divergent views led to dissensions concerning the composition of the proposed UN mission and its terms of reference. Talk of "neutrality" and "impartiality" was found to be of little help, But it was agreed that the UN Special Committee on Palestine (UNSCOP) was to have "the widest powers to ascertain and record facts, and to investigate all questions and issues relevant to the problem of Palestine" and it was to conduct "investigations in Palestine and wherever it may deem useful." It was asked to "give most careful considerations to the religious interests in Palestine of Islam, Judaism, and Christianity" and present its report by Sept. 1, 1947. The only votes against the decision were those of the Muslim states. As to the composition of UNSCOP, it was agreed to make it fully representative of all regions of the world, and to exclude the permanent members of the Security Council and the Arab countries. Two Muslims (from India and Iran) were included, as well as delegates from Australia, Canada, Czechoslovakia, Guatemala, the Netherlands, Peru, Sweden, Uruguay, and Yugoslavia.

Arab dissatisfaction with these decisions found its immediate expression in a boycott by the Arab Higher Committee. The Arab League left the question of its cooperation open in the hope of persuading the mission not to visit refugee camps in Europe. The investigators did, indeed, postpone their decision on the subject until after the hearings in the Middle East. The latter started in the middle of June in an unusually tense atmosphere caused by numerous acts of violence, hangings, and retaliations. It also coincided with the dramatic developments concerning the fate of the refugee ship *Exodus 1947* with over 4,500 men, women, and children who sailed in it to Palestine only to be returned to Germany after a bloody encounter with British forces in Haifa harbor. Nevertheless UNSCOP (presided over by Swedish Chief Justice Emile Sandström) heard Jewish and British representatives, official and unofficial, and visited Arab areas of the country, as well as Jewish ones, spending over five weeks in Palestine. The Arabs who met the UN envoys privately repeated the demands already heard in New York. The Jewish Agency efforts were now clearly directed at achieving partition on fair terms. On its way back, UNSCOP members visited Lebanon, Syria, and Transjordan and heard representatives of the Arab states, who warned against any solution but the one proposed by them. Upon arriving in Geneva, UNSCOP decided to have a subcommittee visit Jew-

ish refugee camps in Germany and Austria, and by the end of August it completed its work.

The UNSCOP report contained 12 general recommendations (11 of them adopted unanimously), a majority plan, and a minority plan. The majority plan, presented by Canada, Czechoslovakia, Guatemala, the Netherlands, Peru, Sweden and Uruguay, called for the partition of Palestine into an Arab state, a Jewish state, and an internationalized Jerusalem, the three to be linked in an economic union. The Jewish state was to include eastern Galilee, the Coastal Plain from a point south of Acre to north of Ashdod, and the Negev. The Arab state was to include western Galilee, central Palestine, and the Coastal Plain from Ashdod to the Egyptian border. The Jerusalem-Bethlehem area was to be administered by the United Nations under a permanent trusteeship. The Mandate was to come to an end, and from Sept. 1, 1947, Palestine was to be administered by Britain for another two years, alone or with the participation of one or more UN members, under UN auspices. The political regimes in the new states were to be "basically democratic." The holy places and access to them were to be safeguarded according to existing rights. Furthermore, the UN was to make speedy arrangements to solve the problem of a quarter of a million Jewish refugees in Europe. With two dissenting votes, UNSCOP also expressed its view that "any solution for Palestine cannot be considered as a solution of the Jewish problem as a whole." The argument of the minority report, concurred in by India, Iran, and Yugoslavia, with Australia abstaining in the vote on both plans, was based on the assumption that "the well-being of the country and its peoples as a whole" outweighed "the aspirations of the Jews." It suggested a federal regime comprising an Arab state and a Jewish state with Jerusalem as capital of a central government in charge of defense, foreign relations, and immigration. There was to be a bicameral legislature based on parity in one house and on proportional representation in the other, and all legislation would require majority support of both. Jewish immigration into the Jewish state was to be allowed for three years within its absorptive capacity. Arbitration was to help in overcoming any deadlock between the states. These proposals were made by less than one-third of UNSCOP and the division of views between the majority and the minority reflected the division within the UN itself, as was to be confirmed three months later.

THE UN DECISION. The UNSCOP report occupied the center of the stage when the regular General Assembly met in New York on Sept. 16, 1947, although there were other important items on the agenda as well. The preliminary discussion on the report took place at an Ad Hoc Committee representing all member states, whose number had increased in the meantime: Yemen and Pakistan had been admitted to the United Nations, thus strengthening the Arab and Muslim front. Apart from that, no new alignments of forces were to be seen during the opening stages of the debate that lasted for over three weeks and was characterized by confusion. The main shift that soon became noticeable was in the tactics of the British delegation, which openly and actively canvassed for the rejection of partition. Arab delegations also increased their pressure. They were outspoken in their threats to Western, and particularly American, interests in their lands, and there were powerful economic and military factors in the United States, Britain, and France which could be – and were – activated in order to defeat the UNSCOP proposals. Indeed, initial American remarks on the subject were reserved and hesitant. On the other hand, threats voiced by the Arab Higher Committee to the effect that what will happen to the Jews in Palestine if the UNSCOP proposals were adopted would "exceed the horrors of Genghis Khan" had the opposite effect. It became clear to a growing number of UN members, and to great sectors of the general public opinion, that decisions must be taken which would prevent these threats being carried out. The Jewish Agency announced acceptance of the majority plan early in the debate. Weizmann's speech before the committee left a profound impression. His role in realizing the ultimate decision of the United Nations in favor of partition and the creation of a Jewish state was of prime importance. Though out of office, for the Zionist Congress in 1946 did not reelect him as president, thus symbolizing its commitment to a more activist policy, Weizmann continued to work both in London and in New York for the creation of a Jewish state. He was particularly successful in moving and impressing President Harry Truman, from whom he secured the binding promise to support the partition proposal, including an outlet on the Red Sea for the proposed Jewish state.

As the discussions progressed, attitudes began to crystallize. The United States and the Soviet Union came out openly for partition. After that, the prospects of the majority plan gaining the necessary two-thirds of the votes grew. More attempts were made to find a compromise, in subcommittees and in the corridors, but the persistent Arab demands for the establishment of what could only be an Arab state with a Jewish minority at the mercy of its adversaries led to the failure of all such efforts. An ominous warning also came from Britain: while accepting UNSCOP's unanimous opinion that the Mandate be terminated, it would take no implementation of a decision that was not acceptable to the parties. This meant noncooperation. The question of implementation became of utmost importance, especially after the British refused to extend their stay in Palestine even for a few weeks beyond May 15, 1948, or to help in the transfer of power to the authorities that were to be established in the Jewish and Arab states. The readiness of the Mandatory power to act in a way that was tantamount to sabotaging an international design for relieving it of a responsibility that had become too great to bear also had an opposite effect. It stiffened resistance to those who refused to accept the majority view. A vote in the Ad Hoc Committee on November 24 rejected an Arab proposal for a unitary state by 29 to 12. On November 25 a vote was taken on the partition plan, somewhat amended by a subcommittee, and it was approved by 25 to 13. This was not yet the two-thirds

majority needed in the plenary. Both sides were by now making exerted efforts to gain their objectives. After one or two postponements, which further increased the tension, the decisive vote came on November 29, and it was 33 for, 13 against, and 10 abstentions.

The wave of emotion which followed gave abundant evidence that not only the Jewish people saw the UN verdict as truly historic, but many other nations found in it an expression of the wish to right some of the wrongs of which Jews were victims, particularly the Nazi Holocaust. There were also grave warning signs. Arabs of Palestine reacted by widespread attacks on Jews; large numbers of armed men were coming in from across the borders to participate in those attacks; and Arab governments made no secret of their preparations for large-scale military action on the day of Britain's withdrawal. The UN appointed a small Palestine Commission to help in an organized transfer of power to provisional councils of government in the two proposed states, but the British refused to cooperate with it or even allow it to enter Palestine before the month of May. The commission also reported that while Arab and Jewish police supernumeraries were being organized in towns and villages, only the Arabs were getting arms from the British. Furthermore, while the British continued to supply arms to Arab governments, the United States imposed an embargo on all such supplies to the area, thus forcing the Jews to seek other sources, mainly in Eastern Europe.

A sense of frustration and helplessness was gradually enveloping the UN, which saw the danger that its first major decision might end in failure. While the UN machinery was going through the motions (the Trusteeship Council, for instance, prepared a draft statute for an international administration of Jerusalem), reports from Palestine spoke of mounting disorder, of fighting and casualties, and of British preparations to leave in an atmosphere of what was then called "planned chaos." The implementation commission made partial progress in one sector only: in cooperation with the Jewish Agency for the establishment of the necessary authorities in the future Jewish State. The situation was repeatedly discussed in the Security Council, which had been told by the commission (February 1948) that it would not be able to fulfill its task without armed assistance. A debate started within the Council concerning its own authority: while it was agreed that it may use force for the preservation of peace, there was less agreement about the same right in respect to the enforcement of UN decisions. U.S. views were negative, and they were strongly criticized by the Soviet Union. On March 19 the United States proposed that the work of the Palestine Commission be suspended and a temporary UN trusteeship over the country be established. The proposal had been made by the State Department in Washington without the knowledge of President Truman, as he later explained. The State Department had also been strongly urging Zionist leaders to postpone action on the establishment of the Jewish state for at least a few months, a suggestion that was turned down by the majority of the Jewish Agency members. Furthermore, the U.S. proposed to call another special session of the Assembly to discuss the trusteeship idea.

The new session met on April 16, 1948, and was immediately bogged down in a procedural debate. The United States presented a working paper outlining details of a temporary trusteeship, providing for a government and essential public services in Palestine pending further negotiations. At the same time, the Trusteeship Council was asked by the General Assembly to study measures for the protection of Jerusalem, where fighting was then going on almost without interruption. On April 28 the Council came to an understanding with the parties concerned about a truce in the city, but reports from Jerusalem spoke of continued firing. On May 5 the Council recommended that before the Mandate expired on May 15, a special municipal commissioner for Jerusalem should be appointed by the Mandatory power with Jewish and Arab consent. The candidate for the post never went to Jerusalem, as the Arabs refused to cooperate with him and there was no truce. On May 14, the last day of the Mandate, a Franco-American proposal to establish a temporary international regime in Jerusalem failed to get the necessary support. It had also become clear that the idea of a trusteeship over the whole of Palestine stood no chance. The only outcome of the discussions on that day had been the disbanding of the Palestine Commission and the decision to appoint a mediator, for which task Count Folke Bernadotte of Sweden was later chosen. With the hands of the clock moving toward 6 P.M. in New York (midnight in Palestine and the end of the Mandate), the struggle was still on. But even before the hour came, the United Nations was informed that the establishment of the State of Israel had already been proclaimed in Tel Aviv. A few minutes after 6 P.M. it was announced by the White House that President Truman recognized its provisional government as the de facto government of the new state. Soviet de jure recognition followed a few days later. On May 15, regular forces of Egypt, Syria, Lebanon, and Iraq, including Saudi Arabian contingents, and the Arab Legion of Transjordan with its British officers, invaded Israel, and its newborn defense forces took the field against them.

[Moshe Medzini]

ZIONIST ORGANIZATION

HISTORY. The Zionist Organization was founded at the First Zionist Congress (convened by Theodor Herzl in Basle, 1897) as the structural framework of the organized Zionist movement, "comprising all Jews who accept the Zionist program and pay the shekel." The biblical name *shekel was given to the membership fee of the Zionist Organization.

Though a rudimentary framework of a popular movement had been established by the Ḥibbat Zion, it was only through the foundation of the Zionist Organization that Zionism became a modern, democratic, mass movement, based on a worldwide interterritorial organization and equipped with instruments for political, settlement, and educational activities on a large scale. The most important of these instruments were created during Herzl's presidency (1897–1904): the Jewish

Colonial Trust, to serve as the Zionist bank (1899); the Jewish National Fund (1901), for the acquisition of land as the inalienable property of the Jewish people; and *Die Welt* (1897), as the official organ of the organization.

Herzl died in 1904 before attaining his primary political aim, the Charter, i.e., the grant by the Ottoman authorities of political autonomy in, and the right of settlement of, Erez Israel. The conflict over the Uganda Scheme at the Sixth Zionist Congress (1903) led to a split in the Zionist Organization. When the Seventh Congress (1905) rejected any settlement activities outside the Land of Israel, the Territorialists seceded from the Zionist Organization and founded the Jewish Territorial Organization, which, however, failed to play a significant part in Jewish life and, after the Balfour Declaration, disappeared from the public scene.

The growth of the Zionist Organization is best illustrated by the increase in the total number of shekels distributed: in the two-year period ending with the Eighth Zionist Congress (1907; for the former period, only the sums of the shekel revenues are available) there were 164,333; at the 11th Congress (1913) the number of shekels was 217,231; it steeply rose to 855,590 at the next Congress in 1921, the first to be held after World War I and the Balfour Declaration (although at that time most of Russian Jewry, the mainstay of Zionism, had already been cut off from the main body of the movement); at the 21st Congress, on the eve of World War II (1939), the number of shekel holders exceeded 1,000,000; and at the first postwar and last pre-state gathering, the 22nd Congress in 1946, the shekel figures indicated that 2,159,840 Jews were organized in the Zionist Organization. After Herzl's death, the seat of the organization was transferred from Vienna to Cologne, the residence of Herzl's successor, David Wolffsohn (1905–11). When Otto Warburg headed the organization (1911–20), Berlin became the Zionist capital, but World War I isolated it from the Zionists in the Allied countries, whose activities were centered in London. The purpose of the Zionist Liaison Office set up in 1915 in neutral Copenhagen was to facilitate the contact across the war fronts between the two sections of the organization. London was the capital of the Zionist world during the presidencies of Chaim Weizmann (1920–31 and 1935–46) and of Nahum Sokolow (1931–35), but in 1936 the center was transferred to Jerusalem, although London remained the seat of its president and of some members of the Executive.

When the 18th Congress (1933) had resolved that "in all Zionist matters the duty of discipline in regard of the Zionist Organization must take precedence over the discipline to any other body," the majority of the Zionist Revisionists, led by Vladimir Jabotinsky, seceded from the Zionist Organization and set up the New Zionist Organization, while a minority of Revisionists, under Meir *Grossman, remained in the ranks as the *Jewish State Party. The split lasted until 1946, when the Revisionists returned to the parent body and renewed their participation in the Zionist Congresses.

The First Congress laid down only a rough outline of a few organizational rules. It was the Third Congress (1899)

that adopted the first complete constitution (Organisations-Statut) which, substituted by a more elaborated text adopted by the Fifth (1907) and the Tenth Congresses (1911), remained in force until 1921, when a thorough revision of the text and its adaptation to the changed conditions was effected by the 12th Congress. Minor amendments were adopted by each of the subsequent Congresses. In 1960 an entirely new Constitution came into force and thoroughly changed its structure (see below). The 25th and 26th Congresses (1960, 1964) made efforts to broaden the basis of the Zionist Organization by the admission of associate members, i.e., Jewish bodies which endorse the Zionist program without obliging their members to be organized Zionists. These efforts were initiated and supported by the fifth president of the Zionist Organization, Nahum Goldmann (1956–68), who assumed the presidency after the office had been vacant for ten years.

The 27th Congress (1968) adopted the greater part of the recommendations submitted by the Commission on Reorganization, which had been set up by the preceding Congress, and resolved to amend the Constitution accordingly. These amendments, however, affected details like Congress elections or the participation of youth in Zionist territorial organizations, rather than the general pattern and basic provisions of the Constitution.

STRUCTURE. Before the Zionist Organization was divided into parties, it had been organized on a purely territorial basis. According to its early Constitution, the members were organized in local societies that were grouped into regional units, which were in turn subordinated to territorial committees in charge of Zionist affairs in the country concerned. With the emergence of ideological trends and groupings, a type of dualism became characteristic of the structure of the Zionist Organization. According to the Constitution of 1921, the Zionist Organization was structured both horizontally and vertically: on the one hand, there were countrywide organizations comprising all Zionists without regard to their views on special issues – Zionist territorial unions with local branches; on the other, Zionists subscribing to a certain ideology, or, as the Constitution put it, "representing a special point of view," were, under certain conditions, given the privilege of forming a separate union (Sonderverband) which set up territorial branches. The first separate union was the Mizrachi (1902); the *Po'alei Zion followed in 1907; Ha-Shomer ha-Za'ir and the Jewish State Party were founded as separate unions after World War I. The *Ancient Order of Maccabeans, established in Britain at an early stage of the movement, soon became defunct.

During the first decades of activity, the separate unions represented only a small minority of the membership. At the 12th Congress (1921) the delegates affiliated with the territorial unions numbered 376, while those of all separate unions totaled only 136. The membership and strength of the separate unions steadily grew, however, and at the last Congress before World War II (1939) the proportion was reversed: the

delegates of the territorial unions numbered 171 and those of the separate unions 386. Furthermore, at the beginning the members of the Zionist territorial unions were called *General Zionists, simply denoting all those who did not belong to any separate union; but a tendency rose and finally prevailed within the General Zionists to adopt an ideology of their own and to transform themselves into a party like the others. Furthermore, this group often split into two wings, at first called Groups A and B, and since the 24th Congress (1956) known as the Union and the Confederation of General Zionists, respectively. On the other hand, the difference between the separate unions and parties not registered as such became blurred and, apart from a few purely formal privileges of the former, ceased to exist for all practical purposes. Because of this differentiation between territorial and separate unions, the Zionist movement in some countries almost disintegrated into several independent parties without common framework, apart from joint committees established for special purposes like the shekel and election boards. As a reaction to this "atomization," several Congresses declared that a United Zionist Federation, based on individual membership and comprising all parties and groups, be compulsory in every country. These and later resolutions, which again made the establishment of a joint territorial framework obligatory, but were content with the collective membership of parties in so-called Zionist Federations, largely remained unimplemented.

The structure of the Zionist Organization underwent a profound change with the promulgation of a new Constitution in 1960. It introduced a new official name, the World Zionist Organization (although the traditional one, Zionist Organization, is still more frequently used); the shekel remained in existence as a token of Zionist allegiance and voting card, but members of the Zionist Organization were no longer individual shekel-payers but collective bodies only, namely Zionist territorial organizations and Zionist territorial and interritorial associations. The former are either Zionist unions based on the membership of individual Zionists (like that of the Netherlands), or Zionist federations based on the collective membership of Zionist bodies (like that of Belgium), or mixed Zionist federations based on the membership both of bodies and individuals (like that of France). Examples of Zionist territorial and interterritorial associations are *Hadassah and *WIZO (incidentally, the two largest Zionist bodies in the world).

The Constitution of 1960 introduced a far-reaching reform of decentralization. According to the legal construction underlying the Constitution, the Zionist Organization is the "body authorized by its members to act for and on behalf of the movement and all the members for the implementation of the Zionist program." Emphasis is placed on the autonomy of the members: "Every member shall determine the conduct of his affairs, the form of his organization and procedure." Bodies that were affiliated with the Zionist Organization when the new Constitution came into force were considered members under its provisions. New members may be admitted by the

Congress or General Council, provided they comply with a number of conditions laid down in the Constitution. One of these provisions is that the body "has regard to the protection of the requirements of all its members and to the fundamental principles of justice." (On the membership of national and international Jewish bodies, see above.)

GOVERNING BODIES. The pattern of internal organization very much resembles that of a sovereign state: the shekel payers are comparable to citizens, the Congress elected by them – and to a certain degree also the General Council – is similar to a parliament, the Executive resembles the government or administration of a country, and the Congress Tribunal and the attorney of the Zionist Organization are its "judicial branch." On the other hand, the Zionist Organization differs from a state in two important respects: it is an interterritorial body and not limited by national frontiers; and it is built on a purely voluntary basis, with no means of enforcing its decisions. The ultimate and gravest sanction it may impose is expulsion from its ranks.

THE ZIONIST CONGRESS. The Congress is the supreme organ of the Zionist Organization. It legislates, receives and considers reports from other organs, determines the financial policy, and elects the president, Executive, General Council, Congress Tribunal, attorney, and comptroller. Until the 26th Congress (1964) the shekel payers chose the Congress either by direct elections or by "unopposed elections," by means of a "united slate" arrived at through interparty agreements. The 27th Congress (1968) was not based on elections but, in accordance with special regulations enacted after the Six-Day War (1967), had the same composition as its predecessor. It decided that future Congresses should not be elected according to a uniform election system, but that each country should itself determine the method of elections of its Congress delegates, provided it does not conflict with generally accepted democratic principles. Until the 24th Congress (1956) the number of delegates allotted to an election area (country) was in direct proportion to the number of shekels sold there. Under the Constitution of 1960, however, the size of the representation is fixed by a special commission "having regard to the size of the Jewish population and the totality of the conditions and activities of the Zionist movement in the country concerned."

In Herzl's time the Congress met every year (apart from 1902); until 1939 it convened once every two years (with the exception of World War I). The Constitution of 1960 legalized the practice of a four-year inter-Congress period.

THE GENERAL COUNCIL. The longer the intervals between Congresses, the greater the importance attaching to the Zionist General Council, also known by its original name of Herzl's times as the Actions Committee. During the inter-Congress period, it has not only legislative functions, but "shall consider and decide upon all matters relating to the Zionist Organization and its institutions." The number of Council members with voting rights in 1968 was 129, compared with 25 in 1921.

The Council meets at least once a year no later than March, since the budgetary year of the Zionist Organization terminates on March 31 and one of the Council's prerogatives is to decide on the budget in years when no Congress is held. It discharges this function either itself or through its Permanent Budget and Finance Committee. It has become general practice that the Congress or the Council fixes the framework of the budget, while the details are determined by the committee acting upon the proposals of the Executive. Over the course of years the importance of the Council has grown because "delegated legislation" has become increasingly frequent, i.e., the Congress has authorized the Council to make decisions or take steps within the jurisdiction of the Congress. Thus, even the Constitution of 1960 was adopted by the Council and not by the Congress. The Council's membership exactly reflects the composition of the Congress, each grouping being represented by a number of members equal to one-fifth of its Congress delegation. Apart from these members with full rights, the Constitution provides for members in an advisory capacity who are entitled to speak but not to vote in the Council's sessions, such as the members of the Executive or Zionist personalities who have been granted seats as "virilists" (i.e., veteran Zionists who are given a seat for their personal merits).

During World War II and up to the 22ⁿᵈ Congress (1946), an Inner General Council in Jerusalem composed of 31 members exercised all functions of the full Council, which could not meet. The presidium of the General Council, consisting of its chairman and 18 members, conducts the meetings of the Council, represents it in external and internal matters, and discharges various duties "imposed by law or referred to by Congress or Council."

THE EXECUTIVE. According to the Constitution of 1960, the Executive, elected by the Congress, is "its executive organ charged with the implementation of the decisions of Congress and Council and responsible to these bodies." Its seat and head office is in Jerusalem, but the Executive may "establish one or more divisions abroad." The branch in London was abolished shortly after the proclamation of the State of Israel (1948), but there is a New York section whose members join their Jerusalem colleagues several times a year for plenary sessions at which general policy is formulated. Day-to-day matters are handled in the almost weekly meetings of the Jerusalem Executive. The Executive acts through its departments, generally headed by one or more of its members. In 1970 the following main departments were in existence: Immigration and Absorption, Youth Aliyah, Youth and He-Ḥalutz, Settlement, Organization, Information, External Relations, Education and Culture – and Torah Education and Culture – in the Diaspora, Treasury, and Administration. Over the years no other governing body of the Zionist Organization has grown in size as much as the Executive, which, originally called the Small Actions Committee, initially numbered five and after Herzl's death seven members. The Executive elected at the first post-World War I Congress (1921) had only 15 members, but that

appointed by the 23ʳᵈ Congress (1951) numbered 19 members and two deputies, while that elected in 1966 included 26 regular members (one without voting rights – WIZO) and one deputy. The 27ᵗʰ Congress (1968) reversed this trend, reducing the number of the Executive members to 14 (among them one representative each of the WIZO and the Sephardim) and empowering the General Council to co-opt up to 5 nonparty Zionist personalities.

THE PRESIDENT. The president elected by the Congress is "the head and chief representative" of the Zionist Organization. He has the full rights of an Executive member. The actual standing of the president is determined less by his constitutional status than by his personality and activities. No president was elected at the 22ⁿᵈ Congress (1946), and until 1956 Nahum Goldmann and Berl *Locker co-chaired the Executive. In 1956 Goldmann was elected president of the Zionist Organization until 1968, when, at the 27ᵗʰ Congress, no president was elected, but Louis Aryeh *Pincus was chairman of the Executive from 1965.

THE JUDICIAL ORGANS. The judicial organs of the Zionist Organization are the Congress Tribunal and the attorney. According to the Constitution of 1960, the Congress Tribunal combines the functions of the former Congress Court and Court of Honor. It consists of a maximum of 25 members including the chairman and up to five deputy chairmen. The Congress Tribunal had jurisdiction to interpret the Constitution; to examine the legality of decisions of central Zionist bodies; to determine disputes between one central Zionist body and another or an individual – except in financial matters; to deal with objections to a postponement of the Congress or a Council session; to verify Congress elections; to deal with appeals from territorial judicial bodies and against decisions of the committees determining the number of Congress delegates and the system of Congress elections; to deal with complaints that the Constitution was infringed or that the interest and prestige of the Zionist Organization damaged. The attorney of the Zionist Organization (formerly Congress Attorney) is charged with representing the interests of the organization before the Congress Tribunal and advising central Zionist bodies in legal matters.

THE COMPTROLLER. The comptroller and his office are a counterpart to the state comptroller of Israel or the comptroller and auditor general of Great Britain. The comptroller's task is to "inspect the financial and economic activities of the Zionist Organization and its institutions and officers of every kind."

ZIONIST ORGANIZATION AND THE JEWISH AGENCY. The term Jewish Agency for Palestine was coined by the Mandate for Palestine promulgated by the League of Nations in 1922, whose article 4 made provision for "the recognition of an appropriate Jewish Agency as a public body for the purpose of advising and cooperating with the Administration of Palestine in such economic, social, and other matters as may affect the establishment of the Jewish National Home and the

interests of the Jewish population of Palestine." The Mandate designated the Zionist Organization as the Jewish Agency it envisioned, and until 1929 it functioned in that capacity, i.e., the Zionist Organization and the Jewish Agency were one and the same body. The position changed when at Weizmann's initiative the enlarged Jewish Agency was established at the 26th Zionist Congress (1929) "for discharging the functions of the Jewish Agency as set forth in the Mandate," on the principle of parity between Zionists and "non-Zionists," i.e., Jewish persons and bodies supporting the building of the National Home, without identifying themselves with the political aspirations of Zionism. Thereafter the Zionist Organization and the Jewish Agency were two different bodies, though headed by the same president. When the last "non-Zionist" member of the Jewish Agency Executive, Werner *Senator, resigned in 1947, the complete identity between the Executives of the two institutions was reestablished. This identity existed until 1971. It was confirmed and stressed in the Israel Law on the Status (see below). In that period the difference between the two bodies was one of terminology rather than substance. In practice the name Zionist Organization indicated the activities and functions in respect to the Diaspora, while the designation Jewish Agency was mostly used in connection with work in and for Israel.

After the Six-Day War, when formerly uncommitted sections of the Jewish people identified themselves with the State of Israel to an unprecedented extent, the proposition to enlarge the Jewish Agency and reinstate its separation from the Zionist Organization was again put forward. The 27th Zionist Congress in 1968 authorized the Executive to initiate negotiations with "fund-raising instruments for Israel" with a view to "establishing a direct relationship between the Jewish Agency and such bodies." A year later the General Council approved the principles of the enlargement; in August 1970 the "agreement on the reconstitution of the Jewish Agency" was initialed, and on June 21, 1971, it was signed. Since then the World Zionist Organization and the Jewish Agency have again been two independent and separate bodies, although – similar to the pattern of 1929 – 50% of the members of the governing bodies of the Jewish Agency are designated by the World Zionist Organization. The chairman of the Zionist Executive is chairman of the Assembly and of the Executive of the Jewish Agency, and they have in common a treasurer and comptroller. The agreement included a division of functions between the Jewish Agency and the Zionist Organization, according to which the latter will "continue as the organ of the Zionist movement for the fulfillment of Zionist programs and ideals." Its main field of activity is the Diaspora, and it deals with Zionist organization, information, youth and He-Ḥalutz (pioneering movements), education and culture, external relations, and the activities of the Jewish National Fund, and also encourages and promotes aliyah from free countries.

ZIONIST ORGANIZATION AND THE STATE OF ISRAEL. In April 1948, one month before the proclamation of the State of Israel, the Zionist General Council resolved that after the establishment of the Provisional Government of Israel, "the jurisdiction of the Zionist Executive should comprise settlement, immigration, and all related matters including Youth Aliyah, Zionist information, organization, propaganda and culture, education in the Diaspora, youth and He-Ḥalutz, the development of Jerusalem and the National Funds." This principle of separation of functions was confirmed in a somewhat modified form by the resolution of the subsequent session of the General Council in August/September 1948 and of the 23rd Congress in 1951. Accordingly, while some functions previously exercised by the Zionist Organization have naturally devolved on the government, other functions remained the sole responsibility of the Zionist Organization-Jewish Agency. In Israeli law the mutual relations between the State of Israel and the Zionist Organization-Jewish Agency were put on a firm legal basis by the Law on the Status of the World Zionist Organization – The Jewish Agency – 5713 (1952), article 4 of which declares: "The State of Israel recognizes the World Zionist Organization as the authorized agency which will continue to operate in the State of Israel for the development and settlement of the country, the absorption of immigrants from the Diaspora and the coordination of activities in Israel of Jewish institutions and organizations active in those fields." The details of this status and the forms of collaboration between the Zionist Organization-Jewish Agency Executive and the government of Israel were, as foreseen in article 7 of the law, determined by a "covenant" entered into by them in 1954. A special committee consisting of an equal number of government ministers and Zionist Executive members was set up to coordinate activities, but in practice the delineation of the functions of the Zionist Organization-Jewish Agency has remained in a state of flux. After the Six-Day War proposals were made to increase the government's responsibility for the integration of the immigrants and were widely discussed in Israel and the Diaspora. In June 1968 the government decided to create a special Ministry for Absorption, with the understanding that even after its establishment, certain aspects of absorption of immigrants would remain in the domain of the Executive of the Zionist Organization-Jewish Agency.

LOCAL DEVELOPMENT THROUGH THE SIX-DAY WAR

In Australia and New Zealand

Zionism developed more slowly in Australia than in other British dominions. An attempt by Leon Jona to establish a Zionist society in Adelaide after the First Zionist Congress (1897) failed. The first Zionist bodies in the Commonwealth of Australia were the Victorian Zionist League in Melbourne (founded 1907) and the Sydney Zionist Society (1908); from 1913 a West Australian Zionist Society (Perth) was also in existence. In Australia's sister dominion, New Zealand, there were Zionist associations at the time in Auckland and Wellington; the former had developed from a Ḥovevei Zion society founded as early as 1903. Nonetheless, as the Sydney

Zionist Society, the most active of these bodies, wrote in a report to Zionist headquarters at Cologne in 1911, "there were comparatively few enthusiastic Zionists in Australia" and the attitude of the great majority of the Jewish community toward the movement was "apathy, though not hostility." In 1911 the first delegate from Australia, Salomon Pechter of Sydney, made his appearance at the Tenth Zionist Congress in Basle. During the so-called language conflict in Erez Israel in 1914, the Zionist societies in Australia came out strongly in favor of Hebrew and against German as the language of instruction at the newly founded Technion of Haifa.

Efforts to bring all Zionist bodies in the various cities into the common framework of an Australian Federation had begun in 1908. Some bodies, like the Victorian Zionist Association, were directly affiliated with the Zionist Federation of Great Britain. It was only after World War I and the Balfour Declaration that the first all-Australian Zionist Conference took place in Melbourne (1927) and that the Zionist Federation of Australia and New Zealand was established, on the initiative of Alexander *Goldstein. Although its name continued to include New Zealand, the Zionist Council of New Zealand has virtually become an independent organization (close cooperation with the Australian Federation notwithstanding) and has been represented by its own delegates at the Zionist Congresses.

Sir John *Monash, who had been commander in chief of the Australian army in World War I, was elected honorary president of the Zionist Federation. However, the other most distinguished personality of Australian Jewry, Sir Isaac *Isaacs, who had been chief justice and governor general of the Commonwealth, was an anti-Zionist, and during World War II he conducted a press campaign against the Zionists, charging them with disloyalty to Britain and denying the existence of a Jewish people. Rabbi Israel *Brodie, later chief rabbi of the British Empire, served as president of the federation from its foundation until he left Australia in 1937.

During the economic depression at the beginning of the 1930s, the federation declined and its very existence was called in question, but it recovered again toward the end of that decade. During World War II its importance and prestige considerably rose as a result of its political and public relations work. The atmosphere for such activities was favorable because general public opinion in Australia was rather friendly to Zionism. Some strongly pro-Zionist Christian sects, like the Christadelphians, were active there. They even raised funds for Zionist causes. The pro-Zionist sentiment in the Commonwealth was also partly due to the excellent relations between the *yishuv* in Palestine and the Australian troops stationed there during both world wars. Australian statesmen Robert Menzies, Ben Chifley, and John Curtin (prime minister during World War II) were supporters of the Zionist cause. Particularly important was the role of Herbert Evatt, a personal friend of some Zionist leaders and an advocate of the idea of a Jewish state, who as foreign minister was elected chairman of the un Palestine Ad Hoc Committee (1947). In this capac-

ity he thwarted delaying maneuvers, and firmly directed the proceedings of the committee which culminated in the positive vote for the partition of Palestine in the General Assembly on Nov. 29, 1947.

Characteristic of Zionist life in Australia has been a certain competition, even to the point of rivalry, between the main Jewish centers: Sydney in New South Wales and Melbourne in Victoria. It has become traditional for the federation to transfer its seat periodically from one city to the other. Thus the 24th Australian Zionist Conference held in Melbourne in 1970 decided that the headquarters of the federation should be in Sydney for the next four years. Like the Commonwealth of Australia, the Australian Zionist Federation is organized on federative lines in state Zionist councils (New South Wales, Victoria, Queensland, West Australia, and South Australia) to which all Zionist societies, bodies, and groups of the state are affiliated. There was a total of 60 such bodies in 1970. A distinctive feature of the Australian Zionist Federation is that it embraces all organizations and institutions which are in any way connected with the work for, and support of, Israel. The Jewish National Fund had remained very strong and popular, and Zionist influence is predominant in the Australian Jewish communal institutions.

While the beginnings of Zionism in Australia were slow and precarious, from the late 1960s this community was one of the most Zionist-oriented in the Diaspora. During the Six-Day War between Israel and the Arab states (1967), several hundred young Australian Jews registered as volunteers for Israel, but only a few managed to arrive there in time to aid the war effort. The Zionist Membership Drive 1970/71 resulted in about 13,000 members, i.e., almost 20% of the total Jewish population in the Commonwealth of Australia.

[Aharon Zwergbaum]

In Austria

Austria, as referred to in this article, is understood as the territory of the Austrian Federal Republic as it existed from 1918 to 1938 and again from 1945. The history of Austrian Zionism, in this territorial sense, is almost identical with that of Vienna, where more than 90% of Austrian Jews were concentrated.

Vienna, then the capital of the Hapsburg monarchy with a Jewish population of about two million, had been one of the centers of the nascent Jewish national movement even before Herzl's appearance on the stage of history. Several Jewish national student associations existed, the most notable being Kadimah (founded in 1883). Even the name Zionism was coined in Vienna by Nathan Birnbaum, the most prominent ideologist of these early Zionists. When Herzl published *Der Judenstaat*, he found enthusiastic followers among these forerunners of political Zionism and many other young Jews, particularly students, but met stiff opposition in the Jewish liberal bourgeoisie and the Jewish community establishment. Since Herzl was a resident of Vienna, that city was during his lifetime the capital of Zionism, i.e., the seat of the Zionist Execu-

tive (the Inner Actions Committee), the central Zionist organ *Die Welt*, and the Jewish National Fund. Viennese Zionists like Johann *Kremenetzky, M. Schnirer, Alexander *Marmorek, and Oser Kokesch occupied key positions in the Inner Actions Committee. It was also in Vienna that the first Zionist-Socialist movement, Aḥva, emerged in 1898, upon the initiative of Saul Raphael *Landau.

After Herzl's death, Vienna lost its central position in the Zionist world movement, the central institutions having been transferred to Cologne, but Zionism remained a vibrant movement in Austria, albeit with a change of emphasis and leadership. The trend was now on practical Zionism, both in respect to settlement work in Erez Israel and in Jewish national politics in the Diaspora ("Work in the present"), greatly invigorated after the introduction of universal suffrage in 1907. The leaders of the movement in the period prior to World War I were Adolf *Boehm, Robert *Stricker, and Jacob Ehrlich. In 1909, 25 Zionist societies existed in Austria, mostly in Vienna, organized in the Zionistischer Landesverband. The 11th Zionist Congress (1913) was held in Vienna. The great influx of refugees from Galicia during World War I and the obvious victory of the principle of national self-determination at the end of the war further strengthened the Zionist movement.

After the dismemberment of the multi-national Hapsburg monarchy and the establishment of the Austrian Republic, a Jewish National Council was established on Zionist initiative. In the first elections Robert Stricker was elected on a Zionist ticket to parliament and three Zionists to the city council of Vienna. But after some time there was a sharp decline in the Zionist following, mainly due to the attraction of the Social-Democratic Party, which had many Jewish leaders, almost all of them assimilationists and opponents of Zionism. Even in that period of decline there was, however, a bustling and very diversified Zionist activity going on. There were scores of Zionist associations, parties, youth movements, cultural clubs, sports associations, etc. Vienna was the most important transit place for immigrants to Palestine and, therefore, an important meeting place. Upon the initiative of Rabbi Ẓevi Perez *Chajes, who had been appointed chief rabbi of Vienna in 1918, a Hebrew teachers' seminary was established, as well as a secondary school, bearing (after Chajes' death) his name.

From 1918 until 1927 a Zionist daily, the *Wiener Morgenzeitung*, appeared, as well as several weeklies. In 1925 the 14th Zionist Congress assembled in Vienna. In 1932 the Zionists succeeded in realizing Herzl's slogan of the "conquest of the communities," gaining 20 out of 36 seats in the Jewish community council. Desider *Friedmann was elected president of the community. Zionists stood, therefore, at the helm of Austrian Jewry when the catastrophe befell them in 1938. From the Nazi conquest in March 1938 until the outbreak of World War II in September 1939, about one-half of Austrian Jewry succeeded in leaving the country, many of them for Palestine, mostly by "illegal" routes. Almost all of the remaining Jews fell victim to the Holocaust; among them were prominent leaders

of Austrian Zionists, like Desider Friedmann, Robert Stricker, and many others.

After World War II Austria was the scene of great Zionist activity, being located on the main route of the *Beriḥah and harboring in its confines many camps of Jewish DPs. In the small reconstituted Jewish community of Vienna a diversified Zionist activity started, all Zionist parties reemerged, but for most of the postwar period the Zionists constituted a minority of the community, while the majority supported the non-Zionist, albeit not anti-Israel, Social-Democratic *Bund werktaetiger Juden*.

[Aharon Zwergbaum / Chaim Yahil]

In Bulgaria

A large part of the predominantly Sephardi and Ladino-speaking Jewish community of Bulgaria was always strongly attached to Zionism, although enjoying full civic rights since the establishment of independent Bulgaria (1878). They were not under pressure to emigrate and suffered little from antisemitism. Even before Herzl's appearance, there were Zionist societies like Ezrat Aḥim in Sofia, Carmel in Plovdiv (Philippopolis), and Dorshei Zion in Khaskovo. Bulgarian Jews founded the settlement Hartuv in Erez Israel as early as 1896, the same year in which Herzl was surprised and moved by the enthusiastic welcome accorded to him by masses of Jews when his train stopped at the Sofia railway station en route to Constantinople.

Bulgaria was represented at the First Zionist Congress (1897) by Ẓevi Belkovsky, Yehoshua Caleb, and Carl Herbst. Marcus *Ehrenpreis, who became chief rabbi of Bulgaria, had taken a very active part in preparing the Congress and also attended it. The first Bulgarian Zionist Conference took place in 1898 in Plovdiv, which was the Zionist center before Sofia. The leader of political Zionism in Bulgaria during its first stage was, until his tragic death (1899), Josef Marcou *Baruch.

The rapid spread of Zionist societies encountered some opposition on the part of the assimilationists influenced by the French education in the Alliance Israélite Universelle schools, but they were less strong than in other countries. However, the Zionists quickly "conquered the communities," in accordance with Herzl's demand. In 1900 they initiated the convocation of the First National Congress of Bulgarian Jewry, which adopted statutes transforming synagogue groups into veritable communities. The second Congress in 1920 already had a Zionist majority and proclaimed the religious and national solidarity of all Jewish inhabitants of the country, regardless of origin, language, or citizenship. Another Congress took place in 1932. The publication of the central Zionist organ *Ha-Shofar* was started in 1901. Due to Zionist influence, in the 1920s Hebrew became the language of instruction (apart from subjects like Bulgarian history and literature) at all schools maintained by the Consistory, the central Jewish community organization, which were attended by the great majority of Jewish children.

Between the two world wars Alberto Romano, for many years chairman of the Zionist Federation of Bulgaria, and

Masthead of Ha-Shofar*, the Zionist weekly in Hebrew and Bulgarian, published in Plovdiv, November 1935. Jerusalem, Yad Vashem Archives.*

Ḥayyim Aaron Farḥi, chairman of the Consistory and member of the Bulgarian parliament, were among the most important figures in Zionist life. The movement became diversified, and parties and youth movements were set up. The Bulgarian wizo was founded in 1923; in 1930 Maccabi had more than 3,300 members in 24 clubs; the number of shekel holders reached 8,000, a much higher percentage of the population than in most countries; He-Ḥalutz was training its members for *aliyah* in training farms, such as that near Pazardzhik. After the Revisionist secession from the World Zionist Organization (1935), the New Zionist Organizations set up branches of the Betar movement. They issued their own weekly *Razsvet*. One of their leaders, Benjamin Arditti, was afterward a member of the Israel Knesset from the Ḥerut list.

Hundreds of Bulgarian Jews settled in Palestine during the Mandate period. Some of them established their own settlements, like the moshavim Kefar Ḥittin near Tiberias and Bet Ḥanan south of Tel Aviv. Members of Ha-Shomer ha-Ẓa'ir who settled in Palestine before 1935 founded five kibbutzim.

The Zionists of Bulgaria were active in organizing "illegal" immigration to Palestine before and immediately after World War II. They also assisted Jews from other countries, who fled the Nazis or pro-Nazi regimes, to embark on "illegal" transports from Bulgarian ports to Palestine. All Zionist activities had to cease under the Fascist regime during World War II, but immediately after the country's liberation a Zionist Conference was convened (1944) and a Zionist organ *Zionisticheska Tribuna* was published. In 1946 a United Zionist Organization was set up. In the same year more than 14,000 shekels were distributed and almost 9,000 voters took part in the elections to the 22nd Zionist Congress, at which Bulgaria was represented by four delegates.

The Communist regime, under Georgi Dimitrov, at first displayed sympathy for the newborn State of Israel and permitted all Bulgarian Jews who wished to go to Israel to do so without placing any obstacles in their way. Thus, in the years 1944–49, a real exodus of Bulgarian Jews took place, when 40,000 of them settled in Israel. However, in accordance with the policy of the Soviet bloc, this attitude changed, and in 1949

all Zionist bodies had to disband "voluntarily" and all Zionist activities ceased.

[Aharon Zwergbaum]

In Canada

In 1898, one year after the First Zionist Congress, a Zionist society, Agudat Zion, was formed in Montreal. One year later, five more societies came into existence in Quebec and Ontario and formed the Federation of Zionist Societies, electing Clarence I. De Sola as its first president. The number of Zionist societies increased gradually and conventions were held annually. With the outbreak of World War I, all Zionist work practically came to a standstill, as contact with the *yishuv* was severed; however, the Balfour Declaration revitalized the Zionist activities.

The year 1919 was a turning point in the affairs of the Zionist Federation; De Sola stepped down from the presidency and was succeeded by A.J. *Freiman of Ottawa, and Lilian *Freiman organized the Canadian Hadassah Organization. One year later, Keren Hayesod began its activities. Within the next four years the Labor Zionist Organization was formed. It sponsored a program for Palestine based on a synthesis of socialism and Jewish nationalism. During the same period the Mizrachi Organization was organized by religious Zionists. All these groups participated actively in the Keren Hayesod-United Palestine (Israel) Appeal and the Jewish National Fund (jnf). In 1924 the Labor Zionists added their own annual campaign, which was called the Geverkshaften (later Histadrut) Campaign; M. Dickstein played an important role in this activity. Each of the organizations also organized national women's branches – Hadassah (affiliated with wizo), Mizrachi Women, Pioneer Women – each conducting active programs and substantial campaigns for institutions in Palestine and later also for Youth Aliyah. The parent bodies also organized youth movements: Young Judea was begun in 1916 by Bernard Joseph (who later, as Dov *Joseph, was military governor of Jerusalem during the siege of 1948 and occupied important cabinet positions in subsequent Israel governments); the *Habonim Labor Zionist organization and Junior Hadassah were formed later.

Organization. In 1966 the Federated Zionist Organization of Canada (fzoc) was established to unify all the existing Zionist organizations into a single framework. It includes the following bodies:

(1) The Zionist Organization of Canada, the oldest and largest of the Zionist organizations, which has branches in most of the sizable communities, as well as fraternal orders in the larger cities. It holds regional conferences regularly, and together with the women's organization, Hadassah (wizo), and the other Zionist movements, influences the Canadian Jewish community in a large measure.

(2) The Labor Zionist Movement, a federative structure of autonomous Labor Zionist bodies which embraces the United Labor Zionist Party (Po'alei Zion), now united with Aḥdut ha-Avodah; the Farband Labor Zionist Order; and the

Pioneer Women of Canada; as well as Habonim Labor Zionist Youth; and the Israel Histadrut Campaign.

(3) The Mizrachi-Ha-Po'el ha-Mizrachi Organization of Canada, which has three offices (in Montreal, Toronto, and Winnipeg) and a Mishmeret Ze'irah of young couples in these centers, as well as its youth movement and a women's division.

(4) The Zionist Revisionist Movement of Canada, with its youth movement, Betar, and women's organization.

(5) The Friends of Pioneering Israel, which is closely affiliated with Mapam in Israel.

The Federated Zionist Organization publishes a monthly entitled *The Canadian Zionist*. The United Labor Zionist Party (Labor Zionist Party and Aḥdut ha-Avodah-Po'alei Zion, affiliated in 1970) publishes *Dos Vort* in Yiddish and English, and a quarterly, *Viewpoints*. Hadassah publishes *Orah, Campaigns and Projects*. The United Israel Campaigns, which have been carried on annually, averaged $3,000,000–3,500,000 (Canadian) a year between 1960 and 1967. In the latter year a special Emergency Campaign brought in an additional $30,000,000. In addition, since 1953 there has been an annual sale of State of Israel bonds, initiated under the leadership of Samuel *Bronfman and E.E. *Gelber. In the first year there were over 10,000 subscribers, with a net sale of $4,500,000. Subsequently there was an annual sale of $3,000,000–3,500,000 up to 1967, and between 1967 and 1970 $4,000,000–5,000,000 annually. The Jewish National Fund has been functioning since the beginning of Zionist activities in Canada. It has concentrated on "Traditional Funds," which link the fund with special occasions in Jewish family life, such as barmitzvahs and weddings. In addition, it has initiated and sponsored special projects, such as the "Negev Dinners," for acquiring funds to plant forests and develop new land projects in Israel. These projects have brought in considerable sums of money over the years.

In 1927 Canadian Zionists bought a tract of 30,000 dunams on the shores of the Mediterranean for $1,000,000, and it was developed as Emek Hefer. In 1952 a convention of Canadian Zionists undertook to redeem an area of 50,000 dunams in the western Negev. In 1955 the JNF of Canada began a project to plant 500,000 trees at Ein Kerem in the Judean Hills, to be known as the Canadian Forest. Canadian Hadassah has sponsored such projects as the Agricultural School for Girls at Nahalal, the Hadassim Children's Village; a hydrotherapy pool for crippled children at Sarafand; a child guidance clinic in Jerusalem; baby crèches; and "Canada Hall" at Hebrew University. Over the years the Histadrut Campaign has sponsored a number of special Canadian projects in Israel, particularly the Amal vocational schools. The Pioneer Women have established Omna, a children's home in Haifa, and a community center at Migdal ha-Emek and have helped maintain the many institutions of the Mo'eẓet ha-Po'alot (Working Women's Council in Israel). In 1955, the Mizrachi Organization began to raise funds for the new Bar Ilan University, and the Mizrachi Women have sponsored a number of their own projects. The Zionist Revisionist group and their women's organization, Jordania, also

have special projects. In addition, the Friends of the Hebrew University was organized in 1944 under the national chairmanship of Allan Bronfman. There is also a Canadian Technion Society, under the leadership of D. Lou Harris, as well as a group interested in the Weizmann Institute at Rehovot, in which Samuel J. Zacks, a past president of the Zionist Organization of Canada, was very active during his lifetime.

The various Zionist organizations have summer camps for young people. In 1970 the Zionist Organization of Canada operated eight youth camps between Halifax and Vancouver, with an enrollment of 1,700 youngsters. The Mizrachi-Ha-Po'el ha-Mizrachi ran a Hebrew camp for over 500 youngsters. The Labor Zionist Movement operated a youth camp near Montreal and Camp Miriam at Vancouver. The Keren ha-Tarbut, Hebrew department of the Zionist Organization of Canada, is active in the larger cities (Montreal, Toronto, Winnipeg, and Vancouver). It carries on special programs, such as Hebrew courses, "Hebrew-on-the-air," and *ulpanim*, particularly for those planning to settle in Israel. The Labor Zionist Movement was influential in helping to establish the Canadian Jewish Congress and has been active in that organization throughout the years. The Zionist organizations also assist indirectly in Jewish education. The Labor Zionist Movement is directly affiliated with the Folk Shule and Peretz schools in Montreal and the Bialik Hebrew Day School in Toronto. The public relations department of the Zionist Organization of Canada operates an ongoing program, supplies speakers for the Jewish and non-Jewish service clubs, and assists in the work of the Canadian Israel Association, a non-Jewish organization which has been in existence and active since 1947. Together with the Canadian Jewish Congress and B'nai B'rith, the Zionist Organization of Canada operates a Canadian-Israel Public Affairs Committee.

Aliyah and Settlement in Israel. The first Canadian ḥalutz, Ya'akov Pruzhansky, who later changed his name to Aḥvah, arrived and settled in Ereẓ Israel in 1913. During World War I more than 200 Canadians volunteered as members of the Jewish Legion and fought under General Allenby; a fairly large number remained in Palestine. In 1948, during Israel's War of Independence, about 250 young men volunteered their services in *Maḥal, and a certain number remained after the state came into being. The Six-Day War of 1967 evoked an unparalleled response of identification with Israel. Financial contributions were made freely and spontaneously; demonstrations for Israel took place throughout the country; delegations of prominent Canadian Jews visited the prime minister and urged that the Canadian government take a positive stand in favor of Israel's position; blood and plasma were volunteered for shipment to Israel. Over 10,000 volunteers offered themselves and, in spite of traveling difficulties at the time, about 400 left Canada and by devious means reached Israel. Of these, 228 went with the direct aid of the Zionist Organization of Canada and many of them remained and settled permanently.

Even before 1967, but particularly from then on, there has been a steady flow of tourists, students, temporary settlers and many who have made their permanent home in Israel, among them prominent Zionist leaders. It was estimated that in 1971 there were about 3,500 former Canadians residing in Israel.

[Samuel B. Hurwich]

In Czechoslovakia

BEFORE THE ESTABLISHMENT OF THE CZECHOSLOVAK REPUBLIC (1918). The growing tension between Czechs and Germans in Bohemia and Moravia aroused the sensitivity of the Jews to the nationality problem and a positive disposition toward the Zionist idea. Several Jewish nationalist societies were established even before the appearance of Theodor Herzl, especially in Czech provincial cities. The first Zionist society was established in 1893 in the town of Horaždovice in Bohemia. The appearance of Herzl aroused a strong response, especially in the communities of Moravia, due partly to the fact that many of the youth of these communities had come into contact with Herzl and Zionism while studying in Vienna. In 1900 the first Zionist weekly, the *Juedische Volksstimme*, was founded in Brno (Bruenn). Berthold Feiwel and Robert Stricker, among the first Zionist students from Moravia, rose later to leading positions in the world movement. Zionist societies were also established in Prague and the cities of the Sudeten. In the final decade before World War I, the Zionist student association *Bar Kochba, led by Shemuel Hugo Bergman, was outstanding for its high intellectual level. This group adopted not only the political program of Zionism but aimed also at a return to the sources of Jewish spiritual creativity and found contacts with the Jewish cultural and social way of life in Eastern Europe. Their goals blended into the great educational task designed to "renew the image of Jewish man." On the whole this group supported the outlook of the Democratic Faction within the Zionist Organization and cultural Zionism; later on it leaned toward the ideas of A.D. *Gordon. Its initiative led to the publication of the Zionist weekly *Selbstwehr* (1907) and the anthology *Vom Judentum* (1913). From Bar Kochba emerged many Zionist leaders in Czechoslovakia and beyond, S.H. Bergman, Hugo Hermann, and Robert Weltsch. With the expansion of the movement among Czech-speaking students, another, parallel group was founded under the name Theodor Herzl (1909). The student Zionist society Barissia, founded in 1903, supported militant political Zionism. In the last two years before the outbreak of World War I, the first youth movement, *Blau-Weiss, was established. Maccabi and other sports organizations were also established in many communities, as were women's organizations.

In Slovakia, then part of Hungary, Zionism penetrated only into communities in the western areas, which maintained closer contact with Jewry in Vienna and Moravia. The founding world convention of Mizrachi was held in Pressburg (Bratislava) in 1904. Although World War I interrupted the organizational work of the Zionist Organization, it also widened and deepened the national feelings by bringing Jewish soldiers from the West to centers of Jewish life in Eastern Europe, on the one hand, and many thousands of Jewish refugees from Galicia to communities in Moravia and Bohemia, on the other.

In the Republic of Czechoslovakia (1918–39). The establishment of the Czechoslovak Republic signified a victory for the principle of national self-determination, which was also supported by the Zionist movement. The establishment of the new, democratic republic also appeared to be the great hour of the Zionist movement, as the leader of the new state, the philosopher and humanist T.G. Masaryk, had fought against anti-Jewish blood libels, was a great admirer of Aḥad Ha-Am, and was supported in his struggle for national independence by Zionist leaders in the United States and Great Britain. The Jewish National Council was founded on the initiative of Zionists and was headed by the leader of the Prague Zionists, L. Singer, aided by Max Brod, Emil Margulies, chief rabbi Chaim Brody, and others. The council's program aimed toward achieving national, political, and cultural autonomy, built upon the communities as autonomous cells. The movement achieved recognition for the Jewish nationality in the constitution of the republic and protection for the rights of a national minority and also succeeded in building a network of Hebrew and Jewish schools – especially in the eastern areas of the republic, but it never achieved the full realization of Jewish cultural autonomy.

The stress on Diaspora work met with opposition in the Zionist movement, and at the second national conference, held in Brno in 1921, a new leadership was chosen for the Zionist movement. It was headed by Joseph *Rufeisen, who advanced practical activities toward the upbuilding of Ereẓ Israel as the central platform of the Zionist program. The center of the Zionist movement was set up in Ostrava and remained there until 1938. The Zionist Organization in Czechoslovakia, headed by Rufeisen, was outstanding in its efforts for settlement work in Ereẓ Israel, Hebrew and Jewish education, and training of ḥalutzim, while the Jewish National Council and the Jewish Party (*Židovská Strana) handled local political matters. On Zionist policy, the majority supported Weizmann's line and based itself on the close cooperation between the General Zionists, headed by Rufeisen, and the Labor Zionists; the Revisionists and Mizrachi also developed substantially.

The Zionists had decisive influence in the communities in Slovakia and Sub-Carpathian Ruthenia. Their opponents were the Czech assimilationist movement, and most fiercely the Communists on one end of the spectrum and the ultra-Orthodox on the other. A pioneering He-Ḥalutz movement had existed since the establishment of the republic and succeeded in founding a number of collective settlements and moshavim in Palestine. Various youth movements were active in the spirit of pioneering and *aliyah*. Zionist influence was also decisive in the sphere of education and in the 1930s in the area of social welfare, especially for the Jews of Sub-Carpathian Ruthe-

nia and the refugees of Nazi persecution. Three Zionist Congresses were held on Czechoslovak territory: the 12ᵗʰ Zionist Congress (1921) and 13ᵗʰ Zionist Congress (1923) in Carlsbad and the 18ᵗʰ Zionist Congress (1933) in Prague.

The Holocaust and After. The destruction of the Czechoslovak Republic, after the annexation of Austria, came in several quick stages: the annexation of the Sudetenland to Germany (October 1938), giving over certain areas to Hungary and Poland (November 1938), the establishment of "independent" Slovakia (March 14, 1939), the conquest of Bohemia and Moravia by the German army turning them into the "Protectorate" (March 15, 1939), and the annexation of the remainder of Sub-Carpathian Ruthenia by Hungary (March 16, 1939). These were also the stages of the destruction of Czechoslovak Jewry, while the Zionists played central roles in attempts to save it. They increased their efforts toward facilitating *aliyah* and emigration. About 15,000 Jews from Czechoslovakia succeeded in reaching Palestine between the autumn of 1938 and the end of 1939, the overwhelming majority by means of "illegal" immigration. Zionists remained in most positions of community leadership both in the "Protectorate" and Slovakia. Under the leadership of the Zionists Jacob Edelstein, Franz Kahn, Otto Zucker and Hannah Steiner, together with the leaders of the pioneering movement, the Zionists preserved their sense of cooperation, national loyalty, and Jewish values in the Theresienstadt concentration camp and even in Auschwitz. They organized means of escape from Slovakia, where the head of WIZO, Gisi *Fleischmann, initiated the *Europa Plan to save European Jewry, and many Zionist youths took part in the partisan uprising in Slovakia in the summer of 1944.

The few who survived the Holocaust tried to reestablish the Zionist movement after the war and save the survivors through *aliyah* and settlement in Erez Israel. Zionist activity was renewed in all parts of the republic. Czechoslovakia was a major transit country for the flow of the *Beriḥah* from Poland. During the Israeli War of Independence (1948), Czechoslovakia was a major source of arms' supply to the new state. Emigration to Israel was permitted, and more than 20,000 Jews, about 40% of the Jewish community, settled there. After a short while, however, the sympathy of the new Communist government in Czechoslovakia for Israel evaporated. Zionist activity was forbidden, and after a time emigration was also halted. In 1952 the Communist government staged a show trial against "Zionism" (see *Slánsky Trial). During the short period of the "Prague Spring" in 1968, under the leadership of Alexander Dubček, expression of sympathy for the State of Israel was again permitted and even *aliyah* was renewed, but organized Zionist activity did not resume and the invasion of the Warsaw Pact armies in August 1968 ended this period of relative improvement.

[Chaim Yahil]

In France

Early History. The Jewish community of France occupies an important place in the early history of Jewish settlement in Erez Israel, due to the initiative of the Alliance Israelite Universelle and of Baron Edmond de Rothschild. The Alliance set up a network of elementary and vocational schools there, the first of which was the Mikveh Israel agricultural school, founded in 1870. Although these activities were similar to Alliance projects in other parts of the Ottoman Empire, this interest in Erez Israel was undoubtedly influenced by the discussions of Joseph *Natonek and Moses Hess with Alliance directors in Paris in 1866. Rabbi Samuel Mohilewer, accompanied by young settlers from Rishon le-Zion, paid a visit to Edmond de Rothschild that served to move him to increase financial, technical, and administrative assistance to new Jewish agricultural enterprises in Erez Israel. Rothschild's intervention was crucial in saving the struggling villages from ruin and in facilitating the development of budding Jewish agriculture. Despite the philanthropic character of Rothschild's undertakings, his paternal attitude, and outbursts of indignation against political Zionism, his contribution was substantial and at a certain stage decisive for the continuation of settlement work.

Paris can also be considered the cradle of political Zionism. It was while in Paris as a correspondent for the *Neue Freie Presse* that Theodor Herzl conceived his Zionist idea and wrote *Der Judenstaat*, and it was in Paris that Max Nordau lived from 1880 to the outbreak of World War I. Among the early Zionists in France were Alexander Marmorek and his brothers Oscar and Isidore, the writer Bernard *Lazare, Miriam Schach, and the sculptor S.F. *Beer. Zadoc *Kahn, France's chief rabbi, supported Zionism and Herzl, but abstained from publicly expressing his support. The Fédération Sioniste de France was established in 1901 and its president until his death in 1923 was Alexander Marmorek. In 1899 he founded the journal *L'Echo Sioniste* which appeared from 1899 to 1905 and again from 1912 to 1914. In 1916 it reappeared under the title *Le Peuple Juif* and remained in existence to 1921. In 1914 the federation had five groups in Paris, one in Nice, and two in Tunis. The great majority of native-born Jews and the official communal bodies, however, were indifferent, if not hostile, to the Zionist program, fearing that their status acquired in the great Emancipation would be placed in jeopardy. This hostility to Zionism did not subside with the Balfour Declaration, although the French minister for foreign affairs, Stephen Pichon, afforded French assent to the declaration. During the Peace Conference at Versailles (1919), two French representatives, the poet André *Spire and Professor Sylvain *Lévi, were members of the committee established by Chaim Weizmann together with N. Sokolow and M. Ussishkin, to present the Zionist views to the conference delegations. Lévi however, who was president of the Alliance, clashed with the committee, since, in his view, the Zionist objectives conflicted with French interests in the Middle East.

Zionism in France appealed mainly to Jewish immigrants from Central and Eastern Europe who arrived there beginning in the 1880s. Thus, the successive leaders of French Zionism were Israel *Yefroykin, Marc *Jarblum, and Joseph Fischer

(Ariel). Fischer founded a bimonthly journal, originally as the organ of the Jewish National Fund, *La Terre Retrouvée* (published from 1928). Jarblum, a leader of Labor Zionism, was its spokesman in the Socialist movement of France and Belgium. He had influence with such men as Léon Blum, Emil Vandervelde, and Camille Huysmans. However, a small number of leading French-born Jews also supported Zionism, among them the poets Edmond Fleg and André Spire. The latter's Zionist writings caused him to split with Charles Péguy and his circle of *Cahiers de la Quinzaine*. In 1915 a group of Jewish and non-Jewish intellectuals established the Ligue Franco-Sioniste, and in 1917 André Spire published *Les Juifs et la guerre*, which dealt with the problem how to present the idea of the Jewish state to the future peace conference. In the same year he established the Ligue des Amis du Sionisme, of which he was the secretary general, and its organ *La Palestine Nouvelle*.

1917–1939. In 1917 a Zionist youth movement was established in Strasbourg, from which the bulk of French immigrants went to Palestine prior to World War II. In 1920 a Zionist students' club was founded in Paris, and in 1921 a Mizrachi group was established with its center in Strasbourg. In 1925 the Union Régionale des Sionistes de L'Est de la France was founded by Léon Metzger and Robert Lévy-Dreyfus. This union was the strongest Zionist organization in France before World War II, and up to the conquest of France by the Nazis in 1941 it retained a separate identity. In 1923 a women's group was founded by Mrs. Richard Gottheil; it later merged with the Women's International Zionist Organization (WIZO). In 1929 French Jews accepted Weizmann's invitation to join the "enlarged" Jewish Agency, and Léon Blum, Leo Zadoc-Kahn, and Henri Lévi represented French non-Zionists in the founding meeting in Zurich in August 1929. In the 1930s the following Zionist organizations existed: Po'alei Zion (Left), founded in 1922; the Union of Zionist Revisionists, founded in Paris in 1925 and becoming the center of its world movement; Po'alei Zion-Hitaḥadut, which included a League for Labor Palestine and the Jewish People's League; Organisation Sioniste de France, founded in 1933, an organization of General Zionists; and the Jewish State Party, founded in 1936. Mizrachi also had a certain following in France, including a group called Yavne and a Yiddish-language journal. In the same period branches of many Zionist youth movements were formed: Bleu-Blanc (General Zionists), Betar (Revisionists), Berit ha-Kannaim (Jewish State Party), Deror (Po'alei Zion-Hitaḥadut), Ha-Shomer ha-Ẓa'ir, Ẓe'irei ha-Mizrachi, Ha-Po'el ha-Mizrachi, and Ha-No'ar ha-Ziyyoni. In 1937 the Fédération de la Jeunesse Sioniste et Pro-Palestinienne was founded as a result of the merger between the Jewish scouting movement and a few Zionist youth groups, with a total membership of 5,000.

World War II. From the German occupation in 1940, Zionist activities were centered in the southern area known as Vichy France. In 1941, at a secret conference in Lyons, initiated by J.

Fischer (Ariel), a new Zionist leadership embracing all groups was established under the chairmanship of Leonce Bernheim, former chairman of the Zionist coordination committee. At another meeting in Vichy in the same year, the Mouvement de la Jeunesse Sioniste, embracing all youth organizations, was created under the direction of Simon Lévitte and Jules Jefroykin. Both frameworks engaged in educational work, such as the teaching of Hebrew, Jewish history, etc., but devoted their energies mainly to smuggling Jewish refugees into Switzerland and Spain. Young Zionists also played a leading part in organizing Jewish armed resistance to the Nazis (see *France, Holocaust Period).

After World War II. Immediately after World War II, leading French Jews, such as André Blumel, were active in aiding the "illegal" immigration and the *Beriḥah* movement to Palestine though French ports. With the establishment of the State of Israel, Jewish community officials in France adopted an attitude of sympathy, putting an end to their previous hostility. In 1947 the Union Sioniste Française was founded, uniting all Zionists in France and North Africa, led for some time by André Blumel. The transformation of French Jewry by the influx of North African, particularly Algerian Jews, also influenced the Zionist movement there. Migration to Israel increased steadily. French Jewry demonstrated its solidarity with Israel before and after the Six-Day War (1967), and Chief Rabbi Jacob *Kaplan voiced Jewish disapproval of De Gaulle's anti-Israel policies. All traditional Jewish bodies began openly to support Israel, and a Comité de Coordination des Organisations Juives en France, headed by Guy de *Rothschild, was specially created in 1967 for financial aid and information services for Israel. Groups for *aliyah* to Israel were formed, among them Oded, comprising young intellectuals from North Africa. All Zionist parties and most world organizations collecting funds and selling bonds for Israel have branches in France, many of them publishing their own journals, such as the French *Amitiés France-Israel* (since 1953) and the Yiddish daily *Unzer Vort* (since 1945) and *Tsionistishe Shtime*.

[Lucien Lazare]

In Germany
The First Zionist Congress (1897) was attended by more than 40 delegates from Germany, not all of them natives of that country. (The delegation included four representatives from Erez Israel, one of whom, Heinrich *Loewe, was a founder of a Zionist group in Germany even before the appearance of Theodor Herzl.) There were, however, a few bodies in Germany that could be regarded as forerunners of modern Zionism; the Esra society in Berlin (founded 1883) tended to the Ḥibbat Zion; the Russian Jewish Scientific Society in Berlin (1889) which was composed almost exclusively of "Eastern Jews"; the Association for the Promotion of Agriculture and Crafts in Palestine, founded in Cologne in 1892 by Max *Bodenheimer and David Wolffsohn, was in 1897 transformed into the Nationaljuedische Vereinigung and demanded, before the Basle Program, nothing less than a Jewish state. As early

as October 1897 the Zionistische Vereinigung in Deutschland (ZVD), a roof organization of all Zionist societies, was set up. The Zionist movement in Germany was distinguished by quality – especially excellent organization and harmonious internal relations – rather than by quantity, since, to quote Richard *Lichtheim: "nowhere was the opposition of Jews to the new movement so widespread, principled, and fierce as in Germany." Herzl's original plan to convoke the First Congress in Munich failed because of the hostility of the German rabbis; the board of the Union of German Rabbis issued a proclamation against the Congress and Zionism (hence *Protestrabbiner).

The slow but steady growth of the ZVD is reflected by the following figures: in 1912 it had 8,400 members and in 1927 some 20,000, 2,000 of whom were members (or "old boys") of the Zionist students' associations organized in the Kartell juedischer Verbindungen; in the same years the number of local branches doubled from 100 to 200. The year 1902 saw the establishment of two Zionist institutions whose influence reached far beyond the borders of Germany: the Zionist weekly *Juedische Rundschau* and the publishing house *Juedischer Verlag. Special importance is attached to the Zionist territorial conference of 1912 because it adopted a resolution obliging every Zionist "to include *aliyah* in the program of his life" or at least to connect his personal fate with that of the national home by means of economic interests.

The influence of the Zionist Federation of Germany was particularly strong during the 15 years in which the headquarters of the World Zionist Organization were in Germany: in Cologne during the presidency of David Wolffsohn (1905–11) and in Berlin during that of Otto Warburg (1911–20), all the more so as one of the chairmen of the ZVD, Arthur *Hantke, was a leading member of the Zionist Executive. It was largely due to the fact that the Zionist headquarters remained in Berlin during World War I, although some Executive members went abroad, and that German Zionists continued to hold key positions in the world movement, that German representatives in Turkey exerted their influence in favor of the *yishuv* and helped to mitigate its persecution. Leaders of German Zionism like Felix Rosenblueth (later Pinhas *Rosen, Israel's first minister of justice), Richard Lichtheim, and Kurt *Blumenfeld held highest office in the world movement even after its seat had been transferred to London.

During the Weimar Republic (1918–1933) the Zionists in Germany continued to be an elite rather than a mass movement. Shekel figures moved round 20,000, and it was only after the Nazis had seized power that the Zionistische Vereinigung in Deutschland reached its maximum membership of 35,000. It always embraced all Zionist parties – with the exception of the Revisionists, who seceded in 1932. When the ascent of the Nazis had conclusively proved the bankruptcy of assimilation, Zionism became the dominant force in German Jewry. The courageous and dignified article of the *Juedische Rundschau*, "Wear the Yellow Badge with Pride," by its editor Robert Weltsch, which was the Zionist reply to the anti-Jewish boycott of April 1, 1933, made Jewish history. The main efforts of the ZVD were now directed at the preparation and promotion of *aliyah* and *hakhsharah* (youth training). Through the *Haavarah, the transfer of Jewish assets to Palestine, some £6,000,000 were saved and infused into the economy of Erez Israel to its great benefit. After the Nuremberg Laws in 1935 the ZVD was subjected to increasing restrictions and in 1938 was dissolved by the authorities.

Immediately after World War II a United Zionist Federation was established by the Displaced Persons. It was very active, but after most of the DPs had left, mainly for Israel, it was dissolved. In 1954 the Zionist Organization in Germany was established, against considerable opposition in the world movement, but when two delegates from Germany were admitted to the 24th Congress (1956), this federation, with its seat in Frankfurt, gained official recognition. Due to the small number of Jews in Germany and to other factors, the scope and quality of its activities fall necessarily short of those of the former ZVD, but it is doing useful work in particular in the fields of fundraising and public relations.

[Aharon Zwergbaum]

In Great Britain

There were many Jewish and non-Jewish forerunners of the Zionist idea and supporters of Jewish settlement in Palestine, as well as an active group of Ḥovevei Zion (see *Ḥibbat Zion), in Great Britain. Thus, political Zionism appeared on the British scene very early. It was in London that Theodor Herzl made his first Zionist speech (at the Maccabean Club in November 1895) and outlined his program in an article in the *Jewish Chronicle*, in January 1896, before the publication of *Der Judenstaat*. He was received with great reservations not only by the Jewish establishment, but even by some of the Ḥovevei Zion. On his next visit, in July 1896, he addressed a mass meeting in the East End and received an enthusiastic response. Among his first supporters and followers were the Sephardi Haham Moses *Gaster, the Hebrew teacher Ephraim Ish-Kishor, the already famous writer Israel Zangwill, and Jacob de *Haas, followed soon after by Joseph *Cowen, Leopold *Greenberg, and Leopold *Kessler. In March 1898 Ḥovevei Zion in Britain joined the Zionist movement mainly under the influence of Herbert *Bentwich and Albert *Goldsmid. As a consequence, the Second Zionist Congress (1898) was attended by 15 delegates from Britain, compared to eight at the First Congress. In January 1899 the English Zionist Federation was founded, with Sir Francis Abraham Montefiore, a grand-nephew of Sir Moses Montefiore, elected the first president of the Federation. Herzl, who from the beginning believed in British support for Zionism, registered the Jewish Colonial Trust as a British corporation (1899), and in 1900 convoked the Fourth Zionist Congress in London, the only Congress during his lifetime not held in Basle. "From here the Zionist idea will soon soar higher and higher," Herzl declared in his opening speech. Most British Zionists supported Herzl in the controversy over the Uganda Scheme, while Jacob K.

*Goldbloom, one of Herzl's first followers, led the opposition. The Zionist movement in Britain suffered a severe blow when Zangwill seceded, in 1905, and founded the Jewish Territorial Organization.

In 1904 Chaim Weizmann settled in England, having received a position at the University of Manchester, and soon gathered around him a group of devoted Zionists who later distinguished themselves in the British and world movement, notably Simon *Marks, Israel *Sieff, Harry *Sacher, and Leon *Simon. In 1914 Weizmann became vice president of the Zionist Federation (under Joseph Cowen as president). World War I opened new political perspectives. An advisory committee on Zionist political activity was formed, composed of Nahum Sokolow and Yeḥiel Tschlenow (members of the world Executive who had moved to London), Cowen, Weizmann, Gaster, and Bentwich. The Zionist Federation became an important factor in these activities. In 1915 it organized a petition demanding "the establishment of a publicly recognized and legally secured Home for the Jewish people in Palestine, as formulated by the Zionist Congress in Basle in 1897." The petition was signed by 77,000 adults out of a total Jewish population of about 300,000. In January 1917 Cowen resigned from the presidency of the Zionist Federation to make way for Weizmann.

In their struggle for British support for the Zionist goals, the leaders of the movement were enthusiastically supported by the federation and advised and supported by Zionists from abroad who spent the war years in London, like Aḥad Ha-Am and Vladimir Jabotinsky, as well as by some British Jews of high social standing, most notably Herbert Samuel and Lord Rothschild. Chief Rabbi Joseph Herman *Hertz came out as a supporter of Zionism, in remarkable contrast to his predecessor Herman Adler, who had denounced Zionism as a fantasy. Still, anti-Zionist sentiments were so strong in the Jewish establishment that the presidents of the Board of Deputies and of the Anglo-Jewish Association, D.L. Alexander and Claude Montefiore, respectively, publicly repudiated Zionist aims in the name of their organizations. The sharp protest by the followers and sympathizers of Zionism forced Alexander to resign. Lord Rothschild accepted the honorary presidency of the Zionist Federation and so became the addressee of the Balfour Declaration. At the first Zionist World Conference after the war, held in London in 1920, Weizmann was elected president of the World Zionist Organization and the seat of the Executive and of the main instruments of the movement were formally established in London, which thus became the capital of world Zionism.

During the 30 years of British administration in Palestine, the activities of the Zionist movement in Great Britain were of utmost importance for the work and struggle of the Zionist Executive, by providing mass support in the political, financial, and cultural fields. Zionist influence within British Jewry increased. In 1929 the Board of Deputies joined the enlarged Jewish Agency for Palestine as a constituent body. In 1939 Selig *Brodetsky, a member of the Zionist Federation,

was elected president of the Board of Deputies, and since then only Zionists or staunch supporters of Israel have served in that capacity. Zionist youth movements developed, and there was a significant *aliyah* from Britain. At the 21st Congress (in 1939) Great Britain was represented by 15 delegates, eight representing the Federation (General Zionists), three Po'alei Zion, three Mizrachi, and one the Jewish State Party. The Revisionists, who at that time had already seceded from the World Zionist Organization, also moved their headquarters to London, which was the seat of the Zionist-led European Executive of the World Jewish Congress, as well. In 1944 the Board of Deputies embraced the Biltmore Program by adopting a resolution calling for the establishment of a Jewish state in undivided Palestine, hopefully within the framework of the British Commonwealth. During the years of the struggle and resistance of the *yishuv* after World War II, preceding the independence of Israel, British Zionists took a courageous stand against their government.

After the establishment of the State of Israel, Great Britain naturally lost its central position in the Zionist world, but British Zionists – under the direction of Lavy Bakstansky – continued to distinguish themselves by their generous support of Israel and their increasing influence within the Jewish community of Great Britain. The achievement of raising £11,000,000 in the Emergency Campaign of 1967 (as compared with £2,600,000 raised the year before), as well as the fact that within a few days about 10,000 volunteers for Israel enlisted, about 2,000 of whom actually arrived in Israel, is worthy of note. The most impressive achievement within the framework of the community is the establishment of a network of Zionist day schools since 1953. In 1969 ten schools were operating with an enrollment of over 5,000 pupils.

[Aharon Zwergbaum]

In Holland

The Zionist Federation was established in Holland in 1899 under the name of Nederlandse Zionistenbond. Among its founders was the young banker Jacobus H. Kann, who was a close collaborator of Theodor Herzl. The members of the organization were mainly middle-class intellectuals, and for about 30 years the Zionist movement of Holland was unsuccessful in attracting a wider following among the Jewish proletariat. The movement also encountered violent opposition from Orthodox circles. The chief rabbi of Amsterdam, J.Z. *Duenner, supported the Zionist movement from the start, and some of his close friends founded the Mizrachi movement, led by S. Ph. de Vries. But his colleagues and almost all of his disciples rejected Zionism, and in 1904 the Council of Chief Rabbis (which Duenner refused to join) forbade the Jews to join the Zionist movement. The Eighth Zionist Congress, which was held in The Hague, led to an awakening of the movement. An attempt to establish a Zionist youth movement during that period ended in failure, but the official Zionist organ, *De Joodse Wachter*, founded in 1905, which in time became a weekly, stood its ground.

In 1912 Nehemiah de *Lieme was elected president of the Nederlandse Zionistenbond, and S.A. van Vriesland (who was later to become treasurer of the World Zionist Organization) was elected its secretary. De Lieme consolidated the organization's special character by establishing several principles: the negation of any Zionist work for Diaspora Jewry ("*Gegenwartsarbeit*"); sound economic management in the upbuilding of Erez Israel; the exemplary organization of the Zionist movement in the Diaspora. In Holland, the organization made the following demands: prohibition of the sale of the shekel for obtaining the right to vote at elections to the Zionist Congresses (therefore Holland's representation at all the Congresses fell below the organization's actual strength); membership to be registered personally (not through Zionist parties); insistence on Zionist principles in propaganda as well as fundraising for Erez Israel. De Lieme exerted tremendous influence on his friends and followers, among them S. *Hoofien, later director of the Anglo-Palestine Bank in Palestine, Abel Herzberg, author and politician, and others. In 1914 the world headquarters of the Jewish National Fund were transferred to The Hague, and de Lieme headed the fund for seven years and formulated its principles. In 1920 he was elected to the Executive of the World Zionist Organization, but resigned when his principles were not accepted. After de Lieme's resignation, he returned to the leadership of the Nederlandse Zionistenbond and developed a stance of opposition to the Executive of the World Zionist Organization. Perez (Fritz) *Bernstein also extended this opposition to the political line of Chaim Weizmann, and in his capacity of editor of *De Joodse Wachter* and later as president of the organization, he left his imprint on the movement. Only a small group of Dutch Zionists countered the de Lieme-Bernstein line, among them David Cohen and the Po'alei Zion, founded in 1933 by S. de Wolff. There was also a small Revisionist group, which would not gain much influence because of the anti-Weizmann stance of the whole Zionist Federation.

During World War I the arrival of refugees from Belgium (all of whom were Jews of East European origin) added an important element to the movement. The study of modern Hebrew developed and several newspapers included a Hebrew supplement. In 1917 an organization of Zionist youth groups, Joodse Jeugdferatie, was established with the moral support of the Zionist leadership and under its aegis. The Jeugdferatie encompassed many groups throughout the country and held independent activities (publications, lectures, conventions). After about ten years, it was headed by young people, mostly students, who had emerged from its own ranks.

The rise of antisemitism in Germany was a cause for much agitation in Holland, and the 30,000 German Jewish refugees who arrived in the country highlighted the problem. The influence of the Zionist movement increased, and although it had no more than 4,000 registered members, many beyond its ranks accepted the Zionist ideology. Anti-Jewish trends then began to grow in Holland and the local Zionist leadership was inclined to conceal the Jewish national character of

Zionism. In opposition to this tendency, a trend calling itself "Radical Zionism," greatly influenced by Lion Nordheim, developed within the youth movements and among the students. It clashed sharply with the Zionist leadership, especially over the following points: the Joodse Jeugdferatie demanded of its members complete identification with the Jewish people and public detachment from the Dutch nation; it stood for the safeguarding of Jewish national values and traditions and for Jewish education, thus opposing the prohibition of "*Gegenwartsarbeit*"; it propagated the ideal of *halutziyyut* (pioneering) among its members. The rift between the youth movement (which also encompassed religious and labor groups and commanded a membership of 2,000 in 40 branches) reached its climax in 1940. With the German invasion, however, it was decided to establish a joint leadership of all the Zionist organizations in Holland, and this body administered the affairs of the Nederlandse Zionistenbond until its dissolution.

Immediately after World War I, many *halutzim* from Eastern Europe had arrived in Holland to complete their agricultural training with Dutch farmers. During the 1930s *halutzim* also emerged from the ranks of the Joodse Jeugdfederatie. They established three organizations: Ḥevrat Olim (the adherents of Bernstein), Berit Ḥalutzim Datiyyim (religious) and He-Ḥalutz (composed mainly of *halutzim* from other countries, including German refugees). As Holland was not considered to be a danger zone, not even by the World Zionist Organization, over 800 *halutzim* were trapped there for many years. Many of them perished during the war, but 444 were saved, mainly due to the activity of the *Westerweel group. After World War II the Dutch Zionist movement was dominated mainly by the radical trend. Its slogan, which called for massive *aliyah*, led to considerable success. Out of the 25,000 Jews who survived in Holland, some 4,000 settled in Israel between 1948 and 1969, a higher percentage than from any other Western country. During this period most of the Zionist leadership itself migrated to Israel, and the Nederlandse Zionistenbond lost its central position within the remnant of Dutch Jewry. Zionist periodicals in Holland included, apart from *De Joodse Wachter, Tikvath Jisrael* (from 1917), monthly of the youth movement; *Mizrachie* (from 1932), monthly of the Mizrachi movement; and *Jaarboek van de Nederlandse Zionistische Studentenorganisatie* (since 1909).

[Jozeph Michman (Melkman)]

In Hungary

Two strong and opposing forces were influential among Hungarian Jewry from the 1840s: on the one hand a desire to assimilate linguistically and culturally into the Magyar nation, and on the other extreme religious conservatism. In addition, Ḥasidism exerted a substantial influence, particularly in the northern part of the country. These three phenomena were an obstacle to the proliferation of the Zionist idea at the end of the 19th century. Nonetheless, the difficult and extended struggle of the Zionists succeeded in spreading the Zionist idea among relatively small groups throughout the country.

During the period of the Ḥovevei Zion a number of enthusiastic supporters of this movement in Hungary maintained ties with other Ḥovevei Zion beyond the borders. However, even the fact that Theodor Herzl was a native of Budapest and was bound to Hungarian Jewry through familial ties did not facilitate the development of the Zionist movement in Hungary. On a number of occasions Herzl himself declared that Zionism would reach Hungary, but only later on.

In spite of strong opposition to Zionism in religious circles, some Orthodox Jews from Hungary participated in the founding of the world religious Zionist movement. Some Hungarian Jews also settled in Ereẓ Israel during the 19th century and became an important element in the old *yishuv*, but as a rule they bore no ties to Zionism. Representatives from Hungary participated in the First Zionist Congress (1897). One of them, János *Rónai, delivered a speech at the Congress and pointed to the normal condition of life of Hungarian Jewry, but he expressed the fear that this situation would deteriorate and predicted that Hungarian Jewry would then join the Zionist movement. Immediately after the Congress, Rónai, an attorney from Transylvania, began to engage in varied organizational activities, establishing branches of the Zionist movement, heading the national efforts at organizations, and being elected first chairman of the Hungarian Zionist Organization. In preparation for his appearance at the Congress, he wrote an ideological pamphlet in German entitled *Zionismus in Ungarn* (1897), in which he engaged the arguments of both the assimilationist and religious opposition. Another central figure was Samu Bettelheim, who was active in Bratislava. Bettelheim was a religious Zionist, and upon his initiative the first world conference of Mizrachi was convened in his city in 1904. The number of local Zionist groups began to increase, and at the Second Zionist Congress (1898) 32 branches of the Hungarian Zionist Federation were in existence.

In 1908 the Hungarian authorities became aware of the movement and prohibited collecting money for the Zionist funds. Local Zionists alerted the president of the World Zionist Organization, David Wolffsohn. He visited Budapest and was received by the minister of interior, Count Gyula Andrássy, who displayed understanding and even friendship toward the Zionist movement but explained to Wolffsohn that the problem of minorities was very disturbing in Hungary and he could not afford to allow the creation of yet another national minority, the Jewish nation. This approach continued to characterize the position of the Hungarian authorities vis-à-vis Zionism.

At the beginning of the 20th century, some of the students at the University of Budapest became Zionists. In 1903 they founded a society called Makkabea, which played a central role in the propagation of the Zionist idea in the capital and the provinces until World War II. The Zionist press was also established by the initiative of this society. The first Zionist organ was *Zsidó Néplap*, which was published from 1905 to 1907. In 1911 another organ, *Zsidó Szemle*, began to appear under the editorship of József Schőnfeld. These papers, however, did not succeed in penetrating into wider Jewish circles.

A Jewish quarterly called *Múlt és Jövő* began appearing in 1911 under the editorship of Joseph *Patai. Although this literary and artistic periodical was not an official organ of Zionism, it clearly identified with the Jewish nationalist and Zionist trend and achieved great popularity (publication ceased during the Holocaust). Zionists were also active in the establishment of Jewish sports organizations that maintained ties with similar groups in Austria.

Feeble attempts were made at the beginning of the century to establish Po'alei Zion in Hungary, but the Jews among Hungarian Social Democrats opposed this idea. The Jewish Territorial Organization (ITO) also set up a branch in Hungary in 1912. Local Zionists became involved in a difficult struggle with the ITO, which was also supported by the non-Zionist Jewish press. In spite of all these difficulties, however, on the eve of World War I there were branches of the Hungarian Zionist Organization in many cities throughout Hungary, and 20 delegates from Hungary participated in the 11th Zionist Congress (1913).

During World War I many active Zionists were mobilized into the army, and some who were captured came into contact with Russian Jews and Zionists. These contacts proved to be very fruitful. During the last months of World War I and the period of the Russian Revolution, Zionists, and especially demobilized officers, organized into self-defense units and in a number of places overcame mob attacks on the Jews. The first short-lived Communist regime in Hungary (1919) displayed open hostility to Zionism, prohibited organizational activities, and forced the Zionist organ to close down for a period.

In the peace treaty that ended World War I, Hungary was divided up, and the Zionist activity in areas annexed to Romania, Czechoslovakia, Austria, and Yugoslavia began to develop independently of the Hungarian Zionist Organization, whose headquarters were in Budapest. Zionist activities continued in the limited area of Hungary, where one of the central problems was the extended struggle to acquire government authorization for the Zionist Organization. The leaders of the Neolog Jewish community also opposed the granting of such authorization, since they regarded Zionism as a breach of Hungarian patriotism. Legalization was finally achieved in 1927, with the Hungarian Zionists receiving strong political support from the Zionist Executive in London. The Pro-Palestine Association exerted influence among those Jews who did not formally join the Zionist Organization.

By the 16th Zionist Congress (1929) many youth movements had already been formed in Hungary, including He-Ḥalutz. A great step forward was the enlargement of the Jewish Agency and the seating of the Hungarian Zionist Joseph Patai, and the chief rabbi of Szeged, Immanuel Löw, who was considered a non-Zionist, on its General Council. In 1937, 17 local branches of the Zionist Organization and 3,600 members existed in Hungary. The number of youth movement members was also substantial. The year 1937 was the last before the cancellation of equal rights for Hungarian Jews (the Hungarian parliament had already begun deliberating the law to reduce

their rights, which was passed in 1938). The first anti-Jewish law, the restrictions on Jewish economic activities, and the proximity of German Nazism – after Germany had annexed Austria – increased the interest of Hungarian Jewry in the Zionist movement. Zionist cultural activities expanded, especially those of the youth movements. The number of Jews who wished to go to Palestine, as well as the number of those who realized their desire, was on the rise.

Jewish refugees from Austria, Poland, and other places began arriving in Hungary, and aid was extended to them principally through the framework of the Zionist movement. Efforts to move refugees to Palestine through "illegal" channels were made under Zionist auspices, particularly through the youth movements. With the annexation of northern Transylvania to Hungary in 1940, a group of Transylvanian Zionist leaders experienced in public and political life arrived in Budapest. Among them were Rezsnő Rudolf *Kasztner and the newspaper editor Ernő *Marton. The Zionist Socialist movement was further strengthened during this period, and Béla Dános, its leader, also took upon himself varied activities. Youth leaders arrived from Slovakia and other parts of former Czechoslovakia, bringing with them strong Zionist views. The movement in Hungary was then headed by Ottó *Komoly. Those who came from the annexed provinces, as well as active Zionists who had fled from other countries, were aided by, and extended aid to, the rescue activities of the Zionist movement and to some degree the Aid and Rescue Committee set up for that purpose. The Aid and Rescue Committee established contact with Adolf *Eichmann to discuss rescue plans and sent Joel *Brand, one of the active Zionist Socialists, on his tragic mission. During World War II Hungarian Zionists were active mainly in rescue activities.

After World War II, in 1945, the Zionist Organization in Hungary was reconstituted. Zionist youth movements directed many young people to Erez Israel. The new government displayed hostility toward the Zionist activities from the very start and tried gradually to liquidate the movement. In 1949 the Zionist Organization and all Zionist activities were formally prohibited. A number of trials, directed specifically against Zionists, were later held by the government, and in other trials, including that of László Rajk, some of the defendants were accused of "conspiring with Zionists." The 50-year history of the Zionist movement in Hungary thus came to an end.

In Italy

Because of the small number of Jews in Italy and the fact that they were largely assimilated, Zionism could penetrate only slowly and with difficulty and for years retained an exclusive character. Among the Jewish periodicals, the first to express Zionist ideas at the end of the 19th century was *Il Corriere Israelitico*, which was published in Italian but appeared in Trieste (then under Austrian rule). No Italian delegates were present at the First Zionist Congress in 1897. The Second Congress (1898) was attended by the rabbi of Naples, Joseph Sonnino,

who was chosen as delegate without formal elections. He represented the first Zionist groups that had been formed in Italy in Ancona, Rome, Leghorn, Florence, and Naples. Also present at the Second Congress was Felice Ravenna, who was to become the head of Italian Zionism and was to remain its leader for many years, representing it at the Third Congress in 1899, together with two other delegates. It was only in 1901 that the Italian Zionist Federation was formed. Its conventions originally took place every two years in various towns. In 1901 the first Zionist periodical, *L'Idea Sionista*, was founded and survived for ten years; in 1908 the more penetrating *L'Eco Sionista d'Italia* appeared.

At that time Italian Zionism had no important political scope and was troubled by various controversies; its nature was mainly philanthropic. Due to the intervention of some of its exponents, however, Theodor Herzl was received in January 1904 by King Victor Emmanuel III and by Pope Pius X. On that occasion, Herzl had an interview with the Italian minister for foreign affairs and later sent him a written statement. From the beginning, the most active and penetrating Zionist writer and journalist was Dante *Lattes. After Herzl's death the movement experienced a period of decline, and the center of its activities was transferred to Florence, under the leadership of Alfonso *Pacifici. In 1916 the weekly *Israel* was founded there and remained the center of Zionist activity, although it carried no Zionist label.

Immediately after World War I an Italian Jew, naval captain Angelo Levi-Bianchini, was sent by the government as Italian military attaché to General Allenby's General Staff. Under the influence of Chaim Weizmann, he became an ardent Zionist. He was killed in a Bedouin ambush in Syria in 1920. In 1922 Weizmann went to Italy and made his first close contact with Italian Jewry, defining it in his autobiography as follows: "The Italian Jewish community seemed to be a community of *sujets d'élite*. And the *élite* of that community were turning their eyes to Palestine." During the early years of Fascist rule, the relations between the Italian government and the Zionist Organization were so good that in 1928 the Comitato Italia-Palestina was formed to facilitate the contact between Italy and Palestine. Personalities of high standing in politics and literature were among the members of this committee. There had even been talk in 1931 of holding the 19th Zionist Congress at Abbazia (now Opatija, Croatia). The Zionist Revisionist movement was also in touch with the Italian government. Its leader, Leone *Carpi in Milan, published the periodical *L'Idea Sionistica*. The Revisionists founded a naval school at Civitavecchia for the world Betar movement that was several times visited by Vladimir Jabotinsky.

Although the attitude of Mussolini's government became increasingly pro-Arab, Zionism remained active for some years. It maintained agricultural training centers (*hakhsharot*); encouraged contributions to the Zionist funds, which showed increases; replied firmly to controversies in newspapers; and regularly sent delegates to the Zionist Congresses. Following the introduction of the racial laws in 1938, the po-

sition of Italian Jewry rapidly deteriorated. The existing Jewish periodicals were ordered to stop publication, the Zionist organizations were dissolved, and Jewish life, with the exception of religious and charitable functions, had to be carried on in secret. This period marked the beginning of a considerable *aliyah* from Italy, whose first pioneers and standard-bearers had been Enzo and Ada *Sereni.

After the interval of World War II, marked by deportations and ruin, particularly during the German occupation, Jewish and Zionist life slowly revived in Italy. Immediately after World War II Italy became a center of widespread and feverish underground activities in the organization of "illegal" immigration of Jewish survivors from Central and Eastern Europe to Palestine (directed by Ada Sereni) and also of secret arms transports for the Haganah. Italian Zionist and communal leaders, among them Raffaele *Cantoni, played a major role in these operations. These facts, as well as the presence of the soldiers of the Jewish Brigade Group from Palestine, created a climate of deep identification of Italian Jewry with the struggle for Jewish independence in Palestine.

Numerous Zionist conventions took place in Italy from 1947 onward and *aliyah* increased considerably. Jewish education, e.g., the great Jewish school in Milan, became Hebrew and Israel-oriented. Italian Zionism, which is numerically still very small because of the limited size of the Jewish community, is now more politically conscious and has more cultural and personal ties with Israel than ever before.

[Giorgio Romano]

In Latin America
The Zionist movement in Latin America grew with the development of the continent's Jewish communities. In most countries Jewish communal and Zionist institutions collaborated from the start, and from the time of the struggle for independence and the establishment of the State of Israel the activities of the Zionist movement have expanded to continental proportions. The movement has sponsored such major continental gatherings as the first Zionist congress in Montevideo (1945); the second Zionist congress in Buenos Aires (1950); the first Jewish Latin American youth convention (Montevideo 1961); a conference convened after the Six-Day War that brought together 527 delegates from Argentina, Uruguay, Chile, Paraguay, and Peru (Nov. 1967); and a South American encounter for the new Zionist generations (Buenos Aires, April 1970).

Argentina. Zionist groups arose in Buenos Aires and in the interior simultaneously with the organization of the First Zionist Congress in Basle. The oldest group (established 1897) was Sion. The Dr. Theodor Herzl League was also influential for several years. As the movement grew, its activities were coordinated by a Federación (established 1904), a central institution which was an extension of the Herzl League. In 1908 it was replaced by Tifereth Zion. The movement's leadership developed within the framework of the Federación Sionista Argentina (established 1913), whose first lead-

ers were Jacobo Joselevich, Nathan Gezang, and Solomon Liebeshutz.

During the early stages of its development, the movement did not tend toward internal political polarization. There were, however, lesser organizations which espoused particular ideological trends: Ḥerut, Socialist Territorialists (established 1905); ss, Socialist Zionists (established 1906); and a Borochovist group, Po'alei Zion (est. 1909), and Ẓe'irei Zion (1918). The two last groups united in 1932 to form Po'alei Zion Ẓe'irei Zion and its periodical *Di Naye Tzait*, established 1918, still exists. The other major local party is the General Zionists, whose official publication is *El Estado Judío*. Ha-Shomer ha-Ẓa'ir, particularly active after World War II, publishes the *Nueva Sion* (established 1947). The Revisionist party (established 1930), which increased its organizational cadres during the struggle of the *yishuv* against the British administration in Palestine, puts out *La idea Sionista*. Mizrachi was established in 1940 on the foundations of previously organized smaller groups.

These parties have sponsored the creation of youth movements which have made significant contributions in the areas of Jewish education and *aliyah*. Women's organizations of each party, as well as wizo, are also active. The Consejo Central Sionista (established 1948), in which all local Zionist institutions are represented, arose from the reorganization of the Zionist parties and the creation of a Comisión Coordinadora (established 1940). As of 1951 it has undertaken functions previously carried out by the Jewish Agency (established 1937, for Argentina and Latin America). Delegates from Argentina have attended Zionist Congresses since 1925; their presence in previous years had been sporadic. The Zionist Organization of Argentina became one of the central organizations of Argentine Jewry.

Brazil. The first Zionist organizations, Tifereth Zion and Ahavath Zion (1916–17) sprang up in São Paolo and Rio de Janeiro. Smaller centers were also established in the northern provinces. With the founding of the Zionist Organization (1921), a degree of coordination was attained, including collaboration between Ashkenazim and Sephardim. During World War II, when Brazil imposed legislation restricting the internal development of national minorities, the Zionist movement was officially closed down (1938), but it nevertheless continued its activities on a limited scale until 1945, when its legal status was renewed. The reorganized Zionist political parties coordinated into the United Zionist Organization (established 1945). The most influential of these parties were Mapai (organized in the 1920s), General Zionists (since 1947), and the Revisionists. The Keren Hayesod was reorganized in 1946.

The movement encountered difficulties which derived from the complex internal organization of the Jewish community; local autonomous trends and a division according to countries of origin interfered with its collaboration with a centralized communal organization. Nevertheless, communal institutions in the state of São Paolo consolidated their activities with the Zionist Organization in support of the Jewish state

and to aid European Jewry. The assimilation of Jewish sectors into Brazilian society, a growing manifestation during and subsequent to World War II, was a contributing factor to the limited influence of the movement during those years. There has been an upswing in the local Zionist movement since the 1950s, particularly after the Six-Day War (1967).

Colombia. The communal life of this small Jewish community, composed of Sephardim who emigrated from Palestine during the crisis years of the 1920s, German-speaking Ashkenazi immigrants arriving since World War I, and refugees from Nazi persecution, was organized with difficulty. The Zionist movement also had a slow beginning due to the restrictive measures adopted by the authorities to prevent the formation of "ethnic islands." The Federación Sionista, together with the Comité Central (established 1936), adopted measures against antisemitism and racial discrimination.

Ecuador and Paraguay. The respective organizations of Ecuador and Paraguay enjoy a limited membership, and they work together with communal institutions. Paraguay, whose minute Jewish population is preponderantly pro-Zionist, has seen an increase in activities in the wake of the Six-Day War.

Chile. Chile's flourishing Jewish community has attained a strong internal organization in which the Zionist movement wields authority and influence. The earliest Zionist initiatives were sporadic. The first stable group was formed in 1911 by members maintaining contact with the Argentinean Zionist movement. An influential figure during this early period was Mauricio Baltiansky. From the first Zionist convention in 1919, the movement became more firmly established. The major blocs were Po'alei Zion (established 1916) and the General Zionist Party (1947). Since the 1930s all Zionist parties and factions have increasingly polarized within the local movement. These include the Pro-Palestine Labor League (1931), the Revisionists (1932), and Mizrachi. Smaller groups such as the Folksfarband and the Grupo Hebraista formed the opposition. Active pioneer organizations are Ivriah (1930), Betar (1933), Bnei Akiva (1940), Kadimah (1944) – from which Ha-Shomer ha-Ẓa'ir grew – Deror-He-Ḥalutz, and Iḥud ha-No'ar ha-Ḥalutzi (1950) of the Po'alei Zion Hitaḥadut. Zionist women's organizations are WIZO (1926) and Pioneer Women (1949).

The firmly organized Zionist Federation of Chile (established 1919) incorporates all political and Zionist organizations, the United Jewish Appeal, and every institution which, if not specifically Zionist, nonetheless identifies with the movement's objectives. Together with the Jewish representative body, the Comité Representativo, it engages in nationwide Jewish education, is involved with cultural activities, and participates in the Central Committee for Jewish Education (established 1946). It sponsors the Instituto Chileno-Israelita de Cultura (established 1950), which is associated with the Comisión de Cooperación Intelectual of the University of Chile. It has also carried out an intensive

campaign of political explanation within non-Jewish circles, particularly since World War II and the creation of the State of Israel.

Peru. The Zionist movement in Peru, established at the end of World War I, encountered initial resistance on the part of the Bund and other left-wing groups in the communal institutions and in the Jewish press. After its establishment (1925), the Zionist Federation collaborated closely with the Unión Israelita del Peru, an Ashkenazi community functioning since 1924, and with the Sociedad de Sociedades (1942), representative of the community. Together with the latter, the Zionist Federation sponsors the León Pinelo school (inaugurated 1946). Jewish public opinion in Peru today is preponderantly pro-Zionist. Jewish university students are organized in the Centro Universitario Peruano-Israelita (established 1960–61), which was reorganized in 1969 as the Movimiento Universitario Peruano Israelita. An independent youth group, Kinneret (est. 1962), sponsors immigration to Israel and local communal activities. The Zionist Federation has collaborated with the Comité Pro-Palestina (1945) and works with the Instituto Cultural Peru-Israel.

Mexico. Despite the divergences between Zionists and sectors identified with the non-Zionist left, the Zionist movement exerted increasing influence from the 1920s onward. Both blocs collaborated in certain communal activities, particularly those pertaining to education. Prior to institutional Zionist organization, activities were sporadic (i.e., on behalf of the Balfour Declaration (1917), a Keren Hayesod campaign (1923), etc.). The first organized group was the Po'alei Zion (1923), which published the first Yiddish publication, *Unzer Vort*. Groups with divergent leanings and bereft of specific partisan character collaborated in the Federación Sionista (1925), which later became affiliated with General Zionism. Fragmentation into specific parties and Zionist institutions – according to countries of origin or youth and women's sectors – began during the years immediately preceding World War II: Liga Pro-Palestina Obrera (1934), Pioneras (1935), Revisionists (end of the decade), Organización Sionista Sefardí (1936, functioning jointly with the Sephardi community), WIZO (1938), Ha-Shomer ha-Ẓa'ir – the first pioneer organization (1940) – Mizrachi (1942), Betar (1946), Bnei Akiva (1946), Ha-No'ar ha-Ẓioni (1948), Habonim (1948), Mapam (1948). The youth organizations centralized their activities in the Federación Juvenil Sionista (1943). Each of the trends had its own publication: *Dos Wort* (1947, Po'alei Zion), *Ha-Shomer ha-Ẓa'ir* (1942), *La Voz Sionista* (1948, General Zionists), *Unidad Juvenil* (Po'alei Zion youth), *Avangard* (1948, Mapam), *Unzer Tribune* and *El Heraldo* (Revisionists), *Mizrachi Leben* (religious). The overall organized movement formed the Federación Sionista de Méjico (established 1950), which has since undertaken central leadership tasks, including those of a local communal nature. An index of the movement's scope are the following figures: approximately 400 organized institutions cooperated in the Emergency Palestine Committee of

1946; in 1954 90% of the Jewish population considered itself Zionist, 8% non-Zionist, and 2% anti-Zionist. The Federación collaborates with the Comité Central Israelita, a representative communal institution, and with the Instituto de Relaciones Culturales Méjico-Israel.

Uruguay. This community of strong Zionist leanings had evolved from groups which have collaborated since the earliest stages of their development. In the first group, Agudath Zion, Israel Tschlenow (1914) brought together Zionists of no particular political leanings. The Sephardim founded the "Dr. Herzl" group in 1918; Po'alei Zion was established in 1917. Various trends took shape during the 1930s, and the movement expanded. All the Zionist parties and their pioneer movements and women's institutions are locally represented. The Organización Sionista Territorial, which encompasses the Federación Juvenil Sionista, cooperates closely with the Comité Central Israelita, a representative communal institution. It also collaborated with the Comité Uruguayo Pro-Palestina (1940) and later with the Comité Cultural Uruguay-Israel.

Venezuela. The Zionist Organization has been the most active and influential institution of this small community since its reorganization in 1949. It works together with the Ashkenazi and Sephardi sectors, as well as with B'nai B'rith and the Jewish National Fund. Despite their limited number, the following youth movements also operate: Ha-Shomer ha-Ẓa'ir, Bnei Akiva, Unión de Jovenes Hebreos (est. 1955), which form the Federación Universitaria Sionista Sudamericana. WIZO maintains branches in the capital and in the interior of the country. Affiliation with the Federación can also be individual. It collaborates with the Instituto Cultural Venezuela-Israel.

Central America. Despite their small size, the Jewish communities of Guatemala, Honduras, Nicaragua, Costa Rica, El Salvador, and Panama have organized Zionist institutions. In El Salvador they have functioned since 1946 and enjoy the cooperation of non-Jewish intellectuals and government figures. In Panama and Costa Rica, Zionist activities have found support among the political non-Jewish personalities who have also sponsored relations with the State of Israel. The Zionist movement in the region has increased its activities since 1965 in the wake of the formation of the Federación de Comunidades de America Central, in which the Zionist Organization is also represented.

[Rosa Perla Raicher]

In North African and Asian Countries

The attachment of Oriental Jewry to Ereẓ Israel was a messianic-religious one, expressed in prayers and aspirations and at times in going to Ereẓ Israel to die and be buried there. Until the 1880s migration to Ereẓ Israel was an individual matter and was not undertaken by organized groups.

Organizations. In the late 19th century the European Zionist movement attracted followers and sympathizers in all the Oriental countries, with the exception of remote *Yemen. The first African and Asian countries in which Zionist movements were founded were *Algeria, *Tunisia, and *Egypt. As early as 1898 communities from these three countries sent two delegates to the Second Zionist Congress, convened at Basle. Later on, Zionist organizations were established in *Iraq, China (Shanghai), Turkey, and *Morocco and afterward in *Libya, *Syria, *India, and Singapore. At first groups were set up to read Zionist journals and literature from Europe. Later on, organizations were founded, sometimes several in the same city. Most of these groups were not registered officially, either because registration was not required by law or because Zionist organizations were not permitted, such as in the Ottoman Empire. From the late 19th century to the 1930s these organizations had a limited membership. The few active members devoted most of their time to Zionist fundraising, and not enough attention was given to strengthening Hebrew and Zionist education.

After World War I, though in some places only after the 1930s, an important change took place in the development of Zionist organizations in Oriental countries. Zionist youth movements were established and directed by *sheliḥim* (emissaries) from Ereẓ Israel, for the most part independent of the adult Zionist organizations. The youth movements were generally more successful than the adult organizations for several reasons; they were organized and run by young people who were sent especially for this task and devoted all their time to it; the emissaries were not interested in collecting funds, but engaged in Hebrew and Zionist education; and they even dared to establish underground organizations when Zionist activities were prohibited. When necessary (in Iraq, Egypt, and Libya), the emissaries also established paramilitary underground self-defense organizations in which hundreds of young Jews were trained in the use of weapons in case of anti-Jewish outbursts.

In 1970 when most of the African and Asian Jewish communities had ceased to exist, Zionist organizations survived only in *Iran and in Turkey, where young people are active in Hebrew and Zionist education.

Financial Contributions. Large sums were contributed to the Jewish National Fund by Iraqi and Shanghai Jewry only in the early 1920s. However, most of the money contributed to the JNF between 1920 and 1923 (£36,500 out of a total of £38,470) was given by a Jew who wished to commemorate his brother, and his contribution enabled the establishment of the moshav Kefar Yeḥezkel in the Jezreel Valley. The rest of Iraqi Jewry contributed only £1,970 during that time. Shanghai Jewry contributed over £21,000 from 1911 to 1926, a rather large sum for a Jewish community in that area.

The contributions to the Keren Hayesod were not large, and the number of shekels (i.e., the dues paid for membership in the World Zionist Organization) acquired by the members of these communities was small. During the 1940s a relatively large number of shekels were acquired in the North African

Table 1: Shekels in Muslim and Asiatic Countries, 1922–50

	1922–33	1946	1949–50
Tunisia	7,857	13,296	32,202
Morocco	5,602	11,982	58,339
Algeria		8,100	26,652
Syria, Turkey, Iran	4,302	4,536	20,613
Iraq	4,557		
Egypt	6,724	7,541	–
Libya	?	1,963	7,000
Other Asiatic countries	?	4,325	2,574
Total	30,000	51,743	147,380

and non-Arabic countries in Asia, as shown in Table 1: Shekels in Muslim and Asiatic Countries, 1922–50.

From 1951 fewer shekels were acquired by Jews in the Eastern countries in the wake of the mass *aliyah*. The weakness of Zionist activity in these countries may be explained by the lack of strong communal organizations. The wealthy and the notables in the community were not attracted to Zionism. As the authorities in several Arab countries prohibited Zionist activity, there was no choice but to establish underground organizations. Indeed, it was impossible to conduct either oral or written Zionist education and propaganda. Therefore, the fundraising campaigns also suffered.

Aliyah. Jewish migration to Israel was always large. There are no data, however, as to the number of immigrants prior to World War I. They may be estimated according to those who remained in Palestine and were counted in the census conducted in the State of Israel in November 1948. In that census 462,567 Jews were registered as born abroad. They are divided according to periods of immigration in Table 2: Jews in Israel Born Abroad.

The number of immigrants is actually larger, as Table: Jews in Israel Born Abroad does not include those who died or left prior to 1948. One may assume that the First and Second Aliyah from Asia and North Africa numbered about 6,000; from 1919 to 1938, about 38,000; from 1939 to May 1948, about 25,000. About 33% of Yemenite Jewry, 27% of Turkish Jewry, and 6–8% of Egyptian, Iraqi, and Persian Jewry migrated to Palestine in 1919–48.

By 1971 only several thousand Jews remained in North Africa, out of a community of 500,000. The immigration to Israel from Libya was minimal until the anti-Jewish riots in Tripoli between 1945 and 1948. Immediately after the State of Israel was established, most of Libyan Jewry migrated there, anticipating more disturbances and fearing life in independent Libya. The rich and the educated, who at first remained in Libya, left the country gradually, so that by June 1967 there were virtually no Jews left in Libya.

In 1971 there were only several thousand Jews in Syria. After 1950, however, only half of the Turkish Jews who emigrated went to Israel, the rest settling in other countries. Some of the Jews in Iran, mostly the poor, left for Israel. Persian Jews enjoyed full political and religious freedom until early 1979. In March 1950 the Iraqi authorities permitted Jews who wished to leave to do so, and 124,000 Jews migrated to Israel within two years. In late 1951 there remained only about 6,000 Jews, some of whom migrated later on.

After the establishment of the State of Israel, there was a relatively large emigration of Egyptian Jews (it seems that a substantial part of these Jews were born in Erez Israel and were expelled by the Turks to Egypt during World War I). In 1956–57 the Egyptian authorities expelled thousands of Jews. Some came to Israel, but the majority, particularly the wealthy, emigrated to Europe and America.

Aliyah from Yemen was proportionately larger than that

Table 2: Jews in Israel Born Abroad According to Native Countries and Periods of Immigration

Countries	Until 1918	1918–38	1939–47	1948 and unknown date	Total no. of Immigrants
Yemen and Aden	1,800	8,510	5,676	316	16,302

Total	12,328	245,265	119,995	84,779	462,367

of other Oriental communities. In the 70 years from 1881 to 1951, Yemenite Jewry exploited every opportunity to settle in Erez Israel.

[Haim J. Cohen]

In Poland

1897–1918. Prior to the restoration of Polish statehood, Poland's territory remained divided into three sections: one under the administration of Germany, the second of czarist Russia, and the third of the Austrian monarchy. In the German part of former Poland, the very limited Jewish population (no more than around 50,000 at the beginning of the century) was thoroughly assimilated into German culture and displayed little interest in Jewish affairs in general and in Zionism in particular. However, two prominent forerunners of Zionism, Zevi Hirsch Kalischer and Elijah Gutmacher, both lived in that part of Poland and published their pamphlets calling for redemption of Zion, but their appeal had no influence upon the community; neither did the first conference of the Ḥovevei Zion movement, which took place in 1884 in the German part of Poland.

The development of Zionism was also slow among the great masses of the Jewish population in the Polish territories of czarist Russia, around 2,000,000 people at that time. A distinction should be drawn between the province of Congress Poland and other parts of the territory. In Congress Poland, which was one of the richest and economically most developed parts of the Russian Empire, the local Jewish population was somewhat influenced by the Polish assimilationist ideology and, on the other hand, the anti-Zionist Orthodoxy. It therefore had to be won over to Zionism with considerable effort. The standard-bearers of Zionism in that part of the country were the so-called "Litvaks," i.e., immigrants who came from Lithuania and the neighboring provinces, who were strongly imbued with Jewish nationalism and ideology and influenced other groups of the Jewish population. Quite different was the situation in other provinces, whose Jewish population was deeply rooted in Judaism, which was much nearer to the idea of Jewish nationalism and adopted the Zionist program with enthusiasm.

These initial differences disappeared in the course of time, however, as the movement conquered growing parts of the Jewish population. It was not particularly disturbed by the authorities, who were inclined to see in Zionism a means of reducing the danger of revolutionary propaganda among the Jews, or by the Polish population, which initially favored the idea of a movement likely to enlarge the scope of Jewish emigration. This situation changed considerably, however, when the Zionist movement proclaimed as a part of its immediate aims the struggle for civic and national rights for the Jewish population, as formulated in the *Helsingfors Program of 1906. The reaction of the authorities was a marked reduction in tolerance toward Zionist activities and antisemitism spread among the Polish population, leading even to an economic boycott of the Jews, which continued until the outbreak of World War I.

The number of adherents of the Zionist movement and the scope of its influence nevertheless grew from year to year. At the beginning the membership was limited mainly to people from the middle class, but the movement subsequently won many adherents among the workers. Although a few groups broke away and joined the territorialist *Zionist Socialist Workers' Party (ss) or the party supporting Jewish autonomism (the "Sejmists," see *Jewish Socialist Workers' Party), the others remained concentrated around the Po'alei Zion Party and tried to combine their socialist ideology with the Zionist program. On the other hand, many groups of Orthodox Jewry had already supported the Ḥovevei Zion, joined the Zionist movement, and decided to establish a special faction of religious Zionists, the Mizrachi. The various groups cooperated closely, although the Po'alei Zion, influenced by the Russian branch with its strong proletarian class character, soon tended to proclaim its organizational independence, stressing the special interests of the Jewish workers.

The situation differed in many respects in Galicia, the Polish part of the Austrian monarchy. The roots of Jewish nationalism and Zionism were much deeper there than in Congress Poland. Not only did the movement of Enlightenment, which considered Jewish nationalism self-evident and whose most prominent representatives lived in Galicia, leave its deep impression on the area, but the organized Zionist movement appeared there years before the First Zionist Congress (1897). The Zionist movement drew its supporters mainly from among the university students and the large groups of the Jewish intelligentsia. It is not surprising, therefore, that Herzl's call was responded to by the masses of the Jewish population, despite the opposition of rather small, if vociferous, groups of assimilationists, the extreme adherents of Ḥasidism, and the unfriendly attitude of the authorities, who were opposed to Jewish nationalism. This opposition grew much stronger when the Galician Zionists conducted a vigorous and relatively successful struggle for civic and national rights for the Jews, whose platform was formulated at the Cracow Conference (1906). In the first election to the Austrian parliament, after universal suffrage had been granted (1907), the Zionists acquired three seats in Galicia. One after another, various groups of the population joined the movement: members of the middle class, considerable groups of wage earners (especially the commercial employees), university and high school students, etc. It was an authentic popular movement, trying simultaneously to satisfy both the cultural needs of the population, through a network of Hebrew schools, and the economic needs, especially by establishment of credit unions in the poor and neglected province of the Hapsburg monarchy. Adolf *Stand and Osias *Thon were the prominent leaders of Galician Zionism in that period.

In Independent Poland. The Zionist movement suffered strongly during World War I, especially in the province of Galicia, which was occupied for almost a year by the Russian

army. After the war it was faced with a new situation and new tasks in the reconstituted Polish republic. It emerged as the strongest force in Jewish public life, challenged only by the anti-Zionist Orthodoxy, the Socialist Bund, and for a certain period also the movement of "Folkists" (see *Folkspartei). At the same time, it was faced with the task of merging into one the movement throughout the various parts of the country now united within the borders of the reconstituted Polish state. This task, however, could be accomplished only to a very limited degree. The religious and socialist factions within the Zionist movement developed into full-fledged parties, independent of the parent body, which thus became one party among several others. The religious Mizrachi party consolidated quickly and established its countrywide organization irrespective of the former territorial division. The labor movement, on the other hand, suffered for years from extreme differentiation and many splits, until at the beginning of the 1930s the main groups united in the Po'alei Zion Hitaḥadut. The Left Po'alei Zion remained aloof and outside the World Zionist Organization, which it joined only shortly before World War II. At the other extreme, the Revisionist Party developed, from the second half of the 1920s, to considerable strength. When the Revisionists broke away from the World Zionist Organization in 1935, a minority group split away from them, constituting the Jewish State Party, which remained within the ranks of the World Zionist Organization. Some of these parties were organized on a national basis, comprising the whole of Poland, whereas others, although ideologically united, stuck to the previous territorial division. Only the center party of General Zionists was divided both on territorial and ideological grounds. In Congress Poland they split into the progressive, pro-labor Al ha-Mishmar faction, left by Yiẓḥak *Gruenbaum, and the outspokenly middle-class Et Livnot faction, led by Leon Levite; in Galicia they were divided in the West Galician Federation, under the leadership of Osias Thon and later of Ignacy *Schwarzbart, and the East Galician Federation led by Leon *Reich, Fischel *Rotenstreich, and Emil Schmorak.

The process of internal disintegration and dissent frequently weakened the influence of the Zionist movement. This was especially felt in the field of national and local politics, the main bone of contention between the rival factions. Activities in this field were very pronounced, frequently taking first place in the program of various parties. The Zionist representation in the Polish Sejm grew considerably, especially in the first three parliaments, reaching its climax in the second Sejm with 32 Zionist deputies out of a total of 47 Jewish deputies. It fell considerably, however, in the following parliaments, with the progressing degeneration of democracy in the life of the country, but it still continued to lead the struggle against the ever-growing wave of antisemitism. In the municipalities and the administration of the Jewish communities, however, Zionist influence was overshadowed by that of other political groups, especially the Bund and various Orthodox groups on the right.

In spite of external difficulties and internal frictions, Zionist activities continued with increasing intensity throughout the entire period, securing for Polish Zionism the first place within the world movement, especially in the field of aliyah to Ereẓ Israel, and strongly influenced all facets of Jewish life in the country. Polish Jewry was strongly represented in the waves of migration to Palestine between the two world wars, both by worker pioneers and the middle class. The membership of the various pioneering youth movements exceeded 100,000 in the 1930s, with 20,000 in active training (hakhsharah) for future life in Ereẓ Israel. Not all of them succeeded in emigrating, as the number of immigration certificates was severely limited by the Mandatory government of Palestine. As a consequence, Polish Jewish youth was also strongly represented in the "illegal" immigration, especially in the later 1930s. Jewish life in Poland during that period can hardly be imagined without aliyah as its focal point.

No less felt was the influence of Zionism on cultural life in all its forms. Jewish literature, press, and artistic life all remained under the strongest influence of Zionist ideology. One of the most outstanding fields of activity was education. Of the 250,000 students in Jewish educational institutions in Poland in the 1930s, those in institutions under predominant Zionist influence took first place. This was especially true for the network of the *Tarbut schools (around 40,000 students), with Hebrew as language of instruction, but other networks, such as those under the influence of the Mizrachi and of the Po'alei Zion, as well as the officially nonpartisan organization of Jewish secondary schools in Poland, also actually remained under the overwhelming influence of Zionism, despite assimilationist pressures from the Polish authorities. Zionist influence was also dominant in the press. In the period before World War I special importance may be attributed to the Hebrew daily *Ha-Ẓefirah, the Yiddish periodicals Dos Yidishe Vort and Tagblat, and the Polish periodical Wschód. In the period between the two world wars virtually all Jewish dailies and periodicals, with the exception of those published by Bund or by Agudat Israel, were either openly Zionist or influenced by Zionist ideology, including the leading Yiddish dailies Haynt and Moment, the dailies in Polish Nasz Przegląd, Nowy Dziennik, and Chwila, and many weeklies and other periodicals, issued by various Zionist parties and youth movements.

There was hardly any other Jewish community in the world before World War II, with the possible exception of the relatively small communities of the Baltic countries and Bessarabia, in which the influence of Zionism was so strongly felt. All this broke down with the destruction of Jewish life in Poland during World War II. Various Zionist groups, especially groups of Zionist youth, tried for a period to continue their activities underground. They took the lead in the clandestine struggle against the Nazi occupation and in the ghetto uprisings. Zionists who succeeded in escaping from Poland established centers for rescue beyond the border, the most important of them in Vilna until its annexation to the Soviet

Union and later the German invasion of the U.S.S.R. in 1941. Zionist refugees participated actively in the political and rescue activities of various Jewish bodies, notably the World Jewish Congress. Ignacy Schwarzbart in his capacity as member of the Polish parliament in exile represented the Jewish minority before the Polish government in London. The second representative was a non-Zionist, member of the Socialist "Bund" party. Emil Sommerstein in his capacity as chairman of the Jewish Central Committee represented the Jews before the Polish authorities established in the Soviet Union. But all these efforts could not arrest the course of events: the extermination of the great Jewish community of Poland. After the war, surviving Zionists, and especially Zionist youth movements, established escape routes to and from Poland (see *Beriḥah), assembled children who had been hidden in monasteries and in gentiles' homes, and reorganized Jewish education. But after a short period of transition all Zionist activity within Poland was finally liquidated by the Communist regime.

[Aryeh Tartakower]

In Romania

The Jews from the principalities of Moldavia and Walachia had rooted religious ties with Erez Israel. In Jerusalem, Tiberias, Safed, and Hebron there were groups of Jews who had emigrated from these two Romanian principalities, whence they received aid. In the middle of the 19th century the first modern pre-Zionist ideas arose in Romania. Israel Benjamin, known as Benjamin the Second, a native of Fălticeni (Moldavia), advocated Jewish agricultural settlement in Erez Israel in his travel memoirs, which were published in 1856.

The first pre-Zionist groups were established starting in 1873, with the trend for the participants to emigrate to Erez Israel and dedicate themselves to agriculture. The initiative began that year from Nicoresti with a group of 100 families, joined by other families from Tecuci, Ivesti, Galati, Piatra Neamt, Bacau, and Jassy. In 1875 a group from Moinesti sent a delegate, David Schub, to Erez Israel to study the possibilities of settlement. The war between Russia and Turkey in 1877 hindered the continuation of that movement.

The Yishuv Erez Israel Movement. In 1880 Eleazar Rokeaḥ arrived in Romania from Erez Israel to collect funds for an agricultural settlement, Gei Oni, near Safed. He also unexpectedly found candidates for *aliyah* partly because of the difficult living conditions of the Jewish population after the Congress of Berlin (1878). One year after Rokeaḥ's mission, groups that called themselves Ḥevrat Yishuv Erez Israel al yedei Avodat Adamah (Society to Settle Erez Israel by Working the Land) existed in 30 Romanian towns. The members of these groups decided to emigrate with their families. The publisher and editor in chief of *Ha-Maggid*, David Gordon, suggested the creation of a central committee, and on Jan. 11–12, 1882, the first meeting of 32 branches from throughout the country took place in Focsani. The president of the meeting was Samuel *Pineles. It was decided that the first group of 100 families was to leave for Erez Israel before Passover,

and resolutions were adopted in order to subsidize the settlement. Among the leaders of the movement were R. Avner Kasvan, Karpel Lippe, the Hebrew writer Israel Teller, and others. The central committee was in Galati, and Pineles was secretary.

In February 1882 the Romanian parliament discussed the "creation of the Palestinian Kingdom," and Prime Minister I.C. Bratianu declared that the Romanian government would give its wholehearted support to this plan. In May 1882 the second meeting with delegates from 28 localities took place in Jassy, with the visit of Laurence Oliphant. The English gentile spoke at the meeting and promised financial aid from non-Jews. Meanwhile Pineles negotiated with the Turkish consul in Galati and, with the approval of the Turkish ambassador in Bucharest, obtained the assurance that Romanian Jews would be able to settle in Erez Israel, except for the Jerusalem region, in groups of 50 to 100 families. At the same time a delegation sent from Bucharest to Constantinople was received by the sultan, the vizier, and the minister of the interior. As a result of these audiences, a decision favorable to the settlement of Romanian Jews was adopted at the meeting of the Turkish cabinet. The sultan, however, refrained from giving his own approval because of the events in Egypt.

The Beginnings of Settlement. While negotiations were taking place, from the spring of 1882, delegates left Romania for Erez Israel in order to buy land there, and, from towns such as Moineşti, Bărlad, Bacău, Bucharest, Tulcea, dozens of families had already emigrated. The group from Moineşti had sent their own delegate, David Schub, who in the summer of that year had bought the lands at Gei Oni, where a previous settlement of Jews from Safed had failed. In August 1882 the first organized 39 families (228 persons), emigrated; the nucleus of this group was formed by those from Moineşti who founded the village of Rosh Pinnah. The central committee also purchased another 6,000 dunams, and Zikhron Ya'akov was founded with 386 settlers. The creation of these two colonies gave an impetus to the *aliyah*, and until the end of 1882 a total of 1,322 settlers had left Romania. In the summer of the same year a movement for agricultural training was started on estates leased by Jews. At the same time, a number of youth organizations held a joint meeting at Galaţi in December 1882 with delegates from 12 towns and founded Aẓilei Benei Israel. In April 1883 a second meeting of the youth organizations took place at which the integration with the Yishuv Erez Israel movement was decided upon. On Sept. 17, 1883, the third meeting of the Yishuv Erez Israel movement took place in Galaţi, and it was decided that the administration of Zikhron Ya'akov would be handed over to Baron Edmond de Rothschild, since the central committee in Romania could not provide sufficiently for the economic needs of the village. In November 1883 Rosh Pinnah, which was in the same situation, also passed to Rothschild's administration. The 60 branches of the movement were dissolved one by one. The central committee ceased its activity in 1884. The pre-Zionist

movement was resurrected again in Romania under the influence of the movement in Russia. Between 1890 and 1892, branches of Ḥovevei Zion were formed in some towns. By 1895 such branches existed in 31 towns and two conferences had been held. A central committee was elected under the management of Pineles, and once again groups of potential settlers organized. A plot of 11,000 dunams was acquired in Brustras and a group of 80 families from Jassy, together with another 16 families from Bulgaria, acquired another 18,000 dunams on the east side of the Jordan. Herzl's *Der Judenstaat* was published in 1896, and by the end of that year the first Romanian translation appeared in Botoşani. Pineles started to collect the signatures of those who wished to settle in Ereẓ Israel. Some 50,000 Romanian Jews signed the petition. Shortly before the First Zionist Congress in Basle (1897), the third meeting of Ḥovevei Zion took place in Galaţi, expressing support for Herzl's political Zionism. The First Zionist Congress was opened by a speech of the oldest delegate Karpel Lippe. Pineles was elected vice president of the Congress. During the fourth conference of Ḥovevei Zion in 1898, the Basle Program was unanimously accepted. The number of Zionist groups increased from 26 in 1897 to 136 in 1899.

The deadlock in which the World Zionist Movement found itself caused the number of active Romanian Zionist groups to decrease from 136 in 1899 to 56 in 1911. An additional reason for the decline was the creation of the Union of Native Jews (UEP) in 1910. The Union, which dedicated itself to the fight for local Jewish emancipation, attracted the active participation of many Zionist leaders. But the younger generation of Zionists wanted a Jewish national emphasis within the movement for political emancipation. A group of young scholars, directed by Jacob Nacht, fought against the trend toward assimilation in the UEP by encouraging Jewish cultural activities, e.g., Romanian translations of Hebrew and Yiddish literature and the introduction of Hebrew as a living language in schools. In this spirit the weekly paper *Ha-Tikvah*, edited by Leon Gold, was published in Galaţi in 1914. It had a great influence on Jewish life in Romania and included among its contributors A.L. *Zissu, Mattathias Friedman, and J. Nacht, as well as almost all the more important Jewish writers of Romania.

Between the Two World Wars. In March 1919 the Zionist leadership of Galaţi published a program of Jewish demands to be presented at the Versailles peace negotiations. It demanded complete political, cultural, and religious autonomy for Jews as a national minority. Under the influence of the young Zionist leaders, the UEP rejected the attempts of the Romanian government to evade again the problem of Jewish citizenship by involved juridical proceedings, as was the case after the Congress of Berlin in 1878. The Jewish population followed the instructions of the UEP leaders and boycotted the government's equivocal laws on Jewish citizenship. Romanian Zionists, together with delegates from the UEP, were included in the Comité des Délégations Juives at the Versailles Peace Conference.

After the Jews finally obtained collective naturalization in 1920 as a result of the Versailles peace treaty, there remained the problem of Jewish participation in elections and in the political life of the country. The UEP supported the idea of Jewish candidates. Therefore, in the next year, the UEP joined the Zionists in presenting a separate Jewish list. Because of fraudulent election procedures, not one Jewish deputy was elected. It was only in 1926 that the first Jewish national deputies entered parliament, but they were representatives of territories annexed by Romania after the war: Bessarabia, Bukovina, and Transylvania.

The Zionist Organization in the rest of Romania went on with its policy of neutrality in internal politics. In 1919, at a Zionist conference in Bucharest, it was decided to transfer the central headquarters from Galaţi to Bucharest and to draw the leadership more and more from the younger generation. In the new era after the Balfour Declaration, Zionism became a mass movement whose principal activity was the collection of funds. In 1924 the Zionist group Renaşterea Noastră ("Our Revival") was created, many of whose members had belonged to the student association Hasmonaea. Later, Renaşterea became affiliated with the radical Zionist faction. In 1930, as a result of Renaşterea's initiative, the Jewish Party was created in Muntenia and Moldavia; it included Zionists, especially from the intellectual younger generation. Along with the Jewish-national deputies elected from the annexed territories, such as Michael Landau from Bessarabia, S. Singer and Mişu Weissman were elected to parliament from Muntenia and Moldavia in 1931 and 1932, respectively. At the same time such Zionist groups as Ẓe'irei Zion, Po'alei Zion, Mizrachi, and the Revisionists were formed. Zionist leadership had been drawn from the ranks of the General Zionists until 1930, when the first coalition of radicals and Ẓe'irei Zion was elected to the leadership. The Zionist youth movements remained organized along the traditional lines existing in the World Zionist Organization.

In 1920 Romania's Zionist Organization tried to create a school for teachers of Hebrew at Jassy, but it only functioned one year because the Romanian authorities refused to authorize it. In 1925 a *hakhsharah* farm to train *ḥalutzim* (pioneers for Palestine) was created in Jassy. Between the two world wars Zionist organizations functioned in 71 Romanian towns, and a central Zionist Council was established in Bucharest. WIZO, which had 5,000 members in its branches in 33 towns, set up 17 kindergartens in which the language of instruction was Hebrew. It also established the agricultural and housekeeping school Ayanot at Nes Ẓiyyonah in Palestine. On Mt. Carmel between 1922 and 1925, 3,500 dunams (875 acres) of land were acquired by a Romanian group and given the name Aḥuzah (actually Aḥuzat Herbert Samuel), on which some of its 1,000 members settled. Another Romanian society bought land in the Haifa Bay area.

The Zionist Press. During the interwar period, many Zionist magazines were issued in Romanian. Among the more im-

portant publications were: *Ştiri din lumea Evreiască* ("News from the Jewish World"), the official organ of the Zionist Organization; *Renaşterea Noastră* ("Our Revival"), the organ of the radical group, which also expressed the point of view of the Jewish Party; *Drumuri Noi* ("New Roads"), first the Revisionist organ, then the organ of the Jewish State party; and *Tribuna Evreiască* ("The Jewish Platform"; Jassy). In addition, the monthly magazine *Hasmonaea*, organ of the Zionist students, was published regularly.

World War II Period. After the invasion of Poland in 1939, Romania became a transit route for *aliyah* from Eastern Europe. Britain, however, pressured the Romanian government to stop the flow of *aliyah* from and through the country. At the beginning of 1940 the collection of Zionist funds was forbidden, but it was authorized again on Feb. 26, 1940, under the condition that the Zionist leadership would not encourage emigration. In September 1940, however, the government of Ion *Antonescu, which approved of Jewish emigration, came to power and negotiations were held between Zionists and the government on emigration plans. The Zionist Organization continued to work even after December 1941, when all other Jewish organizations were dissolved. The Zionist Organization was dissolved only in August 1942, by the order of Gustav Richter, Eichmann's agent in Romania. However, the Zionist leadership and youth movements clandestinely continued their activities, while the semi-official organ of the German legation, *Bukarester Tageblatt*, carried on a defamatory campaign against the Zionists. The Romanian government continued to negotiate with the Zionists about emigration, and at the same time a Jewish underground, in which Zionist leaders also participated, was formed. From the beginning of 1939 until the very capitulation of Romania in August 1944, 31 ships with more than 13,000 emigrants, some of whom were refugees from Poland, Hungary, and Czechoslovakia, left from Romanian harbors. The Palestine Office of the Zionist Organization in Bucharest succeeded in continuing its activity in the guise of a travel agency. Detecting these underground activities, the Germans initiated the imprisonment of the leaders of the Zionist Organization and the youth movements in January and February of 1944. Diplomatic intervention, especially by the International Red Cross, obtained their release, however. Imminent German defeat and the approach of the Allies allowed A.L. Zissu, a Zionist leader, to obtain from Romanian ministers in June 1944 the authorization to create an emigration office which was to serve as a cover for the underground Zionist Executive. In order to report on the situation of Jews in Romania, the Zionist leaders maintained contact secretly with the Jewish Agency in Jerusalem during the whole period of underground activity.

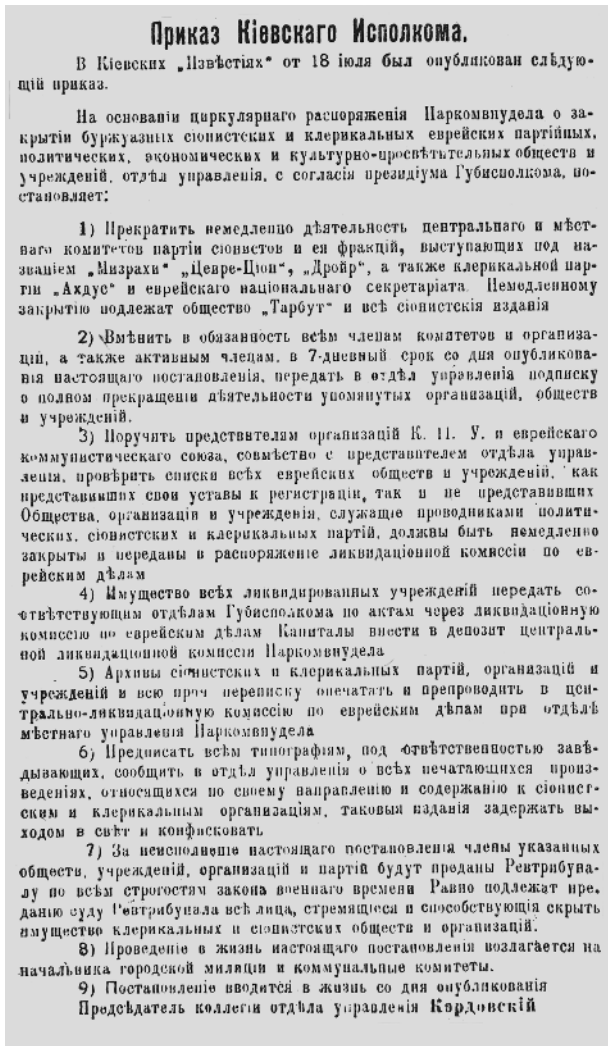
Post-World War II Period. Soon after the cessation of hostilities in Romania in August 1944, the Zionist Organization resumed its legal activity and attracted many members because of the desire of most Jews to emigrate. The Zionist parties and

youth organizations were reestablished, and Zionist weekly magazines began to appear. From 1944 to 1948 a Zionist publishing house, Bicurim, published about 80 volumes of translations from Hebrew literature and works of Zionist history and ideology. Although Britain continued to restrict Jewish migration to Palestine according to the White Paper of 1939, 30,000 Romanian Jews entered Palestine "illegally" before 1948. After World War II the Jewish Communists founded the Jewish Democratic Committee, in which at first the Zionist Socialists also participated. But the latter were eliminated after the creation of the State of Israel as the Jewish Democratic Committee started an anti-Zionist campaign. As a result of the pressure exerted by the Jewish Democratic Committee, the Zionist Organization and its constituent parties were forced to dissolve at the end of 1948. During the summer of 1950 the leaders of the Zionists and the Zionist youth movements were arrested, tried, and condemned to prison. Some were accused of spying and others of inciting against the Communist regime. Finally, in 1955, under a general political amnesty, the leaders were liberated. (Three of them died in prison and some others soon after their arrival in Israel.) From the end of 1949 until the end of 1952 112,652 Romanian Jews left for Israel. Then, for a period of ten years, emigration was effectively stopped, only to start again at various times since 1962. The Jewish Democratic Committee was dissolved in 1953. All in all, about three-quarters of the Romanian Jews who survived the Nazi terror went to Israel.

[Theodor Lavi]

In Russia

Theodor Herzl's activities engendered a revival among the Ḥovevei Zion movement in Russia, and large new groups joined the movement, which soon encompassed masses of people. The number of Zionist societies in Russia increased from 23 to 373 in 1897, the year of the First Zionist Congress. There were 877 societies by May 1899; 1,034 in 1900; and 1,572 in 1903–04. At the First Zionist Congress the Russian delegation accounted for one-third of all the delegates (66 out of 197), among them L. Motzkin, H. Schapira, M. Mandelstamm, V. Tiomkin, and M.M. Ussishkin, and four delegates from Russia were elected there to the Zionist General Council, each of them with a specific function. Y. *Bernstein-Cohen of Kishinev headed the Zionist center of correspondence in Russia (the so-called "Post Bureau"), Mandelstamm was responsible for financial matters. Rabbi S. Mohilever of Bialystok headed the center for cultural activities, and I. Jasinowski of Warsaw headed the center for Zionist literature. For all practical purposes the "Post Bureau" became the organizational center of the Zionist movement in Russia until before the Fifth Zionist Congress (Basle, 1901), when it was replaced by the office of information headed by V. Jacobson. The delegates divided the country into districts and held district conferences. In 1898, prior to the Second Zionist Congress (Basle, 1898), the majority of the first Russian Zionists convened in Warsaw consisting of 160 delegates from 93 cities and towns,

among them 14 Orthodox rabbis, supported the demand that the practical settlement activity in Ereẓ Israel continue, as against the position of the "political" Zionists, who supported Herzl's concept that small-scale "infiltration" into the country might harm the prospects of achieving the Charter. Eventually a compromise decision was formulated. The demand of the rabbis at the Zionist Congress to create a rabbinic committee to supervise Zionist cultural work was rejected. Rabbi E.A. Rabinowich of Poltava and other rabbis left the movement, became its opponents, and later organized in Kovno, together with other ultra-Orthodox rabbis, Ha-Lishkah ha-Sheḥorah ("The Black Bureau"), which published books and pamphlets against the Zionist movement.


Among the Russian delegates at the Second Zionist Congress were Chaim Weizmann, Nahum Sokolow, and Shemaryahu Levin, who played increasingly dominant roles in the Zionist movement. At the Fourth Zionist Congress (London,

Order of the Kiev local authority closing all Zionist organizations and institutions, July 18, 1919. Courtesy A. Rafaeli-Zenziper, Archive for Russian Zionism, Tel Aviv.

1900) Russian Zionists were represented by more than 200 delegates, and at the Fifth Congress (Basle, 1901) the *Democratic Faction, headed by Weizmann, M. Buber, Motzkin, and B. Feiwel, was established. It demanded a much greater emphasis on Jewish education and culture on the part of the Zionist Organization. They were opposed by J.J. *Reines and the Orthodox wing forming the Mizrachi movement, which opposed the anticipated secular character of Zionist cultural activity.

The second All-Russian Zionist Conference was held in 1902 in Minsk (see *Minsk Conference) with the participation of 500 delegates, representing some 75,000 shekel holders. It was the only legal Zionist conference in czarist Russia and aroused much public interest. About 160 delegates represented Mizrachi and about 60 represented the Democratic Faction. After a long and stormy debate on education, a compromise was reached recognizing both educational trends, the secular and the religious.

In 1903 the Russian delegation to the Sixth Zionist Congress (Basle) were the prime movers of the opposition to the Uganda Scheme, which was finally rejected (after Herzl's death) at the Seventh Congress (Basle, 1905), where a minority group seceded and created the Jewish Territorial Organization (see *Territorialism). While territorialism did not gain much ground among most Zionists in Russia, its influence grew in the budding Zionist labor movement. The Zionist Socialists (called ss according to their Russian name Sionisty Sotsialisty) repudiated the solution of the Jewish problem in Ereẓ Israel, devoting their main attention to Jewish migration, which they believed would eventually lead to settlement on a specific territory and thus solve the Jewish problem. Another group in Russian Jewry, known as the "Sejmists," rejected both Zionist and territorialist solutions and advocated instead the struggle for officially recognized Jewish national autonomy in the Diaspora countries. The Zionist Socialist movement Po'alei Zion, under the leadership of B. *Borochov, emerged in 1905–06. Another movement of Socialist-oriented moderate Zionists was Ẓe'irei Zion, which eventually became linked to Ha-Po'el ha-Ẓa'ir in Ereẓ Israel. These movements, which represented Labor Zionism in Russia, soon became popular among the younger generation and the intelligentsia. The main force opposing Zionism in Russian Jewry was also a social democratic party, the Bund, which regarded Yiddish as the sole national language of the Jews and fought against the Zionists and against the cultivation of modern Hebrew.

Prior to the 1905 Revolution, the Zionist movement in Russia abstained from any participation in Russian politics. This abstention was based on the original Zionist concept of "negation of the Diaspora" and rejection of the possibility of Jewish national existence in Russia. The 1905 Revolution brought a radical change in this position. An All-Russian Zionist Conference, known as the Helsingfors Conference (1906) formulated a new Zionist program, that of "synthetic Zionism," which combined the basic negation of Jewish fu-

ture in exile with the struggle not only for equal rights in the existing Diaspora, but also for the right of self-determination as a national minority group (see *Helsingfors Program). Consequently the Zionists nominated their own candidates in the election to the First Duma, and five out of 12 elected Jewish deputies were Zionists. In the Second Duma one of six Jewish delegates elected was a Zionist. When the czarist government renewed its political repression in 1907, the Zionist movement, like other political trends in Russia, became practically paralyzed.

The Legal Status. Russian Zionists did not request official permission to organize because they did not expect to receive such legitimation for a movement whose world center was located abroad. At first, although the authorities knew of the Zionist activities, on the whole they did not interfere. Later a change for the worse took place in the official attitude toward the Zionist movement and to Jews in general, which culminated in the spring of 1903 in the Kishinev pogrom. In June 1903 the czarist minister of the interior, Plehve, issued a directive prohibiting any Zionist activity in Russia. Herzl then traveled to Russia in order to influence the Russian government in favor of Zionism and to abolish the anti-Zionist decree. Plehve promised Herzl that the government would not interfere, provided that the Zionists did not engage in the organization of Russian Jewry on a national scale, but rather encouraged emigration.

The attitude of the authorities, however, did not improve substantially. The holding of public meetings was prohibited. The Zionists were able, however, to continue their educational and cultural activities, the collection of shekels, and the sale of shares of the Jewish Colonial Trust. Though in November 1904 a Zionist delegation learned from the liberal minister of the interior, Sviatopolsk-Mirsky, that the movement would not be persecuted, a turn for the worse took place again. The resolutions of the Helsingfors Conference increased the government's suspicions. The Zionist Organization was declared illegal. Licenses for local groups named "Palestine" were revoked, and activities on behalf of the Jewish National Fund (JNF) were prohibited (1907). Then David Wolffsohn, president of the World Zionist Organization, went to St. Petersburg (1908) and was promised that activity for the JNF and the Jewish Colonial Trust would be facilitated but the Zionist Organization would not be legalized. In 1910 the persecutions increased, and when the Zionist central committee of Russia met in Moscow with the Russian members of the Zionist General Council, some of them, including the editor of *Haolam*, A. *Druyanow, were brought to trial. The central committee was then transferred to St. Petersburg and the editorial board of *Haolam* to Odessa (1912). The police did not harm the editorial board of the Zionist weekly *Razsvet* and Zionist leaders in St. Petersburg.

The Second and Third Aliyah. The pogroms in Kishinev and Gomel and other forms of oppression, together with the deep disappointment caused by the failure of the 1905 Revolution, stimulated a renewed movement of migration and settlement in Ereẓ Israel. Israel *Belkind went from Ereẓ Israel to Russia seeking support to establish an agricultural school there for the orphans of the Kishinev pogrom. M. Ussishkin, in his pamphlet *Our Program*, and Josef *Vitkin's call from Ereẓ Israel to Jewish youth in the Diaspora for *aliyah* and settlement, contributed to a new wave of pioneering migration. Thus the Second Aliyah started, and it included members of different trends, such as Ẓe'irei Zion, Po'alei Zion, Bilu heḤadash, etc. Among the pioneers were men like Berl *Katznelson, David Ben-Gurion, Izhak Ben-Zvi, Joseph *Sprinzak, and others who later became leaders of the *yishuv* and the Zionist movement during the Mandatory period and during Israel's independence. Middle-class settlers from Russia participated in founding a residential neighborhood near Jaffa, Aḥuzat Bayit, which became Tel Aviv. Settlement societies were founded in various cities in Russia. After World War I the Third Aliyah started as a movement of survivors of the pogroms in the Ukraine and of pioneers who followed Joseph *Trumpeldor.

The Russian Revolution of February 1917 removed all the official obstacles from the Zionist movement, which immediately grew tremendously. An All-Russian Zionist Conference met in Petrograd on May 24, 1917, and its 552 delegates represented 140,000 shekel holders (in 1913 there were only 26,000 shekel holders). The conference reaffirmed the Helsingfors Program and succeeded in drafting a unified program of all Zionist groups for the forthcoming elections to the Russian Constituent Assembly. The newly elected central committee was instructed to take the initiative in convening an All-Russian Jewish Congress. This conference, the first after 1902, was attended by Trumpeldor, who spread his idea about creating a Jewish army to march through the Caucasus to Ereẓ Israel. About 20 delegates supported Jabotinsky's pro-British activity in establishing the Jewish Legion, but the overwhelming majority adhered to the official Zionist neutralism in the World War. The Balfour Declaration of Nov. 2, 1917, which put an end to this neutralist position, made Zionism the dominant trend in Russian Jewry, and in the elections to the All-Russian Jewish Congress the Zionists received the majority of votes. Wartime conditions made the meeting of the Congress impossible, but a Jewish National Council was established in which the various Jewish parties were represented in proportion to the number of seats they had won in the elections to the congress. The Zionists also maintained the Tarbut organization with a network of more than 250 Hebrew-language schools and other educational institutions.

The October (Bolshevik) Revolution of 1917 did not, at first, affect Zionist activities. A Palestine Week, proclaimed in spring 1918, was successfully conducted in hundreds of Jewish communities. Palestine Offices were established in various cities, among them Petrograd and Minsk. Efforts were made to mobilize private capital for investment in Palestine, and various companies were established for the construction of residential and business premises, an oil refinery in Haifa,

etc. Trumpeldor founded the *He-Ḥalutz movement. A conference of 149 delegates from 40 Jewish communities in central Russia, which took place in Moscow in July 1918, had a Zionist majority. In the Ukraine, where the Soviet regime was finally established in February 1919, the Zionist movement was in 1918 the dominant force in Ukrainian Jewry. In the elections to Jewish community councils (*kehillot*) there, the Zionists received 54.5% of the vote, and in the elections to the provisional Jewish National Council of the Ukraine in November 1918, about 54% voted for Zionist candidates.

Liquidation and Resurrection in the U.S.S.R. Under Soviet rule Zionism soon became the object of repression and persecution. Zionist parties and organizations were outlawed, their clandestine meetings and regional conferences dispersed by force, and their participants and delegates arrested. The Hebrew language itself was gradually proscribed. Some underground Zionist activity continued, however, in the first decade of the Soviet regime, including the emergence of the pioneering youth movement Ha-Shomer ha-Ẓa'ir as an important factor among young Zionists striving to reach Palestine. In the forefront of the anti-Zionist campaign stood the "Jewish section" (*Yevsektsiya) of the ruling Bolshevik party, whose task it was to eradicate "clericalism" and "bourgeois nationalism" from Jewish life. Various attempts made in the 1920s to achieve a permissive, or at least tolerant, attitude to some aspects of Zionist activity, mainly in the cultural field and emigration to Palestine (such as the semi-official negotiations of the member of the Zionist Executive, M.D. Eder, during his visit to Moscow in 1921 or the exchanges of a Moscow Zionist, Isaac Rabinovich, with high-ranking Soviet personalities in 1926) proved futile. However, until the late 1920s a number of Jews convicted for Zionist activities were allowed to leave for Palestine.

From 1949, and particularly in 1952–53, "Zionism" became an odious catchword in Stalin's anti-Jewish campaigns (see *Slánsky Trials, *Doctors' Plot). After Stalin's death this trend was dormant for several years, until it emerged again under Khrushchev in the 1960s and with particular virulence after the Six-Day War of 1967, when the almost daily attacks against "World Zionism" in the Soviet mass media and "political-education" system achieved an intensity similar to the antisemitic propaganda of czarist times. Meanwhile, from 1948 Soviet Jews showed more and more signs of interest in, and attachment to, the State of Israel, demonstrating their sympathy for it and often their desire to migrate and settle there. These demonstrations took various forms, from many thousands of Jews attending synagogues when members of the Israeli diplomatic mission came to pray or many young Jews who came to greet Israeli delegations to international youth festivals, Israeli sports teams, or folk singers visiting the U.S.S.R., to the famous mass gatherings of Jewish youth singing Hebrew songs and openly declaring their attachment to the Jewish nation and to Israel on Simḥat Torah in and around synagogues of Moscow, Leningrad, and other cities.

This movement became more and more pronounced and daring from 1969, when an increasing number of Jews from various Soviet regions addressed fully signed petitions and protests to the Soviet authorities, the government of Israel, the United Nations, and even to Communist parties in the West, demanding their right – under the Universal Declaration of Human Rights signed by the U.S.S.R., and a convention including a clause that every person has the right to leave any country, including his own, recently ratified by the Supreme Soviet – to leave the Soviet Union for "repatriation to the Jewish ancestral homeland in Israel." There is evidence that this spontaneous movement – which can be defined as "neo-Zionist" – also encompassed private groups of young Jews studying Hebrew, Jewish history, about the State of Israel, etc. The Soviet authorities, particularly the security services, attempted to deter them by arrests, show trials, and other measures of intimidation, but the Jews maintained their campaign for the right to settle in Israel. For further details see *Russia.

[Israel Klausner]

In South Africa

The Zionist Organization found enthusiastic support in South Africa among the new immigrants, mostly from Lithuania, rather than among the Anglicized minority of the "old-timers." The first Zionist associations were established in Cape Town (1897) and Johannesburg (1898). By the end of 1898, a dozen Zionist societies with some 5,000 members were already in existence. A year later the first women's Zionist association was set up in Pretoria. As early as December 1898, 12 years before the Union of South Africa came into being as a political entity, the South African Zionist Federation, including Zionist bodies on the whole South African subcontinent, was established. It was represented at the Third Zionist Congress in Basle (1899) by two delegates. After the Boer War, which impeded the growth of the movement, the Zionist Federation was recognized by the authorities as representative of South African Jewry and entrusted with official tasks, such as the repatriation of Jewish war refugees. Later, this official recognition was transferred to the general communal organization, the South African Jewish Board of Deputies, which, in the course of years, sometimes experienced competition and friction with the federation, but mostly worked in friendly cooperation with it.

In 1908 the *Zionist Record* was founded in Johannesburg as the official organ of the federation; it became the most important South African Jewish newspaper. The sympathies of the leaders of the Afrikaans community, like the generals Louis Botha and J.B.M. Hertzog, were conducive to the progress of Zionism and to its high standing in the country. Field Marshall Jan Christiaan *Smuts was an avowed friend of Zionism and one of the architects of the Balfour Declaration. In later years the Zionist Federation secured his powerful support whenever a major crisis threatened the Zionist cause.

The financial contributions of South African Jewry to the Zionist funds have been outstanding. From 1926 South

Africa occupied the second place in the world (after the U.S.) in fundraising for the Keren Hayesod; its per capita contribution – £1.16 in the 1920s – was by far the largest. The federation's growth is also reflected by the following figures: in 1921 there were 177 bodies affiliated with it, in 1930 about 200, and in 1949 no fewer than 350. Also the Rhodesias, Kenya, and even Belgian Congo then belonged to its jurisdiction. In 1932 the South African Women's Zionist Council was established to coordinate women's work for all Zionist purposes. It became affiliated with wizo and in 1967 numbered some 16,000 members. The South African Zionist Federation also has a notably strong following among youth. A census taken shortly before the 30th South African Zionist Conference in 1967 showed that four youth movements affiliated with the federation numbered 6,800 active members, divided into 297 units throughout the country, and led by 556 youth group workers.

South African Zionists distinguished themselves as a highly efficient movement that succeeded in assuming and retaining leadership of the Jewish community at large. They have attained outstanding achievements in the fields of organization, financial support of Israel, the building up of an impressive network of schools, and in *aliyah*. About 6,000 Jews from South Africa settled in Israel, including members of collective settlements, men of private initiative, scientists, and public servants.

The South African Zionist Federation has been headed by able leaders, from S. Goldreich (first chairman) to H. Morris and N. Kirschner to B. Gering and I.A. Maisels. Under the successive direction of Jack Alexander, Zvi Infeld, and Sidney Berg, it gained a reputation for its organizational structure and efficiency. Divided geographically into provincial councils and functionally into some 20 departments, it covers a variety of Zionist activities, including fundraising, and embraces all the Zionists of the country, both party members and independents. Up to the early 1930s parties played no significant role in the federation; later the Zionist Revisionists and the Zionist Socialists became especially prominent. It was not until 1946 that the Executive of the federation was elected on a party basis, but it continued to include nonparty members. The number of shekel holders was exceptionally high; it sometimes approached and even exceeded 50% of the adult Jewish population (43,605 shekels in 1946 and 42,949 in 1960).

During World War II the federation also aided refugees passing through South Africa and accorded valuable material and moral support to the "illegal immigrants" who had been deported from Palestine and detained in Mauritius. In 1943 the federation arranged a "plebiscite," and its three points – to open the gates of Palestine to Jewish immigration, to set up a Jewish army, and to establish Palestine as a Jewish Commonwealth – were endorsed by 37,000 Jews. No fewer than 3,000 volunteers offered their services in the War of Independence (1948), and 700 were accepted and fought in Israel. During the period of the Six-Day War, 782 volunteers arrived in Israel from South Africa, but several times this number had registered.

[Aharon Zwergbaum]

In the United States

Jewish immigrants who came to the United States from Eastern Europe in the early 1880s brought the ideas of the Ḥibbat Zion movement with them, and by 1890. Ḥovevei Zion organizations existed in the large Jewish communities of New York, Chicago, Baltimore, Milwaukee, Boston, Philadelphia, and Cleveland. At the same time, newspapers propagating Ḥibbat Zion ideas appeared, two of which were *Shulamit*, edited by J.I. *Bluestone in Yiddish, and *Ha-Pisgah* ("The Summit," 1888–89), a Hebrew paper edited by W. Schur. Following a mass meeting in New York on May 4, 1898, supporters of Zionism established an organization which *Die Welt* called the Zentralverein der amerikanischen Zionisten. Other Zionist organizations appeared in the months before the First Zionist Congress at Basle (1897). Opposition was expressed by upper-class Jews and Reform rabbis. The *Central Conference of American Rabbis passed a resolution in July 1897 denouncing Zionism in sharp terms:

> Resolved that we totally disapprove of any attempt for the establishment of a Jewish state. Such attempts show a misunderstanding of Israel's mission which, from the narrow political and national field, has been expanded to the promotion among the whole human race of the broad and universalistic religion first proclaimed by the Jewish prophets.

By 1898 two major Zionist organizations developed in New York City: the Federation of Zionist Societies of Greater New York, under the leadership of Richard *Gottheil, and the League of Zionist Societies of the United States of North America, under Rabbi Philip *Klein and Michael Singer. They united in February 1898 into the Federation of Zionists of Greater New York and Vicinity. Consolidation at the national level in July 1898 resulted in the establishment of the Federation of American Zionists (faz), under the presidency of Gottheil, with Stephen S. Wise as first secretary.

Despite initial progress, the faz encountered great organizational difficulties. Many Zionist organizations did not recognize its authority. The most recalcitrant were the scores of independent Zionist organizations in New York based on *landsmannschaften and in Chicago on the Knights of Zion, who organized in October 1898 under the leadership of Leon Zolotkoff. Only in 1913 did the Knights accept the authority of the faz. Another obstacle to the growth of the faz was the opposition to Zionism from the left, i.e., from East European immigrants who adhered to Socialist organizations and regarded socialism and trade unionism as the solution to Jewish problems as well. Difficulties were increased by the reluctance of the membership, which was primarily from Eastern Europe, to accept the leadership of "Germans," who differed from them in their way of life as well as social class.

In 1902 Jacob de *Haas moved to the U.S. as editor of the faz's official paper, *The Maccabean*, and secretary of the organization. He tried to cope with the various organizational and administrative difficulties and to include more organizations under Richard Gottheil's leadership. De Haas instituted

the "Shekel Day" and developed elaborate Zionist propaganda. Nevertheless, the FAZ was plagued by financial difficulties. In 1904 Gottheil resigned and Harry *Friedenwald became president. In early 1905 de Haas also resigned and was replaced by Judah Magnes as secretary. With the two new leaders, the Zionist orientation of the FAZ changed. Gottheil and de Haas were "political Zionists" who supported Herzl on the Uganda issue, whereas Friedenwald and Magnes were "cultural Zionists" who tried to adapt Zionism to the American scene. Other important cultural Zionists were Solomon Schechter, president of the Jewish Theological Seminary, and Israel *Friedlaender, also of the Seminary, a Bible scholar and communal leader. These "cultural Zionists" saw Zionism as a renaissance of traditional Jewish values and check on assimilation. Although Erez Israel was for them a cultural center, they did not negate the Diaspora, which they viewed as equal in importance.

The first Labor Zionist (Po'alei Zion) organization was founded in New York City in March 1903. Its ancillary Jewish National Workers Alliance (Farband) was established as a benevolent organization in 1910, in part to attract members who might join the Socialist, anti-Zionist Workmen's Circle. In its initial stages, Po'alei Zion was rejected by the Socialists and regarded with suspicion by the Zionists. Labor Zionism combined Jewish national aspirations with a social philosophy dedicated to the establishment of a new political and economic order both in Erez Israel and the Diaspora. During its first decade, the platform included as priorities: the furthering of Jewish settlement in Palestine, the struggle against assimilation, aid to Jewish workers, and the building of Yiddish folk schools. Its organs, *Der Yidisher Kemfer* (1905, with interruptions) and *The Jewish Frontier* (1934), exerted wide influence, especially in liberal and progressive circles outside Zionist ranks (the latter under the editorship of Ḥayyim *Greenberg).

In 1911 a new FAZ administration whose members were mostly East European was elected. Friedenwald remained honorary president, but the affairs of the organization were handed to the chairman of the executive, Louis *Lipsky. He shared the burden with his associates Abraham Goldberg, Bernard *Rosenblatt, and Senior Abel, who founded the Yiddish organ of the movement, *Dos Yidishe Folk* (1909). Until World War I attempts were made to improve administration, notably by Henrietta *Szold, who functioned as secretary between 1910 and 1911. Newly founded organizations gradually established ties with the FAZ: Po'alei Zion, Hadassah Women's Organization, founded by Henrietta Szold (1912), and the Mizrachi Organization of America (1914). The latter was established in 1911 by Meir Berlin (*Bar-Ilan). In time it became the backbone of the World Mizrachi Organization by virtue of its numbers and resources.

World War I and After. Early in 1914 the Federation of American Zionists, and American Zionism, was small and weak; its membership was static and it was suffering from financial stress. It did enjoy the support of the *Day* and *Morning*

Journal, two leading Yiddish dailies. The *Forward*, however, was sharply anti-Zionist out of socialist conviction until it became more sympathetic during the 1920s. With the outbreak of World War I, international Zionist activity became largely centered in the U.S., where the Provisional Committee for General Zionist Affairs (PZC) was established. Louis D. Brandeis, who had his first contact with Zionism through Jacob de Haas, Nahum Sokolow, and Bernard *Richards, accepted its chairmanship. He took up his role with great energy and drew to the Zionist movement Felix *Frankfurter, Louis Kirstein, and Bernard *Flexner, all of whom were also attracted by its democratic and progressive ideas. Under Brandeis' able leadership, the financial situation of the FAZ improved, and membership and political influence increased. Brandeis and his associates were influenced through Horace *Kallen and others by the idea of cultural pluralism, the essence of which is that America is a nation of nations in which different cultures are blended. This theory served to reconcile "Americanism" with Zionism.

After Brandeis' elevation to the Supreme Court in June 1916, he resigned as active chairman but continued to lead the FAZ through his associates, notably de Haas. In 1916 the Po'alei Zion and Mizrachi organizations withdrew from the Provisional Zionist Committee, and in 1917 the federation reorganized all its branches into the *Zionist Organization of America (ZOA), which was based on territorial districts. Brandeis became honorary president, Judge Julian W. *Mack president, Stephen S. Wise and Harry Friedenwald vice presidents.

After the war Brandeis visited Palestine and formed plans to build its future on the basis of large-scale investment and centrally controlled public corporations. He wanted the ZOA to collect funds for specific economic projects. At the London Conference of 1920 his views clashed with those of Weizmann, who wanted to found the Keren Hayesod as a general fund to improve the economy and settlement methods of Palestine, as well as to establish educational institutions. The Brandeis group refused to accept the decisions of the World Zionist Organization, represented by Weizmann. At the Cleveland convention of the ZOA in 1921, in which the issues were debated, a majority rejected Brandeis' views, and as a result he and his close associates seceded from the mainstream of Zionist activity in the U.S. and concentrated their efforts on fostering the economic development of Palestine, as, e.g., through the Palestine Economic Corporation. Louis Lipsky, who led the opposition to Brandeis, became president, with Abraham Goldberg, Emanuel Neumann, Morris *Rothenberg, and others as his collaborators. The Lipsky administration remained in office until 1930. During this period the ZOA concentrated on fundraising but was not very successful. It established the Keren Hayesod in the United States.

Article 4 of the League of Nations Mandate had made specific provision for the recognition of a "Jewish agency" to advise and cooperate with the administration of Palestine as representative of the Jewish people U.S. Jewry, by reason of

its tremendous numbers and resources, was a decisive factor in "enlarging" the Jewish Agency. Louis Marshall, the leading American "non-Zionist," convened two nonpartisan conferences to consider Palestine problems in 1924 and 1925. These meetings resulted in proposals to include non-Zionist representation in an enlarged Jewish Agency. The proposal to enlarge the Agency by the co-option of non-Zionists was also approved in principle by the Zionist Congress in 1927, and in that year, following publication of a preliminary agreement between Weizmann and Marshall, a Joint Palestine Survey Commission was appointed. It made recommendations for practical work in Palestine upon which both Zionists and non-Zionists could agree. In August 1929 the constitution of the enlarged Agency was approved and the Americans received the largest number of the 112 seats allotted to non-Zionists (44). However, due to the death of Marshall, the onset of the economic depression, the subsequent political events, and the disorganization of the American section of the Jewish Agency, the Zionists continued to control all activities and policies of the Agency.

The riots in Palestine in 1929, coupled with the U.S. economic crisis, further lowered the morale of the zoa, whose membership declined to 8,000. There was a general clamor for Brandeis' return. At the convention in 1930, an executive committee of 18, composed mainly of Brandeis' circle, was elected with Robert *Szold its chairman from 1930 to 1932. From 1932 to 1936 Morris Rothenberg functioned as president; Stephen S. Wise succeeded him from 1936 to 1938, followed by Solomon *Goldman in 1938, Edmund Kaufmann in 1940 and Judge Louis E. *Levinthal in 1941.

World War II. With the outbreak of World War II, the zoa formed the American Emergency Committee for Zionist Affairs, which later became the American Zionist Emergency Council, presided over by Stephen Wise and Abba Hillel Silver. On May 9–11, 1942, at New York's Biltmore Hotel, a Zionist Convention consisting of delegates of the zoa, Hadassah, Mizrachi, and Po'alei Zion enacted the Biltmore Program which defined the postwar Zionist aim as the establishment of Palestine as a Jewish Commonwealth. From 1945 the Zionist Emergency Council directed the energies and propaganda of the movement to influence the entire Jewish community, the U.S. government, and public opinion to support its demands in Palestine. Through these efforts American Zionists contributed decisively to the political prerequisites for the establishment of the State of Israel on May 14, 1948.

During and after the war, a dissident group, called at first Committee for a Jewish Army and later the Hebrew Committee for National Liberation, agitated in the U.S., mainly through newspaper advertisements, by expounding and supporting the ideas and acts of the Irgun Ẓeva'i Le'ummi (izl) in Palestine. The group was headed by an izl leader, Hillel Kook (who appeared in America under the name of Peter Bergson), and enlisted the support of several prominent Jews and non-Jews. The style and tactics of the "Bergson group" were the

subject of sharp controversies in Zionist circles, particularly among Revisionists and their sympathizers.

In addition to their efforts in the political field, American Zionists were among the most active participants in practical aid to the *yishuv* in its struggle after 1945; they helped with "illegal" immigration, the *Beriḥah*, secret shipment of arms to the Haganah, and great sums of money. The greatest number of volunteers to the *yishuv*'s fighting forces, which were called *Mitnaddevei Ḥuẓ la-Areẓ* (*Maḥal), came from the United States. However, only after World War II, under the impact of the Nazi Holocaust in Europe and, later, the establishment of the State of Israel, did Zionism become accepted by the bulk of the Jewish community in America.

Opposition to Zionism. From the beginning Zionism had encountered great opposition, especially from Reform Judaism. Among the staunchest, most influential opponents were rabbis Emil G. *Hirsch and Kaufmann *Kohler. Other prominent Reform rabbis, however, such as Gustav *Gottheil, Jacob *Raisin, Bernard *Felsenthal, and Maximilian *Heller supported the movement. In 1907 professors Max *Margolis, Henry *Malter, and Max Schloessinger, all strong sympathizers with Zionism, resigned from the *Hebrew Union College faculty, while the Zionists charged that they were forced to resign by the College's anti-Zionist president Kohler. Among the younger generation, Stephen S. Wise, Judah L. Magnes, and Abba Hillel Silver were notable exceptions to the anti-Zionism of the Reform rabbinate. The main body of the Central Conference of American Rabbis was anti-Zionist and delivered pronouncements against Zionism until 1920. After the Balfour Declaration (1917) and the San Remo decision on Palestine (1920), the Reform movement adopted, although unofficially, a position of non-Zionism which allowed cooperation with Zionists in philanthropic enterprises. In 1935 they revised their collective negative stand on Zionism in favor of individual choice, and further conciliation occurred after the "Columbus Platform" of 1937. A small minority group, however, continued with its opposition to Zionism.

In November 1942 the *American Council for Judaism was formed, composed of Reform rabbis and influential lay leaders, such as Lessing *Rosenwald, with Rabbi Elmer Berger as its head. The Central Conference of American Rabbis tried to halt this split within its ranks, but to no avail. Whereas the Reform movement as a whole tended to pro-Zionism, the Council continued its anti-Zionist activities and upon the establishment of the State of Israel it stated:

> The State of Israel is not the state or homeland of the Jewish people: to Americans of Jewish faith it is a foreign state. Our single exclusive national identity is to the United States.

Jewish Orthodox circles were divided nearly from the beginning on the Zionist issue. While the Zionist Mizrachi and the Ha-Po'el ha-Mizrachi found many adherents among the East European Jews, Agudat Israel, a smaller but articulate group, was anti-Zionist out of conviction that Zionism was secularist and incompatible with Orthodox Judaism.

Only during World War II did these groups abate their anti-Zionism, and in 1945, with some internal opposition, Agudat Israel declared its willingness to cooperate with the Zionists. On the fringe of Orthodoxy, extremist opposition to Zionism was continued by the Satmar Rebbe Joel *Teitelbaum, who condemned the Zionists for trying to hasten the redemption by establishing a "heretical" state.

Within the lay leadership of American Jewry, Zionism at first found its strongest opponent in the *American Jewish Committee, whose leadership included at various times, among others, Mayer *Sulzberger, Cyrus *Adler, Irving *Lehman, Louis Marshall, Jacob *Schiff, Felix *Warburg, Oscar *Straus, Cyrus *Sulzberger, and Julius *Rosenwald, all wealthy, of German background, and non- or anti-Zionists. After the Balfour Declaration, however, the Committee tacitly recognized the ZOA as the representative of those Jews directly concerned with the welfare of Palestine, although within the American context the AJC, which was an unelected elite, opposed the "Congress Movement" during World War I, which was advanced by Zionists and based on mass support. During the 1920s the leaders of the AJC were approached by Weizmann in order to establish the enlarged Jewish Agency. Zionist "Diaspora nationalism," however, which the AJC saw as a threat to their position and patriotism, remained an issue of contention between them. Thus, opposition to the Zionists continued in various forms until January 1948, when Judge *Proskauer, under the pressure of the pro-Zionist Jewish consensus in the U.S., declared the committee's acceptance of the Jewish state recommended by the United Nations Special Committee on Palestine (UNSCOP). However, the AJC remained apprehensive about the status of American Jews in the light of a Jewish state. It was willing to support Israel while remaining independent of direct Israel interference in its affairs. In 1950 David Ben-Gurion, as prime minister, exchanged letters on the subject with Jacob *Blaustein, president of the AJC. Ben-Gurion stated that Israel represented only its own citizens and had no claim to speak in the name of the Jews in the Diaspora. The Jews of the United States, as a community and as individuals, owed political loyalty only to the United States, and the Jews in Israel had no intention of interfering in the affairs of Jewish communities abroad. The effect of these letters was the cooperation of the AJC with Israel within defined areas of agreement.

Mass Support and Fundraising. Dedicated supporters of the Zionist movement came from the ranks of Conservative Judaism. Solomon Schechter and his faculty at the Jewish Theological Seminary supported Zionism despite the objection of the Reform-oriented board of directors of the Seminary. The meetings of the Rabbinical Assembly of America were consistently characterized by expressions of sympathy for Zionism. The Reconstructionist movement, under the leadership of Rabbi Mordecai M. *Kaplan, also was always pro-Zionist. It viewed its endeavor in Palestine as a means to achieve a renaissance in Jewish life in America as well. Guided by Rabbi

Kaplan's concept of "Jewish Peoplehood," Reconstructionist rabbis worked within the Zionist movement in order to achieve their twofold aim.

From the 1930s on, the ZOA devoted more and more attention to fundraising, mainly in the United Palestine Appeal. There was considerable rivalry with non-Zionist overseas agencies, especially the *American Jewish Joint Distribution Committee (JDC), for the allocation of funds raised in local communities. In 1939–40 the UPA and JDC combined into the *United Jewish Appeal (UJA). The frequent consequence of such cooperation was a lack of emphasis on Zionist ideology in Zionist circles. The situation changed from the 1940s when fund raising and political ideology became indistinguishable. Zionist fundraising became the almost universal expression of Jewish identification and communal participation. In April 1960, following criticism from a U.S. Senate committee and other sources of the practice of returning a small proportion of funds raised for Israel for educational activities in the U.S., an agreement was reached between the Jewish Agency and the leadership of the UJA to establish an entirely American body, the Jewish Agency for Israel, Inc., to budget and allocate funds raised in the United States for immigrant needs in Israel. This body was charged with authorizing the expenditure in Israel of funds contributed in America, thus giving American Jewry a direct say and responsibility in administering its funds in Israel. Aid to Israel by Jews in the U.S. was channeled through the UJA and other overseas agencies, and through the Israel Bond Organization. From 1948 through 1968, the UJA provided over $1,100,000,000. In times of crisis for Israel, the sums collected reached unprecedented proportions, as evidenced at the time of the Six-Day War: in 1966 the sale of Israel Bonds totaled $11,000,000; in 1967, $175,000,000. In 1970–71, in the face of threats to Israel's security, the goal was the largest ever, $1,000,000,000. In addition to fundraising, private investment was fostered by bodies such as the Palestine Economic Corporation (PEC). American contributors and investors were not only declared Zionists, but Jews who felt a sense of identification with the Jewish people. As a consequence, American Jewish philanthropy shifted its main priority from support of American Jewish causes to the support of Israel, and the distinction between philanthropic humanitarianism and political Zionism lost its practical significance.

Aliyah and Youth Movements. Aside from the increase in funds, there was also evidence of greater American immigration to Israel, the ultimate expression of commitment to Zionism. In the first three and a half years of the state's existence (May 1948–December 1951), out of a total of 684,201 immigrants to Israel, only 1,909 were Americans. Until 1961 immigration from the United States was less than 1.1% of the total number of immigrants. Between 1960 and 1967 immigration to Israel from the U.S. was 2,000 per year; immediately after the Six-Day War this figure rose to 5,000 per year. After 1967 a "grass roots" immigration movement started independent of the Jewish Agency, which in 1968 formed the Associa-

tion of Americans and Canadians for Aliyah. The resolutions of the 27th Zionist Congress (Jerusalem, 1968) stated that all necessary help be extended to this and all other organizations seriously contemplating immigration. Immigration in 1970 and 1971 was approximately 7,000 annually. The Zionist movement in America financially assisted established educational institutions and youth movements (Iḥud Habonim, Young Judea, Bnei Akiva, etc.), summer camps, and also organized tours to Israel. In the 1950s and 1960s membership in these movements declined mostly as a result of the growing Jewish affiliation to the various religious movements and their youth groups.

Organizational and Cultural Impact. After World War II, as a continuation of the framework created by the American Zionist Emergency Council, an American section of the Jewish Agency Executive was established in New York, consisting of leading members of the ZOA, Hadassah, the Labor Zionists, and Mizrachi. They participated regularly in plenary sessions of the Executive, whose main center remained in Jerusalem.

In 1957 Mizrachi and Ha-Po'el ha-Mizrachi (founded in 1925) united into the Religious Zionists of America. The women's organizations of both groups, as well as their respective youth groups, Mizrachi ha-Ẓa'ir and Bnei Akiva, remained separate organizations. In 1923 Labor Zionism formed the Histadrut Campaign, which raised funds for the various institutions of the Histadrut in Israel. *Pioneer Women, founded in 1926, made its main function raising funds for the women's division of the Histadrut (Mo'eẓet ha-Po'alot). The youth affiliated to Labor Zionism, Habonim, administer summer camps and year-round social and cultural programs in North America.

In the late 1960s Zionists became concerned with increasing their propaganda activities through new tactics and approaches, especially on the American campuses where the New Left and black nationalists developed an explicit anti-Zionist ideology which denied Israel's right to exist and supported Arab aims to destroy Israel – an ideology which even attracted a number of Jewish students. Independent radical campus groups (e.g., the Radical Zionist Alliance; see below) emerged throughout the U.S. to counter this ideology from a Jewish point of view.

Partly under the impact of this Zionist revival in the new generation, an important reform took place in the structure of American Zionism. Instead of the relatively weak coordinating body called the American Zionist Council, in which the main parties and organizations were represented, the Zionist Federation of America was established in 1970. Zionist affiliation of individuals became henceforth possible without the intermediary of a particular party or organization.

The voluminous literature and extensive ideological debates on the relationship between American Jewry and Israel indicated the impact made on the Diaspora by the State of Israel. American Jews showed themselves more willing and ready to be identified as Jews, to affiliate with Jewish organizations and institutions, and to send their children to Jewish schools as a result of their ties to Israel. Israel occupies an important place in synagogue activities, sermons, and various religious celebrations, and Israel's Independence Day assumes an important place in the American Jewish calendar. The Israel flag is frequently displayed in synagogues and community centers. In many synagogues prayers for the welfare of the State of Israel and world Jewry are recited on Sabbaths and holidays following that for the welfare of the United States. Both the Conservative and Reform branches attempt to establish themselves in Israel through rabbinical schools and various educational programs.

Another impact of Israel has been the use of the Hebrew language in contrast to the decline of Yiddish. Hebrew songs and Israeli folk dances have become American Jewish popular culture: at weddings, bar mitzvot, and on many college campuses. Jewish art, which traditionally concentrated on East European themes, expanded to include Israeli symbols; Israeli crafts find a wide market among American Jews. Fiction on Israeli life increases rapidly and an extensive periodical literature is directed from Israeli institutions toward American Jewry.

Israel had a profound impact on the ideologies of American Jews. The anti-Zionist American Council for Judaism was the only American Jewish organization which claimed that any suggestions of an ethnic bond among Jews, especially the ideas of Zionism and the creation of the State of Israel, harmed the position of the Jews in America because it placed in question their loyalty to the United States. With the progress of the State of Israel and particularly after the Six-Day War, many of its members and supporters shifted to a more pro-Israel stance, and the Council's influence dwindled considerably. Agudat Israel, on the other hand, which before the establishment of the state held that any state not governed by *halakhah* would be illegitimate, accepted the State of Israel, as did almost all other Orthodox Jewish groups in America.

Jewish religious and welfare institutions in America, such as the National Council of Jewish Women, B'nai B'rith, and the Jewish War Veterans, as well as civic organizations such as the Anti-Defamation League and the National Communal Relations Advisory Council, all adopted an official stand of "non-Zionism." In practice, however, they supported the State of Israel and demands for an American policy of friendship toward Israel. As a consequence, they rejected the suggestion that Jewish ethnic traditions about Zionism and the existence of the State of Israel created conflicts of dual loyalty.

Religious and Ideological Issues. There were, however, issues of concern to some of these organizations. Orthodox Jewry in America felt itself intimately involved in the course of religious affairs in Israel and pressed the state to pursue official religious policies in accord with its own religious beliefs. Similarly, Israeli rabbis commanded influence and respect among similar circles in the United States. The Conservative and Reform movements, on the other hand, were concerned that the

legal establishment of religious Orthodoxy in Israel involved discrimination against non-Orthodox Jews there. Some demanded the separation of state and religion or the adoption of forms of religious practice closer to their own points of view. The concern of the American religious groups implies that the religious forms practiced in Israel are of direct relevance to American Jews.

After the establishment of the State of Israel, controversies also arose between Israelis and American Zionists over their relationships in the future. The Americans demanded a separation of the activities of the state from those of the Jewish Agency and the World Zionist Organization, whereas the Israelis wanted Jerusalem to be the center of all the Zionist activities. In addition, there was a great controversy about the meaning of the Diaspora and the obligation to immigrate to Israel. The Americans claimed that America was not *galut* because Jews were secure and not oppressed there (Rose *Halprin) and that the Zionist Organization should not submit to the authority of Israel (Abba Hillel Silver). American Zionists wanted to be recognized as the liaison for all activities between American Jews and Israel. They demanded that, through legislation, Israel recognize their leading position in fundraising and practical work, a demand practically achieved in 1952 through the passage of the Zionist Organization and Jewish Agency Law in the Knesset and the covenant signed subsequently between the Israel government and the Jewish Agency.

American Zionists maintained that the most important issue for the Jews was their survival as a people. Since Jews will continue to live in the Diaspora, only a Zionism that recognized the essential ethnic elements of the Jewish people could keep them from cultural disintegration. For this reason a strong emphasis on cultural continuity, Hebrew, and a strong bond with Israel are the tasks of American Zionism (Ben *Halpern), although since 1967 the furtherance of *aliyah* from the U.S. also became a legitimate part of Zionist activity in America. In essence this is a neo-Aḥad Ha-Am position which sees Israel as the cultural center of the Jewish people but simultaneously dependent on the moral, political, and financial assistance of the Diaspora.

[Jehuda Reinharz]

JEWISH RADICAL ZIONISTS IN THE U.S. *The First Generation of the American Jewish Student Movement, 1968–72.*

> We see ourselves as your children, the children of Jews who with great dedication concern themselves with the needs of the community, the children of Jews who bring comfort to the afflicted, give aid to the poor, who have built mammoth philanthropic organizations, who have aided the remnants of the Holocaust, who have given unfalteringly to the building of Israel, who give more per capita to charity than any other group in America. We are your children and affirm this, but, to paraphrase the Rabbinic aphorism, we want to be not only children – *banim* – but also builders – *bonim*. We want to participate with you in the building of a vision of a great Jewish community. It is when we think of this that we become dismayed with the reality of

American Jewish life which we cannot reconcile with what you have taught us to cherish.

> It took us several years to realize our confusion of form and essence and to recognize that there was more to Judaism than its poor expressions in the American Jewish community. For some it was a trip to Israel, for others it was the reading of Buber's *I and Thou*, for others an encounter with Ḥasidim, for others it was a traditional Jewish education redirected to confront existential problems, for others the exploration of self could not overlook the Jewish component. The Six Day War forced us to reassess our attachment in deciding to risk our lives if necessary on Israel's behalf. The black awakening reminded us that the melting pot dream was a fool's fantasy and that differences were legitimate. We woke up from the American dream and tried to discover who we really were. For many of us this now means turning our concerns inward into the Jewish community because we are disenchanted with the crass materialism of the larger society. Yet where can we find inspiration in the multi-million-dollar Jewish presences of suburbia? (from a speech by Hillel Levine, Nov. 1969)

Greening and Ethnicity. The Jewish Student Movement, born in the late 1960s, developed out of the American radical tradition and a groping for an authentic Jewish ethnicity that would permit both a highly visible Jewish commitment and an active concern for the social-political milieu.

The tolerant, permissive environment in which the American post-World War II babies were brought up, in a world which knew both the threat of atom bombs and the ease of wealthy America, made for what has been called the "greening of America." "Greening" is the turning inward in search of roots, of community, and toward a celebration of self; it is a rejection of much of what super-industrialized, technologized America, with its overwhelming belief in progress, had brought, without shunning the blessings of that culture, the cheap transportation and mass communication that make possible the ferreting out of like minds.

By the mid-1960s, emerging black self-confidence, which was to become a paradigm of ethnicity and the engulfing anti-Vietnam war spirit were voiced by young voices – at a time when more and more students were shedding the powerless, lethargic modes of the 1950s for an aggressive, assertive mode of demanding. They demanded the right of self-expression, rather than the duties of an apprenticeship to adulthood. In the early 1960s a high proportion of the activists were Jewish, but what can be termed "low-profile Jewish." Their "high profile" applied to their activism. Some, however, influenced by spreading ethnicity ("work within your own community"), sought to identify themselves more consciously as Jews, i.e., to raise their Jewish profile – in greatly varying measures, of course, but clearly to raise it.

American youth, by then a subculture, asserted the right to play the socio-political games of life according to rules of their own. These rules, no doubt, had an ancestry in the collective memories to which these youths were the heirs; but they wished to choose, order, and stack the rules themselves. A tolerant America seemed to allow for this; the "greening of

America" appeared to allow for the "greening of Judaism." It is in this "greening of Judaism," a radicalism precipitated in an ethnic mode, in which Jewish students after 1967, searching for their spiritual and/or primeval, and/or national, and/or cultural roots, began to make bids for power – the power necessary for the assertion of their will. To gain some perspective on their bids, we turn to some seasoned high-profile activists.

Low-Profile Jews, High-Profile Activists. Of the high-profile activists, low-profile Jews who exerted a shaping influence on the Left of the 1960s, Saul Alinsky and Paul Jacobs (both of them influential in the 1930s), Noam Chomsky and Herbert Marcuse (both of them leaving their mark on the 1960s) are of note.

Saul Alinsky, already in the 1930s, stressed the similarities between "democrat" and "radical." He saw his attitude as rooted in the Jeffersonian tradition, and urged would-be radicals to know the "rules of the game" so as to be able to manipulate them to their own ends.

In his essay "Repressive Tolerance," Herbert Marcuse, of similar profile as regards Activism/Judaism, diagnosed the very acquiescence to the primary rules governing a game (situation) as serving to maintain the system, and as not permitting a really radical change. Marcuse's influence on the emerging "New Left" was particularly widespread, especially as regards his notion of repressive tolerance and his objections to the "one-dimensional" man. His notion of tolerance further discredited an already declining regard for the liberal tradition (a decline that Alinsky had presaged in his writings).

The breakdown of the liberal tradition was also a time of emerging influence of the "beyond-the-nation-state" proponents, of whom Noam Chomsky is of particular note. By 1968, speaking from what he termed an Aḥad Ha-Am perspective, he put forth a theory of the desirability of "kibbutzinization" of the Middle East. He proposed that Israel be in the vanguard of those states which would abandon the apparatus of statehood. The ensuing dialectic, in which he had an important role, picked up momentum and lasted for several years thereafter. It was vital to the articulation of the radical Zionist position on the one hand, and the renewed advocacy of the bi-nationalist state, on the other.

Marcuse and Chomsky had a profound influence on the theoretical superstructure of the planning of radical social action in the 1960s.

Paul Jacobs, active as early as Alinsky, and like Alinsky involved at least as much in doing as in theorizing, represents the low-profile Jew, high-profile activist which the new ethnically conscious Jews of the late 1960s rejected. Writing of himself in *Is Curly Jewish?*, Jacobs portrays his "back-drop" Jewishness as it was worked out in the 1930s. By the 1930s assimilation (passing) and denominational Judaism had been added to the paths opened to Jews in the late 19th century: Torah (religious Judaism, self-consciously ideological, given its exposed, defensive posture); Zionism; Socialism (both in its Diaspora-centered and its internationalist varieties). Jacobs

chose "socialism" and worked from within a class-consciousness perspective.

He explains his pull to radicalism as a push from Judaism:

> I have a hunch, too, that for me one of the unconscious pressures toward radicalism was that the movement provided an atmosphere in which I could reject being Jewish without any feeling of guilt. One of the first rituals in the radical movement was the adoption of a party name by which one was to be known in the organization…. Even granting the legitimate need we felt to change our names in order to escape possible consequences, why was it that so many of the Jewish radicals took as their cover names ones that were conspicuously non-Jewish? No Comrade Cohen ever adopted Ginsburg as a party name; instead he became Green or Smith or Martin, or something equally bland.

Speaking of encounters between members of the Young People's Socialist League (YPSL) and the Zionist Ha-Shomer ha-Ẓair, Jacobs observes:

> … the YPSLers (and Hashomer) were very close… politically. They hated the Communists almost as much as we did, primarily because the Soviet Union had set up the remote province of Birobidzhan as its own Jewish state, touting its virtues over Palestine…. They (Hashomer) were convinced that the only salvation for the Jews was in their own land, and because they were socialists, they were committed to making Palestine into a socialist country…. I sat with them for hours… arguing heatedly that Zionism was only another form of petty bourgeois nationalism. But those arguments had none of the rancor and bitterness that were so characteristic of the fight all of us had with the Stalinists.

In 1947 Jacobs joined the staff of the American Jewish Committee:

> … the emphasis… was not heavily Jewish in those of its operations which related to the non-Jewish world…. My own department, for example, was officially named the "National Labor Service of the American Jewish Committee," but only the name "National Labor Service" appeared on its publications, on the theory that an organization without an open Jewish identification could operate more effectively with non-Jewish groups than one, say, like our rival, the Jewish Labor Committee.

He clearly states that, for himself and many other members of the AJC staff, this arrangement was ideal: "it provided us with a base from which we could fight prejudice and discrimination without any need to be Jewish."

Moving Toward High-Profile Jewishness. The Jewish revolutionary who strives for the liberation of mankind and views Jewish nationalism as merely tribalistic and a retreat from internationalist ideals is of course not a new phenomenon. It was just this perspective of the "steady patriot of the world alone, the friend of every country but his own" that was unanimously rejected by the high-profile Jewish activists of the Jewish Student Movement (JSM). They wished to combine a high-profile activism with a self-consciously assertive high-profile Judaism.

The base of JSM is ethnic, and if concerned with "passing" (being assimilated into, accommodated by) the American culture, it is a minimal passing – that of not being rejected by the host society because of displayed ethnic characteristics.

For JSM, as it grew in the black-is-beautiful hothouse of the American 1960s, the do-it-yourself metaphor, so much a part of American culture, involved a return to classic Jewish texts, a return to *lehrhaus*. Its approach was of the de-schooling sort, which emphasized the student and his personal and intellectual growth, rather than some formal school curriculum. This reflected the general anti-establishment attitude of the times. In this regard, the cultural heroes included men such as Herbert Marcuse and Noam Chomsky, who goaded American youth to that radical perspective known as "New Left."

By 1968 the New Left had moved from a tacit to an explicit anti-Israel stance, and consequently Jews who were moving to a higher ethnic profile were experiencing greater difficulties staying within the fold. At a 1969 meeting, for instance, Students for a Democratic Society (SDS), participating in a teach-in in Washington, D.C., were arguing vehemently against the validity of a separate Jewish group operating in radical politics. Others argued back and by dawn one of the SDS members started quoting verbatim from Mao's little red book. His opponents responded by chanting the morning prayers, the *Shaḥarit*, in Hebrew. This polarization between the mainstream SDS and the more Jewishly conscious activists illustrates the tightrope along which Jews drawn towards the evolving Jewish Student Movement chose to walk.

The earlier American ethic of rugged individualism was being replaced by that of group activity; instead of "pull yourself up by your own bootstraps," there was "work in your community" and "we shall overcome." A dominant mode of behavior had been radicalized in its idiom, and a young Jew faced with existential quandaries and problems of group identities could easily come to think of his search for roots as radical.

Toward Crystallized Stands. Alinsky and Jacobs suggest the tone of the (Jewish) American radical tradition, and Chomsky and Marcuse its intellectual goadings to radical social action. The Students for a Democratic Society served as the paradigm of a radical group and symbol of the New Left of the 1960s.

The aims of the SDS were described by Straughton Lynd in "The New Radicals and Participatory Democracy" (*Dissent*, Summer 1965): "… that the individual share in those social decisions determining the quality and direction of his life; that society be organized to encourage independence in man and provide the media for their common participation."

This was to become characteristic of the Student Non-Violent Coordinating Committee and the "greening of America." The participatory democracy of SDS, with its parallelistic approach – working within the community, i.e., grass-roots as the locus of power; community schools; local papers; a diversity of mini-institutions; free universities – served structurally as the model for much of the behavior of the Jewish Student

Movement. By the early 1970s there would be Jewish "free universities" and Jewish studies departments. Even Jewish Community Centers would have "Jewish culture personnel."

M.J. Rosenberg's "To Uncle Tom and Other Such Jews" (*Village Voice*, February 13, 1969) has become a document of its age. It spread among Jews across American campuses like wildfire. It gave voice to the feelings of many young Jews who would "work within your community"; "stand up and be counted as a Jew"; "work on the grass roots level" and who would reconcile, perhaps even subordinate, their politics to their ethnic affiliation. M.J. Rosenberg suggests the spirit of the Jewish Student Movement – both in what allowed it to pass into the American scene and in its insistence on the right to assertion of Jewish power. These are, of course, at least incompatible, and the JSM was ill put to contain both trends for long.

Rosenberg speaks for those of his generation of post-Holocaust, Third Jewish Commonwealth Jews who had begun to opt for grappling with their Jewish heritage and the incorporation of the realities of Jewish existence (perhaps, especially the death trauma of Auschwitz and the birth trauma of Israel) into their daily living.

> The self-hating Jew should have died with the creation of Israel. If the drama enacted in Cyprus, Europe, and Palestine between 1945 and 1948 did not convince him of the blood and guts of his own people then I am not sure anything would.
>
> The Young American Jew… craves assimilation; the very idea of "Jewishness" embarrasses him. If you tell him that he doesn't "look Jewish," he will invariably take it as a compliment. The concept of Jewish nationalism, Israel notwithstanding, he finds laughable. The leftist Jewish student… is today's "Uncle Tom." He scrapes along ashamed of his identity and yet is obsessed with it. He goes so far as to join black nationalist organizations, not as a Jew, but as a white…. His destiny is that of the Jews but he denies what is apparent to the rest of us; he wants to be an "American," a leftist American talking liberation and an aspiring WASP.
>
> The miracle of 1948 was that the Jew did it alone, with the guns he could smuggle and the iron will that is the legacy of Auschwitz…. This makes it so imperative that we ensure that which was won by Jewish heroes on the fields of Palestine will not be lost with the aid and connivance of Jewish moral cowards…. "
>
> The issue is one of Jewish pride. The Jewish professor who makes a point of teaching on Yom Kippur with subtle mockery of those students who stay home,… the Jewish radicals who are prepared to fight for the Czechs, the Greeks, and the Biafrans and yet reject Israel; these are our Uncle Toms and our shame. The Jew must accept his identity … the burden of proof is on you. You who mockingly reject every lesson of your people's history…. In the aftermath of the crematoriums, you are flippant. In the wake of Auschwitz, you are embarrassed. Thirty years after the Holocaust you have learned nothing and forgotten everything. Ghetto Jew, you'd better do some fast thinking.

Rosenberg criticized what he called the "bagels-and-lox society" Hillel Houses. He rejected both their insularity and their programs. The first "generation" of the movement (1968–72)

shared this evaluation and engaged the Hillel people in a dialectic which led to a move away from a somewhat hollow home-away-from-home in which one could be quietly, safely Jewish on campus, and toward a Hillel which promoted active Jewish involvement and study.

There was a shift in the reality tests of Judaism – from the edifice temple to the community prayer room, from the classroom to the open *lehrhaus*, from the bagels-and-lox brunch to the communal *sukkah*. The call was to a more public Jewish witnessing and the slogan was: Israel is real; Diaspora is real. A de facto Judaism as labeled by others would not suffice, nor would old patterns of expression be adequate. The goal became to rejuvenate and reauthenticate a living Judaism.

This call and others were heeded by Jews who formed the various groups which make up the JSM. From the Jewish Defense League on the right, to the Radical Zionist Alliance on the left (which so significantly shifted its emphasis from "Jewish radicals" to "Radical Jews") and the communitarian *ḥavurot* located at some apolitical point in between, young Jews stood up to be counted. They demanded some of the access, the means, the space of the American Jewish community. In the ethnic mode of the late 1960s, the relatively Protestant frame of the Reform movement with its over-arching "grand issue" concerns could not satisfy the young Jew seeking expression of his Jewishness; nor did he feel comfortable in other of the traditional denominational Jewish sub-groups. He wanted a nondenominational Jewishness, an ethnically binding frame. He wanted to be part of a group, of a movement. Indeed, by being ethnically bound, by achieving a subculture particularism, he would be able to pass in the new America, to demand power for his group. The new "greened" Jew could be at home as a Jew in the new "greened" America, or so it seemed in 1968–69.

Aliveness of Israel and Diaspora. The greened Jews' move was away from the "Jewishness of survival" which they perceived as the over-mortgaged heritage of their parents. Israel as a safety deposit box for their Jewish identity would not suffice. They wanted a growing, developing Diaspora Jewishness, and adopted the more *au courant* ecological metaphor of "greening," of "return to roots."

A major confrontation developed between the emerging demands of Jewish students and their fathers, i.e., within the Jewish community. Hillel Levine, on behalf of a loosely knit ad hoc group, Concerned Jewish Students (CJS) of Boston, presented a set of demands to the Council of Jewish Federations and Welfare Funds in November, 1969. This confrontation was the first of numerous head-on encounters between "radical" (root-searching) young Jews and the established Jewish communities on a local, regional, and national level. It marked the insistence that they, the young Jews, have a say in determining what was happening in the Jewish community. It was a bid for power. The CJS asserted:

> In affirmation of our Jewishness and our concern for Jewish Survival we feel we can no longer be silent. Distortions in the

budget priorities of Jewish Federations have long been decried…. We demand that, while maintaining the generous level of support for Israel, all local federations undertake a drastic and immediate reordering of domestic priorities in their local communities, in order to improve the quality of Jewish cultural life on campus and in the community.

Bill Novak, then of *Response*, a magazine founded by Jewish undergraduates at Columbia, which has operated as "the unofficial intellectual and artistic voice of the new Jewish counter-culture" sounded the call:

> You have a culture, so dig it
> You have a people, work with it
> You have a history and a body of literature,
> Study it!

Meanwhile, Jewish students elsewhere were also responding to the times. 1968 was a year of student demands and new ethnicities. The World Union of Jewish Students (WUJS) is an international federation of Jewish student unions from over 30 countries. In the late 1960s the importance of strengthening WUJS on the North American continent, given the higher-profile Jewish activism, the new ethnicity and the sense of the growing importance of North American Student Jewry, became apparent to both WUJS and its Jewish Agency sponsors.

Certain of the leaders of the Youth and He-Ḥalutz Department of the Jewish Agency, alert to the need for new forms of pat Zionist yea-saying, given changes in fashions and the times, were, in the mid and late 1960s, eager to encourage the formation of Jewish groups, journals, etc., which could serve as vehicles for propagating a concerned Jewish involvement. They accurately sensed the potential usefulness of the campus as medium.

In 1969, at Brewster, N.Y., the assembled representatives of the older national student organizations and the new independent "Jewish Student Movement" decided to create "Network" in order to keep one another informed and to ferment activities.

"Network" stated that its aspirations were grounded in "belief in the unity of the Jewish people. Like most Jews we agree on very little else. Even in our common commitment to the Soviet Jewish struggle and to the flourishing of Israel we differ in our visions and tactics…. We want to share with each other in the rejuvenation of the Jewish people, each of us in his own way…."

Network's aim to "provide Jewish youth organizations with the opportunity to relate to each other without the intervention of the establishment organizations" was a Jewish counter-culture move, toward the grass-roots expression of needs and away from mediating, remote "representation."

WUJS. Particularly dramatic is the history of WUJS's relationship to the World Zionist Organization, to which it was accepted in 1968 (26th Zionist Congress) and within which it was so bitterly attacked over its Arad Program, 1972 (27th Zionist Congress).

In Arad (xv wujs Triennial Congress) the new "ethnic" Jews who, although committed to Israel and its survival, were critical of the policies of the State of Israel and of Zionist ideology, found that their analyses were not well received by the very authorities who had recently sent them out to struggle with the New Left.

The Zionist establishment had been disturbed at the snowballing anti-Zionism of the "New Left" and correctly realized that a left Zionist force could be an effective response. Thus, at the Brewster conference, where the wujs appeared on the American scene, and at others which would follow, the Youth and He-Ḥalutz Department under the leadership of Mordekhai Bar-On, lent its weight, experience, and financial backing.

The financial backing did not bring a line-towing to any of the standard acceptable versions of secular Zionism. It is interesting that, given the asserted Jewishness of these new young Zionists, the Department itself underwent a renewed concern with non-secular Zionism. The very polarity, so unfortunately entrenched in Israel life, between the secular and the religious, was challenged. Unlike the Zionist left of an earlier generation, the "Radical Jews" are not programmatically secularist. The "Judaizing" they brought about was part of the dialectic between the Jews of the "movement" and the controllers of the Jewish community. This dialectic took place with the Agency, and within local Jewish communities, and among the supporters of the Jerusalem program of the wzo and the Arad program of wujs, *et al.*

It did not always entail a neat adherence to the "rules of the game." wujs barely survived the 1972 wzo backlash response to its Arad program. The Jerusalem Program/Arad Program entanglement is a high point in Jewish Student Movement/Establishment Jewry relations.

Arad Program.

1. Zionism is the national and also, by virtue of its territorialistic aspect, the social liberation and emancipation movement of the Jewish people; it is to be realized in Israel. The universalistic task of the Jewish people, as expressed in its prophetic tradition, must arise out of the necessary concentration of the Jewish people in Israel, so that out of this framework, it can devote its energies to the social emancipation of Mankind.

2. A condition for this realization is: The recognition of the national rights of the Palestinian Arabs, not only as a political step, but as a consequence of Zionist ideology.

3. The aims of Zionism are (a) the preservation of the existence of the Jewish people, united by their common identity, through the fostering of the Jewish values and strengthening the identity that will bring to a fulfillment in Israel. (b) the abolition of the abnormal situation of the Jewish people living in the Diaspora, by its territorial concentration in the State of Israel. (c) the realization in the State of Israel of a democratic society, just, equalitarian, and peace loving that recognizes the right of self-determination of all peoples. (d) the encouragement of the Jews to become conscious of, and identify with, the liberation struggle of other peoples. (e) the protection of the rights of Jews everywhere.

Contrast this with the resolution of the 27th Zionist Congress, a resolution known as the 1968 Jerusalem Program:

> The aims of Zionism are: The unity of the Jewish People and the centrality of Israel in Jewish life; The ingathering of the Jewish People in its historical homeland, Eretz Israel, through Aliya from all countries; The strengthening of the State of Israel which is based on the prophetic vision of justice and peace; The preservation of the identity of the Jewish People through the fostering of Jewish and Hebrew education and of Jewish spiritual and cultural values; The protection of Jewish rights everywhere.

The contrast between the Arad and the Jerusalem Programs is obvious. In light of the backstage treatment dealt with the wujs people in overreaction to their program, it is difficult to concede that the disillusionment that followed the ugly rejection could call forth anything but angry tantrums, "children" to "parents." The would-be *"bonim"* received naughty *"banim"* treatment.

Radical Zionist Alliance. In 1969, in Palmer, Mass., the North American Radical Zionist Alliance (rza) came to life. Child of radical enthusiasms, dreams of Zion, and calculated analyses of power-options, it was to serve as an umbrella organization for Jews working in small groups, united by their concerted search for their Jewish selves, a shared concern for effecting social change, and their differing concerns for the Jewish polity.

"Radical Zionist Alliance" was a name, a category, fashioned to drape around a coalition of voices expressing consonant concerns at a time when to group in America was to group ad hoc – For Women; For Peace; Veterans against Vietnam; American Committee for Peace and Justice; *et al.* Such was the social metaphor.

The rza groups were largely campus-based. They had begun to establish newspapers, push for Jewish studies on campus (not unlike their co-students who were demanding Black Studies), and to challenge the American Jewish establishment on its priorities in funding and on the quality of their Jewish education.

The newspaper established by rza, *Nitzotz*, was short-lived. rza, like its member group, the Jewish Liberation Project in New York, had a complicated relationship to *Mapam*, marked by ambivalence and problems of controlling the "young people." Involvement with Israeli political parties is a characteristic shared with the Jewish Defense League.

The formalizing of rza seems to have been more a watershed in the institutionalizing of the new radical mode than a commitment to joint programs of action. The numerous conventions (Brewster, Madison, Philadelphia, etc.) and retreats and scrambled get-togethers among different participants in, and adherents to, the idea of the Jewish Student Movement from 1968 to 1972 suggest a pattern of ritualistic confirmation of the invisible community they formed and an occasion for recharging the commitments of the members.

In the general mood of political impotence that followed the May 1970 invasion of Cambodia, many activist Jews began

to lose interest in politics or to transform their activism into a super-particularistic Jewish nationalist identity – Jewish Defense League or Soviet Jewry work or a turning to Jewish non-denominational religious movements. The Student Struggle for Soviet Jewry, founded in 1964 by people who later became leaders of various of the other groups, was a rallying point of Jewish involvement for activist Jews of all political persuasions. Those who stressed their RZA commitments toyed with the idea of city-kibbutzim (Urbutz); while on campus they did pro-Israel information work, protested awards to reactionary politicians by Zionist organizations, and confronted the Jewish Defense League.

The demise of RZA by 1972 reflects their disposability to the Jewish establishments (especially to the Zionist establishment for whom they had worked on the campuses); a conformity to the general shift on campuses from political and outer-oriented to spiritual and inner-oriented concerns; and their members' inability to cope with the realities of contemporary Israel life.

In late 1972, the Washington Jewish Student Organization (Seattle) could advertise in "Network" its sponsorship of a conference "of all those interested in detailed discussion of the *theoretical* and *strategic* questions now facing the broadly defined socialist-Zionist movement in North America…. This conference will be *political* and will *not* include seminars on Jewish identity, creative *Shabbatot*, Jewish media, innovative *Halakhah*, Krishna-Mishna or Neo-Hassidism…."

The "spiritual" interests struck from the RZA agenda became the critical interests of the Jewish Student Movement. The "spiritual revolution" which had taken root in the American campuses at the turn of the decade now flourished among the second generation of the Jewish Student Movement.

[Chava Alkon Katz]

In Yugoslavia

Zionism in the countries that united on Dec. 1, 1918, to form the kingdom of the Serbs, Croatians, and Slovenes sprang from three main sources: the traditional national-religious aspirations of Sephardi Jewry, which was permeated with messianic yearnings; the youth of these countries who had studied in Vienna; and the influence of the Ḥovevei Zion movement, which penetrated into these regions from Galicia, especially after the conquest of Bosnia by the Austrian army in 1878. Among the forerunners of Zionism were two rabbis in Croatia, although their activities had no reverberations in their immediate surroundings. Jekuthiel Hirschenstein, the rabbi of Varaždin, gave advice to Moshe Zaks, a Jerusalemite, who tried to engage in a kind of Zionist diplomacy in Vienna and Germany, as shown through their correspondence during the years 1835–38. Judah Hai *Alkalai actively engaged in the revival of Jewish nationhood, both philosophically and in practice, and tried in vain to bring the Jews of the Serbian city of Šabac to Ereẓ Israel after the pogroms of 1865. Viennese Zionism influenced the southern Slavic countries even before the advent of Herzl. David M. Alkalai, a relative of Judah Alka-

lai, was a member of the Viennese Zionist student group Kadimah, founded by Nathan Birnbaum. He and his wife, Rachel, Alkalai's granddaughter, were among the few representatives from the southern Slavic countries at the First Zionist Congress (1897). The others were Marcus (Mordecai) *Ehrenpreis from Djakovo and Armand *Kaminka from Osijek. Immediately after the Congress, Alkalai founded an association named Zion in Belgrade and, in 1937, he became the second chairman of the Zionist Organization of Yugoslavia. At the turn of the century, Sephardi students from the southern Slavic countries, including Bulgaria, established the Zionist Esperanza Society in Vienna. A student Zionist association, Bar Giora, uniting Ashkenazi and Sephardi Jewish students from the southern Slavic countries, was organized. In 1904 the two societies held meetings together and thus laid the foundation for cooperation between the southern Slavic Zionists. Judeja, a Zionist student organization from Zagreb, joined them in 1908.

Through the initiative of the Osijek Zionists (pioneers of Herzl's political Zionism in Croatia), led by Hugo Spitzer, the Yugoslav Zionist Federation was founded in 1909 within the borders of the Hapsburg monarchy. It united the Zionist groups that had been established in the cities and towns. The first Zionist local group of this kind was founded in 1897 by Nathan Landau, a teacher in the town of Brčko in Bosnia. Other active Zionists of the early period were Gustav Seidemann, Yoḥanan Thau, Raphael Poljokan, and A.D. Levi. Under the influence of the youth who had studied in Vienna, in 1898 a group of high school students in Zagreb formed an organization that produced a generation of leaders. Led by Alexander Licht, they transformed Zagreb from a center of assimilationism into the center of Yugoslav Zionism and the seat of most of its institutions. Licht's brother Herman organized the Jewish working youth. In Belgrade, David Albala, a member of Bar Giora, founded the youth organization Gideon, which also raised a group of active Zionists. Between the Balkan War and World War I there was a discernible emigration of Jews from Bitolj (Monastir), Macedonia, some of whom reached Jerusalem. Active, organized Zionism actually began in Macedonia between the two world wars in close contact with the center in Zagreb. Leon Kamhi was the leader in Bitolj and Josef Behar in Skoplje. In Vojvodina, which belonged to Hungary, assimilationist trends prevailed until the end of World War I.

World War I brought a temporary halt to all Zionist activities in the region, due to the government's prohibition, as well as the drafting of active Zionists into the army. Before the end of the war, however, the movement came to life in Croatia, Bosnia, and also in Vojvodina, partly because of the presence of a few Russian Jewish prisoners of war and Galician Jewish soldiers in the Austrian army garrisoned there. The leader of the Zagreb Zionists then was Lav Stern. The first conference of the Yugoslav Zionist Organization assembled in Zagreb in January 1919, immediately after the establishment of the independent kingdom of Yugoslavia, with representatives from every part of the new monarchy. It served to renew the tradition of undefined unity and cooperation in the

Zionist movement that had been prevalent before World War I and carried on in this role during the years between the two world wars. In 1919 a union of Jewish youth associations was established, uniting most of the students and working youth who had ties with various world Zionist youth movements. The union organized youth assemblies and summer camps. In 1920 the first *hakhshara* and Palestine Office were founded under the chairmanship of Abraham Werber (Avishur), as a result of the influence of pioneers of the Third Aliyah who passed through Zagreb in 1919–20 and the conference of Ha-Po'el ha-Ẓa'ir in Prague (1920). *Hakhsharot* existed until the Nazi occupation, training *ḥalutzim* from Central Europe. The first pioneers from Yugoslavia went to Palestine in 1921, and their *aliyah* continued until the Holocaust, with the numbers depending upon the Mandatory entry permits ("certificates") allocated to Yugoslavia.

Under the leadership of Julius Dohany, in 1929 the Revisionists broke away from the Yugoslav Zionist Organization and set up Betar; the Zionist Organization, however, preserved its encompassing influence under the leadership of Licht, covering the General Zionists and adherents of Labor Zionism, and youth movements from the left Ha-Shomer ha-Ẓa'ir and Tekhelet-Lavan (Neẓaḥ) to General Zionists. The number of religious Zionists was small and their influence minimal.

Although there was full cooperation between the Ashkenazi and Sephardi elements of the community from the end of the 19ᵗʰ century onward, part of the Sephardi community tended to oppose the Zionist Organization because of complaints voiced by the World Sephardi Organization about discrimination against Sephardim in Palestine. Already with the founding of independent Yugoslavia, the frictions between the majority in the movement and the Sephardi separatists deepened because of Yugoslav political issues. The Zionist movement produced women's WIZO groups, the Maccabi movement, and Jewish choirs, orchestras, and amateur theaters. It reinvigorated the existing elementary schools, founded Hebrew kindergartens (the first in Zagreb under the direction of Miriam Weiller), and invited teachers from Palestine. Jewish poets, writers, and researchers consciously devoted their efforts to Jewish topics and thus developed a rich Jewish literature in the Serbo-Croatian language. A monthly Zionist publication *Židovska Smotra* ("Jewish Review") appeared from 1906 to 1914. In September 1917, before the publication of the Balfour Declaration, copies of the Zionist central weekly *Židov* ("The Jew") began to appear, and it was printed up to the Nazi invasion. *Židovska Svijest* ("Jewish Consciousness") and *Jevrejski Život* ("Jewish Life"), a separatist Sephardi publication, were initiated in Sarajevo in 1918 and united in 1928 as *Jevrejski Glas* ("Jewish Voice"). *Gideon* and other youth publications appeared from 1919. A monthly children's publication, *Ha-Aviv*, was published from 1922 until 1941. The monthly publication *Ommanut*, under the editorship of H. Gottlieb, appeared from 1937 until March 1941. In Novi Sad, Vojvodina, various Zionist publications appeared in German, among them *Juedisches Volksblatt*. Books and pamphlets were also published by the periodicals *Židov* and *Jevrejski Narodni Kalendar*.

The Zionists of Yugoslavia worked to win control over the Jewish community councils. Almost all the Jewish communities (with the exception of the small, separate Orthodox communities) came into the hands of a stable Zionist majority until the mid-1930s. This majority was instrumental in the founding of the Federation of Jewish Communities in 1919, led by Spitzer and afterward by Fridrich Pops. The Federation of Jewish Communities was an active force behind national Jewish education, the results of which were evident even after the Holocaust: most of the survivors settled in Israel during 1944–52, and those who remained in Socialist Yugoslavia tried to retain their Judaism by keeping in close contact with the Jewish people and the State of Israel.

[Yakir Eventov / Cvi Rotem]

For later developments, see entries on the individual countries.

RETROSPECT AND PROSPECT

The Twenty-Seventh Zionist Congress which met in Jerusalem on June 19, 1968, outlined the aims of the Zionist Movement thus:

1) To promote the unity of the Jewish people and the centrality of the State of Israel in Jewish Life.

2) To assist the ingathering of the Jewish people in the historical homeland, which is based on the vision of justice and peace of the Hebrew prophets.

3) To preserve the identity of the Jewish people through fostering Jewish, Hebrew, and Zionist education with emphasis on spiritual and cultural values.

The document is known as the Jerusalem Program 1968. It reiterated the resolution which had been adopted by the Twenty-Third Zionist Congress (Jerusalem, August 30, 1951). It proposed that the Zionist organization undertake the following tasks:

1) To encourage immigration and assist in the absorption and integration of the immigrants in Israel.

2) To assist in agricultural settlement in the land and in economic development; to stimulate the pioneering spirit (*ḥalutziyyut*) among the settlers; and to acquire new tracts of land as the property of the Jewish people.

3) To raise funds and encourage investment of private capital.

4) To foster Jewish consciousness by propagating the Zionist idea by means of education and enlightenment.

5) To engage in a political campaign in defense of Israel and of Jewish rights.

IMMIGRATION (ALIYAH). Since the inception of the movement, *aliyah* had been a sacred precept of Zionist ideology and constituted the highest expression of Zionist fulfillment. As Ben-Gurion affirmed, the one and only hope for creative Jewish survival lay in immigration to the Jewish state. It contributes to the national strength and serves as an antidote to

the demographic problem. It fortifies the physical bond between Israel and the Diaspora.

Jews have been immigrating to Erez Israel for generations. They were motivated by sentimental and religious reasons. It was only from 1882 that the driving force was nationalism and the aspiration to lay the foundations of a national home, and eventually a state. Each wave of immigration was called *aliyah,* meaning ascent. Between 1882 and 1948 some 550,000 Jews made *aliyah*.

Jews immigrated in spite of the restrictions instituted first by the Ottoman government and subsequently by the British authorities imposed. In the eyes of the Turks and the British this kind of immigration was illegal, but the Zionist Organization considered the prohibition itself as illegal. It is estimated that the total number of *"illegal" immigrants (*aliyah bet*) was 120,000, which constituted about 15 to 20 percent of the Jewish population in Palestine in May 1948 (around 640,000). The figure of 120,000 does not include the Cyprus internees. Even during the hazardous years of World War II (1939–45) immigration did not stop and reached the total figure of both legal and "illegal" immigrants of 62,530. During the period between the end of World War II and May 15, 1948, the total number of immigrants, both legal and "illegal," amounted to 56,480, the infamous 1939 restrictions notwithstanding.

With the establishment of the State of Israel the gates of immigration opened wide. However, as the centers of Jewish communities in Eastern and Central Europe were tragically decimated, the State of Israel and the Jewish Agency turned to other centers. Between May 1948 and the late 1950s entire Jewish communities were transplanted to Israel. Among these communities were, in round numbers: Yemen (42,000), Iraq (125,000), Iran (30,000), Bulgaria (40,000), Yugoslavia (68,000), Czechoslovakia (20,000), Poland (120,000), Romania (125,000), Morocco, Tunisia, Algeria (60,000), Libya (32,000), China (2,250), and Aden (3,500). In addition to the sea route, the Jewish Agency organized accelerated immigration from Yemen, Iraq, and elsewhere (Operation Ezra and Nehemia, Operation Magic Carpet). Immigrants arrived in Israel from 70 countries speaking different languages and reared in different cultures and traditions. The newborn State and the Jewish Agency were confronted with the Herculean task of absorbing them and molding them into one nation.

During the first three years of Israel's existence its population more than doubled. During the 1950s and 1960s, Middle Eastern countries constituted a major source of immigration, while the 1970s saw a renewed wave from the West and the U.S.S.R. In the early 1990s there was a new wave of immigration from the former Soviet Union, as well as from other countries, notably Ethiopia and Argentina. In sum, from 1882 to 2005 more than 3,000,000 Jews immigrated to Israel, an unprecedented figure by world standards. By the end of the 20th century there were almost 100 times as many Jews in Erez Israel as at the beginning of the century (50,000).

A word must be said about the two extraordinary Aliyot from the former Soviet Union as well as from Ethiopia. Iso-

lated from the rest of world Jewry and living under a despotic government, Soviet Jewry was almost written off. However, the ecstatic reception accorded to Golda Meir at Moscow's Great Synagogue demonstrated that Soviet Jewry remained far from moribund in their ethnic loyalties. The emergence of a vibrant human rights movement among Soviet intellectuals was a powerful catalyst that contributed to the emergence of newfound nationalism and self-assertion. The remarkable military victory of the Israel Defense Forces in the Six-Day War was an inspiring source of pride. In consequence, the desire to immigrate to Israel became more powerful. The Soviet government was intransigent and hostile but the Jews did not give in. Their struggle could justly be termed heroic. Some were prepared to face imprisonment, to sacrifice their livelihoods and even life itself. The phenomenon of the "refusnik" fired the imagination of many far beyond the borders of Russia. Demonstrations were held in most of the Western capitals under the banner of "Let My People Go." Jews and gentiles took part in the campaign. It was a remarkable demonstration of solidarity in a cause.

American pressure too made its mark. On January 3, 1975, following resolutions overwhelmingly adopted by the House of Representatives and the Senate, President Gerald Ford signed the Trade Reform Act which incorporated the Jackson-Vanik-Hills Amendment. It made trade with the Soviet Union conditional on relaxation of emigration quotas for Jews wishing to go to Israel. It brought a reluctant Soviet Union to terms. For the Jewish lobby it was a remarkable victory.

During the 1970s, 160,000 Soviet Jews made *aliyah* to Israel, constituting approximately half the number of *olim* who arrived in the country. In February 1985 the best-known Prisoner of Zion, Nathan (Antoly) *Sharansky, was freed from a Soviet prison after a long international campaign for his release. On his arrival in Israel he was accorded a national welcome.

After Mikhail Gorbachev came to power a liberal and open policy was initiated, so that during the first part of 1990 *aliyah* reached a high point – 100,000 *olim* were registered – a number that would have been considered completely improbable a few years earlier.

The Israelis observed all this with amazement and admiration. It was nothing short of miraculous. It presented the government of Israel as well as the Jewish Agency with an unprecedented challenge. The absorption of hundreds of thousands of new immigrants within a short period of time in terms of housing, employment, and integration into Israeli society was a task that seemed beyond the ability of the young state. There were indeed a great many problems. But then a second miracle occurred. Not only did the Russian immigrants adjust to the new conditions with relative ease but within a short period they began to contribute to Israeli life, in economics, culture, science, and medical services. For this was an *aliyah* rich in talent, enterprising and determined. No previous *aliyah* had included so many academics, engineers, technicians, musi-

cians, and scientists. Coming from a country which had been anything but democratic, they showed acute political awareness and their representation in the Knesset (eight seats) in a party called Yisrael be-Aliyah was a testimony to their civic maturity. In short, this was one of the greatest gifts that Israel and the Zionist enterprise had received since its foundation.

The Israelis were spellbound also by immigration of Jews from Ethiopia. They were of an entirely different background. Black-skinned, they lived in the highlands of Gondar province. Considered by their neighbors as falashas (strangers), they identified themselves as *Beta Israel. Their origin was uncertain but it seems that they were Africans who in the early Middle Ages had been converted to Judaism. Although cut off from world Jewry they had preserved Jewish customs and traditions with remarkable tenacity in the face of merciless persecutions at the hands of Christian governments. Nor did their yearning to return to Zion abate at any time. By the 19th century their numbers had dwindled to less than 30,000. In 1948, when the news of the foundation of the Jewish State reached them, they became possessed of a feverish desire to depart to the Land of Promise.

In March 1979, with President Carter's assistance, the government of Israel discreetly transferred funds to Sudan's President Ja'afar Numeiri, who for his part agreed to grant Ethiopian Jews temporary asylum in Sudan. Yet their initial migration of over 9,000 people was a trying ordeal. They went on foot, encountering incredible difficulties – disease, starvation, robbery, rape – until they reached a prearranged base, from which 2,000 were transported to the Red Sea coast and then taken to Israel by the Israeli navy. Five years later, in 1984, Operation Moses was carried out, during which another 7,000 Ethiopian Jews were taken out of Sudan. This time they were flown to Europe and from there to Israel. The Israeli government, jointly with the Jewish Agency, the World Zionist Organization, and other bodies, had done a magnificent job. Operation Moses was followed by Operation Solomon, during which, in May 1991, 15,000 Ethiopian Jews were air-lifted to Israel in 36 planes. About 4,000 remained behind in the Gondar highlands; these too, in due course, were quietly, though less dramatically, transported in small groups to Israel.

The absorption of the Ethiopian Jews and their integration into the Israeli society has proven to be far more difficult than that of *olim* from the former Soviet Union. But at least their physical existence is assured. Their *aliyah* could be truly termed as a heroic implementation of the Zionist ideal without prior education in Zionism.

SETTLEMENT ON THE LAND. Like *aliyah*, settlement on the land constitutes a principal tenet of Zionism. The back to the land movement symbolized the transformation of the Jew's image from that of a "luftmentsh" in the Diaspora to that of a healthy and productive individual rooted in the land. This was palpable evidence of normalization. It showed the world that the Zionist experiment was not a passing phenomenon but a durable entity.

In addition to the social, economic, and political importance of settlement on the land, it had also a strategic value. It defined the borders of the Yishuv and subsequently of the State. Thus Kefar Giladi, Metulla and Tel Ḥai ensured that the Galilee panhandle would become part of the Jewish National Home. The pioneers of the 11 settlements that were established in the Negev on the eve of the proclamation of the State ensured that the Negev would not be cut off from the rest of the country.

Since the beginning in 1882, 1,221 rural settlements have been founded in all parts of the country (944 since statehood), changing its superstructure and landscape beyond recognition. It was the World Zionist Organization that played the major role in implementing this huge enterprise. The Jewish National Fund (the Keren Kayemet le-Israel) was also engaged in agricultural development, acquisition of land, building new roads, and afforestation. The land purchased by the KKL became the property of the Jewish people. It could not be sold and was therefore formally leased by the settlers.

EDUCATION. Education has traditionally been the Jewish forte. It is the asset that Jews throughout the generations have valued the most. A learned man was esteemed as a model to be emulated. Education fortified the Jewish ability to survive in hostile environments. Although emancipation brought its obvious blessings, it was sometimes at the expense of Jewish identity and culture. Acculturation and the consequent assimilation, not to mention intermarriage, have become the greatest threats to Jewish survival. In the United States the number of mixed marriages has already passed the 50% mark. In France, in England, and in Western Europe in general the situation is not much better. This is the price the Jewish people are paying for the enjoyment of life in open societies.

The World Zionist Organization could not remain indifferent to this dangerous trend. The answer lies in education. It should be borne in mind that in the Diaspora 50 percent of Jewish youth do not receive any Jewish education at all, and that only 25 per cent attend Jewish schools. First it should be emphasized that education begins at home. The home and family life play an important part in designing the educational process. It is the parents who provide the initial framework and lifestyle that will prepare the child for Jewish life in a gentile environment. But if the parents themselves are subject to the identity crisis so characteristic of life in the Diaspora, the future of their offspring as Jews does not seem bright.

The school system is meant to ameliorate the situation, and it is here that the Zionist Organization plays its part by inspiring and assisting the local Jewish communities to cultivate Jewish education. In concrete terms teacher-*sheliḥim* from Israel are sent to reinforce the existing staffs of local schools and give them particular direction. They focus on teaching Hebrew, Jewish history, and Zionism and on inculcating greater familiarity with the State of Israel. Their overriding purpose is to strengthen Jewish identity, to induce pride in

the Jewish heritage, and to equip the students with the tools to counter anti-Zionist and antisemitic propaganda.

There are two kinds of schools: Jewish day schools and complementary systems of education. Most day schools are on the elementary level. After completion, studies are continued in general schools. The complementary educational system is meant for those parents who for a variety of reasons do not have the option of a full day school. In most cases it is housed on the synagogue premises or in the community cultural center. It has classes on Sundays and thus the system became known as "Sunday School." The program of study at complementary schools focuses on fundamental Jewish concepts, Hebrew, the teaching of prayer, preparation for Jewish festivals, and reinforcing the bond with the State of Israel. The educational effect of this system is limited but still the seeds are being sown. In the United States about 24 percent of young Jews participate in this framework.

In addition to the formal educational system, youth and children enjoy an informal educational experience. In most Jewish communities in the Diaspora there are frameworks which facilitate encounters aimed at the consolidation of Jewish national identity and ideas. These are provided by the Zionist youth movements, which operate practically on parallel lines with the youth movements in Israel. In North America about seven percent of children and youth participate in informal youth movement activities, in the former Soviet Union about 20 percent, and in Latin America 30 percent. Most of the youth organizations maintain strong connections with Israel and Zionism though with different ideological orientations. Moreover, an integral part of their programs are visits to Israel.

Visits to Israel have proved highly effective in the educational process. They have existed since the 1950s and expanded significantly after the Six-Day War. They last for several weeks during the summer vacation and include tours of historical sites of national significance and an introduction to contemporary Israeli society and culture. Since the 1990s these trips have been called named the "Israel Experience." Jewish leaders throughout the world recognized the importance of this particular experiment in stemming assimilation by forging Jewish identity and in educating future leaders. In 2000 a new venture was launched: "The Birthright Israel Project." It is sponsored by Jewish philanthropists, the government of Israel, the Jewish Agency, and Jewish communities throughout the world. The project also enables university students to take courses at institutions of higher learning in Israel free of charge through scholarships. Nearly 40,000 young Jews have visited Israel so far within the framework of the Birthright Israel Project.

Also of importance are summer camps for children and youth financed by communities In the Diaspora. They are popular particularly in North America, where there are over 200 such camps. In some cases camps are active all year round. The participants range from age 8 to 16. The Zionist Organization plays a major role in all the above-mentioned activi-

ties. Early in 1981 the World Zionist Organization launched the Jerusalem Fellows program, which aims to recruit young men and women and train them in Israel for leadership positions in the field of education and organization.

In the area of adult education in 2000 the Jewish Agency initiated a program of "People to People" which aims to stimulate intercourse between professional groups and individuals in Israel and the Diaspora. Partnerships between cities in Israel and Jewish communities in the Diaspora in various parts of the world ("Partnership 2000") is yet another example of cooperation and the demonstration of mutual responsibility. Thus, the city of Netanyah is linked to the Jewish community in Cincinnati; Ramleh and the Gezer regional council to Kansas City; Ashkelon to Mexico; Nahariyyah to Belgium, etc. Public lectures, conferences, and seminars add another dimension to adult education. A powerful factor in galvanizing Jewry and enhancing solidarity with Israel are extraordinary events like the Yom Kippur War and the struggle for the rights of Soviet Jews ("Let My People Go") and against all manifestations of antisemitism and the vilification of Israel.

ORGANIZATION. At the outset of the 21st century the supreme body of the World Zionist Organization remained the Zionist Congress – an elected parliament of sorts. It constitutes the organizational arm of the Zionist movement. Its main roles are: to stimulate *aliyah*; to strengthen the State of Israel; to promote Jewish and Hebrew education and cultivate Jewish values; to counter the trends of assimilation and defend Jewish rights. The Congress meets every four or five years and the seats (more than 500) are allocated geographically in the following proportions; 38% for Israel, 29% for the United States; and 33% for all other countries. In Israel delegates are allocated to the Zionist political parties proportionately to their representation in the Knesset.

The Congress elects the Zionist executive, on which major ideological movements and international bodies are represented, as well as the Zionist General Council. The latter body meets once a year between congresses. The chairman of the Zionist executive serves also as chairman of the Jewish Agency and the Executive. Similarly, the treasurer of the World Zionist Organization serves as the treasurer of the Jewish Agency. In 1952 an agreement was reached between the government of Israel on the one hand, and the World Zionist Organization and the Jewish Agency on the other, on a functional distribution. Accordingly, the Zionist institutions took upon themselves all matters relating to *aliyah*, absorption of immigrants, and settlement on the land, while security, finances, trade, employment, etc. are the prerogatives of the government. The agreement was confirmed in a covenant two years later. In 1980 a coordinating commission of these two constituent bodies approved the establishment of a national authority for *aliyah* and absorption.

Between the years 1973 and 2000 the following leaders served as chairmen of the Zionist Executive: Aryeh Dulzin, Pinḥas Sapir, Joseph Almogi, Simcha Dinitz, Yehiel Leket,

Avraham Burg, and Salai Meridor. Since the Twenty-Seventh Zionist Congress, no president had been elected.

There is a body of opinion that maintains that with the establishment of the State of Israel the Zionist Movement had fulfilled its historical task and outlived its usefulness. This is a misconception. The state, as Herzl proclaimed, is not an end in itself but only a means to implement high ideals such as the ingathering of exiles; redemption of land; building of a model society, and serving as a beacon to Jewry and the world at large. So long as these objectives have not been fulfilled, Zionism still has a role to play in Jewish history. Zionism is the embodiment of Jewish nationalism and as long as the Jewish people exist, Zionism will endure as well.

[Isaiah Friedman (2nd ed.)]

ZIONIST UTOPIAS

In the initial stages of the Zionist movement, the borderline between programmatic and utopian writing was blurred. Moreover, Zionist authors and publicists often consciously made use of the utopian form in order to visualize the end product and thereby prove the feasibility of Zionism. Herzl's *Der Judenstaat* is a classic example of a book in which Zionist ideology and utopian visions are present. In a letter to Moritz *Guedemann (August 22, 1895), Herzl writes of the book: "I can now say why it is no Utopia… There have been plenty of Utopias before and after Thomas More, but no rational person ever thought of putting them into practice. They are entertaining, but not stirring" (Complete Diaries I, 235–6). Herzl's novel *Altneuland*, which was the most famous Zionist utopia, had a great deal in common with the program presented in *Der Judenstaat*. *Altneuland* sought to indicate the way in which Herzl visualized the realization of Zionism – a Jewish state in which technology would be developed to the highest degree and in which the Jewish intelligentsia would find unlimited opportunities. The new culture, however, would be essentially a European culture, based on a medley of languages and devoid of distinctive Jewish character. It is thus not surprising that Aḥad Ha-Am, to whom the continuity of Jewish culture was the essence of Zionism, was outraged by the book. Herzl envisaged that the Jewish state would become a reality by 1923, 20 years after the publication of *Altneuland*.

Another Zionist utopia, *Massa le-Ereẓ Yisrael bi-Shenat Tat* ("A Journey to Ereẓ Israel in the Year 5800 (2040)," 1893), by the Hebrew writer Elhanan Leib *Lewinsky, which preceded *Altneuland* by ten years, reflects the Zionist dream of East European Jewry, rooted as it was in Hebrew culture. The Hebrew language and the fostering of Hebrew culture occupy a central place in the book, and Aḥad Ha-Am's vision of Ereẓ Israel becoming the spiritual center of the Jewish people reaches fulfillment. In *Ein Zukunftsblick* by Edmund *Eisler (written in 1882 and published anonymously in 1885) both the political and cultural visions of the Jewish state are found. The novel describes the Jewish exodus from Europe and the creation of the state of "Judah" in Ereẓ Israel, which has Hebrew as its official language; the fledgling state is attacked by its neighbors, but vanquishes them all. Eisler even had a nightmare vision of Germany. He exchanged correspondence with Herzl on the subject of his book. In the main, the book reflected the background of European antisemitism and the pogroms in Russia.

Edward Bellamy's book *Looking Backward, 1887–2000* had a profound influence on Zionist utopias. One example was a utopia of political Zionism by Max Austerberg-Verakoff, *Das Reich Judaea im Jahre 6000* (2241), published in 1893. The author, a non-Jew (although possibly of Jewish origin), envisaged a mass exodus of Jews from Europe, their settlement in Ereẓ Israel, and the founding there of a Jewish state with Hebrew as its official language. He discusses the attitude of the Jewish state toward the European power that had been guilty of persecuting the Jews (Russia) and the relations between the citizens of the Jewish state and the Jews who stayed behind in the Diaspora. Austerberg-Verakoff also established contact with Herzl. Another Zionist utopia inspired by Bellamy was *Looking Ahead* (1899) by Henry Pereira *Mendes. A native of England, Mendes settled in the United States and for several decades played an important role in the cultural life of American Jewry. He was one of the first American Jews to respond to Herzl's call, and his book expresses the essence of the Zionist vision: the Jewish state and Jerusalem, its capital, would be the center of world peace, and by the creation of the state, the nations of the world would redress the wrongs they had perpetrated against the Jews throughout the ages. There is also a description of the mass exodus of Jews to Ereẓ Israel; those who stay behind are enjoined to be loyal citizens of their countries, without losing awareness of the temporary nature of their residence outside of Ereẓ Israel.

At the height of the *Dreyfus trial (1898), a utopian extravaganza, "Anti-Goyism in Zion," was published in *Siècle*, a Parisian journal, in March 1898; it later appeared in *Die Welt* in German translation (April 1898) and was also published in Hebrew (1954). Its author was Jacques Bahar, who represented Algerian Jewry at the First Zionist Congress. His work, written under the impact of manifestations of French antisemitism (which also had its repercussions in Algeria), describes a "Dreyfus trial" taking place in the Jewish state, with "Anti-Goyism" playing the role of European antisemitism. He makes the point that in the Jewish state tolerance would prevail and a phenomenon such as the antisemitism that dominated the Paris scene of 1898 would be unthinkable.

Two utopias describe a Jewish state bearing the name "Israel." One, written by the Hebrew author Isaac *Fernhof, describes the ascent of the poor and downtrodden Jews to Ereẓ Israel, where they create an independent state to which they give the name the State of Israel. The book is called *Shenei Dimyonot* ("Two Ideas") – one being the reality as experienced by the author, the other his vision of the Jewish state. The second utopia that refers to the Jewish state as the State of Israel was the work of the Hebrew-Yiddish writer Hillel *Zeitlin. Written in 1919 under the name *In der Medinas Yisrael in Yor 2000* ("In the State of Israel in the year 2000"), it reflects

the tremendous impact of the Balfour Declaration upon the Jewish masses. The author foresees the establishment of the state and its growth and development. The work appeared in serial form in *Der Moment*, the Warsaw Yiddish daily, but was never completed. The Balfour Declaration also inspired *Komemiyyut* ("Upright"), a comprehensive work written in Russia in 1920–21 by the Hebrew author Shalom Ben-Avram and published shortly thereafter in the quarterly *Ha-Tekufah*. This utopia contains an astounding accurate vision of mass *aliyah*, the founding of the Jewish state, and the Jew at last straightening his back in the young and vibrant state.

During the British Mandatory period (1918–48), a number of utopias were published in Hebrew (as *Yerushalayim ha-Benuyah* by Boris *Schatz, 1924). They often reflect the contemporary situation – the struggle for Jewish labor and the opposition to the Mandatory regime. When the Jewish state is founded, the problems are foreseen as solved and all unjust decrees abolished.

[Getzel Kressel]

CHRISTIAN ZIONISM

As Zionism is understood to mean a modern Jewish movement aiming at resettlement in the Land of Israel and the revival of an independent Jewish nation, "Christian Zionism," i.e., the active support of Christians for such a movement, could not have preceded the Jewish forerunners of Zionism in the second half of the 19th century. However, Christian Zionism had a long prehistory, deeply rooted in theological thought and messianic expectations. Only gradually, with the emergence of Jewish political and settlement activities in Palestine, did Christian Zionism become more and more secular, pragmatic, and political, though it often still bore the imprint of its religious tradition and motivations. Thus, even in the historic breakthrough of the Balfour Declaration, issued by the British government in 1917, when political expediency was apparently the main factor, religious motives were certainly not absent from the thoughts of men like Lloyd George and Balfour. The importance of the Christian and biblical traditions also became apparent in the attitude toward the State of Israel in the 1950s and 1960s. The Afro-Asian world (including Muslim countries), insofar as it had no biblical traditions – particularly in Central and Eastern Asia – could only gradually "discover" and evaluate the ancient roots of the Jewish renaissance in the Land of Israel, and this realization developed mostly after these states had developed formal relations with Israel on a purely utilitarian basis. The attitude of the Christian world, however, remained clearly influenced by an undercurrent of intimacy derived from the biblical tradition.

The Theological Background. From the time of the Reformation, the belief that Jews should return to the Holy Land, in accordance with the biblical prophecies, became popular mainly among pietistic Protestants and certain groups of English Puritans. It was based on the millenarian concept which held, on the basis of a literal interpretation of apocalyptic prophecies, that the second coming of Jesus was at hand and that he

would rule from Jerusalem for 1,000 years (the millennium). The millenarians anticipated not only the return of the Jews to their land but also their conversion to Christianity as important conditions and "signs of the time" prior to the second coming (Advent).

The Restoration movement spread from 16th-century England to other European countries and became particularly strong in the United States from the 18th century. It flooded the Protestant world with publications. Sometimes the Restorationists requested heads of state to take political measures in order to obtain rights for the Jews to settle in the Holy Land. Their activity remained without any practical results, however, until the 19th century, when essential changes took place in the character of the movement and in the motivations of Christians who supported the return of the Jews to the Land of Israel.

Some of the new sects which arose placed this belief at the center of their theology as the fulfillment of the eschatological prophecies which would bring on the end of days and the millennium. In 1830 the Plymouth Brethren were founded in England by John N. Darby (1800–82), whose doctrine of dispensationalist premillennialism asserted that all the biblical prophecies relate to the return of the Jewish people to its homeland prior to the Advent. Before the second coming, however, the Jews and all the other nations will be judged during a period of tribulation, after which Jesus and the Jewish remnant will rule over all the nations from Jerusalem. Many Protestant Fundamentalist churches adopted this outlook and continue to promote it to this day.

In 1844 the Christadelphians were established in England by John Thomas, author of *Elpis Israel*. From the outset, this sect supported the return of Jews to the Land of Israel. Later it offered practical assistance to Jews, such as the support of the Ḥibbat Zion movement, and even the attempt to rescue Jews during the Nazi Holocaust. The Mormons, founded by Joseph Smith in the United States in 1830, held that Jews would return to their land as "a sign of the time" of the second coming. In 1841 the Mormon missionary Orson Hyde was sent to Jerusalem, where he recited a "Zionist" prayer and dedicated the land to the Jews from the top of the Mount of Olives in Jerusalem. The Adventist movement, which emerged in the United States in 1830, split into many sects. A few of these sects view the return of the Jews to the Land of Israel as a fulfillment of their eschatological beliefs, and some of them have moved their center to Israel.

In the 19th century millenarian sects, mostly American, engaged in experiments in settlement in the Holy Land in order to await the approaching Advent of Jesus. All these attempts failed, including the 1851 agricultural settlement at Monthope, near Jaffa, of the American Clorinda S. Minor and the settlement near Jaffa of Reverend G. Adams and a group of Americans from the Church of the Messiah in 1866.

The Emergence of Political Motives. During the 19th century, Christian politicians in various countries attempted to act on

behalf of the return of the Jews to the Land of Israel, adding to their religious beliefs the political interests of their countries in the Near East. An outstanding example was Lord Anthony Ashley Cooper, Earl of Shaftesbury (1801–85), who drew up detailed projects for the settlement of Jews in Palestine under British auspices, which he presented to the government and circulated among Protestant heads of state in Europe and in the United States. The beginning of practical Jewish settlement on the land in Erez Israel, and especially the establishment of the Ḥibbat Zion movement and later Theodor Herzl's political Zionism, contributed to an increase in millenarian assistance to the realization of Zionist aspirations. The Canadian theologian Henry Wentworth Monk visited Palestine and assisted in the foundation of the first Jewish settlements. The English mystic Laurence Oliphant, who eventually settled in Palestine, lent aid to the first Jewish pioneers from Russia, tried to intercede on their behalf in Constantinople, and founded an influential Christian group in London to assist the Ḥibbat Zion movement. The Zionist activities of Herzl's friend William H. *Hechler also derived from a deeply religious outlook.

The most famous of the Zionist millenarians in the United States was William Blackstone (1841–1933) of Chicago, the author of *Jesus is Coming*, in which he expounded his belief in the future of the Jews in the Land of Israel according to the dispensationalist conception. He attempted a political realization of his ideas through memoranda to the president of the United States, in 1891 and in 1916, which demanded American intervention for the return of the Jews to the Land of Israel as a solution to the czarist anti-Jewish persecutions. Hundreds of eminent Americans signed these petitions, which stimulated various reactions in the general and the Jewish press. Blackstone participated in several Zionist conventions in the United States and remained a supporter of the Zionist movement until his death.

Archaeologists, Scholars, and Politicians. In the second half of the 19th century some Christians supported the return of the Jews to their homeland out of exclusively humanitarian or political motivations, distinct from theological views. In 1852 Colonel George Gawler (1796–1869) established the Association for Promoting Jewish Settlement in Palestine, which assisted the British consul in Jerusalem in the training of local Jews for agricultural work. He also published practical suggestions for Jewish settlement in Erez Israel as a guarantee for establishing British influence in Syria. The Palestine Exploration Fund, established in England in 1865, was a center for energetic supporters of Jewish settlement in the Land of Israel. Among its members were the archaeologist Charles Warren, who conducted excavations in Jerusalem and foretold Jewish rule in the country, and Claude Reignier Conder (1849–1910), a cartographer and scholar of Palestinian studies who preached and wrote on the realization of the Zionist idea. The Italian philosopher and politician Benedetto Musolino (1809–85) preached Jewish settlement in the Land of Israel as a means of bringing European culture into the Middle East in *La Gerusalemme e il Popolo Ebreo* (1851). Jean Henri Dunant (1820–1910), founder of the International Red Cross, displayed a great interest in a humane solution to the Jewish problem. From 1863 to 1876 he attempted (in vain) to rouse the Jewish organizations in Western Europe to act on behalf of Jewish settlement of Palestine, and he founded the Palestine Colonization Society in London in 1875.

In 1887 the question of Jewish settlement in Erez Israel reached the British parliament. Edward *Cazalet, a well-known industrialist and economist, demanded the return of the Jews to Palestine under British auspices both in his book and in his campaign speeches for parliament. He was the first Christian who regarded Erez Israel as the spiritual and scientific center for Jewry, and he foresaw the idea of a Hebrew university in Jerusalem.

After the Balfour Declaration. In the 20th century, mainly after the Balfour Declaration (1917), another change occurred in Christian activity on behalf of Zionism and the establishment of a Jewish state. The British Palestine Society was established and was active from 1916 to 1924 and from 1930 to 1946 in advancing common interests of British policy and Zionism. Similar Christian organizations were founded in other countries. However, the most vigorous assistance and open support of Zionist aspirations were given by several Christian groups in the United States. In 1930 the Rev. Edward Russell founded the Pro-Palestine Federation, which was joined mostly by clergy. In 1932 the American Palestine Committee was founded. Its members included prominent public figures, statesmen, and officials. The Christian Council of Palestine was founded in 1942 and had a membership of 3,000 clergymen in 1946, mostly from liberal churches. The latter two organizations merged in 1946 as the American Christian Palestine Committee, which had a very influential membership of 15,000. This organization published books and pamphlets on the justice of Zionist aspirations and later to strengthen sympathy toward the State of Israel. After the establishment of the state, gentile friends of Israel founded organizational frameworks for their activities in the form of friendship leagues.

[Yona Malachy]

INTRODUCTION TO ZIONIST BIBLIOGRAPHY

Zionist literature developed in many languages: German (*Rome and Jerusalem* by Moses Hess), Hebrew (*Derishat Ziyyon* by Zevi Hirsch Kalischer and the articles of D. *Gordon), and gradually in many other languages, not only in countries with large Jewish populations. It also appeared in many forms, from thick volumes to leaflets and periodicals issued at various intervals (dailies, weeklies, monthlies, yearbooks, collections commemorating special occasions, etc.). The variety of form is reflected in the variety of genre: feature writing, essays, chronicles, belles lettres in all its forms (fiction, plays, poetry, etc.), historical research and documentation, and so forth. Zionist literature covers the period from the 1860s to the present and, including all the books, leaflets, articles, and so on, encompasses millions of items.

A difficulty in cataloging this wealth of material is that in the early days of Ḥibbat Zion, the border between "Zionist" material and works on Erez Israel in general was very vague, and this lack of a clear distinction between the two categories was not overcome in later years. Even after the establishment of the State of Israel it was difficult to draw a distinct line between literature on the state and writings on the Zionist movement. Throughout the existence of Zionist literature, therefore, the terms, "Ḥibbat Zion," "Zionist movement," "Erez Israel," and the "State of Israel," have been viewed as loosely synonymous, although the special scope of each concept was clear. Thus it is difficult to differentiate bibliographically between the history of the *yishuv* from the beginning of the 1880s and the history of the movement and political Zionism.

This overlapping in concepts is inevitably reflected in the majority of the works cited below. Characteristic is the subtitle of a recent platform for research, which is entitled *Ha-Ẓiyyonut: Meʾassef le-Toledot ha-Tenuʾah ha-Ẓiyyonit ve-ha-Yishuv ha-Yehudi be-Erez Yisrael* ("Zionism: Journal of the History of the Zionist Movement and the *Yishuv* in Erez Israel," vol. 1, 1970). The same problem of exact definition exists in the bibliography *Esrim Shenot Medinat Yisrael* ("Twenty Years of the State of Israel," 1970) by A. Neuberg, in which much Zionist material is found, and the index volumes titled *Palestine and Zionism* (all these items are discussed below).

Bibliographies. As a rule, the bibliographies dealing with Zionism are listed in Shunami's *Bibliography of Jewish Bibliographies* (1965²), but not all the material on this subject is found under the headings "Zionism" or "Zionist" in the index (p. 990), and a considerable amount of relevant material is found in other divisions. Bibliographical attention was first paid to the subject of Zionism at the end of the 19ᵗʰ century, even before the advent of Theodor Herzl. Practical efforts intensified with the advent of political Zionism, especially when newspapers throughout the world began to display an interest in Zionism. At a meeting of Russian members of the "Actions Committee" in Minsk, following the Minsk Conference (1902), it was decided to charge G. Belkowsky with the task of publishing a comprehensive bibliography on Zionism. The book came out in Russia under the title *Ukazatel literatury o sionizme* (St. Petersberg, 1903). It did not cite the names of the editors of the bibliography, which Belkowsky revealed after many years in a detailed article on this project (*Haolam*, Sept. 10, 1942, p. 425). The work listed over 4,000 entries in a variety of languages, in three categories: (1) Jewish nationalism; (2) Zionism: Theory and Practice; and (3) Erez Israel.

The second of the three parts, which was to appear later and include literature in Hebrew and Yiddish, was not published because of the conditions in czarist Russia at the time. Hebrew works on Zionism were recorded afterward by William *Zeitlin in his bibliography *Bibliotheca Sionistica* (Frankfurt, 1909; reprint from ZHB, vols. 12–13, 1908–09; includes works from 1852 to 1905).

At the same time a bibliographical project of vast dimensions on Palestine, entitled *Die Palaestina Literatur*, began to be carried out under the editorship of Peter Thomsen. Up to 1971, six volumes had been published, covering the literature from 1895 to 1939 (although the title page of the sixth volume states that it goes down to 1944). This series was published in Germany from 1908 to 1956 (the beginning of the sixth volume includes a biography of Thomsen). Material on Zionism is found only in the first four volumes and in the section on contemporary Palestine; a vast amount of material is listed in several languages (inter alia, bibliographies other than those recorded by S. Shunami).

Since 1944 many bibliographies have appeared, some of a general nature and some devoted to various bodies and institutions of the Zionist movement and Zionist Organization. Among the latest general and detailed bibliographies that include Zionist literature in various languages is *Bibliografiah Ẓiyyonit* (1943), by Abraham Levinson (with the cooperation of N.M. Gelber), which lists 2,400 entries in 17 languages. Bibliographical notations have been added to each section of Yiẓḥak Gruenbaum's work *Ha-Tenuʾah ha-Ẓiyyonit* (vols. 1–4, 1942–54) by G. Kressel (1–2) and Israel Klausner (3–4). With the establishment of the State of Israel, Sophie A. Udin published an important bibliographical listing in English entitled "A List of References Leading to the Establishment of the State of Israel" (in *The Journal of Educational Sociology*, 22:3 (Nov. 1948), 239–47). Finally, *The State of Israel* (1948–68), by Assia Neuberg, contains much material on Zionism in a variety of languages (1970).

Any bibliography, no matter how complete, is by its nature unable to be entirely up-to-date in recording the continuous publication of works each year. Therefore annual bibliographical listings are included in various yearbooks: the *American Jewish Yearbook*, the *Palestine Yearbook*, the *Zionist Yearbook*, the *Jewish Book Annual*, etc. The most complete and correct ongoing bibliographical listing, however, is that published in each edition of the bibliographical quarterly of the Jewish National and University Library in Jerusalem, *Kirjath Sepher*, in the section on "Zionism, Erez Israel, the State of Israel," which covers material published in Israel and abroad. The Zionist Archives in Jerusalem have published a bibliographical bulletin in various forms and at irregular intervals since 1936 (mimeographed). A vast amount of material on Zionism can also be found in the many bibliographies on personalities active in the field; these are listed in the section "Personal Bibliographies" in Shunami. The same is true of bibliographies on institutions and organizations within the Zionist movement, e.g., *Madrikh Bibliografi le-Sifrut Ẓiyyonit-Datit* ("A Bibliographical Guide to Literature on Religious Zionism," 1960²), by Yiẓḥak Raphael, which goes beyond the field defined in its title and also includes articles in periodicals and the press, and *Ha-Poʾel ha-Mizrachi be-Erez Yisrael* (1968), by Yosef Salmon, which also includes articles.

Press and Periodicals. The press and periodicals, Jewish and non-Jewish, in all languages, contain much important mate-

rial on the history of the Ḥibbat Zion movement, political Zionism, and everything pertaining to Ereẓ Israel over the past generations, from first-hand documentation (statements, press releases) to news items, commentary, reaction, essays, and research. Periodicals of all sorts, issued at varying intervals, whether published by official institutions of the Zionist Organization or its sympathizers or by those opposed or openly hostile to Zionism, reach into the thousands; and recent research has led to the conclusion that periodical literature attacking Zionism – whether published by Jews or non-Jews – is no less important for the study of Zionism than the publications of official Zionist organs or Zionist sympathizers.

In the beginning the scope of the Zionist press was limited, in direct relation to the size of the movement itself. In the 1860s and 1870s, the Jewish press, in all languages, was generally hostile, or at least apathetic, to the Jewish nationalist movement, with the exception of the *Jewish Chronicle* in England, *Der Israelit* and *Die Juedische Presse* in Germany, *The Occident* in the United States, and the Hebrew *Ha-Maggid* (Prussia). A pioneer of Zionist journalism in Germany was *Selbstemanzipation*, edited by N. Birnbaum, and its successor *Zion*, edited by H. Loewe and Willy Bambus (until Bambus came into conflict with Herzl before the First Zionist Congress). Then Herzl began to publish the weekly *Die Welt* (in German), which later became the first official organ of the Zionist Organization. Afterward organs of the Zionist organizations in various countries began to appear in a number of languages. Over the years Zionist newspapers have been established wherever a Zionist organization functioned, and some non-Zionist newspapers became pro-Zionist or tempered their opposition. At the same time, however (and until World War I), the Jewish press that was not particularly sympathetic toward Zionism – from the Orthodox and Reform movements to the leftist parties in Eastern Europe – was also a substantial force. The change in their attitude came about gradually, as the achievements of the Zionist movement and the *yishuv* became more noticeable and, by the outbreak of World War II, the future of the Jews in Europe grew darker and darker. Finally, a radical change in attitude came about during and after the Holocaust, which practically reversed the situation that had existed during the 1860s and 1870s: a very small minority of the press remained opposed to the Zionist movement and the State of Israel and the majority were devoted to them to one degree or another. Because of this change in attitude, it was practically unnecessary for the Zionist movement to maintain its own organs, although such a press does continue to exist in many countries.

The Hebrew press holds a unique position. Even when it was employed to preach the doctrines of the Haskalah and indifference toward Jewish nationalism and Zionism, the Hebrew language was, by its very nature, a kind of living bridge to Ereẓ Israel. After the illusions of the Haskalah in Eastern Europe had been destroyed, therefore, the Hebrew press was the most loyal instrument of the Ḥibbat Zion movement and afterward of political Zionism, each paper expressing a differ-

ence in orientation. Sharp opposition to Jewish nationalism and Zionism in the Hebrew press was inconsequential compared to the overwhelming majority of pro-Zionist publications. The opposition began with *Ha-Emet*, a socialist-oriented paper edited by A.S. Liebermann, and after a number of years it was also expressed in extreme Orthodox circles, thus appearing at opposite poles of the spectrum. Over the years this opposition has taken various forms (today as the pro-Arab Israel Communists, Rakaḥ, and the *Neturei Karta, respectively). An impressive symbol of the developments discussed above was the development of the Zionist leadership and its expression in the press and Hebrew literature through such personalities as Lilienblum, Aḥad-Ha-Am, Sokolow, and many others.

Lists of Newspapers and Indexes to their Contents. These two instruments of aid never kept up with the developments in the field of Jewish and Zionist journalism. For decades lists of Jewish newspapers have appeared, both in various lexicons and separately. Comprehensive listings are the *Tentative List of Jewish Periodicals in Axis-Occupied Countries* (1947), covering the period between the two world wars, and Joseph Fraenkel's *The Jewish Press of the World* (1967[6]), which reflects the situation after World War II. In this period, the distinction between Zionist and non-Zionist publications has become blurred, and any comprehensive list of Jewish publications reflects principally Zionist or pro-Zionist publications (see also Hebrew *Press; for other lists of publications, including those prepared by Fraenkel, see Shunami, Bibliography, second edition, index).

More problematic is the task of getting to the vast amount of material in the press. Indexes of the press, long accepted as standard in the world at large, are still rather innovations in the realm of the Jewish and Hebrew press. Only lately have really useful indexes come into being, but this venture is still in its infancy. One thing must be stressed in regard to material on Zionism: it is not to be found under subject headings such as "Zionism" and the like. Over the last generation Zionism encompassed the entire Jewish world and is thus to be found under thousands of other subject headings. Among the indexes included by Shunami and others that have been issued recently, the following deserve special attention:

(1) S.A. Udin and S. Landress (eds.), *Palestine and Zionism* (vols. 1–11, 1949–58) is organized according to a dictionary catalog (as are the two following works), so that "Zionism" is scattered among an abundance of sources; at the end of each volume of this important index to periodicals is a separate index to books and pamphlets, and it also covers material published in languages other than English from 1946 to 1956.

(2) *Index to Jewish Periodicals*, edited by Miriam Leikind, has been published in Cleveland, Ohio, since 1964 (seven volumes through 1970) and covers material from 1963 onward.

(3) Index to *Ha-Po'el ha-Ẓa'ir*, edited by Isa and G. Kressel (1968). The index to this weekly during the 50 years of its existence is essentially an index to all the events in the Zionist

movement, the *yishuv*, and the labor movement during this period and is the largest index of this kind (in its dimensions and number of entries – more than 100,000) that has yet been published in Hebrew. It is also worth noting that an event located in the index to one newspaper can easily be found, according to the dates, in the rest of the press.

(4) The quarterly of the Jewish National and University Library, *Kirjath Sepher*, lists (beginning with no. 21) with exactness the contents of periodicals on Jewish studies and important articles in the daily press. Anyone wishing to keep up with what is going on in all fields of Jewish studies or any one or set of fields therein must go over each and every issue; for the sake of expediency, however, Issachar Yoel has compiled the *Index of Articles on Jewish Studies* (for 1966 ff.), which reviews the yearly output according to special categories, including Erez Israel, Zionism, and State of Israel. It includes an index to the largest number of newspapers and periodicals in this ramified field.

Encyclopedias and Lexicons of Zionism. Every Jewish lexicon obviously contains much material on Zionism, whether on personalities or Zionist affairs. Nonetheless, throughout the decades the need was felt for a special lexicon of Zionism, which would cover all aspects of this subject. The first attempt at this task, which still holds a position of major importance, was the lexicon published by the Zionist Federation in Germany in 1909, *Zionistisches A-B-C Buch*. The entries therein on personalities and Zionist affairs are written with exactitude and provide a comprehensive picture of the Zionist Organization, through the end of the first decade of its existence. The participants in putting the volume together were the heads of the Zionist movement in Germany and Austria. The second venture into this field was the *Leksikon Ziyyoni* (1924) of the Hebrew writer S.L. Zitron; however, it is restricted to personalities only. A Zionist lexicon (in Yiddish) of greater dimensions, whose intention was to cover personalities, Zionist affairs, the names of settlements in Erez Israel, etc., began to come out in Warsaw under the title *Tsiyionistisher Leksikon*, under the editorship of B. Zweibaum; however, only one volume was published (1935; up to the middle of the letter "*bet*"). Another Yiddish lexicon published in Warsaw, *Yidisher Gezelshaftlekher Leksikon*, edited by Reuven Ben-Shem (Feldschuh), met a similar fate. Its first volume, which also included personalities, institutions, affairs, etc., came out close to the outbreak of World War II and is preserved in only a few copies throughout the world. It goes up to the middle of the letter "*vav*" and covers primarily Polish Jewry, but it is considered a Zionist lexicon because of the wealth of Zionist material covered therein.

In Palestine, Moshe Kleinman aspired to publish the *Enziklopedyah le-Ziyyonut* (1947), but was prevented from issuing more than one volume (which goes up to the end of the letter "*gimmel*") by the conditions in the country and finally by his death. Since 1957 *Enziklopedyah shel ha-Ziyyonut ha-Datit*, edited by Y. Raphael (assistant editor G. Bat-Yehudah),

has been published in Jerusalem; it covers personalities only. A large encyclopedic venture covering personalities is David Tidhar's *Enziklopedyah le-Halutzei ha-Yishuv u-Vonav*, published from 1947 (19 volumes) which list biographies of personalities in Erez alphabetically, but the indexes to each volume and to the work as a whole facilitate locating an entry. This work contains a wealth of Zionist material, especially in the latter volumes, which contain biographies of personalities in Erez Israel mostly from Eastern Europe, the United States, England, etc. The *Leksikon la-Sifrut ha-Ivrit ba-Dorot ha-Aharonim*, by G. Kressel, also contains entries on many Zionist personalities. A two-volume work in English, *Encyclopedia of Zionism*, covering both personalities and Zionist events and affairs, was published in New York under the editorship of Raphael Patai (1971). Note should also be made of the various Jewish *Who's Who* volumes in English, Hebrew, and other languages that have come out in Israel and abroad.

Journals, Research Institutes, and Archives. Material on research into the history of Zionism is found in abundance in Jewish periodicals throughout the world. Especially rich in material are the official organs of the Zionist movement (*Selbstemanzipation, Die Welt, Juedische Rundschau, Haolam*, etc.). Since the beginning of the Zionist movement, however, the need for a special forum for Zionist research has made itself felt. In 1905 a forum of this type appeared for the first time in Germany, known as *Die Stimme der Wahrheit* and subtitled *Jahrbuch fuer wissenschlaftlichen Zionismus* (edited by L. Schoen). The notation "the volume of the first year" expressed the intention to perpetuate this publication, which was not realized. Since then collections honoring the memory of Herzl, for example, have turned into platforms for Zionist research: *Theodor Herzl, A Memorial*, edited by Meyer Weisgal (New York, 1929), and the *Herzl-Jahrbuch*, an annual for research on Herzl and Zionism, only one issue of which (by T. Nussenblatt) was published (1933). In Israel three collections were put out (one of which was in two volumes; 1950–56) under the title *Shivat Ziyyon*; they were intended to become an annual (edited by a staff of editors), but publication ceased. In the United States, Raphael Patai published the *Herzl Year Book* (6 vols. 1958–65). In 1970 the first collection on the history of the Zionist movement and the *yishuv* in Erez Israel, *Ha-Ziyyonut*, was published under the editorship of Daniel Carpi. All these collections contain mostly research papers and documentary material.

Research institutes have been established at Tel Aviv University (named in honor of Chaim Weizmann) and the Hebrew University, Jerusalem (named in honor of Israel Goldstein). The former has already put out a number of books that investigate various aspects of the history of the *yishuv* and Zionism. The largest and most important archive for the history of Zionism throughout the world is the Central Zionist Archive in Jerusalem, but other archives are found in New York, in Bet ha-Tefuzot of the University of Tel Aviv, etc. See *Archives.

ZIONIST COMMISSION

ZIONIST COMMISSION (Heb. **Va'ad ha-Ẓirim**), a commission headed by Chaim *Weizmann and consisting of Jewish representatives from Great Britain (Leon *Simon, Montagu David *Eder, Joseph *Cowen, and I.M. *Sieff as secretary), France (Sylvain Lévy) and Italy (Angelo *Levi-Bianchini), which proceeded in 1918 after the issue of the Balfour Declaration, with the approval and authorization of the Allied governments, to British-occupied Palestine. The commission arrived in Palestine on April 4, when the northern districts of the country were still in Turkish hands. It was accompanied by Major W. Ormsby-Gore (later Lord Harlech, colonial secretary in 1936–38) as political officer on behalf of the British government, assisted by Major James de Rothschild and Edwin Samuel to serve as liaison with the British military authorities. The commission was to act as "an advisory body to the British authorities in Palestine in all matters relating to Jews, or which may affect the establishment of a National Home for the Jewish people." It was concerned specifically with coordinating relief work, assisting the repatriation of Jews exiled by the Turks, helping to organize the Jewish population and establishing friendly relations with the Arabs, as well as investigating the possibility of the early establishment of a Jewish

university. Thus Weizmann then made his first contacts with Emir Feisal and laid the cornerstone of the *Hebrew University on Mount Scopus in Jerusalem. On the other hand, the commission encountered an uncooperative and even hostile attitude from the British military authorities, which studiously refrained from officially publishing the policy embodied in the Balfour Declaration (until May 1, 1920) and practically prevented any Jewish settlement work. The commission had to send strong representations to London against this attitude but achieved little in changing it until the military' administration was replaced in 1920 by the civilian regime under the first high commissioner, Sir Herbert *Samuel.

The idea of dispatching such a commission to Palestine was broached by Weizmann as early as November 1917 in his correspondence with the leading Zionist in the United States, L.D. *Brandeis. At first, no American Jew was attached to the commission, because of American neutrality in the war with Turkey, and no Russian Jew could take part in it because of the revolutionary upheaval in Russia. However, two Palestinian Jews, Aaron *Aaronsohn and Zalman David *Levontin, worked with it. In the autumn of 1919 Menahem *Ussishkin became the head of the commission (following a brief tenure by M.D. Eder), which was the sole representative of the Zionist Organization in Palestine until September 1921, when it was replaced by the Zionist Executive established in Jerusalem after the 12ᵗʰ Zionist Congress. Thus the Zionist Commission was the predecessor of the *Jewish Agency.

[Daniel Efron]

ZIONIST CONGRESSES

ZIONIST CONGRESSES, the highest authority in the Zionist Organization; created by Theodor *Herzl. None of the previous attempts to convene general assemblies of the Jewish national movement, some of which were successful and some abortive, succeeded in creating an instrument similar in scope or nature to the Zionist Congresses. Herzl's aim in convening the Congress was "to close the Zionist ranks, bring about an understanding between all Zionists and to unify their endeavors… the Congress will show what Zionism is and wants." His other aim – to establish "the national assembly of the Jewish people" – was realized by many of the Congresses that took place both before and after his death. The problem of the location of the Congress was not confined to the First Zionist Congress alone. Several of the Congresses encountered problems in this sphere until the 23ʳᵈ Congress, which met in Jerusalem (all subsequent Congresses have been held in Jerusalem). Previous venues were Basle, London, The Hague, Hamburg, Vienna, Carlsbad, Zurich, Prague, Lucerne, and Geneva. During the periods of the Ottoman regime and the British Mandate over Palestine, it proved impossible to hold the Congress in Ereẓ Israel.

The First Congress

The location of the First Zionist Congress was to have been Munich, Germany, but due to the opposition of the community and the *Protestrabbiner, it was transferred to Basle and held on Aug. 29–31, 1897. The historical importance of the Congress lies in the formulation of the *Basle Program and the foundation of the Zionist Organization, which united West and East European Zionists in both an organizational and programmatic sense. Up until that time the East European Ḥovevei Zion (see *Ḥibbat Zion) engaged in settlement activities in Ereẓ Israel, and they now accepted political Zionism as well. The approach termed political Zionism, an essential problem debated at the Congress, was raised and defined by Herzl himself. The settlements founded to date had indeed proved the ability of the Jews to farm the land. The Jewish problem, however, could only be solved by large-scale migration and settlement of the country, which could be effected only with international assistance and recognition. By the Third Congress this was expressed in the term "charter." The means and goals of political Zionism were formulated in a key sentence, possessing four subclauses, the Basle Program.

The First Congress also devised a schedule that was followed by all subsequent Congresses: reports on the situation of Jewish communities in the Diaspora (at the first Congresses, the famous speeches of Max *Nordau), lectures on Ereẓ Israel and settlement activities, and debates on cultural questions, which were extremely stormy at the first few Congresses. Herzl acted as the chairman of the Congress (as he did at all Congresses until his death) and was also elected president of the Zionist Organization.

The Congress made a tremendous impression on both Jews and non-Jews throughout the world. Herzl himself summarized the importance of the First Congress thus: "I no longer need to write the history of yesterday [the day on which the Congress opened]; it is already written by others…. Were I to sum up the Basle Congress in a word – which I shall guard against pronouncing publicly – it would be this: At Basle I founded the Jewish State" (Herzl's diary, Aug. 30, Sept. 3, 1897, *Complete Diaries*, ed. by R. Patai, 2, 580–1). Ḥayyim Naḥman *Bialik even published a poem titled "*Mikra'ei Ẓiyyon*" in honor of the First Congress (for English translations see Goell, Bibliography, 489–90, no. 237). A full list of the participants in the First Congress with biographical and bibliographical details was compiled by H. Orlan in *Herzl Year Book*, 6 (1964–65), 133–52. There is a vast literature on the First Congress including *Warum gingen wir zum ersten Zionistenkongress?* (1922), in which 32 participants recount the motives which prompted their participation in the First Congress, and *Sefer ha-Congress* (1923, 1950[2]), an anthology edited by Leib Yaffe. The official language of the first Congresses was German (the minutes were published in this language until the beginning of the 1930s and after that in English). The language spoken from the rostrum was, for many years, also mostly German, but since many delegates spoke a kind of Yiddishized German it was nicknamed "Kongressdeutsch."

The Second Congress

The second meeting of the Zionist Congress was held in Basle on Aug. 28–31, 1898. In his opening address, Herzl called on the Zionists to "conquer the communities," a slogan which later led to the program of "work in the present," i.e., in the Diaspora, in order to deprive various assimilationists of their self-appointed role as spokesmen of the Jewish people. At this Congress the foundations were laid for the *Jewish Colonial Trust and David *Wolffsohn was placed in charge of implementing the project. Leo *Motzkin, who had just returned from Ereẓ Israel, presented a detailed report on the situation of both the new and the old *yishuv*. A group of Zionist Socialists demanding representation for the Jewish proletariat in the leadership of the Zionist Organization made their first appearance at this Congress. Herzl was opposed to splitting the precariously united Zionist camp. The struggle between the "political" and "practical" Zionists had been set aside at the First Congress, and the resolution to establish the Jewish Colonial Trust further narrowed the gap between the two camps.

The Third Congress

Held in Basle on Aug. 15–18, 1899, the Third Congress opened with a report by Herzl of his meetings with Kaiser William II in Constantinople (Oct. 18, 1898) and Jerusalem (Nov. 2), in addition to a casual meeting at Mikveh Israel. While these meetings produced no practical results, their demonstrative value, in the presentation of the Zionist case before the head of a great power, was immense. There was a great deal of debate about the exact meaning of the "charter," first mentioned by Herzl, and the significance of the term "public law" in the Basle Program, i.e., whether the intent was a license from all the powers or only from Turkey. Herzl was persuaded to accept the latter interpretation. It was also resolved that the Jewish Colonial Trust would confine its settlement activities to Ereẓ Israel and Syria. The "practical" Zionists failed in their attempts to gain the Congress' approval for initiating settlement activities before obtaining the "charter," and the theoretical debates on cultural matters, which occupied several Congresses from the Second on, continued. Herzl was preoccupied with political activities, and everything outside this sphere was thrust aside.

The Fourth Congress

On Aug. 13–16, 1900, the Fourth Congress was held in London. The reason for choosing London as the location of this Congress was given by Herzl in his opening speech as follows: "England, great England, free England, England looking over all the seas, will understand our aspirations. From here the Zionist idea will take its flight further and higher, of that we are sure." The Congress bore the imprint of the severe crisis in Romanian Jewry, with many thousands forced to leave the country and those remaining behind subject to pressure and harassment. Herzl viewed the persecution of Romanian Jewry as further proof of the urgent necessity for a Zionist solution. Since the "charter" was still a distant prospect, matters demanding immediate attention came to the fore. The posi-

tion of the Jewish workers in Ereẓ Israel was also brought up at this Congress.

The Fifth Congress

Herzl presented this Congress, held in Basle on Dec. 26–30, 1901, with the greatest of his achievements – an interview with the sultan. He also presented a report on the initial activities of the Jewish Colonial Trust. These achievements, however, did not satisfy many of the delegates, especially a group of young men who organized the *Democratic Fraction. They advanced the concept of Zionism as an internal Jewish renaissance and demanded serious attention to the problems of Jewish culture, instead of concentrating solely on political activities, which they regarded as sterile. The main achievement of this Congress was the establishment of the *Jewish National Fund (JNF) on the lines proposed by Hermann *Schapira at the First Congress.

The Sixth Congress

In accordance with a resolution taken at the Fifth Congress, the Sixth took place two years after its predecessor (on Aug. 23–28, 1903, in Basle) instead of one, as had been the practice. This was the last Congress in which Herzl participated and was also the stormiest and most tragic. While the "charter" was as far as ever from Herzl's grasp, the pressure for a solution to the Jewish problem was mounting, particularly after the shock of the Kishinev pogrom in the spring of the same year. This situation gave rise to "temporary solutions," such as the *El-Arish project, to which Herzl devoted much of his energies and with whose results he was bitterly disillusioned. In spite of the Kishinev pogrom, Herzl had visited Russia, where he met Minister of Interior Plehve. He also received an official offer from the British government, which was willing to allocate a territory for Jewish settlement in Uganda, East Africa. At the Congress, Herzl advanced this proposal for serious examination, while simultaneously emphasizing that "our views on Ereẓ Israel cannot and will not be subject to change. Uganda is not Zion and will never be Zion. This proposal is nothing more than a relief measure, a temporary means of allaying distress." The vote on the *Uganda Scheme was as follows: 295 in favor, 178 against, and 98 abstentions. At first those opposed to the scheme left the hall, headed by Jehiel *Tschlenow, but were persuaded to return by Herzl personally, who appealed to them not to destroy the Zionist Organization. The Uganda Scheme overshadowed all other matters at the Congress, such as Franz *Oppenheimer's lecture on cooperative settlement, a program that was implemented some years later in the settlement Merḥavyah. Approximately one year after this Congress, Herzl died.

The Seventh Congress

The Congress, held on July 27–Aug. 2, 1905, in Basle, was opened by its new president, Nordau, who delivered a eulogy on Herzl. Immediately afterward, a stormy debate on the Uganda proposal broke out. Opposition to the scheme had grown with the return of the commission of inquiry and its negative report on conditions in Uganda, which it found unsuitable for Jewish mass settlement. Despite the opposition of the Territorialists, who were supported by *Po'alei Zion, the Congress resolved to reject finally the Uganda Scheme and the notion of settlement anywhere except in Ereẓ Israel and its immediate vicinity. The Territorialists, headed by Israel *Zangwill, withdrew from the Congress and the Zionist Organization and founded the Jewish Territorial Association (see *Territorialism). A resolution to the effect that practical settlement activities would not be delayed until public rights had been obtained, but would begin at once, was then passed. Otto *Warburg, who was to become the moving spirit of practical Zionism, made his first impressive appearance at this Congress. He emphasized the political value of limited settlement and the need for introducing it in a systematic way. In place of Nordau, who refused to accept the position, Wolffsohn was elected chairman of the Executive which was equivalent to the head of the Zionist Organization. The center of the Zionist movement moved from Vienna to Cologne, where Wolffsohn lived.

The Eighth Congress

In accordance with Herzl's tradition of keeping the Zionist movement in the public eye, this Congress met at The Hague on Aug. 14–21, 1907, while the Second International Peace Conference was taking place there. The struggle between political and practical Zionists was resolved by the decision that settlement activity in Ereẓ Israel should not be delayed until after the receipt of the "charter." On the contrary, planned small-scale settlement, not exceeding the limits of the Basle Program, was to precede the charter, which would thus be obtained on the strength of these "small" achievements. Wolffsohn was the mediator between the two camps. As Herzl's close friend and loyal disciple, on the one hand, and a sober man of affairs, on the other, he was eminently suited to this function. Weizmann's famous speech on "synthetic Zionism" merged political and practical Zionism into an organic whole and laid a common foundation for both camps. He stated: "We must aspire to a charter, but our aspiration will be realized only as a result of our practical work in Ereẓ Israel." As a result of this approach, the *Palestine Office was founded in Jaffa in 1908 to direct the work of agricultural settlement on behalf of the World Zionist Organization. The office was headed by Arthur *Ruppin.

The Ninth Congress

Held in Hamburg on Dec. 26–30, 1909, this was the first Congress to meet in Germany. The hope that the attitude of the Turkish government toward Zionism would change after the revolution of the Young Turks, which had taken place in the previous year, was expressed by both Wolffsohn and Nordau. A very strong opposition to Wolffsohn's leadership emerged at this Congress and was led by Menahem *Ussishkin, Weizmann, and Nahum *Sokolow and joined by representatives of the workers in Ereẓ Israel, appearing for the first time at a Zionist Congress. They were united in their opposition to

the "commercial" approach to the settlement activities, which evaluated every project by its economic efficiency. The decision to begin cooperative settlement according to the Oppenheimer plan was a great concession to the "practical" Zionists, representatives of Po'alei Zion, and the workers of Ereẓ Israel. Wolffsohn was finally reelected president of the Zionist Organization and chairman of the Executive, which also included Warburg and Jacobus *Kann. Friction over Woffsohn's methods, which were also criticized by the political Zionists as not close enough to those of Herzl, did not come to an end with the closing session of this Congress.

The Tenth Congress

This Congress, held in Basle on Aug. 9–15, 1911, earned the name of "The Peace Congress" for ending the quarrels and friction of the "Cologne period" and bringing total victory to the realistic "synthetic" trend in Zionism. In his opening address, which contained the announcement of his resignation, Wolffsohn gave his blessings to the period of Zionist history about to commence after the "Vienna period" and his own "Cologne period." Detailed discussion of practical activity in Ereẓ Israel and Hebrew culture took place. For the first time in the history of the Congresses, a whole session, led by Ussishkin, was conducted entirely in Hebrew. The relations with the Arabs were also discussed in a speech by Shelomo *Kaplansky. The Zionist headquarters were transferred from Cologne to Berlin, and the new leadership consisted of the president Otto Warburg and Arthur *Hantke, Shemaryahu *Levin, Victor *Jacobson, and Sokolow.

The Eleventh Congress

The demonstrative absence of Nordau at this Congress, held in Vienna on Sept. 2–9, 1913, was a silent protest against the abandonment of Herzl's line. Arguments about the body in charge of the Jewish Colonial Trust took place with the Executive and with Wolffsohn and his associates. Ruppin presented a detailed report on the first settlement activities on behalf of the Palestine Office. This report, together with Levin's survey of 30 years of settlement in Ereẓ Israel, were an indirect tribute to "small-scale" deeds. On the suggestion of Weizmann and Ussishkin, it was resolved to establish a Hebrew University in Jerusalem. Bialik made an impressive appearance at the closing session. Wolffsohn, who was the president of the Eleventh Congress, died a year afterward.

The Twelfth Congress

No previous Congress had met in a period so sharply distinguished from the preceding one. This was the first Congress after World War I. It was held in Carlsbad on Sept. 1–14, 1921, after the following crucial events had taken place: the *Balfour Declaration, the British conquest of Palestine, the Bolshevik Revolution in Russia, mass pogroms against Ukrainian Jews, and the London Zionist Conference (1920), at which the *Keren Hayesod was founded. During this period the Zionist movement in America had begun to come to the fore, and the *Brandeis group had clashed with Weizmann's leadership at

the London Conference. The Zionist leadership had also been transformed. The "Berlin period" had come to an end with the defeat of Germany in World War I, and the group that had obtained the Balfour Declaration, led by Weizmann and Sokolow, had transferred the Zionist world center to England. At the London Conference, Weizmann was elected president of the Zionist Organization and Sokolow president of the Executive. In addition, the first years after the Balfour Declaration had been marked by anti-Jewish riots in Jerusalem (1920) and Jaffa (1921). Weizmann delivered a report on the political activities of the Zionist Organization during the war and called on the Jewish people to assist in building Ereẓ Israel. Ruppin brought the acquisition of large tracts of land in the Jezreel Valley before the Congress for approval and was opposed by the directorate of the JNF, led by Nehemiah *de Lieme. Bialik, among others, came out in defense of the Jewish workers in Palestine who were the subject of attacks by the "efficiency"-minded group, opposing Weizmann's leadership. For the first time in the history of Zionism, a representative of the workers in Ereẓ Israel, Josef *Sprinzak, was elected to the Executive, which thereafter was situated in London and Jerusalem.

The Thirteenth Congress

On Aug. 6–18, 1923, the 13th Congress was held in Carlsbad. Before it took place, the British Mandate over Palestine had been endorsed by the *League of Nations and the Zionist Organization became officially the *Jewish Agency for Palestine, mentioned in Article 4 of the Mandate and charged with taking steps "to secure the cooperation of all Jews who are willing to assist in the establishment of the Jewish National Home." At this Congress, the proposal to include non-Zionists in the Jewish Agency was debated and aroused bitter opposition from those who considered this a threat to the broad democratic basis of the Zionist Organization. Weizmann defended the proposal against its opponents until it was finally implemented six years later (1929). The possibilities of obtaining financial resources for building up Palestine were debated at length, and Chaim *Arlosoroff delivered a lecture containing a proposal for a planned economic program. The Congress also resolved to open the Hebrew University in Jerusalem.

The Fourteenth Congress

This Congress, held in Vienna on Aug. 18–31, 1925, was much affected by the "prosperity" in Palestine caused by the Fourth Aliyah (mostly from Poland) and the feverish construction of houses and land speculation. It encouraged the view that private enterprise would solve the problems of building Palestine, and criticism of labor settlement methods reached its height. David *Ben-Gurion participated in the debate, delivering a speech on the workers in Palestine and their activities. Ruppin resigned as head of the Jewish Agency Settlement Department, which he had directed for approximately 18 years, and Colonel F.H. *Kisch was appointed to direct the Agency's Political Department in Jerusalem.

The Fifteenth Congress

The prosperity in Palestine was followed by a severe economic crisis and unemployment, which affected nearly 8,000 workers. Hunger and poverty drove many from the country and *aliyah* dwindled. Preoccupation with "breaking the crisis" at the 15th Congress, held in Basle on Aug. 30–Sept. 11, 1927, spoiled the celebrations in honor of the 30th anniversary of the First Congress. Weizmann outlined a proposal for overcoming the crisis, and Ruppin delivered one of his brilliant Congress speeches on pioneering and its meaning for Zionism. The Executive elected did not include a labor representative and its most forceful personality was Harry *Sacher. Eulogies on Aḥad Ha-Am were delivered by Martin *Buber and Nahum Sokolow.

The Sixteenth Congress

Held in Zurich on July 28–Aug. 10, 1929, this Congress, like its predecessor, met in an anniversary year and was opened with a speech by Sokolow on Herzl upon the 25th anniversary of his death. Unlike its predecessor, however, this Congress met during a period of economic recovery in Palestine, improved employment conditions, and the revival of *aliyah*. Weizmann again reported on the enlargement of the Jewish Agency by non-Zionists, which was to be established after the Congress was over. Despite strong opposition to the project (mainly from the *Revisionists), the debate that had lasted for seven years ended with the official establishment of the enlarged body in an impressive meeting with the participation of Weizmann, Sokolow, Herbert *Samuel, Louis *Marshall, A. *Einstein, Lord *Melchett, Leon *Blum, Sholem *Asch, F. *Warburg, and others. The Executive (the "Sacher regime") was severely criticized for its attitude toward Labor Zionism. The Congress ended with the election of a new Zionist Executive, joined by two *Mizrachi representatives (Rabbi M. Berlin and A. Barth), two labor representatives (S. Kaplansky and Y. Sprinzak), and Ruppin.

The Seventeenth Congress

A few days after the establishment of the enlarged Jewish Agency in Zurich, bloody riots broke out in Palestine (August 1929) and were followed in quick succession by the report of the British commission of inquiry into the 1929 disturbances; the *White Paper by the colonial secretary, Lord Passfield; restriction on Jewish immigration; the negative report on the possibility of Jewish settlement by Sir John Hope-Simpson; etc. The commission report and Sir John Hope-Simpson's conclusions were openly hostile to the Zionist movement, the JNF, Jewish labor, and practically all other Jewish activities in Palestine. Weizmann immediately resigned as president of the Zionist Organization in protest to the new British policy. His move, in turn, resulted in the "MacDonald Letter," which retracted much of the negative elements in the new trend.

At the 17th Congress, held in Basle on June 30–July 15, 1931, a number of delegates voiced their protest to Weizmann's policy, which was based upon the fundamental need for maximum cooperation with the British government. The opposi-

tion, consisting not only of the Revisionists, but also of many other delegates, claimed that this policy was not justified. The Revisionists demanded that the creation of a Jewish majority and a Jewish state be defined officially as the final aim of Zionism, and when this demand was rejected by the majority, Vladimir *Jabotinsky tore up his delegate's card with the cry: "This is no Zionist Congress," leading ultimately (in 1935) to the secession of the Revisionists from the Zionist Organization. In view of the situation, Weizmann, despite support from the labor wing, refused to withdraw his resignation, and Sokolow was chosen president of the Zionist Organization. In spite of Weizmann's official resignation, however, the Executive of the Zionist Organization, in which the strength of the labor parties had grown with the election of Chaim Arlosoroff as head of the Political Department, actually continued to act along the lines of Weizmann's policy.

The Eighteenth Congress

This Congress, held in Prague on Aug. 21–Sept. 4, 1933, bore the imprint of three events: the advent of the Nazis to power in Germany and growing persecution of German Jewry, economic inflation in Palestine, and the assassination of Arlosoroff. The conflict between the Revisionists and labor reached its height, since the labor representatives believed that the constant incitement by the Revisionists had created the setting for Arlosoroff's assassination. It was finally decided to establish a committee of inquiry into the tragedy. A special session was devoted to the celebration of Ussishkin's 70th birthday. Sokolow was reelected president of the Zionist Organization. The representation of labor on the Executive increased and included Ben-Gurion and Moshe Shertok (*Sharett), who succeeded Arlosoroff as head of the Political Department.

The Nineteenth Congress

Held in Lucerne on Aug. 20–Sept. 4, 1935, this Congress was distinguished by the comprehensive and practical lectures delivered on Diaspora Jewry (Sokolow), the building of Palestine (Ben-Gurion), the JNF (Ussishkin), rescuing Jewish children from Germany – Youth Aliyah (Henrietta *Szold), and the problems of Hebrew culture (Berl *Katznelson). The labor faction, the largest at the Congress, worked out a program for a broad coalition and made it possible for Weizmann to resume the presidency, and Sokolow was chosen as honorary president of the Organization and the enlarged Jewish Agency. Ben-Gurion, who was reelected to the Executive, became more and more its central figure. Sokolow died within a year.

The Twentieth Congress

This Congress was held in Zurich on Aug. 3–16, 1937, and was faced with the responsibility of resolving one of the most difficult problems that had faced the Zionist movement since the controversy over the Uganda Scheme. The report of the Royal Commission on Palestine (Peel Commission) appointed in the wake of the 1936 Arab riots proposed the establishment of a Jewish state in part of the country. There were divisions of opinion between and within the Zionist parties on the is-

sue (with Ben-Gurion of *Mapai, for example, in favor of the proposal and Katznelson against it). In the end it was decided to take note of the finding of the Royal Commission "that the field in which the Jewish National Home was to be established was understood, at the time of the Balfour Declaration, to be the whole of Palestine, including Transjordan," but at the same time, the decision of the Congress empowered the Executive to negotiate with the British government the possibility of securing a more favorable partition of western Palestine than that proposed by the Peel Commission's plan and bring the results to the Congress before a final decision was made. In addition a special session took place in Basle to mark the 40th anniversary of the First Congress. During the session, presided over by Ussishkin, delegates to the First Congress recalled the great event in their lives and in Zionist history.

The Twenty-first Congress

Held in Geneva on Aug. 16–26, 1939, the 21st Congress met on the eve of World War II. The British government had withdrawn its partition plan, conferred with representatives of Jews and Arabs (including Arab governments) at the St. James Conference in London, and published its anti-Zionist White Paper imposing tremendous restrictions on Jewish immigration and purchase of land. The delegates unanimously expressed their strong opposition to the White Paper and declared the readiness of the *yishuv* to fight against the restrictions. Katznelson extolled the "illegal" *immigration program and called for all the energies of the Zionist movement to be channeled into extending its scope, in view of the threatening political situation in Europe. In the atmosphere of impending war the Executive was reelected for another term. Weizmann closed the Congress with the emotion-filled statement: "I have no prayer but this; that we will all meet again alive." Ussishkin, the president of the Congress, expressed his grave concern for the fate of Polish Jewry.

The Twenty-second Congress

The Congress met in Basle on Dec. 9–24, 1946, after World War II and the Nazi Holocaust, which had exterminated most of European Jewry. The *yishuv* had participated in the British war effort and had waged an armed struggle against White Paper restrictions. The Revisionists had returned to the Zionist Organization and were represented at the Congress. The *Biltmore Program (1942) on the establishment of Palestine as a Jewish commonwealth had been approved as the program of the Zionist movement at the first international Zionist conference after the war (New York, 1945). The Anglo-American commission of inquiry (1946) had recommended, inter alia, the abolition of a number of existing restrictions and the settlement of 100,000 Jews in Palestine. The British government had refused to accept these recommendations, and the armed resistance of the *yishuv* had increased. Leaders of the *yishuv* and the Jewish Agency had been arrested (1946). The Morrison-Grady plan for the cantonization of Palestine and its division into four districts (Jewish, Arab, Jerusalem, and Negev) had been announced. The British had proposed

a Jewish-Arab conference in London to reach an agreed solution, and the release of the imprisoned Jewish leaders as a preliminary to this conference. The Congress was therefore faced with the necessity of taking a stand on both the Morrison-Grady proposal and the London Conference. Weizmann stressed the importance of the decision on the establishment of a Jewish state in Palestine and the sympathy with which Zionism and the aspirations of the *yishuv* were regarded by President Truman and American opinion. The Congress approved the political program of the Zionist Organization "to establish a Jewish commonwealth integrated into the world democratic structure," turned down the plan for the cantonization of Palestine, and also resolved that "in existing circumstances, the Zionist movement is unable to participate in the London Conference." Weizmann, who was opposed to this last resolution and favored participation in the London Conference, resigned from the presidency, and for the first time in the history of the Zionist Organization the Congress failed to elect a new president.

The Twenty-third Congress

The Congress met in Jerusalem on Aug. 14–30, 1951. Weizmann, now president of the State of Israel, was unable to attend, but in a message to the delegates defined the new situation: "There is a deep symbolism in the fact that the Zionist Congress has not met in our ancient land until it has become ours again… It is only now, since we have attained independence and statehood, that we can fully appraise the paramount place held by Zionist Congresses in the evolution of our movement." The opening ceremony of the Congress took place, symbolically, by Herzl's grave in Jerusalem. The chairman of the Executive, Berl *Locker, summed up the history of the Zionist movement and described the road it had taken from Basle to Jerusalem. The central issue debated at the Congress was the status of the Zionist movement after the establishment of a Jewish state. The Basle Program no longer met the requirements of the new reality and was replaced by the "Jerusalem Program" (see *Basle Program), whose essential clause was: "The task of Zionism is the consolidation of the State of Israel, the ingathering of the exiles in Erez Israel and the fostering of the unity of the Jewish people." The coalition formed after the Congress included all the factions except for the Zionist Revisionists – *Ḥerut. Two chairmen were elected to the Executive: Naḥum *Goldmann in New York and Berl Locker in Jerusalem. One of the resolutions, demanding official recognition of the status of the Zionist Organization by the state, was implemented after the Congress in the World Zionist Organization-Jewish Agency for Palestine Status Law passed by the Knesset on Nov. 24, 1952.

The Twenty-fourth Congress

The Congress, held on April 24–May 7, 1956, was overshadowed by the security situation of the State of Israel, which was threatened by the arms streaming especially into Egypt from the Soviet bloc. Internal affairs in the spheres of *aliyah*, settlement, and organization of fund raising were also discussed.

It was decided to concentrate all funds in the hands of the *Keren Hayesod and United Israel Appeal. Naḥum Goldmann was elected president of the Zionist Organization, an office which had been unfilled since 1946.

The Twenty-fifth Congress

The central issues debated at this Congress, held on Dec. 27, 1960–Jan. 11, 1961, were the relationship of the government of Israel to the Zionist Organization and its official status, in light of the sharp criticism leveled against the Organization by Ben-Gurion; *aliyah*; absorption; Jewish culture and education in the Diaspora. Goldmann was reelected president and chairman of the Executive. After the Congress, Moshe Sharett was elected chairman of the Jerusalem Executive in place of B. Locker, who resigned.

The Twenty-sixth Congress

The slogan "Facing the Diaspora," coined in Goldmann's opening address, was the center of debate at this Congress, held on Dec. 30, 1964–Jan. 10, 1965. After the establishment of the state, Goldmann felt it was necessary to regard the aims of Zionism as the survival of the Jewish nation in the Diaspora and the assistance of the state to the Jewish people. The debate, as usual at Congresses held after the establishment of the state, spread to the sphere of relations between the state and the Zionist Organization, *aliyah* obligations, etc. The Congress resolved on the following as the first of the tasks and functions of the Zionist movement: "The deepening of Zionist awareness and its dissemination as a way of life, based on the recognition of the uniqueness of the Jewish people and the continuity of its history, the unity of the nation despite its dispersion, the mutual commitment of all its parts and their common responsibility for its historic fate, and the recognition of the decisive mission of the State of Israel in assuring its future." Goldmann was reelected president of the Zionist Organization. Sharett, chairman of the Jerusalem Executive, sent his greetings in writing due to the illness from which he died a few months later.

The Twenty-seventh Congress

The Congress was held on June 9–19, 1968, the first in reunited Jerusalem after the Six-Day War. An innovation at this Congress was the participation of youth delegations, students, and members of the *aliyah* movement. The question of *aliyah* was the focal point of the debates, and the decision of the Israel government to establish a Ministry of Immigrant Absorption was approved. Additional paragraphs on the goals of Zionism were added to the Jerusalem Program: "The unity of the Jewish people and the centrality of Israel in its life; the ingathering of the Jewish people in its historic homeland Ereẓ Israel through *aliyah* from all lands; the strengthening of the State of Israel founded on the prophetic ideals of justice and peace; the preservation of the identity of the Jewish people through the fostering of Jewish education, Hebrew, and of Jewish spiritual and cultural values; the protection of Jewish rights everywhere." Goldmann resigned as president of the Zionist Organization

and no one was chosen to take his place. Louis *Pincus, who had been elected chairman of the Executive after the death of Sharett, was reelected to this post.

[Getzel Kressel]

The Twenty-eighth Congress

The Congress was held in Jerusalem on January 18–28, 1972, with 559 delegates voting. For the first time in many years, instead of the interparty agreements whereby the number of delegates for each party was determined, elections were held in most countries. The membership drive which preceded the elections revealed a membership of the World Zionist Organization approaching 900,000. In Israel, however, most of the delegates were nominated by the political parties, in proportion to their relative strength in the Knesset. The Sephardi and Oriental communities were represented by some 90 delegates and observers. Another notable feature was the large representation of youth, through the World Union of Jewish Students and the Zionist youth movements. Louis *Pincus was re-elected chairman of the Zionist Executive. The Congress concentrated on the specific tasks of the Zionist Movement in the Diaspora, such as Jewish education, youth work, and the promotion of *aliyah* from the free countries. Considerable attention was devoted to social problems such as the cultural and economic gaps between sections of the population in Israel and the acute housing shortage. A prominent theme of the Congress was the struggle of Soviet Jewry for the right to *aliyah*. A resolution to the effect that Zionist leaders who failed to settle in Israel after two terms of office should forfeit their right to reelection was declared unconstitutional.

The Twenty-ninth Congress

The Congress was held in Jerusalem from February 20 to March 1, 1978. It had been postponed from January 1977, when the Congress Court ruled as unconstitutional a proposal to allow 90% of the election committee in any country to agree on a slate of delegates without elections. Over a million Diaspora Jews registered in preparation for the Congress.

The composition of the Congress faithfully reflected the political change that had taken place in Israel in 1977. The Zionist Labor Movement lost ground to the Likud and the Confederation of United Zionists in the Diaspora, and to the Likud and Democratic Movement for Change in the Israeli delegation. The Likud, with 174 out of the 550 seats with full voting rights, was the largest party, followed by the Confederation, with 113; Labor with 93; Mizrachi, 77; Mapam, 27; DMC, 26; others, 40. There were also 75 representatives of international Jewish organizations.

The Congress resolved that all WZO departments and programs in Israel should be administered in accordance with the principle of equal treatment for all trends in Judaism, Orthodox, Conservative, and Reform.

Arye Leon *Dulzin (Likud) was unanimously elected chairman of the Executive; Likud representatives took over the *aliyah*, youth and He-Ḥalutz, and education departments, and the chairmanship of the Zionist General Council from

Labor, and the settlement department was shared between Labor and the Likud. A Labor representative, however, succeeded Dulzin as treasurer.

[Misha Louvish]

The Thirtieth to Thirty-second Congresses

The 30th–32nd World Zionist Congresses, all convened within the decade 1982–92, exhibit several noteworthy trends. The meetings became progressively less ideological, of shorter duration, attended by more delegates who represented more world Jewish organizations – and were increasingly democratic. Yet the World Zionist Organization has less status in the Jewish world than in previous periods and has lost substantial power to its offspring, the Jewish Agency.

In 1982, the 30th Congress had 656 accredited representatives; two Congresses later, 721 delegates were accredited to the Congress. The 32nd Congress was also the first at which an incumbent chairman of the World Zionist Executive, running for a second term, was challenged by another candidate.

The 30th Zionist Congress met December 7–17, 1982. Even before it opened there were numerous appeals to the Zionist High Court protesting alleged infringements of democratic practices during elections. The High Court felt it had no recourse but to disqualify all representatives of Zionist parties and groupings in the U.S. Meeting in extraordinary session three days before the Congress opened, the Zionist General Council decided to make an unprecedented exception and passed a resolution which empowered the High Court itself to apportion mandates on a one-time basis. The court reluctantly complied. In a judgment against a previous attempt by the Zionist General Council to bypass holding elections for the Congress, Dr. Moshe Landau wrote, "This is not petty legalistic quibbling… when Zionism is attacked and slandered on all sides by the enemies of the Jewish people, it is doubly important that Zionism zealously guard its image as a movement which maintains its own democratic principles."

Worldwide, five election districts held direct elections, indirect elections were conducted in four, but 16 districts opted for a system of mutually agreed lists instead of elections.

The 31st Congress, December 6–11, 1987, was on the whole a democratically elected Congress, boasting a considerable number of first-time delegates. The American Zionist Federation conducted a nationwide election by mail, supervised by the independent American Arbitration Association, in which 183,000 valid votes were cast. However in electoral districts outside the U.S., only 40,000 people actually voted in elections.

The major groups represented at the Congress, by size of representation, were Likud, Labor Zionist Movement, Confederation of United Zionists, Mizrachi, Artzenu (Reform), Mapam, Mercaz (Conservative), Tzomet, and Teḥiyyah. The results showed major gains for the relatively new Zionist organizations of the Reform and Conservative movements, which ate into the traditional base of support held by Hadassah and the Zionist Organization of America. For the first time since 1948, the balance of power in negotiations to form a coalition was held by a bloc representing the Diaspora, composed of the Confederation, Artzenu, and Mercaz. These groups joined with Labor and Mapam to form a majority.

Simcha Dinitz, of Labor, was elected chairman of the World Zionist Organization Executive; Meir Shitreet, of Ḥerut, was elected treasurer.

The issue of religious pluralism in Israel was a major focus of concern at the 31st Congress due to the increased presence of the Reform and Conservative movements. The Congress passed a resolution that called for the "complete equality of rights to all streams of the Jewish religion and [for] granting their rabbis the legal right to perform all life cycle events and other rabbinic functions." This decision was the cause of much agitation in the ranks of the Mizrachi delegation as well as among Orthodox delegates in other groups.

The 32nd Zionist Congress, July 26–30, 1992, was the tenth to be held in Jerusalem since the establishment of the State. There were ten plenary sessions, four of which were of a cultural and festive nature. Consequently the work of the Congress, traditionally marked by earnest debate, was mainly conducted in the committees which submitted their resolutions for ratification at the closing plenary.

The resolutions fell into two categories, declarative and practical. Since the Resolutions Committee that processes the decisions of the various committees before they can be put to a vote at the plenary does not permit any operational resolution which has a budgetary component attached to it, most of the resolutions tend to be declarative.

Simcha Dinitz was re-elected Chairman by a majority of almost 80 percent. A precedent of sorts was established when the losing candidate's faction (Artzenu) was excluded from the Executive that customarily is a wall-to-wall coalition rather than a majority cabinet.

On the whole changes that have occurred in the wzo since the 31st Congress both reflect and are caused by a younger, Israeli-born leadership that tends to be less ideological and more pragmatic.

Simcha Dinitz and Meir Shitreet overlooked the legacy to revitalize contemporary Zionist ideology by reformulating some of its tenets mandated to them by Arye Dulzin in his last years in office. Dinitz chose to operate primarily in the Jewish Agency field abandoning the ideological thrust of the Herzliyyah Process of 1983. At a meeting held at the home of the president of Israel in 1990, called to discuss "The wzo: Changes in Ideology and Status," Dinitz said, "In essence the crisis confronting the Zionist movement is not ideological but functional. Whereas the wzo is somewhat shabby, dusty, oversensitive, and not terribly efficient, the Jewish Agency is business-like, healthful, robust, and efficient. It is also more ruthless."

Four matters of vital Zionist importance failed to be substantively addressed by the 32nd Congress. These were the diminished standing of Zionist Federations throughout the world; the options regarding partnership with the fundraisers in the Jewish Agency: unification or dissolution; the

change in the thrust of the Settlement Department – once the flag bearer of Zionist pioneering – to a Jewish Agency department of urban and rural welfare; and finally, the transfer of increasingly large segments of *aliyah* and absorption work to government care.

Looming in the background of the 32nd Congress was the notion that, in reality, the World Zionist Organization had outlived its mandate. There were some who felt that since the wzo had failed to come to terms with essential aspects central to itself, a courageous discussion was called for and that the 33rd Zionist Congress, which was to be also be the centenary conclave since the first World Zionist Congress was convened in Basle, could be an appropriate occasion.

[Amnon Hadary]

The Thirty-third and Thirty-fourth Congresses

The 33rd Zionist Congress convened in Jerusalem in 1997. With Diaspora Jewish organizations within the Zionist movement now exercising 50% of the vote in the Jewish Agency and similarly in the wzo (through the Joint Authority for Jewish Zionist Education), Israel found itself less central to the overall agenda. The Zionist leadership and intellectuals attempted to define the nature and role of Zionism at the change of the millennium. The principle of religious pluralism figured high on the agenda of the religious streams; however, it took a concerted effort and much adroit negotiation by Chairman Avraham *Burg, to arrive at an acceptable resolution. At this congress a resolution was passed requiring at least 25% of Zionist Congress delegates to be between the ages of 18–30.

The 34th Zionist Congress convened in Jerusalem in 2003. As resolved in the previous Congress, 25% of the delegation was under the age of 30. Under the banner of "Solidarity and Mutual Responsibility: The Jewish People and the State of Israel" it brought together Zionist groups from across the Zionist spectrum to discuss the issue of Israel as a Jewish and democratic state and to look toward a new vision of Zionism.

The Zionist Congress concluded with a series of resolutions reaffirming the centrality of Israel, the importance of immigration, promotion of Jewish Zionist education, increased funding for youth movements, coordinating the fight against antisemitism and anti-Zionism, and settling the Negev and the Galilee. It also issued the following proclamation:

We, who are assembled at the xxxiv Zionist Congress, held in Jerusalem during the fifty-fourth year since the establishment of the State of Israel and one hundred and five years since the convening of the First Zionist Congress where the right of the Jewish People to national revival in Eretz Israel was declared, hereby do call upon the legislators of the Knesset of Israel to secure in Basic Law the fundamental values of the State of Israel that determine it to be the State of the Jewish People and a Jewish and democratic state;

Whereas the State of Israel was established by the Zionist Movement to be the National Home of the Jewish People and to achieve our two thousand year long aspiration to bring about

the Ingathering of the Exiles, national independence, spiritual renaissance and the creation of a society in accordance with the vision of the Prophets of Israel;

Whereas there are those who refute the right of the Jewish People to self-determination in Eretz Israel;

And whereas the character of the State of Israel is determined and expressed, among others, through the Basic Laws that serve as the foundation for the future Constitution of Israel;

Therefore,

We who have assembled at the xxxiv Zionist Congress, convened in Jerusalem in the month of Tamuz in the year 5762, do proclaim that the time has come to provide for the legal status of the Jewish, Zionist and democratic values of the State of Israel in keeping with Israel's Declaration of Independence and the ethos of the State since its inception, and to declare the following principles as the basis for determining the uniqueness, character and raison d'être of the existence of the State of Israel as a Jewish and democratic state.

1. **The State of Israel is the State of the Jewish People and its capital is Jerusalem.** It is the fulfillment of the aspirations of the Zionist Movement and the aspirations of generations for the independence and sovereignty of the Jewish People in the spirit of the principles of the Declaration of Independence.

2. **The State of Israel will be open to the aliyah of Jews and will aspire to bring the Jewish People home.**

3. **The State of Israel is a democracy** that respects basic human rights and the heritage of the minorities living in its boundaries, through the safeguarding of equal rights for all of its citizens, regardless of religion, race, sex or nationality. The values of freedom, freedom of religion and conscience, justice and peace are the Jewish heritage of Israel.

4. **The State of Israel safeguards** the sites that are holy to all religions from any desecration or other offense that would interfere with freedom of access to members of all religions to their holy places or their sentiments to those sites.

5. "**Hatikvah**" is the national anthem of the State. The State flag and the State emblem are those determined by the Law of the Flag and Emblem.

6. **The State of Israel is a state whose history is intertwined with the history of the Jewish people.** The Shabbat is the day of rest of the State, the national festivals are its holidays and Hebrew is its language.

7. **The State of Israel perceives the encouragement of Jewish settlement in Israel** to a basic value of Zionism and a responsibility of the State and its authorities.

8. **The State of Israel, through the fulfillment of its mission, seeks the involvement of the Jewish People** in the building of the Land and in the Ingathering of the Exiles in accordance with the statutes of the State.

9. **The State of Israel, as the State of the Jewish People, will act to guarantee** the future existence of the Jewish People; will promote ties between Israel and the Diaspora; and will come to the aid of Jews throughout the world in time of need.

10. **The partnership between the State of Israel and the Jewish People** shall find expression through the National Institutions as determined by Law.

On this momentous occasion, here in Jerusalem, we the representatives of the Zionist Movement, call upon the Knesset to adopt these principles among the Basic Laws of the State of Israel as the keystone for ensuring the future of the State of Israel as the Jewish and democratic State of the Jewish People.

Congress Minutes

Minutes of the 1st to the 27th Congresses were published in special volumes from 1898 until 1969. The minutes of the 1st to the 19th Congresses came out in German. Minutes of the First Congress came out in a second edition (Prague, 1911), with introductions by Nordau and Wolffsohn, and were also translated into Hebrew with supplements by H. Orlan (1947) and with the addition of forewords by surviving participants in the First Congress. From the 16th Congress (1929) minutes also include discussions of the Jewish Agency Council, which took place immediately after the closing session of the Congress. Hebrew became the language of Congress minutes with the 19th Congress, whose minutes are also in German; from the 20th Congress, the official records are only in Hebrew. Hugo *Schachtel published the following reference works for the minutes of the first Congresses: an index of the first six Congresses (1905), an index of the Seventh Congress (1906), and the resolutions of the first seven Congresses (all in German, 1906). An index of the minutes of the first four Congresses was compiled at Tel Aviv University (1966–69).

A vast and multilingual literature on the Congresses is to be found in newspapers, journals, and special books, especially during the periods in which Congresses were held. Various catalogues of journals and newspapers are extremely rich in this material, especially the index of Ḥamishim Shenot Ha-Poʿel ha-Ẓaʿir, and Zionism and Palestine (11 vols., 1946–56).

On the role of the Congress within the general structure of the Zionist Organization, See *Zionism, Zionist Organization, Organizational Structure.

ZIONIST ORGANIZATION OF AMERICA (ZOA), U.S. organization of General Zionists. In 1898 Richard *Gottheil, who attended the Zionist Congress in Europe, called a New York conference which formed the Federation of American Zionists. To attract support, the Federation began to publish a monthly, The Maccabean, in 1901, and Dos Yidishe Folk in 1909. The newly formed *Young Judaea (1907) and *Hadassah (1912) joined the Federation, and at a convention in 1918 the various Zionist branches merged into the ZOA. Louis D. *Brandeis was elected honorary president and Julian W. *Mack president. The Mack administration (1918–21) participated in the work of the *Zionist Commission in Palestine. At the Cleveland convention of 1921, Brandeis and his adherents, who differed from Chaim *Weizmann and the world leadership in favoring a policy of private economic investment in Palestine, withdrew from the ZOA. Louis *Lipsky, who supported the *Keren Hayesod, became president, and the ZOA grew numerically, politically, and financially. In 1924 a merger of the annual Zionist major fund-raising efforts created the United Palestine Appeal. After the outbreak of World War II in September 1939, the American Emergency Committee (Council after 1943) for Zionist Affairs (ECZA) began to function. ZOA representatives on the ECZA occupied the front rank in the political struggles and achievements of that period. During 1946–48, U.S. support for the Jewish state was achieved by the exertions of the mobilized Zionist forces, including the ZOA leaders, especially Abba Hillel *Silver and Emanuel *Neumann.

With the founding of the State of Israel on May 14, 1948, the ZOA's role diminished and shifted to fund raising and public relations on behalf of Israel. In 1957 a group of prominent Zionists seceded from the ZOA and organized the American Jewish League for Israel. The ZOA struggled to maintain its position by fostering projects in Israel such as Kefar Silver and the ZOA house in Tel Aviv, and stressing Zionist education and Hebrew culture in the U.S. ZOA supported the Young Judaea youth movement and several Zionist-oriented summer camps. It published a periodical The New Palestine which later was called The American Zionist. ZOA membership was 147,551 in 1918; 44,280 in 1939; and 165,000 in 1950. Since 1950 there has been a decline in membership.

[Herbert Parzen]

ZOA's influence continued to diminish in the 1980s and early 1990s as the focus of pro-Israel activism shifted to major lobby groups like the American Israel Public Affairs Committee (AIPAC) and as Jewish defense agencies increasingly took on pro-Israel functions.

But the group became more prominent after the 1993 election of Philadelphia activist Morton Klein as ZOA president in a controversy-ridden contest.

While most pro-Israel groups supported the 1993 Oslo agreement, under Klein the ZOA expressed strong reservations, citing ongoing terrorism and continuing statements by Palestine Liberation Organization leader Yasser Arafat rejecting Israel's right to exist. Klein also used his position as a member of the Conference of Presidents of Major Jewish Organization to attack fellow presidents and to criticize individuals including New York Times columnist Thomas Friedman, and to lead a campaign against John K. Roth for director of the Research Institute of the U.S. Holocaust Memorial Museum. He tried to prevent the Presidents Conference from endorsing the Peace Process even when this was the policy of the elected government of Israel.

As ZOA became more critical of Israel's participation in the peace process, the group was wracked by internal dissension over the question of whether it was appropriate for American Jews to criticize the policies of an elected government in Jerusalem. That led to several local chapters, led by a prominent group in Baltimore, to disaffiliate from ZOA.

But the shift to the right helped ZOA reestablish a strong fundraising base. The group, and Klein in particular, also became close allies of Christian Zionist groups that became increasingly critical of the Oslo process and U.S. involvement in ongoing negotiations.

ZOA was most effective in raising the issue of American victims of Palestinian terrorism. In the 1990s, it established a Washington lobbying operation that frequently clashed with AIPAC, the leading pro-Israel lobby group, and began working

closely and virtually exclusively with right-of-center lawmakers. In 2005 ZOA became a leading U.S. voice against Israel's unilateral withdrawal from Gaza, conducting a vigorous but ultimately unsuccessful advertising campaign in Israel against the withdrawal.

ZIONIST SOCIALIST WORKERS' PARTY (or **SS**, the initials of "Zionists-Socialists" in Russian), territorialist group in Russia founded at a conference held (interrupted as a result of the arrests of its participants) in Odessa, in January–February 1905. The party was the outcome of the rift between two conflicting tendencies in *Po'alei Zion in 1903–04, and though efforts were made to unite the separate groups into a united Zionist Socialist party, the ideological differentiation led to three distinct trends: territorialist, autonomist, and Erez-Israel-centered. There were also differences on the participation of Jewish socialists in the revolutionary struggle in Russia. Among the leaders and activists of the party were: N. *Syrkin, J.W. *Latzky-Bertholdi, the brothers Jacob and Joseph *Lestschinsky, G. *Abramowitz (Avrahami), J. Chernikhov (Danieli), M. Rashkes, M. *Litvakov, A. *Yoffe, M. Shatz-Anin, S. *Niger, the brothers David and Moses Gepstein, J. *Pat, D. *Lvovich, B. Zelikovich (M. Gutman), Samuel *Weizmann, and A. Sokolovski. B. *Dinur (Dinaburg), B. *Katznelson, A. *Harzfeld, M.D. *Remez (Drabkin), as well as S. *Mikhoels, A. Leyeles *Glanz, and Elisha *Rodin, who belonged to it during various periods. In its foundation statement the party adhered to *territorialism, arguing that the essence of Zionism was its "social economic content," and not "the revival of the Jewish land, Jewish culture, and Jewish tradition." Therefore, "there is no organic link between Zionism and Palestine." Because the SS had rejected the purely autonomist principle of "Sejmism," the supporters of the *Vozrozhdeniye group rapidly seceded from it. The party participated in the Seventh Zionist Congress (summer 1905), after which it left the Zionist Organization, supporting the Jewish territorialist organization founded by I. *Zangwill. The first proper convention of the party was held in Leipzig (March 1906) and decided to change its name, but it postponed it until the establishment of a Jewish world socialist organization. A minority within the party did not support its extreme anti-Erez Israel stance.

The SS viewed the future of the Jews in the Diaspora with extreme pessimism and saw an urgent need for a radical solution for fear of catastrophe. The party did not believe in "national cultural autonomy" of the Bundist type, nor in the national-political autonomism of the Sejmists. The absence of a "national economy" and "acute, social-economic and national-political pressures" were leading to the constant impoverishment of the Jewish masses and their "cultural sterility." The formula "non-proletarization" evolving into "non-

industrialization," explained the abnormal conditions of the Jewish proletariat and its restriction to small industry and craftsmanship. Thus it could not be "the real bearer of the socialist ideal." The "historical necessity" for realizing the concept of territorialism was linked to the actual flow of Jewish mass emigration, which occupied a central place in the party's ideology. The Jewish emigration, flowing to developed countries and towns, would reach a saturation point. It would be compelled to chance its direction toward agriculture, toward a compact settlement, which would foster "the concentration of the Jewish masses in a free territory." Once political rights would be won this evolution would lead to the formation of a "Jewish national economic organism." This concept lacked, however, any indication as to the role to be played by the party in the realization of Jewish territorialism. The party regarded itself as a social-democratic Marxist party, supported active participation in the revolutionary struggle of Russia, but did not see any organic link between it and the aims of territorialism. In the revolution of 1905–06 its influence reached a peak and it became a factor second in importance only to the *Bund, which regarded it as a serious rival. The party also struck roots in Poland, especially in *Czestochowa (J. Kruk and A. *Syngalowski). It claimed to have 27,000 members and played an active role in Jewish *self-defense and in the trade-union movement. In 1907 it was joined by the Jewish territorialist workers' party, the successor of the "Minsk trend" of Po'alei Zion.

There was also a "SS League Abroad." The party maintained relations with sister organizations in the United States (the "Zionist territorialists," led by N. Syrkin, B. *Zuckerman, and A. Goldberg), England, and Argentina. The SS participated in the Congress of the Second Socialist International at Stuttgart (1907) on a consultative basis, but it was not accepted as a member of the International. In the reaction years, after the abortive revolution of 1905–06, the SS declined greatly in importance and was abandoned by a number of its leaders. Its slogan became "regulation of emigration" (Vilna Convention, 1908), hence its initiative for the calling of a World Emigration Congress, the project of an emigration bank, and its participation in the congresses of the Jewish Territorial Organization. The SS stood for Yiddishism. At its fourth conference (1911) it decided to participate in the life of the Jewish communities, while at the fifth conference (March 31–April 1, 1915), it adopted, for the first time, a positive position on autonomism. The SS participated in the activities of the *ORT, the *Society for the Promotion of Culture among the Jews of Russia, and the *OZE. During World War I the SS adopted an anti-war attitude (fifth conference, 1915) and was opposed to participation in the patriotic war-industrial committees in Russia. After the February 1917 Revolution it substituted in its name the word "territorialist" instead of "Zionist," and adopted – at its sixth conference (April 1917) – the program of national autonomy. Thus the road was open for a union with the Sejmists and the establishment of the *United Jewish Socialist Workers' Party (Fareynigte; June 1917). Several former members of

the ss were prominent for their role in Jewish settlement in the Soviet Union (e.g., I. Golde and Y. Liberberg). The organs of the ss included: *Khronik fun der Tsionistish-Sotsialistisher Arbeter Partey* (1905), *Forverts* (Warsaw, 1905–06); *Der Nayer Veg, Unzer Veg* (Vilna, 1906–07), *Der Shtral*, 2 vols. (1907–08), and *Tsukunft* (1913).

[Moshe Mishkinsky]

ZIPH (Heb. זִיף; Wilderness of Ziph, מִדְבַּר זִיף), city of Judah mentioned in the seventh district of the hill country of Judah together with Maon, Carmel, and Juttah (Josh. 15:55); it was also associated with the Calebites (I Chron. 2:42; 4:16). The Ziphites were noted for their loyalty to Saul, to whom they twice revealed the site of David's hiding places in the desert which extended east of the city (I Sam. 23:19 ff.; 26:1 ff.; cf. Ps. 54:2). Ziph was fortified by Rehoboam and it apparently served as the terminus of his line of defense guarding the southern part of Judah (II Chron. 11:8). The wilderness of Ziph, the desert east of the city, was almost impassable for an enemy army. The importance of Ziph during the Judean kingdom is attested by its appearance (along with Hebron, Socoh, and *mmšt*) on royal seal impressions from Judah. The settlement in Ziph continued to exist in the fourth century C.E.: a village with this name is mentioned by Eusebius in Daromas in the territory belonging to Eleutheropolis (Bet Guvrin; Onom. 92:15 ff.). It is last mentioned in connection with the life of St. Euthemios (fifth century). Ziph is identified with Tell Zif, 4½ mi. (7 km.) southeast of Hebron.

ZIPPER, GERSHON (1868–1921), leader of the Zionist Movement in Galicia. Born in Monasterzyska, East Galicia, Zipper became one of the outstanding lawyers in Galicia. His special concern was the oppressed and the poor. From his early youth he was an active Zionist. He was a member of the group that published the first Polish-language Zionist periodical, *Przysloszcz* ("Future") in 1892, and, together with A. Korkis, was the author of a Zionist booklet in Polish, "The Task of Jewish Youth." Zipper was one of the founders of a Galician Zionist organization that preceded by several years the appearance of Theodor *Herzl's *Der Judenstaat*, and became one of the leading protagonists of political Zionism in Galicia. He also be-

came active on the local political scene and played a leading role in the 1911 elections to the Austrian parliament on behalf of a Zionist list. The list, however, suffered a severe defeat as a result of the intimidation practiced by the Austrian administration, in cooperation with the Jewish assimilationists. The following year he visited Erez Israel, where he met Solomon *Schiller, his former associate in Zionist work in Poland, who had become director of the Hebrew high school in Jerusalem. On his return, Zipper organized a campaign for the creation of a building fund for the high school and succeeded in raising the money for the erection of the school building. He was also active on behalf of the *Jewish National Fund. During World War I he served in the Austrian army. On his return to Lvov after the war, he resumed his activities in the Zionist Organization of Galicia and when the Zionist leaders of Lvov were arrested, after the pogrom, Zipper alone was left to lead the struggle with the Polish authorities for Jewish rights. At the beginning of 1919 he founded *Chwila* ("The Moment"), a Polish-language Zionist newspaper.

[Getzel Kressel]

ZIPPER, YAʾAKOV (1900–1983), Canadian educator and Yiddish author. Zipper was born in Tyszowce, Poland, the son of Rabbi Abraham David *Shtern. After receiving an intensive ḥasidic education from his father and at the traditional *ḥeder*, Zipper became deeply interested in Yiddish culture and education and trained as a teacher in the secularist schools of Poland. Despite his strongly secular views and associations, Zipper always maintained a positive interest in the traditional and religious values of Jewish culture and a love for Hebrew as well as for Yiddish, Jewish folklore, the established Jewish community, and the Land of Israel.

While in Poland, Zipper helped to organize secular schools in Vladimir Volynski and Ustilug. In 1925, he emigrated to Canada, where he became the leader of the Labor Zionist-oriented Yiddish-Hebrew Peretz schools of Winnipeg and, from 1934 until his retirement in 1971, in Montreal. He was an important figure in Canadian Jewish literary circles, being active in the Jewish Public Library, the Poalei Zion, the Jewish Nation Workers' Alliance, the Jewish Writers' Association, and in the educational work of the Canadian Jewish Congress. Under his direction and the leadership of Leiser Zuker (1886–1965), the Peretz School paid special attention to the education of the children of the poor, despite the institution's constantly straitened finances.

Zipper also played a leading part in extending the activities of the Jewish schools of the community to the realm of adult education, so that the Peretz schools became a vital spiritual center for the secular and Zionist community – as did the Jewish People's schools with which they merged in 1971. In this context Zipper's oratorical and literary talents supported his pedagogical training.

A major thrust of Zipper's thinking and teaching was the centrality of East-European folk Jewry in the recent centuries of Jewish history, which is reflected in his considerable literary output, both in Hebrew and in Yiddish. Together with Y.Y. *Segal, Rachel *Korn, Melech *Ravitch, Mordecai Chossid, N.J. Gotlib, and Peretz Miransky, he helped to establish the Canadian – and especially the Montreal – community as one of the important secondary centers of Jewish literature in the mid-20ᵗʰ century. His short stories, book reviews, poems, travel reports, and other writings appeared in scores of periodicals in the United States, Europe, Israel, and South America. His Hebrew style was as original a contribution to Jewish literature as were his Yiddish works. Much of his writing reinterprets biblical and historic themes. His first major work, based upon the biography of the Ba'al Shem Tov, appeared in serial form in *Haolam* (1937–38) and later in book form, both in Hebrew (*Ish Hayah ba-Arez*, 1955) and in Yiddish (*Geven iz a Mentsh*, Montreal, 1940). His semi-autobiographical novel, *Oyf Yener Zeyt Bug* (Montreal, 1946), set in Poland after World War I, appeared in a Hebrew version, *Me-Ever Li-Nehar Bug*, in 1957. His *Tsvishen Teykhen un Vassern* (Montreal, 1960), a major fictional work on Jewish life and moods in Polish villages, also appeared in Hebrew, *Bein Naharot u-Neḥalim*, in 1967. He wrote a long elegy on the ruins of the Holocaust, "*Ikh bin Vider in Khurever Heym Gekumen*" (Montreal, 1965). Zipper also edited the *Leizer Zuker Gedenkbukh* in memory of the prominent Poalei Zion educational worker and Canadian Jewish Congress leader.

[David Rome]

ZIPPORAH (Heb. צִפּוֹרָה), wife of Moses. The name of Zipporah's father is variously given as Reuel (Ex. 2:18, 21) and *Jethro (18:2; cf. 3:1), priest of Midian. She was one of seven daughters (2:16). Zipporah bore Moses two sons, Gershom and Eliezer (2:22; 18:3–4). She appears to have accompanied her husband on his return to Egypt when, at a night encampment on the way, she averted his imminent death by circumcising her son with a flint (4:24–26). Zipporah seems to have returned with her children to her father's home in Midian, rejoining Moses at Mt. Sinai after the Exodus from Egypt (18:1–6). Nothing further is recorded of her.

[Nahum M. Sarna]

In the *Aggadah*

Zipporah is praised in the Midrash both for her piety and virtue (MK 16b; Ex. R. 1:32) and for her beauty (Mid. Ps. 7:18). Various explanations are given of her name ("bird"): When questioned by her father about Moses, she ran after him like a bird and returned with him (Ex. R. 1:32); she cleansed her father's house from every vestige of idolatry as a bird collects the smallest crumbs from the ground (*ibid.*); she is compared to the bird used in the purification rites of the leper (Tanḥ. B., Ex. 6). As soon as Jethro realized that Moses was the Hebrew who had fled from Egypt he had him thrown into a pit. During the ten years he spent in the pit, however, Zipporah provided him with food until he was set free (Targ. Jon., Ex. 2:21). The

"sending away" of Zipporah after the Exodus is interpreted as meaning that Moses gave her a bill of divorce (Mekh., Amalek, 3). Identifying the "Cushite woman" (Ethiopian) in Numbers 12:1 with Zipporah whom he remarried, the rabbis explain that as a Cushite woman is distinguished by her skin, so was she distinguished by her virtuous deeds (MK 16b).

Ben-Shabbat, *ibid.*, 213 (Heb.), 7 (Eng. summ.); H. Kosmala, in: VT, 12 (1962), 14–28 (incl. bibl.); J. Morgenstern, in: HUCA, 34 (1963), 35–70; Ginzberg, Legends, index.

ZIPSER, MAJER (1815–1869), rabbi and leader of the *Neologist movement in Hungary. Born in Balassagyarmat, Hungary, Zipser studied at the renowned yeshivot of *Eisenstadt and *Mikulov, under R. Meir *Eisenstadt and N. *Trebitsch, respectively. The latter granted him his rabbinical diploma (*semikhah*), as did Moses *Sofer though he was not one of his disciples (1837). While still engaged in his talmudic studies, he acquired a broad general education, and graduated from the University of Pest in 1851. In 1844 Zipser was appointed rabbi of *Szekesfehervar. As soon as he assumed his position, he called for reforms in the order of prayer: the exclusion of the *piyyutim* from the obligatory prayers and their recital in silence. Controversies immediately broke out within the community which increased after he consented to give a *get* (divorce bill) in the community, something which had never been done before. Zipser published *Mei ha-Shilloaḥ* ("Waters of Siloah," 1853) in defense of his attitude. In 1850 he went to England, where he published his apologetic work *The Talmud and the Gospels* (1851). It was republished by the community of London in 1852 as "*The Sermon on the Mount Reviewed…*, in reply to statements made by two members of parliament, Inglis and Newgate." As a result of the disputes in his community, he thought of emigrating, but accepted a call from the community of Rechnitz (Rohonc), where he remained until his death. His other works include *Zur Biographie R. Meir Eisenstadt* (1846–47); *Die juedischen Zustaende unter der 150 jaehrigen Tuerkenherrschaft* (1846–47); *Raphael Meldola* (1846–47); and *Kritische Untersuchung ueber die Originalitaet der im Talmud und Midraschim vorkommenden Parabeln und Sentenzen* (1848). His German translation of Josephus' *Contra Apionem*, entitled *Ueber das hohe Alter des juedischen Volkes gegen Apion*, was edited by A. *Jellinek and published posthumously in 1870.

[Baruch Yaron]

ZIRELSON, JUDAH LEIB (1860–1941), chief rabbi of Bessarabia, communal leader, and author. Born in Kozelets, Ukraine, at the age of 18 he became rabbi of Priluki and in 1908 of Kishinev. When he received a call to Radom, his community opposed his leaving; the leaders of the Radom community submitted the issue to a *bet din* but lost the case. Widely learned and proficient in many languages, Zirelson became a

leading Zionist and a regular contributor to Hebrew periodicals in Russia, such as *Ha-Meliz, Ha-Ẓefirah, Ha-Zeman, Ha-Peles*, and *Ha-Modiʾa*. He dissociated himself from Zionism, however, as a result of a dispute in 1898 about the election of the Vaʾad Rabbanim ("Committee of Rabbis"). In 1908 he presided over the Conference of Russian Rabbis which met in St. Petersburg to discuss the Jewish position in Russia. In 1911 he issued an appeal for signatories to the protest against the *blood libel raised during the Beilis case at Kiev. In 1912 he was one of the founders of Agudat Israel and was chairman of the two congresses held by that organization in Vienna (1923 and 1929). A communal leader of the loftiest stature, he was one of the personalities most active on behalf of Russian Jewry. When Bessarabia was incorporated in Romania (1920), he learned Romanian, became the leader of the extreme Orthodox Jewry of that country, and was elected a deputy to the Romanian parliament in 1922 and a senator in 1926. Besides being the chief rabbi, he was for certain periods also the head of the community and even mayor of Kishinev, in recognition of which many honors were conferred on him. In Kishinev he founded numerous institutions, among these its first Orthodox high school. He was shot and killed by the Germans in Kishinev (during World War II).

He was the author of several important works: *Aẓei Levanon* (1922), responsa; *Gevul Yehudah* (1906, 1912²), responsa; *Hegyon Lev* (1929), homilies and eulogies; *Maʾarekhei Lev* (1932), responsa and homilies; *Derekh Selulah* (1902), essays and poems; and *Lev Yehudah*, 1 (1935), 2 (1961), responsa and addresses. In his works he included many quotations in various languages, being in this respect almost unique in responsa literature.

[Itzhak Alfassi]

ZIRIDS (Ar. **Banu Ziri**), *Berber dynasty which ruled Ifriqiya (Northeastern Africa, mainly *Tunisia of today) from the late tenth century until approximately 1167. A branch of this family extended Berber rule into *Spain in the 11th century and established its capital at Granada. Under Zirid domination in Northeastern Africa there emerged a vital center of Jewish intellectual life. This became feasible owing to the dynasty's tolerant disposition toward the Jews who generally populated the city of *Kairouan and the commercial ports of Mahdiya and Gabès (today part of southern Tunisia). Kairouan was the residence of the central Jewish leadership and its president, the *nagid. Perhaps the most illustrious *nagid* in the Zirid era was Ibrahim b. ʿAta, who was court physician to the governors Badis and Muʾizz. He had the title of *negid ha-Golah* bestowed upon him in recognition of his outstanding services both to his local community and to the *Pumbedita Academy.

After the Zirids extended their authority to Spain, the Jews of Granada were able to promote cultural and political activity with no particular curbs on communal freedom exercised by the Zirids. This was especially true once the latter

appointed *Samuel ha-Nagid and his son, Joseph, as governmental ministers (viziers). One of the reasons the Jews were properly treated may be attributed to their contribution to the dynasty's financial stability. Following the murder of Joseph ha-Nagid in 1066, Jewish influence declined. The *Almoravids replaced the Zirids as a dominant ruling Berber dynasty in North Africa. Though the Almoravids proved tolerant vis-à-vis their Jewish subjects, this attitude hardly measured up to the golden age enjoyed by the Jews until the mid-12th century.

[Michael M. Laskier (2nd ed.)]

ZISLING, AHARON (1901–1964), labor leader in Erez Israel. Born in the Minsk district, Belorussia, Zisling received both a religious and a secular education. In 1914 he was taken to Tel Aviv by his family. In 1917, when the Turkish authorities ordered the evacuation of Tel Aviv, Zisling studied with a group of deported teachers in Ḥaderah and, under the influence of Joseph Ḥayyim *Brenner, he grew closer to the labor movement. He worked as a laborer in kevuẓat Tirah near Haifa and on the Afulah-Nazareth road and participated in the founding of the workers' collective Ḥavurat ha-Emek, which merged with kibbutz En-Harod. Zisling, who was a delegate to the founding conference of the *Histadrut (1920) and served as secretary of the Jerusalem workers' council (1925–26), was a member of kibbutz En-Harod from its start and a leader of the *Ha-Kibbutz ha-Meʾuḥad movement. Among the founders of *Youth Aliyah, he served on its executive board. As a member of the *Haganah command, he participated in the founding of the *Palmaḥ. During World War II, Zisling was a founder of the Friendship League with the U.S.S.R. A leader of the original *Aḥdut ha-Avodah which merged with Ha-Poʿel ha-Ẓaʾir to form *Mapai (1930), he led the Siʾah Bet ("faction B") when Mapai split and became a founder of the new Aḥdut ha-Avodah Party (1944) and of *Mapam (1948). He was a delegate to the Asefat ha-Nivḥarim, beginning with the second one, a member of the Vaʾad Leʾummi executive, co-founder of Kofer ha-Yishuv (the *yishuv* defense fund), and an active member of central institutions of the Histadrut. In 1947 he was a member of the Jewish Agency delegation to the United Nations. He served in Minhelet ha-Am (People's Administration, see *Israel, State of, Central Governance) and in the provisional Israel government of 1948–49 as minister of agriculture. He was a member of the First Knesset. From 1961 to 1963 Zisling was a member of the Zionist Executive and headed its absorption department.

[Abraham Aharoni]

ZISSU, ABRAHAM LEIB (1888–1956), Romanian Zionist leader and author. Born in Piatra-Neamṭ, Zissu was descended from prominent Ḥabad Ḥasidim and was raised in a religious

environment. Although he became an important manufacturer, Zissu devoted most of his time to literary and political work of a Jewish or Zionist nature. He joined Leon *Algazi and the philo-Semitic Romanian writer Gala Galaction (1879–1961) in publishing the periodical *Spicul*; was coeditor (from 1908) with M.M. *Braunstein (Mi-Bashan) of the Hebrew monthly *Ha-Mekiẓ;* and in 1919 founded the Romanian Zionist daily *Mântuirea*.

As an active Zionist, Zissu often came into conflict with Jewish assimilationists who headed many Jewish institutions, and in his writing developed a violently polemical style. He wrote several novels and other works on Jewish themes, including *Spovedania unui Candelabru* ("Confession of a Candelabrum", 1926); *Ereticul dela Mănastirea Neamțului* ("The Heretic of the Neamț Monastery", 1930); *Calea Calvarului* ("The Road of Calvary", 1935); and *Samson și Noul Dagon* ("Samson and the New Dagon", 1939). The publication of his study *Logos, Israel, Biserica* ("The Logos, Israel, and the Church", 1937) brought him threats of violence from outraged antisemitic students. From 1944 he headed the Zionist Federation and the World Jewish Congress (Romanian section), and organized the mass emigration to Ereẓ Israel of Romanian Jews. Zissu nevertheless continued his efforts under the Communist regime until he was arrested, tried, and sentenced to life imprisonment in 1954 for Zionist activities. Following his release, he arrived in Israel in 1956, but died a few weeks later.

Abraham Zissu's son. THEODORE ZISSU (1916–1942), who had an English university education, was a practical Zionist. He foresaw the immense importance of the then barren Negev region of Palestine and, after the 1937 Peel Commission, formed the Negev Group to fight for the area's inclusion in any future Jewish state. Zissu conducted a vigorous publicity campaign to this end. During World War II he rose from the ranks to become a British tank officer and was fatally wounded at the battle of El Alamein. His book, *The Negev, Southern District of Palestine*, was published in 1946.

ZITNITSKY, PINCAS (Pedro) LÁZARO (1894–1967), Argentine journalist, editor, and author. Born in Kiev, Zitnitsky studied law at Kiev, Koenigsberg, and Bonn. He emigrated to Argentina in 1928 and was active in the non-Zionist and Yiddishist left-wing sector of the Jewish community in Buenos Aires and presided over the Tzentral Veltlech Yiddishe Shul Organizatzie (TZVISHO; Central Organization of Jewish Secular Schools) upon its foundation in 1934. He was also one of the directors and a member of the editorial board of the leftist Yiddish daily newspaper *Di Presse* of Buenos Aires. He became a professor of Slavic civilization at the Universidad Internacional de Latino-America, Buenos Aires, in 1959, and vice rector the following year. Zitnitsky was a prolific journalist and essayist. His books include *Forerunners of Scientific Socialism* (1928), *The Meaning of History* (1930), *Peretz:*

Philosophy and Socialism (1951), and *A Half-Century of Yiddish Literature* (1952).

ZITRON, SAMUEL LEIB (1860–1930), Hebrew and Yiddish writer and journalist. The son of a distinguished merchant family in Minsk, Zitron was educated at Lithuanian yeshivot. While studying at the Volozhin yeshivah, he became attracted to the Haskalah and in 1876 moved to Vienna, where he became friendly with P. *Smolenskin. After studying for several years in Germany, he began his journalistic career, and for more than 50 years contributed to the Yiddish press and to nearly all the Hebrew periodicals in the Diaspora. In the 1880s to 1890s, he wrote short stories, one of which, "*Yonah Potah*" (1887), aroused popular attention. He joined the Ḥibbat Zion movement in its early days and translated L. *Pinsker's *Autoemanzipation* into Hebrew (it appeared in a censored version, under the title *Im Ein Ani Li Mi Li*). From 1904 Zitron lived in Vilna and edited various newspapers and anthologies. Of special interest are a series of articles on the Hebrew press published in *Haolam*, 4 (1911–14, 1927–30). Based mainly on Zitron's personal experiences and recollections, the articles contain material of historic value, particularly on *Ha-Maggid, Ha-Meliẓ, Ha-Ẓefirah, Ha-Karmel, Ha-Levanon, Ha-Emet*, and *Ha-Kol*. He also wrote about the history of the Yiddish press in the 19th century (*Geshikhte fun der Yidisher Prese*, 1923). With the decline of the Hebrew press in Eastern Europe, Zitron wrote extensively for the Yiddish press, and published many monographs written in a popular style, some of which were later published in book form. Zitron also translated many books into Hebrew (including the works of *An-Ski and the stories of L. *Levanda).

His works include: on the Zionist movement and its precursors, *Toledot Ḥibbat Ẓiyyon* (1913); *Herzl* (1921; Heb.); *Leksikon Ẓiyyoni* (1924); on Hebrew literature and its writers, *Yoẓerei ha-Sifrut ha-Ivrit ha-Ḥadashah* (1922); *Anashim ve-Soferim* (1921); articles in Yiddish, *Meshumodim* (4 vols., 1923–23), *Literarishe Doyres* (4 vols., 1921–23), *Shtadlanim* (1926), *Barimte Yidishe Froyen* (1944).

ZIV, JACOB (1931–), electrical engineer. Born in Tiberias, Israel, Ziv received his B.Sc., Dip. Eng. (1954), and M.Sc. (1957), both in electrical engineering, from the Technion, Israel Institute of Technology, Haifa. From 1955 to 1959, he was a senior research engineer in the Scientific Department of the Israeli Ministry of Defense and was assigned to the research and development of communications systems. He was sent by the Israeli Ministry of Defense to Massachusetts Institute of Technology and received his D.Sc. degree in 1962. From 1961 to 1962, while studying for his doctorate at MIT, he joined the Applied Science Division of Melpar, Inc., Water-

town, Mass., where he was a senior research engineer working in communications theory. In 1962 he returned to the Scientific Department of the Israeli Ministry of Defense as head of the Communications Division and was also an adjunct of the Faculty of Electrical Engineering at the Technion. From 1968 to 1970 he was a member of the technical staff of Bell Laboratories, Inc., Murray Hill, N.J., where he also spent several sabbaticals in later years. He joined the Technion in 1970 and was appointed professor of electrical engineering. From 1974 to 1976, he was dean of the Faculty of Electrical Engineering and vice president for academic affairs from 1978 to 1982. Upon his return full time to the Technion in 1970, he worked on a variety of problems in information theory, including the characterization of the complexity of an information source and the related problem of universal data compression. With Abraham Lempel he wrote a series of papers on the Lempel-Ziv algorithm. His research interests include data-compression, information theory, and statistical communication. In 1982 he was elected a member of the Israel Academy of Sciences and appointed a Technion distinguished professor. In 1993 he was awarded the Israel Prize in exact sciences (engineering and technology). Among his many awards, he has twice been the recipient of the IEEE-Information Theory Best Paper Award (for 1977 and 1979). He is the recipient of the 1995 International Marconi Award, the 1995 IEEE Richard W. Hamming Medal, in 1997 the Shanon Award from the Information Theory Society, and in 2002 the Rothschild Prize for technological sciences. He was chairman of the Israel Universities Planning and Grants Committee from 1985 to 1991 and served as the president of the Israel National Academy of Sciences and the Humanities.

[Bracha Rager (2nd ed.)]

ẒIVION (pseudonym of **Benzion Hoffman**; 1874–1954), Yiddish journalist and essayist. Born in a Latvian village, he joined the *Bund soon after its founding in 1897 and remained a faithful interpreter of its ideology. From 1895 he wrote Hebrew articles and in 1909, the year after his emigration to New York, he edited the U.S. Hebrew journal *Ha-Yom*. However, his main literary medium was Yiddish, in which he is said to have written about 6,000 articles, mostly in the New York Yiddish paper *Jewish Daily Forward*, and in the monthly, *Zukunft*. Although he received a doctorate in science and engineering, he preferred to write about rather than practice in these fields. A correspondent to many national and international conferences, he proved to be a skillful interpreter of complex political problems. His readers valued his independent judgment, his simple style, and his mild humor. He popularized scientific subjects in several books and participated in the English-Yiddish Encyclopedic Dictionary (1915). On the semicentennial of his literary activities, a volume of his, *Far Fuftsik Yor* ("Selected Works," 1948) appeared under the editorship of H.S. Kazdan.

BIBLIOGRAPHY: Rejzen, Leksikon, 3 (1929), 246–51; H.S. Kazdan, Introduction to Ẓivion, *Far Fuftsik Yor* (1948).

[Melech Ravitch]

ZIYANIDS (**Banu Ziyan**), Berber dynasty which ruled intermittently in western *Algeria from 1235 to 1557. This dynasty had its capital in *Tlemcen. It welcomed numerous Jewish refugees victimized by pogroms in Christian *Spain in the 1390s – one hundred years before the mass expulsion of Spanish Jewry. Some Jews enjoyed influence in the Ziyanid court as officials, interpreters, and financial advisers. When Spain and *Portugal conquered parts of Algeria in the 16th century, they sowed panic among the Jews, who fled to *Morocco and other parts of the Maghreb. Some came back after the withdrawal of the occupiers. To maintain their hold over Algeria, the Ziyanids enlisted the aid of the Ottoman Turks. The latter gradually consolidated their hold over the country in the 1550s and remained in relative control until the French conquest of 1830.

BIBLIOGRAPHY: H.Z. Hirschberg, *A History of the Jews in North Africa*, 1 (1974); C.-A. Julien, *History of North Africa: From the Early Arab Conquest to 1830*, ed. and rev. by R. Le Tourneau (1970).

[Michael M. Laskier (2nd ed.)]

ẒIẒIT (Heb. צִיצִית pl. צִיצִיּוֹת, *ẓiẓiyyot*; "fringes"), name of the tassels attached to the four corners of special (four-cornered) garments worn by men in fulfillment of the biblical commandment in Numbers 15:37–41 and Deuteronomy 22:12. It has been suggested that the *ẓiẓit* served as a talisman (*amulet) or that it was instituted in order to distinguish between male and female garments which were very similar in biblical times. In the latter case it served as a protection against immoral conduct (an interpretation derived from Numbers 15:39). Talmudic literature invests the commandment of *ẓiẓit* with exalted symbolism. The rabbis regarded the *ẓiẓit* as a reminder to the Jew to observe the religious duties, giving it a function similar to that of the *mezuzah* on the doorposts and to the *tefillin* on the head and arm. The Talmud brings the parable how a person was saved from sensual sin because he wore fringes (Men. 44a).

The biblical commandment prescribing the entwining of a blue cord in the fringes is regarded as essential because blue, the color of the sky, was also supposed to be the color of the "throne of glory" (Men. 43b). Difficulties in obtaining the dyeing material for this purpose caused rabbinic authorities in the second century C.E. to waive this requirement.

In modern times, each *ẓiẓit* consists of one long and three short white threads which are passed through the holes in the four corners of the garment and folded so as to make eight threads. They are then fastened with a double knot. The long thread (called *shammash*) is wound around the other threads seven, eight, 11, and 13 times and the four joints are separated from one another by a double knot. The *ẓiẓit* thus consists of five double knots and eight threads (a total of 13). This number, together with the Hebrew numerical value of *ẓiẓit* (600), amounts to 613, the number of the biblical commandments of which the *ẓiẓit* are to remind the wearer (Num. 15:39). *Ẓiẓiyyot* of wool or linen are ritually fit for a *tallit* of whatever material. A silk or cotton *tallit*, however, should have *ẓiẓiyyot* of only the

same fabric. The minimum length of the *ẓiẓit* threads should be four thumb lengths. If one of the *ẓiẓit* threads is torn, it is customary to replace the whole fringe. A person not wearing a four-cornered garment is exempt from the *mitzvah* of *ẓiẓit* since the religious duty of wearing *ẓiẓit* is not a personal one (*ḥovat gavra*). In order to fulfill this biblical commandment, however, pious Jews always wear a (*tallit katan*) "small four-cornered garment."

Women are exempt from the duty of *ẓiẓit* as the fulfillment of this commandment relates to a specific time and women are exempt from such obligations: *ẓiẓiyyot* have to be worn only during the day, based on the Bible verse "ye may look upon it" (Num. 15:39) which excludes the night.

It is customary to kiss the *ẓiẓiyyot* while reciting the last section of the **Shema* (Num. 15:37–41) in the morning service. The *ẓiẓyyot* of the *tallit* in which males are buried are torn to make them ritually unfit.

ZLATOPOL, town in N.W. Kirovograd district, Ukraine. In 1847 the Jewish community of Zlatopol numbered 2,668 and increased in 1897 to 6,373. Zlatopol was the first residence of the **Brodski family who founded there an almshouse, a hospital, and a high school. In May 1919 Ukrainian revolutionaries conducted pogroms in Zlatopol. Approximately 70 Jews were killed and most homes and stores in the town were robbed and burned. In 1926 the Jewish community amounted to 3,863 (61.7% of the population). The community perished under the Nazi occupation. In all, some 1,200 Jewish residents of the city were killed in 1941–42.

[Ruth Beloff (2nd ed.)]

ZLATOPOLSKY, HILLEL (1868–1932), Zionist leader, industrialist, and philanthropist. Zlatopolsky was born in Yekaterinoslav. As secretary to Max **Mandelstamm, the Zionist Organization representative for the Kiev district (1897–1905), Zlatopolsky was in charge of the Zionist activities there, as well as of the financial center of Russian Zionists. He played a leading role in organizing the opposition to the **Uganda Scheme. He was one of the founders of the Ḥovevei Sefat Ever Society (Friends of the Hebrew Language, 1907) and was also active in the Histadrut le-Safah u-le-Tarbut Ivrit (Association of Hebrew Language and Culture). He made substantial financial contributions to facilitate the establishment of a network of Hebrew schools, ranging from kindergarten to teachers' seminaries. He also subsidized the Hebrew daily *Ha-Am*, and the **Habimah theater in Moscow and was one of the founders of Omanut, a publishing house for Hebrew textbooks and readers (the latter in cooperation with his daughter Shoshannah and son-in-law Joseph **Persitz). During World War I, he lived in Moscow, but he left Russia in

1919. Together with Isaac **Naiditsch, he was one of the founders of the **Keren Hayesod, and as a member of its first board of directors he conceived the idea of a national tithe. Zlatopolsky wrote articles on Zionism and Hebrew culture, as well as feuilletons, the latter containing a wealth of general Jewish and ḥasidic folklore. Some of his writings were published in two collections, *Bi-Tekufat ha-Teḥiyyah* (1917) and *Sefer ha-Feuilletonim* (1944). He died in Paris, the victim of a murder.

ZLOCISTI, THEODOR (1874–1943), physician and one of the first German Zionists. Born in Borchestowa, East Prussia, Zlocisti studied medicine at the University of Berlin and graduated in 1900. He practiced his profession throughout his life, first in Berlin and from 1921 in Ereẓ Israel – initially in Tel Aviv and later in Haifa. During World War I he was the chief medical officer of the Red Cross Mission in Constantinople and director of the Red Cross hospital in that city. In Tel Aviv he served as a member of the city council and its executive committee. Zlocisti played a leading role in the Zionist movement in Germany. In 1893 he was the secretary of the Young Israel Society in Berlin and had an exchange of correspondence with **Herzl. In 1895 he became one of the founders of the first Zionist students' society in Germany; together with his wife he attended the First Zionist Congress and kept up his Zionist activities in Germany until settling in Ereẓ Israel. He took a profound interest in East European Jewry and in Yiddish literature, and in *Aus einer stillen Welt, Erzaehlungen aus der modernen juedischen Literatur* (1910), he published German translations of works by leading Yiddish authors. He also published two collections of verse, *Vom Heimweg* (1903) and *Am Tor des Abends* (1912). He was the author of professional articles and treatises and of a comprehensive work on the climate of Ereẓ Israel, *Klimatologie und Pathologie Palaestinas* (1937).

Zlocisti also revived the writings of Moses **Hess and devoted efforts throughout his life to uncovering documentary material on Hess. He began with the publication of Hess's Jewish writings (*Juedische Schriften*, 1905), to which he added a comprehensive introduction. This introduction was later expanded into a special book (Heb. trans. Y.A. Heller, 2 vols., 1945–46). He also published a selection of his socialist writings, *Moses Hess, der Vorkaempfer des Sozialismus und Zionismus* (1921), a complete edition of *Rome and Jerusalem* (1935), and a shortened edition (1939), including an introduction and comments. He left a collection of Moses Hess's correspondence that was published in Hebrew translation after his death with an introduction by the translator, G. Kressel (1947).

[Getzel Kressel]

ZLOTOWITZ, BERNARD M. (1925–), U.S. Reform rabbi. Raised in an Orthodox immigrant family on the Lower East Side of Manhattan, Zlotowitz served as a leading voice of the Reform movement of the United States, holding several positions in the Union of American Hebrew Congregations (later the Union for Reform Judaism). His father, Rabbi Aron Zlotowitz, was spiritual leader of a congregation in Brooklyn for 60 years. Accepted into medical school while studying at Brooklyn College (B.A., History, 1948), Bernard Zlotowitz decided on a career in the Reform rabbinate. "I decided I didn't want to be a doctor. My real interest was in trying to serve God and the Jewish people," he says. In college, he re-examined his faith. "Reform answered my religious needs. Reform challenges the origins of the Bible … the nature of God."

After ordination in 1955 from the Hebrew Union College-Jewish Institute of Religion, where he earned a B.H.L, M.H.L. and subsequently a D.H.L. degree, Rabbi Zlotowitz served as a pulpit rabbi at temples in Elmont, N.Y., Nyack, N.Y., Freeport, N.Y., and Charlotte, N.C. He returned to New York City in 1975 to serve as the UAHC's New Jersey regional director. "I wanted to serve more Jews than I was serving in Charlotte," he said. In 1980 he was promoted to director of the New York Federation of Reform Synagogues; he also lectured on Bible at HUC and wrote a "Jewish Q & A" column for *Reform Judaism* magazine.

Zlotowitz worked at the federation until retirement in 1990. From his retirement, he taught at the interdenominational Academy for Jewish Religion in the Bronx, and continued to teach and lecture as the URJ's senior scholar, serving as a resource for the Reform movement's rabbis and lay members on a variety of religious and historical topics, such as the construction of a *mikveh,* and the source of the tradition of sitting *shivah* for an intermarried child.

"My major interest is Bible," he said, "because it's a living book. It's a guide for life."

As a leader of summer trips to Israel sponsored by the National Federation of Temple Youth in 1968–72, he took part in archaeological digs in the Old City of Jerusalem. "I chose to do it. It gave me a tremendous insight into archaeology. It gave me an insight into the history of Jerusalem."

Rabbi Zlotowitz was a life member of NFTY and a board member of the New York Board of Rabbis. He received an Honorary Doctor of Divinity degree from HUC in 1980.

With his wife Shirley he traveled around the world, including most of Europe, as well as parts of Africa, Asia, South America and Africa. During a visit to Germany in 1994, Rabbi Zlotowitz became fascinated by the story of Martin Riesenburger, a preacher and cantor who openly officiated at funerals and led worship services in the chapel of Berlin's major Jewish cemetery during the Nazi era and came to be known as "the last rabbi of Berlin."

Rabbi Zlotowitz researched Riesenburger's life and wrote his biography, still unpublished. "He was a hero. He gave the people hope," Rabbi Zlotowitz said. "He always told them the war would end."

Among his writings are *Abraham's Great Discovery* (1991) and *How Tzipi the Bird Got Her Wings* (1995), both as co-author with Dina Maiben; *Folkways and Minhagim, Art in Judaism*; *The Septuagint Translation of Hebrew Terms in Relation to God in the Book of Jeremiah* (1981), *The Book of Psalms: A New Translation and Commentary* (co-author with Mark Rozenberg, 1999); he was editor of *One People* (1982).

[Steven Lipman (2nd ed.)]

ZLOTOWITZ, MEIR (1938–), U.S. publisher. Born in New York, son of Rabbi Aron Zlotowitz, a European-born rabbinic scholar, vice president of the Agudat Harabonim in the 1940s and one of the leaders of the Rabbis March on Washington, on the eve of Yom Kippur 5703 – 1943.

Zlotowitz attended Yeshiva Rabbi Jacob Joseph on the Lower East Side of Manhattan, then spent eight years at Mesivtah Tifereth Jerusalem studying under Rabbi Moses Feinstein, from whom he received his ordination.

As a graphic artist, he established *ArtScroll Studios, specializing in illuminated scrolls, brochures, journals, and invitations. In 1976, he produced a translation of and commentary on *Megillat Esther* as a tribute to a recently deceased friend. The book so impressed those who saw it, that he was encouraged to leave his job and to found Mesorah Publications, publishers of the ArtScroll Series, which has over 1,000 titles in print. He founded the organization with Rabbi Nosson *Scherman and Sheah Brander.

When he first began, in quick succession he similarly translated four other *Megillot* and wrote an exhaustive six-volume translation and phrase-by-phrase commentary on the Book of Genesis. During the first decade of the ArtScroll Series, he authored numerous other books, but then reluctantly withdrew from his personal writing and devoted himself to shepherding Mesorah Publications into its period of explosive growth.

Zlotowitz is also president of the Mesorah Heritage Foundation, a not-for-profit organization which funds more than 80 scholars in Israel, America, and Europe who write and edit such scholarly works as the Schottenstein Talmud. Asked what accomplishments mean the most to him, Zlotowitz speaks of the strangers who approach him to say that ArtScroll has transformed their lives.

The success of the ArtScroll/Mesorah series is undeniable. ArtScroll is a fascinating combination of fervently Orthodox Judaism and an American aesthetic that wraps traditional Judaism in a visual idiom acceptable to the American sensibility. Zlotowitz's sense of the visual impact of a book is an indispensable ingredient in its success. Despite what outsiders may think, even the rejectionist Orthodox community that does not embrace modern culture has, perhaps inadvertently, acculturated itself to the offerings and packaging of the American marketplace.

ArtScroll publishes in English and in Hebrew and has brought its own unique styling to the Israeli and American marketplace. In the United States, it represents an important transition between Yiddish and English as the spoken lan-

guage and the language of Jewish learning for fervently Orthodox Jews in America.

Modern Orthodox scholars have not been uncritical of ArtScroll's success. Its historical studies are wrapped, not in western scholarship, but in hagiography; it seems as if every fervently Orthodox leader or rabbi is without blemish. Others on the right criticize it for enabling and empowering English rather than Yiddish or Hebrew to be the language of contemporary learning.

The Schottenstein Talmud has allowed many who would have otherwise lacked the skill and talmudic virtuosity to participate in *daf yomi* (learning a page of Talmud a day) programs. It has offered those learning in yeshivah the "English" experience of the *bet midrash* and has far outpaced the more sophisticated and erudite commentary of Adin *Steinsaltz in popularity and use.

[Michael Berenbaum (2nd ed.)]

ZMIGROD NOWY, village near Jaslo in Rzeszow province, S. Poland, passed to Austria in 1772, and reverted to Poland after World War I. Jews first settled there in the early 16th century. By the middle of the century they had established an organized community under the jurisdiction of the *Szydlowiec *kahal* in *Sandomierz-Krakow province. In 1692 Menahem Mendel b. Ẓevi Hirsh of Poznan became *av bet din* in Zmigrod Nowy. He was succeeded by Benjamin Wolf who later became rabbi of Dessau and *Metz. In 1765 there were 683 Jews who paid the poll tax living in Zmigrod Nowy, and 1,025 living in 143 surrounding villages; there were 68 Jewish houses in Zmigrod Nowy; a synagogue had been built in the early 17th century. Until Zmigrod Nowy passed to Austria in 1772, Jews there mainly engaged in the import of wines and horses from Hungary, tailoring, and hat making. In the 19th century Jews in Zmigrod Nowy were mainly occupied in trade in timber and grain, the leasing of flour mills and engraving. The Jewish population numbered 1,330 in 1880 (53% of the total), 1,240 (54%) in 1900, and 940 (48%) in 1921.

[Shimshon Leib Kirshenboim]

Holocaust Period

During 1940–41 the Jews suffered from administrative and economic restrictions and forced labor. The Jews of the entire area were concentrated in the city, and in the summer of 1942 hundreds of Jews were killed. Later about 500 people were sent to the Plaszow labor camp, where many of them met their death. The remnants of the community were sent to the *Belzec death camp in the autumn of 1942.

ZMORA, YISRAEL (1899–1983), Hebrew literary critic. Born in the Belz district of Bessarabia, he immigrated to Palestine in 1925. He was one of a group of modernistic Hebrew writers who, from 1927 to 1939, contributed to Tel Aviv's avant-garde literary periodicals *Ketuvim* and *Turim*, and he regularly published critical notices of new Hebrew books and writers in the Palestinian Hebrew press. Zmora founded and edited (1940–54) the literary magazine *Maḥbarot le-Sifrut*. In 1940 he also founded the publishing house with the same name, which published the works of young Hebrew poets, new editions of Hebrew works from the Middle Ages and the Haskalah period, and translations. He was also active as a translator, particularly from French and Russian.

His books include *Anshei Shem Mitloẓeẓim*, under the pen name of Y. Zeh (1933); *Rainer Maria Rilke*, a monograph (1933); *Avraham Shlonsky*, a monograph (1937); *Shenei Mesapperim*, essays on Ḥ. *Hazaz and Jacob *Horovitz (1940); *Sifrut al Parashat Dorot*, essays on literature and writers (3 vols., 1949–50); *Ha-Mesapper Kav le-Kav*, literary analysis of the works of U.N. *Gnessin (1951); and *Nevi'im Aḥaronim*, essays (1953); a collection of poems (1965), *Shloshim Sonetot* (1971) and essays entitled *Ḥamesh Megilot* (1973).

ZNAIMER, MOSES (1942–), Canadian television and theater producer, media executive. Canadian broadcasting was revolutionized in 1972 when Moses Znaimer created *Citytv*, an independent Toronto station that redefined community-based television as culturally diverse, spontaneous, and attuned to the growing wired environment. Znaimer's dynamic and complex personal history grew out of the struggle for survival that defined his early years. His parents had fled the German invasion of Poland and were in Kulab, Tajikistan, when Znaimer was born. The family made their way to Shanghai, then settled in Montreal in 1948. A scrappy dynamo, Znaimer later boasted of the police record he accumulated as a youth in Montreal. But he also immersed himself in Bible and Talmud study, identifying with the Jewish prophets as ideologues who fought alone against the Establishment. He graduated in philosophy and politics from McGill University before earning an M.A. in government at Harvard at the age of 20. Drawn by the world of media communications, he went to work for the Canadian Broadcasting Corporation, where he proved a youthful force, working as producer, presenter, and director of historical and current affairs programming.

He eventually left the CBC to pursue his creative dreams. With the help of financial backers, he built *Citytv* into a major Canadian media conglomerate with stations serving niche markets across Canada. In 1984 he created *MuchMusic*, a 24-hour music-video channel that opened the walls between its multicultural presenters and its young viewers. It relied on hand-held cameras and brought the "backstage" of studio television into the foreground. During the 1980s and 1990s Znaimer presided over the expansion of a media empire that came to include 24-hour local news, creative arts, and educa-

tional channels. By 2002 he had built 17 specialty channels and eight local outlets spread across Canada, and licensed similar stations from Argentina to Finland. Znaimer also appeared as an actor in motion pictures and produced the ground-breaking play, *Tamara*, a thriller where the audience pursues the assorted plot lines unfolding in different rooms of a single house. He opened a TV museum in Toronto, tracing the history and impact of television around the world. In 2000 Znaimer began *IdeaCity*, a yearly "meeting of minds" which provides a "forum for the high ground of ideas and idealism."

By the time of his retirement from full-time production in 2003, Znaimer had defined a uniquely Canadian media voice. He has been recognized with a number of honorary doctoral degrees and awards for his work in media innovation and his efforts on behalf of race relations in Canada, including the Canadian Council of Christians and Jews Human Relations Award.

[Paula Draper (2nd ed.)]

ZNOJMO (Ger. **Znaim**), town in S. Moravia, Czech Republic. Although Jews are mentioned in a document dated 1052, the document itself is considered a 13th-century forgery. A Jewish tombstone in Znojmo, dated 1256, is the oldest to be found in Moravia; another tombstone there is inscribed 1306. A Jewish quarter was established when the town obtained independent status and is described in a document dated 1330. A synagogue is mentioned in 1341. The community were victims of the massacres following the Desecration of the Host libel of *Pulkau and during the Black *Death (1348). An assessment of an impost on Moravian communities in 1421 indicates that the Znojmo community was then the largest in Moravia. The Jews were expelled from Znojmo in 1454 and subsequently were permitted to enter the town only on payment of a body tax (*Leibzoll); there was a special inn for visiting Jews.

There was a "Jewish street" in Znojmo, now called "Vesela street" ("the cheerful street"). The first Jews to receive permission to reside in Znojmo settled there in 1851. A congregation (*Kultusverein*) was founded in 1865 and became autonomous in 1876. In 1888 a synagogue was constructed in the Moorish style. In 1848 there were 19 Jews living in the town. In 1857 there were 36; 357 in 1869; 749 in 1921; 786 in 1928; and 675 in 1930.

The Jews contributed significantly to the town's economic development. They pioneered the canning industry, in particular pickles, for which Znojmo became famous.

Znojmo's population, as well as the vicinity, was known for the Judeophobia entrenched there. During the Sudeten crisis (1938), most Jews left Znojmo. The synagogue was set afire during *Kristallnacht* and was later torn down. Some 665 members of the community perished in concentration camps. A congregation was reestablished after World War II. It no longer exists.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]

ZOAN (Heb. צֹעַן), ancient city in Lower Egypt; the ancient Egyptian Djanet, Greek Tanis, and modern Ṣan el-Ḥagar in the eastern Delta of Egypt. Zoan is mentioned several times in the Bible. Attempts have been made to identify it with the Hyksos capital of Avaris. According to Numbers 13:22 the city was founded seven years after Hebron. An Egyptian text of around 1330 B.C.E. commemorates the 400th year of the god Set in Avaris; since Set was the Egyptian form of the Asiatic storm god whom the Hyksos worshiped, his establishment in Avaris 400 years earlier would follow closely on the appearance of the Hyksos in the Delta. The Egyptian New Kingdom, particularly the period of Ramses II, is well represented at Tanis, but it was not until after the New Kingdom, in the Twenty-First Dynasty, that Tanis rose to preeminence as the chief city of Egypt. It was a Tanite king who campaigned against Gezer, conquered it, and gave the city as dowry to his daughter, Solomon's wife. The mention of Tanis and its rulers by the prophets (Isa. 19:11, 13; 30:4; and Ezek. 30:14) refers, however, to a different dynasty, the Twenty-Second (Libyan) Dynasty, some of whose rulers continued to reside in Tanis and were buried there. The "field of Zoan" (Ps. 78:12, 43), which is attested on several late statues and stelae (Sekhet Djanet) may have been an alternative name for the city, but more probably it was the name of the surrounding region.

[Alan Richard Schulman]

ZODIAC, in astrology, an imaginary zone in the heavens within which lie the paths of the *sun, the *moon, and the planets. The zodiac is divided into 12 signs which are mostly symbolically represented by animals (Gr. Ζώδιον, "a little animal"). The twelve-fold division of the zodiac was first developed by the Chaldean astronomers and was almost certainly suggested by the occurrence of the 12 full moons in successive parts of the heaven in the course of one year. It spread to the West about the beginning of the Christian Era. There is no mention of the zodiac in the Talmud, probably as a result of R. Johanan's statement, based on the verse "Thus saith the Lord, learn not the way of the nations and be not dismayed at the signs of heaven, for the [gentile] nations are dismayed at them" (Jer. 10:2), to the effect that "Israel is immune from planetary influence" (Shab. 156a). It is first mentioned in the *Sefer *Yeẓirah*; and the names given to the 12 signs are direct translations of the Latin names. Thus Aries is called *Taleh*; Taurus, *Shor*; Gemini, *Teʾomim*; Cancer, *Sartan*; Leo, *Aryeh*; Virgo, *Betulah*; Libra, *Moznayim*; Scorpio, *Akrav*; Sagittarius, *Keshet*; Capricorn, *Gedi*; Aquarius, *Deli* ("a bucket"), and Pisces, *Dagim*.

According to the *Yalkut Shimoni* (Lev. 418), however, the standards of the 12 tribes correspond to the signs of the zodiac. Thus in the east were stationed Judah, Issachar, and Zebulun, corresponding to Aries, Taurus, and Gemini; Reuben, Simeon, and Gad in the south correspond to Cancer, Leo, and Virgo; Ephraim, Manasseh, and Benjamin in the west with Libra, Scorpio, and Sagittarius; and Dan, Asher, and Naphtali in the north with Capricorn, Aquarius, and Pisces. A long *piyyut* based on the 12 signs of the zodiac, *Yittaḥ Ereẓ le-Yesha*, is included in old *maḥzorim* accompanying the prayer for rain on Shemini Aẓeret, and the signs of the zodiac usually accompany the printed text. This *piyyut* has, however, been excluded from all modern *maḥzorim*, and the only place where the signs appear today are in some calendars. In the *Pesikta Rabbati* (27–28 ed. Freedman p. 133b) a passage occurs which explains the names of the signs homiletically in accordance with Jewish history. The Temple could not be destroyed in Nisan, since the ram which it represents in the zodiac is a reminder of the **Akedah*; Taurus is connected with the calf which Abraham slaughtered for his angelic guests (Gen. 18:7); the Gemini represent Jacob and Esau; while the Temple was destroyed in the month of Av, since its zodiacal sign *Aryeh*, the lion, corresponds to Ariel, a name given to the Temple (Isa. 29:1).

The signs of the zodiac figured prominently in early Jewish art, for example on the mosaic floors of ancient Palestinian synagogues (e.g., *Bet Alfa, *Hammath) as well as in prayer books, on *ketubbot*, etc.

ZOFIM (Heb. צוֹפִים), place in the vicinity of Jerusalem, which indicated the limits of the city (Pes. 3:8). From this spot, pilgrims approaching Jerusalem first saw the Temple. According to later sources, Jews arriving at Ẓofim and seeing the Temple in ruins were apt to tear their clothes in mourning (TJ, MK 3:7, 83b; Lam. R. 5:18, no. 1). Josephus describes Saphein (the Greek transcription of Ẓofim) as the place where the high priest Jaddua met Alexander the Great (Ant., 11:329). During his march on Jerusalem, Cestius Gallus camped at a spot called Scopus (the Greek translation of Ẓofim = "place of beholding"), 7 furlongs (c. 1 mi.; c. 1½ km.) from the city (Jos., Wars, 2:528; 542). It was also the last camp of Titus in his march on Jerusalem in 70 C.E. (Jos., Wars, 5:67, 106). Ẓofim is usually identified with Ras el-Mesharref to the north of Jerusalem, on the road along the watershed which enters the city from the north and served as the main road on the west. By extension, the name Ẓofim has been applied in modern times to the campus occupied by the Hebrew University until 1948, when it became a demilitarized Israel enclave in Jordanian territory, until reunited with the city during the Six-Day War in 1967.

[Michael Avi-Yonah]

ZOFIT (Heb. צוֹפִית; "Lookout Point"), moshav in central Israel, in the southern Sharon N. of Kefar Sava, affiliated with Tenu'at ha-Moshavim. Ẓofit was founded in 1933 by farm laborers from Eastern Europe within the framework of the Thousand Families Project (see *Israel, State of: Settlement). Before 1948 the settlers earned their livelihood mainly by working as hired laborers on farms in the vicinity, but gradually developed their auxiliary farms into full-fledged holdings based mainly on citrus groves, dairy cattle, and poultry. Newcomers from Poland enlarged the moshav after 1948. In 1970, Ẓofit had 330 inhabitants. By the mid-1990s the population had grown to 405 approximately, rising further to 720 in 2002. In 1998 the moshav initiated an expansion program aimed at children of moshav members and newcomers. Barely 15% of Zofit residents earned their livings in farming: field crops, beehives, poultry, and plantations. The rest were employed in various occupations.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

ZOHAR (Heb. זֹהַר; "[The Book of] Splendor"), the central work in the literature of the *Kabbalah.

Introduction

In some parts of the book the name "Zohar" is mentioned as the title of the work. It is also cited by the Spanish kabbalists under other names, such as the *Mekhilta de-R. Simeon b. Yoḥai*, in imitation of the title of one of the halakhic Midrashim, in *Sefer ha-Gevul* of David b. Judah he-Ḥasid; the *Midrash de-R. Simeon b. Yoḥai*, in several books dating from the period of the pupils of Solomon b. Abraham *Adret, in the *Livnat ha-Sappir* of Joseph Angelino, the homilies of Joshua *Ibn Shu'ayb, and the books of Meir ibn *Gabbai; *Midrash ha-Zohar*, according to Isaac b. Joseph ibn Munir (see *He-Ḥalutz*, 4 (1859), 85); *Midrash Yehi Or* in the *Menorat ha-Ma'or* of Israel *al-Nakawa, apparently because he had a manuscript of the Zohar which began with a commentary on the verse "Let there be light" (Gen. 1:3). Several statements from the Zohar were quoted in the first generation after its appearance, under the general title of *Yerushalmi*, in the writings of, for example, Isaac b. *Sahula, *Moses de Leon, and David b. Judah he-Ḥasid, and in the (fictitious) responsa of Rav Hai in the collection *Sha'arei Teshuvah*.

This article is arranged according to the following outline:

The Literary Form of the Zohar

In its literary form the Zohar is a collection of several books or sections which include short midrashic statements, longer homilies, and discussions on many topics. The greater part of them purport to be the utterances of the *tanna* *Simeon b. Yoḥai and his close companions (*ḥavrayya*), but there are also long anonymous sections. It is not one book in the accepted sense of the term, but a complete body of literature which has been united under an inclusive title. In the printed editions the Zohar is composed of five volumes. According to the division in most editions, three of them appear under the name *Sefer ha-Zohar al ha-Torah*; one volume bears the title *Tikkunei ha-Zohar*; the fifth, titled *Zohar Ḥadash*, is a collection of sayings and texts found in the manuscripts of the Safed kabbalists after the printing of the Zohar and assembled by *Abraham b. Eliezer ha-Levi Berukhim. Page references in the most common editions of the Zohar and the editions of the *Tikkunim* are generally uniform.

References here to the *Zohar Ḥadash* (zḤ) are to the Jerusalem edition of 1953. Some of the sections of the book exist separately in manuscript. The sections which make up the Zohar in its wider sense are essentially the following:

(1) The main part of the Zohar, arranged according to the weekly portions of the Torah, up to and including the portion *Pinḥas*. From Deuteronomy there are only *Va-Etḥannan*, a little on *Va-Yelekh*, and *Haʾazinu*. Basically it is a kabbalistic Midrash on the Torah, mixed with short statements, long expositions, and narratives concerning Simeon b. Yoḥai and his companions. Some of it consists also of common legends. The number of verses interpreted in each portion is relatively small. Often the exposition digresses to other subjects quite divorced from the actual text of the portion, and some of the interpretations are quite skillfully constructed. The expositions are preceded by *petiḥot* ("introductions") which are usually based on verses from the Prophets and the Hagiographa, especially Psalms, and which end with a transition to the subject matter of the portion. Many stories act as a framework for the homilies of the companions, e.g., conversations while they are on a journey or when they rest for the night. The language is Aramaic, as it is for most of the other sections of the work (unless otherwise stated). Before the portion *Bereshit* there is a *hakdamah* ("preface"), which would appear to be a typical collection of writings and not a preface as such, unless perhaps it was intended to introduce the reader to the spiritual climate of the book. Many expositions are found in various manuscripts in different places and sometimes there is some doubt as to which particular portion they really belong. There are also discourses which recur in different contexts in two or three places. *Aaron Zelig b. Moses in *Ammudei Sheva* (Cracow, 1635) listed about 40 such passages which are found in parallel editions of the Zohar. A few expositions in the printed editions break off in the middle, and their continuation is printed solely in the *Zohar Ḥadash*. In the later editions, beginning with that of Amsterdam, 1715, these completions are printed as *hashmatot* ("omissions") at the end of each volume.

(2) Zohar to the Song of Songs (printed in zḤ, fols. 1d–75b); it extends only to the greater part of the first chapter and, like (1), consists of kabbalistic expositions.

(3) *Sifra di-Ẓeniʾuta* ("Book of Concealment"), a kind of fragmented commentary on the portion *Bereshit*, in short obscure sentences, like an anonymous Mishnah, in five chapters, printed at the end of portion *Terumah* (2:176b–179a). In several manuscripts and in the Cremona edition (1558–60) it is found in the portion *Bereshit*.

(4) *Idra Rabba* ("The Greater Assembly"), a description of the gathering of Simeon b. Yoḥai and his companions, in which the most profound mysteries are expounded concerning the revelation of the Divine in the form of *Adam Kadmon ("Primordial Man"). It is of a superior literary construction and the most systematic discourse found in the Zohar. Each of the companions says his piece and Simeon b. Yoḥai completes their pronouncements. At the end of this solemn assembly three of the ten participants meet with an ecstatic death. Among the early kabbalists it was called *Idra de-Naso* and it is printed in the portion *Naso* (3:127b–145a). It is, in a way, a kind of Talmud to the Mishnah of the *Sifra di-Ẓeniʾuta*.

(5) *Idra Zuta* ("The Lesser Assembly"), a description of the death of Simeon b. Yoḥai and his closing words to his followers before his death, a kind of kabbalistic parallel to the death of Moses. It contains a companion discourse to that in the *Idra Rabba*, with many additions. Among the early kabbalists it was called *Idra de-Haʾazinu*. This portion concludes the Zohar (3:287b–96b).

(6) *Idra de-Vei Mashkena*, a study session conducted by Simeon b. Yoḥai with some of his students concerning the exposition of certain verses in the section dealing with the tabernacle. Most of it deals with the mysteries of the prayers. It is found at the beginning of *Terumah* (2:127a–146b). The note in later editions that the section 2:122b–3b is the *Idra de-Vei Mashkena* is a mistake. This part is mentioned at the beginning of the *Idra Rabba*.

(7) *Heikhalot*, two descriptions of the seven palaces in the celestial garden of Eden in which the souls take their delight when prayer ascends and also after their departure from the world. One version is short and is inserted in the portion *Bereshit* (1:38a–48b). The other version is extremely long, because it expands on the mysteries of prayer and angelology. It is found at the end of the portion *Pekudei* (2:244b–62b). At the end of the longer version there is an additional section on the "seven palaces of uncleanness," which is a description of the abodes of hell (2:262b–8b). In kabbalistic literature it is called the *Heikhalot de-R. Simeon b. Yoḥai*.

(8) *Raza de-Razin* ("The Secret of Secrets"), an anonymous piece on physiognomy and chiromancy, based on Exodus 18:21, in the portion *Yitro* (2:70a–75a). Its continuation is to be found in the *hashmatot* and in *Zohar Ḥadash* (56c–60a). A second section on the same subject, cast in a different form, was inserted in a parallel column in the back of the Zohar (2:70a–78a).

(9) *Sava de-Mishpatim* ("Discourse of the Old Man"), an account of the companions' encounter with R. Yeiva, an old man and a great kabbalist, who disguises himself in the beggarly appearance of a donkey driver, and who delivers himself of an extensive and beautifully constructed discourse on the theory of the soul, based on a mystical interpretation of the laws of slavery in the Torah. It is inserted as part of the body of the Zohar on the portion *Mishpatim* (2:94b–114a).

(10) *Yanuka* ("The Child"), the story of a wonder child, the son of the old man, Rav Hamnuna, who teaches the companions profound interpretations of the Grace after Meals and other matters, when they happen to be lodging in his mother's house. Stories concerning other children like this are found in other parts of the Zohar. In some manuscripts this story constitutes the section of the Zohar on the portion *Devarim*. In the printed edition it is found in the portion *Balak* (3:186a–92a).

(11) *Rav Metivta* ("Head of the Academy"), an account of a visionary journey undertaken by Simeon b. Yoḥai and his pupils to the garden of Eden, and a long exposition by one of the heads of the celestial academy on the world to come and the mysteries of the soul. It is printed as part of the portion *Shelaḥ Lekha* (3:161b–174a). The beginning is missing, as are certain parts from the middle and the end.

(12) *Kav ha-Middah* ("The Standard of Measure"), an explanation of the details of the mysteries of emanation in an interpretation of the *Shema*, in the form of a discourse by Simeon b. Yoḥai to his son, printed in *Zohar Ḥadash* (56d–58d).

(13) *Sitrei Otiyyot* ("Secrets of the Letters"), a discourse by Simeon b. Yoḥai on the letters of the Divine Names and the mysteries of emanation, printed in *Zohar Ḥadash* (1b–10d).

(14) An interpretation of the vision of the chariot in Ezekiel, chapter 1, printed without a title in *Zohar Ḥadash* (37c–41b).

(15) *Matnitin* and *Tosefta*, numerous short pieces, written in a high-flown and obscure style, serving as a kind of Mishnah to the Talmud of the Zohar itself. The connection between these pieces and the expositions in the portions of the Zohar is clear at times trod and at others tenuous. Most of the pieces appear as utterances of a heavenly voice which is heard by the companions, and which urges them to open their hearts to an understanding of the mysteries. Many of them contain a summary of the idea of emanation and other major principles of Zohar teaching, couched in an enigmatic style. These pieces are scattered all over the Zohar. According to Abraham *Galante in his *Zohorei Ḥammah* (Venice, 1650), 33b, "when the editor of the Zohar saw an exposition which belonged to an argument in a particular exposition from the *mishnayot* and *tosafot* he put it between those pieces in order to give the exposition added force from the Tosefta and the Mishnah."

(16) *Sitrei Torah* ("Secrets of the Torah"), certain pieces on verses from the Book of Genesis, which were printed in separate columns, parallel to the main text of the Zohar, in the portions *No'aḥ, Lekh Lekha, Va-Yera*, and *Va-Yeẓe*, and in

Zohar Ḥadash in the portions *Toledot* and *Va-Yeshev*. There are several pieces titled *Sitrei Torah* in the printed editions – e.g., *Sitrei Torah* to the portion *Aḥarei Mot* in *Zohar Ḥadash* – but it is doubtful whether they really do belong to the *Sitrei Torah*. Similarly, there are manuscripts which designate the systematic interpretation of creation in 1:15a–22a as the *Sitrei Torah* to this section. However, its character is different from the other examples of *Sitrei Torah*, which contain mainly allegorical explanations of verses on the mysteries of the soul, whereas this piece explains the theory of emanation (in an anonymous discourse) in the style of the main part of the Zohar and the *Matnitin*.

(17) *Midrash ha-Ne'lam* ("Concealed Midrash") on the Torah. This exists for the sections *Bereshit, No'aḥ, Lekh Lekha* in *Zohar Ḥadash*; for *Va-Yera, Ḥayyei Sarah*, and *Toledot* in the main body of the Zohar, in parallel columns; and for *Va-Yeẓe* in *Zohar Ḥadash*. The beginning of the section *Va-Yeḥi* in the printed editions, 1:211–6, is marked in some sources as the *Midrash ha-Ne'lam* to this portion, but there is some reason to believe, with several kabbalists, that these pages are a later addition. From their literary character and the evidence of several manuscripts, the pages 2:4a–5b, and particularly 14a–22a, belong to the *Midrash ha-Ne'lam* to the portion *Shemot*, and 2:35b–40b to the *Midrash ha-Ne'lam* to the portion *Bo*. From this point onward only a few separate short pieces occur in *Zohar Ḥadash*, on the portions *Be-Shallah* and *Ki Teẓe*. Several pieces, very close in spirit to the *Midrash ha-Ne'lam*, are found here and there in the main part of the Zohar, e.g., in the exposition of Rav Huna before the rabbis, in the portion *Terumah*, 2:174b–175a. It is also possible that the pages in the portion *Bo* are of this kind. The language of this part is a mixture of Hebrew and Aramaic. Many rabbis are mentioned in it, and in contrast to the long expositions of the earlier parts we find here mostly short pieces similar to the original aggadic Midrashim. Here and there we can recognize the transition to a more lengthy expository method, but there are no artistically constructed and extensive expositions. As to content, the material is centered mainly around discussions on creation, the soul, and the world to come, with a few discussions on the nature of God and emanation. Most of the sections, after the portion *Bereshit*, expound biblical narratives, notably the deeds of the patriarchs, as allegories of the fate of the soul.

(18) *Midrash ha-Ne'lam* to the Book of Ruth, similar in style and content to the preceding. It is printed in *Zohar Ḥadash*, and was originally printed as a separate work called *Tappuḥei Zahav* or *Yesod Shirim* in Thiengen in 1559. It exists in many manuscripts as an independent book.

(19) The beginning of the *Midrash ha-Ne'lam* to the Song of Songs. It is printed in *Zohar Ḥadash* and is merely a prefatory exposition to the book, without any continuation.

(20) *Ta Ḥazei* ("Come and See"), another interpretation of the portion *Bereshit* in short anonymous comments, most of them beginning with the words *ta ḥazel*, and written in an obviously kabbalistic vein. The first part is found in *Zohar Ḥadash*, 7a, after the *Sitrei Otiyyot*, and the rest was

first printed in the Cremona edition, 55–75, continuing in the *hashmatot* of the Zohar, at the end of volume 1. In some manuscripts (like Vatican 206, fols. 274–86), the two sections are found together, but in most they are missing altogether.

(21) *Ra'aya Meheimna* ("The Faithful Shepherd") – the reference is to Moses – a separate book on the kabbalistic significance of the commandments. It is found in some manuscripts as an independent work, and in the printed editions it is scattered piecemeal among the sections in which the particular commandments are mentioned and printed in separate columns. The greater part occurs in portions from Numbers and Deuteronomy, and particularly in *Pinḥas, Ekev*, and *Ki Teẓe*. The setting of the book is different from that of the main part of the Zohar. In it Simeon b. Yoḥai and his companions, apparently through a visionary revelation, meet Moses, "the faithful shepherd," along with *tannaim* and *amoraim* and other figures from the celestial world, who appear to them and talk with them about the mysteries of the commandments, as if the academy on high had descended to the earth below. This work is quite clearly dependent on the Zohar itself, since it is quoted several times under the name of "the former [or first] book," particularly in the portion *Pinḥas*. The enumeration of the commandments, which is extant in several places and which points to an original order, has become confused (see also below, The Unity of the Work, Order of Composition).

(22) *Tikkunei Zohar*, also an independent book whose setting is similar to that of the *Ra'aya Meheimna*. It comprises a commentary to the portion *Bereshit*, each section (*tikkun*) beginning with a new interpretation of the word *bereshit* ("in the beginning"). The book was designed to contain 70 *tikkunim*, confirming to "the 70 aspects of the Torah," but in actual fact there are more, and some of them are printed as additions at the end of the book. Two completely different arrangements are found in the manuscripts, and these are reflected in the different editions of Mantua (1558), and of Orta Koj (1719). The later editions follow Orta Koj. The expositions in the book digress widely from the subject matter of the portion and deal with quite different topics which are not discussed in the main body of the Zohar, like the mysteries of the vowel points and accents, mysteries concerning halakhic matters, prayer, and so on. The pages in the Zohar, 1:22a–29a, belong to this book and occur in manuscripts as *tikkun* no. 70. Here and there, there is a change in the narrative framework, when it imitates that of the main body of the Zohar and, sometimes apparently continuing the discussion, appears as if it were being held in the celestial academy. The book also has a preface (*hakdamah*) on the model of the preface in the Zohar. Long additional expositions, parallel with the book's opening sections and mixed with other interpretations on the same pattern, are printed at the end of *Zohar Ḥadash* (93–123), and they are usually introduced as *tikkunim* of *Zohar Ḥadash*.

(23) An untitled work on the portion *Yitro*, a redaction, in the spirit of the *tikkunim*, of the physiognomy found in the *Raza de-Razin*, printed in *Zohar Ḥadash* (31a–35b).

(24) A few works printed in *Zohar Ḥadash*, like the "Zohar to the portion *Tissa*" (43d–46b), and the anonymous piece printed as the portion *Ḥukkat* in *Zohar Ḥadash* (50a–53b). These pieces must be regarded as imitations of the Zohar, but they were written without doubt very soon after the appearance of the book, and the first is already quoted in the *Livnat ha-Sappir*, which was written in 1328 (Jerusalem, 1914, 86d).

In addition to these sections there were others known to various kabbalists which were not included in the printed editions, and some of them are completely lost. A continuation of the *Sefer ha-Tikkunim* on other portions known to the author of *Livnat ha-Sappir* (95b–100a) was a long piece on the calculation of the time of redemption. The pieces, which were printed in the *Tikkunei Zohar Ḥadash* (117b–121b), and interpret various verses concerning Abraham and Jacob, seem to belong to this continuation. The "sayings of *Ze'ira*" ("the little one"), which are mentioned in *Shem ha-Gedolim* as being "quasi-midrashic homilies," are extant in Paris Ms. 782 and were included by Ḥayyim *Vital in an anthology which he compiled of pieces from the early kabbalah, and which still exists. The Zohar to the portion *Ve-Zot ha-Berakhah* is preserved in the same Paris manuscript (fols. 239–42), and is a mixture of fragments from the Midrash on Ruth in unknown pieces. It would appear that Moses *Cordovero saw a *Midrash Megillat Esther* from the Zohar, according to *Or Ne'erav* (Venice, 1587, 21b). His pupil Abraham Galante, in his commentary to *Sava de-Mishpatim*, quotes a text called *Pesikta*, from a manuscript Zohar, but its content is not known. There is no direct connection between the literature of the Zohar and the later literary imitations of it that are not included in the manuscripts, such as the Zohar on Ruth, which was printed under the title *Har Adonai* (Amsterdam, 1712).

The opinion of the kabbalists themselves concerning the composition and editing of the Zohar was formed after the circulation of the book. At first the view was widely held that this was the book written by Simeon b. Yoḥai while he was in hiding in the cave, or at least during his lifetime, or at the latest in the generation that followed. Among the kabbalists of Safed, who generally believed in the antiquity of the whole of the Zohar, Abraham Galante, in his commentary to the portion *Va-Yishlaḥ* in the Zohar, thought that the whole work was put together in geonic times from the writings of R. Abba, who was Simeon b. Yoḥai's scribe, and that the book did not receive its present form until that time. This view, which tries to explain a number of obvious difficulties in the chronology of the rabbis who are mentioned in the Zohar, also occurs in *Netiv Mitzvotekha* by Isaac Eisik Safrin of *Komarno. In the 16th century the legend grew up that the present Zohar, which contains about 2,000 closely printed pages, was only a tiny remnant of the original work, which was some 40 camel loads in weight (in *Ketem Paz*, 102a). These ideas are not substantiated by a critical examination of the Zohar.

The Unity of the Work

The literature contained in the Zohar can be divided basi-

cally into three strata, which must be distinguished from one another:

(a) the main body of the Zohar, comprising items (1)–(15) in the list above;

(b) the stratum of the *Midrash ha-Ne'lam and Sitrei Torah*, i.e., items (16)–(19); and

(c) the stratum of the *Ra'aya Meheimna* and the *Tikkunim*, i.e., (21)–(23).

Items (20) and (24) are doubtful as regards their literary relationship, and perhaps they belong to material that was added after the appearance of the Zohar. There are, to be sure, definite links between the different strata which establish a chronological order, but a detailed investigation shows quite clearly that each stratum has a definite unity of its own. The question of the unity of the main body of the Zohar is particularly important. The apparent differences are merely external and literary, e.g., the choice of a laconic and enigmatic style at times, and at others, the use of a more expansive and occasionally verbose style.

STYLE. This unity is evident in three areas; those of literary style, language, and ideas. Ever since the historical critique of the Zohar first began, there have been views that regard the Zohar as a combination of ancient and later texts, which were put together only at the time of the Zohar's appearance. At the very least it contains a homiletic prototype, a creation by many generations which cannot be attributed essentially to one single author. This view has been held, for example, by Eliakim Milsahagi (see *Mehlsack), Hillel *Zeitlin, Ernst *Mueller, and Paul Vulliaud, but they have contented themselves with a general conclusion, or with a claim that the *Sifra di-Ẓeni'uta*, the *Matnitin*, or the *Idrot*, are ancient sources of this type. The only scholar who attempted to investigate the early strata in the expositions of the other parts of the Zohar was I. Stern. A detailed examination of his arguments, and also of the general arguments, shows that they are extremely weak. In particular there is no evidence that the *Sifra di-Ẓeni'uta* differs from the other parts of the body of the Zohar except in the allusive style in which it was intentionally written. In actual fact, the literary connections between the different parts of the Zohar are extremely close. Many of the sections are constructed with great literary skill and the different parts are related to one another. There is no real distinction, either in language or thought, between the short pieces in the true midrashic style and the longer expositions which follow the methods of the medieval preachers, who used to weave together different ideas into a single fabric, which begins with a particular verse, ranges far and wide, and then finally returns to its starting point. Practically all the sections are built on an identical method of composition, stemming from variations of different literary forms. From the point of view of construction there is no difference also between the various narrative frameworks, such as the transmission of expositions which originated during the companions' journeys between one city and another in Palestine, especially in Gali-

lee, or the type of dramatic composition that is to be found in the *Idrot*, the *Sava*, and the *Yanuka*. The breaking-up of the material into a conversation among the companions, or into an expository monologue, does not basically alter the subject matter of the exposition itself. Even in the monologues several opinions concerning a particular verse are mentioned side by side while in other parts the different opinions are divided up and assigned to different speakers. Quotations of, or references to, expositions in other parts of the Zohar occur throughout the main body of the book. Some matters, which are discussed extremely briefly in one place, are treated more fully in another exposition. The Zohar, unlike the Midrash, loves to allude either to a previous discussion or to a subject which is to be dealt with later, and this is typical of medieval homilists. An examination of these cross-references, whether of exact verbal citations or of subject matter without precise quotation, shows that the main part of the Zohar is a literary construction all of one piece, despite superficial variations. Statements or ideas which are not reflected in more than one place do exist but they are very few and far between. Even those sections which have a particularly characteristic subject matter, like that dealing with physiognomy in the portion *Yitro*, are connected in many ways with other sections of the Zohar, which deal more fully with topics only briefly mentioned in the former. On the relationship of the *Midrash ha-Ne'lam* to the main body of the Zohar, see below.

One element in the constructional unity of the Zohar is that of the scene and the dramatis personae. The Zohar presupposes the existence of an organized group of "companions" (ḥavrayya), who, without doubt, were originally meant to be ten in number, but most of them are no more than shadowy figures. These companions are Simeon b. Yoḥai, his son Eleazar, Abba, Judah, Yose, Isaac, Hezekiah, Ḥiyya, Yeiva, and Aḥa. Several of them are *amoraim* who have been transferred by the author to the age of the *tannaim*, like Abba, Hezekiah, Ḥiyya, and Aḥa. What is narrated of them here and there shows that the author utilized stories in talmudic sources which concerned *amoraim* with these names, and these are not therefore unknown historical figures. These basic characters are joined by certain other rabbis, who usually appear indirectly, or as figures from the generation that preceded Simeon b. Yoḥai. In this connection, one particular error of the Zohar is very important. In several stories it consistently turns Phinehas b. Jair, Simeon b. Yoḥai's son-in-law (according to Shab. 33b), into his father-in-law. Similarly, the father-in-law of Eleazar, Simeon's son, is called Yose b. Simeon b. Lekonya, instead of Simeon b. Yose b. Lekonya. In addition to the regular companions there occasionally appear other characters whom the designation *sava* ("old man") places in the preceding generation, e.g., Nehorai Sava, Yeiva Sava, Hamnuna Sava, and Judah Sava. There is a recognizable tendency to create a fictional framework in which the problems of anachronism and chronological confusion do not arise. On the other hand, neither Akiva nor Ishmael b. Elisha is mentioned as a master of mystical tradition, whereas both appear in the *heikhalot* and

the *Merkabah literature. Akiva is introduced only in stories and quotations which come from the Talmud.

The Palestinian setting of the book is also fictional, and, in the main, has no basis in fact. The Zohar relies on geographical and topographical ideas about Palestine taken from older literature. Sometimes the author did not understand his sources, and created places which never existed, e.g., Kapotkeya, as the name of a village near Sepphoris, on the basis of a statement in the Jerusalem Talmud (Shev. 9:5), which he combined with another statement in the Tosefta, *Yevamot* 4. He produces a village in Galilee by the name of Kefar Tarshi, which he identifies with Mata Meḥasya, and tells in this connection of the rite of circumcision which is based on material quoted in geonic literature with regard to Mata Meḥasya in Babylonia. Occasionally a place-name is based on a corrupt text in a medieval manuscript of the Talmud, e.g., Migdal Ẓor at the beginning of *Sava de-Mishpatim*. In the matter of scene and characters there are very close links between the main body of the Zohar and the stratum of the *Midrash ha-Ne'lam*, which follows the same path of mentioning places which do not actually exist. In this section Simeon b. Yoḥai and his companions already constitute a most important community of mystics, but other groups are mentioned as well, and particularly later *amoraim* or scholars with fictitious names who do not reappear in the Zohar. In recent times, several attempts have been made to explain the geographical difficulties, and to give a non-literal interpretation of statements in the Talmud and the Midrashim in order to make them fit the Zohar, but they have not been convincing. Several times the Zohar uses the expression *selik le-hatam* ("he went up thither"), a Babylonian idiom for those who went up from Babylonia to Palestine, thereby changing the scene from Palestine to the Diaspora – "thither" is an impossible expression if the book was actually written in Palestine.

SOURCES. As to the question of the sources of the Zohar, we must distinguish between those that are mentioned explicitly and the true sources that are alluded to in only a general way ("they have established it," "the companions have discussed it"), or are not mentioned at all. The sources of the first type are fictitious works which are mentioned throughout the Zohar and the *Midrash ha-Ne'lam*, e.g., the *Sifra de-Adam*, the *Sifra de-Ḥanokh*, the *Sifra di-Shelomo Malka*, the *Sifra de-Rav Hamnuna Sava*, the *Sifra de-Rav Yeiva Sava*, and in a more enigmatic form, *Sifrei Kadma'ei* ("ancient books"), the *Sifra de-Aggadeta*, the *Raza de-Razin, Matnita di-Lan* (i.e., the mystical Mishnah in contradistinction to the usual Mishnah). With regard to the mystery of the letters of the alphabet, the *Atvan Gelifin* ("Engraved Letters") is quoted, or the "Engraved Letters of R. Eleazar." Works of magic are also quoted, e.g., the *Sifra de-Ashmedi*, the *Zeinei Ḥarshin de-Kasdi'el Kadma'ah* ("Various Kinds of Sorcery of the Ancient Kasdiel"), the *Sifra de-Ḥokhmeta di-Venei Kedem* ("Book of Wisdom of the Sons of Kedem"). Some names are based on earlier sources, like the *Sifra de-Adam*, and the *Sifra de-Ḥanokh*, but matters are referred to by these names which really belong entirely to the

Zohar and to its world of ideas. In contrast to this fictitious library, which is clearly emphasized, the real literary sources of the Zohar are concealed. These sources comprise a great many books, from the Talmud and Midrashim to the kabbalistic works which were composed in the 13th century. A single approach in the use of these sources can be detected, both in the sections of the Zohar itself and in the *Midrash ha-Ne'lam*. The writer had expert knowledge of the early material and he often used it as a foundation for his expositions, putting into it variations of his own. His main sources were the Babylonian Talmud, the complete *Midrash Rabbah*, the *Midrash *Tanḥuma*, and the two *Pesiktot* (*Pesikta De-Rav Kahana* or *Pesikta Rabbati*), the Midrash on Psalms, the *Pirkei de-Rabbi Eliezer*, and the Targum *Onkelos*. Generally speaking they are not quoted exactly, but translated into the peculiar style of the Zohar and summarized. If a particular subject exists in a number of parallel versions in the earlier literature, it is not often possible to establish the precise source. But, on the other hand, there are many statements which are quoted in a form which exists in only one of the different sources. Less use is made of the halakhic Midrashim, the Jerusalem Talmud, and the other Targums, nor of the Midrashim like the *Aggadat Shir ha-Shirim*, the Midrash on Proverbs, and the *Alfabet de-R. Akiva*. It is not clear whether the author used the *Yalkut Shimoni*, or whether he knew the sources of its *aggadah* separately. Of the smaller Midrashim he used the *Heikhalot Rabbati*, the *Alfabet de-Ben Sira*, the *Sefer Zerubavel*, the *Baraita de-Ma'aseh Bereshit*, the chapter *Shirah* in the *Aggadot Gan Eden*, and the tractate *Ḥibbut ha-Kever*, and also, occasionally, the *Sefer ha-Yashar*. Sometimes the author makes use of *aggadot* which no longer remain, or which are extant only in the *Midrash ha-Gadol*; this is not to be wondered at because aggadic Midrashim like this were known to many medieval writers, e.g., in the homilies of Joshua ibn Shu'ayb, who wrote in the generation following the appearance of the Zohar. The Zohar continues the thought patterns of the *aggadah* and transfers them to the world of the Kabbalah. The references to parallels in rabbinic literature which Reuben Margulies quotes in his *Niẓoẓei Zohar* in the Jerusalem edition of the Zohar (1940–48) often reveal the sources of the expositions.

From medieval literature the author makes use, as W. *Bacher has shown, of Bible commentators like *Rashi, Abraham *Ibn Ezra, David *Kimḥi, and the *Lekaḥ Tov* of Tobiah b. Eliezer. Apparently he also knew the commentaries of the tosafists. He was noticeably influenced by the allegorical commentators of the *Maimonides' school, particularly in the *Midrash ha-Ne'lam*, but also in some of the expositions in the main body of the Zohar. The last commentator whom he used as a source was *Naḥmanides in his commentaries both to the Torah and to Job. Certain verbal usages in the Zohar can be explained only by reference to the definitions in the *Sefer he-Arukh*, and in the *Sefer ha-Shorashim* of David Kimḥi. An important exposition in the section *Balak* is based on a combination of three pieces from the *Kuzari* of *Judah Halevi. In

connection with certain customs he bases himself on the *Sefer ha-Manhig* of *Abraham b. Nathan ha-Yarḥi. Rashi's commentary to the Talmud serves as the foundation of several statements in the Zohar, and not only in connection with the Talmud. Of the works of Maimonides, he makes slight use of the commentary to the Mishnah and the *Guide of the Perplexed*, and uses the *Mishneh Torah* more extensively. Several attempts to prove that Maimonides knew the Zohar and made use of it in several of his *halakhot* (more recently that of R. Margulies, *Ha-Rambam ve-ha-Zohar*, 1954) only serve to show the dependence of the Zohar on Maimonides.

The sources of the Zohar among the kabbalistic works which preceded it are also unclear. The *Sefer *Yezirah* is clearly mentioned only in the later stratum. The *Sefer *ha-Bahir, Ma'yan ha-Ḥokhmah* attributed to Moses, the writings of the Ḥasidei *Ashkenaz and particularly of *Eleazar of Worms, R. *Ezra's commentary to the Song of Songs, and the commentary to the liturgy by *Azriel of Gerona, were all known to the author of the Zohar, and he develops tendencies which appeared first in the writings of the circle of the Gnostics in Castile in the middle of the 13th century (see *Kabbalah). Similarly, the kabbalistic terminology of the Zohar reflects the development of the Kabbalah from the *Sefer ha-Bahir* up to Joseph *Gikatilla, and the term *nekuddah ḥada* ("one point") in the sense of "center" is taken from Gikatilla's *Ginnat Egoz*, which was written in 1274. Terms scattered in several places, like **Ein-Sof, avir kadmon, ayin* (in the mystical sense), *mekora de-ḥayyei, re'uta de-maḥshavah, alma de-peiruda*, have their source in the development of the Kabbalah after 1200. The term *ḥaluk* or *ḥaluka de-rabbanan*, for the soul's garment in Eden, and ideas relating to the formation of this garment, are taken from the *Ḥibbur Yafeh min ha-Yeshu'ah* of Jacob b. Nissim (1050). Often the author of the Zohar draws on the Midrashim indirectly by means of the commentaries on them written by the kabbalists who preceded him.

The medieval environment can be recognized in many details of the Zohar apart from those already mentioned. Historical references to the Crusades and to Arab rule in Palestine after the wars are put together with material based on the laws and customs found in the Spanish environment of the author. In the same way his ethical diatribe directed against certain particular immoralities in the life of the community belongs to a specific period of time, as Yizḥak *Baer has shown. The common customs are characteristic of Christian lands in medieval times. The author's ideas on medicine fit this particular period, which was dominated by the views of Galen. The Zohar does not have any clear ideas concerning the nature of idolatry, and it is dependent on the views of Maimonides which, for their part, were based on the fictitious "literature" of the sect of the Sabeans in Haran. The cultural and religious background to which most of the book, including its polemical parts, is related, is Christian and monogamous. But occasionally we come across allusions to Islam and to contacts with Muslims, and this fits the identification of Castile as the place where the book was written.

Where the ideas of the Zohar concerning *Satan and the ranks of the powers of uncleanness, devils, and evil spirits, and also necromancy and sorcerers, are not taken from talmudic sources, they bear the clear impress of the Middle Ages, e.g., the compact between the sorcerer and Satan, and the worship of Satan by the sorcerers. References to these matters are scattered throughout the Zohar, but they are of one and the same type. The liturgy, which is expounded at length in the sections *Terumah* and *Va-Yakhel*, is not the original liturgy of Palestine, but the Spanish and French version in use in the Middle Ages. The literary form of words supposed to have been used in the tannaitic period is only superficial. The author of the third stratum, in the *Ra'aya Meheimna* and the *Tikkunim*, reveals his environment through some additional material, and it is almost as if he did not wish to conceal it at all. This is particularly noticeable in his lengthy treatment of the social and religious situation of the Jewish communities of his time, a favorite subject which receives a different treatment from that of the main body of the Zohar. The social conditions described here are in no way those of the earlier communities of Babylonia and Palestine but fit, in every detail, what we know of the conditions in Spain in the 13th century. His writing has a distinctly harsh polemical note directed against various groups in Jewish society, a note which is absent from other parts of the Zohar. Typical of this part is the use of the phrase *erev rav* ("mixed multitude") to designate that social stratum in the Jewish communities in which were combined all the blemishes which he noted in his own contemporaries. The author was also aware of the lively controversy between the kabbalists, described in these parts only as *marei kabbalah* ("masters of kabbalah"), and their opponents, who denied both their claim that mysteries existed in the Torah and their knowledge of them.

LANGUAGE. If all hopes of discovering primitive layers in the Zohar through an historical and literary analysis of its various parts are vain, they will be equally frustrated when we turn to a linguistic critique. The language of the Zohar may be divided into three types:

(1) the Hebrew of the *Midrash ha-Ne'lam*;

(2) the Aramaic there and in the main body of the Zohar;

(3) the imitation of (2) in the *Ra'aya Meheimna* and the *Tikkunim*.

The Hebrew is, in fact, an imitation of the aggadic style, but whenever it diverges from its literary sources it is seen to be a medieval Hebrew belonging to a time when philosophical terminology was widely used. The writer uses later philosophical terms quite openly, particularly in the earlier sections and in the Midrash on Ruth. At the same time the transition from this Hebrew to the Aramaic of the *Midrash ha-Ne'lam* itself and of the main part of the Zohar, which linguistically speaking are one and the same, can be clearly distinguished. The natural Hebrew of the author is here translated into an artificial Aramaic. While his Hebrew has counterparts in me-

dieval literature, the Aramaic of the Zohar has no linguistic parallel, since it is compounded of all the Aramaic idioms that the author knew and which he used as the foundation for his artificial construction. The very use of the word *targum* (1, 89a) for the Aramaic language, instead of *leshon Arami*, which was used in the Talmud and Midrash, was a medieval practice. The Aramaic idioms are in the main the language of the Babylonian Talmud and the Targum Onkelos, together with the Galilean Aramaic of the other Targums, but they include only very little from the Jerusalem Talmud. Types of different idioms are used side by side indiscriminately, even in the same passage. Similar differences may be seen in the pronouns, both subjective and possessive, demonstrative and interrogative, and also in the conjugation of the verb. The Zohar uses these interchangeably, quite freely. Sometimes the Zohar adopts the Babylonian usage of a particular form, e.g., those forms of the perfect tense preceded by *ka* (*ka amar*) or the form of conjugation of the third person imperfect (*leima*). At other times the corresponding targumic forms are preferred. With the noun there is no longer any distinction between those forms which have the definitive *alef* suffix, and those which do not have it, and there is complete confusion. Even a form like *tikla ḥada* ("a wheel") is possible here. The constructive case is almost nonexistent and is mostly replaced by the use of *di*. In addition to the usual vocabulary new words are coined by analogy with formations that already exist in other words. So words like *nehiru, neẓiẓu, ketatu* come into being (for new words in the vocabulary, see below). As for adverbs, it uses indiscriminately words from both biblical and Babylonian Aramaic, and translations of medieval terms, like *lefum sha'ata* or *kedein*, in imitation of the use of *az* to join different parts of a sentence as in medieval Hebrew. With all the confusion of these forms there is, nevertheless, some sort of system and consistency. A kind of unified language is created which is common throughout all the parts mentioned above. In addition to the basic forms drawn from the Aramaic idiom there are many characteristics which are peculiar to the language of the Zohar. The Zohar mixes up the conjunctions of the verb, using the *pe'al* instead of the *pa'el* and the *af'el* (*lemizkei* for *lezakka'ah*, *lemei'al* for *le'a'ala'ah*, *lemeḥdei* for *leḥadda'ah*) and also the *af'el* instead of the *pe'al*, e.g., *olifana* for *yalfinan* (among the most common words in the Zohar). It uses incorrect forms of the *itpa'al* or *etpe'el* (the two forms of the verb are indistinguishable), e.g., *itsaddar* or *itsedar, itẓayyar* or *itzeyar, itzakkei* or *itzekei, itẓerif*, etc. In several instances, although only with certain verbs, it uses the *itpa'al* (or the *etpe'el*) as a transitive verb, e.g., *it'arna milei, le-istammara* or *le-istemara orḥoi, le-itdabbaka* or *le-itdebaka* in the sense of "to attain." It gives new meanings to words, following their medieval usage: e.g., *istallak* with regard to the death of the righteous; *itar*, through the influence of *hitorer*, which in the Middle Ages was used in the sense of "to discuss a certain matter"; *adbakuta* in the sense of "intellectual perception"; *ashgaḥuta* in the sense of "providence"; *shorsha* in the sense of "basic principle." The conjunctive phrase *im kol da* used throughout in the sense of "nev-

ertheless" (*be-khol zot*) is influenced by the translators from Arabic, as is the use of the word *remez* as a term for allegory.

A large number of errors and of borrowed translations constantly recur in the Zohar. The word *pelatarin* is considered a plural form, and *galgallei yamma* a plural form from *gallei ha-yam* ("waves of the sea"). The author writes *baranan* instead of *bar-minan* and gives the artificial translation "limb" for *shaifa* through a mistaken guess in the interpretation of a passage in *Makkot* 11b. From the verb *gamar*, meaning "to learn," he coins the same meaning for the verb *ḥatam* (*le-meḥtam oraita*), and there are many examples of this kind. There are several words, whose meaning in the original sources the author of the Zohar did not know, and they are given new and incorrect meanings: e.g., the verb *ta'an* is given the meaning of "to guide a donkey from behind" (an Arabism taken from the *Sefer ha-Shorashim* of David Kimḥi) or *taya'a*, "the Jew who guides the donkey." *Tukfa* in the sense of "lap" is based on a misunderstanding of a passage in Targum Onkelos (Num. 11:12); *boẓina de-kardinuta* as "a very powerful light" is based on a misunderstanding of a passage in *Pesaḥim* 7a. There are a number of words, especially nouns, which have no known source and whose meaning is often unclear. It is possible that they derive from corrupt readings in manuscripts of rabbinic literature, or the author's new coinage in imitation of foreign words which occur in that literature. Most of them begin with the letter *kof* (ק), and the letters *zayin* (ז), *samekh* (ס), *pe* (פ), and *resh* (ר) are predominant: e.g., *sosfita, kaftira, kosfita, kirta, kozpira*. Arabic influence appears in only a very few words, but Spanish influence is noticeable in the vocabulary, idioms, and use of particular prepositions. The word *gardinim* in the sense of "guardians," derived from the Spanish *guardianes*, occurs in every part of the Zohar; the verb *besam* in the sense of "to soften" is a literal translation of the Spanish verb *endulzar*; hence also the common expression *hamtakat ha-din*, which comes from the Zohar. The borrowed translations of *ḥakal* in the sense of "battlefield," and of *kos* in the sense of the "cup of a flower," show the influence of Romance usage. Idioms like *likeḥin derekh aḥeret, kayyama bi-she'elta, istekem al yedoi* (instead of *askem*) *osim simḥah, yateva be-reikanya* (in the sense of "being empty") are all translations borrowed from Spanish. In the *Tikkunei Zohar* there is, in addition, the use of *esh nogah* for "synagogue" (Sp. *Esnoga* = *sinagoga*). The phrase *egoz ha-keshet* as a military term has its source in the medieval Romance languages (*nuez de ballesta*). There are many examples of the use of the preposition *min* ("from") instead of *shel* ("of"); *be* ("in") for *im* ("with"); *legabbei* ("in reference to") for *el* ("to") – all resulting from the influence of Spanish constructions.

The linguistic unity of the Zohar is apparent also in particular stylistic peculiarities which are not found at all in rabbinic literature, or which have a completely different meaning there. They occur in all parts of the Zohar, particularly in the *Midrash ha-Ne'lam*, and in the main body of the Zohar. Examples of this are the use of forms on the pattern of "active and not active" – not in the rabbinic sense of "half-active," but

with the significance of spiritual activity whose profundity cannot be fathomed; the combination of words with the termination *de-kholla*, e.g., *amika de-kholla, nishmeta de-kholla, mafteḥa de-kholla*; hyperbolic forms of the type *raza de-razin, temira de-temirin, ḥedvah de-khol ḥedvan, tushbaḥta de-khol tushbeḥin*; the description of an action, whose details are not to be revealed, through the use of the form "he did what he did"; the division of a particular matter into certain categories by the use of it… *ve-it*, e.g., *it yayin ve-it yayin, it kayiẓ ve-it kayiẓ*; the use of hendiadys (two terms for the same object), e.g., *ḥotama de-gushpanka* ("seal of a seal"), *boẓina di-sheraga* ("light of a light"). As for syntax, we notice the use of the infinitive at the beginning of a clause, even when the subject of the clause is different from that of the main sentence, e.g., *ẓaddikim reʾuyyim le-hityashev ha-olam mehem, ihu heikhala di-reḥimu le-iddebaka dakhora be-nukba*. This is particularly so in the case of relative and final clauses. Another syntactical characteristic is the use of *az* or *kedein* at the beginning of subclauses. All these characteristics are typical of medieval usage, and particularly of the Hebrew of Spanish Jewry, under the influence of the philosophical style, and the author of the Zohar uses them without any concern about their being a late development. The dialectical language in the arguments of the rabbis is taken almost exclusively from the Babylonian Talmud, with the addition of a few terms from the medieval homiletical style, e.g., *it le-istakkala, it le-hitara*. Within the context of this linguistic unity, the Zohar uses different stylistic media with great freedom. Sometimes it deals with an exposition or follows an argument at great length; and at others it is laconic and enigmatic, or adopts a solemn, almost rhythmical, style.

In contrast to the language used in other parts of the Zohar, the language of the *Raʾaya Meheimna* and the *Tikkunim* is poor from the point of view of both vocabulary and syntax. The writer is already imitating the Zohar itself, but he does not have the literary skill of its author. The number of Hebrew words transmuted into Aramaic is much greater here than in the Zohar. The literary goal of the author of the main part of the Zohar is quite different from that of this author, who writes an almost undisguised medieval Hebrew: it is quite clear that he never intended his work to be thought of as a tannaitic creation. The terms Kabbalah and *Sefirot*, which are not used at all in the main body of the Zohar or in the *Midrash ha-Neʾlam*, and which indeed are circumvented by the use of all kinds of paraphrastic idioms, are here mentioned unrestrainedly.

ORDER OF COMPOSITION. An examination of the Zohar following the criteria above shows the order of composition of the main strata. The oldest parts, relatively speaking, are sections of the *Midrash ha-Neʾlam*, from *Bereshit* to *Lekh Lekha*, and the *Midrash ha-Neʾlam* to Ruth. They had already been written according to a different literary pattern, which did not yet assign everything to the circle of Simeon b. Yoḥai alone but which established *Eliezer b. Hyrcanus also, following the

heikhalot and the *Pirkei de-Rabbi Eliezer*, as one of the main heroes of mystical thought. This section contains the basis of many passages in the main body of the Zohar, which quotes statements to be found only there, and develops its themes, stories, and ideas more expansively. The reverse cannot be maintained. In these early sections, there are no matters whose comprehension depends on a reference to the Zohar itself, whereas every part of the body of the Zohar, including the *Idra Rabba* and the *Idra Zuta*, is full of quotations from, and allusions to, matters found only in the *Midrash ha-Neʾlam*. The contradictions that occur here and there between the two strata on certain points, particularly on matters concerning the soul, may be explained, in the light of the unity that exists between them, as indications of a development in the ideas of the author whose written work emerged from a deep spiritual stirring. Some gleanings into the creative imagination of the author and its development are made possible by the discovery of a new section on the verse "Let there be lights in the firmament of heaven," which parallels the one in the printed editions and in most of the manuscripts, but which differs from it in the extraordinary imaginative conception of the author, and appears to be the first draft of the printed version. This new section is extant only in the oldest manuscript of the Zohar so far known (see G. Scholem, in: *Jubilee Volume… L. Ginsberg* (1946), 425–46), but it provides the first quotation from Zoharic writings to be found in Hebrew literature. In the last two sections of the *Midrash ha-Neʾlam* there are two references to matters which are to be found only in the main body of the Zohar, the writing of which seems therefore to have been started at that time. In the composition of the main body of the Zohar changes occur in literary technique, and in the transition to the exclusive use of Aramaic, and particularly in the decision to treat more expansively the writer's kabbalistic ideas, and those of his circle. The order of composition of the various sections which make up the second basic stratum cannot be precisely determined. There are so many cross-references, and we do not know whether these references were inserted in the final redaction or whether they were there from the very beginning, either referring to something already written or to what the author intended to write later on. In any event, most of the material was written as the result of a profound creative enthusiasm and over a relatively short period of time, so that the question of the order of composition of this section is not vitally important. Even after the author had stopped working on the *Midrash ha-Neʾlam*, which was never completed, he occasionally continued to write passages in the same vein and fitted them into the structure of the main part of the Zohar. This interlocking of one layer with another, despite the obvious differences between them, occurs also between the main body of the Zohar and the later stratum, whose composition begins with the *Raʾaya Meheimna*. The differences here are so great that it is impossible to suppose that the same author wrote both the two earlier strata and the later one. But there is a link between them. The author of the main part of the Zohar began, apparently, to compose a literary work which

was anonymous and not associated with any particular literary or narrative framework and which was meant to be a personal interpretation of the reasons for the commandments. He did not finish this work, and the remnants of it are not extant in any one particular manuscript copy. However, the author of the *Ra'aya Meheimna*, who was probably a pupil of the former writer, knew it and used it as the starting point of his comments on several of the commandments, adding his own individual insights, and the new scenery. The differences in outlook and style between these fragments – which, when they do occur, are always at the beginning of the discussion on the commandments – and the main parts of the *Ra'aya Meheimna* are very great. It is almost always possible to determine precisely the point of transition between the fragments of the original text, which may be assigned to the Zohar itself, and the *Ra'aya Meheimna*, which was added to it.

The kabbalists themselves seem to have recognized this distinction. For example, the printers of the Cremona edition of the Zohar made a division on the title page between two sections, called *Pekuda* and *Ra'aya Meheimna*. The pages of the *Pekuda* belong from every point of view to the main body of the Zohar. The author of the later stratum had very different ideas from those of the author of the first. He does not express his ideas at length like the homilists, but links things together by association, without explaining his basic principle. He progresses by means of associations, especially in the *Sefer ha-Tikkunim*.

The author of the *Midrash ha-Ne'lam* and the main body of the Zohar intended from the very beginning to create a varied literature in the guise of early rabbinic material. He did not content himself with putting together the various sections which now form part of the Zohar, but he extended his canvas. He edited a version of a collection of geonic responsa, particularly those of Hai Gaon, and he added kabbalistic material in the style of the Zohar, using particular idioms of zoharic Aramaic, and also in the style of the *Midrash ha-Ne'lam*, all of which he titled *Yerushalmi* or the "*Yerushalmi* version." This edited version appeared at about the same time as the Zohar itself, in order to serve as a kind of indication that the new work was in fact known to the earlier rabbis. It was subsequently printed with the title of the *Sha'arei Teshuvah* responsa, and it misled not only kabbalists of the 15th and 16th centuries, but also scholars of the 19th century, who used it as a proof of the antiquity of the Zohar. One of the first of these was David *Luria in his *Ma'amar Kadmut Sefer ha-Zohar*.

Similarly, the author of the *Midrash ha-Ne'lam* wrote a small book titled *Orḥot Ḥayyim* or *Zavva'at R. Eliezer ha-Gadol*, which is connected throughout very closely to the Zohar. It is written in Hebrew but it has all the linguistic ingredients and stylistic peculiarities of the Zohar. In this work Eliezer b. Hyrcanus before his death, which is described at length following the late Midrash *Pirkei de-R. Eliezer*, reveals the paths of virtue and good conduct in an epigrammatic style, and in the second part, adds a description of the delights of the soul in the garden of Eden after death. These descriptions

are very close indeed to particular parts of the Midrash on Ruth, and of the portions *Va-Yakhel, Shelaḥ Lekha, Balak*, and other parts of the Zohar. The book was known at first only in kabbalistic circles. It was printed in Constantinople in 1521, and usually each of the two parts was printed separately – the description of the death and the ethical prescriptions in one part, and the description of the garden of Eden in the other. The second part is included in A. *Jellinek's *Beit ha-Midrash* (3 (1938), 131–40). The first part was interpreted at length in the editions of *Orḥot Ḥayyim* by two Polish rabbis, Abraham Mordecai Vernikovsky (*Perush Dammesek Eliezer*, Warsaw, 1888), and Gershon Enoch Leiner (see *Izbica-Radzyn; Lublin, 1903), who tried to prove the antiquity of the book because it was based entirely on the Zohar, and in fact they did prove that the two works were composed by the same author. There are also some grounds for thinking that the author of the Zohar intended to write a *Sefer Ḥanokh* on the garden of Eden and other kabbalistic topics, and a long description from it is quoted in the *Mishkan ha-Edut* of Moses de Leon.

DATE OF COMPOSITION. Calculations of the time of *redemption, which are to be found in several sections of the Zohar, confirm the conclusions concerning the time of its composition. These calculations give an assurance, in various forms, and by means of different interpretations and conjectures, that the redemption will commence in the year 1300, and they expound the different stages of redemption leading to the resurrection. There are variations in the details of the precise dates, depending on the type of theme expounded. According to the Zohar 1,200 years had passed since the destruction of the Temple – a century for each of the tribes of Israel. Israel now stood at the period of transition which preceded the beginning of redemption. According to these dates (1:116–9, 139b; 2:9b; see A.H. Silver, *A History of Messianic Speculation in Israel* (1927), 90–92) it must be assumed that the main part of the Zohar and the *Midrash ha-Ne'lam* were written between 1270 and 1300. Similar calculations are to be found in the *Ra'aya Meheimna* and the *Tikkunim*. The basic date is always 1268. After this the "pangs of the Messiah" will begin, and Moses will appear and will reveal the Zohar as the end of time approaches. This period of transition will come to a halt in the year 1312, and then the various stages of the redemption itself will begin. Moses, in his final appearance, is not the Messiah but the harbinger of the Messiahs – the son of Joseph, and the son of David. He will be a poor man, but rich in kabbalistic Torah. The period of transition is a period of trouble and torment for the sacred group of the people of Israel, represented by the kabbalists, who will join in fierce conflict with their opponents and their detractors. The Zohar itself is a symbol of Noah's ark, through which they were saved from the destruction of the flood. God revealed Himself to the original Moses through the fire of prophecy; but to the later Moses of the final generation He will be revealed in the flames of the Torah, that is to say, through the revelation of the mysteries of Kabbalah. Something of Moses shines upon

every sage or righteous man who occupies himself in whatever generation with the Torah, but at the end of time he will appear in concrete form as the revealer of the Zohar. Allusions of this type exist in every section of the latest stratum.

The Author

According to the clear testimony of *Isaac b. Samuel of Acre, who assembled the contradictory information concerning the appearance and nature of the Zohar in the early years of the 14th century, the book was published, part by part, not all at once, by the Spanish kabbalist *Moses b. Shem Tov de Leon, who died in 1305, after he had met Isaac of Acre. This kabbalist wrote many books in Hebrew bearing his name, from 1286 till after 1293. He was connected with several kabbalists of his time, including Todros *Abulafia and his son Joseph in Toledo, one of the leaders of Castilian Jewry, who supported Moses de Leon. From all that has already been said, the Zohar with its various strata was without doubt composed in the years that immediately preceded its publication, since it is impossible to uncover any section that was written before 1270. In actual fact, Moses de Leon was considered by some of Isaac of Acre's colleagues to have been the actual author of the Zohar. When he made some investigations in Avila, the last city in which Moses de Leon lived, Isaac was told that a wealthy man had proposed to marry his son to the daughter of Moses' widow provided that she would give him the original ancient manuscript from which, according to him, her deceased husband had copied the texts which he had published. However, both mother and daughter maintained that there was no such ancient manuscript, and that Moses de Leon had written the whole work on his own initiative. Opinions have been divided ever since as to the worth of this important evidence, and even the attitude of Isaac of Acre himself, whose story, preserved in Abraham *Zacuto's *Sefer ha-Yuḥasin*, which is interrupted in the midst of it, is not altogether clear, for he quotes from the Zohar in a few places in his books without relying on it at length or in main points. An analysis of the Zohar gives no support to the view that Moses de Leon edited texts and fragments of ancient works that came to him from the East. The question, therefore, is whether Moses de Leon himself was editor, author, and publisher, or whether a Spanish kabbalist, associated with him, wrote the book and gave it to him to edit. A decision can be made only on the basis of a comparison of the parts of the Zohar with the Hebrew writings of Moses de Leon, and on the basis of such information as the earliest extant quotations from the Zohar. Research into these questions leads to definite conclusions. In the extant works of Moses de Leon, and also in the earliest citations from the Zohar by Spanish kabbalists between 1280 and 1310, there are no quotations from the *Ra'aya Meheimna* and the *Tikkunim*. It may be supposed therefore that these latter were neither composed nor published by Moses de Leon. Of particular weight in this connection is the fact that Moses de Leon wrote a long work on the reasons for the commandments, but there is no similarity whatsoever between his *Sefer ha-Rimmon* and the

Ra'aya Meheimna. In complete contrast to this, all his writings are extraordinarily replete with expositions, ideas, linguistic usages, and other matters to be found in the Zohar, from the stratum of the *Midrash ha-Ne'lam* and the main body of the Zohar, including those particular fragments designated above, which constitute the *Pekuda* at the beginning of the sections of the *Ra'aya Meheimna*. Often long sections like these, written here in Hebrew, contain no mention of the fact that they are derived from one source, and the author often prides himself on being the originator of things, which all exist nevertheless in the Zohar. Short pieces in the middle of a longer section are introduced in various ways which show that his real reference is to the Zohar: "it is expounded in the inner Midrashim"; "they say in the secrets of the Torah"; "the pillars of the world have discussed the secrets of their words"; "I have seen a profound matter in the writings of the ancients"; "I saw in the *Yerushalmi*"; "I have seen in the secrets of the depth of wisdom"; and so on. Quotations like these abound in his writings, and some of them are already present in the Aramaic version of the Zohar. There are also a few passages which do not occur in the existing Zohar, either because these particular texts did not survive or because they were not finally published. I. Tishby's opinion is that several of them were introduced only as pointers to what the author intended to write, but he did not in fact manage to write out these matters at length. But it is more likely that the greater part of the Zohar was available to him when he wrote his Hebrew books.

Moses de Leon's Hebrew style reveals in many particulars those idiosyncrasies of the Aramaic of the Zohar indicated above, and we find especially those mistakes and errors of usage which are characteristic of the Zohar and are not found in the works of any other writer. He writes in this style even when his writing does not reflect the actual expositions of the Zohar, but expresses his own personal ideas or adds a new dimension to ideas in the Zohar. He has a completely unfettered control of the material in the Zohar and uses it like a man using his own property. He ties together expositions from different parts of the Zohar, adding to them combinations of themes and new expositions, which are in perfect accord with the zoharic spirit and show that his thinking is identical with that of the Zohar. In many cases his writings constitute an interpretation of difficult passages of the Zohar which later kabbalists did not interpret literally. Whenever in his writings he diverges freely from the subjects treated in the Zohar, his variations do not constitute any proof that he did not understand his "source." Sometimes he openly mentions the true literary sources which are concealed in the Zohar. The long passage from the Book of Enoch which is quoted in his *Mishkan ha-Edut* is written entirely in his own particular Hebrew style. Features which are peculiar to the Zohar, and which distinguish it from other contemporary kabbalistic works, recur in the works of Moses de Leon. These are in particular the exaggerated use of mythical imagery, the sexual symbolism developed with regard to the relationships between the *Sefirot*, and the striking interest shown in demonology and sorcery. Consequently, there

is no reason to assume that an unknown author wrote the Zohar in the lifetime of Moses de Leon, and then passed it on to him. The authorship of Moses de Leon solves the problems raised by an analysis of the Zohar together with his Hebrew works. These books were largely written in order to prepare the ground for the publication of the texts of the Zohar which went hand in hand with this work. In particular, the *Mishkan ha-Edut* (1293) is full of recommendations and praise for the secret sources upon which it is based.

The solution of the fundamental question of the identity of the Zohar's author leaves questions which are still open on several counts; e.g., the order of composition of the sections of the main stratum of the Zohar; and the final editing of the Zohar before its texts were publicly disseminated, if indeed there was an editing at all, for there is evidence here for both possibilities. The main question still needing clarification is the relationship between Moses de Leon and Joseph Gikatilla, which apparently was very close and reciprocal. Similarly we still have to solve the problem of the author of the *Ra'aya Meheimna*, who, unlike Moses de Leon, left no other books which can identify him. Whether other kabbalists knew of Moses de Leon's plan and helped him in some way to achieve his aim is not clear. What is clear is that many kabbalists, after the appearance of the book, considered themselves free to write works in the style of the Zohar and to imitate it – a liberty which they would not have taken with Midrashim whose genuineness and antiquity were beyond question. This fact shows that they did not take seriously the claim of the Zohar to be accepted as an ancient source, even though they saw in it a fine expression of their own spiritual world. For books of this type see *Kabbalah.

Manuscripts and Editions

The circumstances surrounding the appearance of the Zohar are not known in detail. The first texts which circulated among a few kabbalists were of the *Midrash ha-Ne'lam*, and the earliest quotations are to be found in two books by Isaac b. Solomon Abi Sahula, the *Meshal ha-Kadmoni* (Venice, c. 1546–50) and his commentary to Song of Songs, which were written in 1281 and 1283 in Guadalajara, where Moses de Leon lived at that time. He is the only author who knew and quoted the *Midrash ha-Ne'lam* before Moses de Leon himself began to write his Hebrew works. Todros Abulafia also possessed such texts and quoted from them in his books. Parts of the main body of the Zohar circulated from the late 1280s. An examination of the quotations from the Zohar found in contemporary writing shows that

(1) they possessed only isolated parts, depending on what each of them could obtain;

(2) they knew a few expositions or parts which do not appear in the Zohar we have;

(3) they made use of it without regarding it as a supreme authority in Kabbalah.

In about 1290 some portions of the Zohar on the Torah were known to *Baḥya b. Asher, who translated several pas-

sages word for word in his commentary to the Torah without mentioning his source, and generally used the Zohar widely. Twice, however, he refers to very short passages in the name of the *Midrash R. Simeon b. Yoḥai*. Other sections, including the *Idrot*, were in the possession of Gikatilla when he wrote *Sha'arei Orah*, before 1293. From the anonymous *Ta'amei ha-Mitzvot*, which was probably written in the 1290s, it appears that some passages were known to the author. From 1300 onward there is an increase in the number of quotations actually cited under the specific name Zohar or *Midrash ha-Ne'lam*, which sometimes served as the title for the whole Zohar. Solomon b. Abraham Adret's pupils, who wrote many kabbalistic works, quoted the Zohar only rarely, and they clearly exercised some restraint in the use of it. Menahem *Recanati of Italy also possessed some isolated parts in this time, and he used them widely, mentioning his source in his commentary to the Torah and in his *Ta'amei ha-Mitzvot*. In the latter book he makes a distinction between the *Zohar Gadol*, which consisted mainly of the *Idra Rabba*, and the *Zohar Mufla*. The origin of this distinction is not clear. Recanati possessed only about one-tenth of the Zohar now extant, but he had access to an exposition of the mystery of sacrifices which no longer remains. Among the authors at this time (1310–30) who used the Zohar extensively were Joseph Angelino, the author of *Livnat ha-Sappir*, and David b. Judah he-Ḥasid, who wrote *Marot ha-Ẓove'ot*, *Sefer ha-Gevul*, and *Or Zaru'a*.

The position with regard to the earliest quotations is matched by our knowledge of the earliest Zohar manuscripts. Complete, well-ordered manuscripts did not circulate, and it is doubtful whether they ever existed. Mystics who took an interest in the Zohar made up anthologies for themselves from the texts they were able to procure; hence the great differences in the contents of the early manuscripts. An example of an anthology like this is the Cambridge Ms. Add. 1023, the oldest anthology yet known. It contains material which serves to complete another anthology which is now lost, and includes those parts of the Zohar which the compiler was able to obtain. This manuscript is from the last third of the 14th century, and contains a complete portion, otherwise unknown, of the *Midrash ha-Ne'lam*, which Isaac ibn Sahulah also knew. The Vatican Ms. 202, which is a little earlier, contains only isolated fragments from the Zohar. In the 15th century, manuscripts containing most of the portions of the Zohar were already compiled, but sometimes they still omit whole sections, e.g., the *Idrot*, the *Sava*, etc. (On these manuscripts see I. Tishby, *Mishnat ha-Zohar*, 1 (1957²), 110–2.)

The differences between manuscripts of the Zohar and the printed editions are mainly in the field of spelling (words are mostly written *plene* in the manuscripts and in early quotations), and in the relatively large number of romanisms, which were later confused; in the wider use of the preposition *bedil* for *begin*; and in the alteration of the grammatical forms of the Targum and the Babylonian Talmud. There are many differences in the basic text but they are relatively unimportant, and usually different readings of this kind are given in brack-

ets in the later printed editions. There are manuscripts from the 15th century of the *Sefer Tikkunim* as well, such as Paris Ms. 778. The *Raʾaya Meheimna* also exists in separate manuscripts. From 1400 onward the sanctity of the Zohar became more widely acknowledged in kabbalistic circles, and the criticisms of it which were heard here and there in the 14th century (e.g., in Joseph *Ibn Waqar who wrote: "the Zohar contains many errors of which one must be wary, to avoid being misled by them") died down. At this time the spread and influence of the Zohar were confined mainly to Spain and Italy, and it was very slow to reach the Ashkenazi lands and the East. The great elevation of the Zohar to a position of sanctity and supreme authority came during and after the period of the expulsion from Spain, and it reached its peak in the 16th and 17th centuries.

The Zohar was printed amid a fierce controversy between those who opposed its publication, among whom were some important kabbalists, and its supporters (see S. Assaf, *Mekorot u-Meḥkarim be-Toledot Yisrael* (1946), 246–328). The first two editions of the Zohar were published by competing printers in the neighboring cities of Mantua (1558–60) and Cremona (1559–60). The *Tikkunei ha-Zohar* was also published separately in Mantua (1558). The editors of these two editions used different manuscripts – hence the differences in the order and in detailed readings. Immanuel of Benevento who established the Mantua text used ten manuscripts, from which he arranged his edition, and chose the text which he considered to be the best. Among the correctors at Cremona was the apostate grandson of the grammarian Elijah *Levita (Baḥur), Vittorio Eliano. They used six manuscripts. The Mantua Zohar was printed in three volumes in Rashi script, while the Cremona Zohar was in one large volume in square script. Both of them contain a large number of printing errors. Both include the *Raʾaya Meheimna*, but they differ as to the placing of the different *mitzvot*. According to size, the kabbalists called these two editions *Zohar Gadol* ("Large Zohar") and *Zohar Katan* ("Small Zohar"). The *Zohar Gadol* was printed on two more occasions in this form, in Lublin in 1623, and in Sulzbach in 1684. The Polish and German kabbalists up to about 1715 generally used the *Zohar Gadol*. All other editions follow the Mantua format. Altogether the Zohar has been printed more than 65 times and the *Tikkunei Zohar* nearly 80 times. Most of the editions come from Poland and Russia, but there are also printings from Constantinople, Salonika, Smyrna, Leghorn, Jerusalem, and Djerba. In later editions they added the variant readings of the Cremona text and corrected many printing errors. They also added variants and readings from the manuscript of the Safed kabbalists, indications of biblical sources, and introductions. The Zohar was printed twice in Leghorn with an (incorrectly) vocalized text. Those sections in the Safed manuscripts which were not found in the Mantua edition were, except from the *Midrash ha-Neʾlam* to Ruth, printed together in a separate volume in Salonika in 1597, which was called *Zohar Ḥadash* in the later editions. The best of these are Venice, 1658, and Munkacs, 1911. All the sec-

tions of the Zohar were included in the complete edition of Yehudah *Ashlag, Jerusalem, 1945–58, in 22 volumes, with a Hebrew translation and textual variants from the earlier editions. The *Tikkunei ha-Zohar* began to appear in 1960, and by 1970 was not completed. A critical edition based on early manuscripts does not yet exist.

Commentaries

The crucial importance of the Zohar in the development of Kabbalah and in the life of the Jewish community can be seen in the vast exegetical literature and the large number of manuals that were composed for it. Most of these commentaries have not been printed, notably the commentary of Moses Cordovero *Or ha-Yakar*, of which five volumes have appeared (Jerusalem, 1962–70) – a complete version of this exists in the library at Modena in 19 large volumes; and the commentary of Elijah *Loans of Worms, *Adderet Eliyahu*, and *Ẓafenat Paʾneʾaḥ*, which exists at Oxford in four large volumes in the author's own hand. The early commentaries to the Zohar have not survived. Although Menahem Recanati mentions his own commentary in his *Taʾamei ha-Mitzvot*, most commentaries are based on Lurianic Kabbalah and do not add much to our understanding of the Zohar itself, e.g., *Zohar Ḥai* of Isaac Eizik Safrin of *Komarno, which was printed in 1875–81 in five volumes, and *Dammesek Eliezer* by his son Jacob Moses Safrin, which was printed in seven volumes in 1902–28. The most important commentary for a literal understanding of the Zohar is *Ketem Paz* by Simeon *Labi of Tripoli (written about 1570), of which only the Genesis section has been printed (Leghorn, 1795), but this also diverges quite often from the literal meaning and offers fanciful interpretations. Second in importance is the *Or ha-Ḥammah*, a compilation by Abraham b. Mordecai Azulai, which includes an abridgment of Cordovero's commentary, the commentary of Ḥayyim Vital which was written in the main before he studied with Luria, and the *Yareʾaḥ Yakar*, a commentary by Abraham Galante, one of Cordovero's pupils. Azulai arranged these commentaries together corresponding to each page of the text of the original Zohar. The whole work was printed with the title *Or ha-Ḥammah* in four volumes in Przemysl in 1896–98. It reflects the Cordovero school of Zohar exposition. A very widely known commentary, half literal and half Lurianic, is the *Mikdash Melekh* of Shalom *Buzaglo, a Moroccan rabbi of the 18th century, which was printed in Amsterdam in five volumes in 1750, and several times subsequently. It was printed together with the Zohar itself in Leghorn in 1858. The commentary, *Ha-Sullam*, in Yehudah Ashlag's edition of the Zohar, is part translation and part exposition. These commentaries do not consider the comparison of the Zohar with earlier material in rabbinic literature or in other kabbalistic works. The commentaries of the Gaon *Elijah of Vilna are important, namely *Yahel Or*, and his commentary to the *Sifra di-Ẓeniʾuta*, which is characterized by his comparative approach. Both of them were printed together in Vilna in 1882. Among the many commentaries to the *Tikkunei Zohar*, the *Kisse Melekh* of Shalom

Buzaglo must be singled out, and also the *Be'er la-Ḥai Ro'i* of Ẓevi Shapira (printed in Munkacs, 1903–21), three of whose volumes cover only about half the book.

Of the aids to the study of the Zohar the most useful are *Yesh Sakhar*, a collection of the laws in the Zohar, by Issachar Baer of Kremnitz (Prague, 1609); *Sha'arei Zohar*, a clarification of zoharic statements through their relationship to Talmud and Midrash, set out in the order of tractates and Midrashim, by Reuben Margulies (Jerusalem, 1956); a collection of zoharic statements on the Psalms by Moses Gelernter (Warsaw, 1926); and *Midreshei ha-Zohar Leket Shemu'el* by S. Kipnis, three volumes (Jerusalem, 1957–60), a collection of zoharic statements on the Bible with explanation. Keys to the subject matter of the Zohar are to be found in *Mafteḥot ha-Zohar*, arranged by Israel Berekhiah Fontanella (Venice, 1744), and in *Yalkut ha-Zohar* by Isaiah Menahem Mendel (Piotrikov, 1912).

Translations

The question of translating the Zohar into Hebrew had already arisen among the kabbalists of the 14th century. David b. Judah he-Ḥasid translated into Hebrew most of the quotations from the Zohar which he cited in his books. According to Abraham Azulai, Isaac *Luria had "a book of the Zohar translated into the holy tongue by Israel *al-Nakawa," the author of *Menorat ha-Ma'or* in which all the quotations from the Zohar, under the name of *Midrash Yehi Or*, are in Hebrew. In the Vatican manuscripts of the Zohar (nos. 62 and 186), several sections have been translated into Hebrew in the 14th or 15th century. According to Joseph *Sambari, Judah Mas'ud translated the Zohar into Hebrew in the 16th century. A translation of the Zohar from the Cremona edition, dating from the year 1602, is extant in Oxford Ms. 1561, but the more esoteric passages are omitted; the translator was Barkiel Cafman Ashkenazi. The Genesis part of this work was printed by Obadiah Hadaya (Jerusalem, 1946). In the 17th century Samuel Romner of Lublin translated a large part of the Zohar under the title *Devarim Attikim* (Dembitzer, *Kelilat Yofi*, 2 (1960), 25a); this is extant in Oxford Ms. 1563, with rabbinic authorizations dated 1747, showing that they had intended to have it printed. According to Eliakim Milsahagi of Brody, about 1830, in his *Zohorei Ravyah* (Jerusalem Ms.), he translated the whole of the Zohar into Hebrew, and to judge from his excellent style this must have been the finest translation made, but it is now lost together with most of his separate studies on the Zohar. In the 20th century large sections were translated by Judah Rosenberg in *Zohar Torah* in five volumes; and similarly, commentaries on the Zohar to Psalms and the *Megillot* in two volumes (New York, 1924–25; Bilgoraj, 1929–30). This translation is devoid of any literary qualities. The Hebrew writer Hillel Zeitlin began to translate the Zohar, but he did not continue. The preface to the Zohar in his translation was printed in *Metsudah* (London, 1 (1943), 36–82). A complete and extremely literal translation (but not without many textual misunderstandings) is contained in the edition of the Zohar by Yehudah Ashlag. Many selected pieces were translated in a meticulous

and fine style by F. Lachower and I. Tishby, *Mishnat ha-Zohar* (2 vols., 1957–61²).

Even before the Zohar was printed, the French mystic G. *Postel had prepared a Latin translation of Genesis and of the Midrash on Ruth, which is extant in manuscript in the British Museum and in Munich. The preface to it was published by F. Secret. The Christian mystic Chr. *Knorr von Rosenroth also made a Latin translation of important parts, particularly the *Idrot* and the *Sifra de-Zeniuta*, in his large work *Kabbala Denudate* (Sulzbach, 1677; Frankfurt, 1684), and most of the quotations from the Zohar or translations of those pieces which appeared in other European languages were taken from here, together with all the mistakes of the original translator, e.g., the works of S.L. Mathers, *The Kabbalah Unveiled* (1887); Paul Vulliaud, *Traduction intégrale du Siphra de-Tzeniutha* (1930). A French translation of the three volumes of the standard editions of the Zohar was prepared by Jean de Pauly (the later name of a baptized Jew from Galicia) but it is full of distortions and adulterations and accompanied by a great many false textual references, often to books which do not contain them at all or to books which have never existed. The translation was corrected by a Jewish scholar who knew Talmud and Midrash but did not correct the mistakes in the field of Kabbalah, which he did not understand. This translation, *Sepher ha-Zohar (Le Livre de la Splendeur) Doctrine ésotérique des Israélites traduit… par Jean de Pauly*, was magnificently printed in six volumes in Paris (1906–11). An English translation of the main part of the Zohar, with the omission of those sections which seemed to the translators to be separate works or additions, was *The Zohar* by Harry Sperling and Maurice Simon, published in five volumes in London (1931–34). The translation is in good style but suffers from incomplete or erroneous understanding of many parts of the kabbalistic exposition. A German anthology of many characteristic quotations from the Zohar was made by Ernst Mueller, who was obviously influenced by the teaching of Rudolf Steiner (*Der Sohar, das heilige Buch der Kabbala*, 1932).

Scholarship

Scholarly research into the Zohar did not begin with the kabbalists, however deeply interested they were in its teaching: they accepted uncritically the literary romantic background of the book as historical fact. The Jewish opponents of the Kabbalah expressed doubts about the veracity of this background from the end of the 15th century onward, but they did not delve deeply into a scholarly investigation of the Zohar. Christian interest in the Zohar was not at first scholarly but theological. Many thought they would find support for Christian ideas and developed a "Christian Kabbalah," and most of the writings up to the middle of the 18th century reflect this spirit. No scholarly value can be attached to these efforts. The first critical work was the *Ari Nohem* of Leone *Modena (1639) who questioned the authenticity and antiquity of the Zohar, from the point of view of language and other matters, but he did not undertake a detailed study. The book was printed

as late as 1840 (Leipzig), but its circulation in manuscript aroused the wrath of the kabbalists who saw every attempt at critique as an assault upon the sacred, and they replied to it, and to later books which were written in the same vein, with a considerable number of works defending the Zohar, but these are of little historical worth. Leone Modena's critique was also stimulated by a polemic against certain claims of Christian Kabbalah, while that of Jacob *Emden was connected with the struggle against the Shabbateans, who went to extreme lengths of heresy in their interpretations of the Zohar. In *Mitpaḥat Sefarim* (Altona, 1768), Emden concluded on the basis of a large number of specific errors in the Zohar that many sections, and particularly the *Midrash ha-Ne'lam*, were late, although he still assumed that there was an ancient foundation for the main body of the book. The *maskilim* followed him, especially Samuel David *Luzzatto in his *Vikku'aḥ al Ḥokhmat ha-Kabbalah ve-al Kadmut Sefer ha-Zohar* ("An Argument Concerning the Wisdom of the Kabbalah and the Antiquity of the Zohar" (1827), printed in Gorizia, 1852). These two books, Emden's and Luzzatto's, elicited several replies seeking to answer the questions they raised, particularly *Ben Yoḥai* by Moses Kunitz (Vienna, 1815), and *Ta'am le-Shad* by Elia Benamozegh (Leghorn, 1863). The profound inquiries by Eliakim Milsahagi in several books devoted to the Zohar would have much furthered historical inquiry had they been printed and not simply remained in manuscript. He towered head and shoulders above many of the writers who succeeded him. There remain only a few pages of his in the *Sefer Ravyah* (Ofen, 1837) and his introduction *Zohorei Ravyah* (Ms. in National Library, Jerusalem). The great 19th-century scholars of Judaism, *Zunz, *Steinschneider, and *Graetz, went further than Jacob Emden and saw the Zohar as a product of the 13th century. M.H. *Landauer tried to prove that the Zohar was produced by Abraham *Abulafia, and A. Jellinek directed attention once more to Moses de Leon. A. *Frank and D.H. *Joel argued as to whether the teaching of the Zohar was of Jewish or foreign origin, and an echo of this kind of controversy reverberated throughout most of the literature of the *maskilim*, whose very general conclusions were not based on a close attention to detail and are marred by many weak arguments. Because of the lack of precise critical inquiry, scholars chose to solve the problem of the Zohar in accordance with their own subjective views, and the very widespread belief was that the Zohar was the creation of many generations and was only edited in the 13th century. There were also those who admitted that Moses de Leon had a greater or lesser share in the editing. The results of the many studies by G. Scholem and I. Tishby, which were based on detailed research, do not support these theories and lead to the view summarized above. There is no doubt that scholarly research into the Zohar has only just begun and will develop in detail in connection with research into the history of 13th-century Kabbalah in general. In the bibliography works are listed which reflect various points of view.

[Gershom Scholem]

Later Research

Gershom Scholem, the founder of the modern academic study of Jewish mysticism, was particularly interested in the authorship, historical context, and the mythical doctrines of the Zohar. He devoted two chapters in *Major Trends in Jewish Mysticism* to the author of the Zohar and the worldview expressed in its theosophic orientation. Scholem understood the Zohar as a pseudoepigraphic composition – a work deliberately attributed by its authors to someone else – namely a medieval work attributed to Rabbi Shimon bar Yoḥai. He argued that its composition should be dated to the period between the mid-1270s and late 1280s, and concluded that the Zohar was the fruit of a single spiritual-literary genius, Rabbi Moses de León. Scholem suggested that the different literary units within the Book of the Zohar ought to be understood as compositions arising from different periods of the intellectual development of Moses de León. Scholem saw in the Zohar a mythical, innovative composition, created in the heart of medieval rabbinic Judaism, and emphasized its originality and daring more than its relationship to earlier literary traditions. Since Scholem's work, the Zohar has become an integral part of Kabbalah research and found its place in the canon of literary and spiritual works of the Middle Ages.

Isaiah Tishby's research into the Zohar relied on the key assumptions of Scholem's research. His monumental work, *The Wisdom of the Zohar*, now available in English, is the product of academic research which further seeks to bring the treasures of the Zohar to the modern reader who may not be well versed in the text or its language. Tishby's great contribution lies in his classification of the central topics discussed in the Zohar and in his scholarly, detailed, and systematic introductions to these topics. Alongside these studies he translated into Hebrew (together with Fischel Lachower) many select texts from the Zohar.

Yehuda Liebes contributed many ground breaking studies to Zohar scholarship. In his seminal article, "The Messiah of the Zohar," Liebes explored the messianic character of the hero of the Zohar, Rabbi Shimon bar Yoḥai, and the messianism of the entire composition. In this article, he explored many other aspects of the Zohar including zoharic myth and composition, the place of eros and sexuality in the Zohar's unique language, the world of the companions, analysis of the *Idra Rabba* and *Idra Zuta*, different conceptions of *tikkun* (rectification), and the influence of the Zohar on later Jewish mystics. Liebes argues that the zoharic narratives and homilies are necessarily intertwined and must therefore be analyzed with the zoharic story as an essential component of the text, constituting a key to the text's uniqueness and not merely as the insignificant frame for the homilies expounded therein.

In his article, "How the Zohar was Written," Liebes reopened the question of the authorship and composition of the Zohar. He points to a range of content, conceptual, and stylistic factors, which challenged Scholem's view of a single author creating the Zohar. Liebes refocused attention from the question of *who wrote the Zohar* to *how the Zohar was*

written. This study concludes that the Zohar is the product of a circle of mystics and not the work of a single author. In his article *Zohar and Eros*, Liebes focused on the place of eros and sexuality as the vital force in the Zohar and that which bestows upon the composition its unique place in the annals of Jewish literature.

Elliot Wolfson has written many important studies on the Zohar and emphasizes the centrality of mystical and ecstatic experience in kabbalistic and zoharic creativity while presenting a critical analysis of earlier approaches to the relationship between theosophy and experiential mysticism in the Zohar. His major claim is that an understanding of the world of the Zohar necessitates an appreciation of the fact that the Zohar is not merely a speculative or theoretical work, but rather presents practical means for attaining ecstatic states of union with or participation in the divine. Wolfson has written extensively on issues of gender and sexuality in the Kabbalah as a whole and especially in the Zohar. He argued for the centrality of male sexuality in both mystical experience and exegetical process in the Zohar as opposed to the secondary and dependant status of the feminine.

In *Kabbalah: New Perspectives*, Moshe Idel explored the spiritual and intellectual characteristics of the kabbalistic climate in which the Zohar was produced. He claimed that the circle of mystics responsible for the Zohar came into being out of the creative processes of a secondary elite of spiritual leadership. Idel distinguishes between a primary elite, comprising those scholars and rabbis who assumed central leadership roles in the community, and a secondary elite, the members of which constituted a second order of leadership characterized by the freedom to choose a creative and innovative path without seeking the approval of the legal and spiritual authorities of the time. In his book *Absorbing Perfections* he focused and extended his detailed and extensive research in the field of kabbalistic hermeneutics in which he explored the nature of the kabbalistic and zoharic symbol and the uniqueness of the symbolic-dynamic interpretation of the Zohar.

In the early 21st century Daniel Matt was working on the monumental enterprise of producing an annotated English translation of the Zohar, based on a critical Aramaic text that he is reconstructing from numerous Zohar manuscripts. As of 2006, three volumes had appeared, covering the Zohar's commentary on Genesis. The complete translation, titled *The Zohar: Pritzker Edition*, is projected to comprise 11–12 volumes.

In his research he has also highlighted the tension between innovation and traditionalism in the zoharic consciousness and has explored the way in which the Zohar as a whole understands itself as representing an alternative Jewish culture to that of classical rabbinic culture.

Arthur Green recently published a popular introductory volume for the Pritzker edition of the Zohar, translated by Daniel Matt.

Charles Mopsik translated into French select parts of the zoharic corpus as well as the writings of Rabbi Moses de León, introduced with detailed commentary which explored the ideological and literary context of this corpus. Mopsik further took issue with Liebes' claim about the circle of the Zohar, arguing again for the solitary literary production of the work by R. Moses de León.

Ronit Meroz heads a project which seeks to publish a critical edition of the Zohar. Her research of the Zohar suggests that through the use of philological-historical tools accompanied with literary ones it is possible to identify different chronological layers in the zoharic text. Meroz seeks to delineate discrete literary units in the composition and to test the hypothesis that different units were composed by different authors who were part of a literary movement. Meroz seeks to locate the beginning of what would later become the Zohar in texts composed as early as the 11th century somewhere in the Middle East. The earliest zoharic literary strata that she has defined is written in Hebrew, while the most refined, rich, and complex one, which Meroz calls the "Epic unit," was composed at the end of the 13th century and has at its center the spiritual biography of R. Simeon b. Yoḥai.

Israel Ta-Shma researched the halakhic world of the Zohar. He showed that the composition of the Zohar portrays Spanish *halakhah* even as it shows its dependence and intimate knowledge of French Jewish customs and liturgical rites.

Melila Hellner-Eshed's book "A River Issues from Eden" provides a detailed phenomenological analysis of mystical experience in the Zohar. The book provides the reader with a lexicon for zoharic mystical experience, reviews the paths and practices through which the Companions of the Zohar attain their mystical experiences as well as the special language and modes of expression which are used in order to describe the mystical experience itself, and its unique characteristics. Hellner-Eshed sees the zoharic literature as having the performative aim of awakening the mystical consciousness of its readers. In her book there is also an exploration of dimensions of self consciousness and reflexivity in the Zohar.

Boaz Huss has explored the question of the appearance, acceptance, canonization, and sanctification of the Zohar. Huss has explored the zoharic comparison between the figures of Moses and R. Simeon Bar Yoḥai, the hero of the Zohar, and the Zohar's preference for Bar Yoḥai over Moses. He claimed that the zoharic portrayal of Rabbi Simeon Bar Yoḥai reflects the self understanding of the Zohar's authors, while the figure of Moses points to the authoritative and kabbalistically conservative character of Naḥmanides. The zoharic portrayal of Rabbi Simeon as superior to Moses, Huss argues, expresses the attempt of the Zohar's authors to circumvent the authority of Naḥmanides and his school and to create a sanctified and canonized kabbalistic literature.

Daniel Abrams in various studies has stressed the necessity of distinguishing between the literary production of zoharic texts and the later historical reception of the disparate texts as a book. His central claim is that kabbalists and scholars alike have projected their expectations and assumptions of the "Book of the Zohar" back on to the earlier history of its

composition in late 13th-century Spain. He claimed that there is no evidence as yet to show that the Zohar was written as a book, but rather the book was invented many centuries later as a separate editing effort. Abrams claims as well that the Zohar does not have an "author," as understood in modern conceptions of literature and of the individual.

In her book, *Vision and Speech: Models of Revelatory Experience in Jewish Mysticism*, Haviva Pedaya has written extensively on the religious experience of the Zohar and on strategies for identifying those parts of the Zoharic corpus written in revelatory states.

Oded Israeli wrote a book on the zoharic literary unit known as "*Saba de-Mishpatim.*" In his research, he explored the key issues associated with this unit: the date of its composition, its place in the zoharic corpus, and its conceptual and literary characteristics.

The late strata of the Zohar, *Ra'aya Meheimna* and *Tikkunei ha-Zohar*, composed by an anonymous kabbalist in the beginning of the 14th century, have also enjoyed new investigation and scholarly studies. Pinchas Giller dedicated his book, *The Enlightened Will Shine,* to a study of these two later compositions. His later book, *Reading the Zohar*, detailed the various interpretative strategies among later commentators of the Zohar.

Amos Goldreich wrote on the self-image of the author of *Ra'aya Meheimna* and *Tikkunei ha-Zohar*. His edition of an unknown commentary to Ezekiel by this author is due shortly.

From this cursory overview of Zohar research, the great wealth of complex and complicated questions and issues explored by the Zohar's many researchers and interpreters begins to emerge.

ZOHAR, MIRIAM, Israeli actress. Born in Czernowitz, Romania, Miriam Zohar was in a concentration camp in the Ukraine during World War II. In 1948 she was among the "illegal" immigrants sent to Palestine on the *Pan York*, all of whose passengers were sent to Cyprus. There she began to perform in amateur theater. After arriving in Israel she worked in a Yiddish theater. From 1951, she appeared in *Habimah. In 1986 she co-starred with Lea *Konig in an acclaimed production of Jacob *Gordin's *Mirele Efros*. In 1987 she received the Israel Prize for theater, cinema, and television arts. In 2004 she starred in the film *The Schwartz Dynasty*.

ZOHAR, URI (1935–), Israeli actor, director, singer, comedian; one of the most colorful characters in the history of the Israeli entertainment industry. Until 1977, when he became an observant Jew, he was considered one of the doyens of Israel's entertainment family. Just one year earlier he had been the recipient of the country's most prestigious award, the Israel Prize, in recognition of his cinematic work. However, Zohar's career, which began in the mid-1950s, spanned broad artistic terrain.

Like many of his generation he started out as a member of an army entertainment troupe, teaming up with Chaim *Topol (later to become famous as Tevye in *Fiddler on the Roof*) in the Naḥal band. After completing their national service the two helped found the Baẓal Yarok ("Green Onion") musical-comedy team, which achieved considerable success in the late 1950s, releasing a string of hit songs such as *Adoni ha-Shofet* ("Your Honor") and *Venezuela*.

After Baẓal Yarok disbanded in 1960, Zohar's comedy career blossomed as he worked with top artists such as actor-comedian Shaike *Ofir and writer Ḥayyim *Hefer. He also began to break into radio, cinema, and later television. While at this stage Zohar was chiefly known as a comedian he also contributed to some serious ventures, such as Nathan Axelrod's 1962 film *Tree or Palestine*, which depicted life in pre-state Palestine from the 1930s up to the establishment of the State of Israel in 1948.

When Israeli television started in the late 1960s the charismatic Zohar was a natural choice as frontman for the *What's My Line* TV show, and he was a popular perennial presenter of the Miss Israel beauty contest. Today, Zohar is probably best known for his film directing, which began in 1965 with *Ḥor ba-Levanah* ("Hole in the Moon"), and took a big leap with a string of satirical-farcical efforts such as *Peeping Tom* (1972), *Big Eyes* (1974), and *Save the Lifesaver* (1977). In the early 1970s Zohar was a leading member of the group that put together the highly successful comic-musical *Lul* television series which

has now achieved classic status. Iconic singer Arik *Einstein was among his co-stars in the series.

In 1977 Zohar quit the entertainment industry and moved to an ultra-Orthodox neighborhood in Jerusalem. At the time the Israeli public was shocked, considering the *enfant terrible* persona Zohar had cultivated over the years. His ties to Einstein, however, continued as his two eldest sons married two of Einstein's daughters.

[Barry Davis (2nd ed.)]

ZOHARY, MICHAEL (1898–1983), Israeli botanist. Zohary was born in Bobrka, E. Galicia, and went to Ereẓ Israel in 1920. He joined a team of research workers at the Hebrew University under Alexander *Eig. Zohary wrote *Olam ha-Ẓemaḥim* (1954), *Géobotanikah* (1955), and *Flora Palaestina* (2 vols., 1966). Together with Naomi Feinbrun, Zohary published the *Flora of the Land of Israel* (Heb. and Eng., 3 folios, 1945–55). His research covered a wide section of the Middle East and led to his publishing more than 100 papers and books on the flora of the area. In 1952 he was appointed professor of botany at the Hebrew University and in 1954 he was awarded the Israel Prize in Science.

°**ZOLA, ÉMILE** (1840–1902), French novelist and champion of Alfred *Dreyfus. In Zola's 20-volume *Rougon-Macquart* novel cycle (1871–93), a naturalistic portrayal of French social decay under the Second Empire of Napoleon III, there are Jewish characters who often appear in an unfavorable light. However, as with Gundermann in *L'argent* (1891), the Jewish financier invariably has equally unattractive gentile counterparts. Zola's humanitarian socialism, allied to a deep suspicion of clerical politics, determined his stand in the Dreyfus Affair. One of the earliest opponents of Édouard *Drumont, Zola wrote a series of essays defending the Jews, which were published in the daily *Le Figaro* (1896–97) and which stung antisemites to insinuate that his pen had been hired. "The Jews such as they are today are our work," Zola wrote, "the work of our 1,800 years of idiotic persecution" (*Nouvelle campagne*, 1897). He also contrasted the advanced Hebrew concept of the unity of mankind with the racist's primitive insistence on interracial conflict and hatred. Zola's involvement in the Dreyfus Affair reached a climax when he published an open letter to President Félix Faure on the front page of George Clemenceau's radical daily *L'Aurore*, headlined "*J'accuse…!*" (Jan. 13, 1898). He charged the French government and army with conspiring to suppress the true facts and with committing "high treason against humanity" by diverting popular anger from their own reactionary intrigues to the fabricated crime of a hapless, insignificant Jew. Zola's widely publicized accusation gave new heart to the supporters of Dreyfus and led to a prison sentence which the writer avoided by taking refuge in England. It also led many more to suspect that there had been a miscarriage of justice, and resulted in Dreyfus' retrial and eventual vindication.

Zola returned to the case in *L'affaire Dreyfus* (*Lettre à la jeunesse*, 1897; *La vérité en marche*, 1901), where he reiterated

his belief in a conspiracy of army officers and clericalists aimed at overthrowing the Republic, and declared: "Truth is on the march; nothing can stop it now." His somewhat oversimplified approach to the problem of antisemitism – which would, he believed, vanish forever with the overthrow of ignorance and superstition – reappears in *Vérité*, the third part of his unfinished novel cycle, *Les Quatre Evangiles* (1899–1903). Here the anti-Dreyfusard thesis propounded by Maurice *Barrès is mercilessly lampooned. Anticipating the final outcome of the affair, which he was not destined to witness, Zola brings his fictionalized account of the case to a successful and morally satisfying conclusion with the vindication of his Jewish hero, Simon, a victim of the *blood libel, and the downfall of the reactionary intriguers.

Zola apparently intended to visit Palestine to gather material for a novel about Zionism, but his plan was never realized. His sudden death, resulting from carbon monoxide poisoning due to a blocked chimney, was allegedly contrived by a reactionary fanatic who gained access to the writer's apartment in the guise of a workman.

ZOLA, GARY PHILLIP (1952–) U.S. Reform rabbi, historian, archivist. Zola was born in Chicago, Illinois, and received his B.A. from the University of Michigan (1973) and his M.A. from Northwestern University (1976). In 1982, he was ordained at *Hebrew Union College-Jewish Institute of Religion, where he earned his Ph.D. in 1991. Following ordination, he was appointed National Dean of Admissions, Student Affairs and Alumni Relations for HUC-JIR. In 1996, he was named executive director of The Jacob Rader *Marcus Center of the American Jewish Archives (AJA), the world's largest archival resource documenting the history of North American Jewry. He was also associate professor of the American Jewish Experience at HUC-JIR in Cincinnati and editor of *The American Jewish Archives Journal*. Under Zola's leadership, the physical home of the AJA tripled in size, making it the world's largest free-standing research institution dedicated solely to the study of the American Jewish experience. Dedicated in 2005, the AJA's Malloy Education Building, which houses electronic classrooms, distance learning centers, and public exhibition galleries, introduced new digital technologies to the field of historical research and archival science.

Zola is credited with initiating the 2004 national commemoration marking the 350th anniversary of the establishment of New Amsterdam's first Jewish community in 1654: he was the organizer of the congressionally recognized Commission for Commemorating 350 Years of American Jewish History, a consortium of research institutions representing a historic collaboration of the Library of Congress, the National Archives and Records Administration, the American Jewish Historical Society and the AJA. As commission chairman, Zola served as guest chaplain at the U.S. House of Representatives and the U.S. Senate. In September 2004, he participated in opening ceremonies for the Commission's historical exhibitions held at the Library of Congress and delivered the invocation at the commission's gala dinner in Washington, DC, where President George W. Bush delivered the keynote address.

Active in both national and local Jewish communal affairs, Zola served as president of the Greater Cincinnati Board of Rabbis (1993–94) and rabbinic consultant to the Ethics Committee of Cincinnati's Jewish Hospital (1993–), as well as on the boards of the Jewish Federation of Cincinnati and the Hillel Jewish Student Center. He was selected twice (1988, 1992) by the American Center for International Leadership to be one of two rabbinic delegates on the Religion Commission of the U.S.A./U.S.S.R. Emerging Leaders Summit. He was president of the Martin Luther King Coalition, and a member of the Boards of Trustees of the Cincinnati chapters of the American Jewish Committee and the Jewish Community Relations Council. He was the winner of the Cincinnati Jewish Federation's Rabbinic Leadership Award (2004) and the Rabbi Roland B. Gittelsohn Prize for most effective congregational project in social action.

A contributor to numerous academic journals, and a former member of the editorial board of the *Journal of Reform Judaism* (1985–1990), Zola wrote *Women Rabbis: Exploration and Celebration* (2004) and *Isaac Harby of Charleston* (1994). He also edited *The Dynamics of American Jewish History: Jacob Rader Marcus's Essays on American Jewry* (1996) and co-edited *A Place of Our Own: The Rise of Reform Jewish Camping in America* (2006).

[Bezalel Gordon (2nd ed.)]

ZÖLD, MÁRTON (1865–?), Austro-Hungarian general. Born in Hungary, Zöld passed out of the military academy in Budapest and was seconded to the infantry. In 1914 he commanded a battalion against Serbia and Montenegro, and was awarded a Hungarian knighthood for valor on the Russian front. In the same year he commanded a regiment on the Italian front. After the establishment of an independent Hungarian state, Zöld was made a full general. He was active in Jewish affairs.

ZOLF, Canadian family. FALEK ZOLF (1898–1961), teacher, author, and essayist, was born in Poland. From 1909 to the outbreak of war in 1914, he attended yeshivah in Poland. In 1916, to avoid compulsory military service, he became an "essential worker" at a Jewish-owned leather factory in Yaroslavl, Russia. With the Kerensky revolution he volunteered for the Russian Army, was sent to the Galician front, was captured by the Germans, and, in 1918, became a prisoner of war in East Prussia. Returning home after his release, he found his mother dead and his village of Zastavia caught up in the civil war that fol-

lowed the Bolshevik Revolution. A dedicated Labor Zionist, in 1920 Zolf worked in the Jewish reconstruction in postwar Poland, assisted by the American Joint Distribution Committee, and became a teacher at a rebuilt school.

As life became more and more difficult under the antisemitic Polish regime, in 1926 Zolf decided to emigrate. He arrived in Canada in 1926 as a "farm worker" but soon became an itinerant *melammed* (teacher). After more than a year in Canada, he brought his family to Winnipeg, where he became a teacher and later principal of Winnipeg's I.L. Peretz Folk School. His part-fictional autobiography *Af Fremder Erd* (*On Foreign Soil*, 1945) was republished in English translation in 2003 with some Yiddish transliteration by Martin Green. Zolf also published *Undzer Kultur Hemshekh* (*Our Eternal Culture*, 1956), and contributed essays to the Yiddish press.

Falek Zolf's fourth child, LARRY (1934–), a reporter and producer, was born and brought up in Winnipeg's immigrant North End. Larry Zolf earned a B.A. at the University of Winnipeg, won scholarships, and completed an M.A. in history at the University of Toronto. He was with the Canadian Broadcasting Corporation's News and Current Affairs Department in Toronto from 1962. From 1964 to 1966 he worked on the innovative Canadian public affairs program, *This Hour Has Seven Days,* and teamed with Pierre Elliot Trudeau (before Trudeau entered parliament) to interview René Lévèsque, Quebec "Separatist" leader and founder of the Parti Québécois who led his party to power in Quebec in 1976. Zolf later wrote speeches for Prime Minister Trudeau. Zolf also produced an award-winning documentary on computers and published several books including *Dance of the Dialectic* (1973); *Just Watch Me: Remembering Pierre Trudeau* (1984); and *Scorpions for Sale* (1989), a fictional biography. He continued to write an on-line column for the CBC that mixed political commentary with personal reminiscences, often including references to his Jewish roots in the Winnipeg Jewish community, personalities in the community, community politics, and encounters with the non-Jewish world.

Larry Zolf's daughter, RACHEL ZOLF, is a poet whose works include *Her Absence, This Wanderer* (1999) and *Masque* (2004).

[Abraham Arnold (2nd ed.)]

ZOLLER (**Zolli**), **ISRAEL** (1881–1956), rabbi and apostate. Born in Brody, Galicia, Zoller spent a great part of his life in Italy. He was chief rabbi of Trieste after World War I, professor of Hebrew at the University of Padua from 1927 to 1938, and, from 1939, chief rabbi of Rome. At the beginning of September 1943, when the Germans entered Rome, he abandoned the community and took refuge in the Vatican. At the end of the hostilities he reappeared to assume his position as rabbi, but was rejected by the community because of his unworthy behavior at the time of the greatest danger. On Feb. 14, 1945, he converted to Catholicism, taking the name of Eugenio Maria (in homage to Pope Pius XII), and returned to the Vatican. In 1949 he was professor of Semitic epigraphy and Hebrew at

the University of Rome. He was the author of a large number of works, especially of biblical interpretation, Jewish history, liturgy, and talmudic literature. Among his works are *Israele* ("Israel," 1935), *L'ebraismo* ("Judaism," 1953), and autobiographical reflections entitled *Before the Dawn* (1954). His translation of the tractate *Berakhot* was published by a Catholic publishing house (1968).

BIBLIOGRAPHY: L.I. Newman, *A "Chief Rabbi" of Rome Becomes a Catholic* (1945).

[Sergio DellaPergola]

ZOLLSCHAN, IGNAZ (1877–1948), Austrian anthropologist and physician. Zollschan, who was born in Erlach, Lower Austria, graduated as a doctor and while working in private practice in Carlsbad turned his interests to anthropology. To combat the antisemitic racist theories of Houston S. *Chamberlain, he published his *Das Rassenproblem unter besonderer Beruecksichtigung der theoretischen Grundlagen der juedischen Rassenfrage* (1910, 1925[5]). As a Zionist he opposed Jewish Diaspora nationalism. In *Revision des juedischen Nationalismus* (1919) he attacked the Jewish demand for minority rights, and a revised edition of this work with a supplement, *"Der Weg zum Maximalismus,"* appeared in the following year. In 1921 he analyzed the condition of Zionism in his *Krise und Sezessionsgefahr im Zionismus und deren Ursachen*. His interpretation of the Zionist problem stimulated the formulation of a current within German Zionism called Binyan ha-Arez.

Zollschan recognized the danger to world peace of Nazi racist theories as a tool of rabid nationalism and undertook a struggle to combat them. In 1933 he presented a plan to Thomas *Masaryk for the examination of the theoretical foundations of racialism which was taken up by the Prague Academy of Sciences. The academy submitted a proposal for an international conference on the subject to the leading international and national scientific bodies of the world, including those of the Vatican and the Ecumenical Council of the Protestant Churches. Dr. Beneš, then foreign minister of Czechoslovakia, submitted the plan to the Institute for Intellectual Cooperation of the League of Nations, but the appeasement policy of Great Britain obstructed the involvement of the institute. Zollschan continued his efforts, set up a Society for the Scientific Investigations of the Racial Question in 1937, and in the following year traveled widely throughout Europe to obtain support for his work. One instance of success was the preparation in May 1938 of a papal syllabus calling on all academies to pursue joint scientific research into racial ideologies. The collapse of the Czechoslovak Republic nullified the entire enterprise. Zollschan settled in London, where he published his *Racialism against Civilization* (1942).

[Ephraim Fischoff]

ZOLOCHEV (Pol. **Złow**), town in Lvov district, Ukraine; formerly in Galicia, Poland; between 1772 and 1919 under Austrian rule; ceded to Soviet Russia in 1945. At the end of the 16th century the key leasing enterprises there were in the

hands of a Jewish contractor, Israel b. Joseph Eideles (see *Poland; *Arenda). A Jewish community was formed during the 17th century, and in 1716 was required to pay a poll tax of 350 zlotys, while the tax levied on the *Lvov community for the same year was raised to only 140 zlotys. The *Council of the Four Lands would sometimes convene there. The old synagogue of Zolochev was built in the second half of the 17th century. The *Maggid* Jehiel Michael of *Zloczow, an early leader of the Ḥasidim, preached there from 1770. Under Austrian rule the Jews of Zolochev engaged in considerable political activity; between 1891 and 1907. Zolochev, together with *Brody, returned Jewish deputies to the Austrian parliament: E. *Byk, and after his death Joseph Gold, a physician who officiated also as vice mayor of Zolochev. Both acted in conjunction with the other Polish deputies. From 1892 to 1907 there existed a Jewish school supported by the funds of Baron Maurice de *Hirsch. In 1907, 128 Jewish students attended the local secondary school (out of 500).

The Zolochev community numbered 1,150 in 1765; 5,401 (51.9% of the total population) in 1900; 5,744 in 1921; and 5,700 in 1931.

[Encyclopaedia Hebraica]

Holocaust Period

When World War II broke out, on Sept. 1, 1939, Jewish refugees from western Poland arrived, and the Jewish population of the town increased to 14,000. Under Soviet rule (1939–41) the Jewish communal bodies were disbanded and the activities of the Jewish political parties were forbidden. A number of the Jewish refugees were exiled to the Soviet interior in the summer of 1940. When the war broke out between Germany and the U.S.S.R. on June 22, 1941, groups of Jews attempted to cross over to the Soviet interior, but were turned back by Soviet patrols. German forces reached Zolochev on July 1. Two days later, in a pogrom perpetrated by Ukrainians, with the sanction of the German authorities, 3,500 Jews were killed in the city's fortress. A Judenrat was set up, headed by Dr. Maiblum, a former deputy mayor of Zolochev. In November 1941, 200 Jews were taken to the forced labor camp in Lackie Wielkie. In early 1942 Jews were sent to labor camps in Kozaki, Jaktorow, Plew, Zawarnice, and Sasov. Many inmates died in these camps from disease or injuries. After a *Selektion*, on Aug. 28, 1942, at the railroad station, 2,700 victims were sent to *Belzec extermination camp. On Nov. 2–3, 1942, in a second *Aktion*, 2,500 Jews were sent to Belzec; among the victims were Samuel Jacob *Imber, the poet. On December 1 a ghetto was set up to include Jews from towns in the vicinity of Zolochev – Olesk, Sasov, and Bialy Kamien. Hunger and disease decimated the inhabitants. Jewish doctors, notably Shelomo Jolek, battled against epidemics. On April 2, 1943, the ghetto was liquidated; the inmates were shot in Jelechowice. A small group of craftsmen, who were spared, organized two resistance units under Hillel Safran and F. Nachimowicz. The latter's group escaped to the forest but were betrayed by a Ukrainian peasant and wiped out after offering resistance. The leaders of the other unit were arrested in the ghetto and

the members disbanded. Safran was shot when he attacked his German guard while being led to execution. On Aug. 23, 1943, the labor camps in the vicinity were liquidated. The inmates in Lackie Wielkie offered armed resistance. Soviet forces reentered Zolochev on July 13, 1944. The community was not reconstituted after the war.

ZOLOTONOSHA, city in S.W. Poltava district, Ukraine. Jews began to settle in Zolotonosha at the beginning of the 19th century. In 1847 there were 1,001 Jews, and in 1897 there were 2,769 (about 32% of the population). In October 1905 pogroms broke out in the city, characterized by general looting and the destruction of all Jewish property. In 1926 there were 5,180 Jews in the city (32.5% of the total population). In 1939 they numbered 2,087. When the Germans invaded in September of 1941, they murdered 300 Jews from the surrounding area. Those who were unsuccessful in escaping the city were exterminated: Some 3,500 Jews from the city were executed in November.

[Yehuda Slutsky / Ruth Beloff (2nd ed.)]

ZOLTY, YAACOV BEZALEL (1920–1982), chief rabbi (Ashkenazi) of Jerusalem. Zolty was born in Stavitsk, district Lomza, Poland, and at the age of seven immigrated with his family to Ereẓ Israel where he studied at the Eẓ Ḥayyim and the Hebron yeshivot. In 1951 he was appointed a member of the District *bet din* of Tel Aviv, and the following year to the Jerusalem *bet din.* In 1956 he was appointed a member of the Supreme *bet din* of Israel.

An outstanding rabbinical scholar, Zolty served as head of the Bet ha-Talmud of Yad ha-Rav Maimon from 1966 to 1974 and later as the head of the Yad Aharon Yeshivah, and gave courses in the important yeshivot in Israel. His first published work, *Ginzei ha-Sifrei on* the *Sifrei, was published in 1948 and his responsa, *Mishneh Ya'avitz* on *Ḥoshen Mishpat* (1963) which gained him the Rabbi Kook Prize of the Municipality of Tel Aviv, was followed by a volume of the same name on the Laws appertaining to the Festivals in the *Oraḥ Ḥayyim* (1976).

In 1977 he was appointed chief rabbi (Ashkenazi) of Jerusalem, serving until his death.

ZOMBER, DOV BAER (**Bernhard**; 1821–1884), rabbinic scholar. Zomber was born in Lask, Poland, and studied under the rabbis Joske Spiro of Inowroclaw and Jacob Ettlinger, as well as at the university in Wuerzburg. After settling in Berlin, he taught Talmud there and maintained a boarding house for pupils. In 1871 he was appointed lecturer in Talmud at the *bet ha-midrash* in Berlin, where he served until his death.

He edited the *Shitah Mekubbeẓet* on tractate *Nedarim* (1860), and *Hilkhot Pesaḥim* of Isaac *Ibn Ghayyat with

Zomber's own commentary (1864). He wrote *Ma'amar al Perush Rashi le-ha-Massekhtot Nedarim u-Mo'ed Katan* (1867), a study on Rashi's commentaries on the treatises of *Nedarim* and *Mo'ed Katan*, and *Moreh Derekh* (1870), on Rabbenu Gershom's and Rashi's commentaries on tractate *Mo'ed Katan*. Against the latter Raphael Nathan Nata *Rabbinovicz wrote his *Kunteres Moreh ha-Moreh* (1871). Contributions of his were published in *Ha-Maggid* and in the *Magazin fuer die Wissenschaft des Judenthums*. His study on Judah ben Yakar, an early commentator on the Jerusalem Talmud, which appeared first in the *Monatsschrift fuer Geschichte und Wissenschaft des Judenthums* (1860), was subsequently printed in a Hebrew version with additions by the author in *Ha-Karmel* (1863).

[Tovia Preschel]

ZONANA, wealthy and influential Jewish family in 18th-century *Istanbul. The family held the position of Ocak Bazergânı, the commercial and financial agent of the Janissary corps. It was involved in the administration of the Jewish community of Istanbul, and took part in the committees of deputies entrusted with the affairs of the Jewish communities of Ereẓ Israel. As prominent businessmen and financiers they supported a variety of religious and charitable causes, maintaining yeshivah studies in Istanbul and Ereẓ Israel and financing the printing of rabbinic treatises. The first member of the family to hold the position of Bazergân was DAVID ZONANA, who in 1722 was already portrayed as a prominent figure of Jewish Istanbul (in *Megilat Yuḥasin* by Meyuhas Behor Shemuel of Jerusalem, a guest in David's spacious seashore residence). By the time of the war of 1736–39 David was well established in his position, with considerable influence over promotions and the corps' diverse financial affairs. Later incidents suggest an even greater sphere of influence. When Seyyid Hasan Paşa, agha of the Janissaries since 1738, was appointed grand vizier in 1743, David continued to serve as his personal agent, thus attaining one of the highest ranks possible for Jews in the Ottoman state. When his patron was replaced in August 1746 by a member of a rival faction who also held a personal grudge against him, David was arrested and summarily executed. David's eldest son JACOB (d. 1764) succeeded to his position in the Janissary corps, and continued his activities in the Jewish sphere as a deputy for the Jewish community of Jerusalem. He used his influence in official Ottoman circles to protect, as well as control, the Jerusalem community, involving himself in its internal conflicts. Jacob secured the building (1754–5) of a hostel for Jewish pilgrims and travelers in *Jaffa, the main port of entry en route to Jerusalem, and used his business network to guarantee the transfer of funds designated for the Jerusalem community. SAMUEL HALEVI, son of David's sister, founded a yeshivah in *Hebron and hosted rabbi H.Y.D. *Azulai, the emissary of the Hebron community, during his stay in Istanbul (1757–58). He may have been the unidentified "Levi" who held the position of Bazergân together

with Jakob. After 1768 (and until the demise of the Janissary corps in 1826) the position of Ocak Bazergânı was held by several generations of the *Adjiman family, which appears to have been closely related to the Zonanas.

[Shuki (Yehoshua) Ecker (2nd ed.)]

ZONDEK, family of physicians. MAX ZONDEK (1868–1933), physician born in Wronke in the province of Posen who specialized in surgery and the study of renal diseases. In 1913 he was appointed titular professor of surgery in Berlin. He was the author of numerous publications on surgical subjects, among them *Die Topographie der Niere und ihre Bedeutung fuer die Nieren-Chirurgie* (1903); *Zur Chirurgie der Ureteren* (1905); and *Die chirurgischen Erkrankungen der Nieren und Harnleiter* (1924). His nephew, HERMANN ZONDEK (1887–1979), endocrinologist, was also born in Wronke. He served as assistant at the Charité Hospital in Berlin and later became associate professor at the Friedrich Wilhelm University of Berlin and director of the municipal hospital. He left Germany in 1933, spent a year in England, and then settled in Jerusalem, where he took charge of the internal medical division of Bikkur Ḥolim hospital and subsequently became professor of endocrinology at the Hebrew University.

Hermann was a pioneer in the study of the thyroid gland and disturbances arising from its dysfunction. He was the first to record the cardiac symptoms occurring as the result of thyroid insufficiency. He showed that administration of iodine normalizes the raised metabolism in hyperthyroidism and demonstrated that both thyroid hyper – and hypofunction may be of primary pituitary origin. He made studies on hormonal activity in general and evolved the theory that an endocrine disease may be a result of an abnormal reactivity of the peripheral tissues as well as of a primary endocrine malfunction (peripheral theory). He was the first to point out the inverse relationship between urinary nitrogen and sodium chloride excretion in certain renal disturbances. Zondek made several studies of the pituitary diencephalic system and its relation to certain ocular disturbances. He wrote books and articles on various aspects of endocrinology. His memoirs, *Auf festern Fusse*, appeared in 1982.

His brother, BERNHARD ZONDEK (1891–1966), endocrinologist and gynecologist, was also born in Wronke. He was an assistant in the Charité Hospital in the department of obstetrics and gynecology. He became associate professor at Berlin University and later head of the obstetrical and gynecological department of the municipal hospital in Berlin. When

Hitler rose to power, he left Germany for Palestine where he became professor of gynecology and obstetrics and head of the hormone research laboratory at the Hebrew University of Jerusalem. Bernhard is best known for the pregnancy test which he developed together with Selmar Aschheim in 1927. They demonstrated that the excretion of gonadotropin in the urine is a constant early symptom of pregnancy. His later investigations dealt with methods of preparing estrogenic and gonadotropic hormones, the effect of estrogen in castrates, the induction of uterine bleeding with progesterone, estrogenic substances in the Dead Sea, and hormonal treatments of various diseases. Zondek's contributions significantly advanced the knowledge of hormonal therapy. He was the author of many scientific publications and recipient of many honors. He was awarded the Israel Prize in 1958.

A third brother, SAMUEL GEORG ZONDEK (1894–1970), physician, was best known for his studies on electrolytes and therapy of heart diseases. He developed a theory concerning the relationship between the autonomous nervous system and the electrolytes. He called attention to the importance of potassium for the growth of cells and studied the causes of extra-renal uremia. Samuel Georg was born in Wronke, and in 1926 became associate professor at Berlin University. He left Germany with the rise of Hitler and became chief of the division of internal medicine at Hadassah Hospital, Tel Aviv. He was the author of numerous medical publications.

°**ZOPYRION**, an author, otherwise unknown, appearing in a list of Greeks who wrote specifically about the Jews and attested to their antiquity. Josephus (Apion, 1:216) criticizes him for inaccuracy.

ZORACH, WILLIAM (1887–1966), U.S. sculptor and painter. Lithuanian-born William Zorach immigrated with his parents to the United States in 1891, settling in Ohio. Zorach only completed school up to the eighth grade, forced into working because of the family's impoverishment. He studied lithography in the evenings at the Cleveland School of Art in 1903 and soon thereafter he began earning a wage as a commercial lithographer. After he had saved some money, Zorach moved to New York City in 1907 where he received two years of additional training at the National Academy of Design. Again funded by money earned from his work as a lithographer, Zorach went to Paris to study art at La Palette in 1910. In Paris, Zorach met Marguerite Thompson, an American also studying at La Palette. Marguerite's influence, as well as the avant-garde atmosphere in France, effected Zorach's painting style, which became Fauvist in conception. His colorful paintings were first exhibited publicly at the Salon-d'Automne (1911). Financial circumstances forced Zorach back to Cleveland in late 1911, but by December 1912, he had earned enough money as a lithographer to return to New York, where he and Marguerite

married. Zorach's paintings remained Fauvist-inspired until around 1916, at which time he adopted a Cubist idiom.

Zorach carved his first sculpture in 1917. He gave up painting entirely to focus on sculpture in 1922. Early sculptures were stylized and angular in conception, akin to the Cubist style of his canvases. Soon Zorach adopted the more rounded, simplified, classicized forms for which he is best known in directly carved works such as the 36-inch-tall mahogany *Mother and Child* (1922, Metropolitan Museum of Art, New York). His first solo exhibition of sculpture was held at the Kraushaar Galleries in New York (1924). Many of Zorach's sculptures, mostly carved out of wood and stone, focus on themes of family.

He executed several public commissions, including a monumental marble figure of Benjamin Franklin (1936–37) for the Benjamin Franklin Post Office in Washington, D.C., and a 16-foot-tall group sculpture, *Builders of the Future*, for the 1939 World's Fair. Upon request, Zorach submitted a design for a proposed memorial for the Jews who perished in the Holocaust. Although the memorial never materialized, a plaster model titled *Monument to Six Million Jews* (1949, Zorach family collection) survives. Designed to be viewed in the round, on one side of the tombstone shaped pedestal topped by a *menorah* stands a woman protecting her child and on the other side a man looking upward to heaven beseechingly.

In addition to his artistic production, Zorach wrote articles on art and two books: a primer on sculpture and his autobiography. He also taught at several institutions, including the Art Students League for 30 years beginning in 1929 and Columbia University (1932–35).

[Samantha Baskind (2nd ed.)]

ZORAH (Heb. צָרְעָה), Canaanite city mentioned in Tell-el-Amarna letter no. 273; later a Danite city mentioned with Eshtaol and Ir (Beth)-Shemesh in one of the city lists (Josh. 19:41). According to the later enumeration of the districts of Judah, Zorah passed to that region, where it was located in the northern district of the Shephelah (Josh. 15:33). The fame of Zorah derives from the story of *Samson. The Danite camp in which his father Manoah lived is defined as situated between Zorah and Eshtaol (Judg. 13:25); Manoah himself is described as a Zorite (Judg. 13:2). Samson was buried between Zorah and Eshtaol (Judg. 16:31). The 600 Danite warriors went forth from the same camp to search for living space for their tribe, hard pressed by the Amorites (Judg. 8:11). According to 1 Chronicles 2:53, 54, and 4:2, it was settled by families of Judah. It is listed with Aijalon among the fortifications of Rehoboam (11 Chron. 11:20). It appears with Jarmuth in the list of places resettled by Jews returning from Babylonian exile (Neh. 11:29). In the Byzantine period, it belonged to Eleutheropolis (Onom. 156:15ff.). It is identified with the former Arab village of Ṣarʿa, situated on a dominating hill north of Beth-

Shemesh near the Jerusalem–Tel Aviv highway, about 15 mi. (25 km.) from Jerusalem.

[Michael Avi-Yonah]

Kibbutz Ẓorah in the Jerusalem Corridor west of Beth-Shemesh is affiliated with Iḥud ha-Kevuẓot ve-ha-Kibbutzim. It was founded in December 1948 by Israeli youth, who were later joined by settlers from South Africa. In 1970 Ẓorah had 431 inhabitants, more than doubling to 945 in the mid-1990s but then dropping to 701 in 2002. In addition to farming (field crops, plantations, turkey, and dairy cattle), the kibbutz manufactured mobility and rehabilitation aids for the handicapped and operated a furniture factory, winery, silk-screen printing studio, and guest house and youth hostel.

ẒORAN (Heb. צוֹרָן), urban settlement in the Sharon region of central Israel. It received municipal council status in 1997. In 2002 its population was 5,660. In 2003 the municipality of Ẓoran was united with that of *Kadimah. Their combined population was 15,709 in 2004.

ZOREF, ABRAHAM SOLOMON ZALMAN (1785–1851), leading figure in the Ashkenazi community of Jerusalem. Born in Kaidan, Lithuania, Zoref set out for Ereẓ Israel with his wife and three sons in 1811. Traveling by way of Odessa and Constantinople, they arrived in Acre after a journey lasting more than five months. They settled in Safed where Zoref worked as a gold- and silversmith (whence his surname, which is Hebrew for silversmith). The outbreak of the plague in 1813 drove him to Jerusalem. There he became associated with *Menahem Mendel of Shklov in the leadership of the small Lithuanian community (Kolel ha-Perushim). From 1819 to 1823 and from 1829 to 1833 Zoref traveled in Europe as emissary for this kolel; on his second journey he acted on behalf of the Sephardim as well. When Ereẓ Israel came under Egyptian domination in 1831, he went to Cairo to obtain permission with the help of the Austrian and Russian consuls, to rebuild the Judah he-Ḥasid dwellings. The success of his mission, which contributed to the development of the Ashkenazi settlement in Jerusalem, earned Zoref the enmity of the Arabs, who made two attempts on his life, from the second of which he did not recover.

His sons MORDECAI, MOSES, and ISAAC, who adopted the surname Salomon, and his grandson Joel Moses ben Mordecai *Salomon, continued to work for the growth and consolidation of Jewish Jerusalem and Ereẓ Israel.

[Avraham Yaari]

ZOREF, JOSHUA HESHEL BEN JOSEPH (1633–1700), Shabbatean prophet; the most important figure of the Shab-

batean movement in Lithuania. Born in Vilna, he was a silversmith with a modest Jewish education who early inclined to an ascetic way of life. During the persecutions in the wake of the Polish-Swedish War he took refuge, around 1656, in Amsterdam, but returned later to Vilna where he started the study of moral and mystical writings, but remained without talmudic learning. During the messianic upheaval of 1666 he had visions which many compared with those of Ezekiel. He became the outstanding spokesman of the believers in *Shabbetai Ẓevi and persisted in his belief throughout his life. He continued his strictly ascetic behavior, and during several years was said to have never left his home except for the synagogue or the ritual bath. Shortly after 1666 he started to put down the revelations he received in five books, intended to correspond to the books of the Pentateuch. He assembled around him a circle of fervent followers who considered him an oracle, and played in this group a role very similar to that of the later ḥasidic ẓaddikim. Stories told about him already have a noticeably "ḥasidic" flavor. He used to make pronouncements not only about the messianic developments and the related mysteries but also concerning political events of his time, such as are recorded by Ẓevi Hirsch *Koidonover in Kav ha-Yashar (ch. 12: 1705). People flocked to Ẓoref from all over Poland to ask his advice or to strengthen their Shabbatean faith, He considered himself the Messiah ben Joseph, and Shabbetai Ẓevi the true Messiah, and saw his own role as revealer of the secrets of redemption between the first and the second coming of the Messiah. His written revelations center around the esoteric meanings of the Shema Yisrael and by the time of his death were said to have covered about 5,000 pages. Those parts which have survived show clearly that the book was completely built upon elaborate numerological speculations following the Megalleh Amukkot of Nathan Nata b. Solomon Spiro (*Spira). These speculations are essentially founded on the gematriot of Shabbetai Ẓevi and his own name Joshua (Yehoshua) Heshel (814 and 906), frequently alluding to the year 1666 (in gematria 426) as the beginning of redemption. Although the Shabbatean character of Ẓoref's revelations is clear, he did not divulge his faith except to the members of his intimate circle who had to take a formal vow to show discretion and dissimulation before unbelievers. He maintained, directly or through his confidants, a lively correspondence with Shabbateans in Italy and Turkey. A letter written by the Shabbatean leader Ḥayyim *Malakh in 1696, after some visits to Heshel Ẓoref, acknowledges his extreme ingenuity with numbers but expresses great reservations as to his kabbalistic initiation and his psychic powers. During the last years of his life, Ẓoref transferred to Cracow where he married (a second marriage?) the daughter of Jacob Eleazar Fischhof, one of the protectors of the ḥasidic group of *Judah Ḥasid and Ḥayyim Malakh. When this group prepared to journey to Jerusalem, Ẓoref participated in a meeting of its Shabbatean leaders in Nikolsburg toward the end of 1699. Ẓoref died in Cracow. His manuscripts were scattered. Some parts of the collection of his revelations, Sefer ha-Ẓoref, came into the hands of the kabbal-

ist Nathan b. Levi, a member of the *Klaus* of *Brody who hid them; however, another part, including his writings from his last years, found its way to *Israel b. Eliezer Ba'al Shem Tov, the founder of Ḥasidism, who held these writings in high veneration without seemingly having been aware of their Shabbatean character. He frequently spoke in their praise, and the tradition of his pupils identified them with those of the mythical rabbi *Adam Ba'al Shem which his son was said to have given to the Ba'al Shem. Adam Ba'al Shem, a legendary figure of the 16th century, and Heshel Ẓoref in the generation preceding that of the Ba'al Shem, coalesced into one figure. Toward the end of his life the Ba'al Shem ordered a copy of the *Sefer ha-Ẓoref* to be made, but this order was executed only more than 20 years after his death. Copies of these copies have been preserved among the descendants of the ḥasidic rabbis Nahum of *Chernobyl and *Levi Isaac of Berdichev. An attempt by the latter to have the book printed in Zholkva was foiled by Ephraim Zalman Margulies of Brody who recognized its Shabbatean character.

[Gershom Scholem]

ZORN, JOHN (1953–), U.S. saxophonist, bandleader, composer, festival organizer, record label founder and owner. If any single figure can be credited with the revival and reinvention of Jewish-American musical culture in the last decades of the 20th century and first decade of the 21st, it would be the mercurial John Zorn. It may not have been Zorn who coined the term "Radical Jewish Culture" to describe the scintillating musical and theatrical hybrids that emerged in that period, but it was Zorn who shaped the constituent elements that became that reality. Zorn, who was born and raised in New York City, began as an avant-garde composer and alto sax player, influenced by such disparate figures as Karlheinz Stockhausen, Ornette Coleman, Ennio Morricone, and Warner Brothers cartoon composer Carl Stallings. His early work is a frequently abstract, almost antiseptic exploration of blocks of sound, focusing on the seams and unlikely swerves and turns between them. He was also fascinated with game theory and frequently applied it to group improvisation with uneven but fascinating results. He worked with a film-noir-influenced band, Naked City; wrote numerous soundtracks for independent films; issued numerous solo albums; and founded the Tzadik record label.

At some point in the late 1980s, Zorn became interested in exploring his Jewish identity, as his label name suggests. Starting with his 1990 album *Kristallnacht*, he began developing a new band, Masada, whose focus was on a specific set of the prolific composer's original compositions, most of them a flavorful blend of Blue Note hard-bop and Middle Eastern themes. The band's book became the basis not only for count-

less Masada recordings featuring Zorn's powerful alto but also for numerous spin-offs including a string quartet, an electric band, and a rock-inflected group. What Zorn had been attempting was nothing less than the creation of an entire body of new Jewish music for the new millennium.

To that end, he also encouraged many unlikely musicians from the worlds of avant-garde jazz, post-rock, and performance art to explore their own Jewishness on his record label, involving such luminaries as Steve Lacy, Borah Bergman, and Marty Ehrlich, and his own core of superb musical collaborators, including drummer Joey Baron, cellist Erik Friedlander, and pianists Anthony Coleman and Uri Caine among others. Zorn also promoted this new Jewish culture with a series of festivals, concerts and clubs (Tonic and his own The Stone chiefly) that moved the "downtown" scene gradually into the mainstream. Despite much acclaim and the growing success of his vision of Jewish music, Zorn remained a prickly figure, unwilling to speak to the press and intensely private.

[George Robinson (2nd ed.)]

ZRENJANIN (Hung. **Nagybecskerek**), city in the Banat, Vojvodina province, Serbia; formerly called Veliki Bečkerek and Petrovgrad. Zrenjanin was a regional agricultural and trading center. In the first part of the 18th century it was within the Austrian "military area" and thus inaccessible to Jews. The first mention of a Jewish presence there dates to 1760. A ḥevra kaddisha was created in 1764, and the community was officially founded in 1790. A Jewish school was built in 1816 and the following year a Jews' judge (*Judenrichter*), Adam Guttmann, was nominated. The first prayerhouse was erected in 1809, and another was built in 1895. The first rabbi was Rabbi Fein, who was followed by David Oppenheim and Maurice Klein. The last held office from 1880 to 1915 and became well known in all Hungarian-speaking communities for his translation of Maimonides' *Guide of the Perplexed* into Hungarian as *A tévelygök utmutatója* (4 vols., 1879–90). Jews traded mainly in hides, cattle, wine, and cereals.

During the Hungarian Revolution of 1848 about 25 Jews participated in the uprising, and the victorious Austrians imposed a collective fine on the community for alleged disloyalty: they had to provide 25,000 boots for the army. In the second half of the 19th century the community played an important role in the Danube basin, smaller communities gathering around it. Zrenjanin Jews gave aid to Belgrade Jews, who had suffered through shelling from the Turkish citadel in 1862 – 100 florins, which was half the sum donated by Budapest. By the turn of the century the community was well established and fairly prosperous. A new Hungarian-style synagogue was inaugurated in 1901 (it was completely demolished in 1941). The Zrenjanin Jewish community suffered during

World War I, but subsequently recovered, and by 1929 it numbered 400 families. Until the Holocaust it was active under rabbis Maurice Niedermann and David Finci, and President Leopold Fleischberger. There was a small Orthodox group. In November 1936 a German antisemitic paper, *Erwache* (a sort of imitation of *Der Stuermer*), was published. Its editor was brought to trial, but the court acquitted him. The community, numbering about 1,300, was almost annihilated by the Hungarians in 1941; the few survivors were deported to Auschwitz. The community was reestablished after the war and in the early 21ˢᵗ century hosted small-scale *Maccabiah Games for Vojvodina's Jews.

[Zvi Loker]

ZS (**Zionist Socialists**), Zionist-socialist party, mainly in Russia and Eastern Europe. At its third conference (Kharkov, May 15–20, 1920), the *Ẓe'irei Zion movement in Russia decided to become the Zionist Socialist Party – ZS (The letter "Z" in the shortened name of the party, which stands for the Hebrew or Yiddish word "Zionist," was particularly emphasized in order to distinguish it from the SS, a party called Sionistsko-Sotsialisticheskaya Rabochaya Partiya ("*Zionist-Socialist Workers' Party"), founded in 1904 as a Zionist party but transformed, without changing its name, to a *Territorialist, anti-Zionist party during the conflict over the *Uganda Scheme.) The rising wave of socialist ideas in Russia, as well as the creation of the socialist *Aḥdut ha-Avodah (A) party, in Erez Israel in 1919, induced a decisive majority of this Ẓe'irei Zion conference to adopt the socialist creed and the new name; a "right-wing" minority split off and announced (August 1920) the continuation of the original Ẓe'irei Zion Popular Faction, which later formed the world union Hitaḥadut together with *Ha-Po'el ha-Ẓa'ir.

The ZS joined forces with Aḥdut ha-Avodah in Erez Israel. Soon after the *Kharkov conference a convention of Ẓe'irei Zion in independent Poland decided to adopt a socialist program, and in 1921 Ẓe'irei Zion in independent Lithuania also accepted a socialist program and became ZS parties. The ZS Party in Russia emerged and lived under unique circumstances of revolutionary upheavals, repressions, and persecutions by the anti-Zionist Soviet regime, which was also extremely hostile to any non-Communist socialism. During the decline and disintegration of Jewish public life, especially of the Jewish socialist movements (which were gradually swallowed up in the ruling Communist Party), the burden of the fight for socialist Zionism, and to a great degree also for Zionism as such, was shouldered by the members of the young ZS Party.

ZS had to face not only the Bolshevik regime, the Communist Party, and the ruthless political police ("Cheka"), but also the most implacable of all enemies of Zionism and Jewish socialism, the *Yevsektsia (Jewish section of the Communist Party). In a life-and-death struggle, the ZS operated feverishly on many fronts: in the organization of the party itself, in Zionist activity, in *He-Ḥalutz, in the organization of self-defense against pogroms of counterrevolutionaries, in the youth movement Berit ha-No'ar ha-Ẓiyyoni ha-Soẓyalisti, in the trade unions, in producers', consumers', and credit cooperatives, in rendering productive Jews lacking occupational training and especially in agricultural training and in cultural activities directed toward *aliyah* to Erez Israel. All this was undertaken in a spirit of devotion in the full knowledge that the fight was a losing battle. Arrests and deportations increased, but the ranks closed and activities expanded. ZS members leaped onto every available platform loudly declaring their party's demands – for the democratization of Soviet rule, for cultural-national autonomy, for the rehabilitation of Jewish economic life ruined in the civil war, for the right of *aliyah* to Erez Israel – knowing that they would be arrested on the spot.

The Fourth Congress held in Leningrad in February 1924 decided to intensify activity and publish an illegal Russian-language newspaper (*Hagut ZS*). A climax was reached in August of the same year (on the eve of the Congress of National Minorities in the Ukraine), when the ZS distributed tens of thousands of leaflets denouncing the dictatorial and centralist regime, presenting the economic and cultural demands of the masses of the Jewish people in Russia, and calling for a Zionist-socialist solution to the Jewish problem in general. Both the contents of the leaflet and the manner in which it was distributed under the Cheka terror regime made a tremendous impression on Jews and non-Jews alike, but the party paid a heavy price for it; within a few days 3,000 ZS members and ZS youth had been arrested and sent to join the hundreds of their comrades who had already been jailed and deported to the far north of Russia. Lost leaders were replaced again and again in this emergency situation, but their activities were soon curtailed in turn. The rebellious party was increasingly besieged, and determined efforts were made to break and destroy it completely. Intervention from various quarters, especially from the wife of Maxim *Gorki, Yekaterina Peshkova, brought about the liberation of a certain number of prisoners and their *aliyah* to Erez Israel. With the final establishment of a totalitarian dictatorship under *Stalin, ZS suffocated and disappeared. Only a few of its members survived the years of terror. Thousands died in the deportation camps, after enduring mental and physical torture. In other countries, notably Poland, the Baltic countries (Lithuania, Latvia, and Estonia), and Romania, ZS developed into a legitimate Zionist-socialist movement closely linked with the labor movement in Erez Israel and with He-Ḥalutz, sponsoring pioneering *aliyah* and often taking part in local politics as a link between Zionists and the socialist parties of the respective countries.

[Israel Ritov]

ZSIGMOND, EDE (1916–1944), Hungarian poet. He came from a Jewish proletarian family. In his poems he expressed his socialist outlook and mourned his deported parents. He perished in labor service at the battle front. A collection of his poems was published posthumously under the title *Elszàntan es szeliden* ("With Decision and with Softness," 1961).

ZSOLDOS (formerly **Stern**), **JENÖ** (1896–1972), Hungarian literary scholar and philologist. Born in Budapest, Zsoldos fought as an officer in the Austro-Hungarian army during World War I. In 1919 he became a teacher and, from 1940 until his retirement in 1965, was headmaster of the Jewish community's girls' high school in Budapest. For a time, he edited the Jewish newspaper *Zsidó Szemle* and, between 1936 and 1943, was editor of the eminent Jewish literary periodical *Libanon*. In his research into Hungarian literature and cultural history Zsoldos devoted himself to a painstaking analysis of the relationship between Hungarian and Jewish literature, laying particular stress on its social significance. In an original and varied style, Zsoldos discussed the relationship between Jews and Hungarians and the manner in which these are reflected in literature. His contribution to philology was also important, and for 30 years he contributed to the periodical *Magyar Nyelvőr*, also publishing Hungarian grammars.

Zsoldos' writings include *A felvilágosodás német zsidó irói és a magyar irodalom* ("German-Jewish Authors of the Haskalah Period and Hungarian Literature," 1934), *Magyar irodalom és zsidóság* ("Hungarian Literature and Judaism," 1943), *A héber mese jelentkezése a magyar irodalomban* ("The Appearance of the Jewish Folktale in Hungarian Literature," 1946), and *1848–49 a magyar zsidóság életében* ("1848–49, in the Life of Hungarian Jewry," 1948).

[Baruch Yaron]

ZSOLT, BÉLA (1895–1949), Hungarian novelist, poet, and journalist. Zsolt, who was born at Komárom, joined the editorial board of the radical Budapest newspaper *Világ* in 1921 and later worked for *Magyar Hírlap* and, from 1933, for *Újság*. In addition, he was editor in chief of the radical weekly *A Toll*. In his editorials, Zsolt subjected his press rivals to merciless attack, especially for their ignorance and corruption, their hatred of European culture and, above all, their virulent antisemitism. During the Nazi era he was sent to a labor camp in the Ukraine and when the Hungarian army chief ordered his release, the command was not obeyed. Finally, as a member of the *Kasztner Group, he was dispatched to Switzerland from Bergen-Belsen. After the war, Zsolt returned to Hungary, where he founded the radical weekly called *Haladás*. In

the free elections of 1947, he was elected to parliament on the radical party list.

Zsolt made his name as a novelist and poet. His prose writing, though carelessly constructed, shows great talent for artistic and accurate description, and his bourgeois and petit bourgeois Jews are characters out of real life. Zsolt's attitude toward the Jewish bourgeoisie in his fiction contrasts with his defense of the Jews as a journalist. In his stories, he exposed their corruption and degeneration no less devotedly than he fought for their political and economic rights. Zsolt's verse includes the collection *Zsolt Béla verseskönyve* ("The Book of Poems by Béla Zsolt," 1915). Outstanding among his novels were *Házassággal végződik* (1926; *It Ends in Marriage*, 1931); *Gerson és neje* ("Gerson and his Wife," 1930), on the theme of mixed marriage; *Bellegarde* (1932); *Villámcsapás* ("Thunderbolt" 1937); and *Kakasviadal* ("Cockfight," 1939). He also wrote plays, including *Oktogon* (1932). *Kilenc Koffer* ("Nine Cases." 1947) was a book of memoirs and *Kőért kenyér* ("Bred for Stones," 1939), a collection of articles. Zsolt was continually preoccupied with the problem of the relationship between Jews and non-Jews. This reached a head in the novel *Kínos ügy* ("Distressing Affair," 1935), which showed his descriptive powers at their best. His ambivalence would seem to stem from his own unstable attitude to Judaism: he converted to Christianity, but later reverted to Judaism. Zsolt was the last chronicler of the Hungarian-Jewish assimilated bourgeoisie, and his precise descriptions perpetuated their memory.

[Baruch Yaron]

ZUCKER, DAVID (1947–), U.S. film producer. Born in Milwaukee, Wisc., Zucker studied film making at the University of Wisconsin. With a few borrowed video tape decks and an old film camera, Zucker and his brother, Jerry, and a friend, Jim Abrahams, formed Kentucky Fried Theater, a theatrical sketch group, in the back of a bookstore in Madison, Wisc. Moving to Los Angeles in 1972, they presented a satirical blend of videotaped, filmed and live sketches that in five years became the most successful small theater group there. In 1977 the team collaborated on their first feature film, *Kentucky Fried Movie*, essentially an extension of their sketches, and it became a financial success. Their next project created a new film genre. Conceived by David Zucker as a comedy without comedians, the film *Airplane!* featured dramatic actors performing zany dialogue with straight-laced sincerity. The spoof became a surprise hit of 1980, positioning the trio as kingpins of Hollywood comedy. They broke into television in 1982 with the series *Police Squad!*, which did for the detective drama what *Airplane!* did for its genre. Their streak of successful movies continued with the secret agent spoof *Top Secret!* (1984) and the biting farce *Ruthless People* (1986), which became one of the top-grossing films of the year. In 1988 David, on his own, directed *The Naked Gun*, based on *Police Squad!*, and it was a runaway hit. The 1991 follow-up, *Naked Gun 2½: The Smell of Fear*, surpassed the original at the box office. The final in-

stallment, *Naked Gun 33⅓*, which David produced, was also another box-office hit. David also co-produced several serious films, including *Phone Booth* (2001).

[Stewart Kampel (2nd ed.)]

ZUCKER, HENRY L. (1910–1998), U.S. community leader in welfare services. Born in Cleveland, Ohio, Zucker graduated from Western Reserve University. He began his career in social services as supervisor of public relations for the Cuyahoga County [Ohio] Relief Administration. He was a consultant for the American Jewish Joint Distribution Committee, helping to restore Jewish communal life in Europe after World War II. From 1936 to 1946, he served the Welfare Federation of Cleveland in several capacities. He was associate director of the Jewish Community Federation of Cleveland (1946–48) and later became its executive vice president, serving in that capacity until 1976. Zucker served as chairman of the advisory committee of the Hebrew Union College's School of Jewish Communal Services in Los Angeles, and was on the Board of Trustees of the United Appeal of Greater Cleveland and on several committees of the Welfare Federation of Cleveland. He held key positions in numerous Jewish and civic institutions. Under Zucker's professional leadership the Jewish Community Federation became one of the most comprehensively organized in the U.S., with the highest per capita donations to its Jewish Welfare Fund. He also established the Cleveland Welfare Endowment Fund, considered one of the largest of such funds in existence.

In 1991 Zucker received the Rosichan Retiree of the Year Award from the Association of Jewish Community Organization Professionals. The award is bestowed on a retired Jewish community organization professional who has had a distinguished career, has served as a role model and who, during retirement, continues to make a contribution to the field.

ZUCKER, JACQUES (né **Jakub Cuker**; 1900–1981), U.S. painter, illustrator, writer. Born in Radom, Poland, Zucker studied art in New York, but received most of his education at the Bezalel School of Art, Jerusalem, and the Académie de la Grande Chaumière and the Académie Colarossi in Paris. During WWI, Zucker fought for Palestine's liberation by enlisting in that country's Royal Fusillier's Jewish Brigade. By the 1920s Zucker had attained a reputation as an artist of landscapes, portraits, and figures. Some of his imagery possessed Jewish themes, such as *Synagogue of the Cabala*. The artist immigrated to the U.S. in 1922 to rejoin his family. Zucker traveled extensively: many of his images depict scenes or objects in Spain, Portugal, Egypt, Israel, and Poland. He divided his time between France and the U.S., and exhibited in both countries. In the U.S., Zucker's work was shown at the Art Institute of Chicago, the Brooklyn Museum of Art, the Metropolitan Museum of Art, New York, the Museum of Modern Art, New York, and the Whitney Museum. Zucker's style demonstrates myriad influences: the German and Austrian Expressionists, such as Oskar Kokoschka and Ludwig Kirchner; the

landscapes of Chaim Soutine; and French painters such as Vuillard and Bonnard. Zucker's work is owned by many major museums, including the Jewish Museum, New York and the Israel Museum, Jerusalem. In 1969, the French art critic Claude Roger-Marx wrote a book titled *Jacques Zucker* devoted to the work of the eponymous artist.

[Nancy Buchwald (2nd ed.)]

ZUCKER, JEFF (1965–), U.S. television executive. Zucker, who was born in Miami, Fla., received a bachelor's degree from Harvard University in 1986 after serving as president of the school newspaper, the *Harvard Crimson*. At the *Crimson*, Zucker encouraged a decades-old rivalry with the *Harvard Lampoon*, led by Conan O'Brien, a future colleague. When Zucker failed to gain admission to Harvard Law, he was hired by the National Broadcasting Company to research material for its coverage of the 1988 Olympics in Seoul, South Korea. The following year Zucker became a producer for the highly rated *Today Show* and in 1992 became its executive producer. He introduced rock concerts on the shows and incorporated a mass live audience through a window on Rockefeller Plaza, from which the NBC Studios broadcast. In 2000, at the age of 35, he was named NBC's entertainment president and in 2003 was put in charge of the network's news and cable operations as well. Following a merger with Vivendi Universal, Zucker was promoted to president of its television group in 2004. The following year, Zucker was again promoted by NBC, to chief executive behind the chairman, Robert C. Wright.

[Stewart Kampel (2nd ed.)]

ZUCKER, MOSHE (1904–1987), rabbinic and Arabic scholar. Born in Kopeczowka (near Lutsk), Volhynia, Zucker studied at the Jewish Theological Seminary of *Vienna and the University of Vienna. In 1925 he was ordained as a rabbi, serving as a spiritual leader of a congregation in Vienna and also as a lecturer in the *Beit ha-Midrash* of Jellinek, as well as at the Rambam School. In 1938, with the *Anschluss*, Zucker immigrated to the United States. He served congregations in Brooklyn, New York and Bangor, Maine. In 1947 he began teaching at the Jewish Theological Seminary's Teachers Institute and in 1959 was appointed to the faculty of the rabbinical school of the seminary, where he became professor of Bible commentaries.

Zucker's main works include *Hassagot Rav Mevasser* (1955), an edition of a text by a contemporary of *Saadiah Gaon, based on a unique manuscript in the Firkovich collection in Leningrad, and *Al Targum Rav Sa'adyah la-Torah* (1959). In the latter work Zucker examines Saadiah's Arabic translation and studies on other matters, which are important for the geonic period. He discusses the problem of the *Baraita of the Thirty-two Rules*, ascribed to R. Eliezer b. Yose ha-Gelili, and showed that it is actually part of *Samuel b. Hophni's introduction to his Pentateuch commentary. Zucker also

proved that the *Mishnat Rabbi Eliezer* (ed. by H. Enelow) is a late work, probably by a pupil of Saadiah Gaon. Another of his works is "*Keta'im Ḥadashim mi-Sefer ha-Mitzvot shel Ḥefeẓ b. Yaẓliaḥ*" (PAAJR, 29 (1961), Heb. pt., 1–68). Zucker blended knowledge of the entire *genizah material and of rabbinic literature. Familiar with the Arabic literature of the geonic period, he reproduced the details emerging from *genizah* studies and also interpreted them in the light of the Jewish and Arabic backgrounds of the period. He proved how deeply the *geonim* were rooted in the general trends of their time.

[David Weiss Halivni]

ZUCKERKANDL, EMIL (1849–1910), Austrian anatomist and physical anthropologist. Born in Raab (Győr), Hungary, Zuckerkandl was appointed assistant demonstrator at the Viennese anatomical institute of Karl von Langer in 1874. Langer charged him with the study of skulls brought back by the expedition around the world of the frigate *Novara* in 1857–59. The results, published in 1875, were a precise anatomical description and an assessment of the influence of various abnormalities in the form of the particular skulls, and their influence upon the racial character. His monograph *Zur Morphologie des Gesichtsschaedels* (1877) contained studies of the ratio between cranial and facial form, prognathism and opistognathism, and provided a summary of these problems among diverse races and comparable primates. After fulfilling appointments at the universities of Vienna and Utrecht, he became professor of anatomy at Graz in 1882. In that year he published "Ueber asymmetrische Kranien, welche ohne Nahtobliteration enstehen," demonstrating the frequency of this phenomenon and explaining its causes by the disproportion between the cranium of the foetus and the diameter of the mother's uterus. This paper was followed by several others, all appearing in *Mitteilungen der Anthropologischen Gesellchaft in Wien* (vols. 4 and 5). His epoch-making book *Normale und Pathologische Anatomie der Nasenhoehle und ihrer pneumatischen Anhaenge* (2 vols., 1882–92) entitles him to be regarded as the founder of modern rhinology.

In 1883 Zuckerkandl participated in the study of the ancient charnel houses in the Austrian Alps at Styria, Carinthia, and Carmola. The results, published in the journal of the Austrian Anthropological Society (1883–88), contributed much valuable information regarding cephalic forms in the area. In 1888 Zuckerkandl returned to Vienna to succeed Langer as professor of descriptive and topographic anatomy and occupied this post until his death. Known as an excellent teacher, he at various periods served as dean of the medical faculty at Vienna. Several anatomical entities discovered and described by him bear his name. His bust, placed in the assembly hall of the University of Vienna, was removed by the Nazis.

His younger brother, OTTO ZUCKERKANDL (1861–1921), was an eminent urologist and surgeon.

[Ellen Friedman]

ZUCKERMAN, BARUCH (1887–1970), Labor Zionist leader. Zuckerman was born in Kurenetz, Russia. Steeped in Jewish tradition, he was early drawn to Zionism. Upon his arrival in the United States in 1903 he quickly involved himself in the development of the Labor Zionist movement in that country, becoming one of the founders of the U.S. Po'alei Zion party. When the movement split into territorialist and Palestine-centered factions after the Uganda offer, he went over to the Socialist-Territorialists in 1905, rejoining the Po'alei Zion in 1910. Zuckerman's role in the Labor Zionist movement in the United States was both that of major exponent and of formulator of policy. By virtue of his varied activities as editor, journalist, speaker, and holder of high office in the movement, he became one of the chief spokesmen of the U.S. Po'alei Zion throughout the world. He was a trusted representative of the people in the large Yiddish-speaking sector of the Jewish community. Zuckerman's influence was not confined to his party activities. He played a significant part in the foundation of the People's Relief Committee, serving as its executive director from 1915 to 1924. He was also among the founders and promoters of Farband, the Labor Zionist fraternal order; the Jewish Legion of World War I; the American Jewish Congress; and the Histadrut Campaign.

Zuckerman served as one of the chief representatives of the Labor Zionist movement in the World Organization. A member of the Actions Committee, he was elected to the executive of the Jewish Agency, and was head of its Latin American and Organization Departments from 1948 to 1956. He settled in Israel in 1956 and continued his activities, mainly literary, until his death. In addition to a prolific output of articles and pamphlets, he wrote several volumes of personal memoirs which provide a rich source of historic material for the development of Jewish life and Zionism during the period they cover, among them *Oyfen Veg* (1956) and *Zikhroynes* (1962). Many of his shorter pieces were collected in *Essayen un Profilen* (1967).

[Marie Syrkin]

ZUCKERMAN, BEN (1890–1979), U.S. apparel manufacturer. Zuckerman, who became known as "the dean of the American ready-to-wear coat and suit industry," was a master tailor who never learned how to sew. "You can teach a bear how to dance," he once said. "I can teach a tailor how to work." Zuckerman was born in Romania, one of 13 children. He was a child when his parents brought the family to the U.S. and settled in New Jersey. His formal education ended when he was 15. His first job was sweeping floors in a dress factory for $3 a week. Subsequently, he learned to be an apparel cutter and in 1911 went into business with Joseph Hoffman. Zuckerman & Hoffman made expensive coats and suits. In the late 1920s, the business was dissolved and Zuckerman launched another

firm with Morris Kraus. That company liquidated in 1949 and Zuckerman spent the next year traveling through Europe and the U.S. He returned to New York and in 1950, opened Ben Zuckerman, Inc., and presented his first collection. It was designed by Harry Schacter, who would remain with Zuckerman for decades and who eventually added dresses and ensembles to the line. In 1951, Zuckerman won a Neiman Marcus Award for Distinguished Service in the Field of Fashion. In 1952 and 1956 he was presented with Coty American Fashion Critics Awards and in 1961 was inducted into the Coty Hall of Fame. He retired in 1968, but remained connected to the industry, becoming a charter member of the Council of Fashion Designers of America in 1973.

A prominent figure in New York City's garment business for almost 60 years, Zuckerman was known for making clothes in the U.S. that were said to have the look, the feel, and the fit of Paris originals. His coats and suits became popular with numerous prominent women, including Jacqueline Kennedy when she was still First Lady, and his skills at cutting and draping fabric became legendary.

[Mort Sheinman (2ⁿᵈ ed.)]

ZUCKERMAN (**Cukierman**), **ITZHAK** (**Antek**; 1915–1981), Warsaw ghetto fighter. Born in Vilna to a traditional Jewish family, he became one of the four commanders of the Jewish Fighting Organization (ZOB) that organized armed resistance to the Nazis in the Warsaw Ghetto. He was educated at Hebrew High School in Vilna and joined *He-Ḥalutz and moved to Warsaw as part of the youth movement. When He-Ḥalutz combined with Dror he became one of two general secretaries organizing the movement throughout Poland. When the war began he escaped eastward to Soviet-occupied Poland and organized underground branches of Dror. In 1940 he returned to German-occupied Poland and became a leader in Warsaw and from there traveled clandestinely to other ghettos, organizing the movement for agricultural training and Zionist education. He met and fell in love with Ẓivia *Lubetkin, a fellow Zionist underground leader. They later married. After word of the Einsatzgurppen activities reached Warsaw, he foresaw that all educational and cultural activities would have to be linked to armed resistance. During the great deportation that commenced on July 23, 1942, and sent 265,000 Jews to the Treblinka death camp in less than 60 days, Zuckerman pressed for active resistance, but his position was rejected at that time. When the ZOB was formed on July 28, 1942, he became part of staff headquarters. He was sent on a secret mission to Cracow to discuss resistance activities and was wounded there in December 1942. Returning to Warsaw with great difficulty, he participated in the preparations for armed resistance and was part of the group that fought the Germans during the January 18, 1943, deportations. He then became commander of one of the three fighting sectors. Because he looked like a Pole and spoke the language without an accent, he was sent out of the ghetto to obtain arms for the ghetto underground from Polish

army organizations; he met with rebuttals. When the Uprising broke out on April 19, 1943, Zuckerman was on the Aryan side of the wall. He wanted to return but he received a formal note from ZOB commander Mordecai *Anielewicz and a "very aggressive one" from his wife: "You haven't done a thing so far. Nothing." They were desperate for arms. He returned anyway and helped assist fighters escaping the burning ghetto move through the sewers of Warsaw, which he knew well from his smuggling activities. After the Ghetto Uprising, he also helped organize a Jewish underground among Jews in hiding on the "Aryan" side, the Jewish National Council (Żydowski Komitet Narodowy). The committee distributed information and pamphlets dealing with the situation of the Jewish-led struggle against the Nazis, e.g., known as *Kol mi-Ma'amakim*, which appeared on Aug. 22, 1944. He wrote reports on the activities of the ZOB that were transmitted to the Polish government-in-exile. During the Warsaw Polish Uprising, the fighting of non-Jews in August 1944, Zuckerman commanded a group of fighters, the remnants of the ZOB. Liberated by the Russians in January 1945, he devoted himself to the restoration of the He-Ḥalutz movement and *Beriḥah, the mass movement of East European Jews into Western and Southern Europe on their way to Palestine. He arrived in Palestine in 1947 and was one of the founders of kibbutz Loḥamei ha-Getta'ot. In 1961 served as a prosecution witness at the *Eichmann trial in Jerusalem, where he read from the final correspondence he received from Mordecai Anielewicz. Zuckerman was also one of the founding directorate of the *Ghetto Fighters' House and was editor of its publications. During the 1950s and 1960s as the status of the Warsaw Ghetto Resistance fighters provided the first generation of Israelis with a proud history of the Shoah, Zuckerman's moral voice was often heard. He was interviewed by Claude *Lanzmann in the film *Shoah*, in which he described the aftermath in rather non-heroic terms. "I began drinking after the war. It was very difficult… If you could lick my heart it would poison you." His autobiography, published first in Hebrew and expertly translated into English, ranks together with Czerniakow's Diary and the Ringelblum documents as an indispensable means for understanding the situation of Warsaw's Jews. Aptly titled *A Surplus of Memory*, it is indeed a full, unexpurgated recitation of his memories from that period.

[B. Mordechai Ansbacher / Michael Berenbaum (2ⁿᵈ ed.)]

ZUCKERMAN, MORTIMER (1937–), U.S. developer, publisher. Born in Quebec, Canada, Mortimer Benjamin Zuckerman earned law degrees from McGill University in Montreal and Harvard University and a master of business administration degree from the Wharton School of Business at the University of Pennsylvania. He worked at the Department of Housing and Urban Development before joining the old-line Boston firm of Cabot, Cabot & Forbes, where he revamped the firm's ailing California properties and assembled prime down-

town Boston real estate, rising to a senior financial position at the firm. But Zuckerman found the atmosphere too stuffy and left, along with an associate, Edward H. Linde. The California properties became part of their severance package, and they gave Boston Properties, their new venture in 1970, the starting cash flow. Zuckerman also received $4 million from Cabot after a court suit. Boston Properties became active in real estate and developed more than 50 buildings. Zuckerman became a United States citizen in 1977. Three years later he bought *The Atlantic Monthly* magazine, called the spine of Boston's literary community, paying a reported $3.2 million for a faltering magazine with a splendid piece of real estate near the Public Garden. In 1981 Boston Properties shifted its focus to Washington, DC, and built more than 15 buildings, including the Democracy Project, an office complex in nearby Montgomery County, Md., in which Zuckerman's friend, Martin Peretz, publisher of *The New Republic*, and members of the Bronfman family had an interest. Boston Properties also constructed new headquarters for the magazine *U.S. News and World Report*, and in 1984 acquired the nationally distributed newsweekly, the third largest in the country, and half of its real estate. Although he had an editor, Zuckerman, as publisher, decided to write a weekly column for the magazine, showing a strong pro-Israel stance. In 1992, Zuckerman bought *The New York Daily News,* once the newspaper with the largest circulation in the country but a periodical that had seen a fall in advertising and circulation as the city's economy and demographics changed. Zuckerman cut costs at the newspaper, laying off staff members and frequently changing editors. At the same time Boston Properties won the sweepstakes to build one of the most coveted pieces of real estate in Manhattan, the Coliseum site at Columbus Circle, which eventually became headquarters for Time Warner. Zuckerman used his position as publisher of *The Atlantic Monthly, U.S. News*, and *The Daily News* to promote his views on the Middle East. After buying *The Atlantic*, he issued a ban on articles, that, in his estimation, "challenged Israel's right to exist." In *U.S. News*, he chastised the press for bias against Israel in the 2000 Al Aqsa/Temple Mount incident that triggered the second intifada, although his version of the events were later found to be incorrect. Zuckerman was friendly with many governmental officials and key journalists, including A.M. *Rosenthal, who published a profile of Zuckerman when he was executive editor of *The New York Times* but then printed an Editor's Note apologizing for aspersions made in the article about Zuckerman's character and ambitions. Later, after Rosenthal left *The Times*, he wrote his frequently pro-Israel column for *The Daily News*. Zuckerman was active in many Jewish organizations and served as honorary president of the American-Israel Friendship League. He was honored by the American Jewish Committee and the Jewish National Fund, among other organizations. In 2001 Zuckerman became chairman of the Conference of Presidents of Major American Jewish Organizations, an amalgam of 54 groups, becoming one of the foremost spokesmen for Jewish causes.

[Stewart Kampel (2ⁿᵈ ed.)]

ZUCKERMAN, PAUL (1912–1986), U.S. communal worker. Zuckerman was born in Istanbul, Turkey, and was brought to the United States at the age of two. He lived in Detroit where he was chairman and president of a corporation which manufactured and imported food products. President Johnson named him head of the U.S. Food for Peace Committee in Michigan. He gave outstanding service to the Jewish community, both in Detroit and nationally, serving as a director of Sinai Hospital, National American ORT, and the Jewish Community Center in Detroit. He gave the Paul and Helen Zuckerman Auditorium and Conference Center to Detroit's Sinai Hospital and provided the West Bloomfield Township Library with its site.

He was president of the United Jewish Appeal of the United States from 1974 to 1977 and was a member of the Executive of the Jewish Agency and of the Board of Governors of Ben-Gurion University from 1976.

[Frederick R. Lachman (2ⁿᵈ ed.)]

ZUCKERMAN, SOLLY, LORD (1904–1993), British anatomist. Born in Cape Town, South Africa, Zuckerman settled in England, where he first taught at London University (1928–32). As research anatomist to the Zoological Society of London, he studied the behavior of primates, this interest having been stimulated by earlier observations on wild baboons in South Africa. He described his researches in *The Social Life of Monkeys and Apes* (1932). As a research associate at Yale University (1933–34), he extended his primate studies and in *Functional Affinities of Man, Monkeys, and Apes* (1933) dealt with the behavior, comparative physiology, and reproductive patterns of the primates. Zuckerman taught anatomy at Oxford (1934–45) and became Hunterian professor at the Royal College of Surgeons in 1937, also lecturing on anatomy at the University of Birmingham from 1939. During World War II he was scientific adviser to the British armed forces. After the war Zuckerman became increasingly involved in problems of British government policy related to science. He was chairman of the Defense Research Policy Committee (1960–64) and chairman of the Committee on Scientific Manpower (1950–64). From 1966 to 1971 he was chief scientific adviser to the British government. His book *Scientists and War* (1966) dealt with the relation of science to military affairs and social policy. He also wrote *A New System of Anatomy* (1961) and *The Image of Technology* (1968). He was elected a Fellow of the Royal Society in 1943. Zuckerman was knighted in 1956, was awarded the Order of Merit (in 1968), the French Legion of Honor, and the U.S. Medal of Freedom, and received a life peerage in 1971. He married the daughter of the second marquess of *Reading and was a governor of the Weizmann Institute, Rehovot.

[Mordecai L. Gabriel]

ZUCKERMANDEL, MOSES SAMUEL (1836–1917), rabbi and researcher in tannaitic literature. Born in Ungarisch-Brod (Uhersky Brod), Moravia, Zuckermandel studied under Samson Raphael *Hirsch at Nikolsburg (Mikulov) and later at the

rabbinical seminary (see *Juedisch-Theologisches Seminar) and the University of Breslau. From 1864 to 1897 he was a rabbi of various congregations, and from 1898 he served as rabbi at the Mora-Leipziger Foundation in Breslau. His life work was the scientific edition of the *Tosefta (according to the Mss. of Erfurt and Vienna (third part), and printed texts, 881–82, second ed. with supplement by S. Lieberman (1937), reprinted with additions (1970)) which, despite its deficiencies, represented a great advance in its time. Zuckermandel was of the opinion that the Tosefta was in fact only a remnant of a great Palestinian *Mishnah (to which the Palestinian *amoraim* resorted) that had remained after the Babylonian *amoraim* had removed part of it, adapted it, and called it the Mishnah. This was rightly rejected by A. *Schwarz and others.

His writings include *Die Erfurter Handschrift de-Tossefta* (1876); *Spruchbuch* (vols. 1–2, 1889–90); *Tosefta, Mischna, und Boraitha* (vols. 1–2, and supplement, 1908–10); *Gesammelte Aufsaetze* (vols. 1–2, 1911–13); and *Festpredigten* (vols. 1–2, 1915). In 1915 his autobiography *Mein Lebenslauf* appeared.

[Moshe David Herr]

ZUCKERMANN, BENEDICT (1818–1891), mathematician, librarian, and historian. Born in Breslau, Zuckermann received an education that embraced mathematics and related subjects. After being awarded a doctoral degree at the University of Kiel, Zuckermann returned to Breslau, where he was appointed to the faculty of the newly established Jewish Theological Seminary, headed by Zacharias Frankel, as instructor in mathematics and the natural sciences. In 1857 he was also entrusted with the administration of the Seminary library. Throughout his life he was strictly observant in his religious practice. An authority on the science of the calendar, about which he taught and wrote, Zuckermann was interested in the mathematics of the Talmud and clarified difficult passages.

His article on the complicated law in *Kilayim* 5:5, which appeared with accompanying diagrams in MGWJ (4 (1855), 146–56), shows his erudition in this field. He also specialized in the history of weights and measures of the Talmud; an article on this theme appeared in MGWJ (13 (1864), 295–306, 334–49, 373–84). Several of his papers were printed in the reports published yearly by the Seminary. Among his works are *Ueber talmudische Muenzen und Gewichte* (1862), *Das Mathematische im Talmud* (1878), and *Ueber Sabbathjahrcyclus und Jubelperiode* (1857; Eng. tr. by A. Loewy, 1866).

BIBLIOGRAPHY: M. Brann, *Geschichte des juedisch-theologischen Seminars…* (1904), 84–86, 128 (with list of his works); G. Kisch (ed.), *Das Breslauer Seminar* (1963), 323.

[Alexander Tobias / Andreas Brämer (2nd ed.)]

ZUCKERMANN, ELIEZER (1852–1887), pioneer Jewish socialist in Russia. Zuckermann came from a wealthy family of good lineage in Mogilev. When still a youth, he voluntarily taught needy children at the local *talmud torah* and began

to contribute to the Hebrew periodicals, *Ha-Meliz* and *Ha-Maggid*. Influenced by Pavel *Axelrod, he became a socialist. In 1874 Zuckermann reached Vienna where he worked for a time in the printing press of *Ha-Shaḥar*, which published his stories; he later stayed in a Russian-Jewish youth commune in Berlin. In 1877 he assisted A.S. *Liebermann in publishing *Ha-Emet. Zuckermann probably drafted the Russian manifesto issued by the Group of Jewish Socialists (Geneva, June 1880), calling upon Jewish Socialists to draw closer the Jewish masses and to propagate socialism in Yiddish. In the fall of 1879 he worked in St. Petersburg for the underground organ of the revolutionary organization *Narodnaya Volya*, but was arrested the following January and imprisoned in the fortress of Petropavlovsk. He was eventually sentenced to eight years' imprisonment and exile. After five years in a Siberian prison, Zuckermann was exiled to a remote village in the Yakutsk region, where he drowned himself.

[Yehuda Slutsky]

ZUCKERMANN, HUGO (1881–1914), Austrian translator and poet. Zuckermann was born into an assimilated Jewish family in Eger (Cheb), Bohemia. Austrian antisemitism and the emergence of the Zionist movement led him to rediscover his Jewish heritage. Turning to Jewish literature, Zuckermann translated the Song of Songs and works by leading Yiddish writers, notably *Peretz's dramas. After the death of Theodor Herzl, he founded a Jewish student society in his honor and became an active Zionist. Zuckermann also worked to establish a Jewish theater in Vienna. A lieutenant in World War I, Zuckermann regarded his part in the war as revenge for the *Kishinev Pogrom. He was one of the first Austrian casualties on the Eastern front. His *Gedichte*, a slender volume of lyrics, appeared in 1915 (ed. by C. Abeles with a biographical sketch on pp. 7–12). It included the most popular of his war poems, "Das Reiterlied," written in the form of a folksong and expressing readiness to die for the national cause. It has often been reprinted in German anthologies.

ZUCKMAYER, CARL (1896–1977), German playwright. Though born of a Jewish mother, Zuckmayer was raised as a Catholic in the Rhineland town of Nackenheim. During World War I he served as an officer on the Western Front and from 1919 worked in the theater and as a freelance writer. In 1924 he joined Bertolt Brecht at Berlin's Deutsches Theater, working for a short time under Max *Reinhardt. Zuckmayer's first success was the prizewinning comedy *Der froehliche Weinberg* (1925), which established the new "matter-of-fact" trend. His reputation was enhanced by the many dramas that followed, notably *Schinderhannes* (1927); *Katharina Knie* (1929); *Der Hauptmann von Koepenick* (1930; *The Captain of Koepenick*, 1932), a powerful satirical attack on Prussian militarism and bureaucracy; and *Der Schelm von Bergen* (1934). Zuckmayer

also wrote the screenplay for *Der blaue Engel* ("The Blue Angel", 1930), which was based on Heinrich Mann's novel *Professor Unrat* (1905). Like many other leading anti-Nazi writers, Zuckmayer found his life and career endangered after Hitler came to power and he fled to Switzerland in 1938, emigrating to the U.S. in the following year. From Hollywood he moved to New York, and then spent the war years farming and writing in Vermont. In 1947 he became a cultural adviser to the U.S. Army in Germany and Austria, finally settling in Switzerland in 1958. After World War II he produced an international success with *Des Teufels General* (1946; *The Devil's General*, 1950), the tragic story of an anti-Nazi air force chief. Zuckmayer was much preoccupied with the fate of German Jewry, Jewish characters appearing in several of his dramas, including *Der Hauptmann von Koepenick, Des Teufels General, Der Gesang im Feuerofen* (1950), and *Das kalte Licht* (1955).

His verse collections include *Der Baum* (1926) and *Gedichte* (1960); his novels *Salwàre oder Die Magdalena von Bozen* (1936; *The Moons Ride Over*, 1937) and *Herr ueber Leben und Tod* (1938). Zuckmayer also wrote novellas and short stories, such as *Ein Sommer in Oesterreich* (1937); and two volumes of autobiography, *Second Wind* (1940) and *Als waer's ein Stueck von mir* (1966; *A Part of Myself*, 1970). Four volumes of his collected works appeared in 1960.

[Godfrey Edmond Silverman]

ZUCROW, MAURICE JOSEPH (1899–1975), U.S. aeronautical engineer. Zucrow was born in Kiev and taken to the U.S. in 1914. He became professor of gas turbines and jet propulsion at Purdue University in 1946. Zucrow was a member of several advisory committees on rocket engines and propulsion systems of the National Advisory Committee on Aeronautics, and of the National Aeronautics and Space Administration. He wrote *Principles of Jet Propulsion and Gas Turbines* (1948) and *Aircraft and Missile Propulsion* (2 vols., 1958).

[Samuel Aaron Miller]

ZUELZ (Pol. **Biala**), city in Opole province, S.W. Poland (formerly in Silesia). Although the city appears on the list of places where Jews were martyred during the *Black Death persecutions of 1349, the identification is uncertain. The community itself had a tradition that its beginning was at the end of the 14th century, but the documentary sources date only from the 16th century, when the number of Jewish settlers was very small. In 1564 nine Jewish families lived in a Jewish Quarter (*Judengasse*) in their homes. All Jews were exiled from *Silesia in 1582 with the exception of Zuelz and Gross-Glogau, where many found refuge. In 1591 the local artistocracy sought to persuade the emperor to expel the Jews from Zuelz as well. They found a protector, however, in Hans Christolph von

Proskowski, who labored successfully with strenuous Jewish support to secure their position; in 1601 the Jews received verification of their status. Proskowski himself acquired Zuelz in 1606, maintaining a highly liberal attitude toward the Jews in his domain. They succeeded in developing their trading and commercial interests not only within the city but in many surrounding areas as well. In the 17th century Zuelz became a place of refuge for Jews from Poland, Moravia, and Bohemia. By 1647 there were 17 Jewish houses out of 155 in the town. Jews were involved in the silk industry as well as in the production of wool and wax. The community built a small wooden synagogue and school in 1717 that was destroyed by fire in 1769. A new synagogue was built in 1774.

The community had an important talmudic academy that established the reputation of Zuelz as a "learned city" in the 18th and 19th centuries and was the focus of the community's life. Many scholarly rabbis ministered to the community's needs over the years; among them were Joshua Feivel Teomim; Isaac Zelig Caro; Eliezer b. Samuel (d. 1747); Moses Eliezer Lippmann (d. 1810); Meshullam Solomon ha-Kohen (d. 1823); and Aaron b. Baruch (d. 1836). The oldest tombstone found dates from 1640, but the cemetery itself must be somewhat older. In the 18th century there was a growth of the Jewish population; there were 600 in 1724; 1,061 (over half the total population) in 1782; and 1,096 in 1812; thereafter, the Jewish population began to decline: 539 in 1849; 411 in 1858; and 337 in 1866. The community developed a number of philanthropic organizations that were active in the 19th century, the oldest being the *ḥevra kaddisha*. It also possessed a community school founded in 1844, but disbanded in 1870. The community declined further in the 20th century and was officially dissolved in 1914. The sacred objects in its synagogue as well as an invaluable collection of silver ornaments were transferred to Neustadt, which absorbed the small community. By 1929 only nine Jews were left in the city.

[Alexander Shapiro]

ZUENZ (**Zuelz**), **ARYEH LEIB BEN MOSES** (1773–1883), Polish rabbi and author. Zuenz was a descendant of Leib Zuenz (17th century) who served as rabbi of Holleschau and Pinczow, where Aryeh Leib was born. His great perspicacity was recognized when he was young, and he became known as Leib Ḥarif ("sharp-witted"). He lived in Prague and in Bratislava, and was appointed rabbi of Plotsk. He later went to Praga, a suburb of Warsaw, where he served as rabbi for two years. However, he relinquished this position when he was appointed the head of a yeshivah in the town. A prolific writer, 21 of his books were published and frequently reprinted. After he directed that the inscription on his tombstone should state that he would intercede in Heaven on behalf of anyone who pub-

lished his books, many Jews came forward to publish them. His works were highly valued in Poland because of their extreme subtlety and pilpulistic method.

Most of his books are on the Talmud and on the Shulḥan Arukh; most important are *Ayyelet Ahavim* (2 pts., 1888–1891) on *Ketubbot*; *Get Mekushar* (Warsaw, 1812) which discusses the ordering of *get* and *ḥaliẓah* and has a commentary, *Tiv Gittin; Simḥat Yom Tov* (1841) on *Beẓah; Gur Aryeh* (1943) on *Ḥullin*; and *Geresh Yeraḥim* (1870) on *Gittin*. He also wrote original interpretations of the Pentateuch, responsa, and sermons.

[Itzhak Alfassi]

ZUGOT (Heb. זוגות; "pairs"; sing. זוג; *zug*), name given to the pairs of sages responsible for maintaining the chain of the Oral Law from Antigonus of *Sokho, the pupil of Simeon the Just, to Johanan b. *Zakkai. In the sources they are represented as a link between the prophets and the *tannaim* (Pe'ah 2:6; Tosef., Yad. 2:16). Mishnah *Avot* (1:4–12) mentions five *zugot*. The first *zug* was that of *Yose b. Joezer and *Yose b. Johanan of Jerusalem, who flourished at the time of the religious persecutions under Antiochus Epiphanes (174–164 B.C.E.); the second, *Joshua b. Peraḥyah and *Nittai (or, according to some versions, Mattai) the Arbelite; the third, *Judah b. Tabbai and *Simeon b. Shetaḥ, in the days of Alexander *Yannai and *Salome Alexandra; the fourth, *Shemaiah and *Avtalyon, who flourished in the time of Herod; the fifth, *Hillel and *Menahem, after which "Menahem went forth and Shammai entered" (Ḥag. 2:2). According to a mishnaic tradition (*ibid.*), the first in each *zug* was the *nasi ("elected head of the Sanhedrin"), the second the *av bet din ("elected second to the *nasi"). R. *Meir upheld this tradition in all cases; but the other rabbis made an exception, holding that "Simeon b. Shetaḥ was *nasi* and Judah b. Tabbai *av bet din*" (Tosef., Ḥag. 2:8). None of the extant sources helps to clarify the exact significance of these titles or of the functions associated with them. Nevertheless, the tradition is not to be rejected, or to be regarded merely as a projection of the organization of the *bet din* at Jabneh and Usha. An allusion to dual appointment in the selection of heads of public institutions at the beginning of the Hasmonean period is to be found in the statement that Johanan the high priest appointed *zugot* to supervise the collection of the tithes (TJ, Ma'as. Sh. 5:9, 56d). These *zugot*, however, according to Geiger (*Urschrift und Uebersetzungen der Bibel* (1857), 116 ff., 142, 492), are not to be identified with those under consideration here. Similarly, before the destruction of the Second Temple, there were "two judges of robbery suits" in Jerusalem (Ket. 13:1), and reference is made to 80 *zugot* of pupils of Hillel the Elder (TJ, Ned. 5:7, 39a).

The Mishnah (Sot. 9:9) states that "when Yose b. Joezer of Zeredah and Yose b. Johanan of Jerusalem died, the grape-clusters ceased." The meaning of this expression is not clear, but of all the possible explanations, that of a tradition in the Jerusalem Talmud (TJ, Sot. 9:10, 24a; and see Sot. 47b) is the most plausible, namely, that the difference between this *zug* and the successors was that "the former served in an administrative capacity, while the latter did not serve in an administrative capacity." This apparently means that whereas the leadership of the first *zug*, which flourished before the rule of the Hasmoneans, embraced all spheres, that of the subsequent *zugot* was more restricted, being shared by the Hasmonean kings. In addition to the decrees ascribed to the *zugot* (TJ, Pes. 1:6, 27d and see Shab. 14b), and the ethical maxims and the aphorisms quoted in their names in *Avot* 1, the Mishnah (Ḥag. 2:2) mentions a subject on which all the *zugot* differed between themselves: "Yose b. Joezer says that the laying of hands [on the head of a sacrifice; see *Semikhah*] is not to be performed [on a festival] [for the explanation, see Tosef., Ḥag. 2:10; TJ, Ḥag. 2:3, 78a; Ḥag. 16b], Yose b. Johanan says that it is; Joshua b. Peraḥyah says that it is not to be performed, Nittai the Arbelite says that it is; Judah b. Tabbai says that it is not to be performed, Simeon b. Shetaḥ says that it is; Shemaiah says it is to be performed, Avtalyon says it is not; Shammai says it is not to be done, Hillel says it is."

The question as to why a dispute should have persisted for generations, in particular on the subject of the laying of hands on a sacrifice, with no final decision ever reached on the matter, is one that has puzzled scholars. The various interpretations that have been suggested lack any solid foundation. Nor is there any substance in the different theories that seek to explain this supposed "fundamental controversy" among the *zugot* in terms of trends and schools.

ZUKERMAN, JACOB T. (1907–1973), U.S. judge and labor leader. Born in Brooklyn, to immigrant parents from Minsk, Russia, Zukerman accompanied his parents as a child to Arbeiter Ring meetings, Socialist Party affairs, and Jewish gatherings. As early as 1926, he organized the Young Circle League of the Arbeiter Ring, which influenced many future leaders of the parent organization and of related groups. In 1954, he was elected the first American-born president of the Ring. In 1929, Zukerman graduated from New York University's School of Law. From 1932 to 1946 he was administrative assistant to the commissioner of welfare of New York City, and he was for many years director of the National Desertion Bureau (later the Family Location Service) of the Federation of Jewish Charities (1946–65). In 1965, Mayor Robert R. Wagner appointed him a judge of the Family Court for a ten-year term.

Zukerman had a deep and pervasive influence on English-speaking Jews whom he attracted to the Arbeiter Ring.

He was deeply devoted to all aspects of Jewish life and culture, and was known for his humane spirit and his eagerness to serve and advance Jewish causes and the interests of the State of Israel. He was for many years president of the Jewish Labor Committee, a position he held at the time of his death. He was also president of the Forward Association which publishes the Yiddish newspaper the *Jewish Daily Forward*, a member of the Board of the United HIAS Service, a leader in various ORT agencies, and one of the founding directors of the Cooperative Seward Park Housing Corporation.

[Milton Ridvas Konvitz (2nd ed.)]

ZUKERMAN (**Zuckerman**), **PINCHAS** (1948–), violinist and conductor; born in Israel. He studied with his father and Ilona Fehér. With the encouragement of Stern, Casals, and the America-Israel and Helena Rubinstein foundations, he continued his studies at New York's Juilliard School with Galamian (1961–67). After he won the coveted Leventritt Award (1967) he achieved world fame as violinist, violist, chamber musician, conductor, and teacher. Zukerman is especially known for his clear articulation, full tone, spontaneity of expressive phrasing, and masterful technique. In chamber music he has appeared with *Barenboim, Jacqueline *du Prè, *Ashkenazy, *Perlman, and the Kalichstein-Laredo-Robinson Trio among others. From 1971 Zukerman turned to conducting orchestras, playing and conducting at the same time. He was appointed artistic director of London's South Bank Summer Music Series (1978–80), and music director of St. Paul Chamber Orchestra, Minnesota (1980–87) and the Baltimore Symphony Orchestra Music Summer Music-Fest (1997–99). He was invited to perform and/or conduct the world's finest orchestras, including the Berlin Philharmonic, Boston Symphony, Chicago Symphony, and the New York Philharmonic. He often played in Israel with the Israel Philharmonic Orchestra and the Israel Chamber Ensemble and in the Israel Festival. A noted exponent of contemporary music, he presented premières of works by Boulez, Lutoslawski, Neikrug, and Takemitsu. His extensive discography includes Classical to Modern violin concertos, as well as the complete Mozart and Beethoven violin sonatas. As a devoted pedagogue, he taught at the Manhattan School of Music, New York (1993), and following his successful appointment as music director of Canada's National Arts Center Orchestra in 1998, he initiated several projects for young musicians. Among his distinctions are an honorary doctorate from Brown University, an Achievement Award from the International Center in New York, and the King Solomon Award by the America-Israel Cultural Foundation. President Reagan awarded him a Medal of Arts and he became the first recipient of the Isaac Stern Award for Artistic Excellence. Zukerman was involved in television specials and documentaries.

ZUKERTORT, JOHANNES (1842–1888), chess grandmaster, chiefly in Britain. Zukertort was born in Lublin in 1842. He shrouded his early life in obscurity, but he was probably the son of a Jew who had been converted to Protestantism and acted as a conversionist missionary to the Jews. Zukertort spent some time at a German university, but almost certainly did not take a degree. By the late 1860s he was one of the strongest players in Germany and, in 1872, came to Britain, where he spent the rest of his life, making a living as a chess player and writer. In 1878 he won a big tournament in Paris, and his other performances marked him out as one of the world's leading players. His greatest triumph came in the very big London tournament of 1883 in which the unofficial World Champion Wilhelm *Steinitz and most of the world's best players participated. Zukertort won his first 22 games, one of the greatest feats in chess history. His win against J.H. Blackburne is among the most famous games in chess history. At this point Zukertort suffered a mysterious breakdown, possibly a stroke, and lost three games in a row, although he still easily won first prize. Thereafter his results were mediocre and, in 1886, he lost a match against Steinitz, regarded as the first official match for the World Championship. He died of a stroke at the age of 45. Zukertort was renowned for his phenomenal memory and also for the Munchausen-like accounts he gave of his early life. He stated that he was the son of Baroness Krzyzanovska (sic), that he received a medical degree from Berlin University, that he fought in the Austro-Prussian war of 1866 and was left for dead on the battlefield, and that he was a noted tiger hunter in India. No evidence has been found for any of these claims.

[William D. Rubinstein (2nd ed.)]

ZUKOFSKY, LOUIS (1904–1978), U.S. poet and critic. Zukofsky was born on the Lower East Side of Manhattan to poor immigrants parents, who struggled to provide for his education at Columbia University. He taught English at Brooklyn Polytechnic Institute from 1947 to 1962. His early poems attracted the attention of William Carlos Williams who befriended him. He published various critical articles on Pound's *Cantos* and continued an active but obscure literary life until *All the Collected Short Poems, 1923–1958,* appeared in 1965. A second volume with the same title (poems written in 1956–64) followed in 1966. In 1968 an entire issue of *Poetry* magazine was devoted to him. In 1970 he published a novel *Little* and his poem *A-24* in 1972. His *A*, a poem in 24 sections, was published posthumously by the University of California Press. Zukofsky's other works include *A Test of Poetry* (1948), *Bottom: On Shakespeare* (1963), and *Prepositions* (1967), collected criticism. His *Collected Fiction* was published in 1990, and his *Complete Short Poetry*, in 1991.

The critic Guy Davenport had described him as "one of the three most distinguished living American poets", ranking him with Marianne Moore and Ezra Pound.

In 1976 he received an award from the National Institute of Arts and Letters, and in 1977 he was awarded an honorary doctorate by Bard College.

Scroggins, *Louis Zukofsky and the Poetry of Knowledge* (1998); idem (ed.), *Upper Limit Music: The Writing of Louis Zukofsky* (1997); S. Stanle, *Louis Zukofsky and the Transformation of a Modern American Poetics* (1994).

ZUKOFSKY, PAUL (1943–), U.S. violinist, conductor, and teacher. Zukofsky was born in Brooklyn. His father was the poet and writer Louis *Zukofsky. He began playing at the age of four. At seven he studied with Galamian, at ten he appeared with the New Haven SO, making his Carnegie Hall debut at 13. Entering the Juilliard School of Music at 16, he earned his B.M. and M.S. in 1964. A virtuoso of great technical skill, he was especially noted for his championship of contemporary works. His repertoire includes works by Ives, Cage, *Glass, and first performances of concertos by Sessions, Wuorinen, Iain Hamilton as well as works by *Babbitt, Carter and *Crumb. Zukofsky's extensive list of recordings includes more than 60 first releases, among them the Bach solo sonatas and partitas and Penderecki's *Capriccio* and an anthology of American violin music written between 1940 and 1970. Zukofsky has edited works for violin by Cage and Steuermann, and written several articles on Cage (1982, 1988, 1993), Brahms (1997), Beethoven (2000), *Schoenberg (1992, 2001), and others as well as a book on 20th-century violin techniques: *All-Interval Scale Book* (1977). Zukosky taught at the Buffalo Center, the New England Conservatory in Boston, and the Berkshire Music Center at Tanglewood. In 1969 he joined the faculty of SUNY, Stony Brook. He held a Guggenheim fellowship (1983–4) and was appointed conductor of the Contemporary Chamber Ensemble at the Juilliard School, where he also taught violin. Zukofsky was director of the Arnold Schoenberg Institute (1989–1995) in Los Angeles and editor of the Institute's journal. He serves as program coordinator of the American Composers Series at the Kennedy Center.

ZUKOR, ADOLPH (1873–1976), U.S. motion picture executive. Born in Ricse, Hungary, Zukor went to the U.S. in 1888. He worked in New York and Chicago in the fur business. At first Zukor was interested in motion pictures from the business point of view and opened movie houses. However, he soon foresaw the need for lengthy movies of good quality and turned to production. This idea proved successful when he imported *Queen Elizabeth*, starring Sarah Bernhardt. In 1912 he founded the Famous Players Company, which produced several classics such as *The Prisoner of Zenda* and *The Count of Monte Cristo* (1913). In 1917 he combined with other fledgling production companies to found Paramount Pictures, which became one of the largest movie companies in the world. Zukor was president and chairman of the board. He was also active in Jewish causes.

In 1949 he won an honorary Academy Award whose citation read: "Adolph Zukor, a man who has been called the father of the feature film in America, for his services to the industry over a period of forty years." For Zukor's 100th birthday, Paramount Pictures sold the candles on his birthday cake for $1,000 each, and then donated the proceeds to charity. Zukor lived to be 103. His autobiography, *The Public Is Never Wrong*, was published in 1954.

In 1994 Paramount Pictures Corporation merged with Viacom International, Inc. The merged companies own such corporations as the United Paramount Network (UPN); the Columbia Broadcasting System (CBS) and all its subsidiaries; the Comedy Central network; Blockbuster, Inc; the Spelling Entertainment Corporation and its subsidiaries; Showtime Networks, Inc; the Video Hits 1 (VH1) network; Music Television (MTV) Networks; and the Nickelodeon network.

[Ruth Beloff (2nd ed.)]

ZUKUNFT, DIE ("The Future"), German weekly for "politics, public life, arts and literature," which appeared in Berlin for three decades, every Saturday, from 1892 to 1922 under the editorship of Maximilian *Harden (born Felix Ernst Witkowski, 1861–1927), one of the most controversial figures of the German press. The title seems to have been suggested by Franz Mehring to distinguish the new paper from the journal *Gegenwart* ("The Present"). Harden's political essays, written under the pen name "Keut," and his theater reviews made the periodical an influential platform for intellectual discussion and the mouthpiece of liberal opposition in the German *Kaiserreich*. Due to its topicality, the vigor and erudition of its editor, and the fame of its contributors (among them Stefan *Zweig, Heinrich and Thomas *Mann, Rainer Maria Rilke, Hugo von *Hofmannsthal, Paul *Heyse, and Henrik Ibsen), *Die Zukunft* soon gained numerous readers. Its circulation quickly rose from 6,000 copies per week (40–50 pages each) to 10,000 around 1900, and some 22,000 by 1914. Between 1915 and 1922, however, circulation dropped to less than 1,000 copies per week.

As a result of Harden's deep veneration of Prussian conservatism expressed in the columns of his paper, the aging Otto von Bismarck (1815–1898) made him one of his closest confidants. Yet Harden attacked William II and his entourage with irony and courage. In 1906–07, while Harden was supported by Friedrich von Holstein (1837–1909), a series of articles led to the downfall of Prince Philipp zu Eulenburg (1847–1921), the Kaiser's most influential adviser. In 1897, Harden became a friend of Walther *Rathenau, and published his controver-

sial article "*Hoere Israel!*" in *Die Zukunft*. Georg *Bernhard, however, who had contributed to the paper as "Plutus" from 1901–1903, withdrew upon the advice of August Bebel, after Harden had criticized the Social Democratic Party.

At the outbreak of World War I in August 1914, Harden's *Zukunft* was ardently nationalist and even annexationist, but from November 1915, after the first German military defeat, it became pacifist and supported President Wilson's Fourteen Points of January 1918. Due to Harden's political turn and military censorship, *Die Zukunft* dramatically declined in importance, its readers turning towards papers like Siegfried *Jacobsohn's *Weltbuehne* after 1918. Harden could never come to terms with the new Weimar system, though he advocated a policy of international cooperation and reconciliation. Accordingly, he was blacklisted by the German right wing as "a destructive Jewish intellectual." On July 3, 1922, nine days after the assassination of his friend Walther Rathenau, an attempt was made on Harden's life, from which he never really recovered. On September 30, 1922, the last issue of *Die Zukunft* appeared under the title "After 30 years," and Harden, who realized he could not escape his Jewish origin, emigrated to the Netherlands. Later attempts to revive the paper failed. In 1927, Harden died from pneumonia while taking a cure in Switzerland.

Harden, who had converted to Protestantism in 1881, at times revealed an almost hysterical antisemitism, strongly attacked by Karl *Kraus in his satirical magazine *Die Fackel* (1899–1936). Theodor *Lessing, in his book *Der juedische Selbsthass* (1930), described Harden as a prototype of Jewish self-hatred, which had been particularly stirred up by the *Dreyfus trial. However, it may also be noted that Harden invited Theodor *Herzl in 1897 to state the Zionist case in *Die Zukunft* (an offer which Herzl declined because of Harden's hostile attitude towards William II). From 1917, he maintained friendly relations with the German Zionist Richard *Lichtheim, and the same year stressed the political wisdom of the *Balfour Declaration in his paper.

ZULAY, MENAHEM (1901–1954), Israel researcher of early Ereẓ Israel *piyyut*. Zulay, who was born in Oshcianci, Galicia, settled in Palestine in 1920. In 1925 he was invited to Germany to act as Hebrew tutor to the children of S.Z. Schocken. At the University of Bonn he was awarded a Ph.D. for his study *Zur Liturgie der babylonischen Juden* (1933). He worked at the Schocken Institute for the Study of Hebrew poetry, from its foundation until his death. At the Institute, he studied thousands of photographs of the early Ereẓ Israel *piyyut*, especially those of Yannai, that had been collected from all the libraries of the world in order to identify and classify them.

He published a critical edition of Yannai, *Piyyutei Yannai Melukkatim mi-Tokh Kitvei ha-Genizah u-Mekorot Aherim* (1938); "*Mehkerei Yannai*" in YMHSI, 2 (1936), 213–391; "*Iyyunei Lashon be-Fiyyutei Yannai*," *ibid.*, 6 (1946), 161–248). He was a member of the Academy of the Hebrew Language. Toward the end of his life he published a series of articles on "The *Piyyut* School of Rav Saadiah Gaon" (*Orlogin*, 6 (1952); 8 (1953); 10 (1954)). His complete work, *Ha-Askolah ha-Paytanit shel Rav Sa'adyah Ga'on* (1969), was published posthumously. The many studies he published constitute only a small part of the abundant material he prepared.

[Yehuda Ratzaby]

ZUNDELEVITCH, AARON (1852–1923), pioneer of the Russian revolutionary movement. Zundelevitch was born in Vilna, studied in various yeshivot and in the Vilna Rabbinical Seminary, and for a time came under the influence of Hebrew secular literature. In 1872 he organized a revolutionary circle among the students of the Vilna Rabbinical Seminary; among its members were Aaron *Liebermann and a number of others who played an important part in the history of the socialist movement. Later on he became a prominent figure in the Russian revolutionary group Narodnaya Volya ("People's Will"). He was a brilliant organizer and was responsible for the dissemination of illegal literature. He played a heroic part in the revolutionary struggle against Czarism and endured many years of misery and torture as a convict in the mines of Siberia.

Zundelevitch advocated the use of terror as a political weapon, but he differed from his colleagues on a number of issues. He did not share their enthusiasm for the Russian peasantry, urged closer cooperation with the German Social-Democrats, who were unpopular among the Russian revolutionaries of the 1870s, and showed great interest in the socialist movement of Western Europe.

Zundelevitch believed that the Jewish religion was a reactionary force, and was equally opposed to Jewish national ideas. He was against a Jewish revolutionary undertaking the assassination of the Czar because "the tendency of the Christian world is to ascribe the sins of one Jew to the entire Jewish people." Zundelevitch benefitted from the amnesty declared after the abortive Russian Revolution of 1905. In 1907 he immigrated to London, where he spent the rest of his life. He opposed the Communist regime in Russia "for their trampling underfoot the ideals of freedom, equality and brotherhood for which generations of revolutionaries made the highest sacrifices."

[Schneiur Zalman Levenberg]

ZUNSER, ELIAKUM (1836–1913), popular Yiddish bard and dramatist, known as **Eliakum Badkhn**. Born in Vilna, Zunser was conscripted in 1856 but was soon released, when Czar Alexander II revoked the oppressive military decrees of his predecessor Nicholas I. In 1856 in the barracks, he composed the song "*Di Poymanes*" ("Child Recruits") lamenting the bitter lot of the child soldiers (see *Cantonists), and after his discharge he wrote "*Di Yeshue*" ("Salvation") celebrating the child draftees' miraculous salvation. In 1857, working in Kovno as a braider of gold lace on uniforms, he came under the influence of the *Musar movement of R. Israel *Salanter, and his songs ("*Der Zeiger*" ("The Watch)" and "*Di Blum*" ("The Flower")) became laden with lyricism and moral sentiment. Singing his songs at festivals and weddings, he soon acquired a reputation as an original bard and decided to make a career as a *baḏḥan*. He rapidly attained fame as Russia's outstanding wedding bard. Beginning with *Shirim ḥadashim* ("New Songs," 1872), booklet after booklet of his songs was printed and avidly read.

In 1871 Zunser lost seven children during a cholera epidemic and, a year later, his wife. His tragic outlook after these losses was mirrored in poems such as "*Der Potshtover Glekel*" ('The Little Postal Bell') and "*Der Sandek*" ("The Man Holding a Child at Circumcision," 1872), and in his only published drama *Makhaze Mekhires Yoysef* ("The Sale of Joseph," 1874). After his second marriage Zunser lived chiefly in Minsk, serving as the local correspondent for *Kol la-Am*, a Yiddish periodical edited at Koenigsberg by M.L. *Rodkinson. When the pogroms of the early 1880s led to the founding of the pioneering Zionist group *Bilu, Zunser lent his support to the young idealists who were heading for a new life in Palestine. In 1882 he composed the songs "*Shivas Tsien*" ("Return to Zion") and "*Di Sokhe*" ("The Hook Plough") for them, the latter becoming his most popular song both in the Yiddish and Hebrew versions. Its theme was the joy of returning to plow the Jewish earth in the Holy Land. Zunser himself hoped to settle in the Bilu village of Gederah, but in 1889 was compelled to emigrate to New York, where his East Side home and printing shop became a center for Yiddish poets and young Zionists. There he also published poems of the New World (in *Dos Yidishe Tageblat*) about Columbus, Washington, and sweatshops and wrote his autobiography, *Zunsers Biografye Geshribn fun im Aleyn* (ed. by A.H. Fromenson, 1905). A definitive scholarly edition of his complete extant works, *Verk* (including lyrics and melodies) was edited for *YIVO by Mordkhe Schaechter (2 vols., 1964; incl. bibl.).

BIBLIOGRAPHY: S. Liptzin, *Eliakum Zunser, Poet of his People* (1950); M. Schaechter, in: *Eliakum Zunser, Verk*, 2 (1964), 779–88, bibl.; Rejzen, *Leksikon*, 3 (1929), 259–71; LNYL, 7 (1968), 546–9.

[Sol Liptzin]

ZUNTZ, ALEXANDER (1742–1819), U.S. pioneer merchant. Born in Westphalia, Germany, Zuntz came to America as civilian commissary and adjutant to the Hessian forces employed by England during the American Revolution. Soon after arriving in New York (1779), he became active in Congregation Shearith Israel, and was a leader of the Jewish community during and after the British occupation of the city. In 1784, he was one of the founders of the New York Bank. Though failing in a subsequent business venture, by 1797 he had become prosperous as a broker.

[Neil Ovadia (2nd ed.)]

ZUNZ, LEOPOLD (**Yom Tov Lippman(n)**; 1794–1886), philologist, among the founders of the "Science of Judaism" (*Wissenschaft des Judentums). Born in Detmold, Germany, the child of talmud scholar Immanuel Menachem Zunz (1759–1802) and Hendel Behrens (1773–1809), daughter of Dov Beer. In 1795 the family moved to Hamburg where his father and various teachers introduced him to *Hebrew Grammar, the *Talmud, and the *Pentateuch. After the death of his father, Zunz was educated at the *bet-midrash Samsonsche Freischule at *Wolfenbuettel as of 1803. Samuel Meyer Ehrenberg, an advanced Jewish educator who was appointed director of the school in 1807, recognized Zunz's great talents and helped him in his development; teacher and pupil remained friends until Ehrenberg's death in 1853. Ehrenberg's reforms at the school included the insertion of subjects such as religion, history, geography, French, and German, which Zunz described as a sudden transition from the "middle ages into modern times," and from "Jewish helotism into civic freedom." From 1809 to 1811, Zunz studied at the local high school (Gymnasium), and from 1810 to 1815 was an assistant teacher at the Samsonsche Freischule. In 1811 he read *Ẓemaḥ David* by David *Gans and *Bibliotheca Hebraea* by Johann Christoph *Wolf, which awoke his interest in Jewish history and literature. From 1815 to 1819 he studied at the University of Berlin and acquired a scientific academic grounding; he was particularly influenced by the great classical scholars Friedrich August Wolf (1759–1824) and August Boeckh (1785–1867).

Zunz's scholarly work began in 1817, when he wrote *Etwas ueber die rabbinische Literatur* (1818) and researched *Sefer ha-Ma'alot* by Shem Tov b. Joseph *Falaquera; in 1821 he received his doctorate at the University of Halle for this research. Due to his desire to give Judaism a new definition in keeping with the spirit of the times, he cofounded the *Verein fuer Cultur und Wissenschaft der Juden in 1819, which considered the scientific and historical approach to the "Science of Judaism" as being the best way to achieve society's goals. Zunz edited the *Zeitschrift fuer die Wissenschaft des Judentums* issued by the society (1822) and published three articles in it, including a biography of *Rashi.

Zunz, who then favored the spirit of *religious reform, was invited to deliver sermons in the new synagogue in Berlin starting in May 1820, and in August 1821 he was appointed preacher there, resigning a year later in disappointment with his congregation. A collection of his sermons (*Predigten*) appeared in 1823. He made his living as a member of the editorial board of the Berlin daily newspaper, *Haude und Spenersche*

Zeitung (1824–31) and as director of the primary school of the Jewish community, the Juedische Gemeindeschule (1826–29). His chief interest, however, was his research in Hebrew literature. Zunz used the vast material he had accumulated and the notes he had collected from manuscripts and printed works on his visits to libraries (at Hamburg, the *Oppenheim collection in 1828, and that of H.J. *Michael in 1829) in writing his great work on liturgic addresses which appeared in 1832, *Die gottesdienstlichen Vortraege der Juden historisch entwickelt* (see below).

In 1834–35, Zunz gave 34 public lectures on the Psalms. From September 1835 to July 1836, Zunz served as a preacher to a private religious association in Prague. From 1840 to 1850, he directed a Jewish teachers' seminary (Israelitisches Schullehrerseminar) in Berlin.

His hope that one of the universities would recognize Jewish studies as an academic subject and appoint him as its representative was not fulfilled. In 1848, he sent a letter on this subject to the Prussian minister of culture, but his proposal was turned down. Zunz for his part did not agree to the establishment of separate *rabbinical seminaries for fear of severing the "Science of Judaism" from general intellectual life. He also had little use for the *synods of German progressive rabbis which had begun to convene in 1844, as he could not see any benefit in their reforms; he preferred to carry on his scholarly work alone.

Zunz went on to publish *Toledot R. Azaryah min ha-Adumim* (in Heb. in: *Keren Ḥemed*, 5 (1841); 7 (1843)), 13 articles on Jewish subjects (in the Ersch and Gruber encyclopaedia, 1842), and *Zur Geschichte und Literatur* (1845). In 1850, the community granted him a modest pension. He devoted most of his time to research on the *piyyut, the *seliḥot, and various *liturgies, publishing over time *Die synagogale Poesie des Mittelalters* (1855), *Der Ritus des synagogalen Gottesdienstes* (1859), *Literaturgeschichte der synagogalen Poesie* (1865), and additions to the latter (1867). This work required visits to various libraries, including the British Museum, the Bodleian Library, and the library in Paris (1855; where he visited Heinrich *Heine, his friend from the days of the Verein fuer Cultur and Wissenschaft der Juden), and the de *Rossi library at *Parma (1863). Zunz remained barred from the important Vatican library, however, as he was Jewish.

His other literary contributions in the period after 1850 included: the publication of *Moreh Nevukhei ha-Zeman* of Nachman *Krochmal in accordance with the terms of the author's will (1851); articles on Judaism in the *Brockhaus* lexicon (1853); and a biography of his teacher Samuel Meyer Ehrenberg (1854). In honor of his 70th birthday (1864) the Zunz Foundation (Zunzstiftung) was set up in order to support his scholarship and various other undertakings in the "Science of Judaism." In 1874, the death of his wife Adelheid (Bermann (1802–1874)) caused him deep depression. He ceased to work, and only prepared a collection of his articles (*Gesammelte Schriften*), which appeared in three volumes in 1875–76, for publication. The Zunz Foundation issued a jubilee volume in honor of his 90th birthday (1884) entitled *Tiferet Seivah* (Hebrew and German). After an industrious and a passionate life, Zunz died at the age of 91 and was buried at the cemetery of Schoenhauser Allee in Berlin.

Main Research

In *Etwas ueber die rabbinische Literatur* (which appeared in 1818 and was the first attempt to reflect Hebrew literature in all its branches), Zunz outlined the program and aims of the "Science of Judaism" and his own plan of work. According to Zunz, Jewish literature should not be shut within the narrow confines of religious and halakhic tradition, as this literature also embraces the other humanities, as well as natural sciences. A knowledge of Hebrew literature in its broader sense would make possible the recognition of Jewish history as an inseparable part of the history of human culture in general – research into Hebrew literature is part of the humanities in general. He believed that the time was ripe for this research because the rabbinical epoch had come to an end and Hebrew literature had to be evaluated before it and its knowledge would disappear. Further, a scientific report on the Jew's very active past would testify to his talent and readiness to make contributions in the present, which would serve to facilitate obtaining civil rights. After an overview of all subjects to which Jewish culture had contributed in the Disaspora, Zunz returned to his main aim. By treating the rabbinical literature as an integral part of a universal humanistic culture (i. e., philosophy), he hoped to ban all prejudices against Jews and their literature.

Though in his outline for the investigation of Jewish literature, which he later called a "piece of immature work of youth," Zunz had used "only half speech," as he confessed to Ehrenberg, his *Die gottesdienstlichen Vortraege der Juden* was regarded as "no book, but an event; not a literary work but a school" (D. *Kaufmann). After his plan to write a four-volume introduction to the Wissenschaft des Judentums was not realized, he used his collected materials to demonstrate the historical-philological aims of the new "Jewish science." The main text focuses on the *Synagogue and especially its midrashic literature as the pillar of the Jewish nation in the Diaspora. Hundreds of works and thousands of references were combined into a single organic literary structure in which Zunz describes the prophets' teaching, out of which developed the reading of the Torah and of the *Prophets, the *Targum, and the sermons. He focuses on the development of *Oral Law; the activities of the *amoraim and the *geonim and their writings; all aspects of *aggadah; on preaching, its place in intellectual life; and the places of Jewish settlement in which preaching had been customary from ancient times up to the period of the *maskilim and the religious reformers.

Zunz seldom filled in the historical background of literary works, merely referring to it only to bring out the connection between the periods and the continuity in the tradition of preaching in its various forms. Only details of his research needed correcting. *Sefer Ravyah*, criticisms of Zunz's book by Eliakim Samiler (or *Mehlsack) of Brody, appeared in 1837.

Zunz made use of the latter's corrections and suggestions in preparing a second edition of the *Vortraege*, which appeared in 1892 with N. *Bruell as editor. Despite the scientific and objective character of the book, one can discern in it signs of political controversy and a defense of religious reforms. In the foreword, Zunz links the neglect of Jewish literature with the inferior civil status of the Jewish community; only a knowledge of the spiritual heritage of Jewry would encourage enlightened statesmen to grant the Jew the same rights and civil liberties. The Jew who is familiar with his people's past will know how to reform his religious customs and thereby prepare himself for his new status in society. According to his sympathy for the Reform movement during that time, in the last chapter Zunz approves the various reforms in the synagogues because in this "internal emancipation" he sees a parallel to external political liberation. This scientific book therefore concludes with the hope that the contemporary Jew will yet be a partner in the development of a unified culture for all mankind. (A Hebrew translation by M.A. Zak appeared in Jerusalem in 1947, edited by Ḥanokh Albeck.)

The central idea of *Etwas ueber die rabbinische Literatur* appears again in *Zur Geschichte und Literatur*. In this book he claims it is not right to restrict the scope of Jewish literature and separate it from general culture; the literary productions of the Jews merely supplement general literature, and both exert a mutual influence upon each other. It is true that there were periods of tension and hatred which did not recognize the commands of scholarship, but in the end, the scientific spirit will triumph and Hebrew literature will go forth from its isolation. The chapters deal with the sages of France and Germany in the Middle Ages, collections of manuscripts and printed works, printers and typography, Jewish poets in the south of France, and the history of the Jews of Sicily. The book includes important information from primary sources and accurate records of great historical and literary value. Thoughts on the philosophy of history, announced earlier by the Hegelian thinker and his friend Eduard *Gans, can be found again in the metaphor that Jewish literature is a particular stream that runs into the universal ocean of human culture. While Zunz himself intended to list and arrange his collected materials in order to enlighten the preceived relationship between Jews and the Diaspora societies, the book has been described as impossible to analyze (S. *Schechter) because of its many-sided cultural-historical aspects.

In *Die synagogale Poesie des Mittelalters*, Zunz concentrated on the most characteristic creation of Jewish religious life. At first he decided to limit his research to the *seliḥah* literature that expresses the sorrow of Israel, the suffering of the Exile, faith in the divine covenant, the idea of repentance and beseeching pardon, and the anticipation of the redeemer's coming. Only in the course of the work did he decide to add a discussion on *piyyut* literature, i.e., on the liturgical poetry that later supplemented the prayers. Zunz did not succeed in writing a book that reflected sacred poetry in its entirety, but his work was the first research undertaking of its kind. In the

first chapter (The Psalms), a kind of preface to the book, he repeats the idea of the continuity and organic development of Jewish literature. The prophet who announced the word of the Lord to the people and the poet who poured out his soul before God bequeathed their roles to the sages (the authors of the *aggadah* and teachers of the nation) and the *paytanim*. The form of expression underwent change, but the People of Israel both in the biblical era and after the destruction of the Temple was one people. The state fell, but the nation preserved its inner freedom and its creativity. The synagogue became both a political and religious center, a meeting place for the thinker and the poet. In the liturgy are expressed the "history and martyrology of the people, its past and future; the attitude of man's spirit to its origin, the attitude of the individual to mankind and the attitude of man to nature." Historic conditions change, but the covenant between God and Israel stands fast and the synagogue is the witness of this phenomenon.

While in the prefaces to his earlier books Zunz had stressed the organic structure of the history of the human spirit and the universally human framework of Jewish literature, he later abandoned this idea – even if not entirely – and concentrated on the inner life of the Jews. Perhaps the reason for this was his disappointment at the failure of the 1848 Revolution; from then on it was impossible for him to believe in a democratic union of mankind and the revival of its creative powers. Also, he no longer pinned his hopes on religious reforms in modern Judaism. For him, the "Science of Judaism" filled the vacuum which had been created.

Der Ritus des synagogalen Gottesdienstes is a continuation of this work. Zunz traced the change in liturgical customs, according to the places of Jewish dispersion, and described the influence on these customs of various historical phenomena, such as the *Kabbalah, the *Inquisition, the invention of printing, and the contact with Western culture beginning with Moses *Mendelssohn.

With *Literaturgeschichte der synagogalen Poesie*, his pioneering efforts in the field of synagogue poetry came to an end. This work, which is based on research of 500 manuscripts, describes more than 6,000 liturgical pieces and records the history of the *paytanim* and their works up to 1540. Although his intention had been to write an internal history of this literature, he never realized this plan; his talent for producing bibliographies and for performing research proved stronger than his ability to shape historical concepts.

Attitude to Political Life

From his youth, Zunz remained a confirmed democrat and liberal. In his opinion, the state was to be founded on ideals of justice, law, and morality, and must grant basic human freedom and equal rights to all citizens. As a supporter of Enlightenment, he criticized organized religion (the Church) as being opposed to a free state and also demanded total separation of church and state. He regarded the French Revolution and its democratic ideals as the historical point of reference of both the 1830 and 1848 revolutions, and as the basis of

a political development which should end with the creation of a European state based upon law and justice (*Rechtsstaat*). Zunz also believed in an amalgamation of Wissenschaft and politics. He claimed that the lack of full civic rights for Jews caused a neglect of their science and vice versa; thus, only through Wissenschaft could full equality be reached. Consequently, he committed himself to participating in numerous public concerns. For example, he was commissioned by the Jewish community of Berlin to write a treatise on Jewish names as a response to a royal decree banning the use of Christian names by Jews (*Namen der Juden* (1837)). In this work, Zunz showed that Jews had always adopted the names found in the Diaspora societies and that the so-called "Christian" names had long been used by Jews. In 1840, he expressed his opinion in a historical-political essay in the *Leipziger Allgemeine Zeitung* against the anti-Jewish imputations of the *Damascus Affair ("Damaskus, ein Wort zur Abwehr"). With his *Kurze Antworten auf Kultusfragen* (1844), he attempted to clarify Jewish religion and culture for the Prussian officials, and he also participated in a revision of the restricted emancipation law of 1812 for the united diet of Prussia in 1847. From 1848 to 1850 he took part in political propaganda, gave background talks to democratic citizens' associations, and was chosen to the electors' council (Wahlmaenner) of the Prussian diet and the German national assembly (Nationalversammlung) in Frankfurt on Main. These activities ceased in the years of reaction (1850–58) and were resumed in 1859 after the death of Frederick William IV. At the beginning of the Bismarckian Era, however, Zunz soon recognized that there was no hope of his democratic and liberal principles being implemented and subsequently withdrew from such activities. A compilation of his political speeches can be found in the collection of his articles (*Gesammelte Schriften*, Volume I).

Contribution to the "Science of Judaism"

Zunz devoted his life to the outline and development of the Wissenschaft des Judentums. According to the modern historical-philological school of F.A. Wolf and A. Boeckh, he intended an exploration of all post-biblical rabbinical or, as he called it, Jewish literature. But instead of modern classical studies (Wissenschaft des Altertums), which treated ancient cultures as completely past, he pursued a substantial interest in the nature of Judaism. In addition to parallels to the modern classics, Zunz participated in the contemporary philosophical discourse about the progress of world history and mankind – most influentially expressed by Johann Gottfried *Herder and Georg Wilhelm Friedrich *Hegel. For him, the historical, cultural and religious achievements of the "Hebrew/Jewish nation" in the Diaspora was revealed in all its written sources. In so doing, Zunz denied several basic values of traditional Judaism, but in their place offered the modern Jew an interest in history. One can discern a definitely negative attitude to the area of the Talmud and the Kabbalah; he considered their spirit as opposed to that of the "Science of

Judaism." It is worth noting that among the many subjects in Jewish literature, Zunz chose the most "Jewish": the Midrashim and liturgical poetry. As a researcher he was precise and assiduous, demanding scientific perfection. He did not have disciples, but most of the researchers who followed him learned from him even if they did not accept his ideological premises, and his research served as the foundation and the basis for the "Science of Judaism."

The Zunz Archives

After Zunz's death, his literary estate was presented as a gift to the Zunz Foundation and placed in the *Hochschule fuer die Wissenschaft des Judentums in Berlin. In 1939, the archives were taken to Jerusalem and given to the National and University Library. They include the minute book of the *Verein fuer die Cultur und Wissenschaft der Juden*, documents relating to Zunz's life, among them *Das Buch Zunz* (his diary), drafts of speeches, part of his printed books and articles with comments and additions in his handwriting, and the originals or copies of letters from him and letters received by him or his wife. Microfilm copies of a selection of this material are in the archives of the Leo Baeck Institute in New York. His library, which contained many valuable manuscripts, was bought by the Judith Lady Montefiore College in Ramsgate (1869–1896) and later integrated in the collection of *Jews' College, London.

Legacy

Already during his lifetime Zunz became an, if not *the*, icon of the Wissenschaft des Judentums for scholars like L. *Geiger, G. *Karpeles, M. *Brann and I. *Elbogen, who put much effort into the investigation of his life, work and correspondence (after the Holocaust N.N. *Glatzer was one of those who proceeded with this task). However, at the turn of the 20th century, critical voices increased. Franz *Rosenzweig reported from a conversation with Hermann *Cohen the philosopher's harsh verdict of Zunz: "He could have been a great historian, and was nothing but an antiquarian" (H. Cohen, *Juedische Schriften* (1927)). Shneur Zalman *Shazar blamed Zunz for erecting a wall between Jews and non-Jews out of "the martyrlogium of Jewish history" instead of rejecting such a division, as he had promised (I.S. Rubaschoff, Erstlinge, in: *Der Juedische Wille* (1918)). Finally, Gershom *Scholem accused the Wissenschaft des Judentums and Zunz as its prominent representative (as well as his younger colleague and friend Moritz *Steinschneider) of pursuing a dialectic between constructive and destructive tendencies (G. Sholem, "*Mi-Tokh Hirhurim al Ḥokhmat Yisrael*," in: *Luʾaḥ ha-Arez* (1944)). Despite all this criticism, however, fascination for the life and work of Zunz has continued, since he is still to be regarded as one of the most important personalities in the development of the Wissenschaft des Judentums and, arguably, of Jewish studies in general.

[Nahum N. Glatzer / Gregor Pelger (2nd ed.)]

ZUR, MENACHEM (1942–), Israeli composer. Born in Tel Aviv, Zur attended the Jerusalem Academy of Music and received a D.M.A in 1976 from Columbia University in New York. He wrote over 100 compositions in all musical genres: orchestral, chamber, vocal, electronic, and one full-scale opera, *Neighbors*. His works are frequently performed in Israel, the U.S., Central America, Europe, and the Far East. Zur served as the chairperson of the Israeli Composer's League in 2001 and was awarded the ACUM (Israeli ASCAP) prize for lifetime achievement and the Prime Minister's prize for composition.

He was constantly engaged, both theoretically and artistically, with the problems of pitch organization in post-tonal music. In his compositions, he uses concepts from set theory and cyclical arrays to create prolongation of motives modeled after *Schenkerian theory of tonal music. He was especially interested in contrapuntal relations among various contrasting bodies of sound, as in the series *Discussions* and in the Concerto for Tuba, Concerto for Piano, Concerto for Violin, Bassoon and Horn.

Although Zur's style is always modern, some works on liturgical texts reveal influences of traditional Jewish music, like *Lamentations* (Alto with Orchestra, 1984), *Combinations* (Children's Chorus with Tape), *The Golem* (Baritone with Orchestra, 1988), *Kedusha Prayer* (Ḥazzan Baritone with Children's Chorus). Some choral works in Hebrew involve a distinct Israeli idiom: *A Tale of Two Sandals* (Children's Chorus, 1985); *Alleluia* (Mixed Chorus); *The Sacrifice of Isaac* (Female Chorus and Piano, 1993). Among his other works are *Keyboard Harmony* (co-author, 1985); Concerto for Orchestra; three symphonies (including no. 2 – *Letters to Schoenberg, Stravinsky and Berg*, 1988–1994); *Centers* (Piano, 1982); *Circles of Time* (Piano, 1993).

[Yossi Goldenberg (2nd ed.)]

ẒUR, ẒEVI (1923–), Israeli military commander, the sixth chief of staff of the IDF. Born in Zaslavl, Ukraine, Ẓur went to Palestine in 1925. He joined the *Haganah in 1939, and was battalion commander in the Givati Brigade during the Israeli *War of Independence. After the war he was brigade commander and later chief of staff of the southern command. In 1951 he began to study public administration at Syracuse University, New York, but was recalled to take up an appointment as chief of manpower division at GHQ. In 1956 he became CO of the central command, in 1958, deputy chief of general staff, and then from 1958 to 1961 studied in Paris. In 1961 he was appointed chief of the general staff of the Israeli Defense Forces (1961–63). During his tenure as chief of staff, Israel did not face serious security problems and he devoted himself to upgrading the army's equipment and developing its military doctrine. After he retired from the army, he was director of *Mekorot, the Israeli water company (1964–67). In 1965 he was elected to the *Knesset from the *Rafi party but resigned his seat. In June 1967 he became assistant to the defense minister, Moshe Dayan, a position he held for seven years. From 1974 he served in high managerial positions in the Clal firm. In 2004 he signed a petition supporting Prime Minister Ariel *Sharon's Disengagement Plan.

[Jehuda Wallach]

ZURI (Zuri-Szezak), JACOB SAMUEL (1884–1943), lawyer, authority on Hebrew law, and author. Zuri, who was born in Poland, studied in France and Germany. After immigrating to Palestine after World War I, he lectured for a time at the Jerusalem Law School. In 1927 he moved to Paris and in 1931 to London. Zuri's single scholarly purpose was to introduce into the European study of Greek, Roman, and Islamic law the data of the Jewish legal tradition. He published most of his 31 works in Hebrew, because, as a Zionist, he hoped to lay the foundation for a system of legislation for the coming Jewish state. In his biographical studies and in his analysis of Jewish jurisprudence, Zuri distinguishes between two main currents in rabbinical methodology, the southern, character-

ZURICH

istic of Judean scholars, and the northern, of Galilean scholars. These recur in Babylonian Sura and Nehardea-Pumbedita, respectively. Southern methodology seeks for the underlying unity of surface differences. In mishnaic study, a southerner will relate the view of an anonymous Mishnah to the total view held by a tannaitic authority or to an abstract legal principle. Northern methodology concentrates on concrete characteristics of cases and looks for fine individual differences. In mishnaic controversy, the northerner looks for an explanation of difference in the differing circumstances of specific cases. Zuri worked out these principles in, among others, the following works: *Rab, sein Leben und seine Anschauungen* (1918); *Rabbi Akiva* (Heb., 1924); *Rav Ashi* (Heb. 1924); *Tarbut ha-Deromim* (1924); *Toledot Darkhei ha-Limmud* (1914); *Toledot ha-Mishpat ha-Ẓibburi ha-Ivri* (3 vols. 1931–34); and *Tarbut ha-Deromim* (1924). Zuri made a substantial contribution to the study of talmudic history and law. However, his prolixity and occasional inaccuracies, combined with a single-minded adherence to his primary interpretive principle, have limited his impact.

[Jacob Neusner]

ZURICH, capital of the canton of the same name, N. Switzerland. Jews first arrived in Zurich in 1273, settling in a street known as the Judengasse (now the Froschaugasse). They also had a cemetery. Their taxes were paid to Emperor Rudolf I of Hapsburg, but in other respects they were dependent on the town, which undertook to protect them in exchange for a fee of ten marks and authorized them to engage in moneylending. They were also allowed to acquire real property. However they were compelled to remain indoors during Holy Week. Their principal occupation was moneylending, which they practiced on a large scale, dealing with the municipality, the leading aristocratic families, and even lending considerable sums abroad in such towns as Wuerzburg, Venice, and Frankfurt. The reception hall of a Jewish moneylender has been found at Brunngasse 8. The coats of arms of his noble clients bear Hebrew inscriptions.

The rumor that the Jews had caused the plague by poisoning the wells, which spread throughout Switzerland, reached Zurich at the end of 1348. At first the municipal council attempted to protect the Jews, but it was finally forced to cede to the populace. Numbers of Jews were then burnt at the stake on Feb. 22, 1349, and their belongings confiscated by the municipal council. The emperor promptly protested, claiming compensation; once he had received this, he absolved the council from the charge of murder.

The talmudist, Moses of Zurich, author of glosses on the Se-Ma-K (*Sefer Mitzvot Katan*) which are known as *Semak Zurich*, lived in the town during the early 14th century.

In spite of the massacre of 1349, Jews reappeared in the town as early as 1352. Several expulsion orders were issued (1425, 1435, 1436), but the very number of expulsions indicates that the orders were not strictly observed. However when, in

1634, the Jew Eiron (Aaron) of Lengnau, originally of Frankfurt, was executed in Zurich for blasphemy, the Jews were finally and totally expelled.

After the *French Revolution a few Jews attempted to re-establish themselves in Zurich, but it was only after the emancipation of the Jews of Zurich (1862) that a new community, largely formed by migrants from *Endingen and Lengnau and other nearby south German and Alsatian rural communities, was established. The first synagogue was inaugurated in 1883. It was built by disciples of Gottfried Semper. The community grew rapidly until it became the leading one of Switzerland. The secretariat of the Schweizerische Israelitischer Gemeindebund (est. 1904) has its headquarters in the town. In 1895/98 some separatist Orthodox families split away and later East European Jews formed their own community (between 1912 and 1924). The West European Orthodox community erected in 1926 an art-déco synagogue on Freigutstrasse, which was recently renovated. Only in 1961 did the different East European *minyanim* unite in the synagogue on Erikastrasse.

Jews played a prominent role in textile trade and department stores (Julius Brann), not so much in banking, since Protestant families dominated this branch. The private "Bank Julius Bär" (est. 1897) was the biggest Jewish-owned firm. The children of the East European immigrants entered white-collar jobs. The Social Democratic lawyer David Farbstein was their leader between 1898 and 1939. In 1939 the first Jewish community center in Switzerland was opened in Zurich.

In 2005, Zurich had four Jewish congregations – the moderately Orthodox Israelitische Cultusgemeinde (ICZ; 2,596 members), the Orthodox Israelitische Religionsgesellschaft (IRG, 332 families and singles), Agudas Achim (275 families and singles) which follows the East European tradition – and the egalitarian Liberal Jewish congregation Or Chadasch (est. in 1978, 500 members) each possessing its own religious institutions (e.g., four different Jewish cemeteries) and officials. Besides them, there is a sizeable moderate Orthodox *minyan* in the quarter of Wollishofen. Inner-Jewish polarization led to the founding of often rival Orthodox *minyanim* of Chabad, the Belzer Ḥasidim, etc. In the two Jewish old age homes, there exist additional *minyanim*. The only German-language Swiss-Jewish weekly paper, *Tachles,* is edited in Zurich. It succeeded the *Israelitisches Wochenblatt fuer die Schweiz*, which had appeared since 1901. In 2005 *Tachles* bought the American-Jewish *Aufbau* and tried to establish it as a monthly. A full-time Orthodox Jewish school was founded in 1956, which in 1970 had more than 145 pupils from Orthodox families only. A private moderate Orthodox day school was organized by members of the Cultusgemeinde in 1979, which had also about 170 pupils of every type of observance. Religious lessons are provided even after sixth grade, when the day school program ends ("Achinoam"). The youth movements Aguda-youth, Ha-Goshrim, Bnei Akiva, and Ha-Shomer ha-Ẓa'ir (est. in 1933) play an important role in educating the Jewish youth of Zurich.

In 2005 a new constitution of the canton was accepted, including a paragraph on the possible recognition of two democratically organized Jewish communities, the Cultusgemeinde and the Liberal one.

Many Jews moved to the suburbs of Zurich. In the canton of Zurich there were 6,461 Jews (2000), about two-thirds members of the congregations; some Anglo-Saxon families living in central Switzerland (Zug, Lucerne) also belong to them. Since about 1910 Zurich has been the center of Jewish life in Switzerland.

Hebrew Printing

During the 16th and 17th centuries a number of Christian printers in Zurich produced books containing Hebrew type; chief of these was the house of Froschauer (from 1528), which used the type of *Fagius. In 1558 Eliezer b. Naphtali Herz *Treves printed Psalms with a rhymed Yiddish translation by Elijah Baḥur Levita. The same year Hebrew type was used in J. Reuchlin's *Clarorum Verorum Epistolae*. In the 17th and 18th centuries the presses of J.J. Bodmer and of J.H. Heidegger used Hebrew type, the former from 1635 to 1727, the latter from 1673 to 1766. A few Hebrew works were also produced in Zurich in the 19th century.

[Simon R. Schwarzfuchs / Uri Kaufmann (2nd ed.)]

ẒUR MI-SHELLO (Heb. צוּר מִשֶּׁלּוֹ; lit. "Rock from whose store [we have eaten]"), an anonymous hymn which is generally chanted at the conclusion of the Sabbath meals. This poem functions as an introduction to the *Grace after the Meal, and its four stanzas summarize the contents of that prayer. The first stanza is based on the first paragraph of the Grace which praises God for providing food for all His creatures. The second stanza, relating to the second paragraph of the Grace, expresses Israel's gratitude for the "good land" God has given it. Corresponding to the third paragraph of the Grace, the third stanza asks God to have mercy on Israel and to restore the Temple and the Kingdom of David. The fourth stanza continues the theme of the rebuilding of the Temple and also makes references to the fact that grace is recited over a cup of wine. The refrain of this hymn reads as follows:

> Rock from whose store we have eaten –
> Bless him, my faithful companions.
> Eaten have we and left over –

This was the word of the Lord (transl. Nina Salaman; see Hertz in bibl.).

Although it makes no references to the Sabbath, *Ẓur mi-Shello* is not recited on weekdays. Nevertheless, Jacob *Emden was of the opinion that one reciting it during the week will be especially blessed (*Siddur Beit Ya'akov*, 156).

[Aaron Rothkoff]

ẒUR MOSHE (Heb. צוּר מֹשֶׁה), moshav in central Israel, S. of Kefar Yonah, affiliated with Tenu'at ha-Moshavim. Ẓur Moshe was founded in 1937 by settlers from Greece who were joined by others from Turkey and Bulgaria. In the early years they earned their livelihood mainly by working as hired laborers in surrounding villages. Orange groves became the main farming branch, supplemented by poultry and field crops. With the arrival of newcomers from Bulgaria after 1948, the moshav was enlarged, and in 1970 it had 412 inhabitants. In the mid-1990s the population was 543; subsequent large-scale expansion brought it up to 1,410 in 2002. Ẓur Moshe was named after the Greek Zionist leader Moshe Kophinas.

ZUROFF, EFRAIM (1948–), spiritual heir of Simon Wiesenthal, the last of the Nazi hunters; director, *Simon Wiesenthal Center's Israel Office and coordinator of Nazi War Crimes Research for the Simon Wiesenthal Center.

Born in New York City, educated at Brooklyn Talmudical Academy where his father was principal, he completed an undergraduate degree in history (with honors) at Yeshiva University, where his grandfather was dean, and went on *aliyah* in 1970. He obtained a M.A. degree in Holocaust Studies at the Institute of Contemporary Jewry of the Hebrew University, where he also completed his Ph.D., which chronicles the response of Orthodox Jewry in the United States to the Holocaust and focuses on the rescue attempts launched by the Va'ad ha-Hatzalah rescue committee.

In 1978 he was the first director of the Simon Wiesenthal Center in Los Angeles, where he played a leading role in establishing the Center's library and archives and was historical advisor for the Academy award-winning documentary *Genocide*. In 1980 he returned to Israel, where he served as a researcher for the U.S. Justice Department's *Office of Special Investigations. His efforts assisted in the preparation of cases against numerous Nazi war criminals living in the United States.

His work has less of the drama usually associated with the capture of war criminals. Rather it involves a painstaking review of documents with the goal of not only understanding how the deed was done, but by whom, identifying the perpetrator and then engaging foreign leaders and governments with sufficient pressure to have them try Nazi war criminals.

In 1986 his research uncovered the postwar escape of hundreds of Nazi war criminals to Australia, Canada, Great Britain, and other countries, and he rejoined the Wiesenthal Center to coordinate its international efforts to bring Holo-

caust perpetrators to justice. These efforts have influenced the passage of special laws in Canada (1987), Australia (1989), and Great Britain (1991) which enable the prosecution in those countries of Nazi war criminals.

Since the dismemberment of the Soviet Union and the fall of Communism, Zuroff has played a major role in the efforts to convince Lithuania, Latvia, and Estonia and other post-Communist societies to confront the widespread complicity of their nationals in the crimes of the Holocaust and to prosecute local Nazi collaborators. His public advocacy on these issues has been instrumental in the submission by Lithuania and Latvia of indictments (Lileikis, Gimzauskas) and/or extradition requests (Kalejs, Gecas) against local Holocaust perpetrators. In 1991 he exposed the rehabilitation of Nazi war criminals in Lithuania and led the campaign to stop this process. Zuroff was appointed by the then Israeli Foreign Minister Shimon Peres to serve on the joint Israeli-Lithuanian commission of inquiry established to deal with this issue, which led to the cancelation to date of over 150 rehabilitations granted to individuals who had participated in the murder of Jews during the Holocaust. In 2000 he exposed the rehabilitations granted by the Latvian government to Nazi war criminals; he led the efforts to cancel these pardons, two of which have been rescinded.

In the summer of 2002, together with Aryeh Rubin, founder of the Targum Shlishi Foundation, he launched "Operation: Last Chance," which offers financial rewards for information which will facilitate the conviction and punishment of Nazi war criminals. So far, the project has been initiated in nine countries (Lithuania, Latvia, Estonia, Poland, Romania, Austria, Croatia, Hungary, and Germany) and has yielded the names of over 400 suspects, 85 of which have been submitted to local prosecutors.

At the turn of the 21st century Zuroff directed a research project to identify Nazi war criminals who are receiving special disability pensions from the German government, which passed special legislation to enable their cancelation in 1998. To date, the pensions of 105 individuals who "violated the norms of humanity" have been canceled, several hundred additional cases are currently under active investigation and thousands of other cases are awaiting review by the German Ministry of Social Services.

Zuroff played an important role in the exposure, arrest, extradition, and prosecution of Dinko Sakic, the former commandant of the Croatian concentration camp Jasenovac (nicknamed the "Auschwitz of the Balkans"). In early October 1999, Sakic, who lived for more than 50 years in Argentina, was sentenced in Zagreb to 20 years' imprisonment for his crimes in the first-ever trial of a Nazi war criminal in a post-Communist country.

He has written two books, *Occupation: Nazi-Hunter; The Continuing Search for the Perpetrators of the Holocaust* (1994), which chronicles the belated efforts to prosecute Nazi war criminals in western democracies and explains the rationale for such efforts several decades after the crimes. Also, in 2000

he published a study of the history of the Va'ad ha-Hatzalah, which was awarded an Egit Grant for Holocaust and Jewish Resistance Literature by the Israeli General Federation of Labor (Histadrut) and also received the 1999–2000 Samuel Belkin Literary Award for the best book published by a Yeshiva University alumnus in the field of Jewish studies.

His activities as a Nazi-hunter were the subject of three television documentaries. The first, entitled "The Nazi-Hunter," was produced by ZDF (German Channel 2) in 1999; the second, entitled "The Last Nazi-Hunter," was produced by SWR (German Channel 1 – regional station) in 2004 and the third "The Final Hunt for the Nazis" by France Trois (Channel 3) was broadcast in December 2005.

Zuroff would rather be right than popular. His history of the Va'ad is less a work of the hagiography popular in Orthodox circles today than a serious work of history, which examines not uncritically the work of the Orthodox and demonstrates their unique efforts as well as their dependence on the larger Jewish community for funding and effectiveness. He examines the tendency of Orthodox Judaism to go it alone. He has also been critical of the Israeli government for its lack of interest in pursuing Nazi war criminals.

In 1995 and 1996, Zuroff was invited to Rwanda to assist the local authorities in their efforts to bring to justice the perpetrators of the genocide which took place in that country in spring 1994, and he has served as an official advisor to the Rwandan government. He began his speech in the native language. An activist by temperament as well as by conviction, when he confronts evil, he seeks to undo it rather than understand it.

Since 2001, the Simon Wiesenthal Center's "Annual Status Report on the Worldwide Investigation and Prosecution of Nazi War Criminals," which he writes, is considered the authoritative source on the subject.

[Michael Berenbaum (2nd ed.)]

ZUR YIGAL (Heb. צוּר יִגְאָל), community settlement located 5 mi. (8 km.) east of Kefar Sava. The settlement is one of the "star" plan settlements, aimed to expand the Jewish population near the border of the occupied territories. It was founded in 1991 and the first settlers arrived in 1994. In 2002 the population was 6,800. The name Ẓur Yigal comemmorates Yigal Cohen, a member of Knesset who contributed to Israeli settlement.

[Shaked Gilboa (2nd ed.)]

ZUSYA (**Meshulam Zusya**) **OF HANIPOLI** (**Annopol**; d. 1800), early ḥasidic leader; he was an outstanding disciple of *Dov Baer, the Maggid of Mezhirech, brother of *Elimelech of Lyzhansk, and one of the best known heroes of ḥasidic folktales. Zusya was probably born near Tarnow, Galicia, and at a relatively early age joined the disciples of the Maggid of Mezhirech and interested his brother Elimelech in Ḥasidism. During their youth the two brothers wandered from place to

place in the manner of ascetic kabbalists. Many folk legends tell of their wandering and show Zusya as a simple, modest, and benevolent man who despite his meager knowledge of Torah, attained merit because of his innocence and personal righteousness. Zusya's own statements, however, of which few survive in writing, show that he was a scholar. In addition to the close attachment to his brother Elimelech, he formed a friendship with *Shneur Zalman of Lyady. Apparently after the death of the Maggid of Mezhirech, Zusya settled in Hanipoli and Ḥasidim gathered around him. This circle enlarged after Elimelech's death, when some of the latter's Ḥasidim accepted Zusya as their rabbi. His oldest son, MENAHEM ZEVI HIRSH, succeeded him in Hanipoli. His youngest son, ISRAEL ABRAHAM (1772–1814), served as ḥasidic rabbi and *admor* in Chernyostrov. After Israel Abraham's death, his wife led the Ḥasidim for several years. The few surviving statements of Zusya and his sons were collected in *Menorat Zahav* (ed. by Nathan Neta ha-Kohen, 1902).

[Adin Steinsaltz]

ZUTA (also known as **Yaḥya** and **Abu-Zikri**; 12th century), *nagid* in Egypt. He was also the head of a yeshivah and gave himself the title *Sar Shalom* ("Prince of Peace"), but in reality he acted with great ruthlessness toward the members of his community after he had been appointed *nagid* of Egyptian Jewry in succession to *Samuel b. Hananiah. He secured his position by bribing the caliph al-Fāʾiz (1154–1160). As a result of the complaints brought against him by the Jewish community concerning his criminal conduct, he was removed from his position which he had held for 66 days and Samuel was reinstated. After the death of Samuel (shortly after 1159), Zuta made a new effort to secure the position of the *nagid* but failed. During the reign of Saladin (1138–1193), he succeeded in regaining the position in exchange for a yearly payment of 200 dinars, and he held it for about four years from the beginning of the 1160s. As a result of the efforts of Maimonides and R. Isaac b. Sasson, a member of Maimonides' *bet din*, Zuta was excommunicated and ousted from his position, but he succeeded a third time to become the political leader of Egyptian Jewry. However, he served as a *nagid* for 24 years, from 1172 to 1196. Zuta was known to the members of his faction as messiah and *Gaon*. His adherents were accused of being no better than idolaters. To commemorate the ousting of Zuta, in 1196 the poet *Abraham b. Hillel wrote the *Megillat Zuta*, which was published by A. Neubauer, A.E. Harkavy, and D. Kahana. It contains a description of Zuta's activities and his removal.

[Abraham David (2nd ed.)]

ZUTA, ḤAYYIM ARYEH (1868–1939), pioneer of Hebrew education in Ereẓ Israel. Born in Kovno, Lithuania, he was one of the first Hebrew teachers in Russia to employ the *Ivrit be-Ivrit* ("Hebrew in Hebrew") system. In 1903 he went to Ereẓ Israel, where he taught in various educational institutions (mainly in Jerusalem) and was a founder of the modern Hebrew school system in the country.

He published articles on Hebrew education and schools and wrote a number of textbooks and stories. His book *Darkhei ha-Limmud shel ha-Tanakh* ("Teaching the Bible," 2 vols., 1935–37) is a major work of Hebrew didactics. *Be-Reshit Darki* ("The Beginning of My Way," 1934) are memoirs of his career as a teacher. His short stories were collected in *Kitvei Ḥayyim Aryeh Zuta*, 3 vols. (1931).

[Gedalyah Elkoshi]

ZUTRA, MAR, the names of three *exilarchs during the fifth and sixth centuries. MAR ZUTRA I (d. c. 414), exilarch from 401 to 409, the successor of Mar Kahana and a contemporary of R. Ashi. It may be that he was the son of Huna b. Nathan, although his father's name does not appear in the sources. Mar Zutra was a student of R. Papa and R. Pappai and he transmitted the teachings of the earlier generations. He associated to a great extent with R. Ashi and Ameimar, and their differing opinions regarding various laws concerning meals are recorded in the Talmud (e.g., Ber. 44b, 50b; Shab. 50b). His piety and character were exemplary, and the title "the pious" was appended to his name (BK 81b; BM 24a). Whenever he had to pronounce a ban on a scholar, he first banned himself and then pronounced it on the culprit. Later, Mar Zutra absolved himself and then absolved the other (MK 17a). He prayed and fasted for the welfare of others but never on his own behalf (TJ, Maʾas. Sh. 5:8, 156d). When Mar Zutra was carried in honor on the shoulders of his audience on the Sabbath before the Pilgrim festivals at a time when he preached on the festival laws, he would repeat the verse (Prov. 27:24): "For riches are not for ever; and doth the crown endure unto all generations?" (Yoma 87a).

MAR ZUTRA II (c. 496–520), exilarch from 512 to 520. He was the son of *Huna, who had previously served as exilarch and was killed during the persecutions instituted by the Persian monarch, Firuz. His mother was the daughter of the head of the academy, Mar Ḥanina. According to tradition, Mar Zutra was born after the entire house of the exilarch had died out, and he was the sole survivor of the House of David, from whom the exilarchs were traditionally descended. During his minority, the exilarchate was administered by his brother-in-law, Mar Paḥra or Paḥda, who bribed the king to retain him in office. When Mar Zutra reached the age of 15, his grandfather

induced the king to install him as the legitimate exilarch. The new exilarch took up arms against the Persians, perhaps because of Persian oppression of the Jewish religion. Marching at the head of 400 Jewish warriors, Mar Zutra succeeded in defeating the Persians and setting up an independent Jewish state, with Maḥoza as his residence. The new state survived for seven years, but immorality spread among his followers and they were finally defeated in battle by the Persians. Both Mar Zutra and his grandfather, Ḥanina, were taken prisoner and beheaded, and their bodies were later suspended from crosses on the bridge at Maḥoza.

MAR ZUTRA III (sixth century), the son of Mar Zutra II. According to tradition he was born on the day that his father was executed and was therefore named after him. He later succeeded him as exilarch. He left Babylon to settle in Ereẓ Israel, where he was appointed to an academic position in a college. It is thought that he disseminated knowledge of the Babylonian Talmud in Ereẓ Israel.

In addition to a *tanna* called Zutra who is mentioned in a *baraita* (Ber. 13b), there were also some other *amoraim* of this name: ZUTRA BEN TOBI (third century), a student of Rav and R. Judah who transmitted their teachings (Ber. 7a; Yev. 44a); MAR ZUTRA BEN R. NAḤMAN (b. Jacob; fourth century), who transmitted his father's teachings and who, in his youth, adjudicated a monetary case without previously obtaining the permission of the exilarch and erred in his decision (Sanh. 5a); and MAR ZUTRA BEN MARI (b. Issur; fourth century), the brother of R. Adda the elder (Kid. 65b).

ZVENIGORODKA, city in S. Kiev district, Ukraine. In 1787 the Jewish community of Zvenigorodka numbered 387. In 1897 there were 6,389 Jews (32% of the total population) and in 1926 the number of Jews in Zvenigorodka amounted to 6,584 (36.5% of the total population). Most of the Jews were murdered when the Germans occupied Zvenigorodka in World War II. A 1959 census showed approximately 700 Jews in the town. There was no organized Jewish life. In 1965 private religious services were dispersed by the militia. Most Jews left in the mass exodus of the 1990s,

ZVIA (1935–1974), artist. Zvia was born at kibbutz Mishmar ha-Sharon, Ereẓ Israel, and studied art in Tel Aviv before attending the Central School of Art and Crafts, London; she finally settled in England in 1957. Her gifts in traditional techniques were considerable, as draughtsman, painter and portrait-sculptor. But her real talent and interest lay in research, notably into the light properties of acrylics and the use of electric light in sculpture. For these reasons she was employed by both ICI and Osram-GEC, to explore the properties and possibilities of these materials; the elaborate sculptural complexes she produced for these companies were exhibited.

As part of her research, she produced a series of charming plastic jewelry. Among her public commissions is a large outdoor sculpture for the University of Sussex, England. She possessed an unusual combination of artistic and scientific accomplishments.

[Charles Samuel Spencer]

ZWEIFEL, ELIEZER (1815–1888), Hebrew author and essayist, one of the first Haskalah writers to view Ḥasidism sympathetically. Zweifel was born in Mogilev. His father belonged to the *Chabad movement, and his traditional education included rabbinic and ḥasidic literature, medieval studies, and Kabbalah. Later, he studied the works of the Haskalah and the Wissenschaft des *Judentums writers in Hebrew and German. After many years of wandering in various Russian towns, earning his living by preaching and teaching, he was appointed lecturer in Mishnah and Talmud in the government rabbinical seminary at Zhitomir in 1853, remaining there until the seminary was closed in 1873. Zweifel was liked by his students, who included A.J. *Paperna and M. *Margolis, and inspired them with a love of Jewish tradition and the Talmud. By nature, he was a moderate; he tried "as far as possible to emphasize the favorable aspect of everything and every person" (preface to his *Shalom al Yisrael*, 3 (1870), 11).

His first book, *Minim ve-Ugav*, appeared in Vilna in 1858. It was a small but variegated collection of scriptural commentaries, homilies, and poems, deprecating the extreme attitudes of the Haskalah toward the devotees of the old religious tradition. The book aroused lively literary controversy, and was criticized with particular severity by *Mendele Mokher Seforim, then a young student, in his pamphlet *Mishpat Shalom* ("Peaceful Judgment," 1860). In *Minim ve-Ugav*, Zweifel employed a unique mixture of biblical, mishnaic, and talmudic language. David *Frischmann exaggerates in calling him "the father of the modern style", but he was undoubtedly one of those who led the change in Hebrew prose from the ornate biblical language to the modern literary style.

Zweifel's most important work was *Shalom al Yisrael* ("Peace to Israel"), which appeared in four parts in Zhitomir and Vilna between 1868 and 1873. The book defended Ḥasidism in terms of modern values and marked a sharp contrast to the general hostility which virtually all *maskilim* had hitherto manifested toward that movement. Ḥasidism, he argued, had a system of ideas of its own, which in many respects resembled the ideas of Philo and Spinoza. His defence of Ḥasidism relates specifically to the early stages of its development, whereas he takes issue with negative aspects which emerged in its later period, especially the cult of the *ẓaddik*. The book includes numerous selections from the writings of Ḥasidim, and of modern Jewish writers who wrote favorably about the movement as well as those who attacked it. Although it contains a wealth of material, the contents are poorly edited and make reading difficult. The book aroused indignation and severe criticism among the *maskilim*, and Jewish censors sympathetic to the Haskalah tried to prevent its publication.

The book sparked a reevaluation of Ḥasidism by scholars and writers, and led to the historical appraisal of the movement by S. *Dubnow and a more romantic one by M.J. *Berdyczewski, S.A. *Horodezky, M. *Buber, and others.

After the closing of the rabbinical seminary in 1873, Zweifel lived in various towns in Russia and Poland, until he finally settled in the house of his daughter at Glukhov. His book *Sanegor* ("Defense Counsel," 1885) is a rebuttal to the accusations leveled against the Talmud by Jewish and gentile critics. Zweifel also wrote hundreds of articles in the Hebrew press, issued several works on ethics in Yiddish, including *Musar Haskel* ("Moral Lesson," 1862) and *Tokhaḥat Ḥayyim* ("Life's Reproof," 1865), and published books by other authors, old and new, whose ideas were akin to his. Zweifel's writings are distinguished by profuse quotations from rabbinic sources and his wide erudition. They lack, however, systematic structure, and today his works are primarily of historical interest.

[Yehuda Slutsky]

ZWEIG, ARNOLD (1887–1968), German novelist and playwright. Zweig was born in Gross-Glogau, Silesia. In 1915, while a university student, he volunteered for the German army and spent over a year in the trenches. After the war he became a freelance writer, living first in Bavaria and from 1923 in Berlin. There he was for a time editor of the Zionist *Juedische Rundschau*, having, unlike the vast majority of German-Jewish writers, turned to Jewish nationalism. With Lion Feuchtwanger he wrote *Die Aufgabe des Judentums* (1933). When the Nazis came to power, Zweig left Germany for Erez Israel by way of Czechoslovakia, Switzerland, and France. He lived in Haifa where he coedited the short-lived weekly *Orient* (1942–43). In 1948 he settled in East Berlin, remaining there until his death.

Zweig first attracted attention with his *Novellen um Claudia* (1912, *Claudia*, Eng. 1930). The biblical drama *Abigail und Nabal* (1913) and the novella *Aufzeichnungen ueber eine Familie Klopfer* (1911) were followed by a more important drama of Jewish life, the prizewinning *Ritualmord in Ungarn* (1914, revised as *Die Sendung Semaels*, 1918). It was, however, his bestselling novel, *Der Streit um den Sergeanten Grischa* (1927; *The Case of Sergeant Grischa*, 1928), which (translated into nearly 20 languages) spread Zweig's reputation far beyond the German-speaking world. Perhaps the outstanding war novel of the Weimar Republic, this scathing exposure of Prussian justice dealt with the trial and execution of an innocent and inarticulate Russian prisoner of war. Over the years Zweig wrote a series of prose epics on Germany before, during, and after World War I (parts of an eight-volume cycle entitled *Der grosse Krieg der weissen Maenner);* *Erziehung vor Verdun* (1935; *Education Before Verdun*, 1936); *Einsetzung eines Koenigs* (1937; *Crowning of a King*, 1938); *Junge Frau von 1914* (1931; *Young Woman of 1914*, 1932); and *Die Feuerpause* (1954). The Nazi terror was

described in another fine novel, *Das Beil von Wandsbek* (1947; *The Axe of Wandsbeck*, 1947), filmed in 1951; it was published first in Hebrew in 1943.

Zweig's thinking on Jewish problems found expression in the essays *Das ostjuedische Antlitz* (1920); *Caliban* (1927), a study of antisemitism; *Juden auf der deutschen Buehne* (1928); and *Bilanz der deutschen Judenheit 1933* (1934; *Insulted and Exiled*, 1937); his drama *Die Umkehr* (1925), and the novel *De Vriendt kehrt Heim* (1932; *De Vriendt Goes Home*, 1933), based on the tragic career of Jacob Israël de *Haan. During his early Zionist period in Germany, Zweig held that Palestine could change the character of Jewish life everywhere by becoming once again the spiritual center of the Jews and by developing new forms of cooperative living. He nevertheless increasingly held internationalism to be the highest ideal. Zweig never felt at home in Palestine, being unable to adapt himself to a Hebrew-speaking milieu: local publishers were not inclined to translate his books, nor was *Habimah enthusiastic about staging his plays. He favored a binational, Jewish-Arab state and became increasingly critical of Zionist aims. Failing eyesight also increased his aggravations; after the declaration of Israel's independence, Zweig, now more sympathetic to Communism, made a much-publicized return to East Germany, where he succeeded Heinrich Mann as president of the Academy of Arts in 1950. He received many awards, including the International Lenin Peace Prize (1958). His correspondence with *Freud was published in 1968. Toward the end of his life, Zweig evidently reassessed his views on Zionism and courageously refused to sign an East German intellectuals' statement condemning Israel's "aggression" against the Arab states after the Six-Day War of 1967.

[Sol Liptzin]

ZWEIG, STEFAN (1881–1942), Austrian playwright, essayist, and biographer. The son of a wealthy Viennese industrialist, Zweig had an early and auspicious start in literature, publishing at the age of 20 his first verse collection, *Silberne Saiten* (1901). When Theodor *Herzl, literary editor of the influential *Neue Freie Presse*, agreed to publish one of his essays, young Zweig was greatly encouraged and he soon became an outstanding member of the "Young Vienna" group. In 1903 he wrote a foreword to a collection of paintings and illustrations by Ephraim Moses *Lilien. Zweig also devoted years of self-effacing work to making the Belgian poet Emile Verhaeren known in German-speaking countries by translating Verhaeren's poetry and other works.

World War I marked a turning point in Zweig's outlook. His fourth play was a powerful pacifist drama, *Jeremias* (1918;

Jeremiah, 1922), first staged in Zurich in 1917 when Zweig was attached to the war archives in Vienna. From 1919 Stefan Zweig lived in Salzburg, where his house became an international literary and cultural center. His friends included the French humanitarian Romain Rolland, whose biography Zweig published (1921) and whose novel *Clérambault* he translated a year later. Zweig's collected verse appeared in 1924.

He became best known for biographies, in which he often grouped three people of similar interests in one volume and attempted to find a common spiritual denominator. *Drei Meister* (1920; *Three Masters*, 1930) contained biographical studies of Balzac, Dickens, and Dostoevski; *Der Kampf mit dem Daemon* (1925) analyzed Hoelderlin, Kleist, and Nietzsche, who fell prey to mental illness or committed suicide; while *Drei Dichter ihres Lebens* (1928; *Adepts at Self-Portraiture*, 1928), discussed Casanova, Stendhal, and Tolstoy. These nine biographies were later incorporated in *Baumeister der Welt* (1935; *Master Builders*, 1939). Other biographies were devoted to Joseph Fouché (1929; Eng., 1930), Napoleon's terrifying minister of police; Marie Antoinette (1932; Eng., 1933); Mary Queen of Scots (1935; Eng., 1935); Magellan (1938; *Conqueror of the Seas*, 1938); and Amerigo Vespucci (1944; *Amerigo: A Comedy of Errors in History*, 1942).

Zweig's only novel, *Ungeduld des Herzens* (1938; *Beware of Pity*, 1939), was a penetrating study of the love of a crippled girl. Like *Marie Antoinette*, and several other works by Zweig, this was later made into a motion picture. *Sternstunden der Menschheit* (1927; *The Tide of Fortune*, 1940) dramatized 12 significant events in the history of the human spirit; *Die Heilung durch den Geist* (1931; *Mental Healers*, 1933), included studies of Mesmer, Mary Baker Eddy, and *Freud, in whose psychoanalysis he was greatly interested; while *Triumph und Tragik des Erasmus von Rotterdam* (1934; *Erasmus of Rotterdam*, 1934) described the man whom Zweig considered his spiritual ancestor and mentor. A gentle, nonpolitical modern humanist, Zweig was deeply concerned about the position of the man of spirit in an increasingly brutalized world. In 1934 he wrote the libretto for Richard Strauss' opera *Die schweigsame Frau*. Its suppression by the Nazis became a cause célèbre. Zweig's correspondence with Strauss (ed. by W. Schuh) was published in 1957. Zweig's brilliant and highly charged style and his psychological penetration are evident from his first collection of stories, *Die Liebe der Erika Ewald* (1904), to his last completed work, *Schachnovelle* (1941; *The Royal Game*, 1944), which foreshadows the triumph of a mechanized civilization over the spirit of man. Three other collections were *Erstes Erlebnis* (1911), sensitive studies of childhood and adolescence; *Amok* (1922; Eng., 1931); and *Verwirrung der Gefuehle* (1927; *Conflicts*, 1927), on adult passions and problems.

Although Zweig took no part in Jewish communal life, some of his short stories deal with Jewish themes. The biblical "*Legende der dritten Taube*"; "*Rahel rechtet mit Gott*"; and "*Buchmendel,*" the poignant tale of a Jewish bookseller, are three of those collected in *Kaleidoscope* (1934; Ger., *Kaleidos-*

kop, 1936). His most ambitious work of this type was *Der begrabene Leuchter* (1937; *The Buried Candelabrum*, 1937). Essays about his fellow writers were included in *Begegnungen mit Menschen, Buechern, Staedten* (1937). In his autobiography, written during World War II, *Die Welt von Gestern* (1942; *The World of Yesterday*, 1943), Zweig sadly observed that "nine-tenths of what the world celebrated as Viennese culture in the 19th century was promoted, nourished, and created by Viennese Jewry."

A prey to increasing pessimism, Stefan Zweig, an inveterate world traveler and a tireless lecturer, settled in England in 1935. He lived first in London and later in Bath, then visited North and South America. Depressed by the fate of Europe, Zweig (together with his second wife, Elisabeth) committed suicide in Petropolis, near Rio de Janeiro. One of the most widely read writers between the world wars, Stefan Zweig is esteemed as a great storyteller, biographer, and humanitarian spirit. The International Stefan Zweig Society was founded in Vienna in 1957.

[Harry Zohn]

ZWICKAU, city in *Saxony, Germany. Documentary evidence points to the presence of Jews in the first half of the 14th century. In 1308 Margrave Frederick promised to maintain the privileges of both burghers and Jews. Documents dating from 1330 mention a Jewish street and synagogue. The Jews were expelled from the city in 1430 during the *Hussite wars, although some returned soon after. In 1444 the mint, operated by Jews, was attacked by the burghers, and in 1458 the Jewish quarter was burned down. Jewish settlement dwindled and then disappeared. The modern Jewish community in Zwickau grew from 59 persons in 1875 (only 9 in 1834) to 159 in 1910; 362 in 1925; and 473 in 1932, when 12 charitable and social organizations were functioning. By 1939 only 64 Jews remained in the city; none lived there in 1971. The publisher Salman *Schocken grew up in Zwickau.

There are several memorials dedicated to the destroyed synagogue, the deportations, and the Zwickau Jews who perished during the Nazi era.

ZWOLEN (Pol. **Zwoleń**; Rus. **Zvolen**), town in Kielce province, E. central Poland. In 1578 King Stephen Bathory permitted the Jews to settle and trade in the town. In 1591 King Sigismund III prohibited the Jews of Zwolen from acquiring more than ten houses; they nevertheless owned more houses. In 1815 Zwolen was included in Congress Poland, and henceforth its Jewish population gradually increased, numbering 629 (33% of the total) in 1827; 1,350 (49%) in 1856; 3,242 (56%) in 1897; and 3,787 (51%) in 1921. Apart from petty trade, the Jews of Zwolen engaged in the manufacture of clothes and shoes, in tanning, and foodstuff production.

[Shimshon Leib Kirshenboim]

Holocaust Period
With the beginning of the German occupation in September 1939 the Jews were subjected to economic restrictions, confiscation of property, and forced payments of money. In 1941 people were seized and sent to the Pustkow labor camp. In the summer of 1942 transports of men and women capable of working were sent to the *Skarzysko-Kamienna labor camp. At the end of October 1942 deportations to the extermination camps began. In the process of assembling people about 100 were killed, especially the elderly and sick who could not carry out the Nazi orders. The deportees were sent to *Treblinka. Over 100 Jews who were engaged in putting deportees' property in order for the Germans remained in the city and were later transferred to labor camps.

ZYCHLIN (Pol. **Zychlin**), town in Lodz province, near *Kutno, central Poland. A Jewish community existed in Zychlin from the 18th century and in 1765 there were 311 Jews paying the poll tax. In 1780 a synagogue was erected, following a special permit from the archbishop of Gniezno. In 1880 it was replaced by a stone building. There were no restrictions on Jewish settlement in Zychlin. The community numbered 457 (57% of the total population) in 1808; 782 (61%) in 1827; 1,062 (66%) in 1857; 2,268 (47%) in 1897; and 2,701 (40%) in 1921.

[Shimshon Leib Kirshenboim]

Holocaust Period
About 3,500 Jews lived in Zychlin in 1939, forming approximately 50% of the total population. The town fell to the German forces on Sept. 17, 1939, and on the following day all the Jewish men were driven to a village 15 miles away, but after detention in a church for three days were released. In April 1940 the Polish and Jewish intellectuals, especially teachers, were arrested and deported to German concentration camps. The number of Jews was reduced to 2,800 by April 1940. A ghetto was established in July 1940 on a swampy area on the outskirts of the town. The ghetto population increased to 3,500, when a group of Jews deported from a nearby town arrived in Zychlin. The ghetto was not fenced in, so that there

was some contact with the outside world. The German police could easily be bribed to facilitate some trade. Members of the *Judenrat and certain other Jews were allowed to leave the ghetto during the day. Labor detachments had to be supplied by the Judenrat almost daily. The American Jewish Joint Distribution Committee supplied relief to the poor and the refugees, but no public kitchen could be organized, and as a result of malnutrition a typhoid epidemic broke out in the ghetto. The regime in the ghetto became more severe in 1942 and those who tried to leave the confines of the ghetto were killed. In February 1942 the German police surrounded and broke into the ghetto, killing hundreds of Jews in the streets, among them most of the Judenrat members and their families. The Jewish police were also liquidated in this *Aktion*. On Purim (March 3) 1942, the Jewish population was assembled in the market place and 3,200 persons were loaded on carts; anyone too weak to climb up on the carts was shot on the spot. The entire Jewish population of Zychlin was thus dispatched to the *Chelmno death camp and murdered.

ZYCHLINSKA, RAJZEL (1910–2001). Yiddish poet. Born in Gabin (Gombin), Poland, in the years 1936–38 she lived in Warsaw, before escaping to Russia. After returning to Poland in 1947, she lived in Paris (1948–51), and then settled in New York. Her first poems were published in Warsaw in 1928. The fine economy of her short free lyrics has been much praised; she received the Manger Prize in 1975. Her poems have appeared in major Yiddish anthologies and journals, and have been translated into Hebrew, English, French, and German. In book form she published *Lider* ("Poems," 1936), *Der Regn Zingt* ("The Rain Sings," 1939), *Tsu Loytere Bregn* ("To Clear Shores," 1948), *Shvaygndike Tirn* ("Silent Doors," 1962), *Harbstike Skvern* ("Autumn Squares," 1969), *Di November Zun* ("The November Sun," 1977), and *Naye Lider* ("New Poems," 1993). An English volume of her poetry appeared in 1997: *God Hid His Face: Selected Poems.*

ZYGELBOJM, SAMUEL MORDECAI (pseudonym: **Comrade Arthur**; 1895–1943), Polish Bundist leader. Born in the village Borovica in the province of Lublin, Zygelbojm participated in the convention of the Polish *Bund organizations in December 1917 as the delegate from Chelm. From 1920 to 1936 he lived in Warsaw. In 1924 he became a member of the central committee of the Bund. He was elected member and later secretary of the national council of the Jewish trade unions of Poland and chairman of the leather workers' union (Jewish and non-Jewish). He was also a member of the central commission which headed the country's Socialist trade

unions. In the early 1930s he spent a year in the United States to promote Yiddish books. In 1926 he became a member of the municipal council of Warsaw and in 1936 a member of the Lodz municipal council.

When the German forces entered Warsaw (September 1939), the mayor was compelled to hand over 12 public figures as hostages to the Nazis. Zygelbojm volunteered to be one of these hostages. He was put on the Warsaw *Judenrat as the Bund representative. There he opposed the Germans' demand that the Judenrat itself establish the Warsaw ghetto. On the request of his party, he managed to leave the German-occupied territory early in January 1940. At the end of January he attended the meeting of the executive council of the Socialist international in Brussels, where he reported on conditions in German-occupied Poland. In September he reached the U.S. From the spring of 1942 Zygelbojm lived in London, where he was the Bund representative at the national council of the Polish government-in-exile during the peak period of the "Final Solution" (see *Holocaust, General Survey). Zygelbojm received information on the Holocaust and made every attempt to alert Polish, British, and other authorities to take rescue and retaliatory action. He was deeply depressed by the ineffectiveness of official action as exemplified by the Anglo-American Conference on Refugees, held in Bermuda (April 19–30, 1943), and by the brutal repression of the revolt in the Warsaw ghetto. As a protest against the atmosphere of indifference to the tragedy of the Jewish people, Zygelbojm committed suicide on May 12, 1943. This act and the letter he left in explanation stirred public opinion.

ZYLBERCWEIG, ZALMAN (1894–1972), historian of Yiddish theater. Born in Ozorkow, near Lodz, Poland, to a family descended from the biblical exegete *Malbim, his involvement in the Yiddish theater in Lodz began in 1912, primarily as ensemble manager and translator/adaptor of European repertoire. He also served as a correspondent for the Yiddish press. After living in Palestine and traveling extensively, he settled in New York in 1937, marrying the actress Celia Zuckerberg in 1947. The couple moved to Los Angeles in 1948, where they hosted a Yiddish radio show for 25 years. Zylbercweig wrote, translated, and edited some 30 books. His life's work and signature contribution to Jewish culture was his edition of the six-volume *Leksikon fun Yidishn Teater* ("Encyclopedia of the Yiddish Theater," 1931–69; the first three co-edited with *Jacob Mestel; volume seven, which he also in large part wrote [in press at his death], never appeared). The *New York Times* called it "the most authoritative collection of statistics and biographies of Yiddish stage personalities," and it remains the most important work in the field.

[Faith Jones (2nd ed.)]

ZYRARDOW (Pol. **Zyrardów**), city in Warszawa province, E. central Poland. Jews began to settle there in the 1840s. There were 2,310 Jews (23% of the total population) living in Zyrardow in 1897, most of whom were employed as workers and clerks in the local textile factories, while others engaged in small trade, crafts, tailoring, building, carpentry, transport, and mechanics. The Jewish population numbered 2,547 (12% of the total) in 1921, and 2,726 in 1931.

Holocaust Period

At the outbreak of World War II there were about 3,000 Jews in the city. The German army entered the town on Sept. 8, 1939, and immediately began to terrorize the Jewish population, including public executions. During 1940 about 1,000 Jews from other places in Poland were forced to settle there. In February 1941 the entire Jewish population of Zyrardow was made to leave the city. Most of them went to Warsaw and shared the plight of Warsaw Jewry.

The community was not reconstituted after the war.

In the spring of 1909 members of the Ahuzat Bayit association met on a sandy area northeast of Jaffa for a drawing of the lottery that would distribute plots of land to build a Jewish neighborhood. *Photo by A. Soskin, Courtesy Eretz Israel Museum, Tel Aviv.*

The term Zionism first appeared at the end of the 19th century to denote the movement to reestablish the Jewish homeland in Erez Israel. Over the past century, the nation of Israel has experienced one of the most miraculous transformations in human history. Nowhere is this more clearly revealed than in the vast developments in Israel's architecture and urban landscape. Offered here are some stunning before-and-after views of the growth of Israel as well as some of the faces of Israel's citizens, who hail from more than one hundred countries.

ZIONISM

Nine decades after the lottery of 1909, the large city of Tel Aviv-Jaffa stands on former sandy areas along the Mediterranean coast. The site of the historic lottery gathering is located at the intersection of Rothschild Boulevard and Nahalat Binyamin Street. *Photo: Albatross Aerial Photography.*
TOP: A view of the town of Eilat in its early years (early 1950s). The photograph was taken from the mountains west of the town. The Gulf of Eilat is to the right; in the far background are the Jordanian town of Aqaba and the mountains above it. To the left (north) is the Aravah valley extending all the way to the Dead Sea.

BOTTOM: Eilat in the early 21st century is mostly a tourist-economy town. It boasts a vast hotel area surrounding a man-made lagoon at the head of the Gulf of Eilat. Large numbers of tourists come to the resort town to enjoy its warm sea. Eilat has developed tremendously from the frontier town it was in the early 1950s. *Photo: Albatross Aerial Photography.*
