Initial letter "D" for "Dixit," the first word of Psalm 53, from the Angoulême Psalter, France, 13th century. The illustration shows King David and a fool who, in accordance with medieval iconography, is represented holding a club and eating cheese, Besançon, Bibliothèque Municipale, Ms. 140, fol. 62 v.

DR-DZ

**DRA (Draa)**, river valley region in southern Morocco on the borders of the Sahara. Many well-known scholars have ethnic regional names such as Dar'i, Edrei, etc., meaning "from Dra." According to an ancient legend, Dra was an independent Jewish state which was overthrown in wars with the Christians. In the Middle Ages active communities in the region corresponded with the Babylonian *geonim*. The Jews of Dra were the first to suffer during the \*Almohad persecutions. The geographer Yaqut (1179–1229) stated that most tradesmen in the Dra valley were Jews. Dra is a fertile area with gardens and date-palm groves and until the mid-1950s Jews owned land farmed by "haratin," descendants of black slaves. As late as 1930, there were *mellahs* in the villages of Tamnugalt, Qasbat al-Makhzan, Rabat-Tinzulin, Arumiyat, Mansuriya, Amzru, Alhammid, and Mhamid, containing about 500 families. Some Jewish notables participated in the political life of the region as delegates to the 'councils' which governed this Berber-Arab society.

**BIBLIOGRAPHY:** J.M. Toledano, *Ner ha-Ma'arav* (1911), 13, 26, 47, 109–10; *Villes et tribus du Maroc*, 9 (1931), 94–95, 127, 178, 181; Hirschberg, *Afrikah*, 1 (1965), 90–91, 101, 236, 302; 2 (1965), 27; idem, *Me-Erez Mevo ha-Shemesh* (1957), 105–13; Corcos, in: *Sefunot*, 10 (1966), 75–79.

[David Corcos]

**DRABKIN, ABRAHAM** (1844–1917), rabbi, born in Mogilev, Belorussia. After studying at the yeshivah of Volozhin and

the rabbinical institute in Vilna, he was sent by the \*Society for the Promotion of Culture among the Jews in Russia to the rabbinical seminary in Breslau, completing his dissertation, *Fragmenta Commentarii ad Pentateuchum Samaritano-arabicum*, in 1875. From 1876 to 1908 he served as *Kazionny Ravin* (government-appointed rabbi) of St. Petersburg. Drabkin was a member of the Provisional Committee for the Promotion of Crafts and Agriculture among the Jews in Russia. He took part in the conferences convened after the pogroms of 1881. He was editor of the rabbinical section for the first eight volumes of the *Yevreyskaya Entsiklopediya* (Russian Jewish encyclopedia).

**DRACH, PAUL-LOUIS-BERNARD (David; 1791–1865)**, French apostate. Drach, who was born at Strasbourg, received a traditional rabbinic education. In 1813 he went to Paris, married a daughter of E. Deutz, chief rabbi of France, and, in 1819, was appointed head of the Paris Jewish School. At this time he published a Passover *Haggadah* (1818) and a *siddur* (1819), both with translation, a Jewish calendar (1821), and other works. On Easter 1823, to the consternation of French Jewry, Drach had himself baptized, with much pomp and circumstance, into the Catholic church, and he spent a year and a half in obtaining paternal control of his three children whom his wife had secretly taken to London. For a time he worked in

Paris as an expert in Hebrew and took part in the publication of the Venice Bible (27 vols., 1827–33). From 1832 to 1842 he served as librarian of the Congregation for the Propagation of the Faith in Rome, and published Hebrew poems in honor of the pope and the cardinals. Returning to Paris, Drach collaborated with the Abbé J.P. Migne in the publication of his *Patrologia*. He also edited the fragments of Origen's *Hexapla* (1857–60), and translated into French the anonymous work \**Sefer ha-Yashar* (1858), wrongly attributed to Jacob \*Tam who wrote another work similarly entitled. He also wrote a number of books and pamphlets to justify his apostasy and to prove to his former coreligionists the truth of Christianity. He succeeded in winning over his brother-in-law Hyacinthe (Simon) Deutz, the man who denounced the Duchess of Berry to the police; and his children, too, grew up as Christians and took Holy Orders.

**BIBLIOGRAPHY:** P. Klein [= M. Catane], in: *Revue de la Pensée Juive*, 7 (1951), 87–103.

[Moshe Catane]

**DRACHMAN, BERNARD** (1861–1945), U.S. Orthodox rabbi, first of the modern English-speaking Orthodox American rabbinates. Drachman was born in New York and reared in Jersey City. His early Jewish education was at a Reform institution, the Hebrew Preparatory School, sponsored by Temple Emanu-El Theological Seminary. He graduated from Columbia College, and was sent to study at Breslau and Heidelberg by New York's Temple Emanu-El (Reform). In Europe, much to the chagrin of his patrons, for the first time he came into personal contact with the deep piety of East European Jewry, and was so influenced by it that he became entirely committed to Orthodoxy, of which he later became one of the leading spokesmen in the United States. Drachman served as rabbi of Oheb Shalom in Newark until it introduced mixed seating, and in several New York City pulpits, including Zichron Ephraim (1889–1909) and Oheb Zedek (1909–22). His background was unusual. American-born, he shared none of the East European experiences of his Orthodox colleagues; Reform-trained, he shared none of the enthusiasm for Reform of those who first taught him. He was the first ordained Orthodox rabbi to preach in the vernacular in the U.S. and was one of the founders of the \*Jewish Theological Seminary, where he taught Bible, Hebrew, and Jewish philosophy from 1887 to 1902. After Solomon Schechter's arrival, he continued as assistant reader in Codes from 1902 to 1908. There are two versions of his decision to sever his service at the Jewish Theological Seminary. Some believe that Drachman was not sufficiently scholarly for the institution that Schechter was rebuilding and others believe that he left the Seminary when it gradually started to diverge from Orthodoxy; he later taught at Yeshiva College. He served as president of the \*Union of Orthodox Jewish Congregations during 1908–20. He was a candidate for the Chief Rabbinate of England in 1912 but withdrew when one of his first pupils, J.H. \*Hertz, a graduate of the Jewish Theological Seminary, put forward his candidacy. Drachman was

a founder of the Jewish Endeavor Society and Jewish Sabbath Alliance, which sought to repeal the Blue Laws that prohibited businesses from being open on Sunday and thus imposed a great economic hardship on Sabbath-observing Jews. In the 1920s, together with the labor movement they advocated a five-day work week. He translated Samson Raphael Hirsch's *Nineteen Letters of Ben Uziel* into English (1899). His autobiography, *Unfailing Light* (1948), is a vivid portrait of American Jewry during his lifetime.

**BIBLIOGRAPHY:** M. Davis, *Emergence of Conservative Judaism* (1963), 335–6. **ADD. BIBLIOGRAPHY:** J. Gurrock, "Bernard Drachman and the Evolution of Jewish Religious Life in America," in: *American Jewish History*, 76:4 (June 1967).

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**DRACHSLER, JULIUS** (1889–1927), U.S. sociologist. Drachslers was born in Austro-Hungary, taught at Smith College and at the City College of New York. He served in the Bureau of War Risk Insurance (1918–19), was assistant secretary of the Jewish Big Brother Association (1913–15), assistant executive director of the Bureau for Jewish Social Research (1919–20), secretary of the faculty of the School for Jewish Communal Work (1915–18), president of the Conference on Immigration Policy (1921–22), and consultant of the Bureau of Jewish Social Research (1921–22). In addition, he served as director of the training courses for community center workers of the National Jewish Welfare Board. In his organizational as well as in his scholarly work, Drachslers's interest was centered on topics relevant to the sociology of Jews, then in its infancy. His major published works are *Democracy and Assimilation* (1920) and *Intermarriage in New York City* (1921). The latter is considered a classic in the demography of the Jews, and has been frequently quoted in subsequent studies on intermarriage.

[Werner J. Cahnman]

**DRAGUIGNAN** (Heb. דַּרְגִּינָא), capital of Var department, S.E. France. Toward the end of the 13<sup>th</sup> century, when the poet \*Isaac b. Abraham Ha-Gorni visited Draguignan, there was already an important community of wealthy Jews, who gave an unfriendly welcome to the poet, mistrusting his licentious behavior. The ancient synagogue, no longer standing, a beautiful building with a 23-m.(75.4-ft.)-long facade and a single spacious hall without the support of columns, was built during the same period. During the middle of the 14<sup>th</sup> century the community of 200 to 250 persons was governed by an administrative council and two bailiffs. In the 15<sup>th</sup> century, the number of Jews in Draguignan had increased so much that the accommodation in the Rue Juiverie had become inadequate. There were numerous Jewish physicians, one of whom received a salary from the municipality. In 1489 the Jews in Draguignan were among the first victims of the edict of expulsion from Provence. Five accepted baptism to avoid being expelled. During World War II, there were about 12 Jewish families living in Draguignan. A new community of Jews of

North African origin established there numbered approximately 100 in 1968.

**BIBLIOGRAPHY:** Gross, Gal Jud, 170–1; F. Mireur, *Les rues de Draguignan*, 1 (1921), 134; Monore and Mireur, in *Bulletin de la Société d'Etudes scientifiques et archéologiques de... Draguignan*, 60 (1941); Boyer, in: *Evidences*, 64 (1957), 23–24; Blumenkranz, in: *L'Arche*, 76 (1963), 48–51; Z. Szajkowski, *Analytical Franco-Jewish Gazetteer* (1966), 281.

[Bernhard Blumenkranz]

**DRAGUNSKI, DAVID ABRAMOVICH** (1910–1992), Soviet army officer. Born in Sviatsk, Btyansk district, Russia, he started his army career in 1933. During World War II he commanded a tank battalion and a tank brigade. He was twice awarded the title Hero of the Soviet Union and finished the war as a colonel. After studying in the Military Academy he was promoted to major-general in 1953, lieutenant-general in 1961, and colonel-general in 1970. During World War II he was a member of the Jewish \*Anti-Fascist Committee, and in 1947 his biography was published by the Committee in Yiddish. He represented Soviet Jewry at the opening of the Holocaust museum in Paris and in other places. He was used by the Soviet authorities to attack Israel, Zionism, and the movement to immigrate to Israel. He appeared at an anti-Zionist press conference in Moscow in March 1970 and headed the delegation of Soviet Jewry in Brussels in February 1971 for an international conference to defend Soviet Jews' rights. In 1968 he published his war memoirs.

[Shmuel Spector (2<sup>nd</sup> ed.)]

**DRAÏ, RAPHAËL** (1942– ), French political scientist, sociologist, religious thinker. Born in Constantine, Draï had to leave Algeria at the age of 19, in 1961, and always considered the fate of Algerian Jews after the war of independence, and his own exile, as a great injustice. Nevertheless, he consistently refused to blame anyone for these events, which he saw as a result of the “hardships of history,” leaving the door open to a process of “reconciliation”; he thus remained an advocate of trans-Mediterranean, intercultural, and inter-religious dialogue, and in 2000, after Algerian president Bouteflika acknowledged for the first time, in a speech in Constantine in 1999, the importance of Jewish culture to the history of Algeria, he tried to move forward and, together with the singer Enrico Macias and other Jews from Constantine, traveled to Algeria to pray at the tomb of Algerian-Jewish singer Sheikh Raymond Leyris, assassinated in 1961 and a symbol of the involvement of Jews in the shaping of Arab-Algerian classical culture. Intended to be the beginning of a reconciliation process, the journey left a harsh impression of unrelieved misunderstanding and alienation, but was still a remarkable step forward. In the wake of this journey, Draï voiced the complexity of his feelings in an open letter to President Bouteflika, *Lettre au président Bouteflika sur le retour des Pieds-Noirs en Algérie* (2000). In France, he had a successful academic career in which he tried to apply a broad perspective to political science, taking into account the results of diligent juridical

analysis as well as new developments in the social sciences; he was one of the first social scientists to fully internalize and use the tools provided by psychoanalysis, joining the Psychanalyses et pratiques sociales research unit at the University of Aix-Marseille, where he taught. A former dean of the University of Amiens, Draï also wrote a number of books on social, juridical, administrative, and political subjects, including *Le temps dans la vie politique* (1981), *Sous le signe de Sion: L'antisémitisme nouveau est arrivé* (2001), *Science administrative, éthique et gouvernance* (2002), and *Le Droit entre laïcisation et néo-sacralisation, Instabilités européennes: recomposition ou décomposition?* (2000). Taking part in official think tanks on bioethics, Draï is also a recognized expert in Talmud and *halakhah*, using his knowledge of Jewish Law to deepen his ethical, social, and political analysis, so that his work can be described as an unusual attempt to combine a classical juridical approach to political science with the progress of the modern social sciences, psychoanalytical elements, and Jewish tradition. This original endeavor culminated in *Identité juive, identité humaine* (1995), a discussion of Jewish identity and universal values. Other works related to Judaism were *Lettre au Pape sur le pardon au peuple juif* (1998), *L'Économie chabbatique* (1998), *Freud et Moïse – Psychanalyse, loi juive et pouvoir* (1997), *La pensée juive et l'interrogation divine* (1996), and *La sortie d'Égypte, l'invention de la liberté* (1986).

[Dror Franck Sullaper (2<sup>nd</sup> ed.)]

**DRAMA**, city in Macedonia, Greece. \*Benjamin of Tudela found 140 Jews in Drama in c. 1165. Documentation points to the settlement of a small Jewish community of merchants in Drama from the beginning of the 17<sup>th</sup> century who brought their legal problems to the Salonikan *bet din*. During the years 1671–68, the Hebron emissary Rabbi Moses ha-Levi \*Nazir visited the community. After the fall of Ottoman Hungary in 1689, Jews from Buda settled in Drama. Jewish merchants carried goods in caravans from Drama to other towns. In 1900 the Jewish community numbered 45 families, or 150 people. Many Jews from Serres settled in Drama in 1913 after a large fire erupted under Bulgarian occupation. Before World War II the Jews were engaged in commerce (especially in tobacco); some were craftsmen or in the liberal professions. In 1934, the Zionist Geula organization was founded. In 1940 there were 1,200 Jews in the town. In 1941 Drama was occupied by the Bulgarians, who requisitioned all the Jewish enterprises. Jewish-owned capital in the banks was also confiscated. On March 4, 1943, the Jews of the community were arrested by the Bulgarian police and army, held in tobacco warehouses in the Agia Barbara quarter for three days, and then sent to the Gorna Djumaya camp in Bulgaria, where they were kept in extremely harsh conditions. From there, young men in their teens and early twenties were sent to forced labor in Bulgaria and 113 families (589 people) were dispatched by train to Lom and from there put on a boat to Vienna, where they were reloaded on trains to Treblinka and gassed upon their arrival.

In 1948 there were 39 Jews in Drama and in 1958, 17. A Holocaust memorial plaque was inaugurated in 1999.

**BIBLIOGRAPHY:** Rosanes, Togarmah, 3 (1938), 77; H. Pardo, in: *Fun Letstn Khurbn*, 7 (1948), 88–90. **ADD. BIBLIOGRAPHY:** B. Rivlin, “Drama,” in: *Pinkas Kehillot Yavan* (1999), 93–97.

[Simon Marcus / Yitzchak Kerem (2<sup>nd</sup> ed.)]

**DRANCY**, small town near Paris where an internment camp was established by the Germans late in 1940. It became the largest center for the deportation of Jews from France. Beginning on August 20, 1941, it was reserved exclusively for Jews. They were deported from there “to the East” from July 19, 1942, until the camp was liberated on August 17, 1944. On that date some 1,500 internees were still there. The camp was directed by high Gestapo officers stationed in France. More than 61,000 persons were sent from Drancy to the death camps. The camp has been transformed into an apartment complex for low-income families. At the site, there are a number of memorial plaques and a small museum housed in a cattle car that was used to transport Jews during World War II.

**BIBLIOGRAPHY:** G. Wellers, *De Drancy à Auschwitz* (1946); Z. Szajkowski, *Analytical Franco-Jewish Gazetteer 1939–1945* (1966), 262 (includes bibliography).

[Shaul Esh / Michael Berenbaum (2<sup>nd</sup> ed.)]

**DRAPKIN (Darom), ABRAHAM S.** (1908–1993), criminologist and Israeli diplomat. Born in Argentina, Drapkin studied in Chile and from 1935 to 1940 was secretary-general of the Chilean Department of Prisons. In 1936 he founded the journal *Revista de Ciencias Penales*, and a year later helped establish the Chilean Institute of Penal Sciences. He published *Jurisprudencia de las Circunstancias Eminentemente de Responsabilidad Criminal* (1937) and *Relación de Causalidad y Delito* (1943). In 1948 he immigrated to Israel and entered its foreign service. He represented Israel in Greece, Yugoslavia, Thailand, Mexico, and at the United Nations.

**DRAPKIN (Senderey), ISRAEL** (1906–1990), Israeli criminologist and physician. Drapkin, who pioneered criminological studies in Latin America, was born in Rosario, Argentina. In 1936 he established the first Criminological Institute in Chile, and in 1950 the chair of criminology at the University of Chile. He advised on the establishment of other national institutes of criminology, particularly in Venezuela, Costa Rica, and Mexico. Drapkin settled in Israel in 1959 and established the chair of criminology and the Institute of Criminology at the Hebrew University. His publications include *Manual de Criminología* (1949) and *Prensa y Criminalidad* (1958).

[Zvi Hermon]

**DRAY, JULIEN** (1955– ), French politician. Born in 1955 in Oran, Algeria, Dray was first active in far-left movements after his family had to move to France at the end of Algeria's war of independence. During the 1970s, he was a member of the Trotskyite Ligue communiste révolutionnaire and the

left-wing student union Mouvement d'action syndicale, which merged in 1980 with the newly created UNEF-ID, a radical faction of the mainstream socialist UNEF union. At the time, Dray himself moved from the far-left to the mainstream left and joined the Socialist Party (PS) in 1980, shortly before the socialist François Mitterrand was elected France's president. Dray was in charge of managing the Socialist Party's youth movements, and in 1984 was a founding member of SOS-Racisme, an anti-racist youth association affiliated with the PS and aiming at promoting the social integration of the immigrants, federating French youth around anti-racist values, and countering the rise of the anti-immigration far-right Front National party. In 1986, Dray also helped create the FIDL, a high-school student union. In 2003, he was involved in the creation of Ni putes ni soumises, a feminist organization that worked in the neglected, impoverished suburbs and among immigrant youth to promote the advancement of young women and lead the fight against sexual discrimination and violence. Dray was a member of Parliament from 1988 and in 1997 and 2002 was elected vice president of the Ile-de-France Regional Council. Acting as a spokesman for the party, Dray also participated in its internal ideological debates and headed one of the ideological clubs within the PS, the Club de la Gauche Socialiste. Julien Dray was widely seen as one of the most promising young leaders of the Socialist Party.

[Dror Franck Sullaper (2<sup>nd</sup> ed.)]

## DREAMS.

### In the Bible

The biblical view of dreams agrees substantially with that held by almost all ancient peoples. Dreams are visions of things actually transpiring on an ultramundane plane, where persons are not bound to bodies or events to specific moments and places. This plane is indistinguishable from that of the gods (or God), and dreams are therefore considered to be divine communications (Gen. 20:3, 6; 31:10–11). What is thus revealed may subsequently be actualized in historical fact. Accordingly, dreams are regarded as presages or omens. They are best understood by visionaries, i.e., by prophets, mantics, and ecstasies, who, in their suprasensory states, are in rapport with the “divine dimension,” and it is to such persons that God vouchsafes dreams when He wishes to communicate with mankind (cf. Num. 12:6). In the Bible, “dreamer,” “prophet,” and “magician” are related terms (cf. Jer. 23:28; 27:9; 29:8; see \*Divination). The final interpretation of dreams rests with God (Gen. 40:8).

Dreams are usually symbolic, and their interpretation (known as oneiromancy) revolves around the unraveling of their images. Dreambooks, in which such images are codified, feature in Egyptian and Mesopotamian literature. Biblical examples of such symbolic dreams are those of Joseph (Gen. 37:5ff.), of Pharaoh's butler and baker (*ibid.* 40:1ff.), and of Pharaoh himself (*ibid.* 41:1, 5); in Judges (7:13ff.) a man's dream that a cake of barley rolls onto the Midianite camp and bowls it over is taken to portend the imminent discom-

future of that people. Ancient Near Eastern parallels are afforded by a series of prophetic dreams related in the Babylonian “Epic of Gilgamesh” and in the Hittite “Legend of Kessi.”

Dreams that occur in sacred places are considered to be revelations from the resident deity. People in search of divine direction resort to such shrines and sleep on the premises. This widespread practice, called incubation, is attested for the ancient Near East by a Sumerian inscription of Gudea of Lagash and a Hittite text of King Mursilis II of Hatti. The only clear instance in the Bible is the story of Jacob at Beer-Sheba (Gen. 46:1ff.), though some scholars claim that the narratives of the infant Samuel at Shiloh and of Jacob at Beth-El fall within the same category. It is necessary, however, to distinguish between incubation, which involves a purposeful visit to a shrine, and more general revelation through dreams, such as is described, for example, in 1 Kings 3:5–15 (Solomon at Gibeon). In sundry passages (e.g., Jer. 23:25; Zech. 10:2), the Bible speaks of false dreams. There appear to be two criteria for this designation, as there are also for false prophecy: a dream may be deemed false either because it is not subsequently realized, or because it never occurred at all. In the future Golden Age, says the prophet Joel (3:1), the gift of prophetic dreaming will be bestowed on all men, young and old alike. In the Greco-Roman age, apocalyptic visions were thought to be vouchsafed in dreams. Literary works inspired by this idea are the Book of Daniel and the Apocalypses of Ezra and Baruch. There is evidence of a pious protest against oneiromancy; both Ben Sira (31:1ff.) and the Letter of Aristeas (213–216) denounce belief in dreams.

[Theodor H. Gaster]

### In the Talmud

Diametrically opposed views on dreams were expressed by the sages. Jonathan stated that “a man is shown in a dream only what is suggested by his own thoughts” (Ber. 55b). This statement is similar to Freud’s views that certain thoughts which during the day are suppressed to the unconscious, reappear in a dream, where they find gratification. It is told of Meir and Nathan that after behaving unbecomingly toward Simeon b. Gamaliel the *nasi*, “they were told in their dreams to go and pacify him. Nathan went, but Meir did not, saying, ‘Dreams are of no consequence’” (Hor. 13b; see also Git. 52a). The extent to which the sages did not set store by dreams is attested by Hanan’s statement that “even if the genius of dreams informs a man that on the morrow he will die, he should not desist from prayer, since it is said (Eccles. 5:6): ‘For through the multitude of dreams and vanities there are also many words; but fear thou God’” (Ber. 10b). There were sages who believed in dreams, however, and regarded them as being in the nature of prophecy; Ḥanina b. Isaac declared that “a dream is a variety of prophecy” (Gen. R. 17:5), and R. Joseph said, “If one was placed under a ban in a dream, ten persons are necessary for lifting the ban” (Ned. 8a). Some fasted on account of a bad dream, the \*fast being known as *ta’anit ḥalom* (“dream-fast”). Thus Rav asserted: “Fasting is as potent against a dream as fire

is against tow. Ḥisda said: Provided it is on the same day. R. Joseph added: Even on the Sabbath” (Shab. 11a).

The Talmud contains a prayer which originated in the last generation of the *amoraim* and which, said during the priestly benediction, reads as follows: “Sovereign of the Universe, I am Thine and my dreams are Thine. I have dreamt a dream and do not know what it is. Whether I have dreamt about myself, or my companions have dreamt about me, or I have dreamt about others, if they are good dreams, confirm and reinforce them like the dreams of Joseph, and if they require a remedy, heal them, as the waters of Marah were healed by Moses our teacher, and as Miriam was healed of her leprosy and Hezekiah of his sickness, and the waters of Jericho by Elisha. As Thou didst turn the curse of the wicked Balaam into a blessing, so turn all my dreams into something beneficial for me” (Ber. 55b). The Talmud records that there were 24 professional interpreters of dreams in Jerusalem (*ibid.*), an indication of how deep-rooted a belief in dreams was among the masses. (Extensive material on dreams and their interpretation is given in Ber. 55a–57b.) A third view, midway between these two extremes, regarded dreams as composed alike of truth and of incidental features. This was stated by Johanan in the name of Simeon b. Yoḥai: “Just as there can be no grain without straw, so can there be no dream without meaningless matter.” A similar view was expressed by Berechiah, “While part of a dream may be fulfilled, the whole of it is never fulfilled,” and by Ḥisda: “Neither a good dream nor a bad one is wholly fulfilled” (Ber. 55a). Some sages distinguished between one dream that lacks all substance and another that is fulfilled. This was the view of Johanan, who declared that “three dreams are fulfilled: an early morning dream, a dream which a friend has about one, and a dream which is interpreted within a dream” (Ber. 55b).

[Abraham Arzi]

### In Medieval Thought

Interest in dreams continued through the Middle Ages to modern times, especially among the kabbalists and Ḥasidim. The Zohar discusses the problem of the admixture of truth and falsehood in dreams, and distinguishes between the dreams of the wicked, which derive from the forces of impurity, and the dreams of the righteous, which contain the visions, images, and prophecies seen by the soul in the higher worlds. Nevertheless, even the dreams of the righteous are infected by the false notions of the *sitra aḥra*. The angel in charge of the dreams of the righteous is Gabriel. These dreams, while they are not as great as prophecy, are close to prophecy (Tishby, *Mishnat ha-Zohar*, 2 (1961), 136–43). Maimonides developed a conception of dreams, based on his psychology and epistemology, as an integral part of philosophical anthropology, which totally rejects all supernatural categories. The religious significance of Maimonides’ conception lies in his identification of dreams and prophecy in terms of their essence, and their distinction in terms of their content (*Guide of the Perplexed*, 2:36–38; cf. *Shemonah Perakim*, 1; Yad, Yesodei ha-Torah 7:2). Maimonides attributes no cognitive significance to dreams in

the sense of a spiritual process which introduces new ideas or knowledge which was not previously known. Dreams are a function of the imagination only, not of the senses or the intellect. What one learns in dreams is not a new product of one's soul or a new idea from the outside, but is rather brought up from the imaginative faculty, the storehouse of sensual and intellectual impressions: "The thing which engages greatly and earnestly man's attention while he is awake and in the full possession of his senses forms during his sleep the object of the action of his imaginative faculty." The prophetic dream is unique in that "his [the prophet's] attention must be directed to the knowledge of God.... There must be an absence of the lower desires and appetites." If the prophet fulfills these requirements while he is awake, of necessity he will, in his dreams, "perceive things very extraordinary and divine, and see nothing but God and His angels." The experiences of the dream, those of both the prophet and the ordinary person, occur only "when the senses are at rest and pause in their action." In his dreams a person apprehends ideas which he previously had and which left their impression in his imaginative faculty, which "sees the thing as if it came from without and perceives it as if through the medium of bodily senses." It thus appears as if these are new ideas which have never before been experienced. From this conception of the essence of dreams it can be seen that Maimonides avoids the traditional interpretation of the "dream-fast" as a means of protection from an anticipated danger or for the purpose of abolishing a harmful decree, and sees the fast as an obligation which has a didactic-psychological purpose: "that he may reexamine his actions and analyze them and repent" (Yad, Ta'aniyyot 1:12). A later attempt to promulgate a belief in dreams and their interpretation on a "philosophical" basis was made by Solomon Almoli, whose book *Mefasher Helmin* or *Pitron Halomot* ("The Interpretation of Dreams") was very popular among eastern European Jews. Some medieval thinkers would rely on dreams even in matters of religious law, as, for example, Jacob of Marvège in his responsa. Other scholars, however, strongly opposed this practice: "We do not require the dream of R. Jacob ... nor his interpretation based on a dream ... and one should take no notice of dreams, because we know that it is not in the heavens" (Zedekiah b. Abraham Anav's *Shibbolei ha-Leket* (1896), no. 157). Nevertheless, there were people in later generations who made decisions on the basis of dreams.

**DREBEN, SAM** (1878–1925), U.S. soldier of fortune. Born in Russia, Dreben immigrated to the United States in 1898

and volunteered for the army. He fought in China during the Boxer Rebellion of 1900 and later in Nicaragua, where he became known as the "fighting Jew." In 1916 he volunteered as a colonel in the Mexican army and in 1918 fought in France, where he won the Distinguished Service Cross. Dreben donated a large sum of money to the \*American Jewish Joint Distribution Committee and helped fight the Ku Klux Klan in Texas in the 1920s.

**DREIFUSS, RUTH** (1940– ), Swiss politician. Born in St. Gall, she spent her youth in Geneva. Her father was active on behalf of Jewish refugees in Switzerland. After receiving a diploma in commerce, she became editor of the consumer association's magazine *coop* in Basle (1961–64). She joined the Social Democratic Party in 1965 and studied economics at the University of Geneva, beginning her academic career there as assistant professor (1972–74). She was engaged by the Federal Foreign Ministry (1972–81) and was elected secretary of the Swiss Labor Union (Berne, 1981–93). She also served on the city council of Berne as a member of the Social Democrats. In 1993 she was elected by the Federal Assembly (Parliament) as a Federal councilor, becoming the first Jewish member of the Swiss government. As minister of the interior, she fought to cut welfare spending and was broadly perceived as fighting for women's equality in Swiss private industry. Her vision of social justice had roots in Jewish tradition, even if she declared herself an agnostic and did not become a member of a Jewish community.

In 1998 she was elected vice president of the Swiss Confederation and in 1999 she became president for the one-year term, serving in effect as the Swiss head of state. As such, she reiterated Switzerland's official apology to the victims of the Holocaust, acknowledging that Swiss asylum policy had been "marred by errors, omissions, and compromises." In 2002 she resigned from the government after being reelected councilor twice. In 2004 she contributed to the jubilee volume of the Swiss Federation of Jewish Communities, describing the changes in the position of Swiss Jewry from pre-emancipation times until the present.

**DRESDEN**, capital of Saxony, Germany. A Jewish community existed there in the early 14<sup>th</sup> century, and its members were massacred in the \*Black Death persecutions of 1349. Jews are not mentioned in Dresden again until 1375. They were expelled in 1430. Jewish settlement was renewed in the early 18<sup>th</sup> century when the \*Court Jews Behrend \*Lehmann and Jonas Mayer, with their retainers, were permitted to settle in Dresden. A synagogue and cemetery were opened in the middle of the 18<sup>th</sup> century. A society for caring for and visiting the sick was established which formed the nucleus for communal organization. During this period the Jews in Dresden were subjected to strict regulations and their rights

of residence were limited. Nevertheless there were about 1,000 Jewish residents by the end of the 18<sup>th</sup> century. Their situation improved in the 19<sup>th</sup> century. Active in the communal leadership were R. David Landau of Lissa, who settled in Dresden in 1803, and Bernhard \*Beer, founder of the “Mendelssohn-Verein” for the advancement for crafts, art, and science among Jewish youth (1829). As communal leader for 30 years, Beer was active in efforts for improvement of the civil status of the Jews in Dresden and the rest of Saxony. A new synagogue was built and consecrated on his initiative in 1840 and Zacharias \*Frankel officiated as its first rabbi (1836–54). Frankel succeeded, among other achievements, in obtaining the repeal of the more humiliating portions of the Jewish \*oath in 1840. During this period a Jewish elementary school was founded (1836) and complete civil equality attained (1869). Emil Lehmann (d. 1898) followed Beer as leader of Dresden and Saxon Jewry. Frankel was succeeded by the teacher Wolf Landau (1854–86) and the scholar of Midrash Jacob \*Winter (1887–1941). The community numbered approximately 2,300 in 1886, 4,300 in 1913, and over 6,000 in 1925.

A number of Jews from East Europe settled there after World War I. A prosperous and well-endowed community, it owned a valuable library and maintained numerous social and charitable organizations. A group of Orthodox Jews seceded and founded the “Shomerei ha-Dat” congregations. In October 1938, 724 Jews of Polish citizenship were deported from Dresden. On *Kristallnacht*, 151 Jews were arrested and shipped to Buchenwald. The synagogues were burned and the Jewish community was presented with a bill for their demolition. By May 1939, the community had been reduced to 1,600 people as a result of emigration, deportation, and arrests. There were 12 deportations, dispatching 1,300 Jews, between January 1942 and January 1944. The final deportation was scheduled for February 1945. The Allied bombing of Dresden allowed the deportees to escape.

A synagogue seating 200 was opened in 1950. Subsequently the Dresden community declined, numbering 100 in the late 1960s. From 1962 to 1990 Dresden was the seat of the Association of Jewish Communities in the GDR. Owing to the immigration of Jews from the Former Soviet Union, the number of community members rose to 618 in 2005. A new synagogue was inaugurated in 2001. Dresden is the seat of the Association of Jewish Communities in Saxony.

[Akiva Posner / Annegret Nippa (2<sup>nd</sup> ed.)]

**DRESDEN, SEM** (1881–1957), composer and teacher. Born in Amsterdam, Dresden studied there and with Pfitzner in

Berlin. In 1914 he founded a choral ensemble which gave concerts of the works of the great Dutch composers and of Renaissance and modern works. He was director of the Amsterdam Conservatory (1924–37) and of the Royal Conservatory at The Hague (1937–40; 1945–49), and for a number of years president of the Society of Dutch Composers and of the Dutch section of the International Society of Contemporary Music. His compositions include *Chorus Tragicus* for choir, wind instruments, and percussion (1928, after Vondel's *Hierusalem verwoest*); Psalm 84 for choir “based on an old Hebrew prayer”; concertos for various instruments; orchestral and chamber works; and an opera, *Toto* (1945). He also wrote and edited books on music history and theory.

**DRESNER, SAMUEL HAYIM** (1923–2000), U.S. Conservative rabbi, activist, scholar, and author. Dresner was born in Chicago and began his education at the University of Cincinnati (B.A., 1945) and Hebrew Union College. He left HUC to study with his mentor Abraham Joshua \*Heschel, who went to the Jewish Theological Seminary after World War II, where Dresner was ordained (1951) and subsequently earned his D.H.L. degree (1954). Dresner began his career as associate rabbi of Congregation Har Zion in Philadelphia, Pennsylvania; in addition, in 1955, Dresner and several colleagues revived the quarterly magazine *Conservative Judaism*. For 10 years, Dresner almost single-handedly kept the magazine alive. In 1957, he became the rabbi of Congregation Beth El in Springfield, Massachusetts, where he also joined the civil rights struggle as chairman of the Massachusetts Human Relations Commission. He used his positions in the Conservative movement to promulgate a code of Jewish living, promoting Sabbath observance, and establishing an adult Leadership Training Institute. As part of his lobbying efforts for Jewish funeral reform, Dresner co-chaired the Committee on Funeral Practices of the non-denominational \*Synagogue Council of America. In 1969, Dresner became rabbi of North Suburban Synagogue Beth El in Highland Park, Illinois (1969–77). In 1977, Dresner joined the faculty of Spertus College in Chicago and moved to Deerfield, Illinois, where he assumed the pulpit at Congregation Moriah. Following his retirement from the congregational rabbinate in 1984, he taught at the Hebrew University of Jerusalem (1985), at Hebrew Union College (1986–88), and at the Jewish Theological Seminary (1989–2000).

Dresner contributed hundreds of articles to such periodicals as *Judaism*, *Commentary*, *Forum*, and *Jewish Digest*, and wrote and edited numerous books, including *Prayer, Humility and Compassion* (1957), *The Jewish Dietary Laws* (1959, 1966), *Three Paths of God and Man* (1960), *The Zaddik* (1960; reissued as *The Zaddik: The Doctrine of the Zaddik According to the Writings of Rabbi Yaakov Yosef of Polnoy*, 1994), *The Jew in American Life* (1963), *God, Man and Atomic War* (1966), *The Sabbath* (1970), *Between the Generations: A Jewish Dialogue* (1971), *Levi Yitzhak of Berdichev: Portrait of a Hasidic Master* (1974; reissued as *The World of a Hasidic Master: Levi Yitzhak*

of Berditchev, 1985, 1994), *Agenda for American Jews: Federation and Synagogue* (1976), *Judaism: The Way of Sanctification* (with Byron Sherwin, 1978), *Rachel* (1994), *Can Families Survive in Pagan America?* (1995), *Abraham J. Heschel: Prophetic Witness* (Vol. 1, with Edward Kaplan, 1998), and *Heschel, Hasidism and Halakha* (2000).

## DRESS.

### In the Bible

The biblical terms for clothing (Heb. בְּגָד, *begeḏ*; כֶּסֶת, *kesut*; לְבוּשׁ, *levush*) and the corresponding verbs are employed in connection with the cover of the body for warmth or reasons of modesty. Extensive use is also made of the terms in figures of speech: "Put on thy beautiful garments" (Isa. 52:1), as an emblem of greatness; "He put on garments of vengeance for clothing" (Isa. 59:17), as a symbol of revenge; "For he dressed me in clothes of triumph," as a metaphor for victory and good fortune (Isa. 61:10); "They shall wear shame" (Ps. 35:26), as a metaphor for failure and defeat; and "Let your priest be clothed with triumph" (Ps. 132:9), as a metaphor for success and prestige; and so forth. On many occasions, clothing emphasizes a person's status, position, clothing, or particular situation or task: "Royal apparel (*levush malkhut*)... which the king is accustomed to wear" (Esth. 6:8), with which another man (Mordecai) would be honored or favored. A hairy cloak was probably a hallmark of Nazirites and ascetics: "Neither shall they wear a hairy mantle (*adderet se'ar*) to deceive" (Zech. 13:4). During the period of mourning widows wore a characteristic garment: "She put off from her garments of widowhood" (Gen. 38:14). Prisoners apparently also had special clothing: "He changed his prison garments" (11 Kings 25:29). The official uniform (holy garments) worn by priests in the service of God was of great importance: "And Thou shalt make holy garments for Aaron" (Ex. 28:2). Just as the beauty of a garment symbolized a man's greatness, tearing the clothing or wearing poor and dirty clothing or sackcloth indicated a lowered station or mourning.

The Bible mentions articles of clothing appropriate to specific parts of the body: a cloth miter or turban (*zenif, miznefet*) to cover the head (Ex. 29:6; Zech. 3:5); metal or leather helmets (*kovaf*), and head coverings used in warfare for protection (1 Sam. 17:5; 11 Chron. 26:14); a dress-like garment (*simplah*), apparently with closed seams used by both men and women to cover the entire body from the shoulders to the ankles (1 Kings 11:30; Ex. 12:34; Y. Yadin, et al., *Hazor*, 3–4 (1961), pl. cccxxxix: 1, 2); the tunic (*ketonet*), a short, closed garment, covering the top part of the body, worn by both men and women (Gen. 37:3; Lev. 16:14; Song 5:3); the coat (*me'il*), a long outer garment open at the front (1 Sam. 15:27; 24:5; 11 Sam. 13:18); breeches (*mikhmasayim*), covering the loins, worn by the priests (Ex. 28:42; Ezek. 44:18); the girdle (*avnet*), a belt for

fastening the coat or dress around the waist (Ex. 29:9; Lev. 8:7); and the shoe, made of skin and attached with laces, strings, or straps (Gen. 14:23; Isa. 5:27).

Clothes, particularly the dress-like garment and the tunic, were considered essential though expensive articles, both because of their value, which of course was related to the work that went into producing them, and by reason of their importance in indicating a man's status, position, character, and living style. It is for this reason that the Bible and royal documents frequently list the quantities of clothing given as gifts (Gen. 45:22) or taken in war (Judg. 14:12). Kings had keepers of the wardrobe (11 Kings 22:14), and the Temple in Jerusalem had a special wardrobe room.

### Types of Garment Shown on Monuments

A common garment worn by men, which is often depicted on monuments in Egypt and Mesopotamia, was a piece of cloth covering from the waist to the knees or below (N. de Garis Davies, *The Tomb of Puyemrê at Thebes*, 1 (1922), pl. xxxiii, A), gathered around the waist and held in place by a belt fastened either in front or at the back or tied near the navel (L. Borchardt, *Das Grabdenkmal des Königs Sahu-Re*, 2 (1913), pl. 6; M.G. Lefébure, *Le tombeau de Sêti I*, 4 (1886), pl. v). Occasionally this garment was patterned and multicolored, but more often it was a solid color, usually white. It was sometimes held in place by a leather or cloth suspender, passing diagonally over one shoulder from the upper part of the garment (Y. Yadin, et al., *Hazor*, 3–4 (1961), pl. ccxxvi). A more complex garment, made of a wide piece of cloth, covered the body from shoulder to ankle; it was worn by both men and women and was most common in Mesopotamia, though in other places it was worn as a festive garment (N. de Garis Davies and A.H. Gardiner, *The Tomb of Huy*, 1926). This garment could be both in single color or in multicolored patterns. While it usually covered only one shoulder, it was occasionally worn covering both. In addition to the patterns woven into the cloth, a decorative border was common (W. Wreszinski, *Atlas zur altaegyptischen Kulturgeschichte*, 2 (1935), pl. 46).

A garment more characteristic of the lower classes consisted of two shrunken cloths which were suspended from the waist in front and back by a belt or string, thus covering the loins (P.A.A. Boeser, *Die Denkmäler des Neuen Reiches* (1911)). A sewn dress-like garment with sleeves covered the entire body; it had a large opening for the head, somewhat resembling a collar. The pictures on several monuments show that the stitches were prominent, serving also as a kind of decoration. The more elegant classes wore two garments: a sewn, short- or long-sleeved dress over which was worn a sheath covering the shoulder or sometimes the entire dress (E.F. Schmidt, *Persepolis*, 1 (1953), pls. 31, 32). Another such two-piece ensemble in the luxury category was made up of a length of cloth extending from the waist to the knees or trousers over which was worn a wide decorated cloth covering the body from shoulder to ankles. Typical of the colder, northern countries was a sleeved coat fastened all the way down

(F. Thureau-Dangin, *Arslan Tash* (1931), 111–2, pl. 33:43; N. de Garis Davies, *The Tombs of Menkheperasonb...* (1933), pl. iv). Pieces of cloth were frequently added to the basic garment in order to cover the shoulders (Boeser, op. cit., pl. xxiv). The tunic was a short, sewn garment, usually with short sleeves. It was made of one piece of cloth specially woven for this purpose with an opening for the head in the center. The cloth was folded along the shoulder line and sewn along the edges, thus making a garment which covered the upper part of the body. The tunic was often made with a woven decoration or later embroidered.

The clothing shown on early Mesopotamian and Egypt monuments emphasizes ethnic differences. Most apparent are the shorter lengths, relatively lighter weights of the materials (including translucent cloth) – especially in the case of women's wear – and the head coverings worn in Egypt, while the northern countries used longer and heavier clothing. The materials from which the garments were made also show ethnological differences. The garments depicted on a number of Mesopotamian monuments of the third millennium B.C.E. are made of heavy wool strands, fastened with large laces, or sewn with strips of animal skin. Noticeable ethnological differences also appear in head coverings. Wigs seem to have been widely worn by both men and women. A common style was a band circling the hair, tied at the back or side. On the majority of the Egyptian monuments feathers worn on the head depict Ethiopian captives. Headgear crowned with feathers is characteristic of the Sea Peoples (T. Dothan, *Ha-Pelishtim ve-Tarbutam ha-Homrit* (1967), figs 1–7). Skullcaps resembling cones and cylinders decorated with ribbons and lacing were common in Babylonia and Assyria. Covering the head with a kerchief was customary in Egypt and Canaan. The most common sandal had a leather sole held in place by straps. Sandals could be partly closed, covering half the foot, or completely enclosed. However, the figures on monuments are usually shown barefoot.

[Z'ev Yeivin]

### Talmudic Times

Talmudic and midrashic literature is replete with information on matters of dress and clothing, usually supplied incidentally as part of a comment on biblical themes or in connection with religious law and custom which often concern matters of dress.

The importance of clothing in adding to the confidence and dignity of man is stressed in the Talmud: "fine garments" are among the things which "enlarge man's mind" (Ber. 57b), and "a man's dignity is seen in his costume" (Ex. R. 18:5). Apart from the special and distinctive garments which characterized the scholar, he was enjoined to be spotless and neat in his dress: "A scholar on whose garments a stain is found is worthy of death" (Shab. 114a), and he should not go out in patched shoes (Ber. 43b). An incident related in the Midrash is based upon the fact that \*Yannai mistook an ignorant man for a scholar because he was elegantly dressed (Lev. R. 9:3).

As many as 90 different articles of clothing are listed by Krauss, but the Talmud enumerates the 18 articles of clothing which were regarded as indispensable and which could therefore be rescued from a fire on the Sabbath. The lists given both in the Babylonian (Shab. 120a) and the Jerusalem (Shab. 16:5, 15d) Talmuds, apart from some differences in spelling, are practically identical, affording a picture of a man's complete apparel. On the upper part of the body, next to the skin, he wore a sleeveless tunic which was covered by a shirt (*halluk*). Over this came an outer tunic, and the top garment was a cloak. A hollow money belt was worn. The lower part of the body was covered by breeches, over which trousers were worn; on the feet were socks and shoes. A girdle was tied round the waist and an apron was also worn. A felt cap covered the head and a hat was worn over this. A scarf completed the attire. Even the order of donning the clothes was laid down (DER 10). Apart from the shirt and the girdle, all these garments were worn by the Greeks, and this raises the question of whether there was a distinctive Jewish dress in talmudic times.

There is evidence that there was. With regard to men, the Midrash states that Moses was called an Egyptian (Ex. 2:19) because he was dressed as such and not as a Jew. In one version of a well-known Midrash, one of the reasons given for the redemption of the children of Israel from bondage is "that they did not change or substitute their [distinctive Jewish] dress" and on the verse "Lo, it is a people that shall dwell alone," a Yal-kut (Num. 768) states, "they are distinguished from the other peoples in everything, in their dress..." Generally speaking, however, it would appear that apart from the \**zizit* enjoined by the Bible, the dress of the ordinary people was similar to that of non-Jews. The scholar however wore distinctive garments. The scarf worn by ordinary people, which was probably fringed, became the \**tallit* of the scholar. The Talmud indicates its severe displeasure of the common person who wore the *tallit* of the scholar (BB 98a). The scholar's shirt covered his whole body, so that his skin was invisible, and his *tallit* completely covered the shirt (BB 57b), so that "the scholar was recognized by the manner in which he wrapped himself in his *tallit*" (DEZ 5). He wore a distinctive hat, a kind of turban (Pes. 111b). Judah b. Ilai used to wrap himself in his fringed shawl and he looked like an angel of the Lord (Shab. 25b).

It was regarded as immodest and against Jewish custom for a married woman to wear her hair loose. The difference between the costume of women in Erez Israel and Babylon is noted; in Babylon the women wore colored garments, while in Erez Israel they wore starched white linen garments (Pes. 109a). Black clothing was worn as a sign of mourning, trouble, or distress (Hag. 16a), or when appearing as a defendant in a lawsuit (TJ, RH 1:3, 57b). When R. \*Akiva had to break to R. Eliezer b. Hyrcanus the news of his excommunication he "clothed himself in black" (BM 59b). A complete change of garments was enjoined for the Sabbath, and this was regarded as so important that biblical sanction was found for it (Shab. 113a, 114a).

### Hellenistic and Persian Periods

The frescoes of the third-century synagogue at \*Dura-Europos, depicting a number of biblical scenes, portray costumes reflecting the Hellenistic and Persian cultures, both of which influenced this frontier city. The more common type of dress-tunic or gown (*chiton*, *colobium*, or *dalmatica*) with purple stripes (*clavi*), shawl (*himation* or *orpallium*), and sandals – is assigned to prophets, elders, civilian leaders, and laymen. In certain cases, the *pallium* has *zizit* attached to the corners. The Persian costume, which includes a short belted tunic, trousers, and soft white boots, is assigned to royalty, courtiers, and Temple personnel. The high priest wears a long cloak; he alone has a head covering. Women wear a plain *chiton* with elbow-length sleeves and a shawl, one end of which is fastened over the shoulder and the other draped over the head. The two distinct traditions in Jewish dress, Hellenistic and Persian, are represented by a group of Jews portrayed in the sixth-century mosaics in the church of San Vitale, Ravenna, and by the sixth-century wall painting from Wadi Sarga, Egypt, of the “Three Children in the Furnace,” now in the British Museum. These two works are probably based on much earlier types. The pronged ornaments known as *gams* shown on many of the costumes at Dura-Europos are similar to those found on garments discovered in the Judean Desert caves used as refuge by Bar Kokhba’s followers in the second century.

### The Post-Talmudic Era

In the post-talmudic period Jewish costume was greatly influenced by various halakhic, moral, and social principles laid down in rabbinic literature. The prohibition against following the custom of the Gentiles in the manner of dress and mode of cutting hair (Lev. 18:3; 20:23; Deut. 12:30; Zeph. 1:8) became an important factor behind many of the communal dress regulations and \*sumptuary laws. The garb of a Jew should reflect propriety and humility and he should therefore avoid wearing expensive clothes. He must observe the laws regarding *zizit* and *sha’atnez* (see \*mixed species) and decency requires him to wear a belt. Women must be modest in their attire, and married women should always cover their hair. Fine clothes should be worn on the Sabbath and even finer ones on the festivals. These rabbinical regulations served to keep Jewish dress conservative and outmoded. Discriminatory laws passed against the Jews had a similar effect. The earliest example of these, decreed in Egypt in 849 by the caliph al-Mutawakkil, required Jews and Christians to wear a yellow Persian mantle (*tailasan*) and a cord belt (*zunmar*). If they wore the Persian hat (*kalansuwa*) they were restricted to certain colors, and if they wore a turban it had to be yellow. Later, they also had to wear a \*badge of the same color. In the Christian world, the first legislation of this kind was enacted in 1215 by the Fourth Lateran Council, which ordered Jews to wear a distinct type of dress on the grounds that in some regions they could no longer be distinguished from Christians. All these different influences combined to create a specifically Jewish dress, which, however, varied from one country to another.

### Early Middle Ages

Little is known of Jewish costume in the early Middle Ages. Certain pottery figures of peddlers with Semitic features discovered in some of the Chinese T’ang Dynasty tombs (618–907) are believed to represent Jews, particularly those with pointed Persian hats, caftans, and girdles. There are no paintings or descriptions of European Jews from this period, and only two obscure references to their attire. In 839, when \*Bodo became a convert to Judaism he allowed his hair and beard to grow, and also put on a military belt. This may be an early reference to the practice of wearing a girdle, later laid down in the Shulḥan Arukh. In the ninth century, Pope Nicholas I (858–67) attacked Arsenius, bishop of Orta, for introducing Jewish furred garments (*judaicae peluciae*).

### The Orient

In many Muslim countries, Jews were restricted to black clothing, in North Africa practically up to our times. During the 16<sup>th</sup> century in Turkey, a native Jew wore a yellow turban, while the Sephardi Jew wore a red hat, shaped like a sugar loaf. The *hakhamim* of the Spanish expulsion wore the *capos* (“cape”) on the Sabbath, which had been the distinctive dress of the Jews in Spain. In spite of the strict ruling of R. Elijah \*Mizraḥi the *capos* was used as a festive garb. By the 18<sup>th</sup> century, the common dress for all Jews in Turkey was a violet *kaveze* (“turban”), a black or violet habit, *mest* (“socks”), and violet slippers. The same dress was worn in Mesopotamia, Syria, and Erez Israel. Women developed various regional styles of dress with marked Jewish distinctions. During the 19<sup>th</sup> century, in Smyrna and Salonika, a woman’s costume included full Turkish trousers, over which two or three gowns slit open from the hips to hem were worn. The different cloths had wide contrasting stripes with flower patterns printed over them. Outdoors, a woman wore a long, dark red pelisse, lined and trimmed with fur, and she covered her head with a fine white Turkish towel with fringed ends. In Constantinople, a short, loose jacket replaced the red pelisse. The Turkish Jewish woman’s headwear included a *hotoz*, an enormous cushion-like headdress covered by a white muslin veil; this reached such fashionable extravagances at Constantinople that the chief rabbi banned it at the request of the grand vizier. The *feradje* (“cloak”) worn by Jewish women was distinctive in color and shape. Peculiar to Aleppo was a high-domed cap of striped silk, from which hung a quantity of false hair.

The characteristic costume of Moroccan, Algerian, Tunisian, and Tripolitanian Jews was black; it consisted of a skull cap, a tunic, drawers, a *burnous* (“cloak”), and slippers. In Morocco, for ceremonial occasions, the women wore the *keswa el-kbira*, a costume that had elaborate gold embroidery for which the Jewish needlewomen of Tetuan were renowned. They also wore characteristic wigs which had many regional variations. In Algeria and Tunisia, the tall headdress, known as the *çâma*, was retained by Jewish women as part of their ceremonial dress, after it had ceased to be fashionable during the 19<sup>th</sup> century. In Tunisia women’s ordinary dress consisted of

a baggy chemise reaching down to the hips, a small gold-embroidered velvet jacket, a pair of white, very tight pantaloons, and a velvet *kufia*, shaped like a sugar loaf, worn on the head. No information is available on the Jewish dress in Turkestan, Kurdistan, South Arabia, or India prior to the 19<sup>th</sup> century. In recent times, some elaborate Jewish costumes have emerged from Bukhara, Yemen, and Aden, most of which reflect local influence. (See also \*Bukhara.)

In India, the distinctive feature of the Bene Israel was their *pe'ot* (side curls). They wore Hindu-style turbans and shoes, and Muslim-style trousers. The Iraqi Jews of India retained Turkish dress; for festive occasions their women wore a long, silk brocade gown with a white plastron, probably also Turkish in origin. In the middle of the 19<sup>th</sup> century, the White Jews of Cochin wore a white cotton skullcap, a jacket, a waistcoat with 12 silver buttons, and trousers. The synagogue dress included a turban and a *djubba* ("Turkish gown"). The distinctive feature of the dress of the Black Jews of Cochin was a round embroidered cap.

### Western Europe

In medieval Spain, Jews were obliged at times to wear a full length black gown with a cape and a pointed hood. They were also forbidden to shave their beards. Other distinctive features were the badge and the pointed Jewish hat. By the 13<sup>th</sup> century, in Germany, France, England, and other parts of Europe, the pointed hat, known as the *Judenhut*, had become distinctly Jewish; it was worn voluntarily and was accepted as a Jewish symbol. Later, however, the *Judenhut*, like the \*badge, was also sometimes imposed by law. The hat was not worn after the 15<sup>th</sup> century, by which time a new type of hat with a tassel on its crown was prescribed by the laws of Frankfurt; other garments also acquired a distinctively Jewish significance. The medieval *chaperon* ("hood") known in Germany as the *matran*, *gugel*, or *kappe* as well as the *liripipe* ("tailed hood") was still being worn among the Jews of Nuremberg in 1755. Elsewhere in Germany and many parts of Central Europe, it had been replaced by a *barrette* (a black round hat made of felt or wool). Together with the *Judenkragen* (the 16<sup>th</sup>-century ruff), it became a distinctive feature of Jewish costume.

In the Papal States and elsewhere in Italy, the church canon requiring Jews to wear a yellow hat remained in effect until the French Revolution. Elsewhere in Western Europe, most Jewish distinctive dress had by then disappeared, except for synagogue and ceremonial occasions. The Jew, however, could still be identified by his beard and until the beginning of the 19<sup>th</sup> century even in England and Holland it remained a distinctive feature among Ashkenazi Jews.

The Sabbath *barrette*, known as *schabbes deckel*, and the *schulmantel* ("synagogue cloak") worn with a ruff, remained the accepted synagogue attire until the end of the 18<sup>th</sup> century; the whole costume was black. The *schulmantel*, or Sabbath *sarbal*, was a long cloak closed on the right side to prevent anything being carried on the Sabbath. During the 19<sup>th</sup> century, a new style for synagogue wear became the accepted

garb: a three-cornered hat, a tail coat, knee breeches, and buckled shoes.

From the 13<sup>th</sup> century onward, in many parts of Europe, Jewish women were obliged to have two blue stripes in their veil (*oralia* or *orales*). The *oralia* was replaced by a pointed veil (*cornalia* or *cornu*) and, in the middle of the 18<sup>th</sup> century, it, together with the Jewish ruff and a special synagogue cloak, was still part of the Jewish woman's synagogue apparel. Other distinctive clothes worn by Jewish women were the *sivlonot* ("marriage belt") and the *kuerse* (a kind of blouse worn by brides). The *sheitel* ("wig") worn by Jewish women is a relatively recent custom (see Covering of the \*Head).

### Rabbinical Dress

There is no traditional rabbinical dress but among the Ashkenazim the distinctive features of Jewish lay dress were retained much longer by the rabbis. In 1705, at Fuerth, the rabbi wore a plain collar, a long tunic buttoned down the front, and a *barrette*. In 1755 the *Judenmeister* of Nuremberg wore the medieval *kappe* (hood) with a deep fringed collar and a long sleeveless gown. By the 19<sup>th</sup> century, the typical European Ashkenazi rabbi had a heavy beard and wore a Polish-style costume which included a fur-trimmed gown and a fur-trimmed hat; the latter was exchanged for a *streimel* (a wide-brimmed hat made of fur) on the Sabbath. The rabbinical *streimel* was made of 13 sable-tails. In the middle of the 19<sup>th</sup> century at Mattersdorf, Hungary, the rabbi wore a *streimel* on the Sabbath and a boat-shaped hat on weekdays. In England and America, Christian dress was adopted much earlier and in the 18<sup>th</sup> century Isaac Polack, *hazzan* of London's Great Synagogue, was clean-shaven, wore a three-cornered hat, a wig, and clerical robes with white bands.

The European Sephardi rabbis were even less subject to traditional influences. In the 15<sup>th</sup>-century painting by Nuno Goncalves, in the Lisbon National Museum, the rabbi wears a tall, black circular hat and a black gown with the Jewish badge shaped as a red six-pointed star. By the 17<sup>th</sup> century, the Sephardi rabbis of Holland and England, with their stiletto beards, skullcaps, wigs, and clerical gowns with white bands, were indistinguishable from the Christian clergy. In Oriental countries, a few instances of distinctive dress can be cited. In 1781, in Morocco, the rabbi's habit had very large sleeves and he usually had a blue kerchief around his cap. In the 1860s in Constantinople, the rabbis wore a dark blue felt cap, bound around the base with a white kerchief or turban with fine blue stripes. In 1873, at Smyrna, the rabbi wore a *bonneto*, a type of turban reserved for doctors and priests. At the present time, there are no distinctive features in rabbinical dress either in Eastern countries or in the West.

[Alfred Rubens]

### Eastern Europe

The earliest Jewish costume from Poland, depicted on a 12<sup>th</sup>-century miniature, is an exact copy of the Byzantine tunic and *paludamentum* ("cloak") worn by men, though usually the Jews of Eastern Europe were less influenced by Christian

fashions in dress than in the West. The first intervention of the authorities occurred as early as the 13<sup>th</sup> century; a church council held in Breslau in 1266 ordered the Jews in the bishopric of Gnesen in western Poland to wear a special hat. Soon the Council of Ofen (1279) specified the distinction to a greater extent by requiring the Jews to wear a red badge. Late medieval costumes seem to have been influenced by Central European gentile and Jewish garb, like the dress cut like a kimono, called a *cotte*, worn by men and women, the female kerchief, and the Jewish conical hat worn by men. Later the Jews adopted from the East their most characteristic garment – the *caftan*, which is still in use in certain extreme Orthodox circles. This Persian coat, cut open in the front, was so widely worn throughout the Turkish Empire that it was found in Yemen and Morocco under the same name. In the eastern areas of Poland and Russia the *caftan* was girdled by a wide Oriental sash and in the western regions by a cord.

Like other European regional costumes, the characteristic Jewish dress evolved during the 16<sup>th</sup> century, incorporating some features of the attire no longer worn by the Polish nobility or upper classes. The authorities in several parts of Eastern Europe reacted independently but with the same aim: to restrict the splendor of Jewish costume and to preserve some form of distinction. Thus the Piotrkow diet of 1538 reproved the Jews for adopting Christian attire and compelled them to wear a yellow hat. The Lithuanian statute of 1566, as well as the southern Polish statutes of 1595, laid down minute specifications restricting the sumptuousness of female dress and jewelry. The Lithuanian statute ordered yellow hats to be worn by men and yellow kerchiefs by women. On the other hand in times of special calamity, like the \*Chmielnicki massacres (1648–49), the Jewish communities themselves imposed sober dress on their members. In the 18<sup>th</sup> and 19<sup>th</sup> centuries the Jews in Eastern Europe clung to their distinctive wear. Local differences continued paramount; in Russia and Lithuania clothes revealed an Oriental influence shown in the multi-colored silks of the women, the halfmoons printed on materials, and an immense turban with three tails made of white starched linen.

The most widely known garments worn by Jewish men in Poland were the *bekeshe* and the *kapote*. The latter, both in name and shape, was derived from the Persian *caftan*. The *kapote* was generally made of very expensive cloth, such as velvet or *atlas* (a glossy silk or satin). Besides a shirt, knee-length trousers, and white stockings, the men also wore velvet waistcoats (Yid. *vestel* or *speneer*), a black silk belt with tassels called a *gartel*, and a small prayer shawl. Special headcoverings were the skullcaps (Yid. *keppel*, *yarmulke*), the fur hats (*soibel-heet* and *streimel*), the immense sable *kolpak*, adopted from the Gentiles, and the fur-trimmed *spodek* (“saucer”) with a plush base. Most of these types of clothing, as well as female costumes, appear in the pictures and engravings of Polish types drawn by several artists (Norblin, Le Prince, Dave, Piwarski, Kilisinski, Kruszewski, Andrioli, and Debu-court).

The most important item of clothing was the white woolen prayer shawl, the *tallit*. Its central neckpiece (*atarah*) was decorated with an appliqué of knit embroidery, executed in flat, silver threads, in a style called by Polish Jews *spanier* (“Spanish style”) or *shikh*, which was probably brought to Poland by Jewish craftsmen from Spain during the reign of King Sigismund Augustus. A similar type of Spanish embroidery was also used on Torah curtains and Torah mantles.

WOMEN’S COSTUME FROM THE 18<sup>TH</sup> TO THE BEGINNING OF THE 20<sup>TH</sup> CENTURY. Although the woman’s dress was more colorful, her finery was not meant to be displayed out-of-doors, for it is written: “In all glorious things the king’s daughter is within” (Ps. 45:14). However, the sumptuary decrees regulating women’s clothing made an exception for the Sabbath. The dress of the Jewish woman was generally in the fashion of the period, but rather more subdued. The Jewish woman of the late 18<sup>th</sup> and 19<sup>th</sup> centuries wore on top of her dress a kind of bodice, the *vestel* or *kamisol*, usually made of brocade with black passementerie trimmings. At a later stage these trimmings were sewn on to the dresses themselves, or even on to separate plastrons, called *brust-tukh*, *brist-tikhel*, or *bristekh*. The *brust-tukh* was initially a wide strip of brocade adorned with silver stitching and occasionally ornamented with semiprecious stones. Later, this rectangular strip was almost covered with silver stitching, but in the 20<sup>th</sup> century it lost its regular shape and was made of velvet and adorned with various trimmings. The very Orthodox woman always wore an apron (Yid. *fartekh* or *fartukh*), usually trimmed with lace, embroidery, and ribbons, and serving no practical purpose.

WOMEN’S HEADRESS. A distinctive form of headcovering for Jewish women did not emerge until the 17<sup>th</sup> century. At first the forms of headgear varied through the different regions of the area. In western Poland during the 18<sup>th</sup> century, it was customary to wear on the Sabbath a bonnet made of brocade trimmed with lace and silver stitching. On the other hand, in the east – Lithuania and parts of Russia – the earliest form of headcovering consisted of lace trimmed with colored ribbons, glass baubles, and beads. In time pearls and diamonds gradually replaced the simpler popular ornaments, and not only among rich women. In central Poland, Galicia, and Hungary the headcovering was made up of three separate parts: the *harband*, which covered the hair above the forehead; the *grint*, which served as the background; and the *kupke*, made of cloth or lace. Floral trimmings or ribbons were placed over all three. The headdress for very Orthodox women had to be made up from seven different parts assembled in strict order (in an implicit reference to the seven species of crops). The elaborate trimmings for these headcoverings were made by an expert hat-trimmer called *pitzikel* (derived from *putz*, “adornment”).

For the Sabbath a woman put on a sort of tiara, the *binde*, consisting of two strips of velvet (recalling the two tablets of the Law), decorated with gold chains, pearls, and diamonds.

One such tiara, belonging to a Jewish woman of the late 18<sup>th</sup> or early 19<sup>th</sup> century, was acquired by the well-known Polish painter Jan Matejko, and he used it in several of his paintings as a headdress for Polish princesses. After the beginning of the 19<sup>th</sup> century the *binde* gradually disappeared and was replaced by the *sterntikhel*, *sternbindel*, or *bindalikh* worn on top of the *kupkeh*. The *sterntikhel* consisted of pearls and diamonds, strung on iron wire, set off against a cloth background, and later on with no background. Fixing the jewels on the *sterntikhel* was the job of an expert craftsman (which gave rise to the family names Perlherfter and Perlsticker (“pearl-fixer,” “pearl-embroiderer”). From the *sterntikhel* (and other pieces of jewelry) a pearl or a segment was deliberately removed to indicate that there can be no complete joy as long as the Temple is in ruins. From the beginning of the 20<sup>th</sup> century the *sterntikhel* ceased to be worn almost entirely. In Lithuania where the *sterntikhel* was never worn, the headdress consisted of a white *binde* wound around the head like a turban, called a *patshaile*; it was often adorned with a decorative pin, the *knopp*.

Various forms of the *harband* and of the *kupke* continued to evolve in Poland throughout the 19<sup>th</sup> and early 20<sup>th</sup> centuries, most of them trying to suggest a woman’s hair (with a white line of parting, the *kvishel*). The wig or *sheitel* (made of natural hair) was never considered proper wear for the very Orthodox woman, but many imitations, made of brown satin, were in use. Eventually the *kupke* took on the shape of a hat, the *hitel*, topped by flowers, ribbons, peacock feathers, and a *tsitenadel* (“trembling pin”). Two pairs of earrings were sometimes attached to the *kupke*, one at the level of the temples, the other at the level of the earlobes. Exhibitions of Jewish clothing may be seen at the Israel Museum (Jerusalem), the Museum of Ethnography and Folklore (Tel Aviv), and the Ethnological and Folklore Museum (Haifa).

[Miriam Nick]

### Modern

Distinctive Jewish costume largely disappeared from the early 20<sup>th</sup> century. Among the influences of ancient dress that have survived in synagogue wear is the Roman *pallium*, in the form of the *tallit*, and the *\*kitel* (*sargenes*) worn by some on the Day of Atonement and for the *seder*. Distinctive features are still found in the everyday dress of Oriental Jews. In addition, the wearing of a headcovering at all times has become *de rigueur* as the external sign of the Orthodox Jew; among the modern element this has developed as the small embroidered *kippah*. The ultra-Orthodox groups, concentrated mostly in Jerusalem and Bene Berak in Israel, and in limited areas in other parts of the world, still wear the characteristic *streimel* on Sabbaths and festivals (including the intermediate days) and the long *caftan*, yellow and white striped, is sometimes still retained. The custom of married women covering their hair, obligatory according to the Mishnah, is no longer widely observed, except in Orthodox circles where the *sheitel* is also sometimes worn as a substitute.

**DRESSLER, WILLIAM** (1890–1969), U.S. cardiologist and electrocardiographer. Born and educated in Austria, Dressler went to the United States as a refugee in 1938. From that year until 1967 when he became consultant, Dressler served as chief of the Cardiology Clinic and head of the Electrocardiographic Laboratory at Maimonides Medical Center. Dressler’s major contribution to medicine was his recognition and description of the post-myocardial infarction syndrome, also known as the Dressler syndrome. He wrote six cardiology texts, three in German and three in English. His *Clinical Cardiology* (1942) became the classic book of cardiological diagnosis.

[Fred Rosner]

**DREUX** (Heb. דְּרֵוּךְ), town in the Eure-et-Loire department, France, 53 mi. (86 km.) S.W. of Paris. During the Middle Ages, the Jews of Dreux were numerous enough to occupy their own quarter, which was remembered as the rue des Juifs up until the 19<sup>th</sup> century. Many figures previously associated with Dreux, like R. \*Solomon b. Judah (“the saint”) are now believed to have been active in Rouen. According to W. Bacher (REJ, 17 (1888), 301), Abraham \*Ibn Ezra stayed there for a time.

[Bernhard Blumenkranz]

**DREXLER, MILLARD S.** (“Mickey”; 1944– ), U.S. merchant. Born and raised in New York City, Drexler spent all his professional life as an apparel retailer. He rose from humble beginnings to become chief executive officer of the publicly owned Gap Inc., whose focus on affordable basics made it the biggest specialty clothing store chain in the U.S. and an internationally familiar name. While attending the Bronx High School of Science, Drexler worked in New York City’s garment center with his father, a buyer of buttons and textiles for a coat manufacturer. In 1966, he earned a business degree at the State University of New York at Buffalo and two years later received an M.B.A. at Boston University. He entered retailing with posts at Bloomingdale’s, Macy’s, and Abraham & Straus. In 1980, he was appointed president of Ann Taylor and within three years turned the women’s apparel chain into a success. He joined Gap in 1983 as deputy to Donald \*Fisher, founder and chairman, was named president of the Gap division, and went about reinventing the company. He hired new designers, strengthened quality control, and invested in store renovation. In 1986, he launched GapKids, an immediate suc-

cess. He was named president of Gap Inc. in 1987 and CEO in 1995. In his almost two decades at the company, he cemented a reputation as a master merchandiser. When Drexler joined Gap, it had 550 stores filled with clothes that were not selling and \$80 million in sales. When he left 19 years later, it had more than 4,000 Gap, Old Navy, and Banana Republic stores and more than \$14 billion in sales. In 1994, when Gap's business was feeling the effects of increased competition from high-end designers as well as mass merchandisers, Drexler launched Old Navy, a discount chain that grew to 282 stores in less than three years. In 1998, *Fortune* magazine called him "possibly the most influential individual in the world of American fashion," pointing out that he had transformed Gap from a national retail chain into a global brand. A soft economy and tougher competition contributed to a two-year sales slump that began to reverse itself in 2002, the year Drexler left Gap. In January 2003, he became head of the smaller, privately held J. Crew Group, another specialty chain.

[Mort Sheinman (2<sup>nd</sup> ed.)]

**DREYFUS**, family of bankers originating from Sierentz in Alsace. ISAAC DREYFUS (1786–1845) founded the firm Isaac Dreyfus, Soehne, Basle, with his sons as partners, as one of the few Jews the city magistrate allowed to settle within the walls (1813). His son SAMUEL (1820–1905), who remained with the firm, was president of the Basle Jewish community (1865–96) and founder of the Jewish orphanage and old-age home. A second son, JACQUES (1826–1890), moved to Frankfurt where he established the Dreyfus-Jeidels bank in 1868, which became J. Dreyfus and Co. in 1890, to which a Berlin branch was added in 1891. His son ISAAC (1849–1909) and grandson WILLY (1885–?) developed the bank into one of the largest investment banks in Germany, but the Nazis forced it into liquidation in 1937. Samuel Dreyfus was succeeded by his son JULES DREYFUS-BRODSKY (1859–1941) and his nephew ISAAC DREYFUS-STRAUSS (1852–1936). The family banking tradition was further maintained by Jules's son PAUL (1895–1967), who considerably expanded the firm's activities. Members of the Dreyfus family worked for the Jewish community. In Switzerland, Jules was president of the Swiss Union of Jewish Communities (1914–36) and of the community of Basel (1906–36) and Paul, who was a founder of \*ORT in Switzerland, campaigned for the admission of Jewish refugees from Germany during World War II. In Germany Jacques, Isaac, and Willy Dreyfus were all active in communal affairs. Katjy Guth, née Dreyfus, was the director of the Jewish Museum of Switzerland in Basel (est. 1968).

[Hanns G. Reissner / Uri Kaufmann (2<sup>nd</sup> ed.)]

**DREYFUS, ALFRED** (1859–1935), officer in the French army, involved in a treason trial. His court-martial, conviction, and

final acquittal developed into a political event which had repercussions throughout France and the Jewish world. Born in Mulhouse, Alsace, Dreyfus was the son of a wealthy, assimilated family which settled in Paris after the Franco-Prussian War. He studied at the Ecole Polytechnique and entered the army as an engineer. In 1892 he became a captain on the general staff, where he was the only Jew. He was overwhelmed by the drama (see below) in which he played the central role, but failed to grasp its deeper significance: its Jewish, general humanitarian, and political aspects. After his final exoneration he was reinstated in the army as major and served a further year. He reenlisted in World War I and was promoted to lieutenant colonel at its conclusion. Dreyfus published his *Lettres d'un innocent* (1898; *The Letters of Captain Dreyfus to his Wife*, 1899) written from Devil's Island, and his memoirs *Cinq ans de ma vie* (1901; *Five Years of my Life*, 1901). Additional *Souvenirs et correspondance* were published posthumously (1936; *Dreyfus: His Life and Letters*, 1937).

### Dreyfus Affair

In the fall of 1894 a secret military document (the *bordereau*) sent by a French officer to the military attaché of the German embassy in Paris, Col. von Schwartzkoppen, fell into the hands of the French Intelligence Service. On the basis of a certain similarity of handwriting, and probably out of anti-Jewish prejudice against Dreyfus, the heads of the Intelligence Service – among whom Major H.J. Henry was conspicuous – threw suspicion upon Dreyfus. He was arrested and tried before a court-martial. The trial took place *in camera* and the testimonies were insufficiently verified. It was also not disclosed that contrary to all legal procedure the ministry of war had placed a file of secret documents (part of which were forgeries) before the tribunal, a fact concealed even from Dreyfus' attorney. The court unanimously found Dreyfus guilty of treason, and he was sentenced to life imprisonment. On January 5, 1895, Dreyfus was publicly demoted in a degrading ceremony, during which he continued to proclaim, "I am innocent." The mob, which had been incited by the antisemitic press, especially by E.A. \*Drumont, accompanied the ceremony with fulminations against Dreyfus and the Jews. Dreyfus was exiled to Devil's Island (French Guinea, off the coast of South America), even though in the meanwhile, the German ambassador had declared formally that Germany had had no contact with Dreyfus.

Dreyfus' brother turned to the writer Bernard \*Lazare, who now led the struggle against the verdict. In November 1896 Lazare published a pamphlet, "The Truth about the Dreyfus Affair," and sent it to members of the senate and public figures. The new head of the French Intelligence Service, Lt. Col. Georges Picquart, had independently sensed something suspicious in the Dreyfus trial. In March 1896, Intelligence Service personnel seized a letter which Schwartzkoppen had written to a French major, Ferdinand Walsin Esterhazy, an adventurer of aristocratic Hungarian origin. This made it clear that Esterhazy was a German agent. Picquart concluded that the *bor-*

dereau incriminating Dreyfus had been written by Esterhazy. Henry forged additional documents to prove to his superiors that the court-martial had not erred. Picquart was dismissed from his position and dispatched to serve in Africa.

Before leaving Paris he transmitted the facts to his friends. Through them they reached the ears of the left-wing senator, Auguste Scheurer-Kestner, who announced in the senate that Dreyfus was innocent, and openly accused Esterhazy. The right-wing prime minister, F.J. Méline, refused to accept his statement and tried to hide the facts. The Dreyfus case increasingly became the focus of the political struggle centering round the regime, its image and principles, and fought in all strata of French society, including circles close to the government. Esterhazy was tried and acquitted, while Picquart was punished with 60 days imprisonment. On January 13, 1898 *L'Aurore*, Georges Clemenceau's newspaper, published an open letter from the novelist Emile Zola to the president of the republic, captioned "J'accuse!" which accused the denouncers of Dreyfus of malicious libel. The article made a powerful impression; 200,000 copies were sold in Paris. Zola was found guilty of libel in February 1898. Officers of the general staff threatened to resign if Dreyfus was acquitted and antisemitic riots occurred in different parts of the country. In the meantime confidence in the justice of the verdict was waning. The affair aroused lively interest abroad and in France it became a public issue. Parties, social circles, and even families were split. The antagonistic groups formed two camps – the *Ligue des Droits de l'Homme*, which spearheaded the fight for Dreyfus, and the *Ligue de la Patrie Française*, led by Paul Déroulède. Many of the supporters of the latter camp considered that a single case of injustice involving one Jew was not sufficient grounds for staining the honor of the army.

In summer 1898 the protestations of Picquart and others induced the new war minister, Cavaignac, to reopen the case and re-investigate the documents. Henry's forgeries were detected. He was arrested and subsequently committed suicide in his cell. Public opinion moved in Dreyfus' favor and the controversy divided the government. At last the government decided to request an annulment of the verdict and a retrial for Dreyfus from the Supreme Court. The political agitation continued, and after several crises René Waldeck-Rousseau formed a cabinet whose avowed aim was to restore the rule of law and justice and reestablish democracy.

**THE SECOND TRIAL.** The second trial took place in Rennes. The army officers adhered to their original testimony. Finally, on September 9, 1899, the court-martial decided by a majority that Dreyfus had committed treason – but because of "extenuating circumstances" he was sentenced to only ten years' imprisonment, five of which he had already served. Anti-Semites and reactionaries viewed the verdict as a justification of their position. Differences of opinion developed between Dreyfus' defenders: those to whom the Dreyfus affair was a political issue and a matter of principle wanted him to appeal and continue the struggle, while Dreyfus and his family were inter-

ested only in securing his release. At Waldeck-Rousseau's suggestion, Dreyfus withdrew his appeal and was finally granted a "pardon" by the president of the republic. In 1904, with the Leftist government firmly established, Dreyfus demanded a fresh investigation. The Court of Appeal reexamined the case, and in 1906 pronounced that the evidence against Dreyfus was completely unsubstantiated and that it was unnecessary to order a further trial to exonerate him.

The Dreyfus affair was a turning point in the history of the Third Republic. It embittered the struggle between the opponents and partisans of the republican regime. The Waldeck-Rousseau cabinet succeeded in enacting a number of anti-clerical measures, and in 1905 it passed a law separating the church from the state. This also influenced the status of the Jewish Consistory in France. The Dreyfus affair made a powerful impact on the attitude of the socialist parties toward the Jews. The radical Marxist wing under Jules Guèsde, which identified Jews with the capitalists and viewed the affair as an internal concern of the bourgeoisie, retreated before the socialist-humanitarian wing led by Jean-Léon Jaurès. Proletarian antisemitism weakened. The Dreyfus affair made a strong impact on the outlook of world Jewry and the atmosphere in their respective countries. Jews everywhere were shocked that the affair could take place in France, the "homeland of liberty and the Great Revolution," and that hatred of the Jews could still prejudice the behavior of a considerable part of the French people, in particular when the Jewish victim was completely assimilated. This seemed to prove clearly that assimilation was no defense against antisemitism. Theodor Herzl's confidence in liberalism was shaken when he personally observed the French mass reaction and the uproar that the Dreyfus case aroused. The experience led him to Zionism.

Echoes of the Dreyfus affair continued to reverberate in France for over a generation. Its consequences were still recognizable in the line that divided the Vichy government from the Free French during World War II.

[Moshe Catane]

**DREYFUS, STANLEY A.** (1921– ), U.S. Reform rabbi. Dreyfus was born in Youngstown, Ohio, and received his B.A. from the University of Cincinnati and his B.H.L. from Hebrew Union College in 1942. Ordination and his M.H.L. followed in 1946, when he also won the Heinsheimer Fellowship for graduate study at HUC, where he began teaching liturgy and served as director of the Reference Department. Subsequently (1948–50), he became counselor to the Hebrew Union College's Interfaith Program, working with Christian clergymen who were studying Hebrew, Bible, and Jewish thought to teach in their own seminaries. In 1951, Dreyfus was awarded his Ph.D. from HUC-JIR, which later conferred on him an honorary D.D. (1971). While pursuing his graduate studies, Dreyfus served as rabbi of Congregation Beth-El in Beaver Falls, Penn. (1946–50), and West London Synagogue in London, England (summer 1949). He went on to pulpits at Congregation Beth Shalom, East Liverpool, Ohio (1950–51), and United Hebrew Congregation of Terre Haute, Ind. (1951–66), where he also served as chaplain of the U.S. penitentiary (1951–53). His term as rabbi in Terre Haute and visiting professor at the Indiana School of Religion in Bloomington was interrupted by active service as chaplain for the United States Army in Colorado and Germany (1953–55). Subsequently, as rabbi of Congregation B'nai Israel in Galveston, Texas (1956–65), Dreyfus was president of the Association of Texas Rabbis and chairman of Home Service for the Galveston Red Cross, in addition to serving on the Galveston County Biracial Committee and the Human Relations Committee. In 1965, Dreyfus was appointed rabbi of Union Temple in Brooklyn, N.Y., where he remained until 1979, when he became emeritus and was named director of the Rabbinic Placement Commission of the Central Conference of American Rabbis, becoming emeritus in 1991.

From 1969 to 1973, Dreyfus was chairman of the Liturgy Committee of the \*Central Conference of American Rabbis. He played an instrumental role in compiling *Gates of Prayer: The New Union Prayerbook* (the standard text for synagogue use on Sabbaths and Festivals); *Gates of the House* (for home prayer); and *Gates of Repentance* (for the High Holidays). In this role, he also oversaw and contributed to the publication of *Gates of Understanding*, a volume of lengthy introductions to the series of Reform Jewish prayerbooks. In addition, Dreyfus served on the CCAR's Committee on Homosexuality and the Rabbinate – which ruled that homosexuality *per se* was not to be considered a disqualifying factor when it comes to candidacy for the rabbinate – and the Committee on Patrilinear Descent, which established that Jewish lineage may be passed on to children through the father alone, breaking from Orthodox and Conservative tradition that only the mother determines the religion of the offspring. Dreyfus was also a member of the CCAR's Committee on Reform Jewish Classics, the Admissions Committee, the Responsa Committee, the Rabbinic Population Committee, and the Reform Jewish Practice Committee.

At different periods during his career, Dreyfus also served as president of the Association of Reform Rabbis of New York,

of the Brooklyn Board of Rabbis, of the Association of Jewish Chaplains of the United States Armed Forces, and of the National Association of Retired Reform Rabbis. Additionally, he was a member of the Governing Body of the World Union for Progressive Judaism, the Board of Governors of the New York Board of Rabbis, and the Commission on Jewish Chaplaincy of the National Jewish Welfare Board as well as co-chairman of the Catholic-Jewish Relations Committee of Brooklyn and Queens. Dreyfus was an instructor in the Active Reserve on the faculty of the Army Chaplain School for 21 years, attaining the rank of lieutenant colonel.

[Bezalel Gordon (2<sup>nd</sup> ed.)]

**DREYFUS BROTHERS**, pioneers of the cellulose acetate rayon industry. The brothers, HENRY (1876–1945) and CAMILLE (1878–1956), were born in Basle, Switzerland. They developed quality cellulose fiber soluble in acetone and manufactured noninflammable cellulose film, used by the Allies in World War I for treating fabric wings of airplanes. After the war they developed in England processes for spinning this film into man-made fiber, Celanese. Henry headed British Celanese Ltd.; Camille became president of Celanese Corporation of America and Canadian Celanese Ltd. Henry took out over 1,000 patents, the greatest number ever held by a single individual.

**DREYFUSS, BARNEY** (1865–1932), owner of the Pittsburgh Pirates baseball team from 1900 to 1932, founder of the World Series, builder of baseball's first modern stadium. Born in Freiberg, Germany, to Samuel Dreyfuss, an American citizen living in Germany, Dreyfuss came to the United States in 1881 to avoid being drafted into the German army. He settled in Paducah, Kentucky, and found work at the Bernheim whiskey distillery, at first cleaning whiskey bottles and eventually becoming head bookkeeper. Advised that outdoor activity would cure his poor indigestion, headaches, and general poor health, he organized and played second base on a semiprofessional baseball team that he formed.

The distillery moved to Louisville in 1888, and there Dreyfuss became part owner, secretary-treasurer, and eventually team president and owner of the National League Louisville Colonels. At the same time, he bought into the Pittsburgh Pirates, and as the National League was dropping the Louisville Colonels, Dreyfuss became sole owner of the Pirates, where he remained until his death. Considered the best judge of baseball talent in his time, Dreyfuss' outstanding ability as a scout made it possible for the Pirates to win the National League pennant six times (1901, 1902, 1903, 1909, 1925, 1927) and the World Series in 1909 and 1925. Indeed, many of his star players were elected to Baseball's Hall of Fame, and it was said by the president of the National League upon Dreyfuss' death, "He discovered more great players than any man in the history of baseball."

In 1903, Dreyfuss approached Henry Killilea and proposed that his American League champion Boston Pilgrims

(Red Sox) meet the National League champion Pirates in a nine-game interleague series, with the winner taking 60 percent of the gate receipts and the loser 40 percent. Dreyfuss believed a post-season contest would establish better relations between the two squabbling leagues and create additional interest in baseball. It did, beyond anyone's imagination, and thus was born the first World Series, a permanent American icon that achieved almost mythic proportions. In a gesture of goodwill, and contrary to the treacherous, greedy image of the typical owner, Dreyfuss put his club's \$6,699.56 gate receipts into the players' pool, which earned the 16 Pirates \$1,316 each, more than the victorious Boston players' \$1,182.

In 1909, Dreyfuss built Forbes Field, the first modern steel-frame triple-tier stadium and the first baseball park capable of seating 25,000 fans. The stadium represented a visionary statement, for up until then no one believed that a game of baseball could attract that many people. Dreyfuss was also instrumental in having the spitball pitch banned from baseball in 1920.

Dreyfuss was also a pioneer in the formative years of professional football. He was co-owner and manager of the Pittsburgh Athletic Club, winners of the pro football championship in 1898, professional football's fourth organized season.

[Elli Wohlgelernter (2<sup>nd</sup> ed.)]

**DREYFUSS, RICHARD** (1948– ), American actor. Dreyfuss was born in Brooklyn, New York, where his father was an attorney, but the family moved to Los Angeles, where he was educated. He joined the West Side Jewish Center and at the early age of nine showed his penchant for acting, taking part in all the plays produced there. Even as a high school student he was engaged to play professional parts, and from 1963 to 1973 acted on Broadway, in repertory and comedy. He first gained his reputation as a film actor in George Lucas' *American Graffiti*, playing the part of Curt Henderson, and from then went from strength to strength. In 1974 he went to Canada, and *The Apprenticeship of Duddy Kravitz*, a film with a Jewish theme in which he starred, won first prize at the Berlin Film Festival. In 1974 he starred in Steven Spielberg's film adaptation of Peter Benchley's best-selling novel *Jaws*, which became the biggest box-office hit to that date. A year later he played the part of Yonatan Netanyahu in the TV film *Victory at Entebbe*, about the Israeli commando action that freed hostages held in a plane hijacked to Uganda. In 1977 he starred in another highly successful Spielberg film, *Close Encounters of the Third Kind*. In 1977 he was awarded the Academy and Golden Globe awards for best actor for his performance in *The Goodbye Girl*. At the time, at age 29, he was the youngest performer ever to have won a Best Actor Oscar. Dreyfuss went on to act in such films as *The Big Fix* (1978), *Whose Life Is It Anyway?* (1981), *Down and Out in Beverly Hills* (1986), *Tin Men* (1987), *Stakeout* (1987), *Nuts* (1987), *Moon over Parador* (1988), *Lost in Yonkers* (1983), *Always* (1989), *Postcards from the Edge* (1990), *Rosencrantz and Guildenstern Are Dead* (1990), *What about Bob?* (1991), *Silent Fall* (1994), *Mr. Holland's Opus* (Oscar nomina-

tion for Best Actor, 1995), *Mad Dog Time* (1996), *Krippendorf's Tribe* (1998), *The Crew* (2000), *The Old Man Who Read Love Stories* (2001), and *Silver City* (2004).

Dreyfuss has also performed in many stage and television productions. He starred in the 2001 TV drama series *The Education of Max Bickford* as well as such TV movies as *Prisoner of Honor* (1991), *Oliver Twist* (1997), *Lansky* (1999), *Fail Safe* (2000), *The Day Reagan Was Shot* (2001), *Coast to Coast* (2004), and *Copshop* (2004). On Broadway he has appeared in *But Seriously* (1969), *Total Abandon* (1983), *Death and the Maiden* (1992), and *Sly Fox* (2004). In 2000 Dreyfuss was awarded a Lifetime Achievement Award at the Hollywood Film Festival. With Harry Turtledove, Dreyfuss co-authored the novel *The Two Georges* (1996).

[Jonathan Licht / Rohan Saxena and Ruth Beloff (2<sup>nd</sup> ed.)]

**DREYZL, LEAH** (second half of 18<sup>th</sup> century), composer of *tkhines* (Yiddish prayers). Dreyzl lived in Stanislaw, Poland, and came from a distinguished family. Her great-grandfather was Hakhama Zevi \*Ashkenazi (1660–1718) and several of her male relatives were rabbis and scholars. Leah Dreyzl married Rabbi Aryeh Leib Auerbach, who became the rabbi at Stanislaw and was closely associated with the burgeoning Hasidic movement. He was believed to be an intimate of the Baal Shem Tov.

It is clear from her own writings that Leah Dreyzl was educated. The two *tkhines* she is known to have written are filled with biblical references and lines from the prayer book, and are permeated with mystical overtones. They were published posthumously, probably during the 19<sup>th</sup> century, and were named (by the publisher) "Tkhine es rotsn" ("Tkhine of a Time of [Divine] Favor") and "Tkhine Sha'arei Teshuvah" ("Tkhine of the Gates of Repentance"). An introduction to the published edition credits "Mistress Hena...widow of the departed...Rabbi David Tsvi," with passing down these writings "from her mother-in-law, the righteous, pious, renowned rabbi's wife, Mistress Leah Dreyzel." Both of these poems, written for the penitential month of Elul, easily lend themselves to oral recitation. This has led literary analysts to conclude that Leah Dreyzl was a *firzogerin* in the Stanislaw synagogue, leading the women's congregation in prayer.

[Emily Taitz (2<sup>nd</sup> ed.)]

**DREZNER, YEHIEL DOV** (1922–1947), Jew executed by the British in Palestine. Drezner was born in Poland and came to Erez Israel with his parents who settled in Jerusalem, where Drezner joined the Betar movement. In 1940 he moved to Netanyahu, where he joined I.Z.L. under the pseudonym of Dov Rosenbaum. In 1945 I.Z.L. retaliated for the flogging inflicted

on one of their members who was captured by the British, by seizing British officers and subjecting them to the same humiliating punishment. Drezner was in command of one unit, the other four members of which were Mordechai Alkaḥi, Eliezer Kashani, Abraham Mizraḥi, and Ḥayyim Golavski. The whole unit was captured. Mizraḥi was wounded and died before the trial (one version is that he was murdered) and the other four put on trial. Golavski was sentenced to life imprisonment in view of his youth, while the other three were sentenced to death. An attempt to rescue them by an assault on the Jerusalem central prison where they were held was foiled by their removal to Acre on the very morning of the intended assault. All four, together with Dov \*Gruner, were hanged on the same day, Apr. 16, 1946.

**BIBLIOGRAPHY:** Y. Nedava, *Olei-ha-Gardom* (1966); Y. Gurion, *Ha-Nizzāḥon Olei Gardom* (1971).

**\*DRIVER, SAMUEL ROLLES** (1846–1914), Bible scholar and Hebraist; from 1883 Regius Professor of Hebrew at Oxford. Driver's chief work, *An Introduction to the Literature of the Old Testament*, appeared in 1891 (1913<sup>9</sup>). Among his early publications was *A Treatise on the Uses of the Tenses in Hebrew* (1874, 1892<sup>3</sup>). He was a practicing Christian ordained as a priest in the Anglican Church and held various offices in that church. Nevertheless, he wrote his books in the spirit of the critical method established by J. \*Wellhausen, at the same time stressing that his conclusions did not impugn the sanctity of the Bible or attribute literary forgeries to it. He was therefore attacked from both sides. Conservative theologians condemned his views as "dangerous," while some of his fellow Bible critics accused him of making concessions to orthodox extremism. Driver was alert to every new potential source of information on the Bible, as may be seen by the fact that he was among the first to write a book on archaeology and the Bible, *Modern Research as Illustrating the Bible* (1909). Driver was one of the editors of the "International Critical Commentary" series of scholarly editions of biblical books, and also contributed commentaries on Deuteronomy (1895, 1902<sup>3</sup>), and Job (with G.B. Gray, 1905). His other works include commentaries on Genesis (1911<sup>9</sup>), Exodus (1911), Daniel (1900), and other books of the Bible, and papers on specific points in the prophetic writings, as well as researches into the Masoretic text of Samuel (*Notes on the Hebrew Text and the Topography of the Books of Samuel*, 1890, 1913<sup>2</sup>). He also participated in the compilation of *A Hebrew and English Lexicon of the Old Testament* (with F. Brown and C.A. Briggs, 1907). This work, based on the lexicon of William \*Gesenius, and popularly known as *BDB* (from the initials of its authors), remains in widespread use. Together with A. \*Neubauer, he published *The "Suffering Servant" of Isaiah According to the Jewish Interpreters* (1877). All of Driver's books were well written and carefully researched and three of them are so basic that for all the progress that has been made since then the specialist still has occasion to consult them (his *Introduction...*, his *Tenses*, and his *Notes on the Hebrew Text*).

His son SIR GODFREY ROLLES DRIVER (1892–1975), Bible and Semitic scholar, gained knowledge of the Middle East with the British Egyptian Expeditionary Force in 1919 for which he wrote *A Report on Kurdistan and the Kurds* (1919). Later he also published *A Grammar of the Colloquial Arabic of Syria and Palestine* (1925). From 1919–28 he taught classics at Oxford and from 1928 lectured there on Hebrew and comparative Semitic philology, becoming professor of Semitic philology (1938–62) and intermittently professor of Hebrew (1934, 1953–54, and 1959–60).

One of his important early works was "The Modern Study of the Hebrew Language" in *The People and the Book* (ed. A.S. Peake), 73–120. In 1935 he collaborated with J.C. Miles in editing *The Assyrian Laws*, which aimed to serve as a textbook for scholars of the Old Testament as well as of comparative law (revised as vol. two of *Assyrian Laws and Babylonian Laws*, 1952, 1955). The following year Driver published *Problems of the Hebrew Verbal System* in which he explained the peculiarities of the Hebrew tense system and other features of Hebrew as resulting from the origin of Hebrew as a mixture of Canaanite and the original language spoken by the Israelites. In 1948 he published his Schweich Lectures of 1944 under the title *Semitic Writing* where he examined the origin and development of the Semitic alphabet and in which he was one of the first to realize the significance of Ugaritic. In 1954 he edited and translated the Borchartd Aramaic documents in the Bodleian Museum under the title *Aramaic Documents of the Fifth Century B.C.* (revised 1957). These were official and semiofficial documents from the court of the Persian satrap in Egypt. The following year he published *Canaanite Myths and Legends*, in which he translated Ugaritic legends and included an Ugaritic glossary.

His *Judean Scrolls* (1965) discussed the problem of the identity and date of the community of Qumran, which he identified with the \*Zealots. On his seventieth birthday a volume of *Hebrew and Semitic Studies* (1963) was dedicated to him. It contains a selected bibliography of his works. He was joint director of the committee that prepared the translation of the Old Testament in the New English Bible (1970). He wrote numerous articles on Hebrew lexicography, in which, by the use of cognate languages, he uncovered hitherto unrecognized meanings of biblical words. Much of these he incorporated into the New English Bible and into his work on a new edition of F. Brown, S.R. Driver, and C.A. Briggs' *Hebrew Lexicon*.

**DROB, MAX** (1887–1959), U.S. Conservative rabbi. Drob was born in Mława, Poland, and was taken to the United States in 1895. He graduated from Columbia University (1908) and received rabbinic ordination from the Jewish Theological Seminary (1911), and served congregations in Syracuse, New York (1911–13), Buffalo, New York (1913–19), New York City

(1919–27), and Philadelphia (1927–29). From 1929 he was rabbi of the Concourse Center of Israel, Bronx, New York, where he remained for the rest of his career. Drob was president of the Rabbinical Assembly of America from 1925 to 1927, and chairman of its *bet din* from 1923 to 1941. He was regarded as belonging to the traditionalist wing of Conservative Judaism seeking to transmit traditional religious practice in a manner more decorous and more American. He was actively involved in the professionalization of the rabbinate with such issues as rabbinic placement and pension determined by regulations and procedures. He was president of the non-denominational New York Board of Rabbis 1933–34 and also served as a member of the commission set up by New York State to supervise the enforcement of *kashrut* laws, at a time before the Orthodox Union had established its domination of *kashrut*. He was a founder of the United Synagogue of America and on the board of the Jewish Theological Seminary.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**DROBNER, BOLESŁAW** (1883–1968), Polish socialist politician. Born in Cracow into an assimilated family, Drobner joined the Polish Social Democratic Party of Galicia and Silesia in 1898, attaching himself to the radical left wing. He took part in the revolution of 1905 and during World War I fought in Pilsudski's Legion. After Polish independence, Drobner joined the Socialist Party and in 1922 became one of the founders of the Independent Socialist Party. When the two parties reunited in 1928 he was appointed to the supreme council of the united party. He represented the left wing of the party calling for cooperation between socialists and communists. Drobner was frequently arrested for organizing strikes and following the outbreak of World War II left Poland for the U.S.S.R., where he was a founder of the Soviet-sponsored Union of Polish Patriots. He became minister of labor and social care in the Committee of National Liberation and at the conference of the Polish Socialist Party in 1944 was elected party chairman.

Drobner returned to Poland after the war and was a member of the Polish delegation at the Russo-Polish frontier negotiations of August 1945. In 1947 he was elected to the Sejm (Polish parliament) and in the following year joined the ruling communist United Workers Party. He had a great love for his native Cracow and did much for the preservation of its historical relics. He also initiated the restoration of Jewish culture there, particularly the 15<sup>th</sup>-century Jewish synagogue.

[Abraham Wein]

**DROGOBYCH** (Pol. **Drohobycz**), city in Ukraine, formerly in Poland and Austria. Information about individual Jewish contractors of the salt mines in Drohobych dates from the be-

ginning of the 15<sup>th</sup> century. Some of them settled in the city, eventually forming a small community (*kehillah*). In 1578, however, Drohobych obtained the privilege *de non tolerandis Judaeis* authorizing the exclusion of Jews from its precincts. Although a number of Jews were subsequently found living in the vicinity, their settlement was not permanent until the end of the 17<sup>th</sup> century, enabled by royal patronage. All commerce and crafts were then concentrated in Jewish hands. Jewish guilds were formed and the records evidence the friction that existed between them and the Christian guilds of the city, as also between the citizens of Drohobych and the Jewish inhabitants. The Drohobych *kehillah* was represented on the provincial council of \*Rzeszow (see \*Councils of the Lands). In the middle of the 18<sup>th</sup> century a wealthy, despotic farmer of the taxes and customs revenues, Zalman b. Ze'ev (Wolfovicz), seized control of communal affairs. He appointed his son-in-law rabbi, and for his ruthless treatment of both Jews and non-Jews he was finally denounced to the authorities; in 1755 he was arrested, tried, and condemned to death, but as generous assistance was contributed by his coreligionists the sentence was commuted to life imprisonment. He subsequently adopted Christianity and died a member of the Carmelite order in 1757.

After Drohobych passed to Austria in 1772, economic oppression, heavy taxation, and government interference in communal affairs had an adverse effect on the Jewish position. It improved in the 19<sup>th</sup> century, however, especially with the exploitation of the mineral resources of Drohobych; the salt industry was also a Jewish enterprise. The first attempts to prospect for oil and its extraction were made in Drohobych by a Jew, Hecker, in 1810, and in 1858–59 a refinery was constructed by A. Schreiner in nearby \*Borislav at the same time as the industry was developed in the United States. Drohobych Jews took a prominent part in oil extraction and refining, and its export was mainly in Jewish hands. Many families made fortunes in this sector. The takeover of the smaller companies by big enterprises at the end of the 19<sup>th</sup> century, however, badly hit the Jewish concerns, and the economic position of the community began to deteriorate. After World War I it became impoverished. \*Hasidism and the \*Haskalah movement spread to Drohobych at the end of the 18<sup>th</sup> century. A German biweekly printed in Hebrew characters, the *Drohobitzer Zeitung*, was published between 1883 and World War I, and brought out several Hebrew supplements entitled *Ziyyon* (1886–87, 1897). Toward the end of Hapsburg rule the constituency of Drohobych was represented in the Austrian parliament by a Jewish deputy, an assimilationist with sympathies for Poland, who had the backing of the authorities. He was opposed by a Zionist-supported Jewish national candidate in 1911. The authorities were accused of ballot-fixing during the elections, and the army was called out to disperse a demonstration. Shots were fired into the crowd. Thirteen Jews were killed and many injured. Drohobych remained the center of the Galician \**kolel* from the 1890s until the Holocaust. Hayyim Shapira, the last *zaddik* in Drohobych, was the first of the *hasidic zaddikim* to

join officially the Zionist movement. He went to Erez Israel in 1922. The Jewish population of Drogobych totaled 1,924 in 1765, 2,492 in 1812, 8,055 in 1865, 8,683 in 1900, and 11,833 (about 44% of the total population) in 1921.

[Nathan Michael Gelber]

### Holocaust and Postwar Periods

When World War II broke out, the town with its 17,000 Jews came under Soviet occupation. The authorities arrested the Zionist leaders and closed the Hebrew schools. Jewish refugees from western Poland found shelter in Drogobych, but most of them were deported to the Soviet interior. The Germans entered Drogobych on June 30, 1941, and immediately staged a pogrom with the help of the local Polish and Ukrainian population. About 400 Jews were brutally murdered outside the courthouse and at the Jewish cemetery. Another 300 were executed in the nearby Bronice forest in November. In March 1942 some 2,000 Jews were sent to the \*Belzec extermination camp. The second mass deportation took place on August 8, with the dispatch of 2,500 Jews to the same destination, while another 600 were shot in the town itself. The ghetto was established in September. The remaining 9,000 Jews, some of whom were refugees from the nearby villages, were crowded into it. Toward the end of October an additional group consisting of 2,300 Jews was sent to Belzec, and 200 hospital patients were murdered. The surviving Jews began building hideouts or sought shelter in the nearby forest. However, the Germans thwarted their efforts by continuing the *Aktion* for the whole month of November 1942 and by ordering the death sentence for all non-Jews caught sheltering Jews. For a while the process of extermination did not affect those Jews conscripted for forced labor in the local petroleum industries. The Bronice forest became a mass grave for the Jews of Drogobych and vicinity, including all members of the Judenrat. On February 15, 1943, 450 were executed there, including 300 women. In March 800 from the labor camps were murdered. The remnants of the Jewish community tried to save themselves by hiding or by escaping to Hungary via the Carpathian Mountains, while a few tried to obtain "Aryan" papers. When the Soviet army entered Drogobych in August 1944, some 400 Jews were still alive.

After the war, Drogobych was ceded to the Ukrainian S.S.R., and most of the Jews left for Poland in transit to Israel and other countries.

**BIBLIOGRAPHY:** N.M. Gelber (ed.), *Sefer Zikkaron le-Droho-bich, Boryslav ve-Hasevivah* (1959); M. Balaban, *Z historji Zydów w Polsce* (1920), 129–46.

**DROPKIN, CELIA** (1887–1956), Yiddish poet. Born Zipporah Levine in Bobruisk, Belorussia, daughter of a lumber merchant, Dropkin was raised by her widowed mother. Taught Jewish subjects by a rabbi's wife, she graduated from the Novosybko (Russian) gymnasium. She tutored in Warsaw, before continuing her studies in Kiev. There, the Hebrew writer Uri Nissan \*Gnessin encouraged her writing of Russian po-

etry. Returning to Warsaw, then to Bobruisk, Dropkin married Samuel Shmayer Dropkin in 1909. She and their first child (born 1910) joined him in New York in 1912. Five of their six children survived into adulthood. In New York, Dropkin wrote Russian poems which she translated into Yiddish (1917) and published in *Di Naye Velt* and *Inzikh* (1920). Throughout the 1920s and 1930s, her works appeared in avant-garde publications of *Di \*Yunge* and the *Inzikhistn: Onheyb, Poezye, and Shriftn*. Dropkin's poems – notable for their explicit sexuality, whether about love, motherhood, or death – earned her a reputation as a leading woman poet. Her short stories and poems also appeared in Abraham \*Liessin's *\*Tsukunft*. Only a single volume of Dropkin's poems appeared during her lifetime: *In Heysn Vint* ("In the Hot Wind," 1935). Widowed in 1943, she spent her last years painting in oils and water colors. Her last published poem appeared in *Tsukunft* (April 1953).

Three years after Dropkin's death, her children published an expanded edition of her poetry, short stories, and paintings: *In Heysn Vint* (1959) includes the poems of the 1935 edition, as well as uncollected and previously unpublished poems, selected by Sasha Dillon. Another poem, "Shvere Gedanken" ("Heavy Thoughts"), was later discovered on a tape recording and appeared in *Yidische Kultur* (1990). Poems and stories in English translation appeared in I. Howe and E. Greenberg (eds.), *A Treasury of Yiddish Poetry* (1969); I. Howe et al. (eds.), *Penguin Book of Modern Yiddish Verse* (1987); F. Forman et al. (eds.), *Found Treasures: Stories by Yiddish Women Writers* (1994); R. Whitman (ed.), *Anthology of Modern Yiddish Poetry* (1995); J. Chametzky et al. (eds.), *Jewish American Literature: A Norton Anthology* (2001); S. Bark (ed.), *Beautiful as the Moon, Radiant as the Stars: Jewish Women in Yiddish Stories* (2003).

**DROPSIE, MOSES AARON** (1821–1905), U.S. attorney, businessman, philanthropist, and patron of Jewish learning. Dropsie was born in Philadelphia to a Dutch-Jewish immigrant father and a Christian mother. He embraced Judaism at the age of 14, and ultimately became a vigorous proponent of traditional Judaism in America. Dropsie made his livelihood in the jewelry business until he was 28, when he began the study of law. He was admitted to the bar in 1851. Although his practice was largely in business law, Dropsie became a scholar in legal history and published a number of works on Roman law, including one on the trial of Jesus. Dropsie invested very early in streetcar ventures and became the president of two traction companies. He served as chairman of the commission that supervised the construction of the South Street bridge across the Schuylkill River in 1870. An early organizer of the

Republican Party of Pennsylvania, Dropsie ran for public office only once. He became leader and officer of many Jewish communal activities, and was an admirer and disciple of Isaac \*Leeser. Their sense of mutual understanding was disturbed only by their divergent sympathies in the early days of the Civil War. Dropsie was an active supporter of Leeser's short-lived Maimonides College from its inception in 1867, the first Jewish theological seminary in America. Dropsie believed that one of the major reasons for its failure was the refusal of New York Jewish leaders to give it their full support; when the Jewish Theological Seminary was organized in 1886 in New York City, he refused to lend a hand. This resentment was one of the factors which motivated his establishing a bequest for a totally new institution for higher Jewish learning. Another factor was his anger, which he also expressed in a number of pamphlets, against what he considered to be the extremism of Reform Judaism. Dropsie's will was written in 1895, while he was serving as president of \*Gratz College. He assigned his fortune to the creation of Dropsie College.

**DROPSIE COLLEGE**, independent, nontheological, academic institution dedicated to graduate instruction and research in Jewish studies and related branches of learning. It was founded in Philadelphia, Pennsylvania, in 1907 as Dropsie College for Hebrew and Cognate Learning. The establishment of the institution was provided for in the will of Moses Aaron \*Dropsie, dated September 17, 1895. Dropsie stated: "The increasing need in the United States for a more thorough and systematic education in Jewish lore has long been felt, and is a matter of solicitude to true Israelites, who cherish the religion of their ancestors.... [Hence] I order and direct that there be established and maintained in the City of Philadelphia a college for the promotion of and instruction in the Hebrew and cognate languages and their respective literatures and in the Rabbinical learning and literature." The will directed "that in the admission of students there shall be no distinction on account of creed, color, or sex." The college offered the Ph.D. and, from 1952 onward, the M.A. degrees in areas such as Hebrew, Arabic, and other Semitic languages, biblical and rabbinic studies, medieval Jewish philosophy, Assyriology, and Middle Eastern studies. In 1962 it instituted a program in Jewish education leading to the Ed.D. The original president of Dropsie was Mayer Sulzberger, who directed the Board of Governors selected to execute Dropsie's will. The first operating president was Cyrus \*Adler, who served from the opening of the college in 1909 until his death in 1940 while holding other important positions including the chancellorship of the Jewish Theological Seminary. He was succeeded by Abraham A. \*Neuman (1941–66), Abraham I. \*Katsh (1968–76), Joseph Rapaport (1979–81), and David M. Goldenberg (1981–86). In 1986 the college closed its doors as a graduate school and reopened two

years later as the Annenberg Research Institute for Judaic and Near Eastern Studies, a postdoctoral research center and fellowship program in Judaic and Near Eastern studies. In 1993 the institution was incorporated into the University of Pennsylvania as the Center for Judaic Studies.

The college's importance lies in that fact that when it was founded, and for several decades afterwards, it was the only non-theological institution in the United States that offered the Ph.D. in Judaic studies. As such, it attracted many distinguished scholars to its faculty (such as Cyrus H. Gordon, Ben-Zion Halper, Leo L. Honor, Henry Malter, Max L. Margolis, Ben-Zion Netanyahu, Moshe Perlmann, Solomon L. Skoss, Bernard D. Weinryb, and Solomon Zeitlin). The faculty produced close to 250 Ph.D.s, many of whom filled positions in Judaic and related studies throughout the United States, thus spurring the growth of Jewish studies programs in the country. From its beginnings the college published the *Jewish Quarterly Review*, continuing the publication begun in England in 1888 under the editorship of I. Abrahams and C.G. Montefiore. As the only American Ph.D.-granting school in Judaic studies for several decades, Dropsie acquired an important library collection (including manuscripts and incunabula) in biblical, rabbinic, and medieval Jewish literature, as well as early American Jewish imprints.

Ironically it was the success of the college that, to a significant extent, spelled its demise. With the burgeoning of Jewish studies programs in U.S. universities during the 1950s and 1960s, Dropsie found that with its limited resources it could not compete with the larger and well-endowed universities. By the early 1980s it appeared that the college would eventually be forced to close. An attempt at a revival was made in 1981 with the appointment of David Goldenberg to the presidency of the institution. Goldenberg, a recent Dropsie graduate and then faculty member, rebuilt the faculty with young promising scholars, revived the languishing *Jewish Quarterly Review*, attracted funding for the conservation of *genizah* manuscripts, and hired professional library staff to convert the collection to the Library of Congress cataloguing system and provide online access to the library's holdings. However, the general financial situation of the College did not much improve and, finally, in 1986 the Dropsie closed.

By this time, Albert J. Wood, a member of the Board of Trustees, had induced the American Jewish philanthropist and former ambassador to Great Britain, Walter H. Annenberg, to become involved with Dropsie's future. Wood saw that while a small graduate school was no longer feasible, a postdoctoral research center in Jewish studies would fill a need. Annenberg embraced the plan, funded the construction of a new building near historic Independence Hall in Philadelphia, and supplied the new institution's annual budget. Thus Dropsie was transformed into the Annenberg Research Institute for Judaic and Near Eastern Studies. Under its first president, Bernard Lewis, the scholar of Islamic studies, the Institute opened its doors in 1988 with an annual program of invited scholars from throughout the world to work on various themes in Jewish and

related studies. This program continues today as the University of Pennsylvania's Center for Judaic Studies.

[Meir Ben-Horin / David M. Goldenberg (2<sup>nd</sup> ed.)]

**DROSDOFF, MATTHEW** (1908–1998), U.S. soil chemist. Born in Chicago, Drosdoff received his Ph.D. in soil science from the University of Wisconsin at Madison in 1934. He joined the U.S. Department of Agriculture and was adviser on mineral nutrition and coffee production to Colombia (1951–53), soils adviser to Bolivia (1954), soils adviser to Peru (1955–60), and chief of the Agricultural Division of the U.S. Agency for International Development (AID) in Vietnam (1960–64). From 1964 to 1966 he was the administrator of the International Agricultural Development Service, and in 1966 he became professor of soil science at Cornell University, remaining emeritus professor until his death.

Drosdoff was active in B'nai B'rith in various capacities and from 1944 to 1947 was director of the Hillel Foundation at the University of Florida.

Many of Drosdoff's contributions to scientific journals were concerned with foliar analysis of tropical tree crops. Other topics were soil composition, genesis and morphology, colloidal clays, soil surveys, and agricultural development generally. He was a fellow of the American Society of Agronomy and was honored with its international award for his many overseas services to the U.S. government.

[Samuel Aaron Miller / Ruth Rossing (2<sup>nd</sup> ed.)]

**DRUCKER, DANIEL CHARLES** (1918–2001), U.S. structural engineer. Drucker was born in New York and studied engineering as an undergraduate and postgraduate at Columbia University, where he obtained his Ph.D. in 1940. He taught at Cornell University in 1940–43 before serving in the U.S. Army Air Corps, after which he joined Brown University in 1946, becoming professor in 1950. He was Dean of Engineering at the University of Illinois in 1968–83. His main interests were the theory of plasticity and its application to designing metal structures. He introduced the universally accepted concept of material stability termed "Drucker's stability postulate" which governs the plastic behavior of metals in response to strain and has wide academic and practical applications. Among many honors and awards he received the National Medal of Science (1980) and was the first recipient of the American Society of Mechanical Engineers' Daniel C. Drucker Medal bestowed for outstanding contributions to mechanical engineering (1998). While at Brown University, he was active in the Providence, Rhode Island, Jewish community.

[Michael Denman (2<sup>nd</sup> ed.)]

**\*DRUMONT, EDOUARD-ADOLPHE** (1844–1917), leader of the antisemitic movement in France. Originally holding strongly leftist opinions, while still an unknown journalist Drumont contributed to a number of publications, including

*La Liberté* owned by the Jewish Saint-Simonist, Isaac \*Péreire. In the 1880s, however, Drumont's views changed and he became associated with the activities of ultra-Catholic circles, although adhering to certain remnants of his radical social philosophy. It was on this foundation that he developed a rabid antisemitism, which became his consuming passion. His book *La France juive*, first published in 1886, describes France as subjugated to the Jews in the political, economic, social, and cultural spheres; in a short time it ran to over a hundred editions. Drumont continued his anti-Jewish propaganda in further books. In 1889 he founded the Antisemitic League (see \*Antisemitic Political Parties and Organizations) and *La Libre Parole* whose policy veered between the Catholic right and social radicalism, but was invariably violently antisemitic in tone. Drumont and his paper had a considerable share in exacerbating the \*Dreyfus Affair. In 1898 Drumont was elected to the chamber of deputies, but after the victory of Dreyfus' supporters he was not returned a second time; in 1909 his application for membership of the French Academy was rejected.

**DRUNKENNESS** (Heb. שִׁכְרוֹן, *shikkaron*).

#### In the Bible

Biblical, apocryphal, and ancient Near Eastern references make it clear that, far from being condemned, the use of alcoholic beverages was regarded by Jews and others as a necessary (Ecclus. 39:26; Pritchard, *Texts*, 598, line 89; 602, line 32) and distinctive (Ps. 104:15; Pritchard, *Texts*, 77c, line 12ff.) feature of human life. A feast was inconceivable without wine, and Proverbs 9:1ff. speaks of Wisdom personified offering food and wine. Indeed, complete abstinence was associated with a turning away from civilization (Jer. 35; see \*Rechabites). Likewise, the \*Nazirite avoidance of alcohol is of a piece with their refraining from cutting the hair and from participating in the burial of the dead, two other hallmarks of civilization (Numbers 6). \*Wine was valued for bringing joy and banishing sorrow (Judg. 9:13; Ps. 104:15; cf. Pritchard, loc. cit., line 21; Prov. 31:6–7; Eccles. 10:19; Ecclus. 31:27–28; 40:20) and was used cultically in libations (Ex. 30:40–41) and the festive sacrificial meal (Deut. 14:26).

Intoxication, however, was deprecated (cf. Ecclus. 31:25–31; 39:27), both in the cult – in keeping with the biblical rejection of the Dionysiac element of other ancient religions (Lev. 10:8–11; I Sam. 1:13–16; Ezek. 44:21) – and in daily life. Wisdom literature warns that drunkenness brings poverty, woes, quarrels, wounds, strange visions, etc. (Prov. 20:1; 21:17;

23:19–21:29–35; 31:4–5; cf. 1 Esd. 3:19–24) and causes kings to err in judgment (Prov. 31:4–5; cf. Lev. 10:8–11 (priests); Isa. 28:7 (priest and prophet)). Several narratives depict the disgrace and sometimes death of drunkards (Noah, Gen. 9:20–27; Lot, Gen. 19:31–38; Nabal, 1 Sam. 25:36; Amnon, 11 Sam. 13:28–29; Elah, 1 Kings 16:9; Ben-Hadad, 1 Kings 20:16; Ahasuerus, Esth. 1:10; cf. Holofernes, Judith 13:2). The prophets frequently condemn drunkenness, particularly among the wealthy and the leaders (Isa. 28:1ff.; 56:11–12; cf. Prov. 31:4–5), associating it with moral insensitivity (Isa. 5:11–12, 22–23; Amos 2:8), licentiousness (Hos. 4:11–12, 18), and forgetting God (Hos. 4:11–12; cf. Job 1:4–5). Drunkenness and gluttony are among the charges against the insubordinate son (Deut. 21:20). However, Isaiah 51:17–18, like the Ugaritic Aqhat epic (in Pritchard, Texts, 150b, line 32–33), reflects a view that filial duties include helping a parent made unsteady by alcohol to walk. The occasion of drunkenness might be private drinking (Noah, Lot) or group celebration (Nabal, Amnon, Ben-Hadad, Ahasuerus), including carousing on religious festivals (Hos. 4:11ff.). Drinking songs and music are mentioned at such celebrations (Isa. 24:7–9; Amos 6:5–6; Ps. 69:13). One type of gathering that appears, especially in the light of extra – and post – biblical attestations, to have been conducive to drunkenness is the *marzeah*, referring at times to a joyous banquet (Amos 6:7), at others to a mourning meal (Jer. 16:5)

[Jeffrey Howard Tigay]

### In the Talmud

Basing himself on the fact that the death of Nadab and Abihu is followed by the injunction against priests drinking wine or strong drink when officiating, R. Simeon attributes their death to the fact that they entered the sanctuary while in a state of intoxication (Lev. R. 12:1). Judges must not render decisions after drinking wine (Er. 64a). As a result, judges were forbidden to eat dates because of their possible intoxicating effects (Ket. 10b). The judges of the \*Sanhedrin had to abstain from wine during the entire hearing of a capital case (Sanh. 5:1; Sanh. 42a). The criterion for drunkenness is whether the person affected is capable of addressing himself properly to a king. A quarter of a “log” (approx. 3.2 oz., 100 milliliters) of wine was regarded as sufficient to cause intoxication, but it was not a rigid rule. If he later walked a mil (approx. 3,300 ft., 1,100 meters) or slept, a drunken person was considered sober, unless he drank strong Italian wine, in which case he must walk at least three mils (Er. 64a–b). A drunken person is forbidden to conduct a service. Based upon High Priest Eli’s reprimand of Hannah (1 Sam. 1:13–15), the Talmud lays down that if a person prays in a state of drunkenness, his prayer is an abomination (Ber. 31b). A person under the influence of alcohol is legally responsible for his actions unless he has reached the state of oblivion attributed to Lot (cf. Gen. 19:31–36; Er. 65a). The Bible adopted an ambivalent attitude toward wine, and there are several statements in the Talmud concerning the virtues of wine and its beneficial effects on health (cf. Er. 65a–b). There are many traditions that relate to the negative effects of

drink on everyday life. One example that may be cited is the legend that when Noah was about to plant his vineyard, Satan buried in the soil carcasses of a sheep, a lion, a pig, and a monkey. As a result when a person indulges mildly he becomes sheepish, further indulging makes him feel like a lion. Overindulgence causes him to befoul himself like a pig, and when he becomes roaring drunk he literally “makes a monkey of himself” (Tanḥ., Noah, 14). In one chapter of the Midrash (Lev. R. 12:1) there are three statements with regard to drunkenness. One interprets Proverbs 23:31 homiletically to mean that “while the drunkard has his eyes on the cup, the publican has his eyes on his pocket.” The second tells of the despairing attempt on the part of the sons of a drunken addict to rid him of his vice, while the third is an account of a drunkard who was determined to make up the absence of one bottle from his daily quota of 12. Some scholars have assumed that drunkenness was not a serious problem in the talmudic period, and so have understood these traditions to reflect a lighthearted, almost jocular attitude toward the phenomenon. Others have suggested that these traditions may reflect not the rarity of drunkenness, but rather its frequency. While the Talmud states a positive injunction that a person shall get so drunk on \*Purim that he cannot distinguish between “Blessed be Mordecai” and “Cursed be Haman,” the disastrous results of an actual incident in which two famous amora’im, Rabbah and R. Zera, were involved (Meg. 7b), would seem to represent a serious criticism of this tradition. As a result, later rabbinic authorities were at pains to point out that this talmudic permissibility was not to be taken literally.

[Louis Isaac Rabinowitz / Stephen G. Wald (2<sup>nd</sup> ed.)]

### Modern Times

Interest in contemporary drinking among Jews stems from the mystery of drinking not being a problem. Writers in many countries during recent centuries have commented on the comparative sobriety of the Jews. Multinational statistics of arrests for drunkenness, incidences of alcoholic psychosis, and alcoholic admissions to hospitals have consistently revealed a marked underrepresentation of Jews. From the 1940s, social scientists in the United States have systematically studied drinking patterns of Jewish youth and adults. The consistent finding has been that proportionately more Jews than other ethnic or religious segments of the population drink wine, beer, or spirits, but proportionately fewer Jews are heavy drinkers or alcoholics. Sophisticated socio-cultural-psychological hypotheses, rejecting rational blame-avoidance as an adequate explanation, relate Jewish sobriety to the early initiation of children in a family-centered, religiously oriented, moderate drinking pattern. The attitudinal values thus engendered are presumed to prevent later excess in drinking. An alternative but untested hypothesis proposes a genetic immunity to alcoholism.

Leading studies through the late 1960s suggested that the more acculturated Jewish youth tended to adopt the drinking patterns of the general population. Thus the frequency of

drinking was highest among Jews whose religious orientation is Orthodox, lower among those whose orientation is Conservative, lower still among the Reform, and lowest among the secular, i.e., those who deny any feeling of religious association. But the frequency of drinking large amounts on an occasion, of getting drunk, or of getting into trouble on account of drinking ran in the opposite direction, from highest among the secular to lowest among the Orthodox. This suggested to some sociologists that alcoholism among Jews may increase as acculturation proceeded. But two antithetic findings reported that Jews who ostensibly drink in the acculturated style consider themselves to have overindulged or “been drunk” after substantially smaller quantities than non-Jews; and the acculturated drinking style tends to be abandoned on settling down and starting to raise children. Only in the United States has Jewish drinking been studied extensively and systematically, but observers in many countries continue to report the pattern of sobriety. Some theorists speculated that the pattern may change in a Jewish state and, that drunkenness is more common among some Eastern Jews than among Westerners. However, although statistics on admission of alcoholics to mental hospitals in Israel in former years are not known, in 1966 78 new cases were admitted (2% of all new cases; in some countries alcoholism accounts for up to 25% of admissions to mental hospitals). The total admission of alcoholics was 154 in 1966 (2% of all admissions); and during a six-year period, only 23 deaths were attributed to alcoholism or its complications. Recent data on Jews in the United States are not available, but in New York State in 1950 0.2% of new cases were alcoholics. There was some evidence of greater alcoholic indulgence by Oriental-born Jews in Israel (but not in those of Oriental descent). Asian and African-born male Jews had twice the rate of first admission for alcoholism to mental hospitals than European-born men did. Israel-born Jews, of whatever descent, had only a third of the rate of the European-born. The rates in women of all origin groups were negligible. Thus there were no signs at the time of serious alcohol problems developing in Israel. However, with the development of a “pub” and “disco” culture among Israeli youth through the 1980s and 1990s and the influx of immigrants from the former Soviet Union with its more marked drinking tradition, not to mention growing disaffection in the economic underbelly of Israeli society, drinking has come to be perceived as more of a problem, though still not reaching the proportions characteristic of other societies.

**DRUSILLA** (b. 38 C.E.), daughter of \*Agrippa I and \*Cypros. Drusilla had been promised in marriage by her father to Epiphanes, son of King Antiochus of Commagene. The agreement was canceled, however, when Epiphanes refused to convert to Judaism, after originally agreeing to do so. Drusilla was later married by her brother \*Agrippa II to Azizus, king of Emesa, who had consented to be circumcised. Shortly afterward, a Jewish magician from Cyprus persuaded Drusilla to leave her husband and marry his friend \*Felix, the procurator of Judea. Out of this marriage a son was born, named Agrippa. Josephus alludes to the disappearance of this son and his wife during the eruption of Vesuvius in 79 C.E.

[Isaiah Gafni]

**\*DRUSIUS (Van Der Driesche), JOHANN CLEMENS** (1550–1616), Dutch theologian, Hebraist, and Bible scholar. A native of Oudenarde (East Flanders), he was professor of Oriental languages at Oxford (from 1572) and later in Leiden, Ghent, and Franeker. Drusius wrote several books on Hebrew grammar, including *Alphabetum ebraicum vetus* (1587) and *Grammatica linguae sanctae nova* (1612). He also edited Elijah \*Levita's Hebrew-Yiddish dictionary, *Shemot Devarim (Nomenclator Eliae Levitae, 1652)*, adding to it the Arabic; his son Johann added the Greek. He wrote several works of biblical exegesis.

**DRUYA** (Pol. *Druja*), town in Molodechno district, Belarus. The Jewish community is mentioned in the late 16<sup>th</sup> century. Many Jews there were occupied in the local soap industry and others traded in farm products, like flax, grain, and hides. They dominated trade. In the late 18<sup>th</sup> century a beautiful synagogue was constructed. The community numbered 1,305 in 1766; 2,366 in 1847; 3,006 in 1897 (out of a total population of 4,742); 1,011 (41%) in 1921; and 1,800 in 1925. The author Alter \*Druyanow was born in Druya. After WWI, Jewish merchants resumed their trade in agricultural products; others were artisans. The center of cultural life was the Bund-dominated Yiddish school.

[Shmuel Spector (2<sup>nd</sup> ed.)]

### Holocaust Period

On the eve of World War II the Jewish population of Druya numbered about 1,500. Between October 1939 and June 1941 Druya was occupied by the Soviets. On July 6, 1941, after the outbreak of the German-Soviet war, the Germans entered the town. During the first days of the war many people accused of allegiance to the Soviets were killed. In April 1942 two ghettos were created, one for workers, the second for non-workers. On

July 2, 1942, the Germans surrounded the ghettos in order to liquidate them. The inhabitants tried to break out and some groups succeeded in reaching the forests. In order to prevent a mass escape, the Germans shot at Jews and set the ghettos aflame. Some of those who escaped to the forest joined the partisans around the village of Balnia and participated in activities against the Germans. About 50–60 persons survived.

**DRUYANOW, ALTER (Asher, Avraham Abba; 1870–1938)**, Hebrew writer, editor, and Zionist leader. Born in Druya, in the district of Vilna, he studied at the Volozhin yeshivah in his youth and then turned to commerce. In 1890 he published his first essay in *Ha-Meliz*, under the pen name “Alef, Beit, Gimmel, Dalet,” and from then on was a frequent contributor to the Hebrew press (*Mi-Mizrah u-mi-Ma’arav; Ha-Shilo’ah*, etc.), using various pen names. From 1900 to 1905 he was the secretary of the Committee for the Settlement of Erez Israel in Odessa. In 1906 he immigrated to Palestine, but returned to Russia in 1909 and until 1914 was editor of *Ha-Olam*, the official organ of the World Zionist Organization. In 1921 he settled permanently in Palestine. Together with \*Bialik and \*Ravnitzky, he edited the first four volumes of *Reshumot*, a periodical devoted to the study of folklore (1919–26). His literary work includes Zionist articles, descriptive writing, and literary criticism. He is best remembered for two compilations: *Ketavim le-Toledot Hibbat Ziyyon ve-Yishuv Erez Yisrael* (“Writings on the History of Hibbat Zion and the Settlement of Palestine,” 3 vols., 1919–32 (re-edited by Shulamit Laskov, 1982)) and *Sefer ha-Bediḥah ve-ha-Ḥiddud* (“The Book of Jokes and Witticisms,” enlarged 3-vol. edition, 1935–38), a collection of Jewish folk humor with notes on the origin and history of the contents. A two-volume selection of his essays was published in 1943–45.

**BIBLIOGRAPHY:** J. Fichmann, *Be-Terem Aviv* (1959), 371–6; Kressel, *Leksikon*, 1 (1965), 564; ABGD: *Yad la-Kore*, 9 (1968), 116–8, a bibliography.

**DRZEWIECKI, HENRYK (Hercel Rosenbaum; 1902–1937)**, Polish novelist and critic. An avowed Communist, Drzewiecki wrote essays and reviews advocating revolution in order to abolish Poland’s economic misery. His controversial novel *Kwaśniacy* (1934) greatly influenced Polish proletarian literature and the writer only escaped imprisonment by fleeing first to Paris and then to the U.S.S.R. He was executed during the Stalinist purges of the late 1930s. He was rehabilitated in 1956.

**DUALISM**, the religious or philosophical doctrine which holds that reality consists, or is the outcome, of two ultimate principles which cannot be reduced to one more ultimate

first cause. Dualistic systems have appeared in philosophical (metaphysical) as well as moral forms, both of which have exerted considerable influence on the history of religions, including the history of Judaism.

### Philosophical Dualism

In the history of Western thought, philosophical dualism goes back to \*Platonism and \*neoplatonism which developed and spread the idea of an opposition between spirit and matter, spirit being the higher, purer, and eternal principle, whereas matter was the lower and imperfect form of being, subject to change and corruption. Applied to the understanding of the nature of man, this meant that man was composed of a lower, material part (the body), and a higher, spiritual part (the soul). This dualism could, and not infrequently did, lead to a contempt for the body and for “this world” in general, and encouraged a moral outlook which held \*asceticism (or, in its more extreme forms, total renunciation of the world) to be the way by which the soul could liberate itself from the hold of the body and, purifying itself of the bodily passions, render itself worthy again of returning to its celestial and spiritual home. This view exerted considerable influence on Jewish thinking in the Hellenistic period (see \*Philo) and in the philosophy and \*Musar literature of the middle ages, though its more radical forms were partly inhibited by the rabbinic tradition which considered the physical universe and its enjoyment as essentially good, provided they were hallowed in the service of God.

### Moral Dualism

Although moral dualism generally tended to express itself in the forms of a thoroughgoing metaphysical dualism, the term is justified inasmuch as it reflects the basic doctrine that good and evil were the outcome or product of two distinct and ultimate first causes. The best known form of this dualism is the ancient religion of Persia (Zoroastrianism), according to which history is a cosmic struggle between the powers of good, i.e., light, and evil, i.e., darkness. This system has the logical advantage of accounting for evil in terms of a separate, independent principle, and thus exonerating the “good” creator and God from responsibility for the existence, in the world, of evil and sin. On the other hand it raises many other problems and was unacceptable to any form of \*monotheism. Some commentators see in the declaration that God “formed the light and created darkness, is the maker of peace and the creator of evil” (Isa. 45:7) the prophet’s polemic against this dualism (a polemic, the harshness of which is mitigated by the wording in which this verse appears in the daily morning prayer: “the maker of peace and creator of all” Hertz, *Prayer* 109). The two types of “philosophical” and “moral” dualism were capable of fusing and merging in various combinations. The body, matter, and “this world” could become identified, or at least associated, with darkness and evil, and the soul, with goodness and light. Another pair of opposites, “spirit” and “flesh,” though not identical with Platonic dualism, was yet sufficiently similar to combine with it in various ways. It

is this dualism which underlies the theology and anthropology of the \*Dead Sea (\*Qumran) sect, and of the epistles of Paul in the New Testament. \*Gnosticism presents a peculiar combination of the two types of dualism: this world and our bodily existence, being characterized by evil, are the work of a lower, imperfect deity (the “demiurge” or creator), above whom there is a completely distinct, more transcendent and spiritual, good and “true” god. This higher deity intervenes and “saves” the elect from the power of the evil creator who holds them imprisoned in matter and in this world. Some of the gnostic sects equated this lower and evil demiurge with the god of the Hebrew Bible, i.e., with the Jewish God and giver of the law. Gnostic dualism has therefore been described as a metaphysical antisemitism. The gnostic rejection of creation and the cosmos, as well as of the biblical law, as the work of a lower, evil, or at least imperfect, power led in some cases to manifestations of \*antinomianism, and in others to a very rigorous asceticism and rejection of this world.

### Dualism in Jewish History

Whether or not Isaiah 45:7 is a polemical reference to Persian dualism (see above), it is evident that dualistic tendencies asserted themselves in the Second Temple period and in the first centuries of the common era. These were of a neoplatonic, later also of a gnostic, character. In a general way it can be said that apart from the “heretical” dualistic doctrines of some gnostic sectarians (see \**Minim*), Judaism could accommodate a “mitigated dualism,” i.e., doctrines and attitudes which express metaphysical or moral contrasts in a dualistic manner, but without attributing to them an ultimate character or calling in question the sovereignty of the one omnipotent and good Creator God. This mitigated dualism can be found in some of the biblical \*Apocrypha (e.g., \*Jubilees or the Testaments of the \*Patriarchs) and especially in the writings of the Dead Sea sect, whose doctrines of the spirit and the flesh, of the spirits (or angels), of purity and impurity, i.e., of light and darkness, come as near to a dualistic system as Judaism could tolerate. Yet even these beliefs can be characterized as a “dualism under God,” since the spirits of light and darkness were held to exist through God’s inscrutable will and to be subject to him. The Platonic dualistic spirit-matter (i.e., the realm of ideas as against the material world) penetrated rabbinic Judaism in the form of the soul-body dualism (cf. Plato’s *Phaedo*, 67), and the belief in the preexistence of the soul. The doctrine of the immortality of the (spiritual) soul reflects, in this respect, a more dualistic anthropology than the doctrine of the resurrection of the body (see \*Eschatology, Immortality of \*Soul, \*Resurrection). Rabbinic theology in general tended to reject or at least to mitigate dualistic tendencies. Thus the doctrine of the good and evil *yezer* (see Good and Evil \*Inclination) is a transposition onto a more psychological (and hence theologically more harmless) level of what, for the Qumran covenanters and others, were metaphysical opposites. Talmudic literature has many polemical references to those who believe in *shetei reshuyyot* (“two powers”). Other polemical

references are directed at the gnostic distinction between the supreme God on the one hand, and the Creator-Lawgiver on the other. Thus the *kofer ba-ikkar* (one who denies the essence of the faith) is said to be one who denies his creator and the giver of the Law (cf. Tosef. Shav. 3:7).

### Dualism in Jewish Mysticism

The esoteric discipline and ecstatic visionary practices of the early \*Merkabah mystics, while exhibiting certain gnostic traits, certainly did not share the basic dualism of the great gnostic systems. Dualistic elements, however, were not absent, as, e.g., in the doctrine of \*Metatron (originally Javel) as the “lesser YHWH.” In fact, the term *yozer bereshit* (“Creator”) was deprived of any possible gnostic connotation by being used, in the \**Shi’ur Komah* literature, for the manifestation of God on the Throne of Glory. Another kind of dualism is involved in the radical distinction made by the kabbalists between the hidden, inaccessible *deus absconditus* (the *Ein Sof*), and the godhead as manifested in the \**Sefirot*. The latter two are occasionally described in a dualistic manner (right-left, male-female), but the essential point of the kabbalists was precisely the ultimate mystical unity behind the multiple manifestations.

The dualistic tendency is, perhaps, most marked in the kabbalistic treatment of the problem of evil. The profound sense of the reality of evil brought many kabbalists to posit a realm of the demonic, the *sitra aħra* (or “*azilut* of the left”), a kind of negative mirror image of the “side of holiness” with which it was locked in combat. Nevertheless, here too it is necessary to distinguish between dualistic tendency and dualistic theory. It is precisely because kabbalistic doctrine does not know an ultimate dualism, that it is forced to seek the origin of the demonic realm of the *kelippot* somewhere in the sphere of divine emanation – whether in the *sefirah gevurah* (*din*) or (as in Lurianic kabbalism) in even more hidden aspects of the godhead. More than anything else, it is this awareness of the reality of evil, coupled with an essentially monotheistic rather than dualistic theology of the Zoroastrian type, which gives kabbalistic speculation such an audacious and indeed all but “heretical” quality. In medieval philosophy, the solution proposed for the problem of evil and its possible dualistic implications was the theory that evil had no substantial existence of its own but was a negation of good, even as darkness was the absence of light (cf. \*Maimonides, *Guide*, 3:8; see also \*Good and Evil). The first Jewish philosopher to argue systematically and at length against dualistic notions was \*Saadiah Gaon in his *Beliefs and Opinions* (treatise 2).

### Prophetic Dualism

While Judaism can thus be said to have been consistently anti-dualistic in the sense of recognizing only one ultimate cause and source of all being – including the opposites characteristic of being – there is another sense in which biblical and prophetic religion can be said to be dualistic. It assumes a radical distinction between the absolute being of God and the contingent being of all other (i.e., created) things. Contact

and communion with God is possible in love, obedience, or mystical contemplation, but no identity of the creature with the creator is possible. Systems of thought which assert that all being is ultimately one and that the duality of God and the world (or God and the soul) can be transcended in a more profound unity have not been able to maintain themselves in any significant measure in Judaism. Pantheism and other forms of metaphysical or mystical monism (see \*God, Conceptions of) have never been dominant Jewish philosophies.

Driver, *The Judean Scrolls* (1965), 550–62; A.C. Leane, *The Rule of Qumran and its Meaning* (1966), index; M. Burrows, *More Light on the Dead Sea Scrolls* (1958), index; I. Tishby, *Mishnat ha-Zohar*, 1 (1949), 285–343.

[R.J. Zwi Werblowsky]

**DU BARTAS, GUILLAUME DE SALLUSTE** (1544–1590), French poet and diplomat. Du Bartas served Henry of Navarre as ambassador to England and Scotland. A Gascon Protestant, he opposed the paganism of the Pléiade group of poets and wrote baroque verse imbued with the spirit of the Bible. *Judith* (1573) commemorates the apocryphal Jewish heroine. The epic *La Semaine* (1578), which retells the Creation story of Genesis, and its sequel, *La Seconde Semaine* (begun in 1584, but never completed), set out to unfold the history of mankind to the beginning of the Christian era. The *Semaines* are outstanding for their lofty tone and moral purpose, though the style and imagery are often grotesque. Their encyclopedic conception betrays the influence of Du Bartas' erudite contemporary, Guy \*Le Fèvre de la Boderie. Du Bartas' Hebrew scholarship may have been modest but his respect for and interest in Hebrew studies and the \*Kabbalah (typical of the French humanists) may be deduced from the lengthy "Homage au langage hébreu" in the *Seconde Semaine*. Du Bartas made a powerful impression in the 16<sup>th</sup> and 17<sup>th</sup> centuries and probably influenced Hugo, as well as Milton and Goethe, in translation.

**BIBLIOGRAPHY:** U.T. Holmes (ed.), *Works of Guillaume De Salluste Sieur Du Bartas* (1935–40); A.M. Schmidt, *Poésie scientifique en France au 16<sup>e</sup> siècle* (1938), 247–69; F. Secret, in: *Studi francesi*, 7 (1959), 1–11.

[Godfrey Edmond Silverman]

**DUBERMAN, MARTIN B.** (1930– ), U.S. historian and playwright. Duberman, who was born in New York City, entered Yale University in 1948 and received his M.A. and Ph.D. from Harvard University. From 1957 to 1961, he was history instructor at Yale. He then became an assistant professor at Princeton University and full professor in 1967. Duberman's research centered on the "middle period" of American history, with special attention given to the Civil War and Reconstruction, American radicalism, and intellectual history. His publications include *Charles Francis Adams, 1807–86* (1961) and *James Russell Lowell* (1966). Duberman, himself an advocate of dissent and deeply concerned with the advancement of hu-

man rights, edited *Antislavery Vanguard: New Essays on the Abolitionists* (1965). He also wrote a number of plays, notably *In White America* (1964), a documentary on the American black.

After exposing glaring instances of homophobia in his history *Black Mountain: An Exploration of Community* (1971), Duberman himself became the target of homophobic attacks from his academic peers. Subsequently, he became involved in gay activism on academic, public, and private levels. With fellow gay scholars, he founded the Gay Academic Union (1973) and joined the National Gay and Lesbian Task Force.

In 1971, Duberman resigned from Princeton to become Distinguished Professor of History in the field of gay and lesbian studies at Lehman College, the City University of New York (CUNY), where he continued to teach. He was the founder and first executive director of the Center for Lesbian and Gay Studies (CLAGS) at CUNY. The Martin Duberman Fellowship is a CLAGS endowment awarded to a senior scholar (tenured university professor or advanced independent scholar) from any country doing scholarly research on the lesbian/gay/bisexual/transgender/queer (LGBTQ) experience.

Other publications by Duberman include *The Uncompleted Past* (1969), *The Memory Bank* (1970), *Visions of Kerouac: A Play* (1977), *About Time: Exploring the Gay Past* (1986), *Paul Robeson* (1989), *Hidden from History: Reclaiming the Gay and Lesbian Past* (1989), *Cures: A Gay Man's Odyssey* (1991), *Mother Earth: An Epic Play on the Life of Emma Goldman* (1991), *Stonewall* (1993), *Midlife Queer: Autobiography of a Decade, 1971–1981* (1996), *A Queer World: The Center for Lesbian and Gay Studies Reader* (1997), *Left Out: The Politics of Exclusion: Essays 1964–2002* (2002), and the novel *Haymarket* (2003).

[Mark D. Hirsch / Ruth Beloff (2<sup>nd</sup> ed.)]

**DUBIN, MORDECAI** (1889–1956), \*Agudat Israel leader in Latvia. Dubin represented his movement in the Latvian houses of representatives (1919–34). From 1920 until 1940 he was also the chairman of the Jewish community in Riga. He acquired a reputation among all sectors of the Jewish population as a negotiator and mediator (*shtadlan*) with the government on Jewish public matters and particularly for Jewish individual needs. An adherent of \*Chabad Hasidism, in 1927 he played a decisive part in obtaining permission for Joseph Isaac \*Schneerson (the "Lubavitcher rabbi") to leave the Soviet Union. Even after the liquidation of the democratic regime in Latvia, Dubin, who was personally close to the dictator Ulmanis, continued to intercede with the government to obtain alleviation of anti-Jewish economic measures. With the incorporation of Latvia into the Soviet Union in June 1940, Dubin was arrested with other communal leaders and deported. He was released in 1942 and subsequently lived under police supervision and extreme poverty in Kuibyshev and Moscow. In spite of his personal plight he succeeded in extending help to many Latvian Jews who passed through these cities. In 1946 he returned to

Riga, but was forced to leave after attacks against him were published in the local Communist press. Again arrested in 1948, he died in a concentration camp near Moscow. His remains were buried in the Jewish cemetery in Malakhovka, a suburb of Moscow.

**BIBLIOGRAPHY:** *Yahadut Latvia* (1953), index; M. Bobe, in; *He-Avar*, 14 (1967), 250–61.

[Yehuda Slutsky]

**DUBINSKY, DAVID** (1892–1982), U.S. labor leader. Born in Brest-Litovsk, Belorussia, Dubinsky was brought up in the Polish city of Lodz, where he became a master baker and secretary of the militant Lodz Bakers Union organized by the \*Bund. He was arrested and imprisoned for organizing strikes against his father's bakery, and was exiled to Siberia in 1909 for making inflammatory speeches. He managed to escape en route, however, and at the end of 1910 immigrated to the United States. He joined his elder brother in New York and obtained work through the International Ladies Garment Workers' Union (ILGWU) becoming an apprentice in Cutters' Local 10. He devoted more of his time to the Socialist party than to trade union affairs until larger numbers of East European Socialist Jews entered Local 10, but in 1918 he was elected to its executive board. In 1921 he was chosen president of the Cutters' Local. Dubinsky also rose rapidly in the ILGWU, where he joined the anti-Communist majority. He was elected to its general executive board in 1923. In 1928 he played a leading part in bringing back Benjamin \*Schlesinger as a compromise candidate for president to avoid a split in the union, and in the following year was himself elected secretary-treasurer. On Schlesinger's death in 1932 he became president, a position he held until 1966.

During the 1930s Dubinsky dominated the ILGWU and was a powerful force in the American labor movement. He favored cooperation with the employers in rationalizing the complex structure of the garment industry and made his union a symbol of progressive unionism. In 1934 he was elected a vice president of the AFL. Almost immediately he became embroiled in the controversy between the proponents of industrial unionism and the supporters of the old-style craft union. He played a leading part in the CIO which he helped to found in 1935, his union being the second largest in the country. In 1936 he resigned his vice-presidency of the AFL in protest against their support of the craft unions against the industrial unions, and persuaded the ILGWU to give their backing to the latter. For two years from 1938 the ILGWU was isolated from the American labor movement, but in 1940 Dubinsky brought it back into the AFL. In his capacity as president of the ILGWU for more than 30 years, he transformed the union from a struggling entity to one with assets in the hundreds of millions of dollars. Under his guidance, the union took on issues such as the provision of health insurance, severance pay, retirement benefits, and a 35-hour workweek. He also worked to abolish the sweatshops that were prevalent in the industry.

An influential figure in United States politics, Dubinsky refused to endorse Tammany Hall, New York's political machine, and supported Franklin D. \*Roosevelt for president in 1932 and 1936. To this end he helped to create the American Labor Party (ALP) in 1936. In 1944, when Communists began to dominate the ALP, he helped to form the Liberal Party. After World War II Dubinsky was one of the founders of the anti-Communist International Confederation of Free Trade Unions. In 1945 he served once again as a vice president and member of the executive council of the AFL, even after it merged with the CIO in 1955. Due largely to his efforts to eliminate corrupt union leaders, the AFL-CIO adopted the anti-racket codes in 1957.

In 1969 U.S. President Lyndon Johnson awarded Dubinsky the Presidential Medal of Freedom, which cited him as "a national leader of foresight and compassion. He has advanced the cause of the workingman in America – and the broader cause of social justice in the world, with unflinching skill and uncommon distinction." In 1993 Dubinsky was inducted into the Labor Hall of Fame.

As a self-styled "Jewish worker," Dubinsky was concerned with the special problems facing the Jewish community as a consequence of events in Germany and World War II. He was a member of the executive council of the Jewish Labor Committee founded in 1933, engaged in relief efforts on behalf of refugees, and became a staunch supporter of Israel and in particular of the \*Histadrut, Israel's General Federation of Labor. A hospital in Beersheba, financed by his union, carries his name. Dubinsky wrote *David Dubinsky: A Life with Labor* (1977).

**BIBLIOGRAPHY:** M.D. Danish, *The World of David Dubinsky* (1957); J. Dewey, *David Dubinsky, a Pictorial Biography* (1951); C.A. Madison, *American Labor Leaders* (1962), 199–231; R. Cook, *Leaders of Labor* (1966), 102–12.

[Melvyn Dubofsky / Ruth Beloff (2<sup>nd</sup> ed.)]

**DUBISLAV, WALTER ERNST OTTO** (1895–1937), German philosopher. Born in Berlin, he studied mathematics with Hilbert at Goettingen, served on the Russian front in World War I, and took his degree in philosophy at Berlin after the war. He became professor at the Technische Hochschule in Berlin in 1931, and fled in 1936 to Prague. Dubislav was a logical positivist and conventionalist, influenced by Aristotle, Bolzano, and Frege. He was critical of Kant and a supporter of Fries, and was, with Reichenbach, a leader of the "Gesellschaft fuer empirische Philosophie." Dubislav participated in *Das-systematische Woerterbuch der Philosophie* (1923) and wrote *Ueber die Definition* (1925, 1931<sup>3</sup>), *Die Friessche Lehre von der Begrueundung* (1926), *Die Philosophie der Mathematik in der Gegenwart* (1932), and *Naturphilosophie* (1933).

**BIBLIOGRAPHY:** NDB, 4 (1959), 145.

[Richard H. Popkin]

**DUBLIN**, capital of the Republic of Ireland. A small Jewish group apparently lived there in the Middle Ages since the Ex-

chequer of the Jews at Westminster had an Irish branch. In the middle of the 17<sup>th</sup> century, some Spanish and Portuguese Marranos settled in the city, including Francisco and Manuel Lopes Pereira and Jacome Faro. According to tradition, a synagogue was founded in Crane Lane around 1660. Military operations in Ireland after the revolution of 1689 attracted a few more Sephardi Jews, and the community knew a short period of relative prosperity. In 1718 a cemetery was purchased with the assistance of the London Sephardi community, which advanced the Dublin congregation money to meet its debts and lent it some scrolls of the Law. During the 18<sup>th</sup> century, the original Sephardi element died out, and was replaced by Ashkenazi immigrants. By 1791 the congregation had fallen into complete decay and the borrowed scrolls were returned. The community was revived in 1882 by East European immigrants. It increased considerably with the Russo-Jewish immigration at the close of the century. Many of the Jews of that time engaged in peddling, small business, and small financial transactions (moneylending and pawnbroking). In the course of time the Jews moved into shopkeeping, manufacturing, and the professions. There has been considerable emigration over the years, especially among the younger generation. In 1968 the Jewish population numbered approximately 3,600 and maintained seven synagogues (including one Progressive) with the usual congregational institutions. James Joyce's *Ulysses* depicts certain elements of Jewish life in Dublin at the beginning of the century. Paradoxically, many literary visitors to today's Dublin come to see the route taken on "Bloomsday" by James Joyce's Leopold Bloom. Isaac \*Herzog, later chief rabbi of Israel, was chief rabbi of Dublin 1919–36. Immanuel \*Jakobovits was chief rabbi from 1949 and Isaac Cohen from 1959. Robert \*Briscoe was lord mayor from 1956–57 and from 1961–62, and his son in the 1980s. In the mid-1990s the Jewish population numbered approximately 1,300. In 2004, after some renewed growth, it was estimated at about 1,500.

[Cecil Roth]

**DUBNO**, city in \*Volhynia, Ukraine. Jews in Dubno are first mentioned in documents of 1532 in connection with the ownership of cattle. The oldest tombstone inscription in the Jewish cemetery dates from 1581. At the beginning of the 17<sup>th</sup> century Isaiah ha-Levi \*Horowitz, author of *Shenei Luhot ha-Berit*, was rabbi in Dubno. The community was represented on the council of the province (*galil*) of Volhynia (see \*Councils of the Lands). On the eve of the \*Chmielnicki uprising there were about 2,000 Jews in Dubno. In 1648–49, most of the Jews were massacred because the Poles refused to permit them to take refuge in the fortress. According to tradition the graves of the martyrs were located near the eastern wall of the

great synagogue, where it was customary to mourn them on the Ninth of Av.

The Jewish community was reestablished shortly afterward under the patronage of the owners of the town, the princes Lubomirski, who accorded it special privileges in 1699 and 1713. By the beginning of the 18<sup>th</sup> century Dubno had become the largest Jewish community in Volhynia, being represented on the Council of the Four Lands and earning the sobriquet "Dubno the Great" (*Dubno Rabbati*). Its delegate, R. Meir ben Joel, was chosen to be head (*parnas*) of the Council of the Four Lands in the late 1750s. As many blood libels occurred then in Poland, R. Meir sent his relative R. Eliokim-Zelig of Yampol to the pope in Rome, to get bull against the libels, which he published in Latin and Polish. Jewish poll tax payers numbered 1,923 in 1765. The great fair of \*Lvov was moved to Dubno between 1773 and 1793, and the city became an important commercial center. The most famous of the 18<sup>th</sup>-century Jewish preachers of Lithuania, Jacob \*Kranz, was known as the Maggid of Dubno after the city with which he was most closely associated. In the 19<sup>th</sup> century Haskalah (Enlightenment) activists like the physician and writer Reuben Kalischer, the lexicographer and poet Solomon \*Mandelkern (author of a monumental Bible concordance), and the poet and writer Abraham Baer \*Gottlobler lived there. In 1780 the Jewish population numbered 2,325, in 1847, 6,330, and in 1897, 7,108 (about half the total). A main occupation was dealing in grain and hops. During World War I and the civil war in Russia (to 1921), the city changed hands a number of times and the community suffered extreme hardship, mainly of an economic nature. In March 1918 the Cossacks staged a pogrom killing 18 Jews. While Dubno belonged to Poland (1921–39), the community maintained many cultural institutions and there was an active Zionist and pioneer movement. In 1921 they numbered 5,315 (total population 9,146), and in 1931, 7,364 (total population 12,696).

[Yehuda Slutsky / Shmuel Spector (2<sup>nd</sup> ed.)]

### Holocaust and Postwar Periods

After the outbreak of World War II Dubno was occupied by Soviet forces (Sept. 18, 1939). The Soviet authorities liquidated the Jewish community institutions, made all political parties illegal, transferred Jewish welfare institutions to the municipality, and allowed only one Jewish activity – the public kitchen for refugees from the West. All Jewish economic enterprises and buildings were nationalized. Jewish leaders, among them David Perl, president of the Zionist Organization, were arrested. When the German-Soviet war broke out (June 1941), hundreds of young Jewish men escaped from Dubno to the Soviet interior. After the Germans entered Dubno (June 25), the local Ukrainian population indulged in acts of murder and robbery, while the Germans extracted 100,000 rubles (\$20,000) from the Jewish community. On July 22, 1941, 80 Jews were executed by the Nazis in the local cemetery; one month later 900 were killed. The Germans organized a Judenrat headed by Konrad Tojbenfeld. The Jewish population was

conscripted for forced labor and many succumbed to the unbearable conditions. The winter that followed (1941–42) was marked by hunger and disease, despite the attempts to provide relief by organizing public kitchens. Two ghettos were established at the beginning of April 1942, one for the workers and their families and the second for the rest of the Jews. On May 26–27, 1942, the Germans murdered all the Jews in the second ghetto, burying them in mass graves on the outskirts of the city. In August 1942 Jews from the environs and survivors were brought to the first ghetto. On October 5, 1942, about 4,500 inhabitants of the ghetto were murdered. The remaining 353, needed as artisans, were murdered on October 23, 1942, and the last 14 Jews escaped. Two partisan groups were formed by Dubno escapees. One headed by Isaac Wasserman was wiped out by the Germans, the other suffered losses in battles and the last 16 fighters joined the Polish self-defense units which fought the Ukrainian UPA. When the war was over only about 300 Jews from Dubno remained alive, including those who had returned from the Soviet Union. No Jewish community was reestablished after the war.

[Aharon Weiss / Shmuel Spector (2<sup>nd</sup> ed.)]

### Hebrew Printing

The first Hebrew printing press was set up in Dubno in 1794 by Jonathan b. Jacob of Wielowies, Silesia. Jonathan's partner was M. Piotrowsky, a non-Jew, and the business was under the patronage of Prince Lubomirski, the ruler of the town, whose escutcheon and initials appeared on the title pages. The press was active for nine years and produced 22 books. Another press was founded in 1804 by the printer Aaron b. Jonah, who owned a similar business in Ostrog, in partnership with Joseph b. Judah Leib. During the four years Aaron was in Dubno ten books were published. Dubno's rabbi, Ḥayyim Mordecai Margolioth, established a press in 1819, printing works by his brother Ephraim Zalman of Brody, and a Shulḥan Arukh with his own commentaries (*Sha'arei Teshuvah*) and those of his brother (*Yad Ephraim*). The press was closed after a fire.

**DUBNO, SOLOMON BEN JOEL** (1738–1813), Bible scholar and Hebrew poet. Dubno took his name from his birthplace in the Ukraine and studied in Lemberg (Lvov) under Solomon b. Moses \*Chelm, whose *Sha'arei Ne'imah* on the masoretic accents he published in 1776 with annotations and an introductory poem (also appended to some editions of Judah Leib Ben-Ze'ev's *Talmud Leshon Ivri*, 1886). From 1767 to 1772 he lived and studied in Amsterdam and then in Berlin, where he was engaged by Moses \*Mendelssohn as private tutor for his son Joseph. On Dubno's suggestion Mendelssohn undertook his famous German translation of the Bible and Hebrew com-

mentary, known as the *Biur*. For that work Dubno prepared the prospectus with a lengthy introduction, *Alim li-Terufah* (1778), and contributed the commentary on Genesis (except ch. 1) and part of Exodus as well as annotations to the Masorah of Genesis and Exodus, *Tikkun Soferim*. Dubno, however, left Berlin in 1781 for Vilna before the *Biur* on the Pentateuch, *Netivot ha-Shalom*, appeared in 1783. He had been prompted, apparently, by his friends in Russia such as Zalman Volozkin, who disapproved of his association with Mendelssohn and his circle, and who encouraged him to write his own Bible commentary. Nevertheless, Mendelssohn paid generous tribute to Dubno's work in his introduction to the *Biur*. In 1786 he returned to Germany and finally to Amsterdam, where he lived in penury, though he possessed a valuable library of over 2,000 books, some of them very rare, and over 100 manuscripts, for which he prepared a catalog, *Reshimah* (1814). In Amsterdam he published a commentary on the Masorah of the whole Pentateuch, *Tikkun Soferim* (1803). Dubno also wrote a good deal of Hebrew poetry, e.g., *Yuval ve-Na'aman* (n. d.); *Evel Yaḥid* (1776), a eulogy on the death of Jacob Emden; and *Kol Simḥah* (1780), in honor of the wedding of Simḥah Bunim b. Daniel Jaffe (\*Itzig). He published M. Ḥ. Luzzatto's drama *La-Yesharim Tehillah* (1780 or 1799) with an introduction and wrote a preface, interspersed with poetry, to Heidenheim's edition of the Shavuot *maḥzor* (1805). Dubno also wrote a geography of Palestine, *Kunteres Aharon* (Berlin, n. d.).

In his Bible commentary Dubno followed mainly the medieval exegetes, but added historical and geographical explanations as well as defending his own traditional position. He was the first Jewish commentator to dwell on the structure and didactic style of the Bible stories. In his notes on the masoretic accents, he stressed their exegetical importance as well as their antiquity.

[Jacob S. Levinger]

**DUBNOW, SIMON** (1860–1941), historian and political ideologist. Born in Mstislavl, Belorussia, Dubnow received a traditional Jewish education from his grandfather, but early in his life ceased to observe religious practices. He was self-taught, having achieved his general education at “the home university,” as he put it. Between 1880 and 1906 Dubnow lived, first illegally, in St. Petersburg; in his home town; in Odessa, where he joined the \*Aḥad Ha-Am circle; and Vilna, writing all the time for the Jewish press. He finally settled in St. Petersburg, this time legally, teaching Jewish history, which from then on became his dominating interest; from 1908 at the Institute of Jewish Studies (established by Baron David \*Guenzburg); and from 1919 at the government-supported “Jewish

People's University." Dubnow was one of the founders and directors of the Jewish Historico-Ethnographical Society and from 1909 to 1918 editor of its quarterly *Yevreyskaya Starina*. When the Bolsheviks came to power, Dubnow was asked to participate in the work of various committees appointed to prepare publications on Jewish themes; none of this work was ever published.

In 1922 he left Russia. A proposal for him to become professor of Jewish history at the University of Kovno met with the opposition of the Lithuanian professors, and Dubnow settled in Berlin, where he stayed until 1933. When Hitler came to power, Dubnow found refuge in Riga, the capital of Latvia. There the aged scholar continued his work in solitude, but with undiminished vigor. Riga was captured by the Germans in July 1941, and in a night of terror, on December 8, 1941, when the Jewish community was deported to a death camp, Dubnow was murdered by a Gestapo officer, a former pupil of his.

Dubnow's lifework was the study of Jewish history, of the relevant source material, and its "sociological" interpretation. He began with the evaluation of such men as I.B. \*Levinsohn, \*Shabbetai Zevi, and Jacob \*Frank and his sect (*Razsvet*, 1881; *Voskhod*, 1882). This he followed by a study of \*Hasidism (*Voskhod*, 1888–93; *Ha-Pardes*, 1894; *Ha-Shilo'ah*, 1901). Dubnow then published a series of documents and studies on Jewish life in Eastern Europe (*Voskhod*, 1893–95). He translated H. Graetz's *Volkstuemliche Geschichte der Juden* (1881) into Russian, with an introduction on the philosophy of Jewish history. When the censor prohibited the publication of the translation, Dubnow published his introduction separately (*Voskhod*, 1893; also in German, 1897, 1921<sup>2</sup>; in English, *Jewish History*, translated by Henrietta Szold, 1903; and Hebrew, 1953). In 1896, he published in two volumes an adaptation in Russian of S. Baeck's *Geschichte des juedischen Volkes und seiner Literatur* (1878), and of M. Brann's book of the same title (1893), adding a chapter on the history of the Jews in Poland and Russia. In his introduction, for the first time, Dubnow stated his main thesis of Jewish history as a succession of "centers" and their "hegemony" (see below).

In 1898, he began writing his series of works on Jewish history, based on the works of Baeck and Brann: *An Outline of Jewish History* (3 vols., 1925–29; Russian, 1901–05, 1910<sup>2</sup>, and translated into many languages); *History of the Jews in Russia and Poland* (3 vols., 1916–20; Russ., 1914, and translated into several languages); and finally his world history of the Jewish people, first published in German (*Die Weltgeschichte des juedischen Volkes*, 10 vols., 1925–29), then in Hebrew (1923–38) and Yiddish (1948–58). A version in the Russian original was published between 1934 and 1938. In 1940 an 11<sup>th</sup> volume was published in Hebrew, updating the work to World War II. An English translation by M. Spiegel began to appear in 1967. Although engaged in the writing of general Jewish history, Dubnow did not neglect research into its details. Thus, in 1922, he published the *pinkas* of the Council of Lithuania for the years 1623–1761. At the age of 70 Dubnow summarized his

lifelong study of Hasidism in his history of Hasidism (Hebrew, 1930–32, many reprints; German, 2 vols., 1931). He also served as an editor of the Russian and English Jewish encyclopedias. Dubnow's activities in the field of journalism began with the foreign editorship of *Razsvet* (1881–83), and from 1883 to 1908 he was the literary critic of *Voskhod*.

Dubnow believed that his study of history gave him the key to the understanding of the past, enabled him to work for the improvement of the present, and even provided the solution for the future of the Jewish people. According to him the Jewish people in the Diaspora lost some of the attributes which normally ensure the continuous existence of a people. As a "natural" compensation it developed instead a special social system and communal ideology. Through these the Jewish people was able to exist in foreign countries in a state of judicial autonomy and spiritual independence. In every period there had been a Jewish community which had been more successful than others in maintaining self-rule and national creativity, and it was this community which became the "center" and exercised "hegemony." In the early Middle Ages it was Babylon, taking over from the Palestinian "center"; this was followed by Spain and the Rhineland; in the late Middle Ages and the beginning of the Modern Age it was the \*Councils of the Lands of Poland-Lithuania. During the Middle Ages, the Jews became a "European" people, and they have remained one. Dubnow believed that not only was it possible to establish in modern times a regime of internal independence within the framework of a foreign country, but also that such a regime would rest on firmer foundations and would be more highly developed than during the Middle Ages. At this point he showed the influence of ideas, prevalent in his time, for a "State of Nationalities," which could preserve the unity of the Russian and Austro-Hungarian empires while satisfying the demands for self-rule of the various peoples living in them. The exceptional situation of the Jewish people during the Middle Ages could become a rule of life for many peoples and states in Europe. In this new period of Jewish history, the "center" would be Russian-Polish, with its spiritual strength and aspirations for self-rule. It was Dubnow's hope that under the new conditions Jewish creativity would lose the religious character which it had acquired in the talmudic period and the Middle Ages. Yiddish would be the language in which the new Jewish culture would express itself.

Dubnow's ideas placed him in strong opposition to both Zionism and the various forms of assimilation. In the course of time he became less outspoken in his anti-Zionist attitude but did not give up his basic stand (cf. the amended and "expurgated" Hebrew version of his "Letters on the Old and the New Judaism," 1937, with the original Russian version, 1907). In a series of articles published during World War I in *Novy Voskhod*, he outlined his position on the Jewish problem, demanding an international solution. In *Istoriya yevreyskogo soldata* ("History of a Jewish Soldier," 1918; French, 1929), he described the tragic situation of a Jew serving in a non-Jewish army.

Dubnow took an active part in a number of Jewish activities. In the Society for the Promotion of Culture he joined the Zionists in their struggle for the establishment of national Jewish schools. After the Kishinev pogrom in 1903, he was among those who called for an active Jewish self-defense. Opposing the policy of the socialist-Marxist Bund, he strongly supported Jewish participation in the elections to the Duma in 1905, established a Jewish section of the Constitutional Democrat party, and asked the Jewish deputies to join it. Dubnow also took part in the work of the Society for the Full and Equal Rights of the Jewish People in Russia in 1905, but later seceded and founded the Jewish People's Party in 1906. This "Folkist" party never exercised much influence and was weakened by internal dissension. It continued to exist until 1918.

The principal source on Dubnow's life is his autobiography, *Kniga moey zhizni*. The first two volumes appeared in Russian (1930–34; partial Heb. trans., 1936; Yid., 1962; Ger., 1937). A third volume, completed in 1940, was published in Riga shortly before the German conquest; the entire edition was destroyed by the Nazis. A single copy, however, rediscovered in 1956, made it possible to publish a new complete edition in 1957. Portions of Dubnow's private archives are in the possession of the Central Archives for the History of the Jewish People in Jerusalem. A festschrift on the occasion of his 70<sup>th</sup> birthday was published in 1930; a memorial volume appeared in 1954, edited by S. Rawidowicz; and a centenary volume, edited by A. Steinberg, appeared in 1963 (all three with bibliographies).

[Joseph Meisl]

### Historian and Political Ideologist

In his youth, Dubnow was influenced by the positivism of Comte and his followers, and especially by the philosophy of J.S. Mill, the "Gospel of Individualism" and the "Absolute Freedom of Thought and Speech." For several years Dubnow remained faithful to the teachings of these masters and attacked Judaism sharply in the name of the individual, of scientific thought, and of liberty.

Subsequently he was captivated by the historical world of Judaism. In 1887, having gone through a severe physical and spiritual crisis, he began to strive for a synthesis of "my self-acquired general knowledge and my universal aims... with my inherited treasures of Jewish wisdom and national ideals." To this synthesis he added a profound knowledge of the life and history of Russia and Russian Jewry, and a tremendous capacity for the uncovering of obscure sources of Jewish history. There was, too, the influence of Renan and Taine. Like Taine – who emphasized the importance of *petits faits significatifs*, from which the general principles are evolved – Dubnow placed the stress upon detail, which in its true form can only be found at the source. Both historians taught Dubnow the organic concept of the nation (which they termed "race"), and from Taine, in particular, he took over the idea that the situation of a people and its aspirations are faithfully reflected in the spiritual creations of its great men. Renan's historical concepts made it easier for Dubnow to change his

adverse criticism of the Jewish religion into a positive evaluation of it as the revelation of the national spirit. "A mixture of the teachings of Renan and Tolstoy" was "the main element in his state of mind" when he embarked upon the study of Hasidism and of Jesus and the Apostles. In theory Dubnow always remained a radical individualist, while as a historian, he admired the national unit and the requirements of its life, though these may put restrictions upon the individual. Again, in theory he was a confirmed rationalist, yet he valued religion and religious movements for their role in serving as the nation's shield and as the expression of its spirit. In the writing of history, Dubnow preferred describing "objective" processes and circumstances, based upon a study of detailed events, to the portrayal of personalities, their feelings, and desires; and he noted with pride that in later editions of his works "many lyrical passages were omitted."

Dubnow viewed Jewish history on the assumption that a people is an organism whose life and development depend upon its environment, the conditions under which it lives, and upon the manner in which it chooses to react to them. "In the course of the centuries, the nation passed from the embryonic stage and achieved its own identity... assumed a certain national form, created a state and forfeited it... the form of the national type reached its perfection when and, perhaps, because its first statehood was destroyed." Diaspora, as it were, is a fate preordained for the Jewish people, from the moment it entered Erez Israel. Even toward the end of his life – on the eve of the destruction of European Jewry in 1939 – Dubnow restated in precise terms his conviction that "in the view of historicism, as opposed to dogmatism, the diaspora was not only a possibility, but a necessity. A people small in numbers but great in quality, situated on the crossroads of the giant nations of Asia and Africa, could not preserve both its state and its nationality, and had perforce to break the barrel in order to preserve the wine – and this was the great miracle in the history of mankind." From this follows his definition of the Jewish people as "a people whose home is the entire world"; and his belief that what is known as Jewry is the result of the growth of a people and its adaptation to the conditions under which it lived; though of a special nature, these do not transcend the general laws of history. "... Ancient tribes combine to form a national entity, a state or kingdom. The kingdom is destroyed and the national entity splits into parts, which reconstitute as the communities." Here lies the source of the "unbroken chain of autonomy... of Jewish communities everywhere." Dubnow was convinced that in this respect the Jewish people was a pioneer of national development far wider in scope and much earlier in time than many nations of the 20<sup>th</sup> century.

As for the religion of Israel, Dubnow held that until the 19<sup>th</sup> century it was part of Jewish nationalism, a means of self-defense used by a people which possessed none of the normal defenses of other nations. When the Jewish people, by virtue of its belief in monotheism, became a special group within the pagan (and later Christian) world, having to fight against

assimilation, its leaders were forced to make use of religion for the defense of its existence. In the 19<sup>th</sup> century, however, a Jewish “renaissance” set in, in which, on the one hand, the individual was liberated, and, on the other hand, there arose a new secular interest in the national life. In the development of the Wissenschaft des Judentums in Germany in the 19<sup>th</sup> century, Dubnow saw one of the manifestations of the Jewish renaissance. He went so far as to try to justify the Jewish converts in the period of the \*salons (an observation not included in the Hebrew version of the “World History”). Religion was a discipline imposed upon the national organism, necessary only so long as Jewish culture stood isolated, unrelated to the culture of other peoples, i.e., to the time of \*Emancipation. Once Emancipation had taken place, this discipline was no longer desirable. In Hasidism Dubnow saw a fresh manifestation of the creative power of Jewish religion among East European Jewry, which had preserved tradition and had not yet entered the era of cooperation with the nations of the world. Such cooperation would enable Jewry to exist as a European people with a secular culture, a people destined to remain a permanent minority in the countries of Europe. Basing his work upon such a concept of history, Dubnow regarded the attempts of Zionism to renew the Jewish State in its ancient land as a pseudo-messianic adventure. He put forth a program for the Jews’ future based on these theories which he called \*autonomism.

**DUBNOW, ZE’EV** (1858–1940?), \*Bilu member. Dubnow, who was born in Mstislavl, Belorussia, was the elder brother of Simon \*Dubnow, the historian. He tended to assimilation in his youth and became interested in the Russian radical movement. After the 1881 pogroms he joined Bilu and went to Erez Israel with its first group in 1882. After working at \*Mikveh Israel, Dubnow moved with several friends to Jerusalem, where he was one of the founders of Shaḥu (Hebrew initials for the words “return of the craftsmen and the smiths”), an artisans’ association. In his letters to his brother he expressed the ultimate aim of the Bilu movement: “to acquire Erez Israel and return to the Jews their political independence.” In 1885 he returned to Mstislavl, “disappointed in the hopes of quick success in settling Erez Israel,” but still “a fervent nationalist in his belief.” He became a teacher, and assisted his brother in examining historical documents. Dubnow remained in contact with the Biluim in Erez Israel and

corresponded with them. Eventually he settled in Moscow, where he died.

[Yehuda Slutsky]

**DUBNOW-ERLICH, SOPHIA** (1885–1986), poet, political activist, critic, translator, and memoirist. Born in Mstislavl, Belarus, she was the eldest child of Ida (Friedlin) and historian Simon \*Dubnow. The family moved to Odessa in 1890, where Sophia entered a gymnasium in 1899; upon graduation in 1902, she studied at the Bestuzhev Higher Courses in St. Petersburg. Dubnow-Erich began her foray into the literary and political worlds in 1904, when her first poem, “Haman and his Demise,” appeared in the Russian-Jewish weekly *Budushchnost’* (Future). This satire of the czar’s minister of interior, Plehve, was immediately confiscated by the censors. That same year, university officials expelled her from her courses for participating in a student protest. Undeterred, she entered the history-philology department of St. Petersburg University in 1905 and later studied comparative religion and the history of world literature at the Sorbonne (1910–11). Rejoining her family in Vilna, the hotbed of Jewish politics in the Russian Empire, Dubnow-Erich became an active member of the Social Democratic Labor Party and the Jewish Labor Party and an antimilitarist propagandist.

In 1911 Sophia married Henryk \*Erich (1882–1941), a prominent leader of the leftist Bund in Poland with whom she worked to promote the ideals of Jewish cultural autonomy and socialist internationalism. By 1918, the political situation drove the Dubnow-Erichs to relocate to Warsaw, where they remained for over 20 years with their two sons. When Warsaw fell to the Nazis in 1939, Erlich was arrested by Soviet authorities and Dubnow-Erich moved her family to Vilna, where they lived until 1941. She reached the United States in 1942 where she learned of her husband’s death and her father’s murder by the Nazis. Dubnow-Erich remained politically active throughout her life, advocating for civil rights and protesting the Vietnam War. She died in New York City.

Dubnow-Erich contributed over 50 poems, essays, and translations to Russian and Yiddish-language journals and newspapers. She wrote three volumes of symbolist poetry (*Osenmiaia svirel’: stikhi*, 1911; *Mat’*, 1918; rep. Tel Aviv, 1969; and *Stikhi raznykh let*, 1973); several histories on topics relating to the Bund, including co-editing *Di geshikhte fun ‘bund’* (5 vols., New York, 1960–81); a biography of her father (*The Life and Work of S.M. Dubnov*, transl. J. Vowles, ed. J. Shandler, Bloomington, Indiana, 1991; Russian original, 1950); and a memoir, *Khleb i Matsa* (“Bread and Matzah,” 1994). Her papers are at ΥΙΘΟ.

**DUBOSSARY**, town on the Dniester River, E. Moldova. Founded at the end of the 18<sup>th</sup> century as a Russian fortress, Dubossary developed as a nearby settlement. The inhabitants were employed in the timber trade and log rafting. Jews traded in grain, wine, and prunes. They also grew tobacco. There were 2,506 Jews living in Dubossary (about 1,000 in the town itself) and its vicinity, including the towns of Grigoriopol and Ananyev, by 1847. In 1897 there were 5,220 Jews in Dubossary (43% of the total population). In April 1882 a pogrom was staged, and two Jews were killed, and much property was looted and destroyed. In the beginning of the 20<sup>th</sup> century the community operated a *talmud torah*, nine *hadarim*, and four private schools. An attempt to resuscitate the \*blood libel was made in 1903. During the civil war of 1918–20 Jewish \*self-defense was organized and the community remained relatively free from the pogroms that occurred at the time. Thousands of refugees making their way to Romania in 1920–22 passed through the town, and many from Dubossary itself also crossed the border. There were 3,630 Jews in Dubossary in 1926 (81% of the total population), dropping to 2,198 (total population 4,250) in 1939. In the 1930s there were about 400 Jewish artisans organized in nine cooperatives, and 227 farmers raising tobacco, while others worked as laborers and clerks.

The Germans occupied Dubossary in mid-July 1941. At the end of August a ghetto was set up, and on September 1 the town was annexed to Romanian Transnistria. On September 11, 1941, the Jews were ordered to assemble. By September 28 about 6,000 Jews had been murdered. In September 1943 thousands of Jews were brought to Dubossary from Bessarabia and Moldavia and "liquidated" there. Some managed to join the partisans in the neighborhood. After the liberation of Dubossary on August 14, 1944, the Soviet Commission for Investigation of Nazi Crimes found that about 18,000 Jewish victims were buried in mass graves near the town. Approximately 100 to 150 survivors returned after the war.

**DUBROVNIK (Ragusa)**, port in S. Dalmatia, Croatia; oligarchic maritime city-state, autonomous until 1808, mainly under Venetian or Turkish protectorate. Jewish merchants from Durazzo (Albania) are mentioned in Ragusan archives in 1368. French Jews living in Apulia (south Italy) after the expulsion from France temporarily resided and traded in Dubrovnik in the second half of the 15<sup>th</sup> century. After the Spanish expulsion in 1492 Dubrovnik became an important transit center for refugees traveling to Balkan cities under Turkish rule. In 1502 there were many refugees staying in Dubrovnik.

When an old woman was found murdered, a dozen of them were arrested and tortured; several were declared guilty and burnt at the stake.

After the expulsions from Aragonese possessions in south Italy in 1514 and 1515, many more refugees went to Dubrovnik. Their success in commerce, together with the local clergy's zeal to have the city follow the example of other Christian states, resulted in several expulsion decrees (1514, 1515, 1545) which were revoked on the sultan's intervention. When wars against Turkey in the second half of the 16<sup>th</sup> century made the Mediterranean insecure for commerce, trade was re-routed through the Adriatic to Dubrovnik and thence by caravan to Turkey. Jews were allowed to settle in Dubrovnik and were given customs privileges to encourage transit trade. Jews dealt mainly in textiles, silk, wool, leather (Hananel-Eškenazi, 1 (1958), 264), and spices. They were allowed to live inside the walls in 1538, but in 1546 a ghetto was established in a small street (still called the Jewish street) enclosed by walls, and the gate was locked at night. A monthly tax was levied per person for residence and per bale for storage of wares. The synagogue is said to date from 1532. The Jewish cemetery was first mentioned in 1612 when it had to be enlarged; it was still in use in 1910. Two more streets were added to the ghetto in 1587, when there were 50 Jews in Dubrovnik, some with their families. Most of the trade with Turkey and much of the transit trade with Italy was in Jewish hands. At this time some Jewish intellectuals found temporary or permanent refuge there, such as the physician \*Amatus Lusitanus and the humanist Didacus Pyrrhus. Many Jewish physicians were in the service of the republic, which had to obtain from Rome the authorization for them to treat Christians.

The most important Jewish family in the 16<sup>th</sup> and 17<sup>th</sup> centuries was that of \*Aaron b. David ha-Kohen; arriving from Florence in the 16<sup>th</sup> century, they established connections with Sarajevo and Sofia, and also acted as agents for many Jewish traders throughout Europe. To induce more Jewish merchants to settle in Dubrovnik, the senate issued in 1614 a letter of safe conduct for five years, guaranteeing Jewish merchants freedom from arrest and from seizure of their wares for payment of previously incurred debts. There was a notorious blood libel in 1622, in which Isaac Yeshurun was accused of murdering a small girl: he stoically maintained his innocence, but was sentenced to 20 years imprisonment (he was released after 32 months). As a result of the restrictions imposed on the Jewish community at the time of this libel, most Jews left for Venice or Turkey; only four families remained in Dubrovnik, among them that of Aaron b. David ha-Kohen, rabbi of Dubrovnik. The Jewish population increased again after Aaron had obtained another letter of safe conduct in 1637. Since many restrictions imposed in 1622 were disregarded, the Church renewed its attacks and obtained from the senate the enforcement of several of them. But in many instances, the senate refused to pass anti-Jewish measures as Dubrovnik was a Turkish protectorate and the sultans had always protected the Jews.

In the 18<sup>th</sup> century the Jewish population increased; there were 218 Jews out of a total population of around 6,000. Ragusan archives mention Jewish schools, teachers, weddings, and a Jewish bookseller; Jews participated in maritime ventures as co-owners of ships that went as far as Scandinavia and America, or supplying loans for equipment of such ships; they also played a part in establishing the first maritime insurance companies. With the economic decline of Dubrovnik, however, restrictions were imposed on all foreigners. Jews could not engage in commerce and could only be teachers, physicians, or help in commerce, and some were tax farmers. In 1755 they were again forbidden to live outside the ghetto or to leave it at night. Although it had supported the French against the Russians, Dubrovnik was annexed in 1808 to the French vice kingdom of Illyria, which abolished all Jewish disabilities. When Dubrovnik passed to Austria in 1815, laws applied to Jews in Austria became valid in Dubrovnik too; e.g., Jews had to obtain permission from Vienna to get married. Full emancipation was granted only in 1873. When after World War I Dubrovnik became part of Yugoslavia, the Jewish population had decreased. There were 308 Jews in 1815, and 250 in 1939.

### Holocaust and Contemporary Periods

Dubrovnik was occupied by the Italian army in April 1941; administratively however it belonged to the Independent Croatian State of the Croat quisling Pavelić, whose *ustashi* were allowed to persecute Jews. Jewish property was confiscated or put under “caretakers,” and a few Jews were sent to concentration camps in Croatia. The Italians, however, did not allow mass deportations, so that many refugees from other parts of Yugoslavia went to Dubrovnik. At the bidding of the Germans, in November 1942, the Italians interned all Jews (750) in Gruž and on the island of Lopud, near Dubrovnik. There they remained until June 1943, when they were transferred to the big Italian internment camp on Rab in northern Dalmatia, together with most Jews from the Italian-occupied territories in Yugoslavia. During the brief interregnum in 1943 between the capitulation of Italy and the German occupation, most of them were transported by the partisans to the liberated territory on the mainland. Some joined the Jewish battalion formed on Rab, and others served as physicians or nurses. The 180–200 Jews who could not leave Rab were taken by the Germans to extermination camps. After World War II, 28 Jews immigrated to Israel. The Jewish community in Dubrovnik had 31 members in 1969. The rabbi of Dubrovnik served as the chief rabbi for the regions of southern Dalmatia, Herzegovina, and Montenegro. Services in the old synagogue were held irregularly. During the Yugoslav War of Secession of 1991/2 the synagogue suffered slight damage from artillery shells and its roof had to be repaired. Ceremonial objects from this synagogue, built c. 1510, were loaned to New York’s Yeshiva University in 1964 and returned only in 1988 following a court order. A small community is now affiliated to the Coordination Committee of Croatian Jewish Communities, headed by Zagreb. It maintains a museum showing the synagogue artifacts and

other items belonging to the past. The well-preserved cemetery contains 200 old gravestones, including that of Rabbi Jacob Pardo, who died there in 1819.

[Daniel Furman / Zvi Loker (2<sup>nd</sup> ed.)]

**DUBROVNO**, city in the Vitebsk district, Belarus. Jews are first mentioned there in 1685. There were 801 Jewish taxpayers in Dubrovno and its environs in 1766. During the 18<sup>th</sup> century Dubrovno became a center for weaving prayer shawls in Eastern Europe. Conditions were difficult for the weavers, who worked on handlooms, and were harshly exploited by the merchants who supplied them with the yarn and afterward bought their products and marketed them through agents in Jewish settlements throughout Russia and Galicia, and even exported them to Western Europe and America. From the mid-19<sup>th</sup> century the industry, which had about 660 workers in 1847, encountered competition from the factories in the big cities where prayer shawls were woven by machine, and Jews began to leave the town. The plight of the weavers in Dubrovno aroused the attention of the Jewish community in Russia. In 1902, the Aktsionerneye Obshchestvo Dneprovskoy Manufactory (Dnieper Textile Industry Ltd.) was founded with the help of the \*Jewish Colonization Association (ICA), which held two-thirds of the shares, the rest being subscribed by wealthy Jews in St. Petersburg and Moscow. A large weaving factory, whose directors, staff, and workers were Jews and where Saturday was kept as the day of rest, was established. Near the factory, a public school and a cooperative store were opened. Dubrovno was also a center for scribes of Torah scrolls, phylacteries and *mezuzot*, who received permission to form a professional union in the early period of Soviet rule. A trainload of 30,000 phylacteries which had accumulated in Dubrovno after the war was permitted to be dispatched to Berlin. The manufacture of prayer shawls ceased in the 1920s. Around 1930, the weaving factory employed about 1,000 workers, of whom a considerable number were Jews. The community numbered 4,481 in 1847, 4,364 in 1897 (57.5% of the total population), 3,105 in 1926 (about 39%), and 2,119 (21%) in 1939. Dubrovno was the birthplace of the Zionist leader M. \*Ussishkin and the brothers \*Polyakoff. The Germans occupied the town on July 16, 1941. Soon the Jews were collected in a ghetto. In December 1941 the Germans murdered 1,500 Jews. The remaining 300 skilled workers and their families were executed with the help of Belorussian police in February 1942.

[Yehuda Slutsky / Shmuel Spector (2<sup>nd</sup> ed.)]

**DUCKESZ, EDUARD (Yecheskel; 1868–1944)**, rabbi and scholar. Duckesz was born in Szelepcsény, Hungary, and studied at the Pressburg (Bratislava) yeshivah. In 1889 he became rabbi at the Klaus synagogue and *dayyan* in Altona, Germany. His scholarly efforts were devoted to the history of the three sister communities Altona, Hamburg, and Wandsbeck (רא"ה). He fled to Holland in 1939 but was interned in Westerbork by the Nazis in 1943 and sent to the Auschwitz extermination camp in 1944 where he perished. Among Duckesz' published works are *Ivah le-Moshav*, the first volume of which contains biographies and tombstone inscriptions of the rabbis who served in the three communities, with annotations by S. Buber, and the second, entitled *Chachme Ahu*, biographies of the *dayyanim* and rabbinical authors of these communities, partly in German (2 vols., 1903–08); and *Zur Geschichte und Genealogie der ersten Familien der hochdeutschen israelitischen Gemeinden in Hamburg-Altona* (1914).

**BIBLIOGRAPHY:** T. Preschel, in: N.Y. Institute of Religious Jewry, *Elleh Ezkerah*, 4 (1961), 58–64; H. Schwab, *Chachme Ashkenaz* (Eng., 1964), 47.

**DUDA, VIRGIL (Rubin Leibovici; 1939– )**, Romanian writer. A lawyer by profession, Duda chose a literary career in the mid-1960s, working also as a producer at the Bucharest Film Studio. After a first volume of short stories, he published several novels demonstrating his remarkable talent for psychological analysis: *Catedrala* ("The Cathedral," 1969), *Anchetatorul apatic* ("The Apathetic Interrogator," 1971), and *Măștile* ("The Masks," 1979). The following novels, published during the 1980s, made his reputation as one of the more important Romanian prose writers: *Războiul amintirilor* ("The War of Remembrances," 1981), which received the prize of the Writers Association); *Hărțuiala* ("The Harassment," 1984); and *Oglinda salvată* ("The Saved Mirror," 1986). Autobiographical elements going back to his life as a teenager in the Moldavian town of Bârlad became more obvious in these works. Settling in Israel in 1988, he continued his literary activity, publishing (in Romania) novels with a preponderance of Jewish themes, including the impact of the Holocaust and the Communist period: *România, sfârșit de decembrie* ("Romania, End of December," 1991), *Alvis și destinul* ("Alvis and the Destiny," 1993), *A trăi în păcat* ("To Live in Sin," 1996), *Viață cu efect întârziat* ("Life with Belated Effect," 1998), and *Șase femei* ("Six Women," 2002). A volume of essays, *Evreul ca simbol* ("The Jew as a Symbol," 2004) includes many subtle reflections on Jewish intellectuals and writers (Franz Kafka, Isaac Babel, Benjamin Fondane, Mihail Sebastian). Duda's brother, Lucian Raicu, is a well-known Romanian literary critic.

[Leon Volovici (2<sup>nd</sup> ed.)]

**°DUEHRING, KARL EUGEN (1833–1921)**, German economist and philosopher, born in Berlin; one of the initial pro-

ponents of modern racial antisemitism. He studied economics, law, and philosophy at the University of Berlin. Although totally blind at 30, Duehring made significant contributions to philosophy and the theory of national-autarkic economics. A quarrelsome disposition, however, caused him to give up academic teaching in 1864. Eventually he developed a pathological aversion to such *bêtes noires* as academicians, Social Democrats, and all cosmopolitans, "whether Jews or Greeks." He propounded his theories on racial antisemitism in such scurrilous pieces as his *Die Judenfrage als Rassen-Sitten- und Kultur-Frage* (1881), *Die Ueberschaetzung Lessings und dessen Antwalschaft fuer die Juden* (1881), *Sache, Leben, und Feinde* (1882), *Der Ersatz der Religion durch Vollkommeneres und die Ausscheidung alles Judenthums durch den modernen Voelkergeist* (1883). To Duehring, Karl Marx was the personification of evil, both because of his theories and his race. He had "taken his system from the Mosaic Law." Baptism had not prevented him from associating with his own kin (*Sippe*), namely "the descendants of Judas," in order to form a kind of international "Alliance Israélite." As to Social Democracy, its aim was to exploit and enslave the people in the interests of Jewry. Duehring had a paramount influence on the development of German antisemitism in the 1880s, whether indirect or active, and continues to inspire "voelkisch" elements to this day. In his *Der Wert des Lebens* (1865), Duehring rejected Zionism for strengthening Jewish "world power." Instead he recommended solving the Jewish question "by killing and extirpation" (*durch Ertoetung und Ausrottung*).

Oisermann, *100 Jahre Anti-Dühring – Marxismus, Weltanschauung, Wissenschaft* (1978).

**DUEÑAS**, city in Castile, central Spain. Its Jewish community began to flourish in the 13<sup>th</sup> century. In 1221, Ferdinand III transferred to the monastery of Huelgas near Burgos the Jews settled on lands belonging to the monastery in Dueñas. The first document referring to the Jews of Dueñas is from 1225. At the end of the 13<sup>th</sup> century the Jewish community of Dueñas was one of the smallest in Castile. In 1290 the community paid taxes amounting to 2,427 maravedis. The Jews of Dueñas owned land and vineyards; in 1346, the king's surgeon Don Judah, an inhabitant of Dueñas, leased several gardens belonging to the local church. The community was evidently impoverished by the Black Death (1348–49), since in 1352 it paid only 300 maravedis in tax. Among those who engaged in tax farming in Dueñas were Don Çag Merdohay of Sahagún and his sons David and Shem Tob (1365). During the Civil War in Castile, the Jewish quarter of Dueñas was attacked and sacked, around 1368. The Hebrew chronicler Samuel Zarza, who gives this information, writes that the members

of the community were learned and righteous. Considering the tax paid, the community remained small in the 15<sup>th</sup> century. Following the edict ordering Jews and Christians to live in separate quarters, Ferdinand and Isabella gave instructions in 1483 that the *alcabalá* (“indirect taxes”) should not be collected from houses owned by Christians which were situated in the new Jewish quarter. In May 1492 the Jews of Dueñas complained that they would not be able to leave the city on the date fixed by the decree of expulsion, as they were being hindered in selling their possessions and collecting their debts and the townspeople kept presenting them with claims dating back for generations.

The Jewish quarter was near the castle.

**DUENNER, JOSEPH ZĒVI HIRSCH** (1833–1911), rabbi and talmudist. Duenner was born in Cracow. He studied in the yeshivah there and subsequently at the University of Bonn. In 1862 Duenner was appointed director of the rabbinical seminary in Amsterdam and in 1874 chief rabbi of the Ashkenazi community there. Regarded as the spiritual leader of Orthodox Jewry in Holland, Duenner nevertheless combined traditional learning with a critico-historical approach. The results of his researches and his new interpretations were published as glosses to 19 tractates of the Talmud (1896–1929). His main work is *Die Theorien ueber Wesen und Ursprung der Tosephta* (1874). Duenner became a supporter of the early movement for settlement in Erez Israel in consequence of his contacts with Moses \*Hess while studying in Bonn. He later became a leader of the \*Mizrachi party.

[Jacob S. Levinger]

**DUEREN**, city near Aachen, Germany. Jews from Dueren are mentioned in 13<sup>th</sup>-century records. In 1238 Anselm of Dueren and his wife, Jutta, acquired some property in the Jewish quarter of Cologne. In 1241 the Jews of Dueren paid ten marks imperial tax. Judah of Dueren was involved in a famous controversy over a marriage mentioned in a responsum of Meir b. Baruch of Rothenburg. During the second half of the 13<sup>th</sup> century Isaac ben Meir \*Dueren lived in the city.

The community was annihilated during the Black Death (1348–49), and was not reconstituted until the 19<sup>th</sup> century. The modern community, which had its own elementary school, numbered 252 in 1880, 268 in 1905, and 358 in 1933, but was reduced to 184 in 1939. During *Kristallnacht* (November 10, 1938) the synagogue and community center were burned down by the Nazis. One hundred Jewish men from Dueren were in-

terned in Buchenwald. In July 1941 the remaining Jews were deported to the death camps. After the war, 15 Jews returned there, but subsequently left, and Jewish community life was not resumed.

[Zéev Wilhem Falk]

**DUEREN, ISAAC BEN MEIR** (second half of 13<sup>th</sup> century), German halakhic authority on the laws of \**issur ve-hetter*. Isaac's surname Dueren derives from the town of that name in Germany. In his youth he studied under Tobias b. Elijah of Vienne in France. The period of Dueren's activity has hitherto been uncertain owing to the possibility of his having been confused with other contemporary local scholars of the same name. His date however can now be determined with some precision. Not only does Israel Isserlein state (*Pesakim u-Khetavim*, no. 215) that \*Meir b. Baruch of Rothenburg is to be regarded as a *batrai* (“a later authority”) compared with Dueren, but the recent discovery that the *issur ve-hetter*, in which Dueren is already referred to as an accepted authority, was written by a disciple of \*Perez b. Elijah of Corbeil, and not, as previously accepted, by \*Jeroham b. Meshullam, fixes his dates as the latter part of the 13<sup>th</sup> century. The statement therefore that he was the teacher of Alexander Suslin ha-Kohen, the author of the *Sefer Aguddah*, is erroneous. Dueren is chiefly known for his *Sha'arei Dura* (*Issur ve-Hetter shel Rabbi Yizḥak mi-Dura*, *She'arim mi-Dura*, *Dura*, etc.), which deals with the laws of forbidden food and of menstruant women. This book, based wholly upon the traditions of Germany and France, became the basis of *halakhah* in this difficult sector, exerting a decisive influence upon all Ashkenazi halakhic authorities after him from the *Aguddah* of Alexander Suslin ha-Kohen through *Terumat ha-Deshen* of Israel Isserlein until *Torat Ḥattat* of Moses Isserles. The early halakhic authorities guided themselves by the rule that Isaac was to be followed in *issur ve-hetter* even when he was lenient, although the rule did not apply to *terefot* (*Pesakim u-Khetavim*, no. 215). *Sha'arei Dura* was first published in Cracow in 1534. Since then it has been republished ten times with the addition of many glosses and commentaries by the greatest talmudists in each generation, among them Israel Isserlein, Solomon Luria, Elijah Loans, and Nathan Spiro. These glosses, as well as those of the scholars who preceded Israel Isserlein, were sometimes indiscriminately incorporated into the text, so that it is difficult, without the aid of manuscripts, to determine the original content of the book, a critical edition of which is still lacking. The book was regarded with such sanctity that Ḥayyim

b. Bezalel, brother of Judah Loew of Prague, complains about Moses Isserles' daring to deviate in his *Torat Ḥattat* from the order of *Sha'arei Dura*. Another of Dueren's books, *Minhagim mi-Kol ha-Shanah*, was published by Elfenbein (see bibliography). He also wrote *tosafot* to *Gittin* and *Kiddushin*.

**BIBLIOGRAPHY:** J. Freimann, in: *Festschrift... D. Hoffmann* (1914), 421 n. 4; A. Freimann, in: *JJLG*, 12 (1918), 244 n.4, 248 n.7, 272; Elfenbein, in: *REJ*, 105 (1940), 107–19; idem, in: *Horeb*, 10 (1948), 129–84; Ta-Shema, in: *Sinai*, 64 (1969), 254–7.

[Israel Moses Ta-Shma]

**DUESSELDORF**, city in Germany, capital of North Rhine-Westphalia. Jews are first mentioned there in 1418; the cemetery of the community then served the whole region of \*Berg. They were expelled from Duesseldorf in 1438. In 1582 permission was granted to one \*court Jew to settle there. The community numbered 14 families in 1750 and 24 in 1775. Of these the most distinguished was the wealthy \*Van Geldern family, one of whose members, the court Jew Joseph (d. 1727) in the service of the duke of \*Juelich-Berg, was head (*parnas u-manhig*) of the Jewish community of the duchy. He donated a synagogue to the community in 1712, where services were held until 1772. Joseph van Geldern's son and grandson followed him in these communal offices. During the 19<sup>th</sup> century Duesseldorf Jews achieved importance in trade and banking. The community increased from 315 in 1823 to 5,130 in 1925. A seminary for Jewish teachers functioned from 1867 to 1874. Leo \*Baeck served as district rabbi from 1907 to 1912.

The events of November 10, 1938, were particularly calamitous for the Duesseldorf community since the diplomat Vom Rath, who had been assassinated by Herschel \*Grynspan at the German embassy in Paris a few days earlier, was a native of Duesseldorf. The main synagogue, built in 1905, and two Orthodox synagogues were burned down. Seven Jews were killed or died from the effects of their wounds, and about 70 were injured. In May 1939, 1,831 Jews remained in Duesseldorf, dropping to 1,400 in 1941. Most were deported to Minsk, Lodz, Riga, and Theresienstadt. Only 25 Jews remained in Duesseldorf in 1946. The community was reconstituted after the war, and in 1951 the Central Council of Jews in Germany was established in Duesseldorf. The main German Jewish newspaper, the *Allgemeine Wochenzeitung der Juden in Deutschland* (today *Juedische Allgemeine*), founded in 1946, was published there until 1985. A synagogue was inaugurated in 1958. The community numbered 1,585 in 1969. Owing mainly to the immigration of Jews from the Former Soviet Union, the number of community members rose to 7,237 in 2003. A Jewish elementary school was opened in 1993.

[Zvi Avneri / Stefan Rohrbacher (2<sup>nd</sup> ed.)]

**°DUGDALE, BLANCHE ELIZABETH CAMPBELL** (1890–1948), British Zionist; a niece of Arthur James \*Balfour. Blanche Dugdale was employed in the British Naval Intelligence Department and became a member of the League of Nations Union and the British government's delegation to the League of Nations Assembly (1932). Described by Chaim Weizmann as “an ardent, lifelong friend of Zionism,” “Baffy,” as she was affectionately called, constantly tried to influence cabinet ministers and high commissioners by personal contact and in writing, stressing the justice of the Jewish cause in Palestine. She also addressed public meetings, Zionist conferences, and even World Zionist Congresses and advised Weizmann in his political dealings with the British. From 1940 until a few months before her death she worked daily in the political department of the Jewish Agency. During World War II she served on various committees to aid Jewish refugees. She regularly published articles in the *Zionist Review* and authored a pamphlet *The Balfour Declaration: Origins and Background* (1940) and a two-volume biography, *Arthur James Balfour* (1936). Her diary is preserved in the Weizmann archives in Rehovot. Before she died, on May 15, 1948, relatives and friends told her that the State of Israel had been established. Extracts from her diaries, covering the period 1936–47, were edited and published by Norman Rose in 1973. One of the most committed of British “gentile Zionists,” it has been said that she “thought of [Jewish] Palestine as her second country.”

[Josef Fraenkel]

**°DUHM, BERNHARD** (1847–1928), German Protestant biblical scholar. Born in Bingham on the Ems, East Friesland, Duhm studied at Goettingen (chiefly under H. Ewald). In 1877 he was appointed professor at Goettingen University and in 1899, at Basle University. His activities in Basle, which included teaching in secondary schools and lecturing (*Das Geheimnis in der Religion*, 1896; *Das kommende Reich Gottes*, 1912; Eng. trans., *The Evercoming Kingdom of God*, 1914), extended beyond the academic sphere. His main works were devoted to the study of the Prophets. His early work *Die Theologie der Propheten...* (1875) reflects a somewhat dogmatic understanding of the prophets, whom Duhm regarded as analogous to the writers and orators of other ancient peoples, in particular the Greeks. In this work Duhm (simultaneously with Wellhausen, with whom he was friendly) rejects the presupposition of an older “Mosaic” law. His last work on the prophets, *Israels Propheten* (1918), is an overall exposition of the Israelite religion, based on his previous exegetical studies in his commentaries on Isaiah (1892), Jeremiah (1901), and Minor

Prophets (1911), all of which contain impressive translations. His outstanding capacity for understanding the prophets, especially the irrational aspects of prophetic vision and audition and their subsequent expression, enabled him to set forth a frequently violent (e.g., in conjectural criticism of texts), but profound and imposing, portrayal of the prophetic personalities. Duhm isolated the Servant Songs of Isaiah 40–55 from Deutero-Isaiah. He proposed the separation of Isaiah 56–66 (as “Trito-Isaiah”) from Isaiah 40–55 and the rejection of the authenticity of Jeremiah’s prose orations. Of less importance are his commentaries on Job (1897) and Psalms (1899). The latter work contains exaggerated historical criticism (e.g., he dates most of the psalms to the Hasmonean period).

**DUISBURG**, city in Germany. A small Jewish settlement existed there from the second half of the 13<sup>th</sup> century whose members were massacred in the wake of the \*Black Death (1350). No Jews lived there subsequently until the 18<sup>th</sup> century, when a few families are mentioned. A few Jewish students studied medicine at the university between 1708 and 1817. In 1793 there were ten families living in the town, who formed an organized community. A small synagogue was consecrated in 1826 and replaced by a more impressive edifice in 1875. The Jewish population increased during and after World War I as a result of immigration from Poland and Galicia. The community (united with Hamborn) numbered 2,560 in 1933. In October 1938, 144 Polish Jews were expelled. On *Kristallnacht*, the synagogue was set on fire; 40 Jewish homes and 25 stores were vandalized and 25 Jews were sent to Dachau. In December 1938 Jewish youngsters were sent to Holland on a *Kindertransport*; some later reached England, where they survived the war. The remaining 809 Jews were crowded into 11 Jewish houses from which they were deported in 1941 to ghettos in the East and later to death camps.

In 1969, 75 Jews lived in Duisburg and Muelheim an der Ruhr, which constituted one community. In 1989 the joint community of Duisburg, Muelheim, and Oberhausen had 118 members; due to the immigration of Jews from the Former Soviet Union, their number rose to 2,653 in 2003. The new synagogue, designed by Zvi Hecker and inaugurated in 1999, is an architectural hallmark of the city.

**DUJOVNE, LEON** (1899–1984), Argentine lawyer, philosopher, and community leader. Dujovne was born in Russia and

went to Argentina as a child. In 1966 he settled in Israel and in 1973 returned to Argentina. For many years Dujovne was a member of the Faculty of Philosophy and Letters of the University of Buenos Aires. He published many books, the most important of which are *Baruj Spinoza – Su vida, su época, su obra y su influencia*, 4 vols. (1941–44); *Martín Buber – sus ideas religiosas, filosóficas y sociales* (1966); *La Filosofía y las teorías científicas* (1930); and *Teoría de los valores y filosofía de la historia* (1959), which received the First National Prize of Argentina. Dujovne also translated into Spanish Dubnow’s *History of the Jewish People*, Maimonides’ *Guide of the Perplexed*, and works by Ibn Gabirol, Saadiah Gaon, Bahya ibn Paquda, and others. He was for many years president of the Sociedad Hebraica Argentina and of the Instituto de Intercambio Cultural Argentino-Israelí as well as editor in chief of the Jewish weekly, *Mundo Israelita*.

[Lawrence H. Feigenbaum and Kenneth R. Scholberg]

**DUKAS, PAUL** (1865–1935), French composer. Born in Paris, Dukas studied at the Conservatory and taught there from 1909 until his death. In French music, his style formed a bridge between the school of César Franck and that of Debussy. He achieved fame in 1897 with his brilliant orchestral scherzo *L’Apprenti sorcier* (“The Sorcerer’s Apprentice,” inspired by Goethe), which, it was later suggested, was actually intended as a satire on the fashion of “symphonic poems.” The most important of Dukas’ works is the opera *Ariane et Barbe-Bleue* (1907, with text by Maeterlinck), symbolizing the struggle for emancipation from dictatorship. His other works also include a symphony, several overtures, the ballet *La Péri*, chamber music, and piano works. After 1912, Dukas, who had become increasingly self-critical, gave up composition almost entirely. He devoted himself to teaching at the Conservatory. Before his death he destroyed his unpublished works.

[Chanan Steinitz]

**DUKER, ABRAHAM GORDON** (1907–1987), U.S. educator and historian. Duker, who was born in Rypin, Poland, went to the U.S. in 1923. He served on the library staff at the Jewish Theological Seminary (1927–33) and was research librarian at the Graduate School of Jewish Social Work (1934–38). From 1938 to 1943 he was on the staff of the American Jewish Committee, serving inter alia as the editor of the *Contemporary Jewish Record* (1938–41). He was also an editor of the *Universal Jewish Encyclopedia* (1939–43), *Reconstructionist*, and *Jewish Social Studies*, a quarterly. Duker was president of the Chicago Spertus College of Judaica (1956–62) and from 1963 director of libraries and professor of history and social institutions at Yeshiva University. His works include education surveys, books, and articles in his main fields of interest, Polish-Jewish relations and American Jewish sociology.

His books include *Jewish Emancipation under Attack: Its Legal Recession until the Present War* (with B. Weinryb, 1942) and *Emancipation and Counter Emancipation* (with Meir Ben Hurin, 1974). He also wrote about religious trends in American Jewish life (1949), Jewish community relations (1952), socio-psychological trends in the American Jewish community since 1900 (1954), and the impact of Zionism on American Jewry (1958).

[Sefton D. Temkin / Ruth Beloff (2<sup>nd</sup> ed.)]

**DUKES, LEOPOLD** (**Judah Loeb**; 1810–1891), historian of Jewish literature. Dukes was born in Pressburg, Hungary. He was a student of R. Moses \*Sofer and of R. Ḥayyim Joseph Pollak; the latter introduced him to secular study. An inveterate, though poor, traveler, Dukes visited most of the important libraries in Europe, researching Jewish manuscripts and uncovering many hitherto unknown medieval works. His research covered various aspects of language and literature: aggadic literature, Bible exegesis, medieval Jewish literature, Hebrew grammar and the masoretic text, and talmudic maxims and truisms. Frequently, however, his research was unsystematic and his edited texts in need of correction. Dukes' translation of Rashi's Pentateuch commentary into German was published with Sofer's imprimatur in Prague during 1833–38 (*Ḥamishah Ḥumshei Torah im Ha'takah Ashkenazit al Perush Rashi [Rashi zum Pentateuch]*, 5 vols.). Dukes produced various studies on the poetry of Solomon ibn Gabirol and Moses Ibn Ezra. His autobiography appears in *AZDJ*, 56 (1892).

[Jacob S. Levinger]

**DUKHAN** (Heb. דִּיכָן; "platform"), an elevated platform. According to talmudic literature, the word was used in four instances.

(1) The place in the Temple where the levites sang while the sacrifice was being offered (Ar. 11b). According to the Mishnah (Mid. 2:6), this *dukhan* was placed upon a step one cubit high, which was situated between the court of the Israelites and the court of the priests. It had three steps, each half a cubit high. Hence the height of the *dukhan* was one and a half cubits, or, together with the step, two and a half cubits.

(2) The place where the priests stood while reciting the \*Priestly Blessing. The Talmud quotes R. Tarfon as saying "I once ascended the *dukhan* [for the Priestly Blessing]" (Kid. 71a). The Mishnah (Tam. 7:2) implies, however, that the priests stood on the 12 steps between the porch and the altar when blessing the people and not on the *dukhan* (cf. Tosef. Sot. 7:7). The explanation, apparently, is that the steps of the porch were the main site for the Priestly Blessing, but when there were too many priests to fit on the steps, the others took up this position on the *dukhan* (cf. *Tiferet Israel* on Middot 2:6).

(3) After the destruction of the Temple, the meaning of the word was extended to apply to the place in the synagogue where the Priestly Blessing was recited (Shab. 118b; Sot. 38b;

et al.), and still later, to the Priestly Blessing itself. Hence the familiar phrase "to *dukhan*" was used for "to recite the Priestly Blessing."

(4) The platform where teachers sat while teaching children (BB 21a).

[Jehonatan Etz-Chaim]

**DULCEA OF WORMS** (d. 1196), wife of R. \*Eleazar ben Judah of Worms. Dulcea came from medieval German Jewry's elite leadership class. Married to a leading figure in the \*Ḥasidei Ashkenaz, the German-Jewish pietist movement, she was the economic support for an extensive household, including children, students, and teachers. A capable businesswoman, she was apparently entrusted with the funds of neighbors which she pooled and lent out at profitable rates of interest on which she received commissions. Among R. Eleazar ben Judah's surviving writings are two Hebrew accounts, one in prose and one in poetry, recounting the murders of Dulcea, and their daughters, Bellette and Hannah, by intruders in November 1196. Both documents are important sources of information about medieval Jewish women's activities. Although many scholars have assumed the attackers were Crusaders, there were no massed Crusader forces in Germany at this time. While the two miscreants may have worn Crusader markings, they appear to have attacked the family out of criminal motives, probably prompted by Dulcea's business reputation. These assaults did not go unpunished; the local authorities, in accordance with the German emperor's mandate of protecting the Jews of his realm, quickly captured and executed at least one of the men. R. Eleazar's elegy, an expanded alphabetic acrostic, links numerous details of Dulcea's domestic, religious, and communal endeavors with the praise of the "woman of valor" in Proverbs 31. R. Eleazar designates Dulcea as *ḥasidah* (pious or saintly) and *zadeket* (righteous); in addition to noting her domestic management and business finesse, he praises her needlework, recounting that she prepared thread and gut to sew together books, Torah scrolls, and other religious objects. Unusually learned for a woman of her milieu, Dulcea is said to have taught other women and led them in prayer. As a respected investment broker, Dulcea may have been involved in arranging matches and negotiating the financial arrangements which accompanied them. She is also said to have bathed the dead and to have sewn their shrouds, meritorious endeavors in Jewish tradition. More than anything, R. Eleazar reveres his wife for facilitating the spiritual activities of the men of her household; the reward he invokes for Dulcea at the conclusion of his lament is to be wrapped in the eternal life of Paradise, a tribute to her deeds, on which so many depended.

[Judith R. Baskin (2<sup>nd</sup> ed.)]

**DULZIN, ARYE LEIB** (1913–1989), Zionist leader and Israeli politician. Born in Minsk, Belorussia, he immigrated with his parents to Mexico in 1928, where he was educated and was for many years active in commerce. From 1931 to 1937 he acted as the honorary general secretary of the Zionist Federation of Mexico and in the years 1938–42 was president of the federation. From 1944 to 1946 he was chairman of the Mexico branch of the World Jewish Congress and member of the General Zionist Council at the 23<sup>rd</sup> Zionist Congress in 1951, and at the 24<sup>th</sup> Zionist Congress in 1961 was elected to the Zionist Executive of the World Zionist Organization (wzo), as representative of the Union of the General Zionists. He thus became the first Latin-American member. In 1965 Dulzin settled in Israel, acting as head of the Economic Department of the Jewish Agency and later head of the Aliyah and Absorption Department. From 1968 to 1978 he was treasurer of the Jewish Agency and the wzo and in this capacity traveled widely throughout the Jewish world to raise funds and to bring the message of Israel to the Jewish world. In 1970–71 on behalf of the Liberal Party, he was cabinet minister without portfolio in the Israeli government but later returned to the Zionist Executive. In 1973–74 and again in 1975 he was acting chairman of the Jewish Agency and the wzo. He was the president of the World Union of the General Zionists, chairman of the Central Actions Committee of the Liberal Party, and a member of the Likud Executive. Among his many other functions he was a governor of Bank Leumi, governor of the Land Development Company (Hachsharat ha-Yishuv), member of the board of directors of Keren Hayesod, president of the Israel-America Society as well as a member of a number of cultural and arts institutions in Israel. In 1978 he was elected chairman of the Jewish Agency and the wzo.

[Benjamin Jaffe]

**DUMA**, Imperial Russian legislature, in existence between 1906 and 1917. The electoral law establishing the First Duma included no specific restrictions on the Jewish franchise. Although the Jewish socialist parties, and primarily the \*Bund, boycotted the elections to the First Duma, the majority of Jews took an active part, voting for candidates of the Russian Constitutional Democratic Party (the Kadets). Twelve Jewish deputies, including five Zionists, were elected: L. \*Bramson, G. \*Bruk, M. Chervonenkis, S. Frenkel, G. Jolles, Nissan \*Katzenelson, Shemaryahu Levin, \*M. \*Ostrogorski, S. \*Rosenbaum, M. \*Sheftel, M. \*Vinawer, and B. Yakubson. Nine of the deputies were affiliated to the Kadet fraction and three to the Labor group (Trudoviki). On May 15, 1906, a bill to grant civil equality to the Jews and repeal all discriminatory legislation on the ground of religion or nationality was brought in. When news of the pogrom in \*Bialystok reached the Duma at

the beginning of June 1906, it sent an investigating commission there. The commission's report placed the responsibility for the pogrom on the Russian authorities, and the debate on this burning issue terminated with the dissolution of the First Duma by the Russian government in July. The Jewish representatives took part in the subsequent convocation of protest held by Duma deputies in Vyborg, Finland, and joined in signing the “Vyborg Manifesto,” which called on the Russian people to register passive resistance by refusing to pay taxes or enlist in the army. Jews were also among the deputies who were sentenced to three months' imprisonment for signing the manifesto and deprived of their elective rights.

The Second Duma, which met in February 1907, included only four Jewish deputies, and they were hardly known to the Jewish public: S. Abramson, L. Rabinovich, Y. Shapiro – affiliated to the Kadets – and V. \*Mandelberg (Siberia), affiliated to the Social Democrats. The small number of Jewish members was the result of the organization and activities of the antisemitic groups who opposed the election of Jewish deputies on principle. Since the Jews were in the minority throughout the country they were unable to return Jewish deputies without the support of the non-Jewish electorate. A bill was laid before the Second Duma by the government abrogating all denominational restrictions in Russia excepting those imposed on the Jews. The premature dissolution of the Second Duma in June 1907 interrupted the debate on the bill.

The Third Duma (1907–12) was returned by a new electoral law which restricted *ab initio* representation of the national minorities and increased that of the landowners and clergy. It was overwhelmingly composed of right-wing elements. There were two Jewish deputies, N. \*Friedman and L. \*Nisselovich. The Jews were constantly attacked, especially by representatives of the extreme right such as Purishkevich and Zamyslowsky. A bill to abolish the \*Pale of Settlement signed by 166 deputies met with ridicule and abuse from the antisemites. On the other hand, the assassination of Premier Stolypin and the \*Beilis blood libel case provided an opportunity for scurrilous anti-Jewish attacks. The antisemites also proposed excluding Jews from the army.

Three Jews were elected to the Fourth Duma (1912–17), N. Friedman, M. Bomash, and E. Gurewich. A political office was established by a number of non-socialist Jewish parties to assist the Jewish deputies and provide guidance. The members of this bureau included Y. \*Gruenbaum and I. Rosow (Zionists), S. \*Dubnow and M. \*Kreinin (Jewish Populist Party, *Folkspartei*), M. Vinaver and H. \*Slizberg (Jewish Peoples' Group), L. Bramson and A. \*Braudo (Jewish Democratic Group), and O. \*Grusenbergs. During World War I the Jewish deputies were assigned to counteract the anti-Jewish vilification campaign spread by the army general staff and the restrictions introduced in its wake. It was on the initiative of the political office that deputy A. Kerensky paid a visit to the war zone: on his return he denied the libels from the podium of the Duma. The political office also appealed to the Duma to protest against the government memoranda of 1916 which accused the Jews

of sabotaging the Russian war effort. After the February 1917 Revolution the Jews were granted equal rights and the "Jewish question" disappeared from the agenda of the Duma.

[Yehuda Slutsky]

**DUMUH**, village near Cairo, thought to be on the site of the ancient Memphis. In the Middle Ages there was an ancient synagogue called *Kanīsat Mūsā* after Moses, because according to legend this was where he lived when he went on his mission to Pharaoh. Al-Maqrīzī (d. 1442), an Arab historian, mentions the miracles observed there and writes that the Jews of Egypt customarily visited the synagogue on Shavuot. Joseph Sambari (17<sup>th</sup> century) says that they came there on the seventh of Adar, the anniversary of Moses' death. Regulations were initiated to ensure proper conduct and, especially, that men and women should be separated. The leaders of Egyptian Jewry issued appeals for donations for the upkeep of the synagogue.

A 12<sup>th</sup>-century document reports that the elders of the Cairo community rented a plot of land in the vicinity of the synagogue to a Jew who wished to erect a building there so that the synagogue would not be isolated. Obadiah of Bertinoro (end of 15<sup>th</sup> century) reports that there were two synagogues, one belonging to the Rabbanite Jews and the other to the Karaites. On Sabbaths and festivals, Jews went specially there to pray; thus it seems that Jews were still not living there. At the beginning of 1498 the sultan al-Malik al-Nāsir Muhammad II ordered that the synagogue should be destroyed and this order was carried out in his presence; the synagogue may have been rebuilt, however. Sambari mentions some families who were named "Dumūhī," because of their origin.

[Eliyahu Ashtor]

**DUNAJSKA STREDA** (Hung. *Dunaszerdahely*), town located on the largest island of the Danube River in S.W. Slovakia, now Slovak Republic. Towns and villages of the region had dense Jewish populations and most were supervised by the Dunajska Streda rabbinate.

The first Jews probably settled in the area around 1700. Count Palffy granted the community legal rights in a charter of 1739. The Jewish population rose from 16 families in 1700 to 1,874 people in 1880 (44.8% of the entire population) and around 2,700 in 1930.

From the outset, both the royal treasury and the Palffy family burdened the Jews with heavy taxes. The Jews were occupied in crafts, agriculture, and trade in grain and spirits. Rabbi Simeon David officiated in the mid-18<sup>th</sup> century and by 1780 the community already had a second synagogue and such communal institutions as a ritual bath, kosher butcher, matzah bakery, *talmud torah*, and primary school (a \*Beth Jacob

school for girls was opened in the 1920s). The Great Synagogue was constructed in 1865. The earliest tombstones in the old cemetery were from 1755. (All Jewish religious installations, with the exception of a small synagogue, were pulled down by the Communist regime in 1950 and 1960.) In 1780 the Jewish community of Dunajska Streda was the second largest in the Hungarian kingdom, after Pressburg (Bratislava).

The community was a center of Orthodoxy and important yeshivot were also located there. Among the celebrated rabbis who officiated in Dunajska Streda were Alexander Meislisch (1784–1800), David b. Menachem Mendel Deutsch, and Judah b. Israel Aszód.

In the late 1880s there was an outburst of severe antisemitism. After an extended anti-Jewish campaign the synagogue was set on fire in June 1887. In the same year the Jewish quarter was sacked and hooligans attacked Jews in the street and in their homes. Not until military units were alerted did the attacks stop. In World War I, 220 Jewish men enlisted in the army; 46 of them died. During the war a large number of Polish Jews settled in the town. With the end of the war, the town was hit by another wave of pogroms and robberies.

The Zionists were active in the town along with the Orthodox political bodies. Jews were well represented in the municipal council, including Jewish members of the Communist Party.

With the entry of the Hungarian army in 1938, persecution increased. Budapest would not forgive Dunajska Streda Jewry its loyalty to Czechoslovakia. Anti-Jewish laws in existence in Hungary were applied to the conquered territories. Jews were left with no source of income, and lived on the charity of Hungarian Jewish organizations. In 1940 Jews were recruited into the labor brigades of the Hungarian army, where many perished. Around 200 Jews who were not able to prove their Hungarian citizenship were assembled in the late summer of 1942 and deported to the vicinity of Kamenets-Podolski in Poland, where they were executed by the Germans. During the years 1942–44 Dunajska Streda was one of the centers for smuggling Slovakian and Polish Jews into Hungary.

In March 1944 German forces occupied Hungary. A new wave of persecutions started immediately. On March 29, the property of local Jews was sequestered. The community institutions were closed down and in their stead a Judenrat was organized. On June 8, all Jews were ordered to assemble in the Great Synagogue and on June 13–15 around 3,000 were deported to Auschwitz.

In 1947 there were 404 Jews in Dunajska Streda. In 1948–49, most of the Jews immigrated to Israel and elsewhere. A community of around 20 families established regular services in the small synagogue in the 1990s and the congregation organized social activities, including a yearly memorial service.

The well-known Orientalist Arminius \*Vambery (1832–1913) was born in the town.

[Yeshayahu Jelinek (2<sup>nd</sup> ed.)]

°DUNANT, JEAN HENRI (1828–1910), Swiss Protestant philanthropist. Dunant was the founder of the Geneva Convention and the International Red Cross. Among his humanitarian causes was the settlement of Jews in Erez Israel, which he regarded as essential for reviving the Middle East. During the early 1860s he tried to arouse the interest of Napoleon III and leaders of West European Jewry in his Jewish settlement plan. He established an association for the colonization of Palestine, and in a letter to the *Jewish Chronicle* of December 13, 1867, described its basic principles: the acquisition of land by the association; the building of a Jerusalem-Jaffa railroad; and the development of agriculture “aided by the cooperation of Israelites.” He traveled throughout Europe in an attempt to interest such personalities as Adolphe Crémieux and Moses Montefiore. Dunant was unsuccessful in his efforts, and his contention was that the indifference of the Jews was to blame. Herzl, in his closing speech at the First Zionist Congress (1897), referred to Dunant as a Christian Zionist.

[Getzel Kressel]

**DUNASH BEN LABRAT** (mid-tenth century), Hebrew poet, linguist, and exegete. Most medieval scholars believed that he and Adonim ha-Levi were the same person. Moses Ibn Ezra described him as a Baghdadi by origin and a man of Fez by education. He could have been born around 925, in Baghdad or in Fez, and was one of the last students of \*Saadiyah in Baghdad. After the death of his master (942) he established himself first in Fez and later on in Córdoba, where he was teaching around 960. Some years later, after having had problems with \*Ḥisdai ibn Shaprut, he abandoned Andalusia; in 985 he wrote a poem in honor of a prominent Andalusian Jew. We have no more concrete references about the rest of his life or about his death.

#### Dunash as a Poet

It was Dunash who applied the Arabic poetic forms, genres, and meters to Hebrew, adapting them to the biblical language and thus laying the foundation of medieval Andalusian Hebrew poetry. Though initially there was some opposition in Córdoba, in the circle of Menahem ben Saruq, the innovation was immediately accepted and developed. Ibn \*Gabirol speaks of Dunash as the greatest poet of his generation and imitates his style in one of his compositions. Only some of Dunash's poems have been discovered and a few of them are known only by the lines quoted in his philological work. As was common at the time, his secular poems include panegyrics (in honor of Ḥisdai ibn Shaprut and other Jewish notables), songs of friendship and love, with praise to nature, the good life, and wine, and also didactic and wisdom poetry. The ambivalence of Jewish life in a Muslim atmosphere left deep traces in his verses. He expressed his sadness for the situation of his people, among Muslims and Christians, and for the ru-

ins of Jerusalem. His religious poems include the Sabbath song *Deror yikra* and *Devai hasser*, which has become part of the Grace said after the wedding meal. He also wrote *piyyutim* as is clear from the remains of a *kerovah* for the Day of Atonement and other fragments. A *genizah* fragment indicates that ten rhymed riddles, previously thought to be the work of Ibn Gabirol, were written by Dunash. E. Fleischer published a short poem possibly written by Dunash's wife when her husband was leaving Andalusia.

Collections of Dunash's poems were published by D. Kahana in 1894 and by N. Allony in 1947 (see Mirsky, in: *KS*, 24 (1947/48), 16–19; *Shir u-Fulmus*, ed. by Y. Zmora, 1944); M. Zulai, in *Sinai*, 29 (1951), 36ff.; E. Fleischer, in *Tarbiz*, 39 (1970), 33ff., and in *Jerusalem Studies in Hebrew Literature*, 5 (1984), 189–202; in 1988 C. del Valle published 56 poems by Dunash with Spanish translation and commentary (*El diván poético de Dunash ben Labrat: la introducción de la métrica árabe*).

#### Dunash as a Linguist

When Dunash arrived in Córdoba, \*Menahem b. Jacob ibn Saruq, Ḥisdai ibn Shaprut's secretary, was working on his dictionary of Biblical Hebrew and Aramaic in Hebrew, the *Maḥberet*. Dunash, worried about some possibly heterodox interpretations and dissenting from him in basic grammatical views, wrote some replies against Menahem and presented them, with praise and thanks, to Ḥisdai (shortly after 958). The grammatical and lexical study of the language of the Bible became for Menahem and Dunash a passionate question that gave rise to one of the hottest debates that took place in the Middle Ages. Dunash claimed to have disputed 200 items, but in the text which has been preserved there are 180 entries. Sixty-eight are included in the poem *Le-doresh ha-hokhmot* which is explained by parallel prose paragraphs, a literary form borrowed from technical Arabic literature. Many of Dunash's comments deal with those grammatical or lexical explanations which, in his opinion, are likely to lead to error in matters of *halakhah* and belief. This religious factor may explain the severity of his attack. From our perspective, it is not easy to understand that the meaning of a word or its appropriate grammatical classification could give rise to such vicious and scornful attacks. But it was not a mere question of words: upon this discussion depended the entire Jewish conception of God and his relation to the world, the way of understanding the moral obligations of mankind, and the confirmation of rabbinic tradition over sectarian views. Therefore, his could not be just a cold and objective science. For Dunash the meaning of the biblical text and theology could never be at odds. In some cases Dunash criticized interpretations of his adversaries which seemed to be close to Karaism. Though Menahem was relieved of his position as a result of accusations of heresy, there is no proof that Dunash deliberately caused his downfall or that he benefited from it in any way. Three of Menahem's students, Ibn Kapron, Isaac ibn Gikatilla (Ibn Janaḥ's teacher), and Judah Ḥayyuj, came out against Dunash though Ḥisdai was still alive. They wrote re-

sponsa dealing with 50 items, which imitated Dunash's poem in their form. Dunash's student, \*Yehudi b. Sheshet, answered sharply in the same manner. Rashi, who knew of the argument between the school of Menahem and the school of Dunash, quotes Dunash about 20 times, and many more times Menahem. R. Tam wrote "decisions" on the disagreements between Dunash and Menahem, and Joseph Kimḥi, in his *Sefer ha-Galui*, wrote against these decisions in favor of Dunash. Although Dunash was correct in many of the points under discussion, his grammatical method is no more advanced than that of Menahem. Both shared, for example, the search for the "bases" of Hebrew words and verbs, a set of firm consonants very different from the diachronic concept of "root" used in later philology. However, while Menahem rejected for ideological reasons the comparison of Hebrew with other languages, Dunash accepted the comparatist method, in particular in relation to Arabic.

The book *Teshuvot 'al Rav Sa'adyah Ga'on* ("Responsa on R. Saadiah Gaon") is also attributed to Dunash, but many scholars doubt if he was the author, since it is written in prose full of Arabisms and, moreover, dissents on several points from the opinion of Dunash in his dispute with Menahem and recognizes that hollow roots are also trilateral. There are some who believe that Dunash wrote this work when an old man, perhaps after being influenced by Ḥayyuj, whom all consider to be the founder of the new method in Hebrew grammar.

Dunash's responsa were edited by Filipowski in 1855, and in a critical edition with new materials by A. Sáenz-Badillos in 1980; the arguments, written in verse by students of Menahem and Dunash, were edited by S.G. Stern (1870); S. Benavente published the answers of the students of Menahem (1986); the replies by Yehudi ben Sheshet were published by E. Varela (1981); the *Teshuvot 'al Rav Sa'adyah Ga'on*, by R. Shroeter (1866).

#### Dunash as an Exegete

Dunash did not write complete commentaries to biblical books, but practiced, like Menahem, a kind of grammatical analysis that was a true literal exegesis. For Dunash philology was not an end in itself, it was an instrument for the adequate comprehension of the Bible, the only correct way of interpreting the Scriptures. Dunash was very respectful toward the interpretations of the Targum and the Masorah, remaining faithful to the literal meaning of the text. This did not mean disregarding the fact that the Scriptures uses metaphors and analogies that should be understood as such, above all in the case of the anthropomorphisms and anthropopathisms in Scripture. Dunash applied linguistic knowledge to the interpretation of the Scriptures, complementing it with "the 13 rules by which most of the precepts, laws, norms, and instructions are governed and measured." He made moderate use of the methods of permutation or metathesis applied by some traditional interpreters, and continued the comparative methods initiated by Saadiah and other grammarians in North Africa in order to understand the most difficult words of the Bible.

[Chaim M. Rabin / Angel Sáenz-Badillos (2<sup>nd</sup> ed.)]

**DUNASH IBN TAMIM** (c. 890–after 955/6), North African scholar, known also as **Adonim**, the Hebrew form of Dunash, and by the Arabic surname **Abu Sahl**. (The descriptive adjective *shaflagi* appended to his name by Moses \*Ibn Ezra is inexplicable.) Dunash was from Kairouan, and studied with Isaac \*Israeli, to whom he undoubtedly owed the greater part of his intellectual development. The philosophical and theological parts of his commentary on the *Sefer \*Yeẓirah* reflect the neoplatonism of Israeli's philosophical thinking. Dunash probably also received from Israeli his medical knowledge, displayed authoritatively especially in the last pages of his commentary. Dunash also demonstrates a thorough knowledge of certain theories of Arabic grammar, chiefly theories of phonetics. In addition to astronomy, of which he had made a special study, this commentary shows that he had read treatises derived from Greek sources on physics and the natural sciences. Dunash is thought to be the author of several works (all probably in Arabic). The following three are no longer extant: (1) a comparative study of Arabic and Hebrew, in which the author tries to prove the antiquity of Hebrew, and which is mentioned or quoted by Judah \*Ibn Baḻ'am, Abu Ibrahim Isak \*Ibn Barun, Moses \*Ibn Ezra, and Abraham \*Ibn Ezra, but in deprecatory terms; (2) a book on Indian calculus, probably bearing the title *Ḥisab al-Gubar*; and (3) a treatise on astronomy in three parts (structure of the spheres, mathematical astronomy, and astrology, probably critical). The last was written at the request of \*Ḥisdai ibn Shaprut; another edition or copy was dedicated by Dunash to the Fatimid caliph al-Mansur Ismail ibn al-Qayyim. Extant in manuscript is a treatise on the armillary sphere, an astronomical instrument, dedicated to a high Fatimid dignitary and written in Arabic characters (as opposed to other Arabic writings in Hebrew script; Hagia Sophia Ms. 4861). There are vague allusions to a commentary on the first chapter of Genesis. The Arab physician Ibn al-Baytar (d. 1248) refers to

a medical work by Dunash, and there are other references to a "Book on Urine" as well.

The commentary on the *Sefer Yezirah*, mentioned above, was written in 955/6. Attempts made to attribute this work to Isaac Israeli or Jacob b. Nissim may be disregarded. To date, the Cairo *Genizah* has yielded only about one-third of the Arabic original of this text; it has been preserved fully in four Hebrew versions: the first by Nahum ha-Ma'aravi (c. 1240); the second by Moses b. Joseph b. Moses (somewhat earlier), based on the complete Arabic editions; the third by an anonymous author, probably of the 14<sup>th</sup> century, from a shorter Arabic text of perhaps the mid-11<sup>th</sup> century; and the fourth by another anonymous author of unknown date, from an Arabic abridgment, possibly of 1092.

Dunash's exegetical method in *Sefer Yezirah* is scientific. He succeeded in incorporating in his commentary much of the knowledge of his day without losing sight of the influence of philosophic and scientific truths on religion. He dealt with such truths as an incorporeal God, creator of a perfectly regulated universe, a hierarchy of souls of the spheres, and prophetic inspiration, said to coincide in its highest degree, as in the case of Moses, with Plotinian ecstasy. Dunash did not hesitate to criticize \*Saadia Gaon's commentary on the *Sefer Yezirah*; however, these criticisms have been attenuated or suppressed in some of the Hebrew versions. Dunash's commentary enjoyed some renown in the 12<sup>th</sup> century when \*Judah b. Barzillai, Joseph ibn \*Zaddik, and perhaps \*Judah Halevi made use of it. It is mentioned several times in the 13<sup>th</sup> century, particularly by Abraham \*Abulafia; it was copied with slight alterations c. 1370 by Samuel ibn Motot, and traces of it are found among 15<sup>th</sup>-century authors, such as Zemaḥ Duran, Isaac Halayo (unpublished sermons on the Song of Songs, Paris, Ms. Heb. 228), and \*Moses b. Jacob (*Ozar Adonai*, Oxford, Bodleian Library, Ms. Opp. 556). However, Dunash's work, like that of Isaac Israeli, his teacher, played only a secondary role in the history of Jewish thought.

[Georges Vajda]

**DUNAYEVSKI, ISAAC OSIPOVICH** (1900–1955), Soviet Russian composer. Born at Lokhvitsa, near Poltava, Ukraine, he began to learn the piano at the age of four and studied at the Kharkov Conservatory, with Joseph \*Achron. In 1919 he settled in Leningrad. Dunayevski was one of the leading popular composers of Soviet Russia, and in 1937 was made president of the Union of Soviet Composers. His works include light operas, dance music, songs, choruses, and incidental music to plays and films, as well as a string quartet, a *Song of Stalin* for

chorus and orchestra, a *Requiem* for reciter and quintet, and one work for jazz orchestra, the *Rhapsody on Song-Themes of the Peoples of the U.S.S.R.* (1931). Among his operettas were *The Golden Valley* (1934) and *The Road to Happiness* (1939). His 12 scores for films include *Circus* (1935) and *Volga-Volga* (1938) which made a permanent contribution to Soviet popular song. For a time after 1933 he experimented with jazz idioms. He was awarded the Stalin Prize in 1941. Dunayevski died in Moscow, and the collection *Vystupleniya, statyi, pisma, vospominaniya* ("Appearances, Articles, Letters, Memoirs") was published posthumously in 1961.

**BIBLIOGRAPHY:** L. Danilevich, *I.O. Dunayevski* (1947); I. Nestyev, in: *Sovetskaya Muzyka*, 19: 11 (1955), 35–48; L.V. Mikheyeva, *I.O. Dunayevski, 1900–1955: kratki ocherk zhizni i tvorchestva* (1963).

**DUNAYEVTSY**, town in Khmel'nitski district, Ukraine. The Jewish community numbered 1,129 in 1765, but by 1775 was reduced to 484 as a result of the \*Haidamak uprising of 1768. From the beginning of the 19<sup>th</sup> century many Jews found employment as workers, dyers, and traders in the flourishing textile industry there. Dunayevtsy was the scene of a trial lasting from 1838 to 1840 in which a number of Jews were accused of the murder of two informers. The Jewish population numbered 2,020 in 1847 and approximately 10,000 before the outbreak of World War I (about two-thirds of the total population). Dunayevtsy became known as a center of Hebrew and Zionist literary and educational activity. The scholars and writers Yehezkel \*Kaufmann, Zevi \*Scharfstein, S.L. \*Blank, and Abraham \*Rosen were born and educated there. After the establishment of Soviet rule the town became impoverished. Many Jews immigrated or moved to the cities of the Russian interior. There were 5,186 Jews in Dunayevtsy in 1926 (60.5% of the total), dropping to 4,478 (68.23% of the total) before World War II. The Germans occupied Dunayevtsy on July 11, 1941. They concentrated the Jews into a ghetto. On May 2, 1942, about 3,000 were murdered by the Nazis.

[Yehuda Slutsky]

**DUNEDIN**, city in Otago, New Zealand. Five Jewish families had settled in Dunedin, the most southern Jewish community in the world, before the discovery of gold in Otago in 1861. In 1862, the congregation had a membership of 43, including the poet and novelist Benjamin \*Farjeon. Jacob \*Saphir of Jerusalem, then visiting Dunedin, wrote a *megillah* for reading on Purim. The first synagogue was consecrated in 1864. A number of congregational activities were initiated while B. Lichenstein was minister, from 1875 to 1892. A synagogue was built in 1881. From 1884 D.E. Theomin headed the community for almost 30 years. Wolf Heinemann, professor and examiner in German and Hebrew at Otago University from 1895, lectured in the synagogue and founded the Dunedin Zionist Society in 1905. Other ministers included A.T. Chodowski, who offici-

ated from 1898 to 1909 and later founded the *Australian Jewish Chronicle*, and A. Astor (1926–30). Although a small community, it produced four notable members of the legislature – Sir Julius \*Vogel, Samuel Shrimski, Bendix Hallenstein, and Mark Cohen. In the present century it dwindled and numbered only 100 in 1968 and about the same number in 2004.

**BIBLIOGRAPHY:** L.M. Goldman, *History of the Jews in New Zealand* (1958), index; *Journal and Proceedings of the Australian Jewish Historical Society*, 1 (1943), 154–60; 2 (1948), 202–12, 269–80, 394–400; *New Zealand Jewish Review and Communal Directory* (1931), 19, 47, 69. **ADD. [Maurice S. Pitt]

**DUNKELMAN, BENJAMIN** (1913–1997), Canadian manufacturer and volunteer soldier in World War II and Israel's War of Independence. Dunkelman was born in Toronto. His father, David, was a wealthy Toronto clothing manufacturer and retailer and his mother, Rose Miller (see \*Dunkelman, Rose), was a leading figure in Canadian Hadassah. After finishing at Toronto's elite Upper Canada College, he visited Palestine in 1932 as a teenager and worked for several months at Tel Asher, with the intention of joining a kibbutz. He returned again in 1935 hoping to stay on and establish a new settlement but returned to Canada and in 1939 – believing that he had a personal score to settle with the Nazis – tried to join the Royal Canadian Navy. Rejected, he enlisted in the Canadian Army and served in combat with great distinction, earning the prestigious Distinguished Service Order as a company commander in the Queen's Own Rifles for, among other achievements, leading his men under fire through the heavily mined Hochwald forest. He was recognized as an expert in mortars. Arriving back in Palestine in April 1948, Dunkelman joined Haganah forces battling on the roads to keep Jerusalem supplied and commanded one of the units in the fight for control of Galilee. Troops under his command captured Nazareth. He also organized and trained a heavy mortar support brigade. He returned to Canada after Israel's War of Independence and took over the family clothing manufacturing business. In Toronto he was active also in many Jewish and non-Jewish organizations and later wrote a revealing autobiography, *Dual Allegiance: An Autobiography* (1976), which reflects the tension he felt between his commitment both to Israel and Canada.

[Gerald Tulchinsky (2<sup>nd</sup> ed.)]

**DUNKELMAN, ROSE** (1889–1949), Canadian Jewish communal leader and philanthropist. Rose Dunkelman (Miller) was born in Philadelphia and moved to Toronto at age 13. She married David Dunkelman, a major Toronto clothing manufacturer, in 1910. They had six children. Rose Dunkelman was a formidable force in a number of Jewish causes, including the Toronto Talmud Torah and Hebrew Free Schools, the Toronto YMHA and YWHA, and the Jewish Federated Charities. A passionate Zionist, however, her prime organizational focus was in support of Canadian Hadassah and in her forth-

right manner she was partly responsible for making the organization an independent and powerful Canadian Zionist force during the interwar and immediate postwar years. At her Toronto home and summer estate, "Sunnybrook Farm," she often entertained visiting Zionist leaders who kept her informed of unfolding events in Palestine. Outraged by the exclusion of Jews from nearby vacation resorts, she founded Balfour Beach on Lake Simcoe north of Toronto, where she had 30 cottages built which welcomed Jewish vacationers. A veritable whirlwind of energy and activity, she also worked for the Canadian Red Cross and was awarded the King's Coronation Medal in 1937. Miffed by the anti-Zionist editorials in the Toronto-based *Canadian Jewish Review*, in 1931, together with her husband, she founded the *Canadian Jewish Standard*, and recruited the talented Meyer \*Weisgal, who briefly served as editor. This monthly magazine reflected her deep commitment to the Zionist cause. When she died in 1949 Rose Dunkelman was buried in Israel at \*Deganyah Alef. Her son, Benjamin \*Dunkelman, fought in Israel's War of Independence.

[Gerald Tulchinsky (2<sup>nd</sup> ed.)]

**\*DUNS SCOTUS, JOHN** (1265–1308), Catholic theologian and philosopher. Scotus opposed many of the views of Thomas \*Aquinas. Against Aquinas he affirmed the limitations of philosophy, and argued that the will is superior to the intellect, because the will is free while the intellect is bound by necessity, insofar as one is constrained to believe what the intellect recognizes to be true. He objected to Aquinas' contention that attributes are applied analogically to man and God, holding that if man is to know anything at all about God, the attributes applied to God and man must, in some sense, be univocal. He affirmed the existence of individualized forms, maintaining that every object has its own unique form, its "thisness" (*haecceitas*), which differentiates it from other objects. Scotus is known for his support of the forcible baptism of Jewish children, and his contention that a sovereign has the right to have Jewish children educated in the Christian faith without parental consent. In this he opposed Aquinas who had argued against forcible baptism on the ground that it violates the right of parenthood which is a principle of natural law. Scotus held that conversion supersedes natural law, for nothing should stand in the way of enabling man to achieve eternal salvation. In the case of conflict between the right of parenthood and the will of God, the right of parenthood ceases to be binding. He did maintain that forcible baptism, when carried out by a private individual, violates natural law; however, when carried out by a sovereign it is legitimate (L. Wadding (ed.), *Opera Omnia*, 8 (1639), 275).

In a polemical passage directed against infidels Scotus characterized the Jews in exactly the same terms as had Aquinas: the laws of the Old Testament have become "tasteless" (*insipidi*) with the appearance of Christ (*Opus Oxoniense Prolog.*, pt. 2, in *Opera*, 1 (1951), 71ff.). His negative attitude toward Judaism did not prevent Scotus from utilizing the views of Solomon ibn \*Gabirol, author of *Fons Vitae* (*Mekor*

*Hayyim*; “The Fountain of Life”), whom he knew under the name of Avicenna, and did not identify as a Jew, and \*Maimonides. He defended Ibn Gabirol’s theory that even spiritual beings are composed of form and matter, a view which was traditionally upheld by the Franciscans and rejected by the Dominicans. Scotus refers to Maimonides’ discussion of the relation of reason and revelation, and to his doctrine of divine attributes, which he finds similar to that of Avicenna, and follows Maimonides in his doctrine of prophecy. He argues against the view that the temporal creation of the world cannot be proved – a view which Aquinas adopted from Maimonides – but does not mention Maimonides in this connection. While there are no direct references to Scotus in their writings it had recently been suggested that Scotus and his school exerted an influence on late medieval Jewish philosophers. Thus reflections of Scotus’ theory of individuation are found in *Ma’amar ha-Dan ba-Zurot ha-Peratyyot o Ishiyyot* (“A Treatise Upon Personal Forms,” Paris Bibliothèque Nationale, Ms. Heb. 984) written by \*Jedaiah ha-Penini. \*Levi b. Gershom, in his view that man’s freedom of the will is a deviation from the determinism that prevails in the universe, and in his rejection of negative attributes, appears to have been influenced by Scotus. There are distinct similarities to Scotus in Ḥasdai \*Crescas’ criticism of the physical proofs of God’s existence, in his theory of divine attributes, and in his seeing a compulsory element in the activity of the intellect. (For further details on Scotus’ influence on Jewish philosophy, see S. Pines, in *PIASH*, 1 (1967), 1–51.)

°**DUPONT-SOMMER, ANDRÉ** (1900–1983), French Bible scholar. Dupont-Sommer was director of studies at the Ecole des Hautes Etudes from 1938, professor at the Sorbonne from 1945, professor of Hebrew and Aramaic at the Collège de France from 1963, and president of the Institut d’Etudes Sémitiques of the University of Paris from 1952. He undertook archaeological excavations in the Near East from 1925 to 1934.

Dupont-Sommer was one of the first interpreters of the Dead Sea Scrolls. He published many articles and a number of books on them, including three that have been translated into English under the titles *The Dead Sea Scrolls: A Preliminary Survey* (1952), *The Jewish Sect of Qumran and the Essenes* (1954), and *The Essene Writings from Qumran* (1961). His *Les Araméens* (1949) is an outstanding contribution on the Arameans. His publication of an important collection of several hundred Aramaic ostraca discovered in the French excavations at Elephantine, conducted by C. Clermont-Ganneau,

has increased the knowledge of the Aramaic of the Book of Ezra and of the culture of the Jews of Egypt in the Persian period. His other published works include *La doctrine gnostique de la lettre “Waw” d’après une lamelle araméenne inédite* (1946), *Les inscriptions araméennes de Sfiré* (1958), and *Observations sur le commentaire d’Habacuc découvert près de la Mer Morte* (1950).

[Zev Garber]

**DU PRÉ, JACQUELINE** (1945–1987), British cellist. Du Pré was born in Oxford and began studying the cello at the age of six. In 1968, she graduated from the Guildhall School of Music, London, with a gold medal, then studied with Tortelier (in Paris), with Casals, and with Rostropovich (in Moscow). After her London debut at the Wigmore Hall (March 1961), she steadily acquired an international reputation as one of the most naturally gifted musicians England has ever produced. In 1967, she met Daniel \*Barenboim, the Israeli pianist, and they were married in June of that year after her conversion to Judaism (she was previously an Anglican). She and her husband made many tours together and performed frequently all over Israel, playing chamber music with Itzhak \*Perlman and Pinchas \*Zuckerman and appearing in concerts with conductor Zubin \*Mehta. In 1973, however, her career tragically ended when she was stricken by multiple sclerosis.

[Max Loppert (2<sup>nd</sup> ed.)]

**DUQUE, SIMON DAVID** (1897–1945), one of the last two *ḥazzanim* of the Portuguese Synagogue of Amsterdam, Holland. Born in Amsterdam, Duque was appointed *ḥazzan* in 1923. He was chosen from among three candidates because of his adherence to the Amsterdam tradition. He also aimed at an operatic style and had a beautiful voice. Among his many moving *ḥazzanut* features are his *Kedushah* for Sabbath *Musaf* and *Ve-Hu Raḥum* for the evening service. His falsetto was famous. He was deported by the Nazi occupiers of Holland and died at the Dachau concentration camp.

[Amnon Shiloah (2<sup>nd</sup> ed.)]

**DURA-EUROPOS**, ancient city on the Euphrates River in Syria. It was long known from the writings of the first-century geographer Isidore of Charax/Bosra, but its exact whereabouts, a site known as el-Ṣalihiye, was discovered only accidentally by a British patrol in the aftermath of World War I while they were digging military installations. A brief excavation was conducted at the site by F. Cumont in 1922–23. A major Franco-American expedition carried out work at the site between the years 1928–37. The city was founded in about 300 B.C.E. by Seleucus I Nicator. It served as a transfer post where goods brought up the river from India were put on camels and carried to Palmyra and the Mediterranean. Dura-Europos was taken by the Parthians in 114 B.C.E. but it retained its autonomy and Greek character. After being held briefly by the Romans at the time of Trajan in 116 C.E., it was restored to the Parthians in 118 C.E., and captured once again by the

Romans in Lucius Verus' campaign of 168 C.E. The Romans ruled it until its conquest and destruction by the Sassanids under Shapur I in 256 C.E. Throughout its history the city contained a mixed population and judging from its temples it was largely eastern in orientation, with strong cultural ties with Palmyra. In addition to a synagogue the excavators also found a Mithraeum for the Roman soldiers and a small Christian chapel. The relative sizes of the pagan temples and the synagogue seem to indicate that Dura-Europos' Jewish population was a small minority in the city. Thus although the city was only about 250 miles (400 km.) north of Nehardea, the great center of Babylonian Jewry, the Jews of Dura-Europos must have lived as an isolated group in a pagan center rather than as a fully Jewish community.

The synagogue at Dura-Europos, discovered in 1932, was found in a remarkable state of preservation. It lay just inside the western city wall within an insula of ten houses (block L7) and when the inhabitants, judged expendable by the shrinking Roman Empire, attempted to strengthen the wall against the advancing Sassanid army, they tore off the roofs of the buildings just behind the wall and filled them with sand from the desert. The synagogue was accordingly as securely buried and protected as at Pompeii. The paintings, completed only some five years before the city fell, emerged from the sand nearly as fresh as when painted. The synagogue was built in c. 244–45 C.E. by remodeling a private house and followed the plan of the inner shrines of the pagan temples of the city. Since it contained benches around the room, often found in synagogues elsewhere, it evidently served for group worship. The benches, however, could accommodate only a small part of the congregation and wooden stools were probably used as well. Beneath the synagogue the remains of another smaller and more modest one was found, dating to the last quarter of the second century C.E. The entrance to the earlier synagogue was on the side adjoining the city wall through a narrow corridor which led to a courtyard with porticoes on two sides. The prayer room, 25 × 14 ft. (10.85 × 4.60 m.), contained a niche (the Torah Shrine?) in its west wall, a bench along the walls of the room, and two doorways, one of which may have served as the women's entrance (no sign of a women's gallery was found at Dura-Europos). The walls of the building were painted in geometric designs and fruit and floral motifs. In one corner of the court was a pool; adjoining it was a large room with benches (*bet midrash?*).

The second (upper) synagogue has an inscription written in Aramaic indicating the date of the completion of its construction in 245 C.E. Its entrance was on the street side far from the wall; the entrance was well hidden and the prayer room itself was accessible only through various passageways. The courtyard of the synagogue was expanded and surrounded by porticoes on three sides and the prayer room was also enlarged (to 45 × 25 ft. (13.65 × 7.68 m.)). Benches were extended along all the walls and a stepped *bimah* ("platform") built near the niche. A Greek inscription commemorates the building of the synagogue by Samuel b. Idi "elder of

the Jews" with the assistance of several members of the congregation. All the walls of the second synagogue were covered with paintings, most of them representing scenes from the Bible, and these must have been executed within only a few years of the renovation. Into these scenes were incorporated pagan figures, forms, and symbols (see \*Symbolism, Jewish, in the Greco-Roman Period). The biblical paintings, and others, which only by a flight of the imagination can be associated with any specific biblical incident, were arranged in variously proportioned rectangles separated by borders of running grapevines. Pilasters painted with vines occupy the corners and support the ceiling which seems originally to have been made of square coffers decorated with painted tiles and probably with plaster wreaths at the intersections of the beams. The paintings around the bottom row of the room show masks and harnessed felines holding fragments of their victims. Both the masks and the felines are of the kind generally associated with Dionysus and also with other deities, e.g., the felines with Cybele, the Great Mother of fertility. The many tiles preserved from the ceiling show a large number of fertility symbols: bunches of fruit and grain, and many representations of female heads which Kraeling identified with the "ubiquitous Demeter-Persephone of the eastern Mediterranean," i.e., Cybele. This goddess also appears with the felines and the masks in the dado. Other ceiling tiles show birds, fish, running gazelles, and centaurs holding out a fish. Several tiles bear dated donor's inscriptions in Greek and Aramaic; the congregation was presumably bilingual. Since the ceiling was about 23 ft. (7 m.) high, the inscriptions, written in relatively small letters, could have been read only by the sharpest eyes and thus they were possibly designed to suggest the donors' destiny in the heavenly setting of the ceiling itself, and not as plaques for conspicuous notice.

The room was oriented for worship toward Jerusalem by placing the niche, presumably for the Torah, in the long west wall. On a panel above the niche were painted a *menorah*, *etrog*, and *lulav*, the temple facade, and a crudely drawn scene of the sacrifice of Isaac (the *Akedah*), which was apparently used to represent a *shofar* ("ram's horn"). This decoration, and the first stage of the high vine painted above the niche, seem to have been executed even before the other paintings had been planned. The high panel (the *redos*) above the niche was repainted several times; this makes it the most important design in the room. After being exposed to light for a few hours, the underpaintings came through the upper ones, rendering the whole scene one of utter confusion. The various stages of painting, however, can be fairly well reconstructed, and show that the master directing the decoration planned it during the execution of the paintings and did not merely copy conventional models. First a great tree, rising nearly to the ceiling, was painted with grape leaves and tendrils but without grapes (and thus called a "tree-vine") growing out of a large crater. How many times this design was altered cannot be determined but at a later stage a king in Persian dress seated on a throne and two throne guards were inserted at

the top of the tree-vine since leaves show through the white Greek robes of the guards. Several other alterations were also made. The crater at the bottom was painted out and the trunk awkwardly extended downward to leave spaces on either side of the trunk. In the space at the left a table was painted with a bread symbol, and on the right a crater with rampant felines facing each other above it. Halfway up the vine a figure of Orpheus was added playing his lyre to an eagle and a lion, and perhaps other birds and a monkey. This group was not part of the original design since the vine leaves show through the bodies of Orpheus and the lion. These alterations were apparently made to indicate more clearly the meaning of the tree-vine, namely, through the salvation of music, bread, and wine, the tree led to the great throne above. The design apparently still did not seem specific, or specifically Jewish enough, for the lower table and the crater with felines on either side of the trunk were painted out and replaced by two new scenes. On the left Jacob on his deathbed was represented blessing his twelve sons, while on the right he blesses Ephraim and Manasseh in the presence of Joseph. Representatives of the 13 tribes were also painted standing around the throne above. The alterations in the design were made to show explicitly what seems to have been originally implied by the tree-vine alone, i.e., the salvation of Israel. Orpheus was left in as he was apparently identified with some Jewish figure such as David who saved Israel through his music.

On each side of the reredos two standing figures were painted. The upper two clearly represent Moses at the burning bush and receiving the tablets of the Law on Sinai. Of the lower two figures one depicts a man in a white Greek pallium (as Moses was dressed in the upper two figures) reading a scroll on the model of readers in scenes of mystery religions, and the other an old man in similar garb standing under the arc of heaven with its sun, moon, and stars. The reader seems to be Moses giving the Law to the Israelites after his descent from Sinai, and the old man, the dying Moses, who in Philo's account of his life was taken at his death to join in the song of the heavenly bodies to God. Other identifications, however, have been suggested for the latter two figures and no positive judgment can be made. The painters now continued to cover the walls with scenes based mainly on biblical incidents, all of which are stylized and given midrashic or allegorical interpretation. On the bottom left side of the west wall Elijah is represented reviving the widow's son, an infant dead and without features who is held out to the prophet by his mother; next the prophet holds up the baby alive but still with no features, and lastly he is again in his mother's arms, glorified, and finally with features. Beside this scene a longer painting shows three groups of people. On the right Ahasuerus, enthroned with Esther, is humiliated as a messenger brings him news of the massacre of his subjects. At the left Mordecai in full regal splendor rides on a horse led by Haman in slave's dress. Between these two scenes, in the dramatic center of the painting, stand four large figures dressed in pallia with three of their hands raised in blessing. These are apparently angelic figures

representing God's intervention in the Persian crisis. On the same row to the right of the niche Samuel anoints David, who stands with his hands folded under a dark pallium, while a large Samuel in a white pallium pours oil from a horn onto David's head. Jesse and five brothers stand behind in a hieratic row wearing white or light-colored pallia. To the right of this scene is the last painting on the bottom row of the west wall, a large work based on the infancy of Moses. At the right Pharaoh enthroned and in Persian dress orders the midwives (the mother and the sister of Moses) to kill all male Jewish babies and a woman stoops apparently to put Moses into the ark. In the center of a group at the left Moses is taken out of the ark by a naked woman who stands knee-deep in the river. She is identified as Aphrodite-Anahita by her peculiar necklace. She holds the baby up to three women standing on the bank; these are identified by the emblems they carry as the three nymphs who were the nurses of all divine babies, actual gods, and divine kings. As Aphrodite-Anahita holds the baby up to the nymphs it has no features, but in the last scene the baby is in the hands of the mother and sister and at last fully formed with features. At the far left of the row above, Moses again stands in the pallium, parts of which have a peculiar checked design. He touches a well with his rod and from it 12 streams flow out toward 12 tents surrounding the well. In each tent stands a short figure in Persian dress. A gabled doorway with only darkness behind it occupies the back center of the painting; a *menorah* and incense burners stand before it. It is generally agreed that the scene is based on Moses' bringing water from the rock in the desert, and that the 12 tribes here, as often in Jewish tradition, are equated with the Zodiac.

Adjoining this scene on the right, the artist depicted a temple with Aaron in priestly dress dominating the scene. Aaron is identified by his name written in Greek beside him. Five much smaller men in Persian dress attend him, one holding an ax as if to strike a reddish bovine before him, and the others carry horns (not like *shofars*). Another bovine, probably a bull, stands with a ram on the right. The main interest is the temple itself, which instead of the curtained tabernacle of Aaron's priesthood, is a temple of stone, an outer wall forming a court around an inner porticoed sanctuary. In the outer wall are three closed doorways; a pink-lined curtain blows back from the central one. Aaron stands in the court along with a large *menorah*, two small incense burners, and an altar with an indistinguishable animal on it for sacrifice. The *menorah* is the central object, but behind it, through the open door of the inner shrine, can be seen the veiled Ark of the Covenant. The Ark stands in front of the veil after the ancient custom for revealing veiled objects. The form of the temple was taken from a common design which the Dura painter spaced out so as to indicate the inner court with its objects. Even the winged Victories bearing wreaths as acroteria for the inner shrine were retained. This painting seems to represent the values of the Aaronic priesthood in general. Balancing this on the other side of the reredos is a basically similar temple, but with the design altered to express a more abstract idea. Again

three closed doors pierce what was meant as the outer wall and above it is the inner shrine still with its winged Victories. The outer wall, however, has become a series of seven stone walls, each a different color, which rise from the bottom to the top and from side to side of the painting. Thus the three doors and the inner shrine seem to be artificially superimposed upon the walls. The inner shrine has ten columns instead of the five in the Aaron scene, and like the three doors, it is closed. The temple does not stand on the ground and no ritual is indicated (and so it is called the "Closed Temple"). On each of the two doors in the lower central doorway are three panels. These depict, from top to bottom, a bull lying in the position of sacrifice; a herculean figure standing naked and flanked by a small naked figure; and the figure of Tyche.

To the right of the "Closed Temple" is the last painting on this register of the west wall which depicts a third temple, open and empty, with cult objects and the fragments of two Persian deities strewn on the ground before it. Beside it is the Ark on a cart pulled by two bovines that are being whipped and led by two men in Persian costume. Three dignified men in light-colored pallia walk abreast behind the Ark. The painting was without doubt suggested by the biblical incident in which the idol of Dagon collapsed before the Ark and the Ark itself was returned to the Israelites on a cart. The left side of the top register of the west wall is almost totally destroyed although the base of a throne with "Solomon" written on it in Greek and the bottom of various figures can be seen. Nothing, however, can be identified. Opposite this, a long painting presents the drama of the Exodus from Egypt. Egypt is depicted as a walled town at the far right with figures of Ares and two Victories above the open gate through which the Israelites march out. They advance in four columns. In the upper three columns two bands of armed troops guard both sides of a row of 12 men in white pallia, presumably the 12 heads of tribes. The bottom row is made up of ordinary people wearing only the belted chiton. Leading them is Moses as a great heroic figure. In a white dotted pallium Moses strides vigorously toward the Red Sea, which he is about to strike, not with the rod expected from the biblical narrative, but with the knobby mace of Heracles. The sea before him is already closed in the economy of narrative art and Moses is again depicted closing it on its other side; the sea is filled with drowning people. Beyond this Moses again touches water with his rod; this time the water is a pool filled with numerous leaping fish to indicate its vitality. The armed guards of the first scene stand behind the pool with the 12 heads of the tribes; they hold banners like those carried in mystic processions. When the sea was divided, according to Jewish legend, 12 paths were made, one for each tribe, and these are apparently indicated by a tier of horizontal lines behind the third Moses. The other walls of the room present biblical scenes in a similar vein but, since they are only partially preserved, their overall plan, if any existed, cannot be reconstructed. Of the east wall only the lowest register and dado remain; one scene shows a few birds and part of a table. Another apparently shows David and Abishai

approaching the sleeping Saul and Abner in the wilderness; half the painting is occupied by an army on white horses led by a captain. In the Esther scene the artist seems to have represented divine intervention and this apparently also appears in two scenes on the south wall. There, below a badly preserved procession of the Ark of the Covenant are three scenes from an Elijah cycle which first depicts Elijah coming to the widow, and then the sacrifice of the prophets of Baal. The sacrifice is being vitiated by a great serpent that attacks the small figure of Hiel according to the legend in which Hiel was hidden behind the altar to set fire to the sacrifice but was killed by a snake. Beside this, in the corner adjoining the west wall, Elijah offers his sacrifice while servants pour on water and three great figures dressed in pallia bring down heavenly fire. Although Elijah reviving the widow's son should have preceded the two scenes of sacrifice, it instead adjoins them on the wall where it was apparently part of the original plan and the cycle on the south wall, an afterthought probably intended to show the lesser triumphs of the prophet as preparation for his final power to raise the dead.

The north wall is better preserved but still only part remains. In the single scene left at the top Jacob dreams of the ladder. The design is identical with that in the catacomb of Via Latina in Rome except that in the catacomb the angels wear white pallia and at Dura-Europos, Persian dress. As the pallium is the original form, the change to Persian dress in the East must be of significance, but nothing suggests what prompted it. The register beneath this contains only unidentifiable fragments on the right; beside it is a fine representation of a great battle centering on two champions attacking each other with lances as in other scenes of Eastern art while warriors in identical armor fight above and below them. One champion rides on a black horse and the other on a white. In the same painting a group of six warriors guard the Ark of the Covenant while four men in Greek chitons carry it away from the battle. The scene must be based on the battle of Ebenezer where the Ark was captured but it also shows the turmoil of the conflict between light and darkness (the two horsemen) as against the triumphant reality embodied in the Ark. As in the Elijah cycle the scene seems to be related to the one adjoining it on the west wall where the heathen idols crash before the Ark after the same battle. The scene on the side wall again seems to amplify the one on the west wall but the artist's exact intention cannot be determined. Below this in the longest painting in the room is a great pageant of Ezekiel. He is first depicted being brought into the valley, then preaching to the bones, and supervising their restoration to life. The continuation depicts either the legendary beheading of Ezekiel or Matthias the Hasmonean slaying the faithless Jew.

The paintings at Dura-Europos were executed by at least two artists. One, influenced by Hellenistic art, portrayed the major biblical personages (Moses, Jacob, Joseph, etc.) as Roman citizens dressed in the tunic and pallium, and the Israelite host as Roman soldiers. The other drew his inspiration from Persian art and portrayed his figures as horsemen

in Parthian dress (Mordecai, Ezekiel, the sons of Aaron, the Israelites fighting the Philistines, etc.). The women (such as Queen Esther, Pharaoh's daughter, etc.) are dressed like the Hellenistic city-goddesses (Tyche). Particularly forceful and vivid in artistic execution are the imaginative paintings, such as the vision of dry bones which contains three episodes of the story of Ezekiel in one painting, and the souls of the dead are portrayed as Greek Psyches with wings of butterflies. The Dura-Europos paintings contain a wealth of material from the *aggadah*, which was also apparently derived in part from the early Targum, such as the descriptions of the miracle of the battle of Meribah where water was sent through channels to each of 12 tents which symbolize the camps of the tribes. Solomon's throne and the sacrifice of the prophets of Baal on Mt. Carmel are depicted according to the legends of the Midrash and thus they contain details not present in the biblical narratives, as for example, Hiel bitten by a snake on the altar of the prophets of Baal (cf. Yal., 1 Kings 18:25 [214]). The architecture in the paintings generally follows Hellenistic style but Jewish tradition can be recognized in several details, such as the Ark of the Covenant in the desert as a wheeled chariot (similar to a relief from Kefar Naḥum). This tradition is also evident in the dress of the high priest Aaron and other details.

From the social and religious historical standpoint it is significant that in the third century a Jewish community in the Diaspora did not hesitate to decorate the walls of a synagogue with the human form, with the major figures of the Bible (although this was later on also done in synagogues in the Galilee). The discovery of Dura-Europos is of primary importance for the history of art: until then this Jewish-Hellenistic art style was known only from the paintings of early Christians in the catacombs of Rome. Dura-Europos provided a Jewish source of this art. Its paintings present a blending of Eastern and Western – Persian and Hellenistic – elements (notably in the frontal pose of the figures and the Hellenistic style dress) which predates by centuries the same fusion which is the basis of Byzantine art. The paintings provide a focal point in ancient art in which influences of the past converge with developments of the future. The Dura-Europos paintings were later transferred to the Damascus Museum. A complete copy was reconstructed at Yale.

[Erwin Ramsdell Goodenough / Michael Avi-Yonah]

### Later Scholarship

The synagogue paintings (approximately 29 panels are preserved) are thought to have been the work of Jewish artists, perhaps hailing from Palmyra (Kraeling), utilizing pattern books of artistic renderings of biblical stories available to them, as well as inspired by Jewish liturgy, customs, and legends prevalent in Palestine at that time. Wright wrote in 1980 that the paintings “are too clumsy and provincial in execution to have been invented independently, without an iconographic model, in that desert outpost” (quoted in Guttmann 1987). Among the questions that scholars have been dealing with in regard to the paintings are the following: What are

their stylistic and iconographic sources? Why was the Second Commandment (Ex. 31:45–: “You shall not make for yourself a sculptured image or any likeness”) ignored? Does the cycle of murals have an overall purpose and meaning? Do they reflect a set form of theological Judaism of that time? Did they exert any influence on subsequent Jewish and Christian art? Goodenough dedicated three volumes of his *Jewish Symbols of the Graeco-Roman World* to a detailed analysis of the Dura-Europos synagogue paintings. Goodenough's attempts to read Jewish mysticism into many of the details of the paintings, especially in regard to the type of garments worn by the various figures, and the absence of certain symbols next to the representation of the *menorah*, and so forth, have met with much criticism by scholars, notably by Avi-Yonah (1973) and Smith (1975). Although Jewish religious symbolism and imagery undoubtedly existed in antiquity, and much of it was clearly influenced by Graeco-Roman artistry, what remains unclear is the extent of the values that Jews attached to these symbols and images as they appeared in the Dura-Europos paintings. Most scholars are in agreement regarding many of the painted scenes, but a lack of agreement still prevails as to whether these scenes were connected to a central organizing theme or whether they were made at random to enshrine various events in the destiny of the Jewish people. Grabar was of the opinion that the paintings in the synagogue had explicit messianic associations; Fleisher has recently shown this to be misguided. Guttmann commented in 1987 that “the Dura Europos synagogue paintings have opened up hitherto unforeseen horizons in ancient religious art and history.”

**DURAN**, family which originated in Provence, settled in Majorca in 1306, and after the persecutions of 1391 in Algiers. ZEMAḤ ASTRUC DURAN (d. 1404), a grandnephew of Levi b. \*Gershom, was respected as a scholar by both the Jews and non-Jews of Majorca. He died in Algiers. His son was Simeon b. Zemaḥ \*Duran (14<sup>th</sup>–15<sup>th</sup> century). Until the end of the 18<sup>th</sup> century, the descendants of Simeon b. Zemaḥ provided uncontested lay and spiritual leaders among Algerian Jewry. His son was Solomon ben Simeon \*Duran whose three sons were *dayyanim* in Algiers. They were AARON (d. c. 1470), a rabbinical authority consulted by such distant communities as Constantinople; Zemaḥ ben Solomon \*Duran who was married to the daughter of the illustrious Rab (rabbi) Ephraim al-Nakawa of Tlemçen; and Simeon ben Solomon \*Duran. ZEMAḤ BEN SIMEON BEN ZEMAḤ (d. 1590) wrote a commentary on the poem for Purim by Isaac b. Ghayyat which was published in *Tiferet Yisrael* (Venice, 1591?) by his son SOLOMON (d. c. 1593). The latter wrote notes on the works of his grandfather Simeon b. Zemaḥ, *Yavin Shemu'ah* and *Tashbaz*, which are followed by his casuistic responsa *Hut ha-Meshullash*, part 1. In addition, Solomon wrote a collection of sermons, a commentary on the Book of Esther, and a treatise on temperance. All of these are included in his *Tiferet Yisrael*. He is also the author of a commentary on Proverbs, *Ḥeshek Shelomo* (Venice, 1623). His son ZEMAḤ (d. 1604) was a talmudist whose death inspired Abraham \*Gavison to write an elegy. AARON DURAN (d. 1676), *dayyan* in Algiers, was probably his grandson.

Zemaḥ ben Benjamin (d. 1727) was a prominent authority in religious matters. He also was active in Algerian commerce and left a large fortune to his sons: JOSEPH BENJAMIN (d. 1758), whose responsa were published in the works of Judah Ayash, together with whom he was *dayyan* in Algiers; and ḤAYYIM JONAH (d. c. 1765), who settled in Leghorn, where he published the first part of *Magen Avot* (1763). MOSES BEN ZEMAḤ, one of the notables of Leghorn, had a previously unpublished part of *Magen Avot* printed in 1785 from an original manuscript which was in the possession of his family. DAVID DURAN (18<sup>th</sup>–19<sup>th</sup> centuries), whose father JUDAH (d. c. 1790) was a direct descendant of Simeon b. Zemaḥ and one of the wealthiest merchants of Algiers, himself held a distinguished position in Algerian commerce from 1776. He became a rival of the \*Bakri-\*Busnach merchant families who were then at the height of their power. After the assassination in 1805 of Naphtali Busnach and, two months later, of the dey himself, David was appointed *muqaddim* (leader of the Jewish community) by the new ruler of Algiers, Aḥmad Dey, but was replaced in the same year owing to the intrigues of Joseph Bakri. He continued representing the interests of England in Algiers as against those of France and Spain, whose side was taken by the Bakri-Busnach families. David Bakri was appointed

*muqaddim* in 1806 and held the position for over four years but Duran's machinations evidently caused his execution. Although David Duran was again appointed *muqaddim* he was himself executed the same year (October 1811) for no apparent reason, immediately after bringing the annual tax, or presents, to the dey.

The descendants of Simeon b. Zemaḥ who had established themselves in Leghorn settled in London before 1826.

[David Corcos]

**DURAN, PROFIAT (Profayt; d.c. 1414)**, scholar and physician, one of the outstanding anti-Christian polemicists of Spanish Jewry. Duran was probably born in Perpignan and later moved to Catalonia. He was the son of Duran Profiat, himself the son of Profiat de Limos, both Jews of Perpignan. His Hebrew name was Isaac b. Moses ha-Levi, and he signed his books and letters with the pseudonym אפוד ("Efod"), the Hebrew acronym of אֲנִי פְרוֹפִיאַט דּוּרָן, *Ani Profiat Duran* ("I [am] Profiat Duran"). Duran acquired an extensive knowledge of sciences and languages and associated with Ḥasdai \*Crescas. He was the author of two polemical tracts against Christianity, the dates of which are not known with certainty: *Al Tehi ka-Avotekha* and *Kelimat ha-Goyim*. The decisive event in his life was the wave of anti-Jewish persecutions in Spain in 1391. According to R. Isaac \*Akriš's introduction to *Al Tehi ka-Avotekha* (Constantinople, 1570), Duran himself had been forcibly converted to Christianity in 1391 but reverted to Judaism. However, documents recently discovered in the archives of Perpignan show that Duran lived there as a Christian, under the name of Honoratus de Bonafide, for about 12 years after 1391/2, serving as astrologer to Juan I of Aragon. This presents obvious difficulties, as it is certain that he continued his Hebrew literary activity throughout this period. Tradition has it that he wrote the *Al Tehi ka-Avotekha* when his friend David Bonet \*Bonjorn, who was compelled to undergo conversion with him, became a sincere Christian. Duran apparently considered that the other should have remained like himself a Christian only in name, continuing to believe and act like a Jew. Nevertheless, how he managed to do this remains a mystery.

*Al Tehi ka-Avotekha* is a penetrating satire on Christianity, its tenets, and the affairs of the Church (the schism between Rome and Avignon), and especially on the Jewish converts attracted by the Church. Duran emphasizes the irrationality of Christian doctrine and its insistence on feelings and on "faith" alone. In contrast, he presents the view of Judaism in accordance with the approach of the Jewish philosophers that salvation is attained by faith that does not contradict the demands of the intellect, combined with the performance of the practical *mitzvot*. Because of its witty ambiguities sev-

eral Christians of the period understood the epistle as a panegyric of Christianity and it was cited by Christian authors, who referred to it as “*Alteca Boteca*” a distortion of the opening words of the letter. When its real intention was recognized, the epistle was condemned to public burning.

*Kelimat ha-Goyim*, an attack on the tenets of Christianity by historico-critical method, was written by Duran at the initiative of Ḥasdai Crescas. Duran reviewed the writings of the Church Fathers and clarified inaccuracies and fabrications in the translations of Jewish writings by those who attacked Judaism. *Kelimat ha-Goyim* served as a source for subsequent Jewish apologetic literature.

Duran’s grammatical work, *Ma’aseh Efod* (Vienna, 1865), shows his extensive knowledge of Semitic and Romance languages and Greek. More than a methodical presentation of grammatical rules in the conventional manner, the work is outstanding in its original approach to grammatical problems and its incisive logical analysis of a number of principles in the same field through an impartial critique of his predecessors. Duran arrived at a new evaluation of the conjugations of the verb by a system resembling that of modern Semitic linguistics. His discussion of the theory of pronunciation reveals exact observation of the functions of the organs of speech and describes in passing the accepted pronunciation of the Hebrew of his time in Spain. He emphasizes the social function of language and stresses that writing is a matter of convention. Unique to *Ma’aseh Efod* is the discussion of the essence of Jewish music, to which Duran attributes two basic styles: chant, such as the cantillation for the reading of the Bible, which is addressed to the mind and understanding, and free melody which arouses the feelings, such as used by supplicants in prayer and by righteous men. Duran regards Jewish melody as having a spiritual object and thus different from the music of other nations, which aspires to aestheticism for its own sake.

Important historical details and an outline of his philosophical ideas are found in a letter of condolence which Duran wrote in 1393 to his friend Joseph b. Abraham on the death of his father, R. Abraham b. Isaac ha-Levi of Gerona, a leader of Catalonian Jewry. In the letter, Duran describes the desperate plight of the Jews in his day whose sufferings had increased to such an extent that the loss of their leaders and scholars was not even felt. He blames the people for not observing the *mitzvot* with proper care and for being concerned only for personal benefit. On the other hand he comforts Jews who had been converted under duress and encourages them to repent.

The other works by Duran include replies on philosophical subjects; elucidation of various parts of the commentary on the Pentateuch by Abraham \*Ibn Ezra and of some of his poems; works on astronomy including *Heshev ha-Efod* on the Hebrew calendar (1395); explanations to the commentary of \*Averroes on the *Almagest*; a criticism of the *Or Olam* of Joseph ibn \*Nahmias; *Ma’amar Zikhron ha-Shemadot*, a history of the persecutions and expulsions from the destruction of the Second Temple until his own times (mentioned by Isaac

\*Abrabanel but now lost). The work was used by Jewish historians of the 16<sup>th</sup> century such as Solomon \*Ibn Verga, \*Joseph \*ha-Kohen, and Solomon \*Usque. Many of his writings remain in manuscript; some were published as supplements to *Ma’aseh Efod*. New editions of *Al Tehi ka-Avotekha* were published by A. Geiger in *Kovez Vikkuḥim* (Breslau, 1844) and in some copies of *Melo Chofnaim* (Berlin, 1840); by P.M. Heilperin in *Even Boḥen* (Frankfort, 1846); and J.D. Eisenstein in *Ozar Vikkuḥim* (1928), which also includes *Kelimat ha-Goyim*. His commentary on the *Guide* of Maimonides appeared after 1500 together with other commentaries.

[Jacob S. Levinger / Irene Garbell]

### Philosophy

The introduction to *Ma’aseh Efod* contains Duran’s philosophical views. The Torah, he writes, is perfect, and its study is the only means of attaining eternal, supreme felicity as well as happiness on earth. There are those who maintain that only the observance of *mitzvot* can lead to eternal life. However, while Duran does agree that the observance of the *mitzvot* is very beneficial, he maintains that only knowledge can lead to eternal felicity. He criticizes the talmudists, who reject the study of anything other than the Talmud, refusing even to study the Bible. The philosophers, on the other hand, are also misled. In attempting to reconcile two contraries – Aristotelian philosophy and the Bible – they attribute only a moral function to the Torah. In reality, Duran states, philosophy too is consonant with Jewish teachings, since gentile philosophers borrowed extensively from Jewish sources. However, when Maimonides places the philosopher closest to the throne of God, he is speaking of philosophy in the sense of true knowledge, which is the privileged property of Israel alone. The kabbalists, whose aim is to achieve communion with God, also realize that the worship of God can reach perfection only in the Land of Israel, since the commandments are in harmony with the stars which guide the destiny of that land. Thus the Kabbalah, too, conforms to the Torah and the prophetic books. Nonetheless, since the principles of the Kabbalah are not easily demonstrable and the dissensions among its adherents clearly indicate its dangers, Duran concludes that the surest course is the study of the Torah. The Bible, like the Temple of Jerusalem, has virtues which preserve Israel’s physical existence; for example, the Jews of Aragon were saved from persecution as a reward for having recited the Psalms continually. In addition, the Torah has intellectual virtues: it is only the Torah which contains both moral precepts and all of true philosophy. The *sine qua non* of Jewish survival and of eternal life is to preserve the Torah, its text, and its grammar. Thus, for Duran, the real doctrine of Judaism, which he ardently defended, encompasses both philosophy and the whole range of the human sciences, without being limited as are the latter. His commentary on Maimonides’ *Guide* (first published 1553) is quite literal. He rejects any interpretations of Maimonides which would portray the latter as a philosopher who holds the Torah in contempt. Nevertheless, he also emphasizes the dangers in-

herent in certain Maimonidean doctrines. He is very close to the astrological teachings of Abraham ibn Ezra. In response to questions raised by his student, Meir Crescas, he wrote commentaries on various passages of ibn Ezra's commentaries.

**DURAN, SIMEON BEN SOLOMON (RaShBaSh)**, Heb. acronym of Rabbi Shimon ben Shelomo ha-Sheni (“the Second”); 1438–after 1510), rabbi and author. Simeon, son of Solomon b. Simeon \*Duran (called RaShBaSh ha-Rishon, “the First”), was born in Algiers and succeeded his brother Zemaḥ \*Duran as rabbi there. In 1499 he was active in the ransoming of 50 Spanish Jews who had been brought as slaves to Algiers (see Zacuto in bibl.). His attitude toward the Marranos from the religious point of view was lenient (his responsa *Yakhin u-Voaz* pt. 2 nos. 3, 19, 31), regarding them as Jews. In his old age he had to flee from Algiers when the Spanish army was approaching Bougie and Tunis. He wrote responsa which are printed as the second part of *Yakhin u-Voaz* (Leghorn, 1782), the first part being by his brother Zemaḥ. They are quoted by Joseph \*Caro. He has been confused with Simeon (ha-Sheni) b. Zemaḥ.

[Hirsch Jacob Zimmels]

**DURAN, SIMEON BEN ZEMAḤ (RaSHBaZ)**, Hebrew acronym of Rabbi Shimon ben Zemaḥ; 1361–1444), rabbinic authority, philosopher, and scientist. He was born in Majorca to R. Zemaḥ Astruc Duran. In his youth Simeon studied in Palma (Majorca) at the yeshivah of Ephraim Vidal, who was martyred in the year 1391, and in Aragon at that of Jonah \*Desmaestre, whose daughter he later married. Educated in accordance with the old Spanish method, he acquired a thorough knowledge of mathematics, astronomy, science, logic, and particularly medicine, which was to become his profession. After his return to Majorca, Simeon practiced as a physician and surgeon in Palma, and he seems to have been in comfortable circumstances. He was also highly esteemed as a rabbinic scholar and even his teacher Ephraim Vidal sought his advice. His prestige there can be gauged from the fact that 44 years after he had left the island he addressed a letter to the Jews of the island reproaching them for negligence in some religious practices and admonishing them to change their way of life.

After the massacre of 1391 in which he lost all of his fortune, Simeon left Majorca for Algiers together with his father and family. Jews from other parts of Spain also immigrated to North Africa, and the arrival of the immigrants had a beneficial effect upon the native Jews there. It caused a revival of

knowledge and scholarship, which had been neglected and was in a state of great decline. Spanish rabbis now became religious leaders of African communities. In Algiers the aged \*Isaac bar Sheshet was appointed chief rabbi and was also nominated a supreme judge of the Jews by the king. Simeon seems to have joined his *bet din*. Having lost all his fortune and being unable to earn his livelihood from his medical profession, since the native population resorted to superstitious practices rather than to medical help, he was forced to accept a salaried office of rabbi. As Maimonides had prohibited the acceptance of a salary for a rabbinical office, and since in Algiers only Maimonides' decisions were regarded as authoritative, Simeon later found it necessary to justify his action.

The nature of Simeon's official activity during the lifetime of Isaac b. Sheshet can be seen from the following examples. In 1394 a commission to deal with matrimonial laws was appointed, consisting of Bar Sheshet, Isaac \*Bonastruc, a rabbi in Algiers, and Simeon, who was asked by the other members to draft the ordinances; his draft was accepted in its entirety. Originally intended for the Spanish immigrants, the ordinances were soon adopted by some of the native Jews as well and were authoritative for African Jewry for centuries. A ban against informers issued about that time was also signed by Bar Sheshet, Bonastruc, and Simeon. From the very fact that Simeon signed third, it is obvious that he was not assistant chief rabbi as some scholars believe (at least not at that time).

Much has been written about the relationship between Bar Sheshet and Simeon. On the one hand Simeon respected the older rabbi, but on the other hand the latter bitterly complained of Simeon, who himself also confesses “I was childish and behaved impudently toward a rabbi who was very old and distinguished in learning” (*Tashbez*, 1, no. 58). In view of this there can be no doubt that a certain tension had existed between the rabbis, the active party being Simeon. The reason for this animosity is not quite certain; it may have been the appointment of the chief rabbi which annoyed Simeon, who although much younger, regarded himself no less worthy of the post owing to his secular and rabbinical knowledge. It seems that Isaac bar Sheshet, being good-natured and peace-loving, succeeded in the course of time in dispelling the greater part of the unfriendly atmosphere. Soon after Bar Sheshet's appointment as judge by the king, Simeon wrote a responsum in which he tried to prove that such an appointment was not permitted, but he did not publish it (*ibid.*, 162). Bar Sheshet often consulted Simeon on various matters, asking him to deal with them and to write responsa. After Isaac bar Sheshet's death (1408) Simeon was appointed chief rabbi (he himself says *dayyan*) with the request that his appointment not be confirmed by the king. (According to the report of the Algerian rabbis in the introduction to *Tashbez*, Simeon's appointment already took place during the older man's lifetime.) During his period of office Simeon was very active. While he had to fight some practices not in accordance with Jewish religion current among the native Jews, he had to raise

his voice against his own countrymen who criticized the doctrines of *terefah* and were lax in the observance of some commandments. As judge, Simeon was regarded as an undisputed authority, and interesting facts have become known of his legal proceedings. From various communities, questions were sent to him about religious and legal matters. He had to deal with the problem of the Marranos from the religious and legal points of view. Of his pupils only Abraham ha-Kohen Sholal is known by name, but he may have been his pupil when he was still in Majorca.

Simeon was against adopting stringent practices (*humrot*) which had no foundation in the Talmud; he said that one should be stringent with oneself, but lenient with others. There were some contradictions in him, however, which can also be found among other Spanish scholars. On the one hand he was meek, but on the other he praised himself for his wisdom. Although he greatly admired Maimonides and followed his philosophical views, he believed in astrology which Maimonides so strongly opposed, and he quoted Abraham \*Ibn Ezra in connection with astrology, calling him "*he-Ḥasid*."

A characteristic feature of the method employed in his decisions as *posek* is given by Simeon himself: "In reaching my decisions I do not grope like the blind grope along the wall, for I give a decision only after studying the case carefully. I have never given a decision which I later retracted" (*Tashbez*, pt. 3, no. 189). His decisions were indeed always correct; they exhausted all existing sources and discussed all opinions, leaving no possibility of controverting them. His decisions became authoritative in North Africa (see introduction to *Tashbez*). The *takkanot* he drafted were in vogue among the Jews in North Africa for centuries, and his responsa were a guide to later *posekim* who frequently quote them (e.g., Joseph \*Caro, *Beit Yosef* EH 119, 122, 126, 130, 134, 140, 141, 143; they became known to Caro through Jacob \*Berab; see introduction to *Tashbez*). Ḥayyim \*Benveniste established the principle that in cases in which Simeon's decisions contradict those of Solomon b. Abraham \*Adret, the decision is according to the former (*Keneset ha-Gedolah*, HM 386). Preference should also be given to Simeon when he is contradicted by Israel \*Isserlein.

### Philosophy

As in his halakhic decisions, Simeon also respected the opinions of Maimonides in the area of philosophy, but often differed with him, even on important issues. He accepted Maimonides' naturalistic views on prophecy but with added emphasis on the role of divine grace. Like Ḥasdai \*Crescas, he disagrees with Maimonides' theory that eternal bliss depends on how much knowledge one has acquired. He accepts the Aristotelian conception of the soul, but adds to it another, immaterial part of man, his *neshamah*, which is derived from God and bears the intellectual faculty, and which is eternal. Thus eternal bliss is not proportioned only according to one's acquired intellect, as Maimonides claimed, but human felicity, both in this world and the next, depends on one's observance

of the *mitzvot*, as Nahmanides had shown. Further, Simeon disagrees with Maimonides' theory that superior intellect determines the amount of divine providence to which one is subject. According to Simeon, divine providence is contingent upon one's performance of God's commandments. Simeon's most important contribution (later repeated by Joseph \*Albo) was his fixing the boundaries of philosophical speculation in order to safeguard the principles of traditional Judaism. Thus he reduced the fundamental dogmas of Judaism to three, which, according to him, must be accepted by everyone: the existence of God, revelation, and divine retribution. In doing so, he was not disagreeing with Maimonides but only commenting on Maimonides' system of 13 principles of faith. He insisted that "Every Jew must believe that the Holy Scriptures, and in particular the Torah, come from God and he must accept their contents as the absolute truth" (*Ohev Mishpat*, Introd.). Although, as has been mentioned, Simeon believed in astrology (*Magen Avot*, 4:21), he defined himself primarily as a disciple of the "masters of the truth," the kabbalists (*Ohev Mishpat*, Introd. to ch. 19), whose doctrines he often quoted in his works.

Among Simeon's writings as an exegete were a commentary on Job and glosses on Levi b. Gershom's commentary on the Bible (see list of his works). Only the former has been preserved, and shows that he was an adherent of the *peshat* ("simple meaning") and strongly opposed allegories such as those developed in the school of southern France in the 13<sup>th</sup> century. He often quoted Targum, \*Saadiah Gaon, Abraham Ibn Ezra, Rashi, Nahmanides, and Levi b. Gershom. When citing the Zohar he generally added "by R. \*Simeon b. Yoḥai." He adopted some doctrines from the Kabbalah (e.g., transmigration of the soul, *Magen Avot*, 88a). In his responsa he quotes and uses *gematriot*, *notarica* (see \*Notarikon), and letter mysticism. Sometimes he says (*Tashbez*, 3 no. 54): "I can only explain what I have been permitted" and warns "You should give only a plain interpretation and consider what is permitted."

Simeon's philosophy is included mainly in his *Magen Avot*. However, his commentary on Job also contains several of his philosophic teachings. In it he refers to many philosophic sources, constructs his exposition lucidly, and takes a clear position on the philosophical problems which he treats. His philosophical ideas and writings did not have much influence on subsequent generations, except for Joseph \*Albo, who in turn did make a significant impact on later philosophers.

As an apologist, Simeon deals with the \*Karaites when seeking to prove the divine origin of the \*Oral Law. He shows how important the Oral Law is for understanding Torah and fulfilling the commandments and states that many actions of Jewish leaders and institutions can only be explained as being based on oral tradition. He then attacks the doctrines of the Karaites (e.g., their explanation of Ex. 16:29 which contradicts Isa. 66:23). Simeon was very well acquainted with Christian literature (it has to be studied, he says, in order to be refuted). He had a dispute with a Christian theologian (*Keshet u-Magen*, 14a) who had to admit that Simeon was right. He

quotes Saadiah Gaon, \*Judah Halevi (*Kuzari*), the disputation of \*Jehiel b. Joseph of Paris, and Naḥmanides. It is doubtful, however, whether he used Ḥasdai Crescas' *Bittul Ikkarei ha-Nozerim* and the work of Profiat \*Duran, since they are never mentioned. He first refutes the attacks of the Christians and then counterattacks. The Christians, he says, admit that the Torah is of divine origin, but maintain that it is superseded by the Gospels. He shows that Jesus and his disciples strictly observed the Law and that Jesus declared that he had come not to destroy the Law or the teaching of the prophets but to fulfill them. His death was not due to his negligence of the Law but to his assertion that he was "the son of God and Messiah" (*Keshet u-Magen*, 2b). Simeon points out the various contradictions regarding the origin of Jesus, his claim to be the Messiah (refuted by the fact that the criteria of the Messianic age had still not occurred), and the assertion that the Torah had been superseded by the Gospels, since the Torah, being of divine origin, is unchangeable. He draws attention to the many mistakes and forgeries contained in Jerome's Bible translation. He also enumerates 21 misquotations from the Bible by Jesus and his disciples. Simeon tries to prove that the Koran cannot be of divine origin owing to the great number of contradictions found in it (e.g., in regard to free will), to its many unintelligible passages, and to its sensual views on the world to come. What is good in it had been borrowed from the Midrash. Regarding Islam as a whole, Simeon did not consider Islam as idolatrous, however, he did consider the pilgrimage to Mecca as an idolatrous practice.

Simeon was also active as a poet and composed many *piyyutim*, *kinot*, *seliḥot*, and *teḥinnot*, some of which have been printed (see below). He was a prolific writer, and there is no subject with which he did not deal. His *Magen Avot* is more than a philosophical treatise. It covers human and animal physiology and pathology, psychology, science, phonology, etc., and has the character of an encyclopedic work. Perhaps the intention of its author was to write a book which should serve as a source of knowledge and information particularly for the Jews of North Africa. His responsa not only treat religious and legal problems, but also deal with grammar, philology, exegesis, literary history, philosophy, Kabbalah, mathematics, and astronomy.

The following list of his writings is given in the same order as mentioned by the author in *Tashbez*, end of pts. 2 and 3: (1) *Perush Hilkhoh Berakhot le-ha-Rif*, commentary on Alfasi's laws on *Berakhot*; (2) *Piskei Massekhet Niddah*, decisions on the tractate *Niddah*; (3) *Sefer ha-Hashgahah*, called *Ohev Mishpat*, commentary on Job, printed together with *Sefer Mishpat Zedek* by R. Obadiah \*Sforno (Venice, 1589); (4) *Zohar ha-Raki'a*, commentary on Solomon ibn Gabirol's *azharot* (Constantinople, 1515); (5) *Tashbez* (תשוב"ץ, abbreviation of *Teshuvot Shimon ben Zemah*), responsa in three parts (the fourth part is called *Hut ha-Meshullash*, containing responsa of three rabbis of North Africa, including Simeon's descendant Solomon b. Zemah Duran; Amsterdam, 1738–41); (6) *Magen Avot*, four parts, philosophical work; the first three parts, without the

fourth chapter of the second part (Leghorn, 1785); the fourth part is (7) *Magen Avot*, a commentary on the tractate *Avot* (*ibid.*, 1763); (8) *Keshet u-Magen* (fourth chapter of the second part of *Magen Avot* (see above no. 6)), polemics against Christianity and Islam, printed together with *Millḥemet Mitzvah* of his son Solomon (*ibid.*, c. 1750); the sections dealing with Christianity and Islam were published separately; (9) *Perush Massekhet Eduyyot*, commentary on *Eduyyot* mentioned by Simeon in his list; (10) *Ḥiddushei ha-RaSHBaZ*, novellae on *Niddah*, *Rosh ha-Shanah*, and *Kinnim* (*ibid.*, 1745); the novellae on *Kinnim* were also printed with those of Solomon b. Abraham Adret on *Niddah* (Metz, 1770); (11) *Perush Keẓat Piyyutim*, commentaries on various poems, as well as poems composed by Simeon: (a) a *piyyut* by Isaac \*Ibn Ghayyat for the Day of Atonement with Simeon's commentary appeared in B. Goldberg's *Hofes Matmonim* (Berlin, 1845, pp. 85ff.); (b) a commentary on the *Hoshanot* (Ferrara, 1553); (c) an elegy on the destruction of the Temple appeared with Profiat Duran's letter *Al Tehi ka-Avotekha* (Constantinople, c. 1575–78); (d) an elegy on the persecution in Spain was printed in *Magen Avot* (Leipzig, 1855); (e) some *piyyutim* published by I. Mar'eli appeared in *Kobez al Jad*, 7 (1896–97) under the title *Zafanat Pa'ne'ah* (see also A. Gavison, *Omer ha-Shikhhah* (Leghorn, 1748, 125); (12) *Or ha-Hayyim*, polemics against Ḥasdai Crescas (mentioned by Simeon in his list); (13) *Livyat Hen*, glosses on the commentary of Levi b. Gershom and four discourses against Ḥasdai Crescas mentioned by Simeon in his list; (14) *Yavin Shemu'ah* on *Hilkhoh Sheḥitah u-Vedikah*, on the laws of slaughtering and porging; (15) *Ma'amar Ḥamez*, commentary on the *Haggadah*; (16) *Tiferet Yisrael*, on the calendar; (17) *Perush Eizehu Mekoman*, commentary on *Mishnah Zevahim* ch. 5, and commentary on the *Baraita* of R. Ishmael in the beginning of *Sifra*. Nos. (14), (15), (16), and (17) were published together with (18) *Tikkun Soferim* of his son Solomon (Leghorn, 1744); (19) also appeared in the Roedelheim *Haggadah* edition of 1882; novellae on *Bava Me'zia*, quoted in *Shitah Mekubbezet* of Bezalel \*Ashkenazi; (20) *Sefer ha-Minhagim*, on customs, in the responsa of Abraham Tawwah in *Tashbez*, pt. 4 no. 32; (21) *Sefer Tikkun ha-Hazzanim* (*ibid.*, no. 31); (22) commentaries on the *ketubbah* and *get* ("divorce document") and regulations about divorce and *halizah* (Constantinople, 1516; cf. also *Tashbez*, pt 3 no. 301); (23) *Takkanot*, see *Tashbez*, pt. 2 no. 292.

[Hirsch Jacob Zimmels]

**DURAN, SOLOMON BEN SIMEON** (known as **RaShBaSh**, Hebrew acronym of **Rabbi Shelomo ben Shimon**; c. 1400–1467), North African rabbinical authority; son of Simeon b. Zemaḥ \*Duran. He was born in \*Algiers, but no details are known of his youth. His education embraced not only rabbinical knowledge but also science, medicine, and philosophy. It appears from his responsa that he joined his father's *bet din* at an early age and was the head of the yeshivah. Some of his responsa were written during the lifetime of his father. His apologetical work *Milhemet Mitzvah* (1438) was written with his father's authorization. In it Solomon repulsed the accusations against the Talmud made by the apostate Joshua \*Lorki (Geronimo de Santa Fé) and even made counterattacks against the Christian clergy. He showed that Lorki's accusation that the Talmud favored immorality was wrong, and on the contrary that it teaches a high standard of morality and chastity; and that it was the Christian clerical circles who indulged in immoral conduct to such an extent that it became known by the name "peccato dei frati." After defending the halakhic parts of the Talmud he proceeded to explain the *aggadot* attacked by Lorki. In Solomon's view (as expressed already by \*Jehiel b. Joseph of Paris and by Naḥmanides in their disputations) they had no binding force.

In his youth he wrote a rhetorical epistle (*melizah*) to Nathan Najjar in Constantine (Rashbash, no. 259) using talmudic idioms, style, and language (the use of this kind of *melizah* is characteristic of him). His letter made a deep impression upon Najjar as can be seen from his reply in which the following passage occurs: "My son, my son, my heart was filled with anxiety for I said 'Who will sit on the throne of my master the rabbi, your father?'... Now, however, I know that Solomon, his son, will reign after him and will sit upon his throne" (cf. 1 Kings 1:13, 17, 30). After his father's death Solomon was appointed rabbi of Algiers. He seems to have also been the head of a yeshivah and some of his pupils were mentioned by name. His religious and general outlook can be derived from his responsa. Thus when asked whether the dialogue of \*Balaam and his ass (Num. 22:28), Jacob's wrestling with the angel (Gen. 32:25), and the visit of the angels to Abraham (Gen. 18:1ff.) took place in reality or were dreams, his reply was that all were real events, as Naḥmanides had already stated (Rashbash, no. 44). In responsum no. 3 he strongly criticized Haggai b. Alzuk in Mostaganem, who maintained that perfection of the soul could be achieved by perfection of the intellect and that *aliyah* to Erez Israel had no effect. In his view settling in Erez Israel is a great *mitzvah*, particularly as many religious commands concern only Erez Israel. With regard to the question whether the world will be destroyed or not, he showed that the Talmud and Naḥmanides decided in the affirmative, while Maimonides' view was in the negative. Solomon thought that while the belief in creation *ex nihilo* is binding, belief in the ultimate destruction of the world is not; it is left to one's own discretion (responsum no. 436). Concerning the Kabbalah he said of himself (no. 36): "I am not one of its members" and expressed his indignation at

the doctrine of the ten \*Sefirot (no. 188). His decisions were quoted by later authorities (including Joseph \*Caro and Moses \*Trani).

His works are (1) *Teshuvot Ha-Rashbash* (Leghorn, 1742), cited above, which deal not only with the legal matters but also with some philosophical problems and contain explanations of some biblical and talmudic passages; (2) *Milhemet Mitzvah*, in *Keshet u-Magen* (*ibid.*, 1750); (3) *Tikkun Soferim*, dealing with contracts together with *Yavin Shemu'ah* of his father (*ibid.*, 1744); (4) the elegy *Shamayim Laveshu Kadrut*. The bibliographers mention also *Melizah le-ha-Rashbash*; in fact, this *melizah* is contained in his responsum no. 259 (*Kerem Hemed*, 9 (1856), 110ff.).

**BIBLIOGRAPHY:** H.J. Zimmels, *Die Marranen in der rabbinischen Literatur* (1932), index; A.M. Hershman, *Rabbi Isaac ben Shesheth Perjet and his Times* (1943), index; Hirschberg, *Afrika*, index.

[Hirsch Jacob Zimmels]

**DURAN, ZEMAḤ BEN SOLOMON** (15<sup>th</sup> century), North African rabbinical authority. Zemaḥ, the second son of Solomon b. Simeon \*Duran, acted together with his brothers Aaron and Simeon as *dayyan* in \*Algiers. It appears from the sources that he was the most active of them and the greatest scholar of the three. In an admonishing responsum written to a certain rabbi he says of himself: "I do not boast of my distinguished ancestry, of my sermons, and of my responsa, of my learning – that I am familiar with all the tannaitic literature and the whole of the Talmud, of the accuracy and profundity of my legal tradition, of my rational reasoning, though my paternal grandfather [Simeon b. Zemaḥ \*Duran] praised and eulogized me from my childhood for my readiness to grasp the truth." Being rather sickly he went for a cure to Majorca, returning in 1468. He had some knowledge of medicine and a great knowledge of philosophy and Kabbalah, and his attitude toward the latter was positive. His ideology and piety are reflected in the responsum in which he tries to refute the views expressed to him by R. Abraham Conque of Malaga, who, following other philosophers, maintained that perfection and immortality do not depend on fulfilling the commandments and studying the Talmud but rather on the study of sciences and philosophy. Zemaḥ tries to show that perfection can only be achieved through the fulfillment of the *mitzvot*. The seven sciences (see Ibn Ezra on Prov. 9:1; Klatzkin, *Thesaurus Philosophicus*, 1, 292ff.) serve only to teach fear and love of God. They are not the end but only the means. He writes that Maimonides wrote his *Guide of the Perplexed* to refute the philosophers with philosophical arguments (cf. also his father's responsum, Rashbash no. 3). Zemaḥ dealt with the problem of the Marranos (*Yakhin u-Vo'az*, pt. 1, nos. 75, 125), whom he regarded as Jews from the religious point of view. He wrote responsa which form the first part of his brother Simeon's collection *Yakhin u-Vo'az*. Some of them are quoted by Joseph \*Caro.

[Hirsch Jacob Zimmels]

**DURAZZO** (Durrësi, Durrës), chief port of Albania. There may have been Jews in Durazzo during the Roman period. The community, referred to as Durachi(um), is mentioned however for the first time in 1204 in a responsum of R. \*Isaiah b. Mali di Trani. An English traveler found a group of Jews in Durazzo in 1322. Documents of 1368 mention the community leader (*magister Yudayce*) David, his business associates, and the communal scribe. The Jewish merchants traded with Italy, Serbia, and Dubrovnik exporting salt and importing textiles. In 1401 the representatives of the Jews appealed to the Senate of Venice, which then ruled over Durazzo, to exempt or partly exempt them from the obligation of presenting to the civic authorities annually 16 cubits of finest velvet, in addition to a sum of money in cash. During the 16<sup>th</sup> century a few Spanish refugees settled in Durazzo, but they do not seem to have had a communal organization. In 1939, refugee families from Vienna settled in Durazzo.

[Simon Marcus]

**DURBAN**, port in KwaZulu-Natal, third largest city in the Republic of South Africa. The relatively small Jewish population has always played a prominent part in the life of the city. One of the founders of Port Natal (Durban's original name) was Nathaniel \*Isaacs, who came as a youth in 1825. Important contributions to the port's early development were made by Jonas \*Bergtheil and by Daniel de \*Pass. The first *berit milah* in Natal, for the son of a former Durban resident D.M. Kisch, was performed in 1876 by the Rev. S. Rapaport, who came from Port Elizabeth for the ceremony. In 1880 a Jewish burial ground was laid out. Three years later a congregation was formed and in 1884 a building which had been a Methodist chapel was converted into a synagogue, with Bernard Lipinski (d. 1907) as the first president. Outstanding services were rendered by Felix C. Hollander (1876–1955), who was mayor of Durban (1910–13), a member of the Natal provincial executive committee (1914–23 and 1926–39), a senator (1939–48), and the head of the Jewish community. Charles Phineas Robinson (d. 1938) was a member of the Natal legislature and later of the Union parliament. His son Albert also sat in parliament and later became London high commissioner for the Central African Federation. Other leading communal personalities were Philip Wartski (1853–1948) and Solomon Moshal (1894–1986).

Less affected by Eastern European immigration than other communities of the Republic, Durban Jewry has at the same time an active communal life. There are four synagogues (one Reform) and the usual fraternal and welfare organizations. Diminishing numbers, however, led to the closure of the city's Jewish day school, Carmel College, in 1997. The Durban Jewish Club, the only institution of its kind in the Republic, has played a major role in the community's development. The Council for KwaZulu-Natal Jewry is a coordinating body and

also functions as the provincial office of the South African Jewish Board of Deputies. Zionist activity is directed by the KwaZulu-Natal Zionist Council. The Jewish population of Durban in 2004 was 2,750.

**BIBLIOGRAPHY:** G. Saron and L. Hotz, *Jews in South Africa* (1955), index; *South African Jewish Year Book* (1929), 107–10; M. Gitlin, *The Vision Amazing* (1950), index.

[Louis Hotz / Gustav Saron]

**DURHAM**, city in North Carolina, U.S. Jewish communal life formed in the late 1870s as the agrarian village grew into a New South industrial town. The Jewish population, with neighboring Chapel Hill, rose from 40 in 1880 to 305 in 1910. As the region evolved into a Sunbelt academic, research, and retirement center, the Jewish population reached 5,000 in 2005.

In 1874 the first permanent Jewish settlers, Polish-born brothers Abe and Jacob Goldstein, opened a general store, which served as a way station for peddlers. By 1880, ten more Jewish merchants, all of German origin, had arrived from Virginia to establish dry-goods stores. In the early 1880s tobacco magnate James B. Duke contracted with a young Ukrainian immigrant, Moses Gladstein, to bring more than a hundred East European proletarians from New York to roll cigarettes in his factory. These Jewish rollers formed a chapter of the Cigarmaker's Progressive Union and later an assembly of the Knights of Labor. In 1884 Duke automated the factory and dismissed the Jewish workers. Most returned north although several, including Gladstein, opened Durham stores.

Immigrant peddlers, artisans, and storekeepers, mostly of Latvian-Lithuanian origin, created a viable community. Durham was a typical New South mill and market town. Jews provided mercantile services to workers, farmers, and industrialists. Durham's appeal was enhanced by the educational opportunities of Duke University and the University of North Carolina at Chapel Hill. Jewish faculty began establishing themselves in the 1930s. They included European émigré scholars, notably Polish law professor Raphael \*Lemkin, author of the Genocide Convention. In 1943 Duke became the first southern campus to institute Jewish studies with the hiring of Judah \*Goldin.

East European Jews resided first in a ghetto near the African-American "Bottoms" and then in a middle-class neighborhood near Main Street. The community supported chapters of B'nai B'rith, Hadassah, Mizrahi, and the Zionist Organization of America. In 1951, E.J. Evans, running on a progressive platform with black support, was elected to the first of six terms as Durham mayor, and in 1991 Kenneth Broun was elected Chapel Hill mayor.

Religious services were held as early as 1878, and a burial society formed in 1884, under Myer Summerfield, a Prussian-born Orthodox merchant. Two years later the Durham Hebrew Congregation organized, and by 1892, when it received a state charter, it had evolved into an East European shul. After meeting in rented halls, the congregation purchased

a wooden house in 1905. In 1921 it built a brick, downtown cathedral-style synagogue, renaming itself Beth El. Evolving into a Conservative congregation, it dedicated a new suburban synagogue-center in 1957. Beth El also housed an Orthodox Kehilla.

In 1961 Judea Reform Congregation formed, and it built a temple in 1971. Growing into the area's largest congregation with 550 members, it built a new campus in 2003. The Lubavitcher movement established Chabad houses in Durham and Chapel Hill. In 1996 the Chapel Hill Kehillah, a Reconstructionist congregation, organized, and it purchased a synagogue five years later. The area also accommodated a Triangle Congregation for Humanistic Judaism. The communities are united by the Durham-Chapel Hill Jewish Federation and Community Council, founded in 1977, which supports Jewish Family Services, and Midrasha, a supplemental high school. In 1995 the Lerner Jewish Community Day School opened with a religiously pluralistic program. Both Duke and UNC erected new Hillel centers and expanded their Jewish studies programs.

Durham-Chapel Hill's growth reflects the national Jewish population movement toward the Sunbelt. With two major universities and the creation of the Research Triangle Park in 1959 it also reflects the Jewish demographic movement into the professions. Scientists Martin \*Rodbell and Gertrude \*Elion won Nobel Prizes at the Park. The moderate climate and college-town ambience also draw retirees.

[Leonard W. Rogoff (2<sup>nd</sup> ed.)]

**DURKHEIM, ÉMILE** (1858–1917), French sociologist. Born in Epinal (Lorraine), France, of a long line of rabbinical ancestors, Durkheim initially prepared himself for the rabbinate. Although he never wrote directly on a Jewish topic, the interest in law, ethnology, and the ethical implications of social relations, which were aroused by his early training, stayed with him throughout his life. To be a sociologist always meant for him, essentially, to be a moral philosopher as well as a scientist of moral behavior; and although he became a free thinker early in life he remained conscious of his rabbinical heritage. Durkheim studied in Paris, where he was a pupil of the philosophers Emile Boutroux and Jules Monod and of the historian Fustel de Coulanges. He was also influenced by the French neo-Kantian Charles Renouvier and by his fellow students Lévy-Bruhl, \*Bergson, and Jaurès.

Durkheim is a towering figure in the history of \*sociology. The first chair in social science in Europe was established for him at the University of Bordeaux in 1887. In 1902 he became professor of sociology and education at the Sorbonne; a separate department of sociology, under his chairmanship, was established in 1913. Durkheim was a founder and editor in chief of *L'Année Sociologique*, which was published from 1898 until the beginning of World War I. Durkheim attempts

to demonstrate that it is possible to trace regularities of behavior in human action regardless of the subjective motives of individuals. The physical, biological, and psychological factors operative in the social life of man must be taken into account. Yet, as soon as attention is focused on the interpersonal relationships characterizing group life, the special nature of "social facts" becomes apparent: group products, such as art, morals, and institutions are in the mind of the individual, and yet entities apart from him. These group products are irreducible facts which must be studied in their own right. Society's "collective representations" have an objective existence outside the individuals and, at the same time, exercise a constraining power over them. Even conceptual knowledge may be said to consist of collective representations having their roots in society.

The best exemplification of the fruitfulness of Durkheim's approach is his concept of social solidarity, as employed in his studies on the division of labor, religion, morality, conscience, and suicide. Because society, at the same time, is above man and penetrates man, it is ultimately the only thing that has the power to inspire awe and reverence in individuals and to submit them to rules of conduct, to privations, and to the kind of sacrifice without which society would be impossible. But society, on which the individual is absolutely dependent, is not sufficiently concrete to be an object of direct reverential submission. Instead, the individual experiences his dependence indirectly, by focusing his attention on everything essential to the maintenance of society: its principal norms, values, institutions, its sacred symbols. Especially, the notion of divine authority is a sublimation of society. Thus religion springs not from the nature of individual man, but from the nature of society. According to Durkheim, the effect of beliefs and acts with respect to essential norms and symbols is to create a more effective society. Similarly, suicide is not a function of race, climate, religious doctrine, and economic conditions, however close the correlations between any of these facts and the phenomenon of suicide itself may be. The clue, says Durkheim, lies in crucial social facts, that is, the breakdown of social solidarity and the ensuing normlessness, or "anomie." Groups with little social cohesion tend to have higher suicide rates than those providing strong psychic support to their members in the various crises of life.

Durkheim stresses the concept of "collective consciousness" (or "conscience"). Durkheim initially explained social control mainly in terms of external constraints. In his later work, however, he stressed the internalization of culture, the fact that social norms are "society living in us." On his conception of education he places no less heavy a burden. Through education, he holds, society implants general social values and discipline in the individual. "Discipline," he writes, "has its justification in itself." Yet, the nature of the discipline is not wholly a matter of indifference. It depends not only on society in general, but on the particular society in question. Not every society values the kind of individualism and democratic pluralism which Durkheim espoused in his personal and political thought.

Durkheim's early work, *De la division du travail social* (1893), still shows traces of evolutionary thought; but his opposition to the utilitarianism of the economists is clearly marked there. In his subsequent works, especially in *Les règles de la méthode sociologique* (1895; *The Rules of Sociological Method*, 1950) and in *Le suicide: étude de sociologie* (1897; *Suicide*, 1951), as well as in numerous scholarly papers published chiefly in *L'Année Sociologique*, he increasingly emphasized scientific method and the combination of empirical research with sociological theory. His major work, cast largely in the language of functionalism, is *Les formes élémentaires de la vie religieuse: le système totémique en Australie* (1912; *The Elementary Forms of the Religious Life*, 1965). Other treatises with a strongly historical and philosophical bent are *Education et sociologie* (1922; *Education and Sociology*, 1956), *Sociologie et philosophie* (1929), *L'éducation morale* (1925), *Le socialisme: sa définition, ses débuts, la doctrine Saint Simonienne* (1928; *Socialism and Saint-Simon*, 1958), *L'évolution pédagogique en France* (1938), and *Montesquieu et Rousseau; précurseurs de la sociologie* (1953).

**BIBLIOGRAPHY:** Analyses of Durkheim's approach to sociology abound. The most influential of these are contained in G. Gurvich, *Essais de sociologie* (1936), and in T. Parsons, *Structure of Social Action* (1937). Among book-length evaluations the best known are C.E. Gehlke, *Emile Durkheim's Contributions to Sociological Theory* (1915); P. Faconnet, *The Durkheim School in France* (1927); R. Lacombe, *La Méthode sociologique de Durkheim* (1926); E. Conze, *Zur Bibliographie der Durkheim Schule* (1927); and H. Alpert, *Emile Durkheim and His Sociology* (1939). A complete bibliography is found in K. Wolff (ed.), *Emile Durkheim, 1858–1917* (1960).

[Werner J. Cahnman and Joseph Maier]

**DUSCHAK, MORDECAI (Moritz; 1815–1890)**, rabbi, teacher, and writer. Duschak was born in Triesch, Moravia. He studied under Moses \*Sofer in Pressburg, and later was appointed rabbi in Aussee and in Gaya, both in Moravia. From 1877 he occupied the post of preacher and teacher in Cracow. Toward the end of his life he moved to Vienna, where he remained until his death. Duschak published many studies on talmudic topics and Jewish scholarship in both Hebrew and German.

His noteworthy books in German are *Umriss des biblisch-talmudischen Synagogen-Rechtes* (1853), *Das mosaisch-talmudische Eherecht* (1864), *Geschichte und Darstellung des juedischen Cultus* (1866), *Das mosaisch-talmudische Strafrecht* (1869), *Zur Botanik des Talmud* (1870), *Die biblisch-talmudische Glaubenslehre* (1873), and *Tor Esier* (against the Blood \*Libel, 1883). In Hebrew he published *Yerushalayim ha-Benuyah* (1880, combining the Babylonian and Jerusalem Talmuds in order to explain the *mishnayot* of tractates *Eruvin*, *Pesahim*, *Megillah*, and *Yoma*).

**BIBLIOGRAPHY:** Zeitlin, *Bibliotheca*, 39, 71; M. Schwab, *Répertoire des Articles...* (1914–23), 106f., s.v.; A. Bauminger et al. (eds.), *Sefer Cracow* (1959), 103f.; Kressel, *Leksikon*, 1 (1965), 546, s.v.

[Yehoshua Horowitz]

**DUSCHINSKY, CHARLES (Jacob Koppel; 1878–1944)**, historian. Duschinsky was born in Námestovo, Czechoslovakia; he served as rabbi in Kostel, Moravia, from 1904 to 1907, and thereafter settled in London, where he engaged in business. He continued publishing monographs in scholarly journals on Anglo-Jewish history and other topics. His most important work was *The Rabbinate of the Great Synagogue, London, from 1756–1842* (1921).

[Cecil Roth]

**DUSCHINSKY, JOSEPH ZEVI BEN ISRAEL (1868–1948)**, Hungarian rabbi, and later rabbi of the separatist Orthodox community of Jerusalem. Duschinsky was born in Paks, Hungary, where his father was the *sofer* ("scribe"). He studied first under Moses Pollak, rabbi of Paks, and later under Rabbi Simḥah Bunim Sofer (Schreiber, the *Shevet Sofer*) in Pressburg. In 1892 he married the only daughter of R. Mordecai Leib Winkler of Brezovanad Bradlom (Slovakia) and spent the next three years in his house. The years spent at Pressburg and his father-in-law's fine personality were the main formative influences in his life. In 1895 he was elected rabbi to a congregation in Galanta established in opposition to the existing one, and in 1921 went to Khust (Carpatho-Ruthenia). In 1932 he visited Palestine and on the death of R. Joseph Ḥayyim \*Sonnenfeld was elected in 1933 to succeed him as rabbi of the Edah Ḥaredit ("Orthodox Community") of Jerusalem. He founded a yeshivah, Bet Yosef, which had hundreds of pupils. Duschinsky, an active supporter of \*Agudat Israel, appeared before various commissions of inquiry of the British mandatory government, and although he did not normally cooperate with the official rabbinate, during the siege of Jerusalem in 1948 he endorsed their permission to undertake defense and fortification work on the Sabbath.

Duschinsky was a discerning bibliophile of refined taste and amassed a fine library of rare books. None of his own works was published in his lifetime. From his literary legacy two volumes of responsa, *She'elot u-Teshuvot Mahariz* (pt. 1, 1956; pt. 2, 1966), and three volumes of his homiletic commentary to the Bible (pt. 1, 1956; pt. 2, 1961; and pt. 3, 1965) have been published. His responsa in particular reflect his immense learning and wide range of reading (e.g., vol. 2, no. 51 adduces proof for a halakhic point of view from Emden's anti-Shabbatean tract *Mitpaḥat Soferim*, Altona, 1768). He died during the siege of Jerusalem. His yeshivah continued to function under the direction of his only son, Moses Israel.

**BIBLIOGRAPHY:** A. Katzburg, *Temunat ha-Gedolim* (1925–); S.Z. Tennenbaum, *Nata Sorek* (1899), 167b–174b (HM 1–5).

[Abraham Schischa]

**DUSHKIN, ALEXANDER MORDECHAI (1890–1976)**, educator. Born in Suwalki, Poland, Dushkin was taken to the United States in 1901. He was associated with J.L. \*Magnes' Kehillah experiment in New York City (1910–18) and with its Bureau of Jewish Education under Samson \*Benderly, and in

1916 went to Europe as a secretary of the American Jewish Relief Committee. In Palestine in 1919, he was inspector of Jewish schools and taught at David \*Yellin's Teachers' Seminary in Jerusalem. Returning to the United States, Dushkin was appointed secretary of \*Keren Hayesod (1921–22). From 1923 to 1934 he was director of Chicago's Board of Jewish Education and founded that city's College of Jewish Studies (1924). In 1934 he was called by the Hebrew University in Jerusalem to organize and conduct its Department of Education (since 1952, the School of Education). He was lecturer in educational methods and administration and also the principal of Bet ha-Kerem High School, Jerusalem (1934–39). Upon his return to the United States he became executive director of the Jewish Education Committee in New York City (1939–49). In 1949 Dushkin was invited by the Hebrew University to establish and direct its undergraduate studies and to teach education and education administration. From 1962, he headed the Department of Jewish Education in the Diaspora in the Hebrew University Institute of Contemporary Jewry. Dushkin wrote the first doctoral dissertation on a Jewish educational theme (Columbia University, 1917), *Jewish Education in New York City* (1918), and was the editor of the first educational journal in English in the United States, *The Jewish Teacher* (1916–19); edited and co-edited its successor, *Jewish Education* (1929–35, 1939–49); was coauthor of *Jewish Education in the United States* (1959); edited the third volume of the *Enzyklopedyah Hinnukhit* ("Educational Encyclopedia"); and wrote many monographs and articles. In his educational philosophy Dushkin recognized the validity of pluralism in American Jewish education, but saw its bases in common elements and values. He saw Jewish education in the Diaspora as being one of the main responsibilities of Jewish communal efforts. As a student of Kilpatrick and disciple of the progressivist concepts, he strove to base education on science and experience; he had, however, a positive attitude to Jewish tradition, seeing it as the unique force in the preservation of the Jewish people. Dushkin was awarded an Israel Prize in 1968.

[Nathan Greenbaum and Leon H. Spotts]

**DUSHKIN, SAMUEL** (1891–1976), violinist. Dushkin was born in Suwalki, Poland, and studied with Guillaume Remy (violin) and Ganaye (composition) at the Paris Conservatoire, and with \*Amar and \*Kreisler in New York. After his Paris début in 1918, he toured widely and gave many important first performances, notably of Ravel's *Tzigane* (Amsterdam, 1925) and Stravinsky's *Violin Concerto* (Berlin, 1931). Stravinsky, who composed it with technical advice from Dushkin, often accompanied him in it at subsequent performances. Dushkin also collaborated with Stravinsky in making transcriptions from *Pulcinella* and *Le baiser de la fée* and recorded the *Duo concertant* with him. He gave the first performances of a considerable amount of chamber music by Prokofiev, \*Milhaud,

Poulenc, and others. Dushkin edited, and in some cases transcribed, virtuoso music for the violin. Some are in fact his own compositions attributed to earlier composers, such as Johann Benda and Boccherini. He also published teaching manuals for the violin.

**ADD. BIBLIOGRAPHY:** Grove online; MGG<sup>2</sup>; R. Ellero, *Le Composizioni Violinistiche di Stravinskij per Dushkin*, Tesi di laurea Univ. degli Studi di Venezia (1991/2).

[Max Loppert / Israella Stein (2<sup>nd</sup> ed.)]

**DUSHMAN, SAUL** (1883–1954), U.S. chemist and physicist. Dushman was born in Rostov, Russia, and was taken to Canada as a child of nine. He obtained a doctorate at the University of Toronto in 1912 and in the same year joined the General Electric Company Laboratory at Schenectady, N.Y., where he worked for 40 years, from 1928 as assistant director. For a period he was also director of research at the Edison Lamp Works. Dushman's published books and papers were mainly concerned with the development and use of high vacuum with which his name is firmly associated. He introduced, with Langmuir, the suffix *-tron* for equipment in which high vacuum was used; later the suffix was used in words such as cyclotron, magnetron, etc. His books included *High Vacuum* (1923), *The Elements of Quantum Mechanics* (1938), *Scientific Foundations of Vacuum Technique* (1949), and *Fundamentals of Atomic Physics* (1951).

**BIBLIOGRAPHY:** Langmuir, in: *Vacuum*, 3 (1953–54), 113f.

[Samuel Aaron Miller]

**DUSTAN** (al-Dustān; Dositheans), Samaritan sect (or sects), followers of Dusis or Dustis, which is probably the Aramaic form of the Greek name Dositheos. In a somewhat different form – Dosa or Dostai – it is quite common in Jewish sources such as Mishnah, Tosefta, and Midrash. A Dostai and a Sabbai are mentioned in the Midrash as the priests sent by the Assyrian king to Samaria to teach the new settlers the laws and customs of the country. In a legend told by Josephus about a religious dispute between Jews and Samaritans before Ptolemy IV Philometer, Samaritan representatives are called Sabbeus and Theodosius (Theodosius being another form of Dositheos). But in all probability there is no connection between these and the founder of the Dosithean sect. Information about this sect is found in the *Samaritan Chronicles* and in patristic and Islamic writings. The relation between this sect and the 11<sup>th</sup>-century C.E. al-Dustan of the Samaritan liturgy has not yet been clarified. The accounts about the Dosithean sect (or sects) differ in many ways and contradict each other in some places. The Samaritan sources, the *Annals* of \*Abu al-Fatḥ and the *New Chronicle*, speak of two sects: one called al-Dustān, which arose shortly before the time of Alexander the Great, i.e., in the fourth century B.C.E., and a sect mentioned in the *Tolidah* as founded by Dūsis or Dustis in the days of the high priest Akbon, the brother of \*Baba Rabbah, i.e., in the second half of the fourth century C.E. Patristic sources from the

second–seventh centuries mention a founder of a Samaritan sect, Dositheos, who claimed to be the messiah prophesied by Moses in Deuteronomy 18:15. The dating of the sect is vague, generally given as before or after the time of Jesus.

The Islamic writer al-Shaharastānī (1086–1153) describes a Samaritan sect al-Dustāniyya, also known as al-İlfāniyya. Their founder, al-İlfān, is said to have lived approximately 100 B.C.E. Al-Shaharastānī explains the name al-Dustāniyya to mean the dissenting, mendacious sect. It is difficult to tell from these accounts whether they render different traditions about one and the same sect which became blurred in the course of time, or whether there existed two or more sects at different times. The main source for the account of the fourth-century B.C.E. sect is the *Annals* of Abu al-Faḥ. There the sect is said to have been called al-Dustān because they abolished the lawful festivals and the traditions of their ancestors. Their most important deviations were: changing of the Samaritan combined solar-lunar \*calendar, counting all months as 30 days; ceasing to recite the formula “Blessed be our Lord in eternity” and to pronounce the Tetragrammaton, substituting *Elohim*; counting the 50 days between Passover and Pentecost from the day after the first day of Passover, as the Jews do; and altering the laws of ritual purity. Because of the above differences and others outside the sphere of belief and religious rites, they started to build their own synagogues and to appoint their own priests. The first to become their high priest was the son of the then high priest. He was called Zar‘a, perhaps an allusion to Ezra, and was banned from the community for infamous conduct. He composed a compendium of laws for them – a new Torah, derided the high priests, and was esteemed the most learned of his time. The account concerning the Dosithean sect of the fourth century C.E., found in the *Tolidah*, the *Annals* of Abu al-Faḥ, and the *New Chronicle*, is centered on the person of Dustes b. Pilpelo, who went to Shechem in the time of Akbon, Baba’s brother. He was not of Samaritan extraction but descended from the Aravruba (*Erev rav*), the mixed multitude who left Egypt together with the Israelites. The *Tolidah* does not go beyond this brief statement, whereas the other two chronicles, especially that of Abu al-Faḥ, elaborate their story with much detail.

Dusis b. Fufti (or in the *New Chronicle*, Dusis) was living in Jewish territory, committed adultery there, and was sentenced to death. However, when he proposed to the Jewish elders the founding of a heretic sect in Samaria, they consented to release him. He went to Qaryat ‘Askar, where he won the friendship of a very learned and pious man called Yaḥdū. Together they spent two years abiding by a vow of asceticism. When their vow ended, they ate, drank, and became intoxicated. When Yaḥdū was still sleeping off his drunkenness, Dusis took away his hood, gave it to a harlot, and bribed her to testify on the Day of Atonement before the community, gathered for prayer on Mt. Gerizim, that Yaḥdū had sinned with her. But his plot was discovered by the high priest Akbon, who sought to kill him. Dusis fled to Shuwayka or Socho and hid in the house of a widow called Amintū, whom he told that he

was the son of the high priest. During his stay there, he occupied himself with writing. When he had finished, he heard that the high priest was still looking for him, so he left the house of Amintū and went to hide in a cave, where he eventually died of hunger and was devoured by the dogs. Before leaving, he had ordered Amintū to allow his writings to be touched only by those who had purified themselves in a nearby pool. Soon afterward the high priest’s nephew, Levi, with seven companions, arrived at the house of Amintū in search of Dusis. She told them faithfully all Dusis had taught her. Levi then sent one of his men to immerse in the pool. Upon rising, the man cried out, “My belief is in Thee O Lord and in Dusis Thy servant and in his prophetic mission.” Levi shouted at him and struck him. However, the same happened to all of the seven and at last to Levi himself. Then they read the books of Dusis and learned that he had changed much of the Torah, similar to Ezra and even more so. They kept all this to themselves and returned to Shechem. On the first day of the Passover festival, when Levi was called upon to recite the Law, he substituted the word “zatar” for “ezov,” according to the books of Dusis. When the community tried to correct his reading, Levi insisted on it and blamed them for having rejected the prophetic mission of Dusis; he changed the days of the festivals, the mighty name of YHWH, and sent pursuers after the second prophet sent by God from Mount Sinai. Thereupon, Levi was stoned, and his followers went to a place near Jerusalem, from where they continued to win disciples from among the Samaritans. They venerated Levi as a martyr, kept a palm leaf dipped in his blood in the books of Dusis, and allowed only those who had fasted for seven days to approach and study them. They believed that the dead would soon rise; they cut their hair, prayed with their body immersed in water, did not go from one house to another on the Sabbath, and observed all the festivals on the Sabbath only. When one of the followers died, they put a belt around his waist, sandals on his feet, and a rod in his hand so that he could rise from his grave in haste. Some of them believed that as soon as the dead were buried they rose from their graves and went to Paradise. After a short story about Simeon the Sorcerer (Simon Magus, who, according to most scholars, belongs to the first century C.E.) there is an enumeration of seven subsects that succeeded each other and the fate that befell each of them. The narrative ends with the words: “All these came forth from the *Books of Dusis* and caused the Samaritans much hardship and great sinning.”

Especially interesting is one of the sects, founded by Shaliyah ibn Ṭirūn ibn Nīn, because his followers are once called al-Dustān. That is the only occurrence of this name in the narrative about the sect founded by Dusis. In this report antisectarian polemics are intermingled with the legend about Levi, which is obviously borrowed from the literature of the sect. The short notes speaking of Dositheos in the patristic sources all agree that he was a Samaritan heretic and founder of a messianic sect. But they differ in details. Thus Pseudo-Tertullian (second century C.E.) mentions the Samaritan Dositheos as the first Jewish heretic from whom the

heresy of the Sadducees developed. He was the first to reject the prophets, deny belief in resurrection, angels, and the last judgment. According to the Pseudo-Clementines (third century C.E.), Dositheos and Simon Magus were pupils of John the Baptist. The Samaritans, awaiting a prophet predicted by Moses, had been prevented by the depravity of Dusis from believing in the prophetic mission of Jesus. Origen (second and third centuries C.E.) mentions Dositheos several times. After the time of Jesus, Dositheos tried to convince the Samaritans that he was the messiah prophesied by Moses, and he succeeded in winning some of them over. Then he adds that these are the Dositheans, still extant in his time, who own scriptures of Dositheos and recount myths about him that he had never died and was still alive somewhere. Similar to the above is the account of Eusebius (third and fourth centuries C.E.), who states that Dositheos appeared after Jesus' time and was acknowledged by the Samaritans as a prophet like Moses. Epiphanius (fourth century C.E.) gives a report resembling that of Abu al-Fatḥ in some basic points about Dusis and his sect. According to him, the Dositheans were a Samaritan sect; kept circumcision, the laws of the Sabbath, and the Pentateuch; refrained from eating meat; venerated abstinence; and believed in resurrection. Dositheos was of Jewish origin and had retired to a cave. However, out of an exaggerated desire to gain knowledge, he fasted so that at last he died of starvation. Eulogius (seventh century C.E.) tells of two rival Samaritan parties, one believing that the expected prophet of Deuteronomy 18:15 was \*Joshua son of Nun, the other claiming that it was someone called Dosthes or Dositheos, who was a disciple of Simon Magus, cast blame on the prophets and the patriarch Judah, left scriptures, and did not believe in resurrection. Even from this scanty material, it becomes obvious that the Dosithean sect must have had considerable influence in the beginning of the common era or even before it. It seems quite plausible that several subsects branched off from an original major sect in the course of time. This may account for the double report of the Samaritan chronicles, including that of the seven subsects, and the discrepancies found in patristic and Islamic sources.

## DUTCH LITERATURE.

### Influence of the Bible

The arrival, on October 27, 2004, of the Nieuwe Bijbelvertaling, a completely new translation into Dutch of the Bible and the Christian Apocrypha, initiated a fierce debate in Dutch literary circles. At the core was the major influence of the Bible on Dutch culture and linguistics. Many participants in the discussion lamented the sometimes radical choices the translators had made to rephrase the biblical stories into a modern vernacular. They stated their desire to protect the language and imagery of the Statenbijbel, the official translation of the Bible which was commissioned by the Dutch Reformed Church in the early 17<sup>th</sup> century. It was completed during the years 1627–37. Similar to its English-language counterpart, the King James Version, the Statenbijbel has enriched the Dutch language with countless beautiful and poetic similes, expressions, and metaphors, most of which are still in use in present-day Dutch.

The original Statenbijbel translation project was one high point in the cultural revolution that brought Calvinism and Humanism to Holland. The Eighty Years' War (1568–1648) led to a new and powerful interest in the Bible as a source of inspiration for a national Dutch identity, which was at that time beginning to assert itself. In a famous poem which later became the Dutch national anthem, “Wilhelmus van Nassouwe,” Prince William of Orange was compared to David, king of Israel. The war against Spain was likened to Israel's war against her enemies. Among the many poetic adaptations of the Psalms composed in these times were those of authors such as Philips van Marnix van Sint Aldegonde (1540–1588), and the poets Pieter Corneliszoon Hooft (1581–1647) and Constantijn Huygens (1596–1678).

Humanists and Reformers promoted the study of Hebrew in the Low Countries during the 16<sup>th</sup> century, particularly in such circles as that of the humanist Antwerp printer Christophe \*Plantin (1514–1589), who at one time was obliged to move to Leiden. During the 15<sup>th</sup> century, biblical drama flourished in the many chambers of rhetoric (*Rederijkerskamers*) and later poets such as Carel van Mander (1548–1606) and Dirck Volkertszon Coornhert (1522–1590) wrote a number of biblical plays. Outstanding among these authors was Joost van den Vondel, who wrote *Joseph in Dothan* (1640), *Joseph in Egypten* (1640), *Salomon* (1648), *Jephta* (1659), *Samson* (1660), and *Adam in Ballingschap* (“Adam in Exile,” 1664). The last work can be compared to \*Milton's *Paradise Lost*.

After the 17<sup>th</sup> century there was a sharp decline in interest in biblical subjects. In the late 18<sup>th</sup> century, Willem Biederdijk wrote some biblical poetry, while Arnold Hoogvliet composed an epic entitled *Abraham de Aartsvader* (“Abraham

the Patriarch," 1729). In the 19<sup>th</sup> century, Allard Pierson published *Israel*, the first part of his study *Geestelijke Voorouders* ("Spiritual Ancestors," 1887–91) and J.L. ten Kate wrote *De Schepping* ("The Creation," 1866).

Dutch biblical dramatists of the 20<sup>th</sup> century include H. van den Eerenbeemt, the author of *Judith* (1916); F. Rutten, who wrote *Hagar* (1917); and the Flemish poet René de Clercq, the author of biblical stories in verse form such as *Thamar* (1917). The poet Albert Besnard composed an epic poem about the history of the Jewish people called *Drama* (1959). In 1945 a Protestant author, H. de Bruin, published *Job*, a dramatic adaptation of the Book of Job. The Bible and the land of the Bible provide the themes of some of the writing of Roman Catholic poet Bertus Aafjes, notably his poem *In den Beginne* (1949) and his novels, *Vorstin onder de landschappen* ("Empress Among Landscapes," 1952) and *Arenlezers achter de maaiers* ("Gleaners Behind the Reapers," 1952).

During the 20<sup>th</sup> century Protestant religion lost its prominence in Dutch society. In mainstream fiction, Biblical themes have almost disappeared, the work of author and artist Jan Wolkers (1925– ) being the most notable exception. In 1990 Wolkers published *Op de vleugelen der profeten* ("On the Wings of Prophets"), essays on the beauty of the Bible. As a literary topos, the Bible can be found in the works of novelists Maarten 't Hart, Nicolaas Matsier, and Desanne van Brederode. From the 1960s onwards, poet and novelist Gerard Kornelis van het Reve (1923– ) created an original poetic aesthetic, mixing the language and imagery of the *Statenbijbel* with Roman Catholic mysticism and explicit references to homosexuality. This literary style is known as *Revisme* ("Revisism").

### Hebraic Influences on the Dutch Language

The influence of the *Statenbijbel* on the Dutch language can not be overestimated. Expressions deriving from this translation are still current in literature and colloquial usage. Besides such common words as *Satan*, *cherubijn*, etc., there are expressions like "*met de mantel der liefde bedekken*" ("to cover with the coat of love"), borrowed from the story of Noah (Gen. 9:23). The influence of Yiddish began to be felt with the appearance of Dutch books by Jewish authors, which contained Yiddish expressions. Some Yiddish words that have become part of standard Dutch are *Mokum*, the popular nickname for Amsterdam ("place," from *makom*); *bajes* ("prison," from *bayit*); *gabber* ("friend," from *haber*); *stiekem* ("in secret," from *shetikah*); and *lef* ("courage," from *lev*). Many more are to be found in popular speech and thieves' slang – *jatten* ("to steal," from *yad*), and *kapoeres* ("gone to pieces," from *kapparah*). Others which were mainly used by Jews are disappearing with the dwindling of the Jewish community in Holland.

The Jewish community has coined some Dutch words for its specific linguistic needs. By subtly changing the prefix of verbs and nouns, meaning has shifted – predominantly in the verbs *aanbijten* (lit. "to bite onto," to break the fast after Yom Kippur) and *uitkomen* (lit. "to come out," to convert to Juda-

ism), and the noun *voorzanger* (lit. "singer in front," Cantor), which are not in use outside the Jewish community.

### The Figure of the Jew in Dutch Literature

The physical presence of Jews in the Netherlands is not reflected in medieval Dutch literature. The Jew is made to symbolize the forces of evil, and his sufferings are pointed to as proof of the Christian concept of history. Examples of this are to be found in the *Rijmbijbel* of Jacob van Maerlant (c. 1235–1300), in the same writer's *Spiegel Historiael*, in *Van den Levene Ons Heren* ("On the Life of Our Lord") by an unknown 13<sup>th</sup>-century author, and in various other sources. A literary record of the pogroms following the plague of 1350 occurs in *Brabantse Yeesten* by Jan van Boendale. The alleged use of the blood of Christian children for healing purposes was described in the *Bienboek*, a medieval Dutch version of the *Liber Apum* by Thomas de Cantimpré. Van Boendale's *Van den Joden ende van haren Wesen* ("Of the Jews and Their Nature") was a more rational work. The secular morality poem *Der minnen Loep* ("The Course of Love") by Dirck Potter (c. 1370–1428) denounces sexual intercourse with Jews. The Shylock motive appears in the fragmentary rhetorical play *Van den Gedinge tusschen eenen Coopman ende eenen Jode* ("On the Case Between a Merchant and a Jew," c. 1515).

Despite the increase in the number of Jews in Holland during the 17<sup>th</sup> century, none of the great authors of the Golden Age dealt with Jewish themes, with the exception of Joost van den Vondel, who wrote the poem *Aan de Joodsche Rabbijnen* as an addendum to the play *Hierusalem verwoest* (1620). On the other hand, many chronicles deal with Jews, mostly from a Christian, antisemitic point of view. An exception is the treatise on Jews and the Jewish religion in *Bewijs van den waren godsdienst* ("Proof of the True Religion") by the great Dutch jurist Hugo \*Grotius. After a speculation scandal in 1720, Jews began to appear in low comedy, satirical poetry, and scurrilous writings. Examples are to be found in the unfinished comedy of manners *De Spiegelder Vaderlandsche Kooplieden* ("Mirror of Native Merchants," 1720) by Pieter Langendijk. Two periodicals founded by Justus van Effen, *Spectatoriale Geschriften* and *De Hollandsche Spectator*, were influenced in their attitude toward the Jews by the ideas of the Enlightenment.

In the 19<sup>th</sup> century, too, the number of literary works dealing with Jewish themes was very small. They include the poem *De Israelitische Loovertut* by Antonie Christiaan Wynand Staring; descriptions of middle-class Jews in the *Camera Obscura* (1839) of Hildebrand (pen name of Nicolaas Beets); descriptions of the Amsterdam ghetto in the novel *Woutert e Pieterse* (2 vols., 1865–77) by Multatuli (pen name of Eduard Douwes Dekker); and the antisemitic novel *Jeanne Colette* by W. Paap. At the beginning of the 20<sup>th</sup> century, Jewish types appear in the short stories collected in *Vluchtige begroetingen* ("Casual Greetings," 1925) by Aart van der Leeuw. An exotic Jewish girl figures in the novel *Tobias en de dood* ("Tobias and Death," 1925) by Jan van Oudshoorn (pen name of J.K. Feylbrief). The \*Wandering Jew motif is to be found in

the novel *De wandelende Jood* (1906) by the Flemish author August Vermeylen. The poet Johan Andreas dèr Mouw was the only writer who tried to analyze his attitude toward Jews.

The first writer to react to rising Nazism and the persecution of the Jews was the outstanding essayist Menno ter Braak, who had a great influence on Dutch literature. The change of attitude to Jewish themes brought about by World War II can be gauged by a comparison of two novels by Simon Vestdijk (1898–1971): *Else Boehler, Duits dienstmeisje* (“Else Boehler the German Maid,” 1935) and *De rimpels van Esther Ornstein* (“The Wrinkles of Esther Ornstein,” 1958). A writer who often used Jewish themes was Ferdinand Bordewijk, whose novels show a progressively antisemitic tendency. His works include the collections of short stories *Fantastische vertellingen* (“Fantastic Stories,” 3 vols. 1919–24), and the novels *Noorderlicht* (“Northern Lights,” 1948) and *Bloesemtak* (“Blossoming Branch,” 1955).

In the years immediately after World War II, there was a remarkable increase in literary works dealing with Jewish themes and fictional characters. Some writers, like August Drefesne in his play *De naamloozen van 1942* (“The Nameless of 1942,” 1945), tried to prove the unequivocally sympathetic attitude of the Dutch people toward the Jews. The theme of other works is the absence of differences between Jews and non-Jews, as in *Volg het spoor terug* (“Follow the Track Back,” 1953), an essay by J.B. Charles (pseudonym of W.H. Nagel), and in the novel *De ondergang van de familie Boslowits* (“The Ruin of the Boslowits Family,” 1946) by Gerard Kornelis van het Reve. Nel Noordzij deals with collective guilt feelings as a personal experience in *Variaties op een moederbinding* (“Variations on a Mother Attachment,” 1958), and with Jewish self-hate in her novel *Het kan me niet schelen* (“I Don’t Care,” 1955).

The difficulties arising in mixed marriages as a result of traumatic war experiences form the theme of several novels, including *De donkere kamer van Damocles* (“The Dark Room of Damocles,” 1958) by Willem Frederik Hermans, *Het wilde feest* (“The Intruder,” 1952) by Adriaan van der Veen, *Allang geleden* (“A Long Time Ago,” 1956) by W.G. van Maanen, and Jan Wolkers’ *Kort Amerikaans* (“Short American,” 1962). A worthy attempt to draw an authentic Jewish portrait is that by the Flemish writer Marnix Gijsen (pseudonym of Jan-Albert Goris), who went to live in New York in 1939, in his short stories “Kaddisj voor Sam Cohn” and “De school van Fontainebleau” in the collection *De Diaspora* (1961).

During the 1960s and 1970s, Dutch literature shifted direction as a result of rising tides of realism and early post-modernism. Also, many Jewish writers came into their own, with a staggering growth of publications on Holocaust and post-Holocaust themes. As a result, Jewish experience and the place of the Jew in Dutch society became almost a taboo subject for non-Jewish writers. Jews all but vanished as characters in fiction by non-Jewish authors, with the exception of Erik Hazelhoff Roelfzema’s *Soldaat van Oranje* (“Soldier of Orange”), which was published in 1971, a picaresque autobiographical novel about his travels during 1940–45 that included

a Jewish love interest. The crime fiction that Jan-Willem van de Wetering wrote during the 1970s and 1980s features a minor character who is a Sephardi Jew.

It took until the late 1980s for a Jew to return to Dutch fiction. The novel *Mystiek Lichaam*, published in 1986 by acclaimed author Frans Kellendonk (1951–1990), caused a major literary scandal. Kellendonk uses the relationship between two siblings in a Roman Catholic family as the backdrop for an exposition of the intrinsic Otherness of homosexuality and Jewishness in Dutch society. Some critics denounced the novel as antisemitic. Since then, not many non-Jewish writers have dared touch the subjects of Jewish history, Jewish identity, and Judaism.

The Jewish community in the former Dutch colony of \*Surinam has a long history. Cynthia Macleod-Ferrier (1936– ), a writer from Surinam, described the experiences of a fictional Jewish family at an 18<sup>th</sup> century plantation in *Hoe duur was de suiker* (1987, “How Expensive Was the Sugar”). In children’s fiction Karlijn Stoffels’ novel about two friends during the Holocaust, *Mosje en Reizele* (1996, “Moshe and Reizele”), attracted a large audience.

### The Jewish Contribution to Dutch Literature

17<sup>TH</sup> AND 18<sup>TH</sup> CENTURIES. The Sephardi Jews, arriving in Amsterdam toward the end of the 16<sup>th</sup> century, were the first Jewish writers in Holland. Although they wrote in Latin, Spanish, and Hebrew, they made a significant contribution to Dutch literature. Prominent among them were poets such as Jacob Israel \*Belmonte; Paulo de Pina, author of the biblical morality play *Dialogo dos Montes* (1624); the satirist Abraham (Diego) Gómez Silveyra; and the dramatist and poet Antonio Enriquez \*Gómez. A vast but inaccurate source for the history of the Amsterdam Sephardi Jews is the poetry of Miguel (Daniel Levi) de \*Barrios. Other important cultural figures were the scholar and statesman Manasseh Ben \*Israel and the philosophers Uriel da \*Costa and Baruch \*Spinoza (see also Spanish and Portuguese \*Literature).

The literary production of the Ashkenazi Jews did not cross over into Dutch society in general. Until the 1750s Ashkenazi Jews mainly wrote in Yiddish. In addition to translations of religious books, they made adaptations of secular literature, such as the \*Bove-Buch, Josef Maarsen’s *Sjeine artliche Geschieden* (1710) translated from \*Boccaccio’s *Decamerone*, and a translation of the *Travels of Benjamin of Tudela* (1691) by Ḥayyim ben Jacob.

During the second half of the 18<sup>th</sup> century, the elite of the Jewish community slowly gained entrance into Dutch society through their growing ease with the Dutch language. A handful of young Amsterdam Jews actively participated in the revolutionary movements of 1787 and 1795. Some Jewish revolutionaries contributed to magazines and pamphlets in Dutch, marking the entrance of Dutch Jewry into Dutch letters. The emancipation of the Jewish nation, as declared by the French in 1796, officially opened the doors for their entrance into Dutch society.

FROM THE 19TH CENTURY TO WORLD WAR II. The 19<sup>th</sup> and early 20<sup>th</sup> centuries saw a gradual entry of a growing number of educated Jews into most walks of Dutch life. Jews went into law, medicine, commerce, and the fine arts. They entered journalism, the theater, and the entertainment industry. The advent of liberalism and socialism profoundly influenced Jewish intellectuals. Jewish writers reflected upon social inequality and depicted scenes of squalor and misery in the poorer Jewish communities and working-class neighborhoods of the major cities. Also, many explored Jewish self-hatred, assimilation, and, to an extent, Zionism.

The first writer of Portuguese-Jewish descent to contribute to Dutch literature proper was the poet Isaac da \*Costa, who at first worked for Jewish emancipation but converted to the Reformed Church in 1822 under the influence of the poet William Bilderdijk. Da Costa was active in the Protestant Réveil movement, which strove for a deepening of religious experience. His works include a collection of poetry, *De Chaos en het Licht* ("Chaos and Light," 1850–53); the biblical drama *Hagar* (1848); and studies on various Jewish themes. Da Costa's friend Abraham Capadose (1795–1874), who also converted, was another early contributor to Dutch literature. He wrote several conversionist works, including *Rome en Jeruzalem* (1851). Other 19<sup>th</sup>-century authors were the satirist Mark Prager Lindo, the poetess Estella Hijmans Hertzveld, and the novelist Arnold Aäron Aletrino.

Herman \*Heijermans, who is generally considered the most important playwright of his time, wrote naturalistic works reflecting the struggle with Jewish identity and social involvement. His many outstanding books include the novel *Diamantstad* ("Diamond City," 1904); *Ghetto* (1898), a drama of Amsterdam Jewish life; and a play about the life of fishermen, *Op hoop van zegen* ("The Good Hope," 1900), which is generally considered one of the best plays ever written in Dutch. The Sephardi author Israël \*Querido wrote a number of novels on "ghetto" life, as well as several biblical works. His brother, the publisher Emanuel Querido (1871–1943), was also an author. Other writers of the time were Samuel C. Goudsmit; Willem Schürmann (1879–1915), the author of the "ghetto" play *De Violiers* (1912); and the anti-assimilationist rabbi Meyer de Hond (1873–1943), author of *Kiekjes* ("Snapshots," 1926).

Jewish national feelings dominate the works of M.H. van Campen and a few other writers. A.B. Kleerekoper (1850–1943), who was a minor Hebrew poet, wrote a Dutch adaptation of Song of Songs, *Het Hooglied Zangen van Liefde* (1903). A. van Collem (1858–1933), the first president of the Dutch Zionist Organization, wrote *Russische melodieën* (1891), the story of a pogrom, and the lyrical poem *God* (1930). Outstanding for his religious poetry was Jacob Israël de \*Haan, a controversial figure who was assassinated in Jerusalem. His collection *Het Joodsche Lied* ("The Jewish Song," 2 vols., 1915–21) is among the finest religious poetry of modern times. De Haan's sister, the novelist Carry van \*Bruggen, whose writing was mainly autobiographical, often dealt with the rift between Jewish par-

ents and children. Sebastian Bonn (1881–1930) wrote some fine poems in both Dutch and Yiddish on Jewish and socialist themes, notably those collected in *Gewijde Lieder* ("Sacred Songs," 1926). The literary critic and poet Victor Emanuel van \*Vriesland published an essay on Jewish literature, *De culturele noodtoestand van het Joodsche volk* (1915). An important impressionistic poet was Herman van den \*Bergh. The Catholic convert Herman de Man (1898–1946) wrote regional novels such as *Het wassende water* ("Rising Water," 1926). Jewish themes play a large part in the works of the novelist and literary critic Siegfried Emanuel van \*Praag. Among his books were *Jerusalem van het Westen* ("Jerusalem of the West," 1961), an account of vanished Amsterdam Jewish life, and the monograph *De West-Joden en hun letterkunde sinds 1860* ("The Western Jews and Their Literature Since 1860," 1926). The novelist Maurits \*Dekker wrote on Jewish and socialist themes, his works including *Brood* ("Bread," 1933) and *De laars op de nek* ("The Jackboot on the Neck," 1945), an account of the German occupation of Holland. Another writer with strong socialist leanings was David de Jong (1898–1963), whose collection of poems, *Eenzame opstandigheid* ("Lonely Revolt," 1925), displays deep melancholy. Dola de Jong (1905–2003), who settled in New York and Los Angeles, wrote the novel *En de akker is de wereld* ("And the Field Is the World," 1947).

EARLY POSTWAR PERIOD. World War II and the Holocaust are generally seen as the watershed in Dutch history. Since 1945, all Jewish novelists, poets, and playwrights have in one way or another reflected on the Holocaust. Some have published their prewar memoirs, others have written about their experiences in hiding or in the Nazi death and concentration camps. A younger generation has taken on the subject of the wartime and postwar experiences of their relatives. This contemplation has taken shape in many different genres. Some authors pursued careers in academia, commerce, journalism, or the stage before turning to writing fiction. Others were already well-established writers when they finally found the courage to give an autobiographical account of their wartime experiences.

War journals are headed by the world-famous diary of Anne \*Frank, *Het Achterhuis* (1946; *The Diary of a Young Girl*, 1952). Others are *Brieven uit Westerbork* ("Letters from Westerbork," 1961) by Etty Hillesum (1914–1943), whose letters and diaries were rediscovered and reprinted in the 1970s, with dazzling commercial success. The diary *In Depot* (1964) by Philip Mechanicus (1899–1944) was also rediscovered by a younger audience in the 1970s and again in the 1990s.

Jacob \*Presser wrote prose and poetry inspired by World War II experiences, and the two-volume historical study *Ondergang. De vervolging en verdelging van het Nederlandse Jodendom 1940–1945* (1965; *Ashes in the Wind: The Destruction of Dutch Jewry*, 1969). The prominent Zionist and lawyer Abel \*Herzberg wrote factual stories on the Bergen-Belsen concentration camp, such as *Amor Fati* (1946) and *Brieven aan mijn kleinzoon* ("Letters to My Grandson," 1964).

A fine autobiographical novel on the war is *Het bittere kruid* (1957; *Bitter Herbs*, 1960) by Marga \*Minco. She has continued publishing one novella per decade, in a sober, washed-out style.

Clara Asscher-Pinkhof (1896–1984), who settled in Israel, wrote about children in Bergen-Belsen in her novel *Sterrekinderen* (“Starchildren,” 1946; Hebrew, *Yaldei ha-Kokhavim*, 1965); Meyer Sluysen (1901–1973), a popular radio commentator, wrote several novels on vanished Jewish life in Amsterdam, notably *Voordat ik het vergeet* (“Before I Forget,” 1956). Another war writer was Salvador Hertog (1901–1989), author of the novel *De Tuin* (“The Garden,” 1957) and *Meijer en ik* (“Meijer and I,” 1980).

Early postwar poets include Maurits \*Mok, author of *Aan de Vermoorden uit Israel* (“To the Murdered of Israel,” 1950); Leo Vroman (1915– ), who settled in New York and wrote in Dutch and English; and Hannie Michaelis (1922– ). Novelist Josepha Mendels (1902–1995), who settled in Paris, tasted literary success only late in life, when her novels about Jewish family life *Rolien en Ralien* (*Rolien and Ralien*, 1947), and *Als vuur en rook* (1950; *Like Ashes and Smoke*) were rediscovered by an eager young readership.

#### 1970–2005

Judith Herzberg (1934– ), the youngest daughter of Abel Herzberg, made her literary debut as a poet with *Zeepest* (“Seamail,” 1963). She developed into the most important poet and playwright of her generation. She is revered for her clarity of style and her use of seemingly simple language. She based 27 *liefdesliedjes* (1971, “27 Love Songs”) on the biblical Song of Songs. She successfully translated and adapted classics of the Yiddish theater *The Golem* and *The Dybuk* for the Dutch stage. Her play *Leedvermaak* (1982) was chosen the best play of the 1980s by her peers. It deals with the unspoken trauma of a family of Holocaust survivors and the younger generations of child survivors and Jews born after 1945. Herzberg subsequently wrote two more plays revolving around the *Leedvermaak* characters, *Rijgdraad* (1995) and *Simon* (2003).

The literary career of Harry \*Mulisch (1930– ) has spanned decades. He broke new ground in the early 1980s with his highly successful *De aanslag* (“The Assault,” 1981). In 1985, the film by Dutch director Fons Rademakers based on the novel won an Academy Award for Best Foreign Film. Mulisch had dealt with Jewish themes in his novel *Het stenen bruidsbed* (“The Stone Bridal Bed,” 1959) and wrote an account of the \*Eichmann trial, *De zaak 40/61* (1968). His major epic on the world’s redemption, as seen from a Jewish perspective through the unwitting ministrations of a Dutch boy, *De ontdekking van de hemel* (1992; *The Discovery of Heaven*, 1996), established his reputation worldwide.

A generation after the Holocaust, Dutch Jews who had pursued non-literary careers started putting their wartime experiences on paper. This has resulted in some exquisite fiction that has reached a large international audience. Andreas Burnier, the pen name of criminologist Catharina R. Des-

saur (1931–2002), published *Het jongensuur* (*The Boys’ Hour*, 1969), the first of many novels and essays on Judaism, ethics, and religion. Physicist Jona Oberski (1938– ) wrote *Kinderjaren* (1978; *Childhood*, 1983), a memoir of his experiences in the Bergen-Belsen concentration camp as a small boy. Sociologist Gerhard Durlacher (1928–1996), a prewar refugee from Baden-Baden in Germany, did not dare to start writing fiction until the 1980s. His small body of work includes *Strepen aan de hemel* (1985; *Stripes in the Sky*, 1992), *Drenkeling* (1985, *Drowning: Growing up in the Third Reich*, 1993), and *De zoektocht* (1991; *The Search: The Birkenau Boys*, 1998). Lisette Lewin, who had previously worked as a journalist, published her semi-autobiographical novel *Voor bijna alles bang geweest* (“Having Been Afraid of Almost Anything,” 1989). Eli Asser, a popular writer for television and the stage, changed direction in the early 1990s, which resulted in his war memoir *Rembrandt was mijn buurman* (“Rembrandt Was My Neighbor,” 1995).

The autobiographical novel *Brief aan mijn moeder* (“Letter to My Mother,” 1974) by journalist and theater critic Ischa (Israel Chaim) Meijer (1943–1995) is credited with shattering the taboo that children of Holocaust survivors have no cause to complain. Meijer luridly described his troubled childhood amongst Holocaust survivors. In Meijer’s wake many new, younger writers have emerged who have grappled with the Holocaust “as part of their mental history, if not their own physical history,” in the words of author Marcel Möring. This intense inner search has led to a large body of novels, poetry, and plays.

Leon de Winter (1954– ) is both a novelist and a screenwriter. He started out as the highly literary author of *De (ver)wording van de jonge Dürer* (“The Corruption of Young Dürer,” 1979), *Place de la Bastille* (1981), and *Zoeken naar Eileen* (“In Search of Eileen,” 1981). With the publication of *Kaplan* (1986) De Winter seemed to have changed his pace. His Jewish characters, bitter humor, and use of literary techniques often used in crime fiction have made him a bestselling novelist, both in Holland and abroad, with *Hoffman’s Honger* (“Hoffman’s Hunger,” 1990), *SuperTex* (“SuperTex,” 1991), *De ruimte van Sokolov* (“Sokolov’s Space,” 1992), *Zionoco* (1995), *De hemel van Hollywood* (“The Heaven Above Hollywood,” 1997), and *God’s gym* (2002). Many of his novels were adapted for film or television.

Marcel Möring’s (1957– ) highly accomplished novels *Mendels Erfenis* (“Mendels Heritage,” 1990), *Het grote verlangen* (1995; *The Great Longing*, 1995), *In Babylon* (1997; *In Babylon*, 1999), and *Modelvliegen* (2001; *The Dream Room*, 2002) seriously explore the emotional entanglement of children of Holocaust survivors, a theme also explored by Wanda Reisel (1955– ) in her novel *Het beloofde leven* (1995).

Arnon Grunberg (1973– ) has been called the most interesting young author in the Dutch language. He made his debut with the novel *Blauwe Maandagen* (1994; *Blue Mondays*, 1996). Grunberg moved to New York in the 1990s, but has continued to write in Dutch and concern himself with Dutch so-

ciety. His novels *De figuranten* (“The Extras,” 1997), *Fantoompijn* (2000; *Phantom Pain*, 2002), *De asielzoeker* (2002; “The Asylumseeker”), and *De Joodse Messias* (2004, “The Jewish Messiah”) gained him prominence. He has published poetry and essays, made a new version of Desiderius Erasmus’ *Lof der Zotheid* (1509, *The Praise of Folly*), called *De mensheid zij geprezen*. (“Humanity Be Praised,” 2001). Grunberg also makes use of the not overtly Jewish pseudonym Marek van der Jagt. Both Grunberg and Van der Jagt have won many Dutch and international literary prizes.

In fiction for children and young people, the novel *Chaweriem* (“Hawerim” (Hebrew for “Friends”), 1995) stands out as a modest Dutch classic. In this tale of a group of young Jews wanting to immigrate from Holland to Israel, Leonard de Vries (1919–2002) caught the hopes of young child survivors for a better future. Child survivor Ida Vos (1931– ) has gained prominence with her many novels for children: *Wie niet weg is wordt gezien* (1981; *Hide and Seek*, 1995), *Dansen op de brug van Avignon* (1989; *Dancing on the Bridge of Avignon* 1995), *Anna is er nog* (1991; *Anna Is Still Here*, 1995), *Witte Zwanen, Zwarte Zwanen* (“White Swans, Black Swans,” 1992), *De sleutel is gebroken* (1996; *The Key Is Lost*, 2000), and *De lachende engel* (“The Laughing Angel,” 2000).

Dutch literary critics include Joseph Melkman (1914– ), who settled in Jerusalem and wrote *Geliefde Vijand* (“Beloved Enemy,” 1964), a book about the Jew in postwar Dutch literature. Historian Jaap Meijer (1912–1993) published a study on poet Jacob Israël de Haan, *De zoon van een Gazzan* (“The Son of a Cantor,” 1967). Meijer, the father of Ischa Meijer, also became known by his pen name Saul van Messel, a poet who distinguished himself from his peers in the literary world by writing in the Saxon dialect of Groningen province.

A few Jews have also written in Afrikaans, a dialect of Dutch containing other elements and spoken mainly by the South African Afrikaners; see “South African Literature.

[Gerda Alster-Thau / Daphne Meijer (2<sup>nd</sup> ed.)]

**DUTY**, an action that one is obligated to perform; a feeling, or sense, of obligation. In Judaism man’s duties are determined by God’s commandments. The entire biblical and rabbinic conception of man’s role in the world is subsumed under the notion of *mitzvah* (meaning simultaneously “law,” “commandment,” “duty,” and “merit”). The term *hovah*, meaning “obligation” or “duty,” which came into use later, is used interchange-

ably with *mitzvah*. To perform a divine commandment is to fulfill one’s duty, *lazet yedei hovah* (Ber. 8b). The translator from the Arabic original into Hebrew of \*Baḥya ibn Paquda’s major work *Ḥovot ha-Levavot* (“Duties of the Hearts”) used the term *hovah* as a synonym for commandment, and the term was taken up by other writers of \**musar* literature (for a discussion of the relationship between “*mitzvah*” and “*hovah*” see ET, vol. 12, s.v. *hovah*). Duty is the incentive to moral action, and a morality-based duty is evidently different from one that is based on pleasure. According to a talmudic dictum “Greater is he who performs an action because he is commanded than he who performs the same action without being commanded” (BK 38a). The pleasure derived from the performance of a commandment is irrelevant to its nature (cf. RH 28a “the commandments were not given to be enjoyed”), and conversely dislike of an action is no sufficient reason for abstention from it, cf. the saying of R. Eleazar b. Azariah: “Say not, ‘I do not like to eat pork’... but say, ‘I would like, but I will not for it is God’s prohibition’” (Sifra 20:26; cf. Mak. 3:15). One should not perform an action in order to gain a reward, but because it is a divine commandment, and hence one’s duty: “Be not like servants who work for the master on condition of receiving a reward...” (Avot 1:3).

The morality of an action is determined more by the motivation of the one who performs it than by its consequences: “You must do what is incumbent upon you; its success is up to God” (Ber. 10a). The notion of intention (*kavvanah*) is central in Jewish ethics: “Whether it be much or little, so long as the intention is pure” (Ber. 17a; Sif. Deut. 41); “God demands the heart” (Sanh. 106b). That is not to say that an action performed without the proper motivation is worthless. The fact that its results are beneficial does give it some worth. Moreover, through performing an action without the proper motivation, one may come to perform it with the proper motivation: “From doing [good] with an ulterior motive one may learn to do [good] for its own sake” (Pes. 50b; cf. Maim., Yad, Teshuvah, 10:5).

The major problem in modern Jewish thought in connection with the concept of duty is posed by the Kantian notion of autonomy, according to which an action to be moral must be motivated by a sense of duty, and must be autonomous (I. \*Kant, *Fundamental Principles of Ethics*, trans. by T.K. Abbott (1946<sup>10</sup>), 31ff.). This appears to conflict with the traditional Jewish notion that the law is given by God, that is, that it is the product of a heteronomous legislator. Moritz \*Lazarus in his *Ethik des Judentums* (1898, 1911; *The Ethics of Judaism*, trans. by H. Szold, 1900) attempts to show that rabbinic ethics are based on the same principles as Kantian ethics, the basic underlying principle of both being the principle of autonomy (*ibid.*, 1 (1898), no. 90–105). In so doing he somewhat distorts the Kantian notion of autonomy. Hermann \*Cohen, in *Die Religion der Vernunft aus den Quellen des Judentums*, in his attempt to deal with the problem of heteronomy and autonomy, interprets *mitzvah* to mean both “law” and “duty,”

the law originating in God and the sense of duty in man. Man, of his own free will, must take upon himself the “yoke of the commandments.” Franz \*Rosenzweig approaches the question of the duties imposed by Jewish law from a somewhat different consideration. Distinguishing between “law” (Ger., *Gesetz*; Heb., *hukkah*) and “commandment” (Ger., *Gebot*; Heb., *mitzvah*), he holds that the individual is confronted by the body of Jewish law which is impersonal (*Gesetz*) and that he must make a serious effort to transform it into commandments (*Gebot*) by appropriating whatever is meaningful to him in the situation in which he finds himself (F. Rosenzweig, *On Jewish Learning* (1955), 83–92, 109–24).

**DUVDEVANI, SHMUEL** (1903–1987), Israel botanist. Duvdevani was born in the Ukraine. He studied botany in England and went to Palestine in 1921. He was an instructor at the Hebrew University in Jerusalem and beginning in 1935 he taught at the agricultural school at Pardes Hānannah. In 1936 he turned his attention to research on \*dew. He invented an optical method of measuring the amount of dew precipitation which has been accepted all over the world. The international meteorological organization, accepted the Duvdevani Dew Recorder as a standard method for the international measuring of dew. Duvdevani was instrumental in setting up a network of observation stations throughout Israel for recording dew precipitation, the first such network in the world. In connection with his meteorological work, Duvdevani carried out research on plant physiology, especially on the absorption of water by the foliage of the plant. In 1946 he participated in the publication of *Magdir le-Zimhei-Bar* (1946), which is a systematic definition of flora, according to vegetative qualities alone.

**DUVEEN**, family of British art dealers. The famous firm of Duveen Brothers was founded by Sir JOSEPH JOEL DUVEEN (1843–1908), who was born in the Netherlands, the son of a Jewish blacksmith, and migrated to Hull, where he opened a curiosity shop dealing in china. Duveen developed a deep knowledge of Nanking china, which he imported successfully, and, in 1879, moved to London. There he opened an impressive gallery. With the help of his brother Henry in New York, Duveen then specialized in selling paintings and other art works to nouveau riches millionaires, especially Americans and South Africans. He increasingly employed the renowned American-born art expert resident in Italy, Bernard \*Berenenson, to authenticate the works he sold. Duveen also built luxury houses for his wealthy clients. He received a knighthood in 1902 for his gift of £20,000 to build the Turner Gallery at London's Tate Museum.

Sir Joseph's eldest son, Joseph \*Duveen, first Baron Duveen of Millbank (1869–1939), with whom he is often confused, became head of the firm after the death of his father

and uncle (in 1919), and continued to maintain the firm as a leading international art house.

**BIBLIOGRAPHY:** ODNB online; DBB, II, 213–17; S.N. Behrman, *Duveen* (1972); E. Fowles, *Memories of Duveen Brothers* (1976).

[William D Rubinstein (2<sup>nd</sup> ed.)]

**DUVEEN, JOSEPH, LORD** (1869–1939), English art dealer. His grandfather was a Dutch Jewish blacksmith, and his father a dealer first in lard, then in Delft pottery, furniture, and objets d'art. Duveen was born in Hull, and later moved to London. He began to deal in paintings in 1901 and by 1906 was buying famous collections. In the same year he engaged Bernard \*Berenenson as his authenticator of Italian art. Duveen's chief clients were a relatively small number of American millionaires. He encouraged in his clients a taste for the luxurious surroundings in which great works of art could be shown, sometimes even going so far as to build and furnish their houses. At the same time he “educated” them in an appreciation of the old masters and fostered in them a desire to achieve lasting fame through the formation of important collections. He then met their requirements by supplying the most magnificent examples available of the Italian, Dutch, French, and English schools at the highest prices. His specialty was the English masters of the late 18<sup>th</sup> and early 19<sup>th</sup> centuries. The collections he thus brought into existence were often donated to the public on their owners' death. Lord Duveen received many honors. Most controversially, he was appointed a Trustee of London's National Gallery, National Portrait Gallery, and the Wallace Collection. The apparent conflict of interest of an art dealer having a potential role in deciding which works of art England's leading art museums might purchase was widely debated, and led to Duveen's dismissal from these posts shortly before his death. Duveen received a knighthood in 1919, a baronetcy in 1929, and was awarded a peerage in 1933 – the first ever awarded to an art dealer – in large part for paying for the building of the famous gallery at the British Museum which houses the Elgin Marbles.

**BIBLIOGRAPHY:** S.N. Behrman, *Duveen* (Eng., 1952); J.H. Duveen, *The Rise of the House of Duveen* (1957).

**DUVERNOIS, HENRI** (pen name of **Henri Simon Schwabacher**; 1875–1937), French author and journalist. Duvernois' popular melancholy and ironical stories of everyday life in Paris, influenced by Maupassant, include the novels *Crapotte* (1908), *Faubourg Montmartre* (1914), *Edgar* (1919), and *Maxime* (1927). Duvernois also published a volume of one-act comedies (1928).

**DUWAYK (Doweik ha-Cohen)**, family of rabbis and authors in Aleppo, Syria. SIMEON BEN SAMUEL (first half of the 18<sup>th</sup> century) was the author of *Rei'ah Sadeh* (Constantinople, 1738). ABRAHAM (d. 1900) was an author and presided over the Jewish community of Aleppo for many years, until his dismissal in 1896. His wealthy brother SAUL (d. 1874 in Aleppo)

wrote *Emet me-Erez* (Jerusalem, 1910). JACOB SAUL (d. 1919 in Aleppo) was acting chief rabbi of Aleppo beginning in 1906 and wrote *Derekh Emunah* (1914) and *She'orit Ya'akov* (1925), sermons. The family was also found in India, Calcutta and Bombay, and in the latter they had a certain influence on the \*Bene Israel community.

[Haim J. Cohen]

**DVIR**, Hebrew publishing house, founded in 1922 in Berlin by Hayyim Nahman \*Bialik, Shemaryahu \*Levin, and Yehoshua Hana \*Rawnitzki as a successor to the \*Moriah publishing firm of Odessa. Bialik expressed Dvir's program as: "Not just books, but basic books; books bequeathed from generation to generation that provide light for our people." The firm began publishing books in Tel Aviv in 1924. Dvir's publications covered all areas of publishing: reference books, dictionaries, handbooks, anthologies, belles lettres, humanities, sciences, social sciences, art, children's books, and textbooks. Its list included many basic works in Judaica and the classics of modern Hebrew literature. Its *Sefer ha-Mo'adim* ("Book of Festivals," 9 vols., 1956 on, ed. Y. Lewinsky) contains a wealth of material about each holiday. A new edition of the Mishnah, vocalized by Hanoeh Yalon and annotated by Hanokh Albeck, was published in cooperation with Mosad Bialik. Dvir also began publishing the Babylonian Talmud with a Hebrew translation. Authors published by Dvir, in addition to the founders, include \*Shalom Aleichem, Sholem \*Asch, Yizhak Dov \*Berkowitz, Simon \*Dubnow, Isaac Leib \*Peretz, Moshe \*Smilansky, Benzion \*Dinur, and Yehezkel \*Kaufmann. Later Dvir merged with the Zemorah-Bitan Kinneret publishing house.

[Israel Soifer]

**DVORETZKY, ARYEH** (1916– ), Israeli mathematician. Born in Chorol, Russia, Dvoretzky went to Palestine in 1922 and studied at the Hebrew University, Jerusalem, where he became professor of mathematics in 1951. As dean of the faculty of science (1955–56) and as vice president (1959–61) he adopted a policy of fostering basic research designed to keep pace with advances in contemporary mathematics. He was also chief scientist to the Israel Defense Forces. His special fields of study were mathematical statistics, the theory of probability, and functional analysis. In 1973 Dvoretzky was awarded the Israel Prize in exact sciences, and in 1974 he was appointed president of the Israel Academy of Sciences and Humanities, after serving as chairman of its science section (1963–68) and vice president (1968–74). In 1975 he established the Institute for Advanced Studies at the Hebrew University of Jerusalem and from 1985 to 1988 he was president of the Weizmann Institute.

[Bracha Rager (2<sup>nd</sup> ed.)]

**DVORZETSKY, MARK MEIR** (1908–1975), writer, communal worker, and partisan fighter. Dvorzetsky was born in Vilna, where he graduated in medicine in 1935 and received his rabbinical diploma in 1938. He was active in Vilna in student

affairs and a member of the Jewish Students' Self-Defense Organization. He was also a permanent contributor to the Jewish press in Poland. In 1939 he was elected to the Executive of the municipality of Vilna.

An officer in the Polish Army in World War II, he was taken prisoner by the Germans but escaped and returned to Vilna, where he took part in the Jewish self-defense against the Lithuanian pogromists. In 1941–43 he was one of the founders of the Jewish underground in the ghetto of Vilna and wrote a diary which is now in the historical archives of the city. During this period he did research on ghetto life during the Middle Ages on the basis of responsa existing in the ghetto library. In 1943 he was transported to a concentration camp in Estonia, where he formed an underground group called She'ar Yashuv, and where he also kept a diary. In 1944 he was transferred to concentration camps in Germany. In 1945 he organized the escape of Jewish internees from the camp during a death march and was finally freed by the French army. He organized and headed a displaced persons organization and served as editor of the Yiddish daily *Unzer Vort*. From 1945 to 1949 he resided in Paris, where he was active in the rescue of Jewish children who had been hidden in monasteries.

From this time Dvorzetsky devoted himself entirely to research on the Holocaust, publishing numerous papers and books on the subject in Hebrew, Yiddish, French, and English. Immigrating to Israel in 1949, he was a member of the executive of Yad Vashem from its establishment, and an active member of all the organizations of ex-partisan fighters and ex-inmates of the concentration camps, as well as literary organizations, including the Israeli branch of PEN.

He was instrumental in founding the chair for research into the Holocaust at Bar-Ilan University and lectured there from 1960. He received the Israel Prize for social sciences. in 1953.

[Benjamin Rivlin]

**DWORKIN, RONALD** (1931– ), U.S. legal philosopher. Born in Worcester, Massachusetts, Dworkin received a B.A. degree from Harvard in 1953 and another B.A. degree in 1955 from Oxford. Two years later he received his law degree from Harvard. After admission to the New York bar, he joined the law firm Sullivan and Cromwell as an associate. In 1962 he joined the faculty of Yale Law School, where he was named Hohfeld Professor in 1968. In 1969 he was appointed professor of jurisprudence and Fellow at University College, Oxford; in 1977 he became professor of law at New York University without resigning his position at Oxford.

Dworkin is recognized as a leading philosopher of law. His best-known works are *Taking Rights Seriously* (1977), *A Matter of Principle* (1985), and *Law's Empire* (1986). In his work Dworkin has contended against the philosophy of legal positivism, identified with Jeremy Bentham, John Austin, and more recently H.L.A. Hart. Legal decisions, he maintains, should be based on principles and pre-existing rights, rather than on discretion or policy. While rights may be controver-

sial, Dworkin holds that nonetheless there is always only one right answer in hard cases. Rights, he holds, are inherent in the Constitution and in the precedents that interpret it. Judges make moral judgments as they apply precedents to factual situations – precedents on which principles are based and which are the bases of decisions.

In *Ronald Dworkin and Contemporary Jurisprudence* (1984), the editor – Professor Marshall Cohen – states, “In the opinion of the editor, the jurisprudential writings of Ronald Dworkin constitute the finest contribution yet made by an American writer to the philosophy of law.”

Despite Dworkin’s close association, as student and as teacher, with Oxford, he is basically an American thinker. Much more than would be true of a British jurist, Dworkin has been influenced by American constitutional law and constitutional jurisprudence. His emphasis on principle is a reflection of this influence.

Dworkin holds the positions of professor of philosophy and Frank Henry Sommer Professor of Law at NYU and chair at University College, London. He is a fellow of the British Academy and a member of the American Academy of Arts and Sciences, as well as co-chairman of the Democratic Party Abroad, a member of the Council of Writers and Scholars Educational Trust and of the Programme Committee of the Ditchley Foundation, and a consultant on human rights to the Ford Foundation.

Other works by Dworkin include *Philosophical Issues in Senile Dementia* (1987), *A Bill of Rights for Britain* (1990), *Life’s Dominion: An Argument About Abortion, Euthanasia and Individual Freedom* (1993), *Freedom’s Law: The Moral Reading of the American Constitution* (1996), and *Sovereign Virtue: The Theory and Practice of Equality* (2000).

[Milton Ridvas Konvitz / Ruth Beloff (2<sup>nd</sup> ed.)]

**DWORKIN, ZALMAN SHIMON** (1911–1985), Lubavitch rabbi. Dworkin was born in Rogotchov, White Russia. At the age of 11, he arrived in the city of Lubavitch, then the center of activities of the \*Chabad-Lubavitch movement, to study in the Yeshivah Tomchei Tmimim Lubavitch. In late 1915, when the fifth Lubavitcher Rebbe, Shalom Dov Baer, relocated from Lubavitch and settled in Rostov, Dworkin also settled there. As the need for additional Chabad grade schools and yeshivot across Eastern Europe became apparent to the Rebbe in Rostov, Dworkin was one of the students that served as the seed group in establishing many of them, as the Rebbe’s emissary. He received rabbinic ordination from the Rogotchover Gaon, Rabbi Joseph \*Rozin.

Following his marriage, Dworkin became the rabbi of the city of Stardov, Russia. He also served as a *rosh yeshivah* in Yeshivah Tomchei Tmimim Lubavitch in Samarkand and in later years in Paris, France. During World War II, he oversaw the *kashrut* of meat in Ireland. After the war, he arrived

in the United States and settled in the Lubavitch community in Crown Heights, Brooklyn, N.Y. In the mid-1960s, he was appointed to the position of “*rav*” and “*av bet din*” in the Lubavitcher community.

The Lubavitcher Rebbe, Menachem Mendel \*Schneersohn, was very fond of Dworkin and would refer many people with complicated halakhic questions to him, but also those with personal dilemmas that needed a bright and caring individual to assist them. The rabbi was exemplary in treating every individual, no matter who he was, with great sensitivity and understanding. He was a renowned expert on *shehitah* (ritual slaughter) and many other issues. After his death his responsa were published in book form as *Kovez Razash*.

[Michael A. Seligson (2<sup>nd</sup> ed.)]

**DYATLOVO** (Pol. **Zdzięciol**; Yid. **Zhetl**), town in Grodno district, Belarus. Jews first settled there around 1580, and by 1670 a community was formed. Rabbi H̳ayyim ha-Kohen Rapoport served there in 1720–29, and then moved to Lvov, where he was an important participant in the dispute with the Frankists in 1759. The number of Jews in the town steadily increased; of the total population of 3,979 in 1897, 3,033 (75%) were Jews. Personalities associated with Dyatlovo include Aryeh Leib ha-Levi Horowitz and H̳ayyim ha-Kohen \*Rapoport. Dyatlovo was the birthplace of Jacob of Dubno (the “Dubner Maggid”) and Israel Meir ha-Kohen (the “H̳afez H̳ayyim”). Zalman \*Sorotzkin was rabbi of the community from 1912 to 1929. There were 3,450 Jews (75% of the total) in 1926, comprising 621 Jewish families. Of these, 303 earned their livelihoods from crafts, mainly as tailors and shoemakers, while 210 lived from trade. The community had a hospital and an old age home. Two schools were in operation: a Hebrew Tarbut school and a Yiddish *CYSHO* school. Communal and Zionist activities continued until the outbreak of World War II. The Germans occupied the town on June 30, 1941. A hundred and twenty prominent Jews were executed on July 25 and 400 were sent to the Dworzec labor camp on December 15. On February 22, 1941, a ghetto was created, housing together with refugees 4,000 Jews. On April 30 around 1,200 were murdered and on August 6, 1942 another 1,500–2,000. About 800 succeeded in escaping into the forests and joined the Soviet partisans or later the Red Army. A hundred of them died in the battles.

**DYCHE, JOHN ALEXANDER** (1867–1939), U.S. labor leader. Dyche was born in Kovno, Lithuania. He went to New York City in 1900 after 14 years in England, where he was active in trade unionism. Dyche soon became involved in the newly founded International Ladies’ Garment Workers’ Union, and from 1904 was its secretary-treasurer. Dyche defended the principles of “pure and simple” trade unionism, including the sanctity of contracts, the use of the strike only as a last resort and only under the strict control of a na-

tional union, and the basic interest of the worker in self-advancement rather than solidarity and socialism. He strongly supported the Protocol of 1910, arguing that this collective bargaining agreement in the cloak and suit trade, with its unusual provision for arbitration, would aid the large clothing concerns at the expense of the small contractors, and allow the union and the employers to move toward a single wage schedule in the industry. He stressed that employers were prepared to raise wages if their competitors did likewise. However, the Protocol produced bitter disputes within the union, and Dyche refused to seek another term in office in 1924. He subsequently left the labor movement and became the owner of a small business in the garment industry. He wrote *Bolshevism in American Labor Unions* (1926).

**BIBLIOGRAPHY:** L. Lorwin, *Women's Garment Workers* (1924); L.P. Gartner, *Jewish Immigrant in England, 1870–1914* (1960), 66.

[Irwin Yellowitz]

## DYEING.

### Biblical Period

The preparation of cloth for clothing required several operations. After the cleaning of the wool or flax, it was dyed the necessary color, usually light blue or purple, with animal or vegetable dyes mixed with minerals and salts by chemical processes unknown today. Special dyeing plants and implements were used in Erez Israel. Dye tools were found at Tel Beth-Mirsim, Gezer, and other places. They were made of stone, like hollow barrels: on the upper surface a groove was carved, which was connected to the inside by means of a hole. With the introduction of the material to be dyed into the dye-filled barrel, the liquid would rise, overflow through the hole, and be collected in the groove. Upon the removal of the wet garment, the overflow would return through the reverse process thus permitting the material to be dyed again and preserving the precious dyes. Some operations required heating or boiling, and portable earthenware vessels, which could be placed over a fire, were used for these purposes.

### Mishnaic and Talmudic Periods

The craft had developed considerably by the mishnaic and talmudic periods, both in the preparation of dyes and in the dyeing of materials and clothes. The sources describe the dyer's workshop (מק 13b) and his equipment, such as the coverings which protected his hands (Kelim 16:6); before he cast the ingredients into the crucible, the dyer made a small sample for himself which was known as the "taste" (Men. 42b); the ingredients were ground with a special handmill (Tosef. Shab. 9 (10):19). During this period, some places were known as centers of dyeing: Migdal Zevaya on the eastern bank of the Jordan, which was noted for the production of cloth; \*Haifa, which was also called Purpurin (Purple); and a place called Luz where the \**tekhelet* was manufactured (Sot. 46b). After the Bar Kokhba War (132–135 C.E.) dyeing was developed in \*Lydda and \*Beth-Shean, both important weaving centers.

### Middle Ages

As the Jews had been masters of the techniques of the craft from ancient times, in some districts, especially in the Mediterranean region, the preparation of dyes and dyeing of cloth was considered mainly a Jewish occupation. Such occupations were generally despised and their practice by Jews was seen as part of the general humiliation of the Jewish people. However, some sources indicate that dyeing was a highly respectable profession. The apparent contradiction points to a difference in social and economic standing between the artisan engaged in the craft and the merchant who dealt in the ingredients (though this distinction was not always clearly expressed in the sources). During this period, Jewish trade in dyestuffs expanded extensively. Jewish merchants imported reseda from eastern India, via Egypt and Tunisia, to Italy and Spain, and exported saffron from Tunisia to southern Europe. Those trading in indigo between Egypt and Europe were known as *alnili* (nil = indigo). Contemporary letters illustrate the range of the undertakings: a Jewish merchant of Kairouan wrote to his friend in Egypt that in Sicily only indigo of the best quality could be sold; another merchant, head of the Babylonian congregation of Fostat (Old Cairo), wrote to an associate in Tyre in the 11<sup>th</sup> century, "The price of indigo has risen over the last fortnight because it was in great demand among the people of Syria and the West...." Documents also point to the high prices of these commodities: 270 pounds of indigo cost from 100 to 300 quarter dinars.

Jews also developed the manufacture of dyes, especially in Greece and Italy, where they were most active in the south, and in Sicily; important dyeing centers existed in \*Brindisi, \*Benevento, Salerno, Agrigento, Trani, and Cosenza. In these localities, the dyehouse was sometimes the center of the Jewish quarter, along with the synagogue.

\*Benjamin of Tudela found Jews engaged in dyeing in several localities in Erez Israel, notably in Jerusalem, Jezreel, Lydda, Bethlehem, and Bet Nubi. In Jerusalem, their shops were situated in a special building which they had obtained from King Baldwin II. In 1231, Emperor Frederick II created a crown monopoly of the silk and dyeing industries and Jewish firms in Trani were appointed to administer it. When the monopoly came to an end with the death of the emperor in 1250, the Jews continued to engage in this industry, which also spread to the north of Italy. In \*Montpellier, France, Jews were prominent in the manufacture of dyes, while in Spain they had engaged in the craft from the Muslim period, especially in \*Seville and \*Saragossa. After the Christian reconquest, the Jews continued in this occupation, in particular in Saragossa where they owned special workshops. Among the responsa of Solomon b. Abraham \*Adret are clear allusions to the existence of dyers' guilds. During the 16<sup>th</sup> century, the occupation expanded after \*Safed had become the Jewish center of the wool weaving industry.

During this period, dyeing was highly developed in a number of Jewish communities in the Ottoman Empire, especially in \*Salonika and \*Constantinople. During the 17<sup>th</sup> cen-

ture, the Salonika dye industry declined, along with weaving, mainly as a result of competition from Venice and Ancona. Jews of \*Brest-Litovsk are often mentioned as experts in manufacture in Poland and Lithuania. Responsa literature contains numerous accounts of the craft of dyeing, the tools employed, and the various methods used in the preparation of dyes. There are descriptions of a dyeing shop where the work was carried out (Responsa of Abraham, the son of Maimonides, no. 117); of a dye-pit (*ibid.*, no. 101); and of barrels in which wool was dyed (Responsa of Samuel b. Moses di Medina, ח"מ 462). Documents also mention dyers who were expert in a given color: *Samāk*, the expert in preparing dyes from the sumac shrub; *quirmizini*, the expert in crimson, etc.

### Modern Times

In the Near East, the Jews continued to practice this profession during the 19<sup>th</sup> century. The surname Zebag (dyer), still widespread among Oriental Jews, is evidence of the fact. In Damascus in the middle of the 19<sup>th</sup> century, 70 of the 5,000 Jews were dyers. Jews also played an important part in the development of dye ingredients in the Americas. Planting of indigo was introduced in Georgia during the 17<sup>th</sup> century and Moses \*Lindo from London invested large sums in the cultivation of indigo in South Carolina in 1756. The development of modern chemistry and the \*chemical industry, in which Jewish scientists and entrepreneurs played a considerable role, brought to a close the traditional methods in the manufacture of dyes and dyeing.

**DYE PLANTS.** The dye materials that were used in ancient times were many and varied and were obtained from various mineral, plant, and animal sources. The last gave fast and beautiful colors, but these were so costly that only the wealthy could afford them. Of these the most famous were the “blue and purple and scarlet” mentioned frequently in the Bible in connection with the construction of the Sanctuary and the Temple (see \*Crimson, \*Tekhelet). In mishnaic times cheaper dyes were obtained from such common plants as the carob and the sumac (*og*; Tosef. Shev. 5:7). Green walnut and pomegranate shells were used to produce a brown-black dye (Shev. 7:3).

In the Bible three plants are mentioned from which dye was obtained: *karkom* (\*saffron), *kofer* (\*henna), and *pu'ah*

(madder). The saffron provided an orange dye, the henna a reddish orange one, and the madder a red-colored dye. *Tola* (crimson) and *puvah* (or *puah*) are mentioned in the Bible as proper names (Gen. 46:13; 1 Chron. 7:1; Judg. 10:1). These names, which were borne by the sons of Issachar, suggest that this tribe was skilled in the production of these dyes or in using them for dyeing cloth. Madder is obtained from the plant *Rubia tinctorum* which was grown in large quantities before the discovery of synthetic dyes. It is indigenous to Edom, and many species grow wild in Israel. The plant was cultivated in the mishnaic period and there is a discussion on the methods to be employed in uprooting it in a sabbatical year (Shev. 5:4).

Other dyestuffs are mentioned in rabbinic literature. *Isalis*, *kozah*, and *rikhpah* are mentioned together (Shev. 7:1). *Isalis* is obtained from a plant, *Isalis tinctoria*, from whose leaves a blue dye was extracted. It grew in abundance until the end of the 19<sup>th</sup> century; some 2,000 kg. (about 4,400 lbs.) of leaves per dunam were harvested, from which four kg. (about 8¾ lbs.) of dyestuff was produced. *Kozah* is the *Carthamus tinctorius* whose top leaves provide a dye of a reddish orange shade. The seeds of this plant served both as a food and as a source of dye. In the Mishnah it has the additional name *hari'a* (Kil. 2:8; Uk. 5:3). In the Talmud it is also called *morika*, *kurtemei* (i.e., *carthamus*), and *dardara*. The latter means a thistle, hence its mishnaic name *kozah* as it is a thorny plant of the family *Compositae*. *Rikhpah* is dyer's reseda, the *Reseda luteola* that grows wild in the arid areas of Erez Israel. Its leaves and flower provide a yellow dye. *Leshishit* (turnsole, *Chrozophora tinctoria*) grows wild among the summer crops in many parts of the country. The various parts of the plant produce a blue dye which is used for dyeing textiles and is used in Europe for coloring food to this day. This plant is mentioned in the Tosefta (Shev. 5:6). *Kalilan* (indigo, indigotin) was imported from India during Roman times, and a dye of bluish shade was obtained from it. It was not easy to distinguish it from the true blue (see \*Tekhelet) permitted for the ritual fringes, and the rabbis therefore warned against the use of ritual fringes dyed with it.

[Jehuda Feliks]

**DYHERNFURTH** (Pol. **Brzeg Dolny**), town in Lower Silesia; from 1945 in Poland, near Wrocław (Breslau). Its Jewish community dates from 1688, when Shabbetai \*Bass, founder of modern Hebrew bibliography, leased printing privileges from the local magnate who, in turn, held them from the emperor. The first work he printed in Dyhernfurth was \*Samuel b. Uri Shraga Phoebus' *Beit Shemu'el*, a commentary on Shulhan Arukh *Even ha-Ezer* (1689). A community was formed by 13 families, all employed in Bass's printing works. Both Bass and his son Joseph had to contend with the hostility of the Jesuits,

but printing continued until 1762, from 1717 under Berel Nathan, husband of Bass's granddaughter Esther, and later under Esther herself. Other printing houses were established by Samuel b. Abraham Katz (until 1767), Abraham Lewin (until 1771), Solomon Koenigsberg (1774–75), M.L. May (until 1819), H. Warschauer & Co., and lastly D. Sklower whose press closed in 1834 when he moved to Breslau. The Dyhernfurth productions, which included a complete Talmud and Maimonides' *Mishneh Torah*, were very popular at the time, but business declined due to outside competition. A Yiddish newspaper, serving the Breslau community, was printed there in 1770. The cemetery of Dyhernfurth was used by Breslau Jews until 1765; a *Memorbuch* was started before 1700. The synagogue, consecrated in 1847, was sold in 1926. The numbers of the community declined from 191 in 1833 to 42 in 1885, and 5 in 1910, and it was dissolved in 1916.

**DYKMAN, SHLOMO** (1917–1965), translator and literary critic. Born and educated in Warsaw, he fled to Bukhara during World War II and taught Hebrew there. In 1944 he was arrested for “counterrevolutionary Zionist activities” and sentenced to 15 years’ hard labor in the Vorkuta coal mines in the far north. He was released in 1957 and repatriated to Warsaw. In 1960 he immigrated to Israel. He translated Bialik’s collected poems into Polish, and his translations of the Greek and Roman classics into Hebrew include Virgil’s *Aeneid* (1962); Lucretius’ *On the Nature of the Universe* (1962); Ovid’s *Metamorphoses* (1965); Sophocles’ *Tragedies* (1963); and Aeschylus’ *Tragedies* (1965). He was awarded the Israel Prize posthumously in 1965. Autobiographical notes on his years in Vorkuta appeared in *Ha-Ummah* (1 (1963), 531–46; 2 (1963), 60–67, 230–45, 375–89; 3 (1965), 375–85).

**BIBLIOGRAPHY:** Elhanani, in: *Moznayim*, 20 (1964/65), 529–32; Ben-Shamai, *ibid.*, 21 (1965), 415–25.

[Getzel Kressel]

**DYLAN, BOB (Robert Allen Zimmerman; 1941– )**, U.S. folk singer, composer. Probably the most significant folk artist in the last half of the 20<sup>th</sup> century, Dylan was born in Duluth, Minn., and grew up in the small town of Hibbing. He started writing poems at ten and taught himself piano and guitar in his early teens. He fell under the spell of the music of the country, rock, and folk performers Elvis Presley, Jerry Lee Lewis, Hank Williams, and Woody Guthrie. Dylan dropped out of the University of Minnesota and went to New York to be part of the burgeoning folk-music scene, and to meet Guthrie, who was hospitalized with a rare, incurable disease of the nervous system.

Dylan spent all his time with other musicians and began writing songs, including a tribute, “Song to Woody.” He began to perform at local nightclubs, honing his guitar and harmonica work and developing the expressive nasal sound that would become the hallmark of his distinctive style. Around this time he adopted the stage name Bob Dylan, presumably in honor of the Welsh poet Dylan Thomas. In 1961, a reviewer for the *New York Times* said he was “bursting at the seams with talent.” Columbia Records soon signed him to a contract, and in 1962 his first recording, *See That My Grave Is Kept Clean*, offered the sound of an aging black blues man in the voice of a 21-year-old from Minnesota. His next album, *The Freewheelin’ Bob Dylan*, in 1963, contained two of the most important and durable folk anthems, “Blowin’ in the Wind” and “A Hard Rain’s A-Gonna Fall,” and two influential ballads, “Girl From the North Country” and “Don’t Think Twice, It’s All Right” as well as nine other originals, marking the emergence of the most distinctive and poetic voice in the history of American popular music.

Dylan’s next album, *The Times They Are A-Changing*, provided more of the same: the title cut, the protest song “The Lonesome Death of Hattie Carroll,” and “Boots of Spanish Leather,” a sad but graceful love song. In 1965, as he grew tired of the folk genre, Dylan recorded *Bringing It All Back Home*, a half-electric, half-acoustic album of complex biting songs like “Subterranean Homesick Blues,” which featured the line “You don’t need a weatherman to know which way the wind blows.” (It was a line that inspired the name, the Weathermen, an American antiwar protest group.) Also on the album were “Mr. Tambourine Man” and “It’s All Over Now, Baby Blue.” When Dylan introduced his move from folk to rock at the 1965 Newport Folk Festival, he was booed off the stage. Nevertheless, he released the album *Highway 61 Revisited*, which contained the monumental single “Like a Rolling Stone,” an angry six-minute-long song that found a huge audience.

Dylan had brought a new, literate standard to rock music writing. In *Blonde on Blonde*, a two-record set recorded in Nashville, Tenn., in 1966, he offered the now-classic “Stuck Inside of Mobile With the Memphis Blues Again,” “Visions of Johanna,” and “Sad Eyed Lady of the Lowlands.”

After a near-fatal motorcycle accident on July 29, 1966, Dylan retreated to his home in Woodstock, N.Y., to reevaluate his career. He produced more recordings: *The Basement Tapes*, *John Wesley Harding*, *Nashville Skyline* (which included “Lay Lady Lay”). Over the years he dabbled, unsuccessfully, as a film actor and toured extensively with various groups. In the mid-1970s, one rock promoter said there were mail-order requests for more than 12 million tickets, though only 658,000 seats were available for 40 shows in one period. Dylan’s pain after his marriage ended resulted in the album *Blood on the Tracks*, a moving and profound examination of love and loss that included the songs “Tangled Up in Blue,” “Idiot Wind,” and “Shelter from the Storm.” His religious explorations led him to profess to be a born-again Christian in 1978, but in

1983 he reportedly returned to his Jewish roots and was said to have observed the Jewish holidays.

Widely regarded as America's greatest living popular songwriter, Dylan was inducted into the Rock and Roll Hall of Fame in 1988. In 1990 he received France's highest cultural award, the *Commandeur dans l'Ordre des Arts et des Lettres*. In 2001 he won an Academy Award and a Golden Globe for Best Original Song, "Things Have Changed," for the film *Wonder Boys*.

The 1967 documentary *Don't Look Back* chronicles Dylan's 1965 tour of England, which includes appearances by Joan Baez and Donovan. Martin Scorsese's 1978 film *The Last Waltz* is a documentary about Dylan and The Band performing their last concert after 16 years on the road. Among Dylan's publications are *Bob Dylan in His Own Words* (with C. Williams, 1993); *Tarantula*, a book of poetry (1994); *Younger Than That Now: The Collected Interviews with Bob Dylan* (with J. Ellison, 2004); and his autobiography, *Chronicles, Vol. 1* (2004).

Beginning in the mid-1980s Dylan hit the road full-time, performing all over the world. His albums were not as successful as those of his early years, but he continued to perform and sing in his nasal twang through the early years of the 21<sup>st</sup> century. He rarely granted interviews, refused to explain the meaning of his songs, and remained a significant but enigmatic figure. He had millions of fans – he played in Rome at the behest of Pope John Paul II – and inspired hundreds of articles, books, and websites. In December 2004 he was one of five recipients of one of the highest awards for artistic excellence, the Kennedy Center honors.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**DYMOV, OSSIP** (pen name of **Joseph Perelman**; 1878–1959), Russian and Yiddish author and playwright. Dymov was born in Bialystok, attended a Russian gymnasium and the Forest Institute in St. Petersburg, and at 16 began publishing humor-sketches in Russian satiric journals. The first collection of his stories, *Solntsevorot* ("The Sun Cycle," 1905), artistically blending symbolism, irony, and wit, placed him in the mainstream of Russian literature. The motif of Jewish suffering became predominant in his plays *Slushay, Izrail!* ("Hear, Israel!" 1907; Heb., 1913) and *Vechny strannik* ("Eternal Wanderer," 1913), which were staged in Russian, Hebrew, Yiddish, and other languages in Europe and in the U.S., bringing Dymov substantial fame. He settled in New York in 1913 and over decades contributed hundreds of stories and humoresques to the Yiddish press and wrote dramas and comedies for the Yiddish theater. He also reworked classical texts for Yiddish screenplays, published two volumes of memoirs, and worked in Yiddish radio. His most popular play, *Yoshke Muzikant* ("Yoskhe the Musician") is included in the volume *Dramen un Dertseylungen* ("Dramas and Stories," 1943).

**BIBLIOGRAPHY:** LNYL, 2 (1958), 502–4. **ADD. BIBLIOGRAPHY:** Z. Zylbercweig, *Leksikon fun Yidishn Teater*, 1 (1931), 557–62; *The Encyclopedia of Russian Jewry*, 1 (1994), 448–9.

**DYMSHYTS, VENIAMIN E.** (1910–1993), Soviet economist and engineer who became a deputy premier of the Soviet Union in 1959. He was a grandson of the Hebrew writer A.A. Rakowski. Born in Theodosia (Crimea) he qualified as an engineer at the Moscow Technical Institute and began working as a construction engineer in 1931. By 1950 he was deputy minister of construction enterprises in the metallurgical and chemical industries. Later he went to India as chief engineer of the Bhilai steel plant which was erected with Soviet aid. Dymshyts became chairman of the State Planning Committee in 1959 and simultaneously was appointed deputy premier, the only Jew in the upper echelon of the regime. He was promoted to head of the National Economic Council in 1962, with responsibility for dealing with the daily problems of overall economic management. Later he assumed the leadership of the new state committee to centralize the distribution of industrial products. Dymshyts was a member of the Communist Party Central Committee for 1961 and a deputy to the Supreme Soviet. He was awarded the Stalin Prize twice (1946, 1950). On March 4, 1970 he was the main representative of Soviet Jewry in a press conference about the situation and strongly criticized the State of Israel.

[Shmuel Spector (2<sup>nd</sup> ed.)]

**DYNOW, ŻEVI ELIMELECH** (1785–1841), ḥasidic *zaddik* in Dynow, Galicia, often known after his main work as "the author of *Benei Yissakhar*" (Zolkiew, 1850). He was a disciple of Zevi Hirsch of \*Zhidachov, \*Jacob Isaac "ha-Ḥozeh" ("the seer") of Lublin, and the *Maggid* Israel of \*Koziennice. Zevi Elimelech served as rabbi in Strzyzow, Halicz, Dynow, and Munkacs. His total opposition to Haskalah and philosophy was evidenced in both his devotion to Kabbalah as the essence of Judaism and his statement that "there is no knowledge, either in the realm of science or philosophy, which is not alluded to in the Torah [which is higher than the intellect]" (*Benei Yissakhar*, Sec. 2:88). He considered philosophical enquiry a waste of time and of soul. Rational reason should not be sought for the *mitzvot*, but they should be observed with love, as divine decrees, whether rational or not, without questioning or seeking proofs. Man must have faith "even in two opposite [commands of God] where the intellect cannot solve the contradiction" (*ibid.*, Sec. 1, 73). The task of the *zaddik* is of utmost importance since by means of the high spiritual level he attains he may help to unite the upper and lower worlds. Zevi Elimelech differentiated between two types of *zaddikim*: the perfect one, "the servant of God" (*eved adonai*) and the one who only "worships God" (*oved Adonai*). Worship of God must combine both love and fear. Fear corresponds to *zimzum* and love corresponds to *hitpashetut* ("expansion"). Just as there can be no stability or survival for worlds without *zimzum*, so if it were not for fear, man would dissolve in ecstasy "and the light of the soul would depart from its earthly container." Fear of Divine Majesty – in contradistinction to fear of punishment – is the acme of faith. A man "to whom God gives knowledge (*binah*) is enabled to retreat within himself direct-

ing his thought to his Creator also while in the company of other men.” Dynow thus reformulates \*Nahmanides’ thesis (commentary on Deuteronomy 11:20).

Dynow’s writings comprise (1) kabbalistic: glosses to the commentary of \*Eleazar of Worms on Sefer \*Yezirah (Przemysl, 1888); commentary on the beginning of Eleazar’s *Sefer Hokhmat ha-Nefesh* (Lemberg, 1876); glosses to the *Zohar* (Przemysl, 1899); *Ma’yan Gannim*, a commentary on *Or ha-Hayyim* (1848) by Joseph Jabetz; *Regel Yesharah* (Lemberg, date of publication not known), an alphabetical commentary on names and concepts on the basis of the kabbalistic system of Isaac \*Luria. (2) Homiletic and exegetical works which became popular among Ḥasidim, among them *Derekh Pikkudekha* (Lemberg, 1851), homilies on the mitzvot; *Igra de-Kallah* (Lemberg, 1868), homilies on the Torah; *Igra de-Pirka* (Lemberg, 1858); *Likkutei Maharza* (Przemysl, 1885), on the Torah and the Prophets; *Keli ha-Ro’im* (Lemberg, 1808), commentary on Obadiah; *Devarim Neḥmadim* (Przemysl, 1885); *Maggid Ta’alumah* (Przemysl, 1876), novellae to tractate *Berakhot*; *Rei’ah Duda’im* (Munkacs, 1879), on tractate *Megillah*; *Ve-Heyeh Berakhah* (Przemysl, 1875), commentary on Mishnah *Berakhot*; *Berakhah Meshulleshet* (Przemysl, 1896, commentary on the Mishnah); *Tamkhin de-Oraita* (Munkacs, 1926).

Grossmann, *Shem u-She’erit* (1943), 21–23; R. Mahler, *Ha-Ḥasidut ve-ha-Haskalah* (1961), index; N.Z. Horowitz, *Ohel Naftali* (1964), 98–99.

**DZIALOSZYCE**, town in S. central Poland; passed into Austria in 1795 after the third partition of Poland, and to Russia after 1915; from 1919 in Poland. From 1765 it had a considerable Jewish majority. The community numbered 651 in 1765; 2,514 (83% of the total population) in 1856; 3,526 (76.5%) in 1897; 5,618 (83.3%) in 1921; and about 7,000 (80%) in 1939. Tanning, brickmaking, and tailoring were the principal occupations of the community. After World War I Jews in Dzialoszyce owned about 78 clothing stores, six tanneries, and brick kilns. In 1930 the artisans established an authorized union to protect their status and assist their members in obtaining recognized technical diplomas. Although efforts were made to reconstruct life in 1937, it had not returned to normal before the German occupation in World War II.

[Shimshon Leib Kirshenboim]

### Holocaust Period

The German army entered on September 7–8, 1939, and the anti-Jewish terror began. In 1941 about 5,000 Jews from \*Cra-cow, \*Warsaw, \*Lodz, \*Poznan, and Lask were deported to Dzialoszyce, swelling the population to 12,000. In June 1941 Jews were forbidden to leave the town, but no closed ghetto was established. On September 2, 1942, the Germans carried out the first *Aktion* against the Jews. At least several hundred succeeded in fleeing to the surrounding forests and 800 were selected for the labor camps, but up to 2,000 unfit to travel were murdered in the local cemetery and about 15,000 were sent to Michow en route to Belzec. Several hundred Jews were allowed to remain in Dzialoszyce.

**RESISTANCE.** Those Jews from Dzialoszyce who fled into the woods joined other Jewish runaways from Pinczow and other places in the vicinity. A number of Jewish partisan groups were formed to resist actively the German police search units and Polish antisemitic gangs. The biggest partisan units were those organized by Zalman Fajnsztat and Michael Majtek. They united to form the guerrilla unit “Zygmunt,” which was recognized by the Polish People’s Guard. This unit fought the Nazis and provided armed cover for hundreds of Jews hiding in the forest until February 1944, when it suffered great losses in a battle near the village of Pawlowice. The surviving Jewish partisans joined different Polish guerrilla units, but only a few of them were still alive by the time of the liberation of Dzialoszyce region from the Germans (January 1945). The Jewish community in Dzialoszyce was not reconstituted after the war. The town retains a 19<sup>th</sup>-century synagogue built in the classic style.

[Stefan Krakowski]

**BIBLIOGRAPHY:** Yad Vashem Archives; *Sefer Yizkor shel kehilath Dzialoszyce ve-ha-Seviva* (1977).

**DZIGAN, SHIMON** (1905–1980), Yiddish satirical actor. Dzigan began his career in Lodz, Poland, where he was born. He became popular in comic dialogues with Israel Schumacher, who played the sedate know-all to Dzigan’s quick-witted ignoramus. When World War II broke out, they escaped to Russia and gave performances for the Polish Jewish refugees. After the war, Dzigan and Schumacher performed in Western Europe and North and South America, before settling in Israel in 1952. When the two parted as a result of personal differences, Dzigan staged his own revues.

**EARTH.****In Biblical Literature**

The earth is portrayed in the Bible as a flat strip (Isa. 42:5; 44:24) suspended across the cosmic ocean (Ps. 24:2; 136:6). It is supported on pillars (Ps. 75:4; Job 9:6) or props (Isa. 24:18; Prov. 8:29) and is evidently surrounded by a mountain range like the *qār* of Arabic folklore, to keep it from being flooded (Prov. 8:29; Job 26:10). The ultimate bounds of the earth known to the ancient Hebrews were India and Nubia (Esth. 1:1; cf. Zeph. 3:10). A similar conception of the earth was held by Herodotus (3:114) and is found in the Persian inscriptions of Darius. Sometimes, too, its furthest inhabitants were thought to be the peoples who resided in remote lands north of Palestine – \*Gog and Magog – a concept which finds a parallel among the Greeks. It was believed that the fertility of the earth could be affected by the misconduct of men. It was then said to be “polluted” (Heb. *ḥanefah*; Isa. 24:5). As a result of Adam’s sin, the earth yields grain only when man puts heavy labor into it (Gen. 3:17–19), and for receiving the blood of Abel it was forbidden to “yield its strength” to Cain under any circumstances (Gen. 4:11–13). The idea that the land could be rendered infertile by having innocent blood shed upon it is widespread in other cultures, and probably stems from the notion that “the blood is the life” and, therefore, represents the outraged spirit of the murdered man who exacts vengeance until the crime is redressed or expiated. Bloodshed could likewise cause lack of rainfall (II Sam. 1:21). Since it is usually a particular land, especially the Land of Israel, that is affected by misdeeds committed in it, such misconduct includes not only moral turpitude but also disobedience to divine commandments. For example, a famine ensued for several years as a result of David’s taking a census, against the orders of God. According to Exodus 23:10–12, the land of Israel had to lie fallow every seventh year; according to Leviticus 25, every 50<sup>th</sup> year as well. This may be explained as a survival of the ancient belief that life is vouchsafed in seven-year cycles. Deuteronomy, which speaks of the seventh year only as one of debt remission (Deut. 15) and enjoins a public reading of the Torah to the pilgrims assembled in Jerusalem on the festival of Tabernacles of that year (Deut. 31:10–13), is believed to represent a late development. Among the gentiles particular lands were regarded as the estates, or inheritances, of their tutelary gods; in the Bible *YHWH* is the Lord of what would later be known as the universe, yet the land of Israel is the object of His special care (Deut. 11:12; 32:8–9; II Sam. 20:19; Jer. 2:7; Ps. 79:1). In the apocryphal book of Ben Sira (17:17), the Lord parcels out the earth among “rulers,” i.e., celestial princes, as an emperor might apportion his dominion among satraps. Conversely, waste places were deemed the natural habitat of demons (Isa. 34:13–14), and the winds which sweep the wilderness were depicted as howling monsters, just as in Arabic folklore the desert is called “howl-place” (*yabāb*; cf. Deut. 32:10). Earth, like sky, was sometimes called to serve as a witness in prophetic denunciations of the people (Deut. 4:26; 30:19; 31:28). This

reflects a common ancient Near Eastern practice of invoking the earth and sky, along with the national and local gods, to witness covenants and treaties. There is no clear evidence in the Bible of any worship of the earth, even by apostate Israelites. However, a goddess named *Arṣay*, i.e., Ms. Earth, is mentioned in the Canaanite texts from Ras Shamra (Ugarit) as one of the brides of Baal, and the Phoenician mythographer Sanchuniathon (second quarter of the sixth cent. B.C.E.) speaks of a primordial woman, called *Omorka*, who was cut asunder by *Belus* (Baal) to make earth and heaven respectively. In the six-day scheme of creation described in the first chapter of Genesis, earth is said to have emerged on the third day (Gen. 1:9–11). It was originally watered not by rain but by a subterranean upsurge (Heb. *ed*; Gen. 2:5–6). It is not impossible that this picture was inspired by conditions that actually obtain in parts of Palestine where, before the onset of the early rains and the beginning of the agricultural cycle in autumn, the soil is moistened only by springs which burst forth at the foot of the hills. It is possible – though this must be received with caution – that the Hebrews shared with the Babylonians the notion that the geography of the earth had its counterpart aloft and that the portions of the heavens corresponded to terrestrial domains, for it is in terms of such a view that it may perhaps be possible to interpret the words of Balaam (Num. 24:17) about the star which is stepping out of Jacob (i.e., the region of the sky answering to the Land of Israel) and which is destined to smite the borders of Moab. It was held that at the end of the present era of the world, when a new dispensation was to be ushered in, the soil of the Land of Israel would undergo a miraculous renewal of fertility. A stream, like that which flowed through Eden, would issue forth (Zech. 14:8), and there would be a prodigious increase in vegetation and livestock.

**Post-Biblical Literature**

Ideas about the earth are elaborated in post-biblical literature. The earth is represented as resting on a primal foundation stone, which also forms the bedrock of the Temple. The navel, or center, of the earth is located at Zion, just as among the Samaritans it is located at the sacred Mt. Gerizim, and among the Greeks, at Delphi. Earth, like heaven, consists of seven layers superimposed upon one another. Its extent is reckoned in one passage of the Talmud (Ta’an. 10a) as equivalent to (roughly) 190 million square miles, and it is 1,000 cubits thick. In IV Ezra 6:42 it is said that six parts of it are habitable, and the seventh is covered by water. According to post-biblical sources, the earth is sheltered from the blasts of the south wind by the gigantic bird *ziz*, and, as in the Bible, it will become miraculously fertile in the messianic age (Ginzberg, *Legends*, s.v.). Earth’s pristine fertility, it is said, was diminished through the sin of Adam, and its smooth surface was made rugged by mountains as a punishment for its having received the blood of Abel. When the new age dawns, it will again become level. Just as in the Greek myth the earth opened to rescue Amphiarus, so in Jewish legend it hid the tender babes of Israel hunted by Pha-

raoh. It likewise swallowed up the vessels of the Temple, to conceal them when that edifice was destroyed. On the other hand, it engulfed the four generations of the offspring of Cain as an act of punishment; it also swallowed up the army massed against Jacob, the unfinished part of the Tower of Babel, and the city of Nineveh. However, it refused to receive the body of Jephthah who, as the result of a rash vow, had sacrificed his own daughter (*ibid.*, s.v.).

[Theodor H. Gaster]

**EARTHQUAKE**, ground vibrations produced generally by a sudden subterranean occurrence. Accounts of destructive earthquakes extend far into antiquity. In biblical times earthquakes, like thunder and other natural cataclysms, were regarded as demonstrations of God's unlimited power. It was believed that the phenomenon preceded divine manifestations (1 Kings 19:11–12; Isa. 6:4; Ezek. 3:12–13), the revelation at Sinai (Ex. 19:18), divine wrath (Ps. 18:8; 104:8), and collective punishment (1 Sam. 14:15; Isa. 5:25; Nah. 1:5; 16:32; Amos 9:1), and it was also envisaged as heralding the end of the world (Ezek. 38:19–20). The descriptions of earthquakes in the Bible – especially by prophets – indicate that such cataclysms occurred from time to time and that people were therefore familiar with their consequences. The almost scientific description of the phenomenon of earth dislocation and cracking related in a prophecy of wrath (Zech. 14:4–5) might be based on a personal experience of an earthquake. Because of its powerful impact, the major earthquake which occurred toward the end of King Uzziah's reign (about 800 B.C.E.) was referred to for some time in date references (Amos 1:1; Zech. 14:5). In 31 B.C.E. a disastrous tremor in Judea claimed 10,000 to 30,000 victims (Jos., *Ant.*, 15:122). In 749 a powerful earthquake, thought to be 7.3 on the Richter scale, hit northern Israel, destroying \*Bet(h)-Shean, \*Tiberias, Kefar Nahum (\*Capernaum), and \*Susita. The earthquake caused a huge tidal wave that led to the death of thousands. Another series of earthquakes occurred in 1033, striking Tiberias and its environs. During the last 2,000 years, earthquakes in Palestine and its neighborhood have been recorded in greater detail (see bibl. Amiran, 1951; Shalem, 1951; Arieh, 1967). These records reveal that, on the average, several damaging earthquakes have occurred in each century, but usually only one reached disastrous proportions. Seismological observatories have been operated by the Geological Survey of Israel since 1955 and by the Weizmann Institute of Science since 1969. Recent seismographic measurements indicate that most earthquake epicenters are situated in or near the Jordan Rift Valley, an area where the two most destructive earthquakes since the 19<sup>th</sup> century originated. The earthquake on Jan. 1, 1837, whose epicenter was near Safed, took about 5,000 victims, ruined much of the old city, and was strongly felt from

Beirut to Jerusalem. This earthquake was preceded by one in 1759 in which the walls of \*Safed were ruined and many were killed. On July 11, 1927, an earthquake occurred north of \*Jericho violently affecting vast areas from Lebanon to the Negev, and in Transjordan killing about 350 persons and ruining some 800 structures (mainly in Shechem). This earthquake stopped the flow of the Jordan River for a few years owing to rock collapse. The last significant earthquake in Israel was in 1995 in Eilat (\*Elath), when the epicenter was in the Red Sea, therefore causing minor damages. In 2004 a series of tremors struck Israel, mainly in the Dead Sea area. Experts argue that such earthquakes are a warning sign of a bigger one yet to come in the next few years. The extent of damage caused by an earthquake depends not only on magnitude, focal depth, and proximity to the epicenter, but also, and sometimes mainly, on local ground features, topographic conditions, type of foundation and construction, and density of population. In areas with long-standing earthquake records, seismic risk can better be evaluated than in areas without such records. Cities which have suffered relatively much from earthquakes are Safed, Tiberias, Shechem (all near the epicenter zone, and partly built on slopes and unconsolidated ground with poorly built structures), Lydda, and Ramleh (unstable ground conditions). Jerusalem, with its rocky fundament, has remained during its long history relatively undamaged by earthquakes, as if to justify the psalmist's verse: "Those who trust in the Lord are like Mount Zion, which cannot be moved, but abides for ever" (Ps. 125:1).

[Eliyahu Arieh]

**EAST LONDON**, port in Eastern Cape province, South Africa. East London was founded in 1836 as a landing stage and proclaimed a town in 1847. W. Barnett acquired a grant of land in 1849, but the first known permanent Jewish resident was Gustave Wetzlar, who arrived in Cape Town in 1861 from Germany and settled as a merchant in East London in 1873. A town councilor in 1881, he became mayor in 1889. John Lewis Norton, a descendant of the British settlers of 1820, became chief constable and messenger of the court. The growth of the Jewish population resulting from immigration and an influx during the Boer War of 1899–1902 led to the establishment of a Hebrew congregation in 1901. Julius Myers and G.G. Deal, both immigrants from England, took the initiative and continued to be active in communal life. Emmanuel Lipkin, later of Oudtshoorn, arrived from England in 1903 as minister and a small synagogue was opened. A larger synagogue was built 20 years later. A small Reform congregation was established in 1958. In the heyday of the community, which at its height in the mid-1960s numbered some 1,200 people, there was an active Jewish commu-

nal life, with Hebrew schools, Zionist and other organizations, regional branches of national bodies, and a country club. By 2004, however, it had dwindled to fewer than 150, mainly elderly individuals, though the main communal organizations continued to function. Jews have been prominent in civic affairs, the mayors including (besides Wetzlar) David Lazarus, 1947–48 and 1966–68, Abraham Addleson, 1957–59, and Leo Laden, 1962–64.

[Abraham Addleson / David Saks (2<sup>nd</sup> ed.)]

**EATON, JOSEPH W.** (1919– ), U.S. sociologist and educator. Born in Nuremberg, Germany, Eaton went to the United States in 1934. After graduating in 1948, he directed the study of the Hutterites, an isolated Mennonite sect of northwestern U.S. and Canada who lived in communities and held property in common. The results were published in 1955 in *Culture and Mental Disorders* (J. Eaton and R.J. Weil). Eaton published an analysis of prison reform and treatment programs in California (*Stone Walls Not a Prison Make*, 1962). In 1961 he published *Measuring Delinquency* and in 1964 *Prisons in Israel*. He directed a long-range study of Israel's youth organization and national service program financed by the U.S. Office of Education (*Influencing the Youth Culture: A Study of Youth Organizations in Israel*, 1969). His academic interests were in evaluative research, applications of social theory, and the sociology of social work. He also wrote *Card-Carrying Americans: Privacy, Security, and the National ID Card Debate* (1986) and *The Privacy Card: A Low Cost Strategy to Combat Terrorism* (2004).

Eaton became professor emeritus at the Graduate School of Public and International Affairs at the University of Pittsburgh, in the field of economic and social development and sociology. He remained actively involved in studying the Hutterites and was a consultant for a University of Pittsburgh research project on the causes of schizophrenia.

[Zvi Hermon / Ruth Beloff (2<sup>nd</sup> ed.)]

**EBAN, ABBA (Aubrey) SOLOMON** (1915–2002), Israeli statesman, diplomat, and writer, member of the Fourth to Eleventh Knessets. Born in Cape Town, South Africa, Eban was brought up in England. He studied Oriental languages and classics in Queens College at Cambridge University, where he was research fellow and lecturer in Arabic in 1938–40. Eban was noted for his mastery of several languages. As an undergraduate, he was a founder of the University Labor Society and became president of the Students' Union.

During World War II Eban held the rank of major, serving on the staff of the British minister of state in Cairo from 1941. In 1942 he served as liaison officer on behalf of the Allied Command with the leadership of the Jewish *yishuv* in Palestine, and in 1944 as chief instructor in the Middle East Center for Arab Studies in Jerusalem, for the purpose of training

Jewish volunteers. At the end of the war he took up residence in Jerusalem and in 1946 was appointed by the Jewish Agency political information officer in London, and the following year served as its liaison officer with UNSCOP. After serving as a member of the Jewish Agency delegation to the UN General Assembly, Eban was appointed representative of the newly established State of Israel to the UN, and in the years 1949–59 as Israel's permanent delegate, serving in 1952 as deputy president of the General Assembly. In the UN Eban was known for his eloquence and superb presentation of Israel's case in the face of Arab hostility. In 1950–59 he also served as Israeli ambassador to the United States. In 1958–66 Eban was president of the Weizmann Institute in Rehovot and initiated the International Rehovot Conferences on "Science in the Advancement of New States." In 1959 he was elected to the Fourth Knesset on the \*Mapai list. He served as minister of education and culture in the years 1960–63, deputy prime minister in 1963–65, and minister for foreign affairs in 1966–74. As minister for foreign affairs, Eban sought to consolidate Israel's relations with the United States and to secure association status for Israel in the European Economic Community. In May 1967 he paid dramatic visits to Paris, London, and Washington in an effort to avert the outbreak of war. Throughout the Six-Day War in 1967 and the Yom Kippur War in 1973 he led Israel's diplomatic campaigns in the UN. Eban was reappointed minister for foreign affairs in the short-lived government formed by Golda \*Meir after the Yom Kippur War and participated in the negotiations with Henry \*Kissinger which led to the Disengagement Agreement with Syria on May 31, 1974. However, after Meir's resignation, following the publication of the \*Agranat Commission report on the background to the outbreak of the war, he was not included in the government formed by Yitzhak \*Rabin. Though continuing to serve in the Knesset, Eban started to teach at Haifa University and at Columbia University in the U.S. as a visiting professor. In September 1974 he was appointed chairman of the Board of Governors of Bet Berl, which was the ideological center of the Labor Party. In the Eleventh Knesset he served as chairman of the Knesset Foreign Affairs and Defense Committee and as chairman of a subcommittee that dealt with the Pollard Affair. In the primaries held in the Central Committee of the Labor Party for a place in the party's list for the Twelfth Knesset, Eban failed to be elected. Eban then withdrew from the political arena and concentrated on the production and presentation of TV programs in the U.S. on Jewish tradition and the history of the State of Israel. His writings include *Voice of Israel* (reprinted speeches, 1957), *The Tide of Nationalism* (1959), *The Final Solution: Reflections on the Tragedy of European Jewry* (1961), *Chaim Weizmann – A Continuing Legacy* (1962), *My People: The Story of the Jews* (1968), *My Country: The Story of Modern Israel* (1972), *An Autobiography* (1977), *Heritage: Civilization and the Jews* (1984), *The New Diplomacy: International Affairs in the Modern Age* (1983), *Personal Witness: Israel Through My Eyes* (1992), and *Diplomacy of the Next Century* (1998).

**ADD. BIBLIOGRAPHY:** R. St. John, *Eban* (1972); A. Ron (ed.), *Abba Even: Medina'i ve-Diplomat: Sefer le-Zikhro shel Sar ha-Huz le-She'avar* (2003).

[Edwin Samuel, Second Viscount Samuel / Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**EBEN-EZER** (Heb. אֶבֶן עֶזֶר). (1) Site of the Israelite camp facing the Philistine army at \*Aphek before the battle in which the Philistines captured the Ark of the Covenant (1 Sam. 4:1). It is generally identified with Majdal Yābā, which was still known in the first century C.E. as Migdal Aphek. (2) Name of the stone set up as a victory monument by Samuel between \*Mizpah and Shen after the Israelites had “pursued the Philistines and smote them, until they came under Beth-Car” (1 Sam. 7:11–12). Most scholars consider the two Eben-Ezers identical and locate it on the Israelite-Philistine border.

**BIBLIOGRAPHY:** Albright, in: *BASOR*, 11 (1923), 7; Abel, Geog, 2 (1938), 309; *EM*, S.V.

[Michael Avi-Yonah]

**EBER** (Heb. עֶבֶר, *Ever*). (1) Great-grandson of \*Shem, son of Noah and ancestor of Abraham (Gen. 10:21ff.; 11:14ff.; 1 Chr. 1:17ff.); presumably (but nowhere explicitly) intended as the eponymous ancestor of the \*Hebrews (*Ivrim*). “All the children of Eber” (Gen. 10:21), a phrase which appears – possibly unintentionally – to include Arabian and other tribes as well as Israelite, may or may not be related to the term “Hebrews”; certainly there is no solid evidence that the Bible understood any but Israelites to be Hebrews. The names appearing in the genealogies of Genesis 10 and 11 are, as in other ancient West Semitic genealogies, personifications of tribes, nations, cities, and lands rather than individuals (see \*Genealogy; \*Nations, The Seventy). In view of this, many scholars consider the name Eber to be derived from Ivri, rather than vice versa, while others suggest that the term refers to the region known as *ever hanahar* (“beyond the river [Euphrates]”; Josh. 24:2; cf. Num. 24:24). Such usage of the name was facilitated by the fact that Eber was probably also the name of a clan or a personal name. (2) The head of a Gadite family (1 Chron. 5:13). (3 & 4) The heads of two Benjaminite families (1 Chron. 8:12, 22). (5) A post-Exilic priest (Neh. 12:20). (In nos. 2–5 some Hebrew and/or LXX manuscripts read עֶבֶד (*ebed*).

[Jeffrey Howard Tigay]

**EBLA**, archaeological site in northern Syria, present-day Tell Mardikh, located 35 mi. (60 km.) south of Aleppo and excavated by an Italian team of archaeologists starting in 1964. In the 1970s thousands of cuneiform texts dated to the second half of the 3<sup>rd</sup> millennium B.C.E. (in archaeological terms, EB IV, or Early Bronze Age IV) were discovered at the site. The language reflected in these texts was neither Sumerian nor Akkadian, two well-known languages of the period written in

cuneiform, but rather was determined to be a previously unattested language, called “Eblaite” by scholars.

Scholars continue to debate the specific date of these texts. The main issue is whether they are pre-Sargonic (i.e., from a time before the reign of Sargon of Akkad (2270–2215 B.C.E. according to one standard opinion)), or whether they are contemporary with the Sargonic period. The discovery of an object bearing the cartouche of the Egyptian pharaoh Pepi I is an important find – attesting to trade relations between Ebla and Egypt, though perhaps only indirectly, through the intermediation of Byblos (see below) – but unfortunately the date of Pepi I (and all the 6<sup>th</sup> Dynasty monarchs) is not fixed (2333–2283 B.C.E. is one approximation), and thus this artifact cannot help answer the chronological question definitively. The issue of whether the heyday of Ebla is pre-Sargonic or Sargonic hinges in the main on who or what caused the destruction of Ebla (well attested in the archaeological record) during this period. Was the city destroyed by Sargon, by his grandson Naram-Sin, or by accidental fire that simply could not be controlled? Without attempting a definitive answer to these questions, for our present purposes we will side with those scholars who view the Ebla texts as pre-Sargonic. Accordingly, we proceed with the statement that Eblaite is the earliest attested Semitic language, antedating the oldest Akkadian material by about a century, though perhaps by only a few decades.

Another scholarly debate concerns the exact identification of the Eblaite language. Some scholars hold that the language reflected in the Ebla texts is nothing more than a dialect or variation of Old Akkadian; according to this opinion it would be incorrect to speak of a separate language called Eblaite. Other scholars, meanwhile, hold that Eblaite is sufficiently distinct from Old Akkadian to merit the identification as a separate Semitic language. Among the latter, though, there is still no consensus: some hold it to represent an independent branch of Semitic to be called North Semitic, while others group Eblaite in the West Semitic branch. To be sure, there are quite a few lexical and grammatical links between Eblaite and the later attested Amorite (early second millennium) and Aramaic (first millennium), thus suggesting a Syrian *Sprachbund* incorporating these three languages. An important piece of evidence is the first person singular independent pronoun *ana ana* 'I, exactly as in Amorite and Aramaic (in contrast to Akkadian *anāku*).

The debate over the language is due in part to the nature of the texts written in Eblaite. The Eblaite texts use a very high percentage of Sumerograms, that is, words written as Sumerian signs though meant to be read as Eblaite words. Often, however, we do not know what Eblaite words lie behind these Sumerograms. For example, in the expression *si-in i-li-lu* A-MU DINGIR-DINGIR-DINGIR, appearing in an incantation text, we can understand the words to mean “to Elil father of the gods.” But the only Eblaite words that we learn are the preposition *si-in*, to be normalized as *sin*, “to,” and

the name of the deity *i-li-lu*, to be normalized as *ililu*, “Ilil” or “Elil.” The remaining words are A-MU and DINGIR-DINGIR-DINGIR, whose meanings are clear as “father” and “gods,” respectively. But these are the Sumerian forms. When the Eblaite scribe read this text aloud, he would have pronounced these words as their Eblaite equivalents. And while we can be almost certain that the former was based on the root *ab* and that the latter was based on the root *il* (as in all the Semitic languages), we lack the precise information in this case. When one multiplies this example several hundredfold, it becomes clear how scholars can differ over the issue of the exact identification of Eblaite.

Most of the Ebla texts were found in several rooms of Palace G from the 24<sup>th</sup> century B.C.E. (as per the statement above that the tablets are pre-Sargonic). The total number of texts is about 2,000 complete or nearly complete tablets and about 10,000 fragments. The discovery of this archive in 1974 came as a complete surprise to scholars. No one had imagined that a city in northern Syria might be home to such a literate culture. Even for the heartland of Mesopotamia at this time, the discovery of such a large archive would have been astonishing. Moreover, the previous scholarly consensus held that the Tigris and Euphrates valley at one end of the Near East and the Nile valley at the other end were the two great centers of culture, already in the third millennium B.C.E., but that the vast area in between, including Syria, was a cultural backwater, populated mainly by pastoralists with their flocks, with no great urban centers of the type found in Egypt or Mesopotamia. The excavations at Ebla and the discovery of this large archive changed everyone’s conception.

The corpus of Ebla texts includes a wide variety of documents. The greatest number by far are administrative texts, recording in great detail the activities of the palace, the economy of Ebla centered mainly on textile production and the growing of barley and other grains, the far-reaching trade with cities throughout Syria and Mesopotamia, and so on. The second group consists of texts of a historical nature; these include some important treaty texts. The best preserved of the treaty texts is a highly detailed pact with Abarsil on the upper Euphrates; it includes about two dozen articles regulating commerce, taxation, emissaries, and the like. The third group is made up of lexical texts, the most important of which are the bilingual dictionaries providing us with the Sumerian and Eblaite equivalents of hundreds of words. While these dictionaries do not give us the words in literary contexts, they provide us with very valuable information about the Eblaite vocabulary (see further below). Finally, there is a series of incantation texts (a line from one was quoted above). (There have been some reports about literary texts found at Ebla; but at present only one such text has been published, and that composition is a duplicate of a document known from Abu Salabikh in southern Mesopotamia.)

The administrative and historical texts reveal that Ebla had contacts with hundreds of cities throughout the region.

Many if not most of these cannot be identified with any confidence, but the toponyms that can be identified give us an indication of Ebla’s power and influence. Here we may mention important urban centers such as Gublu (= Byblos) on the Mediterranean (though not all scholars agree with this reading); Emar and \*Mari, both on the middle Euphrates; and Kish, situated between the Tigris and Euphrates near Babylon; as well as KURki *la-ba-na-an*, “the mountain-country of Lebanon.” (When the Ebla tablets first were discovered, there were reports that the five cities of the plain listed in Genesis 14 appear at Ebla as well; but there is no substance to this claim.)

The quantity of materials appearing in the administrative texts is sometimes staggering. One text (ARET 2:20) gives a total of 548,500 barley measures distributed (and of this amount 360,400 appears in one line and 182,600 appears in a second line). Eblaite, in fact, attests for the first time in any Semitic language a word for 100,000, namely *ma-i-at* (obviously based on the pan-Semitic word for “hundred”; cf. Hebrew מאה).

The deities attested at Ebla are better known from later West Semitic sources than from East Semitic sources. Important gods are Dagan, Hadd/Baal, Rashap, Ashtar, Kamish, Malik, and Qura, as well as the sun and moon deities, though their Eblaite names are unknown since the Sumerograms UD (“sun”) and ITI (“moon”) respectively, are used consistently. (There is absolutely no validity to the claim (reported in the early days of Ebla studies) that Ya (a shortened form of Yahweh) appears in personal names.)

Of particular interest is the god Kamish: the name appears in the city name Kar-Kamish (Carchemish) in northern Syria; it is attested in the pantheon of \*Ugarit on the Syrian coast from the Late Bronze Age, spelled alphabetically as *kmt* and syllabically as *ka-ma-ši* (= /kamāt/); and most prominently it appears much later as the national god of the Moabites, spelled כמוש and vocalized *kāmōš* in the Bible. Note, however, that in one passage, Jer 48:7, the name of the Moabite god occurs as כמיש in the Ketiv. While previous scholars typically assumed a confusion between *waw* and *yod* in the scribal transmission of this text, we now must consider another possibility, that the Ketiv in Jer 48:7 preserves an ancient alternative pronunciation, Kamish, harking back to the Early Bronze Age as attested at Ebla.

An important deity hitherto unknown is Qura (typically spelled Kura in Ebla studies), clearly a major god given the number of times the name occurs, including some prominent contexts. Apart from Ebla, we know nothing about this deity. The name resurfaces, however, about 3,000 (!) years later as the first element in the name of the angel Quriel, attested in Aramaic, Syriac, and Greek magical texts of the first millennium C.E. In one passage Quriel occurs as the father of a demones; this invites comparison with the demotion of \*Baal, worshipped throughout the Bronze and Iron Ages as a major deity, but appearing in the New Testament as ruler of the demons in the form Baal-zebul.

Whenever a new Semitic language is uncovered, the natural tendency among Hebraists and Biblicists is to mine the new source for information that can help elucidate problems in the Bible and can supply cognates for Hebrew lexemes. Several examples of this process were noted above. The remainder of this entry will present additional instances of contributions from the study of Eblaite to the study of Hebrew (notwithstanding the temporal and geographical distances between Eblaite in third millennium northern Syria and Hebrew in first millennium southern Canaan).

A number of Hebrew words, which hitherto had no cognates within Semitic (see the standard dictionaries), now gain etyma from the Eblaite lexicon. Examples include the following: *ni-zi-mu* (to be normalized as *nizmu*), “a type of jewelry” ≈ נָזַם, “nose-ring, earring”; *a-a-tum* (to be normalized as *ayyatum*), “a type of bird” ≈ אֵיָה, “a bird of prey”; *bar-su-um* (to be normalized as *parsum*), “a type of bird” ≈ פָּרַס, “a bird of prey.” The first of these items appears in an administrative text; the latter two appear in the bilingual lexical lists as the Eblaite equivalents of Sumerian forms classified as birds due to the presence of the MUŠEN determinative.

The common Hebrew word for “cedar” is אָרֶז, but a unique feminine form אֶרְזָה occurs in Zephaniah 2:14. This now has a parallel in Eblaite *ar-za-tum*, presented in the bilingual dictionary as the equivalent of Sumerian GIŠ-NUN-SAL (the GIŠ determinative indicates a type of tree).

The above represents but a handful of Hebrew lexemes with parallels in Eblaite. In truth, however, the very large Sumerian-Eblaite dictionary (attested in multiple copies at Ebla) affords the scholar of ancient Hebrew much fodder for lexical exploration. We permit ourselves one further example here. The root גָּדַד, “cut, incise, divide,” yields the *hitpaal* form הִתְגַּדְּדוּ, “make incisions upon oneself” (Deut. 14:1; 1 Kings 18:28, etc.) and the noun גִּדְדוּ, “troop” (cf. English “division” in a military sense). Cognates to this word occur in various Aramaic dialects (Biblical, Samaritan, Jewish Babylonian, Syriac). The verb *gadādu*, “separate off” occurs in Akkadian, but only in Neo-Assyrian and Neo-Babylonian, and thus scholars conclude that the word is a borrowing from Aramaic. The bilingual dictionary from Ebla glosses Sumerian TAR-TAR with Eblaite *ga-da-dum*; since Sumerian TAR means “cut,” it is clear that Eblaite *ga-da-dum* represents an Early Bronze Age forerunner of later Hebrew and Aramaic דָּדַד.

We move now from the realm of lexicon to the realm of grammar, with one representative illustration. Already prior to the discoveries at Ebla, Francis Andersen opined that ancient Hebrew included a morpheme וַי-, that is, conjunctive *waw* + enclitic *mem*. Andersen’s insight was strikingly confirmed by the presence of *ù-ma* in Eblaite, composed of the same two elements. Biblical passages which include this morpheme are Gen. 41:32, Num. 23:10, Judg. 13:19, 1 Kings 14:14, Ezek. 48:16, 48:22 (twice), Amos 6:10, Nah. 2:13, Ps. 147:3, Ruth 4:5, Neh. 5:11. A study of these passages reveals that Hebrew וַי- has a specific syntactic function: it serves as an emphasizing conjunction to be translated “indeed, even, verily, yea.” The rec-

ognition of this form impacts most of all on the analysis of Ruth 4:5, where the phrase וּמֵאֵת רוּת does not mean “and from Ruth” (note the *etnah* on the previous word), but rather is to be analyzed as the emphasizing conjunction וַי- followed by the direct object indicator אֵת and then the proper name רוּת, thus yielding a translation for the entire verse as follows: “Boaz said, ‘On the day you acquire the field from the hand of Naomi – ; verily, Ruth the Moabitess, the wife of the deceased, I have acquired [reading with the Ketiv] to raise the name of the deceased on his estate.’”

Our last instance of the interconnections between Eblaite and Hebrew returns us to the world of magic. One of the incantation texts is directed against a demon named ḥa-ba-ḥa-bi, normalized as *ḥabḥabi*, who is bound and rendered powerless by the magician. This name is the reduplicated form of the demonic figure *Hby* attested in Ugaritic (Mesopotamian cuneiform has no symbol for [ḥ] and here substitutes [h]; where he gains the epithet “lord of the horns and tail,” that is, the traditional imagery of a devilish character), and appearing in the Bible in two passages in variant forms (one the basic form, the other with suffixed *-ōn*): חֲבִי in Isa 26:20 and חֲבִיּוֹן in Hab 3:4. The occurrence of *ḥabḥabi/hby/חֲבִי* in Early Bronze Ebla, Late Bronze Ugarit, and Iron Age Israel attests to the tenacity of magical praxes throughout the epochs (see also the discussion above concerning Qura and Quriel).

Finally, we may note that Ebla was rebuilt after the major destruction noted above and achieved a second floruit c. 2050–1950 B.C.E., that is, during the Ur III period. We possess very few Eblaite literary remains from this period, however. Most of our evidence comes from other sites, including, for example, references to Ebla in inscriptions of Gudea, famous ruler of Lagash, whose great building projects necessitated his men to travel to the region of Ebla in order to procure quantities of timber and stone.

**EBNER, MEIR** (Meyer; 1872–1955), Jewish leader in Bukovina and Romania, active Zionist. Born in Czernowitz, he participated in the establishment of the Jewish national student association, Hasmonea, in 1891. He earned the degree of jurist doctor from the university in his native city. With the advent of Herzl, Ebner joined the Zionist Organization, attending the First Zionist Congress and many succeeding ones. He was active in Jewish affairs in Bukovina, at the same time

working to obtain Jewish representation in the local *Landtag* and at the *Reichsrat* in Vienna. He was exiled to Siberia by the Russian conquerors in 1915 and returned in 1917. In 1918–20 he was head of the Jewish National Council of Bukovina. When Bukovina was annexed to Romania in 1918, he led the struggle for Jewish rights and in 1919 founded the German language periodical *Ostjuedische Zeitung* in which he advocated Zionism and a Jewish national policy in the Diaspora. It was published until the end of 1937, when it was banned by the government. Ebner attended the international Congresses of National Minorities in Geneva, becoming vice president of the organization after the death of Leo Motzkin in 1933. In May 1926 (until July 1927) he was head of the Czernowitz Jewish community and was elected to the Romanian parliament, where he frequently spoke with great courage, undeterred by threats from antisemites. In 1928 Ebner was elected to the Romanian Senate and became head of the Jewish faction of four members. He helped found the Jewish Party of Romania in 1930 and was elected on its behalf to the Romanian parliament. In 1934 his election was prevented through the machinations of the government. Ebner immigrated to Palestine in the beginning of 1940, where he became a regular contributor to Zionist publications in Palestine and abroad and was active in associations of immigrants from Romania and Bukovina. He died in Israel.

**EBONY**, heartwood of certain trees. The Hebrew word *hovanim*, which occurs in Ezekiel (27:15) in a reference to Tyre's commerce in "horns of ivory and *hovenim*," is identified by most translators and exegetes as ebony, called *hbn* in Egyptian. Several tropical trees supplied the ebony used in ancient times, the most important being the *Diospyros ebenum*, which grows in India. Other species of the same genus grow in Africa. Ebony was extensively used with ivory ornamentation (as described by Ezekiel) for the effect given by the contrast of black and white.

**ECCLESIA ET SYNAGOGA**, the name given to the symbolic representations in Christian art of the Middle Ages of the victorious Church and defeated Synagogue, symbolizing the triumph of Christianity. The representation is often found in medieval Christian manuscript art. It also became a conventional decoration in many medieval churches, especially in France, England, and Germany, and took the form of two graceful female figures, usually on the outside of the building. The Church is shown erect and triumphant, bearing a cross; the Synagogue is usually blindfolded and dejected, bearing a

broken staff and sometimes decorated with the Tables of the Ten Commandments symbolizing the Old Testament. The best known statues of this type are on the exterior of the cathedrals of Strasbourg and Bamberg. They are also found in Rheims, Paris, and Bordeaux. In England, they figure, generally in a mutilated condition, in Rochester, Lincoln, Salisbury, and Winchester. The representation of the blindfolded synagogue was paradoxically reflected even in Jewish manuscript art: as for example in the miniature of the blindfolded Torah with her spouse, the People of Israel, in a 14<sup>th</sup>-century manuscript prayer book (Hamburg, Cod. Lev. 37; possibly having a symbolic meaning, representing the Torah and the People of Israel).

**ECCLESIASTES** (Heb. הַקוֹהֵלֶת, הַקוֹהֵלֶת), one of the group of minor writings of the Hagiographa known as the Five Scrolls (*Megillot*). The name Ecclesiastes is Greek and probably means "member of the assembly." It renders the Hebrew word *kohelet* (*qohelet*, or *ha-qohelet* = the Qohelet; 1:1, 2, 12; 7:27; 12:8, 9, 10). Qohelet is not a proper name but means something like "one who acts in the assembly" or "teaches the public" – see the description of his activities in 12:9. Qohelet is usually thought to be the author, but he may be a fictional persona, the author's "mouthpiece." Though Qohelet never claims to be Solomon, he does describe himself in Solomon-like terms: He is "king in Jerusalem" (1:12) and "son of David, king in Jerusalem" (1:1). Traditionally, therefore, he was identified with Solomon. Solomonic authorship, however, is ruled out by evidence of language and content.

#### Language and Date

The Hebrew of the book represents the latest stage in the evolution of biblical Hebrew. An example of the indicators of late biblical Hebrew is the root *taf* (4:12; 6:10), which can only be borrowed from Aramaic, and not before the seventh century B.C.E. Also, the nouns *pardes* "orchard" (2:5) and *pitgam* "decree" (8:11) are both borrowed from Persian. Persia only emerged from obscurity in the middle of the sixth century B.C.E., and no words are known to have been borrowed from its language before that. Moreover, *pardes*, from the Persian *piridaēza* ("rampart," a domain of the king) was also borrowed by the Greeks (*paradeisos*) in the sense of "orchard," the sense it has in Ecclesiastes 2:5. The word *avadeyhem* "their deeds" in 9:1 is Aramaic, not Hebrew. So too, *'illu*, the Aramaic and post-biblical equivalent of the classical *lu*, occurs in the Bible only in Ecclesiastes 6:6 and in \*Esther 7:4 (the latter being obviously post-exilic and probably third century B.C.E.). There are, in fact, Aramaisms in Qohelet at a much greater frequency than we would expect in a pre-exilic work. Indeed it has been argued – see the items by Ginsberg in the Bibliography – that

the book was written in Aramaic and later translated into Hebrew. This theory has not been accepted by other scholars, but it calls for further examination. On the linguistic background of the book, see especially the books by Schoors and Seow.

The content too points to a Hellenistic dating. There is reason to think that the author was influenced by Stoic philosophy (see Rudman in Bibliography). Also, competitive foot races, alluded to in 9:11, entered the Near East only in the third century B.C.E. A deeper indicator of Greek influence (which would scarcely be possible before the Hellenistic period) is the book's display of the mindset of Greek philosophy. This enterprise tried to determine the good by the application of human reason alone, without appeal to tradition or revelation. Qohelet, alone of the Bible, follows this path.

### Contents

The book of Ecclesiastes is a reflection on life together with advice on making one's way through it. Qohelet introduces himself as a wise king who sought to examine all that happens on earth (1:12–18), including toil, wisdom, and pleasure. His goal is to determine “what is good for man to do under the heavens during the few days of his life” (2:3). He amassed wealth and belongings, and this accomplishment seems to have given him pleasure; but ultimately he found it senseless (2:4–2:26). As Qohelet proceeds on his investigation, he observes a variety of values and typical events. Most of these he finds senseless and “bad,” but he does suggest various ways of maneuvering through life and, from time to time, does praise certain modes of behavior and experiences. Still, he begins and concludes with a judgment that recurs throughout the book, “All is *hevel*,” a keyword usually translated “vanity” or “transient” but that might be better translated “senseless” or “absurd.”

Recurring topics include injustices (3:16–22); social oppressions (4:1–3; 5:7–11); the futility of toil and pleasure (2:18–26; 4:4–8; 5:12–6:9); the failure of wisdom and the frailty of its achievements (4:13–16; 6:10–12; 7:13–14, 23–24; 8:16–9:10; 9:1–3). Occasionally he grants wisdom's (limited) value (9:13–18; 10:1–3). He more emphatically affirms life's goodness and the importance of grasping life's pleasures when they present themselves (9:4–10; 11:7–12:1) – an imperative made all the more urgent by the incessant awareness of death's grim certainty (9:7–10; 12:1–8). He concludes with a mysterious description of the path to death (12:2–7). The opening declaration “All is *hevel*” concludes his words. An epilogue (12:9–14) speaks about Ecclesiastes from the standpoint of a later sage.

### Teaching

The book of Ecclesiastes is written in an unusual, difficult Hebrew, and its thought is self-contradictory and sometimes opaque. Hence its interpretation has been marked by sharp disagreement among the commentators.

Traditional commentators, following the Midrash (especially *Kohelet Rabbah*), regard the book to be King Solomon's words in old age. Having experienced both the world's glories and its disappointments, he realized the futility of mun-

dane strivings and the insignificance of earthly goods – matters “beneath the sun” (1:3 and often). These he deemed *hevel* (understood to mean “trivial”). In contrast, matters that are *not* “beneath the sun” but rather belong to the transcendent, spiritual realm, have great and everlasting value. These are, above all, the eternal life and study of Torah. The book teaches that one must resign oneself to God's will, for all his works are good. Injustices will eventually be rectified and righteousness rewarded, if not in this life then in a blessed eternity, the “world to come.”

Most modern commentators understand the book to express skepticism about traditional beliefs, especially the verities of the book of Proverbs and similar wisdom literature, in particular the axioms of God's justice and the efficacy of wisdom and hard work. An example of a negative reading is that of Crenshaw, according to whom Qohelet directs a radical, unrelenting attack on the traditional beliefs of the sages and denies the reality of a moral order. All that is left, Qohelet concludes, is the pleasure of the moment, which may soothe the troubled spirit. A more positive reading is advocated by Fredericks, who argues that Ecclesiastes is only commenting on the human realm. This is characterized by transience, to be sure, but man can find ways to cope, namely by simple pleasures, wisdom, the joy of work, and resignation to God's will. Similarly, Seow argues that “all is *hevel*” does not mean that everything is meaningless or insignificant, but that the meaning of life and the rationale of its inequities transcend human comprehension. Humans must accept whatever happens, while making the most of life's possibilities.

Fox (1999, 2004) argues that the underlying issue that Qohelet addresses is the question of meaningfulness in life. For events to be meaningful, they would have to cohere in a comprehensible picture, with deeds securely and predictably producing the appropriate consequences. The righteous should be rewarded and the wicked punished; the one who toils should get to enjoy the full fruits of his work while the foolish should suffer penury; the wise should have a life the polar opposite of the fool's; and something should distinguish them in death.

Qohelet sees that these things do not happen, at least not consistently (see 6:2; 8:11; 9:11), and he is weighed down by the collapse of meaning, which is revealed by the contradictions that pervade life. These he repeatedly calls *hevel* – “absurd” or “senseless.” Qohelet is frustrated that life does not make sense. The irrationality of the world is his fundamental grievance, and his other complaints – such as the brevity of life, the futility of effort, the triviality of worldly goods, the vulnerability of wisdom, and the anomalies in divine justice – are secondary to this one and serve to confirm it.

Qohelet believes, or at least tries to believe, that God will eventually execute justice (3:17; 11:9b). The righteous, in principle at least, live long and the wicked die young (8:11–12a, 14). But Qohelet does not see this happening at present and fears that justice will come too late (8:10–11, 14). Qohelet sees injus-

tices but insists that God is just. Qohelet does not eliminate this contradiction but is just frustrated by it.

God for Qohelet is an absolute, unpredictable autocrat. He is a distant and all-powerful force who can be feared but not loved (3:14b; 5:1, 2, 4; 6). But, though rather steely and remote, He is not uniformly hostile. If (for unpredictable reasons) God should grant someone good things, He wants the fortunate man to enjoy these gifts (5:20; 9:7).

For all his complaints, Qohelet is not a nihilist. "Everything is absurd" is to be understood as expressing a general characterization of life, not an absolute negation of the value of all activities and values. Qohelet shows how humans can recover and reconstruct meanings. He does not arrive at a grand logic or theology that makes sense of everything, but he does recommend modest adjustments and small-scale accommodations in our individual lives.

Some things Qohelet does find worthwhile, such as moderate work, temperate enjoyment of the pleasures that come to hand, love and friendship, gaining and using whatever wisdom is within our capacity, being reasonably righteous, and fearing God. Though their benefits are brief, imperfect, and uncertain, they are enough to make life worth living. Qohelet comes to realize that despite all its unfairness and absurdity, life itself is good, to be grasped all the more eagerly for death's finality.

Qohelet's affirmations all look inward, to each individual's benefit, and his concerns are internal as well: what troubles people, what cheers them up, how they can get along in a world in which much is predetermined and opaque. Though there are practical things we can do to reduce the risks, the only real realm of real freedom and control is the human heart – the domain of emotions, thoughts, and attitudes. We are to enjoy whatever pleasures God makes possible and avoid whatever sorrow we can. This, we may note, is Stoic doctrine as well.

A different theology emerges in the epilogue, 12:9–14. This is commonly considered an addition by a later scribe, but it may well be the words of the anonymous author. The epilogue evaluates Qohelet from a more conventional standpoint. It assures the reader that Qohelet was a wise and eloquent teacher, but also warns that the words of the wise hold certain dangers. What is of ultimate importance is to fear God, obey His commandments, and live in awareness of His ultimate judgment.

**ECCLESIASTES RABBAH** (Heb. קהלת רבה, *Kohelet Rabbah*), \*aggadic Midrash on the book of \*Ecclesiastes, called "Midrash Kohelet" in the *editio princeps*. (On the term "Rabbah," see *Ruth \*Rabbah*.)

### The Structure

*Ecclesiastes Rabbah* is an exegetical Midrash which gives a chapter by chapter and verse by verse exposition of the Book of Ecclesiastes. In the *editio princeps*, it is divided into three *sedarim* ("orders"): (a) Chapters 1–6; (b) 6:1–9:6; (c) 9:7–the end of the book of Ecclesiastes. In later editions however it is also divided into 12 sections, corresponding to the biblical chapters. The Midrash opens with an anonymous proem of the classical type found in amoraic Midrashim. It begins with an extraneous verse from the Book of Proverbs which is then connected with the opening words of the Book of Ecclesiastes. It bears, however, a few signs of lateness, including its (introductory formula): "This is what the Scripture declared in the holy spirit by Solomon king of Israel."

### The Language

*Ecclesiastes Rabbah* is written for the most part in mishnaic Hebrew. Galilean Aramaic is also used, and there are numerous Greek words.

### The Date of its Redaction

The redactor used tannaitic literature, the Jerusalem \*Talmud, \**Genesis Rabbah*, \**Leviticus Rabbah*, \**Lamentations Rabbah*, and \**Esther Rabbah*. The work also incorporates material taken from the Babylonian \*Talmud, some of which, however, was added later. Several factors indicate that *Ecclesiastes Rabbah* is of a comparatively late date, having been redacted apparently not earlier than the eighth century C.E. It was used by the *paytan* \*Solomon b. Judah ha-Bavli, who flourished in the second half of the tenth century C.E., and it is quoted by \*Nathan b. Jehiel in his *Arukh* (c. 1100). *Ecclesiastes Rabbah* contains much important material of the tannaitic and amoraic periods, and also numerous *aggadot* of a polemical character, some with anti-Christian references.

### Editions

*Ecclesiastes Rabbah* was first published at Pesaro in 1519, together with Midrashim on the four other scrolls (Song of Songs, Ruth, Lamentations, and Esther) to which, however, it is entirely unrelated. The many subsequent ones are based on this edition. Although several manuscripts of *Ecclesiastes Rabbah* are extant (the earliest dating from the 14<sup>th</sup> century), a complete scholarly edition has yet to appear. M. Hirshman edited the four first chapters of the book in his dissertation

(1983). An English translation by Abraham \*Cohen appeared in the Soncino Midrash (1939).

**ÉCIJA**, city in Seville, S. Spain. We have no information on the Jews of Écija in the Muslim period. The earliest information concerning Jews there dates from the 13<sup>th</sup> century. Following its conquest by Ferdinand III, Zulema, a Jewish courtier, was given substantial property. The size of the Jewish community can be judged from the fact that for the year 1293 its tax amounted to 5,000 maravedis. Its most prominent member was the wealthy Don Yuçaf (Joseph) de \*Écija (Joseph ha-Levi ibn Shabbat), who distinguished himself in the service of Alfonso XI of Castile. In 1332 he endowed a yeshivah in Écija, and provided stipends for the scholars who studied in it. The persecutions of 1391 struck Écija and its synagogue was destroyed by order of Fernando \*Martínez, who was archdeacon of Écija. However, when in 1396 the archbishop of Toledo demanded from the vicar of Écija an account of the destruction of the synagogue, he was told that it was razed by the mob. It is not known when the community was reconstituted, but its tax assessment in 1439 was 6,800 maravedis, in old coin. The community apparently lasted until the expulsion of 1492. There was also an organized group of \*Conversos, which in 1477 had as its leader a New Christian named Fernando de Trujillo.

**ÉCIJA, JOSEPH (Yuçaf) DE (Joseph b. Ephraim ha-Levi ibn Shabbat;** d. 1339/40). Écija was born in Écija, Andalusia, and was chief tax farmer (*almoxarife mayor*) of Alfonso XI of Castile. He played a major role within the Jewish community and cooperated with R. \*Asher ben Jehiel, then the leading halakhic authority in Castile. He was advanced in the royal service through the patronage of Infante Felipe, son of Sancho IV. By 1322 he was *almoxarife mayor* and a member of the royal council, besides two other Christians. In 1326 he was sent by Alfonso XI to meet his betrothed, the daughter of the Portuguese king. While at Valladolid, some of the knights who accompanied him stirred up the populace against him, but he was saved through the intervention of Dona Leonor, the king's sister. He was dropped from the royal council in 1328 as a concession to the Cortes, which had been summoned to approve extraordinary taxes. A year later, however, he was again high in royal favor, conducting negotiations with Alfonso IV of Aragon. He gained the latter's favor as well and appealed

to him to relieve the Aragonese Jews from the obligation to wear the Jewish \*badge. In a letter of 1329 the Aragonese king expressed his regret over his inability to grant Joseph de Écija's request at that time. At court Joseph's rival was the royal physician, Samuel ibn Waqar of Toledo. The two competed for the farming of various royal revenues. Gonzalo Martínez de Oviedo, a protégé of Joseph, became royal major-domo and commander of the Order of Alcántara. Martínez turned against his benefactor and brought about the imprisonment of both Joseph and Samuel. Joseph appears to have died in prison. Solomon \*Ibn Verga in his *Shevet Yehudah* emphasizes the fact that Joseph, for all his high rank at court, was a loyal and devoted son of his people. He built a synagogue in Seville and endowed a house of learning in his native Écija, providing for the maintenance of the dean and students. In 1342, the king asked Pope Clemens VI to permit the Jews of Seville to worship in the synagogue that was built by Joseph. He was also a lover of music, an interest which he shared with Alfonso IV of Aragon, who asked Joseph to send him his favorite Castilian musicians.

**°ECKARDT, ROY A.** (1918–1997), theologian and Methodist minister. Born in Brooklyn, New York, Eckardt, a prolific writer and a leading figure in the field of Jewish-Christian relations in the U.S., was from 1955 president of the American Academy of Religion and, from 1956, chairman of the department of religion at Lehigh University (Bethlehem, Pennsylvania). His books on the Jewish-Christian dialogue (*Christianity and the Children of Israel*, 1948, and *Elder and Younger Brothers: The Encounter of Jews and Christians*, 1967), and his many articles on the subject, center upon three themes: the meaning of antisemitism; the theological and moral relations between Christians and Jews; and the understanding of the State of Israel. He interprets Christian antisemitism as the pagans' war against the people of God, and the Gentiles' war against Jesus the Jew. The Jewish people, whether conceived in religious or in secular terms, belongs to the unbreakable covenant between God and Israel. In Jesus the Jew, the covenant is opened to the world, but not in any way that annuls the election of the original Israel. Because the Christian has been brought into the family of Jews, the fate of Israel, including the State of Israel, is also his fate. Together with his wife, Alice, he wrote *Encounter with Israel: A Challenge to Conscience* (1970), which analyzed the distortion of facts related to Israel frequently favored by antisemites, and *Long Night's Journey into Day: A Revised Retrospective on the Holocaust* (1982). Regarded as one of the most powerful and prolific teams working in the area of Christian-Jewish relations, they

traveled the globe to challenge Christians in the way they related to Jews, Judaism, and Israel. The couple made a point of encouraging young people who worked in the field of Christian-Jewish relations.

Eckardt was an active member of the National Christian Leadership Conference for Israel (NCLCI) since its establishment in 1979. That same year, President Carter appointed him special consultant to the President's Commission on the Holocaust. From 1981 to 1986 he served on the United States Holocaust Memorial Council as a special advisor to its chairman, Elie \*Wiesel. Eckardt was also a senior associate fellow of the Center for Postgraduate Hebrew Studies and a Maxwell Fellow at Oxford University.

Other publications by Eckardt include *The Surge of Piety in America, an Appraisal* (1958), *Your People, My People: The Meeting of Jews and Christians* (1974), *Jews and Christians, the Contemporary Meeting* (1986), *For Righteousness' Sake: Contemporary Moral Philosophies* (1987), *Long Night's Journey into Day: Life and Faith after the Holocaust* (1988), *Black-Woman-Jew: Three Wars for Human Liberation* (1989), *Reclaiming Jesus of History: Christology Today* (1992), *No Longer Aliens, No Longer Strangers: Christian Faith and Ethics for Today* (1994).

**ECKHART, MEISTER** (c. 1260–c. 1327), theologian and mystic. Born Johannes Eckhart at Hochheim, Thuringia, he joined the Dominican Order in his youth. Although some of his propositions were condemned as heretical by Pope John XXII, Eckhart exerted a great influence on medieval mysticism. Because Eckhart wrote little about the Jews, and, unlike other Christian theologians, did not discuss the question of the continued existence of the Jewish people, it was generally assumed that he had nothing to do with Judaism. The pioneers in the study of the influence of Jewish philosophy on Christian scholasticism, Manuel \*Joel and Jacob \*Guttmann, did not even bother to analyze Eckhart's writings. However, in 1928, Josef Koch advanced the thesis that Eckhart was influenced by Jewish philosophy, in particular by \*Maimonides. According to Koch, Eckhart first came into contact with the writings of Jewish philosophers in 1313, when he began to prepare a comprehensive collection of doctrinal statements to serve as authorities for his own interpretation of religious doctrines. Koch suggests that Maimonides' method of biblical exegesis, found in the *Guide of the Perplexed*, influenced Eckhart to change the direction of his work and to begin to write biblical commentaries instead of the collection of doctrinal statements he had originally begun. Maimonides' doctrine of negative attributes had a profound influence on Eckhart, in that it showed him that it was possible for man to describe God without obliterating the distinction between God and His creatures, a distinction which Eckhart regarded as fundamental. While it was a matter of routine by the last decades of the 13<sup>th</sup> century for Christian philosophers to refer to Maimonides, Eckhart was more dependent on Maimonides than

other Christian philosophers of the period. It should be emphasized that Eckhart's interest in Judaism always remained purely intellectual, and that he was not at all interested in the social role of the Jews in a Christian society.

**ECKMAN, JULIUS** (1805–1877), U.S. rabbi. Eckman was born in Rawicz, Posen. He began a mercantile career in London at the age of 14, but after three years left for Berlin to resume his studies. In 1846 he was appointed rabbi in Mobile, Alabama, and subsequently in New Orleans, Richmond, and Charleston. In 1854 he was appointed rabbi of Congregation Emanu-El, San Francisco, but his appointment was terminated after one year. A man of high principles and constant devotion to scholarship, Eckman was in demand on account of his ability to preach in English as well as in German, but the reclusive bachelor lacked the temperament to cope with the conditions of congregational life in pioneer America. Eckman remained in San Francisco for the greater part of his life. He took over the congregational school as a private venture and devoted himself to the education of Jewish children. In 1856 he established a periodical *The Gleaner*, which he published until 1862 and resumed in 1864. Shortly thereafter he merged it with the *Hebrew Observer*. Eckman served as rabbi of congregations in Portland, Oregon, during 1863–66 and 1869–72.

**ECOLOGY.** This survey deals with those Jewish sources which have particular reference to environmental matters, and the restrictions upon the actions of the individual both in his own private domain and in public places, to the extent that they affect his nearest neighbors and the community in general. Four general observations may be made:

(1) According to the Bible, the earth has not been given over to man's absolute ownership to use and abuse as he wishes; he merely acts as a custodian to maintain and preserve it for the benefit of his contemporaries and future generations; stress is laid on the influence exerted by the environment on the mind and spirit of man. The special talmudic approach to the individual's duty to protect and preserve public property is illustrated by the story told in the Tosefta of the man who threw boulders from his land onto the public highway. A pious person (*hasid*) chided him: "Dolt, why are you throwing stones from a place which does not belong to you to one which does?" The man was scornful of the *hasid*. Eventually,

the man sold his land. One day, as he walked along the highway adjoining the land, he stumbled over the boulders. Only then did he realize the wisdom of what the *ḥasid* had told him (Tosef. BK 11:10; BK 50b).

(2) Protection of the public is a constant motive.

(3) Although the regulations in the Talmud are cast in typical casuistic form, a number of general principles or basic guiding rules may be inferred, which are capable of extended application in the light of existing conditions.

(4) Although many of the rules fall within the specific context of what may be termed tort concepts, such as private nuisance, they have clear public law projections because of the religious character of Jewish law.

### The Protection of Nature

**THE FALLOW YEAR.** The idea of preserving nature clearly inspires the biblical command concerning the fallow year (Lev. 25:1–5).

Maimonides in his *Guide of the Perplexed* (3:39) explains as one of the reasons for the fallow year “that the earth shall increase its yield and recover its potency.” The clearly religious nature of the commandment extends its immediate utilitarian purpose and turns it into a general overriding principle of the widest application to the natural environment as a whole.

**THE PROHIBITION OF WASTE.** The peculiarly Jewish religious attitude towards nature is also to be seen in the rule forbidding the purposeless destruction of things from which human beings may derive benefit. The prohibition covers the destruction of animal and vegetable life as well as inanimate objects.

The reason for the prohibition in connection with fruit-bearing trees (see below) is given by the author of *Sefer ha-Hinnukh* in the following words: “to inculcate in our hearts a love of the good and the beneficial so that it becomes part of us and we separate ourselves from evil and destructiveness. That is the way of the pious, of those who observe religious practice – they love peace and rejoice in the well-being of their fellow-men, not even a mustard seed will they destroy” (Commandment 529).

**THE FELLING OF FRUIT-BEARING TREES.** The Bible prohibits the felling of fruit-bearing trees in time of war (Deut. 20:19), and the halakic Midrash to this verse extends the prohibition to failing to irrigate the trees. The rule, however, is not confined to destruction in time of war, but is of more general application. Maimonides states it in the following terms: “Fruit-bearing trees growing in the countryside are not to be cut down, nor are they to be deprived of water so that they dry up and wither. Whoever cuts down (such trees) is liable to the penalty of flogging, and this not only during times of siege, but whenever they are wantonly destroyed. They may, however, be cut down if they damage other trees or a neighbor’s land, or because it is too costly to maintain them. The Torah only forbids wanton destruction” (Yad, *Melakhim* 6:18; cf. *Talmudic Encyclopaedia*, s.v. *Bal Tashhit*).

The rule is further extended to all objects, including buildings, unless their demolition is necessary for essential human needs. A case of the destruction of trees in the Bible which appears to contradict the clear proscription contained in Deuteronomy (II Kings 3:19) is regarded by Rashi and Kimḥi as exceptional in view of the special circumstances, in which higher national considerations were involved.

**THE REARING OF SMALL CATTLE IN EREZ ISRAEL.** The Mishnah proscribes the breeding of small cattle except in Israel (BK VII:7), and the Talmud comments that it refers to “small cattle, but not to large, since intolerable restrictions are not imposed on the community, and whereas small cattle can be imported, large cattle cannot” (BK 79b). Rashi *ad locum* explains the prohibition by saying that the purpose of the regulation was to encourage settlement of Erez Israel, and small cattle crop the soil so closely that it is impaired; they are also inclined to stay and trespass on the land of others.

The seriousness with which the prohibition was regarded from a religious (public) viewpoint is illustrated by the following incident related in the Talmud: There was once a pious person who suffered from heart disease. His doctors advised him to drink warm milk each morning, and for this purpose he acquired a goat which he tied to his bedpost. Some days later, friends came to visit him and when they saw the goat tied to the bedpost they said: “An armed robber is in the house of this man. How can we go in to him?” When on the point of death, he himself declared: “I know that I have not sinned except as regards the goat, when I transgressed against what my colleagues had said.” Further it is reported that R. Ishmael said: “My father’s family belonged to the landowning class in Upper Galilee. Why were they ruined? Because they pastured their cattle in the forest... but there was also a small field nearby (belonging to another) and they led their cattle on to it.” In the talmudic period the regulation was extended to the Jewish settlement in Babylon (BK 80a).

### Environmental Pollution

**SEWAGE AND ODOR.**

**Human waste.** The injunction of the Bible providing for the sanitary disposal of human waste (Deut. 23:13, 14) is formulated in a more comprehensive fashion by Maimonides: “It is forbidden to withdraw within the camp or to any chance place in the open fields, but it is a positive precept to set aside a special place for the purpose.... Likewise it is a positive precept that each one shall have with him a spade as part of his military equipment so that he can dig a hole for his needs and thereafter cover it up” (Yad, *Melakhim* 6:14, 15). In his comment upon this command, the author of *Sefer ha-Hinnukh* stresses in a still wider perspective the importance of cleanliness as a means for promoting the life of the spirit. “It is very well known that cleanliness is one of the virtues that conduces to holiness of mind” (Commandment 566). The precept is not confined to military camps, but applies to all human settlements (TJ Eruvin 5:1). Within the context of the Jewish law of

torts, there is an injunction against the construction of privies too close to human habitation, and their removal may be ordered.

**Sewage.** The rabbis were stringent about public places being made insalubrious. They distinguished between summer and winter. "Nobody has the right to open up his drains or clear his cesspits in the summertime; that may only be done during winter" (BK 6a). Rashi explains that during summer it is pleasant out of doors and therefore wrong to make the place unsightly and malodorous, whereas this consideration does not apply to the rainy season.

The same passage also provides that although the disposal of sewage may be permitted, any injury caused thereby must be compensated for. The same rule is laid down by the Codes (Maim., Yad, Nizke Mammon 13:13; Sh. Ar., HM 104:31).

The Mishnah also prohibits pollution by industrial effluent. "Flax water must be kept away from vegetables" (BB 11:10), and the principle underlying it is naturally of general application.

**Odors.** The ruling of the Mishnah (BB 2:9) that "carrion, graves, and tanneries must be 50 cubits from a town" is ascribed to the bad odor which they emit, and for the same reason the Mishnah states that a tannery may be sited only on the east of a town, since the winds prevailing in Israel are north-westerly. The odors of privies are also included (BB 23a). These instances given by the Talmud are merely examples, and all like instances are comprehended in the prohibition. Thus R. Asher b. Yehiel (1250–1327, Germany-Spain), replying – *inter alia* – upon a geonic responsum regarding water pollution, gave a ruling about stagnant water which penetrated a neighbor's house and gave off an offensive smell (Responsa 108:10; cf. Tur HM 155:20–26; Sh. Ar. 155:20).

On the other hand, the rabbis composed a special benediction on fragrant odors "which give enjoyment to the soul and not to the body" (Ber. 34b).

**AIR POLLUTION.** Air pollution is also the subject of a number of mishnaic provisions. "A permanent threshing floor must be kept at a distance of 50 cubits from a town. One should not set up a permanent threshing floor on his own property unless there is a space of 50 cubits in every direction" (Mishnah BB 2:8). Rashi explains that the prohibition is because of the chaff which is injurious to humans and is also liable to affect sown fields. The same applied to all industrial waste, and Maimonides states that it applies to any operations which create dust, whatever the direction of the prevailing winds (Yad, Shekhenim 11:1).

**SMOKE.** Among the ten regulations enacted on entering Erez Israel is one which, in order to preserve the amenities of Jerusalem, proscribed the erection of kilns which emit smoke and blacken the surrounding buildings (BK 82b). R. Nathan in the Tosefta generalized this rule by providing that kilns must be kept 50 cubits from any town (BB 1:7), and smoke damage is included among those injurious acts to which no legal ti-

tle can be acquired by prescription (BB 23a). The *geonim* later did not prescribe a specific minimum distance for removal, but insisted that kilns must always be kept at such a distance that the smoke will not be a source of injury or give rise to any nuisance or annoyance (cf. S. Assaf, *Teshuvot ha-Geonim* 10:32).

The particular significance of smell, smoke and similar sources of damage are explained by Nahmanides in the 13<sup>th</sup> century: "Since they cause injury to the person no prescriptive right can arise, for that only applies to pecuniary damage. Pools of water, lime, stones, and debris will affect only the fabric of a person's house and he may well acquiesce therein, even if real damage is done. Smoke, however, and privies give rise to damage and annoyance to the person, and no prescriptive right can be acquired" (Novellae to BB 59b).

**WATER POLLUTION.** According to the Tosefta, a person who digs a cistern or water hole for public use may wash his face and hands and feet there, unless there is mud or excrement on his feet. If the cistern and water hole, however, provide drinking water, he may not wash himself at all (Tosef. BM 11:31).

The fear of polluted drinking water is also manifested in the talmudic prohibition against drinking water which has been left uncovered for any length of time, since insects or other harmful matter may have contaminated it (AZ 12b; see also 30a and b).

The protection of water from pollution served as a cause of action against anyone who dug a cesspit close to a neighbor's well. The geonic responsa cite an instance which came before R. Samuel bar Ḥofni of Sura in the early tenth century. Reuven had a well adjoining the boundary of his land. Shimon came along and built a privy nearby at the prescribed distance of three *tefaḥim*. Reuven sued Shimon for the damage caused to his well water. Shimon defended by claiming that in accordance with rabbinical precept his privy did not adjoin the pit. R. Samuel was asked whether Shimon came along and built a privy nearby at the prescribed distance of three *tefaḥim*. Reuven sued Shimon for the privy must be removed from the well to a distance even up to 20 *amot*, at which the well water would not be affected. It was no argument, he added, that the privy had already been built, since no prescriptive right can be acquired when serious damage is suffered.

**NOISE.** Noise is an actionable civil wrong. According to the Talmud, millstones which create noise and vibrations must be kept at a prescribed distance (BB 18a and 20b). The Shulḥan Arukh extends the principle by making the distance vary with the size of the millstones, and making it apply to noises from other sources (HM 155:7).

An exception is made in the case of a school where the convenience of neighbors must give way to the needs of education (*ibid.*). This exception is again extended by the Shulḥan Arukh to all activities connected with the performance of religious precepts. In the case of a large school having at least 50 pupils, Rashi and Nahmanides would, however, enable neighbors to prevent its continuance on account of excessive

noise, when it is possible to moderate the noise by conducting the school in smaller classes (Rashi to BB 21a; *Nahmanides Novellae, ibid.*).

**AMENITIES OF PROSPECT.** The Bible prescribes for an open space to be left surrounding the levitical cities (Num. 35:1–5). Maimonides, in summarizing the law, adds that it applies equally to other towns and cities in Erez Israel (Yad, Shemitah 13:1–2, 4–5). Rashi explains that the reason for this open space, uncultivated, without trees or buildings, is to allow for free passage of air (Sotah 27b). The *Sefer ha-Hinnukh* suggests that since the levitical cities served national requirements (the levites were chosen to conduct divine services and people always came to consult them), they were to be kept pleasant and attractive to add to the luster of the people as a whole (Commandment 342). The same consideration lies behind the mishnaic rule that trees generally are to be kept at a distance of 25 cubits from a town, and carob and sycamore trees up to 50 cubits. R. Solomon b. Adret went further and introduced the rule that townspeople cannot forgo or waive anything which has been prohibited in the interest of the town's amenities.

### Conclusions

Major environmental protection problems which concern us today are dealt with extensively in old Jewish sources. They indicate various ways in which spoiling of the environment in its various aspects may be prevented. Rules are laid down with some degree of particularity to control and inhibit the abuse of private rights to the detriment of others, both neighbors and local inhabitants.

Biblical passages dealing with the preservation of nature were elaborated in the Mishnah and Talmud to circumscribe and even remove possible sources of environmental damage. Its importance was emphasized by the fact that the rabbis were not merely content to rely upon the sanctions of the general law, as the law of torts but promulgated enactments specifically devoted to the environment and its protection, such as regulations relating to Jerusalem because of its special status, which were subsequently in part given wider application. Of utmost significance in this regard was the rule that while a particular injury might not be actionable according to the letter of the law, it was, nevertheless, forbidden. Equally important was the rule that no prescriptive right could be acquired in respect of any environmental tort of a serious nature which resulted in injury to the person, individual or collective, as distinct from injury to property, on the basis that no real acquiescence obtains in such cases.

The precise standards imposed by the Talmud to measure and control the injurious effects of the various sources of environmental injury were treated not as absolutes, but according to prevailing conditions, and thus were (and still are) adaptable, as times change. Injury to the environment included not only cases of proximate causation, but also those in which conditions were created which might reasonably give rise to nuisance.

#### Epilogue

### First Temple Period

Reconstruction of ancient Jewish economic conditions is greatly hampered by the paucity of available documentation. The main source of information still is the Bible; but its general orientation is either normative in the legal sections, exhortatory in the prophetic enunciations, or romanticizing in some of the historical descriptions. Thus a great deal may be learned of what the leaders believed the economic conditions ought to be rather than what they really were, the *Sollen* rather than the *Sein*. Archaeology, on the other hand, which has greatly enriched our knowledge about such *realia* as the utensils employed in agricultural and industrial production, the size and shape of buildings, sudden devastations by earth-

quakes or wars, and the like, has proved wholly inadequate in reflecting the daily economic relationships or the dynamics of economic evolution. More informative have been the documents found in the archaeological mounds, such as the el-Amarna and the Lachish Letters and the Samaritan ostraca. But these documents are too few and limited to certain localities which may not warrant generalization from them to other areas and periods. Much can also be learned, however, from the vaster accumulation of materials in the neighboring civilizations (including the more recently explored Mari, Nuzi, and Ugaritic collections), provided one does not lose sight of the great differences prevailing between the respective countries and the many unique features which characterized the economy of ancient Israel as also Israelite society and culture at large. Utilizing these and other sources, as well as the combined results of many generations of intensive research by scholars, often of high competence, one may perhaps obtain some approximation of the actual economic evolution of ancient Israel after its entry into Canaan and the formation of its monarchy.

One conclusion which seems clearly to emerge from the state of knowledge today is that we must abandon the long-held assumption of both traditionalists and critical scholars that the historic evolution of ancient Israel must be explained in terms of a gradual emergence of a nomadic people into an agricultural society which was later combined with an urban civilization characterized by an increasing division of labor. This evolution, it was believed, required several centuries of slow growth. Such gradualism was used to explain not only the changing economic trends but also the general societal and religious transformations; it supposedly proved helpful even in the dating of biblical sources. It is now known, however, that the ancient Middle East, including the land of Canaan, had a fairly advanced civilization more than 2,000 years before the appearance of Israel on the historical scene. Even according to the biblical narratives, the first patriarch, Abraham – now widely accepted as an historic personality of prime magnitude – combined in his career an intimate acquaintance with his native Babylonian city of \*Ur (the excavation of which has revealed its rich and ramified social stratification at the beginning of the second millennium B.C.E.) with that of Egypt, which he visited for a time and of Canaan, in which he settled. The segment of the Canaanite people which appears under the name of Phoenicians was soon drawn into the orbit of a maritime empire extending all the way to Spain. Hence even a primitive, nomadic tribe conquering one Canaanite city after another could quickly learn its methods of production and adopt its mode of living, skipping many stages of the accepted economic evolution.

It may be assumed, therefore, that very early Israel replaced nomadic cattle raising by agriculture as its dominant source of livelihood. Settlers in the formerly Canaanite cities also turned to crafts and even commerce as their primary occupation. With the establishment of a monarchy and the building of the Temple in Jerusalem there also arose a sub-

stantial royal and priestly bureaucracy. The new capitals of Jerusalem and Samaria, especially, revealed many characteristics of major urban centers where upper classes indulged in considerable luxuries in dwellings and personal attire, such as are described by Isaiah in his censure of the ladies of Jerusalem (Isa. 3:18ff.). At the same time, the old occupations of cattle raising and even the still more “primitive” activities of fishing and hunting – the latter was never a mere sport even among the Israelite kings – were never completely given up. They flourished particularly in the peripheral areas of the south and Transjordan.

This great diversity of pursuits was aided by both climatic and hydrographic conditions in the country. Despite its relatively small size, it has been found that ancient Palestine consisted of no less than 40 distinct geographic units, each with a different set of natural conditions, which not only affected the type of production but also colored the entire system of political and social life by promoting local independence, even tribalism. That is also why throughout the First Temple period Israel continued to share its land with Edomites, Moabites, Ammonites, Philistines, and some Arameans, while, beginning with a sort of “amphictyonic” alliance, its own 12 tribes gradually built up whatever unity existed later in their divided kingdom.

Although the country was dotted with many localities called cities (*arim*), these settlements did not resemble, as has often been assumed, the medieval and modern cities in being primarily centers of industry and commerce. While no less than 400 such “cities” existed in the territory of Israel and Judah, their population, as a rule, numbered no more than 1,000 persons and consisted principally of farmers who had banded together to live behind city walls for protection against raiders. Their livelihood was derived from cultivating their fields, vineyards, and orchards, for the most part located outside the city walls, to which they proceeded in the morning and from which they returned in the evening (note this sequence in Ps. 121:8; 11 Kings 19:27). Beyond their fields and vineyards there also were some pastures where the farmers could maintain some sheep and goats, particularly for the purpose of producing milk.

Nutrition of the ancient Palestinian population was about equally divided between grain and fruit. Barley was a particularly important staple which, if the prices are deduced from better known Babylonian parallels, was at times more in demand, and even more costly, than dates. Among the fruits grapes, dates, olives, and figs loomed very large in the popular diet. Meat was always considered a luxury and was consumed by the majority of the population only on festive occasions. The cultivation of vineyards and orchards often required intensive irrigation – already practiced in the pre-Israelitic period – and years of waiting for actual production, further aggravated by certain ritualistic taboos and imposts (*orlah*, *kilayim*, *bikkurim*). This system presupposed investment of much capital and human labor. But the ultimate returns were quite rewarding in produce yielded by small plots

of land. The quality of some ancient Israel fruits seems to have been as high as that of similar products of the Second Temple era (see below).

Industrial production, on the other hand, was usually in the hands of artisans who were often organized in clans or guilds or both. We know of villages dedicated to single crafts (1 Chron. 4:14). Entire families or clans served as scribes. While there is no evidence of guild monopolies, it appears that admission to certain crafts depended on a fairly long apprenticeship and hence was beyond the reach of ordinary laborers. At the same time we also learn about royal enterprises employing, for instance, numerous potters. The frequent occurrence of potsherds bearing the imprint of *la-melekh* ("to the king") suggests that it might have been a trademark of royal potteries. Some scholars, however, interpret that mark as a fiscal receipt for a certain quantity of wine or oil delivered to the royal treasury in payment of taxes. No final decision can be made on this score, since the entire subject of ancient Jewish taxation is shrouded in obscurity, deepened by many unresolved controversies.

A certain number of Israelites also entered mercantile occupations. Some of them did this as "the king's merchants," especially in the days of King Solomon (1 Kings 10:28). At that time the international trade of ancient Israel made rapid strides both because it was fostered by the concentrated royal power and because, ever since David's conquest of Edomite territory, Israel had gained access to Ezion-Geber-Eloth on the Red Sea (1 Kings 9:26). The new open route to the Indian Ocean made Israel a very welcome ally to Hiram, king of Tyre. Even earlier some northern Israelites seem to have hired themselves out as sailors to Phoenician shipowners (this seems to be the meaning of "Dan, why doth he sojourn by the ships?" in the Song of Deborah; Judg. 5:17). But now the two kings could collaborate in sending ships both to the Indian Ocean and the western Mediterranean where the Phoenicians had long been exploiting the copper mines of Sardinia and were ultimately to establish a colony in Tartessus, Spain. A combined Phoenician-Israelite expedition to Ophir, probably located on the west coast of India or even further east, was a landmark in the history of eastern navigation.

This condition did not last, however. After Solomon's death and the ensuing partition of the country into two kingdoms, Israel lost its overlordship over the Edomites, not to regain it except for a short time under Jehoshaphat. Nor could Israel any longer exploit the copper mines and use the refinery built by Solomon in Ezion-Geber. These losses contributed to the overall decline in both the commercial and political activities of Northern Israel and Judah, which often became tributary to foreign monarchs and occasionally indulged in internecine struggles. As a result, most of the country's mercantile activities were now conducted by strangers, mainly Phoenicians and other Canaanites. The term *kena'ani* now became a synonym for merchant in popular parlance.

All through that period Israelite commerce was abetted by a more or less stable system of weights and measures which

the country shared with other Middle Eastern nations. There was also an increasing demand for money to facilitate mercantile transactions, and even in his day Abraham purchased the cave of Machpelah for "four hundred shekels of silver, current money with the merchant" (Gen. 23:16). At first the currency circulated in the form of silver bars which had to be weighed, but soon their weight was standardized and officially marked. By the end of the First Temple era regular coins, whether first introduced in Lydia or in Babylonia, gained the ascendancy. Curiously, gold never became the main instrument of exchange. Down to the Roman period it was often considered a mere commodity, valued at so-and-so many silver shekels, although its price was steadily gaining.

Another effect of the political weakness of the two kingdoms was the relative absence of slaves from the productive processes in the country. Even Solomon's ambitious public works, including the building of the royal palace and the Temple, required more manpower than could be supplied by slaves. Hence the royal imposition of *corvée* labor on hundreds of thousands of free Israelites. After Solomon's death the supply of unfree labor must have further dried up, since the country now was rarely victorious in battle and thus could recruit only a small number of slaves from among prisoners of war. On the other hand, to purchase slaves in the Phoenician slave market became increasingly unremunerative. As early as the early days of the Book of the Covenant (ninth century or before) the indemnity for a male or female slave was set at 30 shekels of silver (Ex. 21:32). Later on the price seems to have gone up to 50 or more shekels. With the prevailing high rates of interest throughout the ancient Middle East, which ranged from a minimum of 20–25% on cash loans and of 33⅓% on grain loans, up to 100% and more for more risky credit or in periods of scarcity of capital, it simply did not pay for a landowner or craftsman to acquire a slave and maintain him to the end of his life while free day laborers were readily available at very low cost. "Hebrew" slaves probably originated only from debt bondage or a condemned criminal's inability to pay the fine. But the legal restrictions on the treatment of Hebrew slaves, the enforced manumission at the end of a six-year term, and the (probably utopian) demand of the Deuteronomist that a manumitted slave should be provided by his master with means for earning a living (Deut. 15:13–14), made the possession of a Hebrew slave very irksome. It was, therefore, not for productive purposes but rather for domestic service or concubinage that a few slaves were acquired by better situated masters. However, unemployment among free labor was often so great that one or another Hebrew slave may have chosen voluntarily to forego freedom and stay on after the expiration of the six-year term.

Surplus of free labor must have grown toward the end of the First Temple period as a result of the sharp inequalities which the prophets denounced. At that time many small farmers fell into debt and, unable to earn enough to pay the high rates of interest (probably collected under some subterfuge to avoid the even more far-reaching laws against usury), lost their

land. Isaiah was not alone in exclaiming: “Woe unto them that join house to house, that lay field to field, till there be no room and ye be made to dwell alone in the midst of the land” (5:8; see also Hos. 5:10; Micah 2:1–2). The ensuing social unrest gave rise to the immortal calls for social justice by the great Israelite prophets. It also stimulated much idealistic social legislation (see below), the practical implementation of which left much to be desired. The rumblings of discontent among the masses helped to undermine the existing social order, particularly in Northern Israel with its constant revolts and assassinations of reigning monarchs. Of its ten ruling dynasties in the relatively short period of 931–721 B.C.E. all but two were replaced after the reign of one or two kings. Such instability was also ruinous for the country’s economy and helped to bring about the disastrous fall of Samaria in 721 and of Jerusalem in 586 B.C.E. which spelled the end of the First Temple period.

### Exile and Restoration

The fall of Jerusalem marked a turning point also in the economic history of the Jews. Not only was Palestine severely devastated – the reservations voiced by some modern scholars were disproved by the widespread desolation evidenced by archaeological diggings – but a large segment, perhaps the majority, of the Jewish population either perished during the war, was deported by the Babylonians, or emigrated voluntarily. The removal of the most active members of the community, including the royal house, the priests, the great landowners, and the artisans, further aggravated the effects of the depopulation and material destruction. Like the Philistine overlords of the early Israelite tribes, many ancient conquerors saw in the exile of smiths, the main suppliers of weapons as well as of industrial and agricultural tools, the best method of disarming the conquered population. Deprived of their leadership, the Israelites who remained behind were prone to adopt some of the more primitive ways of life and thought of their pagan neighbors.

On the other hand, the exiles to Babylonia joined the ever-growing Jewish dispersion. There are reasons to believe that a number of those deported from Northern Israel by the Assyrians in 733–719 B.C.E. had continued to profess their ancestral religion on the foreign soil. Their descendants, as well as those of the Judeans deported by Sennacherib in 702, now joined the groups of the new arrivals to form a powerful new community. (Only thus can we explain why those returning from the exile half a century later included descendants of families who had lived in Northern Israelite localities before the fall of Samaria; see Ezra 2:2 ff. and the commentaries thereon.) They developed a new center in and around Nippur, the second largest city in Babylonia, which was located on the “river” Chebar, or rather the canal connecting the Euphrates and the Tigris. Here, both the new and old settlers now enjoyed the distinguished leadership of Ezekiel and many former Palestinian elders. They were also supported by surviving members of the royal family after Amel Marduk (“Evil-Merodach”) released the imprisoned king of Judah, Jehoi-

achin, and restored him to a high position at the royal court of Babel. This release, narrated in the Bible (11 Kings 25:27 ff.) and confirmed also by Babylonian sources (E.F. Weidner in *Mélanges Dussaud*, 2 (1939), 923–35), seems to have laid the foundation for the development of the exilarchate, a remarkable institution which lent the dispersed Jews a focus of leadership, with few interruptions, for the following 2,000 years.

Besides Babylonia, Egypt also accommodated a number of Jewish communities; the best known being the Jewish military colony of \*Elephantine in Upper Egypt, established perhaps as early as the seventh century by Psammetichus I to help defend the southern frontier of Egypt against Nubian raiders. Before long, Jewish settlers spread throughout the Middle East, especially after 549 B.C.E. when Cyrus and his successors founded the enormous Persian Empire, territorially exceeding in size even the later Roman Empire at the height of its grandeur. The author of the Book of Esther did not hesitate to place in the mouth of Haman, the anti-Jewish courtier in the capital of Susa, the accusation against “a certain people scattered abroad and dispersed among the peoples in all the provinces of thy kingdom; and their laws are diverse from those of every people” (3:8). Nor was Deutero-Isaiah guilty of vast exaggeration when he prophesied that “I [God] will bring thy seed from the east and gather thee from the west; I will... bring My sons from far and My daughters from the end of the earth” (Isa. 43:5–6).

This multitude of Jewish settlers appears to have been rather speedily integrated into the environmental economic structures. Despite their vivid messianic expectations, their majority followed Jeremiah’s advice and built houses, took wives, and generally established themselves in their new countries on a semipermanent basis. In Babylonia, particularly, which at that time marched in the vanguard of a semicapitalistic civilization, Jews entered the stream of advanced mercantile exchanges. The people who at home had devoted itself largely to agriculture and small crafts now assumed an important role in \*banking and far-flung commerce. Whether or not Jacob, the founder of the leading banking house of Egibi, was Jewish – there is some support for this hypothesis in the fact that loans were formally extended without interest, though the bankers collected the revenues from the mortgaged properties including slaves and cattle – there is no question that some Jewish landowners and businessmen wrote significant contracts with leading Babylonian capitalists. In the archives of the House of \*Murashu, an important banking and warehousing firm, no less than 70 Jewish names have been identified. Some of the Jewish contracting parties, to be sure, merely undertook to raise sheep and goats in return for a specified annual delivery of cattle, butter, wool, and hides. Others obligated themselves to deliver to the firm 500 good fish within 20 days if they were provided with five nets and permits to fish in the firm’s waters. But some major contracts were signed by wealthy Jewish landowners in their own right who traded with the Murashu Sons on a basis of equality.

In contrast, the Aramaic papyri of the Elephantine colony include business contracts representing rather small amounts, as was to be expected from a typical soldiers' camp which derived its main livelihood from cultivating the soil. Other Egyptian localities, particularly Migdol, Taphanhes, and Noph – mentioned by Jeremiah (44:1) and identified by scholars with Magdalos, Daphne, and Memphis in Lower Egypt – doubtless offered the Jewish settlers and other arrivals from the Asiatic mainland much wider business opportunities. Certain glimpses of such “higher” activities may be obtained from a number of other papyri which have come to light in recent decades.

In short, by acclimatizing themselves to their surroundings many Jews, especially those living in Babylonia, acquired considerable wealth and extensive political as well as business contacts with the ruling classes in the empire. They now could undertake the ambitious program of resettling thousands of their coreligionists in Palestine and to secure from the friendly Persian regime charters guaranteeing full autonomy to the re-established community. In his original proclamation, \*Cyrus himself provided that the Jews remaining behind should equip the returning exiles “with silver, and with gold, and with goods, and with beasts, beside the freewill offering for the house of God which is in Jerusalem” (Ezra 1:4). As a result, some 50,000 Jews, including approximately 7,000 slaves, left with Zerubbabel and another 5,000 later on under Ezra.

Not surprisingly, the returning Jews found the country in a chaotic state; they also encountered considerable hostility on the part of their new neighbors. To begin with, those families which, on the basis of their excellently kept genealogical records, started reclaiming the landed possessions of their ancestors evoked, as has often been the case elsewhere, the staunch resistance of the new owners. Before very long their “theocratic” leadership (a term later coined by Josephus to describe the new form of government in the Second Temple period) had to fight a protracted battle to stave off both the hostile actions of neighbors and excessive assimilation to them. For several centuries the Jewish autonomous area covered no more than some 1,200 square miles in and around Jerusalem. Cut off from the coastal region occupied by Phoenicians (as evidenced by the so-called Eshmunazarid inscriptions), they engaged in small-scale farming and petty trade and crafts. The socioeconomic difficulties encountered in the First Temple period now returned with increased severity because of the greater yoke of taxation imposed by the Persian bureaucracy, made doubly burdensome by the numerous gifts, bribes, and other “voluntary” contributions extracted by the Persian officials.

Once again the economic shortcomings brought about a state of unrest which boded ill for the future of the country. The complaints of the masses to the new governor, Nehemiah, were eloquently restated by him in his memoirs. They claimed:

“We, our sons and our daughters, are many; let us get for them corn, that we may eat and live.” Some also there were that said: “We are mortgaging our fields, and our vineyards, and our

houses; let us get corn, because of the dearth.” There were also that said: “We have borrowed money for the king’s tribute upon our fields and our vineyards. Yet now our flesh is as the flesh of our brethren, our children as their children; and, lo, we bring into bondage our sons and our daughters to be servants, and some of our daughters are brought into bondage already; neither is it in our power to help it; for other men have our fields and our vineyards” (Neh. 5:2–5).

We are told, to be sure, that Nehemiah succeeded in persuading the upper classes to renounce their claims, to restore the fields to their rightful owners, and thus to reestablish for a while the social equilibrium. But the activities of this disinterested high official, who emphasized that he “demanded not the bread of the governor, because the service was heavy upon the people” (5:18), undoubtedly could offer but temporary relief. The conditions in the city of Jerusalem were no more satisfactory. Nehemiah actually had to take measures to prevent the flight of Jerusalemites, particularly the Temple personnel, to the countryside. Yet, the prolonged era of peace within the borders of the Persian Empire made life more or less bearable in the long run, and the country could look forward to better times.

### Second Temple Period

The boundaries of the autonomous Jewish state, as established under Ezra and Nehemiah, did not expand, but there was a possibility for some Jews to settle in other parts of the country on both sides of the Jordan. While fertile Galilee was still called the *gelil ha-goyim* (“the district of gentiles”), the Jewish minority there was becoming a substantial factor. Transjordan, too, had a growing number of Jewish settlers. Alexander the Great’s conquest of western Asia and the replacement of the Persian domination by that of Ptolemies and Seleucids opened up vast new opportunities for both Palestinian and Diaspora Jews. The new pervasive Hellenistic civilization greatly encouraged exchanges between the various provinces, including those between the Jews of Palestine and their ever growing Diaspora. Legally, too, under Alexander, Ptolemy I, and Antiochus the Great, Jewish self-government, with its implied economic freedoms, received a favorable interpretation. If, in time, the new Hellenistic culture began attracting many Jewish individuals, fostered their assimilation to Greek ways of life, and thereby created deep internal cleavages within the Jewish people, the ultimate result was the Hasmonean revolt and the establishment of a new and enlarged sovereign Jewish state. In the century between 165 and 63 B.C.E. the Hasmoneans conquered all of Palestine and Transjordan, converted most of the subject population to Judaism, and established a strong and populous Jewish country with but a few enclaves of Samaritans and Hellenistic city-states along the coast and in Transjordan.

Because the Temple of Jerusalem now served as a focal point for millions of dispersed Jews, the country benefited greatly from the influx of the half-shekels, imposed annually upon all adult male Jews, and from additional gifts voluntarily added by benefactors in various lands. A wealthy Egyp-

tian Jew by the name of Nicanor, for example, provided the Temple with a brass gate named after him which allegedly required 20 men to open or close. In addition, thousands upon thousands of pilgrims from all lands considered it a high religious duty to visit the Temple and offer their sacrifices there at least once in a lifetime. Even Egyptian Jewry, which, for historic reasons, had built an independent Jewish "Temple of Onias" in the district of Leontopolis after the outbreak of the Maccabean revolt, continued to send to Palestine groups of pilgrims, including their spiritual leaders such as the Alexandrine philosopher Philo. Some pilgrims brought along with them substantial funds they had collected for Palestine in their home communities. Naturally, the coins collected by these cosmopolitan groups, as well as those spent by them during their stay in the Holy Land, greatly differed from one another in weight and value since many municipalities issued currencies of their own. To facilitate exchanges, the Palestinian authorities arranged for the opening of money-changing establishments in all parts of Palestine, including the Temple Mount, several weeks before Passover at the height of the pilgrim season. When Jesus "overthrew the tables of the money changers" in the Temple precincts (Matt. 21:12), he merely removed a facility which the visitors from many lands greatly appreciated.

Not surprisingly some large collections aroused the cupidity of Roman officials. One of them, Lucius Valerius Flaccus, governor of Apamea, confiscated a local collection of 100 pounds of gold on the excuse that gold was not to be transferred to what in 59 B.C.E. still was a foreign country (despite Pompey's conquest of Palestine four years before). But in fact he merely sought to line his own pocket with the seized amount. However, he was promptly accused before the Roman senate of having committed a "sacrilege" on property belonging to a temple. He escaped severe punishment only after an effective defense by Cicero, whose eloquent plea, mixing Jew-baiting with purely legal arguments, still serves as a Latin textbook in many schools today. Later, Roman legislation, however, clarified the issue by placing all funds destined for the Jerusalem Temple, and later for the Palestinian patriarchs, under the protection of the laws governing sacrilege.

Domestically, too, the economy was surging upward. Agriculture still was the mainstay of the entire social structure. Benefiting from the accumulated energies of many generations, irrigation systems were installed in new areas, stimulating the annual output. True, in time, the needs of a quickly expanding population forced the farmers to put many marginal lands under cultivation. Probably for this reason R. Yose (second century) spoke of the seed yielding on the average a fivefold return in finished products (Ket. 112a), which contrasted with much higher yields in earlier periods. But some areas still produced the ten- or fifteenfold return characteristic of ancient Italy and even higher than ones recorded both in the First Temple era and in the talmudic period (see the exaggerations cited *ibid.*). Once again it was barley rather than wheat which was the mainstay of the bread diet. Dates,

grapes, olives, and figs continued to furnish major ingredients for both domestic consumption and the export of surpluses. Remarkably, despite the growing population and the excessive costs of transportation, Palestine was able to export both cereals and fruits. Some of its choice fruits were served at the imperial tables in Rome, notwithstanding the competition of Italy, Spain, and Greece, all of which yielded similar products. A rarer plant was the papyrus grown in the Negev, the high price of which, however, maintained by the Egyptian state monopoly, made it noncompetitive as writing material with the far less expensive parchment, and still less costly ostrakon. For its part Palestine had a sort of monopoly on the balsam tree, the growing of which was largely limited to the "fat lands of Jericho." Balsam was often sold for its weight in gold. During the Roman-Jewish War of 66–70, Pliny informs us, the Jewish defenders cut down the balsam trees lest they fall into the hands of the enemy; and "there have been pitched battles in defense of a shrub" (*Historia naturalis*, 12, 54:113).

It is small wonder that plants were considered a vital social asset of the country and cutting them down wantonly was treated as a serious crime. The term for cutting down plants was extended metaphorically to cover infringement on the fundamentals of the Jewish law and religion. To be called a "cutter, son of a cutter" became a superlative insult. The vine, palm, and olive trees were often used as symbols of the Jewish people; they still adorn many extant Jewish graves in ancient cemeteries and catacombs. Compared with agriculture, cattle raising played a rather minor role. While sheep were still needed to provide wool and milk products, meat was a relatively minor article of consumption. According to a second-century rabbi, "a man who owns 100 shekels shall buy a pound of vegetables for his stew; 1,000 shekels, shall buy a pound of fish; 5,000 shekels, a pound of meat [it is later explained: for the Sabbath]. Only if he owns 10,000 shekels, he may put his pot on the stove every day" (Hul. 84a). A major consumer of cattle was the Temple with its sacrificial worship, particularly on Passover when thousands of families lined up to offer their paschal lambs. However, the total production could probably be provided by the outlying steppes in Transjordan and the south, where more intensive cultivation was impeded by the shortage of water. With this geographic differentiation also went a cultural disparity, since the cattle-raising areas were removed from the main center of learning. As a result we may understand the transition from the high esteem of the shepherd in the First Temple period to the low status he held before and after the second fall of Jerusalem. Although conscious that in the Hebrew Bible God Himself was often compared to the "good shepherd," the rabbis now deprecated the shepherd not only as an illiterate person but also as a man untrustworthy to testify in court. Pigeon fanciers were likewise rejected as witnesses because they often engaged in aleatory games which were very popular throughout the Greco-Roman world.

In trade and industry the changes created by the new opportunities consisted in the main of the intensification of

existing trends rather than of any change of direction or basic innovation. During most of the period the Jewish population remained cut off from the coastal area, the old Philistines and Phoenicians having been replaced by the Hellenistic city-states. Josephus' observation, "Ours is not a maritime country; neither commerce nor the intercourse which it promotes with the outside world has any attraction for us" (*Against Apion*, 1:60) was generally true, in spite of the Maccabeans' determined drive to the sea, which was blocked by the Roman conquest, and the presence of substantial Jewish minorities in Jaffa and Caesarea, the harbor newly founded by Herod. Yet some Jews engaged in maritime commerce, owned ships, and even participated in Mediterranean piracy. During the Jewish War of 66–70, the pirates actually threatened to reduce the supplies to the Roman legions by blockading the port of Jaffa. But the majority of Jewish merchants consisted of shopkeepers, agents, and other petty traders.

Industry, too, was conducted on a very small scale. As before, Jews often organized guilds of their own. This movement was stimulated by the growth of Greco-Roman guilds which were often endowed with special privileges by the administration. As before, some crafts were concentrated in special villages or had assigned to them special quarters in the cities. In the battle for Jerusalem, the Romans stormed "that district of the new town, where lay the wool shops, the braziers' smithies, and the clothes market" (*Jos., Wars*, 5:331). While the country was poor in metals, almost all of which had to be imported, it distinguished itself in the production of textiles, particularly linen. In the later price list of Emperor Diocletian the highest price was assigned to the linen produced at Beth-Shean (Scythopolis). The Dead Sea region supplied the country with a variety of minerals; it was renamed by the Romans the "Lacus Asphaltitis." Another series of industrial opportunities was created by the Temple. Because of its holiness and partial inaccessibility to laymen some tasks had to be performed by priests, so that we hear of 1,000 priests serving as skilled craftsmen at one time.

In general, the economic situation in the country might have been tolerable, were it not for the excessive fiscal exploitation by both Herodians and Romans and their corrupt bureaucracies. Ancient governments usually placed the main tax burdens on the farmers. As a major concession Caesar reduced the state's share in the farm produce from one-third to one-quarter. However, in actual practice the publicans, who farmed the taxes against lump sums, as a rule exacted more than their due. In Jewish Palestine, moreover, according to biblical law, the farmer was also expected to set aside a first tithe to the levite, a heave offering averaging 2% to the priests, and an additional second tithe to be consumed in two out of three years in Jerusalem, and to be distributed among the poor every third year. Through the observance of the year of fallow-ness the farmer not only lost the crop of the seventh year but often had no incentive to cultivate the soil in the preceding year. There also was much chicanery in the collection of tithes. The total number of priests and levites seems not to have ex-

ceeded 3% of the population – it may not have exceeded 1% of the world Jewish population – and hence the 12% of the produce should have provided sufficient income for all of them. Yet the powerful priestly families used their political power to the disadvantage of their fellow priests. Josephus states that the servants of High Priest Ananias (47–59 C.E.) "went to the threshing floors and took away tithes that belonged to the priests by violence, and did not refrain from beating such as would not give these tithes to them... so that priests that of old were wont to be supported with those tithes died for want of food" (*Ant.*, 20:181).

As a result many farmers, crushed by these combined burdens and unable to resist the state-supported publicans, often disregarded the law of tithing altogether. In consequence, they appeared suspect to the orthodox leadership. Because of the prohibition on consuming untithed food there was practically no conviviality between observant Pharisees (or Sadducees) and the *am ha-arez* ("people of the land"), creating an almost unbridgeable class division (see *Ber.* 47b, and the exaggerations in *Pes.* 49b). Economically, too, the farmers were often unable to meet their obligations and lost their properties to better situated neighbors. Although Palestine never developed *latifundia* comparable with those existing in contemporary Italy, the number and size of "large estates" grew from generation to generation. The concomitant evils of absentee landlordism became even more manifest now, since after the Maccabean expansion the capital, Jerusalem, was located at a considerable distance from those estates.

The great difficulties confronting the small farmer and his ensuing migration to the cities resulted in a rapid increase of the urban proletariat. Although many small towns continued to engage in a mixed economy in which agriculture still played a predominant role, the larger cities, especially Jerusalem, developed into centers of trade, industry, and governmental bureaucracy. Into such cities streamed thousands of landless peasants seeking employment as unskilled laborers at below-subsistence wages. Understandably, the role of slavery constantly diminished. Not being a conquering country, Palestine had few prisoners of war, while purchasing slaves at the prevailing high prices was even less remunerative now that a vast army of underpaid free laborers was readily available. Hebrew slavery, in particular, hedged around by a variety of legal restrictions, to all intents and purposes disappeared completely. The rabbis phrased it metaphorically: "The Hebrew slave existed only when the Jubilee Year was in force" (*Kid.* 20a, 69a). Gentile slavery, too, played a small role in the agricultural and industrial production and was largely limited to domestic service.

Once again economic disarray combined with other socio-religious and political conflicts to bring about a social turmoil in the country which prepared the ground for its ultimate downfall. The great Roman-Jewish War of 66–70 was an almost unavoidable consequence. With it came the destruction of the Temple and the end of its hierarchy as well as of whatever residua of national independence had still remained after

6 C.E. when Judea was incorporated into the Roman Empire as a mere subdivision of the Syrian province. Thenceforth the center of gravity of the whole people shifted more and more to the Diaspora lands.

### Talmudic Era

Before the fall of Jerusalem the majority of the Jewish people had long lived outside Palestine. Yet the course of Jewish history was largely determined by the Palestinian leadership and society. Only Egypt acted in a more independent way and Alexandria, its great emporium of trade and culture, served as Jerusalem's counterpart, as it was designated by the Palestinian leaders in their letter to Judah b. Tabbari (TJ, Hag. 2:2). Even Babylonia, upon which soon descended the mantle of leadership of the whole people, was rather inarticulate about its Jewish life until the third century C.E., when it came under the neo-Persian domination. Outside these two centers there is some information about the Jews of \*Rome, owing to the preservation of numerous catacomb inscriptions, as well as occasional references, mostly in an anti-Jewish vein, in contemporary Latin letters. As to the multitude of Jews inhabiting Syria, Asia Minor, the Balkans, and North Africa west of Egypt, we are limited to stray flashes of light thrown by a few surviving inscriptions, the Pauline Epistles, and other sporadic sources. Before long, the distinction between Palestine Jewry and those of other countries became increasingly blurred as the former gradually lost their position as a majority of the Palestinian population.

Minority status understandably affected also the Jewish economic structure. Many Mediterranean communities may have owed their origin to Jewish prisoners of war taken by the Romans and sold into slavery. This was particularly true of the capital itself. To be sure, the Jews did not long remain in bondage. Because many Jewish slaves insisted upon observing the Sabbath rest commandment and abstained from consuming ritually forbidden food, they must have been uncomfortable workers and domestic servants. On the other hand, Jewish families and communities bent every effort to redeem captives, a commandment placed high in the hierarchy of values by the ancient rabbis. Roman law facilitated manumission inasmuch as freedmen retained certain connections with their patrons – whose family names they usually assumed – and performed important economic services for them. According to law, moreover, freedmen enjoyed a limited Roman citizenship, while their descendants were treated as full-fledged citizens with rights far superior to those of other citizens in the complex political structure of the empire before 312 C.E. Economically, however, such privileged citizens at first joined only the vast group of landless proletarians. Especially in Rome many of them joined the estimated 200,000 welfare clients (about a fourth of the population). In fact, Augustus singled out the Jewish welfare recipients for special favors. Taking into account their religious scruples, he allowed them to demand a double portion of the grain due them on Friday so that they would not have to violate the Sabbath. He also gave them the

option of refusing oil, the other major article of consumption given away free, and to ask for money instead. In this way the Roman emperor decided a question still controversial among Palestinian rabbis as to whether “the oil of gentiles” was prohibited for Jewish consumption.

Nevertheless some former slaves and many free immigrants found ultimate employment in agriculture. Most of them had been engaged in farming at home and, wherever given the opportunity, they tilled the soil either as small farmers or as hired hands. In the major countries of their settlement, particularly Egypt and Babylonia, many of them cultivated vineyards, which they and the Greeks seem to have introduced into Egypt, and olive groves, in the planting of which their ancestors appear to have pioneered in Babylonia. They also helped produce dates and other fruits, as well as grain. Dates were particularly plentiful and inexpensive. The Palestinian rabbi Ulla upon arriving in Babylonia exclaimed: “A whole basket of dates for a *zuz* [28 cents] and yet the Babylonians do not study the Torah!” But after overindulging in dates, which caused him a stomach upset, he varied his epigram by saying: “A whole basket of poison for a *zuz*, and yet the Babylonians study the Torah!” (Pes. 88a). To facilitate their coreligionists' agricultural pursuits in competition with non-Jewish farmers, the Babylonian sages quite early suspended the obligation of Diaspora Jews to observe the years of fallowness and even the payment of levitical tithes. They included these requirements among “commandments dependent on the land” of Israel, that is, as being binding only for Palestine. Later on, under the pressure of Roman taxation and particularly after the reform of Diocletian (who instituted the collection in kind of the land tax from territorial groups (so-called *iugera*) regardless of the ethnic or religious differences among the owners of particular parcels of land) R. Yannai ordered even the Palestinian farmers to “go out and sow during the Sabbatical Year because of the tax” (Sanh. 26a).

Certain industrial activities, such as the brewing of beer, were also connected with \*agriculture. Unlike Palestine, whose population preferred table wines, Babylonia had from ancient times consumed much beer, one variety being brewed from a mixture of barley and dates. No less than three distinguished Babylonian rabbis, \*Huna, \*Hisda, and \*Papa, are recorded as having amassed considerable wealth from brewing. Jews were also active in many other crafts, and at times organized specific Jewish guilds. The crafts of tanners (see \*Leather), collectors of dog dung, and copper miners were, however, considered so malodorous that the law permitted wives to sue for divorce on this ground. Nevertheless everybody knew that they were socially necessary and all that Judah ha-Nasi could say was that “the world cannot get along without either a perfumer or a tanner. Happy is he whose occupation is perfuming. Woe unto him who must earn a living as a tanner” (Kid. 4:14; 82a-b). Complaints of unethical practices by craftsmen were also heard; an example of such prejudices was the popular adage that “the best of surgeons belongs to Hell, and the most conscientious of butchers is a partner of Amalek.” Judah

bar Ilai, who reported this saying, also drew a line of demarcation between different types of transport workers. He contended that “most of the donkey drivers are evildoers, most of the camel drivers are honest, most of the sailors are pious.” The latter’s reputation may have been owing to the fact that \*shipping had now become an even more important occupation than in earlier centuries. The Alexandrian Jewish guild of *navicularii* had become so important that even the hostile Roman administration had to extend it important privileges in 390 C.E. (*Codex Theodosianus*, 13, 5, 8).

Perhaps the most significant economic change, resulting from the transfer of the center of gravity to the dispersion, occurred in the much larger Jewish participation in commerce. It is a well-known sociological phenomenon that alien immigrants often turn to mercantile endeavors because they have no attachment to the foreign soil, shun isolated living among native majorities, are familiar with two or more languages and cultures, and hence are able the better to mediate between distant localities. If, as seems to have been the case, a large number of former Phoenicians and Carthaginians had joined the Jewish community via conversion, they must have brought some of their commercial skills and contacts into their new communities. Jewish slaves, if employed in their masters’ businesses, must also have acquired certain aptitudes which they put to good use upon obtaining freedom. For all these reasons the number of Jewish traders, ranging from peddlers to big merchants, must have greatly increased. Yet their ratio in the Jewish population of the Diaspora need not have greatly exceeded the general mercantile ratios among the majority of peoples.

Even banking began to assume a certain role in Jewish economic life. True, would-be Jewish moneylenders faced the tremendous obstacles of the traditional Jewish anti-usury laws. In fact, some rabbis tried, on segregationist grounds, to forbid their coreligionists to lend money with or without interest even to gentiles, unless they found absolutely no other means of earning a living (BM 70b). However, there were always legal subterfuges which made loans profitable, such as high conventional fines for missing the repayment date, intervening in utilization of mortgaged properties, and the like (see, e.g., *The Tebtunis Papyri*, 3, 1902, ed. by B.P. Grenfell et al., 315ff., nos. 817–8; E.N. Adler, introd. to his ed. of *The Adler Papyri*, 1939, 5f.). In Alexandria Jewish banking may have played a certain role even in nurturing the anti-Jewish animus of the population. This is, at least, the interpretation given by some scholars to an Alexandrian merchant’s warning to a friend “to beware of the Jews” recorded in a single papyrus dated 41 C.E. (*Aegyptische Urkunden aus... Berlin, Griechische Urkunden*, 2, no. 1079). But this explanation has been cogently disputed. There is no question, however, that Philo’s relatives, Alexander and Demetrius, holding the high position of *alabarchs* (the meaning of this term is still controversial), could enter banking on a large scale. For example, Alexander extended to Agrippa I the substantial loan of 200,000 sesterces (about \$30,000), the bulk of which he paid out to the Jewish king from his Italian

branch office in Putoli-Dikaerchia (Jos., Ant., 18:160). But these were exceptions confirming the rule that the majority of Jews were still very poor and eking out a living by hard work in various occupations.

On the other hand, in the talmudic age Jewish slavery played even less of a role than before. Jewish masters, rigidly circumscribed by law, did not enjoy employing coreligionists as slaves. A popular adage had it that “he who buys a Hebrew slave acquires a master unto himself” (Kid. 20a). Certainly, as aids in production, even gentile slaves could not compete with the readily available free laborers. The Roman *colonate* with half-free sharecroppers tilling the soil for the landlords only developed toward the end of antiquity. Characteristically, the new Christian empire after Constantine I, which totally outlawed Jewish ownership of Christian slaves and encouraged pagan slaves to obtain freedom by conversion to Christianity, was prepared to tolerate the employment of Christian *coloni* by Jewish farmers (Gregory I, *Epistolae*, 4:21, 9:38). Even Jewish slave trading (see \*Slavery and the \*Slave Trade), which was to play a certain role in the early Middle Ages still, was quite insignificant.

In all these activities Jews depended even more than before on the general economic transformations which took place during the first centuries of the Christian era. The Roman Empire’s semicapitalistic economy of the first two centuries increasingly gave way to a semifeudal system. The Sassanian Empire never reached the stage of relative economic freedom of the early Roman Empire. Jews, as well as their intellectual leaders, had to make constant adjustments to both economic systems through the adaptation of traditional laws by way of interpretation. As a consequence of this pliability, rabbinic legislation was to prove quite useful to the Jewish communities in their medieval pioneering. One result of the growing state controls in both empires was a certain regimentation in occupations and price structures, which also induced the Jews to organize their own zoning tariffs in transportation, supervision of weights and measures, and even setting maximum prices. Even the unfriendly Theodosius I decreed in 396 that “no one outside the Jewish faith should fix prices for Jews” – a principle upheld by his successors (*Codex Theodosianus*, 16, 8, 10). On the other hand, because of the ensuing commercial restrictions, customs barriers, and innumerable official fees, the exchanges between the provinces of the Roman Empire were now severely hampered. This reduction in imperial and international commerce greatly stimulated the local and regional autarky and helped to create in many parts of the empire highly diversified occupational structures, providing for most of the needs of the local populations. These developments account also for the greater diversity of occupations among Jews from the third century onward.

Economically perhaps even more important was the sharp decline in the class struggle within the Jewish community. Confronted with indiscriminate hostility on the part of many neighbors, Jews, whether rich or poor, employers or employees, had to close ranks. Since the hostile state legislation

often interfered with their ability to earn a livelihood, many Jews now depended on the ramified Jewish welfare system. The economic effects of anti-Jewish riots also were quite significant. Although far from resembling medieval massacres, the occasional anti-Jewish outbreaks in the Middle Eastern cities seriously interfered with Jewish business activities. The first major anti-Jewish riot, staged by the Alexandrian mob with the support of the Roman governor Avilius Flaccus, is well described by Philo, an eyewitness. In his indictment of Flaccus, the philosopher wrote:

But cessation of business was a worse evil than plundering. The provision merchants had lost their stores, and no one was allowed, either farmer or shipper or trader or artisan, to engage in his normal occupation. Thus poverty was brought about from both quarters, both from plunder, for in one day they were dispossessed and stripped of their property, and from inability to earn a living from their normal occupations (*In Flaccum*, 7:57).

Even in less stormy periods the Jewish masses required the intercession of their leaders to counteract inimical measures by unfriendly officials. Under these harsh conditions the old ritualistic animosities between the learned and the illiterate *am ha-arez* paled into insignificance. In any case, the main obstacle to rapprochement between the two classes was eliminated when the levitical tithes were discontinued in the Diaspora. Differences in the study of Torah were likewise toned down by the leading Palestinian rabbi Johanan's declaration (in the name of R. Simeon b. Yoḥai) that the biblical commandment, "This book of the law shall not depart out of thy mouth" (Josh. 1:8), could be fulfilled by the mere recitation of the *Shema* in the morning and evening. If, because of fear that the disclosure of this statement might discourage study, the rabbis forbade its being given wide currency; the fourth-century Babylonian Raba, however, insisted that it be divulged to the public (Men. 99b; see also the anecdote about Judah ha-Nasi's reconsideration in BB 8a). In short, even illiterate Jews could now fulfill their religious duties to the satisfaction of their more learned brethren.

### Muslim Middle Ages

After the rise of Islam and its speedy expansion from southern France to India, Jewish economic life took a drastic turn. Together with the simultaneous developments in Christian Europe, \*Islam's perennial antagonist, the new political and socioeconomic evolution for the first time converted a predominantly agricultural Jewish population into a people of merchants, moneylenders, and artisans. This lopsided economic stratification carried over into the modern period and was only slightly rectified in the emancipation era.

A major cause of this epochal change was the new treatment of Jews by the host nations as primarily an indispensable source of fiscal revenue for the respective governments and bureaucracies. In the declining Roman Empire and, still more, in Sassanian \*Persia, Jews were often considered important objects of fiscal exploitation. This, however, was largely

done by administrative chicanery within the generally oppressive taxation systems in the two empires. Jews and pagans in the Christian Roman Empire and Byzantium, and Jews and Christians in Zoroastrian \*Iran may have been mere defenseless victims of arbitrary acts by rapacious officials; or, for special historic reasons, they may have been forced after the fall of Jerusalem to pay for a time a special tax, the so-called *fiscus judaicus* (in lieu of the old Jewish Temple tax); but they were not singled out, as a matter of principle, as a separate class of taxpayers on whose shoulders was supposed to rest the main burden of financially maintaining the existing governmental structures.

It was left to the founder of Islam to enunciate the broad general commandment: "Fight those who do not practice the religion of truth from among those to whom the Book has been brought, until they pay the tribute by their hands, and they be reduced low" (*Qur'an* 9:29). Later Muslim jurists and statesmen, constantly invoking this injunction of their messenger, interpreted it to mean that Jews, Christians, and for a time also Zoroastrians, as "people of the book," that is as adherents of scriptural religions, be tolerated in Muslim countries, provided they pay "tribute," that is taxes of all kinds, and are kept in a low social status without exercising any control over faithful Muslims. The latter provision (similar to Christian Rome's denial to Jews of the *honor militiae et administrationis*) was supposed to entrust all responsibility for the defense of the country and its administration to the Muslims, while delegating the entire fiscal burden and the task of keeping the economy alive to the infidel or "protected" peoples. Though \*Muhammad himself left the details open, some extremists, such as Ash-Shafi'i, founder of one of the four influential schools of Muslim jurisprudence, contended that a Muslim state could exact tribute to the extent of two-thirds of all his possessions from a Jewish or Christian subject.

The prevailing practice was to collect from these religious minorities a land tax of 25% of the crops and a poll tax from adult and able-bodied males. According to Abu Yusuf, Caliph Harun al-Rashid's chief fiscal expert, the Christians and Jews were divided into three income classes and paid 1 dinar, 2 dinars, and 4 dinars, respectively (*Kitab al-Kharaj*, 69 ff. (Ar.), 187 ff. (Fr.); a dinar was valued about \$4 by its weight in gold, but had many times that value in purchasing power). Despite the great inflationary changes in the following three centuries, \*Obadiah (Johannes), the Norman proselyte, recorded an increase by only half a dinar for each of these classes. He added that if a delinquent Jewish taxpayer died his body could not be buried unless his family or the Jewish community paid up all tax arrears (*Fragment*, ed. by A. Scheiber, in: KS, 30 (1954/55), 98). These basic imposts were augmented by a variety of local and individual taxes, enforced "gifts" and loans, and other services which made the life of the Jewish masses very difficult. But at least in periods of rapid economic progress, as in the ninth century, some Jews of the upper classes were able to amass sizable fortunes.

Methods of tax collection aggravated the generally arbitrary and unpredictable forms of fiscal exploitation. They were also designed to demonstrate the taxpayers' inferiority. A description preserved in an old papyrus gives an inkling of the deliberately humiliating ceremony accompanying the delivery by a representative Jew or Christian of a sum collected from his community. "Then the emir," we are told, "gives him a blow on the neck, and a guard, standing upright before the emir, drives him roughly away... The public is admitted to enjoy this show" (J. Karabacek, in *Mitteilungen aus der Sammlung der Papyrus Erzherzog Rainer*, 2–3, 1962, 178). Occasionally, following an old Babylonian custom, the tax receipt was stamped on the taxpayer's neck in a more or less indelible form. Needless to say, the Jews resented such excesses. However, they realized that their special taxation was the main justification for their being allowed to live in Muslim countries altogether. A Jewish family chronicle mentions that the prominent Baghdad Jewish banker, Netira, on being told by Caliph Al-Mutaḍid (c. 892) that the administration wished to eliminate all special Jewish taxes, allegedly dissuaded the ruler from such drastic action. He agreed that a reduction of the tax to its original size would be a blessing for his community, but he added, "Through the tax the Jew insures his existence. By eliminating it, you would give free rein to the populace to shed Jewish blood" (A. Harkavy, in: *Festschrift Berliner* (1903), 36 (Ar.), 39 (Heb.)). In the back of Netira's mind may also have loomed the danger that anyone of Al-Mutaḍid's successors might not only reinstate the taxes but also demand from the Jews the instantaneous repayment of all arrears thus accrued.

One effect of this discriminatory fiscal pressure was the constant diminution of the Jewish share in agriculture. Even after the extension of the land tax to the growing Muslim majority, many farmers were unable to meet their obligations to the state. Jewish farmers had the additional burden of the heavy poll tax paid in produce at a price arbitrarily set by the tax collector. The requirements of Jewish law, too, particularly the Sabbath rest commandment, which was much more stringent than the rest precepts of the Muslim Friday and Christian Sunday, generally made Jewish agricultural endeavor less competitive. There is evidence that in the days of Harun al-Rashid (766–809) the land flight of Palestinian farmers was so severe that the government was forced to appeal for their return under the promise of permanent tax abatement. The chances are that fewer Jews returned after having found shelter in one or another urban Jewish community. The growing disorders in the great caliphate from the tenth century on must also have induced many Jewish villagers, whose defenselessness invited attacks by marauders, to leave their landed properties – despite their great attachment to their ancestral soil attested by some geonic sources – and settle in a somewhat more secure urban Jewish quarter. Beginning in the 12<sup>th</sup> century the increasingly powerful trends toward semifeudalism throughout the Middle East further militated against Jewish farming as they did, on a larger scale, in contemporary Christian Europe.

On the other hand, new opportunities beckoned to Jews in the commercial area. The general upsurge of the Middle East economy during the first centuries of Muslim rule, the rise of great metropolitan areas such as \*Baghdad and \*Cairo, and, for a time, uniformity and stability of currency and relative security in travel and transportation, all stimulated the expansion of mercantile activities on the part of merchants of various nationalities. Commerce was generally held in higher esteem than agriculture among Middle Eastern Muslims, Christians, and Jews. Al-\*Farabi voiced the prevailing notions that "villages are in the service of cities." While in the internal exchanges within the caliphate the Jews encountered severe competition on the part of several equally gifted mercantile groups, including Greeks, Armenians (increasingly muslimized), Syrians, and even Arabs – a popular Middle Eastern adage was to state later that one Greek could cheat two Jews, and one Armenian could cheat two Greeks – Jewish merchants had certain advantages in domestic and, even more, in international trade.

In the first place their competitors often came from regions of diverse legal systems. Most of the Christian merchants followed deep-rooted customs and traditions of the former provinces of the Byzantine Empire. The Muslims, too, were divided in their mercantile and other civil laws through the disparate teachings of their four major schools of Muslim jurisprudence and the great variations of local and regional customs. These factors were far less pronounced in the case of Jews. Although the Babylonian and Palestinian laws often differed in many significant details, a growing majority of Jews, settled in the great caliphate and adjoining countries, increasingly came under the sway of the Babylonian Talmud and its official interpretation by the geonic academies of Babylonia. At the same time the presence of Jewish communities throughout the far-flung empire and in many neighboring countries, both east and west, assured Jewish merchant travelers a brotherly reception and help in emergencies wherever they went. They could also readily establish branch offices, and engage a number of dependable local agents. Examples like those recorded in the documents preserved in the Cairo \**Genizah* have shown the vast geographic extension of the mercantile dealings of certain Cairo-Fostat firms. In 1115–17 one Abu 'Imran gave a power of attorney to an agent surnamed "the candle maker" to look after all his business undertakings in Sicily, \*Morocco, and other localities, as well as to manage his houses in Spain and Sicily. Another businessman, Ḥalfon b. Nethanel, after returning to \*Aden in 1134 from a prolonged stay in India, soon thereafter traveled to Cairo. In the following year we find him in Morocco and \*Spain before his return home (H. Hirschfeld, in: JQR, 16 (1925/26), 280f.; S.D. Goitein, *Speculum*, 29 (1954), 186f.)

An even greater advantage accrued to Jewish merchants in the burgeoning international trade with Western Europe. Although the Carolingian Empire and its successor states were still economically quite backward, their growing landed aristocracy furnished many customers for the luxury articles

imported from Eastern lands. Here Jewish traders served as important mediators in a world divided between Islam and Christendom. Few Western merchants traveled to the Middle East, despite occasional Christian pilgrimages to the Holy Land, while even fewer Arabs dared to enter the hostile Christian countries for any length of time. Jews were tolerated under both civilizations. The legal advantages arising from the uniformity of their law were even greater in this area, since Christian and Muslim laws diverged very greatly and familiarity with each other's legal systems was extremely rare. The Jews also had a linguistic advantage in being able to communicate with one another, whereas few Christians knew Arabic and still fewer Arabs could converse in Latin or any local dialect. But a few polyglot individuals could occasionally serve as interpreters. We hear of a ninth-century Jewish linguist named Sallam, apparently a native of Spain or Khazaria, who in 845 reached the "wall of Gog and Magog" in China and who allegedly was able to converse in 30 languages. Multilingual documents were also found in the Cairo *Genizah*. When Charlemagne decided to send an embassy to Harun al-Rashid he had to add a Jewish interpreter, named Isaac, to the mission. It turned out that the chief noble envoys died on the journey and Isaac alone returned from Baghdad, bearing gifts from the Eastern potentate to the Western emperor. In general, however, Hebrew could easily serve as the regular medium of communication among Jewish merchants under both Islam and Christendom, and by the ninth century it had become a leading international language.

In his oft-cited *Kitab al-Masalik* ("Book of Routes"), written in 846 and revised some 40 years later, Ibn Khurdadhbah, who held in the caliphate an office approximating that of a modern postmaster general, described the routes taken by the Jewish \*Radaniya (Radhanites; a word of uncertain etymology and meaning) from northern France and southern Morocco to India and China. He wrote:

These merchants speak Arabic, Persian, Roman [Greek and Latin], the Frank, Spanish, and Slav languages. They journey from West to East, from East to West, partly on land, partly by sea. They transport from the West eunuchs, female slaves, boys, brocade, castor, marten and other furs, and swords. They take ship from Firanja [France] on the Western Sea, and make for Farama [Pelusium]... On their return from China they carry back musk, aloes, camphor, cinnamon, and other products of the Eastern countries... Some make sail for Constantinople to sell their goods to the Romans; others go to the palace of the King of Franks to place their goods... These different journeys can also be made by land (pp. 153 ff.; E.N. Adler, *Jewish Travellers*, 1966, p. 2).

There is some reason to believe that Western Jewish merchants quite early reached even Korea and Japan.

Ibn Khurdadhbah's statement helped support what soon became a Christian ecclesiastical myth, adopted by some modern historians, about an extensive Jewish slave trade in the Middle Ages. Medieval and modern controversialists from St. Agobard, archbishop of Lyons, onward, often pointed a

finger at the medieval Jews as the main slave traders who transported Christian slaves, especially from Slavonic countries, to the ever more manpower-hungry Middle East and Muslim Spain. They readily overlooked the staggering legal barriers erected against that trade by both Jewish and gentile laws. Islam and Christendom severely outlawed the possession by Jews of Muslim or Christian slaves respectively. On its part, the Talmud had long demanded that a slave acquired by a Jewish master should be circumcised, made to observe the seven Noachide commandments, and live an essentially Jewish life. If a slave refused to be converted within 12 months, he was to be freed or sold to a gentile master. Female slavery, mainly intended to serve sexual purposes, was made difficult for Jewish slaveholders by the strict prohibition on sexual relations with slave girls. Typical of the provisions of Jewish law was the following statement by the ninth-century Babylonian teacher Natronai Gaon: "If a son of Israel is caught with his slave... she is to be removed from him, sold, and the purchase price distributed among Israel's poor. We also flog him, shave his hair, and excommunicate him for 30 days" (*Shaarei Zedek*, fol. 25a, attributed to Amram Gaon). The trade in eunuchs, so much in demand for Oriental harems, depended on whether the Jewish slave trader could acquire castrated males. Otherwise talmudic law had long included castration among the physical mutilations which entitled the slave to seek immediate release. Responsibility for a slave's hidden blemishes, both mental and physical, was greatly delimited by talmudic law and hence anyone acquiring a slave ran considerable risks. If some Jews, defying these legal difficulties, were attracted to this extremely lucrative commercial branch, they must have constituted but a minority among the international slave traders and doubtless played an even smaller role in the various domestic slave markets throughout the world of Islam. It is not surprising, therefore, to find that in the vast, populous, and affluent North African lands, hardly any reference to Jewish slave traders appears in the extant Muslim and Jewish sources of the time.

Under the rule of medieval Islam Jews also entered the money trade in all its ramifications in an important way. Some of them played a considerable role in the very \*minting of coins. Under Caliph Abd al-Malik (695–96), for example, one Sumeir helped set up a very important monetary reform which so impressed a Jewish homilist that he placed it among the signs of the approaching Messiah (PDR, xxix, ed. by Michael Higger, in: *Horeb*, 10 (1948) 193f.; in G. Friedlander's English trans., p. 221). Other Jewish minters are recorded in various Muslim and Christian countries, though not in Byzantium where minting was an effective state monopoly. Some of the first coins issued by Poland in the 11<sup>th</sup> and 12<sup>th</sup> centuries bore inscriptions in the Hebrew alphabet, probably because the minter was most familiar with that script. Money changing likewise became a very widespread and profitable trade, particularly after the dissolution of the caliphate when diverse coins from various lands began appearing in all large mercantile centers. Considerable expertise was required in order to

recognize defects, whether inflicted by coin clippers or by the admixture of undue amounts of alloy. Here, too, internationally experienced Jewish dealers were often in a favored position. Deposit banking also assumed a major economic role. Unlike the ancient temples and medieval churches, neither mosques nor synagogues ever served as important depositories of funds. Because of the relative absence of expulsions and large-scale massacres of Jews in Muslim countries, Jewish bankers were considered a fairly secure outlet for surplus funds which, if profitably invested, could yield substantial profits to both depositors and depositories. To be sure, in unstable periods an arbitrary official (for instance, Al-Baridi, governor of Al-Aḥwaz) could seize the bankers' possessions, including deposits held by them for other accounts, without compensation. But the depositors running afoul a dignitary's personal greed or whim found keeping their funds at home no less risky. In general, however, the frequency and usefulness of the new methods were so great that the rabbis had to relax some ancient restrictions and alter the areas of responsibility on the part of the depositories in order to facilitate their operations.

Similarly, the transfer of large amounts from one province to another in the vast empire and beyond its boundaries became the more imperative as carrying cash to a distant locality by land or sea became increasingly hazardous. Gangs of robbers on land were far exceeded in number and efficiency by both Mediterranean and Indian Ocean pirates. The North African coast and the extended coastline of the Arabian Peninsula served as particularly useful hideouts for corsairs. If the Talmud had objected to the method of transferring money through a deed called *dioqni* (derived from sign), and some medieval rabbis still opposed the bearer instrument called *suftaja* in Arabic (which Jews apparently helped develop jointly with the Arabs), the economic realities were such that the *geonim* had to yield and recognize its employment as a legitimate mercantile usage, "lest the commercial transactions of the people be nullified" (*Teshuvot ha-Ge'onim*, 1887, ed. by A.E. Harkavy, nos. 199, 423, 467). Ultimately, Samuel b. Hophni, head of the academy of Sura, felt impelled to write a special legal monograph on "Letters of Authorization" (*Sefer ha-Harsha'ot*). Nor did the \*Kairouan scholar Nissim b. Jacob hesitate to use a *suftaja* in forwarding a gift for the support of the Babylonian academies.

Even more important, of course, was the large-scale Jewish participation in the increasingly vital credit system. Although all three major religions tried to outlaw usury – the Muslim *riba* being even more broadly defined than the Christian *usura* or the Jewish *ribbit* – the economic needs of credit became overwhelming. Since most loans were now extended not to impoverished farmers but rather to businessmen or government officials for use in trade or public administration, the outlawry of any kind of increment over the amounts lent lost its moral justification. Jews were in a strategic position to overcome the legal obstacles, as they were the relatively smallest group in the population and, even if observing the prohi-

bition of charging interest to coreligionists, could engage in profitable \*moneylending with the large majority of borrowers of other denominations. All sorts of legal evasions, moreover, were conceived by jurists of all groups, although this system was never quite so refined as it was to become in medieval Europe. One of the simplest expedients appeared to be a fictitious sale of income-producing property with the right of repurchase which gave the lender the opportunity of collecting the revenue of that property during the interim. The widespread *commenda* contract, in which the investor appeared as a partner in the enterprise, likewise offered him the opportunity of exacting the pledge that he would participate in the ultimate sale with a specified profit regardless of possible losses. It was this form of purported silent partnership with a guaranteed revenue which was most widely used to secure for the lender an income agreed upon in advance. Until today, some pious Jews still enter on a bond of indebtedness the words *al zad hetter iska* (often in abbreviated form, see \*Usury) to indicate their mental reservation against the transgression of the biblical commandment.

During periods of quiet, profits derived from banking could be enormous. As a result there emerged a number of wealthy Jewish bankers, especially in the metropolitan areas of Baghdad, Cairo, \*Alexandria, Kairouan, \*Fez, and \*Córdoba. These banking firms did not limit their activities to loans but usually engaged in related businesses such as trade in jewelry and precious metals, investment in real estate, and the like. They often had at their disposal large funds deposited with them by high government officials secreting away illicit income from bribes. Ibn al-Furat, a leading vizier of early tenth-century Baghdad, admitted having had large deposits with the two Jewish bankers Aaron b. Amram and Joseph b. Phinehas. In return, the bankers had to perform services for these officials which went much beyond ordinary business risks. For example, 'Ali ibn 'Isa, Ibn al-Furat's more virtuous rival, did not hesitate to force his Jewish banker to advance him monthly the equivalent of \$40,000 in gold for the wages of the imperial infantry. This loan was to be covered by the banker's revenue from tax farming in the province of Al-Aḥwaz. Another Jewish tax farmer, Ibn 'Allan al-Yahudi of Baṣra, who had lent both the sultan and the famous Persian statesman Nizam al-Mulk the equivalent of \$100,000, was assassinated in 1079. Sometimes the whole Jewish community was held responsible for a banker's refusal to lend money to a dignitary. In one such case, in 996, the mob attacked the entire Jewish quarter.

Less dramatic, but equally significant, was the expansion of Jewish activities in the traditional fields of handicrafts and professions. Needless to say, these occupations offered vast opportunities to many more Jews than did commerce and banking. Regrettably no exact occupational statistics can be offered, but a few extant lists show that the proportion of craftsmen considerably exceeded that of merchants, even including the petty shopkeepers and peddlers. Three such *genizah* lists show percentages ranging from 38.4 to 52.1 for

industrial occupations, compared with 17.3 to 37.5 for commerce and banking. According to Al-Jahiz, Jews predominated in the industries of dyeing and tanning in Egypt, Syria, and Babylonia and formed the majority among the Persian and Babylonian barbers, cobblers, and butchers. Another contemporary Arab observer, Muqaddasi, contended that “for the most part the assayers of corn, dyers, bankers, and tanners are Jews; while it is usual for physicians and scribes to be Christian” (J. Finkel, ed., in: *Journal of the American Oriental Society*, 47, 311–34; Muqaddasi, *K. Aḥṣam at-taqasim*, p. 183; in Le Strange’s English trans. in his *Description of Syria*, p. 77). In fact no less than 265 different crafts are mentioned in the *genizah* records, showing both the extensive Jewish participation in industrial occupations and their great specialization. Gradually Jews also penetrated the medical profession, some of them achieving considerable fame as medical theorists and writers (Asaph, Israeli, \*Maimonides, and others). One must add, of course, a considerable number of Jews who were employed by their own communities as rabbis, teachers, cantors, *shohatim*, sextons, and in administrative capacities, forming a sort of Jewish civil service.

This occupational diversification was greatly facilitated by the openness of Muslim society and the relatively large measure of economic equality for subjects of all faiths. The latter included much freedom of movement, except in Egypt where the traditional state-capitalistic order presupposed governmental controls over the influx of foreigners and the exit of natives. Only Egypt enacted strict regulations concerning passports. In industry, too, there was much freedom of choice. Even where industrial \*guilds existed, they were neither so monopolistic nor so discriminatory in the admission of Jewish members as their counterparts in Europe. It was also possible for the autonomous Jewish communal organs to use considerable discretion in enforcing their own price controls whenever needed, supervising weights and measures, and generally policing the markets in the Jewish quarters.

It was unfortunate for the Jews and non-Jews alike that this flourishing commercial-industrial civilization sharply declined after the tenth century as a result of the caliphate’s dissolution and its constant foreign and civil wars. By the time of the 13<sup>th</sup>-century \*Mongolian invasions much of the grandeur of that great civilization had given way to a slow process of decay. Coming on top of the Christian \*Crusades, these invasions dealt further severe blows to both the international and local commerce of the eastern lands. While Christian Europe was marching ahead on the road toward a flourishing economic structure, the eastern lands began to stagnate. Among the numerous departures were Jews, fleeing from foreign invaders as well as domestic enemies and seeking whatever uncertain shelter they could secure in Western lands. The center of world commerce now began shifting westward, with the various Italian merchant republics taking over the offensive, establishing colonies in the eastern Mediterranean and later in the Indian Ocean, and ultimately displacing the East even in the Levantine trade.

### Medieval Christendom

At first, to be sure, far fewer Jews lived under Christendom. Only from the 13<sup>th</sup> century on, as a result of the general upsurge of the Western nations, the Spanish reconquest, and the simultaneous sharp decline of the Eastern countries, did the center of gravity of the Jewish people slowly move to the European area. Here the far better accumulation and preservation of archival materials and the concerted efforts of generations of scholars have yielded much reliable and detailed information about general and Jewish economic developments. Jewish documents, too, such as the “starrs” of England, the records of the Laurenz parish in Cologne, the vast collection of Arabic and Hebrew documents in Toledo and other parts of Spain, the numerous notarial records, and even occasional private archives of Jewish firms, have made the study of economic Jewish history much more reliable and concrete.

Clearly, the existing trends toward the alienation of Jews from agriculture were much stronger in Europe than in the Muslim Middle East and North Africa. In certain areas the insecurity of Jewish life and the ever-present danger of massacres, expulsions, and forced conversions made landholdings far less attractive for Jews. Whenever a landowner had to depart suddenly or was otherwise obliged to dispose of his property within a very short time, forced liquidation, if not total confiscation, resulted in enormous losses. For example, two years after the expulsion of Jews from France in 1306 a Christian landlord was able to acquire 50 Jewish houses in the old and venerable community of Narbonne for the mere pittance of 3,957 livres. This transaction so aroused the ire of both the viscount and the archbishop, each of whom had special feudal rights in the city, that, to appease them, the purchaser gave an additional 5,000 livres, two houses, and a plot of land to the viscount and an unspecified, but undoubtedly large, amount to the archbishop (S. Luce, *REJ*, 2 (1881)). Of course, the Jewish exiles received nothing. Similarly, according to the court historian Andrés Bernáldez, after the promulgation of the Spanish decree of expulsion in March 1492, anyone could acquire a Jewish vineyard for a piece of cloth or linen (*Historia de los Reyes Católicos* (1870), 338f.). In addition to such countrywide expulsions, there were local and regional forced exiles of varying frequency. For instance, the city of \*Speyer, to which Jews had originally been admitted in 1084 by Bishop Ruediger-Huozmann “in order to enhance the city’s honor,” subsequently often ousted them on short notice. To mention only the events of the 15<sup>th</sup> century: Jews were expelled from Speyer in 1405, readmitted in 1421, banished again in 1430, and allowed to return in 1434, to be once more evicted a year later. Yet they were there again in 1465. They became objects of renewed Episcopal legislation in 1468–72.

The first major blow of this kind came to the Jews of Byzantium as a result of Emperor \*Heraclius’ decree of 632 forcing all Jews to become Christians. Although incompletely carried out even in the areas which remained Byzantine after the expansion of Islam soon after, such Byzantine decrees were repeated in the following three centuries. It was truly amaz-

ing, therefore, that during his visit to the Balkans in the 1160s Benjamin of Tudela found an entire Jewish community of 200 families in the village of Crissa who “sow and reap on their own land” (Travels, pp. 12 (Heb.), 10 (Eng.)). Similar forced conversions occurred in Visigothic Spain, Merovingian Gaul, and Langobard Italy in 613–61, and were replaced in Spain by many sharply discriminatory laws against the Jews who survived or were allowed to return before the Muslim conquest of 711–2. To all intents and purposes these hostile actions put an end to all forms of organized Jewish life there and only a small Jewish remnant remained under Catholic domination in central and southern Italy. Even if not all the Jews left these countries, their ownership and cultivation of land must have practically ceased, while returning Jews may have had little incentive or opportunity to acquire new agricultural property. Similar effects were later produced by the successive expulsions of Jews from royal France, England, Spain, Portugal, various Italian states, and other parts of Christian Europe between 1182 or 1290 and 1600.

An equally important factor was the growth of European feudalism. Land now not only became the source of economic power but also the mainstay of political and military force. He who owned land exercised dominion over a multitude of peasants whether they tilled the soil as half-free sharecroppers so long as the Roman *colonate* persisted, or as villeins furnishing parts of their produce and *corvée* labor to their masters. While since Pope Gregory the Great the Church had allowed Jews to maintain Christian *coloni* on their land, it became increasingly awkward for Jews to be either vassals taking oaths of fealty to Christian lords, or seigneurs administering such oaths to Christian barons. Remarkably, this system persisted in Provence up to the 12<sup>th</sup> century and beyond. In Angevin England, kings also protected Jewish feudal holdings through decrees such as that issued by Richard the Lion Heart in 1190 in favor of one Isaac, son of R. Joce, and his sons or, more broadly, through the generic decree by John Lackland in 1201. It was in the royal interest to protect the Jewish holding of a “baronial state, claiming for themselves wardships, escheats, and advowsons,” as did Henry III. Even the antagonistic Edward I had to allow Jews to acquire feudal possessions if their noble owners defaulted on the payment of their debts. But the antagonisms aroused in such cases contributed to the baronial revolt against the crown in 1264–66. The barons argued that the kings selfishly promoted feudal acquisitions by Jews because through the royal overlordship over Jews noble property was thus indirectly transferred to the royal domain. Ultimately, beginning in 1269, the kings themselves had to oblige Jewish creditors to dispose of such foreclosed estates to Christian owners within a year. In short, feudalism and Jewish landholdings appeared incompatible in the long run and it was the weaker Jewish side which had to yield ground.

On the other hand, unlike under Islam, Jewish landowners were not subjected to a special land tax. “In our entire realm,” declared \*Meir b. Baruch of Rothenburg, “[Jews] pay not tax on land. Sometimes capitalists have tried to change

this system, but when the matter was brought before us, we disallowed it” (Responsa (Prague, 1607), 50c no. 452). In other areas, however, the general land taxes became so burdensome that the Barcelona rabbi Solomon b. Abraham \*Adret complained that “frequently the very best fields yield insufficient harvests to pay the royal taxes” (Responsa, 3 (Leghorn, 1778), no. 148). More universal and irksome was the ecclesiastical drive to force the Jews to pay tithes on property they acquired from Christian owners, lest the parish priests or monasteries lose the income from such lands. Finally, the Fourth Lateran \*Council of 1215 insisted that these contributions be universally collected from Jews, riding roughshod over the religious scruples of some Jewish pietists who saw in such payments subsidies for the erection of churches and monasteries devoted to the worship of another faith.

Employment of Christian agricultural workers by Jews became another important issue, anti-Jewish agitators of all kinds clamoring that Jews be forced to cultivate the land with their own hands. The nobles, on the other hand, even in Mediterranean countries, often tried to eliminate Jewish landholdings altogether. Such a proposal was advanced, for instance, by the Castilian Cortes in 1329. These opponents readily overlooked the early medieval Jewish pioneering contributions to European agriculture. Coming from the more advanced Eastern countries, Jewish groups settling in the West are often still remembered in such names as Terra Hebraeorum, Judendorf, Żydaczów, and the like. Even a Spanish name like Aliud is probably a derivative of *Al-Yahud*. As late as 1138 three Jews of Arles bought from Abbot Pontius of Montmajour the entire output of *kermes* of the district of Miramar, thus stimulating the farmers to produce that dyestuff. They were also very active in introducing the silkworm into Sicily and other Mediterranean countries.

Yet it was only the opposition of the crown which prevented general prohibitions of Jewish land ownership. Whenever such were enacted, they usually bore a local character and even these were not always fully implemented. Even in fervently anti-Jewish Germany after the \*Black Death of 1348–49, the assertion of the author of the *Rechtsbuch nach Distinctionen* (iii. 17, 1) that “Jews are not allowed to own real property in this country” was a clear exaggeration. In the Mediterranean lands, especially, Jews continued to own and cultivate landed properties; this they did to the very end of their sojourn in Spain, Portugal, Provence, Sicily, and Naples. Their endeavors were particularly flourishing in those areas where extensive orchards and vineyards, located in the neighborhood of towns, enabled them to combine fruit production with other occupations. Queen Maria of Aragon was not wrong when in 1436 she upheld the right of \*Huesca Jewry to dispose of the grain and wines produced on its property, “since the Jews of the said city for the most part live as workers and cultivators of fields and vineyards and derive a living from the latter’s produce” (Baer, *Urkunden*, 1 (1929), pt. 1, 858f. no. 535). The city council of Haro (Faro), close to the Navarrese border, complained that Jewish and Muslim landowners in the district

had in 1453 signed a covenant not to sell any land to Christians. In the council's opinion this created a threat that before long the entire land of the area would fall into the hands of infidels (N. Hergueta, in: *Boletín de la Real Academia de Historia*, 26, 467ff.). Less exaggeratedly, a modern scholar of the rank of F. de Bofarull y Sans claimed (in his *Los Judíos en el territorio de Barcelona*) that between the 10<sup>th</sup> and 12<sup>th</sup> centuries one-third of all the land around Barcelona was owned by Jews. In short, Jewish agriculture never completely disappeared from the European scene and the alleged complete outlawry of Jewish landholdings throughout medieval Europe is another example of a widely accepted historical myth.

Jewish land ownership was particularly frequent in urban settlements, particularly in Jewish quarters. Understandably, wherever the Jewish population grew rapidly and its quarter could not enlarge its area, the real estate owned by a family was often subdivided into small parcels by the numerous progeny. In the Laurenz parish of Cologne a Jewish couple sold in 1322 a one-eighth and one-96<sup>th</sup> portion of "a large house" in which two other coreligionists owned another quarter and one-16<sup>th</sup> part. Thirteen years later another Jewish couple acquired a share of one-third and one-60<sup>th</sup> minus one-700<sup>th</sup> of a house from a Christian neighbor. For the most part, however, in Europe north of the Alps and the Loire Jews were rarely allowed to live long enough to create many such subdivisions over several generations.

In Europe, too, Jewish industrial occupations were far more significant. In this area early Jewish immigrants from the Middle East and North Africa, often in possession of an advanced technology, could perform many pioneering services. In 1147 Roger II of Naples attacked Byzantine Thebes, a major center of the silk industry, and evacuated "all" Jews to southern Italy, where they helped establish a flourishing silk industry. Another trade in which Jews played a considerable role since ancient times was that of dyeing. When Benjamin of Tudela arrived in Brindisi he found there ten Jewish dyers. A particular "Jewish" dye existed in the Neapolitan kingdom. Weaving, too, had long been a prominent Jewish craft. It was partly stimulated by the biblical prohibition on *\*sháatnez* (mixing wool and linen) which, carried down through the ages, became an important factor in preserving Jewish tailoring and other branches of the clothing industry in many lands. Another religiously stimulated industrial craft was that of slaughtering animals according to the Jewish ritual. Even where, as in most German areas, the Christian guilds tried to suppress Jewish competition, they had to make some exceptions in favor of Jewish butchers and tailors who were permitted to produce such ritually restricted goods for the Jewish customers. Many Jewish crafts were stimulated by Jewish pawnbroking. Since most pledges consisted of articles of clothing, furniture, or jewelry which, upon the debtor's default, became the property of the pawnbroker, it was natural for him to try to refurbish the pawns for sale to the public at a higher price.

In fact, many restrictive ordinances inspired by Christian merchants made a special allowance for Jewish trade in

used articles (see *\*Secondhand Goods*). For instance, in Rome during the Counter-Reformation Jews performed a major service by acquiring secondhand clothing from the luxury-loving high clergy and nobility for resale to the masses of the population. Indirectly, such business furnished employment also to tailors, dyers, and other craftsmen.

Beyond these specially Jewish areas there were also Jewish craftsmen in almost all domains of industry, although specialization here was far less developed than in the contemporary Islamic world. In Cologne, for example, where the guilds succeeded in ultimately barring Jews from almost all industrial occupations, they still allowed them to become glaziers, probably because no other qualified personnel was available. This exception was reminiscent of the Greek glassblowers in seventh-century France who claimed to be able to produce glass as well as the Jews did. The few extant Spanish occupational statistics are very enlightening indeed. For example, the 20 Jewish families in the small town of Valdeolivas near Cuenca embraced, in 1388, six shoemakers, three tailors, one weaver, one smith, and one itinerant artisan. Some of the wealthiest of the 168 Jewish taxpayers in Talavera de la Reina shortly before the expulsion in 1492 consisted of 13 basketmakers and three goldsmiths. Jewish cobblers, tailors, blacksmiths, and harness makers also seem to have made a reasonable living there. True, in 1412–13 Castile and Aragon, in sharply anti-Jewish decrees, forbade Jews to serve as veterinarians, ironmongers, shoemakers, tailors, barbers, hosiers, butchers, furriers, rag pickers, or rag dealers for Christians. Yet the very man who inspired that legislation, Anti-Pope Benedict XIII, himself employed a Jewish bookbinder, two Hebrew scribes, and even a Jewish seamstress-laundress for his ecclesiastical vestments. A Roman list of 1527 recorded the presence of 1,738 Jews in a population of 55,035 in the city. The more than 80 Jewish families whose occupations were recorded included about 40 Jewish tailors and a substantial number of other craftsmen. Twelve years earlier Cardinal Giulio de' Medici had urged his cousin Lorenzo to attract some of the Jewish manufacturers of saltpeter from Rome to Florence or Pisa, since "such opportunities do not occur every day." Although similar detailed data are not readily available elsewhere, it appears that wherever Jews lived in larger numbers their majority derived a livelihood from one or another craft.

In some Spanish cities there were enough Jewish craftsmen to form independent guilds. The statutes of the Jewish cobblers' guild in *\*Saragossa*, approved by Pedro IV in 1336, offer mute testimony to the continuity of Jewish craftsmanship from the ancient associations of Jewish master artisans. When the Spanish decree of expulsion was extended to Sicily on June 18, 1492, the Christian leaders of Palermo and other cities protested that "in this realm almost all the artisans are Jews. If all of them will suddenly depart there will be a shortage of many commodities, for the Christians are accustomed to receive from them many mechanical objects, particularly iron works needed both for the shoeing of animals and for cultivating the soil; also the necessary supplies for ships, gal-

leys, and other maritime vessels.” In the north, of course, there was no opportunity for Jews to organize guilds of their own, whereas the Christian guilds in their constant drive for monopolistic control of their trades and political power in their municipalities not only sought to suppress Jewish competition but, if possible, to get rid of the Jews completely.

At the same time Jewish commercial activities played an ever-increasing role in Western Europe. There are relatively few records of Jewish \*peddlers. Apart from the insecurity of roads in most European countries, aggravated by the hostility toward Jews on the part of many peasants and town-folk – even hostile legislators often freed Jews from wearing their badges on journeys for this reason – the majority of the villeins had little cash available to purchase goods from itinerant merchants. Most of their needs were provided for by their own agricultural production and the home work of their wives and daughters in spinning, weaving, and tailoring. With the growth of the urban centers, Jewish shopkeepers increased in number wherever Jews were tolerated at all. Of course, there was a constant struggle with the growing burghers’ class which wanted to monopolize whatever trade was available locally or regionally. In many cities these commercial rivals sooner or later succeeded in ousting Jews completely and even in obtaining from the royal power, whose self-interest dictated protection of Jewish tradesmen, special privileges *de non tolerandis Judaeis*. In England, for instance, where Henry III’s exorbitant fiscal exploitation depended on the presence of a prosperous Jewry, there was a wave of such enactments in favor of many cities in the 1230s and 1240s. In many continental localities the law restricted Jewish shopkeeping to the Jewish quarter and often forced the Jewish merchants to abstain from displaying their wares on Sundays and Christian holidays – a major burden indeed for observant Jewish shopkeepers who kept their stores closed on the Sabbath and Jewish festivals. Nevertheless economic necessity forced Jews to use all means at their disposal to earn a living from merchandising.

Jewish international trade, which in the Carolingian age had been a major incentive for Christian regimes to invite Jewish settlers, later suffered greatly from the competition of the Italian merchant republics, the prevalence of Mediterranean piracy, highway robbery on land routes, discriminatory tolls at the multitude of feudal boundaries, and special Jewish taxation. Nevertheless, many rulers still tried to maintain freedom of movement and trading for their Jewish “serfs.” The major imperial privileges for German Jewry often repeated, with minor variations, the provision in the 1090 privilege for the Jews of Speyer given by Emperor Henry IV: that they “should have the freedom to trade their goods in just exchange with any persons, and that they may freely and peacefully travel within the confines of Our kingdom, exercise their commerce and trade, buy and sell, and no one shall exact from them any toll or impost, public or private” (Aronius, *Regesten*, 71ff., no. 170, etc.). Similar sweeping provisions were enacted by John of England in 1201 and other monarchs (J.M. Rigg, *Select Pleas*, 2). In practice Jews often suffered from attacks and despo-

liation by local barons and arbitrary officials, this was the effect of the poorly organized governmental systems in most European countries rather than of the rulers’ intent. In this respect Jews had plenty of fellow sufferers among their gentile competitors.

International fairs in particular (see \*Markets and Fairs) offered many opportunities for Jewish traders to profitably exchange goods with other merchants, Jewish and non-Jewish. Even in the less hospitable northern lands they played a considerable role in the famous Champagne fairs and those of Cologne. When in the last three medieval centuries most of these fairs lost their international character and catered more to regional needs, Jews still appeared as welcome visitors even in areas from which they were generally barred. They enjoyed the special protective devices developed by many communities seeking to attract foreign trade without discriminating among the visitors according to their faith or country of origin. One important concession generally granted at fairs was the suspension of the group responsibility of merchants of the same origin for each other’s misdeeds or insolvency. Such mutual responsibility affected non-Jewish burghers as well as Jews, but the process of generalization in blaming all Jews for the misconduct of any coreligionist was generally much more prevalent. Even in Mediterranean commerce, where group responsibility was less strongly stressed, Pedro III of Aragon felt obliged to intervene in 1280 on behalf of many Jewish Levant traders, when one of their coreligionists, Isaac Cap of Barcelona, had been accused of unethical business dealings in the Middle East. The main argument advanced by the king in his epistle addressed to the Templars and Hospitalers in Jerusalem, the consuls of Pisa and Venice, and the representative of the king of Cyprus was not that other Jews should not be held responsible for Cap’s actions, but that Cap had long since left Aragon. It so happened that in time Cap was able to return to Barcelona, settle his debts, and again become an honored member of his community.

Another major concession to Jewish traders was the acceptance by many regimes of the prevailing Jewish practice in respect to the so-called law of concealment. In the talmudic age the rabbis had already come to the conclusion that a merchant who had unwittingly acquired some stolen object was not to suffer complete loss in returning that object to its legitimate owner. They provided, “for the benefit of the market,” that if the acquisition was proved to have been made in good faith, the owner had to compensate the merchant to the full amount of his investment. The more primitive Teuton laws, which dominated many European legislative systems, had made no such provisions in favor of the bona fide merchant. Jews, especially in areas where they were largely restricted to dealing in secondhand merchandise or lending on used pledges, could not carefully investigate the title of each seller or borrower. At times fraudulent borrowers might actually scheme to offer, through impecunious intermediaries, pledges for loans and subsequently as owners reclaim these objects without paying their debts. There were antecedents for such protection of le-

gitimate merchants in other laws. Yet Jewish traders were in the vanguard of those clamoring for redress. Ultimately, this provision, which German antisemites often denounced as a *Hehlerecht* (privilege for “fences”), became a widely accepted principle in most modern mercantile laws.

Despite these and other legal safeguards, the general insecurity of Jewish life affected the Jewish merchants as well. A remarkable illustration is offered by the business ledgers kept during the years 1300–18 by the important mercantile firm of Héliot (Elijah) of Vesoul in Franche-Comté. These extant ledgers reveal both the firm’s effective method of bookkeeping and its far-flung business interests. Principally a banking establishment endowed with vast resources, it also bought and sold merchandise of all kinds either through *commendata* agreements with Christian or Jewish traders, or by direct shipment of its own. It dealt in cloth, linen, and wine produced in its own vineyards. Héliot also served as a tax collector for the government. Characteristically, the ledgers also include entries relating to horses and carriages used by members of the firm for business travel as far as Germany and Flanders. Héliot was also very precise in delivering the ecclesiastical tithes to the churches, notwithstanding scruples he may have had in thus contributing to the upkeep of non-Jewish religious institutions. His career was cut short, however, when in 1322 Philip the Tall extended his decree of expulsion of the Jews from France to Burgundy as well. Two years later Héliot’s house was given away to a lady-in-waiting of the queen.

In spite of all these difficulties Jewish commerce, particularly in the more friendly Mediterranean lands, frequently flourished and became another mainstay of the Jewish economy. In the 12<sup>th</sup> century a German rabbi, Eliezer b. Nathan, could assert that “nowadays we are living on commerce only” (*Sefer Even ha-Ezer* (Prague, 1610), 53d no. 295).

Commerce included money trade in its various ramifications, particularly moneylending. Because of their general insecurity and frequently enforced mobility, Jews under Christendom were not good risks for deposits. Unlike the Jews under Islam, they could not compete with the stability of deposits in churches or such major banks as the Banco di San Giorgio in 12<sup>th</sup>-century Genoa. Their rabbis, therefore, fell back on the talmudic regulation that treasures should be buried in the soil, which was not always feasible in the crowded Jewish quarters. Burying them out of town subjected the owner to the risk of some stranger accidentally discovering the place of burial and appropriating the treasure trove. Moreover, even accumulations of savings by Jewish communal bodies were subject to seizure by unfriendly rulers. In 1336 King John of Bohemia not only confiscated the communal “treasure trove” kept in the old synagogue of Prague but also fined the Bohemian elders for concealing its presence from him. Minting could occasionally help support a Jewish individual, especially in backward areas. But generally the manufacture of coins was a governmental enterprise, even if exercised by some local baron or city council (there were, indeed, many kinds of coins and even scrip circulated by such local rulers).

On the other hand, coin clipping, whether for the purpose of reminting or for that of using the gold or silver in the fabrication of some industrial objects, was considered a major crime if indulged in by private individuals, although it was accepted as a perfectly legitimate performance on the part of governments. One such accusation of coin clipping, real or alleged, supposedly resulted in 1278–79 in the execution of 293 English Jews and was partially responsible for the decree of expulsion of 1290 (H.G. Richardson, *English Jewry*, 218ff.). Finally, notwithstanding the great variety of coins in circulation, money changing likewise seems to have been only a minor sideline of Jewish banking, if we are to judge from the paucity of references thereto in the extant sources.

Moneylending, however, increasingly became the lifeblood of the Jewish economy at large. It was abetted by the increasing Christian prohibition on usury which was broadly defined by Richard, son of Nigel, as “receiving, like the Jews, more than we have lent of the same substance by virtue of a contract” (*Dialogus de Scaccario*, trans. by C. Johnson, 99f.). It was an uphill struggle for the Church because, down to the 12<sup>th</sup> century, the clergy themselves often indulged in moneylending on interest, a practice surreptitiously pursued by some priests even later. Jews also encountered stiff competition from Lombards and Cahorsins, often styled the papal usurers for their major services in transferring ecclesiastical dues to Rome. However, Jews had the advantage of being able openly to engage in this legally obnoxious business; as a matter of fact they did it as a rule with considerable governmental support.

In fact, kings considered Jewish gains via moneylending as an increase of their own resources. This was basically the meaning of “belong to the imperial chamber,” a stereotype phrase referring to Jews found in many imperial privileges in German, implying that the Jews were the “king’s treasure,” as they were designated in Spanish decrees. When in 1253 Elias of Chippenham left England and took along his own bonds, Henry III prosecuted him because he had “thievishly carried off Our proper chattels.” This nexus did not escape the attention of hostile observers who often blamed the princes for the excesses of their Jewish usurers. In his letter of 1208 to the count of Nevers the powerful Pope Innocent III complained that while certain princes “themselves are ashamed to exact usury, they receive Jews into their hamlets [*villis*] and towns and appoint them their agents for the collection of usury” (S. Grayzel, *The Church and the Jews in the 13<sup>th</sup> Century*, 126f.). Although in a special pamphlet *De regimine judaeorum* Thomas Aquinas tried to appease the conscience of Princess Aleyde (or Margaret) of Brabant for deriving benefits from Jewish taxation largely originating from usurious income, one of his most distinguished commentators, Cardinal Tommaso Vio Cajetan, sweepingly declared that “the gain accruing to a prince from a usurer’s revenue makes him an accessory to the crime.” The better to control Jewish revenues, the English administration introduced in 1194 the system of public chests (\**archae*) into which all bonds had to be deposited, supposedly to avoid con-

troveries between lenders and debtors. Philip II in France tried in 1206 and 1218 to emulate the English example, as did Alfonso IV of Aragon in 1333, and in a somewhat different way Alfonso XI of Castile in 1348. But outside of England this system broke down, apparently because neither lenders nor debtors wished to comply. In any case, the Protestant clergy of Hesse was not wrong when, in its memorandum of 1538 to the landgrave, it compared the role of Jewish moneylending with that of a sponge, used by the rulers to suck up the wealth of the population via usury ultimately to be squeezed dry by the treasury.

Despite all opposition, Jewish moneylending was an imperative necessity in many areas. Because of the prevailing high rates of interest it also was a lucrative business. Emperor Frederick II's Sicilian constitution of Melfi of 1231 restricting the permissible interest rate to 10% remained a dead letter even in his own kingdom. Somewhat more effective were the maximum rates of 20% set by certain Aragonese kings and Italian republics. But for the most part the accepted rates ranged between 33⅓ and 43⅓%, although sometimes they went up to double and treble those percentages, or more. Upon their readmission to France in 1359–60, Jews were specifically allowed to charge up to 86⅔%. Even some Silesian princes are recorded to have paid 54% to their Jewish moneylenders. In the case of the innumerable small loans by petty pawnbrokers, these high rates were justified by the lenders' overhead in receiving weekly interest payments, slow amortization, and much bookkeeping. But the Lombards who, for the most part, dealt in large credit transactions nevertheless likewise charged what the trade could bear.

So long as the economy was on the upswing the resentment against these high rates of interest was moderate. But when the European economy entered a period of deceleration in the late 13<sup>th</sup> century, further aggravated by recurrent famines and pestilences, such exorbitant charges, though economically doubly justified because of the increased risks, created widespread hostility. They were an important factor in the growing intolerance aimed at the English, French, and German Jews. Of course, expelling the Jews from the country, as England did in 1290 and France in 1306, merely meant replacing one set of moneylenders by another. Christian creditors, as a rule, charged even higher rates, partly to compensate for the increased opprobrium and sinfulness connected with their trade. As a result, Philip IV's successor, Louis X, in 1315 revoked the decree of expulsion and called the Jews back to the country as he claimed, in response to "the clamor of the people." Yet when the Jews returned under the royal pledge that they would be tolerated for at least 12 years, the popular outcry became so vehement that Philip the Tall broke his predecessor's promise and banished the Jews again in 1322. At the same time in neighboring Italy, where the grandeur of the Florentine and Genoese bankers was on the decline, Jews began to be invited by various republics to settle in their midst and to provide credit "to the needy population." These *condottas*, resembling formal treaties between the govern-

ments and groups of Jewish bankers, extended to the latter a variety of privileges for specified periods of time, subject to renewals. The city of Reggio (Emilia) went so far as to guarantee to the incoming Jewish bankers that, if they ever were to sustain losses from a popular riot, the city would fully indemnify them. This significant chapter in Jewish economic history, however, began drawing to a close in the latter part of the 15<sup>th</sup> century on account of the emergence of the new, rivaling institution of *monti di pietà*. These charitable loan banks were supposed to extend credit to the poor without any interest and thus make Jews wholly expendable. In itself this was a laudable idea and spread quickly into countries such as France from which Jews had long disappeared. At times the *monti* were supported by Jewish bankers themselves (for instance, by Isaac b. Jehiel of Pisa). But most of them assumed from the outset a strongly antisemitic character. They were propagated by outspoken anti-Jewish agitators and rabble rousers, especially \*Bernardino da Feltre. Only in Venice, which refused admission to Da Feltre, did the Serenissima reach a compromise with the Jews by persuading them to establish the so-called *banchi del ghetto* which, financed entirely by Jews, were to serve an exclusively Christian clientele at nominal rates of interest. These institutions lasted until the emancipation era when, upon the entry of the French army into Venice in 1797, the Jewish community voluntarily transferred the assets of its five banks to the new republic.

Connected in many ways with banking was Jewish public service. As under Islam, the Christian rulers could not scrupulously adhere to the demands of their religious leaders to keep "infidels" out of any public office lest they exercise dominion over the faithful. Governments often had to rely on the religious minorities to provide fiscal experts whose specific experiences as taxpayers as well as businessmen could be put to good use by the treasuries for tax collection and necessary cash advances. In his petition to Alfonso IV of Aragon (before 1335), requesting the king's assistance in the collection of loans from Hospitalers, the Navarrese Jewish banker, Ezmel b. Juceph de Ablitas, boasted that Alfonso "had never received so great a service from either a Christian or a Jew as you have received from me at a single stroke" (M. Kayserling, "Das Handelshaus Ezmel in Tudela," in: *Jahrbuch fuer Israeliten*, 1860, 40–44).

Most widespread was the Jewish contribution to tax farming. The medieval regimes, as a rule, aided by only small, inefficient, and unreliable bureaucracies, often preferred to delegate tax collection to private entrepreneurs who, for a specified lump sum they paid the treasury, were prepared to exact the payments due from the taxpayers. Of course, the risks of undercollection were, as a rule, more than made up by considerable surpluses obtained, if need be, by ruthless methods. So indispensable were the Spanish Jewish tax farmers that the Catholic Monarchs signed such four-year contracts with Jewish entrepreneurs as late as 1491, only a year before the expulsion. Among their most prominent collectors was Abraham Senear, officially the "rabbi of the court" or chief rabbi

of Castilian Jewry, and Don Isaac b. Judah \*Abrabanel. In the early days of the Christian reconquest, the services of able Jewish financiers and administrators were even more indispensable. Members of the Cavalleria and Ravaya families were particularly prominent in 13<sup>th</sup>-century Aragon. For one example, Judah b. Labi de la Cavalleria served from 1257 on as bailiff of Saragossa, from 1260 on as chief treasurer to whom all royal bailiffs had to submit regular accounts, and finally in 1275 also as governor of Valencia. Jews were also active in diplomatic service, for which their familiarity with various lands and languages made them especially qualified. In vain did Pope Honorius II address a circular letter to the kings of Aragon, Castile, Navarre, and Portugal, warning them against dispatching to Muslim courts Jewish envoys who were likely to reveal state secrets to the Muslim enemies, since "you cannot expect faithfulness from infidels." Yet his successor, Gregory IX, generally even more insistent on the observance of all canonical provisions, conceded in 1231 and 1239 that the Portuguese and Hungarian monarchs had no workable alternative.

In other countries Jews exerted political influence more indirectly. Even in some antagonistic German principalities of the 14<sup>th</sup> and 15<sup>th</sup> centuries some Jews were called upon to provide the necessary funds for raising mercenary forces as well as to supply them with food, clothing, and other necessities. Such a combination of large-scale financing and contracting was performed, for example, by a Jewish banker, Jacob Daniels, and his son Michael for the archbishop-elect Baldwin of Trier in 1336–45. This adumbration of the future role of \*Court Jews in helping build up the modern German principality was cut short, however, by the recurrent waves of intolerance which swept Germany in the last medieval centuries and resulted in the expulsion of the Jews from most German areas.

### Economic Doctrines

Notwithstanding these constant changes in the Jewish economic structure and the vital role played by the Jewish economic contributions for the general society, no ancient or medieval Jewish scholar devoted himself to the detailed interpretation of these economic facts and trends. No Jew wrote economic tracts even of the rather primitive kind current in Hellenistic and early Muslim letters. All Jewish rationales must therefore be deduced indirectly from the legal teachings. Even Maimonides who, in his classification of sciences, recognized the existence of a branch of science styled domestic economy, or rather the "government of the household" (a literal translation of the Greek *oikonomia*), did not feel prompted to produce a special monograph on the general or Jewish economic life. Speaking more broadly of political science which included that branch of learning, he declared: "On all these matters philosophers have written books which have been translated into Arabic, and perhaps those that have not been translated are even more numerous. But nowadays we no longer require all this, namely the statutes and laws, since man's conduct is [determined] by the divine regulations" (*Treatise on Logic [Millot ha-Higgayon]*, Arabic text, with Hebrew and

English translations, by Israel Efros, 1937, 18f.). In consonance with this conception, the great codifier devoted the last three sections of his *Mishneh Torah* to economic matters regulated by civil law. He also often referred to economic aspects in the other 11 books, following therein the example of both Bible and Talmud. None of these normative sources, however, which always emphasized what ought to be rather than what is or was, can satisfactorily fill the lacuna created by the absence of dispassionate analytical, theoretical, and historical economic studies. From the outset we must, therefore, take account of the idealistic slant of our entire documentation. The emphasis upon ethics and psychology far outweighs that of realistic conceptualism. Only indirectly, through the use of the extant subsidiary factual source material, can we balance that normative slant by some realistic considerations.

Typical of such idealistic approaches is the biblical legislation. For example, the commandment of a year of fallowness may have resulted from the practical observation that land under constant cultivation was bound to deteriorate and to yield progressively less produce. Similar experiences led other agricultural systems to adopt the rotation of crops and other methods. But there is no hint to such a realistic objective in the biblical rationales. The old Book of the Covenant justifies the commandment by stating that in this way "the poor of the people may eat" (Ex. 23:11). The more religiously oriented Book of Leviticus, on the other hand, lays primary stress on the land keeping "a Sabbath unto the Lord" (25:2) so that it provide "solemn" rest for servants, foreign settlers, and even cattle. Similarly, the Jubilee Year was conceived as a measure of restoring the landed property to the original clan, envisaging a more or less static agricultural economy, at variance with the constantly changing realities of the then increasingly dominant urban group. No less idealistic were the provisions for the poor, particularly widows and orphans. We also recall the extremely liberal demand that, upon manumitting his Hebrew slave, the master should also provide him with some necessities for a fresh start in life.

That these and other idealistic postulates did not represent the living practice in ancient Israel we learn from the reverberating prophetic denunciations of the oppression of the poor by the rich and other social disorders. But here again we deal with even more extravagant idealistic expectations than had been expressed by the lawgivers. In the main, the Bible reflects in part the "nomadic ideals" carried down from the patriarchal age and in part the outlook of the subsequently predominant agricultural population. But the landowning aristocracy, as well as the priesthood and royal bureaucracy often residing in Jerusalem and Samaria, and the impact of foreign relations, especially wars, shaped the actual affairs of the people to a much larger extent than normative provisions or prophetic denunciations, although the latter's long-range effects far transcended in historic importance the immediate realities.

Even the far more realistic legal compilations of the Mishnah, the Talmud, and other rabbinic letters are still in the

main ethically and psychologically oriented. This remains true for most periods of Jewish history until the emancipation era. Certain economic factors are simply taken for granted. Not even Maimonides, who tried to find rationales for many biblical rituals, considered it necessary to offer any justification for such a fundamental economic fact as private versus public ownership. There only was common agreement that good fortune is bestowed upon man by God's inscrutable will, while poverty is to be borne with patience and submission to fate. Asceticism never became a major trend in Jewish socioreligious life, although certain groups and individuals practiced it as a matter of supererogation. Similarly, the postulates of communal ownership raised by the \*Rechabites in the days of Jeremiah and the \*Essenes toward the end of the Second Temple period were only part of their rejection of alleged departures from the purity of the old law. But they remained rather ineffectual fringe movements.

At the same time the "normative" Judaism of the majority subjected private ownership to severe limitations because of ethical requirements. From the restatement by Maimonides of talmudic law, as modified by the subsequent rabbinic literature, the following categories of property clearly emerge: "(1) public property belonging to no one and accessible to everybody for free use, e.g., deserts; (2) public property belonging to a corporate group, but open to general use, e.g., highways; (3) potentially private property belonging to no one, but available for free appropriation, namely all relinquished and some lost objects; 4) private grounds belonging to the ownerless estate of a deceased proselyte, equally open to free appropriation; (5) private grounds not yet taken over by a Jew from a gentile, open to appropriation against compensation; (6) private grounds in a walled city, open to everybody's use but not to appropriation." To these must be added the "sacred property" (\**hekadesh*) of the Temple of Jerusalem, which, however, did not apply to the later synagogues; objects placed outside ordinary use or sale by ritualistic law; as well as the theoretical claim of every Jew in the world to the possession of four ells of land in Palestine. Based on the assumption that forcible deprivation of land never eliminates the rights of the real owner, the latter legal fiction was of practical significance only in connection with certain technical restrictions on the formal transfer of property.

With all their emphasis on private ownership the rabbis recognized its limitations necessary for the common good. To begin with, they did not acknowledge the riparian rights of owners, but considered four ells along all shores as belonging to the community at large. They also accepted the right of expropriation for purposes of roadbuilding, the erection of city walls, and other necessary public works. A city also had a right to banish certain odiferous trades, such as that of tanning, outside its walls. Even individuals trying to sell land had to respect the neighbors' right of preemption at the price offered by strangers. In general, referring to an old tradition going back to the agricultural economics of Palestine and Babylonia, Jewish leaders placed land outside the range

of ordinary commodities. During the very era of semicapitalistic prosperity under Islam, they still believed in the stability of land ownership as against the fluctuations in the value of any other property. Going beyond the advice of talmudic sages that prudent men should invest one-third of their funds in land, one-third in commerce, and keep one-third in ready cash, Maimonides, perhaps inspired by the severe business losses sustained by his own family on account of his brother David's shipwreck on a voyage to India, counseled his readers not to sell a field and purchase a house, or to sell a house and acquire a movable object. They should rather generously "aim to acquire wealth by converting the transitory into the permanent." The rabbis also greatly stressed the responsibility of relatives for one another, not only in such dire emergencies as the redemption of captives but they also generally taught that "a relative may prove to be extremely wicked, but he nevertheless ought to be treated with due compassion."

Other ethical and psychological criteria were employed in the rabbinic approximation of the doctrine of the just price, later extensively debated by the medieval Christian scholastics. No one questioned the community's right to supervise weights and measures. Any deficiency, if purely accidental, called for restitution, but if it was premeditated it was to be punished severely. Maimonides waxed rhetorical on this subject: "The punishment for [incorrect] measures is more drastic than the sanction on incest, because the latter is an offense against God, while the former affects a fellow man. He who denies the law concerning measures is like one who denies the Exodus from Egypt which was the beginning of this commandment" (Yad, Genevah 7:1-3, 12; 8:1, 20 with reference to BB 89b). The community also had the right as well as the duty to set maximum prices whenever conditions demanded it. Of course, under the general rabbinic doctrine of *dina de-malkhuta dina* ("the law of the kingdom is law") all market regulations by the state, including the maximum prices set by it, were to be respected by the Jews too, except when they specifically conflicted with the divinely revealed Torah. Conversely, in many areas (for instance in Majorca in 1344) the government specifically forbade the local market supervisors to interfere in any business dealings in the Jewish quarter. In any case, with their inveterate conservatism the rabbis were reluctant to accept the law of supply and demand as the determining factor in controlling prices.

A convenient psychological expedient was found in the theory of "misrepresentation" (\**ona'ah*). To prevent overcharges by sellers and, to a lesser extent, the taking of excessive advantage of an existing "buyers' market," the ancient sages had already established the principle that if the price paid for an object exceeded or was below its market value by one-sixth, the sale could be nullified by the injured party. This rabbinic doctrine of "misrepresentation," which seems to have inspired some related teachings of the Church Fathers and, through them, the Code of Justinian, could prove to be a serious obstacle under the freer economy of medieval Islam or modern Europe. An escape clause was opened by the rabbis,

however, through their emphasis on psychology. They taught that if a seller openly declared to the purchaser that he had overcharged him by so and so much and the purchaser accepted the deal, there was no redress. Also by removing such important areas as land, slaves, and commercial deeds – the latter particularly important in transferring properties from one individual to another – from the operation of this principle, the economic realities could reassert themselves without formally altering the law. The same exception facilitated barter trade. A man could trade, for example, a needle for a coat of mail if, for some psychological reason, he preferred the needle. This was particularly true in the case of jewelry where emotional preferences might well have outweighed purely market considerations.

Among the transactions also not subject to the law of “misrepresentation” was free labor. Although the economic importance of hired workers was much greater than that of slaves, there was no comprehensive labor legislation in rabbinic law (see \*Labor Law). Generally, the leaders preferred the employment of Jewish workers as a matter of ethnoreligious policy. Typical of the rabbinic attitude was Maimonides’ contention that “he who increases the number of his slaves from day to day increases sin and iniquity in the world, whereas the man who employs poor Jews in his household increases merits and religious deeds” (Yad, Mattenot Aniyyim 10:17). This doctrine implied a general right to work for Jewish laborers, just as it conversely stressed everybody’s duty to work in order to make a living. “Skin a carcass on the streets [the lowest type of labor], rather than be dependent on other people” was an old rabbinic watchword. Because of the primarily psychological interpretations, an employer could overtly arrange with a free laborer to do work which he could not impose upon a slave, since this was but a voluntary agreement on both sides. Similarly, the ancient protective regulation in the Bible that the payment of a daily worker’s wages must not be delayed overnight could be modified by mutual agreement if a labor contract extended over a longer period. On his part, the employee was obliged to do an honest piece of work and not waste any time. Following ancient precedents, however, the rabbis allowed agricultural workers to partake of some of the grapes or grain on which they were working, though not of the fruit from orchards or vegetables from truck gardens. There also were many specific regulations concerning different categories of labor, such as shepherds. Each category had its own regulations, largely derived from age-old customs prevailing in particular localities.

The most difficult problem confronting the Jewish leaders was that of moneylending on interest. From biblical times there existed the outright prohibition, “Unto thy brother thou shalt not lend upon interest” (Deut. 23:21). Once again the approach of the ancient and medieval interpreters to that passage was based on ethics and psychology rather than economics. We are told in the same verse that “unto a foreigner [or stranger] thou mayest lend upon interest,” but it did not occur to any of these interpreters to look for an economic

rationale for this distinction. Under the conditions of ancient Palestine, lending money to a fellow Israelite usually meant extending credit to a needy farmer or craftsman for whom the return of the original amount plus the prevailing high interest was an extreme hardship. At the same time the foreigner, that is, the Phoenician-Canaanite merchant, as a rule borrowed money to invest it in his business for profit. Such a productive form of credit fully justified the original lender to participate in some form or other in the profits derived by the borrower.

Instead, the interpretation was always purely moralistic, namely a demand that lending to a fellow Jew had to be purely charitable, while extending credit to a non-Jew could be a businesslike proposition. Without going to the extreme of St. Ambrose who considered lending to a stranger a legitimate hostile act against an enemy (*ubi ius belli ibi ius usurae*), nor sharing the equally extreme view of some Jewish jurists who considered the biblical phrase, *la-nokhri tashikh* a commandment: “thou shalt,” rather than “thou mayest,” lend on interest to a stranger, most rabbis followed the talmudic rule that for segregationist reasons all but well informed scholars should abstain from moneylending to gentiles altogether. Yet they admitted that many Jews could not make a living any other way. Remarkably, not even the medieval Jewish Aristotelian philosophers quoted, as did their Christian counterparts, Aristotle’s doctrine of the essential sterility of money. Whatever the theoretical justification of this point of view was, it ran counter to the daily experience of most Jewish sages that money could, in fact, earn greater increments than did land or any other movable property.

In their extremist ethico-psychological bent of mind the rabbis even outlawed such external forms of “usury” as nonmonetary gains. They taught, for example, that, unless the borrower used to do so before securing the loan, he was not entitled to greet the lender first or even to teach him the Torah. Echoing talmudic teachings Maimonides insisted that “it is forbidden for a man to appear before, or even to pass by, his debtor at a time when he knows that the latter cannot pay. He may frighten him or shame him, even if he does not ask for repayment” (Yad, Malveh ve-Loveh 1:1–3). Needless to say, only a few pietistic moneylenders could live up to these high expectations. On the other hand, economic realities, particularly in countries like medieval England, France, northern Italy, and Germany, where banking became the very economic foundation of many Jewish communities, forced the Jews to make some theoretical concessions. In his apologetic tract, *Milhemet Mitzvah* of 1245, Meir b. Simon of Narbonne argued that “divine law prohibited usury, not interest... Not only the peasant must borrow money, but also the lords, and even the great king of France... The king would have lost many fortified places, if his faithful agent, a Jew of our city, had not secured for him money at a high price” (cited by Adolph Neubauer from a manuscript in *Archives des missions scientifiques*, 3d ser., 16, 556). Addressing his own coreligionists, a German rabbi, Shalom b. Isaac Sekel, insisted that “the reason why the

Torah holds a higher place in Germany than in other countries is that the Jews here charge interest to gentiles and need not engage in a [time-consuming] occupation. On this score they have time to study the Torah. He who does not study uses his profits to support the students of the Torah" (cited by Israel Isserlein's disciple, Joseph b. Moses of Hoehstadt, in his halakhic collection, *Leket Yosher*, ed. by J. Freimann (1903–10), 1, 118f.).

Like their Muslim and Christian colleagues, the rabbis had to legitimize many practices aimed at evading the prohibition of usury. The ingenuity of businessmen and jurists invented a variety of legal instruments which, formally not reflecting borrowings, nevertheless secured sizable profits for the capitalist advancing cash to a fellow Jew. Called in Europe the *contractus trinus*, *contractus mohatrae* (the purchase of rents, and the like), these instruments were also employed by Jewish lenders with telling effect. It was also easy to circumvent the law by the purchase of bonds. Since deeds were generally exempted from the prohibition of usury and could be discounted below their nominal value, a lender could extend a profitable loan to a third party by using an intermediary. Agents, too, were entitled to charge a commission for securing credit for any borrower. Most importantly, the various forms of the *commenda* contract, which enabled a lender to appear as a silent partner in the enterprise, opened the gate very widely for "legitimate" profits by the "investor." The permission of that type of *iska* ("deal") became quite universal and served as the major instrument for credit transactions among Jews.

These examples of the rabbis' economic teachings, which can readily be multiplied, must suffice here. They give an inkling of the great power of halakhic exegesis which made it possible for scholars to read into the established texts of Bible and Talmud provisions, as well as limitations, to suit the changing needs of Jewish society. In this way the people's intellectual leaders were able to preserve a measure of continuity within a bewildering array of diverse customs and usages. At the same time ample room was left for individual opinions, which often sharply differed. Some interpretations were derived from the simple operation of juristic techniques which had an autonomous vitality of their own. However, in many cases the communal leaders, rabbinic and lay, often personally immersed in a variety of economic enterprises and thus acquiring much practical experience, consciously made interpretive alterations to reflect genuine social needs. Since the entire system of Jewish law operated through inductive reasoning on the basis of cases rather than the deduction from juristic principles, as advanced by Roman jurists and their medieval disciples, the sages of various countries and generations were able to maintain a certain unity of purpose and outlook among the different segments of the Jewish dispersion. They thus lent the Jewish economic rationales the same kind of unity within diversity that permeated the entire Jewish socioreligious outlook on life.

[Salo W. Baron]

### Early Modern Period

The variety of place, social condition, and economic development puts any review of the economic aspects of Jewish life since the end of the 15<sup>th</sup> century beyond the reach of a simple unified framework. For this variety to be seen in a meaningful way, for an analysis of the leading features of the subject, there must be some preliminary, if crude, divisions of the subject. Yet even a simple temporal division of the developments of almost 500 years is not free from difficulty. The pace and pattern of Western economic development differed markedly from country to country and from region to region, and as a matter of course the economic situation and activities of the Jews in those countries and regions differed widely also. The striking event, the momentous date, that might symbolize a qualitative change in Western economic structure is not to be found. If there is some basis for separating the early modern economic history of the Jews from the later modern developments, it must be sought in other criteria: the basic structure and leading characteristics of the economy and the goals of the society.

If we accept these criteria, it is not difficult to divide the whole period into two phases. During the first, economic development and economic policy were clearly and rigidly subordinated to noneconomic considerations of the society, and there was relatively little room for activity prompted by considerations of economic rationality as determined by the individuals concerned. In the second phase economic interests were articulated more openly and clearly, and the idea of freedom of economic activity was accepted as leading to results generally beneficial to the community as a whole. The transitional period between the two phases saw fundamental changes occurring throughout society: the legal and social framework had to be adjusted to the new demands, as symbolized by the substitution of the voluntary contract for traditional, customary relationships or for relationships hitherto determined and regulated by the usage of special privileges and governmental orders. Equality before the law was established as a principle that overrode the predominant institutionally ingrained system of legal and social inequality.

This transformation took place slowly and unevenly. Decades and even centuries apart in the various regions of Europe, the process nevertheless was continued and was accompanied by major differences in the legal status, pattern of employment, and other characteristics of the various Jewish communities at each point in time. Thus, the study of the economic aspects of Jewish life over the 500 years is basically the study of the participation of the Jews in the process of economic change and of the impact of the changing conditions upon the economic and social structure of the Jews. Even within the first period, which for reasons of convenience and convention will be called the early modern one, the conditions of the Jews living in the economically advanced regions must be distinguished from conditions in the economically less developed regions of Europe. Examples of the advanced regions are the city-states and major commercial centers of Italy and

the Low Countries; examples of less developed regions are the countries of Central and Eastern Europe.

The discussion here of the early modern period will be confined almost exclusively to Europe because most Jews lived there (although Jews of course lived within the boundaries of the Ottoman Empire, in the Middle East, and other areas). Although the variety and heterogeneity of the European situation make generalization hazardous, much of what was done in one part of the continent to the Jews was more or less emulated in other parts, because of the cultural affinities within Christian Europe.

**SEPHARDIM AND ASHKENAZIM.** The Jewish communities in Europe at the end of the 15<sup>th</sup> century were not homogeneous in the cultural sense. The two mainstreams or dominant groups were the \*Sephardim, originating from the Spanish-Portuguese Jews, and the \*Ashkenazim, originating from the French and German Jews. These two branches grew apart, especially from the time of the Crusades. By the end of the 15<sup>th</sup> and beginning of the 16<sup>th</sup> century, when the Sephardi Jews were finally expelled from the Iberian Peninsula, the two major "tribes" of European Jewry came into a much closer contact, one resulting not in integration of the two, but in tolerable coexistence and peripheral cross-cultural interchange. The intellectual impact of the Sephardim was noticeable primarily in one area, namely that of religious mysticism. In other areas the Ashkenazim excelled the Sephardim in the creative development of what could be termed Jewish culture.

In the area of economic and social activity, the difference between the Sephardim and Ashkenazim was profound. The Sephardim were on the average much more affluent, skilled, and better educated (at least in the secular sense) than the Ashkenazim. In comparison the Ashkenazim were not only less prosperous but less culturally influenced by the gentile environment and less successful in any attempts at finding an intellectual symbiosis between their own and the surrounding culture. Therefore, the elements of the resource endowment of the Sephardi Jews made them the more attractive group of the two for settlement and employment in any European country. The Sephardi Jews were able to bring into the new areas of their settlement highly developed skills and craftsmanship in the areas of luxury consumption and were therefore highly valued by the influential consumers of such products and services, by the nobility, gentry, and patricians – the ruling classes of the contemporary societies. From available direct and circumstantial evidence it becomes clear that some of the Sephardi Jews were able to transfer portions of their capital out of Spain and Portugal, and thus their settlement in an area was accompanied by a capital import. It is interesting to note that in most cases, as far as the Christian countries are concerned, the Sephardi Jews were attracted to and sought opportunities in the more economically advanced regions, areas with both developed trade and crafts and with a legal framework that did not hinder the economic activities

of a developed money economy. These were areas actively engaged in foreign commerce in which the knowledge of commodity and money markets possessed by Sephardi Jewish merchants could be profitably utilized. An additional asset of some Sephardi Jews was their knowledge gained from family and former business connections in the Iberian Peninsula and the overseas empires of Spain and Portugal. The Jewish participation in trade with Spain, Portugal, and their colonies never ceased, contrary to the myth of a worldwide Jewish boycott of the Iberian Peninsula.

**ECONOMIC ENVIRONMENT.** Thus it could be roughly assumed that the "territory" of the Sephardim, at least during the 16<sup>th</sup> and 17<sup>th</sup> centuries, was the city-states and commercial centers of Europe, while the "territory" of the Ashkenazim was the interior, the landmass or hinterland of Central and Eastern Europe.

The economy of city-states like Genoa, Venice, and Dubrovnik (Ragusa), or of commercial centers like Antwerp, Amsterdam, and Hamburg, was based on international and interregional trade and the exploitation of politically dependent territories where trade was carried on or which were administered by corporate bodies either in the form of trading companies or governmental agencies acting on behalf of organized mercantile interests. The main problem for the Jews, as for any group of outsiders, and even more so because of some peculiar restrictions or prejudices, was to gain entry into the organized institutions of economic activity, whether registered partnerships, trading companies, or later the commodity and money exchanges. It was difficult, if not impossible, for the Jews as newcomers to operate outside the institutional framework except in areas where their specialized skills or professions (such as medicine or science) would be recognized as exceptionally useful for the polity or economy. Thus, each outsider, including the Jews as individuals, had to fit into the preexisting economic structure and social fabric, upon neither of which he could expect to make any significant impact. The process by which the Jews were economically integrated in the city-states and commercial centers was therefore primarily the sum total of adjustments by individuals in these occupations and activities. Much depended on individual skill or wealth, with very limited room left for the collectivity of the Jews, the autonomous and organized Jewish community, to influence significantly the pattern of economic activity of its members.

The economic environment of the majority of the Ashkenazi Jews in the areas of Central and Eastern Europe differed from that in the city-states and in the major commercial areas. In the latter the Jews were restricted in terms of numbers, place of habitat, and areas of gainful employment, and formed almost exclusively an urban element concentrated in the major cities and confined largely to trade, some specialized skills, and money and lending operations. The situation of the Jews in Central and Eastern Europe, by contrast, can be described as characterized by both greater opportunities

and more severe constraints. The peculiar combination is a paradox of underdevelopment and discrimination, both operating simultaneously.

There is an inherent conflict in societies with a high propensity to have rigid institutional arrangements in their economic sphere, even if within the institutions there may be provisions and conditions enabling the exercise of individual initiative. This is the conflict between such a propensity for institutional stability and the need to innovate, for it is only through innovation that the economy can grow. Within such societies it is particularly difficult for newcomers, who have to be integrated and accepted, to innovate. Outsiders are often forced to follow a circuitous road and assume greater risks to achieve their objectives. An interesting case in point is presented by the penetration of the Jews into the international \*sugar trade. Apparently finding it initially difficult to enter via trade activity, Jews of Amsterdam entered the sugar plantation business in Brazil, Surinam, and the West Indies. The result was beneficial for many parties: for Amsterdam, a widening of its foreign trade; for the Jews, entrance into sugar production and sugar trade; for Europe, presumably a decrease in the price of sugar as a result of a rapid increase in supply.

In the predominantly agrarian economies of this period, a very large sector of the population was on a subsistence level and for all practical purposes outside the exchange and money economy. The money economy included the court, the nobility, gentry, and the urban classes, but only to a very limited extent the majority of the rural population, the peasants or serfs. While the areas of traditional or routine economic activity were circumscribed and regulated to an extent that made it virtually impossible for the Jews to enter the established institutions, there was a relatively wide spectrum of activities that were not institutionalized or controlled and that broadened the market or money economy. This presented a range of opportunities for individuals who possessed or were forced to have a lesser-than-average risk aversion for activities in which returns proved to be higher and for whom accordingly the returns could be higher than average.

The Jews suffered from discriminatory legislation; very seldom did their legal or social status as individuals depend upon their individual skills or the size of their personal wealth. There was no institutional arrangement by which a Jew could be integrated into his economic class or professional group. In a sense, he was the eternal outsider regardless of the economic function he performed, operating under conditions of discrimination and extreme uncertainty, dependent upon the arbitrary decisions of the rulers, and paying a high price (in the form of high taxes, bribes, ransom, etc.) for his right to be employed. Thus with the environmental conditions differing between the more advanced and less advanced countries, the ranges of opportunities and the areas of economic activity of the Jews differed, which in turn influenced the patterns of utilization of their resource endowment and their social structure.

**JEWISH MIGRATION.** One of the chief characteristics of Jewish economic activities in Europe during the early modern period was the relative (for this period) mobility of both capital and labor of the Jews. Even if we could consider exclusively voluntary mobility, the two other outstanding groups, the Italians and the Dutch, are in quite a different class when compared with the Jews. Thus, the migration phenomenon can be considered as one of the most significant dynamic elements of the economic and social history of the Jews. Jewish migration from the end of the 15<sup>th</sup> century was from Western to Central and Eastern Europe; this continued as the main vector until the second half of the 19<sup>th</sup> century. The eastward movement overshadowed in its intensity the "return" of the Jews to the countries of Western Europe from which they were exiled in the earlier centuries and to which they gradually returned between the 17<sup>th</sup> and 19<sup>th</sup> centuries.

The process of migration did not take the form of an even, continuous flow but proceeded through spurts and movements differing in intensity, with interruptions, reversals, and resumptions that defied regularity. It is also difficult to ascertain, apart from the general vector of the migration movement and the main routes, the average distances and time periods of the earlier phases of the migration. For the Sephardi Jews two general directions can be established: one from the Iberian Peninsula to the areas adjacent to the Mediterranean toward Italy, the Balkans, and Asian Turkey; the other toward southern France, the Netherlands, Hamburg, and England. For the Ashkenazim the direction of migration was from Western Germany over Austria toward Bohemia and Hungary, with another branch through Bohemia leading toward Poland, Lithuania, Belorussia, and the Ukraine, while the Jewish population of eastern and northern Germany consisted of primarily Austrian and Bohemian Jews and to a lesser extent of western German Jews. Many aspects of Jewish migration still await thorough investigation. Nevertheless, certain generalizations can be made on the basis of available evidence:

(1) By and large the eastward migration was in fact a movement of labor and capital from more highly developed to less economically developed countries and regions, from areas of greater availability of skilled labor and capital to areas of greater scarcity of these factors of production.

(2) The mobility of labor and capital and thereby the migration process was facilitated not only by religious identity but also by the cultural affinity of common customs and language, by the availability of established and organized Jewish communities not far from the destination of the migration route, and by the relatively high level of liquidity of capital on the part of capital owners.

(3) The significance of the migration process for the economy of the Jews was due to a large extent to the fact that through migration and mobility a more remunerative distribution of human and capital resources could be achieved over a large territory, while both cultural and economic intercourse

could be maintained thanks to the continuing ties between the older and newer communities.

(4) Some of the benefits of the process of mobility accruing to the Jewish communities were congruent with the benefits to the economies of countries that absorbed the Jewish migrants, namely the import of skilled labor and capital resources to meet a strong demand.

(5) The migration process of the Jews in the eastward direction, although caused to a very large extent by economic considerations, even by the differential of economic well-being or differences in the rates of return to skills, had significant effects in other areas as well. It became a part of the "strategy for survival" either in cases of mass expulsions and exile or under conditions of a clear worsening of the legal status. Moreover, the absence of effective internal barriers supported the prevailing notion of a single, general Jewish community in Central and Eastern Europe. Leading schools drew students from far afield; famous scholars and rabbis were not bound to a particular locale; mystics and messianic claimants attracted multitudes from all over the continent.

The first reversal of the direction on a larger scale in the eastward migration took place around the middle of the 17<sup>th</sup> century during the times of the \*Chmielnicki massacres in the Ukraine, the Swedish and Muscovite invasions of Poland, and the subsequent worsening of the economic situation there. The flow of refugees from Eastern Europe reached western Germany and even the Netherlands. From the middle of the 18<sup>th</sup> century, there was a small but continuous flow of Central and Eastern European Jews trying to settle in Western Europe and North America. But this early ebb of migration had a minimal effect upon the economic life of the communities that they left or the ones that they joined. It only indicated that change was possible if not imminent.

**PATTERNS OF EMPLOYMENT.** Any systematic insight into the economic activities of the Jewish population in Europe during this period requires an examination of the patterns of employment. If the chief economic characteristic of Jewish migration was the movement from more developed to less developed countries one would expect the Jews to be employed primarily not in areas of an abundant labor supply but in the economic sectors with a scarcity of labor and capital, namely trade and highly skilled crafts. Only when the employment in such areas had reached a level of saturation or was encountering barriers would we expect the migrants to turn to less remunerative employment. The great majority of the Jews was employed in sectors of the economy that were directly connected with the market. Very few operated outside the exchange and money economy, while most derived their incomes from the production and sales of goods and services. It is true that the markets differed, but it is important to bear in mind that the market psychology affected the activities of the great majority. It is therefore appropriate to begin the review of the patterns of employment with the type of employment and activity most intimately connected with the

organized markets and also yielding the highest returns. The "big business" of that period was carried on by a small group of enterprising individuals who either combined or fulfilled separately the functions of wholesale merchants, bankers, and industrial entrepreneurs. Such individuals in the economically advanced countries acted mostly in their private capacity, in the economically backward countries mostly in conjunction with the government, and were termed \*Court Jews.

It is impossible to measure directly the volume of international trade carried on by Jewish wholesale merchants from the 16<sup>th</sup> to the 18<sup>th</sup> century, or the share of Jewish trade in the countries they inhabited, or even the share of these countries in the total volume of international trade. Such data are not as yet available, but it should be clear that, for example, a 10% share in the Dutch trade would probably be more than a 50% share in Poland's international trade, because of the relative sizes of the trade volume of the two countries. Direct and indirect evidence indicates that the Jews were involved in the trade of precious metals, the colonial trade, and trade of products possessing a high value per unit. Only later, with the improvement of shipping technology and cheapening of transportation costs, did Jews enter the trade in grain and other bulk products, thus expanding the trade with the agrarian economies of Central and Eastern Europe.

As bankers and bill brokers in the economically developed countries, their operations did not differ from others of the profession. The two advantages that they might have possessed over some of their competitors were their ability to transfer money rapidly from one locality to another, as they had either family or business connections with members of other Jewish communities, and the extension of credits by using the savings deposited with them by members of the community. Jewish bankers' preference for short-term over long-term credit could perhaps be explained by the desire for a quicker turnover of their capital and the unwillingness to accept land or real estate as security for loans outstanding. Industrial entrepreneurship of the Jews in the developed areas was due to the availability of technical skills and business expertise in a number of craft and industry branches that the incoming Jews had brought with them.

In the less developed countries the Court Jews played a significant role, and the gradual transformation of their functions reflected the economic development of such countries as well as the contribution such individuals made to the development process. The shortage of money and the low credit standing of most European rulers and their governments were notorious. Accordingly, the initial role of the Court Jews, as the title implies, was to serve the rulers in a double capacity, as lenders of money and as suppliers of precious metals to the mint, precious stones, and other luxury items for consumption of the court. The form of payment and security given were often tax farming, toll collection, and other privileges that provided for the principal and interest of the transaction. Thus the Court Jews not only provided credit for the rulers but also performed functions in the revenue collection of the

states. Two major factors contributed to the transformation of the nature of the service of the Court Jews. The first were the wars of the 17<sup>th</sup> and 18<sup>th</sup> centuries which called not only for greater monetary outlays and thus expanding demand for credits, but also for the organizational talent to supply the numerous armies in the field with weapons, ammunition, clothing, food, and fodder. The need to contract and pay for, and to deliver large bulks of necessary supplies at great distance, called for new and substantial organizational talents. The Court Jews performed well when requested to carry out the above tasks, and in the process of doing so gained new knowledge in large-scale operations requiring greater efficiency in mobilizing vast resources in relatively backward economies. In so doing the Court Jews were assisting the political interests of the rulers or of the state.

Another factor contributing to the transformation of their service was the entry of the Jews into the ranks of industrial entrepreneurs. The setting-up of mining and manufacturing industries in the economically backward countries was not a market response to a demand for such products. It was in most cases either a direct result of government action or an indirectly induced development as a result of a conscious government policy. Government policies in those countries pursued two goals: first, to develop armament industries to strengthen the countries militarily and politically in their struggles for hegemony or for the restoration of a power balance in Europe; secondly, to develop industry branches that produced import-substitutes, which meant primarily products used by the wealthy upper classes of society. The military needs on the one hand and the maintenance of a positive balance of payments on the other were mainly responsible for the state initiative and support given to early mining and manufacturing industries. Given the government financial or tax support for the industrial establishments, the critical factors were skilled labor and entrepreneurial and managerial talents. In providing technical skills the contribution of the Jews was probably inferior to the possibilities of importing skills from the advanced countries, so the primary area of their contribution, by no means exclusively Jewish, was that of entrepreneurial and managerial talent. Their previous experience in large-scale banking, military contracting, etc., provided the necessary background. The involvement in previous services for the state gave them the knowledge and political connections necessary for obtaining licenses, privileges, and often the labor force for the budding industrial enterprises. Thus the former Court Jew became an industrial entrepreneur, continuing social innovation, creating new types of economic organization, and helping to break old patterns and traditional systems. The economic significance for the Jewish community of this group of wholesale merchants, bankers, and industrial entrepreneurs consisted not only in their role in the accumulation of capital, but also and primarily in their collective role in creating employment opportunities for other Jews. The relatively large-scale operations of this entrepreneurial class gave rise to a demand for services that could be performed by

other members of the community. For example, in such enterprises as supply-contracting, a system of subcontracting was established that provided income for a relatively large number of smaller-scale merchants, and even the administration of large landed estates provided employment for many innkeepers, alcohol distillers, and other self-employed members of the Jewish community.

A second area of employment, which was represented by a massive participation of the members of the Jewish community, was that of smaller-scale and retail trade and of commercial intermediaries operating with limited capital resources, in many cases not their own. In the economically more advanced centers the economic activities of this employment group were rather specialized, with heavy concentration in limited areas of the retail trade and specialized services as commercial and financial intermediaries. Here too their activities were limited by the existing institutional structure of the commercial centers. In order to compete with the more established firms or individuals, the Jewish merchants tried to deviate from the standards of goods being marketed and provided a greater variety in terms of quality for a broader range of prices. The economic effect of such – for that period – unorthodox behavior was a broadening of the market and an increase in the number of consumers attracted by a wider range of quality. In the less advanced economies of that period, the Jewish merchants had to overcome both the power of the urban guilds and the customary location of actual markets in the cities. Therefore a major area of the trade of the Jewish merchants consisted in reaching the social circle beyond the orbit of the exchange economy, the peasants. The merchants sought out the areas of a marketable surplus of agricultural products. By increasing the size of shipments from the outlying areas it was possible to decrease the costs of transportation that previously had made it unprofitable to bring these products to market.

A number of varied and interesting phenomena attended this Jewish mercantile activity. First, through their penetration of the rural areas Jewish merchants and peddlers supplied both the manor and the peasant huts with manufactured goods that were in demand, and simultaneously collected the marketable surplus of grains, flax, wool, and livestock. This two-way trade enabled the Jews to compete relatively successfully with the local merchants who conducted their trade at fixed points, primarily in the cities, and were relatively protected by their status as city dwellers and merchants. Secondly, the penetration of Jewish peddlers and merchants into the countryside enabled them to organize early, still primitive forms of a putting-out system, making use of and helping in the further development of cottage industries in the rural areas, and thus organizing and supporting a form of production in competition with the urban crafts controlled and protected by the city guilds (see \*Peddling). Thirdly, the employment of Jews in innkeeping, alcohol distilling, and livestock production in the rural areas helped further to inject into the agricultural sector the elements of an exchange and money economy. The result of the activity of the Jewish small merchants in the rural areas

was to encourage the production of an agricultural surplus, to stimulate the consumption of nonagricultural goods, and to foster the alienation of some part of the former agricultural labor force from the land and to channel it into the cottage industries and into transportation services, thus helping to create a nonagricultural labor force in the rural areas that depended upon wages rather than upon returns from land.

The second largest employment group within the Jewish community was that of the artisans. Given the limited size of the market and the degree of organization of the craft guilds, the Jewish artisans faced a constant struggle for the right to compete. Since they were refused admittance to the craft guilds, they suffered from the constraints imposed on non-members of the guilds and at best could count on a compromise that would allow them to continue their activity at the price of compensatory payments to the guilds. The alternative was to be restricted to the very narrow market for craft production provided by the Jewish community. Faced with this choice, the Jewish artisans accepted the conditions of higher costs of production, including the payment of compensation to the guilds, until such time as the burden of discrimination could be lessened or alternative arrangements could create new opportunities. The range of Jewish crafts was very wide, beginning with highly specialized gold- and silversmiths and jewelers, ranging to masons, carpenters, and blacksmiths, but with a heavy concentration in the clothing crafts like tailoring, cap-making, furriery, and shoemaking. This concentration indicates a reliance upon a mass market. Through this orientation toward an expanding market the survival of Jewish artisans was guaranteed and new arrangements for production and marketing were developed. The new arrangements took the form of what amounts to a putting-out system organized by Jewish merchants who provided the artisans with raw materials and occasionally with advance payments for their work. Thus, the artisans were converted almost into wage laborers. The arrangement, however, freed them from the necessity of having their own or borrowed capital tied up in stocks of raw material or finished goods and also from involvement in the process of distribution, these functions being performed by the merchants. From the end of the 16<sup>th</sup> century the artisans started to organize Jewish craft guilds. Although there is still much debate about the actual effectiveness of these Jewish guild activities, there is no doubt that their establishment was a response to a deeply felt need for collective action and for articulating their interests at least within the Jewish communities. Under such arrangements Jewish artisans were better able to survive at least until the time when modern industry posed new threats to the positions of small crafts and the putting-out system.

A description of the various employment categories within the Jewish milieu would be incomplete if it did not note that a certain part of the economically active population was employed within the Jewish community itself. This general area of employment can be divided into two groups: (1) the occupations that served the Jewish community exclusively;

(2) those providing services for which an assured demand existed within the Jewish community but of which outsiders also could avail themselves. Among the first category were rabbis, schoolteachers, ritual slaughterers, scroll scribes, employees of the ritual bathhouse, and keepers of synagogues and cemeteries. The demand for the services of this group was determined largely by religious laws and customs and therefore was not very flexible. Among the other category were butchers, candle-makers, bookdealers, and prayer-shawl weavers. The demand for their employment could have been a joint demand since they were capable of providing services for non-Jews as well. Nevertheless the Jewish community had to sustain the costs of maintaining the bulk of their services when outside demand proved insufficient. The percentage of all these intracommunity services in the total of gainful employment varied for the particular communities according to their size; but there was less variation if the Jewish population of each of the countries was viewed as a unit. While smaller communities could have shared in some of the services that none alone could afford, the combined percentage of intracommunity employment, when standardized for size, was not much different from that of the larger communities. As a rule of thumb it would probably be correct to assume that at least 10% of total employment was devoted to the internal community services.

These various categories of employment constituted a wide spectrum within the Jewish communities and absorbed much of the energy of its members. In terms of the percentage of gainful employment or actual volume of labor input within the year they were probably greater than the average for the population at large for whom seasonality of agriculture reduced the volume of labor input. Apart from them, however, there existed a numerous group of unemployed or unemployable members of the community. It would be fair to assume that the primary responsibility for the support and maintenance of the unemployed or unemployable rested with the extended family which was the basic social unit within the community. Whenever the family was unable to provide such support, the community accepted such people as public charges. The three major ways in which the community met its responsibilities were through private charity; institutionalized voluntary associations organized for the purposes of providing assistance through institutions, such as hospitals, homes for incurables or the aged, and loan-societies; and through direct community support out of the taxation levied upon the tax-paying members. In accord with traditional beliefs, private charity was not only considered a responsibility but also an opportunity for the more prosperous members of the community. The activities of voluntary associations concerned with this type of welfare and social services prevented a full bureaucratization of functions, which would otherwise have been taken over entirely by the community authorities, and left thus much room for individual initiative and energy. Needless to say, neither private charity nor the work of the voluntary associations sufficed to meet the problem. Since the number of unemployed and unemployable also depended

upon general economic conditions, in times of relative prosperity the economy would tend to absorb the unemployed and the community would be in a better condition to support the unemployable, while the reverse was true during periods of economic decline. Thus the role of community taxation increased at times when the tax burden was already felt most heavily. Nevertheless, the communities accepted this “welfare responsibility” either out of a sense of moral obligation or in order to mitigate the social friction and conflicts that a refusal would have entailed. It is difficult to estimate the proportion of unemployed or paupers within the Jewish communities for this period, but depending upon the economic and legal conditions of the Jews, it would be no exaggeration to estimate their number as between 15 and 25%, with a secular tendency to rise since the second half of the 17<sup>th</sup> century.

It is likewise difficult to document the employment distribution within the Jewish communities for countries scattered all over the map of Europe, although there are data for separate local communities either for irregular intervals or for single years. The employment distribution for the largest Jewish community in Europe – Poland-Lithuania – in the middle of the 18<sup>th</sup> century can roughly be reconstructed. The employment distribution differed markedly among the Jews settled in the larger cities, among those inhabiting the small towns, and among those scattered in the rural areas. In addition, the peculiarity of the settlement pattern of the Jews in Poland-Lithuania during this period was the large proportion of Jews living in rural areas, about one-third of the total Jewish population. While in the rural areas leaseholding (see *\*arendas*), innkeeping, alcohol distilling, and ancillary agriculture were the main occupations, the mass of Jewish artisans inhabited the larger cities and smaller towns. The social structure which emerges from the approximate data reflects the following employment distribution of the Polish Jews by the middle of the 18<sup>th</sup> century: wholesale merchants, financiers, etc. – about 2–3%; small traders, including leaseholders and innkeepers – less than 40%; artisans and other urban wage earners – more than 33%; employed in intracommunity services – about 10%; unemployed and paupers – at least 15%. The most obvious conclusions that could be drawn from this employment distribution is that the vast majority of the Jews earned their livelihood from physical labor and that a substantial proportion of the population was either already living on charity or on the threshold of poverty.

**RESOURCE ENDOWMENT AND SOURCES OF INCOME.** The consideration of the employment distribution within the Jewish community sheds some light on the problem of the sources of Jewish income and on one particularly interesting aspect, that of resource endowment and returns to labor and capital, the factors of production. For a long time the prevailing view among historians of the period has been that capital was the more important component of the resource endowment of the Jewish community and that returns to capital were also quantitatively the more significant component of the income earned

by the Jews. Needless to say, this view was more congruent with popular images than with documentary calculations. Both progress in historical research and increased sophistication of economic analysis have led to serious questioning of this view. There is no doubt that a substantial part of the capital with which the Jews operated was borrowed from non-Jews, as evidenced by the bankruptcy of the Jewish communities in Poland during the 18<sup>th</sup> century and their large debts to the nobility and clergy. It is also increasingly clear that the return to skills in the pre-industrial period was relatively higher than was initially assumed. If first the labor income derived from the goods produced by Jewish artisans and craftsmen is calculated and then the labor component of the earning in retail trade is added, the result arrived at would be a very substantial share of the total income earned by all employed. The vast majority of the Jews during this period earned the bulk of their income from labor services. The profit rate of owners of capital could be maintained only by using capital in new areas of trade and industry, thus counteracting the secular tendency of the profit rate to decline while capital was becoming relatively more abundant. The capital earnings of the members of the Jewish community were in part used, through a process of income redistribution, to maintain intracommunity services and to aid the poorer members of the community.

The income position and income level of the Jewish community depended upon prevailing economic conditions and their changes. If the Jewish community is considered as being involved in an exchange of goods and services with the community at large, the economic well-being of the Jewish community would depend not only upon its employment composition and resource endowment, but also upon the “terms of trade” of its production of goods and services with the products for which it traded with the community at large. If, for simplicity’s sake, it is assumed that the Jews were producing manufactured goods and consuming food and raw materials, their prosperity or lack of it would depend to some extent upon the terms of trade between manufactured goods and raw materials. In fact, the income of the Jews depended upon the economic situation of the various countries and particularly upon conditions in the agrarian sector which provided the bulk of the consumers of the products and services produced and marketed by the Jews. Since the goods sold by the Jews were more sensitive to the income position of consumers and since prices tended to vary with regard to relatively small changes in the demand or supply of such goods, their income probably fluctuated even more than that of the primary product producers. At the same time the volume of consumption of the Jews was less liable to fluctuate, thus tending to underscore even more the vulnerability of their net income position.

The secular trend of the economic well-being of the Jewish community in Europe varied from country to country, making it difficult to establish a general trend that would fit all countries during identical periods. The most general trend in the economic conditions of the Jews, and one that helps to explain the historical direction of the migration process,

is the continuous improvement of their economic status and income level in Eastern Europe until the middle of the 17<sup>th</sup> century when the decline set in. About the same time, actually after the recovery following the Thirty Years' War in Germany (1618–48), a slow process of improvement of the economic conditions favorable to the Jews started in Central and Western Europe. While the 18<sup>th</sup> century reinforced the two diametrically opposed tendencies, the reversal of the migration pattern became discernible. The dependence of the Jews upon the economic conditions of the country and the particular society is self-explanatory. What is less clear, however, is the existence of significant differences in the attitude of different social groups toward the Jews behind the facade of a generalized "attitude."

ATTITUDES OF AND RELATIONS WITH THE SOCIETY AT LARGE. The pattern of economic and especially social relations between Jews and non-Jews remained almost unchanged throughout most of the early modern period. These relations were initially established to a very large extent upon the basis of the expected or actual utility of the Jews to the interests of particular social groups. The similarities and differences of economic interests of the social groups and their relative political strength played a decisive role in shaping the constraints upon the economic activity of the Jews. The following social groups might be differentiated: the crown and the nobility; the gentry; the merchants, with differentiation between the more advanced and backward countries; the craftsmen; and the peasants. From the outset it should be noted that the Jews had no economic counterpart to some of the social groups (crown and nobility, gentry, peasants) and thus no problem of economic competition could enter into the relationship. In the cases of the craftsmen and merchants, however, the problem of direct competition created almost an a priori presumption of an antagonistic relationship.

For the crown, the Jews were either a source of revenue or a vehicle of economic development in the areas of foreign trade, money and credit, and later manufacturing industry. The dependence of the Jews upon the crown allowed them to be considered both as a pliable instrument of government policies and as an important source of money income, fully compensating for the distaste or religious resentment generally felt toward the Jews. In the countries where the upper nobility shared in the power of the government, the economic convenience and money incomes from the Jews derived by the nobles employing them on the large private estates or in the discharge of the nobility's public offices rivaled the gains derived by the crown. The attitudes of the gentry toward the Jews were somewhat more ambiguous than that of the nobility. The Jews served the gentry as middlemen in the sale of their agricultural surplus and as suppliers of manufactured goods on terms more favorable than other merchants would customarily offer. In addition they often served as a source of credit for the money-hungry, debt-ridden gentry. Like the nobility, the gentry preferred in many cases to have the Jews

act as a buffer between them and the peasantry, so that for the opportunity of employment and income the Jews often assumed the role of the gentry's agent in the economic exploitation of the peasantry and in effect became the scapegoat of the justified wrath of the peasants. The presence of the Jews as a threat of competition to the urban dwellers was useful to the gentry in resisting the merchants' demands for economic and political privileges, which the gentry were loathe to give up or to share. The gentry, therefore, appeared as a defender of the Jews and of their activities as traders and craftsmen. The ambiguity in the gentry's position arose mainly in connection with their role as debtors who were quite unwilling to live up to their obligations.

With respect to the merchants, a distinction has to be made between the advanced and the economically backward countries. In the economically advanced countries, the merchants during this period had already given up many of their special privileges in exchange for the legal protection of the business contract. The existing institutions and organizational forms of trade allowed a certain degree of competition; and the merchants as a group did not feel terribly threatened by an influx of newcomers, as long as the newcomers subscribed to the generally accepted rules of business conduct, were subject to the common jurisdiction, and were contributing to the expansion of trade. Therefore, even if the Jewish merchants were not socially accepted, they were tolerated as performing the same social function as the merchants in general. In contrast, the merchants in the economically backward countries were hostile for a number of reasons: (1) the occupation of merchants was circumscribed by sets of special privileges and regulated by the guild organizations in the areas of entry, business behavior of the guild members, and the nature of the markets; (2) the merchants in those countries subscribed very strongly to the erroneous notion that there is at each point in time a given volume of business, and the admission of more people into the profession will only reduce the share everyone already enjoys; (3) the fear of competition, which might lead to a decrease of the profit rate, made the merchants hostile to newcomers in general and particularly to the Jews who were outside their jurisdiction; (4) many of the merchants in the less developed countries were themselves ethnically of foreign stock and by keeping the conspicuous Jews out they tried to mollify the popular impression that trade was almost exclusively in the hands of foreigners. Thus the merchants in such countries did their best, wherever they could, to limit the occupations of the Jews, trying to eliminate competition from the most lucrative areas of trade and from the conventional channels of trade.

The social group that felt subjectively most threatened by competition from the Jews were the artisans who relied even more than the merchants upon benefits derived from old privileges and the guild organization. They tried to augment their incomes by following monopolistic practices, by regulating entry into guilds, setting a long time period for apprenticeship, prescribing the production process in detail,

and trying to control the market. The artisan guilds in urban areas were relatively powerful, closed corporate bodies, quite effective in controlling urban crafts. As a social group the artisans had a much narrower outlook than the merchants, were much more under the influence of the Church, and resentful and suspicious of outsiders. During this period the Jewish artisans did not succeed in being incorporated into the general guilds and had to operate outside the Christian guild organization. Attempts to set up guilds of Jewish artisans were numerous and always argued for on the basis of the need for organization for successful competition or income maintenance. Needless to say, the artisans, the plebeian masses of the cities, quite often linked their struggle against competition from Jewish craftsmen and traders to the social struggle against the gentry and urban patricians. Thus anti-Jewish sentiment often accompanied particular forms of the class struggle of the urban plebeians.

The attitudes of the peasantry to the Jews did not matter in terms of the policies toward the Jews, except in cases of peasant wars and uprisings. Nor could the peasants prevent Jews from acting on behalf of the crown, gentry, and nobility. Nevertheless they affected some of the economic activities of the Jewish traders and artisans and were of importance in the social sphere since the peasants constituted the vast majority of the population. There is no doubt that in the situations in which the Jews acted as economic agents for the landowners they were strongly resented by the peasants. But even in the many instances when the Jews helped to bring the peasants into the money economy the attitude was not one of unqualified gratitude. This was due to the fact that the peasants' entry into and participation in the money economy was accompanied by rising demands for incomes on the part of both the landowners and the state at the expense of the peasants. In a sense, with peasant incomes rising, rents and taxes tended to rise accordingly. It would probably not be incorrect to conclude that in spite of tangible benefits provided for the peasants by some economic activities of the Jews, the peasants did not differentiate among the various roles played by the Jews in the rural economy. They were certainly either unable or unwilling to distinguish between different categories of Jews, a trait which they share with other social groups. The Jew was the stranger who, in the eyes of the peasants (as well as of the artisans), was suspected of undermining the traditional order. That old order was one that the peasants did not like, but they were too conservative to substitute another for it because of all the accompanying uncertainties. The Jews, in turn, especially those that settled in the rural areas, were perhaps only a notch above the peasants economically, but they were separated from the peasants by a cultural gulf that could not be bridged. Thus suspicion on the one side was reciprocated by contempt from the other.

**ROLE OF THE JEWISH COMMUNITY ORGANIZATION.** To the extent that the relations between some groups of the general community and various social groups within the Jewish

community appeared to the contemporaries as antagonistic, and to the extent that the legal framework and policies of many European states were discriminatory, there existed a strong tendency within the Jewish community to engage in self-defense. In addition, there manifestly existed a desire to free themselves of the fetters of restrictions and controls imposed by the state, guilds, and other existing corporate bodies. But the latter attitude did not lead necessarily to a *laissez-faire* attitude even in areas of autonomous choice. The Jews' demand for freedom of trade or for the free exercise of one's skills in crafts and manufacturing did not include a demand for the abolition of regulations by the Jewish community itself of the economic activity of its members. The adoption of such an attitude would clearly clash with existing economic realities and with the basic tenet of governmental policy toward the Jews, which was accepted, willingly or unwillingly, by the Jewish communities. The point of departure of governmental policies was the principle, explicitly stated or implicitly assumed, of collective responsibility of the community for the acts of its members. In order for the Jewish community to discharge this responsibility at least a modicum of autonomy had to be granted in areas of taxation and civil law.

Seen in historical perspective, the measures of self-regulation and control by the autonomous authorities of the Jewish community over the economic activities of their members were perhaps only minor alterations in the general framework of the economic life of the Jews, which was determined largely by the conditions of the economy and major policies of the state. Nevertheless, the details and alterations seem to have been important since they apparently influenced the well-being of many and helped minimize some effects of discrimination. In general the spirit in which particular adjustments and arrangements were made was one of pragmatic realism. Broadly it coincided with the abolition of the restriction upon Jews charging interest to their coreligionists, a move that officially sanctioned a usage originating much earlier than the beginning of the 17<sup>th</sup> century. The basic criteria for community control appear to be in the same spirit: (1) maximum economic effectiveness for the community, the collectivity as the sum of its members; (2) conformity with traditional standards of justice and welfare; (3) minimal interference with individual initiative; and (4) continuity of religious traditions and maintenance of the existing authority structure, social order, and economic stratification.

Among the most outstanding examples of community activity as a self-regulatory agency influencing the economic life of its members, the following may be mentioned: (1) The right to accept new settlers enabled communities at least to some extent to regulate and direct the flow of migration. By granting or refusing the "right of entry" in the community (which was tantamount to the right of habitat and employment in a certain locality; see \**Herem ha-Yishuv*), the communal authorities were able to exercise a degree of control upon the supply of labor and the extent of competition for employ-

ment and business opportunities. (2) The community had the right of enforcing the principle of *\*hazakah* – of seniority or preferential option granted in the bidding or negotiation of a new contract to the previous partner over his competitors. This was a rule that benefited the previous or current party over any new entrant and effectively limited competition among Jewish businessmen. (3) There was a right and obligation to guarantee the solvency of the members of the community in business transactions whenever such guarantee were required or requested. In practice such guarantees helped members of the community avail themselves of business opportunities and strengthen their credit position, but in some cases the community, by indicating the limits of credit, was both protecting itself and preventing its members from engaging in high-risk operations. (4) There was a right to distribute the tax burden of the community among its members both for the purposes of poll tax payments and for its intracommunity needs (see *\*Taxation*).

The paradox of the situation is that most of the cited examples appear to be in conflict with the liberal idea of granting freedom of economic activity to individuals. It is, however, congruent with the conviction that for a minority to survive as a distinct group it has to place the interests of group survival above the short-run interests of the individual members. It is also plausible that when the state was regulating economic life and practicing economic discrimination, an autonomous group could not afford a *laissez-faire* practice and still maintain its identity and internal cohesion. In fact, when during a later period the state started to withdraw from the positions of control and regulation, the Jewish communities also had to give up most of their regulatory functions under the pressure of the individual members in order to survive at least as voluntary associations. But during the period under consideration the Jewish community organization was still very strong in enforcing its control over an economically heterogeneous and socially stratified population.

**SOCIAL STRATIFICATION WITHIN THE JEWISH COMMUNITY.** Since the Jewish community was differentiated in respect to economic functions, it would be well to inquire into the pattern of social stratification among the Jews during this period. The society at large was hierarchically organized, and the social conditions of its members were largely predetermined either by birth (by hereditary status) or by the role and functions assigned to them by prevailing custom or by the state. There was no perfect identity, however, between the stratification of the society at large and the Jewish community for the simple reason that the Jews were excluded from land ownership and were therefore lacking the equivalent of the nobility, gentry, and serf-peasantry. Within the Jewish community there was the equivalent of three large groups which had their counterparts in the society at large, namely: the equivalent of the urban patricians, the equivalent of the small producers (craftsmen) and middlemen (merchants), and the wage earners and paupers.

The first group, in terms of wealth, was represented by rich merchants and entrepreneurs engaged in international and interregional trade, in ownership of industrial establishments, in banking and moneylending, as court factors, tax farmers, etc. In terms of social prestige this group also included famous rabbinical scholars and book publishers, although the last two categories were far inferior in terms of wealth. The second group, representing the majority of the Jewish population, included all the owners of some capital, in the form of tools or stocks of goods, to which their own or family labor was applied and who employed a small number of workers. They were the ones who, like the vast majority of the first group, came into direct contact with the market and were exposed to all the irregularities of the early, imperfect markets of the time. Although social mobility from this group into the upper stratum was not prevented by any legal means, the dichotomy between the two groups was noticeable both in the economic and the social spheres, and the grievances voiced by this group against the upper stratum are a clear witness to the cleavage existing between them. The third group included wage earners engaged in crafts, trade, transportation, services (including domestics), and a large number of unemployables for whom the community had to provide a livelihood. While social mobility from the third group into the second was a possibility, the “plebs” of the community constituted a distinct group, inferior not only in terms of income, but also in education and skills and separated by many social and cultural barriers from the ones who were economically independent.

While the intergroup mobility was limited by economic factors and perhaps also by some cultural factors, intragroup mobility was much more free and frequent; and in this respect the Jewish community was ahead of its times in comparison with the society at large. There were also special reasons why the tensions among the various groups and social classes were dampened and less explosive than in the society at large. Two reasons were especially significant: first, the generally oppressive attitudes of the society at large, which apart from exceptional cases and special situations was hardly in a mood to differentiate among the various categories and groups within the Jewish community; secondly, the institutionalized system of welfare within the Jewish community acted as a form of income redistribution and provided for the most basic needs of its indigent members. But even this mitigation of the internal tensions could not eliminate the intensity of the discord and the deep resentment that existed among the various social groups within the community, contrary to the superficial impressions of casual outside observers who were convinced that the Jewish community was a model of internal harmony and solidarity. The internal conflicts were at times so intense that external, governmental authorities were called upon to take sides and intervene either to strengthen the forces of authority within the community or to curb the arbitrariness of the decisions and limit the authority of the ruling bodies. The various intellectual and religious movements within the Jewish community also exhibited strong social overtones and

in some cases revealed the strength of subterranean resentments and open protest on the part of the lower classes of the community.

The real power in the community was located in the hands of the upper social group, and the wealthy occupied offices of consequence and social prestige. Although Jewish communities strongly resented the appointment of officers by government authorities – which guaranteed office-holding for the wealthiest – as an interference in community affairs, the system of electing officers (who were often personally responsible for the fiscal obligations of the community) no less favored the election of the rich, the ones who could afford the burden of office. Wealth became almost a prerequisite for office and could be augmented by holding office, since offices provided access to information and opportunities that could be turned to business advantage by their holders. In part, some of the power of the wealthy elite was exercised because of the economic dependence of members of the community directly employed or indirectly influenced by the elite. The relatively large-scale business operations by the members of the elite provided employment opportunities for agents, salesmen, domestics, etc., which assured the elite of the support of the dependents in community affairs. The symbol of the autonomy of the Jewish communities was their right to elect their spiritual leaders, the rabbis. The communities viewed any attempt by governmental authority to appoint rabbis as an assault on their right of religious autonomy. Nonetheless, the power of the spiritual leaders was more important in maintaining the continuity of tradition and is to be seen more in their role as mitigators in internal conflicts than in the internal policies or the routine economic activities of the community. It was left to the business elite to regulate and supervise the economic activities of the community. In cases where a conflict arose between the spiritual leaders and the upper stratum in the community, the real power, that of the elite, usually asserted itself. In the communities in which the power of office was shared by the upper stratum with representatives of the middle group, the important decisions were usually left to the “patrician” families. An important result of the existing social stratification during this period was the degree of stability provided by community leadership recruited basically from one social group. In a period when all other societies were hierarchically organized, the Jewish community could hardly afford to be organized according to any other principle.

### Transition Period

The transition between the “old” conditions and the “new” was neither smooth nor short. It spanned two distinct periods, which differed markedly from one another in respect to the general framework of economic activity, the prevailing ideologies, and the social groups that made the important decisions. The transition reflected the change in social and economic development, in this sense exhibiting both its revolutionary aspects regarding some institutions and individuals and its evolutionary aspects of piecemeal transformation of other in-

stitutions, habits, and activities. The major characteristics of the transition in the economic sphere included acceleration in the accumulation of tangible assets (capital) as well as the possibility and willingness to transfer increasing amounts of capital from one area of economic activity to another. This phenomenon was accompanied by the development of technology, which provided labor-saving mechanical devices for the production of goods, and in turn became a strong force in creating the demand for new capital and for new skills.

Concurrent with these economic changes were new developments in generally held beliefs and opinions. Among the many, some must be singled out for their significance. Especially important was the rise of secularism at the expense of traditional religious and theological views. The turn toward secularism put man in the center of the universe and assumed that he was able and willing to subordinate the forces of nature to serve him. This led both to the development of a more generalized utilitarian approach and, with the weakening of earlier dogmatic attitudes, to the development and penetration of scientific thought, thus providing the basis for innovations and inventions in the field of technology. The spread of the idea of egalitarianism was another important element in the change of social thought. While not a characteristic feature of the period, the fact that man in the abstract was now at the center of the universe, led egalitarianism to challenge the basic premises of a hierarchical society in which the accidents of birth largely determine the social position of individuals. Though egalitarianism was not yet successful during the period of transition in securing the political and social participation of a broad spectrum of the populace, it at least achieved the legitimization of merit and achievement rather than birth as the leading criteria for joining the social elite. The change of criteria was of utmost importance, while the implementation of the principle could proceed only slowly if the social fabric was not to be torn by revolution. If ideas of secularism and egalitarianism are to be intellectually tenable and socially effective, equality before the law is perhaps the first necessary step. Thus the establishment of a new legality based not upon divine law or the will of the sovereign but upon the consensus of the governed led to new forms of individual freedom and to social responsibilities or disciplines being shared by all citizens or inhabitants of the particular countries. That social discipline required the resolution of conflicts within a legal framework was obvious, and for the framework to be effective it had to approach universality and offer equitable treatment to all.

The transition period in Western Europe dates from about the middle of the 18<sup>th</sup> century until after the Napoleonic Wars, and in Eastern Europe runs from the Napoleonic Wars until the third quarter of the 19<sup>th</sup> century. The distinction and the lack of overlap in time is important to the extent that the Western European experience could have been considered as a model of the future economic and social development of Eastern Europe. However, if a comparison were made of the situation in Western Europe with that of Eastern Europe during a

particular point in time, more striking contrasts than similarities would be found. At a time when the economies of Western Europe were caught up in the process of economic growth, those of Eastern Europe during the same period were in a state of relative stagnation in which the process of economic development either did not get off the ground or was arrested by the prevailing political regime. While in the West the end of the 18<sup>th</sup> and the beginning of the 19<sup>th</sup> century witnessed new economic opportunities for its indigenous population and for immigrants, the Jews included, the wholesale bankruptcy of the Jewish community organizations of Poland in the second half of the 18<sup>th</sup> century and the economic plight of the majority of the Polish and Russian Jews around the turn of the 19<sup>th</sup> century were examples of the different situations of the Jewish communities in various countries at those times.

How did the Jews fare under the conditions which were defined as the transition period? There is no doubt that the initial benefits were considerable since they signified the changed status of the Jews. Even in the absence of equal civil rights or true emancipation they meant an increased sense of personal security, a decrease in arbitrariness, and a greater recourse to the prevailing law of the land. It is possible to describe, rather than measure, the economic effects of these transitional changes upon the activities of the Jews in two distinct areas, labor and capital.

The loosening of restrictions affecting places of habitat or work made it possible for labor to move more freely in search of markets with higher earnings. Thanks to the relaxation of restrictions, on entering particular professions Jews could avail themselves of training opportunities or enter educational institutions with hopes for upward social mobility and higher incomes. The rising demand for new types of employment, spurred by the accelerated pace of economic development, provided possibilities for absorption of at least a part of the relatively large groups of unemployed members of the Jewish communities in the labor market. The greater degree of personal safety and security of their assets had a number of effects upon Jewish owners of capital. There was a reduction of the size of reserves previously kept as personal insurance against various emergencies. The size of such reserves for Jewish merchants was variously estimated as up to a third of their wealth. By reducing the reserve it was possible to devote a larger part of the total wealth to productive use. The improvement of the legal position of the Jews increased the amount of credit that could be extended to them without excessive risks on the part of the lenders. This development in turn probably led to a decrease in the rates of interest at which Jews could borrow. Added security and new opportunities enabled the Jewish owners of capital to use it in a number of areas (real estate, industry) hitherto closed to them, thus increasing both the returns and effectiveness of capital. The removal of some discriminatory regulations (such as double taxation), which previously increased the costs for Jews of carrying on economic activities and affected the size of their income, had the effect of increasing their disposable income

and could have led to simultaneous growth in, or to a redistribution of the shares of, consumption and savings. In some cases an increase of savings (or investment) could be expected; in other cases an increase of consumption or an increase in family size could follow. With regard to the last, it is clear that even partial removal of some discriminatory rules applied to the Jews, like restriction on settlement, on marriage, and the like (see, e.g., \*Familiants Laws), resulted in an increase in the birth rate and population growth.

The transition period can be characterized as the beginnings of consideration of the "Jewish problem" as a matter of social and national policies for the states and societies in Europe, in contradistinction to earlier preoccupation with fiscal interests, Church concerns, or narrowly defined group competition. The growing concern of the state with the economic activity of the Jews was exhibited in various attempts by governments to influence such activity. Some attempts could be classified as representing a policy of "productivization" of Jews and attempts to change the social composition of the Jewish population. Interesting examples of such policies, perhaps in part also inspired by physiocratic thought, were the attempts to settle Jews on the land by "enlightened absolutist" regimes such as those of \*Joseph II in Austria and Alexander I in Russia. It is immaterial here that such attempts were completely unsuccessful, either because the schemes were insufficiently prepared and financed or because they were sabotaged by the bureaucracy that was to administer them. The disappointments of tens of thousands of Jews and the sufferings of thousands who participated in the failing experiments are also not at issue. The important feature was the clearer realization that in part, at least, government policies were responsible for the peculiarities of Jewish economic activities or social structure and that state policies – as a part of the social and legal framework of Jewish activity – had to be brought in line with or adjusted to the economic changes that were taking place. Therefore, while during the transition period, government-sponsored agricultural colonization in southern Russia resulted in settling on land only a few thousand Jewish families and failed abysmally in Austria, it nevertheless raised by implication the problem of legal tenancy and ownership of land for Jews. This in turn resulted in the subsequent development of a small but socially diverse farming element in the Jewish communities of Eastern Europe during the 19<sup>th</sup> century.

Whatever the impact of the changing economic and social conditions on the economic activities of the Jews, during the transition period the Jewish communities had to face an imminent, fundamental change. For the Jewish communities the problem was how to continue as a distinct group in the general society, not under conditions of forced separation but under those of free choice by their members. For the first time within the general period under consideration, it became possible for larger numbers of Jews to break away culturally and socially from the Jewish community, even while maintaining their religious beliefs, and to be accepted by the community at large. Social acceptance was offered to a small

but influential minority of the Jews as remuneration for cultural assimilation. The price to pay was basically severance of their relations with the rest of the Jewish community and the abandonment of the active desire to perpetuate this community. Under the circumstances, the offer of social acceptance was a tempting one since it involved social advancement by the criteria of the community at large. That not every social group would accept its Jewish counterpart even at the price of cultural assimilation was obvious, but during the transition period personal or narrow group interests were strong and the fight for universal civil rights still very much ahead. The situation presented a challenge to the Jewish communal authority and called for surrender of its traditional power of exclusive representation of the Jews and of its power of taxation. The weakening of the authority of the Jewish community organization could also be traced to the growing unwillingness of the more affluent groups in the community to subject themselves to income redistribution in favor of the poor. Poor relief was "scaled down" from a duty concept to one of discretionary charity, and paupers were "encouraged" to find employment. Although the full impact of the newly created situation of defining one's identity, under conditions of relatively free choice, was to be felt during a later period, the difficulties and problems thus created – psychological and social – were already becoming apparent during the transition period.

### Modern Period

The main features of the development of the economy of the Jews during the modern period are patterns of migration, penetration into areas of industry, maintenance of a strong position in the area of services, and very limited involvement in agriculture. Decades ago economic historians were engaged in a debate about the role of the Jews in the development of capitalism, some trying to define the historically objective role of the Jews as active agents of capitalist development. Now with historical hindsight the discussion would probably be conducted and conclusions reached within a different framework. The implicit notion that capital was abundant in the Jewish sector of the economy would now be refuted and therefore the logic of portraying the Jews as "objectively acting" on behalf of a capitalist order would be rejected. It would probably be accepted, however, that an order of economic liberalism is one that provides greater opportunities for any minority, the Jews included, than an alternative economic system based upon a different ideology and set of political principles. An impersonal market and a high degree of division of labor may create alienation and other social ills, but by not requiring that the commodities produced have any other labels than the price tag, the free market works against discrimination. A competitive market may injure high-cost producers or cause unemployment, but its principles were compatible with the ideas of social and cultural pluralism. The relatively favorable response of Jews and other minorities to the liberalization of the economic order was based primarily on an expected reduction in discrimination. However, while a liberal economic order pro-

vided the Jews with opportunities, it could not provide them with a right to work, to compete on equal terms, to the same extent that such a "right" was traditionally enjoyed by the various classes of the majority population. In addition, the phase of economic liberalism as a chief characteristic of the capitalist system was neither a permanent feature nor a very long-lasting one, nor even one universally followed in all countries experiencing the capitalist type of economic growth.

In most countries of Eastern Europe the capitalist stage of development coincided with a rise of nationalism, which at various points exhibited a discriminatory attitude toward the Jews in general or toward some social groups within the Jewish community, in attempts to promote the interests of the ethnic majority. Tariff policies against foreign goods were accompanied not infrequently by discriminatory taxation imposed upon "foreigners" within the country, meaning national minorities. In the multi-national states of Eastern Europe there were ample opportunities for labeling various minorities as "foreign," "alien," and so on. Under such conditions it could hardly be expected that the Jewish masses, who were adversely affected by discriminatory policies, would consider the capitalist economic system as more desirable or attractive than an alternative promising them the "right to work."

**JEWISH MIGRATION.** It is against the background of insufficient employment opportunities and discrimination that the process of migration has to be viewed. The pattern of Jewish migration, of spatial mobility of labor, during the modern period differed in many respects from previous migration patterns. The general direction was westward, from Eastern Europe to the West, and from Europe overseas. As a matter of fact, the migration from Western Europe overseas was more than made up for by an influx of Jews from the East. This general direction of the migration was significant as a movement from less rapidly developing countries to more rapidly developing ones. In terms of its time dimension the inter-country migration was intensified during the 19<sup>th</sup> century and reached its peak during the decade prior to World War I. But apart from the inter-country migration, of very considerable significance was the intra-country migration from the less urbanized areas to the more urbanized areas, a development that increased the degree of concentration of the Jewish population in large urban and metropolitan areas, with their developed industry, trade, and other social or cultural characteristics. Both the domestic and international migration and the pattern of settlement of the Jews contributed to urban concentration and had an impact upon the social and economic structure of the Jewish population. While it is tempting to assign the role of prime mover in Jewish migrations to purely economic causes, it would be erroneous to omit political elements such as discriminatory legislation, violent antisemitism, pogroms, and revolutions. Political upheavals and governmental policies influenced the pace of the migration process, but could not stop it for any appreciable length of time (the case of the Soviet Union being an exception).

What were the characteristic features and effects of the migration process as a whole and of its various forms? The migration process started as soon as the Jewish population could rise above the level of poverty and isolation to which it had deteriorated in Eastern Europe by the end of the 18<sup>th</sup> and first half of the 19<sup>th</sup> century and regain its age-old habits of mobility. In terms of numbers, the migration stream from continental Europe during the 100 years preceding World War II accounted for approximately 4,000,000 individuals, of which over 70% went to the United States, about 10% each to South America and Palestine, and the rest to Britain, Canada, South Africa, Australia, and other countries. Thus, in view of the fact that the North American continent absorbed three-quarters of the total international (or overseas) migration, the characteristics of this migration may be assumed as the most typical.

The available data indicate that the migration was a family one (of whole families, even if separated by a one- or two-year period) rather than of single individuals; that it was a migration for settlement and not for work, saving, and return; and that it was a migration involving a relatively very high percentage of skilled workers. With respect to the last characteristic, only the data can be relied upon and little investigation beyond these can be done: the explanation of this phenomenon can only be surmised. It is logical to assume that the process of overseas migration required payment of transportation costs, in other words some amount of savings, and thus could not involve paupers. Therefore, it is logical to assume that the migrants were either members of the industrial labor force, or entrants into the labor force who already had acquired skills, or individuals who acquired particular skills in anticipation of their migration, having made an investment over and above their transportation costs or borrowed in anticipation of future returns. It was in large measure due to the industrial skills and some working habits of the migrants that their future relative success can be explained.

Three further points need to be emphasized in connection with the migration problem. First, given the nature of the family ties within the Jewish community, the financing of migration took place within the extended family of the immigrants and was later also subsidized by the earnings of the immigrants, often virtually out of their first savings. Secondly, prior to the end of the 19<sup>th</sup> century there were already in operation well-organized voluntary associations that assisted in the migration process. In their absence the economic and psychological costs of migration would have been considerably higher. Thirdly, by organizing voluntary associations of mutual assistance, in part copying the models from Eastern Europe, the immigrants were able to help the new arrivals more effectively. Some relatively small part, probably not more than about 3% of the total of the migration movement, was financed and assisted by funds donated or collected on behalf of the migration, especially in the presence of an ideological or programmatic background. The two most outstanding examples were Palestine and the agricultural settlements in Argentina.

The primary effect of both the intraregional and international migration of the Jews was to decrease the competition for employment opportunities where such were scarce and provide a higher return for the migrants where their labor and skills were in greater demand. Thus while the income of the migrants increased in comparison with their previous income level, the income level of those who remained behind did not fall. However, it must be admitted that the movement of millions of people within a few generations deprived the established Jewish communities of a young, enterprising, and skilled element. This movement had a number of demographic, economic, and cultural repercussions on the European Jewish communities. It is difficult to pinpoint such effects, but it certainly affected the age structure of the European communities by removing some of the middle groups (age groups 20–40 in particular). It also perhaps affected adversely the growth rate of the Jewish population in Europe, although it would be difficult to predict what that rate would have been under worse economic conditions in the absence of migration. In terms of its impact upon the social structure, it probably increased the economic polarization within the Jewish communities since neither the rich nor the very poor contributed to the migration stream. In another sense the migration movement contributed to a greater stability within the Jewish communities since it absorbed much of the unruly and nontraditionally inclined element of the community. Last but not least, the migration movement contributed to an activated exchange among Jewish communities, with a money transfer to Eastern Europe that not only subsidized further migration but supported relatives and community institutions, and that was in part compensated by an export of cultural and spiritual services from Europe to the areas of new settlement.

**PENETRATION INTO INDUSTRIAL EMPLOYMENT.** Some assessment must be made of the conditions that enabled Jews to penetrate into industrial employment and maintain their position in the areas of services under conditions of modern industrialization. What adjustment was required on their part to attain their goals? Here we are concerned with entrepreneurial activities in the industrial sector as well as the transformation of handicraft employment into small-scale and larger-scale industrial employment. This entrepreneurial activity is not being considered here in terms of “Jewish contributions” to the development of this or that country, or the amassing of wealth by individuals of Jewish descent. It is beyond the purview of this account to dwell upon the Rothschilds in England and France, on the German-Jewish bankers, or on mining magnates in Africa or South America. In addition, a distinction should be made between large-scale and small-scale entrepreneurs. While a few Jews entered industrial entrepreneurship via high finance, the banking system, etc., the multitude consisted of small-scale industrial entrepreneurs who were recruited mostly from the ranks of craftsmen and merchants, previously engaged in the putting-out system. They were subordinate to and dependent upon

the large-scale industrial establishments because they could hardly compete with large-scale industrial firms in the production of goods and had therefore either to become suppliers to the large firms of some specialized goods or producers of market goods that were outside the assortment manufactured by large-scale industry. Given the scarcity of capital in the social milieu from which the small-scale producers or entrepreneurs were recruited, their proximity to industrial centers and markets was absolutely crucial. Small-scale industrial firms did not possess the capital to carry large stocks, and a quick turnover was their only mode of survival. A great deal of flexibility in product-mix and in assuring sources of demand was required to keep the enterprises in operation. They also required a labor force skilled but not overly specialized and with relatively few employment alternatives to accept a less-than-regular employment. This was a typical solution for economic branches that operated with a basically backward technology at low levels of productivity, low wages, and long hours of work, in what were fringes of the consumer goods industries. It was due to the declining role of handicraft production, which was suffering from industrial competition, that this type of industrial employment was acceptable to Jewish industrial job seekers.

Jewish entrepreneurs did, however, play an important role in providing gainful employment for large numbers of Jews. It may be assumed that for a Jewish entrepreneur there existed a "psychological income" in providing employment for other Jews, whether he did so for reasons of greater familiarity and cultural affinity or because it was considered a "good deed" in cases when discrimination in favor of Jewish employees increased his operational costs. Those costs, in turn, depended upon the nature of the labor supply and the distribution of skills within the Jewish labor force and within the total population. If the costs of hiring Jewish labor were less than or equal to those of hiring other members of the labor force, it can be assumed that there were no costs in the discrimination in favor of employing Jews. As will be seen from a number of examples, the employment pattern of Jewish labor by Jewish entrepreneurs did not in fact impose additional costs upon the employers. There were, however, two other obstacles that had to be overcome in order to have the employment of a Jewish labor force reach a significant level. The first constraint was the assumed or real strength of the religious taboo against work on the Sabbath, regardless of whether the taboo was expressed in the behavior of workers or in the attitudes of the entrepreneurs. The second constraint was the assumed animosity of non-Jewish workers and foremen toward Jewish co-workers. There is no doubt that such constraints upon the entrepreneurs were real, especially in the later part of the 19<sup>th</sup> century in Eastern Europe.

The cases of a few industries in Europe and one in the U.S. are instructive since they provide a broad spectrum of employment opportunities created by Jewish entrepreneurs for Jewish workers. One is the textile industry in Russian Poland in which Jewish spinners, weavers, and other textile

workers were predominantly employed in the smaller-scale enterprises, while the larger-scale factories refrained from employing them. Second is the case of the forestry trade, in which few Jewish workers and laborers could compete successfully with the low-paid peasants seeking off-season employment in lumbering. Therefore, thousands of Jews were employed in this industry by Jewish firms as overseers in the forests, sawmills, and transportation of the products, much of the output being destined for export or railroad construction. Thus, the demand for trained personnel with a degree of familiarity with the operation and quality standards in forestry and with some clerical skills attracted many Jewish workers and employees. While such a combination of skills was rare in the general labor force, and the wages and salaries accepted by the Jewish workers were generally low, there was hardly any cost of discriminating in favor of Jewish employment in the forestry trade. In the third case, the sugar and oil industries may be subsumed under one type of employment. Neither in sugar-beet growing nor in the processes of sugar refining were Jews represented. The same is true for the oil industry located outside the Jewish \*Pale of Settlement. The Jews could compete neither with the peasants and local oil-workers nor with the highly skilled specialists in sugar and oil refining. The areas of employment for Jews provided for them by Jewish entrepreneurs were those of distribution and trade. Thus, thousands of Jews were employed as clerical personnel, salesmen, and sales agents in the trade networks of both the sugar and oil industries. The outstanding case of industrial employment provided by Jewish entrepreneurs for Jewish workers in the U.S. is the garment industry. The levels of skill brought over by the Jewish immigrants, the relatively low wage schedule of the garment industry, and the relatively small scale of the operations of the firms led to a high concentration of Jewish workers, with the industry as a whole serving as a massive source of employment.

The above examples illustrate some of the patterns of the penetration by Jews into areas of industrial employment. They are indicative of the manner in which masses of former artisans and pauperized elements of the Jewish community could join the ranks of industrial workers and employees. As in other societies, child labor and long-term apprenticeship were the chief means of skill-acquisition for the poor. Although the capital-goods industries were virtually closed for both Jewish entrepreneurs and workers alike, industrial employment concentrated in consumer goods industries signified the adjustment to modern, industrial society and injected a new dynamism both in the social relations within the Jewish communities and with the community at large.

MAINTENANCE OF POSITIONS IN THE SERVICE SECTOR OF THE ECONOMY. The service sector includes employment in trade, transportation and communication, public and private services, and the liberal professions. For the huge segment of the Jewish population previously employed in it, largely in trade and particularly commodity trade, the problem of eco-

conomic survival within this sector became absolutely essential. During the early period of industrialization when massive investments are made in the build-up of physical industrial capital – primarily in construction and equipment and in some of the services of the social overhead type such as railroad and road building – the majority of the services are not recipients of capital. It is only when the basic capital in industry is created, and both the producers' goods and consumers' goods branches are producing at relatively high levels of productivity, that the demand for services increases on the part of a population whose general level of income has risen very substantially. The fact that Jews were heavily concentrated in the service sector in countries whose pace of development was slow, whose market growth was sluggish, and whose levels of personal income were among the lowest in Europe, did not augur well for service employees. It was, therefore, not so much a matter of historical foresight but a lack of viable alternatives that kept large masses of Jews within this sector during the early stages of industrialization. It was the gradual process of commercialization of agriculture that provided outlets for the commodity trade and thus for service employment for the Jews who were living in rural areas or small towns. Urbanization provided other opportunities for employment in trade and also in other services; but paradoxically the process of urbanization and the development of service opportunities in the large cities significantly undercut or substituted the service functions previously performed in small towns. The process of urbanization was accompanied by the development of a more dense transportation network which created direct links between the big cities and the hinterland, decreasing transportation and travel costs and making the big city and rural areas accessible to one another. The result was that many of the services concentrated in the small towns could no longer be performed at the prices offered in the big cities where economies of scale were more likely; and the decline of small towns under the conditions of a competitive market followed. The problem for Jewish service employment was whether the opportunities available to Jews in the big cities were sufficient to compensate or substitute for the disappearance of such opportunities in the small towns and also allow for the rate of Jewish population increase. The answer for Eastern Europe appears to have been negative, for Western Europe positive. In the U.S. there was a secular trend of employment growth in the service sector for the Jews. In Eastern Europe the crisis of the small towns remained a continuous problem, especially exacerbating for the Jews when coupled with discriminatory policies of limiting access or prohibiting the influx of Jewish service employees in such branches as the civil service, central government or municipal services, and public transportation. In countries that did not openly follow discriminatory policies, the solution of the service employment problem for the Jews became very much dependent upon both the general pace of economic development and the urbanization process.

The diversity of service employment makes it very difficult to estimate the degree of substitution of one type of

employment for another or the mobility of individuals from one category to another within this sector. The required educational background differed substantially; and substitution or transfers were possible probably at the lower levels of skills in which literacy could be considered the predominant, if not the universally sufficient, prerequisite. Internal mobility within the service sector was much less frequent at higher levels of specialization and especially when the specific training presupposed a higher level of schooling. The explanation of the continuity of a high proportion of Jewish employment in the area of services would be incomplete if two other factors were overlooked. The first was the opening up of opportunities in the liberal professions; the second was the continued demand for special services generated within and performed expressly for the Jewish communities. The first phenomenon, entry into the free professions, was a result of the reduced effectiveness of discriminatory policies toward Jews in the area of secondary and higher education relative to the areas of the public services. Educational opportunities that provided employment possibilities in the free professions became attractive avenues of social and economic advancement for the Jewish middle class, previously employed primarily in commodity trade. Therefore, with employment in the public sector and in the civil service very much restricted and curtailed for eligible Jewish candidates, the typical employment pattern was in the private service sector, including health services, educational services, and legal services. In addition, the private service sector provided employment opportunities for a certain number of educated individuals as salaried employees, such as bookkeepers, legal clerks, and pharmacist's assistants.

The demand for services by and for the Jewish communities continued during this period, although the process of secularization tended to shift the demand from the purely religious areas to those of education, health, and social services. Attempts to maintain a general cultural and not only an exclusively religious identity helped to sustain the demand for educational services. Meanwhile, the pattern of settlement in urban and metropolitan areas created a demand for the development of a communication network by which some of the cultural needs could be met and thus supported the activities of the press, theater, literary activities, and the like. Given the fact that public services in the area of health for the total population were highly inadequate and that the Jewish population received even less than a proportionate share of those, the demand for health and social services provided within and by the Jewish community was very strong. This stimulus was instrumental in the provision of such services either on a private basis or as a part of the welfare activities carried on by the community authorities for needy members.

**EMPLOYMENT IN THE AGRICULTURAL SECTOR.** Farming played a very subordinate role in the employment structure of the Jewish population during this period and its share in total employment was relatively small. It is not difficult to provide an explanation for this phenomenon. During the 19<sup>th</sup> cen-

tury and later, agriculture in Europe was a declining industry, releasing rather than attracting labor. In addition, previous discriminatory policies prevented land ownership and restricted land tenure for Jews to the extent that farming as a skill did not develop within the Jewish milieu. Although the lifting of some of the most severe restrictions rendered farming a plausible alternative to the precarious positions of small-town traders or artisans, a number of circumstances mitigated against a mass influx of Jews into farming. Land was becoming relatively expensive in Eastern Europe, and the returns to both capital and labor in agriculture were relatively small. Settlement on large land tracts and the establishment of colonies required sizable capital outlays and a degree of organizational effort beyond the available resources and authority of the organized Jewish communities. The pattern of individual settlement in a dispersed manner was discouraged on the one hand by religious and traditional attitudes, since it typically involved a high degree of cultural isolation, and on the other hand by an often hostile rural environment, suspicious of any aliens settling in its midst. Within the Jewish milieu or as part of Jewish folklore, the stigma of boorishness or coarseness was associated with Jewish farmers, characteristics of a low prestige status, not so much in economic terms as in general cultural ones.

Outside of Europe, however, two types of development have to be considered: (1) countries of rapidly developing agriculture in which the employment of Jews in this sector of the economy was not significant, the United States and Canada being prime examples; (2) countries in which the employment share of agriculture was higher than in most of Europe, the specific cases being Palestine and Argentina.

With respect to the first group, two factors might explain the relatively low share of agriculture in the employment distribution. The foremost was the greater attraction that employment opportunities had for immigrants in the industrial and service sectors coupled with the preference for urban settlement, which provided additional security to the immigrants as members of their own ethnic communities. The second was the timing of the large migration streams, which took place after the closing of the so-called "agricultural frontier." In the case of Palestine and Argentina there was an induced process in which some noneconomic variables were of utmost importance. In Palestine the ideological aspect, the Zionist idea, motivated a relatively high percentage of the immigrants to settle on land, beginning with the last decades of the 19<sup>th</sup> century; farming became as much a way of life as a profession. In Argentina a substantial segment of the immigration was sponsored by adherents of agricultural colonization schemes who induced agricultural employment by paying the transportation costs and providing land for agricultural group settlement in the name of ideas of "productivization" of unskilled and unemployed members of the Jewish community. However, the long-term trend both in Palestine, later the State of Israel, and in Argentina was the relative decrease of farm employment under the impact of industrialization and urbanization.

INCOME. Given the employment structure of the Jewish population during the modern period, what could be said about the level and distribution of income within this population?

At the beginning of the period, and in a number of countries during most of the period, the average income of the Jews was below that of the population at large, including the peasants. However, the level of income increased both as a result of the total increase of incomes in Europe in general and because of the impact of migration, which, given its direction from economically less prosperous areas to economically more prosperous ones, had a net impact of increasing the average income level of the Jewish population. In addition, because of its composition as an increasingly urbanized population and one concentrated in the industrial and service sectors of the economy, its income during the 100 years preceding World War II probably increased at a higher rate than the average income of the total population of the countries they lived in. As a rule of thumb it would not be incorrect to assume that the average income level of the Jewish population by the end of the period reached a level that was higher than the average for farmers and industrial workers, although probably not above the level of the skilled stratum of industrial workers and salaried employees. Another way of saying this is that Jewish income was at about the average level of the urban population. The level of Jewish income fluctuated around the general upward trend. The fluctuations were pronounced, first because of the relatively large proportion of self-employed, a social group whose income is less stable than that of salaried workers and employees; secondly, because of the impact of exogenous factors such as wars and major upheavals during which the property of the Jews was much more vulnerable than that of other population groups (e.g., the forced mass exile of Russian Jews from the war zones in World War I and the wave of pogroms in the Ukraine (1918–21), during which property was either destroyed, expropriated, or simply taken away by force from its rightful owners). Thirdly, during the downturns of the business cycle, Jews as a minority group usually suffered more than the average member of the society at large. But notwithstanding such fluctuations, the general trend of Jewish income growth on a global scale was upward.

How was this income distributed, and what were the basic determinants of its distribution? Both tendencies to increase and to decrease the income inequality were at work, and it would be very difficult to measure the separate effects with any degree of precision. Following intuitive judgment it would be sensible to assume that in the countries in which the impact of discrimination against Jews was the strongest, income inequality within the Jewish community was probably more pronounced than in the countries that followed a more liberal policy toward the Jews. That income inequality within the Jewish community led to tensions, internal struggle, and organized activities of one social group against the other is obvious. That the divergency of interests led to the development of different ideologies and as such intensified the divisive tendencies in the community is no surprise, being a reflection

within the Jewish milieu of what was taking place within the population at large. It is also true that the internal struggles within the Jewish communities during the last decades of the 19<sup>th</sup> century and beginning of the 20<sup>th</sup> century made a considerable contribution toward reforming the community authorities toward their democratization and modernization. They thereby became much more responsive to the needs of their members. But whatever generalizations are attempted in order to bring under a common denominator the economic and social trends prevailing during the modern period, the significant differences of the developmental patterns of the Jewish communities can be better understood only upon a closer examination of at least the major Jewish communities. The ones selected for further scrutiny are the Western European, the Eastern European, the U.S., and the Palestine Jewish communities.

**WESTERN EUROPE.** The economic development of Western European Jewish communities during the modern period can be generally characterized by their successful attempt to join the middle class. Their problems roughly paralleled the problems of the middle class in Europe, in the sense that they enjoyed apparent well-being and security under normal conditions and discovered the precariousness of their position in times of crisis. Western Europe, following the example of England, experienced the industrial revolution around the middle of the 19<sup>th</sup> century and was busily involved in adjusting its institutional structure to fit the new economic order. Since the institutional adjustment was more complicated while vestiges of the older order had to be destroyed, eliminated, or transformed, and the state played a much more decisive role in the process of economic transformation on the European continent than in England, there was a greater degree of politization of economic issues than in England. The politization of economic issues provided a specific impetus for the activities of the middle class and had a profound impact upon the activities and attitudes of the Western European Jews.

At a time when new economic opportunities were being created in Western Europe, the Jewish population of those countries was relatively sparse and the Jews constituted a negligible percentage of the total population. Therefore, there was within the Jewish communities very little of the fierce competition for relatively scarce economic opportunities which characterized the situation of the Eastern European Jews. The process of urbanization and concentration of the Jewish population in Western and Central Europe started relatively early, but proceeded gradually, largely undisturbed by outside political factors. Migration, both internal and overseas, by the less prosperous members of the Jewish communities helped to achieve the aims of both the migrants as economic opportunities in the new centers of industry and the drive to penetrate into the middle class. The gradualism of the process of economic growth resulted in strengthening commerce, helped to develop among the Western European Jews a pref-

erence for independent economic activity. Economic integration of the Jews in Western European society meant self-employment in trade, finance, industry, and the free professions and not in manual labor. This process was facilitated by their utilization of the opportunities provided by the educational system and the marked decrease in discriminatory attitudes and policies.

The groundwork for the development of more liberal attitudes toward the Jews and for the readiness of the Jews to take advantage of the new economic and social opportunities was laid by the Enlightenment (\*Haskalah) and its impact on the Jewish milieu. Originally the new opportunities and social acceptance were offered to the upper strata of Jewish communities for the price of language assimilation and severance of their ties with the Jewish community. The upper strata of the Jews found the conditions acceptable and acted accordingly. When the opportunities to join the middle class became available to a larger number of Western European Jews and after they joined the political struggle of the middle class for broader suffrage, the problem of emancipation and of their civil rights was raised by the members of the Jewish middle class. Emancipation and civil rights for Jews meant a further integration of the Jews with the society, not within the concept of a Christian state but within a modern, secularized state. In the latter case language assimilation of the Jews was considered an insufficient prerequisite. The existence of Jewish Orthodoxy both as a symbol and major characteristic of their culture was considered a serious obstacle to real integration. Thus at the roots of the religious Reform movement which spread from Germany, there were both the changing patterns of employment among the Jews and the desire for cultural assimilation. As a result the gradual adjustment of religious rituals to modern conditions and some relaxation of the Orthodox law, which previously supported the exclusiveness and guarded the separation of the Jews from their environment, gained in appeal to the majority of the Western European Jews. An interesting by-product of the changes in the social position and cultural attitudes was the growing gulf between the Western European and East European Jews. The cultural ties were becoming looser and the sense of a common destiny weaker.

The penetration of the Jews into the middle class was a slow process which marked the second half of the 19<sup>th</sup> century. Its success over the period was unmistakable, but not necessarily continuous and certainly not without problems. It was challenged first by a wave of nationalism at the end of the century, when it became clear that the new social order in Europe could not guarantee the universal fulfillment of the rising expectations in the short run. The new wave of nationalism exhibited antisemitic aspects which gained currency among members of the European middle class. The \*Dreyfus affair and other manifestations of antisemitism had a profound impact upon some members of the Western European Jewish communities and forced them to rethink and revise their notions of social and cultural integration. Although the majority continued

to behave according to previously established patterns, a minority turned to solutions of either cultural pluralism or Jewish nationalism as the more satisfactory for the long run. A greater need was also felt for the maintenance of Jewish cultural (including religious) continuity and for closer ties with other Jewish communities. The net result was a somewhat decreased atomization of the Western European Jewish communities and their activities as well as the development of new cultural and economic institutions which strengthened the sense of Jewish identity and were instrumental in the moments of crises that lay ahead.

**EASTERN EUROPE.** To explain the economic activities of the Jewish communities in Eastern Europe during the third quarter of the 19<sup>th</sup> century and until World War II in purely economic terms, in terms of the market opportunities, demand for products, and labor supply would not only be a difficult task but provide incomplete and sometimes misleading answers. Since so much more is known about the economic conditions of this period, the interaction of the economic and extra-economic factors, be they political, legal, or psychological, is keenly felt. The outstanding characteristic of the other factors was the existence of a measure of discrimination against the Jews that was much more intense in this part of the world than elsewhere. Thus, in spite of the progress of a modern market economy, in spite of the process of industrialization that took place there, there was a strong residue of discrimination that limited the benefits of economic progress for the Jews and affected their economic activities. One rather striking example is to be found in the exile of Jews from the rural areas of Russia in the 1880s. The process of urbanization that took place as a result of industrial development is a familiar phenomenon and one that affected Jews in the rural areas. But there is a qualitative difference between a process that creates new opportunities in urban areas and draws labor away from the rural areas, and a mass exile that uproots tens of thousands and forcibly transplants them in a new economic and social environment with no visible means for their economic survival and with no economic alternatives since the demand for their labor or service is absent. Apart from such major catastrophes, the conditions of discrimination included a whole chain of minor calamities which created an atmosphere of uncertainty and determined the behavior of large masses of the Jewish population in Eastern Europe. Thus, the development of a capitalist society in Eastern Europe, while creating new economic opportunities was, as far as the Jews were concerned, accompanied by unsettling features that were constantly threatening to destroy the benefits bestowed by the economic progress. It is, therefore, proper to emphasize that the economic and social conditions of the majority of the Jews in Eastern Europe were influenced by a number of external constraints, one of which was the Pale of Settlement in Russia. The existence of the Pale limited the mobility of most of the Jews and virtually excluded them from some of the more important regions and dynamic centers of indus-

try, trade, and public life and often forced them to accept opportunities that could be described as second best. The existence of legal and economic discrimination made the process of social mobility much more difficult and expensive for the Jews. The limitations on entering areas of employment, professions, public service, and education decreased their chances of fully contributing to the process of economic development and benefiting from it. While the advancement of the industrialization process destroyed some of the traditional areas of Jewish economic activity and created new ones, the process itself was erratic and did not allow for the formation of long-term expectations or less costly adjustments. Thus, while on the whole the Jewish population benefited from the process, growing in size and slowly improving in income position, the accompanying hardships were burdensome and unsettling. Given the relatively slow pace of economic progress of the regions of concentrated Jewish population in Eastern Europe (western part of the Russian Empire, northeastern part of the Hapsburg Empire, and Romania), coupled with the existence of discriminatory policies, these regions were primarily involved in the migration of Jews to Western Europe and America. But although emigration had the function of a safety valve, it could not counteract the impact of the industrialization process, which, while injecting a new dynamism in the economic and social sphere, affected the life of the Jewish communities by creating new areas of internal conflicts and threatening to destroy the traditional values built up through centuries of relative cultural isolation. To the extent that they represented breaks with previous traditions and emphasized the existence of new opportunities, the very processes of industrialization and urbanization raised the level of expectations of the Jewish masses and made them more aware of their relationship to the outer world. This led to the development of new patterns of thought, increased sensitivity to the conditions of discrimination, and a more intensive search for new solutions to the specific problems of the Jews. The awareness of common specific problems was demonstrated not only in the economic but also in the cultural sphere. In spite of some tangible returns to the cultural assimilation of groups of Jews, until the end of the period a cultural homogeneity of the Jewish population in Eastern Europe was preserved. This culture embraced the basic elements of traditional moral and religious values with an addition of modern elements developed during the period following the Enlightenment in Eastern Europe. While the symbiosis of the elements of the traditional culture with those of a secular, modern, and nationally oriented one was by no means harmonious, the tensions had a culturally stimulating effect. It was a period of very intensive cultural activity and creativity by the Eastern European Jews, marked by the revival and modernization of Hebrew literature and development of modern Jewish literature in Yiddish. Cultural activities, in addition to rudimentary religious training and bare literacy, penetrated and affected the Jewish lower classes which had previously been excluded from most of their cultural heritage.

The period between the two world wars witnessed a number of new developments in Eastern Europe that were of major significance for the Jewish population. The most important events were the Russian Revolution and the establishment of new national states in the region on the ruins of the two large empires that had long dominated the political scene in Eastern Europe prior to World War I. The positive effect of the political changes was the granting of citizenship and civil rights to the Jews in the new states. On the negative side were the growth of nationalism of the dominant ethnic groups and the continuation of *de facto* discrimination against the Jews in most countries. Coupled with the difficult economic conditions in those countries, which were even more aggravated by government interference in the economic sphere, the precarious power balance in Europe, and the impact of the economic depression of the late 1920s and 1930s, this worsened rather than improved the economic conditions of the Jewish population.

In the Soviet Union, after an initial gain resulting from the granting of civil rights and the abolition of the Pale of Settlement by the democratic government of 1917, the period of the civil war inflicted heavy population losses upon the Jews, particularly in the Ukraine. The three outstanding features of Soviet policy toward the Jews were the following: (1) The isolation of Soviet Jews from the Jewish communities abroad and the slow but consistent policy of destruction of their cultural autonomy, institutions, and organized forms of communal life, leaving cultural assimilation as the solution to their problems as individuals. (2) The destruction of the small town, the former locus of economic activity of the majority of Russian Jews as a result of the forced industrialization drive and the mobilization of human resources to build up the industrial base of the country. This policy led to a mass migration from the western parts of the Soviet Union (Belorussia and the Ukraine) to the metropolitan areas and new centers of industrial activity. (3) Since education became one of the major vehicles of social advancement and was made available in the first instance to the urban population, a large proportion of the Jewish population took advantage of the opportunities and a marked shift in the employment pattern as well as in the professional composition took place. The Jews entered *en masse* into industrial employment and various service branches, all of which were nationalized and under the centralized control of the government. Although the social and economic advancement of the Jews in the Soviet Union should not be disputed, it raised two grave issues: one of cultural assimilation and the loss of group identity of the Jews, of their existence as a distinct cultural or religious entity; and the second, of their dependence as a group or as individuals upon the decisions lodged in the hands of the supreme policy makers of the country. The gravity of both issues arose, however, in a later period, following World War II.

**THE UNITED STATES.** The chief characteristic of the development of the Jewish community in the United States during the

late 19<sup>th</sup> and early 20<sup>th</sup> century was its rapid numerical growth by comparison with other Jewish communities. The growth occurred primarily as a result of the immigration of the Jews, rather than because of the birth rate of the Jewish population *per se*. The attraction of the U.S. for Jewish immigrants could be explained both in terms of a wage level relatively higher than in Europe as well as an open immigration policy, and the lack of specific anti-Jewish discrimination. However, the pace of immigration cannot be explained only in terms of increasing attraction. The impetus to immigration of the Jews can be traced to events in the European countries of their origin, and the influence of the turns of the business cycle in the United States on the size of the immigration stream can be demonstrated. During the modern period there were two streams of Jewish immigration, one of Western European Jews and the other involving almost entirely Eastern European ones. Each of these streams, although different in terms of its occupational or professional endowment, was faced by similar problems of economic integration and general acculturation with the environment.

While the German Jews arrived with the experience of language assimilation, a weakened sense of culture traditions, and the articulated desire to join the middle class, the Eastern European Jews arrived with industrial skills and the expressed willingness to be employed in any sector of the economy where opportunities were available, but without the experience of previous cultural assimilation. In addition, they transferred some of their habits of group behavior from their European environment. There was, therefore, among Jewish immigrants from Eastern Europe a strong preference for settling in compact masses for reasons of economic and psychological security. At the time of the first waves of mass immigration from Eastern Europe, the Western European Jews (mostly immigrants from Germany) had already acquired in the U.S. a basically middle-class or quasi-middle-class status and their pattern of employment reflected a high percentage of self-employment and concentration in the area of services. The mass influx of Eastern European Jews changed for at least two generations the social composition of the Jewish community in the United States. It became a predominantly industrial and labor-oriented community concentrated in major cities. The symbiosis of the two elements, the German and the East European, was ridden by conflicts and prejudices, by distinctions in wealth and status, the latter being derived from the degree of "Americanization" or the duration of residence in the U.S. The German Jews, often in the role of employers of the recent immigrants, especially in the garment industry, tried to maintain the social distance between themselves and the immigrants arriving from the culturally most backward areas of Europe. Faced with the model of success presented by the German Jews, the East European immigrants could not avoid aspiring to positions of social and economic advancement. While they accepted their status as manual workers and laborers as inevitable, and drew from it a number of conclusions, expressed by their political orientation, trade union activities, and so on,

they actively sought an improvement in the economic position and status for their offspring. Thus, while the process of acculturation of the immigrants took time, the gradual social advancement of some was counterbalanced by the successive waves of immigration swelling the ranks of the Jewish industrial working population. It was not until after World War I and the harsh restrictions against East European immigration that the process of penetration into the service sector and self-employment category became much more visible.

The rapid growth of the economy, the decline of agriculture, and changes in industrial structure, accompanied by a sustained, relatively high level of income, made it possible for the service sector to develop. Aided by the availability of educational opportunities, the almost exclusively urban Jewish population found outlets for its employment in the service sector, and the percentage of employment as unskilled labor, domestic service, or low-paid industrial employment declined. It would be wrong to assume that the shift in employment and the resulting improvement in the income position of the Jews in the United States before World War II took place in the total absence of discrimination. There was in fact a whole range of discriminatory attitudes operating against the Jews, as against many other ethnic groups representing relatively recent immigration. There was, however, a major difference between the U.S. and Europe in that discrimination was a *de facto* attitude rather than a *de jure*, statutory, or legal arrangement; that it was a private matter rather than one of public policy. Like other groups of European origin, the Jews were relatively successful in minimizing the effects of discrimination, first by improving their economic position and second by using political power derived from their numbers and concentration in some major urban centers of the country. In addition, discrimination was met by the Jews with an almost atavistic reflex of communal activity. The Jewish community developed a time-honored self-defense mechanism against discrimination in the form of institutions designed to meet specific needs of individuals or groups within the community. In the absence of organized communal authorities, recognized either by the outside world or by the Jews themselves, or representing their collective interests, the role of voluntary associations and institutions was even more significant for the discharge of group responsibilities and for the maintenance of whatever cohesion was possible within the Jewish community.

The numerical growth and economic advancement of the United States' Jewish community resulted in a change in the relationships among Jewish communities in the world, the U.S. Jewish community becoming an important source of economic assistance for the others. In a certain sense the bonds between American and European Jews provided a community of interest and purpose for the various groups of American Jewry, giving expression to their Jewish identity. At a time when the process of language assimilation was in progress, and the commonality of cultural concerns was diminishing, the "foreign aid" of American Jews provided them with a much-needed psychological satisfaction and helped to

maintain their identity. This process turned out to be of particular importance for the subsequent developments during and after World War II.

PALESTINE. While the first systematic attempts of organized mass colonization in Palestine go back to the 1870s and 1880s, a marked acceleration of the immigration stream occurred at the beginning of the 20<sup>th</sup> century, primarily as a result of the growth of a modern nationalist movement making immigration and settlement in Palestine the cornerstone of its ideology. The more organized manner of immigration and settlement, in part directed by a long-term national vision, led to the establishment of a social infrastructure within and for the Jewish population in Palestine, and to the establishment of modern social, economic, and educational institutions in an otherwise primitive and backward country. The introduction of modern institutions was accompanied by a striking attempt to modernize agriculture, a successful undertaking that integrated the need for economic modernization with the ideological factor of the need to recover the land, producing a sizable agricultural sector within the Jewish community in Palestine. The fact that the agricultural sector embraced a variety of organizational forms of production, that alongside private agriculture a cooperative and even a communal network of farms was created, was of considerable importance for the further development of the economy. The ideas of cooperation were also applied to other sectors of the economy: in industry, construction, and the services. Such enterprises had to reconcile private and social criteria in their decision-making and had to accept procedures for social control, arrangements that provided a particular atmosphere for economic activity within the Jewish community.

The continuous numerical growth of the Jewish population, resulting from successive immigration waves and natural population increase, and the emotional intensity of the issues connected with its development and its role among Jewish communities in the world often obscured the interesting pattern of economic and social development of the Jewish community in Palestine. An important feature of the Jewish population in Palestine was its relatively homogeneous cultural background since the majority of immigrants came from Eastern Europe. It possessed or created a full array of industrial, agricultural, and service skills at various levels, coupled with a level of education that was compatible with, if not excessive of, the existing level of skills. The economic activities of the Jewish population were conducted under conditions of virtual absence of discriminatory policies, apart from restrictions on immigration, particularly during the interwar period. This in turn created a basically stable economic structure; the employment distribution did not change drastically with time. There was relatively less income inequality than within other Jewish communities because skills were distributed differently. The level of income of the Jewish population in Palestine provided for the consumption needs of the population, with investment funds either imported by private investors from abroad, bor-

rowed abroad, or provided as a form of nonreturnable transfers (gifts) from other Jewish communities to the Jewish community in Palestine.

While the above characteristics appear to portray the main features of economic and social conditions of the Jewish community in Palestine until World War II, they obviously do not convey the dynamics of the process of economic development per se. A more detailed treatment of this subject would have to include the economic relationships with the majority of the population, the Arabs; the extent of self-sufficiency achieved within the Jewish community; and the economic relations with the foreign markets to which some of the products of Jewish labor, land, and capital were exported and from which income was derived (see \*Israel, State of, Economic Affairs).

### Epilogue

The interwar period that ended with the catastrophe of World War II, an event in the history of the Jews whose dimensions and consequences our present generation is still unable to perceive let alone define, was marked by the following characteristics: (1) the forced separation and isolation of one of the largest Jewish communities, namely that in the Soviet Union, from the rest of world Jewry; (2) the growth of the Jewish population in the United States and its relative economic strength in comparison with Jewish communities elsewhere created a new element in the balance and relationship between Jewish communities and indicated a future trend; (3) the economic situation of the European Jews, and especially of the East European communities, which worsened since economic and political uncertainty had become the norm even before the rise of Fascism and Nazism; (4) the rise of Nazism which created a direct danger to Jewish life and property in Central Europe, and the spread of discriminatory policies modeled upon the early legislation of Nazi Germany which became a real threat to a large part of European Jewry; given the limited opportunities for migration, the European Jewish population did not possess any real alternatives; (5) the growth of the Jewish community in Palestine which became an important cultural factor in the life of other Jewish communities, but its small relative size and the severe limitations imposed by the British upon Jewish immigration kept it from having a larger impact and from contributing toward a solution of European Jews' distress.

Therefore, prior to World War II, the Jewish communities found themselves at a crossroad, with the direction of their future fate and development depending upon exogenous, primarily political forces. The tragic results of World War II have left most of Europe virtually without Jews. There are now two major communities: that of the United States and that of the State of Israel, to shape the future of the Jews as a national entity. This situation of the Jewish communities, recovering from the physical disaster and psychological shock of World War II, made the economic relationship between the American Jewish community and the State of Israel one of the cornerstones

of a policy of survival. The economics of the Jews, apart from the parochial interests of economists and economic historians, was geared toward the survival of the group during most of its recorded history.

Cohn, in: *Zeitschrift fuer vergleichende Rechtswissenschaft*, 18 (1905), 37–72; S. Eisenstadt, *Ein Mishpat* (1931), lists numerous, economically relevant, juristic monographs.

**ECSTASY**, from Greek *ekstasis*, “displacement,” “movement outwards,” “distraction of mind,” “drunken excitement,” “entrancement,” or secondarily, “astonishment.” (See Mark 5:42.) In Greek religion two fundamental types of ecstasy, dionysiac and contemplative, are well attested; the former is induced by means of narcotics, alcohol, music, and dance; the latter by contemplation and prayer. Only the dionysiac is represented in the Bible. Several scholars have maintained that ecstasy was the fundamental experience of all prophecy. This view ultimately can be traced back to \*Philo who maintained that no prophecy is without ecstasy (see Spec. 4:49). Some scholars have distinguished between two groups: the classical prophets, or literary prophets, allegedly did not suffer from loss of

identity, but maintained their consciousness and were aware of a divine encounter to which they responded. The second group, the pre-classical prophets, sometimes manifested group prophecy, which was ecstatic and contagious (cf. Num. 11:16ff., where the 70 elders “speak in ecstasy” after the spirit of the Lord rests upon them – the Hebrew verb used is *hitnabbe*). Thus, when Saul meets “a band of prophets coming down from the high place with harp, tambourine, and lyre before them,” he, too, is overwhelmed: “A spirit of God came mightily upon him and he spoke in ecstasy among them” (1 Sam. 10). Similarly, when Saul sends men to capture David, who was staying with Samuel, they find Samuel at the head of a group of ecstatic prophets. The messengers are overcome by the spectacle and begin to rave. After this has happened to three sets of messengers, Saul goes himself, and, in a violent ecstatic fit, strips off his clothes and lies naked a whole day and night (1 Sam. 19:18–24). Both these incidents are cited as the origin of the proverbial expression “Is Saul among the prophets?” Scholars who maintain the pre-classical ecstatic/classical non-ecstatic distinction also cite 1 Kings 22, where some 400 prophets rave in ecstasy before kings Jehoshaphat and Ahaz on the eve of their united attack against Ramoth-Gilead. They note, correctly, as well that this feature of collective dionysiac frenzy is not confined to early Israelite prophets. In 1 Kings 18:28–29, 450 Canaanite prophets of Baal and 400 prophets of Asherah “cried aloud and cut themselves after their manner with swords and lances till the blood gushed out upon them ... They prophesied in ecstasy until the time of the evening offering. ...” Individual prophets, too, might fall into an ecstatic trance. Thus, Elijah ran before Ahab’s chariot when the hand of the Lord was upon him (1 Kings 18:46). An extra-biblical example, in addition to the Canaanite prophets of Baal just mentioned, is found in the 11<sup>th</sup>-century Egyptian tale of Wen-Amon, which relates that while Zakar-Baal, king of Byblos, was offering a sacrifice, “the god seized one of his youths and made him possessed” (Pritchard, *Texts*, 26). In such a state the person turns into “another man” (e.g., Saul, 1 Sam. 10:6) and may behave madly (1 Sam. 18:10ff.). This is doubtless why a disciple of the prophets is referred to as “the madman” (11 Kings 9:11). But a careful reading of the classical prophets shows that they too manifested odd behavior. Jeremiah is referred to as “madman” and “ecstatic” (*mitnabbe*) in the same breath (Jer. 29:26; cf. Hos. 9:7). Isaiah walked about barefoot and naked for three years (Isa. 20:3). Ezekiel lay on his left side for 390 days and 40 days on his right. From Zech. 13:4–6 we learn that a prophet might be expected to wear a hairshirt and have sores on his back, perhaps from some ritual beating. Indeed, the Hebrew word for madman, *meshugga*, may be a *terminus technicus* for a type of god-inspired individual who is called in the \*Mari letters a *muhhu* (fem., *muhhutum*), “frenzied,” “mad,” “ecstatic.” Such an ecstatic seizure may be induced by external means: music (cf. Elisha, 11 Kings 3:15, and the musical instruments carried by the bands of prophets, 1 Sam. 10:5 and 11 Chron. 35:15) or dancing (mentioned in connection with the prophets of Baal, 1 Kings 18:26). Some-

times this ecstatic seizure is described as caused either by “the hand of God” (1 Kings 18:46; 11 Kings 3:15; Jer. 15:17) or by “the spirit of God” (1 Sam. 10:6, 10; 18:10; 19:23), an indication that seizure and strange behavior might lend credibility to claims of prophecy.

[Shalom M. Paul / S. David Sperling (2<sup>nd</sup> ed.)]

**ECUADOR**, South American republic; population 13,363,593 (2005); Jewish population 900.

Unlike most other Latin American countries it was only in the wake of the Nazi persecution in Europe that a considerable number of Jews arrived in Ecuador. With the Spanish conquerors Jews, too, had in fact come to Ecuador, but their number was small. Also after independence from Spain comparatively few Sephardi Jews immigrated; these assimilated or at least did not practice their tradition in public. Certain family names among established Ecuadorian families attest until today to their Sephardi descent. At the end of the 19<sup>th</sup> century, and in the 1920s and 1930s, Jews emigrated mainly from Eastern Europe and settled chiefly in Guayaquil but did not become visible as a group. It is related that the first meeting for a New Year’s celebration took place in 1934 in a private apartment. In 1914 Vienna-born Julius Rosenstock was appointed by the Ecuadorian government to head the construction of the Sibambe–Quito highland railway. Because of his excellent connections in government circles he successfully fought for the entry of persecuted Jews to the country. The stream of refugees to Ecuador began in 1938, reaching its peak in 1939. On Rosenstock’s initiative a HICEM Committee was founded and the government negotiated the conditions of immigration with him. Because of his personal intervention, he succeeded in obtaining the repeal of the 1937 decree by the dictator Alberto Enríquez Gallo ordering Jews who did not work in agriculture or industry to leave the country within 30 days.

A relatively small number of Jews, 3,500–4,000, found refuge in Ecuador through 1942. Settlement projects from the mid-1930s, including the plan for long-term settlement of 50,000 families in mostly remote areas, were supported neither by the Ecuadorian public nor by the Jewish settlers and proved to be untrustworthy and impractical. For most of the Jews who found refuge in the country until 1942, Ecuador, with its three million inhabitants, was a second-choice place of exile, since they had failed to find asylum in another, preferred country. The majority came from Germany and Austria after the pogrom of November 1938 (\**Kristallnacht*) having lost hope that they could stay in their native country. Part of them settled in Guayaquil, the biggest city of the country, which was a real trading center with a population of about 180,000.

Major Jewish communities in Ecuador.

Located near the Pacific coast, it had a tropical climate. The vast majority, however, preferred the capital, Quito, situated in the Andes at an altitude of 9,200 ft. (2,800 m.). Few settled in small towns like Ambato (100), Banos, Cuenca (30), and Riobamba, or in the jungle around Puyo.

In Quito as in Guayaquil they were concentrated in several streets in the city center or not far from it. Quito with 150,000 inhabitants had no industry and only one multi-story building. Compared to middle-class European standards the living conditions were cramped and primitive, with no infrastructure and with infectious diseases and a lack of hygiene threatening their health. Many of the immigrants had only meager financial means, though many of them had brought their household goods and other possessions. Since the authorities returned the deposits that the immigrants had made to receive their visas (a few hundred dollars each), most of them had money to invest. Many had to earn their livings in unfamiliar occupations. But wherever it was possible they tried to continue in their former professions or similar ones.

Despite the regulations restricting immigration to industrial or agricultural laborers, only a minority worked in agriculture. Because of the difficult living and working conditions and their lack of knowledge such onerous attempts were given up. The project of HICEM and the Joint in 1937 to settle 60 families in the area of Ambato for chicken farming was among those failed attempts. A considerable number of the immigrants were active in trade, as peddlers, in retail and wholesale, and in the import and export trade. While the majority of the enterprises in the first years required hard work by all family members to reach a subsistence level, some of the enterprises reached a considerable size by 1942 and exist until today. The most successful were those that found a niche in the market, offering services and goods unknown in the country or absent from the market because of the war. In the field of food and textile production, in the metallurgical (El Arco, Ideal, Siderúrgica SA.) and pharmaceutical indus-

tries, in services and the hotel trade, they played an important role and brought a dynamic element into business life. Names like Rothschild, Seligmann, Neustätter, Di Capua, and Ottolenghi stand out.

The fact that the authorities as a rule did not enforce industrial or agricultural employment made it easier for the immigrants to integrate into the economic process but soon led to anti-Jewish pressure on the part of the local population. While the presidents José María Velasco Ibarra (1934–35, 1944–47) and Carlos Arroyo del Río (1940–44) approved the immigration of Jews, some circles espoused an antisemitic line with recourse to the German-based press and deep-seated Christian prejudices. Also textile merchants of Arab origin, especially from Lebanon, who had lived in Ecuador for decades, considered the Jews undesirable competitors. In August 1944 Velasco Ibarra rescinded the regulations that restricted immigration to industrial or agricultural employment, but already at the end of the 1940s the authorities stepped up the control of Jewish enterprises and in 1952 another law was passed requiring proof that a foreigner was engaged in the occupation stipulated in his entry visa. This legislation was counteracted by the intervention of the World Jewish Congress. Within these limited political and social limitations the immigrants were free to do whatever they wished. There was no bar to practicing their religion or founding associations.

The biggest group among the refugees was in Quito. Its nucleus was the above-mentioned HICEM Committee founded in 1938. In the same year the Asociación de Beneficencia Israelita was founded, reaching its peak with over 540 members (heads of families) in 1945. Unlike most Latin American countries, where Jewish communities already existed and the newcomers founded their own separate organizations according to their countries of origin, the “Beneficencia” united Jews from Germany, Austria, Italy, Poland, Hungary, Czechoslovakia, Romania, the Soviet Union, and the Baltic states.

Though there was some religiously motivated separation this was of minor significance. While in Guayaquil differences of opinion about Zionism were a greater potential cause of discord than in Quito, in religious matters the situation was quite the opposite. In Guayaquil the strongest organization, Comunidad de Culto, with more than 140 members, combined the Sociedad de Beneficencia, founded in 1939–40, and the Centro Israelita, which had split off in 1944, both competing for cultural primacy. Under the impression of the foundation of the State of Israel all organizations in Quito united under the umbrella of the “Beneficencia” while in Guayaquil it took almost 20 years more to reach such unity.

The “Beneficencia” did a great deal to create a center of religious, social, and cultural life for its members. A bulletin called *Informaciones para los Inmigrantes Israelitas*, in the first period mainly written in German, informed readers about the community, the host country, and international affairs. Based on the model of their European countries a court of arbitration, a *hevra kaddisha*, a women’s association, a cooperative bank, Maccabi, and B’nai B’rith were established. In

Quito and in Guayaquil Zionist organizations were founded that succeeded in winning the support of public figures in the host country for the objectives of Zionism. The Ecuadorian representative cast his vote in the UN General Assembly resolution of November 29, 1947, in favor of the partition of Palestine. Ecuador and Israel established diplomatic relations. From the late 1960s a network of technical cooperation and assistance was developed between the two countries, especially in the fields of agriculture, water development, youth training, and technology.

Jews achieved prominence in Ecuadorian society beyond the economic field. They contributed to cultural development in music, painting, theater, arts and crafts, architecture, literature, science, journalism, and publishing.

In the 1940s the Kammerspiele theater was established on a high artistic level, directed by Karl (Carl) Loewenberg, co-founder of the Juedischer Kulturbund of Berlin. In the 1950s the theater continued to perform in Spanish before appreciative local audiences. An international reputation was achieved by the painter Olga Fisch-Anhalzer, co-founder of the Instituto Ecuatoriano de Folclor. The painter and sculptress Trude Sojka, who had survived Auschwitz, arrived in 1946. Paul Engel, a physician and writer (pen name Diego Viega), who immigrated to Ecuador in 1950 from Colombia, became known as an endocrinologist. Benno Weiser (Benjamin Varon) made a name for himself as a journalist. Like his brother Max Weiser, who was the first Israeli consul to Ecuador, he entered the Israeli diplomatic service.

As the majority of the immigrants had regarded their stay in Ecuador as a temporary episode, emigration after the end of the war was considerable. By 1948 about half the Jews in Quito had emigrated, mainly to the U.S. On the other hand, a considerable number of survivors of the Holocaust arrived in the early postwar years. Because of continuous emigration, mortality, and partial assimilation of the following generation, which considered Spanish its mother tongue, the immigrant organizations lost their pivotal role as preservers of social and cultural identity. However, the Jews continued to form a small middle-class group largely cut off from the strong Catholic upper class and the masses of mestizos and the indigenous population.

In 1972 the *Informaciones* ceased publication. Different attempts to revive tradition did not persevere. The small communities of Ambato and Cuenca disbanded. At the beginning of the 1970s, in the course of the oil boom and thanks to easier-to-obtain entry permits, Jewish families from other Latin American countries arrived. As a result of political developments under the presidency of Salvador Allende a large number of families preferred to exchange Chile for Ecuador as a domicile. Towards the end of the 20<sup>th</sup> century many Jews from Argentina settled in Quito.

In 2005 the Jewish community (Comunidad Judía del Ecuador) of the city of Quito with its 2 million people numbers 200 families, or 550–600 members (the community of Guayaquil has 20 families, or some 70 members). The com-

munity has modern facilities for its social, recreational, and administrative needs. There is a synagogue and a rabbi for religious services. A *hevra kaddisha* and a home for the aged continue to function as well as the women's association as an independent organization. About 75 children go to the Colegio Alberto Einstein, a private school founded in 1973 by members of the community where the great majority of the pupils are non-Jews. The community is in contact with other Jewish organizations in Latin America and worldwide.

[Marie Luise Kreuter (2<sup>nd</sup> ed.)]

**EDAH**, U.S. grassroots organization comprised of rabbis, laity, intellectuals, and communal leaders who joined forces to revitalize a distinctive Modern American Orthodoxy. By the late 1960s, most observers had abandoned earlier predictions of the imminent demise of American Orthodoxy. Champions of Orthodoxy, as well as more neutral observers, pointed to the growth of day schools, the strength of the Orthodox family, and the intensity of Orthodox commitments as markers of sustained vitality. Generally, however, these commentators pointed to Modern Orthodoxy as the wave of the future. Haredi Orthodoxy remained in retreat and on the defensive. Israel's victory in the 1967 war signaled the ascendancy of religious Zionism. Yeshiva University, the flagship institution of Modern Orthodoxy, was experiencing unprecedented growth. High-profile Modern Orthodox intellectuals – notably Emanuel \*Rackman, Irving \*Greenberg, David \*Hartman, and Eliezer \*Berkovits – were eagerly probing the bold and exciting challenge of defining the shape of a Judaism that would wed modern values with the teachings of Torah.

By the end of the 1980s, much had changed. Although increasingly vibrant, American Orthodoxy seemed decreasingly modern. Some pointed to a Haredi ascendancy. Others underscored the widespread Orthodox practice of attending year-long post-high school programs in Israel, which had intensified Orthodox commitment and attachment to Israel, but whose faculties loudly proclaimed the bankruptcy of Modern Orthodox culture and values. Historians pointed to a new wave of Ultra-Orthodox immigration to America. Survivors of the Holocaust, these individuals spared no effort to rebuild Ultra-Orthodoxy on American shores. Lastly, Modern Orthodox parents, unlike their Haredi counterparts, generally failed to perceive Jewish education as a suitable profession for their children, thereby creating a vacuum that Haredi educators eagerly filled.

Thus, within short order, Modern Orthodoxy appeared to be more in danger of eclipse than on the cusp of renewal. Interdenominational programs, such as the Joint Chaplaincy Board and the Synagogue Council of America, were closed down in 1987 and 1994, respectively. The very nomenclature

“Modern Orthodoxy” was dropped in favor of the more neutral and less ideologically-charged “Centrist Orthodoxy,” a change that Dr. Norman \*Lamm, then president of Yeshiva University, for one, publicly regretted by the close of the century.

In this context, it was easily understandable that some sought to restore the “modern” in American Orthodoxy. In the late 1990s, a group of Orthodox intellectuals and lay leaders established Edah under the banner of “the courage to be modern and Orthodox.” Launched initially as a grassroots initiative, with Rabbi Saul Berman as president, Edah’s founding conference in February 1999 attracted over 1,500 participants. At stake were the questions on which the founders of Edah maintained that Modern Orthodoxy has ceded leadership. These included the challenge of feminism and women’s equality, the hijacking of religious Zionism by \*Gush Emunim, the pursuit of secular education as a value in itself rather than purely for utilitarian or instrumental reasons, and the continuing need for cooperation with the non-Orthodox religious movements and their leaders. More specifically, Edah hoped to redress women’s inequality, notably in Jewish divorce law, to train a cadre of Modern Orthodox educators, to help define religious Zionism for the 21<sup>st</sup> century, and, perhaps above all, nurture an atmosphere of open dialogue and freedom of exchange that was so sorely lacking in an Orthodox world dominated by *roshei yeshivah*. Significantly, during these years, one of the most prominent of Yeshiva University Talmud faculty had pronounced Modern Orthodoxy to be the “Amalek of our time.”

Yet Edah’s hope to reclaim Yeshiva University as Modern Orthodoxy’s stronghold remained unfulfilled. For one thing, notwithstanding Edah’s impressive turnout of supporters and intellectual leadership, Yeshiva University faculty generally were absent. At best, Yeshiva University remained neutral towards Edah if not outright dismissive. Rabbi Aharon Lichtenstein wrote from Israel that he was certain that his late father-in-law, Rabbi Joseph B. \*Soloveitchik, upon whose memory as Modern Orthodox scholar and communal leader Edah had sought to build, would today have little identification with Edah and its program. More generally, Yeshiva University leadership dismissed Edah as unnecessary, pointing to Y.U.’s Orthodox Forum which claimed the virtue of continuing dialogue between Orthodox intellectuals and *roshei yeshivah*. Nonetheless, Edah, under Rabbi Berman’s leadership, persisted into the 21<sup>st</sup> century. By 2005, it had held four national conferences and several regional ones. Five volumes of the Edah journal had appeared, containing impressive scholarship and dialogue on critical issues, e.g., *aliyot* for women, generally not found elsewhere in the Orthodox world. Other institutions, notably the Jewish Orthodox Feminist Alliance (JOFA), Rabbi Avi Weiss’ Yeshivat Chovevei Torah, proclaiming its commitment to an “open Orthodoxy,” and, in Israel, the Lavi Conference, all loosely aligned with Edah in an effort to spearhead a Modern Orthodox renewal.

In the final analysis, however, the struggle for the Orthodox future remained open. Most observers agreed that Yeshiva University, given its enormous resources and prominence inside the Jewish community, would continue to set the tone for Modern Orthodoxy in America. To be sure, Yeshiva’s direction, under the presidency of Richard Joel, who was appointed in 2003, remained unclear. Yet the purposes for which Edah had come into being in the late 1990s remained as compelling in the 21<sup>st</sup> century.

[Steven Bayme (2<sup>nd</sup> ed.)]

**EDEL, YIZHAK** (1896–1973), composer and teacher. Edel was born in Warsaw and from 1924 to 1927 he taught music in the orphanage of Janusz \*Korczak, in Warsaw. In 1929 he immigrated to Palestine where he worked as a music teacher in teachers’ colleges. His works include orchestral and piano music, quartets for strings and wind instruments, songs, and cantatas. His musical style shows the influence of Eastern European Jewish tradition.

**EDELMAN, GERALD MAURICE** (1929– ), U.S. biochemist and immunologist, Nobel Prize laureate. Edelman was born in New York. He originally studied as a violinist but turned to biochemistry and received his M.D. from the University of Pennsylvania in 1954 and his doctorate from the Rockefeller University in 1960, where he was appointed associate professor of biochemistry, and associate dean of graduate studies in 1963. One of the leading immunologists in the United States, he devoted himself to research in the elucidation of the structure of antibody molecules and established the complete chemical structure of gamma globulin, which defends the body against foreign bodies and disease. In 1977 Edelman and his colleagues discovered cell adhesion molecules. Subsequently he turned his attention to neuroscience, becoming director of the Neurosciences Institute in San Diego, California. He has proposed a global brain theory called Neural Darwinism, which provides the basis for understanding the origin of consciousness. Edelman is a member of numerous scientific bodies, including the National Academy of Sciences, the American Academy of Arts and Sciences, the American Association for the Advancement of Science, and the American Chemical Society. In 1972 he was awarded the Nobel Prize for Medicine and Physiology together with Dr. Rodney Porter.

**EDELMAN, MAURICE** (1911–1975), author and politician. Born in Cardiff and educated at Cambridge, Edelman was a Labour M.P. from 1945 until his death. He was president of the Anglo-Jewish Association in 1963. His works include *France: The Birth of the Fourth Republic* (1945); *David Ben-Gurion* (1964), a biography; and political and other novels, including *A Trial of Love* (1951), *Who Goes Home* and *A Dream of Treason* (both 1953), *A Call on Kuprin* (1959), *The Fratricides* (1963), *The Prime Minister’s Daughter* (1964), and *Shark Island* (1967). Edelman’s best-known work was probably the novel *Disraeli in Love* (1972). Although a Labourite, Edelman was such an

admirer of Disraeli that, in 1972, he leased and lived in a wing of Hughenden manor, Disraeli's country house. Once a leftist supporter of the Soviet Union, by the end of his life Edelman was active in the movement for Soviet Jewry.

**BIBLIOGRAPHY:** ODNB online.

[William D. Rubinstein (2<sup>nd</sup> ed.)]

**EDELMANN, RAPHAEL** (1902–1972), Danish scholar and librarian. Born in Latvia, Edelmann immigrated to Copenhagen as a child. In 1933 at the recommendation of David \*Simonsen he began working in the newly established Jewish department of the Royal Library of Copenhagen, which consisted of the rich library of Simonsen; from 1938 he headed the department. From 1948 he lectured at the University of Copenhagen, where he was in charge of Judaic studies, including Yiddish. In 1955 he founded the Association of Libraries of Judaica and Hebraica in Europe and in this capacity organized training courses for Jewish librarians. Edelmann published extensively in several scholarly fields and made important contributions to the dissemination of Jewish scholarship in Denmark. Among his works are *Bestimmung, Heimat and Alter der synagogalen Poesie* (1932), and *Zur Fruehgeschichte des Machzor* (1934), important works on the early history of liturgical poetry. He compiled the catalog of Hebrew incunabula of the library of L. \*Goldschmidt, now at the Royal Library (in *Fund og Forskning*, 3 (1956), 82–90); edited the series *Corpus Codicum Hebraicorum Medii Aevi* (1954– ); and edited the *Subject Concordance to the Babylonian Talmud* by L. Goldschmidt (1959). He also arranged successful exhibitions of the treasures of the Royal Library in Paris, Strasbourg, Milan, and New York.

[Menahem Schmelzer]

**EDELMANN, SIMḤAH REUBEN (Sar ha-Adulammi)** (1821–1893), Lithuanian Hebrew scholar. Edelmann was born in Vilna and studied at the Volozhin yeshivah. He tried his hand in various branches of Jewish scholarship, and also wrote poetry and was one of the first to “discover” J.L. \*Gordon, whom he befriended.

Among his published books are *Shoshannim* (1860); *Ha-Mesillot* (1875); *Ha-Tirosh* (1871), on *Genesis Rabbah*; and *Doresh Reshumot* (1893), on I.H. \*Weiss' historical work *Dor Dor ve-Doreshav*, which Edelmann criticized for its liberal views. Edelmann also contributed to Hebrew periodicals. Part of his literary remains were used by A.D. Lebensohn and I. Benjacob in their edition of the Bible (1849–53) and published by Edelmann's son Mordecai Isaac in his *Me'arat Adulam* (1922) and *Tovim ha-Shenayim* (1913). An autobiographical fragment was published by the son in his biography of his father, *Hakham ve-Sar* (1896).

**EDELMANN, ZEVI HIRSCH** (1805–1858), Hebrew scholar, printer, and publisher. Edelmann, who was born in Svisloch, Belorussia, published books at Danzig, Koenigsberg, and London. In England, in particular, he carefully searched the

libraries for Hebrew manuscript material. Edelmann published editions of hitherto unpublished medieval Hebrew literature such as Estori Ha-Parhi's *Kaftor va-Ferah* (1851, repr. 1959); *Ginzei Oxford* (translated into English by M.H. Bresslau and published in *Treasures of Oxford*, 1851), a collection (with L. Dukes) of liturgical and secular poetry by Spanish-Jewish poets; *Derekh Tovim* (also translated into English by M.H. Bresslau and published in *Path of Good Men*, 1852), varia by Maimonides, Judah ibn Tibbon and others; *Hemdah Genuzah* (1856), an important collection of philosophical writings and letters, mainly by, to, or about Maimonides; *Divrei Hefez* (1853), another collection of philosophical and poetical material; and also M.H. Luzzatto's *La-Yesharim Tehillah* (1854). Edelmann also published a number of important liturgical items: *Seder Haggadah* (1845), with critical notes; *Haggadah Le-Leil Shimmurim* (1845), with commentaries and notes; and *Siddur Hegyon Lev* (1854) containing Edelmann's critical notes and emendations, *No'am Megadim* by J. Teomim, and *Mekor Berakhah* by E. Landshuth. Edelmann's first publications, which were purely talmudic, were *Haggahot u-Vi'urim li-Me'irat Einayim* (1839) and *Alim le-Mivḥan*, including *Megillat Sefer Iggeret ha-Purim* (1844) on Esther. He also wrote an historical study on Saul \*Wahl, the alleged one-day king of Poland, *Gedullat Sha'ul* (1854), with an appendix *Nir David*. His considerable publishing ventures were carried out under conditions of great financial stringency. Edelmann lived in Berlin from 1852 and died in the ward for the insane in a Berlin hospital.

**BIBLIOGRAPHY:** *Jewish Chronicle* (1841–1941) (1949), 55; A. Berg, *Birkat Avraham* (1882); Kressel, *Leksikon*, 1 (1965), 24–25.

**EDELS, SAMUEL ELIEZER BEN JUDAH HA-LEVI** (known as **MaHaRShA** – Morenu **Ha-Rav Shemu'el Adels**; 1555–1631), one of the foremost Talmud commentators. Born in Cracow, he moved to Posen in his youth, where he married the daughter of Moses Ashkenazi Heilpern. His mother-in-law, Edel, by whose name he was later known, was a wealthy woman and supported him and his numerous disciples for a period of 20 years (1585–1605). After her death, Edels took up a rabbinic position in Chelm. In 1614 he was appointed rabbi of Lublin, and in 1625 of Ostrog, where he founded a large yeshivah. On the lintel of his house (burned down in 1889) was inscribed the verse: “The stranger did not lodge in the street; but I opened my doors to the traveler” (Job 31:32). His commentary on the Talmud is one of the classical works of talmudic literature included in almost every edition of the Talmud. The commentary is divided into two parts. In his *Hiddushei Halakhot* he explains the talmudic text with profundity and ingenuity. In his introduction to the work he writes that “out of love for terseness” he would refrain from elaboration. He ends most of his comments with the phrases: “And weigh carefully” or “And the meaning is simple,” although in reality it is far from clear and many later scholars often found difficulty in understanding his point. Often he poses a difficulty and says: “And this may be solved,” leaving it to the students to

find the answer. He was fond of talmudic casuistry, and used to say: "No one can arrive at the root and depth of a talmudic problem without a master who teaches him *pilpul*"; but he vehemently opposed the kind of casuistry which, in his time, came to be known as *hillukim*, where students would engage in fruitless debate to try to demolish one another's arguments. In his *Hiddushei Halakhot*, Edels' explanations of talmudic problems are generally in accordance with the view of Rashi and the tosafists. His book gained such wide currency that an understanding of Edels' comments came to be regarded for many generations as one of the qualifications of the average talmudic scholar. The second part of his commentary is called *Hiddushei Aggadot*, in which he attempts to explain the difficult talmudic *aggadot* in a rational manner, sometimes taking them as parables with interpretations which are at variance with their literal meaning. He criticized, however, the prevailing tendency of preachers to distort the plain sense of biblical and talmudical passages. Although censuring "those people who in the present generation give all their time to the study of Kabbalah," he nonetheless quotes extensively from kabbalistic literature. He also made use of his acquaintance with Jewish philosophy in his interpretation of talmudic *aggadot*.

He adopted a positive attitude toward the secular sciences, considering them important for a fuller understanding of Torah, and their acquisition as vital for learned Jews in their disputations with non-Jews. His statements are sometimes marked by a spirit of critical inquiry. He decides, for example, that the Targum to the Pentateuch ascribed to Jonathan b. Uzziel is not by him. He senses that the *tosafot* to the tractate *Yoma* are different in style from those to other tractates. He established that some statements or passages in Rashi's commentary and in the *tosafot* had originated as marginal comments by students who had not understood the passage, and in the course of time these comments had come to be interpolated in the text. Edels reproved his contemporaries for making light of certain precepts, e.g., those who drink to excess at the *melaveh malkah* meal on Saturday night and so neglect the recitation of the *Shema* upon retiring, and rise too late the following morning for the statutory time for the reading of the *Shema* and the recital of the morning prayers. He was a sharp critic of social evils in the communities, such as the dishonesty and egotism of some rich *parnasim*. He reproached the rabbis of his time with overawing their communities for motives which were not purely altruistic, and was irked by the fact that "in these times, whoever possesses wealth is appointed to public office for a price and is in constant pursuit of honor." In 1590 he participated at a session of the \*Council of the Four Lands which pronounced a ban on those who purchase rabbinic office. Edels was held in high esteem by the scholars of his day. Joel \*Sirkes in his address to the leaders of the Council of the Four Lands in Lublin, said: "You have in your midst the greatest man of the present generation ... with whom to consult and deliberate." On his tombstone, Edels is described as "a holy man ... exemplary in his generation ... whose fame traveled far and wide. His great work was a light

to the eyes of the Sages of Israel." He was also highly regarded by later generations. Jonah \*Landsfer enjoined his sons to pay close attention to the works of Edels, "because his writings are amazingly terse and plumb the depths of Torah's truth ... The spirit of God spoke through him, for without divine inspiration it would have been impossible for a man to write such a book." Edels' other works are *Zikhron Devarim*, novellae of the group of scholars at Posen (published by his mother-in-law in 1598); a penitential prayer beginning with the words: "*El Elohai Dalfah Einai*"; and a penitential prayer written in memory of the Warsaw martyrs (1597).

His brother's son, whose name has not been preserved, made his way to Morocco, and apparently settled there. His work *Sha'arei Hokhmah*, on *aggadah* and homiletics, is extant in many manuscripts. In it he quotes his uncle and many of the other great 17<sup>th</sup>-century scholars of Poland, including Israel Spira, son of Nathan \*Spira, whom he calls "my teacher," and Abraham Abele \*Gombiner. He died before 1674.

Modern rabbinic teachers lament the forsaking of Edels' talmudic commentary. In addition to the profundity of his ideas, Edels' work is instrumental in teaching the correct analysis of the talmudic text.

[Shmuel Ashkenazi]

**EDELSTADT, DAVID** (1866–1892), Yiddish poet. Edeldstadt was born in Kaluga, the son of a cantonist. After the Kiev pogrom of 1881, he immigrated to the U.S. as part of the agricultural \*Am Olam movement but settled in Cincinnati to work in the garment industry, joined the anarchist movement (which at the time wielded great influence among Jewish workers), and became one of the first Jewish socialist poets, initially composing radical poetry in Russian. In 1888 he moved to New York and continued working in sweatshops, writing increasingly in Yiddish. In works such as "In Kamf" ("In Struggle"), "Vakht Uf" ("Awaken"), and "Mayn Tsavoe" ("My Last Will and Testament"), Edeldstadt called upon his working-class audience to revolt against the upper classes and seize the means of production. In 1890, he became a regular contributor to and, a year later, editor of the newly founded anarchist weekly *Fraye Arbeter Shtime*. His lyrics, sung in sweatshops and on picket lines, depict the world's imperfections and the wondrous life to come after a social revolution. After he contracted tuberculosis in 1891, he traveled to Denver to recuperate but died there the following year at the age of 26, becoming a romantic legend to the young Jewish labor movement and a central figure, along with Joseph \*Bovshover, Morris \*Rosenfeld, and Morris \*Vinchevsky, of the \*Sweatshop Poets. His collected works were published in London in 1910 and in Moscow in 1935.

[Sol Liptzin / Marc Miller (2<sup>nd</sup> ed.)]

**EDELSTEIN, JACOB** (d. 1944), Czech Zionist leader and head of the \*Theresienstadt ghetto. Born in Horodenka, Galicia, Edelstein went to Bohemia as a refugee during World War I. He first joined the Social Democrat youth movement there, and then the Zionist movement. From the early 1930s he was one of the leaders of the Labor Zionist movement in Czechoslovakia, a member of the presidium of the nationwide Zionist Federation, and director of the Palestine Office of the Jewish Agency in Prague. After the invasion of Bohemia and Moravia by Nazi Germany in 1939, Edelstein became the central figure of the Zionist movement and of Jewish life in the Nazi Protectorate. In the autumn of 1939, he visited the group of Jewish deportees at Nisko, in the Lublin region, and reached the conclusion that in most cases deportation of Jews to the East meant their death. In order to avoid deportation of the Protectorate's Jews, he suggested establishing a labor camp for them within the Protectorate that would employ the Jews to further the economic needs of the occupying power.

The establishment of the ghetto in Theresienstadt (Terezin) was apparently due to Edelstein's initiative. He was appointed its first *Judenaeltester* (Jewish Elder), serving in this post from December 1941. His courageous stand on behalf of the ghetto inmates made him the object of hatred of several heads of the \*Gestapo. His jurisdiction was restricted, and in November 1943 he was arrested for having falsified the lists in order to rescue several inmates. He was sent to \*Auschwitz, where he was kept in a punishment cell and shot on June 20, 1944, after having been forced to witness the execution of his wife and young son. He went proudly to his death. Opinions are divided in the evaluation of his activities during the Holocaust. Some (such as H.G. Adler) contend that Edelstein misunderstood the situation and thus engaged in a measure of cooperation with the Nazis; others, particularly survivors from the Zionist pioneering movement, see in him a tragic martyr, who fought the enemy for the rescue of Jews until his defeat. The liberated inmates of Bergen-Belsen named their camp school for him.

[Chaim Yahil]

**°EDEN, SIR ANTHONY, EARL OF AVON** (1897–1977), British Conservative statesman, foreign secretary (1935–38, 1940–45, 1951–55), secretary for war (1940), and prime min-

ister (1955–57). Eden resigned in 1938 in protest against Neville Chamberlain's policy of "appeasement" to the Axis and became Churchill's right-hand man during World War II. In 1936 Eden signed the Anglo-Egyptian Treaty of Friendship and Alliance, which was unilaterally denounced by Egypt in 1951. During World War II he increasingly advocated Arab unity, which in 1945 took the form of the \*Arab League that eventually turned against Britain. Eden was aware of the Holocaust and, indeed, made a famous statement in the House of Commons in 1942 confirming that the Nazis were exterminating Europe's Jews, but that Britain could do little or nothing to thwart it apart from winning the war. In 1955 Eden led Britain into the Baghdad Pact, an additional source of friction with Egypt. In November 1955 he suggested a compromise between the Arab demand that Israel withdraw to the boundaries of the UN Partition Plan of 1947 and Israel's stand on the borders of the armistice agreements of 1949. In October 1956, after the nationalization of the Suez Canal by Egypt, he and Guy Mollet, the prime minister of France, mounted the Suez Expedition, the object of which was to gain control of the Canal. The Suez campaign had the secret backing and cooperation of David \*Ben-Gurion and the Israeli government. (See \*Sinai Campaign.) Under the extraordinary agreement reached between Britain, France, and Israel, Israeli forces were to take control of the Sinai – which they proceeded to do in short order – at which point Britain and France were to intervene to keep the belligerents apart but also to retake the Suez Canal for themselves. The Suez Campaign failed, thanks in large measure to American opposition. It aroused fierce hostility from the British Labour party and left-wing sources, but also marked the first time in which Israel's military prowess was displayed successfully. Soon afterwards, Eden became seriously ill and retired from the prime ministership and from political life early in 1957. In retirement, he wrote *Full Circle* (1960), *Facing the Dictators* (1962), and *The Reckoning* (1965). In 1961, Eden was given an earldom. He had been made a knight of the Garter in 1953 and was known as Sir Anthony Eden during his prime ministership.

[Sh.Be / William D. Rubinstein (2<sup>nd</sup> ed.)]

**EDEN-TAMIR**, Israeli piano duo. Bracha Eden was born in Jerusalem (1928) and Alexander Tamir (1931), a native of Vilna, settled in Jerusalem after World War II. Both studied with Alexander Schroeder (a pupil of A. Schnabel) at the Rubin Academy of Music in Jerusalem. After graduating in 1952, they formed a piano duo. In 1955 they continued their studies with Vronsky and \*Babin at Aspen. They made their debut in Israel in 1954 and appeared in New York (1955) and Rome (1956), where they won the 1957 Vercelli Competition. Eden and Tamir founded the Max Targ Music Center in Ein Kerem, near Jerusalem (1968), and taught as senior professors at the Rubin Academy. During the 1990s they began to perform and

teach regularly in China, Russia, and Poland, and in 1997 they became directors of the International Duo Piano Seminary. Well known for their artistry, virtuosity, and immaculate ensemble playing, the duo made an important contribution to the revival of works for two pianos and piano duet.

Among their recordings are the complete works for two pianos and piano duet of Mozart, Schubert, and Rachmaninoff, and works by Bach, Brahms, Debussy, Ravel, Bartók, and Poulenc. They gave the American première of Lutoslawski's *Paganini Variations* (1955) and, at the suggestion of Stravinsky (1968), were the first to perform and record the piano duet version of *The Rite of Spring*. Tamir has made several transcriptions for piano duo and duet and has written a few works for piano duo.

**EDER, MONTAGUE DAVID** (1865–1936), Zionist leader, psychoanalyst, and physician. Born in London into an assimilated family, Eder devoted himself to the medical care of the poor in London's slums and mining villages, becoming a member of the Labour Party. One of the first British psychoanalysts and protagonists of Sigmund Freud, together with Ernest Jones he founded the Psychoanalytical Association in England in 1913. Eder also established a children's clinic and founded and edited the journal *School Hygiene*. His interest in Jewish affairs was aroused by his cousin, Israel \*Zangwill, and his brother-in-law, Joseph \*Cowen. Eder joined the Jewish Territorialist Organization (JTO) and participated in a mission on its behalf to Cyrenaica to evaluate the possibilities for Jewish settlement there. In 1918 he was invited by Chaim \*Weizmann to join the \*Zionist Commission for Palestine, as a representative of JTO and as medical officer. He arrived there in 1918 and stayed for over four years, becoming an enthusiastic Zionist. He played a key role in the Commission, being its only member to extend his stay after 1918. He conducted the negotiations with the military and civil administration of Palestine and helped actively in the absorption of the first groups of immigrants of the Third \*Aliyah, displaying great understanding for their pioneering spirit. Eder was a member of the Zionist Executive 1921–23 and 1922–28, first in Jerusalem and later in London. His kinship with the Soviet diplomat Maxim \*Litvinov (to whom he was related through his wife) enabled him to visit the Soviet Union in 1921, where he tried, unsuccessfully, to achieve some degree of legal status for the work of the Zionist Organization there. Upon his return to Britain, Eder was active on behalf of the Hebrew University, the Political Department of the Zionist Executive, and the British Zionist Federation, which he headed for a short time in 1930. An agricultural farm for the training of Palestine pioneers, established in 1935 in Ringelstone, Kent, was called the David Eder Farm.

[Getzel Kressel]

**EDESSA**, a city in the upper Euphrates Valley (today Urfa in Turkey). Archaeological remains are known in the area of the city going back to the second millennium B.C.E., and Edessa may very well have been a Hurrian city alternatively known as Orrhoe, Orhai, or Osrhoene. Until 11 C.E. Edessa was part of the border area that passed on various occasions from Parthian to Roman hands. The city was conquered in August 116 by Lusius Quietus, and remained a Roman possession until 216, when it was officially incorporated into the Roman Empire. The suppression of the Parthian resistance against the Romans meant also the subjugation of the Jews of the city (see Segal). By the end of the second century C.E. Edessa had become the center of Christianity beyond the Euphrates, and this development suggests a Jewish influence in the area during that period. It is known, for instance, that the local king during the early second century, Abgar VII, was a son of \*Izates of Adiabene, a monarchy already converted to Judaism. Eusebius, a primary source regarding the establishment of Christianity in Edessa, relates that Abgar V had corresponded with Jesus himself, and as a result immediately accepted the teachings of the first Christian disciple to arrive at Edessa, the preacher Addai. The story is also given in the "Doctrine of Addai," which claims that the conversion involved, among others, Jewish silk merchants. The story is a Christian invention. The Palestinian Targum identifies the Erech of Genesis 10:10 with Edessa and refers to it, together with Ctesiphon and Nisibis, as one of the three Babylonian cities ruled by \*Nimrod. In the Talmud the name of the community is Hadass.

[Isaiah Gafni / Shimon Gibson (2<sup>nd</sup> ed.)]

The Edessa chronicles mention an order issued by the emperor in 411, to erect a convent on a spot occupied by a synagogue; other reliable sources, however, describe the bishop who was then in office, and was alleged to have built the convent, as a friend of the Jews (see Overbeck, *Opera Selecta*, 195; reports on Jews in Edessa are also available for the year 499: REJ, 6 (1883), 137). The participation of Edessa Jews in the wars between Heraclius I, the Byzantine emperor, and the Persians (610–42), on the side of the latter, gives reason to believe that their number was quite substantial.

For a considerable period after its capture by the Arabs (who renamed it al-Ruha), the town remained predominantly Christian. Islam, of course, spread in the town, at the expense of Christianity and Judaism. There is a source about a false Messiah in c. 735, who was a native of Edessa. According to Bar-Hebraeus, Muḥammad b. Ṭāhīr built a mosque in 825 on a site previously occupied by a synagogue. In the 9<sup>th</sup> century the physician Yizhaq Ben Ali Al-Rohawi (Odessa man) was born in Edessa. In 1098 the town was conquered by the Crusaders and the Jews were expelled. There is a document from December 1101 in Ruzafa (150 km. south of Edessa) which notes the Jews of the castle of Ruzafa (one of the names of Edessa); probably these Jews were the refugees from Edessa who had fled to Ruzafa. When 'Imād al-Dīn Zengi captured the town in 1144, he settled 300 Jewish families there; and in 1191 when

R. Samuel b. Ali, head of the Baghdad Academy, addressed a circular letter to the communities in northern Babylonia and Syria, he included the al-Ruha community among those addressed. \*Al-Ḥarizi (13<sup>th</sup> cent.) also mentioned the Jewish community and noted that the local Jews were polite and cultured. He noted the Ḥazzan Joseph and another person, Hasan. He mentioned that the origin of the Jews in Ruha was from Al-Ein. Maybe he referred to the settlement of 300 Jewish families in Edessa two generations earlier which had been organized by the Mamluk Ruler Zengi I in 1144. From the 12<sup>th</sup> century the Karaite scholar Yehuda Hadassi (from Edessa) is known. Jews continued to live there during the Ottoman rule, when the town's name was changed to Urfa. In the 17<sup>th</sup> century, the traveler Pedro de Texeira found many Jews there. In 1834, 500 Jews lived there and the general population was 50,000. \*Benjamin II, who visited the town in 1848, wrote of a community of 150 families, whose economic standard was very good, but their cultural standard was so low that only about a third was able to read the prayerbook. Benjamin also gave details of the local legends relating to biblical figures; the Syriac name of the town, Orhai, for some reason appears always to have been identified with Ur Kasdim (Ur of the Chaldees), and thus the town came to be regarded as the scene of various events in the life of Abraham. Among the sights pointed out to Benjamin II was a cave which was regarded as Abraham's birthplace and the oven into which Nimrod had been thrown. These places were venerated by both Jews and Muslims. In 1876 the Jews of the place spoke Aramic. In 1880 the Jews survived a big fire that had spread in the city. In 1893, 1,000 Jewish families lived in Urfa. At the end of the 19<sup>th</sup> century and the beginning of the 20<sup>th</sup>, the number of Jews in Urfa dwindled steadily; in 1904 there were 322 Jews there, and thereafter their number was further reduced. Many of the town's Jews settled in Jerusalem, where they formed a separate community, that of the "Urfalis." During World War I most of the Jews in Urfa were merchants. Following a blood libel many of them were murdered and the survivors fled to Syria, Lebanon, Istanbul, and Erez Israel, where many of the immigrants settled in Jerusalem. There have been no Jews in Urfa since the late 1960s.

**EDINBURGH**, capital of \*Scotland. No trace of Jews is to be found in medieval Scotland generally. Apart from individual Jews, a community possibly existed in Edinburgh at the close of the 18<sup>th</sup> century, but the present congregation was estab-

lished in 1816 with 20 families. The first minister was Moses Joel of London, who served in the office for 46 years. With the influx of Russian and Polish Jews at the close of the 19<sup>th</sup> century, the community grew and many communal institutions were founded. For many years Salis \*Daiches was the rabbi. In 1968 the community numbered approximately 1,100 out of a total population of 468,770. There was one synagogue and extensive communal and Zionist activity. In the mid-1990s the Jewish population numbered approximately 500. According to the 2001 British census, 763 Jews lived in Edinburgh. There is an Orthodox synagogue.

[Cecil Roth]

**EDINGER, LUDWIG** (1855–1918), German neuroanatomist and neurologist; considered the founder of modern neuroanatomy. Edinger was born in Worms on the Rhine, Germany, and began his academic studies at Heidelberg University. He completed his medical studies at the University of Strasbourg and became a licensed physician in 1877. In 1879 he began teaching at the University of Giessen and in 1883 he moved to Frankfurt to practice neurology. That same year he started lecturing on the structure of the central nervous system. In 1885 he joined the Senckenberg Research Institute in Frankfurt and conducted further studies in neurology, particularly in brain anatomy. That year marked the appearance of *Zehn Vorlesungen ueber den Bau der nervoesen Zentralorgane*, later translated into English as *Twelve Lectures on the Structure of the Central Nervous System*, his most famous text on the structure of the nervous system.

By 1907 his division had become one of the most modern neurological departments of the time and he became professor of neurology at Frankfurt University. In his research Edinger described the ventral and dorsal spinocerebellar tract, clarified polioencephalon and neoencephalitis, as well as the paleo-cerebellum and the neo-cerebellum. His studies and research appeared in many publications, and his name became associated with several parts of the human brain that he elucidated, including "Edinger's nucleus," "the Edinger fibers," and "Edinger's tract."

Edinger was also a gifted artist and achieved considerable notoriety in the field of hypnosis.

[Suessmann Muntner / Ruth Rossing (2<sup>nd</sup> ed.)]

**EDINGER, TILLY** (1897–1967), vertebrate paleontologist. Born in Frankfurt on the Main, Edinger received her doctorate in paleontology from Frankfurt University. Her main research interest was brain development and she created the field of paleoneurology. She was fascinated by the disproportionate

growth of the forebrain in many mammals and the implications for the emergence of *Homo sapiens*. She worked initially at Frankfurt University's Geological Institute but, under antisemitic pressure, left for London in 1939 before moving to the U.S. in 1940. She joined Harvard University's Museum of Comparative Zoology and became a research associate in paleontology. Her classic works are *Fossil Brains* (1929) and *The Evolution of the Horse Brain* (1948).

[Michael Denman (2<sup>nd</sup> ed.)]

**EDIRNE (Adrianople)**, town in Turkey located in eastern Thrace near the Turkish-Greek-Bulgarian frontier. According to the 2000 census, the city's population was recorded as 119,316. The city was named after the Roman emperor, Hadrian (125 C.E.). Individual Jews went to Adrianople even before the destruction of the Second Temple, but certain knowledge of a Jewish settlement comes only from the beginning of the \*Byzantine period. The Adrianople Jews then traded in textiles, leather goods, and wine. The community is mentioned in connection with the opposition to the messianic ferment in the Byzantine Empire at the time of the First Crusade (1096), and the synagogue of the Greeks (or Romaniots), burnt down in 1905, probably dated back to that period. After the Ottoman capture (1361) the city, now renamed Edirne, became the new Ottoman capital and the main administrative and military base from where the \*Ottomans set off to conquer the Balkans. The city maintained this latter position even after the capital moved to Constantinople/\*Istanbul following the conquest of the Byzantine city in 1453. The Ottomans populated Edirne with many immigrants; among them there were a large number of Jews arriving from the newly conquered lands in the Balkans. The community developed further following the influx of immigrants from Hungary after the expulsion of 1376 and from France after 1394. R. Isaac Zarefati, the leader of the Ashkenazi community, issued an appeal to West European Jews to settle in the \*Ottoman Empire (after the capture of Constantinople in 1453). He and his descendants held office until 1722. The Ottomans transferred some of the local Jews to Constantinople. After 1492 many exiles from Spain came to Edirne followed by refugees from Portugal, and Italy as well. These new immigrants, who had different customs from the Romaniots, established their own congregations (*kahal*, pl. *kehalim*) according to their place of origin. In 1656 there were 15 different *kehalim*, most of them named after locations in Spain, Portugal, and Italy. On the basis of Ottoman fiscal registers, we can estimate that the city's population in 1580 was around 30,000 inhabitants. During the second half of the 17<sup>th</sup> century, the general population grew to about 100,000; many of them arrived in Edirne following the temporary transfer of the sultan's residence to the city (until 1703). At the time the Jewish population of the city grew from 2,500 people to about 5,000. \*Shabbetai Zevi was brought to Edirne for questioning before the sultan in September 1666, and after his apostasy, some of his disciples in Edirne also converted to Islam. Shabbetai lived another ten years after his conversion, mostly in Edirne. His

influence lingered in the city: Samuel \*Primo (d. 1708), the leading rabbi of Edirne, was a secret adherent of Shabbatean mysticism, covertly giving instruction in it to small groups of followers. The decline of the Ottoman central authority brought new burdens on the local Jewish community, which had to accommodate itself to the changing local political circumstances. Nineteenth-century developments, encouraged by the new policy of reforms (*tanzimat*) led to the emergence of a new bourgeoisie in the non-Muslim communities of Edirne. The Jewish economic elite was composed of moneylenders and traders. The 19<sup>th</sup> century was also marked by a deterioration in the relations between the Jews and their Christian neighbors: the Jews suffered, for example, from \*blood libels, spread by the Armenians (1871–72). The rise of nationalism in the Balkans was another and much more menacing threat to the community: when the Bulgarians temporarily occupied Edirne during the First Balkan War (March 1913), following a six-month siege, the Jews suffered and many of them found temporary shelter in Istanbul.

The Ottoman census of 1831, which counted only the adult male population, registered 1,541 Jewish men in the city. In 1873 there were approximately 12,000 Jews in the city; a report submitted to the \*Alliance Israélite Universelle in Paris in 1897 on the various handicrafts and occupations in the Jewish community mentioned some 815 workers in 47 different categories. The community developed further following the arrival of refugees from the newly established Balkan states. The Ottoman census of 1906–7 put the number of the Jews in Edirne at 23,839. They lived in various neighborhoods according to their professions. Each neighborhood maintained its own community organization, synagogue, and *bet din* under the general supervision of the city's chief rabbi (the first chief rabbi, *hakham bashi*, was appointed in 1836 as part of the formal recognition of the Ottoman Jewish community as an official one). Before World War I their numbers rose to 28,000 but thereafter they declined in 1921–22 to 13,000, in 1927 to 5,712 Jews, the community being reduced by 1943 to 2,000. The decline can be explained in part by the changed status of the city which became a border town, in part by the impoverishment due to the wars, which resulted in immigration to \*Salonica, France, and America, and later to Palestine. Apart from the Rabbanite community there was also a \*Karaite community dating from the Byzantine period; among its members was the \*Bashyazi family which became famous in Karaite history. For a time, Edirne was one of the important Karaite centers in Europe. At the beginning of the 20<sup>th</sup> century no trace of the Karaites remained.

The Jews of Edirne played an important part in the city's economy. They traded with Jewish and Christian merchants in other countries, either directly or through the latter's Jewish agents in Edirne. Local Jews held at times the lease (*iltizam*) of the import taxes and manufactured glass. Government taxes were paid on the basis of a fixed assessment which took into account one hundred families, although the number of Jews had increased. These taxes were imposed on the 13 congrega-

tions. In accordance with a special *firman* of 1783, the Jewish community was allowed to collect the *gabala*, a tax on meat which covered the poll tax (*\*kharaj*), the clothing of the poor, and other communal needs. Tax collectors appointed by the general body apportioned the taxes among the congregations making evaluations every three years. Edirne was long a center of learning. In the 15<sup>th</sup> century Mordecai \*Comtino lived there and at the beginning of the 16<sup>th</sup> century R. Joseph \*Caro wrote most of his famous *Beit Yosef* commentary there. In the 16<sup>th</sup> century there lived in Edirne the \*Ibn Verga family and the poet R. Avtalyon b. Mordecai (see Avtalyon \*Modena). In the court of Sultan Mehmet II (1451–81) there was a famous Jewish physician, Hekim Ya'akub, with widespread diplomatic connections. He later converted to Islam.

The printers Solomon and Joseph \*Jabez set up a Hebrew printing press in Edirne in 1554 when they fled from the plague in Salonica but returned a year later. During this short period they produced *She'orit Yosef* by Joseph ibn Verga; *Shevet Yehudah* by Solomon ibn Verga; and Joseph Jabez's own commentary on *Avot*. A press reappeared in Edirne only in the late 19<sup>th</sup> century.

The last of the rabbis of the Zarefati family was Abraham (d. 1722). After his death the jurisdiction of the Edirne rabbinate was divided between Abraham Gheron, Zarefati's son-in-law, and Menahem b. Isaac Ashkenazi (Bekhemoharar), each of whom had his adherents; the Bekhemoharar family officiated for approximately 180 years and counted among its descendants halakhists and authors, and the Gheron family officiated for approximately 170 years. Each family maintained its own *\*bet din*. In the 18<sup>th</sup> century R. Isaac Molkho, author of *Shulhan Gavoha* (1756), a popular handbook on the laws of *shehitah*, lived in Edirne. In the middle of the 19<sup>th</sup> century, the *haskalah* movement penetrated Edirne through the philologist Joseph \*Halevy (1827–1917). While the role of Edirne's *maskilim* in diffusing these new ideas was only secondary when compared to the role of Istanbul or Salonica, we can still recognize some of their contributions: on the request of the *maskilim*, the \*Alliance Israélite Universelle opened a school for boys in 1867 and one for girls in 1870. The writer, historian, and poet Baruch b. Isaac Mitrani (1847–1919) taught at the Alliance schools. He endeavored to implement new methods of education. To achieve these aims he established a new school – Akedat Yitzhak – and published books on education in Hebrew and a grammar of spoken Judeo-Spanish. He edited the first newspaper that was published in Edirne: *Karmi* (1871–81) and *Kerem Sheli* (1890; in Hebrew and Ladino), calling for Jewish colonization in Palestine and national revival. Abraham \*Danon (1857–1925), a pupil of Joseph Halevy, established under the latter's influence the *Doreshei Haskalah* group and in 1888 edited the historical periodical *Yosef Da'at* (in Hebrew and Ladino) in order to collect and publish Jewish historical studies. The periodical was closed down by the government after a short time. In 1891, Danon opened a rabbinical seminary that taught both secular and religious subjects. The teaching was partly in Turkish – a major innova-

tion for the period. The seminary moved to Istanbul in 1898 with its 11 students. In his writings, he attempted to reconcile traditional and Western knowledge. The Ladino press was the major printed product of the period: Joseph Barishak edited the major political-literary Jewish journal of Edirne: *La Boz de la Verdad* (“The Voice of Truth”) in 1911–22. Nissim Behar published the weekly *L'Echo d'Adrianople* in French in 1921–22. Many of the graduates of the Alliance joined the newly founded alumni associations. A B'nai B'rith lodge was established in 1911. These associations – including reading clubs and mutual-aid fraternities – were chiefly meant to support and propagate the new trends of modernization among the community's members. In this capacity they contributed to the Westernization and secularization of the local community. Following the great fire of 1905 in which all the 13 synagogues of Edirne were burned to the ground, the community constructed a new synagogue in 1907 which was modeled on the synagogue of Vienna. It could accommodate 1,200 worshippers – 900 men and 300 women – and was designated to demonstrate the community's achievements and modernity.

[Simon Marcus / Eyal Ginio (2<sup>nd</sup> ed.)]

The demise of the Ottoman Empire and the foundation of the Turkish republic put unprecedented pressure on all the Jewish communities of Turkey. They were required to assimilate linguistically and culturally into Turkish society. This pressure must be seen as part of the overall anti-minority attitude in public opinion in the republic's first years. It seems that the lot of the Jewish community in Thrace (including Edirne) was the harshest. Living in a sensitive border area and remaining the only non-Muslim minority following the transfer of the Bulgarian, Greek, and Armenian populations, the Jews of Edirne suffered from verbal and sporadically physical assaults as well as from legal restrictions on their economic activities. The local Turkish press played a major role in inciting the local population against their Jewish neighbors. This reached its peak with the outbreak of assaults on Jews in the major towns of eastern Thrace in 1934. The agitation of mobs in Edirne, which involved physical attacks on the Jews and threats against the community, caused panic among Edirne Jewry. Thousands moved permanently to Istanbul, although the government intervened to stop the attacks and assured the Jews of their safety. The community never recovered from this blow. The conscription to labor battalions and the imposition of a discriminatory head tax caused impoverishment and further decline in the community. The town suffered economic crises after World War II. The community diminished through migration to Israel and other countries and also to Istanbul. In 1948, 2,750 Jews remained in Edirne, while by 1960 their number dwindled to 438, and in 1977 there were only 72 Jewish inhabitants in the city. In 1948 the community was still well organized and levied dues from its members. Its council maintained charitable institutions, a Bikkur Holim society (which then provided medical care for 730 patients), a Mahazikei Torah association (which provided Hebrew and reli-

gious education), the 'Ozer Dallim association (which cared for the needy), and several synagogues. By 1969 most of the institutions had closed and the community was left with only one synagogue. In 1971 the municipality prohibited the community from using its cemetery and in 1975 it confiscated it altogether. Subsequently the cemetery was destroyed. The shrinking community used the synagogue until 1983. In 1998 there were only three Jews living in Edirne.

[Hayyim J. Cohen / Eyal Ginio (2<sup>nd</sup> ed.)]

### Music

Edirne was also a center of Jewish music. A choral society of Maftirim was founded in the seventh century. It sang every Sabbath at dawn from a book of religious hymns which were locally called *jonk* (the Persian-Arabic designation of "harp"). A great number of able cantors and assistant singers (*maftirim*, *mezammerim*) came from Edirne. Congregations from as far away as Bulgaria and Romania appealed to this community whenever there was need of a good synagogue singer. The activity and reputation of the Maftirim Society helped Edirne become a center for hymn writers. Among the best known were Aaron b. Isaac \*Hamon (18<sup>th</sup> century; possibly the composer called Yahudi Harun by the Turks), Abraham Zemah (late 19<sup>th</sup> century), and Joseph Danon (d. 1901). A large repertoire of Ladino folksongs from Edirne was collected and published by A. Danon in 1896. Danon contended that the proficiency of the local Jews in Eastern music had been stimulated by, and modeled after, the style of the Muslim Dervish brotherhoods.

**EDMAN, IRWIN** (1896–1954), U.S. philosopher. He was born in New York, earned his Ph.D. at Columbia in 1920, and taught there until his death. He was appointed full professor in 1935. Edman wrote poetry, essays, and philosophical works. He was greatly influenced by John Dewey and American naturalism, while drawn to the philosophical classics. He once called himself "an empiricist homesick for Platonism." Edman was interested in aesthetics, social and political philosophy, and the philosophy of religion. He published many works, including *Human Traits and Their Social Significance* (1920); *The Mind of Paul* (1935), on St. Paul's religious outlook; *Philosopher's Holiday* (1938), a popular presentation of philosophical anecdotes from his own life; *Arts and the Man* (1939); and *Philosopher's Quest* (1947). Edman also edited English editions of Plato, Boethius, Schopenhauer, and Santayana. An anthology of his writings, *The Uses of Philosophy*, was published in 1955.

[Richard H. Popkin]

**EDMONTON**, capital of Alberta, Canada. Edmonton was first incorporated as a town in 1892. At that time, there were about 700 permanent residents. Founded on the banks of the North Saskatchewan River on the site of the former Hudson's Bay Company's Fort Edmonton, it gradually began to attract settlers. Abraham and Rebecca Cristall, Edmonton's first Jews, arrived in 1893. Their children, George and Rose, were the town's first Jewish-born children. Abe became a successful businessman and encouraged Jews from his native Bessarabia to come. By 1901, there were 17 Jews in Edmonton. In 1904, Edmonton became incorporated as a city, and in 1905 Alberta officially became a province and the Canadian Pacific Railway arrived.

In 1905, William "Boss" Diamond came to Edmonton from Calgary, where his businessman brother Jacob had been Alberta's first Jewish citizen. William set up in the clothing business in competition with Abe Cristall, but the two competitors worked together to establish Edmonton's Jewish community. Together with eight other men they formed the Edmonton Hebrew Association in 1906. They hired Rabbi Hyman Goldstick of Pilton, Latvia, to be rabbi, *shohet*, and *mohel* to serve both the Edmonton and Calgary Jewish communities.

In 1907, Abe Cristall purchased land on the south side for a Jewish cemetery and the *hevra kaddisha* was formed. In 1912, the foundations were laid for the Orthodox Beth Israel Synagogue. Cristall served as its first president, and William Diamond its second president, a position he held for 31 years. In 1912, the newly founded Edmonton Talmud Torah Society organized classes in the synagogue basement. In 1925, the Society erected its own building and in 1933 it was incorporated as the first Hebrew day school in Canada.

In 1928, a second congregation was started in the basement of the Talmud Torah building, which in 1932 became the Conservative Beth Shalom Congregation and engaged Rabbi Jacob Eisen, who became one of the first English-speaking rabbis west of Winnipeg. Also at that time, the Peretz or New Yiddish School was organized and opened its own building. An offshoot of the Arbeiter Ring, which started in Edmonton in 1922, it had its heyday in the early 1930s, but had to close in 1939 due to declining enrollment. By 1941, Edmonton's population had increased to 93,817, and the Jewish population stood at 1,449. Of the 120 men and women from Edmonton's Jewish community who served during World War II, 11 were killed in action.

The postwar years saw rapid growth in both the Jewish and general population of Edmonton. With prosperity and a shift by Jews into the city's West End, a new Beth Shalom Synagogue was built in 1951. A new Beth Israel Synagogue building was also constructed as well as a new Talmud Torah building. In 1954, the Edmonton Jewish Community Council was formed as a community-wide umbrella organization and served as such for 28 years. On September 20, 1982, the Community Council merged with the Edmonton United Jewish Appeal to become the Jewish Federation of Edmonton.

Alberta's booming oil-based economy brought increased immigration to Edmonton including that of Jews from other provinces in Canada, as well as from Hungary, Russia, and South Africa. From a Jewish population of 1,748 in 1951, the community grew to 2,910 in 1971 and 5,430 in 1991. In 2001 it stood at about 6,000.

All these new immigrants contributed to Edmonton's vibrant Jewish community life. Local branches of prominent Jewish organizations thrive, including the Canadian Zionist Federation, Edmonton Hadassah-WIZO, chapters of ORT and Na'amat, B'nai B'rith and Emunah, all of which are actively working for the welfare of the State of Israel. Local offices of the Jewish National Fund are located at the Edmonton Jewish Community Centre, founded in 1970. The now defunct Edmonton chapter of the National Council of Jewish Women was responsible for founding the city's Jewish Seniors' Drop-in Centre (formerly the Golden Age Club) in 1954, as well as Jewish Family Services.

The community's third congregation, Temple Beth Ora Reform Congregation, was founded in 1979, and incorporated in 1980. It rented space at the Jewish Community Centre. In 1996 Congregation Beth Tzedec, a breakaway from Beth Shalom, incorporated and began to hold services at the Talmud Torah. Chabad Lubavitch arrived in Edmonton in 1991, and in 1993 a second Hebrew day school, the Orthodox Menorah Academy, was founded. In 1999, a new building for Edmonton Talmud Torah was erected and the next year a new Beth Israel Synagogue was opened reflecting a further westward shift in population.

In the fall of 2004, Edmonton elected its first Jewish mayor, Stephen Mandel. Mandel had previously served as a city councilor, continuing a long tradition of Jewish city coun-

cilors, including Dr. Morris Weinlos, Helen Paull, Mel Binder, Tooker Gomberg, and former MLA Karen Leibovici. There has also been a strong tradition of Jewish civic involvement in the larger Edmonton community, with members serving on the boards and executives of many local arts, cultural, educational, and fundraising organizations, as well as on the judiciary.

The Jewish Archives and Historical Society of Edmonton and Northern Alberta (JAHSENA) was founded in 1996 to preserve and promote the history of this vibrant Jewish community.

[Debby Shoctor and Ed Mickelson (2<sup>nd</sup> ed.)]

**EDOM** (Heb. עֲדוֹם), a land in the south of eastern Transjordan, the southeastern neighbor of Palestine.

### The Country

"The land of Edom" is the most common name for the Edomite territory. It had, however, other names and appellations, both prosaic and poetic, i.e., "the field of Edom" (Judg. 5:4), "Seir" (*ibid.*), "Mount Seir" (Deut. 1:2), "the land of Seir" (Gen. 36:30, "the lands of Seir," cf. *mâtâtîd še-e-riki*, in el-Amarna letter no. 288, line 26; Pritchard, Texts, 488; J.A. Knudtzon, *Die El-Amarna-Tafeln*, 2 (1915), 1340), and a combined name, "the land of Seir the field of Edom" (Gen. 32:3). There are also in Egyptian sources the equivalents of two names: Seir (Pritchard, Texts, 262) and Edom (Papyrus Anastasi VI, Pritchard, Texts, 259). It is possible to establish, according to the Egyptian and Akkadian sources, that the name Seir is chronologically first, since it is mentioned at the beginning of the 14<sup>th</sup> century B.C.E. in the Tell el-Amarna document, as well as in an Egyptian list from the time of Ramses II, i.e., from the first half of the 13<sup>th</sup> century B.C.E. On the other hand, the first mention of the name Edom in Egyptian sources occurs only at the end of the 13<sup>th</sup> century B.C.E.

The name Seir is apparently related to the Horites; this is especially evidenced by Genesis 36:20: "These were the sons of Seir the Horite, who were settled in the land" (cf. Deut. 2:12). The name Edom is related to the Western Semitic settlers who came after them.

It appears that the Edomite territory consisted of the mountain which extends from the Dead Sea in the north to the Red Sea in the south. The northern border of Edom was the Zered River (Wadi al-Hesa), which was also the southern border of Moab (Deut. 2:13). Its eastern border was the desert and its inhabitants were the Kedemites. Its southern border was Elath and Ezion-Geber (Deut. 2:8), i.e., the gulf of Elath. There was probably no fixed western boundary; during the Exodus from Egypt, the Israelites who requested permission to pass through Edom said to the king of Edom: "Now we are in \*Kadesh, the town on the border of your territory" (Num. 20:16). Another place mentioned as being on its western border is "Mount Hor on the boundary of the land of Edom" (Num. 20:23). The western border is described more compre-

hensively as “the boundary of Edom to the wilderness of Zin at the farthest south” (Josh. 15:1), and in an abbreviated manner as “south, toward the boundary of Edom” (Josh. 15:21).

In later periods there was an Edomite expansion beyond Mount Seir, especially after the fall of the kingdom of Judah (see below). Ezekiel thus terms the Edomite territory “Mount Seir and all Edom” (Ezek. 35:15). The capital of Edom was probably Bozrah (see especially Amos 1:12, “the palaces of Bozrah,” similar to the palaces of other capital cities mentioned in this prophecy). Bozrah was the principal city, the other cities of Edom being called Bozrah’s cities: “For I have sworn by myself, says the Lord, that Bozrah shall become a horror, a taunt, a waste, and a curse; and all her cities shall be perpetual wastes” (Jer. 49:13). Among the other cities of Edom mentioned in the Bible are Teman, which is used as a parallel for Bozrah (Amos 1:12), and Dedan (Jer. 49:8). The principal cities of Edom, which were also the royal cities, can be learned from the list of kings, who reigned “before any king reigned over the Israelites” (Gen. 36). In this list, Bozrah and Teman are mentioned with other towns such as Avith, Rehoboth Hanahar, Masrekah, and Pau, about which nothing is known from the Bible or from other sources.

### The People

In the biblical tradition about the origin of the Edomites or, more precisely, in accounts about the eponym “Esau who is Edom” (Gen. 36:1), the Edomites are related to the Hebrews. Esau was the grandson of Abraham the Hebrew and the son of Isaac. The close relationship of \*Esau to Israel is especially emphasized in the narratives which point out his closeness with Jacob-Israel, and describe their birth as twins. In parenthetical narrative comments and especially in genealogical lists, the complexity of the Edomites’ ethnic composition is demonstrated. In the accounts of Esau’s marriages, which should be viewed as etiological-ethnological stories, it is told that Esau married Canaanite-Hittite women (Gen. 26:34; cf. 36:2). It is likewise told that he married Ishmaelite women (Gen. 28:9; cf. 36:3). He also took Hivite wives (Gen. 36:2). These parenthetical narrative remarks substantiate and confirm the contents of the genealogical lists of Edom. The ethnic composition appears to be even more heterogeneous when in addition to the Canaanite-Hittite, Hivite, and Ishmaelite elements, Kenazite (Gen. 36:15), Amalekite (36:16), and especially Horite (36:20, 21, 29, 30) elements are found in the genealogical list of Esau’s descendants and in the list of the chiefs of Esau. A similar picture is reflected in the names appearing in the genealogical lists of Edom. West-Semitic names are listed side by side with Horite names. It is possible to distinguish earlier and later elements in the ethnic composition of Edom. Traditions, whose authenticity is beyond doubt, have been preserved in the Bible about the antiquity of the Horites in Edom. In the Deuteronomistic tradition about the ancient settlers of eastern Transjordan before the advent of the Hebrews, it is stated: “Seir was formerly inhabited by the Horites; but the descendants of Esau dispossessed them, wiping them out and settling in their

place” (Deut. 2:12). This tradition is reported in brief also in the chapter specifically dealing with Edom, Genesis 36, where a parenthetical remark is made: “these were the sons of Seir the Horite, who were settled in the land” (36:20). Thus, the ancient ethnic element of Edom is the Horites, to whom were later added those descendants of Esau who were from a Western-Semitic origin. This is corroborated by epigraphic sources and archaeological findings. From Akkadian and Egyptian epigraphic sources it is known that toward the first half of the second millennium B.C.E. “Horite” (Akk. *hurru*) tribes penetrated all the areas of the Ancient East and settled in these areas including Canaan and eastern Transjordan. There is also information about waves of migration of Western-Semitic elements who infiltrated western Asia, including Transjordan, and apparently conquered these territories and defeated the Horite population. According to biblical tradition, Esau and his descendants first inhabited the land of Canaan (Gen. 36:5), and when “the land in which they sojourned could not support them because of their livestock,” Esau, together with Jacob and his children, “took . . . all the members of his household . . . [and] settled in the hill country of Seir” (36:6–8). From the archaeological survey of eastern Transjordan conducted by Nelson Glueck the same picture emerges. It appears that the settlement which existed from the 23<sup>rd</sup> to the 20<sup>th</sup> centuries B.C.E. was highly civilized, but the 19<sup>th</sup> century B.C.E. saw a steep decline and the total extinction of all the great fortresses and settlements. The blow was final and the destruction, total. The cities were not rebuilt and most of Transjordan became a camping spot for shepherds and nomads until the end of the 14<sup>th</sup> century B.C.E. The archaeological survey demonstrated that at the end of the 14<sup>th</sup> and the beginning of the 13<sup>th</sup> centuries B.C.E., there was a revival of an agricultural civilization among the Edomites, the Moabites, the Ammonites, and the Amorites, who quickly divided into national groups within defined territorial boundaries. Thus, Transjordan was divided into the kingdoms of Edom, Ammon, and Moab, which were separated mainly by the deep and wide natural boundaries of the Zered, Arnon, and Jabbok rivers. These kingdoms underwent a fast development of prosperity and growth, primarily material, from the 13<sup>th</sup> to the 8<sup>th</sup> centuries B.C.E. There followed a period of decline which ended in utter destruction in the sixth century B.C.E.

### Biblical Sources

These latter comments would have exhausted our knowledge about Edom had the Bible not preserved much information about this kingdom, more so than about any of the other kingdoms neighboring Israel. This great amount of material in the Bible is very valuable from both the historical and historiographical points of view. Biblical information about Edom may be divided into two types, which are distinctly separable. The first type is the original and authentic material, which apparently originated in Edom itself and somehow made its way to Israel, and which is found mainly in Genesis 36. The second type is information about Edom which is connected with the

history of Israel. These two types of material give a chronological coverage of the two periods of Edom's history (see below). The original and authentic material about Edom is from the period before the monarchy was established in Israel (it is not intended here to discuss R.H. Pfeiffer's Edomite-Seirite, or Southern source (s); for its scope, character, and time see \*Pentateuch). This material describes the history of Edom until its conquest by David. On the other hand, the material about Edom which is contained in the Israelite history covers the period of the monarchy in Israel and Judah, and, in fact, beginning with the time of David, the history of Edom is contained within the history of Israel.

### History until Its Conquest by David

From the information contained in Genesis 36, it may be learned that the Edomites were governed by chiefs (*allufim*) and kings in the period which preceded its conquest by David. The question arises as to whether chiefs and kings ruled at one and the same time, the kings being only the most powerful of the chiefs, or whether there were two periods, a first of chiefs and a subsequent one of kings. It appears that two periods should be distinguished, the "period of the chiefs" and the "period of the kings," typologically paralleling the "period of the judges" and the "period of the monarchy" in Israel.

THE PERIOD OF THE CHIEFS (*Allufim*). It appears that the chiefs were the heads of the thousands (*alafim*), which were tribes or clans (in the broad sense of the word), and later, heads of regions. This form of organization was prevalent among nomadic tribes. Actually, only 11 chiefs of Edom are mentioned, but there is reason to accept the opinion that a 12<sup>th</sup> name, which is found in the Septuagint, was left out. The tradition of the 12-fold organization in Edom is based on, and confirmed by, the organization of other tribes which are closely related to Edom in terms of race and origin. This 12-fold organization is found among the Nahorites (Gen. 22:20–24), the Ishmaelites (25:13–15), and the Israelites, and it is M. Noth's opinion that this system is based on "principles such as were customary in tribal societies which were still lacking settled political institutions" (Noth, *Hist Isr*, 87; for details). Taking as a starting point the conclusion of Nelson Glueck's survey that the Edomites arrived in Edom at the end of the 14<sup>th</sup> and the beginning of the 13<sup>th</sup> century B.C.E., it may then be assumed that the rule of the chiefs lasted approximately 150 years, until the middle of the 12<sup>th</sup> century B.C.E. Actually, the Bible appears to contain information to the contrary, since in the narrative on the Exodus from Egypt and the penetration of Canaan it is told that the Israelites had dealings with the king of Edom (Num. 20:14; if it is assumed, as is the accepted opinion today, that the Exodus was during the second half of the 13<sup>th</sup> century B.C.E.). It is known, however, that the source for the narrative (Num. 20) is late and "the king of Edom" is an anachronism. More authentic evidence from a very early poetic source, the Song of the Sea, testifies that at the time of the Exodus the chiefs were

ruling in Edom: "Now are the chiefs of Edom dismayed" (Ex. 15:15). There are also sources outside the Bible which confirm this. In the Papyrus Anastasi VI from the time of Merneptah (end of the 13<sup>th</sup> century B.C.E.) the population of Edom and its adjuncts is divided into "tribes" or *shasu*: "[We] have finished letting the Shasu (*š'sw*) of Edom (*'idm*) pass the Fortress [of] Merneptah" (in Pritchard, *Texts*, 259). Ramses III (beginning of the 12<sup>th</sup> century B.C.E.) boasts: "I destroyed the people of Seir among the nomad tribes. I razed their tents: their people, their property, and their cattle as well, without number, pinioned and carried away in captivity, as the tribute of Egypt" (see Papyrus Harris I, in: Pritchard, *Texts*, 262). In any event, it becomes evident from these two Egyptian sources that there was a tribal organization, the population was nomadic, and there was no monarchy.

THE PERIOD OF THE MONARCHY. The genealogy of Edom in Genesis 36 contains a list of the kings of Edom who ruled "before any Israelite king reigned" (probably meaning "before any Israelite king ruled over Edom"). It is not certain whether "kings" were merely judges or tribal chiefs, or whether they were literally kings. Those scholars who hold that they were judges point to the following supporting evidence: the absence of succession, the absence of a fixed capital city, the parallelism of *melekh/shofet* ("king"/"judge") in Ugaritic and the Bible, as well as the formula "in those days there was no king over the Israelites," which recurs repeatedly in the Book of Judges in reference to the period of the judges. Thus, king here means judge (this opinion has been expressed by S. Talmon). It appears that the second opinion is the correct one, however, and that kings is meant literally.

The list of the Edomite kings (36:31–39) resembles a "royal chronicle" in that it includes various details found in the Judean and Israelite chronicles contained in Kings and Babylonian Chronicles. Details given in this list – though not all the details are given for every king – are the name of the king, his father's name, the name of his city (or place of origin), and an informative comment. This list includes eight kings. The names of the fathers of four of them are given, and the city (or place of origin) of seven out of the eight is mentioned. An informative comment is made about two of them. The informative comment about Hadad son of Bedad is distinctly historical. It is stated that he "defeated the Midianites in the country of Moab" (36:35), while the comment about Hadar, the last king, refers to his wife's genealogy: "and his wife's name was Mehetabel daughter of Matred daughter of Me-Zahab" (36:39). This list has been analyzed by numerous scholars in an attempt to derive from it information about the history of Edom, its chronology and the possibility of synchronization, its monarchy, and its character. It is clear from this list that the monarchy in Edom was not dynastic. Not one of the kings of Edom is said to be son of the former king. However, it should not be deduced from this, as has been done by several scholars, that the monarchy was not consistent. The formula: "when ... died, ... succeeded him as king" attests to the con-

sistency and continuity of the monarchy. Further, it should be pointed out that there was no central authority based in one capital city. The fact that the king's capital or place of origin is mentioned shows that there was no common ruling city for even two of the kings (cf. the absence of a regular capital city in the kingdom of Israel until the establishment of Samaria by Omri). The two informative statements were variously interpreted by scholars. From the statement about Hadad son of Bedad E. Meyer tried to establish a synchronistic connection with events in Israel, namely that Hadad, who defeated the Midianites, was a contemporary of Gideon who defeated the Midianites. On the basis of this they attempted to derive chronological conclusions with regard to the history of the kings of Edom. There is no certainty, however, about Gideon's time, and even less about the time of the kings of Edom, concerning whom there is no chronological information. From the information about Hadad's wife's lineage on her mother's side, and from the naming of her mother and grandmother, W.F. Albright attempted to deduce the existence of a royal dynasty in Edom which passed in succession on the side of the mother and not the father. Thus, the king's son-in-law because he marries the queen's daughter is heir to the throne. A general conclusion of this nature, derived from a single comment, is, however, difficult to maintain. Moreover, there are no examples of such a custom in the ancient Near East to support this hypothesis (the example of Saul-Michal-David cannot be explained in this way).

It is most difficult to assess the dating of Edom's kings since, as has been stated, there is no chronological information given in regard to this period. It is only known that it ended at the time of David's conquest of Edom. If this assumption is correct, namely, that at the time of the Exodus, Edom was ruled by chiefs and not by kings, then the period of these kings can be set from the middle of the 12<sup>th</sup> century to the end of the 11<sup>th</sup> century B.C.E., i.e., a period of around 150 years, and an average of approximately 20 years per king.

During this period of chiefs and kings, Edom was strong and its borders well-fortified by a series of border fortresses which prevented the penetration of nomadic tribes from the desert. A series of fortresses was discovered during the archaeological survey in eastern and southern Edom, and some also in western Edom. (In the north, Edom shared a common border with Moab, with which it apparently had close and good neighborly relationships.) There is almost no biblical information in regard to contacts between Israel and Edom during this period, except that Edom is listed among the nations oppressing Israel which Saul defeated at the end of this period (1 Sam. 14:47; it is possible that this refers to Amalek which is related to Edom). In Psalm 83, which is assumed by B. Mazar and S. Feigin to be from the period of the judges, Edom (as well as Amalek and Gebal which belong to Edom) is also mentioned as joining with Israel's other neighbors against Israel. It appears, however, that these two mentions are schematic and it is difficult to arrive at historically valid conclusions from the appearance of Edom in these lists.

### From David until the Destruction of Judah

**THE TIME OF DAVID AND SOLOMON.** In David's wars of expansion, Edom was conquered after a decisive defeat in the Valley of Salt. This is echoed in three biblical sources – actually three accounts of the same battle. According to 11 Samuel 8:13 it was David who defeated Edom (this should be read instead of Aram) in the Valley of Salt, slaying 18,000 Edomites. According to 1 Chronicles 18:12, "Abishai son of Zeruiah slew 18,000 Edomites in the Valley of Salt," while according to Psalm 60:2, it was Joab who defeated Edom, and here there is a different number given for Edom's casualties – 12,000. While a few scholars held that these are accounts of battles led by the different people mentioned, it appears that they are, in fact, different accounts of the same event, and the numbers are schematic. In any event, in order to clarify the historical aspects, it appears that the original historical version is that Joab defeated Edom. The introduction of Abishai in Chronicles is aimed against Joab and is based on the wars in eastern Transjordan in which Joab and Abishai led the armies. The war was attributed to David because it appears that the victories of Joab, his military commander, were credited to the king, David, as was the case in the defeat of Rabbath-Benei-Ammon (11 Sam. 12:26–31). Edom suffered a decisive defeat, apparently after a difficult battle. Contrary to his custom with regard to the other nations of Transjordan, David did not leave the Edomite monarchy in power but made Edom into an Israelite province ruled by appointed governors (11 Sam. 8:14; 1 Chron. 18:13). There is additional information about this battle in 1 Kings 11:15–16 which states that "For six months did Joab remain there with all Israel, until he had cut off every male in Edom." His reasons for turning Edom into a province which rendered tribute and was ruled by governors were probably primarily economic, since Edom controlled the trade routes, both overland – the "King's Highway" – and maritime – the port of Ezion-Geber-Elath. Israel's rule of Edom by means of governors lasted throughout David's reign and apparently also through most of Solomon's time, until Hadad, a descendant of the last Edomite king, rebelled against Solomon. (It is difficult to determine whether Hadad was the son or the grandson of the last king of Edom. Actually, this was the introduction of a dynastic monarchy in Edom. In the opinion of Edward Meyer the Edomites were loyal to their last king.) This Hadad, who fled to Egypt during the conquest of Edom, received personal aid and political support in Egypt, and returned to Edom after David's death (1 Kings 11:14–22). According to the Septuagint, what is said about Aram in 1 Kings 11:25 refers to Edom, and it thus turns out that this Hadad rebelled at the beginning of Solomon's reign and ruled Edom. It is difficult to accept this version, however, since it would mean that at the beginning of his reign, a time of prosperity and growth, of the development of the Negev and Arabah, and of maritime and inland trade, Solomon did not have absolute control over Edom and over the routes which crossed its territory. It would therefore appear that Edom's liberation was possible only at the end of Solomon's reign.

FROM JEHOSEPHAT TO AHAZ. There is no information about Edom from the end of Solomon's reign until Jehoshaphat's, either from the Bible or from other sources. It may be assumed that after the collapse of Solomon's kingdom and its division, and especially after Shishak's campaign in Judah and Israel, Edom finally overthrew the yoke of Israel's rule and established an independent kingdom, which lasted around 50 years, until the time of Jehoshaphat. With the expansion of Judah southward in the time of Jehoshaphat, the submission of the Arabian tribes (II Chron. 17:11), and the institution of a mercantile fleet at Ezion-Geber (I Kings 22:49), Edom was probably conquered. In fact, there is an explicit statement in this regard from which it can be understood that not only was Edom conquered by Jehoshaphat but he dealt with it as did David and turned it into a province ruled by governors. Chronicles writes in connection with Jehoshaphat that "there was no king in Edom; a deputy was king" (I Kings 22:48 (47)). The conquest of Edom probably stemmed from the same economic motivations which existed at the time of David and Solomon. Edom became subject to Judah, and, during the period of subjection, "the king of Edom" (probably the "deputy" mentioned above) joined the campaign of Joram king of Israel and Jehoshaphat king of Judah against Mesha, the rebellious king of Moab, which passed "through the wilderness of Edom" (II Kings 3:8). The participation of the "king of Edom" angered the king of Moab, who attempted first and foremost "to break through opposite the king of Edom" (3:26). The failure of this campaign led to the weakening of the rule of Judah and Israel in eastern Transjordan, as well as Judah's rule in Edom. It is explicitly stated that during the time of Joram, Edom rebelled against Judah: "In his days Edom revolted from under the hand of Judah, and made a king over themselves" (II Kings 8:20). Joram attempted at the beginning of his reign (probably in 848 B.C.E.) to reinstate Israel's hegemony over Edom in a great campaign including "all the chariots" (8:21–22), which apparently failed (the biblical text is corrupt here), and Edom was completely liberated from the domination of Judah. Edom maintained its independence for about 60 years, until the middle of Amaziah's reign. At the time of Amaziah, Judah recovered from the pressure of Aram, to which it paid heavy taxes. This recovery is expressed in the undertaking of a military campaign against Edom in order to renew the rule of Israel there. It is said of Amaziah that "He slew of Edom in the Valley of Salt 10,000, and took Sela by war, and called the name of it Joktheel unto this day" (II Kings 14:7). The battle was waged in northern Edom, the Valley of Salt (as in David's time), and in Sela. Amaziah (like Joab) treated the Edomites with cruelty, as is recounted in II Chronicles 25:11–12: "...and [Amaziah] smote 10,000 men of Seir. The men of Judah captured another 10,000 alive and took them to the top of a rock and threw them down from the top of the rock; and they were all dashed to pieces." It seems that the changing of Sela's name can be interpreted not only as a symbol of renewed domination but perhaps also as the introduction of Judahite settlers in the new important town

Joktheel which "on account of its geographic conditions, its distinctly strategic location, its close proximity to the capital Bozrah which lay south of it, and its control over the approach to the mines of the Arabah, ... was subject to a violent controversy between Israel and Edom" (S. Abramsky). With the conquest of Sela, Amaziah assured Judah of control over northern Edom and the copper mines of the Punon area. It appears that Uzziah son of Amaziah completed his father's activity by conquering Edom. Uzziah, who expanded his kingdom in the direction of south and the Negev, "built Elath and restored it to Judah" (II Kings 14:22); this was the climax of his activity in the Negev and the Arabah, in developing agriculture, industry, and commerce, which has been confirmed by archaeological excavations and surveys. Apparently, in the days of Jotham son of Uzziah as well, Judah ruled over Edom. The "ליתם" (*lytm*) seal found at Ezion-Geber may have belonged to Jotham. This period of Judah's rule over Edom did not last long, and ended with the establishment of the Aramean-Israelite coalition between Rezin king of Aram and Pekah king of Israel: "At that time the king of Edom recovered Elath for Edom (the MT text reads Aram instead of Edom) and drove the men of Judah from Elath; and the Edomites came to Elath, where they dwell to this day" (II Kings 16:6). The Edomites took the opportunity to penetrate Judah itself: "For again the Edomites had come and smitten Judah, and carried away captives" (II Chron. 28:17). There was probably a final attempt on the part of Judah, during the time of Hezekiah, to renew its hegemony over Edom. In the genealogical list of Simeon's descendants, it is stated parenthetically that "some of them, 500 men of the Simeonites, went to Mount Seir ... and they destroyed the remnant of the Amalekites that had escaped, and they have dwelt there to this day" (I Chron. 4:42–43). This attempt, however, was probably limited to the western border district of Edom and had no real results since Edom, like Judah, was subjugated by Assyria.

FROM AHAZ UNTIL THE DESTRUCTION OF JUDAH. From the time of Ahaz, Edom became an Assyrian vassal state, like the other nations of Palestine and Syria. Tiglath-Pileser III (745–727 B.C.E.) mentions, together with the kings of Palestine and Syria, Qosmalaku, king of Edom, who surrendered to him (Pritchard, Texts, 282). Sennacherib mentions the king of Edom, Aiarammu (*ibid.*, 287), who surrendered to him in his campaign against Jerusalem (701 B.C.E.). Esarhaddon (680–669 B.C.E.) mentions Qosgabri king of Edom together with the 22 vassal kings whom he swore to loyalty at Nineveh (*ibid.*, 291). In addition to its subjugation to Assyria, Edom was, beginning with the eighth century B.C.E., under pressure from the Arabian tribes that impoverished the land and brought about its decline in material culture. Toward the end of the kingdom of Judah (beginning of the sixth century B.C.E.), when Judah was rising up against Babylonian rule, Edom was among the peoples preparing to rebel against the Babylonian king. The king of Edom sent messengers to a meeting of rebels called in Jerusalem by Zedekiah king of

Judah (Jer. 27). Later, however, during the destruction itself, Edom was on the other side, sending its troops against Judah (II Kings 24:1; “the bands of Edom” should be read in place of “the bands of Aram”), and even participating in its destruction. This is verified from the recently discovered Arad letters, in which Judah is guarding itself against Edom’s penetration into the land (Y. Aharoni). Edom’s participation in the destruction of Judah aroused the great anger and strong condemnation of the poets (Ps. 137; Lam. 4:21–22) and prophets (Isa. 34, which is to be dated to this period; Jer. 49; Obad.) of Judah. The anger and condemnation continued in the following generation in the prophecies of Deutero-Isaiah (Isa. 63).

Edom, too, was subject to destruction in the sixth century B.C.E. Nomadic tribes infiltrated Edom and exerted pressure on the Edomites, who turned toward Judah and settled in its southern region. This settlement was long known in Hellenistic sources as \*Idumea.

### Religion and Culture

The gods of Edom were mainly fertility gods, as is evidenced by the numerous clay figures found in Edom. Like Ammon and Moab, Edom had one chief god, Qos. This name is known to be a theophoric element, both from the names of the Edomite kings mentioned in the inscriptions of the Assyrian kings (see above) and from names which are preserved in the Bible (e.g., Barkos, Neh. 7:55). This name also appears as a first name in a seal in Hebrew-Edomite script on oil jugs from the eighth and seventh centuries B.C.E. which were found at Tell al-Khalayfa “לקוסענל עבד המלך,” “*lqwsʿnl* servant of the king.” There are some scholars who read instead of the unclear name *Alqum* in Proverbs 30:31, *Alqus*, on the assumption that the name is included here in the context of Edomite wisdom. Although Edom had one national god, it cannot be described even as monolatry. Biblical evidence emphasizes Edomite polytheism. It is told of Amaziah after “he came from the slaughter of the Edomites, he brought the gods of the men of Seir, and set them up as his gods, and worshipped them, making offerings to them” (II Chron. 25:14).

Apparently there was an early connection between the religion of the men of Seir and the early religion of Israel, a connection deduced from an Egyptian list from the time of Ramses II (13<sup>th</sup> century B.C.E.) from a statement in which there is the unusual juxtaposition “the land of the Shasu of JHW” (see Herrmann in bibl.). In the same list there is the equivalent juxtaposition “the land of the Shasu of Seir.” (The connection between YHWH and Seir can be learned from a number of early biblical verses, e.g., Deut. 33:2; Judg. 5:4.) Of course, one cannot speak of the identification in this period of this name with YHWH but rather about the origin of YHWH from the same area and ancient contacts between the people of Israel in its early period and the sons of Seir. In this way the biblical tradition is confirmed.

From the archaeological excavations and surveys in Edom it appears that its material culture was developed. The only evidence with regard to its spiritual culture is biblical.

The wisdom of Edom was held in esteem by the prophets. Jeremiah asked in amazement: “Is wisdom no more in Teman? has counsel perished from the prudent? has their wisdom vanished?” (49:7); Obadiah 8 repeats the same idea: “destroy the wise men out of Edom, and understanding out of the mount of Esau.”

### In Second Temple Times

The geographical conception of Edom during the Second Temple period differs radically from that at the time of the First Temple. Following the movement of Edomites from southern Transjordan and into southern Palestine, across the Arabah, in the late seventh and early sixth centuries B.C.E. (II Kings 24:2; Ezek. 35:6), the area to the south of the territory of Judah came to be referred to as Edom/Idumea. The territory of “Darom” (“south”) in Talmudic literature usually refers to Idumea. Idumea in Second Temple times was further north than in the previous period and covered a considerable part of the territory of the tribe of Judah, including Hebron. The border with Judea passed south of Beth-Zur. This change came about on the one hand in consequence of the invasion of Old Edom by new tribes from the desert and the establishment there, in the course of time, of the Nabatean kingdom; and secondly through the weakening of Jewish resistance during the time of the destruction of the Temple and the Babylonian exile. The return only changed the situation slightly; in general the returning exiles did not settle south of Beth-Zur. Even in the list of those who built the walls of Jerusalem in the days of Nehemiah, there is no mention of men from places south of the line Tekoa-Beth-Zur-Keilah-Zanoah.

During the Hellenistic period the Idumean region formed a separate administrative district and is mentioned as such by Diodorus in connection with the period of the Didache (*Bibliotheca Historica*, 19, 98, 1). Marissa and Adorah were the main Idumean settlements in the Hellenistic era. Marissa became an important junction during the Ptolemaic era and served, as can be inferred from one of the Zenon papyri (C.C. Edgar, *Catalogue général des antiquités égyptiennes du Musée de Caire*, 1 (1925), 34, no. 59015 verso), as the seat of the government administration. From the inscriptions and painted designs in one of the tombs, it is possible to follow in great measure the process of Hellenization of Marissa during the Ptolemaic era. Among other things, a Phoenician settlement, which was the standard-bearer of the Hellenistic movement in Idumea, existed in the town, and had organized itself as a *politeuma* of Sidonians in Marissa (W. Dittenberger, *Orientalis Graeci Inscriptiones Selectae*, 2 (1905), 284–5 no. 593). The Ptolemaic government of the country also helped in the migration of many Idumeans to Egypt. Hostile relations between the Idumeans and the Jews persisted throughout the Hellenistic period. Ben Sira enumerates the Edomites among the “nations whom his soul abhorred” (50, 25–26). The same enmity is reflected in the quotation from the Greek writer Mnaseas given by Josephus (*Apion* 2:112ff.) describing how Zabidus of Dorii fooled the people of Jerusalem. During the

Hasmonean wars the Idumeans assisted the Seleucids against the Jews. Judah Maccabee fought the Idumeans, and was particularly active against Hebron (1 Macc. 5:65).

A decisive change in the relations between the two nations took place in the days of John \*Hyrcanus (end of second century B.C.E.). Hyrcanus conquered the whole of Idumea and undertook the forced conversion of its inhabitants to Judaism (Jos., Ant., 13:257ff.). Thenceforth the Idumeans became a section of the Jewish people, Idumea becoming one of the ordinary administrative districts of the Hasmonean state. It appears that the Hasmonean dynasty used some of the respected families of Idumea to establish its dominion in that country. During the reigns of Alexander Yannai and his wife Alexandra Salome, \*Antipas, who was an Idumean, served as ruler of Idumea on behalf of the Hasmoneans (Ant., 14:10). \*Herod, appointed king of Judea by the Romans in 40 B.C.E., was his grandson. During the reign of Herod, Idumea served in general as the firm basis of his authority. He considered the Idumeans to be much more loyal to him than the Jews, and also depended upon them for the military settlement in Transjordan; three thousand Edomites being settled in Terakhan (Ant., 16:285). Despite this, even during his reign, an attempt was made to sever the link between Idumea and Judea. The king's brother-in-law, Costobar, entered into a conspiracy with Cleopatra, queen of Egypt, for the purpose of annexing Edom directly to Egypt, but the plot was foiled by Herod. After the death of Herod in 4 B.C.E. Idumea was included with Judea and Samaria in the ethnarchy of Archelaus. When the latter was deposed in 6 C.E., Idumea became part of the Roman province of Judea. Furthermore Gaza was severed from any administrative connection with Idumea and added to the province of Syria. Consequently, the size of Idumea was reduced – and in view of the fact that by degrees the differences between the Idumeans and their northern neighbors became blurred – the Roman government decided to abolish the separate status of Idumea as an administrative district equal in status to Judea or Samaria. Toward the end of the Second Temple era, Idumea appears as one of the 11 ordinary toparchies of Judea (Jos., Wars, 3:55).

The Idumeans participated in the Roman War of 66–70 C.E. They were organized into their own detachments and, at the time of the fratricidal war in Jerusalem between the Zealots and their opponents under the leadership of Anan b. Anan, hastened to the help of the Zealots, on the assumption that Anan and his associates intended to deliver the city into the hands of the Romans. The Idumeans were led by four commanders. They penetrated into Jerusalem on a rainy night and freed the Zealots who were besieged in the Temple, thus triumphing over their enemies. During the siege of Jerusalem by Titus they constituted a special division, numbering 5,000 men. They were led by ten officers, the most prominent among them being \*Jacob b. Sosas and Simeon b. Katala. They acted under the high command of Simeon b. Giora (Jos., Wars, 5:249). Johanan, the brother of Jacob, was killed during the siege (6:290), and the Idumeans were prominent in the defense

of Jerusalem (9:358–6:92, 148). Titus, too, regarded them as an important element of the Judean military force (8:379). It is not known which were the most important Idumean centers of settlement at the end of the days of the Second Temple. At the time of the Parthian invasion in 40 B.C.E., Marissa had already been destroyed, and Adorah no longer appears in the sources of the period. On the other hand Hebron is mentioned (4:529, 554).

Idumea is frequently mentioned in Latin poems of the period, usually as a synonym for Judea.

[Isaac Avishur]

### In the *Aggadah*

Edom appears sometimes in the *aggadah* as referring to the actual Edomites and sometimes to the Romans, who are identified with them (see \*Esau *aggadah*).

THE HISTORICAL EDMOM. The historical Edom is chiefly discussed from the point of view of its relations with the Israelite people as these are reflected in the books of the Bible. Beside the enmity and hatred already stressed there, the *aggadah* emphasizes that Edom oppressed the people most closely akin to him. There are interesting *aggadot* which discuss, for example, the legal aspects of Israel-Edom relations in the time of King David (Gen. R. 74:15; ed. Theodor-Albeck, p. 872ff.), and also attempt to justify David's wars against Edom despite the biblical command laying down that Edom was not to be a heritage of the people of Israel (Deut. 2:5).

EDOM AS ROME. The identification of Edom with Rome is never found in the literature of the Second Temple period. It appears for the first time close to the Bar Kokhba revolt (cf. Margolioth, p. 610/2). R. Meir even connects it with the verse (Isa. 21:11), "The vision of Dumah" = the vision of Dome (דומי = דומי, Rome, TJ, Ta'an. 1:1, 64a see ed. princ.); also "The *re'emim* [wild-oxen] shall come down with them" (Isa. 34:7) is read as "The Romans shall come down with them" (פדרק 7, 11, ed. Mandelbaum, p. 134). The previous verses (5–6) speak of Edom (cf. also Targ. Jon. ed. Sperber, Isa. 9, "The streams thereof shall be turned into pitch": "The streams of Rome shall be turned into pitch"). Many scholars are of the opinion that the source of this identification lies in the connection between \*Herod, a descendant of Edomite proselytes, whose evil rule over Judea left a harsh impression and the intensification of Roman rule in Judea, especially as Herod was virtually a vassal of Rome. However these conjectures cannot be accepted. Not only are substantial proofs lacking, but the identification appears only in the second quarter of the second century C.E., more than four generations after the death of Herod. It seems, therefore, that its source is to be sought elsewhere.

In the Bible Edom is described as the eternal enemy of Israel (and Judah, Amos 1:11; Ezek. 35:5) who not only always oppressed Israel, but at the time of the destruction of the First Temple took advantage of the situation and seized control of parts of Judah (Ezek. 25:12; 35:5, 10, 2; Obad. 11–16), and it is hinted that Edom also took part in the destruction of Jeru-

salem (Ps. 137:7; Obad. 11) and even in that of the Temple itself (Obad. 16). In consequence, during the Second Temple period there spread a belief that it was actually the Edomites who burned the First Temple (1 Esdras 4:45; Ethiopian Enoch 89:66), and also interfered with the building of the Second Temple (*ibid.*, 72). Hence the intense enmity toward Edom which grew stronger in the course of time (Ecclus. 50:25–26), until the conquest of Edom and its conversion to Judaism in the time of John Hyrcanus – a conquest which is the background to the descriptions of the wars of Jacob and his sons with Esau and his sons in the Book of Jubilees (37–38) and in the Testament of the Twelve Patriarchs (Judah 9). Edom is even compared to a black boar (1 En. 89:12, 42–43, 49, 66; Jub. 37:20, 24). The intense hatred of Rome after the cruel crushing of the revolt of the Diaspora in the time of Trajan and still more after the harsh suppression of the Bar Kokhba revolt and the decrees of persecution in Hadrian's days; the fact that Rome, like Edom, had destroyed the Temple; the similarity of Edom, compared to a pig, with Rome, for whom the pig (or, more correctly, the sow) was a most important symbol; the allusions to Edom dwelling on high like an eagle and the fact that the eagle, too, was an important Roman symbol; and perhaps finally even the similarity to the name Rome and Romans in several verses that speak of Edom, Seir, and Esau – all these apparently combined to cause the application to Rome of the biblical references to Edom, the eternal enemy of Israel.

At the end of the tannaitic period, and still more in the amoraic, the identification became very widespread, and the overwhelming majority of homilies about Edom speak explicitly of Rome. Thus it was stated that Rome was founded by the children of Esau, and Rome was identified as one of the cities of the chiefs of Esau enumerated at the end of Genesis 36 (these identifications occur not only in the Midrashim and the Talmuds but also in the Palestinian \*Targums of the Torah and in the Targums to Lamentations and Esther). At a still later period the term became a synonym for Christian Rome and thence for Christianity in general, and allusions were even found to \*Constantinople among the cities of Edom (and see \*Caesarea).

**EDREHI** (Heb. אֶדְרֵי), **MOSES BEN ISAAC** (c. 1774–c. 1842), Moroccan scholar. Edrehi was born in \*Agadir, Morocco, but when the Jews were expelled from that city Moses, while still a boy, was taken with his parents to \*Mogador, and after 1784 to Rabat. He began to preach in public at the age of 14, and became an itinerant preacher in North Africa. In 1791 he reached London, where he studied for a time in the *bet ha-midrash* Eṣ Ḥayyim and was accustomed to preach every Sabbath. In 1792 he published his *Torat Ḥayyim* readings for Friday nights according to the custom of the Jews of Morocco. In 1802 he proceeded to Amsterdam, where he published his *Yad Moshe* (1809), consisting of sermons preached in various places; and *Ma'aseh Nissim* (1818), tales of the ten tribes, with a Yiddish translation. An English edition of this somewhat preposterous work was published in London in 1834 under the title, *Book of Miracles... With... an Account of Many Millions of Israelitical Children... Dwelling Beyond that River*, later expanded as *An Historical Account of the Ten Tribes Settled Beyond the River Sambatyon in the East* (1836) which was prefaced by letters of commendation from Dutch, French, and English scholars and clergymen. About 1829 he met the writer John Wilson (“Christopher North”) in Edinburgh who described him in his series *Noctes Ambrosianae* in Blackwood's Magazine. Edrehi finally left for Erez Israel, traveling by way of France, Italy, Malta, and Smyrna and taking four years on the journey. While in \*Izmir in 1841, his belongings and manuscripts – among them a grammar of the French and English language with a translation in Spanish – were destroyed by fire. In 1842 he published in \*Jerusalem the *Azharot* of Isaac b. Reuben \*al-Bargeloni. After his death his son Isaac published his *History of the Capital of Asia and the Turks, together with an Account of the Domestic Manners of the Turks in Turkey*, 3 vols. (1855).

**EDREI** (Heb. אֶדְרֵי).

(1) A biblical town in Transjordan. It may be recorded among the towns captured by Thutmosis III in c. 1469 B.C.E., but that reference may be to (2) below. In all likelihood the toponym is found in Ugaritic (KTU 1.108:3). It is first mentioned in the Bible as the city of \*Og, king of Bashan, whom Moses and the Israelites defeated before entering Canaan (Num. 21:33; Deut. 1:4; 3:1; Josh. 12:4; 13:12). Og's lands were allotted to the half-tribe of \*Manasseh (Num. 32:33ff.; Josh. 12:6; 13:7–12, 29–31; cf. Deut. 3:5; 1 Kings 4:13). In Roman times, as Adraene, it was a well-known town in Provincia Arabia, located on the highway leading from Bozrah to Bet Reshah (Capitolias) 24 mi. (40 km.) from the former and 16 mi. (26 km.) from the latter. Edrei contained a Jewish community up to the 14<sup>th</sup> century. It is identified with the modern town of Dar'ā in Syria, near the Jordanian border, 1,887 ft. (575 m.)

above sea level, with a population of about 8,000 Muslims. Potsherds ranging from the Early Bronze Age to the Arab period have been found on an adjacent tell. Within the town were discovered fragments of an early medieval Hebrew inscription. As a junction on the Hejaz Railway, Dar'ā had great strategic importance during World War I and played a part in T.E. \*Lawrence's campaign.

(2) A town in the territory of \*Naphtali in Upper Galilee (Josh. 19:37). Aharoni identified it with the Edrei mentioned in Thutmosis III's list.

[Michael Avi-Yonah]

**EDUCATION.** The Jewish people has an educational tradition as old as history (see \*Education, Jewish). From the very beginning of their identification as a distinct entity, Jews have contributed not only to the advancement of their own education, but also to that of the world at large. The educational principles of the Bible found their way into the educational thought of Christians and Muslims. As an example one might cite the moral, spiritual, and character education through the family and community described in the Book of Proverbs. Compulsory teaching, incumbent upon the father in the first instance, is ordained in Deuteronomy 6:6–9 and 11:18–20. Compulsory school attendance was decreed by \*Simeon b. Shetaḥ in 75 B.C.E. and by \*Joshua ben Gamla in 64 C.E. In recent years, educators have come to recognize that ancient Jewish education anticipated, and no doubt indirectly and remotely influenced, modern education. Thus the National Education Association of the United States cited the Babylonian Talmud as authority for a maximum class size of 25 pupils (BB 21a). The same source requires, under Joshua ben Gamla's ordinance, that children start school at six or seven, the age at which children all over the world traditionally enter school. Adult education is sometimes traced by educational historians, such as I.L. \*Kandel, to the *bet ha-midrash* of Second Temple times. The importance of the teacher in the learning process is repeatedly emphasized in the Talmud (*Avot*), as is the significance of motivation in teaching and of vocational training-principles, which are basic to effective instruction and a modern educational system. The practice of “each one teach one,” inaugurated by Frank C. Laubach in teaching literacy to the people of developing nations, has a talmudic prototype.

For most of their history, Jews educated their children in their own institutions and expressed their educational ideas in their own languages, until the late 18<sup>th</sup> century. There was little contact between Jewish and non-Jewish pedagogues. Jews made few, if any, contributions to general education during the greater part of the development of education from an-

cient times. One outstanding exception may be Constantinus Afer or Africanus (d. 1087), believed by some historians to be Jewish. He influenced the course of medical education at the University of Salerno and other medieval universities, chiefly through his Latin translations of Greek and Arabic medical works, many of the latter of Jewish origin. Africanus had learned Hebrew and Kabbalah from a Jewish teacher and transmitted his inspiration to the German humanist Johannes \*Reuchlin. Reuchlin then learned his Hebrew from Jacob Loans, physician to the emperor Frederick III, and from R. Obadiah \*Sforno, the biblical exegete. Reuchlin went on to introduce the study of Hebrew as a learned subject in German universities. In this way Jews exercised an impact on the development of the European university curriculum.

The Edict of Tolerance issued by Emperor Joseph \*II of Austria in 1782 applied the principles of the Enlightenment to the Jews of his empire. Among other reforms, Jews were permitted to enroll their children in government schools and to establish secular schools of their own. Young Jews could now attend institutions of higher education. These changes were hailed by Naphtali Herz \*Wessely, a disciple and collaborator of Moses \*Mendelssohn, in his *Divrei Shalom ve-Emet* (Berlin, 1782). The separation of Jews from the general stream of education was now beginning to be bridged. This German Has-kalah \*period ushered in a growth of interest among Jews in the secular pedagogical theories and practices of their Christian neighbors. Especially of interest to Jewish educators were the new ideas and methods of Johann Bernhard Basedow, Johann Friedrich Herbart, and Friedrich Froebel of Germany, Johann Heinrich Pestalozzi of Switzerland, and Andrew Bell and Joseph Lancaster, founders of the mutual or monitorial method of instruction in England.

Among the Jewish contributors to education in the early 19<sup>th</sup> century was the Austrian philanthropist Joseph Ritter von \*Wertheimer who, among other things, was responsible for the development of Austrian kindergartens, the first of which he founded in Vienna in 1830. Another was Sir Isaac Lyon \*Goldsmid, the first Jewish baronet in England, who helped to finance the establishment of University College in London (1825). The list of Jewish philanthropists in education is long. It covers many types of institutions in many countries. Among the men who made munificent and influential benefactions to education were Julius \*Rosenwald, who contributed huge sums for the founding of schools for Blacks in the Southern states of the U.S.; James \*Loeb, patron of the Loeb Classical Library; Sir Ernest \*Cassel, founder of the Anglo-German Institute for the advancement of cultural relations between the two countries through the encouragement of mutual studies; and the Baroness Mayer de \*Rothschild, who founded the Association for the Oral Instruction of the Deaf and Dumb in London on the basis of the lip-reading method practiced by William van Praagh. The kindergarten movement received much attention from Jewish educators and philanthropists. Adolf Pick (1829–1874) founded a pioneering kindergarten in Italy on the German model. In Germany, the original home

of the kindergarten, the well-known feminist Lina \*Morgenstern-Bauer was an ardent propagandist of the movement through her writings on childhood development, as well as a founder of kindergartens and seminaries for training kindergarten teachers. In still another branch of education there was a Jewish pioneer in the 19<sup>th</sup> century. Otto Salomon (1849–1901) promoted the teaching of manual skills in Swedish schools. In 1875 he established the Sloyd Seminarium at Nääs, where he trained teachers of manual crafts from all over the world. His impact on education was extensive not only in Sweden, but in other countries as well. A notable educator in the specialized field of teaching deaf-mutes was the Frenchman Jacob Rodrigues \*Péire. The first teacher of deaf-mutes in France, Péire was to influence Maria Montessori a century later in her teaching of handicapped children. The international authority Edouard Séguin has also testified to the significance of Péire's work. Perhaps the most long-lasting contribution to general education was the opening in 1805 of a school in Seesen, Germany, by Israel \*Jacobson, an initiator of the Jewish Reform movement and an ardent advocate of closer Christian-Jewish relations. Among German historians this type of school is known as a "Simultanschule," an institution where religious instruction is given to different religious groups within the same school building. For 30 years, between 1838 and 1867, there was an equal number of Jewish and Christian pupils in the school, but because of the shortage of Jewish teachers of secular subjects, especially the sciences, as a result of the earlier limitations on higher education for Jews, there was a much larger proportion of Christians on the staff. Jacobson's school remained in existence until the advent of the Nazis in 1933. Few other Jews in the 19<sup>th</sup> century made any recognizable mark on general education. Félix Hément (1827–1891) rose from elementary teaching in France to become inspector of primary schools in the department of the Seine and, upon his retirement, honorary inspector-general of public instruction. Naphtali Herz \*Imber, author of *Ha-Tikvah*, contributed bulletins on ancient Jewish education to a series published by the U.S. Bureau of Education.

In the 20<sup>th</sup> century, the liberalization of the position of Jews in the Western world made it possible for more of them to participate in the educational thought and work of the world at large. Ferenc Kemény (1860–1944), a Hungarian convert to Christianity who served as teacher, principal, school inspector, and professor at the University of Budapest, was active in promoting plans for international education toward world peace. Emile \*Durkheim, professor of sociology and education at the universities of Bordeaux and Paris, won an international reputation not only as a sociologist, but also as author of a number of influential and scholarly works on education. International figures in education included William \*Stern, an émigré from Hamburg to Duke University in the U.S., whose *Psychologie der fruehen Kindheit* (1914; *Psychology of Early Childhood*, 1924) and interpretation of the nature of intelligence were most helpful to teachers on both sides of the Atlantic. Also

of international interest was Kurt Hahn (1886–1974), another refugee from Nazi Germany, who moved his Salem progressive school to Gordonstoun, Scotland, where Prince Philip and his son Prince Charles received their education.

To obtain a balanced view of the Jewish contribution to education the subject should also be considered from the standpoint of particular nations.

In Germany, Clara Stern, the wife of William Stern, wrote on and put into practice principles of child development in relation to education. Erich \*Stern, a doctor of medicine and philosophy, was a professor at the universities of Giessen and Frankfurt before leaving for the University of Paris after 1933. His educational work was concerned with intelligence tests and with the application of child psychiatry. Curt \*Bondy, who returned to Germany after World War II to become professor of social and educational psychology at the University of Hamburg, planned a system of education for juvenile prisoners. In the theoretical aspects of education, Jonas \*Cohn, the neo-Kantian philosopher, wrote several works on educational philosophy, among them *Geist der Erziehung* (1919). Like Cohn, Richard \*Hoenigswald approached pedagogy by way of his philosophical specialty, and wrote books on the theoretical foundations of education. He left Germany for the U.S. in 1933 after having been professor of philosophy at the universities of Breslau and Munich. There were many German Jewish educators who were concerned with the education of girls and women. Susanne \*Engelmann wrote on the psychological foundations of girls' education, as well as a study of the teaching of German literary history. Ulrike Henschke (1830–1897) and her daughter Margarete (1859–?) were active in the promotion of secondary and vocational education for girls. Higher education for women was the special interest of Henriette Goldschmidt (1825–1920), who also made significant contributions, as a follower of Froebel, to the development of the kindergarten movement. This movement benefited immensely from the activities and writings of Clara Morgenstern and Johanna Goldschmidt. Eugen Pappenheim (1831–1901) opened kindergartens and seminaries, edited *Der Kindergarten*, and founded the Deutscher Froebelverband (1873). Among the other prominent German Jewish educators were Kurt Levinstein, author of research on the history of education and the teaching of literature; Leo \*Kestenberg, author and editor of books on musical education; and Fritz \*Karsen, head of the Karl-Marx-Schule in Berlin, a specialist in experimental schools and later professor of education at Brooklyn College, New York. August Homburger (1873–1930), a psychiatrist, founded in Heidelberg in 1917 the first German counseling center for the education of the mentally handicapped.

In Austria, Theodor \*Heller pioneered in the teaching of the blind and the mentally handicapped, wrote and edited works in these fields, and organized societies. Alfred \*Adler founded kindergartens and experimental schools, and edited and published works on education from the standpoint of

individual psychology. Ferdinand Birnbaum (1892–1947), a psychologist, promoted through his teaching, writing, editing, and organizational work, the education of mentally handicapped children on an international basis. Siegfried \*Bernfeld, a Freudian psychoanalyst, was active in youth psychology and education. In Denmark, Ernst Trier (1837–1893) founded the Vallekilde Folk High School (1865) in accordance with the principles of Grundtvig. Sofie \*Elkan, a novelist, translated the writings of Comenius, Salzmann, and Pestalozzi into Swedish, thus making pedagogical classics available to the teachers of Sweden.

Jean \*Zay, a youthful minister of education in France in 1936–39, introduced a school reform involving careful guidance of 11-year-old pupils before classification in secondary education. Among contemporary educators have been Lamberto \*Borghini, professor and director of the Istituto di Pedagogia, University of Florence, and author and editor of pedagogical works and journals; Leon van Gelder, professor of education at the University of Groningen and former director of the Dutch teachers' association; and Joseph Katz, professor of comparative education at the University of British Columbia, founder-president of the Comparative and International Education Society of Canada, and author and editor of significant writings on Canadian and international education.

Jews have played a significant role in general education in the U.S.S.R. Moses M. Rubenstein wrote extensively on the applications of psychology to education. Sergey L. \*Rubinstein, of the Academy of Pedagogical Sciences, worked along similar lines. Moses M. Pistrak (1888–1940), author of the first textbook on education for pedagogical institutes (1934), also wrote works on educational theory. Yevgeni Y. Golant, professor at the Hertsen Pedagogical Institute in Leningrad, became a leading figure in the historical and methodological aspects of education. Sholom Izrailovich Ganelin, of the Academy of Pedagogical Sciences, is recognized as a specialist on the theory and history of education. Alexander R. Luria, a psychologist in the Academy of Pedagogical Sciences, won an international reputation as an expert on the education of the mentally handicapped. Elye I. Monoszon, another of the many Jews in the Academy of Pedagogical Sciences, wrote important works on didactics. Distinction in editorial work was attained by M.S. Epstein, coeditor of the pedagogical encyclopedia (1927–30), and by David A. Epshtein, an editor of the new children's encyclopedia.

In England, Sir Meyer A. Spielman (1856–1936) served as inspector of schools for juvenile delinquents and as a pioneer in the Borstal movement for their rehabilitation. Sir Philip J.H. \*Hartog was a well-known specialist on higher education and on education in India. Susan \*Isaacs applied psychoanalytic methods in early childhood education, published important studies on the social and intellectual development of children, and headed the department of child development at the University of London's Institute of Education (1933–43). A refugee from Nazi Germany, where he was professor of psychology at

the University of Frankfurt, Karl Mannheim enhanced his international reputation when he was professor at the University of London's Institute of Education by his publications on the sociology of knowledge and education.

In the United States, the Jewish contributions to general education in the 20<sup>th</sup> century have been varied, frequent, and profound. Probably the single most influential force in changing American education was Abraham \*Flexner, the author of reports on medical education (1910) and universities (1930). The arguments of Louis \*Marshall, the lawyer on behalf of private schools, influenced the U.S. Supreme Court's Oregon decision (1925) upholding the constitutionality of parochial schools. Lillian D. \*Wald, a social worker, pioneered in public school nursing in New York City. Vice Admiral Hyman G. \*Rickover emerged as a widely read critic of the U.S. educational system. Of particular value was the analysis by Fred M. Hechinger, who replaced Benjamin Fine as education editor of the *New York Times*. In the professional field of education, numerous Jews have distinguished themselves: Isaac B. \*Berkson, Harry S. \*Broudy, and Israel \*Scheffler in the philosophy of education; Bernard Bailyn, Lawrence A. \*Cremin, and Saul Sack in the history of education; Isaac L. Kandel and Harold J. Noah in comparative education; David P. \*Ausubel, Bruno \*Bettelheim, Benjamin S. \*Bloom, Frank S. Freeman, Kurt \*Lewin, and Irving \*Lorge in educational psychology and research; Jacob Greenberg, Mark M. Krug, Morris Meister, Paul C. Rosenbloom, and Joseph J. \*Schwab in methods of teaching various subjects; Harold H. \*Abelson, Paul \*Klapper, and Harry N. \*Rivlin as deans of university schools of education; and Myron \*Lieberman as specialist on the professional status of teachers. Abraham A. \*Ribicoff and Wilbur J. \*Cohen both served as U.S. secretary of health, education, and welfare; David H. Kurtzman was superintendent of public instruction in Pennsylvania. Rose Shapiro was elected president of New York City's Board of Education in June 1968. Most of these experts exercised considerable influence on education in other countries. Another powerful force in education was the mostly Jewish United Federation of Teachers in New York with over 140,000 members. Throughout the 1960s and 1970s, with the controversial Albert \*Shanker serving as president 1964–74, it led a number of major strikes to improve the conditions of the city's teachers.

Two Israelis have won international recognition in education. The philosophical and educational writings of Martin \*Buber have had a profound impact in educational theory and on teaching in Protestant theological seminaries in various countries. Ernst A. \*Simon pioneered in the teaching of general educational history and theory in Israel, in research in these fields, and in advancement of comparative education.

**The Nature of the Sources**

The Bible is the primary source for an understanding of the process of education in ancient Israel. Since there is no biblical text that formulates a philosophy, methodology, or curriculum of education such information must be pieced together from occasional admonitions and narrative references and episodes supplemented by known facts about ancient Near Eastern institutions. Additional information is contained in the growing amount of ancient Hebrew epigrapha and relevant artifacts from archaeological digs.

Because of geographic proximity and cultural contact, extra-biblical Near Eastern material can be used to clarify the

nature of biblical educational institutions. However, this material must be used judiciously, with an eye to the particular limitations of each society. For example, higher education or book learning in Mesopotamia and Egypt was formal and limited to the scribal class, which does not seem to have been the case in Israel. The difference was no doubt due to the simpler alphabetic system of writing used by the Hebrews.

Any description of education in the biblical period is necessarily incomplete and must ultimately rely on general impressions of what was applicable to most levels of society, as it is reflected in the Bible and later Jewish sources.

### Historical Survey

The sources at hand do not allow for a precise, chronological description of the development of pedagogical institutions or methodology. Three major periods may be discerned, each displaying a distinctive political, social, and economic order in ancient Israel.

**THE PATRIARCHAL PERIOD AND THE SETTLEMENT.** During this crucial but sparsely documented period, the Israelites developed national-religious institutions that were to have a profound influence on them and on the world at large. For most of this period, they were seminomadic, residing in the great cultural centers of the ancient world, from Ur in Babylonia to the eastern Nile Delta in Egypt. Politically they were subject to greater and lesser powers in the Fertile Crescent.

The family or *bet av* was the basic socioeconomic unit tending to the communal needs of its members, including educating the young. In matters of war and external affairs the families acted concertedly with related groups to form the tribe and nation. There was little economic diversity. As the need arose, other clans that had specialized as scribes joined the confederation of shepherds and farmers (1 Chron. 2:55).

The character of the Israelite nation was shaped during this period. Central to the religion of Israel were the promise to Abraham (Gen. 15), the exodus from Egypt (Ex. 7ff.), and the theophany at Sinai (Ex. 19–20). These historic moments welded the tribes into a nation related through blood and history. Guided by prophets and priests, they set upon the united goal of the conquest and settlement of the Land of Canaan. The revolutionary ideals of monotheism were later crystallized in the laws of the Torah and the historical narratives of the lives of the Patriarchs.

**THE KINGDOM.** Through the genius of David, the Israelite tribal union was reshaped into a politically independent, centralized monarchy. Over the following 400 years, and in spite of the internal split into two kingdoms, Israel and Judah were able, at times, to control politically and influence their neighbors (David-Solomon, Ahab, Jeroboam II, Uzziah, and Hezekiah). To serve the needs of this society, new institutions evolved. Tribal allegiances were subordinated to the new order. The country was redivided into administrative areas, not

always along tribal lines (1 Kings 4:7–20). A bureaucracy, patterned after local Canaanite models, came into existence, introducing new administrative forms (1 Sam. 8:11–18).

The portable tabernacle and local shrines were overshadowed by the Jerusalem Temple, which was patronized by the king and officiated at by his appointees. The king's conquests and military establishment superseded the tribal holy wars. Professional soldiers and mercenaries now fought the battles of Israel (Song 3:8).

The centralized monarchy and subsequent urbanization directly affected all aspects of education. The need was felt for trained professionals and skilled artisans. Religious ideals of the covenant were transmitted to the people at the Temple and sanctuaries by a recognized priesthood. In reaction to the increased social injustice found in urban society, the classical prophets appeared in the eighth century to interpret the social implications of the election of Israel to the people.

**THE BABYLONIAN EXILE AND HELLENISTIC TIMES.** The Jewish people successfully overcame the trauma of the Babylonian Exile. The small province of Judah that was established subsequently was politically part of the Persian Empire and economically dependent upon the gifts of wealthier Jews in exile.

Ezra the Scribe and his colleagues were empowered to teach the Torah to the Jews (Ezra 7:25), and under his guidance the Torah became the accepted basis of individual and community life. Beginnings of a program of mass education (Deut. 31:12–13; 11 Chron. 17:7–9) matured under Ezra into new institutions, intensifying the study of Torah and raising the quality of popular knowledge. Recognized instructors, called *mevinim*, were appointed to teach publicly. The Torah was read out and explained (Neh. 8:7–8). It was the beginning of the regular public lection of the Torah, later connected with the synagogal liturgy and ascribed anachronistically to Ezra (BK 82a). The internal tensions between stipulations of the Torah, on one hand, and between the Torah and the reality of the period on the other, led to a search for new meaning in the biblical text, thereby creating Midrash (Dan. 9:23–27; Neh. 8:13–15). In Hellenistic times there began to appear schools for public instruction (Eccles. 12:9; Ecclus. 39:1–3). Ben Sira, the late third century B.C.E. pedagogue, seems to have introduced tuition-free education (51:28–30). It was not uncommon for an informal study session to take place even at a student's house (Avot 1:4). Finally, toward the end of the second century B.C.E., \*Simeon ben Shetah inaugurated the first known system of community-supported public education. A new intellectual model had emerged: the biblical *hakham*, or wise man, gave way to the rabbinic *talmid hakham*, or scholar.

### The Goals and Orders of Instruction

The goals of education may be broadly summed up: (1) To transmit knowledge and skills from one generation to another or from one person to another; (2) To broaden the range of man's knowledge and skills; and (3) To concretize

cultural values into the form of accepted group and individual behavior.

In each of the three main orders of study in ancient Israel – religious education, the learning of occupational skills, and military training – these goals were pursued to varying degrees. Each type of instruction had its own specific goals, methods of study, and pedagogic institutions.

Occupational and military training were subject to social and technological changes. For example, with the appearance of professional soldiers, military training for the average man became less important and at times nonexistent. On the other hand, religious education was conservative, retaining its goals and some of its methods well after the biblical period.

**RELIGIOUS EDUCATION.** The goal of religious education was to produce “a kingdom of priests, a holy people” (Ex. 19:6). Wisdom literature stated the corollary, *reshit hokhmah yirat adonai* (“The essence of knowledge is fear of the Lord”; Ps. 111:10; Prov. 1:7).

The means of achieving this goal were twofold: first, the recognition of the divine will in the laws of the Covenant; and second, the study of Israel’s history, which reflected God’s concern for His chosen people. Learning God’s law and Israel’s history became the basic means of receiving a peculiarly Israelite religious education.

The law was regarded as the conditions of the *berit*, or covenant, between God and Israel (Ex. 24:7). Near Eastern vassal and parity treaties help to clarify many aspects of the *berit* as it is found in the Bible (see \*Covenant). Since the covenant at Sinai was accepted by all those present when they said “We will do and obey” (Ex. 24:7), it followed that the whole nation would have to be taught the laws incumbent upon them. It is for this reason that Moses, Israel’s first teacher, is repeatedly commanded to “Speak unto the Children of Israel saying ...”

How were the laws to be taught? Some Near Eastern treaties contained a “document clause,” i.e., a clause providing either for the public display of the treaty document or for its deposit in a temple, where it was read at regular intervals before the vassal king and citizens. Parallels are found in the Torah. The text of the covenant was read at the time of the agreement (Ex. 24:7) and an authentic copy was kept in the holy ark guarded by the priesthood (Deut. 31:9, 26). The covenant was to be reread publicly once every seven years during the Feast of Tabernacles (31:10–11); this was the earliest prescription for mass education in ancient Israel: “Gather the people – men, women, children and the strangers in your communities – that they may hear and so learn to revere the Lord your God and to observe faithfully every word of His Teaching. Their children, too, who have not had the experience, shall hear and learn to revere the Lord your God as long as they live in the land which you are about to cross the Jordan to occupy” (Deut. 31:12–13; 11 Kings 23:1–3; Neh. 8:1–8; Sot. 7:8).

The second means of acquiring a religious education was through the study of Israelite history. The belief in a God

acting in events, coupled with a high regard for oral tradition, made the telling of history a most effective pedagogical method. These collective memories took the literary forms of song and story that made up so large a part of biblical literature.

In the words of the psalmist:

Give ear, O my people, to my teaching;  
Incline your ears to the words of my mouth.  
I will open my mouth with a parable;  
I will utter riddles concerning days of old.  
That which we have heard and known,  
And our fathers have told us,  
We will not hide from their children,  
Telling to the generation to come the praises of the Lord,  
And His strength and His wondrous works that He has done

(Ps. 78:1–4; cf. 44:2).

A periodic reading of a written covenant in addition to the recital of an oral tradition of sacred history were the distinctive features of the Hebrew religious education. If the laws specified man’s duty, it was history that revealed God’s concern. Together, they instilled in the Israelite a sense of identification with his God and people.

#### **Educational Institutions**

During the biblical period various social and religious institutions served to disseminate the ideals and the amassed knowledge of society. Some of these were relatively short-lived, already disappearing during the biblical period, e.g., the monarchy and prophecy. Others, like the Temple itself, lasted through the Second Temple period.

One institution, the \*family, has remained a vital educational influence in Israel from biblical times to the present. The family educated the whole man, only delegating some of its responsibilities in periods of technical specialization. While it is true that in most societies the family plays the key role in the child’s socialization, in Israel new emphases were developed.

**INTRA-FAMILY RELATIONSHIP.** The ancient Israelite family was characterized as having respect and awe for parents (Ex. 20:12; Lev. 19:3) and love and responsibility toward the children (Mal. 3:24). The parents were allowed almost complete control over the lives of their offspring, except where the Torah limited their authority, as in cases of dispensing capital punishment (Deut. 21:18–21) or in disallowing the birthright of the eldest son (21:15–17). Fatherly love, even for the disobedient child, is a favorite prophetic image (Jer. 31:20).

Disciplinary measures were an expression of concern for the child’s well-being (Prov. 13:24; 22:15; 29:15) and were to help him control the inherent evil inclination (Gen. 8:21; Ps. 51:7). At the same time, the child’s natural abilities were to be encouraged (Prov. 22:6).

An especially close relationship between mother and son seems to have existed in the polygamous family. This motif plays a major part in the patriarchal stories (Sarah and Isaac; Hagar and Ishmael; Rebekah and Jacob; Rachel and Jo-

seph; Leah and Reuben). While sibling rivalry was a decisive factor in these and later narratives, fraternal concern is also not lacking (Reuben for Joseph; Judah and Joseph for Benjamin; Miriam, Aaron, and Moses; Eliab for David; Absalom for Tamar).

**OCCUPATIONAL TRAINING.** It was a simple matter for the child to learn the rudiments of herding and farming by observing his elders and taking on these responsibilities at an early age (I Sam. 16:11). Girls learned the basic home trades necessary to make the family self-sufficient.

During the nomadic period some families may have specialized as merchants along the trade routes of the Fertile Crescent (cf. Gen. 37:25), while others were wandering smiths, as represented in a 19<sup>th</sup>-century B.C.E. picture from an Egyptian tomb. After they settled in Canaan, extended families and even whole villages were employed in a single trade (I Chron. 4:21–23).

Some families became artisans, eventually developing into professional societies. The terminology employed by these “guilds” was drawn from family life. The founder was called “father” and the members were “sons.” The biblical term for these groups was, among others, the *mishpahah*, or “family” (I Chron. 4:21; cf. *lehakah* (*lehaqah*) and *hevel*).

This same system seems to have been common among Israel’s neighbors: “Adah bore Jabal, he was the father of those who dwelt in tents and amidst herds. The name of his brother was Jubal; he was the father of all who play the lyre and the pipe. As for Zillah, she bore Tubal-Cain, who forged all implements of copper and iron” (Gen. 4:20–22). In Israel the noted craftsmen Bezalel son of Uri and Oholiab son of Ahisamach taught their skills to others (Ex. 35:30–34). Even the courageous Shiphrah and Puah may have become eponyms of “households” or professional midwives (Ex. 1:21).

**MILITARY TRAINING.** Before the establishment of the Davidic monarchy, the tribes were beset by continual local wars, necessitating general military training (Judg. 3:2).

The boys learned agility (II Sam. 22:34, 37) and courage in face-to-face combat (II Sam. 2:14 ff.). They traveled with their warrior fathers and took active part in warfare (Judg. 8:20–21). They learned to handle the simple weaponry of the tribesman – sling, bow, sword, and spear.

The youth’s training was probably supplemented by the telling of heroic exploits (Judg. 14–16; II Sam. 21:15–22), including tactical blunders that were not to be repeated (Judg. 9:50–53; II Sam. 11:20–21).

The tribes fought as units, each under its own banner (Num. 1:52). Some tribes seem to have developed their own military specialty. The tribe of Benjamin was noted for what seems to be the ambidextrous use of the sword (Judg. 3:15 ff.) and the sling (Judg. 20:16), whereas the tribe of Judah was practiced in the bow (II Sam. 1:18). The monarchy probably exploited these local talents in homogeneous units in the organization of the national army (I Chron. 27:1–22; II Chron.

17:14–18). At that time, though, foreign mercenaries, professional Israelite soldiers, and sophisticated arms and defense systems were introduced, ultimately reducing the importance of the tribal warrior.

**RELIGIOUS EDUCATION.** The Israelite home was consciously employed for the religious education of the young (Deut. 4:9; 6:7). The content of this education centered on the telling of family, tribal, and national history:

Remember the days of old,  
Consider the years of ages past;  
Ask your father, he will inform you,  
Your elders, they will tell you

(Deut. 32:7).

The many prophetic allusions to bygone generations assume a wide popular knowledge of Israel’s early history.

Deuteronomy makes a particular point of ensuring that the child be instructed orally in the laws of Israel. The head of the household was put under obligation to teach his own children (Deut. 6:6–7). The naturally inquisitive boy might himself initiate such lessons (6:20–25). Copies of appropriate sections of the Torah were to be attached to the doorposts (6:9; 11:20) or (so literally the scriptural phrases were later interpreted) worn on the person (6:8; 11:18; cf. Prov. 1:9; 3:3; 6:21; 7:3).

An outstanding innovation of biblical pedagogy was the religious home ceremony, which became the primary means of conveying cultural values from one generation to another. The Passover home ritual is found at the very inception of Israel’s national history (Ex. 12:21–27) and other home rituals were associated with other holidays of the Hebrew calendar (Deut. 16:10–12; I Sam. 20:5–6). The home as an educational institution would become the hallmark of the Jewish people.

### Specific Training

**THE EDUCATION OF ROYALTY.** The young prince grew up in the harem where he was raised by his mother. She was his first teacher and continued to exert her influence on him after he reached his majority (I Kings 1–2; Prov. 31:1–9). In the event that her son became king, her influence was enhanced when she assumed the title and privileges of queen mother or *gevirah*.

As an infant the prince was placed in the hands of a wet nurse, who was responsible for his physical well-being (Ex. 2:7–10; II Kings 11:2). After being weaned, the child was given over to a governess (*omenet*) until he reached the age of five, approximately (II Sam. 4:4). Childhood and youth were spent at court in the company of aristocratic contemporaries (II Sam. 8:10; 13:3; II Kings 14:14). Due to accident or intrigue, the eldest son did not always succeed his father. To prepare for this eventuality, all the young princes received the same education. Upon maturing, they assumed positions of political responsibility, either as advisors to their brother (I Kings 12:8) and/or as governors of key cities in the kingdom (II Chron. 11:23).

Already in Davidic times, provision was made for the formal instruction of the king's sons (1 Chron. 27:32). Ahab's 70 sons were educated by leading men of the northern capital of Samaria, no doubt with specialized training by professional tutors (11 Kings 10:1ff.). Neo-Babylonian administrative documents show that the exiled Judean king Jehoiachin had a Hebrew attendant, perhaps a tutor, for five of his sons (Pritchard, Texts, 308).

Some princes had personal tutors. Solomon benefited from the prophet Nathan's guidance (11 Sam. 12:25; 1 Kings 1); the young Joash was raised under the eye of his influential uncle (according to 11 Chron. 22:11), Jehoiada, the high priest (11 Kings 11–12). Similarly, Isaiah took great interest in the young Hezekiah, over whom he was to wield a strong influence (Isa. 9:5–6; 11:1ff.).

The king himself also had influence over his son's upbringing. His own personality played a major part in their relationship. Some, like Saul, tended to harshness, while others, like David, were over-lenient. Both extremes led to family tragedies. In general, the king supervised the transfer of responsibilities to his sons (11 Kings 15:5; 11 Chron. 21:2–3). On his deathbed, the king gathered his royal progeny to deliver his last testament, charging them in religious and diplomatic matters (1 Kings 2:1–9; Isa. 38:1; cf. Gen. 48–49).

Drawing on the Former and Latter Prophets, it is possible to reconstruct broadly the curriculum of a prince's education. To fulfill his duties properly, he had to be trained in three main areas: physical and military training, diplomacy and government, and the national religion of Israel.

The first kings, Saul and David, were famous for their military prowess; some later kings rose to power through the army ranks (Omri, Jehu, and Pekah son of Remaliah). However, not only soldier-usurpers but also princes must have learned the art of warfare. Kings Jehoshaphat, Uzziah, and Josiah, to mention a few, took an active part in leading their soldiers. They trained with the bow (1 Sam. 20:19–20, 35ff.; 11 Sam. 22:35), could handle horse and chariot, and probably learned the fundamentals of military strategy (1 Kings 20:13–14; 11 Kings 3:6–8). Some were known for bravery and on more than one occasion a king died from battle wounds (1 Kings 22:34–35; 11 Chron. 35:23–24).

In contrast to ancient Near Eastern descriptions of contemporary royalty, the Bible is silent in regard to hunting expeditions. This pastime, which is mentioned in connection with the non-Israelite Nimrod and Esau, was usually a basic part of physical training.

**DIPLOMACY AND GOVERNMENT.** Because of the ever-present foreign influences at court, the prince had a good measure of familiarity with the larger world. Through the many foreign wives, sons of vassals, and frequent diplomatic envoys (11 Kings 5:5ff.; 20:12ff.; Isa. 18), he learned of the customs of the gentiles and learned to appreciate their political strength in relation to that of his father. In the later monarchy the prince may have acquired some fluency in Aramaic,

which was during the eighth century B.C.E. the lingua franca of the ancient Near East.

The prince had also to learn the workings of government. Upon reaching his majority, he went through a period of practical training, when he accepted responsibilities in the royal bureaucracy. Jotham, Uzziah's heir apparent, held the high position of *al ha-bayit* or "chamberlain" (11 Kings 15:5). A personal seal inscribed only with *lytm* was discovered in the excavations of ancient Ezion-Geber, and possibly belonged to the prince. The absence of his father's name reflects his high administrative position. That other princes held minor administrative positions is suggested by several *ben ha-melekh* ("son of the king") seals found in and around Palestine.

**RELIGIOUS EDUCATION.** The king was patron and administrator of the Temple and national cult (11 Kings 12). Like all other kings of antiquity, he demonstrated his piety by lavish donations to the cult (1 Kings 8:63).

On the other hand, the prophets demanded of the king allegiance to monotheism and the religious values of the Torah, expressed in acts of justice (Isa. 9:5–6) and humility (Deut. 17:14–20). It was by these criteria that the Israelite kings were judged by the authors of the books of Kings and Chronicles. These values were imparted to the princes by the court prophets and priests, not always successfully.

From the very inception of the monarchy in Israel, the king was conceived to be the highest judge in the land (1 Sam. 8:5–6). Most of the famous cases mentioned in the Bible are ad hoc decisions demonstrating the king's legal sagacity in finding a just solution (11 Sam. 14:5–11; 1 Kings 3:16–28). In order to fulfill this primary function of kingship, the prince must have received a thorough education in common law and in the written law collections (11 Sam. 15:1–6; 11 Kings 14:6).

Though there are no actual records, some kings may have promulgated laws of their own (cf. Micah 6:16). Jehoshaphat is said to have reorganized the judicial system, dividing it into local courts and a high court of appeal, and appointing supervisors for religious and royal interests (11 Chron. 19:5–11). Such familiarity with Hebrew law assumes that the princes had training in jurisprudence. Indeed, the Deuteronomic ideal entailed a literate king, well versed in the Torah (Deut. 17:18–19; cf. 11 Kings 5:7; 19:14).

Not only in his judicial capacity, but in setting the tone of court life, the king patronized the literary arts. The more talented among Israelite royalty were accredited even with composition in the various genres. David's musical talent was still proverbial in the Kingdom of Israel two centuries after his death (Amos 6:5). His religio-national poems inspired later religious poets to see in him their own spiritual forebear (11 Sam. 1:17–27; 22; 23:1–7, and 74 of the 150 psalms).

Solomon was the proverbial wise man, mastering all forms of wisdom literature (1 Kings 5:9–14). This literature was edited from time to time by the court savants (Prov. 25:1). Such was the case in the time of Hezekiah, who was also credited with poetic talents (Isa. 38:9–20).

The importance of alphabetic writing for the history of education must not be overlooked. It ushered in a break with the traditional scribal cultures of Egypt, Mesopotamia, and second-millennium Canaan. To be literate was no longer the identifying and exclusive characteristic of a class of professional scribes and priests, versed in the abstruse cuneiform and hieroglyphic scripts.

**SCRIBAL EDUCATION.** The etymology of the term *sofer*, “scribe,” has not been conclusively determined. It may be derived from the Canaanite root *spr*, “to count,” “to tell.” The rabbis suggested a similar origin (Kid. 30a). Others derive the word from the Assyrian, *šaparū*, “to send,” “to deliver a message.” Whatever the origin, it seems clear that in the Bible a distinction should be made between a scribe, in the usual sense, and a Scribe who because of personal ability or family ties was appointed a minister or secretary of state. Both, however, received the same basic training.

As in the ancient Near East, the scribal class (or “guild”) in Israel was originally organized along family lines. An early example is found in 1 Chronicles 2:55. Under the Davidic monarchy, the same principle of kinship is found in the position of “the king’s scribe” (11 Sam. 8:17; 1 Chron. 18:16; 1 Kings 4:3; cf. Ezra 2:55 and Neh. 7:57). This was probably the case toward the end of the kingdom of Judah. The family of Shaphan dominated the bureaucracy and held the position of king’s scribe from the time of Josiah until the Exile (11 Kings 22:3; Jer. 36:11, 12, 20, 21; 40:9).

Most professional scribes served the administrators of the central government, city councils, and Temple bureaucracy. These institutions set up their own schools which taught the specific scribal skills demanded.

Perhaps the youth of Judges 8:14 was a local scribe: “And he [Gideon] caught a young man of the men of Succoth, and inquired of him; and he wrote down for him the princes and elders of Succoth, seventy-seven men.”

**CURRICULUM.** Scribal education everywhere was the conservative study of traditional methods and subjects. The Israelite scribe had the easy task of learning the 22-letter alphabet, whereas his Egyptian and Mesopotamian counterpart had to master at least one system of hundreds of signs.

The alphabet was invented and developed by the Canaanites during the second millennium B.C.E., probably in one of the major Phoenician cities. Indicative of the conservative nature of the scribal art is the fact that the form of the letters in the three main alphabetic branches (Phoenician, Hebrew, and Aramaic) did not differ radically during the period between 1200 and 600 B.C.E. While mastering the forms, the apprentice scribe learned their order. The standard order of the characters is found already in the 30-letter abecedaries of the scribal schools of Ugarit (15<sup>th</sup> century B.C.E.). Minus eight letters, the series reappears in biblical acrostics (Ps. 119, 145; Lam. 1–4) and is almost identical with the sequence of the modern Hebrew alphabet. Probably in the ninth century B.C.E. the form and order of the letters were exported to the Greek islands as well.

It seems that Isaiah refers to an elementary class learning the alphabet in one of his prophecies (28:9–13): he describes the “first grade” lesson for the day when the children learned the letters *zadi* (צ) and *kof* (כ). During the excavations at Lachish, a list of the first five letters was found incised on one of the steps of an Israelite building, perhaps the work of a child practicing his alphabet.

The second stage of a scribe’s training was the copying of short texts that may have been learned by heart and practiced at home. The \*Gezer Calendar (tenth century B.C.E.) is a possible example of such an assignment. It divides the year into eight agricultural seasons, noting the main characteristics of each. Gezer had been an important Canaanite city, and during the tenth century it housed a levite community serving the Jerusalem administration. Perhaps it was in cities like Gezer that the Canaanite scribal traditions were conveyed to the Israelites.

The young student next learned epistolary and other administrative formulae. After much practice, he could easily produce the names of the city elders (Judg. 8:14). During the monarchy there was a standard tax form, as found in the Samaria Ostraca (mid-ninth or according to others mid-eighth-century B.C.E.), and as more recently noted in the inscribed jar handles from Gibeon (late seventh century B.C.E.).

The local scribe had also to master the forms of deeds of sale (Jer. 32:10–14), marriage contracts (Tob. 7:13 (14) and Elephantine Papyri), bills of divorce (Deut. 24:1–3; Isa. 50:1; Jer. 3:8) as well as court pleas (ostrakon from Mezad Hashavyahu; Job 31:35). The latter, however, may have been part of the responsibilities of the *šoṭer* or “court secretary.” This term is derived from the Akkadian *šaṭāru* (“to write”) and related to the later Hebrew *sheṭar* (“a written document”).

The king’s scribes received a broader and more cosmopolitan education. They had to be competent in diplomacy and the exact sciences. Their knowledge of international diplomacy began with the study of Aramaic, the lingua franca of the period (11 Kings 18:26; Dan. 1:4).

Because of the involvement of all the Israelite kings, from Ahab to Zedekiah, in regional politics, it was necessary that the royal scribes know the workings of the Assyrian, Egyptian, Aramean, and Phoenician courts. Several kings even appeared in person before their Mesopotamian suzerains. International law and treaty formulae (11 Chron. 20:35–37) as well as far-reaching trade agreements (Ezek. 27) were the scribes’ normal business.

Simple arithmetic was probably learned in all formal systems of education (Isa. 10:19). The Israelite court scribe, like his Egyptian and Mesopotamian counterparts, mastered the higher mathematics needed for solving problems of logistics and engineering (11 Kings 20:9–11; 11 Chron. 26:15; 32:30). While astronomy is not specifically mentioned in Israelite sources, it was needed for the calendrical intercalations decreed by the central government (11 Chron. 30:2–4; Pes. 4:9; cf. Jub. 4:7; 1 En. 8:3). Cartography as well was a well-known ancient art (Josh. 18:9; Ezek. 4:1).

In addition to diplomacy and the exact sciences, the court bureaucracy developed what might be termed a “scribal ethic.” Wisdom literature, more specifically the collections now found in the Book of Proverbs, served as a primary text for character education: they focused on the individual’s rather than on the national interest.

Like the comparative Egyptian material, and the Book of \*Ahikar (Aramaic), the Book of Proverbs was an outstanding example of court literature. The book was meant to serve in educating king and courtier (8:15–18) but especially the bureaucracy (22:29). The virtues stressed by these pedagogues were, among others, religious piety, proper family relations, honesty, industry, sagacity, responsibility, social virtues, and loyalty to the king.

Various literary methods were used as memory aids for the student. Key words (Prov. 25:4–5; 30:11–14) and common ideas (25:2–3, 5–6) tied together independent statements. Similarly alliteration (*rash*, *rasha’*, *ra’*, 28:3–5) and repetition of the same or similar roots (25:18–20) served as learning devices. Other units might be formed as number series (30:15–33). Another mnemonic device was the alphabet acrostic (31:10–31).

Foreign material was freely borrowed: Proverbs 22:17–24:22 bears a great resemblance to the “Thirty Sayings of Amen-em-Opet,” a famous Egyptian wisdom text (Pritchard, *Texts*, 421 ff.).

The Book of Proverbs may be the closest thing to an actual school text from the biblical period. Its explicit pedagogic goal, as well as its employment of mnemonic devices, supports this contention. The centrality of secular, royal figures (Solomon, Hezekiah, King Lemuel of Massa, “The Wise”) and its affinities to non-Israelite wisdom literature further argue for its role in the education of the officialdom.

**EDUCATION OF PRIEST AND PROPHET.** The nature of the priest’s education can be determined through an inductive analysis of his manifold functions in biblical society.

Foremost were the cultic duties centered on the elaborate and complicated sacrificial rites. Later, the sacrifice was accompanied by music and song, performed by levitic families, versed in liturgical composition (1 Chron. 25).

Giving rulings on questions of ritual law and ritual purity was intrinsic to the priest’s responsibilities (Lev. 10:8–11; 12–15; Jer. 18:18; Haggai 2:11 ff.; Mal. 1:4–8). The necessary knowledge for these decisions was no doubt acquired by training and study, including the study of the body and its diseases. Professional secular physicians are mentioned in 11 Chronicles 16:12 (cf. Ecclus. 38:7; Pes. 4:9, a “book of medicines”).

It was to the priests that Moses delivered the official copy of the Torah (Deut. 31:24–26; Jer. 2:8). They authenticated and supervised the writing of subsequent copies (Deut. 17:18–19; 11 Kings 22:8) and became the authoritative teachers of the Torah (Deut. 31:10–13; 11 Kings 17:28; 11 Chron. 17:8–9; Ezra the Scribe was a priest).

The priesthood, though ultimately subject to the king administratively, supervised the Temple finances (11 Kings

12:8–17). (The Chronicler even has the priests assume trusted positions in the centralized government system of David and Solomon, 1 Chron. 26:30–32.) Their religious and secular functions demanded that they be literate. This is apparent also in the centrality of the written word in the cult (Ex. 34:27–28; Num. 5–23) and upon the sacred vestments (Ex. 28:21, 36).

Though there are no actual records, the clergy must have received formal training. As was the case elsewhere, schools probably were part of the Temple complex.

The clerical census counted priests only from the age of 30 (Num. 4:3) and levites from the age of 25 (8:24), when they began to assume their cultic functions. This relatively late age indicated a long period of apprenticeship necessitated by their complex duties.

Unlike the priesthood, there were no qualifications for joining the prophetic orders. Even women achieved renown as prophetesses (Miriam, Deborah, Huldah).

The prophets attracted a following known as *bene hanevi'im*, “sons (i.e., disciples) of the prophets.” Some encouraged only a selected group of disciples (Isa. 8:18) or only a single protégé (Moses-Joshua; Elijah-Elisha; Jeremiah-Baruch). The disciple did not always succeed the master since true prophecy was not a skill to be learned but rather a result of divine election (11 Kings 2:9–10).

The disciple’s education was acquired through his ministering to the needs of the prophet. This type of training resembled the rabbinic concept of *shimmush*, attendance upon a master (Avot 1:3). This, of course, is not to say that there was no formal or literary side to the novices’ education. Several prophets may have been trained in the court schools (Isaiah and possibly Zephaniah); others had a priestly education (Jeremiah, Ezekiel, and possibly Malachi). Both schools provided a thorough knowledge of the national-religious literature and more.

The prophetic order no doubt preserved and studied the words and deeds of their illustrious predecessors (Elijah and Elisha cycles; cf. 11 Kings 8:4; Jer. 26:17–18). The writings of the prophets show unmistakable signs of their acquaintance with the writings of their predecessors (Isaiah of Amos’, Zephaniah of Isaiah’s, Deutero-Isaiah with those of Isaiah, Zephaniah, and Jeremiah) as well as with the older psalms and other literature.

There must have been some training in prophetic oration, and musical accompaniment (11 Kings 3:15). An enlightening passage, reflecting prophetic training, in addition to the general popularity of the prophets’ presentation, is found in Ezekiel 33:30–33: “... the children of thy people that talk of thee by the walls and in the doors of the houses and speak one to another ... Come, I pray you and hear what is the word that cometh forth from the Lord ... and, lo, thou art unto them as a love song of one that hath a pleasant voice, and can play well on an instrument ...”

**THE EDUCATION OF WOMEN.** Women’s education was conditioned by several cultural factors which limited and set the

goals of their training. Before marriage, the woman was protected by her father or older brothers; afterward, by her husband who represented her interests in the community. Her dependent status is reflected in her being called by the name of her husband, be she ever so illustrious in her own right (Deborah, the wife of Lappidoth; Huldah, the wife of Shalum). Likewise her personal seal always refers her to some male: Elsegov, daughter of Elishama; Ne'ehevet, daughter of Remaliah; Abigail, wife of Asaiah; Ahotmelekh, wife of Yesha; Menaḥemet, wife of Gadmelekh.

Her protected status was based on a religious and moral outlook, sharply contrasting local Canaanite custom, as well as on economic and social interests that predated the Settlement. These generally limited her activity to that of the home and kindred occupations and provided the goals and limitations of her education, contingent upon her father's position in society.

The mother was naturally the girl's primary teacher and model (cf. Ezekiel's epigram "Like mother like daughter," 16:44). Besides her religious obligations, the young girl learned the domestic chores and special skills of her mother through observation and imitation in the informal atmosphere of the home. She performed other tasks dictated by the family's work – attending the flocks (Gen. 29:6) or helping at harvest time (Song 1:6; Ruth 2:8). She played in the streets and markets (Zech. 8:5). Recently discovered artifacts have demonstrated that she also possessed an assortment of games and dolls.

The upper-class maiden was raised by her nurse, who sometimes accompanied her to her husband's house (Gen. 35:8). If orphaned at an early age, she was raised by a close relative (Esth. 2:7). If there were no brothers, she could inherit her father's property, though in order to protect tribal interests she would have to marry paternal relatives (Num. 27:1–11).

She was brought up on the virtues of sexual innocence and chastity. Violation of her body demanded retaliation by her menfolk (Gen. 34:25 ff.; Judg. 21:22) and was considered a great personal and family tragedy (11 Sam. 13:11 ff.).

Woman was created to be a helpmate to her husband (Gen. 2:18). A good wife was regarded as a gift of God and worth great riches (Prov. 31:10). Her subordinate social and economic status did not diminish the affection in which she was held. A mother's guidance was highly regarded by sons and daughters, influencing them long after they had matured.

She was taught to be industrious and to take an active interest in the economics of her home. The paean to a good wife (Prov. 31:10–31) is an extraordinary celebration of woman's industry. Other virtues lauded are foresight, thrift, good judgment, devotion to her husband's interests, and, above all, piety. It has been suggested that this passage served as a guide to a formal course of study in home economics for upper-class girls.

If a woman had a profession or skill, it was passed on to her daughters. The usual skills were midwifery (Ex. 1:21), weaving and cooking (1 Sam. 8:13), and professional mourn-

ing (Jer. 9:19). In the pre-Israelite period a musical profession, associated with the pagan cult, was regarded as a proper alternative to marriage. In a letter to a Canaanite nobleman living in 15<sup>th</sup> century B.C.E., Taanach, a friend, advises "As for your daughter ... let me know concerning her welfare; and if she grows up you shall give her to become a singer or to a husband" (Pritchard, Texts, 490).

While Israelite women did not participate in the Temple choirs at Jerusalem, they did sing at the royal court (11 Sam. 19:36; Eccles. 2:8). Others were known for gifts of prophecy and poetic expression (Ex. 15:20–21; Judg. 5). There were wise women able to compose fables; still others practiced the black arts and magic (1 Sam. 28:7). Such skills indicate a formal training, learned from experts.

Women raised at court later assumed positions of importance. Political marriages were not infrequent in Israel; such women must therefore have received some formal education befitting their future positions. Since some women had personal property (11 Kings 4:8 ff.) and seals of their own (see above), they may have known writing and calculation.

## IN THE TALMUD

### General

While the sages regarded education as a central instrument in the preservation of Judaism, talmudic sources, characteristically, nowhere deal with the subject systematically in a comprehensive halakhic exposition. Instead, statements on education are scattered throughout talmudic literature, not as normative *halakhot*, but rather as incidental philosophical or psychological ideas, which in the main express the educational aspirations of spiritual leaders during about 600 years (c. 100 B.C.E.–500 C.E.). It is possible to derive a good idea, however, of the actual state of education at that time, which, when compared with the ideal, presents a unique cultural phenomenon – the approximation of pedagogical achievement to the ideal, not only in the attainments of exceptional individuals but also in the numbers of outstanding contemporary personalities. Here would seem to lie one answer to the riddle of the continued existence of Judaism despite the catastrophe

which overwhelmed it in the first century C.E. History has revealed the profundity of \*Johanan b. Zakkai's insight in his plea to the Roman ruler at the time of the destruction of the Second Temple: "Give me Jabneh and its sages" (Git. 56b). It was the study of the Torah which filled the breach left by the loss of the Temple service and which instilled new vigor into the nation.

### Character and Aims

The basis of education is, according to talmudic sources, the study of the Torah, an all-embracing concept which includes means and ends alike. Two basic educational principles followed from the sages' regarding Torah as the very substance of their lives: (1) Education is not to be treated as distinct from the inner content of life but as one with it; (2) accordingly, Torah study is not to be limited to a certain age but to continue throughout one's life under the guidance of a teacher. The prompting of Rabban \*Gamaliel, "Provide yourself a teacher" (Avot 1:16; cf. also 1:6), was intended for everyone, without regard to age or social standing. The unique character of Jewish education finds expression in the phrase "Torah for its own sake," a concept which sets before the student of Torah two goals: the disinterested fulfillment of the commandment itself – as it is written (Josh. 1:8): "Thou shalt meditate therein day and night" (Maim., Yad, Talmud Torah 1:8) – and the orientation of his studies to observance of the *mitzvot*. Torah study was actually regarded as greater than observance in that the first, aside from its intrinsic worth, led to the second by its very nature (Kid. 40b). The sages, in what was apparently designed to serve as a model for educators in all generations, defined the ideal man as one who studies the Bible and the Mishnah, attends upon scholars, is honest in business, and speaks gently to people (Yoma 86a).

Even as the supreme goal of study was Torah for its own sake, so was the general aim of education, "Let all your actions be for the sake of Heaven" (Avot 2:12), an epitomization which brings all actions, even those seemingly removed from Torah and *mitzvot*, into the sphere of man's central purpose – the service of God. To the end that a man support himself by his own labors and not become a burden on society, the sages declared: "All study of the Torah that is unaccompanied by work is ultimately futile" (*ibid.* 2:2). Accordingly, the permission granted parents to make arrangements on the Sabbath for the education of their children was extended to include arrangements "for teaching him a trade," both activities being regarded as "the affairs of Heaven," i.e., religious duties (Shab. 150a). One sage even declared that whoever fails to teach his son a trade, encourages him to become a brigand (Kid. 29a). A child was also to be taught swimming, undoubtedly for the preservation of life. As for other subjects, astronomy and geometry were regarded as aids to the study of the Torah, philosophy ("the wisdom of the Greeks") was not approved, and foreign languages, though discouraged for fear of contaminating cultural influences, were apparently, in view of the number of

non-Hebrew words that found their way into talmudic literature, not entirely prohibited (see \*Greek and Latin Languages, Rabbinical Knowledge of). Moreover, \*Abbahu allowed girls to be taught Greek as "a social accomplishment" (TJ, Pe'ah 1:1, 15c), while Rabban Gamaliel established a school in which 500 pupils were taught philosophy so that they might be able to maintain contacts with the ruling authorities.

### Age Levels

A child's education commences when he begins to speak, whereupon the duty devolves upon the father to teach him to repeat selected biblical verses, such as "Moses commanded us a law, an inheritance of the congregation of Jacob" (Deut. 33:4). This reveals the sages' appreciation of the cultivation of a child's imitative, mechanical faculties even before the attainment of understanding. They were aware of the value of inculcating in young children the habit of observing the *mitzvot*: "A minor who knows how to shake a *lulav* is obliged to observe the laws of the *lulav*; a minor who knows how to wrap himself in the *tallit* is obliged to observe the law of the *zizit*" (Tosef. Hag. 1:2). The pedagogical rule in \*Judah b. Tema's statement: "At five years the age is reached for studying the Bible, at ten for studying the Mishnah, at thirteen for fulfilling the *mitzvot*, at fifteen for studying the Talmud" (Avot 5:21) was not always rigidly adhered to. At variance with it is \*Rav's statement to \*Samuel b. \*Shilat, a schoolteacher: "Do not accept a pupil under the age of six; but accept one from the age of six and stuff him [with knowledge] like an ox" (Ket. 50a). At Usha it was laid down that up to the age of 12 gentle means were to be used to induce a child to study (*ibid.*, loc. cit.). A girl and a boy on reaching the age of 12 and 13 respectively were regarded as "adults," whereupon the father was no longer obliged to teach them Torah and the observance of *mitzvot*, the obligation now devolving upon the "new adults." The studies of adolescents did not thus represent a unique pedagogical stage. The obligation to study Torah under their teachers for the rest of their lives applied to them as it did to all other adults. Having learned Bible and Mishnah, they attended lectures on the Mishnah together with the young scholars and were present at the talmudic discussion centering around the *mishnayot*. In this "yeshivah" no distinction was made on grounds of age or status. Even those engaged primarily in earning a livelihood took part in the studies during the month of \**kallah*, the special lecture series given by the academy head during the months of Adar and Elul when the studies of the intervening periods were summarized.

### The Educational Framework

THE FAMILY, THE SCHOOL, THE TEACHER. In biblical times, as mentioned, the family, particularly the father, was the source of education. After that time, however, the growing demands of life and the expanding boundaries of Torah study made an institutional framework necessary. At an early stage it was apparently the custom to assemble children in the synagogue, where they were taught reading from the biblical scrolls. The first regulation that children be sent to school was

introduced by Simeon b. Shetaḥ, the brother-in-law of King Alexander Yannai (c. 100 B.C.E.). The Talmud provides a more explicit statement on the establishment of schools at the end of the Second Temple period (the beginning of the common era) in which are noted the various stages in the development of institutional education: “Rav Judah said in the name of Rav: ‘Truly the name of that man is to be blessed, namely, \*Joshua b. Gamla, since but for him the Torah would have been forgotten in Israel. At first, if a child had a father, his father taught him; if he had no father, he did not learn at all... They then introduced an ordinance that teachers of children be appointed in Jerusalem ... Even so, if a child had a father, the father would take him up to Jerusalem and have him taught there; but if he had no father, he would not go up there to learn. They therefore ordained that teachers be appointed in each district and that boys enter school at the age of 16 or 17. But because a boy who was punished by his teacher would rebel and leave school, Joshua b. Gamla at length introduced a regulation that teachers of young children be appointed in each district and town, and that children begin their schooling at the age of six or seven’” (BB 21a). The basis of organized schooling for all ages was laid by Joshua b. Gamla’s regulation. Most of these schools were in synagogues and were under the supervision of beadles (see Shab. 1:3). “There were 480 synagogues in Jerusalem, each of which had a Bible school (*bet sefer*) for the study of the Bible and a Talmud school (*bet talmud*) for the study of the Mishnah” (TJ, Meg. 3:1, 73d). At a later period, the patriarch, as the chief spiritual leader, was concerned with education and with the quality of teachers. \*Judah III (third century C.E.) sent emissaries throughout Erez Israel to ascertain whether each town had teachers of the Bible and of the Mishnah (TJ, Hag. 1:7, 76c). \*Rava, a leading *amora* of the fourth century C.E., introduced, on the basis of Joshua b. Gamla’s regulation, several important educational ordinances: (1) No child was to be sent daily from one town to a school in another, but could be sent from one synagogue to another in the same town. (2) The number of pupils to be assigned to a teacher was 25. If there were 40, an assistant was to be appointed. Whether one teacher could be replaced by a better one was the subject of a difference of opinion between Rava and \*Dimi of Nehardea, who also differed on which teacher was to be preferred, one who taught a great deal but inaccurately, or one who taught less but without mistakes. Dimi’s view, favoring the more careful teacher, was adopted (BB 21a).

All these institutions – the *bet sefer* for the study of the Bible, the *bet talmud* for the study of the Mishnah, and the *yeshivah* – had as their purpose not only the imparting of knowledge but also education for a life of Torah. This aim was achieved thanks to the personal example set by the teachers, who were held in awe by their students, as witness the statement of \*Joḥanan b. Nappaḥa and \*Simeon b. Lakish (prominent *Erez Israel amora'im* of the third century C.E.): “We succeeded in the Torah only because we were privileged to see \*Judah ha-Nasi’s finger projecting from his sleeve” (TJ, Bezah 5:2, 63a).

### Methods of Instruction

Instruction was two-pronged in intent – improvement of the memory by accurate transmission and frequent repetition of material, and, at a later stage, the development of creative thought. Pupils learned to transmit statements in the same phraseology used by their teachers (“one is obliged to use the language of one’s teacher”). Since the Oral Law, which could not be committed to writing, was continually expanding, accuracy in learning it was attainable only through endless repetition; hence the dictum, “He who has repeated his chapter a hundred times is not to be compared to him who has repeated it a hundred and one times” (Hag. 9b). The pupils thus acquired proficiency in recitation and a knowledge of the language of Scripture and the basic equipment required for participation in the creative study of the Talmud, essentially an incisive analysis of the *mishnayot* and the *beraitot*. The sages were strikingly modern in their practice of the pedagogic art. When \*Tarfon’s pupils said to him: “Tell us, teacher, by what virtue did Judah merit the kingdom? he answered, ‘You tell’” (Mekh., Be-Shallah 5). On one occasion \*Akiva deliberately stated a *halakhah* incorrectly “to sharpen the wits of his pupils” (Nid. 45a). Every possible mnemonic device was employed – *notarikon*, association of ideas, and many others. Only in this way could the vast body of talmudic thought have been transmitted intact from generation to generation until the end of the fifth century C.E., when it was finally redacted.

Discipline played a vital role in this system (see Shab. 13a, and Rashi, ad loc., s.v. *ve-eimat rabban aleihem*). Although corporal punishment was inflicted when deemed necessary, the sages sought to curtail it as much as possible and warned against injuring a child. Rav’s directives to Samuel b. Shilat the school teacher included the following: “When you punish a pupil, hit him only with a shoe latchet. The attentive student will learn of himself; the inattentive one should be placed next to one who is diligent” (BB 21a). This counsel applied to younger students; with those who were older the teacher might introduce the lesson with a humorous remark to create an atmosphere congenial to learning. But the teacher’s most valuable asset was the example he set for his students. Well aware of this, the sages sought to impress upon teachers the need for circumspection in speech and deed. Thus \*Zēira, a leading *amora* of the end of the third century, stated: “One should not promise something to a child and then fail to give it to him, for he thereby teaches him to lie” (Suk. 46b). Though the sages were remarkable pedagogues, the greater part of their achievement doubtless resulted from the atmosphere generated by their personalities, an atmosphere of unbounded love for the Torah and of supreme self-discipline in the observance of *mitzvot*.

#### IN THE MIDDLE AGES

##### Babylonian, Pre-Geonic, and Geonic Periods

By the end of the fifth century, the time of the completion of the Babylonian Talmud, the Jewish community in Babylonia had become the leading Diaspora Jewry, a position it was destined to maintain for another five hundred years. This leadership expressed itself also in its educational system and in its high level of scholarship. Many synagogues had both a *bet sefer* for elementary study, and a *bet talmud* for advanced study. At the peak of this network of educational institutions were the two major academies of \*Sura and \*Pumbedita that contributed so richly to Jewish scholarship and, through the interpretation of the *halakhah*, set the pattern for Jewish religious life and the place of study in it. The heads of these academies – known at first as *rashei ha-yeshivot*, and later as *geonim* – were accepted as the authorities on religious law not only in Babylonia but also in the other lands of the dispersion. In the seventh century, Babylonia's influence was enhanced by the Arab conquests of many Mediterranean countries, extending as far as Spain, which united them with Babylonia in the bonds of a common language, Arabic. This last factor facilitated personal contact and communication between the Jewries of the geonic period and helped establish and solidify a more or less uniform style of Jewish life.

One of the chief components of this style of life was the upbringing of children. Their education was started at home where at a very early age they noted numerous observances, learned some of the benedictions and simple prayers and began participating, on their level, in many traditional practices, especially on Sabbaths and holidays, where they became acquainted with the synagogue rituals and celebrations. The home and the synagogue were effective educational agencies from the child's very infancy.

While some children were instructed by their fathers, starting school at age six was the more common practice. The school was usually in the synagogue or in a building near it, and the pupils were accordingly referred to as “synagogue children” (*tinokot shel bet keneset*). It was a community institution. However some affluent parents preferred private schools for their sons.

The elementary school's chief aim was to prepare the boy for participation in the synagogue service. The ability to read was therefore the first objective. Books being rare and expensive, children learned the alphabet by copying its letters on parchment, or paper or slate. In the early stages of learning, the teachers often outlined block letters which the children filled out, and sometimes colored. On the more advanced level, scrolls or sheets with biblical texts were available, or Torah scrolls that were unfit (*pesulim*) for synagogue use. Prayers and sections from the Pentateuch came next on the program, often starting with Leviticus. The Torah was stud-

ied assiduously in an attempt to cover the *sidra* (“portion of the week”). Afterward the pupils delved into the books of the Prophets and Hagiographa, but a later tendency was to neglect these works in favor of Talmud. In some schools the native language and arithmetic were also taught. \*Hai ben Sherira (10/11<sup>th</sup> century), the last *gaon* of Pumbedita, permitted teaching these secular subjects, recognizing the need for them in daily life. However, their inclusion in the school's curriculum probably preceded Hai's dictum.

Widespread and effective elementary education continued in Babylonia's Jewry for a thousand years or so. Surely \*Pethahiah of Regensburg exaggerated when he recorded in his travel diary (of 1180) that “there is no one so ignorant in the whole of Babylonia, Assyria, Media, and Persia, that he does not know the twenty-four books [of the Hebrew Bible] with their punctuation and grammar. . . .” This statement, however, reinforces information from other sources indicating that basic instruction was the lot of nearly all boys during the centuries of the gaonate.

The elementary teachers at this period were known as *melammedei tinokot*, or simply *melammedim*. Their economic position was relatively low, as was also apparently their social status. Hai Gaon, who, in his didactic poem *Musar Haskel* (“Wise Instruction”), urged the people not to be miserly in educational matters and engage good teachers for their children, also advocated generosity in the matter of teachers' remuneration. Teachers enjoyed extra presents on special occasions and on gift-giving holidays, particularly from parents pleased with their children's achievements.

The elementary schools were also preparatory institutions for more advanced studies. There were two levels of such study that may be characterized in the modern terms of secondary and higher learning but this division did not reflect so much the age of the students as the level of studies. In the intermediate stage, those engaged in *Midrash Mishnah* (study of the Mishnah) or *Midrash Talmud* (study of the Talmud) still needed the assistance of a *rav* – a teacher. On the upper level students proceeded with their learning independently. The subject was almost exclusively Talmud. The stress on Talmud brought about a nearly complete elimination of Bible and Mishnah from schools beyond the elementary. \*Natronai b. Hilai Gaon (ninth century) expressed the opinion that adults, being pressed for time because of the need to earn their living, should concentrate on the study of the Talmud, since the Talmud contains much of the other two works. This same logic was later expressed by Rabbenu Jacob b. Meir \*Tam in France.

The Babylonian academies served substantial numbers of students, some of them from distant lands: Egypt, Tunisia, Italy, Spain. During the pre-holiday months of Adar and Elul, the *kallah* assemblies in the academies attracted many students. In Babylonia there thus developed a system of talmudic learning also for the broader circles of the Jewish population, something on the order of peoples' universities or, to use still another modern term, extension courses.

This entire educational enterprise, however, was restricted to the male population. Girls did of course learn a great deal at home and were taught those observances that applied to their function as housekeepers. They knew the benedictions and prayers related to these activities. Some of them also learned to read and attended synagogue services. There are references to an organized girls' class, to a girl that attended school together with her brother, and even to some women teachers. But these were exceptions. By and large the Jewish women of that period were untutored and either completely or partially illiterate.

### The West Mediterranean Lands

In the West Mediterranean countries of Spain, southern France, and Italy, one finds in the eighth and ninth centuries the same basic educational pattern that prevailed in Babylonia. But in the course of time a substantial network of elementary schools and important academies for advanced study were established in Spain, which inherited Babylonia's place as the Diaspora's leading Jewry, and the dependence on Babylonian scholarship lessened considerably. The elementary Judaic program remained much the same as in earlier centuries in Babylon. On the more advanced levels, however, many new books were introduced, most of them by Spanish authors, but including the commentaries of northern France's \*Rashi. There was also a tendency to engage less in *pilpul* (the casuistry of excessive arguing pro and con on all halakhic matters, which was supposed also to sharpen one's mind) and concentrate instead on works of such codifiers as Isaac \*Alfasi and, later, \*Maimonides.

Another innovation was the introduction into the curriculum of Hebrew language and grammar, a more serious study of the Prophets and Hagiographa, and of contemporary Hebrew poetry. Judah \*Al-Harizi (c. 1200, Spain) speaks of the "inspiration that descended upon the Jews of Spain ... in the year 4700 (940 C.E.) to train their manifold tongues in the style of poems," which was very poor at first but improved in the course of a century until "they learned to construct a stanza in meter and proper form." In Spain also the curriculum expanded, especially in the upper classes, to include general, secular instruction. The language of the country, Arabic, was studied in order to improve one's professional or business opportunities. Judah ibn \*Tibbon (1120–1190, Spain and France), in his "testament" to his son, stated that "as you know, the great men of our people did not achieve their high position except through their knowledge of Arabic." Some students found it feasible to combine the study of Bible and of Arabic, and Ibn Tibbon advised his son to review the weekly *sidra* every Sabbath both in the original and in Arabic translation, "as this would be of benefit to you [in understanding] the vocabulary of Arabic books." Good writing, too, was taught: fine penmanship to the young, proper language and good style to the more advanced.

The progression in the Judaic program of studies was, as elsewhere, reading the Pentateuch, then Mishnah and Talmud.

Obviously, not everyone continued through all these stages of learning. \*Bahya ibn Paquda, in a classification of educational accomplishments, describes the person on the lowest level of achievement as able to read a biblical verse without understanding its content, without even knowing the meaning of the words, as "comparable to an ass carrying books." There were then some, perhaps many, who remained ignorant. Others advanced to substantial levels of knowledge.

During this period there appeared for the first time in Jewish literature treatises on education, mostly chapters in various books, testaments, or commentaries, some of which are quite informative about the educational practices of the time. A school curriculum was fully outlined by Joseph ibn \*Aknin who lived mostly in North African lands, but whose opinions represent typical Spanish views. Besides Torah, Mishnah, and Talmud, he advocated the study of grammar, poetry and continuation to logic, rhetoric, arithmetic, geometry, astronomy, music, physical science, and metaphysics. Ibn Aknin also expressed definite opinions about teacher qualifications and prerequisites for the good student. The teacher must be well versed in the subject he instructs; must practice what he teaches or preaches; should be patient with students and consider their learning abilities; should stress ethical behavior, etc. The good student is to acquire habits of cleanliness and good manners; should not be too bashful to ask questions; should pay attention and subject himself to his teacher's discipline; must never be idle; should study for the sake of knowledge and not in order to acquire wealth or for any other ulterior purpose. The mature student should seek out communities that have good schools and try to learn from qualified teachers rather than exclusively from books. Other writers give programs of study similar to Ibn Aknin's or to parts of it, suggesting that in all likelihood some such programs were actually followed in many communities. An even more detailed and ambitious outline by Judah ibn \*Abbas (13<sup>th</sup> century, Spain) offers curriculum guidance for virtually a lifetime. At the age of three or three and a half the child learns the alphabet, reading, and proper vocalization. He is then taught the weekly portions of the Torah, with stress on correct reading and cantillations; the translation of the Torah into Aramaic, which will prepare him for the language of the Talmud; the Former Prophets, with emphasis on accurate meaning, syntax and writing, to be followed by the Latter Prophets and the Hagiographa. This program should be covered by about the age of 13. The boy will then study grammar and language. Only after such well-grounded preparation does one begin studying the Talmud with commentaries. The *halakhah* requires separate attention, and is taken up next, culminating in Maimonides' *Mishneh Torah*. When the young man reaches the age of 18 or so, he studies medicine, mathematics, astronomy, logic, and natural sciences. Specific works are named in textbooks for the various subjects. Ibn Abbas warns that at all times the scholar must observe the commandments, and the more he delves into the various subjects (*hokhmot*), the more must

he strengthen his fear of the Lord and the observance of the *mitzvot*. This program may have been followed by a few of high intellectual abilities who could afford to devote themselves entirely to study. But the unexceptional too, especially among the wealthy, followed a rich curriculum of both the sacred and profane subjects. Even music and sports were learned in affluent families, though most likely not in the schools, but privately. King Affonso of Portugal is reported to have asked some Jewish scholars why they taught their sons music and fencing when they are obligated to weep over the destruction of the Temple and they do not go into battle.

Such Spanish curricula, with extension into languages and secular studies, were not universal. There were always those who concentrated almost exclusively first on the Pentateuch (*Humash*), then on Talmud, to the neglect even of Hebrew and of the post-Pentateuch Bible books. A compromise view was that “extraneous” subjects were permissible for God-fearing and observant adults who had already become thoroughly versed in Jewish lore. Jacob \*Anatoli (1200–1250, Marseilles) expressed the opinion that those who prohibited the study of “Greek wisdom” on the basis of the talmudic injunction not to teach “your sons” *higgayon* (meaning “Greek wisdom”) erred in interpretation, and the word “sons” should be understood to mean young boys who were not ready to assimilate it.

This issue of advanced “extraneous” studies stirred Jewish communities repeatedly in both Spain and southern France and led to serious controversies. In Montpellier (southern France) it resulted in a violent split between the proponents and opponents of philosophy and in mutual excommunication by and of the two groups. Solomon b. Abraham \*Adret, rabbi of Barcelona and prominent leader of Spanish Jewry, wrote a decision which prohibited “extraneous” teachings to those below the age of 25, on threat of excommunication. However, he permitted the teaching of medicine which was needed to heal the sick.

The fear of the effects of broad general education was not without foundation in reality. Spanish Jewry of the 12<sup>th</sup> and 13<sup>th</sup> centuries experienced a weakening of the faith in some of its best-educated circles. M. \*Guedemann states that Jews of Spain became in large measure “Arabized,” or, through Arabic learning of Greek philosophy, Hellenized (Guedemann’s term in German is “*graecisiert*”). This resulted in a counter-tendency on the part of many leaders troubled by the phenomenon. They gained strength by the arrival from Germany in 1305 of \*Asher b. Jehiel who became rabbi in Toledo. R. Asher never studied “Greek wisdom” and rather gloried in that fact. His opposition to this area of scholarship was resolute and effective. Talmudic study gained greatly due to his efforts and influence, and as a result Jewish education in Spain took a turn away from the trend of the two or three previous centuries, and by and large restricted itself to Torah and Talmud. In certain groups, particularly those in the higher economic and social strata, the practice of engaging in secular studies persisted.

The Jewish settlements in Provence, southern France, resembled those of Spain in their educational and cultural development. Here too, learning had developed to a high level. \*Benjamin of Tudela, who traveled in the area in 1165, listed a string of towns that had important academies and scholars. Lunel is mentioned as a city with “about three hundred” Jews, where the “holy community of Israel” is engaged in studying Torah day and night and “people that come there from afar to study are maintained by the community as long as they stay in the house of study.” Posquières, with only “about 40 Jews,” has “a great yeshivah.” Marseilles, with “about 300 Jews,” is “a city of *geonim* and sages.” Narbonne and Arles were centers of Jewish medical learning in the 13<sup>th</sup> century. Some Jewish schools in the French cities must have been substantial institutions, as reflected in documents of the sale of Jewish properties that accrued to the royal treasury after the expulsion of the Jews in 1306. While ordinary houses were sold for 5–20 livres and big houses for somewhat higher prices, Jewish school structures realized 350 livres for the building of the *Midrash Katan* and 620 livres for the *Midrash Gadol*, both in Narbonne, and similarly for buildings in other cities. In Toulouse there was a street named *Rue des Ecoles Juives*, suggesting more than one school. These houses were sold for 700 livres.

The educational picture in Italy resembled that in Spain and southern France. A cultural spurt in Italy during the eighth century contributed to a parallel development in the Jewish community. Apparently there were at that time well-established Jewish communities and schools in the south of Italy. Abraham \*Ibn Ezra, who visited Italy in mid-12<sup>th</sup> century, expressed little respect for Italian Jewish scholarship. Hebrew, however, was in use, at least in certain circles. Solomon b. Abraham \*Parḥon (12<sup>th</sup> century, Spain and Italy) observed that Italian Jews spoke Hebrew better than those of Spain. His explanation was that since all the “lands of Ishmael” used one language (Arabic), the Jews understood each other without resort to Hebrew, but it was a necessity in the Christian lands that used diverse languages, and Jewish travelers from these lands used Hebrew among themselves. From the 13<sup>th</sup> century on, Italian Jews were active in the study of Hebrew poetry, Bible, and Talmud, but in all of these pursuits Italian Jewry more or less followed the paths paved in Spain and in southern France.

#### Northern France and Germany

The educational aims of the Jews in northern France and in Germany during the first half of the previous millennium differed from those in Spain and Provence. Knowledge of Torah, strict observance of the commandments, and complete devotion to God and to Israel, even to the point of readiness to be martyred, were the exclusive objectives in the rearing and teaching of the young generation. Philosophy did not hold any lure for them and they delved into the study of the Scripture and Talmud without the need to reconcile them with Greek philosophy. The teacher’s task was thus to teach and not to speculate; the scholar’s task to elucidate and explicate the

law where it was obscure and difficult, as did Rashi (Troyes, France), the explicator par excellence whose commentaries helped the young boy and fascinated the adult. With such an attitude deeply implanted in the Jewish communities, Judaic knowledge was quite widespread. Guedemann states his conviction that the study of the Bible in the original was so widespread in 11<sup>th</sup>-century France, that there was hardly a Jew there who did not know Hebrew and learned Jews spoke Hebrew out of preference.

The Franco-German educational literature of this period, both fragments found in various works as well as several documents dealing primarily with learning, provides a fairly complete picture of education in the Jewish communities. The home, the rearing institution of early childhood, was saturated with a motivating atmosphere and with practices that would later lead to effective Jewish learning. Some of these were performed long before the child could appreciate their meaning. Thus, the *Mahzor Vitry*, a compilation of Jewish laws, prayers, and customs for the cycle of the year, written by Simḥah of Vitry (d. about 1105), tells of a custom that “some short time after circumcision, ten men would be gathered [in the home of the infant], a *Humash* (Pentateuch) placed over the infant” in his cradle and the wish would be expressed “may this [boy] observe what is written in this [book].” As he was growing up the boy heard prayers and benedictions on many occasions at home, and was taught to repeat many of them. He soon began to carry his father’s prayer book to the synagogue and sat there during services on low benches provided for children. On Fridays after the *Minḥah* service he would run home to notify his mother of the arrival of the Sabbath and of candle-lighting time. On Passover eve children were given nuts or chestnuts to play with, and wine glasses to arouse interest in their role at the *seder* ceremony. Similarly there were various practices in which children participated on other holidays: noisemakers on Purim, bows and arrows on Lag ba-Omer, etc.

The start of formal schooling was a special event. The boy was sent to a “*heder*” (the word meaning room), a term which came into use in the 13<sup>th</sup> century, suggesting that certain rooms in the synagogue were designated especially for study. According to the *Mahzor Vitry*, “when a person introduces his son to the study of Torah, the letters are written for him on a slate. The boy is washed and neatly dressed. Three cakes (*ḥallot*) made of fine flour and honey are kneaded for him by a virgin and he is given three boiled eggs, apples, and other fruits. A scholarly and honorable man is invited to take him to school ... The boy is given some of the cake and eggs and fruit, and the letters of the alphabet are read to him. Then the letters [on the slate] are covered with honey and he is told to lick it up ... And in teaching him, the child is at first coaxed and finally a strap is used on his back. He begins his study with the Priestly Code and is trained to move his body back and forth as he studies.” This description is followed by an explanation of the rationale of each of these details. R. Eleazar b. Judah of Worms lists some of the same details in his version of school

enrollment, as does also an anonymous document, *Sefer Asufot*, written probably around the year 1300. This initiation into school was usually made when the boy was five years old, in some cases earlier, at the time of the festival of Shavuot, which celebrates the giving of the Torah. Another source gives the month of Nisan as a suitable time weatherwise, “neither cold nor hot,” for such a start.

The curriculum of the elementary school was the traditional one consisting, as R. Eleazar of Worms summarized it, of first learning the letters, then combining them into words, then biblical verses, to be followed by Mishnah and Talmud. But there was no need for pedagogues to outline this curriculum, since most Jews knew it quite well. The document *Hukkei ha-Torah* (“Rules of the Study of Torah”) instructs the father to bring his child to a teacher at the age of five and tell the teacher what he expects of him: “... you are to teach my son knowledge of the letters during the first month, vocalization in the second, combination into words in the third and afterwards this ‘pure’ child will take up the ‘purities’ of the book of Leviticus. ...” Later, the boy is to learn the weekly *sidra*, first in Hebrew and then in the vernacular and the Targum (the Aramaic translation of the Pentateuch) and its translation into the vernacular. At the age of ten the boy starts Mishnah and certain tractates of the *Gemara*. By 13 he has completed his course in the *Midrash Katan* and then continues in the *Midrash Gadol* (terms probably taken from the French *petite école* and *grande école*.)

These *Hukkei ha-Torah*, written in 1309, are unique in that they constitute a complete set of regulations dealing with community responsibility, school administration and supervision, course of studies, and other administrative and instructional elements. According to these regulations, teachers should not instruct more than ten children in any one group. The pupils should be trained to discuss their lessons with each other, and thus sharpen their minds and increase their knowledge. “On Fridays teachers should review with their students what they had studied during the preceding week, at the end of the month what they studied during the past month, in the month of Tishri what they had studied during the summer, and in the month of Nisan what they had studied during the winter.” A supervisor is to be appointed to observe the pupils’ diligence or indolence. Should the supervisor note a slow-learning, dull child, he should bring him to his father and say: “May God bless your son, and may he be brought up to perform good deeds, because it is difficult to bring him up for study, lest on account of him brighter students be retarded.” Seven more years of talmudic study were to follow the elementary and intermediate schooling. This did not apply to the masses (*hamon*). However, the numerous references in the literature to yeshivot suggest that there were many bright boys who did continue with such an advanced program.

\*Judah b. Samuel he-Hasid of Regensburg in his *Sefer Hasidim* advocated continuation of studies until the students no longer need their teacher and “are already teaching others.” He, too, felt that talmudic studies were not for everyone: “if

you see that [the boy] can study Bible but not Talmud, do not pressure him to study Talmud.” For Talmud was practically the exclusive subject in the yeshivot, and talmudic erudition was the highest educational objective. The starting of a new tractate of the Talmud was an occasion for a minor celebration and a feast in which community leaders often participated. Hours of study were long, even for the young children, but especially for the talmudic scholars. When the young boys (*balhurim*) arrived at an independent age, some of those who sought further knowledge wandered off to towns that had renowned yeshivot. This practice seems to have become fairly widespread in the 14<sup>th</sup> and 15<sup>th</sup> centuries during the decline of the Jewish communities in Germany that followed the severe persecutions associated with the \*Black Death. Many schools closed their doors and young men in search of Torah wandered about the land. Occasional yeshivot arranged accommodations for these nomadic scholars and communities helped provide for their maintenance.

Here, as elsewhere, the educational program was aimed at the male population only. Women were not taught Torah, although a few of them managed to learn some of it. *Sefer \*Hasidim* states that girls should be taught to pray, and also those commandments that fall within their realm of activities, “for if she does not know the regulations of the Sabbath, how will she observe the Sabbath?” The education of girls was thus quite limited in France and Germany as elsewhere.

### Eastern Europe and Asia

The Jews from Byzantium who settled in southern Russia and the Crimea around the turn of the millennium at first had no rabbinic authorities of their own and maintained a correspondence with scholars in Germany in matters religious. They also sent there some of their young men who desired a talmudic education. There is thus a suggestion that some elementary schooling, or elementary instruction, was available at home. Hebrew was not unknown in the region. One Crimean Jew, Khoza Kokos, an influential agent of Ivan III Vasilievich, grand duke of Muscovy, used to write reports to the duke in Hebrew, causing the latter some difficulties in finding an interpreter for them. In Poland and Lithuania Jewish communities were formed in the 12<sup>th</sup> and 14<sup>th</sup> centuries, mainly by refugees from German persecution. Among these were some rabbis, teachers, and cantors. The new communities continued for some time importing these functionaries from Germany, so that the Jewish educational efforts in these lands were shaped in the German-Jewish style of the period. The advanced scholarship of East European Jewry did not begin to flourish until later times.

In the Asiatic lands the Jewish communities could not, because of poverty and the extremely primitive conditions of life in their physical and social environment, develop the type of educational institutions that evolved in Western Europe. However, elementary instruction was imparted among the Jews in \*Yemen and occasionally scholarly talmudists were found among them. In Iran, during the geonic period, elemen-

tary study of the Torah seems still to have been popular. In the ninth century a deviationist tendency appeared in the work of \*Ḥiwi al-Balkhi, who apparently wrote an abbreviated version of the Pentateuch, omitting portions that he considered unsuitable for children, and criticizing many biblical passages and teachings. His book and opinions gained popularity also in \*Afghanistan, his land of birth, and in other countries, so that \*Saadia b. Joseph Gaon found it necessary to attack it severely. Jewish learning in Persia was already then on the decline, but the Jews, some of whom were active in Persian cultural life, retained their Hebrew alphabet for the Persian language in whatever writing they had to resort to. A number of Persian language manuscripts of the 12<sup>th</sup> to the 16<sup>th</sup> centuries authored by Jews, including poetry and fiction, were written in Hebrew characters. Most of this literature was not Jewish in content, but at least one major poet \*Shahin wrote on Jewish themes and authored a poetical version of the Pentateuch. There were Jewish communities also in other Asiatic lands or cities that preserved their Jewish identity, but their education was mostly quite rudimentary.

### Community Responsibility

With the demand for education so widespread in the Jewish population and with the heavy burden borne by parents for the schooling of their sons, it was only natural that the organized community too undertook certain responsibilities in the educational field. As far back as the geonic period teachers used to be appointed by the communities, paid by them, and considered community functionaries. Later, community support of education was best organized in Spain. Various responsa that deal with this problem refer to community taxes and to the handling of bequests for education. Meir ha-Levi \*Abulafia (13<sup>th</sup> century, Spain) ruled that “communities must engage teachers for young children; and in smaller villages ... it is the duty of the entire community, and not only of the children’s parents, to pay [the teachers].” A revealing document on the subject is the set of ordinances of the Valladolid synod, convened by Abraham \*Benveniste in 1432. Part I of these ordinances dealt with education, including its financing. It imposed taxes on meat and wine, and imposts on circumcisions, weddings, and funerals, for education expenditures. These taxes were not to be used for any other purpose than education or “support of students who received maintenance from the aforementioned *talmud torah* contributions.” Each community of 15 householders was obligated to maintain a qualified elementary teacher who had to be paid according to the number of his dependents. Where the tuition fees from the pupils’ parents were insufficient for his needs, the community had to supplement his income. The community also exercised a measure of supervision as seen from rulings about school practices, such as a limit on the number of children to be taught by one teacher (25), and other such administrative regulations.

Essentially the same type of responsibility obtained also in North European countries. Rabbenu Tam (12<sup>th</sup> century,

Troyes, France) in his ordinances referred to communities paying or supporting teachers' salaries as established practice, and ruled that in cases of shortage of educational funds, monies designated for other purposes might be diverted to meet educational needs. These ordinances were accepted by the Rhenish communities in the year 1220. Even very small Jewish communities in many German towns managed to maintain schools, or at least a teacher. Reference is also made to such practices and to support of advanced students in *Hukkei ha-Torah*. Guedemann, who first published this document, expressed the opinion that while there can be no certainty that it represents the exact reality of its period, he was inclined to believe that it did reflect prevailing practices. Nor was financial support the only responsibility undertaken by the community. Mention was made above of regulations dealing with size of classes, supervision, reviews of material covered, and similar practices. Large schools were even required to have non-teaching supervisors, akin to the modern principals, who were to manage the business aspects of the school as well as assure proper instruction by the teachers (*Hukkei ha-Torah*). These may have been concomitants of financial support, since in education, as in other endeavors, subvention is often linked with at least some regulation and supervision. In any case, Jewish communities of the Middle Ages, even in extremely difficult times and circumstances, undertook a substantial measure of responsibility for the education of their young.

#### JEWISH EDUCATION – 16TH–18TH CENTURIES

##### General

Jewish education during the 16<sup>th</sup>–18<sup>th</sup> centuries continued as a virtually universal practice. It was greatly facilitated by the then recently developed process of printing which made reasonably priced books readily available. There was, of course, one negative factor that interfered with Jewish life and hence also Jewish learning. The constant prejudice and persecution, the repeated expulsions, the frequent minor and occasional major pogroms, reduced the numerical strength of the world Jewish community which reached its lowest ebb in the 17<sup>th</sup> century. However education seemed to persist in high priority in the Jewish family and in the Jewish community of the period.

##### Europe – North and East

Elementary Jewish schooling in the German lands and in Poland, Lithuania, and Russia was given either in the private *heder* or in the community *talmud torah*. The former was in many places a rather shabby institution. Moses Moravchik, in a pamphlet entitled *Keizad Seder Mishnah* (“How to Organize Learning”), published in Lublin in 1635, listed among the

causes for the poor state of the *heder* the tendency of many parents to change teachers each half-year term, low instruction fees and difficulties in collecting them, the *melammed's* inclination to promote pupils for fear of losing them, the difficulties of proper instruction in the *melammed's* home, and improper program and methods of instruction. The *talmud torahs*, maintained primarily for the poor, were often better organized, because they were supervised by the community, usually by a Talmud Torah Society (Hevrah Talmud Torah). At periods and in places of community strength the *talmud torahs* too benefited. In the 16<sup>th</sup> and early 17<sup>th</sup> centuries, many Jewish communities in Eastern Europe enjoyed considerable autonomy and authority in their internal affairs, and they regulated both *talmud torahs* and private *hadarim*. The Cracow community ordinances (1594) are typical of those in many communities. They imposed penalties on parents who failed to pay the teacher in prescribed time and prohibited teachers to accept children for whom tuition fee was owed to another teacher. A “truant officer” was to see that boys were not out in the streets or market place during their school hours. Supervision of the schools was likewise quite common. It was the duty of *talmud torah* officials to visit the schools, to ensure adherence to the program of studies, to test the pupils at specified times, and to select those pupils who merited awards.

The age of school entrance was usually five, but many three- and four-year-olds were sent to the *melammed*, even if merely to sit in his *heder* and thus absorb some fragments of knowledge or get into the habit of accepting learning. They were referred to as “sitting children.” School attendance was obligatory in most communities to age 13, in 16<sup>th</sup>-century Moravia “even for boys who did not do well in their studies.” In Metz (1690) education was compulsory to age 14, and the community announced that it “will pay out of its tuition fee fund for all the children whose parents request it ... without inquiring into the applicants' economic position.” Those aged 14–18 who did not continue attendance in a yeshivah were required to study at least one hour daily. Amsterdam regulations (1738) obligated the community to provide orphans with the best teachers, to keep them in school until they were 13, and good students to age 15. A 1750 revision changed these ages to 14 and 17. The Sephardi community of the same city placed even greater stress on equal quality of instruction for the rich and for the poor. Similar specific concern for the poor and the orphans is found in many towns across Europe, from Amsterdam to Belaya Tserkov in the Kiev region of Russia (1764). Some regulations fixed the number of students per class: up to 40 pupils, with two boys as assistants (*behelfers*), in Cracow; or 25 in Dubno. However, Talmud classes in Dubno were limited to 15; in Fuerth to 10; in Mikulov to 14. In Mogilev-Podolski a limit of 15 was set on Talmud groups, but of only ten for those studying Talmud with Rashi's commentary and *tosafot*.

Education of girls remained very limited during this period as in previous centuries. A few of them received some instruction in reading the prayers and no doubt some girls, not tutored formally, managed on their own to acquire read-

ing skills at home, where book learning was highly regarded and assiduously practiced. From the 17<sup>th</sup> century on, after the publication in 1620 of *\*Ze'ènah u-Re'ènah* by Jacob Ashkenazi of Janow, the Yiddish work which became immensely popular among women, many girls learned biblical and later stories, aggadic and midrashic homilies, comments on Jewish life, customs and morals, as told by a remarkable raconteur. Private instruction was given to girls in some affluent families, which in the German and Western lands in the late 17<sup>th</sup> and in the 18<sup>th</sup> century often included French and German as well as music and dancing.

The elementary curriculum consisted, as in previous generations and periods, of reading, prayers, and *Humash*. A new development was the widespread use of Yiddish as the language into which *Humash* lessons were translated, in most cases word by word. Textbooks appeared of such translations, or of commentaries, some of which were based mostly on the popular commentaries of Rashi, like the *Be'èr Moshe* of Moses ha-Levi (Prague, 1605) that became very popular, and other similar works. The weekly portion constituted the week's *Humash* curriculum, but it was seldom completed. The stress on talmudic learning was so great that it was started at age seven or eight, the Prophets, the Hagiographa, and Mishnah being completely omitted. R. Joseph Yuspa \*Hahn (d. 1637) of Frankfurt wrote that "in our generation there are rabbis who never studied the Bible." Even less interest, or rather no interest whatever, was evinced in any area of study that was not directly related to the Jewish religious lore. Secular subjects were completely excluded from the curriculum.

In the yeshivot of Central and Eastern Europe the aim was to produce scholars with a thorough knowledge of the Talmud and its commentaries, the *tosafot*, and the major halakhic codes. The talmudic *pilpul* method, a thorough dialectical examination of all possible arguments pro and con, was further elaborated in this period and transformed, mainly under the influence of Rabbi Jacob b. Joseph \*Pollak of Prague, Cracow, and Lublin, into the "*hilluk*," extra-keen hairsplitting sophistry and ability to come forward with innovations (*hiddushim*) used in disputations and learned discourses, a sort of impressively complicated mental gymnastics, no matter how odd or absurd, which led to neglect of genuine search for understanding and even to distortion of original meanings. Although time consuming and apparently lacking in any practical purpose, it became very popular and highly valued in itself, to the neglect of more worthwhile scholarly pursuits.

Both the elementary and yeshivah programs and methods of study were severely criticized by R. \*Judah Loew b. Bezalel of Prague and a number of his disciples. He advocated a graded program in accord with the child's readiness and in response to actual needs, greater stress on the commandments and practices taught in the Pentateuch rather than on Rashi's commentaries which were in his opinion a waste of time, and a further study of Hebrew, Bible, and Mishnah. He also sought the introduction into the school of certain secular subjects, particularly natural science. In the Talmud, according to him,

children need not engage in study of tractates that are meaningless to them, and the overly refined pilpulistic method should be avoided at any stage since "it distorts one's intelligence." A number of prominent rabbis and scholars followed Loew's ideas and an elementary teacher, Moses Moravchik of Moravia (quoted above), wrote a pedagogic pamphlet based on them. But except for a few followers in several localities, these progressive ideas did not gain popularity.

The 17<sup>th</sup> century saw a decline of Jewish schools and of Jewish learning. In Germany the cities suffered decimation of population and impoverishment due to the Thirty Years War (1618–48). In Poland many Jewish communities were completely destroyed or reduced in the pogroms (1648–49) perpetrated by the \*Chmielnicki rebellion, and the Jewish community organizations that flourished there broke down. After a slow and gradual recovery another development, mainly in the German lands, was the rise among the Jews of a substantial body of wealthy financiers, merchants, and \*Court Jews, who lost interest in the traditional scholarship and observance. Their business required the use of local European languages, and "culture" decreed knowledge of French and Latin. Jewish learning was reduced in these circles to mechanical reading of ideas, and fragments of the Pentateuch. These attitudes and practices spread slowly into wider groups. Jonathan \*Eybeschuetz (1690–1764), who served as rabbi in Metz, Hamburg-Altona, and Prague, and everywhere had many students and disciples, nevertheless complained about this decline in traditional learning and, in the lessened community, lack of support for it at a time when there seemed to be sufficient means for many other purposes, "some of them quite useless."

The second half of the 18<sup>th</sup> century brought about further changes in Jewish education in Germany and in the Austrian empire, which included, besides Austria proper, also Bohemia, Moravia, Hungary, Galicia, and parts of the Slavic Balkans. Emancipation of the Jews in these and other North and West European countries and the removal of many disabilities that afflicted them for centuries encouraged the spread of Moses \*Mendelssohn's "Enlightenment" and of the educational views of Naphtali Herz \*Wessely. Himself well educated both in traditional Jewish and general lore, Wessely advocated modernization of the Jewish school, through improved educational methods in the Jewish traditional subjects, which are God's law, and the introduction of secular subjects like the country's language, arithmetic, geography, history, and good manners, which are man's lore, into the Jewish school. Many prominent rabbis bitterly fought Wessely's proposals. But the desire for liberation from the old ghetto atmosphere and the slogans of enlightenment appealed to many in Germany and in parts of Austria. The governments too helped strengthen these tendencies.

In Germany, a high official, Christian Wilhelm von \*Dohm, a friend of Mendelssohn, proposed reforms for the "civic improvement of the Jews" through modernized education. The very next year (1782) Emperor Joseph II of Austria issued a Toleration Edict that lifted some of the restrictions on

Jewish occupations and mobility, but also demanded “reform” of some of their practices including educational ones. The frank statements or implications that Jews needed “improvement” in order to merit improved civil status did not seem to offend and were in fact accepted by many of the Jewish seekers of emancipation and enlightenment. New schools were established by them in German and Austrian cities, where things soon took a very different turn from what Mendelssohn and Wessely intended, and Jewish studies in them suffered a serious decline. However, the Jews of Galicia, whose background and sentiments resembled more those of their fellow Jews in Poland and Russia to the east of them, remained refractory to the educational modernization efforts and only a few sent their children to the many schools opened for them, on government instruction, by the Jewish educator Naphtali Herz \*Homberg.

Throughout this period, education of the youth in the Jewries of Poland, Lithuania, and Russia was most nearly completely traditional. During the period of the *kahal*'s (“community”) greatest autonomy, traditional learning flourished. German cities exploited the scholarship of Polish and Lithuanian communities by employing rabbis and teachers who came West upon invitation or on their own. These East European Jews were influenced much less than their Western coreligionists by their environment, perhaps because this environment was much more primitive. Neither political emancipation nor cultural enlightenment and modern educational ideas had yet had a serious impact on the Jewries of the Russian lands at the end of the 18<sup>th</sup> century.

### Italy

After the expulsion of the Jews from Spain and Portugal, Italian Jewry became the major Jewish community of the Mediterranean lands. Here, too, education was the earmark of the Jew. Even towns with only a few Jewish families, or for that matter a single one, had their local teachers. Nearly all the *condottas* (contractual agreements) drawn up with Jewish loan bankers allowing them to conduct business in towns where no other Jews resided included permission to have a teacher brought by the family to instruct their children. In larger communities, too, there was a tendency by the affluent to engage private instructors. The *talmud torahs*, originally established for the benefit of the poor, eventually as they became well organized were generally placed in the service of all members of the community. The management of the schools was left to Talmud Torah Societies that operated them according to carefully formulated regulations. The manner and rate of assessment for the maintenance of the schools was usually distributed to all community members. In some towns, as in Casale Monferrato in the 16<sup>th</sup> century, school funds were raised mainly from obligatory contributions made by those called to the Torah. Minimum obligatory contributions were fixed in Ancona (1644) for those called to the Torah, for men getting married, for families celebrating the birth of a male child, and for the School Society members on specified holidays.

House-to-house collections were practiced in some places, as in Modena (TT Society, 1597). Schools had overseers and supervisors. The Talmud Torah Society regulations of Ancona (1644) and of Verona (1688) specified the physical facilities of the building, the authority of the trustees, number of teachers, teachers' duties and salaries, discipline, the program of studies, and supervision. The Modena regulations, as well as several others, state that the school is open to all comers, whether rich or poor, whether local residents or out-of-towners. A number of these sets of regulations spell out in detail not only the manner of collecting funds but also of their disbursement, occasionally specifying that teachers, both men and women, must sign receipts for the books given them, that these receipts are to be handed over to the accountant and must be properly recorded, and so forth.

While the schools were primarily for boys, it appears that girls learned a great deal at home through private instruction, and in the early years some of them seem to have attended the schools as well. Women were knowledgeable enough to instruct children of pre-school level, i.e., below age six, and perhaps some of the school children as well, in reading and prayers. The woman teacher (*melammedet*) was popular in Italy and her functions and salary are set down in some of the TT Societies' regulations. David \*Reuveni wrote in his travel notes that in Pisa (in 1524) he met a young lady who “read” the Bible and prayed daily the morning and the evening prayers. He also met there a wealthy woman who served as a schoolteacher. Later, in 1745, a *talmud torah* for girls was opened in Rome.

Children attended school generally from age 6 to 14, a practice that was virtually obligatory. Study to age 18 was strongly encouraged. The six-year-old who started school could usually read, having been taught previously by the *melammedet* who in some cases was also a community functionary, like the teachers in the *talmud torah*.

The program of study in the early grades was the Pentateuch, the Prophets and Hagiographa, prayers, Hebrew and its grammar. The weekly portion of the Torah was stressed, and the Torah with Rashi's commentary was continued in several grades. In the third or fourth year, the Code of Maimonides was introduced or Caro's Shulhan Arukh, then Mishnah with Obadiah of \*Bertinoro's commentaries. The Talmud, burned in 1553 and by decree not printable in Italy, was for nearly two centuries practically eliminated from the curriculum and replaced by the various Codes, particularly Isaac Alfasi's *Halakhot*, a codified compendium of the Talmud.

An important feature of the Jewish schools in Italy, which distinguished them from the *hadarim* in Central and Eastern Europe, was the inclusion in the program of general subjects – Italian, arithmetic, good writing and style. Following an educational trend that had its origins in the West Mediterranean European lands in the Middle Ages (see above), the schools aimed to train individuals to be at ease in Italian life and society as well as faithful Jews, rather than talmudic or halakhic scholars. The teachers of the secular subjects in the

*talmud torahs* and the yeshivot were often Christian. In affluent families private teachers also taught music, dancing, and dramatic reading.

Higher learning was provided in the yeshivot which were established in the larger Jewish communities, such as Venice, Mantua, Padua, Modena, Ferrara, Leghorn, and elsewhere. Jewish students also attended general higher schools, mainly medical colleges. Reflective of the cultural tendencies among the Jews of Italy during the Renaissance period is a proposal circulated in all Italian Jewish communities by one David Provenzale of Mantua in 1564, to establish a Jewish university. It was to be a sort of combination yeshivah and university for advanced study of Hebrew, Bible, the Oral Law, Jewish philosophy, good speech and good writing, as well as Italian, general philosophy, mathematics, astrology, and medicine. In such an institution, the proposal stated, Jewish students would feel at ease and would not be influenced by their Christian environment, a comment suggesting that there was at the time some concern about assimilation and possibly conversion. The stress on good speech and good language, applied to both Hebrew and Italian, is particularly illuminating. Good, grammatical, and well-styled Hebrew seems to have been highly valued. The period's Hebrew documents evince great care in writing and editing. Fondness for Hebrew language and literature was widespread. Shabbetai Ḥayyim \*Marini, a physician, must have been convinced that he would have a substantial reading audience when he translated Ovid's *Metamorphoses* into Hebrew. Moses Ḥayyim \*Luzzatto, one of the earliest pioneers of modern Hebrew literature, learned his Hebrew in his native town of Padua. But, Luzzatto's work excepted, the bulk of Hebrew writing in Italy in this period seems to have been that of poetasters, altogether lacking substance and originality. In the 18<sup>th</sup> century, with restrictions somewhat relaxed, the Talmud became once more the main subject of study in the yeshivot, and there seems to have been a lessening of the emphasis on general secular studies. But when, toward the end of the 18<sup>th</sup> century, new trends in Jewish education rocked Jewish communities in Germany and Eastern Europe (see next section), they caused only a ripple of controversy in Italy. When after the French Revolution emancipation and liberation from the ghetto came to Italy's Jewry, it was on the one hand quite ready for their concomitant educational and cultural "enlightenment," and on the other hand quite unable to withstand their corollary assimilating powers.

#### East Mediterranean and North African Lands

In the other Mediterranean lands traditional Jewish education continued in all sizable Jewish communities and moreover there was some intensification in Jewish life and schooling due to the influence of the expellees from Spain who settled in North Africa, the Balkans, and \*Turkey. The Turkish cities \*Constantinople and \*Izmir had substantial Jewish communities in the 16<sup>th</sup> and 17<sup>th</sup> centuries and there is a reference to Constantinople as "a city of sages and scribes." A report from the mid-18<sup>th</sup> century by a Constantinople rabbi speaks of about

1,600 children in that city's *talmud torahs* of whom about 1,000 received community assistance in the form of clothing. Izmir had a Talmud Torah Society and a *talmud torah* in which \*Shabbetai Zevi received his schooling. \*Damascus in the first half of the 16<sup>th</sup> century had about 500 Jewish families and three synagogues. There was no yeshivah there but several teachers were teaching 30 or so pupils each. In 17<sup>th</sup>-century \*Alexandria boys apparently studied to age 13, mostly the Pentateuch, and at their bar mitzvah they held forth on the portion of that week. There is reference to a yeshivah in Arta, Greece, in mid-16<sup>th</sup> century. \*Aleppo in the 17<sup>th</sup> century had a *heder* or *hadarim* maintained by two communities, one of which was composed of "Francos," West European Jews who settled there. A large and important Jewish community in the eastern Mediterranean was that of \*Salonika, which had a number of private *hadarim* in the early 16<sup>th</sup> century. These were later merged to form a central community school. A Talmud Torah Society was organized, buildings were put up, and the institution apparently flourished. In 1564 the *talmud torah* opened a clothing manufacturing shop, mainly to produce clothes for its pupils. In 1694 the Society also opened a printing press to supply textbooks for the *talmud torah* and for the yeshivah. This *talmud torah* and the yeshivah of Salonika became popular in the Balkan area and attracted students from other Greek towns, from Albania, and from some of the Greek islands. Out-of-town Jews contributed toward their support.

In the Maghreb countries the Jews spoke Arabic and Spanish but also taught their children in accord with established tradition, first at home – various phrases, benedictions, and prayers, and even reading. Later, in school, they learned the Torah, prayers, and some of the Oral Law as well. The Bible was studied much more than in the Ashkenazi lands. The majority of the Jewish population, however, was very poor and could not afford adequate schooling. A 1721 document from \*Meknes, Morocco, bewails the fact that poverty drives many families to send children of six and seven into trade apprenticeship, appeals for the cessation of the practice, and enjoins tradesmen from accepting for employment children below the age of 13. Even under these difficult conditions Jewish literacy seems to have been impressive to the non-Jew. A Christian minister, Lancelot Addison, in describing the life of Maghreb Jews in his book *The Present State of the Jews* (London, 1675), states that early in life children are taught at home some Hebrew terms of daily use and from age 5 to 13 they attend school. According to Addison, "there is no boy in the world who can at the age of thirteen give such an accurate account of the laws of his faith as can the Jewish boy."

### THE MODERN PERIOD, 1800–1939

#### General

The political emancipation of Jews in 19<sup>th</sup>-century Europe was associated with the so-called “Enlightenment” (*Haskalah*), in the educational and cultural spheres. Its effects differed in the various European lands, depending upon the local culture and politics, and on the numerical strength and the social and economic status of the Jewish populations.

#### Italy and Western Europe

The small French Jewry, formally organized as a consistory, opened two schools in Paris, one for boys (1819) and one for girls (1821), which were shortly afterward taken over by the municipality. Besides the general, secular subjects they offered a very limited program of Jewish studies. Additional schools of the same type came into being as the Jewish population increased, in Paris and in several other cities, particularly in southern France. After mid-century, however, most Jewish families began sending their children to the government schools. Supplementary religious instruction was at a minimum. In Alsace and Lorraine Jewish education was more intensive, but here too it became mainly supplementary by the beginning of the 20<sup>th</sup> century. Even more precipitous was the decline of Jewish education in Italy, where for centuries prior to the French Revolution a well-organized system of both elementary and advanced Jewish schools was in operation. Many small communities were virtually depleted of Jews by their migration to bigger cities, but here too a desertion of the Jewish schools took place, especially by those in the upper economic strata. About 1,600 pupils attended Jewish schools in 1901, mainly four-year elementary schools (some with two-year kindergartens, known in Italy as “*asili*”), accepted by the government authorities as fulfilling the legal requirements of elementary education. Jewish instruction was given in these schools for about one hour daily and consisted of reading, prayers, selections from the Torah, and a Jewish catechism in Italian. Older pupils received “religious instruction.”

The rabbinical seminaries in France and Italy were similarly weak. The years 1827 and 1829 saw the establishment of such higher institutions of learning in Metz and in Padua. The *Ecole Rabbinique* moved to Paris in 1859, but continued to attract some students from the Alsace and Lorraine areas, and later, in the pre- and post-World War I periods, also from the East European Jews who settled in France. The Italian seminary, in its early years under the direction of Samuel David \*Luzzatto, attracted a small group of eager young students, but declined after Luzzatto's death (1865). Removal of this *Collegio Rabbinico* to Rome (1865) did not improve its status. It was reinvigorated when it was again transferred, this time to Florence (1899), and came under the directorship of Samuel Hirsch \*Margulies, chief rabbi of that city, who raised its level of scholarship and who introduced a Jewish nationalist spirit into it and into Italian Jewry.

In England, prior to the introduction of compulsory education (1870), Jews maintained schools of their own, some

of which continued in existence for many years. When immigration brought many Jews from Eastern Europe, philanthropists established Jewish Free Schools for them in several cities. One of those in London was toward the end of the 19<sup>th</sup> century the largest school in England, with 3,000 pupils. Jewish studies were allotted limited time, no more than one hour a day. Some of the immigrants, displeased with this meager Jewish program, opened *hadarim* for supplementary instruction. Jews' College, for the training of ministers, was established in 1855. It had at all times a very limited enrollment.

The few Jewish schools that were founded in the 19<sup>th</sup> century in the Scandinavian countries closed their doors after the introduction of general compulsory education. Religious instruction preparing for confirmation became the accepted form of Jewish education. In Holland too, Jewish education was converted into this type of schooling, but here the Jewish community took it rather seriously, as did also the Dutch people their Christian religious instruction. After the enactment of the law of 1889, which permitted various religious groups to organize schools of their own to be supported by the government, Jewish full-time schools were opened in Amsterdam. Their program of Jewish studies was limited, but Jewish practices were strictly observed, and a Jewish spirit prevailed in them. Some private schools offered a more solid Jewish education. A rabbinical seminary, founded in 1808, began to train teachers as well as rabbis. A small Sephardi *bet midrash* likewise trained teachers and occasionally a rabbi.

#### Germany and Austria

The German lands present a more complex picture. Here emancipation and the “Enlightenment” brought about major changes in Jewish style of living and education, strong assimilationist tendencies, and considerable conversion. The old style *hadarim* were replaced by modern Jewish schools for those who did not wish to send their children to the general schools where an anti-Jewish attitude often prevailed. The number of these modern Jewish schools was rather small. Besides, their Jewish program was very meager: reading of prayers, some portions of the Bible translated into German, bits of Jewish history, mostly biblical, and religion and ethics. The traditional study of Mishnah and Talmud was abandoned, even in the secondary schools. After mid-century, when larger numbers began to enroll in the general educational institutions, supplementary schools came into being, from which students usually withdrew after the age of 13. Some religious instruction was also given in the general schools to Jewish students.

There was, however, a movement in Germany that countered these tendencies. Samson Raphael \*Hirsch opened a co-educational school in Frankfurt (1855) offering a substantial program of Jewish studies, including Hebrew, Bible, and some Talmud, as well as the general subjects programmed after the pattern of the government or private German schools. A similar institution was opened in Fuerth (1862) after the previously existing Jewish school in that city was made nonsectarian. The Orthodox element, following Hirsch's approach,

proved an anti-assimilationist force of considerable strength throughout the 19<sup>th</sup> century and in the early 20<sup>th</sup>. Germany also was a haven for many Jewish young men from Poland and Russia who, unable to gain admittance into the Russian universities, came for their higher education to Germany whose language they partly knew via Yiddish. Waves of emigration from Russia to the United States likewise passed through Germany. The students and migrants contributed to an ideological ferment that made Germany, in spite of the decline of its Jewish educational system for the many, a forum for live debates and discussions and study of Jewish religio-cultural life and Jewish issues.

On the higher level of Jewish studies German Jewry made a substantial contribution to scholarship through the establishment in the 19<sup>th</sup> century of several outstanding rabbinical seminaries. In 1854 the Jewish Theological Seminary was established in Breslau with Zacharias \*Frankel at its head. It was a modernly organized institution, open to critical scholarship, yet traditionally oriented, in accord with Frankel's theory of "positive historical Judaism." The historian Heinrich \*Graetz was one of the institution's early teachers, and many important Judaic scholars received their higher education in it.

The Higher School for Jewish Science (Hochschule fuer die Wissenschaft des Judentums) was opened in Berlin in 1872 and under Abraham \*Geiger's influence came to represent Reform Judaism. However not all of its scholars were followers of Geiger's views, and it included among its teachers strictly observant talmudists and Zionist nationalists. An Orthodox rabbinical seminary (Rabbiner Seminar fuer das orthodoxe Judentum) was also established in Berlin in 1883 by Azriel \*Hildesheimer, and it, too, soon became a school of high scholastic standing. These three rabbinical seminaries continued in existence until World War II.

In the German-speaking areas of the Austrian Empire, Jewish education resembled that of Germany. Although the Vienna Jewish community became numerically large, Jewish education declined. Again as in Germany, a rabbinical seminary was established in Vienna in 1893 which maintained high standards of scholarship. This, too, existed until the eve of World War II. The Hungarian part of the Empire had two paths of development, an assimilationist tendency in one section of the population and a strong Orthodox one in another. The latter elements gave their children an intensive Jewish education of the traditional type, as reflected in many yeshivot, some in rather small communities. A modern rabbinical seminary was established in Budapest in 1877.

The situation was different in Polish-Ukrainian Galicia, home of about half of the Empire's Jewish population. Here developments resembled those in Poland and Russia. Most of the government schools for Jewish children which were organized under the directorship of Herz \*Homberg at the end of the 18<sup>th</sup> century closed in the first decade of the 19<sup>th</sup>. The only remaining modern type Jewish schools were the one founded by the esteemed educator Joseph \*Perl in Tarnopol

which was supervised by rabbis and gained the confidence of many traditional Jews, and a high school in Brody. The number of Jewish children attending government general schools increased slowly and reached some 78,000 in 1900. A new type of Jewish nationalist school (see below, Eastern Europe) made its appearance in the last decades of the century. However most Jewish boys continued receiving their instruction in the old style *hederim*.

### Eastern Europe

Western ideas began penetrating into the Polish-Russian domain after a lag of some decades. In Poland, contiguous to Germany and with many German contacts, the "Enlightenment" first reached the more prosperous and worldly Jewish circles who believed that talmudic training was obscurantist, that the educational system maintained by the communities was backward, and that the cure for these ills was stress on the Polish language and a school program similar to that in the Polish schools. The government, too, was interested in this educational issue, its aim being polonization. A similar situation obtained somewhat later in Russia where the government attempted a russification of the Jewish school and tried to destroy the *heder* and the yeshivah. Many Jewish assimilationists in both Poland and Russia supported the government efforts. Even some of the non-assimilationist *maskilim* cooperated with the government, often not realizing its ulterior motives. Isaac Baer \*Levinsohn advocated a revolutionary change in Jewish life, with return to such occupations as agriculture and manual trades, and, educationally, a modernization of the program of Jewish studies, and the introduction of secular subjects, particularly the Russian language and civics. He believed that the government intended to improve the status of the Jews. The government exploited this trend of thought and tried to change the *heder* system under the direction of the rabbi and educator Max \*Lilienthal, who was invited from Germany, first to administer a modern school in Riga (1840) and soon (1841) commissioned by the government to establish a chain of modern schools throughout the Pale of Settlement. Most of the Jewish population opposed Lilienthal's enterprise. After a few years Lilienthal himself became convinced of the government's ulterior objective of russification of Jewry and he immigrated to the United States. A number of these new schools continued to function but the majority of the Jews resisted the attempt to convert the *heder* into a school and the *melammed* into a teacher and remained faithful to their traditional style of schooling.

The "enlighteners" nevertheless were gaining ground, even if slowly. Levinsohn's ideas of better organized and graded curricula and Lilienthal's modern practices and organization proved attractive to many groups. Westernized Jewish elementary and secondary schools began to appear in various communities. In the 1860s the newly formed "Society for the Promotion of Culture among the Jews of Russia" became influential in limited circles. At first this Society stressed knowledge of the Russian language and Russian culture, but

toward the end of the century it came under the influence of the movement for the revival of the Hebrew language that was spreading among the *Hovevei Zion* and the intelligentsia. The revival of Hebrew as a national tongue became a passionate ideal in numerous nuclei of the large Diaspora of Russian Jewry. Limited though they were in numbers, these small groups soon began to exercise considerable influence in their communities. The search for effective ways to spread the knowledge of Hebrew led to the evolution at the turn of the century of a new type of Jewish school known as the *heder metukkan* (improved *heder*) that derived its inspiration from Jewish nationalism, and which rapidly developed into an educational movement. Its leadership included active Zionists, like \*Weizmann and \*Dizengoff, the poet \*Bialik and others of similar stature and status in the Russian Jewish community. \*Aḥad ha-Am spoke of the “invasion” of the school by Hebrew, the national language. The early *hadarim* of this “improved” kind were founded in the south of Russia – in the Kiev area, in Bessarabia, and in Odessa – and soon spread throughout the Pale of Settlement as well as in Austrian Galicia and sections of Romania. The movement proved a powerful intellectual and administrative stimulus. Men, and women, began studying educational programming and method and successfully organized and taught in the new schools. Ḥayyim Aryeh \*Zuta authored a curriculum for this type of school. Isaac Epstein, linguist and psychologist, pioneered in the method of instruction which became known as *Ivrit be-Ivrit* (also referred to as the “natural method”). Samuel Leib \*Gordon, later to gain renown as a popular biblical commentator, opened a *heder metukkan* in Warsaw in 1903, and soon afterwards a similar school was opened by Ḥayyim Kaplan which continued in existence until the eve of World War II. Some of the “improved” *hadarim* were coeducational, but new schools for girls also made their appearance following the example of Pua Rakovsky’s school in Warsaw, which gained considerable repute. A pioneer of the movement, Jehiel \*Heilprin, organized a Hebrew kindergarten in Warsaw (1909), and as this enterprise was soon emulated in many other communities, Heilprin opened “Froebel courses” for the training of kindergarten teachers. Efforts to establish a training institution to provide teachers for the “improved” schools were made as early as the 1880s. These failed due to government opposition, but finally, in 1907, the Society for the Promotion of Culture succeeded in opening “Pedagogic Courses” in Grodno under the direction of Aaron Cohenstam in which all subjects were taught, at least partly, in Hebrew. The students were recruited in large part from the circles of yeshivah young men caught in the nationalist spirit. A more limited program of teacher training, including summer seminars, was later started in Odessa. The teachers themselves began to organize under the leadership of P. Shifman in 1906 for educational as well as for professional-economic purposes. A teachers’ association was also formed in Galicia under the leadership of S. \*Schiller, with the aim of strengthening and guiding the “improved school.” Many new textbooks appeared during this period as well as Hebrew publications

for children, youth, and adults. The Hebrew language was being revived as a modern language, even if in limited circles. Some Orthodox elements opposed this trend, maintaining that the sacred tongue (*leshon kodesh*) must not be turned to “profane” use. Assimilationist elements were likewise critical, as they were of the entire nationalist-Zionist movement. The revival of Hebrew however kept gaining ground. The term Hebrew School (*bet sefer ivri*) that crept into use reflected the new educational trend.

While the old style *hadarim* in Eastern Europe declined in quality, though not in enrollment, during the 19<sup>th</sup> century, some of the yeshivot saw a remarkable development, this in spite of government interference and of the indifference to them of the modern, so-called enlightened Jewish groups. Many of the leaders of Russian Jewry during the period under discussion were products of these yeshivot, in which high scholarship and originality raised the repute of talmudic studies and added dignity to those engaged in them. The community of the small country of Lithuania pioneered in this respect when the Volozhin yeshivah was established in 1803 and from the very start introduced innovations in the method of study, considerable freedom in students’ choice of tractates to be covered, and later the introduction of some general subjects as well, such as history and mathematics. Yeshivot were founded in the following decades in Mir, Telz, Grodno, Radin, and elsewhere. A number of these were centers of distinctive Jewish philosophies, like the yeshivah of Slobodka (a suburb of Kovno), founded by Rabbi Israel \*Lipkin, where his views on ethics (*Musar*) became a major subject, or the Tomkhei Temimim yeshivah of the Lubavitch ḥasidim where ḥasidic ideology was stressed. Modern type yeshivot too made their appearance, which included general studies as an integral part of the program, like the yeshivah in Odessa, founded in 1865 and reorganized in 1906 under the directorship of Rabbi Chaim \*Tchernowitz (Rav Tz’air) into an important institution of Jewish scholarship. The poet Bialik and the historian Joseph \*Klausner served for brief periods as instructors in this Odessa yeshivah. Another prominent yeshivah, traditional but modernized in its program and organization of studies, was the Torah v’Daas, founded by Rabbi Isaac Jacob \*Reines in Lida in 1905; it included in its program Hebrew grammar, Bible, Jewish history as well as Russian, and several general subjects in the humanities. On the eve of World War I the enrollment in some 30 yeshivot in Russia, which at the time included the Baltic states, much of Poland and Bessarabia, was about 10,000 students.

### The Balkans and the Lands of Islam

In the Balkans, and in the Muslim lands of the Eastern Mediterranean and North Africa, an important factor in modernization of Jewish education appeared in the second half of the 19<sup>th</sup> century, that of the \*Alliance Israélite Universelle (AIU). This organization was an expression of the Jewish group consciousness of French Jews, who, while themselves strongly assimilationist, yet felt the responsibility incumbent

upon them to help their coreligionists in these underdeveloped lands. The AIU began its activities in the political field but after about 1860 concentrated mainly on education. It was instrumental in westernizing to a great extent some of the Oriental-style primitive *kuttabs* and *talmud torahs* of the old \*Ottoman Empire and the Maghreb countries as well as in \*Persia and the Balkans. Its first schools were established in \*Tetuán, Morocco, in 1862, in \*Tangiers in 1864, in \*Damascus and \*Baghdad in 1865. Soon a large network of schools, numbering on the eve of World War I more than 100, came into being. To train teachers for these schools the AIU founded the Ecole Normale Israélite Orientale in Paris (1867). Students were recruited from the AIU schools in the various countries and their study in Paris was subsidized. The AIU educational institutions stressed the French language and culture, but Hebrew, Bible, and other Jewish subjects were taught in them as well, the extent of the latter varying in different communities and sometimes depending on the personal opinions and sentiments of the local school directors. Other Jewish schools in the communities where the AIU operated were influenced by this educational enterprise. Old *hadarim* underwent considerable modernization. In Izmir, Turkey, a society was formed (1869) to help the education of the poor, mainly in order to ward off the influence of the missionary schools. In the same city regulations were passed earlier in the century prohibiting craftsmen from employing boys who do not know the three daily services. School societies came into being in many other cities of the Muslim lands. One of the largest schools, modern in its organization and program, was founded in \*Baghdad in 1865. Recognizing that withdrawal into Jewish studies alone is disadvantageous, it introduced the study of the languages of the country, Arabic and Turkish. In Bulgaria, Hebrew as a spoken language gained a foothold in some schools. The trend reached also some non-Alliance schools in the North African lands of \*Egypt, Tripolitania, \*Tunisia, and \*Algeria. Education of girls, too, became acceptable practice during this period. A girls' school was established in \*Mogador, Morocco, as early as 1840. Later in the century a number of such schools, as well as several kindergartens, were opened in Egypt and in \*Turkey.

A German society, the \*Hilfsverein der deutschen Juden, founded in 1901, also entered the educational area of activities in the Balkan countries and in the Middle East. On the eve of World War I it maintained some 50 schools in these regions, including 29 in \*Palestine.

### The Period between the Two World Wars

The political upheavals that followed World War I brought about radical changes in the fate of the Jews of Eastern Europe. The Russian Revolution cut off Russian Jewry from the rest of the world and suppressed both Jewish religious and Hebrew-nationalist education. Yiddish was recognized as the language of the Jews in Russia, but in fact Yiddish schooling too was discouraged and was rapidly reduced to near the vanishing point (see below).

A second major outcome of the war was the establishment in Eastern Europe of a chain of new or enlarged states from the fragments of the broken Austrian and reduced Russian empires. The majority of Europe's Jews lived in these states, and they were recognized as national minorities entitled to national-minority status and to specific rights in the educational and cultural spheres. But the new states, as yet uncertain of, and jealous of their new national sovereignty, did not treat their minorities generously, and, steered in the old tradition of antisemitism, the Jews found themselves a discriminated group. At the same time the Zionist ideal, which in the pre-War period inspired only narrow strata of the Jewish population, suddenly became, on the heels of the Balfour Declaration (1917) and the British Mandated National Home authorized by the League of Nations, a hope inspiring near-reality. This conjuncture of circumstances strengthened the Hebraist-Zionist trend in Jewish education both in the secular and religious groups. (It also encouraged the creation by the radical circles of a nationalist Yiddish movement.) The extreme Orthodox, non-Zionist elements resorted to a passive withdrawal into the traditional life and education, slightly modified to meet contemporary needs. During this period the cultural life of Jewry became strongly politicized, the schools and various courses having come under the auspices or sponsorship of Jewish political parties.

The Orthodox Agudat Israel maintained or supported a network of schools, "Hovev," which included *hadarim*, *talmud torahs*, and yeshivot, some of them full day schools in which both general subjects and Jewish subjects were taught. In the mid-1930s, "Hovev" schools in Poland numbered about 350 and had an enrollment of over 47,000 pupils. Another network, of schools for girls, grew out of the activities of a Cracow seamstress, Sarah Schnirer (1883–1938). Having noted the neglect of Jewish education for girls, she organized a group of girls into a class which eventually developed into a school. Its success encouraged the establishment of similar institutions, designated as Beth Jacob Schools, in many other communities. In 1938 they numbered 230 in Poland including several day schools, with about 27,000 pupils. In 1929 Agudat Israel took over the sponsorship of these institutions. The Mizrahi Zionist religious party sponsored the Yavneh network of schools. These included kindergarten and elementary day schools and, on the secondary level, mostly supplementary schools. In 1938 the Yavneh system had 235 schools of all types with an enrollment of over 23,000. A major difference between the Agudah and Mizrahi school systems was the attitude to and the use of the Hebrew language. The extreme Orthodox elements had not yet made peace with Hebrew as a modern language. In their view the language of conversation and instruction was to be Yiddish, the language of the majority of Jews in Eastern Europe and the one in which many prominent rabbis had preached. The Mizrahi leaders, on the other hand, with their Zionist philosophy, accepted Hebrew as the language of the National Home in Erez Israel and the desired language of the people in daily life everywhere as well as the language of the sacred lore.

Another large school system was that of Tarbut. In these schools students were imbued in the Jewish nationalist spirit and were oriented towards *ḥalutziiyyut* (pioneering) in Palestine. The Bible was the core of the Hebrew traditional program, and modern Hebrew literature provided the contemporary nationalist orientation. The Tarbut educational institutions included many day schools, both elementary and secondary. By and large the students came from the middle and upper middle classes, the poor being unable to afford them. Nevertheless the Tarbut schools, which in 1918 numbered 50 with 2,500 pupils, grew by 1935 to 270 with about 38,000 students, scattered throughout the Baltic states, Poland, and Romania.

There were also some schools not formally identified with these major trends in Poland and Lithuania, but that were actually under the same type of religious or secular sponsorship. Thus in Latvia Agudat Israel schools were known as "Moriah" and the Mizrahi schools "Tushiah" were similar in their Hebraic-religious program to the "Yavneh" schools in Poland. In several Bessarabian towns and elsewhere there were secondary schools not associated with the Tarbut network, but following virtually the same program. Aside from these major organized groups of schools private unaffiliated *ḥadarim* of the traditional type continued to function, mostly in Poland. These had, in the mid-1930s, an enrollment of some 50,000 boys.

The above school systems all had their teacher-training schools: the Beth Jacob school in Cracow (established 1925); the *bet midrash* "Taḥkemoni" in Warsaw (1920), which trained rabbis and teachers for the Mizrahi's Yavneh schools, and a similar institution in Vilna; and three Tarbut teacher seminaries, in Vilna (1921), Lvov (1922), and Grodno (1926). In Warsaw there was also a government school for teachers of the "Mosaic Faith" which became Hebraically oriented during this period.

The decline in the economic positions of the Jewish communities brought about considerable enrollment in Jewish trade schools and the study of agriculture in preparation for Palestine. One of the Tarbut schools offered courses in agriculture as did some of the yeshivot of Yavneh. The \*Ort trade schools too were popular. In Poland alone in 1934 Jewish trade schools had an enrollment of about 5,000.

The yeshivot suffered greatly from the war, some having closed and others being forced to move. To recover from this decline a Va'ad Yeshivot (Yeshivot Committee) was organized under the leadership of R. Ḥayyim Ozer \*Grodzinski, and numerous yeshivot and "junior yeshivot" (*yeshivot ketannot*, preparatory to the yeshivot proper) were established within a few years by this committee as well as by other groups or individual rabbis. In 1937 there were in Poland 136 yeshivot with some 12,000 students. Outstanding among these new institutions in its organization, physical facilities, and scholarship, was the Yeshivat Ḥakhmei Lublin (the Yeshiva of the Lublin Scholars) founded in 1930 by R. Meir \*Shapira, who had previously established yeshivot in several towns in which he served as rabbi and who gained renown for his passionate advocacy

of "the page a day" idea (*daf yomi*), that every Jew study one page of the Talmud daily.

In Central and Western Europe the Jewish educational trend continued much in the same direction as it did before World War I. Here and there new schools were founded, and some old schools closed their doors. In Antwerp there were two large day schools. A new day school was opened in Paris. In Gateshead, England a yeshiva was founded in 1927 which attracted students from the West European countries, especially after the beginning of the flight of Jews from Germany and the other lands threatened by the Nazis. Most Jewish learning however was in supplementary schools of limited hours and programs. In the general schools for Jewish students that continued functioning in Germany, England, Austria, and elsewhere time allotted to Jewish studies also remained minimal. On the eve of and immediately after the Nazi rise to power, study of Hebrew became widespread among the Jewish youth of Europe.

In the Muslim lands the Alliance Israélite continued to maintain or support schools, although their number began to decline in the 1930s. There still were 65 AIU schools in 1938, of which 33 were in one country, Morocco. In \*Iraq certain restrictions were imposed on Jewish education after the country gained its independence in 1932, but a substantial number of schools continued functioning in \*Baghdad and in several other cities. In the East Mediterranean Arab lands the schools took on a more modern Western character while the old style *ḥadarim* declined. In the Maghreb lands the *ḥadarim* and yeshivot remained numerous and popular.

All these educational activities of the period between the two world wars – modest in some of the countries discussed above, extensive and vibrant with vitality in others – were terminated in 1939 or soon after when the Germans invaded nearly all of Europe and gained control of North Africa. Even where the Jews were not physically destroyed as in Italy and the North African lands, the restrictions imposed upon them and the dread and uncertainty in which they lived during the German occupation suppressed their educational and cultural functions. The largest and most creative Jewries of Eastern Europe were almost totally destroyed and with them disappeared centuries-old centers of Jewish life, culture, and scholarship. While about two and one half million Jews remained alive in the Soviet Union after the Nazi Holocaust, the discriminatory regime deprived them of opportunities for the free exercise of their religio-cultural life. In this country there was practically no Jewish education of any kind. Fortunately the other large Jewish population centers on the American continent were unaffected by the ravages of World War II. One-half of the world Jewish population of 13 million was to be found on the American continent. The United States became the largest Jewish population center with 5,750,000 Jews who have created institutions for Jewish learning for both young and old.

#### JEWISH EDUCATION IN EUROPE (WAR & POSTWAR)

##### The War Years

In Nazi-occupied Europe normal Jewish education practically ceased to exist. In Western Europe the Germans initially insisted that Jewish children be removed from general schools and educated in Jewish schools. Later, however, when the “Final Solution” was initiated, Jewish education was completely disrupted, particularly in Eastern Europe, where it was officially prohibited. In spite of this ban, clandestine classes in Hebrew and Yiddish were held, under highly dangerous conditions, in most larger ghettos such as Lodz, Warsaw, Vilna, and others. They continued until the liquidation of the ghettos themselves (see \*Holocaust). Jewish schools developed during these years in Italy, where all Jewish children had to leave government schools.

##### The Period Since World War II

The survivors of the war gathered in Displaced Persons camps. About 250,000 Jews from Eastern and Central Europe were in D.P. camps in Italy, Austria, and Germany. Few children had survived, but for those who did come back from their various hiding places, schools were opened. An education board consisting of representatives of the Jewish Agency, the Joint Distribution Committee, and the DPs was set up in 1947. Work had to start from scratch. Books were reprinted, teachers were brought from Palestine, a complete network of schools was set up, serving all the camps and Jewish communities in the larger towns. Soldiers of the \*Jewish Brigade played an important role in this work.

The camps were emptied with the establishment of the State of Israel in 1948. The vast majority of the Jews in the D.P. camps left for Israel. Those that remained behind settled in various communities in Central and Western Europe. By that time Jews in Eastern European countries could no longer freely leave their place of residence. New Jewish communities grew up in Eastern Europe, whose educational program depended on policies of the governments in their respective countries of residence. No serious educational program was developed in any of the Communist countries except for Hungary and, for a short period of time, in Poland. The Theological Seminary was reopened in Budapest. A primary and secondary Jewish day school was also started, which continues to function to the present time. The total number of children involved in Hungary, however, never exceeded 200–300 out of a total Jewish population of 80,000.

The education program in Poland developed after the era of Stalin and with the return of Jewish refugees from the Soviet Union. Four Yiddish schools were opened for the re-

turning refugees. The language of instruction was Polish, but Yiddish and Yiddish culture were taught. These schools were closed with the reduction of the Jewish community in Poland through emigration and because of a change in government policy after 1967.

There were no Jewish schools in Romania, Czechoslovakia, or Yugoslavia. Very few children received a supplementary Jewish education in any of these countries.

With the collapse of Communism and the dissolution of the Soviet Union, Jewish communal life in Eastern Europe underwent a marked revival in parallel with mass emigration. Community organizations now offered a wide range of religious, social, and cultural services, including Jewish education. In 2005 the Federation of Jewish Communities of the Former Soviet Union operated 54 kindergartens, 72 elementary day schools, 15 high schools, and five universities in 65 cities, with a total enrollment of over 15,000 youngsters. In addition it had 15 yeshivot with 700 students and over 100 Sunday schools in 13 countries. The Federation also operated a teacher training institute and a resource center turning out educational materials.

In Hungary there were just three Jewish day schools and a high school in Budapest in 2005, serving a population of around 80,000 Jews countrywide, of which only a few thousand were affiliated to the Orthodox or Neolog community. However, it continued to operate the only rabbinical seminary in Eastern Europe. In Bulgaria formal Jewish education was received at a state secondary school where Hebrew and Jewish history studies were compulsory, while a few Sunday schools were also in operation. Other countries of Eastern Europe, with their small Jewish populations, were also making efforts, whether in *talmud torah* or Sunday schools, to perpetuate Jewish education.

In postwar Western Europe a new awareness spread among the surviving leadership that education is the foundation of Jewish communal life.

Several factors contributed toward the achievements in cultural reconstruction.

a) The respective governments were sympathetic to the Jewish communities and many helped in the maintenance of the schools. The Swedish government provided grants for the day schools and so did the governments of France, Belgium, Holland, Denmark, Finland, Germany, and Italy.

b) American Jewish aid, through the Joint Distribution Committee, heavily subsidized educational reconstruction in all Western European countries. The German government paid compensation channeled through the \*Conference on Jewish Material Claims against Germany. These funds made it possible to build new schools or to renovate old ones in practically all larger Jewish communities.

c) The creation of the State of Israel was an enormous stimulus for Jewish education.

d) The Jewish Agency through its emissary-teachers played an important role in upgrading the level of education throughout Western Europe.

As a result of all these factors there were in 1969 over 40 day schools, some in communities where none existed before the last war, such as Stockholm, Madrid, Zurich, and Basle.

Parallel with the building program went an effort to train teachers and to prepare textbooks. Individual teachers were sent for training to Israel or to England and teacher-training programs were set up in Italy, Holland, and Belgium, the last one recognized by the Belgian government.

The Claims Conference encouraged the printing of textbooks, some of which were translated and adapted into various European languages.

Israel educators provided in-service training for European Jewish teachers.

Jewish education in 1970 embraced approximately 50% of all children of school age in Western Europe. Out of every four children receiving some Jewish education, three attended supplementary schools and one a Jewish day school. The underlying approach in all these schools was based on religious teaching. Only one day school in Western Europe (Brussels) declared itself to be non-religious. Even this school had to introduce the teaching of festivals and Jewish practices because of the demand of parents. Almost all schools taught Hebrew as a language and were Israel oriented.

The day school system continued to thrive into the 21<sup>st</sup> century, but with varying levels of enrollment. In Paris there were over 20 such schools, including kindergartens, primary and secondary schools, and religious seminaries, but only 4% of French Jewish children were enrolled in these frameworks, despite the influx of tradition-minded North African immigrants that made France the third largest Jewish community in the world. There was also a rabbinical seminary ordaining rabbis. In Antwerp, most of the community's children were enrolled in seven Jewish schools, receiving an intensive religious education, while another four such schools operated in Brussels.

There were three Jewish primary schools in Germany in 2005, but with low enrollment, and a Jewish high school in Berlin (opened in 1993). In Switzerland, nine schools were operating in five cities. Two Jewish day schools operate in Amsterdam, one each for the traditional communities (primary and secondary school) and the ultra-Orthodox community (primary and secondary school). Furthermore, there are three institutes of higher learning – a *kolel*, a seminary, and the Institute of Jewish Studies in Leiden. In Italy Jewish schools were to be found in Rome, Milan, Florence, Genoa, Livorno, and Trieste.

#### YIDDISH EDUCATION

##### In Czarist Russia

Yiddish had been the language of instruction in the *heder* and the *talmud torah* for as long as it had been the vernacu-

lar. However, in recent centuries the language itself was introduced into those institutions as a new subject, i.e., the art of writing. The instructor in this subject bore the designation of “*Shrayber*” (scribe). Ordinances of communities and societies determined his duties and assigned specific periods of time during which he was to “write” with his boys. This was a new tendency in Jewish education, a sort of secularism, since the “*Brifnshteler*” (as the textbooks were known) introduced new content into the subject of writing.

In the first quarter of the 19<sup>th</sup> century several of these *Brifnshteler* were stereotyped reprints of older editions. There is a list of 60 such letter composers. In 1826 there appeared a *Brifnshteler* by Abraham Leon Dor which was reprinted in 1843, 1861, 1868, 1870, 1873, 1876, and 1882. In 1850 his son, Hirsh Leon Dor, issued “letter learning,” a new *Brifnshteler*, in which he included various kinds of letters, customs, business letters, and arithmetic. This work, too, appeared in several editions. Gradually these works acquired the character of reading textbooks. They introduced anecdotes and fables, ideas for entertainment and humor that made reading “enjoyable,” even some elements of arithmetic and geography. These scribes gained entry into all types of schools and in small towns they organized groups and conducted systematic instruction for girls. The method of instruction of these groups carried the name *Shura Greizel*. In this manner the study of “Yiddish writing” became an attempt at secular education in Yiddish. At first the Russian school authorities tolerated this study, but after 1863 they began to oppose it and finally prohibited it.

A further development in the study of Yiddish was the establishment of the “Sabbath and Evening Schools” for the young (1859). In the 1860s such schools existed in Vilna, Berdichev, Zhitomir, Minsk, and other cities. The official language in these schools was Russian, but lectures were also given in Yiddish on nature study, geography, and Yiddish literature. The Russian government mistrusted these schools, closed some of them promptly, and authorization of new schools was obtained with great difficulty. Nevertheless the number of these Sabbath and evening schools grew and toward the end of the 19<sup>th</sup> century such schools were found in Vilna, Homel (Gomel), Grodno, Kovno (Kaunas), Yekaterinoslav, Kishinev, Kharkov, Lodz, and elsewhere. Some of these bore a cultural-philanthropic character; but there were also schools on which the teachers and leaders bestowed an ideological character, and they valued the role of the Yiddish language in the program. In the officially required Russian subjects Yiddish was used as an aid language. In this fashion did the Sabbath and evening schools prepare the ground for schools for secular studies in the mother tongue of the children. Schools in the Yiddish language were not legalized by the education authority, and this led to the opening of schools under disguised designations (as in Mir, Dokshitsy, Warsaw). Under various legal excuses the study of the Yiddish language was carried on in the authorized schools. Out of the 53 schools which the Society for the Diffusion of Enlightenment (*Mefizey Haskalah*) sub-

sized in 1909, there were 27 schools that included Yiddish in their programs, of which 16 were girls' schools, 3 boys', and 8 coeducational. In 1910 there was a school in Kremenchug which conducted instruction of all the subjects in Yiddish. In 1911, in the town of Demievka (a suburb of Kiev) a collective *heder* established by several progressive teachers, who obtained certificates of *melammedim*, was legalized, and all the subjects of study were taught in Yiddish. In 1912 teachers and community leaders converted the Warsaw school *Hinnukh Yeladim* into one of general studies in the Yiddish language. Also the modernized *talmud torahs* in the country gradually introduced Yiddish into their program.

When World War I broke out, Jewish refugees from Poland and Lithuania flooded the cities of central Russia and the Ukraine. The Yiddishist teachers and the Progressive Democratic organizations began establishing schools for the refugees' children where instruction was carried on in Yiddish, under the approval of the new law of 1914. By 1916 there were several dozens of schools in which Yiddish was the language of instruction. Teachers adopted new methods of instruction, and they created suitable textbooks for the pupils and pedagogic literature for the teachers. The Russian Revolution of 1917–18 brought about great changes in Jewish education.

#### **The Ukraine and Belorussia**

During the brief existence of the "Jewish Ministry" and after its liquidation there were under the leadership of the "*Kultur Lige*" 63 active elementary schools, three secondary, and dozens of kindergartens and evening schools, all conducted in Yiddish. In 1920 the Ukraine experienced the Bolshevik upheaval and the People's Commissariat for Nationalities of the Soviet regime became the school authority over the Jewish educational institutions in the Ukraine, Belorussia, and Russia proper.

The next decade, 1921–31, was very productive in the Soviet Yiddish schools. In the Ukraine there were in 1931 a total of 831 schools with 94,000 students; Belorussia had 334 schools with 33,000 students; and there were also a number of high schools; in all, 160,000 children were given schooling in Yiddish. In the year 1933–34 the attitude of the authorities to Yiddish underwent a radical change and a decline set in; the number of schools diminished annually, reaching a catastrophic low level on the eve of World War II.

#### **Poland**

With liberation and unification of the Polish Republic a strong school movement developed among the Jews of that country. In 1920 Warsaw already had 14 all-Yiddish schools with 49 classes and 14 kindergartens, with a total of 2,000 children. Similar developments took place throughout the provinces. At a conference in 1921 attended by 376 delegates, the Central Yiddish School Organization (CYSHO) was formed, which included as its affiliates Yiddish schools of all trends. In 1921 there were, in 44 Polish cities, 69 Yiddish elementary schools and 35 kindergartens, having altogether 381 classes with 13,457 children.

The Polish government took a hostile position to these new secular Yiddish schools, but nevertheless freed their pupils from the obligation of attending other schools to meet the requirements of compulsory education. Various absurd police accusations were leveled against the schools. Schools were closed and teachers arrested or removed. Nevertheless the network of these CYSHO schools grew. In 1925 their numbers reached 91 elementary schools with 455 classes and 16,364 pupils; 3 secondary schools with 780 pupils. In 1929 there were 114 elementary schools with 17,380 pupils, 46 kindergartens, 52 evening schools, 3 secondary schools, and 1 teachers' training seminary, a grand total of 216 institutions with 24,000 pupils. The Polish government became ever more reactionary and antisemitic, which resulted in a quantitative decline in the schools, but their quality kept improving. The character of the CYSHO school became crystallized; its educational approach included also the social and national upbringing of the child, attachment to his people, and an attitude of social responsibility. The methodology of instruction was in consonance with these objectives. The pride of the CYSHO school movement was the children's sanatorium named after V. \*Medem. This was a great creative institution with many pedagogic achievements. On the eve of World War II it had 250 children, and the institution was open the entire year. The children and teachers were all killed by the Nazis.

The Educational and Cultural Union (Shul un Kultur Farband) of the right-wing Poale Zion and of the nonpartisan organizations tried to open Yiddish schools with a stress also on Hebrew and *Yiddishkeit*. In 1934–35 they had in Poland seven elementary schools with 818 children. The ideological and programmatic effect of this movement was minimal. The number of the religious schools was large, 2,560 schools with 171,000 pupils. These schools too conducted their program in Yiddish. Thus, over 200,000 children received their schooling in the Yiddish language.

#### **Borderlands**

The 1917–18 upheaval in Russia freed the countries of the borderland areas: Lithuania, Latvia, Estonia and, in part, also Romania. In these countries the Yiddish language schools went through the same development as in Poland. In 1934 there were in Lithuania 16 elementary schools with 1,555 pupils and 3 secondary schools with 420 students. In 1933 Latvia had 122 Yiddish schools with 6,000 children (45% of the total Jewish child population). The Fascist revolution destroyed these school systems in both lands. In 1934 Estonia had one Yiddish school with 80 children. For a time the Yiddish schools in these countries enjoyed the same status as government schools and were maintained by the state. In Bessarabia (Romania) there were 62 Yiddish elementary schools with 5,757 pupils. The decreed Rumanization of education gradually brought about their liquidation.

#### **United States and Canada**

The October 1910 conference of the Poale Zion formulated a policy for Yiddish National Radical Schools and soon after-

ward the first such school was opened in New York. In 1911 the National Workers' Farband formed a committee to organize and maintain these National Radical schools. This school program was also supported by the Socialist-Territorialists and by non-partisan groups. However, differences of opinion arose on the place of Hebrew in the curriculum. One school in the Bronx seceded from the National Radical movement and, after the death of \*Shalom Aleichem, took on the designation of Sholem Aleichem School. In 1918 several schools of this type organized the Sholem Aleichem Folk Institute. The Farband likewise changed the designation of its schools to Jewish Folk Schools.

In 1915 a new type of school made its appearance. Members of the Jewish Socialist Federation opened a school in Harlem, New York, and a year later, one in Chicago. In 1916 the Conference of the Workmen's Circle decided to "demand of all its branches that they support the Socialist Yiddish Schools"; and in 1918 their convention declared that the school enterprise was the duty of the entire organization and of its Education Committee. Thus there came into being three different school organizations. The schools of the Workmen's Circle and of the Sholem Aleichem Institute put the stress on Yiddish language and literature and Jewish history; the Farband stressed Hebrew and national traditional upbringing. At the end of 1927 there were 103 Workmen's Circle schools with 6,000 pupils. In 1928 the Farband opened in Montreal a day school vis-à-vis the Folkshulen, which operated as an institution for supplementary education. By 1919 it had 559 pupils; the Peretz schools in Winnipeg had 600 pupils. In 1929 the Sholem Aleichem Institute conducted three schools in Chicago, three in Detroit including a secondary school, and the New York schools with an enrollment of 1,400 pupils. World War II upset the whole school system. In 1956 the picture was as follows: Workmen's Circle, 85 elementary and six secondary schools; the Farband, 57 elementary schools and seven day schools; Sholem Aleichem Institute, 16 elementary schools and five kindergartens. The International Order, a left-wing organization (no longer in existence), maintained a number of schools with an enrollment of approximately 4,000 as of 1939. In 1969 the various organizations had the following numbers: Workmen's Circle, a total of 50 institutions (kindergartens, elementary, and secondary) with 2,500 pupils; Farband, 21 schools with 1,700 pupils; Sholem Aleichem Institute, nine schools (five of them with pre-school educational programs) and, jointly with the Workmen's Circle, one secondary school.

All these schools faced extraordinary social and pedagogic problems in the early postwar period. The differences in the educational ideologies of these organizations were substantially reduced. Yet each continued its work on its own (with the exception of the joint secondary school and the teachers' seminary). Since that time the large majority of these schools have disappeared.

#### Latin American Countries

In most of the countries of Latin America with any apprecia-

ble Jewish community there were Yiddish schools of which the majority were secular. Such schools were established in Argentina (1917–1921), Brazil (1945), and Mexico (1924) and originally the language of instruction was Yiddish. The schools were oriented to a Yiddish Bundist ideology and in Argentina a teachers' seminary was also established which by 1955 had graduated 265 teachers to work in such schools and had 170 pupils in 1967. However, with the steady acculturation of the Jews the vernacular, by and large, replaced Yiddish as the language of instruction although the schools still styled themselves as Yiddish. The establishment of the State of Israel and particularly the Six-Day War in 1967 gave tremendous impetus to the study of Hebrew.

#### General

A few Yiddish language schools, all of them supplementary, are to be found in cities throughout the world under both ultra-Orthodox and secular auspices. In Israel, particularly in Jerusalem, there are many *hadarim* in which the language of instruction is Yiddish and in which the curriculum is hardly different from that of Eastern European *hadarim* of the Middle Ages. In most of the major yeshivot in Israel the language of instruction is Yiddish; the students, however, speak mainly Hebrew among themselves. In England, both in London and Manchester, there were Yiddish language schools associated with the ultra-Orthodox *hasidic* groups. In these schools a minimum of instruction in secular subjects was given in order to accord with the Compulsory Education Act.

### JEWISH EDUCATION IN THE UNITED STATES OF AMERICA

#### Early National Period

During the colonial and early national periods, Jewish education was not regarded as a communal responsibility. Congregational life was led by volunteer trustees and non-ordained religious functionaries (*hazzanim*). Indeed, the first rabbi to settle in the United States did not arrive until 1840. While Jews acquired burial grounds, built synagogues for public worship, and established mechanisms for aiding the poor, education was not treated as a public concern. Tutoring in Hebrew language, prayers, and Torah (primarily reading and translating) was provided for a fee, most commonly by independent teachers. On occasion, congregations would contract with an instructor to provide education to indigent children.

In the generation that the American colonies became a nation, the most prominent Jewish religious figure in the United States was Gershom Mendes \*Seixas. Congregation Shearith Israel in New York, at which Seixas received his edu-

cation and which he served as religious leader, conducted an all-day school from 1755 to 1776 and, intermittently, through the early decades of the 19<sup>th</sup> century. The aim of this initiative was to provide both Hebrew and general studies under Jewish auspices, as an alternative to secular training under non-Jewish, sectarian auspices.

In the early national period, almost all schools in New York City, as elsewhere, were religious in character. “Common pay” (i.e., private) schools generally assumed the religious identity of their headmaster; charity or “free schools,” supported by churches, could draw funds from the state. Through a bequest, Shearith Israel established a charity school named Polonies Talmud Torah, in 1803. Starting in 1811, the school achieved equal footing with the Protestant and Catholic schools in the city, benefiting from state financial assistance. In New York, state support of religiously sponsored charity schools continued until 1825; public schools were, gradually, to achieve a monopoly over state funding of education throughout the country.

Shearith Israel’s inability to maintain a school on a continuing basis was not only a function of uncertain state financial support, but of an apparent disinclination of its members to enroll their children. This may, in part, have resulted from the lack of educational leadership on a sustained basis. For example, when Emanuel N. Carvalho, a well-qualified teacher who had come to New York from London, served as the school’s headmaster, 1808–11, there was a well-subscribed, full day instructional program. When Carvalho moved to Charleston, the school experienced years of intermittent openings and closings, depending on the availability and ability of teaching personnel. The Polonies Talmud Torah eventually turned to the provision of supplementary education, holding sessions on Sunday morning and Tuesday and Thursday afternoons. Primary attention was given to prayers, Bible, preparation for bar mitzvah, and elements of Hebrew language and grammar.

In Charleston, home to the largest population of Jews in America in the early 19<sup>th</sup> century, the Jewish community allocated no funds for a school – parents had to rely, exclusively, on private tutors. Savannah’s Mikveh Israel offered no congregationally sponsored religious education before 1853. With a modest population, rapid acculturation, and a negligible educational infrastructure, Jewish learning in the early national period was at a low ebb.

### Emergence of Sunday Schools

As public, non-sectarian schools became increasingly predominant, many Christian Sunday schools, initially established by “benevolent societies” to provide poor children with general as well as Christian religious educational opportunity – and to keep them off the streets on Sunday – became strictly religious institutions. By 1838, there were 8,000 Christian schools of this kind in the United States. Consistent with this trend, American-born Rebecca \*Gratz (1781–1869), member of a prominent Jewish family of merchants and community leaders in Philadelphia, aided in founding the Female

Hebrew Benevolent Society (1819) and the Hebrew Sunday School Society (1838). Rebecca Gratz was convinced that religious instruction for all Jewish children was imperative, particularly in the face of Christian proselytizing.

One month after securing the approval of the Female Hebrew Benevolent Society for this initiative, the Hebrew Sunday School opened with 50 students and six teachers (including Gratz, who served as superintendent). The volunteer faculty consisted of women respected for their moral character and intelligence. From its inception, the Jewish Sunday School movement was, as its Protestant counterpart, a women’s movement. Women founded, directed, and taught at the schools, starting with the Philadelphia prototype, and girls attended alongside boys. In America, children’s religious education was considered part of the domain of women, and women thus required religious education to properly educate their children. Financial support came from the FHBS, private donors, and Mikveh Israel (Philadelphia’s well-established Sephardi congregation). Parents who could afford to do so paid \$2 per year, and an annual appeal was held at a festive public exam.

Gratz’s Philadelphia-based efforts benefited from the assistance of the *hazzan* of Mikveh Israel, Isaac \*Leeser. By 1845, Jewish Sunday schools had been established in a number of communities, including New York, Charleston, Cincinnati, and Richmond. As in the Philadelphia model, Saturday and Sunday schools established in other locales were conducted on a coeducational basis. Jewish Sunday schools reinforced the middle class values of public schools and Protestant Sunday schools: obedience, order, punctuality, cleanliness, and self-discipline. They embraced the Protestant division between universal morality (the domain of public education) and particularistic forms (the province of supplementary religious education).

Leeser, who championed Jewish traditionalism throughout his career, authored a *Catechism for Younger Children* (1839), used in many of the schools. The catechism opened with reflections on religion in general, before turning to the “Mosaic Religion” in particular. He affirmed the divine origin of the Torah and its correct interpretation by the sages; hence, the enduring imperative of both the moral and ceremonial law. The catechism concluded with Maimonides’ 13 principles of faith.

Leeser also published a Hebrew Reader, “Designed as an Easy Guide to the Hebrew Tongue, for Jewish Children and Self-Instruction,” in 1838. The text devotes 23 pages to the development of skills for Hebrew reading, with the ensuing 25 pages applying those skills to such recurring prayers as *Adon Olam*, *Shema*, *Ma Tovu*, *Modeh Ani*, the opening paragraph of *Birkat ha-Mazon*, and *Yigdal*. While the work was reprinted a number of times, Leeser lamented, in his preface to the 1856 (fourth) edition, that though the book “has met with approbation, still the sale has been very slow, the demand for the various schools being quite small.” Leeser, who founded a short-lived Jewish Publication Society in 1845, produced dozens of printed works, along with a widely disseminated periodical

(*The Occident*). Improvements in print technology and the declining cost of printed material led, at mid-century, to expanded publications of all kinds, including evangelical literature. Consequently, Jewish education and Jewish educational materials were essential both to strengthen the faith and to protect against proselytizing missionaries.

Even as he expressed the highest regard for the work of Rebecca Gratz and her assistants, Leiser urged the establishment of an all-day Jewish school for two basic reasons. First, it was impossible to achieve Hebrew literacy in “extra” hours. Second, the public or private schools were, in Leiser’s view, essentially Christian. Where it was impracticable to conduct day schools, supplementary education needed to be strengthened – hence, Leiser’s support of Rebecca Gratz’s Sunday School initiative.

### **Educational Currents in the Era of Heightened German-Jewish Immigration, 1840–1880**

During the period 1840 to 1880, the American Jewish community grew from 15,000 to 250,000, primarily bolstered by the immigration of Jews from German-speaking lands. German Jews spread through the length and breadth of the expanding nation and, with their geographic diffusion, the number of congregations grew from 18 to 277 by 1877. As in the colonial and early national periods, congregations typically progressed from establishing a burial society to forming a synagogue and, only later, providing some form of Jewish education.

In the 1840s and 1850s, many American schools were still conducted by churches, and instruction in the Christian religion was part of the curriculum. Many public schools had a distinctly Protestant tone. Within this context, Jewish day schools were established by immigrant Jews in a number of communities.

By the 1850s, seven Jewish day schools had been established in New York, enrolling more than 1,000 students. Similar schools were initiated in other cities, including Philadelphia, Baltimore, Chicago, Boston, Albany, Cincinnati, Detroit, Essex County, New Jersey, Pittsburgh, and Washington, D.C. A typical school of this kind was the one organized by Kehillath Anshe Maariv Congregation, in Chicago in 1853. The school was patterned on similar schools in Germany, where the curriculum included general studies supplemented by instruction in Jewish religion, Hebrew prayers, and Bible reading in German translation. At КAM, in addition to English, German, arithmetic, geography, drawing, and singing, prayers and readings from the Pentateuch, as well as catechism relating to Jewish religion and history, were part of the curriculum. The “common” school branches were taught by non-Jewish instructors, with a rabbi or cantor responsible for Jewish studies. The commitment of German-Jewish immigrants to maintaining German culture is reflected in the fact that of the 17 mid-19<sup>th</sup> century Jewish day schools with extant curricular information, all schools included German.

Several private boarding schools teaching Jewish and secular subjects also operated in the middle of the 19<sup>th</sup> cen-

tury. The creation of this variety of day school reflected their founders’ interest in the Jewish education of their children, an interest in preserving German culture, a desire for “quality assurance” in their children’s schooling (the developing public schools were not, uniformly, seen as centers of educational excellence), and concern about sectarianism in public schools. Intensive Hebrew education was, not always, of paramount interest; often, one hour per day was devoted to Jewish studies.

In the 1840s, Hebrew literary associations, maintaining libraries and conducting lectures, were founded in several cities. From references in Jewish newspapers, it appears that literary discussion groups typically were conducted separately by and for men and women. During the 1860s and 1870s, a new type of organization – the Young Men’s Hebrew Association (YMHA) – was established in a number of communities (the first YMHA had been organized in Baltimore in 1854 but suspended its activities in 1860–68). The YMHA aimed to foster improved knowledge of the literature, history, and doctrines of Judaism. The “Y” often included a library of Jewish reading matter and offered lectures and classes for young men and women in Jewish history and Hebrew language. Y’s thus met the need of young adults for a congenial social and intellectual milieu.

During the 1860s, Christian missionaries operating on New York’s East Side operated a school teaching Jewish children Bible in Hebrew. Mission schools, with conversionary aims, appeared in other poor Jewish neighborhoods. In 1864, several congregations organized the Hebrew Free School, as a countermeasure. Five branches were established and, in addition to Jewish education, pupils were supplied with clothing and other necessities. Similarly, Jewish Y’s introduced gymnasiums and sports as a counterinfluence to Christian missionaries, and in imitation of YMCAs.

While, in the development of American Jewry, the period 1840–80 was, primarily, an era of Western and Central European Jewish settlement and institution building, a trickle of Eastern European Jewish immigration was already apparent by the 1850s. New York’s first East European congregation, Beth Hamidrash Hagodol, founded in 1852, established a *talmud torah* (supplementary Jewish school) for the instruction of children attending New York City public schools. This school was, in the 1880s, to become a communally supported *talmud torah* known as Mahazikai Talmud Torah.

As public schools, through exclusive state funding, came to be viewed as superior educational settings, Jews (unlike Catholics) increasingly opted for public education. For the American-born generation of parents with children of school age in the 1870s – by which time public education had become well established throughout the country – public schooling was a “given.” By 1875, no Jewish day schools remained in operation.

Though, by 1860, there were 150,000 Jews in the United States, there was no institution of higher Jewish learning. All American rabbis were foreign-born and -trained immigrants.

An attempt to create an academy of higher Jewish learning, spearheaded by Isaac Leeser, was initiated, in 1867, with the founding of Maimonides College in Philadelphia. Leeser died in 1868, and the College disbanded in 1873.

An enduring college for the training of American rabbis was established by Isaac Mayer \*Wise, the institution-builder of Reform Judaism in America. The Bohemian-born Wise, who had immigrated to the U.S. in 1846, succeeded in forming a “Union of American Hebrew Congregations” in 1873, with 34 participating synagogues. In turn, the Union, in 1875, sponsored the establishment of the \*Hebrew Union College for the training of rabbis. The college, based in Cincinnati, with Isaac M. Wise as its president, was to take root and grow. Though Wise’s vision of the possibility of a “Minhag America,” an “American Way,” among the Jews of the U.S. was not realized, the UAHC and HUC were destined to become pillars of American Reform Judaism.

It is estimated that, in 1880, there were 40,000–50,000 Jewish children of school age in the United States. Of this number, no more than 15,000 received some type of Jewish education in “Sabbath school” one or two days a week (Saturday afternoon and/or Sunday morning) or through private lessons. “Sabbath school” was generally of three to five years’ duration. The curriculum consisted of Bible stories, religious thought (through catechism), and a few Hebrew verses used in worship. The first Jewish children’s magazine in America, *The Hebrew Sabbath School Visitor*, founded and edited by Dr. Max Lilienthal, was initiated as an instructional aid for such schools, in 1874. Commonly, the rabbi served as “Superintendent,” and volunteers taught the classes at these very part-time schools. In a paper on “Pedagogics in the Sabbath-School,” presented in 1880, Moses Mielziner, professor at the HUC, reported that of 118 congregations affiliated with the UAHC (representing more than 40% of the then existing congregations), only 12 did not have a Sabbath school.

### **Educational Responses to Mass Migration from Eastern Europe, 1881–1910**

Though East European Jews were to be found among the immigrants of earlier generations, a rising “wave” of such immigrants came to the shores of the U.S. in 1881–1910. The new immigration resulted not only from political persecution but from lack of economic opportunity, exacerbated by a fivefold increase in East European Jewish population in the 19<sup>th</sup> century. Swelled by immigration, primarily (though certainly not exclusively) from Eastern Europe, the American Jewish population reached two million by 1910.

East European immigrants transplanted to the United States the traditional educational institutions of their native lands. The immigrants’ readiness to adjust to American life was manifest in their adoption of the public school for their children. On the Lower East Side of New York City, where Jewish immigrants were most heavily concentrated, 38 elementary schools, serving a total population of 65,000 students, included 60,000 Jews by 1905. The most prevalent form of Jewish

education established by the new immigrants (primarily for boys) was the *heder*, a private one-room school, open every weekday of the year. The teachers in most cases were ill-educated men untrained in pedagogy. Parents were too busy with their jobs in the sweatshops or small businesses to have the time to consider the quality of their children’s education, or to exercise some control of the *heder*, as was the case in their country of origin. The “curriculum” consisted of mechanical reading of prayers, study of the Torah portion of the week, recitation of portions of liturgy, and bar mitzvah preparation.

The *talmud torah*, an educational framework maintained in Eastern Europe for the children of the poor, developed as a promising alternative to the *heder* in America. It was, typically, founded and managed by residents of a given neighborhood, financed by a paid membership and through synagogue appeals. These schools tended to be staffed by more competent teachers, among them nationalist Jews, products of the Russian \*Haskalah and the \*Hibbat Zion movement. The curriculum of most *talmud torah* schools approximated that of the East European elementary *heder*: Hebrew reading (of the prayerbook), word by word translation – typically, into Yiddish – of the Pentateuch, and the commentary of Rashi on the Torah.

Concomitant with the onset of mass migration was an “awakening” in Jewish life among young, American-born Jews who, by the late 1870s, had lost confidence in the liberal, universalist visions of the era. This awakening expressed itself in initiatives for the revitalization of Jewish education. One manifestation of this agenda was the Jewish Chautauqua Society, launched by Henry \*Berkowitz, one of the four men in the initial (1883) graduating class of HUC, in 1893. The Chautauqua Society had been developed by Bishop John H. Vincent of the Methodist Episcopal Church in 1874. Begun as an intensive training program for Sunday school teachers (with a summer assembly at Lake Chautauqua, New York), the society established local reading circles and adult correspondence courses. By the 1880s, it had become a forum for the discussion of politics, literature, science, economics, and religion. Dozens of local Chautauqua assemblies were launched; hence, Rabbi Berkowitz’s initiative in launching the Jewish Chautauqua Society in Philadelphia (where he served as rabbi of Rodeph Shalom Temple) was also part of a national phenomenon.

The Jewish Chautauqua Society held its first summer assembly in 1894. By 1908, it had 125 circles, with 2,500 members. Starting in 1909, it sent scholars to teach summer courses on Jewish topics at universities (a function which, by the 1930s, was to become the society’s central focus), and, in 1915, it initiated a correspondence school. This adult education project sprang from the sense of its leaders and supporters that Jewish education was sorely lacking.

While the Jewish Chautauqua Society focused on adults, the Jewish education of children was, likewise, a significant concern. Indeed, the first book published by the newly established Jewish Publication Society, in 1890, was a revised edition of a work (initially published in England, in 1886) by

British children's author Lady Katie Magnus, titled *Outlines of Jewish History*. The book sold tens of thousands of copies and went through numerous printings.

The first yeshivah day school in the U.S., Yeshivat Etz Chaim, an all-day Jewish school for elementary school boys, was established in New York in 1886. The school's constitution averred that "the purpose of this Academy shall be to give free instruction to poor Hebrew children in the Hebrew language and the Jewish religion – Talmud, Bible and Shulhan Aruk – during the whole day from nine in the morning until four in the afternoon. Also from four in the afternoon, two hours shall be devoted to teach the native language, English, and one hour to teach Hebrew – Loshon Hakodesh – and jargon [Yiddish] to read and write. The Academy shall be guided according to the strict Orthodox and Talmudic law and the custom of Poland and Russia." The general studies program also included grammar, arithmetic, reading, and spelling. Though called a "yeshivah," this elementary school, as others later to be established, differed significantly from its European predecessors, both with regard to the age of its students and to the breadth of its curriculum (which included general education).

In the ensuing decades, additional yeshivah schools, including the Rabbi Jacob Joseph Yeshiva (1900), the Yeshiva Rabbi Chaim Berlin (1906), and the Talmudical Institute of Harlem (1908), were established. To meet the continuing Jewish educational needs of Etz Chaim graduates and of teenage immigrants at advanced levels of talmudic study, the Rabbi Isaac Elchanan Theological Seminary (RIETS) was founded in 1897, creating a framework for the training of (Orthodox) rabbis. RIETS combined with Yeshivat Etz Chaim in 1915; the expanded institution was headed by Lithuanian-born Bernard \*Revel (1885–1940), a scholar who had studied at the yeshivah of Telz and who, after emigrating, had earned a doctorate from the recently established Dropsie College in Philadelphia.

The Reform Pittsburgh Platform of 1885 had led established ("Americanized") traditionalists to band together to create a more traditionalist seminary than the HUC. The driving force behind the founding of the \*Jewish Theological Seminary, which opened its doors in New York in 1887, was Sabato \*Morais (1823–1897), who had succeeded Isaac Leeser as *hazzan* of Mikveh Israel in Philadelphia. Among the seminary's founders, in addition to Morais, were American-born, European-ordained Rabbis Bernard \*Drachman and Henry Schneeberger, recently arrived Hungarian-born Rabbi Alexander Kohut, and the British-born *hazzan* of Shearith Israel (New York), Henry Pereira Mendes. In the early years of the 20<sup>th</sup> century, the seminary received significant financial support from such well established (Reform) German Jews as Jacob \*Schiff, Felix M. \*Warburg, David \*Guggenheim, and Louis \*Marshall, who hoped that it would attract Russian Jews and prepare them to be leaders in the Americanization of immigrants.

Under the leadership of Solomon \*Schechter (1847–1915), reader in rabbinics at Cambridge University, who assumed the presidency of the fledgling Seminary in 1902, JTS be-

came a center of Jewish scholarship and a core institution in the emerging Conservative stream of Judaism. Of great significance in the unfolding history of Jewish education in the United States was the establishment at JTS of a Teachers Institute (1909). Mordecai \*Kaplan (1881–1983), himself a JTS rabbinical graduate, was appointed dean of the new Institute by Schechter.

The Teachers Institute, which was to play an important role in training a cadre of Jewish educators in the decades that followed, was the second Jewish institution for the preparation of teachers to be founded in the United States. The first, \*Gratz College, had been launched in Philadelphia in 1893 through a bequest of Philadelphia merchant and philanthropist, Hyman Gratz, brother of Rebecca Gratz. Both of these teachers' colleges, as others established in the ensuing years, were open to and attracted significant numbers of women.

While an organic process of Jewish educational development was in evidence, an "external" event served as the catalyst for a pivotal, communal educational initiative in New York City. In the September 1908 issue of the *North American Review*, New York Police Commissioner Theodore A. Bingham commented that half of the city's criminals were "Hebrews" and that Hebrew juveniles were emulating the adults in this regard. This accusation served to galvanize hundreds of New York Jewish organizations – synagogues, federations, fraternal lodges, and professional societies – to establish the "New York Kehillah" in 1909. The Kehillah was headed by San Francisco-born, HUC-ordained Judah \*Magne (1877–1948), rabbi at New York's Temple Emanu-El. Magne was close to the premier German-Jewish banking families who formed the leadership of Emanu-el and was the brother-in-law of the prominent Louis Marshall. At the same time, he was attracted to the Yiddish intellectual milieu of the East Side Russian immigrants, among whom he enjoyed a broad-based following.

One response to the Police Commissioner's charge was the establishment by the Kehillah of a Committee on Jewish Education to survey the state of Jewish education and to develop appropriate responses to needs that would be identified. The survey was undertaken by Professor Mordecai Kaplan of the Jewish Theological Seminary and Dr. Bernard Cronson, a public school principal.

The report identified six frameworks within which Jewish education was being conducted:

- (a) *talmud torah* schools
- (b) institutional schools
- (c) congregational schools
- (d) Sunday schools
- (e) Chedorim (*hadarim*)
- (f) private tutors

The *talmud torah* schools, opined the researchers, "instill more Jewishness into the lives of the children" than any of the other educational settings; and this, despite the facts that: "home-work is never allotted; the discipline is poor; the attendance is very irregular and seldom kept up for any length of time."

The institution schools (operated by orphan asylums and social work agencies – often sponsored by German-Jewish-supported charitable groups) – had the benefit of good pedagogy and materials, but lacked the confidence of the population it aimed to serve, “because they do not regard it as Jewish enough insofar as it makes Hebrew only secondary.” The congregational school, holding sessions three or more times per week, was typically sponsored by a Conservative or Orthodox synagogue. Here, “the work covered is not very extensive, and is usually confined to the reading and translation of the prayers, and of a few passages in the Bible, with a smattering of a few rules of grammar.” Sunday schools, reported the survey, engaged a cadre of public school teachers, mostly women, many of whom volunteered their services. However, these teachers lacked “the knowledge necessary for a Jewish school,” and carried out “a vague kind of curriculum...” As to the *heder*, the researchers described it in the following, critical terms:

A cheder is a school conducted by one, two or three men, for the sole purpose of eking out some kind of livelihood which they failed to obtain by any other means. It generally meets in a room or two, in the basement or upper floor of some old dilapidated building where the rent is at a minimum.... The instruction, which seldom goes beyond the reading of the prayer book, and the teaching of a few blessings by rote, is carried on only in Yiddish. The method of instruction is quite unique. It consists of about fifteen minutes of individual instruction, with seldom or never any class work. Each pupil, not knowing when he is needed, straggles in at random, and waits for his turn to come, in the meantime entertaining himself with all sorts of mischief. When his turn comes and the teacher has given him the fifteen minutes, he runs off. There is hardly an ideal aim in the mind of the teacher, except in some cases it is the training for the Bar Mitzvah feat of reading the Haftorah.

The survey could not gauge the number of students who might have been receiving private tutoring, nor did the tally include the handful of day schools and their several hundred students. It was estimated that 21–24% of 200,000 Jewish children of school age were in the *talmud torah*, institutional, congregational and Sunday schools, and the various *hadarim*.

Ready to undertake communal action to address these challenges, the Kehillah of New York initiated a response which was to be replicated in the decades ahead in scores of American Jewish communities. It established a Bureau of Jewish Education. The Bureau was to provide educational guidance and service, and organize and coordinate activities beyond the capacity of any one school unit to conduct. In the ensuing generation, the concept of community responsibility in the domain of Jewish education was to be embraced by federations and central Jewish philanthropies in cities across the country. The BJE, launched through a \$50,000 contribution from Jacob Schiff and \$25,000 from the New York Foundation, was, initially, to perform the following specific functions:

1. To study sympathetically and at close range all the Jewish educational forces in New York City, including alike those that

restrict themselves to religious instruction and those that look primarily to the Americanization of our youth, with a view to cooperation and the elimination of waste and overlapping.

2. To become intimately acquainted with the best teachers and workers who are the mainstay of these institutions, and organize them for both their material and their spiritual advancement.
3. To make propaganda through the Jewish press and otherwise, in order to acquaint parents with the problem before them and with the means for solving it.
4. To operate one or two model schools for elementary pupils, for the purpose of working out the various phases of primary education, these schools to act also as concrete examples and guides to now existing Hebrew schools, which will undoubtedly avail themselves of the textbooks, methods, appliances, etc. worked out in the model schools....

Dr. Samson \*Benderly, of Baltimore, who had served as a consultant to the Kehillah on the Kaplan-Cronson survey and its analysis, was engaged as director of the new Bureau. Having worked with the Kehillah’s education committee for a year, Benderly’s educational and ideological positions were clear to Judah Magnes and to the Board which hired him. Benderly’s ideas were to shape the work of the New York Bureau and influence scores of Jewish educators summoned to leadership in communities throughout the country.

Samson Benderly (1876–1944) was born and raised in Safed. At age 15, he traveled to Beirut to study at the American University. After completing a B.A., he began medical studies. In 1898, Dr. Aaron Friedenwald, professor of ophthalmology in Baltimore, visited Beirut, and encouraged Benderly’s interest in coming to the United States. By September 1898 Benderly had moved to Baltimore, where he completed his medical studies at the College of Physicians and Surgeons (he earned his degree and began residency, in June 1900). Concurrently, he undertook to teach Hebrew and direct a Jewish school.

Having, because of the demands of time, to choose between medicine and Jewish education, Benderly chose the latter. His Hebrew immersion program (*Ivrit be-Ivrit*) included not only Hebrew language, but also Bible, holidays, history, and activities designed to nurture strong connection to Israel. In 1905, he initiated a youth group called “Herzl’s children.” He used visual aids and incorporated music, dance, and drama as instructional tools.

Though having begun his Baltimore career at a synagogue school, Benderly left, early on, to head the “Hebrew Free School for Poor and Orphaned Children.” Interestingly, early in his Baltimore stay, Benderly served as Hebrew tutor to his “patron” Dr. \*Friedenwald’s son, Harry, then in his thirties, who was to become president of the Federation of Zionists in America – later known as the Zionist Organization of America. At the same time, he tutored Henrietta \*Szold (also an adult learner) who was soon (1912) to found Hadassah.

Benderly’s “Zionist-nationalist” bent was not unknown to the Kehillah committee that enlisted him. His pedagogic approach, centering on children and the development of a school-based society, was rooted in the progressive education ideals of John Dewey. For Benderly, as for Dewey, all human

association – and most assuredly, the intentional constructs of schools – were educative, ensuring cultural continuity. The executive committee to which Benderly reported in New York consisted of five individuals, four of whom were Zionists (Israel \*Friedlaender, Judah L. Magnes, Mordecai Kaplan, and Henrietta Szold). The fifth, Louis Marshall, was close to Jacob Schiff, and was likely keeping a watchful eye on the project for Schiff.

Modern Zionism had, already, expressed itself in two “*aliyyot*” to Palestine, several Zionist Congresses, and numerous Zionist ideologies. For Benderly and his committee, it was the cultural Zionism of \*Aḥad Ha-Am combined with a commitment to Americanism, which shaped an emerging approach to Jewish education. In the modern era, the Zionist center (Palestine) would, it was supposed, serve as a spiritual hub of renewed Jewish cultural creativity, nurturing Jewish life in the Diaspora. Consistent with the findings of the Kaplan-Cronson report, the vehicle which Benderly and his supporters saw as best suited to furthering Jewish consciousness and commitment to Jewish ideals was the *talmud torah* school.

#### **Institutional Development, 1910–1945**

The New York BJE, created as a mechanism for improving and expanding Jewish education in a burgeoning community, undertook a vigorous program of federating and supporting *talmud torah* schools, providing in-service professional training to educators, writing modern textbooks, and recruiting pupils. *Talmud torah* curricula – typically, Hebrew-based (consistent with cultural Zionist nationalism) – included Hebrew language and literature, Bible, festivals, Palestine (as the source of Jewish creativity), selections from Midrash and the Talmud, Jewish history, and some degree of synagogue ritual familiarity (customs and ceremonies). Among the curricular innovations of the BJE was the use of arts and crafts and of music and dramatics in the instructional program. The BJE also gathered together graduates of the various *talmud torahs* and organized a Hebrew High School. A Board of Teachers’ License and a Hebrew Principals’ Association were organized; a summer camp was opened; the League of Jewish Youth was organized. Benderly successfully encouraged a group of young American Jews to study both Judaica and education, in preparation for professional careers in Jewish education.

Bureau-supported communal *talmud torah* schools had a decidedly Hebraic-Zionist emphasis, with much of the instructional program conducted *Ivrit be-Ivrit* (in Hebrew). Communal sponsorship and the Hebrew language emphasis (a cultural unifier) established the *talmud torah* as a community, “non-denominational” program. With few exceptions, *talmud torah* schools operated on a coeducational basis, consistent with the prevailing practice in public schools and Sabbath schools. As in Sabbath schools and public schools, women were well represented in the teaching force.

Yiddish (secular) schools offered a significant alternative. Starting in 1908, in Brownsville, New York – an area with a large, working class population noted for socialist leanings –

Yiddish schools of various kinds were founded in every major locus of Jewish settlement. Among the larger networks of Yiddish schools were those of the Arbeiter Ring (Workmen’s Circle), grounded in secularism and radicalism. Such schools were essential, their sponsors believed, both because the public schools were largely controlled by capitalists and because education in “*Yiddishkeit*,” the culture of the immigrant generation, would bridge the disaffection between immigrant parents and their American-born and educated children. By the mid-1920s, the peak period of Yiddish secular education, 10,000 to 12,000 children attended *folkshuln* which centered on the study of Yiddish. At the other end of the spectrum, Orthodox day schools continued to be established in the early decades of the 20<sup>th</sup> century, though at a slow pace. In 1928, 4,290 students were enrolled in 17 such schools. Immigration restrictions, implemented in 1925, put an end to the massive influx of immigrants; by that time, more than 4 million Jews called America home.

A noteworthy structural opportunity for part-time Jewish study presented itself, beginning 1913, with the spread of the “Gary Plan” initiated in Gary, Indiana. The “Gary Plan,” among other innovations, authorized release time during the school day for religious instruction, off campus. In New York, the plan was supported by the Reform movement and opposed by supporters of the *talmud torah* system. Reform educators were finding Sunday-only instruction insufficient to meet their Jewish educational goals. Release time might have represented a “slot” for additional instructional time. The Gary Plan, on the other hand, lengthened the school day. Supporters of the 5-days-per-week *talmud torah*, which drew children from multiple public schools, were concerned about negative impact on scheduling and enrollment in the established, more intensive Jewish educational programs. While the Gary Plan did not long survive, it evoked varying pronouncements within the Jewish community on church-state considerations relating to education. Discussions of “strict separation” of church and state were to become a matter of considerable debate later in the 20<sup>th</sup> century surrounding the issue of public funding in support of education in non-public schools.

#### **Non-Formal Education**

In 1913, many of the country’s YMHAS and YWHAS (which had come into being starting in 1888) organized to form the Council of Young Men’s Hebrew and Kindred Associations. The Y’s cooperated with the Jewish Welfare Board, established in 1917, to provide Jewish chaplains and support services (starting with meeting religious needs) for Jews serving in the armed forces. In 1921, the Council of Young Men’s Hebrew and Kindred Associations merged with JWB. Many mergers of YMHAS and YWHAS ensued, with most of the “new” institutions taking the name Jewish Community Center. In 1990, the JWB itself was to be renamed the Jewish Community Centers Association of North America. From their inception, the centers inherited from the Y’s a culture of Americanizing Russian Jewish newcomers.

The first Jewish residential camps date to the closing decade of the 19<sup>th</sup> century, and a 1936 directory of Jewish camps sponsored by Jewish communal organizations listed 88 such camps in the U.S. and Canada. In the “fresh air” camps, Jewish experiences were, by no means, paramount; rather, good health and Americanization were emphasized. Under the influence of progressive educational thinking which recognized the rich possibilities for individual and group development inherent in camping, Jewish educational camping was launched starting in 1919 by Dr. Albert P. Schoolman. Schoolman, a disciple of Samson Benderly, founded CEJWIN (Central Jewish Institute) camps, to use the summer months to continue and strengthen the educational program of the Institute’s *talmud torah* program. Jewish camps of diverse ideologies, both communal and private, were soon operating.

In the early decades of the 20<sup>th</sup> century, informal Jewish youth movements were formed, including such Zionist youth groups as Young Judea (1909), Hashomer Hatzair (1923), AZA (1924), and Habonim Dror (1935). The (Reform) North American Federation of Temple Youth – NFTY (1939) and (Conservative) Leadership Training Fellowship (1945) followed suit. By 1940, there existed 30 American, nationally organized Jewish youth groups. Many served young people ages 18 to 25 or 30; only four (Young Israel, Agudat Israel Youth, Young Judea, and Hashomer Hatzair) served children under 12 years of age. Tabulation of membership in 26 of the 30 national Jewish youth organizations for the year 1939–40, showed 61,019 males and 99,262 females participating.

As young immigrants and the children of immigrants proceeded in increasing numbers to colleges, Jewish campus organizations were initiated. The Menorah movement began with the founding at Harvard University of the Harvard Menorah Society for the Study and Advancement of Jewish Ideals, in 1906. Jewish student organizations were, similarly, founded at several other universities. At a convention at the University of Chicago, the Intercollegiate \*Menorah Association was launched, in 1913. The object of the IMA, as articulated in its constitution, was “the promotion in American colleges and universities of the study of Jewish history, culture and problems, and the advancement of Jewish ideals.” Basic elements of any Menorah Society were lectures and study circles. By 1917, there were more than 60 such societies.

The exclusively intellectual focus of the IMA made it less appealing to many collegiates than the \*Hillel Centers, which emerged in the 1920s. Hillel, which began at the University of Illinois in Champaign in 1923, encouraged social and cultural as well as scholarly programs. B’nai B’rith undertook sponsorship of Hillel in 1925, and Hillel Foundations were soon established at Wisconsin, Ohio State, West Virginia, California, Texas, and Cornell. The Intercollegiate phase of the Menorah Association ended by the late 1920s.

### **Institutions of Higher Learning, National Organizations, New Initiatives**

In addition to Gratz College and the Teachers Institute of JTS,

institutions for the education of Jewish teachers were established in New York, Baltimore, Boston, Pittsburgh, Cleveland, and Chicago between 1917 and 1929. The communal model of *talmud torah* education seemed headed for ascendancy in the American environment, and Hebrew teachers colleges, it was anticipated, would train the necessary faculties for a growing educational system. Moreover, these institutions were centers of higher Jewish learning, and their instructors often saw their mission as nothing less than ensuring the continuity of Jewish life.

As the teaching profession grew – in number of practitioners and level of training – several teachers’ organizations were established, including a Hebrew Teachers Union. To link the efforts of communities across the country, the National Council for Jewish Education was created in 1926, as a forum for Jewish educational leaders. This organization became a catalyst for the establishment (1939) of the American Association for Jewish Education (AAJE) as a national service agency in the field of Jewish education. The AAJE served, in part, as a link among and between local bureaus of Jewish education which were, increasingly, becoming educational service providers to synagogue schools, rather than *talmud torah* operators.

An enrollment shift towards synagogue-based schools (as Jews moved from urban centers) was, already, in process after World War I. In the generation of 1910 to 1935, the percentage of children enrolled in synagogue-based Jewish schools rose from 35% to 60%. While *talmud torah* schools commonly met 4–5 days, 10–12 hours per week, congregational schools typically provided no more than 6 weekly hours of instruction and often lacked clear, curricular goals. In a notable resolution (1923) which, very gradually, came to be mirrored in practice, the Commission on Jewish Education of the Union of American Hebrew Congregations, headed by Emanuel \*Gamoran, a disciple of Benderly, urged that UAHG schools add a week-day session to the existing Sunday program. The Conservative movement’s Commission on Jewish Education of the United Synagogue was established in 1940, and urged an educational program of no fewer than 6 hours per week.

Despite the decline of the communal, Hebraic-Zionist-oriented *talmud torah*, the supplementary schools operated by congregations of the growing Conservative movement continued to emphasize Hebrew language, and were commonly known as “Hebrew schools.” While Hebrew had, at one time, been seen as a means to accessing classical Jewish texts (“*talmud torah*” in the sense of studying Torah), Hebrew proficiency – both in communal and congregational schools – gradually assumed paramount status, with classical (Hebrew) texts studied with the aim of improving Hebrew language proficiency.

Beyond the earlier-established HUC, JTS, and RIETS, a number of academies and yeshivot of higher Jewish learning were established in the early decades of the 20<sup>th</sup> century, as East European immigration continued. These included Tifereth Yerushalayim of New York (1908), Torah V’daath of New York (1918), Hebrew Theological College of Chicago (1921),

Ner Israel of Baltimore (1934), and the Jewish Institute of Religion, organized in New York, in 1922 (JIR, founded by Stephen S. Wise, was to become part of HUC in 1950). JIR, a liberal rabbinical seminary, was – unlike HUC – pro-Zionist and welcoming of the immigrant East European Jews. Through a bequest of Moses Aaron Dropsie, \*Dropsie College, an independent, non-theological institution dedicated to research in Jewish studies and related branches of learning, was established in Philadelphia in 1909.

In 1928, the Rabbi Isaac Elchanan Theological Seminary (RIETS) opened a College of Liberal Arts and Sciences, alongside its rabbinical school. Yeshiva President Bernard Revel recruited Rabbi Moses \*Soloveitchik, scion of a world-renowned rabbinic family, to head the RIETS faculty in 1929. On the death of Rabbi Soloveitchik (1941), his son, Rabbi Joseph \*Soloveitchik, talmudic scholar and Ph.D. in philosophy from the University of Berlin, became head of the RIETS Talmud faculty. The “Rav,” as Soloveitchik came to be known, was to emerge as the “towering ideologue” of American Orthodoxy in the 1940s and beyond.

At Hebrew Union College, Kaufman \*Kohler served as president in 1903–21. Kohler, whose religious ideology was expressed in the Pittsburgh Platform of 1885, expanded the faculty, brooking no tolerance of Zionist leanings. He was succeeded as president by Julian \*Morgenstern, an HUC alumnus, and professor of Bible. During Morgenstern’s tenure (1921–47), a dozen European Jewish scholars found a haven at the College, largely through his efforts.

At the Jewish Theological Seminary, Solomon Schechter was succeeded as president by Cyrus \*Adler, who served until his death in 1940. Adler, an American-born, Hopkins-trained semiticist, took part in founding the Jewish Publication Society of America (1888), was a founder of the American Jewish Historical Society (1892), served on the staff of the Smithsonian Institution, played a leading role in the reorganization of the Seminary and its engagement of Solomon Schechter, was President of Dropsie College, and edited numerous publications, including the first seven volumes of the *American Jewish Yearbook* and the *Jewish Quarterly Review* (1916–40). Consistent with Adler’s personal interests, it was during his tenure that JTS developed a pre-eminent library collection. Adler’s successor was Louis \*Finkelstein, a JTS alumnus. Both HUC and JTS had thus succeeded in educating leaders who could carry forward the spiritual-religious mission articulated by these institutions’ founders.

Between 1917 and 1939, four “progressive” Jewish day schools were established; these schools aimed to synthesize progressive and Jewish education. Limited time was devoted to Hebrew studies. Three of these schools closed their doors after brief periods of operation for lack of pupils and financial support. The fourth of the progressive schools (Brandeis “bi-cultural” school) eventually affiliated with the Conservative movement.

In 1937, the Ramaz School in Manhattan and Maimonides School in Boston were established. These Orthodox

day schools aimed at providing outstanding general education alongside excellent, classical Jewish education. Each of these schools was to grow and develop (continuing into the 21<sup>st</sup> century), serving as a model to future generations of modern Orthodox day schools. In 1939, an experiment in Jewish pre-school education was initiated in New York, with the establishment of Beth Hayeled (House of the Child) School. Children entered the program at the age of three, remained at Beth Hayeled five years, and transferred to public school (and a neighborhood *talmud torah*) in third grade. Soon after this program began, additional such early childhood “foundation” schools were established.

Though, by the beginning of World War II, there were 7,000 students in 30 day schools (almost all of which were in New York), most Orthodox leaders shared the view that, when it came to formal Jewish schooling, the congregationally sponsored *talmud torah* was to be the primary institutional framework for religious education. In 1942, the Union of Orthodox Jewish Congregations published a curriculum guide for *talmud torah* education. The curriculum was designed, ideally, for a ten-hours-per-week school. Interestingly, as in the educational programs developed and promoted by Samson Benderly and his protégés, the Orthodox “Model Program” called for *Ivrit be-Ivrit* (Hebrew-based) instruction. Though influenced by the pedagogic approach of the Benderly “school,” the UOJC manual made it clear that it brooked no tolerance for deviation from traditional Jewish belief and practice.

With the relocation of several leading personalities of Jewish educational life from Europe to the United States before and during World War II, a number of new institutions appeared on the American scene. These included Lubavitcher schools, established with the arrival of the Lubavitcher Rebbe in 1940, the creation of Bais Yaakov (\*Beth Jacob) girls schools in the early 1940s, and the establishment, in 1941, of the Telshe Yeshiva in Cleveland and, in 1943, the Beth Medrash Govoha in Lakewood, New Jersey. In 1944, under the impetus of Shraga Feivel Mendlowitz, an immigrant from Austria-Hungary, who had studied with noted European rabbinic scholars and significantly expanded Brooklyn’s Torah V’daath yeshiva, an ambitious Orthodox day school initiative was launched.

Mendlowitz, who had devoted himself to Jewish education in the U.S. since his arrival in 1913, aimed to “jump start” and unite a national network of (Orthodox) yeshivah day schools. Towards that end, Mendlowitz enlisted Samuel \*Feuerstein, a successful business executive, to serve as president of the “Torah Umesorah Society for the Establishment of Torah Schools.” The articles of incorporation of the society firmly established the ideological authority of a body of Orthodox rabbis in all matters of religious life appertaining to its functions; indeed, the Rabbinical Supervisory Council would determine the very scope of its jurisdiction, since it would decide what constituted a religious matter. A group of Orthodox rabbinical leaders was enlisted, and Torah Umesorah launched into the work of advocating the establishment of hundreds of Jewish day schools, nationwide.

### **Jewish Education in a World Transformed, 1945–1975**

The dominant motifs of American Jewish life in the period 1945–75 were suburbanization and institutional growth. In the 1950s and 1960s, at least a billion dollars were spent building a thousand new synagogue buildings. Many of the young families who relocated to new suburban areas had not previously been involved in synagogue life. The synagogue, however, represented an expression of Jewish group feeling and was seen as a primary vehicle – particularly with the decline of “Jewish neighborhoods” – for the Jewish education and socialization of the younger generation. The Union of American Hebrew Congregations grew from 334 member congregations in 1948 to 664 in 1966, while the United Synagogue grew from 350 affiliates at the close of World War II to 800 by 1965. With the growth of Los Angeles Jewry – from 160,000 to 480,000, in the period 1945–65 – a West Coast branch of the Jewish Theological Seminary (\*University of Judaism) was established (1947), as was a branch of Hebrew Union College (1954). In the 1950s and 1960s, the rate of synagogue affiliation climbed from the 20% of the 1930s to nearly 60%. American society validated Sunday school attendance as an expression of wholesome, middle class values.

One hundred forty thousand Holocaust survivors came to the United States after World War II, joining more than 200,000 refugees who had been admitted to the U.S. between Hitler’s rise to power in 1933 and America’s entry into the war, late in 1941. Among the most recent arrivals were Jews from traditional Jewish societies, who served as a “cultural booster shot,” advancing demand for more substantial Jewish education. At the same time, the establishment of the State of Israel heightened Jewish identification among many American Jews, and excitement surrounding the founding of the State of Israel seemed to validate the teaching of modern Hebrew.

The post-World War II baby boom, combined with heightened synagogue and Jewish (largely synagogue-sponsored) school attendance brought about a trebling – in one generation – of students enrolled in Jewish schools, from 200,000 in 1937, to 588,955 in 1962. While, in the 1930s, only an estimated 10,000 students (5% of total enrollment) were in high school programs of Jewish education, by 1959, closer to 10% of the expanded population of students was to be found in Jewish secondary schools. Conservative congregational schools aimed to meet 6 hours per week (typically divided among three sessions) and the curriculum included Hebrew, prayerbook, history, Bible, customs and ceremonies, current events, and songs. By the late 1940s, 25% of Reform congregational schools had introduced weekday (in addition to Sunday) sessions. Instruction included holidays, biblical and post-biblical heroes, Jewish history and literature, Hebrew, prayers, Bible selections, singing, current events, and modern Jewish problems, and Jewish contributions to civilization.

### **Growth of Day Schools**

Spearheaded, often, by Orthodox refugees who had found asylum in the United States, Jewish day schools, which had been

rare phenomena before 1940, rapidly proliferated. From 30 day schools with 7,000 students in 1940, the “system” grew to 95 schools with 14,000 students in 1946, to 330 schools with 67,000 students in the early 1970s. By 1975, there were 425 Orthodox day schools (including 138 high schools) with a total enrollment of 82,200.

Although most Torah Umesorah schools devoted half of the school day to “Torah studies” and half of the day to general education, there was considerable diversity in outlook. While some schools emphasized the complete subordination of all study to a “Torah mindset,” “integrationists” sought to achieve “synthesis” of Judaism and Americanism. Such ideological differences influenced the apportionment of time between Torah studies and general studies, the language of religious studies instruction, the choice of texts (within the “sea” of classical Jewish sources), and the structure of the school day.

Writing in 1973, Alvin Schiff distinguished between Orthodox Hebrew day schools, traditional yeshivot, and ḥasidic schools, noting that in the latter two categories – accounting for one-third of U.S. day schools – 30–40 hours per week were dedicated to Jewish studies and 10–15 hours (frequently less) to general education. From the 1940s to the 1960s, significant numbers of Torah studies educators were European immigrants. As Orthodox rabbinical seminaries grew and yeshivah day school enrollment escalated, American-educated teachers – themselves yeshivah graduates – became, increasingly, common. While the great majority of day schools were under Orthodox sponsorship, it was estimated, in the 1960s, that one-third of the students enrolled in yeshivah day schools were from other than Orthodox homes.

A number of Conservative congregations launched day schools under synagogue sponsorship, in the years after World War II. In 1946, Congregation Anshe Emet (Chicago) opened a day school, followed in 1950 by Temple Beth El in New York. By 1958, there were 14 Conservative day schools. Additional Conservative day schools were founded in the late 1950s and 1960s; in 1964 the (Conservative) Solomon Schechter Day School Association was formed. By 1977, nearly 10,000 students were enrolled in 50 Solomon Schechter schools.

Notwithstanding movement opposition to the establishment of day schools, two Reform temples – Congregation Rodeph Sholom in New York and Temple Beth Am in Miami – opened such schools in 1970. The emergence of Reform day schools – in 1970, and subsequently – represented a coalescence of parental concern for quality secular education and the interest of rabbinic leadership in quality Jewish education. Of great significance was the fact that, as confidence in public education eroded, private schooling was undergoing “democratization” in the eyes of many Reform Jews. By 1981, there were nine Reform day schools. Not until 1985, however, were day schools approved by the UAHF, and, subsequently (1990), a Reform day school network (PARDES – Progressive Association of Reform Day Schools) established.

During the period of mass Jewish migration to the United States, the public school had been a key agent of American-

ization. By the closing decades of the 20<sup>th</sup> century, at a time of increasing acceptance of ethnic and religious diversity and, among Jews, of greater openness to and the economic means of accessing private education, many children and grandchildren of Americanized immigrants chose to send their children to Jewish day schools. For many of these students and their families, the school experience now served a Judaizing function, nurturing intensive knowledge of and commitment to a Jewish way of life.

### Congregational Education in the 1960s and 1970s

Notwithstanding the rapid growth in enrollment and the proliferation of congregational schools, curricula had not developed, substantially, for decades. Responding to this reality, and to the sense that congregational schools were missing the mark, a flurry of curricular initiatives was launched in the 1960s and 1970s. The Melton Center (at the Jewish Theological Seminary) published curricular materials on Bible and holidays. Experimental editions of the UAHC's Shuster Curriculum began appearing in 1977, and the United Synagogue produced its Menorah curriculum in 1978. Behrman House published textbooks at all levels, utilized by both the Conservative and Reform congregational schools.

One of the noteworthy additions to the new curricula was the study of "comparative religion."

The National Conference of Christians and Jews had been established in 1928, and the interfaith "goodwill" movement gained strength after World War II. In 1955, Will Herberg published his classic *Protestant, Catholic, Jew*. On this backdrop, the UAHC published *Our Religion and Our Neighbors*, in 1963, and Behrman House published *Judaism and Christianity: What We Believe*, in 1968. Students who mastered the information in these texts could recognize certain similarities and differences between Jewish and Christian beliefs about God, human nature, sin, and salvation. They would also learn about various life cycle events, calendars, and liturgies. The textbooks encouraged their readers to view themselves as no different from their neighbors in values and citizenship, while suggesting the maintenance of boundaries between Jews and Christians in a narrowly circumscribed religious sphere.

In 1959, the AAJE published the "Report of the Commission for the Study of Jewish Education in the United States." The report estimated that 40–45% of Jewish children ages 5–14 were, in 1959, receiving Jewish schooling – though upwards of 80% were enrolled in Jewish education at some time during their elementary school years. It "pegged" the average stay at 3–4 years.

With regard to the profile of teachers teaching in various school types, the report distinguished between Sunday school, weekday (supplementary) school, and day school faculties. It found that, among day school faculty members, 69% were men/31% women, and that 62% of teachers were foreign-born; among weekday Hebrew school teachers, the data showed 64% women/36% men – 61% foreign-born; among Sunday school teachers, 64% women / 36% men – 90% U.S.-born. With ref-

erence to the qualifications of teachers, the report (which was based upon an extensive survey) noted that of the "pool" of Sunday school teachers, 58% claimed nothing beyond elementary Jewish education of some sort, and 9% claimed no Jewish education.

In 1950, the Jewish Educators Assembly of the Conservative Movement was established, followed by the (Reform) National Association of Temple Educators in 1954. Yet, with the collapse of the *talmud torah* system, there were few full-time teaching positions outside of day schools in Jewish education, and a lack of qualified personnel. There was a decided tendency, in the 1960s and 1970s, to embrace pedagogic trends in public education, including audio-visual technology, programmed instruction, values clarification, and cooperative learning. A 1967 study conducted by the American Association for Jewish Education showed that 42.2% of students enrolled in Jewish schools were in one-day-per-week programs; 44.4% in 2 to 5-days-per-week programs; and 13.4% in day schools.

### New Settings of Jewish Education

A much different educational phenomenon, first emerging on a modest scale in the 1940s, was the *kolel*. The *kolel*, a full-time program of advanced talmudic study for adult men (supported by stipends) of outstanding scholarly ability, was introduced to the U.S. by Rabbi Aaron \*Kotler at the Beth Medrash Govoha in Lakewood in 1943. The Lakewood *kolel* began with 12 graduates of American rabbinical schools. In 1945, 15 men who had been Rabbi Kotler's students in Europe joined the *kolel*.

A second *kolel*, Beth Medrash Elyon of Monsey – an extension of Brooklyn-based Mesivta Torah Vodaath – soon followed. While, in 1950, there were no more than 50–100 persons studying in American *kolelim*, by the end of the 1970s the number of *kolel* participants exceeded 1,000. Beyond the numerical growth, a cultural transformation had occurred over the course of a generation: the latter-day *kolel* was no longer exclusively for the elite, most outstanding students.

Yet another Jewish educational development which came into full flower in the 1940s was the Jewish residential summer camp. Early Jewish residential camps, dating back to the years before World War I, had been sponsored by philanthropic agencies to provide relief from tenement conditions and to teach immigrant children "American ways." As earlier noted, camping as a Jewish educational vehicle was first explored by Albert P. Schoolman, principal of the Central Jewish Institute in New York (an educational center influenced by the theories of Mordecai Kaplan) in 1919. Schoolman's Camp CEJWIN, originally envisioned as a bridge between the school year and the summer months, provided enveloping experiences in Jewish living and served as a training ground for young adults entering careers in Jewish education and social service.

In the 1920s and 1930s, a number of Yiddish and Zionist camps were launched, including camping initiatives by Hashomer Hatzair, Habonim, Young Judea, and B'nei Akiva (then known as Hashomer Hadati). The first Hebrew-speaking camp, Camp Achvah, was established by Samson Benderly

in 1927. Though it provided a rich educational experience, the Depression dashed its early promise.

A more enduring Hebrew-based, Zionist camp, Camp Massad, opened in 1941, led for many years by founding Director Shlomo Shulsinger. In 1944, the Boston Hebrew Teachers College opened Camp Yavneh to advance the knowledge of students of the Hebrew Teachers College and to encourage the use of Hebrew outside the classroom. The Conservative movement entered the arena of Jewish educational camping with the opening of Camp Ramah in Wisconsin in 1947. NFTY held its first encampment at the UAHC's newly purchased camp in Wisconsin in 1951. In the 1940s and 1950s, scores of Jewish residential camps were established, coast to coast. While, prior to 1947, Jewish camping had been avowedly pluralistic, the opening of Ramah and, subsequently, of the Union Institute (Oconomowoc, Wisconsin), represented a move to a denominational agenda within the universe of Jewish educational camping. Within a few years, both Ramah and Union Institute became full-scale camping movements, often serving as training grounds for the development of the movements' leadership, lay and rabbinic.

Jewish youth groups continued their growth and development after World War II. Among the "new entries" were (Conservative) United Synagogue Youth (1951) and (Orthodox) National Conferences of Synagogue Youth (1959). Educators often encouraged students to participate in school, youth group, and residential summer camp, to maximize Jewish educational opportunity.

During the first half of the 20<sup>th</sup> century, a variety of Jewish community centers were created. In the settlement house era, such centers often focused on "Americanization" of Jewish immigrants. In the course of the Great Depression of the 1930s, JCC services to the broader community became common; many of the centers' professionals saw JCCs as agents in the mission of social reconstruction. During World War II, many Jewish centers had organized nursery schools and kindergartens to provide care for the children of working mothers. These early childhood programs became an integral part of the centers' "menu" of activities.

With increasing suburbanization, new Jewish community centers were built in emerging areas of Jewish population. In the two decades after World War II, \$125 million were invested in new JCC facilities. In an effort to clarify the mission of the JCC in the new era, the Jewish Welfare Board, umbrella organization of the Jewish Community Centers, commissioned a study (1945–47) aimed at articulating the direction to be taken by Jewish centers at mid-century. Summarizing the data, the author of what came to be known as the "Janowsky Report" noted that very few centers provided an atmosphere reflecting intensive Jewish interest or activity. While the report called upon centers to promote Jewish activity, it did not offer guidance as to how the program of centers was to move toward this outcome.

Though Harry \*Wolfson and Salo \*Baron had, by the 1930s, achieved scholarly eminence in Jewish studies at Har-

vard and Columbia, respectively, it was the ethnic studies current of the late 1960s that brought courses in Jewish studies to hundreds of American universities. The number of full-time university positions in Jewish studies had risen from 12 in 1945 to 65 in 1965, and increased even more dramatically in the ensuing decades. In addition to the availability of and mounting interest in university-level Judaic studies courses, the aftermath of the June 1967 Six-Day War saw a proliferation of and enrollment in Israel programs for high school students and collegiates.

While the "Foundation Schools" of the 1940s for students ages three through eight (combining Jewish and general education) were being supplanted by day schools, early childhood ("nursery") centers for pre-school children, which had expanded significantly during and after World War II, continued to grow. As more women entered the work force, such programs served not only a Jewish educational function, but assumed an essential child care role. Synagogues, Jewish centers, and elementary day schools were among the primary providers of burgeoning early childhood education services.

In the 1940s, adult Jewish education began a generation of renewed growth. The Conservative Movement's National Academy for Adult Jewish Studies was established in 1940, followed in 1948 by the founding of the Department of Continuing Education of the UAHC. B'nai B'rith launched adult "Institutes of Judaism" in 1948. Another adult educational initiative destined to have a significant impact was the Brandeis Camp Institute for college-age young adults, initiated by Shlomo Bardin in 1941. In 1965, the AAJE convened the first national conference on Jewish adult education in the United States. There was ample evidence that programs of adult Jewish learning were on the rise. This was consistent with the expansion, during the 1950s and 1960s, of adult education generally, as a result of increased leisure time and an escalated level of education.

Despite the many positive trends in the Jewish educational landscape, there were some ominous signs of challenge to continuing Jewish vitality. In 1957, the U.S. Census Bureau reported the following regarding birthrates among Catholics, Protestants, and Jews: Catholics, 3.1; Protestants, 2.8; Jews, 2.1. Indeed, with the end of the post-World War II baby boom, Jewish school enrollment declined to under 400,000 (from a peak of nearly 590,000 in 1962) by the mid-1970s. Perhaps most shocking was the dramatic rise in intermarriage. The National Jewish Population Study of 1971 reported that the rate of intermarriage had risen from under 7% in the 1950s to 31% between 1966–70.

The vision of integration articulated by Benderly, Kaplan, and generations of educators was, it was beginning to appear, less tenable than once imagined. As Jewish communal leaders increasingly spoke the language of "Jewish survival," the focus of congregational education became Jewish identity – "to make young people feel more Jewish." Adding to concern about the success potential for ensuring Jewish survival in the United States were two studies, published in 1975 and 1976,

which “scientifically” demonstrated that a minimum threshold of instructional hours of Jewish schooling (3,000 according to one study and 1,000 according to the second) was required to impart adult religious identification. These thresholds exceeded the level of Jewish education received by all but a small minority of Jewish students.

### **Educational Trends at the Close of the 20<sup>th</sup> Century**

The last quarter of the 20<sup>th</sup> century, particularly its closing decade, saw Jewish education emerge as a centerpiece of Jewish communal and philanthropic efforts to address the perceived challenges to “Jewish continuity” in the United States. During this period, Jewish day schools came to serve nearly 200,000 students from the four-year-old pre-school level through high school, participation in “Israel experience” programs by teens and collegiates was defined as a “birthright” and heavily subsidized, a Foundation for Jewish Camping sought to expand the availability of residential camping as a Jewish educational option, initiatives aimed at recruiting and training recent college graduates for service as Jewish educators were launched, programs of systematic, comprehensive adult learning were created and embraced by significant numbers of participants, and congregational change strategies aimed at nurturing communities of Jewish learning were conceived and piloted. Philanthropic foundations and individual funders with interest in Jewish life came to play an increasingly more substantial role in shaping Jewish educational projects. Evidence of intensification of Jewish learning and living was readily available, as was evidence of declining Jewish population and the diminishing Jewish involvement – at least on a communal level – of many Jews. Sociologists aptly noted that, notwithstanding the plans and prescriptions of Jewish community leaders and organizations, the story and extent of individual Jewish involvement was, increasingly, a function of the “sovereign self.”

Among the educational trends of note towards the close of the 20<sup>th</sup> century were the following:

1. The growth of early childhood education programs
2. The “boom” in Jewish studies programs on college campuses and the revitalization of Hillel
3. A more “holistic” approach to Jewish education, embracing both formal and informal educational experiences
4. Family education in a variety of settings (including Jewish community centers, schools, and retreat centers)
5. The proliferation of adult study opportunities
6. The impact (albeit touching a modest percentage of the population pool) of Jewish residential camping
7. Expanded Israel trips, including Birthright Israel (a partnership between North American Jewish philanthropists, Jewish Federations, and the Israeli government to make it possible for American Jewish college students to experience Israel on organized, ten-day trips, at no charge)
8. Foundation initiatives in funding broad issues in a systemic fashion

Many of these initiatives were responses to the findings of the 1990 National Jewish Population Survey, indicating inter alia that the intermarriage rate had reached 52% (a figure

challenged by some as overstating a rate which stood “only” at 43%). Even before release of the NJPS, the Commission on Jewish Education in North America, convened by respected philanthropist Mort Mandel, had issued its report, *A Time to Act*, giving expression to the malaise of American Jewry, and suggesting Jewish education as the antidote.

As growing numbers of school-age children of the “echo” of the post-World War II baby boom were enrolled in private schools, including Jewish day schools, “community” (i.e., pan-denominational) Jewish day schools were among the expanding educational venues. Alongside the Torah Umesorah, Solomon Schechter, and PARDES School networks, there emerged networks of pluralistic day schools, representing approximately 10% of day schools and of student enrollment. Community elementary schools were organized as RAVSAK: the Jewish Community Day School Network. In 1999, the North American Association of Jewish High Schools (NAAJHS) was formed. Consisting chiefly of community day high schools, this network had more than 20 member schools within three years of its establishment. Its programs included joint student activities, in addition to collaboration among educational professionals. The American Association of Jewish Education was, in 1981, reconstituted as JESNA (Jewish Education Service of North America), and undertook to work with federations, bureaus, and school networks for the advancement of Jewish education, nationally.

With the growth of non-Orthodox day schools – and the enrollment in such schools of students whose families, in many cases, represented the element within Conservative and Reform congregations most interested in a more intensive Jewish life style – the primary focus of part-time congregational education came to be “Jewish identity” development. Consistent with this change in emphasis, and responding to member families’ expressed needs, many schools sponsored by Conservative congregations modified their “traditional” 3 days /6 hours per week standard in favor of two weekly sessions.

Concern about the efficacy of congregational schooling was expressed not only by earlier research reporting on the inadequacy of instructional hours, but by a major study conducted by the Board of Jewish Education of New York in the mid-1980s. Findings of the study were released in a report titled “Jewish Supplementary Schooling: An Educational System in Need of Change.” The report urged that family education and informal education became integral to supplementary education and that training and the provision of educational career opportunities be made available to attract and retain qualified personnel for the type of instruction proposed.

The 1980s and 1990s saw significant growth in family education initiatives. Early childhood Jewish education programs, in particular, were increasingly understood as portals of entry offering the possibility of Jewish educational engagement with parents and families. At the same time, there were those who argued that not only the family but the communities of families comprising congregations needed to “re-imagine” themselves. In the 1990s, Joseph Reimer chronicled

a model of effective, school-based Jewish education in a congregation which had apparently transformed itself into a community of learning. Isa Aron led a systematic project, “The Experiment in Congregational Education,” aimed at facilitating a reconceptualization of congregational education. In Dr. Aron’s vision, synagogues needed to re-engineer themselves into congregations of learners. On a parallel track, adult education frameworks such as Boston’s Meah program, the Wexner Foundation Heritage program, and the Florence Melton Adult Mini-School, each serving thousands of participants over a two-year period of intensive study, aimed at effecting socio-cultural transformation through Jewish learning.

An Avi Chai Foundation study of day school enrollment, released in the year 2000, showed that 80% of the 185,000 students (pre-K–4-years-old–through 12<sup>th</sup> grade) enrolled in the country’s 670 day schools were in Orthodox schools; more than half of the total number of day school enrollees were in the state of New York. Ḥasidic and yeshivah day school enrollment – estimated at 33% in 1973 – had, a generation later, grown to nearly 50%. That the day school phenomenon, however, was not exclusively the concern of Orthodox institutional leadership was reflected in the emergence of PEJE (Partnership for Excellence in Jewish Education) – a consortium of mainly other-than-Orthodox philanthropists organized to promote access to and the quality of day school education – as a prominent advocacy group in support of day school education. The end of the 20<sup>th</sup> century saw an escalating number of day high schools established, many of them “community” (non-Orthodox) schools. Within the Orthodox sector, an Association of Modern Orthodox Day Schools and Yeshiva High Schools (AMODS) was established, affiliated with Yeshiva University.

The 1990s saw the emergence of “Partnership 2000,” a series of “twinning” linkages between Israeli municipalities and various American Jewish Federations. Within those partnerships, educational initiatives between Israeli schools and American Jewish schools (typically, day schools) were launched. These joint ventures commonly brought faculty (and, sometimes, students) together, often around the question of the nature and meaning of Jewish peoplehood and core Jewish values. A century after Aḥad Ha-Am suggested that, somehow, a critical mass of Jews constituting a majority population in the land of Israel might resolve the malaise of Judaism in the modern world, the legatees of his thinking – both in Israel and in the U.S. – were working jointly to meet the continuing, complex challenge of articulating the very meaning of Jewish identity. On both sides of these partnerships, Jewish communities aggregating 75% of world Jewry sensed the need for such definition, knowing that, in the case of Jewish education as with any other educational matter, coherent purpose is essential for effectiveness.

The 1990s saw renewed declarations regarding the importance of Hebrew language literacy. The Statement of Principles for Reform Judaism, for example, adopted at the 1999 Pittsburgh Convention of the Central Conference of American Rabbis, affirmed “the importance of studying Hebrew, the

language of Torah and Jewish liturgy, that we may draw closer to our people’s sacred texts.” It remained to be seen what impact the “new” Pittsburgh Platform might have on emphases in curriculum and instruction in the educational settings of Reform Judaism. Similarly, in the mid-1990s, the chancellor of the (Conservative) Jewish Theological Seminary of America, Ismar \*Schorsch, issued a pamphlet describing the seven “core” values of Conservative Judaism. Schorsch identified recognition of the importance of Hebrew as a core value of Conservative Judaism, urging that Hebrew must emerge as the unifying language of the Jewish people. Writing at a time when Conservative congregational education was, for increasing numbers of students, being restructured from three weekly sessions to two weekly contacts, it remained to be seen in which settings this sentiment might be “translated” to an action program.

By 1998, Jewish civilization was being taught or researched at over 700 American institutions of higher learning. While the 2000–1 NJPS indicated that 41% of Jewish undergraduates took at least one course in “Jewish studies” during their college years, it is important to keep in mind that the academic analysis of aspects of Jewish civilization is neither designed nor presented as an exploration which should, in any way, inform the learner’s identity. A revitalized Hillel Foundation sought to meet – and, for many, to create – Jewish educational needs of an estimated 400,000 Jewish collegiates.

By the year 2000, an estimated 18,000 post-high school young men – in addition to the 150,000 students of both genders in Orthodox Jewish day schools – were enrolled in yeshivot and *kolelim*. Of this number, approximately 2,350 studied at the Beth Medrash Govoha in Lakewood and 1,500 were at the United Talmudical Seminary of the Satmar ḥasidim. An emerging phenomenon was the establishment of small, “activist” *kolelim* in cities from Boca Raton to Atlanta to Pittsburgh, Chicago, Los Angeles, and elsewhere, in which full time, deeply Orthodox talmudists devoted significant time to community education, engaging in study with non-traditionalist segments of Jewry. In addition to the growing number of *kolel* participants, thousands of American Jewish young men and women were studying in yeshivot and seminaries in Israel each year. Yet, even the Orthodox population was by no means impervious to acculturating tendencies. The estimates for dropouts by youth from Orthodoxy, though not from Judaism, ran as high as one-third.

The 2000–1 NJPS indicated that, among students ages 6 to 17 in once per week programs, 2–3 times per week, or Jewish day schools, the day school group represented a plurality of students, with 29% of school age students receiving day school education, 24% part-time (but more than once per week) Jewish education, and 25% attending once-per-week classes, during the course of their educational “career.” Day school enrollment had become ubiquitous in Orthodox circles and PEJE was undertaking a series of initiatives designed to double – over the ensuing decade – day school enrollment in the non-Orthodox sector (this at a time of a shrinking po-

tential student pool owing to the end of the “echo” of the post-World War II baby boom). Issues such as government financial support for the education of students attending (day) schools, whether through voucher programs or funding of assorted educational services, continued to be vigorously debated within the Jewish community. The growing number of “community” (non-denominationally affiliated) day schools, combined with the emergence of two new non-denominational rabbinical schools (Academy for the Jewish Religion, California, and the Rabbinical School of Hebrew College, Newton, MA), suggested a growing strand of “post-denominational” American Judaism in the making.

The notion of Jewish education as “enculturation” gave rise, in the closing decades of the 20<sup>th</sup> century, to increased attention to “beyond the classroom” experiences engaging children and families. Influenced perhaps by public discussion and government action in the matter of providing appropriate educational services and opportunities for students with special learning needs, expanded initiatives to provide Jewish education for students with special needs were launched. Programs built on “inclusion” and self-contained models were established in schools, camps, and youth groups.

The trend towards maximizing the Jewish educational effectiveness of Jewish community centers continued at the turn of the century, as did “synagogue transformation” projects. If the Pittsburgh Platform of 1885 was a statement of late 19<sup>th</sup>-century American Jewish acculturation, the Pittsburgh Platform of 1999 reflected revitalized interest in the “whole array” of Jewish teaching. Kaplan’s vision of Jewish organizations as vehicles for promoting Jewish learning and fostering Jewish consciousness was being realized in many settings.

Thus, by the end of the 20<sup>th</sup> century, trends of intensified engagement in Jewish education stood alongside diminishing numbers of Jews, and the spirit of individualism – long a distinguishing feature of the American ethos – was pervasive in Jewish life. The structures of Jewish corporate society, ruptured by modernity, never held sway on American soil. Through the first half of the 20<sup>th</sup> century, however, immigrant ties, the specter of antisemitism, and support of the emerging State of Israel had served to nurture and sustain strong communal bonds. By the latter part of the 20<sup>th</sup> century, the “sovereign self” reigned fiercely supreme. Individual “journey” had, for increasing numbers of Jews, supplanted community-centered Judaism. A growing array of Jewish educational frameworks aimed to respond to diverse needs and interests.

### Challenges at the Beginning of the 21<sup>st</sup> Century

Within the many domains of Jewish educational activity, the issue of goal clarification, or educational vision, is an increasingly recognized focus. Articulating a vision (or multiple visions) of Judaism and its significance must, as generations of concerned observers have noted, be the starting point of Jewish educational activity. One significant model of building education on a “platform” of vision and clearly defined purpose was a pioneering school accreditation program de-

veloped by the Bureau of Jewish Education of Greater Los Angeles for Jewish day, supplementary, and early childhood education centers in the 1990s. This comprehensive program, as the Experiment in Congregational Education, called for institutional articulation of the mission and goals of each Jewish educational community as an essential starting point. Towards the same end, the Mandel Foundation, prior to and since publication of its *Visions of Jewish Education* (2003) – a work which “unpacks” the educational implications of alternative visions of Jewish education – has sponsored training programs aimed at encouraging more careful reflection on educational vision.

The challenge of personnel recruitment, training, and retention has been part of the “story” of Jewish education since the earliest period of American Jewish life. The Mandel Commission report of 1990 highlighted personnel as key to addressing Jewish educational challenges in every domain – early childhood through adulthood; in 2004, JESNA convened a national “Summit” focused on addressing the personnel needs of Jewish education. This heightened attention to the essential need for personnel has “translated” to a proliferation of fellowship and in-service programs, both preparing new recruits and strengthening the skills of those already in the field.

In addition to clarity of vision and the training of educational personnel, the cost of providing and accessing Jewish education is a third, critical issue, early in the 21<sup>st</sup> century. Having developed such outstanding – and costly – frameworks as day schools and residential camps, to name but two examples, the need for ensuring student access is compelling. If seats or beds, as the case may be, cost thousands or tens of thousands of dollars per child per session, what is to be the “standing” of the majority of American Jews who are unable to sustain the costs involved? The engagement of increasing numbers of private foundations in the cause of Jewish education and the example of “Birthright Israel” represent “promising prospects,” but the challenge of financial access to Jewish education remains considerable. The organic inter-relationship of the above issues is clear. Attracting and retaining qualified personnel surely has cost implications. A sense of vision and mission relates to attracting personnel and funds, and will be rooted in notions of the very nature of Judaism and the purpose of Jewish education.

If American Jews are to continue to flourish and contribute to the world as Jews, intensive and extensive Jewish educational opportunity must, surely, be available and accessible. Though Jewish population is declining (because of low birth-rates) and many Jews lack rudimentary Jewish education or more than an ephemeral sense of Jewish identity, the percentage and numbers of American Jews involved in serious Jewish study have never been greater. An Avi Chai report released in 2005, for example, showed that, over the five-year period 1998–99 to 2003–4, day school enrollment had increased from 185,000 students to 205,000 students.

At the start of the century, new initiatives were also underway aimed at strengthening early Jewish education and

engaging parents of early childhood students in Jewish experiences. The challenges of creating, sustaining, and providing access to frameworks of meaningful Jewish educational engagement to nurture and facilitate lifelong Jewish learning and living are considerable. It is, however, the commitment and sense of urgency of those who care deeply about the advancement of Jewish education and act accordingly in each generation that ensures the vitality of Jewish life in the United States, as elsewhere.

[Gil Graff (2<sup>nd</sup> ed.)]

## GREAT BRITAIN

### Early Period

Jewish education was quickly reorganized after the readmission of the Jews in the mid-17<sup>th</sup> century. The London Sephardi congregation established a boys' school, *Sha'arei Tikvah* ("Gates of Hope"), in 1664, where instruction was at first given in Spanish, Portuguese, and Ladino, although English was one of the secular subjects taught. A talmudical college (Beth Hamedrash Heshaim, 1664) was also sponsored by the Sephardim, and in 1730 the Villareal girls' school was founded to provide a training in Judaism, languages, and domestic science. During the 17<sup>th</sup> century, the haham of the London Sephardim had to devote several hours of his day to teaching the children of his congregants. Jewish educational standards among the British Ashkenazim were uniformly lower. Although the Great Synagogue in London established a *talmud*

*torah* school in 1732, records of the mid-18<sup>th</sup> century show that the more recent Ashkenazi community had managed to organize only two small "*hadarim*" in which the language of instruction was Yiddish. An anonymous publication of the late 18<sup>th</sup> century, *Sefer Giddul Banim* (London, 1771), discussed contemporary teaching methods and syllabi in the spirit of the Haskalah. Despite its Hebrew title, this work was written in Yiddish and its approach reflects the critical views of English *maskilim* of the time.

### The 19<sup>th</sup> Century

By the beginning of the 19<sup>th</sup> century, English had replaced Portuguese and Yiddish as the language of instruction in Jewish congregational schools, which were reorganized and broadened. The Sephardi "Gates of Hope" school was reconstituted in 1821 and the Villareal girls' school merged with the National and Infant Schools in 1839. Meanwhile, the Ashkenazim had overtaken the Sephardim in numbers and importance and this development was reflected in the comparatively large number of educational projects established during the first half of the century. In London, various "free schools" came into being: the Westminster Jews' Free School (1811); the (East End) Jews' Free School (1817); and the Jews' Infant Schools, founded to combat missionary activities. The Western Metropolitan Jewish School flourished during the years 1845–97 and, from the 1860s, other schools were established in the Bayswater, Borough, and Stepney districts. "Hebrew endowed schools" were also founded in the major cities of the Provinces, such as Manchester (1838), Liverpool (1840), Birmingham (1840), and Hull. By 1850, some 2,000 Jewish children attended schools of this type in Britain, representing a remarkably high proportion of the total Jewish school age population at a time when the Jews of Britain numbered no more than about 35,000.

The "free schools" did not, however, enjoy a complete monopoly of Jewish education at this period. Some children attended religion classes after spending the day at non-Jewish schools, and their educational needs were catered for by the Jewish Association for the Diffusion of Religious Knowledge (1860). Other children attended Jewish fee-paying schools run by private individuals and these were often of vastly differing educational standards. Among the best known were those of the Hebraist Hyman Hurwitz (Highgate, c. 1800), whose pupils included many who later attained eminence in Anglo-Jewry; Solomon Lyon (1754–1820), whose Jewish boarding school at Cambridge was the first of its type in Britain; the writer Grace \*Aguilar (Hackney, 1842–47); and the Orientalist Louis \*Loewe, who was secretary to Moses Montefiore.

Jewish educational institutes of an advanced type also came into existence during the early and mid-19<sup>th</sup> century. A chair of Hebrew was established at the non-sectarian University College of London in 1828 and attracted Jewish teachers and students; while the Jews' General Literary and Scientific Institution, inspired by the popular "mechanics institutes," was founded in 1845. Ten years later, Jews' College was established in London to train Jewish ministers and preachers. Dur-

ing the 1870s a Society for Hebrew Literature also flourished in London. Boys intending to enter the Jewish ministry were educated at the Jews' College Preparatory School (1855–79), a forerunner of Aria College in Brighton.

Following the Education Act of 1870, which established free primary schooling for children in Great Britain, no new Jewish “free schools” came into being and the private, fee-paying establishments suffered a sharp decline. Toward the end of the 19<sup>th</sup> century, when Jewish immigration from Eastern Europe swamped the old-established communities in London and the provinces, dozens of Yiddish-speaking *hadarim* and *talmud torah* schools were set up throughout the country. Though despised by many of the anglicized Jews, these provided Jewish youngsters with a far deeper basic training in Judaism. The Association for the Diffusion of Religious Knowledge was reorganized as the Jewish Religious Education Board (1893) and, by the turn of the century, the Jews' Free School in London's East End with its 3,000 pupils (2,000 boys and 1,000 girls) was the largest school in Britain and reputedly the biggest Jewish teaching center in Europe, if not in the whole world. Many of its own teachers were former pupils and it provided the staff for many other Jewish schools in Great Britain and the British Empire. However, as Israel Zangwill observed in *Children of the Ghetto* (1892), the school's primary aim was to neutralize the more fiery Judaism of “alien” immigrants by the process of anglicization; and by 1901 Solomon Schechter was already deploring the ignorance prevalent in the Anglo-Jewish community.

### The 20<sup>th</sup> Century

As early as the first decade of the 20<sup>th</sup> century, the established Jewish educational organizations were feeling the pressure of the more Orthodox bodies set up by, or on behalf of, the immigrant population. The process had a synagogal parallel in the rivalry between the United Synagogue and the Federation of Synagogues in the London area, and there were similar repercussions in the major Jewish centers in the Provinces. A Talmud Torah Trust (known in later years as the London Talmud Torah Council) was founded in London in 1905; while bodies of the same type came into being in Leeds (1879) and Liverpool (1893) and in Manchester and Glasgow. The Redmans Road Talmud Torah in Stepney (1901) first introduced instruction in Hebrew on the Zionist pattern (“*Ivrit be-Ivrit*”), the same system being adopted by the Liverpool Hebrew Higher Grade School of Jacob Samuel Fox. However, the overwhelming proportion of Jewish children attended state primary and secondary schools and acquired their meager knowledge of Hebrew and Judaism in “withdrawal classes” or in the religious schools administered by the various synagogue groups. Although an amalgamated Union of Hebrew and Religious Classes was founded in London (1907), there was little concerted effort to train teachers, standardize textbooks, or inspect classes in the Provinces. Those Jewish parents sufficiently interested could request the withdrawal of their children from Scripture (“Divinity”) lessons and their

exemption from attendance on Saturday mornings and Jewish festivals, wherever non-Jewish head teachers were agreeable. Only a small minority of youngsters enjoyed the benefit of a more intensive course of instruction.

After World War I, a fresh attempt was made to reorganize Jewish education through the “Jewish War Memorial” project, which led to the establishment of the Central Committee for Jewish Education (1920). This worked with limited success for the next two decades. More strenuous efforts were made by Zionist educators such as Jacob Koppel Goldbloom in London's East End and Izak Goller in Liverpool, as well as by the more strictly Orthodox Jews of London, led by Rabbi Victor (Avigdor) Schoenfeld. In 1929, the latter established the Jewish Secondary Schools Movement, which was reinforced by Orthodox teachers and scholars from Central Europe who sought refuge in Britain during the 1930s. Other immigrants helped to fortify and improve the religion classes and standards of the Reform and Liberal movements. In the sphere of rabbinic training, Jews' College – the British Empire's only seminary from 1855 – continued to prepare ministers and a few rabbis under the direction of Adolf Buechler; while the more recent yeshivot (talmudical colleges) founded by immigrants from Lithuania and Poland endeavored to produce “learned laymen” capable of influencing the religious direction of the community and of raising its Jewish educational sights. By 1939, there were flourishing yeshivot in London (Etz Chaim – Tree of Life College, 1903; Law of Truth Talmudical College, 1938, etc.), Manchester (1911), and Gateshead (1927), and smaller yeshivot in Liverpool (1915), Leeds, and Glasgow.

At the outbreak of World War II, the Jewish educational picture in Great Britain showed signs of improvement. Apart from the two old-established Sephardi schools and the London and provincial “free schools” of the 19<sup>th</sup> century, there were some 3,000 pupils at the Jews' Free School, over 2,000 at the 19 institutes run by the Talmud Torah Trust, and nearly 5,000 boys and girls enrolled in the 57 classes of the Union of Hebrew and Religious Classes, with many more at *talmud torahs* and religion classes in the Provinces. In 1939, the Central Committee for Jewish Education merged with the Joint Emergency Committee for Jewish Religious Education in Great Britain and, led by educators such as Nathan Morris, grappled with the urgent problem of maintaining a Jewish educational program for children and young people uprooted from their homes by wartime evacuation. A series of regular publications and correspondence courses was devised for the teaching of Hebrew, Bible, Mishnah, Jewish history, and religious subjects; and supplementary aid was provided by the Habonim, Bnei Akiva, and Torah va-Avodah Zionist youth movements, all of which published material of an educational nature during the war years. The Education Act of 1944 first gave formal sanction to the withdrawal of Jewish children from state or state-aided voluntary (i.e., denominational) schools for the purpose of worship or religious instruction in accordance with parents' wishes.

### Early Postwar Developments

A Communal Conference on the Reconstruction of Jewish Education in Great Britain was held in London in 1945, as a result of which two major coordinating bodies came into being: the London Board of Jewish Religious Education and the Central Council of Jewish Religious Education, which had the harder task of organizing schools and classes in Jewish communities throughout the British Isles. In London and the Provinces, the old “*heder*” and *talmud torah* institutions gradually gave way to the Jewish day school system, and increasing emphasis was laid on combating ignorance, apathy, and assimilation. In this battle much inspiration was obtained from the emergence of the State of Israel, which has enlivened the Jewish calendar and added a new zest to the learning and teaching of Judaism and Jewish history as well as the Hebrew language.

During the late 1940s and the 1950s many new Jewish day schools were founded in London and the major cities, this movement gaining added impetus and encouragement after the Ministry of Education granted recognition to several such schools in 1951. Most of them provide primary education (ages 5–11) in general subjects and Jewish studies, but there are also some secondary and grammar schools which receive state aid. Progress was at first slow after the devastation of the war years and in 1953 less than 19,000 Jewish children in the Greater London area (with a total Jewish population of 285,000) received regular religious instruction, as compared with slightly more than that number in 1924, when there were only 175,000 Jews in the British capital. By 1954, there were ten Jewish schools in Britain receiving state aid and 13 others operating on a private basis. One important development was the revival of the old Jews’ Free School as the JFS Comprehensive School in Camden Town, North London (1958). The postwar years also saw the growth of the Jewish Secondary Schools Movement and of two other Orthodox networks: the right-wing Yesodey Hatorah schools (1943) and the Lubavitch Foundation (1959). A few schools were also sponsored by the British Mizrahi Federation in conjunction with the Jewish Agency Torah Department (North-West London, Dublin) and many more in London and the Provinces by the British Zionist Federation. Schools of the Zionist type run in conjunction with the London Board or local Jewish education authorities were founded in the London suburbs of Clapton (1956), Willesden (1945, 1947), Hampstead Garden Suburb, Golders Green (1959), Edgware (1956), and Ilford (1970), and older schools refounded in Bayswater and Stepney. The same trend was maintained in the Provinces with Jewish primary schools in Birmingham, Leeds, Liverpool, Manchester, Newcastle, Southend, Sunderland, and in Dublin and Glasgow.

The rate of educational progress may be gauged from the fact that, while only a little more than 4,000 Jewish children attended day schools in 1953, nearly 9,000 were enrolled in schools of this type by 1963. In 1961, it was estimated that 13% (approximately 8,000 children) out of the total Jewish school population attended 18 kindergartens, 23 primary, and 9 secondary schools under various Jewish auspices in Great Britain

(of which 16 were state-aided); while 22,000 Jewish youngsters were enrolled in “withdrawal classes,” “*hadarim*” and *talmud torah* and synagogue schools throughout the country. Nevertheless, only a little over half of the Jewish population of school age received regular Jewish education. Attendance in the day schools compared with the national average, whereas boys enrolled in synagogue and similar classes tended to abandon their Jewish studies after the critical age of 13, when they had reached their bar mitzvah. The same was true of girls once they reached their early teens. By 1970 there were 50 Jewish day schools in Great Britain (a little over half of them in the London area), with about 10,000 pupils in all, including 4,000 in the Provinces.

### Secondary and Higher Education

During the 1950s and 1960s there was a gradual, but significant, increase in the number of Jewish youngsters in full-time attendance at Jewish secondary and grammar schools. In the Provinces, the two principal mixed grammar schools were both in Lancashire – the Liverpool King David School (part of a local network with a total enrollment of 700, not all of whom were, however, Jewish children) and the Manchester King David High School, which also had associated infants’ and junior schools. The Glasgow Hebrew College taught youngsters over the age of 13. There were also a number of voluntary schools in Manchester, where about half the Provincial day schools were concentrated, including the Manchester Jewish Grammar School (Boys) and the Manchester Jewish High School for Girls. The most novel experiment in Jewish education of the postwar years was Carmel College at Wallingford, near Oxford, founded by Rabbi Kopul Rosen in 1948. This was a highly successful Jewish “public school” combining a high level of secular and traditional Jewish studies. It appealed to parents frustrated by the public school “quota” system operating against Jewish boys, but also attracted students from abroad. Whittingehame College in Sussex, run on a Zionist pattern, was, unlike Carmel College, based on a secular program, which may account for the lack of public support which led to its closure in the late 1960s.

The Jewish institutions of higher learning were headed by Jews’ College which, under the direction of Isidore \*Epstein, was reorganized from 1958 as a seminary for the training of rabbis, ministers, and cantors, with an associated teachers’ institute. The Judith Lady Montefiore College (1869) in Ramsgate was reestablished in 1952 as the result of an agreement between the London Sephardim and the Jewish Agency Torah Department to train teachers and cantors mainly recruited from North Africa. In 1960 the college was transferred to London. Leo Baeck College (1956), a Reform foundation, was later reorganized in conjunction with the Liberal and Progressive movement to train non-Orthodox rabbis and teachers. By 1967, there were a dozen yeshivot in Great Britain with a total enrollment of some 400 full-time students – about four times as many as those attending the two London seminaries. Four of the yeshivot (Etz Chaim, Law of Truth, Horomo, and Chaye

Olam) were in the Greater London area; and there were three major yeshivot in Gateshead, Manchester, and Sunderland, each of which had an associated *kolel* (institute for higher rabbinic studies). Gateshead, an island of strict Orthodoxy, had a yeshivah population of 160 in 1962 and also housed two Jewish schools. There were smaller yeshivot in Ilford, Leeds, Liverpool, and Glasgow. Advanced Hebrew studies were also pursued by degree students at the universities of London, Leeds, Manchester, and Oxford, and at Dublin and Glasgow.

Jewish education was promoted in Great Britain by various communal and other bodies, including the National Union of Hebrew Teachers (1945), which fought a long campaign to raise the status and remuneration of the Jewish teacher; the B'nai B'rith Hillel Foundation (1953); the Inter-University Jewish Federation (1919); the Central Council's Jewish Youth Study Groups (1946); and Hovevey Torah (1951), a voluntary organization of young adults conducting a weekly program of advanced Torah study in London. Other important educational bodies included the Society for Jewish Study (1946), whose members ranged from the Orthodox to the Liberal; the Jewish Book Council (1949), which organized an annual Book Week of lectures and exhibitions in London; and the Institute of Jewish Studies (1953), established in Manchester by R. Alexander \*Altmann and later transferred to University College, London. One notably successful educational scheme was the Hebrew Seminar movement initiated by Levi Gertner, director of the Jewish Agency Education Department, which drew hundreds of participants to its weekend and vacation courses in the countryside and abroad.

### Hebrew Teaching

The cost of maintaining the fabric of Jewish education in Great Britain is borne by the most committed, and derives from communal taxation, voluntary donations, Zionist grants, *kashrut* supervision fees, and synagogue seat rentals. Additional sums are obtained from fees paid by a minority of parents, and a proportion of the budget is also paid by the state.

In order to improve the general standard of Hebrew teaching, salaries were increased (this was not necessary in state-recognized schools) and a number of teachers' training colleges established. These included the Teachers' Institute attached to Jews' College, whose students sat for degree and diploma examinations; an evening institute run by the London Board; the Lady Judith Montefiore College; the Salford Training College in Manchester; and two women's colleges administered by the Beth Jacob movement in London and Gateshead. In most, if not all, of these the minimum training period was three years; and in 1960 there were close to 250 men and women enrolled. There were active Jewish education boards in Glasgow, Leeds, Manchester, and Sheffield, and a communal education officer in Birmingham.

### Subsequent Developments

While estimates of the Jewish child population (and of those receiving part-time Jewish education) fell with the decline of

the general child population in Britain, the number enrolled in Jewish day schools reached some 13,000 at the end of the 1970s, representing over 20% of the estimated Jewish child population. New Jewish day schools continued to be founded and there were positive developments in Jewish adult education in various aspects involving synagogues of different religious affiliation, the Lubavitch movement, and courses for younger Jewish leaders. Enrollment continued to rise through the 1980s and 1990s reaching 30% in 1992 and 51% in 1999. The United Synagogue Agency for Jewish Education operated 14 primary and nursery schools and five secondary schools in the early 2000s and had trained over 150 teachers since 1997. The Leo Baeck College Center for Jewish Education offered an M.A. program in Jewish education from 2002.

### AUSTRALIA

In 1968 there were 40 school units of which 12 were day schools with an enrollment of 3,580 and 28 supplementary schools with a total registration of 3,335. The programs of all-day schools included secular subjects as prescribed by State authorities. In most of these schools 12 hours per week were allocated for Jewish study of traditional subjects, including modern Hebrew. These schools served children from grades 1 to 6 (ages 5–13 primary) and grades 7 to 12 (ages 14–17 secondary). The percentages of pupils on the secondary level were satisfactory (about 690 out of the total 3,580).

In the supplementary schools or part-time schools, based on a six-year program, the children attended four days a week as well as once-a-week classes. The educational program of the supplementary schools conducted by synagogues varied with the type of sponsorship. The Orthodox placed more stress on traditional subjects (prayers, Bible, customs, and Hebrew), the classes conducted by the Zionist Council emphasized the study of Hebrew, the liberal synagogue-schools, especially in the one-day-a-week classes, employed the vernacular in all teaching, and the Yiddish schools taught almost exclusively Yiddish language and literature and some Hebrew for bar mitzvah purposes. In addition to children receiving an education in the Jewish schools, there were in 1968 about 3,700 pupils in the religious instruction classes of the government schools. Since the education departments in all states of Australia permit denominational teachers to conduct weekly lessons, the Jews made full use of this opportunity. Thus a total of approximately 10,600 children received a Jewish education: a little more than a third having had a maximum program, and about two-thirds a minimal education. Most schools lacked

adequate text materials and instructional aids. Most textbooks were imported from England, the U.S.A., and Israel.

The teacher situation was very grave in the 1960s. There was a shortage of competent, qualified teachers. In 1968 the day schools employed Israeli teachers; they constituted 35% of the instructional staff. Of the teachers of general subjects in the Jewish day schools more than 50% were non-Jewish.

The schools in each state were affiliated with its State Board of Jewish Education, a community representative body headed by competent educational leadership. In addition, there was in the 1960s an Orthodox United Education Board and a Board for the Schools of the Liberal Congregations. Hebrew classes were also conducted under Zionist auspices. All schools received regular supervisory services by educators engaged by the central educational agencies. In 1968 the Jewish education budget for all Australia was 1,700,000 Australian dollars.

[Judah Pilch]

Several full-time Jewish day schools were founded in the subsequent decades, bringing the total up to 18 in the early 1990s: nine in Melbourne, six in Sydney, and one each in Perth, Adelaide, and Brisbane. These represented the various streams in Australian Jewish life, with three schools in Melbourne, for instance, representing strict Orthodoxy, and the other schools associated with the Mizrahi movement, mainstream Orthodoxy, and with the Progressive movements, with secular Yiddish culture, and with secular Zionism. Enrollments continued to climb at these schools through the 1980s and into the 1990s. In Melbourne, they rose from 4,840 at all schools in 1982 to 5,492 in 1989, and about 6,000 in 1992. In Sydney, the rise was even more spectacular, from 1,594 in 1982 to 3,041 in 1988. During the severe recession of the early 1990s, doubts were widely expressed about the continued viability of several Jewish schools, all of which were fee-paying although they each received some state government assistance. Nevertheless, though their rate of growth fell off, absolute numbers continued to increase, with especially strong growth in the Strictly Orthodox schools, and enrollments at Jewish day schools in Australia probably represented a higher percentage of the local Jewish community than in any other significant Diaspora community, with over 50 percent of Jewish school-age children attending one or another school. Indeed, Australia's Jewish-day-school system has been termed "the jewel in the crown" of Australian Jewish life, with Melbourne's Mount Scopus College, with 2,700 students, long claiming to be the largest Jewish day school in the world. Growth, though slight, continued into the 2000s despite the fact that tuition had become prohibitive for many Jewish families, who were increasingly sending their children to state schools.

Advances were made in this period in tertiary Jewish education, long an area of neglect, especially in comparison with the well-developed day school movement. By 1992, the University of Sydney and three universities in Victoria – Melbourne, Monash, and Deakin – were offering or actively

planning Jewish studies programs, a notable advance on the situation a decade before. Lecturers in Modern Jewish History were appointed at Melbourne and Monash universities in, respectively, 1988 and 1992. An Australian Association for Jewish Studies was established in 1987 and held annual conferences since then; hundreds of scholarly papers, representing all facets of Jewish studies, were presented. Several Orthodox *kolelim* also existed.

#### CANADA

Jewish education in Canada began as formal schooling, using models that were familiar to the early immigrants arriving from Europe. These modes of instruction were slowly adapted to public school models that were developing at the same time in late 19<sup>th</sup>-century and early 20<sup>th</sup>-century Canada. What began, then, as *hadarim* in private homes soon became classrooms in a synagogue, and then, later on, modern school buildings. Early schooling was supplemental to the public system, in the afternoons and on Sundays, but day schools eventually became the dominant system. In the large communities of present-day Montreal, Ottawa, Toronto, Winnipeg, Calgary, and Vancouver day school students outnumber supplementary school students, a phenomenon which distinguishes Canadian communities from those in the United States.

This distinguishing characteristic is due, in part, to the fact that early in the history of Canadian public schooling, religion separated different school systems. This remains the case in certain provinces. As a result, Jewish day schools are government-assisted in some provinces, the great exception being Ontario, with the largest Jewish population. Many attempts have been made to right this injustice in the Ontario system where Catholic schools receive full funding, and for a brief period a tax credit did exist in the early years of the 21<sup>st</sup> century.

There are a number of modes of Jewish education currently operating in Canada. These include full day schools and supplementary congregational or independent schools; Jewish pre-schools linked to day schools, JCC's, or associated to congregational or independent supplementary schools; educational programs organized by denominational, community-, or Zionist-based youth groups; educational programs at denominational, community, Zionist, or private summer camps; adult educational programs offered by congregations and community organizations as well as Jewish teacher training programs and Jewish studies courses and programs available through different Canadian universities. With the exception of a few secular schools, youth groups, and camps, almost all Jewish education in Canada is religious education and is divided by denominations: Ḥasidic, Ḥaredi, Modern Orthodox, Reform, Conservative, Reconstructionist, and Ḥavura communities. Of course, university-based Jewish studies are

conducted in the secular settings of Canada's largest academic institutions.

Day schools across Canada offer the typical full day of studies with varying proportions of general studies vis-à-vis Jewish studies, based on the ideology of the school. A typical Ultra-Orthodox school might have a morning and early afternoon of intensive holy studies followed by a late afternoon period of general studies. Another denomination will emphasize high-quality general studies for two-thirds of the day and a Jewish studies curriculum for the remaining third. Most day schools teach both textual and modern Israeli Hebrew, while some teach Yiddish for varied ideological reasons. Jewish curricular content and emphases are determined by the ideology of each particular school.

Pedagogical methodology is also case-specific to each school. The approaches range from rote recitation of texts to Montessori, multiple intelligence instruction, and arts-based techniques.

Supplementary schools are even more varied in their content and form. They range from volunteer-taught Sunday or Sabbath schools to three-day-a-week institutions with full-time directors and professional teachers. There are schools linked to synagogues and temples, community schools, Orthodox *kiruv* schools for non-Orthodox children, and for-profit commercial establishments. In Canada, supplementary schools account for the minority of children in Jewish schooling, but have demonstrated great potential for outreach to peripheral and marginal Jewish families.

Youth groups and summer camps are divided by religious denominations or Zionist movements, with some community-wide groupings. BBYO, Beitar, Bnei Akiva, Habonim-Dror, Hashomer Hatzair, NFTY, NCSY, Tzofim, USY, and Young Judea all have chapters and groups in various communities across Canada. Zionist camps, community camps, denominational camps, and private camps are active near most of the larger communities.

Teacher education has a unique character in Canada due to two university-based programs at McGill University in Montreal and at York University in Toronto, respectively. The McGill program was established in 1973, with York opening its version soon after in 1977. These are Jewish teacher training programs based on an undergraduate degree and a teaching diploma, using faculties of general education and Jewish studies programs in both institutions. York University has an agreement with western Canadian communities to train teachers for the schools of the western provinces. Other teacher training takes place either in pre-service seminaries of Ultra-Orthodox systems or in in-service professional development offered by central agencies such as Toronto's Board of Jewish Education or Montreal's Bronfman Jewish Education Centre.

Aside from teacher training, which is professionally oriented, there are multiple modes of adult education sponsored by a variety of synagogues, temples, service organizations, and community federations. They range from *kolelim* in the Or-

thodox community, sporadic lectures in a JCC, home study groups, on-line courses, synagogue *shiurim*, Daf Yomi classes, to the *kolel* in Toronto's liberal community.

It should be noted that although several provinces provide partial funding for day schools, all other Jewish educational activities are funded by users, voluntary organizations, and federated communities. In two such federated communities, Montreal and Toronto, there are central agencies for Jewish education, which provide a variety of services to Jewish schools, youth groups, camps, and Israel experiences such as the March of the Living and Birthright for Israel. In Toronto, where there is no provincial aid to day schools, the UJA Federation's Board of Jewish Education grants millions of dollars annually to subsidize day school tuition for parents in need. Over 200,000,000 Canadian dollars are spent annually on all aspects of Jewish education across Canada.

Data from the 2001 Canadian census, coupled with statistics provided by Jewish schools across the country, provide us with a snapshot of the status of Jewish education in Canada.

Of the 61,000 school-age children (those between the ages of 6 and 17) in Canada, 87% lived in the six largest Jewish communities, communities with more than 7,000 Jews. A review of enrollment in day elementary, day high school, and supplementary schools demonstrates the following: In 2001, of the 53,300 children aged 6–17 in the six largest Jewish communities, 25,446 children or 48% were receiving some form of Jewish education. In 2001, of the 34,215 Jewish students aged 6–13 in these communities, 13,767 or 40% attended day elementary schools; by comparison, in 1970, 30% of Jewish students aged 6–13 in all Jewish communities with more than 25 families attended day elementary schools. In 2001, of the 19,085 Jewish students aged 14–17 in the six largest Jewish communities, 4,889 or 26% attended day high schools; by comparison, in 1970, only 10–14% of Jewish students aged 14–17 attended day high schools, so there clearly has been a marked increase in high school attendance. In 2001, of the 53,300 children aged 6–17 who might have enrolled in supplementary schools, 6,790 or 13% were in attendance.

An examination of the figures for individual communities reveals that enrollment statistics vary widely:

	Total Jewish population (2001 Census)	Student population ages 6–17 (2001 Census)	Total enrollment in Jewish education	Total % enrolled in Jewish education
Toronto	179,100	30,365	14,569	48
Montreal	92,975	13,585	7,733	57
Vancouver	22,590	3,140	993	32
Winnipeg	14,775	2,240	875	39
Ottawa	13,130	2,650	913	34
Calgary	7,950	1,320	363	28

In Calgary, Ottawa, and Vancouver, approximately 30% of the children aged 6–13 were enrolled in Jewish schools, with 5–7%

of the students continuing through high school and 6–14% attending supplementary school programs.

Winnipeg's Jewish elementary day schools also service close to 30% of children ages 6–13. However, the situation in Winnipeg is somewhat different. In addition to those students enrolled in Jewish schools, a significant number were enrolled in Hebrew bilingual programs at two public schools, where they study Hebrew language, culture, holidays, etc. In total, then, some 48% of students ages 6–13 were enrolled in Jewish programs. Another difference: in Winnipeg, 20% of students ages 14–17 were enrolled in Jewish high schools. A very small percent attended supplementary school programs.

Montreal and Toronto, with the largest Jewish populations, attracted a larger percentage of the students than the smaller communities. Montreal had the highest percentage of enrollment, with 55% attending elementary schools and 46% attending high schools. Supplementary schools in Montreal attracted some 5% of students ages 6–17. Toronto had 36% of 6–13-year-olds in elementary day school and 21% of 14–17-year-olds in high schools. Toronto had the highest percent of students in supplementary school settings – 17% of 6–17-year-olds. (School population data provided by Federations and schools.)

#### SOUTH AFRICA

The outstanding feature of South Africa Jewish education is the predominance of all-day schools over supplementary classes. This is a development that followed World War II. Whereas in 1948 there were only seven pupils in a pioneering day school, in 1968 there were 17 schools with an enrollment in elementary and high school departments of a total of 5,632 pupils. The early post-World War II supplementary schools consisted of several types: one hour daily, five days a week in the morning prior to classes, on public school premises, for secondary school pupils; one hour each day, or two hours twice a week in the afternoon, meeting mostly in Orthodox congregational buildings. These classes had a total enrollment in 1968 of 4,275 pupils. In Johannesburg and its environs the afternoon Hebrew schools, or *talmud torahs*, were organized in a regional body called the United Hebrew Schools. Apart from these Orthodox part-time classes, the Reform congregations under the aegis of the South African Union of Progressive Judaism also maintained such Hebrew schools with a total enrollment of about 1,300 pupils. Finally, 3,406 children studied in 53 Jewish nursery schools established and maintained by various women's groups. In 1967 Johannesburg

had an Orthodox Yeshiva College and a *Folkshule* where instruction was given in Yiddish.

All these schools, except the Reform, were administered by two separate bodies, the South African Board of Jewish Education based in Johannesburg, and the Cape Board of Jewish Education in Cape Town. This division of labor was due to the distance between the two cities. The South African Board provided various services to scattered small settlements of Jews in rural areas, such as visiting teachers, correspondence courses, syllabi, and supervisory visits.

The South African Jewish community provided especially lavish support for its ever expanding system of day schools. All these schools were accommodated in magnificent, modern structures, usually surrounded by spacious sports fields. Expenditures were covered by tuition fees, fundraising campaigns, grants by Jewish communal organizations, and by private bequests, trust funds, and endowments. To accommodate pupils from outlying country districts, hostels, or dormitories, were provided. In 1968 more than 100 pupils were housed in such hostels of the King David schools in Johannesburg. The hostel of the Herzlia school in Cape Town was also quickly filled with over 50 out-of-town boarders. Sustained living in a richly Jewish atmosphere, especially on the Sabbath, provided a lasting influence on the character of students in these hostels. A further salutary effect upon the development of student Jewish consciousness was afforded by an ulpan scheme whereby groups of secondary school pupils from day schools spent annually over three months in Israel, learning Hebrew and touring the country.

Crowning the Jewish educational system was the Rabbi Judah Leib Zlotnik Seminary in Johannesburg for the training of Hebrew teachers. From the year of its foundation in 1944 to 1968 it produced more than 100 graduates. These teachers served not only the day schools but also the widespread country communities. Every graduate was sent for a year's further study in Jerusalem. The seminary did not meet the demand for teachers. A number of students, mainly women, took courses in Hebrew at the universities of Witwatersrand and Cape Town. Bursaries (stipends) were provided for by the community for those who studied for teaching. The severe shortage of Hebrew teachers was partly filled by arrivals from Israel. In addition to the formal schooling the community provided informal cultural activities, as well as sports and recreational facilities for both youth and adults.

[Isaac Levitats]

In 2003, over 80% of school-going Jewish children in Johannesburg, Cape Town, and Port Elizabeth (whose Theodor Herzl school by then had a mainly non-Jewish enrollment) were attending one of the Jewish day schools. The total pupil enrollment in the day schools was about 8,000, substantially more than the 1970 figure of nearly 6,000 even though the overall Jewish community declined by more than a third. Those still in government schools had their Jewish educational requirements catered to by the United Hebrew Schools (un-

der the SABJE) in Johannesburg and the Religious Instruction Department of the SAJBD in Cape Town. Jewish pupils in Pretoria and Durban received Jewish education through a special department at the Crawford College branches. This arrangement came about following the takeover of the Carmel College Jewish day schools in those cities by Crawford during the 1990s.

The mainstream schools in Johannesburg were the three King David schools, located in Linksfield, Victory Park, and Sandton. The first two provided Jewish education from preschool to matriculation level while the third went up to primary school level. King David's counterparts in Cape Town were the Herzlia schools.

The ideological basis of the King David, Herzlia, and Theodor Herzl schools was officially described as "broadly national traditional," a formula intended to indicate both the religious and the Zionist character of the education. Pupils received a full education following a state syllabus and a Jewish studies program, including religion, history, literature, and Hebrew language. However, many demanded more intensive religious instruction and greater religious observance. Thus Johannesburg's Yeshiva College developed into a full-time day school from nursery school up to matriculation and steadily grew from an initial few dozen pupils to well over 800 by the turn of the century. In 1995, the school received the Jerusalem Prize for Jewish Education in the Diaspora. Yeshiva College could be regarded as centrist Orthodox in its approach. More right-wing Orthodox schools that subsequently were established included Torah Academy and Cape Town's Hebrew Academy (both under Chabad's auspices), Yeshivas Toras Emes, Shaarei Torah, Bais Yaakov, Hirsch Lyons, and Yeshiva Maharsha.

The Progressive movement also maintained a network of supplementary Hebrew and religious classes at its temples. These schools are affiliated with the Union for Progressive Jewish Education.

At the tertiary level, university students were able to take Jewish studies through the Semitics Department of the University of South Africa (UNISA); the Department of Hebrew and Jewish Studies of Natal University; and the Department of Hebrew and Jewish Studies (including the Isaac and Jessie Kaplan Centre for Jewish Studies and Research) at the University of Cape Town. Programs of adult education continued to be provided by the South African Board of Jewish Education, the South African Zionist Federation, and the various affiliates, including most particularly the Union of Jewish Women, the Women's Zionist Council, and the South African Zionist Youth Council.

#### ARGENTINA

Jewish education was sponsored and supervised by the Central Board of Education, an affiliate of the Va'ad ha-Kehillot.

This Board represented a consolidation in 1956–57 of two formerly independent educational boards, one for Buenos Aires, the other for the provinces. It included the Agudah-oriented Heikhal ha-Torah school with 500 students in 1970. Only the Yieuf (Peoples Democrats, Communist) schools with some 2,000 students remained out of this national Jewish school network. In the past the Argentine Jewish educational system consisted of supplementary schools. The first day school was opened in Buenos Aires in 1948; it took a long time for these schools to spread. Supplementary education was facilitated by the fact that the public schools meet on a four-hour two-shift basis. This enabled Jewish children to attend either morning or afternoon Jewish classes. The predominant element in the program was national rather than religious. Yiddish was given preference over Hebrew, although both languages were taught. Each of the many ideological groupings had its own program of instruction. In the 1960s these curricula began to coalesce and to gravitate toward more traditional and broadly national common elements. There were many inherent weaknesses in the system. As late as 1965 it was pointed out that only 17% of the Jewish school age population was enrolled in Jewish schools. Of those who did attend the first grade in Buenos Aires in 1960 only 4.2% stayed until the sixth grade. Small schools predominated; most buildings were inadequate. European-trained teachers were gradually replaced by native-born, most of them female and inadequately prepared for teaching. Since schools were often initiated and administered teaching by lay individuals, supervision left much to be desired. The general apathy of parents and the assimilatory factors in the community resulted in cultural deprivation of the children.

In the late 1960s there was a turn for the better. Many school buildings were modern, airy, and roomy. The well-organized community supplied a considerable proportion of the school budgets for operational and capital expenditures and strove toward a general upgrading of curriculum and supervision. There were four types of schools: purely Hebraic, Yiddish–Hebrew, Hebrew–Yiddish, and religious. Israel was a most important element of the course of study.

In addition to in-service training courses for teachers there were a number of teachers' seminaries. The oldest among them was the Midrashah, or Seminario Docente para Escuelas Israelitas, established in 1940. In the course of the first 25 years it enrolled some 3,000 students; 900 teachers were graduated. Close to 70% of the teachers in Buenos Aires and neighboring schools were graduates of Midrashah, recognized for the higher Jewish learning it offered, and the requirement was that high school teachers must be graduates of that school. In 1966 it had 350 students enrolled. The Moisesville Teachers Seminary trained many of the teachers for the interior of the country. In 1949 it graduated its first class of ten primary and kindergarten teachers. In 1966 it had 120 resident and 85 local students. Ninety-nine percent of the teachers were native-born. Many spent a year in Israel. In 1964–69, 281 Buenos Aires graduates of teacher training schools enjoyed such

an experience. Special courses were offered also for administrative personnel.

In addition to opportunities for formal schooling Argentina offered many informal programs. Thousands of students attended summer day and sleep-away camps. Evening courses for adults were offered at the spacious community center named Hebraica in Buenos Aires. Sports activities were popular among the recreational facilities which provided a means of identification with the Jewish group. Widely ramified communal and Zionist efforts further enhanced such identification. These positive factors were outweighed by the large sectors of the unaffiliated, the unschooled, and those bent on the road to assimilation.

[Isaac Levitats]

The institution of a longer school day in Argentina's public educational system in the late 1960s worked a revolution in Jewish education. With no time left for complementary education Jewish schools were transformed into day schools offering both a general and a Jewish curriculum. To keep their students the general curriculum was upgraded, often at the expense of Jewish studies, but the strategy succeeded. A survey carried out in 1997 found that nearly half of all Jewish children aged 13–17 and two-thirds of children aged 6–12 attended Jewish day schools. A total of 19,248 students attended classes in 56 kindergartens, 52 elementary schools, and 29 high schools.

By 2002, however, the numbers had dropped to just 14,700 students in 40 elementary schools and 22 high schools. The difference was the natural result of low birthrate, assimilation, and emigration. The high tuition rates in these private schools were also a deterrent under Argentina's grim economic conditions, even though local Jewish institutions, the Jewish Agency, and Israel's Ministry of Education, together with the Joint Distribution Committee and World Jewish Congress, established financial aid programs.

To reach Jewish youngsters not in day schools, the community, in cooperation with the Jewish Agency, established a supplementary program called *Lomdim* for secondary level (with about 1,200 students in 2004) with classes two or three days (6–9 hours) a week. A second supplementary program, for elementary-school children, called *Chalomot*, with 4–12 hours a week had approximately 600 children. Chabad developed a similar strategy, offering children attending public school an enriched after-school program in computers, English, and other subjects, together with Jewish studies.

There were also no teacher training institutions in Argentina after Michlelet Shazar was closed in the late 1990s. The only institutions of higher Jewish studies were Orthodox yeshivot and the Seminario Rabínico Latinoamericano of Conservative orientation, in which there was also a section for non-rabbinic studies.

## BRAZIL

On the assumption that the children of elementary and secondary school age constitutes 20 percent of the Jewish population in most countries, there should have been a Jewish school enrollment in Brazil of 28,000. Actually only a little more than 10,000 pupils attended the Jewish schools of Brazil in the late 1960s. The number of schools supervised by the central office for education consisted of kindergartens, elementary and secondary schools, a yeshivah, a college, a seminar, and a teacher training institute. Altogether 10,409 students attended these 33 schools.

The Jewish educational system combined both Jewish and general studies in the same school. The Jewish program included the study of both Hebrew and Yiddish. In schools where Jewish studies were taught two or three hours a day, there was still the possibility of teaching both languages; many of the schools, however, allowed only 40–50 minutes a day for Jewish studies, making the study of two languages in those schools to all intents and purposes impossible. The 20 Jewish day schools in the country had small enrollments, and thus had difficulties in grading the children adequately, in providing an adequate staff, and in financing. Among the Jewish teachers in Brazil there still were a number of teachers who came from abroad equipped with pedagogic skill, Jewish knowledge, experience, and deep commitment to Jewish education. But the number of those teachers was gradually diminishing. To meet in some manner the pressing need for classroom teachers, the community organized seminars for teachers in Rio and Sao Paulo, which in reality were secondary schools, applicants entering upon completion of the primary school. The Sao Paulo seminar, founded in 1950, had an enrollment of 84 students in 1968. A considerable number of the teachers were Israelis. In addition to maintaining the teacher training school, the Council of Education and Culture conducted periodically, especially during the summer, in-service teacher training programs for kindergarten and grade teachers. During the winter, the Council also conducted special courses for teachers in Bible, Jewish history, Hebrew literature, and educational psychology. In the early 21<sup>st</sup> century the Sao Paulo community had four Orthodox and four traditional schools, with 3,000 students at the Educacio Hebraico Brasileiro Renscenca. There were several Jewish schools in Rio de Janeiro, including the 500-student Bar-Ilan School, which also had a kosher dining room and a synagogue.

## URUGUAY

The enrollment in Montevideo's 11 Jewish schools (seven of them day schools) was about 3,000 in 1968. Most of the schools offered elementary Jewish education, beginning with kindergarten. With the exception of the Sholem Aleichem school, Hebrew had replaced Yiddish in all schools. Many of the teachers and principals were Israelis or had studied in Israel. All the schools were affiliated with the Board of Education of the Montevideo *kehillah*, which acts as a central coordinating supervisory community agency for Jewish educa-

tion. In the early 21<sup>st</sup> century there were four Jewish schools in all of Uruguay, with studies both in Spanish and Hebrew. A comprehensive school was the largest, going from pre-school through high school. The Chabad Center also ran a comprehensive school. About a third of the country's Jewish children attended these schools.

### MEXICO

After World War I large numbers of Jews from Eastern Europe and their families came to Mexico with the intention of staying temporarily while waiting for visas to the U.S.A. American immigration laws did not relax and they lost hope and decided then to make Mexico their permanent home. The married couples began to worry about the education of their children. Fortunately for Jewish education in Mexico there were among the immigrants a few young men with a good Jewish background who could not adapt themselves to the hard and humiliating occupation of peddling and consequently took upon themselves the organization of a school for Jewish children. The desire of the parents was to open a day school authorized by the Mexican Board of Education in accordance with the programs of the Mexican government schools, but with a substantial part of the schedule to be devoted to Jewish studies. Thus in 1924 an all-day Jewish school with 24 students was established in Mexico City.

By 1969, 45 years later, it had developed to nine all-day schools with a population of approximately 5,000 boys and girls between the ages of 3–18 in spacious modern buildings with up-to-date equipment, libraries, laboratories, workshops, and assembly halls. It has been claimed that as many as 90% of Jewish children in Mexico attended these Jewish schools, and still did at the outset of the 21<sup>st</sup> century in a country where the intermarriage rate is just 10 percent. In Mexico City there were at least a dozen Jewish schools in 2005. The schools in existence in 1969 were (1) Colegio Israelita de Mexico – from kindergarten to college with about 1,500 students; (2) Colegio Yavne – from kindergarten to college with about 700 students; (3) Colegio Tarbut – from kindergarten to college with about 1,000 students; (4) I.L. Peretz school – from kindergarten to high school with about 400 students; (5) Colegio Tarbut Sephardi – from kindergarten to college with about 800 students; (6) Colegio Monte Sinai – from kindergarten to college with about 700 students; (7) Yeshivah de Mexico – from kindergarten to high school with about 100 students; (8) Colegio Israelita de Monterrey – from kindergarten to high school with about 80 students; (9) Colegio Israelita de Guadalajara – from kindergarten to sixth grade elementary school with about 50 students; (10) The Yiddish-Hebrew Teachers Seminary in Mexico City – with about 70 students.

In all the schools the Jewish subjects were compulsory. The majority of them did not admit students in the higher

grades without a proper preparation in Yiddish or Hebrew or both. Some schools were more lenient and special groups for Jewish studies were formed to prepare the newcomers for their respective classes.

In Colegio Israelita de Mexico, Colegio Yavne, I.L. Peretz school, and in the Yeshivah de Mexico, Yiddish and Hebrew were compulsory. In all the other schools only Hebrew was taught. Three hours daily were devoted to the Jewish subjects up to high school and two hours in high school and college. In the schools where both languages were taken the time was divided equally between Yiddish and Hebrew.

All the schools were authorized by and incorporated with the Board of Education of Mexico. The colleges were under the jurisdiction of the autonomous University of Mexico. In the colleges, after successful completion of the curriculum, the students were granted the degrees of B.A. or B.S. which entitled them to be admitted to the professional schools at the university without any additional examinations.

The Jewish subjects were Yiddish language and literature, Hebrew language and literature, Jewish history, Bible, and geography of Israel. The State of Israel occupied a very prominent place in the curriculum. In the higher grades study about Israel was included and in the lower grades starting from kindergarten the teachers made use of all available material to develop in the children a sense of national identity and common fate with the people and State of Israel.

Mexican Jewry has continued to be a tight-knit mostly Orthodox community into the 21<sup>st</sup> century, enfolding its young in a comprehensive educational system that ensures a strong Jewish identity.

[Bezalel Shachar]

### NORTH AFRICA

Modern Jewish education in North Africa started with the opening of the first Alliance Israélite Universelle (AIU) School in \*Tetuán in 1862. This French-Jewish organization through its schools and through its educators inspired with missionary zeal saved a significant number of Jewish children in North Africa and Asia from misery and prepared the new generation for modern professions and techniques.

The first schools were opened for boys, often against the opposition of the rabbis. Slowly the population was won over and schools were opened for girls in the larger cities. In 1878 the first school was opened in \*Tunis. \*Algeria, being a French *département* and its Jews having been declared French citizens, had government schools for the French population, including Jews, and did not require AIU schools.

Once the advantages of a modern education were understood, the parents clamored for more AIU schools. By 1914, when the French Protectorate was established, there were 14 schools in \*Morocco with an enrollment of 5,500 pupils.

In 1928 an agreement was reached with the Protectorate authorities which assigned primary education for Jewish children to the AIU. The Protectorate agreed to subsidize the schools and to provide buildings. This enabled the AIU to de-

velop further the network of its schools in North Africa. In 1939 there were 45 schools with an enrollment of 15,800.

The basis of programs was the teaching of the French language as a channel for Western and particularly French culture. This education enabled the Jews to leave the mellahs, to enter commerce and certain professions, and to become the intermediaries between the Protectorate authorities and the Arab population. Hebrew education was given by local rabbis in the age-old tradition and with the ancient methods which had neither influence nor any relevance to the emerging new generation of AIU students.

French influence in Algeria brought about speedy assimilation, to the extent that the AIU intervened to set up *talmud torahs* and to ensure some Jewish education.

Jewish communities in North Africa assumed new importance after the loss of the six million Jews in the Holocaust. American Jews, through the Joint Distribution Committee, became interested in Muslim countries. The AIU, with the help of the Protectorate authorities, developed a large network of new schools. By 1960 there were about 30,000 Jewish pupils in AIU schools. Two new agencies started working in North Africa after World War II. \*Ozar ha-Torah, an Orthodox organization for Jewish education in Muslim countries, opened schools for boys, girls, yeshivot, and teacher training colleges. The Lubavitch Hasidim opened yeshivot for boys and Battei Rivkah for girls.

The creation of the Jewish state, the independence of \*Tunisia in 1955, Morocco in 1956, and Algeria in 1962 completely changed the Jewish map. On the one hand greater stress was laid on Hebrew and Jewish subjects. The AIU opened the Ecole Normale Hébraïque in Casablanca to train Hebrew teachers for its schools. On the other hand there was the rise in Muslim countries of anti-Jewish sentiment as a result of the wars in Israel. The independence of these countries and political events in the Middle East reduced through emigration the number of Jews in Tunisia, Algeria, and Morocco to about 50,000 by 1969. By the mid-1990s only Morocco had a substantial Jewish population of around 5,500, with only the AIU, Ozar ha-Torah, Lubavitch, and ORT schools still in operation.

[Stanley Abramovitch]

#### IRAN

\*Iran, unlike Jewish communities in other Muslim countries, did not preserve through the centuries a high standard of Jewish learning. The arrival of the Alliance Israélite Universelle (AIU) in 1898 was, therefore, very important for the preservation of the Jewish community. AIU schools opened the doors of the “*mahaléh*,” the Jewish quarter in \*Teheran, for the Jews. In many towns the schools served as a safeguard against the inroads of Christian and Bahai missionaries. The French language provided wider commercial possibilities for Jews in a developing country.

The revolution of \*Reza Shah in 1925 and his reforms weakened the influence of Muslim priests and introduced state schools for the entire population including Jews. AIU schools were opened in the larger cities. By 1939 there were 17 schools with an enrollment of 6,000. The schools provided a basic Iranian education with French as first foreign language. Hebrew was taught by local teachers and was generally on a low level. The flow of refugees through Iran during World War II drew the attention of American Jewry to Iran. The Joint Distribution Committee (JDC) opened an office in Teheran and Ozar ha-Torah (OH) sent a representative. New schools were opened in Teheran, \*Shiraz, and provincial cities, where no AIU schools existed. OH assumed responsibility for Jewish education in all AIU and OH schools. Teachers were trained in Iran and in Israel, and Israeli teachers were brought to Iran. Hebrew textbooks, suitable for Muslim countries, were printed. A first attempt was made to produce a Jewish history book in Persian for school children.

In 1969 there were 11,000 pupils in AIU, OH, and communal schools. On the basis of statistics available, it can be assumed that half the Jewish school population was in Jewish day schools and the other half in government and Christian schools. The AIU and OH developed secondary schools in the larger cities. There was emphasis on Hebrew language and Jewish religion. The level of Jewish education progressed in the 1960s and 1970s with the increasing wealth of the Jews in a period of general economic prosperity and was effective in containing assimilation trends in a community which had not known profound Jewish scholarship for many generations.

In 1977/78 there were in Teheran 11 OH, 7 AIU, and 6 community schools, including an ORT vocational school and a school belonging to the Iraqi Jews in the city. This picture drastically changed with the mass exodus of the Jews after the Islamic revolution in Iran. By the end of the 20<sup>th</sup> century there were reportedly three Jewish schools in Teheran, one in Shiraz, and one in Isfahan.

[Stanley Abramovitch]

**EDUYOT** (Heb. עֲדוּיֹת; “Testimonies”), tractate of the Mishnah in the order *Nezikin*. *Eduyyot* is different from all other tractates in the Mishnah, in that it does not focus on a particular subject matter but rather contains a number of relatively small collections of *halakhot* dealing with various topics, and organized around the names of the particular sages who transmitted them. These *halakhot* often “bear witness” to the disputes and controversies of earlier authorities and frequently involve an attempt by contemporaries or by later sages to decide or to resolve these disputes and controversies. This general tendency of the tractate as a whole, together with the repeated use in the later chapters of the phrase “rabbi so-and-so testified” (רַבִּי כַּדְּ, *he'id*), probably explains the tractate’s title. The tractate is also referred to in the Talmud (Ber. 27a; Kid. 54b; Bek. 26a) by the name *Behirata*, i.e., the “select” or “chosen” *halakhot*. This name seems to reflect an assumption that the traditions included in *Eduyyot*, having been reviewed and

adjudicated by the sages, possess some special authority, as the Talmud itself explicitly states (Ber. 27a; Kid. 54b; Bek. 26a): “The *halakhah* of R. Judah (or Meir) is accepted as normative since his view was included in *Behirata* (i.e., in *Eduyyot*).”

H. Albeck argued that *Eduyyot* differs from the rest of the Mishnah because it represents an earlier stage – in fact the earliest stage – in the redaction of the Mishnah. In his opinion later redactors of the Mishnah then took most of its *halakhot* and included them in the various tractates and orders arranged according to subject matter, each in its own proper place. Epstein, however, argued vigorously against this view (Tanna'im, 428), and it is fair to say that no consensus had been reached concerning the date and purpose of the redaction of *Eduyyot* (Stemberger, 131). According to one tradition (Ber. 28a), these testimonies were pronounced on the day when \*Eleazar b. Azariah was elected president of the Sanhedrin, but Epstein effectively refuted this view.

### The Content of *Eduyyot*

The first chapter puts on record three items of controversy between Shammai and Hillel, and further items of controversy between their respective schools. There are instances where the school of Shammai disapproved of the view of Shammai, and instances where the school of Hillel eventually accepted the view of the rival school. Reasons are given why opinions which were finally rejected are nevertheless recorded in the Mishnah.

The second chapter opens with a testimony of \*Ḥanina, Segan Ha-Kohanim, on four items of *halakhah* followed by mnemotechnical triads of sayings. R. Ishmael propounded three laws before the sages. They in their turn discussed another three laws before him. Again a halakhic pronouncement of Ishmael concerning three things is mentioned, with which R. Akiva disagreed. Then come three laws discussed before R. Akiva, and the chapter ends with two sets of five aggadic sayings by R. Akiva, and a concluding one by R. Johanan b. Nuri.

The third chapter records ten items of controversy between \*Dosa b. Harkinas and the sages as well as other controversies between single scholars (Joshua, Zadok, Rabban Gamaliel, and Eleazar b. Azariah) and the majority of the sages. The fourth chapter lists items of law in which the House of Shammai was, contrary to custom, more lenient than the House of Hillel.

The fifth chapter puts on record further halakhic items in which, according to several named scholars, the House of Shammai was more lenient than its rivals. It includes one of the most beautiful aggadic passages of the Mishnah concerning the moral and intellectual integrity of \*Akavyah b. Mahalalel. He gave testimony on four items of *halakhah* on which the majority of the sages had a different tradition. The sages urged him to retract, promising to appoint him *av bet din* if he did, and threatening him with excommunication if he did not; he remained steadfast. Before his death, however, he told his son to follow the majority ruling, as halakhic discipline required it.

When his son, as a last favor, asked that he commend him to his colleagues, he refused, saying, “Your own deeds will bring you near or your own deeds will remove you far.”

The rest of the tractate (chapters 6–8) gives a great variety of *halakhot* in which the word עִיד (“testified”) is consistently used and concludes with an *aggadah* to the effect that at the end of time Elijah the Prophet, in accordance with Malachi 3:23f., will settle the controversies between the sages and make peace in the world. There is no *Gemara* either in the Babylonian or the Jerusalem Talmud, since the various *mishnayot* are included in the other tractates, where they are duly discussed. There is, however, a Tosefta.

Stemberger, *Introduction to the Talmud and Midrash* (1996), 122, 131.

[Arnost Zvi Ehrman / Stephen G. Wald (2<sup>nd</sup> ed.)]

**EDWARDS, PAUL** (1923–2004), U.S. philosopher and editor of the eight-volume *Encyclopedia of Philosophy* (1967), the first comprehensive work of its kind in English since 1901. Edwards was born in Vienna, took his doctorate at Columbia University, and taught at New York University and Brooklyn College. In later years, he taught at the New School for Social Research in New York City.

A leading exponent of Bertrand Russell's philosophy and an atheist, Edwards was an aggressive opponent of religious philosophy and theological argumentation. He wrote *The Logic of Moral Discourse* (1955), in which he held that ethical predicates such as “good,” “right,” and “should” generally have two major functions: to describe something as having a certain property or properties and to express the speaker's pro or con attitude. Hence, he postulated, ethical predicates have, for the most part, descriptive as well as emotive meaning.

He also wrote *Heidegger on Death: A Critical Evaluation* (with Eugene Freeman, 1979), *Equiano's Travels* (1989), *Reincarnation: A Critical Examination* (1996), and *Heidegger's Confusions* (2004).

Among the many books Edwards edited are *A Modern Introduction to Philosophy: Readings from Classical and Contemporary Sources* (1967); and *Immortality* (1997).

[Richard H. Popkin / Ruth Beloff (2<sup>nd</sup> ed.)]

**°EERDMANS, BERNARDUS DIRKS** (1865–1948), Dutch Protestant Bible scholar. He was privatdocent of Semitic languages from 1896 to 1898 and professor of Bible from 1898 in Leiden. His *Alttestamentliche Studien* (4 vols., 1908–12), a collection of writings on the composition of Genesis, Exodus, Leviticus, and the early history of Israel, are uniform in their complete rejection of the starting points of modern Pentateuchal criticism. Unlike the advocates of the Documentary Hypothesis, Eerdmans posits a fragmentary-supplementary hypothesis that views J, E, and P as redactors and supplement-

ers, rather than composers. According to Eerdmans, material found particularly in Genesis belongs to various stages of religious development of which the earliest is polytheistic and the latest monotheistic, the earlier material referring to God by the plural form Elohim and the later as Yahweh. He argued for the cultural historicity of the patriarchs and for the advanced state of ritual in the Mosaic period. He maintained that most of the legal codes of Leviticus were Mosaic, thus rejecting the commonly accepted J. \*Wellhausen–K.H. \*Graf hypothesis. He was one of the earliest scholars who advanced an Exilic date for sections of the book of Daniel. He wrote *Der Ursprung der Ceremonien des Hosein Festes* (1894); *The Religion of Israel* (1947), a new treatment of his earlier *De godsdiens van Israeel* (2 vols., 1930); *The Covenant at Mt. Sinai* (1939); *Studies in Job* (1939); and *The Hebrew Book of Psalms* (in: *Oudtestamentische Studieën*, 1947).

**BIBLIOGRAPHY:** H.F. Hahn, *The Old Testament in Modern Research* (1956), 23–26, 97–98; Eissfeldt, in: *ZDMG*, 85 (1931), 172ff. **ADD. BIBLIOGRAPHY:** S. Devries, in: *DBI*, 1, 318.

[Zev Garber]

**EFRAT** (Heb. אַפְרַת), urban community with municipal council status, located in the \*Gush Etzyon area south of Jerusalem. Its area is 1.5 sq. mi. (4 sq. km.). Efrat was established in 1983 after planning by an Israeli group and an American group led by Rabbi Shlomo \*Riskin of New York, who settled in Efrat and became the town's rabbi. When the first families arrived the Shevut Yisrael Yeshivah, one of the *hesder* yeshivot, was functioning on the site. Efrat was unique among the West Bank settlements in that settlers moved immediately into permanent housing. Neighborhoods are named after the seven species for which the Land of Israel was famous in biblical times (Deut. 8:8). In 2002 the population of Efrat was 6,810, mainly religious people. Many of its inhabitants are Anglo-Saxons.

**WEBSITE:** www.efrata.muni.il.

[Shaked Gilboa (2<sup>nd</sup> ed.)]

**EFRAT, YAACOV** (1912–1977), agricultural researcher. Born in Poland, Efrat immigrated to Israel in 1936. He specialized in field agriculture, particularly in the various breeds of wheat used in Israel. He developed special systems for winter agriculture. Efrat received the Israel Prize in 1977 for services to agriculture.

**EFRON, ILYA** (1847–1915), Russian publisher. Efron was born in Vilna. In 1880 he founded a printing press in Peterburg and in 1890 he and the well-known German encyclopedia publisher F. Brockhaus founded the Brockhaus-Efron publishing house in St. Petersburg. It became one of the leading publishing houses in Russia, responsible for a number of historical and literary reference works, including an 86-volume Russian encyclopedia, the Library of Famous Writers, and the multi-volume Library for Self-Education and Library of Natural Sciences. It also published, in cooperation with the Society for

Jewish-Scientific Publications, the Russian-Jewish encyclopedia *Yevreyskaya Entsiklopediya* in 16 volumes (1907–13). In the field of Jewish history it published, among other works, Renan's "History of the Jewish People" with commentaries by S. Dubnow and others, and two works on the Inquisition. After 1917 it transferred its activities to Berlin, operating there until the 1930s.

[Shmuel Spector (2<sup>nd</sup> ed.)]

**EFROS, ISRAEL ISAAC** (1891–1981), Hebrew educator, poet, and scholar. Born in Ostrog, the Ukraine, he went to the United States in 1905. He served for a time as rabbi and in 1918 founded the Baltimore Hebrew College and the Teachers Training School. He was professor of Hebrew at Johns Hopkins University (1917–28), rabbi of Temple Beth El in Buffalo (1929–34), professor of Semitics at the University of Buffalo (1935–41) and Hunter College, N.Y.C. (1941–55), where he founded the Hebrew Division; in 1945 he was appointed professor of Jewish philosophy and modern Hebrew literature at Dropsie College, Philadelphia. Efros served as president of the \*Histadrut Ivrit of America (1938–39). He settled in Israel in 1955 and served as rector of Tel Aviv University. In 1960 he was elected honorary president of the university.

His works on Jewish philosophy include *The Problem of Space in Jewish Medieval Philosophy* (1917), *Philosophical Terms in the Moreh Nebukim* (1924), *Judah Halevi as Poet and Thinker* (1941), *Ha-Pilosofyah ha-Yehudit ha-Attikah* (1959), *Ancient Jewish Philosophy: A Study in Metaphysics and Ethics* (1964), *Studies in Medieval Jewish Philosophy* (1974), and studies on Saadia Gaon and Abraham B. Ḥiyya. Among his volumes of poetry are *Shirim* (1932); *Vigvamim Shotekim* (1932), a poem about the American Indians with echoes of American epic poetry; *Zahav* ("Gold," 1942) about the California Gold Rush of 1849; *Anahnu ha-Dor* (1945). A four-volume collection of his poetry was published in 1966. His spiritual world is rooted both in tradition and in critical philosophy; thus tension is felt in his poetry between the antipodes of feeling and cerebration. Efros' diction is both poetic and precise. A pessimistic vision dominates his post-World War II works. Efros translated Shelley's poetry and Shakespeare's *Hamlet* and other works into Hebrew, and some of Bialik's poetry into English. He also collaborated with Judah Even-Shmuel (Kaufman) and Benjamin N. Silkiner in compiling an English-Hebrew dictionary (1929). For translations of his poetry, see Goell, *Bibliography*, p. 21.

**BIBLIOGRAPHY:** A. Epstein, *Soferim Ivrim ba-Amerikah*, 1 (1953), 66–91; J. Kabakoff, in: *Jewish Book Annual*, 28 (1970), 105–109; Kressel, *Leksikon*, 1 (1965), 135–6; Waxman, *Literature*, 4 (1960<sup>2</sup>), 1065–67, 1115, 1188; J. Kabakoff, in: *JBA*, 28 (1970/71).

**EGALITATEA** ("Equality"), Romanian-language periodical (1890–1916, 1919–40), edited, directed, and published in Bucharest by Moses Schwarzfeld with Elias \*Schwarzfeld (from his exile in France) as chief editor in the first years. It was the longest-running Jewish periodical in Romania, at first calling

itself a “weekly journal.” The editor stated his aim in a letter sent to potential subscribers before the publication of the first number, explaining that it was an Israelite journal intending to inspire Romanian Jews with strength, courage, conviction, and moral force, and to give them guidance in their individual trials. The journal described Jewish life and the struggle for emancipation in Romania, condemned discrimination and antisemitism, and also published literary material. Although an independent journal, as its owner and manager involved himself in the Zionist movement it became the official publication of the Jewish National Fund of Romania (1907) and also published Zionist propaganda. In the fall of 1916, when Romania entered World War I and Bucharest was occupied by the German army, the journal ceased publication. It reappeared in 1919, also as a weekly, but with only four pages, and included popular historical articles promoting Jewish identity and the Zionist idea. In July 1931, when Moses Schwarzfild was ill and in financial difficulties, he began to publish *Egalitatea* every two weeks, in double numbers, up until July 3, 1940, when its publication was banned by the government. Many articles in *Egalitatea* were written by Moses Schwarzfild himself, sometimes signed with pen names. Among the contributors were Elias Schwarzfild, Wilhelm Schwarzfild, I.H. Fior, M. Braunstein-Mibashan, Carol Drimer, J.I. Niemirower, Leon Feraru, Adolphe Ștern, A.L. Zissu, E. San-Cerbu, and others.

[Lucian-Zeev Herscovici (2<sup>nd</sup> ed.)]

**EGER** (Ger. **Erlau**), city in N. Hungary. Although Eger is mentioned in 1660 as a Jewish community it was only in 1841 that Jews obtained the right of residence there. A community organization was set up in 1843. By 1858 there were 861 Jews living in the city and an additional 680 in the district. Its first rabbi was Joseph Zevi Weiss. After his death the Orthodox members established a community – separate from the existing status quo community – whose first rabbi was Simon Schreiber, son of Abraham Samuel Benjamin \*Sofer. Many Jews in Eger engaged in the wine trade. There were 2,559 Jews living in Eger in 1920, and 1,787 in 1941. They were deported to \*Auschwitz by the Nazis on June 8, 1944. By 1946, only 215 Jews remained in Eger.

**BIBLIOGRAPHY:** E. László, in: *Hungarian-Jewish Studies*, 2 (1969), 137–82.

**EGER (Eiger), AKIVA (“The Younger”) BEN MOSES GUENS** (1761–1837), German rabbi. Born in Eisenstadt, Eger went to Breslau at an early age to study under his uncle, Benjamin Wolf Eger, and Ḥayyim Jonah Teomim-Fraenkel. In 1780, he went to live with his father-in-law in Lissa, where for about ten years he engaged in study, free from financial stress. Impoverished as a result of the losses suffered in the fire of

1791, he accepted a position as rabbi in Maerkisch-Friedland, where he established a yeshivah. As his reputation grew, his decisions were sought in many matters. The thought of reaping material benefit from the Torah was repugnant to him, and on several occasions he thought of leaving the rabbinate and devoting himself to teaching. In 1807 he led a deputation of Jewish leaders who negotiated with the French authorities on Jewish rights in the newly established duchy of Warsaw. In 1814 he was prevailed upon to accept the position of rabbi in Posen, which was offered to him over the objections of the \**maskilim* and the followers of the Reform movement, who, fearing his great influence, sought the intervention of the secular authorities, on the grounds that he had no command of the German language and was opposed to all innovations. They were eventually obliged to accept Eger’s appointment, but they attempted to minimize his influence by the insertion of certain restrictive clauses in his letter of appointment. Eger, as unofficial chief rabbi of the Posen district, labored on behalf of his own and other Jewish communities. He established a large yeshivah, whose students included Zevi Hirsch \*Kalischer, Jacob \*Levy (author of the dictionaries of the Talmud), and Julius \*Fuerst. He waged a constant struggle against the Reform movement. The *maskilim* opposed him and drew attention to what they considered bizarre and unreal questions discussed in his responsa. Eger was not blind, however, to the spiritual and educational needs of his time. He made certain concessions to meet official demands for a more modern curriculum in Jewish schools, and he encouraged Solomon Plessner’s pioneer efforts to propagate traditional Judaism using German instead of Yiddish, which was until then the medium of instruction. He received a royal message of thanks from Frederick William III for his services during the cholera epidemic of 1831, during which he framed a number of helpful *takkanot* and cared for many of the sick. A number of welfare institutions established by him were in existence until World War II. He was the father-in-law of Moses \*Sofer and the ancestor of many prominent scholars, scientists, and writers. His son Solomon \*Eger was elected rabbi of Posen on his father’s death. Many popular legends surrounded Akiva’s person. His exemplary humanity and beneficence earned him universal admiration, even among his adversaries. A story typifying his sensitivity to others tells of a Jew who asked Akiva before Passover if he could use milk for the Seder rituals. When asked why, the Jew answered that he did not have enough money to buy wine. Akiva promptly gave him 20 rubles for purchasing wine. When rebuked by his wife for giving too much, Akiva answered that he deduced from the question that the Jew also did not have enough money to buy meat for the holiday. His modesty was proverbial, and he was sternly opposed to the titles of honor common in rabbinical circles. Of his works, the following were published in his lifetime: *Ḥilluka de-Rabbanan* (1822); *Haggahot* to the Mishnah (1825–30); *Gilyon ha-Shas*, notes to the Prague edition of the Babylonian Talmud (1830–34), and later to the Vilna edition; responsa, together with decisions, etc. (1834). After his death there appeared re-

sponsa, part 2 (1839); *Ḥiddushei R. Akiva Eger* (1858); *Tosafot* (1841–48 in the Altona edition of the Mishnah); *Haggahot*, glosses to the Shulḥan Arukh (1859); responsa (1889); *Kitvei R. Akiva Eger* (letters; 1929). In addition many of his letters and responsa were printed in talmudic journals and in numerous other works. Much of his work has remained in manuscript and some has been lost (e.g., his glosses to the Palestinian Talmud).

[Akiva Posner]

**EGER, AKIVA BEN SIMḤAH BUNIM** (c. 1720–1758), rabbi and author, known as R. Akiva Eger the Elder. A native of Halberstadt, he was a pupil of Zevi Hirsch \*Bialeh (Ḥarif) of Halberstadt and Jacob ha-Kohen Poppers of Frankfurt. Around 1747, he served as rabbi of Zuelz (Upper Silesia). He conducted a yeshivah in Halberstadt even during the lifetime of his teacher Bialeh, and in 1756, became head of the yeshivah of Pressburg. Eger, who was among the foremost talmudic scholars of his generation, carried on halakhic correspondence with Jonathan \*Eybeschuetz, Meir \*Eisenstadt, and other prominent rabbis. His novellae on the Talmud, *Mishnah de-Rabbi Akiva*, to which are appended a number of his responsa, were published posthumously (Fuerth, 1781). Eger had two sons, Judah Loeb, who served as rabbi in Halberstadt, and Wolf, rabbi of Leipzig.

**BIBLIOGRAPHY:** B.H. Auerbach, *Geschichte der israelitischen Gemeinde Halberstadt* (1866), 33, 71; I. Weiss, *Avnei Beit ha-Yozer* (1900), pt. 2, 35b–37b; L. [Jacob Haberman]

**EGER, JUDAH LEIB OF LUBLIN** (1816–1888), ḥasidic *zaddik*, son of Solomon \*Eger, grandson of Akiva \*Eger the Younger. Born in Warsaw, Judah studied in Posen under his grandfather, whom he regarded as an example of moral virtues. He also studied at the yeshivah of Isaac Meir Alter (later the founder of the ḥasidic Gur dynasty) in Warsaw, through whose influence Judah became a Ḥasid. After his marriage Judah settled in Lublin, and visited Menahem Mendel of \*Kotsk (Kock), continuing as his disciple despite opposition from his family. When Menahem Mendel secluded himself from society, Judah became a disciple of Mordecai Joseph Leiner of Izbica. After his father's death in 1852 Judah declined the position of rabbi of Posen. Following the death of the Izbica *zaddik* in 1854 Judah led his own ḥasidic congregation in Lublin. It was not until after the death of Menahem Mendel of Kotsk in 1859, however, that Judah assumed the role of

*zaddik* and propounded his own teachings. Judah Leib's moral integrity and conduct won him esteem even from people who opposed Ḥasidism. He spent a long time over prayer, devoting himself to it with concentration and fervor, accompanied by weeping and loud cries. His manner of prayer, which was contrary to the tradition of his preceptors, aroused severe criticism. Judah's teachings on the portions of the law and the festivals were arranged by his son Abraham in *Torat Emet* (3 vols., 1889–90) and *Imrei Emet* (2 vols., 1902–3). Judah corresponded on halakhic questions with his relatives Abraham Samuel Benjamin \*Sofer in Pressburg and Simeon \*Sofer in Cracow. Abraham succeeded Judah as leader of his disciples from 1882 to 1914. He was the author of a work on Ḥasidism, *Shevet mi-Yehudah* (1922–38). Judah Leib's grandsons Solomon and Ezriel Meir continued to lead their congregation until they perished in the Holocaust.

**BIBLIOGRAPHY:** A.I. Bromberg, *Mi-Gedolei ha-Ḥasidut*, 13 (1958), 91–158.

**EGER, SAMUEL (Perez Sanwel) BEN JUDAH LOEB** (1769–1842), German talmudic scholar and author. Eger, the grandson of Akiva \*Eger the Elder, was born in Halberstadt. After studying at his father's yeshivah, in 1809 he became rabbi of Brunswick where he served until his death. He had one of the most acute minds of the talmudic scholars of the time, engaging in halakhic correspondence with his cousin, Akiva \*Eger (the Younger) of Posen, and with Moses \*Sofer, who was related to him by marriage. A staunch opponent of the Reform movement, he took a firm stand against the innovations of the Kassel Consistory. Although in principle he was opposed to changes in the liturgy, he stated that he would not oppose those changes which were not contrary to the Shulḥan Arukh. His insistence on the retention of Hebrew in prayer was motivated by his belief that it was a necessary link uniting all Jews throughout the world. His published works include *Ateret Paz* and *Rimmon Perez*, novellae on the tractates *Bezah* and *Ketubbot* (both Altona, 1823); and homiletic discourses delivered on Sabbath *Devarim* (1837) and Sabbath *Mishpatim* (1829). The bulk of his work, talmudic novellae and responsa, comprising an extensive correspondence with the rabbis of Eastern and Western Europe, remains in manuscript.

[Jacob Haberman]

**EGER, SIMḤAH BUNIM BEN MOSES** (1770–1829), Hungarian talmudist, younger brother of Akiva \*Eger the Younger. Eger was also known by the family names of Guens and Schlesinger. After studying under his brother Akiva and then continuing his studies in Krotoszyn, he was appointed rabbi of Rogasen and in 1810 of Mattersdorf, where he remained until his death. Some of his novellae are printed in his brother's *Ḥiddushei Rabbi Akiva Eger* (1858) which also includes their halakhic correspondence. Eger was also in correspon-

dence with his relative Moses \*Sofer, with Mordecai Michael Jaffe, author of *Beit Menaḥem*, and with Israel Moses b. Aryeh Loeb, author of *Rishmei She'elah*. His novellae were later published as an appendix to his brother's responsa (2<sup>nd</sup> part; 1938). His sons were JOSEPH GINZ of Vienna, founder of the well-known publishing firm of Schlesinger; SAMUEL GENZ, rabbi of Abrany (Hungary), who published many of his novellae in the talmudic periodical *Tel Talpiyyot* (ed. D. Karzburg); and MOSES, rabbi and preacher in Hamburg. His daughter married Zalman Ulman, rabbi of Makow.

[Itzhak Alfassi]

**EGER, SOLOMON BEN AKIVA** (1786–1852), rabbi and *rosh yeshivah*. Born in Lissa, he was the son of R. Akiva \*Eger the Younger, under whom he studied. Eger became a merchant in Warsaw, but after losing his fortune in the Polish rebellion in 1831, he accepted the rabbinate of Kalisz. In 1839 he was appointed to succeed his father in Posen. Active in communal affairs, Eger sought to direct the Jews from commerce to farming, and in 1844 appealed to Frederick William IV, king of Prussia, to assist Jews in founding an agricultural village in the province of Posen. The request was granted, and Eger took active steps to implement the plan. In 1846 he founded an organization for agricultural settlement with the consent and formal support of 21 local communities, with promises of support. The project was, however, brought to an end by the disturbances of 1848. Eger was also active in soliciting contributions for Erez Israel and in assuring their fair disbursement. He also took a prominent part in the campaign for emancipation of the Jews in his country. A strong advocate of traditional Judaism in its strictest interpretation and an outspoken opponent of the Reform movement, he sided with G. \*Tiktin of Breslau in his controversy with A. \*Geiger and was influential in restoring Tiktin to his position. Many of his responsa are included among those of his father, particularly those which he published together with his older brother, Abraham. His own published works include *Gilyon Maharsha*, notes on the Talmud and on Alfasi's Code appended to the Vilna Talmud (1859); *Gilyon Rasha*, notes on *Yoreh De'ah* (Koenigsberg, 1859) and republished with additions in the Vilna Talmud. His letters were published in *Iggerot Soferim* (1929), pp. 62–86.

[Akiva Posner]

**EGGED** (Heb. “bundle”), Israel public transport cooperative. In the 1930s small groups of drivers, each numbering between 50 and 100, constituted themselves into cooperatives

to avoid duplication by abolishing parallel routes, and to increase efficiency. Egged was founded in 1933 and established branches all over the country. With the large increase in public transport that followed the establishment of the State of Israel, two other cooperatives, Shaḥar, which operated in the Haifa area, and Drom Yehuda, which operated in Tel Aviv and the south, merged with Egged, the merger being completed in 1951. The Jerusalem transport cooperative, Ha-Mekasher, joined in 1967.

Egged is one of the largest public transport cooperatives in the world. In 1968, the company operated 2,200 buses, which traveled about 620,000 mi. (1,000,000 km.) daily on 1,100 routes. At that time, Egged members numbered about 4,400, and there were also 2,200 hired workers. In 2004, Egged employed 6,309 workers, 2,452 of whom were Egged members. It owned 3,332 buses, traveling on 1,308 routes, and served about a million people a day.

Egged owns four subsidiary companies: Egged Transport offers personalized transport services, including VIP limousines, company transport, a messenger service, and so on. Egged Tours is an inland tourist company operating 300 tourist buses. Derech Egged offers air and recreation services. Egged Investments develops new sources of employment for Egged. The cooperative is governed by a general assembly, composed of all members, which biennially elects a council of 80, an executive of 20 from the members of the council, and a secretariat with five members elected by the executive, which runs the cooperative.

[Leon Aryeh Szeskin]

**EGGS.** One of the few references to the egg in the Bible, and the only injunction connected with it, is the command to drive away the dam before taking the eggs from the nest (Deut. 22:6). The only other references to birds' eggs are in Isaiah 10:14 and the hatching of the egg of the ostrich through the heat of the sun (Job 39:14). Viper's eggs are mentioned in Isaiah 59:5. In contrast, the egg figures prominently in rabbinical literature, both in *halakhah* and *aggadah*.

#### **Halakhah**

The egg belongs to two spheres of *halakhah*: as permitted food and as a standard measure of volume (the tractate of the Talmud called *Bezah* (“egg”) deals with the laws of the festivals and is so called merely because of the first word of its first Mishnah, which deals with the question of the permissibility of eating an egg laid on the festival).

(1) Although it is nowhere clearly stated in the Bible that eggs are permitted for food (the Talmud sees a reference to it in Deut. 22:6; see Ḥul. 140a), on the principle that “that which emerges from a clean animal is clean and that from an unclean animal unclean” (Bek. 1:2) it is established that the eggs of clean birds are permitted for food, and those of unclean birds, forbidden (Ḥul. 122a). With the formation of the hard shell of the egg, however, even before the egg has been laid, it is regarded as independent and no longer part of its dam,

with the result that the prohibition of eating a part of a living animal does not apply to it, nor the law prohibiting the eating of meat with milk (Bezah 6b). Nevertheless fully formed eggs in a bird which is *\*terefah* or *\*nevelah* are forbidden (Maim., Yad, Maakhalot Asurot, 3:19). The Talmud (Hul. 64a) gives the signs of the eggs of permitted and forbidden birds. The former have one end oblate and the other pointed and the white surrounds the yoke, while if both ends are oblate or pointed and the yellow surrounds the white it is the egg of a forbidden bird. The egg is regarded as beginning to form the embryo when a bloodspot appears on the yoke, from which time it is forbidden as food, but the custom has been generally adopted of forbidding eggs if the bloodspot appears even on the albumen (see *\*Blood*).

(2) The bulk of an egg is one of the most common of all the measures of volume in the *halakhah*. It constitutes the usual quantity of volume to establish liability, e.g., for ritual uncleanness, for the size of the *\*etrog*, for the amount of bread from which *\*hallah* must be separated, and many others. It is also the standard whereby all other measurements are calculated, a *log* being equal to six eggs, a *kab* to 24, and a *se'ah* to 144 (see Er. 83a and *\*Weights and Measures*). It is evident however that these relative measurements do not accord with the normal size of an egg. It is accepted that the "egg" is that of the chicken (Yoma 80a) and recourse has had to be made to the theory that the egg thus referred to is a "desert egg" which was much larger than the present day one, and to be on the safe side the standard adopted in the *halakhah* for the egg of the Talmud is two present-day eggs (*Hatam Sofer*, OH, Tesp. no. 127).

### Aggadah

The egg is regarded both as having laxative qualities and of bringing about sexual stimulation. The egg, being "round and having no mouth" (opening), is regarded as a symbol of mourning which "is like a wheel which continually revolves in the world, and one must not open one's mouth in complaint" (BB 16b; YD 378:9 of Gen R. 63:14). It is therefore given to mourners at the meal given to them on the return from the burial (*se'udat havra'ah*) and is eaten at the meal before undertaking the fast of the Ninth of *\*Av*. On the *seder* night of Passover there has developed the custom of eating an egg dipped in salt water before beginning the festive meal. There is no authority for this custom in the sources; various explanations have been put forward, and Moses Isserles connects it with its mourning aspect. According to him it is in commemoration of the destruction of the Temple with which the paschal sacrifice was discontinued, and it happens that the first day of Passover always falls on the same day of the week as the Ninth of *Av* of each year (OH 476:2). A roasted egg, in memory of the festival offering (*hagigah*), forms part of the Passover plate at the *seder*.

[Louis Isaac Rabinowitz]

**°EGIDIO DA VITERBO** (c. 1465–1532), Italian ecclesiastical statesman and humanist. He entered the Augustinian order in 1488. The papal Curia utilized his diplomatic talents and in 1517 Leo X made him a cardinal; he was also bishop of Viterbo. For many years he maintained Elijah *\*Levita* in his entourage in Rome, *Levita* instructing the cardinal in rabbinics and Jewish mysticism and himself obtaining instruction in Greek. He was also among *\*Reuchlin's* correspondents (*Illustrium ... epistolae ... ad ... Reuchlin*, Hagenau, 1519, 97–98) and entertained the false messiah David *\*Reuveni*. Egidio's interests in Jewish (particularly kabbalistic) studies were very considerable. In addition to projecting a plan for translating David Kimḥi's dictionary he translated (or sponsored translations of) extracts of the *Zohar* and various esoteric tracts (*Ginnat Egoz*, *Razi'el*, etc.; also portions of Menahem Recanati's commentary), and composed a treatise on the Ten *\*Sefirot* (all preserved in manuscript: Paris Mss. 527, 596–8, 3363, 3367, Angelica Ms. 3).

Monfrin, in: *Bibliothèque d'humanisme et renaissance*, 23 (1961), 551–4; A. Palmieri, in: *Dictionnaire Théologique Catholique*, 6 (1920), 1365–71; F. Secret, *Le Zôhar chez les Kabbalistes chrétiens de la Renaissance* (1958), index.

[Raphael Loewe]

**'EGLAH 'ARUFAH** (Heb. עֵגְלָה עֲרוּפָה), an expiatory ceremonial for an untraceable murder prescribed in Deuteronomy 21:1–9, in which the elders of the settlement nearest the corpse bring an unworked heifer to an uncultivated area in a watered wadi, break the heifer's neck, wash their hands over it, and profess their innocence to the bloodshed. This ceremonial of the *'eglah 'arufah*, "the broken-necked heifer," is unique to the Bible, but it is elucidated by prior Hittite and subsequent rabbinic law codes. The *'eglah 'arufah* is not a sacrifice. It is not slaughtered ritually on an altar, but is killed like a non-sacrificial animal (Ex. 13:13) away from the altar; it need not be unblemished like a sacrifice (Sot. 9:5), but it must never have been subjected to the yoke, a stipulation attested only in rituals never incorporated into the sacrificial system (Num. 19:2; see *\*Red Heifer*; cf. I Sam. 6:7). Above all, its death does not make expiation for the life of the murderer (nor does any sacrifice; see *\*Atonement*, *\*Sacrifices*), for if the murderer is subsequently discovered, he is still put to death (Sot. 9:7; see Ket. 37b).

The key to this rite is its underlying postulate that the blood of the innocent does not "remain on his head" (e.g., Josh. 2:19; see *\*Bloodguilt*), but pollutes the earth on which it is shed (Num. 35:33). The earth, having received the blood involuntarily, withholds its strength (Gen. 4:11–12), bringing drought and famine upon its inhabitants (II Sam. 21:1, LXX; cf. also II Sam. 1:21; Ezek. 22:24). This belief is not peculiar to Israel, but is part of its heritage from the cultures along the Mediterranean littoral (e.g., Ugarit: Aqhat 1:42–46; Asia Minor (Hittites), Proclamation of Telepinus,

20). That the blood of the slain must come into contact with the ground is confirmed by the rabbinic dictum that if the murder was perpetrated by some other means, e.g., hanging, the heifer ceremonial is not required (Sot. 9:2; TJ, Sot. 9:2, 23c). In rabbinic law, just as in the Hittite Code, paragraph 6 (earlier version, cf. Pritchard, Texts, 189), the corpse is interred on the spot where it was found (BK 81b), and the original owner loses his rights to a set area circumscribing the corpse.

According to biblical law, “the land shall have no expiation for blood that is shed except by the blood of him who shed it” (Num. 35:33b). However, what if the murderer is unknown: will the land be permanently blighted? The *‘eglah ‘arufah* is the cultic prophylactic to avert this contingency. Its purpose is to transfer the land polluted by the corpse to an uncultivated plot, removed from the settled area. Thus it closely resembles the rites of the \**azazel* goat and of the purification of the healed \*leper, whereby sin and impurity, respectively, are exorcised from the afflicted and banished to the wilderness. Here, however, the fact that land and not man needs to be expiated necessitates the use of another method, not banishment, but transference. Through the killing of the heifer, the murder is, in effect, reenacted; the blood of the heifer (*ha-dam ha-zeh*, “this blood,” Deut. 21:7) becomes identified with the blood of the slain, and the pollution is transferred from the area of the corpse to the area of the heifer. This rite of reenactment and transference explains why the ceremonial must take place at a perennial stream: the blood must not come into contact with the earth again and trigger the fatal polluted soil-drought syndrome, and it is thus drained off to some distant sea. Also explained is the need for the elders of the nearest settlement to wash their hands and recite a confessional over the broken-necked heifer: since the blood of the heifer represents the blood of the slain, they must purify themselves and declare their innocence of either committing or witnessing the crime (Deut. 21:6–7). Finally, the rabbinic law that the land surrounding the heifer is forever forbidden to be cultivated further underscores that the purpose of the ritual is the transference of land impurity from the human to the animal corpse.

According to this interpretation the Torah has incorporated an ancient rite, whereby land pollution due to an untraceable murder is transferred from a desirable area to an undesirable one. At the same time, it should not be overlooked how an act of pure sympathetic magic was transformed by the Torah to conform to its basic spiritual and ethical outlook. First, the ritual was placed in the hands of the priests, those “chosen by the Lord to serve Him” (21:5), and removed from the authority of the lay-elders, who might be addicted to its pagan origins. Then, the declaration was given an appendix (21:8–9), whereby the automatic, magical expiation presumed by the ritual was abolished, and the expiation and, indeed, all forgiveness of sin attributed solely to the Lord.

[Jacob Milgrom]

### In the Talmud

No less than nine *mishnayot* (Sotah 9:1–9) and six folios of the Babylonian Talmud (Sotah 44b–47b) are devoted to the laws of the *‘eglah ‘arufah*, despite the fact that the rite was abolished at the beginning of the first century (see below). Unless otherwise stated, the details that follow are derived from those passages. According to the rabbis, this act of expiation and disavowal by the elders was not for the murder itself, of which no one could possibly accuse them, but for failure to create conditions which would make such a crime impossible. “He [the victim, or possibly the murderer?] did not appeal to us for help and we dismissed him without providing him with food; we did not allow him to depart without an escort.” The measurement of the distance between the corpse and the nearest town was performed by three or five elders from the Great Sanhedrin of Jerusalem. When they had finished their task and had decided to which city the murder was to be ascribed, they returned to Jerusalem, and the rite of breaking the heifer’s neck (from behind with a hatchet) was performed in the presence of all the elders of that city. The rite was performed only when it was presumed that the undetected murderer was a Jew, and it was therefore not performed in a city near the border or where the majority of the inhabitants were gentiles. Nor did the rite apply to Jerusalem. It was limited to a murder executed with a lethal weapon and therefore did not apply in the case of hanging or strangulation. The heifer had to be less than two years old. The ceremony took place by day, and the carcass was buried *in situ*. The rite of the *‘eglah ‘arufah* was discontinued “when murderers increased in number.” Its discontinuation is connected with \*Eleazar b. Dinai, also called Tehinah b. Parishah, a notorious murderer who is probably identical with the Zealot leader of the same name (c. 35–60 C.E.) mentioned by Josephus (Ant. 20:121 and 161; Wars, 2:235–6, 253).

[Louis Isaac Rabinowitz]

**BIBLIOGRAPHY:** H.J. Elhorst, in: ZAW, 39 (1921), 58–67; R. Patai, in: JQR, 30 (1939), 59–69; S.H. Hooke, in: VT, 2 (1952), 2–17; A. Rofé, in: *Tarbiz*, 31 (1961/62), 119–43.

**EGLON** (Heb. עֶגְלוֹן), Canaanite royal city. According to the Bible, Debir, king of Eglon, joined the confederation of Amorite kings, led by \*Adoni-Zedek of Jerusalem, against \*Gibeon. They were defeated by Joshua at Aijalon and slain near the cave of Makkedah, where they had sought refuge (Josh. 10). Eglon was subsequently captured, sacked, and destroyed (*ibid.* 10:34–35). The king of Eglon is again mentioned in the list of conquered cities (*ibid.* 12:12). The city was allotted to the tribe of Judah in the Lachish district (*ibid.* 15:39). It does not appear in later sources; Eusebius mentions an Agla, present-day Khirbat ‘Ajlan, 12 mi. (19 km.) west of Bet Guvrin (Eleutheropolis) (Onom. 48:19). Scholars are divided as to the location of Eglon; the identification generally accepted is that of Tell al-Ḥasī proposed by Albright. This tell is situated 7 mi. (11 km.) southwest of Lachish, at the edge of the foothills that extend into the Coastal Plain. Elliger has suggested the more west-

erly Tell Beit Mirsim, and recent studies have shown that this identification is no less probable (cf. \*Debir).

**BIBLIOGRAPHY:** Albright, in *BASOR*, 17 (1925), 7ff.; Elliger, in: *PJB*, 30 (1934), 67f.

[Michael Avi-Yonah]

**EGLON** (Heb. עִלְוֹן; lit. “calf”), king of Moab in the period of the Judges, apparently in the first half of the 12<sup>th</sup> century B.C.E. The Bible relates that Eglon assembled the \*Ammonites and the \*Amalekites and with them attacked Israel, subduing the land for 18 years (Judg. 3:12–14). It is likely that Eglon had previously conquered the plain north of the Arnon, a region disputed by Israel and Moab. Eglon and his allies crossed the Jordan, captured the city of Jericho, and from there penetrated to the center of the country and subdued the tribes of Benjamin and Ephraim. It is natural, therefore, that a Benjaminite, the “judge” \*Ehud, son of Gera, assassinated Eglon by a ruse and freed Israel from Moabite rule. The events related in Judges 3 appear historically plausible although some scholars have argued that the mention of Eglon’s gross obesity (vs. 17, 22) and the chapter’s apparent scatological references (vss. 21–25) are indications that the story is fictional political satire.

[Bustanay Oded]

### In the *Aggadah*

Eglon is identified as the grandson of Balak (Yal. 665). Because of the respect he showed to God through rising from his throne when Ehud told him that he had a message from the Lord, he was rewarded: Ruth was his granddaughter (Naz. 24b) and her descendant David “sat on the throne of the Lord” (Ruth R. 2:9).

**BIBLIOGRAPHY:** E.G. Kraeling, in: *JBL*, 54 (1935), 205–10; K. Galling, in: *ZDPV*, 75 (1959), 1–13; A.H. van Zyl, *The Moabites* (1960); Y. Kaufmann, *Sefer Shofetim* (1962), 104–11; W. Richter, *Traditions-geschichtliche Untersuchungen zum Richterbuch* (1963), 1ff.; A. Malamet, in: B. Mazar (ed.), *Ha-Historyah shel Am Yisrael, ha-Avot ve-ha-Shofetim* (1967), 229–30. **ADD. BIBLIOGRAPHY:** B. Halpern, *The Bible’s First Historians* (1980), 39–75; idem, in: *ABD*, 2, 414; M. Brettler, in: *HUCA*, 62 (1991), 285–304; Y. Amit, *Judges* (1999), 71–79.

**EGOZI**, Turkish family, members of which served as rabbis of Constantinople in the 16<sup>th</sup> and 17<sup>th</sup> centuries. **MENAHEM BEN MOSES EGOZI** (second half of 16<sup>th</sup> century) was a rabbi, preacher, and poet. His sermons, *Gal shel Egozim*, were published in the printing press of Gracia \*Nasi in Belvedere between 1593 and 1599. *Ginnat Egoz*, a manuscript collection of his letters and poems, some showing considerable talent and of historical importance, is in the British Museum (Or. 11.111). A responsum by him is included in the responsa of Elijah b. Ḥayyim (no. 38). **ḤAYYIM**, a contemporary of the former, was a member of the *bet din* of Elijah b. Ḥayyim in Constantinople, their signatures appearing together in a document of 1601. A manuscript of his book on the laws of divorce is in the Jerusalem National Library (no. 119, 8°). **DAVID** (d. c. 1644) was rabbi of the indigenous Turkish community of Constantino-

ple. He was appointed to be in charge of the congregational property and was in halakhic correspondence with Ḥayyim and Moses \*Benveniste. **NISSIM BEN ḤAYYIM**, rabbi and *dayyan*, was involved in the Shabbatean controversy which engaged the Constantinople rabbis in 1666.

**BIBLIOGRAPHY:** Rosanes, *Togarmah*, 3 (1938), 33; Scholem, *Shabbetai Zevi*, 2 (1957), 416–7; A. Yaari, *Ha-Defus ha-Ivri be-Kushta* (1967), 140–1, no. 228, 147.

**EGYENLÖSÉG**, a political weekly newspaper, its title meaning “Equality,” which was published in the Hungarian language in Budapest from 1881. The official mouthpiece of the Neolog (non-Orthodox) sector of Hungarian Jewry, it circulated among Hungarian Jewry as a whole. Its founder was Moritz Bogdányi, who published daily editions during the proceedings of the \*Tiszaeszlár blood libel trial of 1882–83. Miksa \*Szabolcsi headed the editorial staff from 1884, later becoming its owner, and after the Tiszaeszlár trial took up the struggle anew for religious equality of the Jews of Hungary. Some of the best-known Hungarian Jewish writers were among its contributors, such as Adolf \*Agai, Hugo \*Ignotus, József \*Kiss, Tamás \*Kóbor, Emil \*Makai, and Péter Ujvári. The declared policy of the paper was assimilationist, aiming at moderate religious reform but complete integration in the life of the state. With the appearance of organized Zionism, the paper took up an anti-Zionist stand. After the death of Miksa Szabolcsi in 1915, his son Lajos Szabolcsi edited the paper and took a bold stand against the “*numerus clausus*” and the excesses of the “White Terror” after the revolution of 1918–19. The paper was banned in 1938.

[Baruch Yaron]

**EGYPT**, country in N.E. Africa, centering along the banks of the River Nile from the Mediterranean coast southward beyond the first cataract at Aswan. The ancient Egyptians named their land “Kemi,” the “Black Land,” while the neighboring Asiatic peoples used the Semitic word “Miṣr” which is still the country’s name in both Hebrew (Heb. מִצְרַיִם; *Mizrayim*) and Arabic. Geographically Egypt consists of two areas, Lower Egypt, the northern part of the land, which contains the Delta, and Upper Egypt, the south, which comprises the narrow strip of cultivable land on both sides of the river as far south as Aswan.

### Ancient Egypt

Ancient Egyptian history can be divided into seven periods that correspond to the major dynastic ages of Pharaonic history:

1. Predynastic – (prehistory)
2. Early Dynastic Period (Archaic) – Dyn. 1–3, 2920–2575
3. Old Kingdom – Dyn. 4–8 (Pyramid Age), 2575–2134
4. First Intermediate Period – Dyn. 9–10, 2134–2040
5. Middle Kingdom – Dyn. 11–12 (“Classical” Period), 2040–1640

6. Second Intermediate Period – Dyn. 13–17 (including the Hyksos Period), 1640–1532  
 7. New Kingdom – Dyn. 18–20 (Empire Period), 1550–1070

**PREDYNASTIC – EARLY DYNASTIC PERIOD.** The Predynastic history of Egypt refers to the period before the unification of Upper and Lower Egypt. It is the unification of the two kingdoms that heralds the national consciousness of Egypt; therefore, her history as a nation cannot start before the Early Dynastic Period. Egyptian tradition traced its historical beginnings to the time when King Menes of Upper Egypt (as recorded by Manetho, and transmitted with slight variations by Herodotus, Josephus, and Diodorus Siculus) conquered Lower Egypt and unified the two lands. By this action, he became the ruler of both Upper and Lower Egypt, thereby establishing the First Dynasty. Menes' unification came to symbolize the nation and its conception of itself. The earliest representation of the unification of Egypt is the Narmer Palette (+/-3150 B.C.E., now in the Cairo Museum). The legendary Pharaoh Narmer has been identified with Menes, and the Narmer Palette apparently represents the Pharaoh of Upper Egypt conquering Lower Egypt and subduing the enemy. The obverse of the palette shows the ruler wearing the White Crown of Upper Egypt, while the reverse has him wearing the Red Crown of Lower Egypt. Throughout dynastic history the unification represented the potency of the land, a potency recalled in a variety of ways, from the titles of the kings, through the representations in the artistic canon.

The most important legacy of the Early Dynastic Period is the foundation of what we view as the civilization of ancient Egypt. The national economy, political ideology, and religious philosophy all developed in this period, and the administrative seat of Egyptian government moved north to Memphis. Much of the contact between Egypt and the Levant during the Early Dynastic Period was in the area of trade. Grain, timber for construction, precious and semi-precious materials, including lapis lazuli copper and turquoise, were imported to Egypt from Southwest Asia.

**THE OLD KINGDOM.** The Old Kingdom is also known as the Pyramid Age. During this period Egypt's power revolved around her resources, human and natural, and the Pharaoh's ability to utilize them. One of the results of the successful harnessing of resources was monumental architecture; the first complexes built from fully dressed stones are from this period. These large structures seem to represent the physical manifestation of the Pharaoh's godhead and authority. The strong centralized government of the god-king that had developed earlier underwent decentralization during the 5<sup>th</sup> dynasty and resulted in a new class of officials: The vizier no longer had to be a prince, and the nomarchs began to reside in the nome that they administered rather than in the royal residence or capital.

Foreign relations during the Old Kingdom were generally peaceful, and foreign expeditions were related either to defense or, more frequently, to trade. A 6<sup>th</sup> dynasty official

named Weni inscribed his autobiography on a wall in his tomb-chapel. He reports that at the behest of the Pharaoh he led five expeditions into the Southern Levant to defend against the "Sand-dwellers" (Lichtheim 18ff.). At least two stone vessels bearing Old Kingdom royal names have been discovered at *Tel Mardikhi*, \*Ebla, in central Syria. There is no certainty as to how the vessels got to Ebla (one, bearing Pepy I's name, is thought to have come through Byblos, and the other with Kephren's name may have come directly from Egypt), but their existence attests to far reaching diplomatic connections between Egypt and the Levant.

**THE FIRST INTERMEDIATE PERIOD.** In Egyptian chronology, the term "Intermediate" refers to the periods when there was no strong centralized government unifying the Two Lands. During the first Intermediate Period there was dynastic rule both in the North (at Herakleopolis), and in the South (at Thebes). The attempts to reunify the land fostered sporadic internal conflicts and civil wars.

**THE MIDDLE KINGDOM.** The detailed origins of the Middle Kingdom are unknown, but in a political sense the Middle Kingdom may be said to begin when the ruler of Upper Egypt becomes the sole Pharaoh and the two lands are again united. During the 11<sup>th</sup> Dynasty the seat of rule remained at Thebes in the South, but the first Pharaoh of the 12<sup>th</sup> Dynasty moved the capital North to a new capital called *Itjtawy*, "Grasper of the Two Lands"; the capital remained there for more than 300 years. The 12<sup>th</sup> Dynasty is the "Classical Period" in the art and the literature of Ancient Egypt.

The literature and the art of this period were used to promote the royal and elite values and interests. Many of the literary texts of this period have a propagandistic flavor and were circulated to the literati though the temples and schools. The monumental royal inscriptions on temples and other buildings were also used to address the public, to inspire loyalty, and to tell the people of the grandeur of their rulers.

For the most part Egypt's foreign relations remain peaceful during this period as witnessed by the famous tomb painting in the tomb of Khnumhotep II at Beni Hasan. Part of this painting depicts 37 Asiatics (men, women, and children) bringing eye-paint to Khnumhotep. But there is evidence of international strife during the Middle Kingdom in the Execration Texts. The Execration Texts were a class of formulas that functioned as destructive magic; they were designed to counteract negative influences, and they are attested from the Old Kingdom through the New Kingdom. The performance of execration rituals centered on objects inscribed to identify the target of the magical act; they were then destroyed or symbolically neutralized. These texts include figures made of unbaked clay and crudely formed into the shape of a bound prisoner. There are three lots of execration texts that deal with Western Asia containing standard formulae with the names of Asiatic chieftains and their related toponyms (place names), after which follows a comprehensive statement of curse along

the lines of “all Asiatics of Gns, and their mighty runners ... who may rebel ... etc.”

**THE SECOND INTERMEDIATE PERIOD AND THE PERIOD OF THE HYKSOS.** The Second Intermediate Period began toward the end of the 13<sup>th</sup> Dynasty when the centralized government began once again to falter, leading to the rise of local rulers in the eastern Nile Delta. The period reached its culmination when the \*Hyksos invaded from Western Asia and usurped the throne. Originally these Near Easterners were referred to as “Shepherd kings” or “captive shepherds” by the scholarly community. These titles are based on an incorrect folk-etymology attested to as early as Josephus. The term Hyksos is the Greek rendering of the Egyptian appellation for these foreigners. But the Egyptian that underlies the Greek is best translated as “rulers of the foreign countries.” In Egypt it became the official designation of the first three kings of the 15<sup>th</sup> Dynasty. The capital of the Hyksos was at Avaris, modern Tel ed-Dab’a in the Delta, on the eastern most of the Delta branches. The population there seems to have been composed of Asiatics, especially those who spoke Amorite, a West Semitic dialect.

Much of the Hyksos’s power resulted from good trade relations with Cyprus, Nubia, and the Levant, and it was during this period that the horse, and wool-bearing sheep were introduced into Egypt. The archaeological record indicates that the Hyksos were not the first Near Easterners to live in the Nile Delta, but it was under the Hyksos that Egypt became more involved with the eastern Mediterranean (Bietak).

The reign of the Hyksos ended when the Theban ruler Ahmose finally expelled them and reunited the Two Lands. After this expulsion the capital shifted south again to Thebes.

**THE NEW KINGDOM.** The New Kingdom is the period of Egyptian expansion and imperialism. In the earlier periods Egypt’s contact with, and control over, foreign areas was limited to her desire for trade and resources; during the New Kingdom Egypt’s foreign policy became more aggressive. The Hurrian kingdom of Mitanni became a threat to Egypt, and the New Kingdom rulers responded to Mitanni’s rising power in the area. The 18<sup>th</sup> Dynasty ruler Thutmose I led a campaign into northern Syria. Later, Thutmose III led 14 campaigns into Western Asia (one of which included a seven-month siege at Megiddo), and eventually subdued the Levantine coast, increasing Egyptian hegemony into the interior of Syro-Palestine. Under Thutmose III the rulers of the conquered Asiatic city-states became vassals to Egypt who had to send tribute and swear an oath of loyalty to the Pharaoh. True peace was not realized until the reign of Thutmose IV, who married one of the Mitannian princesses (Murnane 2001).

The Egyptian Empire reached its height during the reign of another 18<sup>th</sup> Dynasty Pharaoh, Amenhotep III. By this time the empire was firmly established, so that Egypt was able to keep her troops in just a few areas and to send garrisons only to regions that threatened revolt. But this relative ease of imperialism was short lived, and the Empire began to falter under the reign of Amenhotep IV whose internal policies

caused him to be labeled the “heretic king.” Amenhotep IV devoted much of his energy to religious reform. Traditionally, the established cults of Egypt’s gods were under the care of the Pharaoh. Amenhotep IV neglected the traditional gods of Egypt and showed strict devotion to a new conception of the sun god the “Aten” (solar orb); he eventually withdrew his patronage from the capital at Thebes (which was the “city of Amun”), he changed his name to reflect his religious preferences to Akhenaten (\*Akhenaton; “effective on behalf of the orb”), and established a new capital city named Akhetaten (“horizon of the orb”). Akhenaten weakened the power of the royal family to such an extent that that even when the traditional cult was re-established in the land, the last kings of the 18<sup>th</sup> Dynasty (including Tutankhamun) had no real power. The entire balance of power in the Near East changed during this period when the Mitannians lost control of most of their vassals to the Hittites and Egypt lost control of her vassal Kadesh to these same Hittites. The resulting hostilities between Egypt and Hatti only increased when a Hittite prince died on his way to Egypt with the intent to marry Tutankhamun’s widow. Egypt’s borders continued to recede south for the next three generations.

The Ramesside kings of the 19<sup>th</sup> and 20<sup>th</sup> Dynasties attempted to regain Egypt’s past glory. These attempts met with varying levels of success. Ramesses II successfully defended Egypt against the invasions of the Sea Peoples, but his “victory” against the Hittites at Kadesh is not the unqualified “victory” portrayed on his temple walls. In addition, the balance of power achieved by Egypt in the south, and the Hittites in the north changed as Assyria emerged as a major force in Western Asia. Ramesses III was the strongest ruler of the 20<sup>th</sup> Dynasty, and he too defended Egypt against the Sea Peoples, and defeated two Libyan invasions. But the end of his reign is marked by a series of strikes by craftsmen who were working on the royal tombs at Thebes. These strikes were the beginning of the economic difficulties that helped bring about the end of the 20<sup>th</sup> Dynasty and Egypt’s Empire period.

The New Kingdom saw Egypt rise to become an international superpower ruling territories from Nubia to Asia. But by the end of this period Egypt was a nation overwhelmed by internal troubles, which had lost control of all of her foreign territories; never again would Egypt regain her splendor.

For the biblical depiction of events in this period, see \*History; \*Exodus; \*Pentateuch.

[Sharon Keller (2<sup>nd</sup> ed.)]

After the shortlived 21<sup>st</sup> Dynasty, the 22<sup>nd</sup> Dynasty, of Libyan origin, came to power in Egypt. Sheshonk I (the biblical \*Shishak) gave refuge to the Israelite pretender \*Jeroboam and, after the latter had returned to Israel, invaded first Judah, thoroughly ravaging and looting the country, and then Israel, treating it in like manner. Returning with vast plunder, and leaving a weakened Palestine behind him, Sheshonk retired to Egypt. Henceforth the Libyan rulers of Egypt, having shown their power, left West Asia alone.

By the end of the eighth century B.C.E. the Egyptianized Nubian rulers of \*Cush had displaced the Libyans in control of Egypt, while the Assyrians under \*Tiglath-Pileser III made their presence felt in Syria and Palestine. During the last revolt of Israel against Assyria (724–721 B.C.E.) Hosea wrote to So, the king of Egypt, for support against the Assyrians. This otherwise unknown king has been plausibly identified recently as Tefnakht, the ruler of Sais (So), a vassal of the Nubians. However, Egyptian support was to no avail; Tefnakht was repulsed and Samaria fell. Nevertheless Egypt still appeared to be powerful, and in the following decades \*Hezekiah, king of Judah, again relied on Egypt. Although the biblical account names \*Tirhakah (Taharka), king of Cush (Nubia; 11 Kings 19:35) as Jerusalem's ally, there are chronological problems involved, since the decisive battle of this campaign, that of Elteke, took place in 701, and Taharka's rule began only in 689.

\*Sennacherib's successors subjugated Egypt, expelled the Cushites, and installed puppets who managed to regain Egyptian independence under the twenty-sixth Dynasty. The founder of this dynasty, Psammetichus I (c. 664–610 B.C.E.) strengthened Egypt by the widespread employment of foreigners – Greek and Jewish mercenary troops and Phoenician sailors and merchants. During his reign or that of Psammetichus II (c. 595–89 B.C.E.) the famous colony of Jewish mercenary soldiers was established at \*Elephantine to protect the southern frontier of Egypt. After the fall of the Assyrian capital of Nineveh in 612 B.C.E. to the Neo-Babylonians and Medes, the king of Egypt, Neco II, “went up against the Babylonians,” but found his way barred by \*Josiah, king of Judah, whom he defeated and killed at Megiddo in 609. Four years later, the Babylonians decisively defeated him at the battle of Carchemish. The subsequent Babylonian invasion of Egypt, preceded by the siege and sack of Ashkelon, was, however, beaten back, although Palestine remained under Babylonian control.

In 589 \*Nebuchadnezzar besieged Jerusalem, whose king, \*Zedekiah, had rebelled at the instigation of the pharaoh Apries (\*Hophra). The latter invaded Syria in an attempt to relieve Jerusalem, but again Egyptian support proved ineffectual, and in 587 Jerusalem fell. Most of the city's population was deported to Babylon; some, however, took refuge in Egypt, including the prophet \*Jeremiah.

[Alan Richard Schulman]

### **Egyptian Literature in the Bible**

Egypt has a long and full literary history and tradition, and as such, there is ample evidence of both literary and nonliterary genre of texts. These texts serve many functions and come in a variety of forms each with its own established conventions and styles. The technical aspects of Egyptian literary forms are not generally paralleled in biblical literature, yet it is well recognized that there is a commonality in content between some biblical narrative motifs and those found in various Ancient Egyptian texts. Direct links in the prose literature are difficult to establish, but there is a scholarly consensus that relates the two bodies of literature. Wisdom texts fall in

their own category; the consensus maintains that the biblical wisdom tradition is dependent, at least in part, upon the Egyptian. Questions of borrowing and/or primary derivation notwithstanding, there is no doubt that the Egyptian material antedates the biblical.

Egypt plays an important part in the narrative setting of the Torah. From the time that Joseph is sold into servitude through the Exodus and the crossing of the Sea of Reeds, the central location of the story is Egypt. It is in these stories, the ones set in Egypt, that the majority of narrative parallels are to be found. The most frequently cited example is the biblical tale of Joseph and Potiphar's wife (Gen 39) and the New Kingdom *Tale of Two Brothers*. The Egyptian tale is the first known example in ancient literature of the Temptress motif. The details and purposes of each of the stories differ greatly, but there is no serious doubt that the structure of the motif is essentially the same. In such stories an older woman (or a woman of higher social status) develops an ill-advised passion for a younger man (or one of a lesser social status). This “temptress” makes her desires known to the young man (Gen 39:7) who refuses her advances on moral grounds (verses 8–9); thus spurned, the “temptress” accuses the young man of violating her, and the “wronged” husband then seeks retribution. The standard versions of this tale eventually vindicate the youth and punish the mendacious wife. In the biblical account Joseph is punished for his supposed actions by being imprisoned (verses 19–20). Eventually he is pardoned by Pharaoh and released from prison because, after interpreting Pharaoh's dreams, Joseph is rewarded and made viceroy of Egypt (41:14–45). The biblical version deviates from the pattern in two significant ways: First, the narrator never tells us that Joseph is ever publicly declared innocent. (He is pardoned not exonerated). Second, the fate of the temptress is not revealed. Potiphar's wife disappears from the story right after she accuses Joseph (Gen 39:18–19), because she is no longer important to the progress of the narrative.

Although the *Tale of Two Brothers* is the most frequently cited example of biblical and Egyptian narrative parallels, it is by no means the only one. Some literary tales present us with a picture of Syria-Palestine that is reminiscent of the description of the area in the Patriarchal Narratives of Genesis and also show some parallel values. The prime example is the Middle Kingdom *Tale of Sinuhe*, which depicts the environment of the Levant in detail and shows it much the same as described in the Torah narratives. Both the Hebrew and Egyptian sources describe pastoral nomadic clans who travel among the settled urban population centers. Sinuhe was an attendant to Princess Nefru, daughter of Amenemhet I and wife of Sesostri I. After Amenemhet I dies, Sinuhe overhears plans for a palace coup. Fearing that he will be caught up in the civil-war that will inevitably follow, he flees Egypt and wanders through the Nile Delta and throughout Canaan. Sinuhe becomes very successful in Canaan, but always longs to return to his native land. Ultimately, he is reunited with Sesostri I and urged to return to Egypt. As with most Egyptian tales, this one ends happily

when Sinhue returns to Egypt and is welcomed back into the royal household, His wish that he be allowed to returned to Egypt so he may die and be buried there is fulfilled. Sinuhe's flight from political danger may be compared to Moses' flight from Egypt to avoid Pharaoh's wrath (Ex. 2:15). Sinuhe's subsequent wanderings though the Egyptian Delta and into Canaan along with his new found prosperity in a foreign land may be compared with the accounts of Abraham's peregrinations. Another frequently cited parallel is that Sinuhe very much wants to be buried in his native Egypt, just as Jacob desires that his body be returned from Egypt to Canaan (Gen. 47:29–30). Similarly, Joseph adjures the children of Israel to carry his bones out from Egypt when they leave (Gen 50:25, Ex. 13:19).

Narrative parallels are not limited to the Torah. One of Sinuhe's exploits has been compared to David's slaying of Goliath. "He came toward me while I waited, having placed myself near him. Every heart burned for me; the women jabbered. All hearts ached for me thinking: 'Is there another champion who could fight him?' He [raised] his battle-axe and shield, while his armful of missiles fell toward me. When I had made his weapons attack me, I let his arrows pass me by without effect, one following the other. Then, when he charged me, I shot him, my arrow sticking in his neck. He screamed; he fell on his nose; I slew him with his axe. I raised my war cry over his back, while every Asiatic shouted. I gave praise to Mont, while his people mourned him" (Lichtheim in COS) Both Sinuhe and David are underdog warriors who surprisingly vanquish the enemy champion with his own weapon (1 Sam 17:51).

Scholarly consensus recognizes that the biblical Wisdom tradition, and much of the poetic and instructional literature related to that tradition, has very close associations with Egyptian Wisdom Literature. Within the Bible there is a conception of Egypt as a source of great wisdom (1 Kings 4:30, "Solomon's wisdom was greater than the wisdom of all the Kedemites and than all the wisdom of the Egyptians"), but this "wisdom" is not that of the Wisdom Literature. Egyptian Wisdom Literature deals with "truth," "justice," and especially "order," the "cosmic order" as ordained by the gods. Biblical Wisdom focuses primarily upon Wisdom personified and the "fear of God" associated with it. So the larger conceptions that inform the genre are not identical, but the Egyptian material most certainly has influenced the biblical.

Psalms 104 is frequently viewed in light of "The Great Hymn to the Aten." Both texts venerate the solar aspects of the deity and use similar language in so doing. Song of Songs is widely recognized as having significant parallels to Egyptian love poetry (Fox) There are parallels of phraseology: In the Song of Songs "sister" is used as a term of intimacy between the two lovers (4:9, 10–12, "...my sister, my bride..."; also 5:1, 2), and in the Egyptian Love Songs both "sister" and "brother" are used as terms of love and intimacy. In both literatures there is an alternation between the speech of the girl and that of the boy, but with a difference; In the Bible the lovers engage in dialogues, whereas in the Love Songs from Egypt the lovers are given alternating soliloquies. Another

common feature is found in the so-called "Praise Song," where the physical beauty of the beloved body is described limb by limb. (4:1–7; 5:10–16; 7:2–10a).

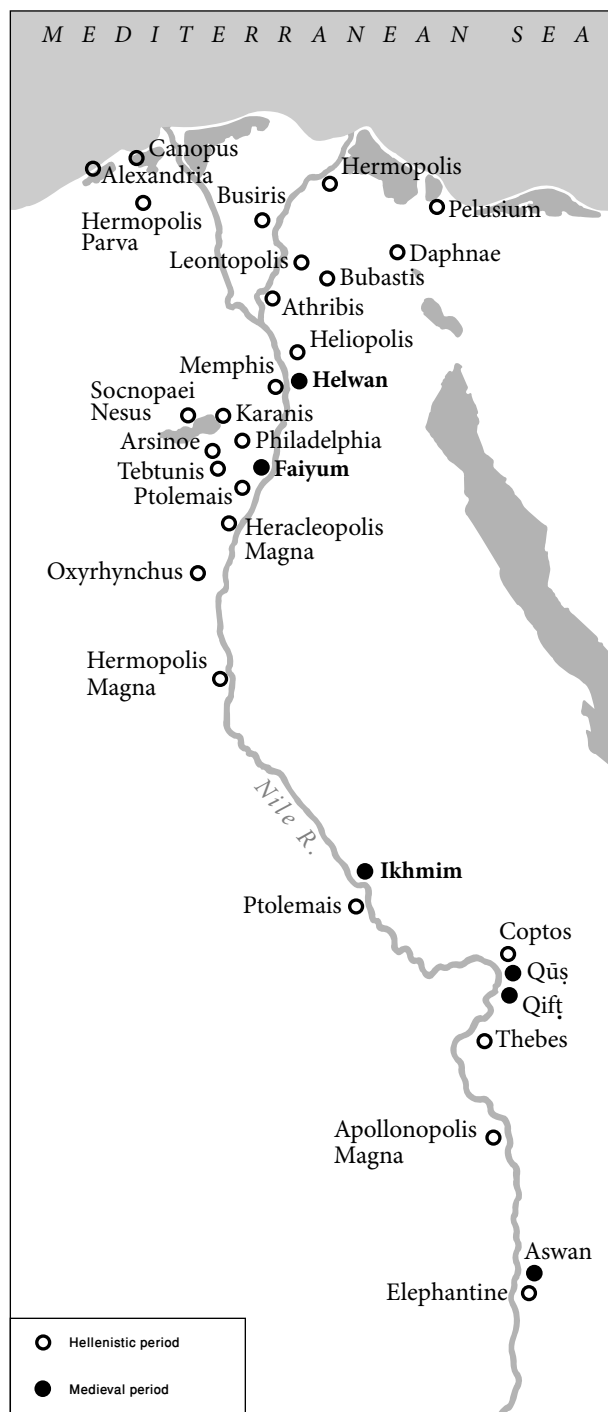

Even more striking parallels are to be found in instructional literature; these connections were first recognized in the early 20<sup>th</sup> century, and are regularly noted in modern commentaries. The prime example is the "Instruction of Amenemope." Proverbs 22:17–24:22 and Jeremiah 17:5–8 are both thought to be inspired by "Amenemope." Of particular interest is Proverbs 22:20 and the difficulty surrounding the Hebrew word traditionally written both *shlshwm* (*ketiv*) and *shlyshym* (*qere*) and vocalized to mean either "officers" or "the day before yesterday." Neither makes any sense in the context of the pericope. Accordingly, many scholars vocalize this word as *sheloshim*, "thirty" ("Have I not written for you thirty sayings of counsel and wisdom") especially since there are 30 chapters in the "Instruction of Amenemope" and that text ends "Look to these thirty chapters, They inform, they educate ..."

The points of contact between biblical and Egyptian literature go beyond content, and include linguistic borrowings as well. There are close to six dozen agreed upon Egyptian loan words in the Bible, not including personal names and toponyms (place names); some of these words are Hebraized, whereas others are used in forms that are close to their Egyptian form. Understandably, there is a remarkable clustering of these loan words in the biblical accounts relating to Egypt. We have come to expect Egyptian words used to describe the natural environment of Egypt, so the biblical words for "reeds" (Ex. 13:18, 15:4, 22, 23:31; *passim*), "Nile" (Gen. 41:1–3; *passim*), "papyrus" (Ex. 2:3; Isa. 18:2, 35:7; Job 8:11), and "marsh grass" (Gen. 41:2, 18; Job 8:11) all are Egyptian loans. The same goes for specifically Egyptian offices like the *hartumim* typically translated as "magicians" (Gen. 41:8, 24; Ex. 7:11, 22, 8:3, 14–15, 9:11; Dan. 1:20, 2:2, 10, 27, 4:4, 6, 5:11). Pharaoh is a royal title (literally "big house" / "palace") used in the Bible both as a royal title with a specific royal name following (Pharaoh RN – 11 Kings 23:29, 33–35; Jer. 46:2), or alone as a virtual royal name or specific appellative (this usage is consistent in the Torah text). Attempts have been made to date biblical passages according to the usage of the word "Pharaoh," but such arguments are speculative at best, and ignore the literary aspects of the text.

[Sharon Keller (2<sup>nd</sup> ed.)]

### The Hellenistic Period

**THE PTOLEMAIC PERIOD.** Egyptian Jewry traced its history back to the time of Jeremiah (Letter of Aristeas, 35), but it was not until the conquest of \*Alexander the Great in 332 B.C.E. that the second great wave of Jewish emigration to Egypt began. Alexander's successors in Egypt, the Ptolemaic dynasty, attracted many Jews early in their reign to settle in Egypt as tradesmen, farmers, mercenaries, and government officials. During their reign Egyptian Jewry enjoyed both tolerance and prosperity. They became significant in culture and literature, and by the first century C.E., accounted for an eighth of the population of Egypt. The majority of the Jews of Egypt lived,

Map 1. Main Jewish communities in Egypt during the Hellenistic period and during the Middle Ages; the enlarged section of the Delta region (right) gives medieval communities only.

as the Greeks, in \*Alexandria, but there were also very many in the *chora*, the provincial districts outside Alexandria.

\*Ptolemy I Soter (323–283) took a large number of Jewish prisoners of war in Palestine and forcibly settled them as mercenaries in Egypt to hold down the native Egyptians (*ibid.*, 36).

On Ptolemy I's retreat from Palestine many Jews fled with him to Egypt, where they found a haven of tolerance. \*Ptolemy II Philadelphus (283–44) emancipated the Jews taken captive by his father and settled them on the land as cleruchs or in "Jew-Camps" as Jewish military units. He was remembered by the Jews of Egypt as having instigated the translation of the Septuagint (see Letter of \*Aristeas; \*Bible: Greek translation). Since \*Manetho's antisemitic work was written in his reign there must have been a fair number of Jews already in Egypt.

\*Ptolemy III Euergetes (246–221) was said to have been favorably disposed toward the Jews and to have respected their religion. Two facts confirm this. One is the number of Jews who settled in the nome of Arsinoe (\*Faiyum) in his reign, and the other is the synagogue inscription dedicated to him, declaring that he granted the rights of asylum to the synagogues (Frey, *Corpus* 2 pp. 374–6). There is also a synagogue inscription from Schedia, which was also probably dedicated to him (Reinach in *REJ*, 14 (1902), 161–4).

\*Ptolemy IV Philopator (221–203) attempted to institute a massacre of the Jews of Alexandria in 217 B.C.E., but was later reconciled with them (*III Macc.* 5–6). During the reign of \*Ptolemy VI Philometor (181–145) a marked change took place. Ptolemy VI won Jewish favor by opening up the whole of Egypt to the Jews, on whom he relied, as well as by receiving Jewish exiles from Palestine such as \*Onias IV, to whom he granted land to build a temple at Leontopolis (c. 161 B.C.E.; *Jos.*, *Wars* 1:33). The Jewish philosopher \*Aristobulus of Paneas was said to have advised him on Jewish affairs, and he appointed two Jews, Onias and Dositheos, to high military posts (*Jos.*, *Apion*, 2:49). During the struggles of Cleopatra \*III (116–101) with her son \*Ptolemy IX Lathyros (116–80) the Jews of Egypt sided with the Queen, thus earning her esteem but alienating the Greek population from them (*Ant.* 13:287). She appointed two Jewish brothers, \*Ananias and Helkias, as commanders of her army.

**SOCIAL AND ECONOMIC DEVELOPMENTS.** Most of the Jews who settled in the *chora* were either farmers or artisans. The

Ptolemies did not generally trust the native Egyptians and encouraged the Jews to enter three professions:

(a) the army, where, as other nationalities in Egypt, they were allowed to lease plots of land from the king (called *cle-ruchies*), and were granted tax reductions;

(b) the police force, in which Jews reached high ranks (cf. the Jewish district chief of police in Frey, *Corpus*, 2, p. 370); and

(c) tax collecting (a government executive job) and sometimes in the *chora*, tax farming (a government administrative post; see Tcherikover, *Corpus nos.* 107, 109, 110).

Others were managers in the royal banks or administrators (*ibid.*, nos. 99–103, from middle of second century B.C.E.). In Alexandria there was a greater diversity of occupations and some Jews prospered in trade and commerce.

Early in the third century B.C.E. synagogues were founded in Egypt. They are known to have existed at Alexandria, Schedia (third century B.C.E.), Alexandrou Nesou (third century B.C.E.), Crocodilopolis-Arsinoe (three: third century B.C.E., second century B.C.E., and second century C.E.), Xenephyris (second century B.C.E.), Athribis (two: third or second century B.C.E.), and Nitriæ (second century B.C.E.). They were usually called *προσευχή* or *εὐχέϊον* (from the Greek *euche* = prayer), and tablets were often erected dedicating the synagogue to the king and the royal family.

At first the Jewish immigrants spoke only Aramaic, and documents from the third century and the first half of the second century B.C.E. show a widespread knowledge of Aramaic and Hebrew (cf. Frey, *Corpus* 2, pp. 356, 365). But from the second century on there was a rapid Hellenization. Documents were written in Greek, the Pentateuch was read in the synagogue with the Septuagint translation, and even such a writer as \*Philo probably knew no or little Hebrew. At first the Egyptian Jews transliterated their names into Greek, or adopted Greek names that sounded like Hebrew ones (e.g., Alcimus for Eliakim, or Jason for Joshua), but later they often adopted Greek equivalents of Hebrew names (e.g., Dositheos for Jonathan, Theodoras for Jehonathan). Gradually Egyptian Jewry adopted any Greek name (even those of foreign gods), and among the \*Zeno Letters only 25% of the names are Hebrew.

In the *chora* the Hellenization was not so strong, but there the Jews were influenced by the native Egyptians. Documents testify to Egyptian names among the Jews, and sometimes to an ignorance of Greek (presumably these Jews spoke Egyptian). However, the *chora* Jews were more observant of the Sabbath and dietary laws than those of Alexandria.

The relations between Greek and Jew was on the whole good under the Ptolemies. The Jews often sought to explain Judaism to the Greeks (cf. Aristobulus of Paneas, Philo, and others). They tried to enter the Greek gymnasium which was a sign of the cultured Greek. Cases of actual apostasy were rare; that of Dositheos, son of Drimylos, who renounced Judaism to enter court, was exceptional (III Macc. 1:3).

CONSTITUTION. It used to be thought that the Jews were given equal rights with the Greeks by Alexander the Great, and that they called themselves Macedonians (Wars, 2:487–88). This has been disproved by papyri where it appears that only Jews or Jewish military units, who were incorporated into Macedonian units, were termed “Macedonians” (compare Tcherikover, *Corpus nos.* 142 line 3 with no. 143). Since the population registered its name and racial origin, each nationality in Egypt formed a separate group through the Ptole-mid period. The Jews, unlike the Greeks, were not granted a *politeia* (rights of free citizenship), but received a *politeuma* (a constitution by which they had the right to observe their ancestral laws). Individual Jews were granted citizenship occasionally by the polis or the king, or by managing to register in a gymnasium. These, however, were exceptions. From the papyri of Faiyum and Oxyrhynchus it seems that the majority of Jews did not use the right of recourse to Jewish courts, but attended Greek ones even in cases of marriage or divorce. The head of the Jewish community in Alexandria was the \*ethn-arch, while in the *chora* elders held sway.

Toward the end of the Ptole-mid period Jewish-Greek relations steadily worsened. The Greeks, supported by the Egyptians, were struggling to strengthen the power of the polis, while the Jews supported the Ptolemids, first Cleopatra III (see above), and then \*Ptolemy XIII and \*Gabinus in 55 B.C.E. Papyri of 58 B.C.E. recorded some unrest in Egypt of an antisemitic nature (e.g., Tcherikover, *Corpus no.* 141). Josephus records that \*Julius Caesar was aided by Jewish cleruchs in Egypt when \*Antipater brought reinforcements from Palestine. In return for this Caesar is said to have reaffirmed the citizenship of the Alexandrian Jews in 47 B.C.E. (*Ant.*, 14:131, 188–96).

### Roman Period

EARLY ROMAN EMPIRE. The new administration under \*Augustus at first was grateful to the Jews for their support (cf. the stele of their rights set up in Alexandria; *Jos.*, *Ant.* 14:188), but generally it relied on the Greeks of Alexandria for help, which fact caused a great rift between the Jews and the rest of the population early in their rule. Augustus disbanded the Ptolemaic army and abolished the tax-collection system about 30 B.C.E. Both of these acts caused great economic hardships for the Jews. Few of them joined or were permitted to join the Roman army in Egypt (an exception being a centurion of 116 C.E., in Tcherikover, *Corpus no.* 229). Jewish tax collectors were mostly replaced by Greek government officials. The *cursus honorum* was closed to Jews unless they renounced their religion, which most refused to do (an exception being \*Tiberius Julius Alexander, prefect of Egypt). Jewish civil rights (*politeuma*) were endangered by Augustus’ revision of the constitution of Egypt. Three classes were created:

(a) the upper class of Romans, priests, Greek citizens of Alexandria, Naucratis, and Ptolemais, and those who had registered in the gymnasium;

(b) Egyptians, the lowest class, who paid a burdensome poll tax; and

(c) the middle class *metropolitae* (i.e., half-Greeks who lived in the *chora*), who paid the poll tax at a reduced rate.

Augustus placed the Jew in the lowest class, forced to pay the tax. This was a blow to Jewish pride, for besides those few individual Jewish families who had received the distinction of Greek citizenship, the vast majority of Jews could no longer register in the gymnasia and had to pay the poll tax.

From that time began a long struggle by the Alexandrian Jews to confirm their rights. The works of writers such as Josephus (*Contra Apionem*) and Philo (Vita Moysis 1:34) contain a defense of Alexandrian Jews' rights. The Greeks in turn approached Augustus suggesting that they would keep all non-Greeks out of the gymnasia, if he, in turn, would abolish the privileges of the Jews. Augustus refused and confirmed the Jewish ancestral rights, to the intense anger of the Greeks. Augustus abolished the post of ethnarch of Alexandria in 10–12 C.E., replacing it by a *gerusia* of elders.

The Greeks of Alexandria seized their opportunity with the rise of the pro-Hellenic emperor, Caius \*Caligula in 37 C.E. The following year they stormed the synagogues, polluted them, and set up statues of the emperor within. The prefect, Valerius \*Flaccus, was embarrassed and dared not remove the images of Caesar. The Jews were shut up in a ghetto and their houses plundered. Philo, who wrote *In Flaccum* and *De Legatione* on the affair, headed a Jewish delegation to Caligula to complain, but was dismissed with derision. On the assassination of Caligula in 41 C.E. the Jews of Alexandria took vengeance by instigating a massacre of the Greeks.

The new emperor, \*Claudius, issued an edict in favor of the Jews in 41 C.E., abolishing the restrictions imposed at the time of the pogrom of 38 C.E., but he banned the Jews from entering the gymnasia, and refused them Greek citizenship. Much antisemitic material was written at this period in Egypt, e.g., \*Apion's works, and the *Acts of the \*Alexandrian Martyrs*.

Consequently the Jews closed their ranks and became more self-conscious of their Jewish heritage. Such works were written as III \*Maccabees and the Wisdom of \*Solomon. The Jews also tended to live closer together, though no ghettos were imposed.

In 66 C.E. the Alexandrians, in debating about a delegation to be sent to Nero, presumably to complain about the Jews, discovered several Jewish spies among themselves. Three were caught and burnt alive. The Jews rose in revolt and tried to burn the Greeks in their amphitheater, and Tiberius Julius Alexander, the prefect, crushed them mercilessly, killing more than were slain in the pogrom of 38 C.E. After the destruction of the Jerusalem Temple in 70 C.E. Onias' Temple at \*Leontopolis was destroyed and the *\*fiscus judaicus* imposed. However, the Egyptian Jews had to pay more than other Jews, because the Egyptian calendar provided that they pay in the first year of the *fiscus* (71 C.E.), two years in arrears instead of

one year, as other Jews. It is estimated that they paid that year 27 million Egyptian drachmae in taxes.

In 115 the great revolt of the Jews of Egypt, Cyrene, and Cyprus occurred (see \*Trajan). The revolt was immediately crushed in Alexandria, by Marcus Rutilius Lupus, but it continued in the *chora* with the help of the Jews of \*Cyrene (in centers as Thebes, Faiyum, and Athribis). Marcus Turbo was sent by the emperor to deal with the situation, and crushed the revolt in 117. Much of Alexandria was destroyed and the revolt resulted in the virtual annihilation of Egyptian Jewry. From that time on Jews almost vanish from the *chora*. In Alexandria the great synagogue was destroyed, large tracts of Jewish-owned land in Heracleopolis and Oxyrhynchus were confiscated, and Jewish courts were suspended. The causes of the revolt suggested are the antisemitism of the local Greeks, and the "messianic" movement centered around \*Lucas of Cyrene. The revolt spelled the end of Jewish life in Egypt for a long time. From 117 to 300 only a few Jewish names occur among the peasants in the *chora*.

#### From the End of the Second Temple Period to the Muslim Conquest

The defeat suffered by the Jews, both in Erez Israel under Bar Kokhba and in the quelling of the rebellion in Egypt during the years 116–117 C.E. almost crushed the Jewish communities in Egypt, especially in Alexandria. The evidence from the papyri of the presence of a large, cohesive community in Egypt, found rather abundantly before 70 C.E., diminishes, until after the year 200 C.E. it becomes almost negligible. The territory of Egypt was still a marked battleground for imperial ambitions and rebellions during this later period of the Roman Empire. The revolt of the Βουκόλοι (herdsmen) and its aftermath, finally settled by the emperor Septimus Severus (194 C.E.), left the country with its agriculture almost ruined and burdened with heavy taxes. During the latter half of the third century Egypt was again racked with internal dispute. Finally, Diocletian brought a period of relative peace to the land, reorganizing the territory into three, and later four, provinces. The later history of Egypt under the Byzantine emperors is closely tied up with the growth and predominance there of hitherto persecuted Christianity.

Centered as it was in Alexandria, Christianity in Egypt inherited some of the classical antisemitism of the city. Clement of Alexandria mentions (*Stromata*, 3:63; 2:45.5) the fact that there existed in the primitive church there two "Gospels," an "Egyptian Gospel" and a "Hebrew Gospel" – evidence of the dichotomy in the early church between gentile and Jewish Christianity, the latter being characterized in Egypt by a Gnostic tendency. By 150 C.E., however, both Orthodox and Gnostic Christianity found themselves allied with regard to the Jews. Basilides, an Alexandrian Gnostic at the end of the second century, tried to stress in Gnostic terms that Christianity is to be completely dissociated from its Jewish ancestry. An early work called the *Epistle of Barnabas* (c. 135 C.E.) argued for the abrogation by God of the Old Covenant (Old

Testament) and the preference for an allegorical and “spiritual” interpretation of the Jewish Scriptures, a tendency later adopted by Clement of Alexandria and the exegetical school of the Alexandrian, \*Origen (d. 253 C.E.). Another early work, found only in citations, the *Kerygma Petrou*, accused the Jews of angel and star worship.

Some of the knowledge of the Jews in these times is derived from Christian sources. The martyrologies of the time, as a matter of style, brought in the Jews as the accusers. Generally though, as Baron reports (*Social*<sup>2</sup>, 2 (1952), 188), the early Christians got along with their Jewish neighbors. Indeed, toward 300 C.E., Jewish names begin to appear more frequently in the papyri, giving witness to a renewal of activity. There are even some Hebrew fragments found at Oxyrhynchus which speak of *rashei* (“heads”), *benei* (“members”), and *ziknei* (“elders”) of the *keneset* (“the community”; Cowley, *Journal of Egyptian Archaeology*, 2 (1915), 209 ff.). An interesting feature of the Greek papyri of this period is the appearance of the name “Sambathion” among both Jews and non-Jews, giving testimony to the great respect given the Sabbath among the Egyptians (for a fuller discussion cf. Tcherikover, *Corpus*, 3 (1964), 43–56). It is true that the Jews did support the Arians in their disputes with orthodox Christianity, and patristic literature placed the Jews together with the heretics and pagans as the hated enemies of the church. This attitude later became codified into law by the *Codices* of the emperors Theodosius and Justinian. A pogrom and expulsion of the Jews from Alexandria by the patriarch Cyril occurred in 415 C.E. Whether or not this expulsion was fully carried out is still a moot point, since later Christian literature points to the fact that Jews were still living there (M. Chaîne, in *Mélanges de la Faculté orientale de l'Université Saint-Joseph*, Beyrouth, 6 (1913), 493 ff.). The Persian conquest seemed to be especially helpful to the Jews in Egypt, since they were able to receive those Jews persecuted in Syria by the emperor Heraclius. The Arab conquest in 632 saw the beginning of a new regime.

[Evasio de Marcellis]

### Arab Period

There is little information available concerning the condition of the Jews from the Arab conquest in 640 until the end of the tenth century. In Fostat, founded by the conqueror of Egypt, 'Amr ibn al-'Āṣ, a relatively large community was established, while the Jewish population probably also grew in other Egyptian cities. Ahmad ibn Ṭūlūn (ninth century), the first independent ruler of Egypt under the Muslims, seems to have favored the Jews. The historian al-Maṣ'ūdī relates that he had a Jewish physician. Documents found in the Cairo \*Genizah of Fostat give evidence of the commercial ties between the Jews of Egypt and those of \*Kairouan (Tunisia) during the second half of the tenth century. The Jews of Egypt also renewed their relations with the major academies of Babylonia. It is significant for the high standard of Jewish learning in Egypt itself that \*Saadia Gaon (born in Faiyum in 882) acquired his widespread culture there. At that time many Babylonian

Jews settled in the principal Egyptian cities and established communities with their own synagogue and *bet din*. They also maintained a close relationship with the academies in their country of origin. Students traveled there to study, and religious and judicial queries were addressed to the heads of the Babylonian academies. The Palestinian and Syrian Jews who settled in Egypt acted in the same manner. They established Palestinian communities and synagogues, and they recognized the heads of the Palestinian academies, to whom they gave their material support, as their spiritual leaders. The activities of Saadia Gaon prove the presence of large numbers of \*Karaites in Egypt at the time. It seems that during the ninth and tenth centuries, there was still a variety of sects in Egypt. The work *Kitāb al-Anwār wa-al-Marāqib* (“The Book of Lights and Watch Towers”) by al-\*Kirkisānī, in 936 (L. Nemoy (ed.), 1 (1939), 12), mentions a sect which observed Sunday as a day of rest instead of Saturday. Members of this sect lived on the bank of the Nile, some 20 miles from Fostat (Bacher, in: *JQR*, 7 (1894/95) 704).

THE \*FATIMIDS. A change in the condition of the Jews occurred with the conquest of the country by the Fatimids in 969. After the conquest by this dynasty of Shi'ites which was in rivalry with the \*Abbasid caliphs, Egypt became the center of a vast and powerful kingdom, which, at the end of the tenth century, included almost all of North Africa, \*Syria, and \*Palestine. The union of all these countries brought a period of prosperity in industry and commerce from which the Jews also benefited. Of even greater importance was the characteristically tolerant attitude adopted by the Fatimids toward non-Muslim communities. They did not insist on the observance of the decrees of discrimination, such as the wearing of a distinctive sign on the garments; they permitted the construction and repair of non-Muslim houses of prayer, and they even accorded financial support to the academies in Palestine. In the court of al-Mu'izz (d. 975) and his son al-'Azīz (975–996), a Jew converted to Islam, Ya'qūb \*Ibn Kīlīs, occupied an important position and was finally appointed vizier. He was the first to hold this post under the reign of the Fatimids in Egypt. There were also Jewish physicians in the service of al-Mu'izz. The third Fatimid caliph, al-Ḥākim (996–1020), founder of the \*Druze sect and a controversial personality, departed from the policy of tolerance toward non-Muslims, which was characteristic of his dynasty, during the second half of his reign. At first, he ordered that the Christians and Jews mark their clothes with the *ghiyār* (“distinctive sign”; see Jewish \*Badge); later, he issued orders for the destruction of their houses of prayer. He also prohibited Christians and Jews from riding horses and purchasing slaves and maidservants. Many Christians and Jews converted to Islam in order to escape these degrading decrees, while others emigrated to different countries, such as Yemen and \*Byzantium. However, after some time, al-Ḥākim revoked his decrees and authorized the converts to return to their former religion.

In 1036 the grandson of al-Ḥākīm, al-Mustanṣir, ascended to the throne. A Jewish merchant, who had previously sold al-Mustanṣir's mother to the caliph al-Zāhir, then wielded much influence in the court. This merchant Abu Sa'd (in Hebrew, Abraham b. Yashar) was also named "al-Tustari" after his city of origin in Persia. He and his brother, Abu Naṣr Ḥesed, endeavored to protect their coreligionists by all available means. According to one opinion, Abu Sa'd and his brother were Rabbanites, while according to another they were \*Karaites. In 1047 Abu Sa'd was killed, as was his brother, Abu Naṣr, some time later. The economic stratification of Egyptian Jewry during the Fatimid period was very diversified. According to the lists of taxpayers and of charitable donators (such as the one published by E. Strauss in *Zion*, 7 (1941/42), 142ff.), the majority were engaged in various trades and a minority in commerce. At that time, the transit trade of products from India and the Far East became an important source of income in Egypt and the Jews played an active role in this commerce. The Fatimid government encouraged these commercial ties with India and protected the seaways and overland routes. The friendly attitude of the Fatimids was also expressed by the granting of a large degree of autonomy to the merchants.

At the beginning of their rule, the office of \**nagid* was established. The first *nagid* seems to have been a physician in the service of the caliph al-Mu'izz. In later generations, the office of *nagid* was also filled by men employed in the court, especially as court physicians. The Fatimid dynasty began to weaken at the end of the 11<sup>th</sup> century, but the condition of the Jews did not worsen. A Jewish family which during several generations produced scholars and physicians held high positions at the royal court at that time. Judah b. Saadia was probably court physician and from 1065 acted as *nagid*. He was followed by his younger brother \*Mevorakh, who was also court physician and *nagid* from 1079–1110. During his period of office \*David b. Daniel b. Azariah, a scion of a family of Babylonian exilarchs, arrived in Egypt. David made an effort to secure the leadership of the Jewish population and succeeded in deposing Mevorakh for a short while. Moses, the elder son of Mevorakh, was *nagid* from 1110–1140. At that period a Christian favorite of the regent al-Afdal endeavored to remove the Jews from government service (see Neubauer, in *JQR*, 9 (1896/97), 29–30). Fragments from the \**Genizah* mention another enemy who plotted against the Jews until Yakhin b. Nethanel, who was influential in the royal court, succeeded in saving them. On the other hand, \*Abu al-Munajja, one of the Jewish courtiers, was responsible for the administration of the "Eastern" province. In the middle of the 12<sup>th</sup> century \*Samuel b. Hananiah was court physician. He was a distinguished scholar and also acted as *nagid* from 1142 to 1159. His poems in honor of his guest, \*Judah Halevi, are well known.

During this period the Jews of Egypt prospered in every sphere. \*Benjamin of Tudela, who was in Egypt in c. 1171, gives much information concerning the prevailing conditions in the communities he visited. On the basis of his informa-

tion and other relevant data, the number of Jews in Egypt at that time has been estimated at between 12,000 and 20,000 (see Neustadt-Ayalon in *Zion*, 2 (1937), 221; Ashtor, in *JQR*, 50 (1959/60), 60 and *JJS*, 18 (1967), 9–42; 19 (1968), 1–22). After the death of Samuel b. Hananiah, there was a crisis within the Jewish community of Egypt. An ambitious individual named \*Zuta, who succeeded in being appointed *nagid* for a short while during the lifetime of Samuel b. Hananiah, exploited his connections to secure the office for a second time, after Samuel's death, and later a third time. As a result of Zuta's activities, the prestige attached to the office of *nagid* declined and for a long time there was no new appointment. At that time the heads of the Fostat academy became the leading authorities of Egyptian Jewry; an academy had existed in Fostat from at least the end of the tenth century. During the reign of al-Ḥākīm the academy in the Egyptian capital was headed by \*Shemariah b. Elhanan, who had studied in Babylonia in his youth. He was succeeded by his son, \*Elhanan b. Shemariah. During the first half of the 12<sup>th</sup> century, \*Maḏli'ah b. Solomon Ha-Kohen, a member of the family of the Palestinian academy heads, arrived in Egypt. He founded an academy in Fostat, whose leaders were referred to as *geonim*. They appointed *dayyanim* and gave authority to their activities. The authority of these *geonim* was recognized even outside Egypt, especially in South Arabia and \*Aden. In the early 1150s Abu Sa'id Joshua b. Dosa headed the academy in Fostat.

With the end of the Fatimid dynasty, orthodox Islam again became the official religion in Egypt. Saladin (Salāḥ al-Dīn) and his successors made their religiosity conspicuous and, among other actions, Saladin renewed the discriminatory decrees against the non-Muslim communities. However, both he and his successors were by no means fanatical and they did not persecute non-Muslims. His successors, the \*Ayyubids, who reigned in Egypt until 1250, followed the same policy. Communal life was well organized and cultural activities were maintained. During this period a number of scholars from Christian countries settled in Egypt and took an active part in the communal life. They included \*Anatoli b. Joseph and Joseph b. Gershon from France, who became *dayyanim* in Alexandria. Moses \*Maimonides spent most of his life in Cairo, where he played a leading role in the life of the community. His son, \*Abraham b. Moses, acted officially as *nagid* after the death of his father in 1205 until his own death in 1237. He had an independent mind and was also a halakhic authority, as can be seen from the numerous legal questions which were addressed to him.

THE MAMLUKS. In the middle of the 13<sup>th</sup> century the \*Mamluks came to power in Egypt. The entire political regime was changed and a decisive change in the condition of the Jews also took place. These rulers were the leaders of the foreign Turkish soldiery of which the army was exclusively composed, and they tried to enhance their position and to curry favor with the Muslim native population by emphasizing their piety and by introducing a series of measures directed against the

non-Muslim communities. The first Mamluks declared total war against the Crusaders. They found it necessary to encourage religious fervor in order to succeed in their efforts. Thus, the Mamluk rule was accompanied by a series of decrees and persecutions against the Christians and Jews, which continued until the Mamluks were deposed by the Ottomans. The ancient discriminatory laws were brought back into prominence and new ones were also instituted. These activities were primarily directed against the Copts, the most powerful non-Muslim community in the Mamluk kingdom, but even so the Jews suffered considerably. On the other hand, Jewish communal organization in Egypt was not abolished and its autonomy was mostly maintained. The decrees against non-Muslims were introduced during the first generation of the Mamluk rule. In 1290 Sultan Qalāwūn issued an order which prohibited the employment of Jews and Christians in government and ministerial departments. This order was reissued during the reign of his son and successor, al-Malik al-Ashraf Khalīl (1290–1293).

In 1301 there was a large-scale persecution. The Christians were compelled to cover their turbans with a blue cloth, the Jews with a yellow one, and the Samaritans with a red one. The authorities renewed the prohibition of riding horses and also forbade the building of houses higher than those of the Muslims. On this occasion the Jewish and Christian houses of prayer in \*Cairo were closed down. In 1354 there was an even graver persecution. The cause for it was again attributed by Arab historians to the haughtiness of the Christian officials. There were attacks on non-Muslims in the streets of Cairo and the government instituted a severe control over the habits of Muslim converts. At that time the economic situation of the Jews took a turn for the worse; under the Mamluks the system of monopolies was consolidated. Private industry was generally ruined and the commerce of spices, the most important part of Egypt's external trade, was taken over by the monopolized "Kārimī" merchant company in which only a few members were Jews. During this period the Jewish population was led by *negidim* of Maimonides' family. Maimonides' grandson, R. \*David b. Abraham, was *nagid* from 1238 to 1300. In various documents the *negidim* are referred to as heads of academies but the exact nature of the academy is in question. During the second half of the 13<sup>th</sup> century, the literary activities of Egyptian Jewry continued to flourish, as in the Fatimid and Ayyubid periods. \*Tanḥum ha-Yerushalmi, the well-known Bible commentator, and his son \*Joseph, a competent Hebrew poet, lived in Egypt at this time.

At the end of the 14<sup>th</sup> century, a second dynasty of the Mamluks, the Cherkess, came to power. The Mamluk rule then increased in violence and the anti-Jewish and anti-Christian decrees grew in frequency. The oppression and extortions of the sultans were severer than in former times. There often were internal conflicts within this Mamluk faction, and as a result the soldiers, unrestrained, rioted in the streets and attacked the citizens. In order to appease the embittered people, the sultans issued a multitude of decrees against the non-Muslims.

While the first sultan of the Cherkess Mamluks, Barqūq (1382–1399), as well as his son and successor Faraj (1399–1412), acted leniently toward the non-Muslims, the third sultan, al-Muʿayyad Sheikh, oppressed the non-Muslims by various means. The discriminatory decrees were renewed, and there were searches for wine in the non-Muslim quarters. During the reign of the Cherkess Mamluks the autonomous organization of the communities in Egypt remained unharmed and as previously, they were led as before by the *negidim*. The last of Maimonides' descendants to act as *nagid* was R. \*David b. Joshua. For reasons that are not known R. David was compelled to leave Egypt in the 1370s. He was replaced by a man named \*Amram. At the end of the Mamluk period, Egyptian Jewry was led by the *negidim* R. Nathan \*Sholal and his relative R. Isaac \*Sholal, who emigrated to Palestine after the conquest of Egypt by the Ottomans.

The travelers Meshullam of Volterra, who arrived in Egypt in 1481, and R. Obadiah of \*Bertinoro, who came there seven years later, provided information about the size of the communities in the descriptions of their travels. The numbers which are found in their writings emphasize the decrease in the Jewish population, which was concomitant with the general depopulation and was partly a result of the oppression under Mamluk rule. According to Meshullam there were 650 families, as well as 150 Karaite and 50 Samaritan families, in Cairo, 50 families in Alexandria, 50 in Bilbeis, and 20 in al-Khānqā. Obadiah mentions 500 families in Cairo, besides 150 Karaite and 50 Samaritan families, 25 families in Alexandria, and 30 in Bilbeis. From this it can be deduced that there was probably a total of 5,000 persons in all the communities visited by the two travelers. By then the immigration of Spanish Jewry to the oriental countries had begun. Even before the expulsion, groups of forced converts arrived in Egypt. Immediately after the expulsion, the Jews who had not converted arrived and the Jewish population in Egypt increased. In those centers where an important number of newcomers settled separate communities were established. The arrival of the Spanish immigrants had a beneficial effect on the cultural life of Egyptian Jewry. Their numbers included scholars of renown who engaged in educational activities and who were appointed as *dayyanim*. Among the scholars who arrived in Egypt during the first generation after the Spanish expulsion were R. \*Samuel ibn Sid, who was a member of the *bet din* of the *nagid* in 1509, R. Jacob \*Berab, who is mentioned in a document of 1513 as a *dayyan* of this same *bet din*, and R. Samuel ha-Levi \*Ḥakim, who was a prominent halakhic authority and acted as *dayyan* at the beginning of the 16<sup>th</sup> century in Cairo. The *negidim* welcomed the Spanish refugees.

THE OTTOMAN TURKS. When Egypt was conquered by the Ottomans in 1517, there was a decisive turn in the history of the country and the Jews living there. A wide choice of commercial possibilities was offered to the Jewish merchants, as well as an introduction to a variety of other trades. At the height of their power, the Ottomans were very tolerant and the Jews

held key positions in the financial administration and in the collection of taxes and customs duties. Almost all the Turkish commissioners and governors who were sent to Egypt turned over the responsibility of the financial administration to Jewish agents, who were known as *şarrāf-bashi* (“chief treasurer”). It is evident that the agents greatly profited by holding these positions. After two generations of prosperity, the political and economic decline of the Ottoman empire manifested itself and affected the rank and file of the Jewish population who sank into poverty and ignorance. Thus, Ottoman rule caused a distinct polarization in the status of Egyptian Jewry. The corruption of the governors, who were often replaced and whose ambition was to enrich themselves or to rebel against the sultan in Constantinople, and their acts of violence, extortion, and cruelty brought suffering on the Jews. One of the first Turkish governors, Ahmad Pasha, who was appointed in 1523, extorted a large contribution from Abraham \*Castro, director of the mint. He then ordered him to mint coins carrying his name, as if he were an independent ruler. When the Jewish official fled to Constantinople, Ahmad imposed an enormous contribution on the Jews, who were fearful of his vengeance if they did not provide the sum by the appointed time. However, on the day of payment, Ahmad Pasha was killed by soldiers loyal to the sultan and the anniversary was thereafter celebrated as \*Purim Miṣrayim (“Purim of Egypt,” i.e., Cairo).

In 1545 the governor Dāʿūd Pasha ordered the closure of the central synagogue of Cairo. All the efforts to obtain its reopening were in vain; the synagogue remained closed until 1584. After the conquest of Egypt by the Turks, Jews of Constantinople were sent to Egypt to act as *negidim*. The first of them was R. Tājir, who was followed by R. \*Jacob b. Ḥayyim Talmid. When this *negid* came to Egypt, a dispute broke out between him and R. Bezalel Ashkenazi, who was then the leading rabbi in Egypt. As a result of this dispute, the office of *negid* came to an end in about 1560. From then onward the Jewish finance minister in the service of the governor was recognized as the leader of the Jewish community in Egypt. He was referred to by the Turkish title of *chelebi* (*çelebi* = “gentleman”). Many of these Jewish ministers were executed by despotic governors. Masiah Pasha, who was appointed in 1575, chose Solomon \*Alashkar, a well-known philanthropist whose efforts were directed toward the amelioration of Jewish education among the Jews of Egypt, as *chelebi*. His activities continued for many years, until Karīm Hussein Pasha executed him in 1603.

The standard of Jewish learning improved with the arrival of the expelled Spanish Jews. During the first generation of the Turkish rule, the leading rabbi in Egypt was R. \*David b. Solomon ibn Abi Zimra. He instituted several regulations in the Jewish communal life, and, among others, he abolished the system of dating documents according to the Seleucid era, which was still in practice in Egypt. In the 1520s the renowned halakhic authority R. Moses b. Isaac \*Alashkar also lived in Egypt, where he acted as *dayyan*. However, he emigrated to Palestine and died in Jerusalem in 1542. Later David

b. Solomon Abi Zimra also emigrated to Palestine and Bezalel Ashkenazi became the spiritual leader of Egypt’s Jewish communities. During the second half of the 16<sup>th</sup> century, R. Jacob \*Castro was the most prominent Egyptian rabbi. These rabbis acted as *dayyanim*, gave responsa, and educated distinguished pupils. R. Isaac \*Luria, the famous kabbalist, was one of Bezalel Ashkenazi’s pupils.

The Jews of Cairo and Alexandria were at that time divided into three communities – the Mustaʿrabim (Arabic-speaking i.e., indigenous Jews), the Spanish (immigrants), and the Mogradim (settlers of North African, Maghreb origin). There were occasional disputes between the communities and the rabbis and communal leaders exerted themselves to restore peace.

During the 17<sup>th</sup> and 18<sup>th</sup> centuries, the Ottoman government became harsher and the upper class of wealthy Jews, who were employed by the governors and ministers, suffered especially. About 1610 the position of *chelebi* was filled by Abba Iscandari, a physician and philanthropist. In 1620 with the arrival of a new governor, the Albanian (“Arnaut”) Husain, the Muslim enemies of the *chelebi*, jealous of his wealth, slandered him before the governor and he was executed. Jacob Tivoli replaced him as *chelebi* until he was executed by Khalil Pasha. In 1650, when Silihdar Ahmad Pasha was appointed governor of Egypt, he brought with him Ḥayyim Perez, a Jew, whom he appointed *chelebi*. In the same year natural catastrophes and a plague occurred in Egypt; the sultan summoned the commissioner and the *chelebi* to Constantinople and had them both executed. A year later another governor, Muhammad Ghāzī Pasha, was sent to Egypt. He appointed Jacob Bibas as *chelebi*, but after a time became jealous of his wealth, killed him with his own hands and buried him in the garden of his palace. In 1661 the governor Ibrāhīm Pasha appointed the exceedingly wealthy Raphael b. Joseph Hin as his *chelebi*. The latter actively supported \*Shabbetai Ṣevi, the pseudo-messiah, who had visited Cairo twice. In 1669 Karākūsh Ali Pasha was appointed governor of Egypt, became jealous of Raphael Hin’s wealth, accused him of various crimes, and had him publicly executed. The title of *chelebi* was then abolished and the Jewish agent of the Egyptian governor, who stood at the head of his community, was henceforth known as *bazirkān* (from Persian *bāzargān* “merchant”). In 1734–35, a serious popular riot killed many of Cairo’s Jewish community which, as a result, became much less effective in Egypt’s administration and economy. The severity of Ottoman rule and the economic decline lowered the cultural level of Egyptian Jewry. During this period the community ceased to be led by renowned rabbis, as in the 16<sup>th</sup> century, even though some of them were excellent talmudic scholars such as Abraham Iscandari, Samuel \*Vital, the son of R. Ḥayyim \*Vital, \*Mordecai ha-Levi, and his son Abraham during the 17<sup>th</sup> century, and Solomon Algazi during the 18<sup>th</sup> century. Nevertheless, the Shabbatean movement brought some activity to the stagnant community. In 1703 the Shabbatean propagandist Abraham Michael \*Cardoso settled in Egypt, where he became physician to the Turkish governor

Karā Ahmad Pasha. At times scholars and authors came to Egypt from other countries and acted as *dayyanim* and rabbis for a number of years. Such was the case of David \*Conforte, author of *Kore ha-Dorot* who came in 1671.

The transition from an Ottoman province to a virtually independent unity was accompanied by a difficult struggle during which Jews also suffered considerably. In 1768 when Turkey became embroiled in war with Russia, Ali Bey, the governor of Cairo, proclaimed himself the independent governor of Egypt. He also made an effort to impose his authority on Palestine, Syria, and the Arabian Peninsula. In order to provide for the tremendous expenses of his wars, he levied a heavy contribution on the Jews, which they were compelled to pay within a short period (see Ben-Ze'ev in *Zion* (1939), 237–49). The reforms of \*Muhammad (Mehmet) Ali (1805–1848) and later the opening of the Suez Canal (1863) brought a new prosperity to commerce and the other branches of the Egyptian economy. As a result of the changes in all spheres of life, the Jewish population grew. Jews from European countries settled in Egypt and schools where education was dispensed along modern lines were introduced. Alexandria again became a commercial center and its Jewish community expanded until it was equal to that of Cairo. The census of 1897 showed that there were 25,200 Jews in the country. Of these, 8,819 (including approximately 1,000 Karaites) lived in Cairo, 9,831 in Alexandria, 2,883 in \*Tanta, 400 in Port Said, and 508 in al-\*Manṣūra. There were also small communities in other provincial towns, numbering a total of 4,600 Jews. The immigrants from European countries founded their own communities, even though they recognized the authority of the rabbis of the existing ones. Thus, in the middle of the 19<sup>th</sup> century there were communities of Italian and Eastern European Jews in Alexandria, while in Cairo the immigrants from Italy and Turkey united in one community. The relations between Muslims and Jews were normal and there were only rare cases of disturbances resulting from religious hate. In 1844 there was a blood libel against the Jews of Cairo and this was repeated in 1881 and in 1901–1902. In 1840, after the blood libel of \*Damascus, Moses \*Montefiore and Adolphe \*Crémieux came to Egypt and established Jewish schools in cooperation with R. Moses \*Algazi. In Alexandria, rabbis who distinguished themselves by their western education were appointed, and social activities were encouraged in the community. The numerical increase, the improvement of cultural standards, and the development of social activities continued throughout the first half of the 20<sup>th</sup> century.

After World War I Sephardi Jews from \*Salonika and other Ottoman towns, as well as Jews from other countries, settled in Egypt. According to the census of 1917 there were 59,581 Jews in Egypt, of which 29,207 lived in Cairo, and in 1937 their numbers reached 63,550, of which 34,103 lived in greater Cairo and 24,829 in Greater Alexandria. With the improvements in the economic and intellectual standards, the Jews took an active part in public life. Some financiers were appointed as members of Parliament and ministers. Joseph

\*Cattai was a member of parliament in 1915 and minister of finances and communications in 1923 (the year Egypt became officially independent), and Aslan Cattai was a member of the Senate during the 1930s. Some, such as Ya'qūb (James) \*Ṣanū', had even been associated with the Egyptian nationalist movement. On the other hand, Zionist organizations were created at the end of the 19<sup>th</sup> century in the larger towns such as Cairo, Alexandria, Manṣūra, \*Suez, \*Damanhūr, and al-Maḥalla al-Kubrā. As a result of the expulsion of large numbers of Palestinian Jews to Egypt during World War I, the attachment of Egyptian Jewry to the Palestinian population and to the national movement strengthened. The reinforcement of Jewish consciousness found expression in the publication of Jewish newspapers in various languages. In 1880, a Jewish weekly in Arabic, *al-Ḥaqīqa* ("The Truth"), began to appear in Alexandria. In 1903, a weekly in Ladino, *Mizrayim*, was founded in Cairo. From 1908 to 1941 a French weekly, *L'Aurore*, appeared in Cairo, and in 1919 another weekly, *Israël*, was founded in Cairo. This newspaper was amalgamated in 1939 with the Alexandria weekly *La Tribune Juive*, which was first published in 1936. It appeared until 1948, as did the Arabic weekly *al-Shams* ("The Sun"), founded in 1934.

[Eliyahu Ashtor]

### Contemporary Period

According to the Egyptian census of 1947, 65,600 Jews lived in Egypt, 64% of them in Cairo, 32% in Alexandria, and the rest in other towns. Egyptian Jewry was thus among the most urban of the Jewish communities of Asia and Africa. In 1947 most Egyptian Jews (59%) were merchants, and the rest were employed in industry (18%), administration, and public services (11%). The economic situation of Egyptian Jewry was relatively good; there were several multi-millionaires, a phenomenon unusual in other Jewish communities of the Middle East.

Most Egyptian Jews received some form of education, and there were fewer illiterates among them than in any other Oriental community in Egypt then. This was due to the fact that Jews were concentrated in the two great cities with all kinds of educational facilities. There were no restrictions on accepting Jews in government or foreign schools. In November 1945 riots, organized by the "Young Egypt" group led by Aḥmad Ḥusayn, ended in attacks on the Cairo Jewish quarter. A synagogue, a Jewish quarter hospital, and an old-age home were burned down and many Jews injured or killed. This was the first disturbance of its kind in the history of independent Egypt.

The year 1947 was the beginning of the end of the Egyptian Jewish community, for in that year the Companies' Law was instituted, which required that not less than 75% of employees of companies in Egypt must be Egyptian citizens. The law affected Jews most of all, since only about 20% of them were Egyptian citizens. The rest, although in many cases born in Egypt and living there for generations, were aliens or stateless persons. After the State of Israel was established, perse-

Map 2. Main Jewish communities in Egypt at the end of the 19th century.

cution of Jews began became more severe. On May 15, 1948, emergency law was declared, and a royal decree forbade Egyptian citizens to leave the country without a special permit. This was applied to Jews. Hundreds of Jews were arrested and many had their property confiscated. In June through August 1948, bombs were planted in Jewish neighborhoods and Jewish businesses looted. About 250 Jews were killed or wounded by the bombs. In 1949, when the consular law courts which tried foreign citizens were abolished, many Jews were affected. The condition of the Jews gradually worsened until, in July 1949, the new government headed by Ḥusayn Sirrī Pasha began to release detainees and return some of the frozen Jewish assets which had been confiscated, also allowing some Jews to leave Egypt. In January 1950, when the Wafd government under Nuqrāshī Pasha was overthrown, all Jewish detainees were released and the rest of their property restored to them. The condition of the Jews slightly improved, although they were forced to donate large sums of money to the soldiers' fund, and leaders of the community were coerced into publishing a declaration against the State of Israel. During the anti-British riots on Black Saturday (January 26, 1952), many foreign citizens were injured, and the loss of Jewish property on that day was estimated at £9,000,000 (\$25,000,000). About 25,000 Jews left Egypt between 1948 and 1950, some 14,000 of them settling in Israel. When persecution lessened, Jewish emigration decreased.

After the deposition of King Farouk in July 1952, the new government headed by General Muhammad Naguib was favorably inclined toward Jews, but when Naguib was overthrown and \*Nasser seized power in February 1954 there was a change for the worse. Nasser immediately arrested many Jews who were tried on various charges, mainly for Zionist and communist activities. In 1954 about 100 Jews were arrested, but most attention was attracted by the trial of the 13 charged with being members of an Israel intelligence network. Two of those charged died, and Moses Leo \*Marzuk, a Karaite surgeon and Samuel Bekhor Azar, a teacher, were sentenced

to death, while the rest were condemned to various terms of imprisonment (see. \*Cairo Trial).

Arrests of Jews continued. They were also forced to donate money to arm the military forces, Chief Rabbi Haim \*Nahoum explaining that it was a national duty. In addition, strict supervision of Jewish enterprises was introduced; some were confiscated and others forcibly sold to the government.

Immediately after the Sinai Campaign (November 1956), hundreds of Jews were arrested. About 3,000 were interned without charge in four detention camps. At the same time, the government served notice on thousands of Jews to leave the country within a few days, and they were not allowed to sell their property, nor to take any capital with them. The deportees were made to sign statements agreeing not to return to Egypt and transferring their property to the administration of the government. The International Red Cross helped about 8,000 stateless Jews to leave the country, taking most of them to Italy and Greece in chartered boats. Most of the Jews of Port Said (about 100) were smuggled to Israel by Israel agents. The system of deportation continued into 1957. Other Jews left voluntarily, after their livelihoods had been taken from them, until only 8,561 were registered in the 1957 census. Most of them lived in Cairo (65.3%) and Alexandria (32.2%). The Jewish exodus continued until there were about 3,000 in 1967 of whom only about 50 were Ashkenazim, since most members of this community had left or been deported.

With the outbreak of the Six-Day War in June 1967 the few remaining Jewish officials holding public posts were discharged and hundreds of Jews were arrested. They were beaten, tortured, and abused. Some were released following intervention by foreign states, especially Spain, and were permitted to leave the country. Among the detainees were the chief rabbi of Egypt, R. Ḥayyim Duwayk, and the rabbi of Alexandria, who were held for seven months. Several dozen Jews were held in detention until July 1970. Less than 1,000 Jews still lived in Egypt in 1970, when they were given permission to leave Egypt but without their possessions. Subsequently, only some four hundred Jews (1971) remained in Egypt. Thirty-five thousand Egyptian Jews live in Israel and there are about 15,000 in Brazil, 10,000 in France, 9,000 in the United States, 9,000 in Argentina, and 4,000 in Great Britain.

Egypt was the only Arab country in which the Zionist shekel was clandestinely distributed for the Zionist Congress of 1951 after the establishment of the State of Israel. There was a well-developed Zionist underground movement in Egypt, and some of its members were arrested. After the mass exodus from Egypt, most of the synagogues, social welfare organizations and Jewish schools were closed; the Jewish newspaper, *La Menora* (published in French and edited by Jacques Maleh from February 1950 to May 1953), was closed down after Maleh had been deported. The Jewish representatives in the Senate and the House of Representatives (Aslan \*Cattai and his brother René) lost their seats. The Cairo and Alexandrian communities had official committees, but there was no

nationwide organization, the chief rabbi of Cairo simply being recognized as the chief rabbi of Egypt.

The peace negotiations between Israel and Egypt brought some information and a certain renewed activity with regard to the small Jewish community remaining in Cairo. The total number of Jews in Egypt was approximately 400, and it was an aging community.

There was only one synagogue in Cairo, the 70-year-old Shaarei Ha-Shamayim synagogue, normally attended by a handful of old men and women. There was no rabbi, the last having left in 1972. In December 1977 over 120 persons, Israeli citizens and Jewish journalists who had come to cover the peace talks in Cairo, attended the services. The members of the Israeli delegation were unable to attend, but they attended the services the following Friday night. There was also a synagogue in Alexandria, the Eliyahu Ha-Navi synagogue. With only 150 Jews remaining in the city they succeeded with difficulty in holding services on Sabbaths and Festivals only.

In May 1977, at the request of Lord Segal of Wytham, 11 scrolls of the Torah from the Great Synagogue of Alexandria – of the 50 in the synagogue – were sent to Great Britain through the good offices of President Anwar \*Sadat.

Jewish rights were restored in 1979 after the Camp David Peace Accords. Only then was the community allowed to establish ties with Israel and World Jewry. However, these ties remained weak, despite Israeli tourism to Egypt, because the community is almost extinct.

Egypt was one of the Arab countries that invaded Israel upon its establishment in May 1948. After the defeat of the Egyptian forces, an Armistice Agreement was signed between the two states at Rhodes on Feb. 24, 1949; however, Egypt still regarded itself as at war with Israel, and there was no improvement in the relations after the Egyptian officers' 1952 revolution and the accession to power first of Muhammad Naguib and, later, of Gamal Abdel \*Nasser. Egypt participated in the Arab economic \*boycott of Israel, did not permit passage of Israel shipping and cargoes to and from Israel through the Suez Canal, and obstructed the passage of Israel shipping and cargoes to and from Israel through the Straits of \*Tiran. It occupied the \*Gaza Strip after the 1948 war and encouraged an increase in armed infiltration and sabotage against Israel beginning in 1955, which led to the Sinai Campaign (October–November 1956). After the Sinai Campaign and the stationing of the United Nations Emergency Force (UNEF) in the Gaza Strip and Sharm el-Sheikh, there was an almost complete cessation of fedayeen activity on the Gaza Strip–Sinai border and no interference with shipping to the port of Eilat until the withdrawal of the UNEF at Egyptian demand in May 1967, which was one of the factors that precipitated the Six-Day War (June 1967). Throughout the period that followed the Israel War of Independence, Egypt was the leading force in Arab opposition to Israel and the threat to its existence. It attacked Israel again in October 1973 (“the Yom Kippur War”) and, although defeated, President Anwar Sādāt felt the war's results were honorable enough for Egypt to initiate a peace

process. The Camp David Peace Accords of November 1978 normalized relations between Israel and Egypt.

**EGYPT, BROOK OF** (Heb. נַחַל מִצְרַיִם, *Nahal Mizrayim*), the natural border of the land of Canaan and the Kingdom of \*Judah on the south and the southwest according to the Bible (Num. 34:5; Josh. 15:4; cf. 11 Chron. 7:8; Isa. 27:12; Ezek. 47:19;

48:28). It is also described as the southern border of Solomon's kingdom: "from the entrance of \*Hamath unto the Brook of Egypt" (1 Kings 8:65) and the eastern extremity of Egypt (11 Kings 24:7). Assyrian inscriptions of \*Sargon and \*Esarhaddon also refer to it as the Mušur or Mušri River. Its identification with Wadi el-Arish is found in the Septuagint (Isa. 27:12), which translates it "Rhinokoroura," the Greek name of the city near its mouth.

The river, about 150 mi. (240 km.) long, drains about 12,500 sq. mi. (32,500 sq. km.) in the northern part of the \*Sinai Peninsula. It absorbs part of the heavy flood waters inundating it, and the area near its mouth is rich in wells.

[Moshe Kochavi]

**EḤAD MI YODE'Ā** (Heb. עֶחָד מִי יוֹדֵעָא; "Who Knows One?"), song incorporated in the Ashkenazi rite among the concluding songs of the Passover \**Haggadah*, whose aim was "to keep the children awake" until the end of the *seder* (cf. Pes. 108b–109a). The song consists of 13 stanzas, made up of questions (Who knows One?.. Two?.. Three?.. etc.) and their corresponding answers. The reply to each succeeding question also repeats the previous answers. The last verse reads: Who knows thirteen? I know thirteen. Thirteen are the attributes of God; twelve the tribes of Israel; eleven the stars (in Joseph's dream); ten the Commandments; nine the months of pregnancy; eight the days of circumcision; seven the days of the week; six the books of the Mishnah; five the books of the Torah; four the patriarchs (Sarah, Rebekah, Leah, and Rachel); three the patriarchs (Abraham, Isaac, and Jacob); two the tables of the Covenant; One is our God in heaven and on earth. (Some *Haggadot* have substituted other answers for the eighth and ninth questions of the traditional form. They read: nine are the Jewish holidays of the year, eight the Hanukkah lights.) In some places the song is chanted responsively: one person, usually the leader of the *seder*, asks the questions, and the whole company answers, each person responding as quickly as possible in an effort to finish the answer first. *Eḥad Mi Yode'ā* is first found in *Haggadot* of the 16<sup>th</sup> century and only in those of the Ashkenazi ritual. Many scholars believed that it originated in Germany in the 15<sup>th</sup> century. Perles showed its similarity to a popular German pastoral song, "Guter Freund Ich Frage Dich" (one of the "Hobelbanklied" German folk songs), the first stanza of which ends with the same words as the Passover song. In fact, the identical words of this line of the pastorate are given as the German translation of the first answer of *Eḥad Mi Yode'ā* in many early *Haggadot*. The Christian theme of the original was changed to one of Jewish content. Zunz discovered that the Hebrew song was used in Avignon as a festive table song chanted on other holidays as well, and Geiger noted other German counterparts. Since then it has been found among the liturgical music of Jews from Ceylon and Cochin, where it forms part of their Sabbath songs for the entertainment of

bride and groom. Some scholars have even traced it to Greek or English church songs and Scottish nursery songs.

**EHRENBURG, VICTOR LEOPOLD** (1891–1976), German historian. Born in Altona, Ehrenberg was professor of ancient history at the German University in Prague (1929–39). The Nazi regime forced his immigration to Great Britain (1939), where he was visiting lecturer at several universities, and from 1949 to 1957 lecturer and reader in ancient history at the University of London. He was joint founder of the London Classical Society and joint founder and editor of the journal *Historia*. The bulk of Ehrenberg's work was in ancient Greek history. These include *Neugruender des Staates* (1925); *Alexander und Aegypten* (1926); and *Alexander and the Greeks* (1938). The *People of Aristophanes* (1943, 1951<sup>2</sup>) is a sociological account of life in ancient Athens, based upon the surviving works of old Attic comedy; *Sophocles and Pericles* (1954) deals with the spiritual trends of the fifth century B.C.E.; *From Solon to Socrates* (1968) describes Greek civilization of the sixth and fifth centuries B.C.E. Many of his numerous articles were gathered in *Aspects of the Ancient World* (1946) and *Polis und Imperium* (1965).

[Irwin L. Merker]

**EHRENBURG, ILYA GRIGORYEVICH** (1891–1967), Soviet Russian writer and journalist. Born to an assimilated middle-class Jewish family in Kiev and, with no ties to Jewish religion or culture, Ehrenburg is typical of many Jewish left-wing intellectuals of this century, whom Hitler and Stalin would not allow to forget their origins. A feeling of outrage at antisemitism recurs in Ehrenburg's books and journalistic output throughout his career and was a major factor in his youthful revolt against Czarist and, at the end of his life, against Stalinist injustice. Forced to flee Russia because of participation in revolutionary activities, he lived abroad, mainly in Paris, between 1908 and 1917. Ehrenburg returned to Russia after the February Revolution, criticizing sharply in his essays the October Revolution and its leaders, Lenin, Kamenev, Zinoviev, and others. He left again in 1921 and lived mainly in Berlin, where he witnessed the rise of the Nazis to power. Understanding that Nazi ideology was a danger to the world, he proposed to Stalin in September 1934 to turn the International Organization of Revolutionary Writers into a movement against Fascism and in support of the Soviet Union. His proposal was accepted. He did not permanently settle in the U.S.S.R. until shortly before the Nazi attack on the U.S.S.R. in the summer of 1941. On the eve of the Molotov-Ribbentrop agreement, the

publication of his poems and essays was stopped, but renewed on the eve of the German attack on the Soviet Union. From 1948 he was active in the pro-Soviet World Peace Movement, serving as its vice chairman.

Of the nearly 30 volumes of Ehrenburg's literary and journalistic output, including collections of poems, the most successful was his first novel, *Neobychaynye pokhzhdeniya Khulio Khurenito* (1922; *The Extraordinary Adventures of Julio Jurenito*, 1958), an all-out sardonic attack on different aspects of modern civilization, including its persecutions "of the tribe of Judah." A series of rather undistinguished novels dealing with different subjects followed in rapid succession. These include *Zhizn i gibel Nikolaya Kurbova* (1923; "The Life and Death of Nikolai Kurbov"), the story of the undoing of a Soviet secret policeman; *Lyubov Zhanny Ney* (1923; "The Love of Jeanne Ney"), an account of a love affair involving a Russian Communist and a "bourgeois" French woman; *Rvach* (1925; "The Grabber"), a typical tale of a Soviet revolutionary corrupted by peacetime prosperity; and *Zagovor ravnikh* (1928; "The Conspiracy of Equals"), which tells the story of Babeuf, one of the heroes of the French Revolution.

Closest in spirit to *Julio Jurenito* is Ehrenburg's "Jewish" novel, *Burnaya zhizn Lazika Roitshvantsa* (1927; *The Stormy Life of Lazik Roitschwantz*, 1960) a biting lampoon of injustice, hypocrisy, and pretense both under capitalism and in the new Soviet republic. Its hero, a pathetic Jewish tailor, is a direct descendant of the ne'er-do-wells and *Luftmenschen* of \*Shalom Aleichem. Try as he may, Lazik Roitschwantz cannot understand why both the Reds and the Whites consider harmless folk like himself dangerous enemies of the State. Though outwardly a rogue, all Lazik Roitschwantz really desires is to earn a livelihood and to be left alone by the authorities. Though liberated by the revolution from the yoke of official Czarist antisemitism, he is now suspect to the Soviet bureaucrats as a petty bourgeois individualist artisan. Escaping to Western Europe, he finds himself mistaken for a Communist agent and is packed off to jail as a Jewish Bolshevik. When he finally makes his way to Palestine, fate decrees that he die of starvation in the land of his ancestors.

There are no grounds to doubt Ehrenburg's assurances that the main reason he opposed reprinting the novel in the post-Stalin nine-volume set of his works brought out in the 1960s was his feeling that the old caricature of the "little Jew" should not be revived only a few years after millions of real-life "little Jews" were murdered in Nazi crematoria. Ehrenburg's loyalty to the Soviet regime did not waver during Stalin's bloodiest terror as well as during the Nazi-Soviet pact, and for years he was a most vocal apologist for some of the most abhorrent features of the Soviet regime. His activities in the latter capacity frequently smacked of cynical opportunism, just as his later championing of freedom might have been dictated by a desire to expiate his guilt as a verbal accomplice in Stalin's crimes. There is, however, one aspect of Ehrenburg's activity in which the writer's sincerity is beyond all questioning, namely his opposition to Nazism. His novel

*Padeniye Parizha* (1941; "The Fall of Paris"), written during the period of Nazi-Soviet friendship, was published in its entirety only after Hitler's armies had invaded Russia. Ehrenburg had become the leading Soviet journalist on the strength of his reports in *Izvestia* on the Spanish Civil War and, during World War II, his impassioned diatribes against the German invaders were distributed to millions of Soviet soldiers. A member of the Jewish \*Anti-Fascist Committee, he stressed his Jewish identity during the war. On the assignment of the Committee he prepared together with Vasily Grossman the "Red Book" on the heroism of Jewish fighters and the "Black Book" on the Holocaust of Soviet Jewry. The first book was banned outright by the authorities. The second was even typeset, but during the liquidation of the committee in 1948 it was halted by the KGB. Parts of the book were then published in Yiddish (1944) and Romanian (1946), and it was fully published in Russian in 1980 in Jerusalem by Yad Vashem.

Ehrenburg's usefulness as the Soviet Union's foremost anti-German ideologist came to an end with the defeat of Nazism, but he was soon to achieve eminence in the propaganda onslaught on the West, which is also much in evidence in his two novels of that period, *Burya* (1947; *The Storm*, 1949) and *Devyaty val* (1952; *The Ninth Wave*, 1958). In the fall of 1948 he played a significant part in the Soviet Union's swing away from outright support for the State of Israel. In an article in *Pravda* he opposed Jewish nationalism and warned Soviet Jews against cultivating any special attachment to Israel more than any other capitalist land.

A controversy that is not likely to be solved for years to come relates to Ehrenburg's role during the sinister antisemitic purges which claimed the lives of scores of Ehrenburg's friends and colleagues, such as the actor Solomon \*Mikhoels, the poets Itzik \*Fefer and Peretz \*Markish, the novelist David \*Bergelson and others. Not only did Ehrenburg escape their tragic fate, but in 1952, the year when the others were executed, Ehrenburg was awarded the Stalin Prize. However, he detached himself from the official line over the "Doctor's Plot."

Almost immediately after Stalin's death in March of 1953 Ehrenburg became a spokesman for those Soviet intellectuals who demanded liberal reforms. His novelette *Ottepel* (1954–56; "The Thaw") was a major event in the struggle for a more humane Soviet society: it was an indictment of many aspects of Stalinism, including crudely propagandistic art and the antisemitic campaigns. Yet in retrospect Ehrenburg's crowning achievement may well prove to be his memoirs *Lyudi, gody, zhizn* (1961; *People and Life 1891–1921*, 1962; *Memoirs: 1921–41*, 1964), which were serialized in the monthly *Novy Mir* between 1960 and 1965. In spite of all the evasions and distortions, these presented a relatively truthful picture of Russia's and Western Europe's artistic and literary intelligentsia during the 1920s and 1930s and included several loving portraits of Yiddish cultural figures. Ehrenburg's memoirs constitute, in fact, the closest Soviet approximation to date of cultural history.

On the occasion of his 70<sup>th</sup> birthday celebrations, Ehrenburg stated: "Even though my passport declares me to be a Jew,

I am a Russian writer," implying that Soviet Jews were allowed entry into Russian culture, but not into the Russian people.

Toward the end of his life Ehrenburg frequently clashed with Soviet official spokesmen, stubbornly championing the cause of a greater degree of artistic and personal freedom and, whenever the opportunity presented itself, heaping scorn on Soviet antisemites. Thousands took part in his funeral, many of them young Jews who saw him as a liberal and a fellow Jew.

A major biographical study of this Soviet Jewish writer in English appeared in 1984: *Ilya Ehrenburg: Writing, Politics and the Art of Survival* by Anatol Goldberg, with an introduction, postscript, and additional material by Erik de Mauny.

[Maurice Friedberg / Shmuel Spector (2<sup>nd</sup> ed.)]

**EHRENFELD**, family of Hungarian rabbis. The founder was DAVID ZEVI EHRENFELD (d. 1861), a son-in-law of Moses \*Sofer. He wrote no books of his own, but some of his writings are included in the books of his son Samuel. Ehrenfeld had five sons, four of whom served in the rabbinate of Hungary. Samuel \*Ehrenfeld served as rabbi of several communities. SIMEON (b. 1860) was rabbi of Szinna (Snina) and Nagymihaly (Michalovce), both of which places became part of Czechoslovakia after World War I. He laid the foundation of the central bureau of Orthodox rabbis in Czechoslovakia. SAUL (1835–1905), who was born in Pressburg, succeeded Samuel at Szikszó and served there until his death. ISAIAH (1850–1902) was rabbi in Berzavicz, Sarospaták, and Nagysurany and wrote *Shevet Sofer* (1903, 1938<sup>2</sup>) on the Pentateuch. He fought vigorously against every form of religious innovation. Abraham Glazner was his son-in-law.

Stern, *Melizei Esh: Tishri and Marḥeshvan* (1933), 153a no. 435 (on David Zevi), Av and Elul (1932), 7a no. 6 (on Samuel), 111a no. 284 (on Saul), Sivan (1931), 149a no. 197 (on Isaiah); P.Z. Schwartz, *Shem ha-Gedolim me-Erez Hagar*, 1 (1914), 266 no. 54 (on David Zevi), 52b no. 260 (on Isaiah); 2 (1914), 40a no. 71 (on Samuel), 366 no. 1 (on Saul); (A.S.) B. Sofer-Schreiber, *Ketov Zot Zikkaron* (1957), 262–7.

[Naphtali Ben-Menahem]

**EHRENFELD, NATHAN** (1843–1912), chief rabbi of Prague. He was a pupil of Azriel \*Hildesheimer both at the yeshivah in Eisenstadt and at his seminary in Berlin. In 1890 he was appointed chief rabbi of Prague. While strictly Orthodox himself, he managed to keep the peace between the divergent factions in the Prague community. He gave particular attention to religious instruction and founded a college for teachers of religion. He acted as trustee for the charitable foundations in Austro-Hungary of the Orthodox Karl Wilhelm Rothschild. His son-in-law, Heinrich (Ḥayyim) \*Brody, succeeded him in office.

**BIBLIOGRAPHY:** *Der Israelit* (Feb. 29, 1912), 7–8; AZDJ, 76 (March 1, 1912), 3.

**EHRENFELD, SAMUEL BEN DAVID ZEVI** (1835–1883), Hungarian rabbi known from his works as the "Hatan Sofer," ("son-in-law of Sofer" to indicate his connection by marriage with the famous Moses \*Sofer, and in assonance with the title of Sofer's responsa *Ḥatan Sofer*. Actually it was his father who was the son-in-law of Moses Sofer). Ehrenfeld was born in Pressburg. He studied under his father and in the yeshivah of Pressburg under Abraham \*Sofer, his maternal uncle. At first he engaged in business, but when this failed he accepted the rabbinate of Betlen (now Beclean, Romania) in 1866. In 1868 he became rabbi in Szikszó, because of the opportunities which a larger yeshivah there afforded him. In 1877 he moved to Mattersdorf where his grandfather and other members of his family had served before him. He was able to devote himself completely to the interests of the community and the large yeshivah there. He died at Kierling, where he had gone to recuperate after a long illness. As a teacher he was able to impart his own approach to Talmud and *halakhah*, based on the clear understanding of the talmudic text and its relevance to the ultimate *halakhah*.

His clarity and complete mastery of all branches of *halakhah* is evident in his published works: *Ateret Bahurim*, *Ḥatan Sofer* (only one part, 1874), on various topics from *Ḥoshen Mishpat*, and *Ḥatan Sofer* on the Shulḥan Arukh, *Orah Ḥayyim* (one part, 1878; 2 vols., 1963<sup>2</sup>), both having long aggadic introductions. He printed the biography of his grandfather as well as other historical matter. *Ḥatan Sofer* was edited with an introduction by his son, Simḥah Bunim Ehrenfeld (1912), and contains a biography of his father. *Misped Mar* (1874) was his next work. A Passover *Haggadah* (1884) with his own commentary and that of his grandfather was edited by Rabbi Joseph Baumgarten (later *rosh bet din* of Vienna).

Ehrenfeld was succeeded in Mattersdorf in 1884 by his son SIMḤAH BUNIM (1856–1926) who had from 1876 been rabbi in Sarvar. He is the author of *Maaneh Simḥah*, part of which is printed in the introduction to his father's *Ḥatan Sofer*. He was succeeded by his son SAMUEL, who served that community until 1938/39, when he immigrated to New York and there reestablished the Mattersdorf yeshivah (1939). In 1958 he founded Kiryat Mattersdorf, a religious suburb in Jerusalem. He re-edited all the above-mentioned works with copious notes and added much new material.

**BIBLIOGRAPHY:** Samuel b. David Zevi Ehrenfeld, *She'lot u-Teshuvot Ḥatan Sofer* (1912), introd.; P.Z. Schwartz, *Shem ha-Gedolim me-Erez Hagar*, 2 (1914), 40a no. 71 (on Samuel 1); 47 no. 179/1 (on Simḥah Bunim); J.J. (L.) Greenwald (Grunwald), *Mazzevat Kodesh* (1952), 127, 149–50; S.N. [Abraham Schischa]

**EHRENFEST, PAUL** (1880–1933), Austrian physicist. Born in Vienna, Ehrenfest studied under Ludwig Boltzmann, the

Austrian physicist, and later went to Goettingen. He and his wife, Tatiana Afanashewa, carried out a critical investigation of kinetic theory, and collaborated in an extensive article on statistical mechanics which is still one of the classics on that subject. From 1912 until his death Ehrenfest was professor of physics at Leiden. His work in that period included papers on the adiabatic hypothesis and invariants (a term he coined), propagation of wave packets, and ferromagnetic Curie points. Ehrenfest was a masterful teacher, infecting his students with his own enthusiasm for physics. He was a merciless critic of unclear and superficial expositions and in his own work stressed clarity and fundamentals. Ehrenfest became a symbol of a period in physics characterized by two great advances, the quantum theory and the theory of relativity, where fundamental enquiry was the rule.

[Gerald E. Tauber]

**EHRENKRANZ, BENJAMIN (WOLF) ZEEB** (1819–1883), popular Yiddish and Hebrew poet known as **Velvl Zbarzher**. Born in Zbarazh, Galicia (now Ukraine), Ehrenkranz had a traditional Jewish education. He composed and sang folk songs, and as a singing bard traveled to various European cities, spending his last years in Galata, a district in Istanbul. He performed his songs in Yiddish, shifting to Hebrew when appearing before a maskilic audience. His songs spread quickly, gradually changing until their original versions were forgotten. The major themes of his poetry were nature and people, poverty and wealth, and the fight of light against darkness, i.e., as he viewed it: *maskilim* against *ḥasidim*. Much of his work, only a fraction of which he published, is comprised of satires and parodies. His collected poetry, *Makkel No'am* (Hebrew and Yiddish), appeared in 1865–78 in four parts. He also wrote *Makkel Hovelim* (1869), in Hebrew and Yiddish, as well as *Siftei Yeshenah* (1874). B. Wachstein published three of Ehrenkranz' long Yiddish poems (*YIVO-Bleter*, 1938), and a selection of his letters in 1928. Although most of his improvised songs were never published, some were issued by L. Morgenstern, the Warsaw publisher, but were not attributed to the poet.

**BIBLIOGRAPHY:** S. Niger, in: *Tsukunft*, 1 (1925); Tiger, in: *Yidish*, 3–4 (Vienna, 1928), 1–6; D.I. Liptzin, *Eliakum Zunser* (1950), 74.

[Mordechay Zerkawod]

**EHRENPREIS, MARCUS (Mordeciai)** (1869–1951), rabbi and author. Ehrenpreis, who was born in Lemberg where his father was a Hebrew printer, combined a traditional East European Jewish upbringing with a Western education, attending the \*hochschule fuer die Wissenschaft des Judentums in Berlin as well as German universities. He officiated as rabbi in Djakovo, Croatia, from 1896 to 1900, and later became chief rabbi of Sofia, Bulgaria, and from 1914 of Stockholm. As

the chief rabbi of Sofia, Ehrenpreis labored to ameliorate the condition of minorities in the Balkans, and in 1913 went on a mission to several European capitals on behalf of King Ferdinand I of Bulgaria. His contributions to the early Hebrew periodicals *Ha-Maggid* which first appeared in 1884 and in *Ha-Shilo'ah* among others make him one of the pioneers of modern Hebrew literature. At the request of Theodor \*Herzl he translated the invitation to the First Zionist Congress into Hebrew, personally setting the type. There, and at later Zionist congresses, Ehrenpreis acted as a consultant on cultural matters. Like \*Berdycewski he criticized \*Aḥad Ha-Am's view that Hebrew literature confine itself to Jewish themes and demanded that it fulfill all the spiritual needs of Jews living within the boundaries of European culture (*Ha-Shilo'ah*, no. 1, 1896/97). However, in his article *Ha-Sifrut ha-Illemet* ("The Silent Literature") in *Ha-Shilo'ah*, 17 (1908), he expressed the view that the Hebrew literature of his generation was not capable of creating "the redeeming synthesis between Judaism and Europeanism." From then on he abandoned almost totally his interest in Hebrew literature and the Zionist movement (for which he was severely criticized by the Zionists), and devoted himself to his rabbinic and public work, writing in Swedish and other languages. He published many translations of modern Hebrew literature into Swedish; and his own essays "De som byggt Israel" ("The Builders of Israel," 3 vols., 1929–43); "Landet mellan öster och väster" ("The Country Between East and West," the journey of a Jew to Spain, 1927); *Österlandets Sjal* (1926; *The Soul of the East*, 1928), impressions of a journey to the Middle East; and his autobiography, *Mitt liv mellan öster och väster* ("My Life Between East and West," 1946). His books were translated into several European languages and his autobiography (1953) into Hebrew. He founded the Jewish-Swedish journal *Judisk Tidskrift* (1928), and edited a Jewish encyclopedia in Swedish. Although first a political Zionist, he became an advocate of spiritual nationalism, believing that dispersal and assimilation were the true way of life for the Jewish people, enabling them to fulfill their spiritual mission among the nations.

**BIBLIOGRAPHY:** *Judisk Tidskrift*, 17 (1944), no. 1, on Ehrenpreis' 70<sup>th</sup> birthday with bibl. (special suppl.); M.J. Berdycewski, *Maamarim* (1960), 223–5; J. Klausner, *Yozerei Tekufah* (1956), 126–32; Gelber, in: *Zion*, 3 (1953), 45–51; Waxman, *Literature*, 1 (1960<sup>2</sup>), 155–6.

[Gedalyah Elkoshi and Hugo Mauritz Valentin]

**EHRENREICH, BERNARD COLONIUS** (1876–1955), U.S. Reform rabbi. Ehrenreich was born in Hungary and immigrated to the United States as a young child in 1879. He attended New York University, where in 1898 he was one of the founders of the Zeta Beta Tau American Jewish Fraternal Organization as a forum for exchanging ideas and promoting Zionism. Ehrenreich earned his B.A. degree from NYU in 1900, the same year he was ordained at the Conservative movement's Jewish Theological Seminary. He became rabbi of Congregation Beth Israel in Atlantic City, New Jer-

sey (1901–2) and served as recording secretary of the Federated Zionists of America. In 1903, he assumed the pulpit of Congregation Adath Jeshurun of Philadelphia, where he was one of the nucleus of founders of the Alumni Association of the Jewish Theological Seminary (the forerunner of the Rabbinical Assembly). In 1906, after affiliating with the Reform movement's Central Conference of American Rabbis, he became rabbi of Kahl Montgomery in Montgomery, Alabama, where he was also active in the Jewish Welfare Board, the Montgomery Chamber of Commerce, the Graduate Menorah Society, and the American Jewish Congress. During World War I, he served as a welfare worker in the military base at Camp Sheridan, Alabama.

Devoted to the education, character building, and leadership development of young people, Ehrenreich purchased a summer camp in Minocqua, Wisconsin, in 1915, named it Camp Kawaga, and directed it as a Jewish boys' camp – albeit heavily influenced by Native American culture – from 1916 to 1951. His philosophy was that he could teach boys the Great Outdoors (GOD), as well as skills to turn them into men. Over the years, Kawaga attracted (and continues to attract) thousands of campers, winning the approval and endorsement of rabbis and educators from states throughout the Midwest, the South, and the Southwest. Ehrenreich's voluminous correspondence shows that many men stayed in close touch with “Doc E.” into adulthood and attributed their lifelong allegiance to Judaism and Jewish values to his influence. Ehrenreich also became a civic leader in the town of Minocqua, where he eventually chose to reside for most of the year. During World War II, although in his late sixties, Ehrenreich traveled as far afield as Columbia, South Carolina, and Stockton, California, to volunteer as a replacement for congregational rabbis who were away serving as military chaplains.

**BIBLIOGRAPHY:** Guide to the Papers of Bernard C. Ehrenreich, American Jewish Historical Society (<http://www.cjh.org/academic/findingaids/ajhs/nhprc/Ehrenreichf.html>); *Journal of the 66th Annual Convention of the Central Conference of American Rabbis* (1955).

[Bezalel Gordon (2<sup>nd</sup> ed.)]

**EHRENREICH, HAYYIM JUDAH BEN KALONYMUS** (1887–1942), Hungarian rabbi. Ehrenreich served as rabbi of Holesov, Moravia; Deva, Transylvania; and Humenne, Slovakia. In this last community, to which he was appointed in 1930, he devoted himself to a study of talmudic literature. Ehrenreich planned a scientific edition of the Babylonian Talmud together with a new commentary of his own, and a similar one of the Jerusalem Talmud, but nothing was published. Immersed in this scholarly activity, he hardly engaged in communal activity, but in 1920 published an important pamphlet *Yisrael bein ha-Amim* (“Israel Among the Nations”) dealing with Jewish survival. His works include *Saadiah Gaon's She-losh Esreh Middot* (1922); *Sefer ha-Pardes* (1924); parts of *Sefer Abudarham* (1927); *Abraham Klausner's Minhagim* (1929); and *Givat ha-Moreh* (1936), sermons. From 1920 he published parts

of *Seder Rav Amram Ga'on* with his own commentary and edited a monthly journal, *Ozar ha-Hayyim*, from 1924–38. He and his family were killed by the Nazis in Lublin in 1942.

**BIBLIOGRAPHY:** Ehrenreich, in: *Ozar ha-Hayyim*, 2 (1926), 47; 5 (1929), 260; Wininger, *Biog.* 6 (c. 1930), 555; S.K. Mirsky (ed.), *Ishim u-Demuyyot...* (1959), 432–7; *EZD*, 1 (1958), 194–7.

[Naphtali Ben-Menahem]

**EHRENSTAMM**, family of pioneering textile manufacturers in the Hapsburg Empire in the 18<sup>th</sup>–19<sup>th</sup> centuries. Solomon Jacob, a son of Phinehas \*Illovy, was first known by the family name of Kolin. He settled in \*Prostejov (Prossnitz) in 1752 as a textile importer, but twice went bankrupt because of the unfavorable government policy on imports. In 1787 he adopted the family name of Ehrenstamm. His son Feith (d. 1827), who from 1786 had acquired wealth as an army contractor, took over the firm in 1790. In 1801 he founded a textile factory with modern imported machines, initially employing 3,000 workers, for supplying the army and export. He later added dyeing departments. In 1812 he accepted a contract for supplying the quota of textiles for army uniforms imposed on Moravia, and in 1820, in partnership with Simon von \*Laemel, for supplying the entire Hapsburg army. He took up residence next to his factory, becoming the first Jew at this time to live outside the Jewish quarter of a Moravian town. After his death, the privileges he had received were transferred to his four sons. They became known for their extravagance, and gave a lavish reception in honor of Archduke Franz Karl. The firm built additional factories, but in 1833 went bankrupt. The factories were liquidated, the bankruptcy proceedings continuing until 1856. One of the brothers committed suicide, and another immigrated to Hungary in 1852.

**BIBLIOGRAPHY:** Hellig, in: *BLBI*, 3 (1960), 101–22; R. Kestenberg-Gladstein, *Neuere Geschichte der Juden in den boehmischen Laendern* (1969), 103–15.

**EHRENSTEIN, ALBERT** (1886–1950), German poet and author. Born in Vienna of Hungarian parents, Ehrenstein lived until 1932 mostly in Vienna and Berlin as a freelance writer. Studying history and geography in Vienna, he published his first poems in Karl Kraus' *Die Fackel* (e.g., “Wanderers Lied”). The publication of the novel *Tubutsch* (with drawings by Oskar Kokoschka, 1911) made Ehrenstein an important exponent of the expressionist movement. His texts were guided by a new diaspora politics and aesthetics, understanding modernity as the overcoming of the bourgeois concept of nation and art. Ehrenstein's work is populated by exterritorial figures who suffer from homelessness and at the same time stand for a modern, aesthetic cosmopolitanism which transcends the 19<sup>th</sup> century concept of nationalism. This constant subject is found in Ehrenstein's novels (*Der Selbstmord eines Katers*, 1912; *Nicht da nicht dort*, 1916; *Bericht aus einem Tollhaus*, 1919; *Zaubermerchen*, 1919; *Die Nacht wird*, 1921; *Briefe an Gott*, 1922; *Ritter des Todes*, 1926) as well as in his poetry (*Die weisse Zeit*, 1914; *Die Gedichte*, 1920; *Wien*, 1921; *Herbst*, 1923; *Mein Lied*,

1931). In his essays, collected in *Menschen und Affen* (1926), Ehrenstein legitimized this programmatic extraterritoriality as a new “ahasverism” with social-revolutionary aspects, criticizing both assimilation and Zionism as throwbacks to old-European nationalism (cf. *Zionismus, Vom deutschen Adel juedischer Nation, Nationaljudentum*). He spent World War I in exile in Switzerland, vehemently criticizing the war (cf. *Der Mensch schreit*, 1916; *Die rote Zeit*, 1917; *Den ermordeten Bruedern*, 1919). After the war he turned to rewriting old Greek and Chinese works (cf. *Lukian*, 1918; *Longos*, 1924; *Schi-King*, 1922; *Pe-Lo-Thien*, 1923; *China klagt*, 1924; *Raeuber und Soldaten*, 1927; *Das gelbe Lied*, 1933). With the three cultural spaces of Hellas, Zion, and China, Ehrenstein constructed an antique world as a medium for contemporary criticism. In 1929, Ehrenstein together with Kokoschka visited Palestine, describing his impressions in a series of articles. In 1932, Ehrenstein moved to Switzerland. Even though the Swiss authorities prohibited him from writing, Ehrenstein praised Switzerland as a liberal and pancultural community within barbarian Europe (*Tessin*, 1938; *Switzerland*, 1942). In 1941 he settled in New York, where he died in poverty. After selected editions by Karl Otten and M.Y. Ben-Gavriel, the work and letters of Ehrenstein were published in a complete edition (ed. H. Mittelmann). Ehrenstein’s manuscripts are at the Hebrew University.

[Andreas Kilcher (2<sup>nd</sup> ed.)]

**EHRENTREU, HEINRICH** (1854–1927), Orthodox German rabbi and author. Ehrentreu was born in Alt-Ofen (Obuda), Hungary. Considered a brilliant talmudist in the yeshivah of Pressburg, he later pursued Semitic studies at the University of Heidelberg (from 1877) and was a tutor in Mainz. Ehrentreu became preacher at the Ohel Jakob synagogue in Munich where he supervised and greatly developed the religious institutions of the Jewish community over a period of 42 years. He was a member of the German chapter of the Rabbinical Council of Agudat Israel. In 1897 Ehrentreu edited the last volume of R.N. \*Rabbinovicz’s *Dikdukei Soferim*, 16 (1897). He also published *Heker Halakhah* (“Halakhic Research,” 1904), and *Minhat Pittin*, halakhic essays published in 1927/28. Together with Rabbi Jacob Schor of Kutu, he wrote *Zidkat ha-Zaddik* (1910), a defense of Z.H. \*Auerbach’s edition of *Sefer ha-Eshkol*, which had been attacked as a forgery by S. \*Albeck. His responsa and numerous articles were published in Jewish scholarly journals. Ehrentreu’s son, ERNST (JONAH) EHRENTREU (1896–?), succeeded him. Escaping from Germany to England, Ernst Ehrentreu became rabbi of a small congregation (Adath Yeshurun) in London. He published *Untersuchungen ueber die Massora* (1925), and *Jewish Thought in the Modern World* (1947).

[Jacob Hirsch Haberman]

**EHRlich, ABEL** (1919–2004), composer and teacher. Born in Crantz, Germany, Ehrlich went to Zagreb to study with Vaclav Huml at the academy of music (1934–38). In 1939 he settled in Palestine and studied composition at the Jerusalem Academy of Music with Solomon \*Rosowsky. He taught theory and composition in various music institutions such as the Oranim Teachers College and at the Rubin Academy of Music in Tel Aviv. His works before 1953 were influenced by Arab music. In the late 1950s he began to use serial procedures, after attending the courses of Stockhausen and Pousseur at Darmstadt in 1959. He was awarded the Lieberson Prize three times (1969, 1971, 1980), won the Israel Composers and Authors Association Prize in 1974, 1980, and 1994, the Israel Prime Minister’s Award in 1990, the ACUM Prize for life achievement in 1994, and the Israel Prize for music in 1997. Ehrlich was one of the most prolific Israeli composers – he wrote more than 3,500 pieces and as a result appeared in the Guinness Book of Records as the world’s most prolific contemporary composer. Among his early compositions are *Bashrav* for violin solo (1953) and *Symphonic Bashrav* for orchestra (1958), in which he explored the fusion of Near Eastern and Western musical elements. His later works include *I Will Sing in Praise* for chamber orchestra (1977); *Will It Work?* suite for guitar (1985); *Enkhah Yodea* for youth choir and violin solo (1986); *Our Modest Friend Avraham* for chamber ensemble (1992); *The Jubille*, chamber opera in 16 scenes (1995); *Another Exercise: Four Dreams: May 1997*, for four tenors and chamber ensemble (1997); and many pieces for solo instruments.

**BIBLIOGRAPHY:** Grove online; A. Wolman and Y. Shaked, *Abel Ehrlich* (1995).

[Israela Stein (2<sup>nd</sup> ed.)]

**EHRlich, ARNOLD BOGUMIL** (1848–1919), biblical exegete. Ehrlich was born in Wlodawa in Russian Poland. As a youth he studied in a *heder* and then a yeshivah, married at an early age, and had two daughters. Despairing of his narrow Jewish world, Ehrlich, still quite young, divorced his wife, and, in 1865, went to Germany. There he worked as a librarian in the Semitics department of the Berlin Royal Library. In Leipzig, under the influence of Christian missionaries and tempted by the greater opportunities available to Christians, Ehrlich converted to Christianity. He worked with Franz \*Delitzsch (1813–99) in the missionary Institutum Judaicum, helping to translate the New Testament into Hebrew (1877) for the purpose of a Christian mission to the Jews. At the age of 30, Ehrlich migrated to the U.S., married again, and raised a family under difficult economic conditions, working at various jobs including social work, portraiture, and Hebrew teaching. According to Richard J.H. \*Gottheil, when Ehrlich reached New York in 1876 he called on Rabbi R. Gustav Gottheil of Temple

Emanu-El (Richard's father), confessed that he had been converted to Christianity at the age of 23 while working for Delitzsch, and expressed a desire to be reaccepted formally into the Jewish faith. He accordingly appeared before a *bet din* on March 7, 1876, and was readmitted to the Jewish community after making the necessary declarations in both German and English (which are quoted by Richard in his biography of his father). The proceedings were duly recorded. Ehrlich, who weighed three hundred pounds, never obtained a real academic post. On the one hand, Jews with academic influence suspected his Christian connections, while on the other hand Christians probably saw him as too much of an East European Jew. In 1884 he published a chrestomathy containing selections from the Talmud and the Midrashim, "for youths and students." His main work, however, was devoted to biblical exegesis. From 1899 to 1901 his Hebrew commentary on the Bible *Mikra ki-Feshuto* was published in Berlin in three volumes (of the four he planned; repr. 1969). He subscribed the title page with the pseudonym "Shabbetai b. Yom Tov ibn Boded." In the introduction he explained that he had written the commentary in Hebrew so that the Hebrew reader would study his words and comments. His book, however, received only scant attention. The Jewish press on the whole reacted to the book with exceptionally sharp criticism (also because of his skeptical attitude to tradition and his attacks on the medieval commentators), and the Christian scholars, who had great difficulty with Modern Hebrew, almost completely disregarded the commentary. The publication of his German commentary on the Book of Psalms (1905), which included a new translation, was a turning point in his life. It served as an introduction to his German commentary on the Bible, which like his Hebrew one consists of notes on the Bible, *Randglossen zur hebraeischen Bibel* (7 vols., 1908–14). Ehrlich included part of the material from his Hebrew commentary, but in an expanded form, as well as new interpretations arrived at since its publication; many of his earlier opinions are changed here. Although Ehrlich does not mention the Documentary Hypothesis, he employs evidence from language, religious concepts, and institutions to assign relative "late" and "early" dates to specific passages. Historical assessments such as the denial of Egyptian enslavement and of the Exodus are buried in comments to individual verses. He concentrates on textual criticism and reconstructions, and his very numerous emendations (especially in his German commentary) are at times conjectural (such as haplography or dittography, letters having a similar appearance in the ancient or in the square script, the use of abbreviations, glosses, etc.), and in most cases are not based on ancient translations. His comments, which are distinguished by their originality, at times have the quality of homiletics and are derived from Ehrlich's innovating spirit; yet through his sound linguistic instinct and fine linguistic differentiations he succeeded in illuminating and explaining, with great acumen and profundity, many verses and linguistic usages. Ehrlich's exegetical work is an important contribution to modern biblical exegesis. Ehrlich's

work was highly influential on the Jewish translation produced by the Jewish Publication Society in 1917 and its successor of 1962–82.

[Raphael Weiss / S. David Sperling (2<sup>nd</sup> ed.)]

**EHRlich, EUGEN** (1862–1922), jurist. Born in Czernowitz, Ehrlich was associate professor of Roman Law in the university there from 1899 to 1914. In this capacity he made an important contribution to the study of the sociology of law, his thesis being that the law of society was the only "living law" and that the norms of a legal system must conform with the laws of society. Ehrlich was removed from all teaching posts in 1919 following antisemitic attacks by the student body in the nationalist press. His main works were translated into English and had a profound influence on American legal and sociological thought in the 20<sup>th</sup> century. These include *Grundlegung der Soziologie des Rechts* (1913, *Fundamental Principles of the Sociology of Law*, 1936). Although Ehrlich renounced Judaism in his youth he became interested in Jewish affairs in his later years and his treatise *Die Aufgabe der Sozialpolitik im oesterreichischen Osten* (1916) discusses the question of the Jews and the peasants.

[Guido (Gad) Tedeschi]

**EHRlich, GEORG** (1897–1966), graphic artist and sculptor. Born in Vienna, he studied at the Arts and Crafts School in Vienna under Oscar Strnad and Franz Cizek from 1912 to 1915. During World War I he served in the Austrian Army until 1918. In 1919 at his first exhibition Ehrlich became known for lithographs revealing the influence of Oskar Kokoschka. After he had been exhibited along with other modern artists such as Barlach, Beckmann, and Kokoschka in Munich, Paul Cassirer approached him with a commission for an album of lithographs entitled "Biblical Portfolio." The lithographs of this album reflect a deeply conscious Jewish identification and an intensely Jewish upbringing. At the same time, Ehrlich also painted watercolors of landscapes. He took up sculpture in 1926, in the graceful, elongated style of Lehmbruck, who remained a lasting influence. He cast numerous small-scale sculptures and busts in bronze, his favorite material. Ehrlich was already a prominent artist when in 1937 he was forced by the Nazis to leave Austria. He settled in England where he soon became established. His heads of the composer Benjamin Britten (1950) and the singer Peter Pears are among the

finest works of this period. His work appears in leading museums in Britain, the U.S., and Israel.

[Charles Samuel Spencer / Sonja Beyer (2<sup>nd</sup> ed.)]

**EHRlich, JACOB** (1877–1938), Austrian Zionist leader. Born in Bistrica, Moravia, Ehrlich studied at Vienna University and joined the Jewish student association “J.A.V. Ivria.” Encouraged by Theodor \*Herzl, he toured Moravia and Bohemia to propagate Zionism. In 1908 he settled in Vienna, where he became a lawyer, and in 1912 he was one of the first Zionists to be elected as a member of the Board of the Jewish Community (Israelitische Kultusgemeinde). As a high officer of the Austro-Hungarian army during World War I he saved a number of Russian Jews from false accusations, among them the son of Abraham Menachem Mendel \*Ussishkin. From 1919 to 1923 Ehrlich was a member of the Vienna city council. In the 1920s, and also during the Zionist Congress of 1925, he was president of the Zionist Federation in Austria. He helped to obtain a Zionist majority at the Israelitische Kultusgemeinde in December 1932, and in February 1936 became its vice president. In 1934, after the defeat of the Austrian Socialists in the civil war and the establishment of the Austrian corporate state, he became the representative of the Jewish community (councilor of the city of Vienna) in the “Buergerschaft,” which replaced the city council, and an outspoken defender of Jewish rights. After the annexation of Austria by Nazi Germany (March 1938) Ehrlich was arrested, beaten daily by the Gestapo, and deported with the first transport to the Dachau concentration camp. He was murdered on May 17, 1938, the first prominent Austrian Jewish victim of the Nazis. His body was sent to Vienna, but the Nazis forbade all speeches and obituaries. His widow, Irma, and his son, Paul, immigrated to the United States via England.

The society of Jews from Austria in England and a B’nai B’rith Lodge in Tel Aviv bear his name.

[Josef Fraenkel / Evelyn Adunka (2<sup>nd</sup> ed.)]

**EHRlich, LUDWIK** (1889–1968), Polish international lawyer. Born in Tarnopol, Ukraine, Ehrlich became professor of international law at the University of Lwow in 1924 and professor at the University of Cracow in 1945. He was recognized as an authority on international law and in 1928 and 1962 lectured at the Hague Academy. Ehrlich’s writings include textbooks on general international law, and the law of treaties and sovereignty.

**EHRlich, PAUL** (1854–1915), German chemist, pioneer of modern histology, immunology, and chemotherapy; Nobel Prize winner. Ehrlich was born in Strehlen near Breslau. He studied at German universities and began his scientific work in

1878 in Berlin University as an assistant, becoming an associate professor in 1890. In 1896 he became director of the Royal Institute for Serum Research in Steglitz (Berlin) and three years later director of the Institute of Experimental Therapy in Frankfurt on the Main, which was subsequently amalgamated with the Georg Speier Institute for Chemotherapeutic Research. In 1904 Ehrlich was appointed honorary professor at the University of Goettingen and in 1914 became a professor at Frankfurt University. He was awarded the Nobel Prize for Medicine in 1908. Ehrlich began his scientific work in the fields of hematology and histology. From methods of staining dead blood cells he progressed to staining living cells, and discovered methods of staining living nerve fibers. His research work on the staining of microorganisms led to the method of staining TB bacilli and he discovered the diazo reaction in urine for the recognition of aromatic compounds, which serves to diagnose typhoid fever.

From 1890 onward Ehrlich concentrated mainly on problems of immunization. He proved the specificity of immunity to toxins, and established the basic concepts of applied immunology: active and passive immunization. He laid the foundation for standardization of therapeutic sera by employing as standard serum a stable antitoxic serum capable of long-term preservation. On the basis of this method he developed, in 1897, the evaluation of the antitoxic sera and its theoretical basis, one of the vital practical achievements in the history of immunology.

Recognizing the particular specific affinity of dyes, active organic compounds, and toxins to certain cells, Ehrlich started to search for chemical compounds which would specifically attack the microorganisms causing disease without damaging the body cells. He first treated syphilis with the poisonous organic arsenic compound atoxyl and in 1909, after years of investigation, he discovered, together with his Japanese assistant Hatta, the compound “606,” Salvarsan, which can inactivate the treponema causing syphilis, as well as other treponemas causing various tropical diseases. This was the greatest achievement in the fight against syphilis since its appearance in Europe four centuries earlier and marked the beginning of modern systematic chemotherapy.

Developments in theoretical and applied medical biology since Ehrlich’s day have thrown new light on certain of his concepts and some of his theoretical assumptions have been modified. But his basic concepts and methods remain firm and still serve as fundamentals for research in the fields of hematology, immunology, and chemotherapy.

Ehrlich was interested in Jewish affairs all his life. He was an active member of Le-Ma’an Zion, and was also associated with and supported the Nordau Institute, one of the nuclei of the Hebrew University of Jerusalem.

[Aryeh Leo Olitzki]

**EHRlich, SIMḤA** (1915–1983), Israeli politician, leader of the Liberal Party, and first non-Labor minister of finance, member of the Seventh to Tenth Knessets. Ehrlich was born in Poland. He studied at the Hebrew Gymnasium in Lublin and was active in the General Zionist youth movement prior to his immigration to Israel in 1938. In Israel he worked at first as an agricultural laborer in Nes Ziyonah. Ehrlich studied optics and in 1961 established a firm for the manufacture of lenses and applied optical instruments. He joined the General Zionist Party and was elected to the Tel Aviv Municipal Council in 1955, serving as deputy mayor in 1962–65. In 1965 he ran in the municipal elections at the head of the \*Gaḥal list. In 1969 he ran for the Seventh Knesset on the Gaḥal list.

In 1970, Ehrlich was appointed chairman of the Liberal Party Executive, and after the founding of the \*Likud in 1973 he became a member of its Executive. In June 1977 he was appointed by Menaḥem \*Begin as minister of finance, in which position he introduced a policy of economic liberalization, first of all in the field of foreign currency. However, his policy resulted in a serious deterioration in Israel's balance of trade and a rapid rise in the rate of inflation. As a result he was forced to resign in October 1979, remaining in the government as deputy prime minister. In Begin's second government formed after the elections to the Tenth Knesset, Ehrlich served as minister of agriculture and deputy prime minister.

[Fern Lee Seckbach / Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**EHUD** (Heb. עִהּד), son of Gera the Benjaminite, referred to as “a left-handed man” (Judg. 3:15). Ehud delivered Israel from \*Eglon, the king of Moab, to whom they had been subject for 18 years. According to 1 Chronicles 8:3, Gera was the son of Bela, Benjamin's firstborn. If this is the same person, it would imply that Ehud belonged to one of the chief families of the tribe. Apparently, this family lived in the region of Geba, which may have been associated with the ancient Gibeonites. Possibly, this was the reason that some of its members were driven to the western slopes of the mountain (Manahath; see 1 Chron. 8:6). In early Israel's pre-monarchic period, some of the adjoining kingdoms, notably Moab, attempted to extend their dominion over the Jordan Valley and the hill country on the western bank of the river. They encountered resistance only in Mt. Ephraim, the territory of the Rachel tribes, who did not suffer foreign rule until the Philistine hegemony.

Ehud headed a tribute-bearing delegation to \*Eglon, king of Moab (Judg. 3:15ff.). Being left-handed, he wore a sword under his garments on his right thigh, where guards were not in the habit of looking for a suspicious bulge, and no one noticed it. Under the pretext of having a “secret word” for the king, he succeeded in gaining a private audience with him. When he said “I bring you a word of God, your Majesty” the heavy-

fleshed monarch rose to hear it; Ehud drew his sword, thrust its entire length into the belly of the corpulent king, and fled. Returning to his country, he sounded the ram's horn for the armies to gather, captured the fords of the Jordan, and defeated all the Moabite garrisons on the western bank of the river. This ended the Moabite rule over Israel for several generations. Ehud is not actually called a judge, although he is usually numbered among the “judges.”

**EIBESCHUETZ, SIMON AARON** (1786–1856), Danish philanthropist. He bequeathed the major part of his property, which amounted to about 700,000 Danish thalers, to various municipal institutions in Copenhagen, but especially to Jewish institutions. Among other bequests, he donated an annual grant to the University Library of Copenhagen in order to purchase ancient Hebrew works and books dealing with Oriental culture. The condition that two Jewish students be admitted annually without payment was attached to his bequests to the Polytechnic and the Academy of Arts of Copenhagen.

**EICHELBAUM, SAMUEL** (1894–1967), Argentine playwright and short-story writer. Born in a Jewish agricultural colony in Domínguez, Entre Ríos, he lived most of his life in Buenos Aires. Though in his psychological plays Eichelbaum deals mostly with the Argentinian middle class and is not especially concerned with Jewish life, Jewish themes and characters (both urban and rural) appear in his plays *El Judío Aarón* (1942), *Nadie la conoció nunca* (1926), and *Divorcio nupcial* (1941); and in some of his short stories such as “La buena cosecha,” “El señor Lubovitzky depositario” (1925), and “Lo que la luna vio.” He is considered one of the principal architects of Argentinian drama. Two of Eichelbaum's plays were awarded the municipal prize of Buenos Aires: *Tormenta de Dios* (1930) and *Señorita* (1937); but his best-known plays, also adapted for the screen, are *Un guapo del 900* (1940) and *Un tal Servando Gómez* (1942), which deal with the suburban cultural environment of Buenos Aires.

Lockhart, *Jewish Writers of Latin America. A Dictionary* (1997); L. Senkman, *La identidad judía en la literatura argentina* (1983).

[Florinda Goldberg (2<sup>nd</sup> ed.)]

**EICHENBAUM, BORIS MIKHAILOVICH** (1886–1959), Russian literary scholar. Eichenbaum was born in Krasnoye (Smolensk district) to a Jewish father and a Russian mother,

both physicians. His father, who became a Pravoslav Christian, was the son of Jacob \*Eichenbaum (Gelber), a well-known Hebrew poet and scholar. After finishing the First Voronezh Gymnasium, Boris Eichenbaum entered the Military-Medical Academy of St. Petersburg in 1905. In 1907, he published his first essay on Russian literature ("Pushkin and the Rebellion of 1825," *Vestnik znaniya*, 1 and 2), and during the following year he was admitted to the Philological Faculty of St. Petersburg University, where he studied Slavic and Romano-Germanic philology, graduating in 1912 and joining the faculty of the university in 1918. From 1912, Eichenbaum regularly published scholarly and critical essays in *Russkaya Mysl*, *Apollon*, and other literary journals, as well as some poetry (in Gumilev's *Giperborey*). In 1919, Eichenbaum joined the Society for the Study of Poetic Language (ОРОУАЗ) and soon became one of the foremost exponents of the so-called "Formal Method" in literary scholarship, an early structural trend that laid the foundation of modern scientific poetics. Between 1922 and 1931, Eichenbaum published nine books, which are generally considered classics and have almost all been reprinted in the West: *Melodika stikha* ("Melodies of Verse," 1922); *Molodoy Tolstoy* ("Young Tolstoy," 1922; reprinted 1968); *Anna Akhmatova* (1923); *Lermontov* (1924; reprinted 1967); *Skvoz literaturu* ("Through Literature," Collected Essays, 1924; reprinted 1962); *Literatura, Teoriya. Kritika. Polemika* (1927; reprinted 1969); *Lev Tolstoy* (vol. 1, 1928; vol. 2, 1931; 1–2 reprinted 1968); *Moy vremennik* ("My Chronicle," 1929) (the latter collection includes an essay on Jacob Eichenbaum and his long poem "Ha-Krav").

In the late 1920s Eichenbaum attempted a synthesis of the purely intrinsic and the sociological approach to literature. However, this attempt, as well as Eichenbaum's earlier books, evoked official criticism, which found some support in retrograde academic and literary circles. Forced to abandon theoretical research, Eichenbaum devoted himself to textual work, preparing exemplary critical editions of such classic Russian authors as L. Tolstoy, Lermontov, Gogol, and Leskov. In 1933, he published a novel, *Marshrut v bessmertiyu* ("A Route to Immortality"), about the lexicographer N. Makarov. In his diary he mentioned that his spiritual-genetic ties to his Jewish grandfather had an affect on him. When in 1924 his grandfather's Hebrew poem "The Battle" appeared in Russian anonymously, he wrote an essay speaking among other things about the forgotten author.

In 1947, in the course of the official campaign against the great Russian comparative philologist Aleksandr Veselovskiy, Eichenbaum and his colleagues \*Zhirmunsky and Tomashevskiy "were taken to task for perpetuating Veselovskiy's 'bourgeois cosmopolitanism,' i.e., drawing parallels between Russian and Western literature" (V. Erlich). In September 1949, an officially inspired article about Eichenbaum's "reactionary militant idealism," abundantly interspersed with antisemitic allusions, appeared in the magazine *Zvezda*, virtually silencing Eichenbaum for five years. He did not resume his scholarly activity until 1954.

The third volume of his great monograph on Tolstoy appeared posthumously in 1960. Following the revival of the study of poetic language in the U.S.S.R., two volumes of Eichenbaum's selected writings appeared in 1969 in Leningrad, *O poezii* ("On Poetry") and *O proze* ("On Prose"). The following works of Eichenbaum have been translated into English: "Theory of the Formal Method," in: *Russian Formalist Criticism*, transl. and ed. by L.T. Lemon and M.J. Reis (1965); "On Tolstoy's Crises," in: *Tolstoy (20th Century Views series; 1967)*; "O. Henry and the Theory of the Short Story," transl. with notes and postscript, by I.R. Titunik, in: *Michigan Slavic Contributions* (1968); *Young Tolstoy* (1972).

[Omri Ronen (2<sup>nd</sup> ed.)]

**EICHENBAUM (Gelber), JACOB** (1796–1861), Haskalah poet, educator, and mathematician. Born in Krystianopol, Galicia, he was married at the age of 11, but divorced when his father-in-law suspected him of secular leanings. He married again in 1815 and settled in Zamosc where he developed his interest in mathematics and translated Euclid from German into Hebrew (unpublished). Here he adopted the name Eichenbaum in order to obtain a resident's permit. Later he served as a private tutor, traveling from place to place, and finally settling in Odessa where he established a private Jewish school in 1835. He was appointed director of the Kishinev Jewish school in 1844 by the Russian government and in 1850 inspector of the newly established Zhitomir Rabbinical Seminary. Eichenbaum contributed poetry to Hebrew journals of the period. *Kol Zimrah* (1836), his collection of poems (and some translations), was one of the first books of poetry published in the Haskalah period. He also wrote *Ha-Kerav* ("The Battle," 1839), a book in verse describing the game of chess, and *Hokhmat ha-Shi'urim* (an adaptation of a French arithmetic book, 1857). His grandson Boris \*Eichenbaum was a well-known Russian literary scholar.

**EICHHORN, DAVID MAX** (1906–1986), U.S. Reform rabbi, chaplain, and author. Eichhorn was born in Columbia, Pennsylvania, and received his B.A. from the University of Cincinnati in 1928. He was ordained at Hebrew Union College in 1931 and earned a D.D. degree from the same institution in 1938. In 1956, he was awarded an honorary D.H.L. from HUC-JIR. He served as rabbi of Sinai Temple in Springfield, Massachusetts (1932–34), and Mt. Sinai Temple in Texarkana, Arkansas (1935–38), before becoming the first rabbi of Temple Israel in Tallahassee, Florida, in 1939. He also became the first state

director of Florida Hillel Foundations (1939–42). In 1942, he enlisted as a chaplain in the U.S. Army and was the first Jewish chaplain to enter Dachau, conducting the first religious service inside the liberated concentration camp on April 30, 1945. The service was captured on film and is commonly seen in liberation films. He was made supervisor of displaced persons for the Austrian Zone of the U.S. occupation, working with survivors of several concentration camps. For his service in combat zones, he was awarded the Bronze Star and eventually promoted to the rank of lieutenant colonel. After the war, the demobilized Eichhorn remained in the U.S. Army Reserve and was appointed director of field operations for the Committee on Army and Navy Religious Activities, as well as director of religious activities at the \*National Jewish Welfare Board – a position he retained until he retired in 1968. He was also president of the Association of Jewish Chaplains of the Armed Forces (1953–55).

During his retirement, Eichhorn served as rabbi of Temple Israel in Merritt Island, Florida, and chaplain of the Kennedy Space Center and Patrick Air Force Base. In 1973, he founded the Jewish Community Center of Brevard County. In the field of scholarship, Eichhorn was renowned as an expert in the history of conversion to Judaism as well as Christian attempts to convert Jews in the United States. He wrote *Conversion to Judaism: A History and Analysis* (1965), *Evangelizing the American Jew* (1978), and *Jewish Inter-marriage: Fact and Fiction* (1974). He was chairman of the Central Conference of American Rabbis' Committee on the Unaffiliated (1950–58), and a liberal who favored rabbinic participation in the wedding ceremonies of mixed marriages. He also wrote *Cain, Son of the Serpent* (1957); *Joy of Jewish Folklore* (ed., 1981; reprinted as *Jewish Folklore in America*, 1996); and *Musings of the Old Professor: The Meaning of Koheles* (1973). His posthumously published letters home from World War II provide a vivid depiction of Jewish life: *The GI's Rabbi: The World War II Letters of David Max Eichhorn* by Greg Palmer and Mark S. Zaid (2004).

°**EICHHORN, JOHANN GOTTFRIED** (1752–1827), German historian and biblical scholar. Eichhorn was professor of Oriental languages at Jena (1775–87) and of philosophy at Goettingen (1788–1827), where he succeeded his teacher, J.D. \*Michaelis. He was one of the pioneers in the modern study of the Bible. He shares the credit with G. \*Herder for freeing biblical studies from the shackles of church dogma and making biblical literature accessible to a wider public. Some of his work attempts to explain biblical myth naturalistically. In his *Einleitung in das Alte Testament* (3 vols., 1780–83; a partial translation: *Introduction to the Study of the Old Testament*, 1888), which ran into four editions (the 4<sup>th</sup> edition including 5 vols., 1820–24) and several reprints, he summed up the results of research in the field of biblical literature up to his day and en-

deavored to give a just appreciation of the poetic and religious elements in the Hebrew Bible. This was the first introduction to the Bible to be written, and through its vivid style and wide scholarship made a deep impression upon the scholarly world. Eichhorn's *Einleitung* exerted great influence on the biblical studies of Moses \*Mendelssohn and his fellow commentators, especially \*Ben-Ze'ev. Eichhorn also wrote an introduction to the Apocrypha (*Einleitung in die apokryphischen Schriften des Alten Testaments*, 1795) as well as translations of Job and the prophetic books of the Bible (*Die hebraeischen Propheten*, 3 vols., 1816–19). He edited *Repertorium fuer biblische und morgenlaendische Litteratur* (18 vols., 1777–86) and *Allgemeine Bibliothek der biblischen Literatur* (10 vols., 1787–1801).

**BIBLIOGRAPHY:** T.K. Cheyne, *Founders of Old Testament Criticism* (1893), 21–26; H.J. Kraus, *Geschichte der historisch-kritischen Erforschung des Alten Testaments* (1956), 120–40; ADB, 5 (1877), 731–7. **ADD. BIBLIOGRAPHY:** J. Rogerson, in: DBI, 324.

**EICHLER, MENAHEM MAX** (1870–1927), U.S. Conservative rabbi. Eichler was born in Hungary and immigrated to the United States in 1892. In 1899, he earned a B.A. degree from the City College of New York and was ordained at the Jewish Theological Seminary. Eichler became rabbi of Congregation Beth Israel (1899–1905) in Philadelphia, Pennsylvania, where in 1901 graduates of the \*Jewish Theological Seminary met in his home to discuss the impending financial collapse of the Seminary. Their plan of action led to the formation of the Alumni Association of the Jewish Theological Seminary, which quickly evolved into the \*Rabbinical Assembly. Eichler was elected the second president of the Rabbinical Assembly (1904–7) and served on the financial committee that planned the Seminary's million dollar campaign. From 1905 to 1916, he was rabbi of Congregation Ohabei Shalom in Boston, where he also attended law school at Boston University. After receiving his LL.B. degree in 1914 and being admitted to the Bar in 1916, Eichler began the practice of law and devoted much of his time to Jewish communal causes. He founded the Central Jewish Organization of Boston – which he also served as president – and was director of the Federated Jewish Charities of Boston, as well as the Zionist Bureau of New England. Eichler returned to the rabbinate in 1920, moving to Temple Beth El in Buffalo, New York, where he remained until his death. He wrote two books: *What Makes Life Worth Living* (1904) and *Jewish Home Prayers* (1913).

[Bezalel Gordon (2<sup>nd</sup> ed.)]

°**EICHMANN, ADOLF OTTO** (1906–1962), SS officer and head of the Jewish Department of the Gestapo. He became one of the people most identified with “the Final Solution of the Jewish Problem” during his trial, which took place in Jerusalem in 1961, and a synonym in all discussions dealing with human evil.

Eichmann was born in Solingen, Germany, to Adolf Karl, an accountant, and Maria, a housewife, both of whom were devout Protestants. When Eichmann was seven years old, the family moved to the city of Linz, Austria, a mostly Catholic city. In 1916, Eichmann's mother died and, shortly thereafter, his father remarried.

Eichmann's childhood was a usual bourgeois one, very different from the commonly accepted image of what is thought to be the childhood of Nazi war criminals, as if they had usually experienced traumas in childhood and were on the fringes of society. No social rejections can be found in his childhood nor any outstanding expressions of hatred of Jews.

Eichmann's achievements as a student were low, and at age 19, he became a traveling salesman for the Vacuum Oil Company in Upper Austria. In 1933, he was promoted to the Salzburg area, but in the same year was fired because of staff downsizing in the company. His joining the ranks of the Nazi Party of Austria was the result of several factors. The general context was that Eichmann had grown up in an Austria where there was a long history of anti-Jewish movements and public discourse full of Jewish stereotypes. Eichmann was surrounded by an atmosphere and environment within which Jews were thought, as a matter of course, to be despised, foreign, and suspect as to their loyalty, as well as different in their religion and culture. Jews and non-Jews belonged to different societies. That is, there was a background of antisemitism, but not outright and aggressive. As to the street, there was a desire to eradicate the shame of Versailles and that, too, was thought to have been caused by the Jews. The strengthening of the National Socialist Party in Austria during the 1932 local elections gave it, besides strength, an increasing size and public respectability. To all this was added personal background. It was Ernst Kaltenbrunner, who later became the commander of the Head Office of the Security of the Reich, an acquaintance of the Eichmann family, who suggested to Eichmann that he join the ranks of the party and the ss. On April 1, 1932, Eichmann became a member of the Nazi Party. His number was 899895. Seven months later, he also swore allegiance to the ss, which at the time, numbered about 2,000 members in all of Austria.

The strengthening of the Nazi Party in Austria after 1933 resulted in its persecution by the government, and this, in addition to the fact that Eichmann was unemployed, caused him to immigrate to Germany in August 1933. Once in Germany, he received military training in one of the ss camps. In 1934, Eichmann served as a colonel in the Austrian unit of the ss in the concentration camp at Dachau. At the end of the year, he volunteered for the SD, the Secret Service, and was transferred to Berlin. This was extremely important because in a few years the SD became the driving force of the implementation of Jewish policies in Nazi Germany and an influence on the determiners of that policy.

Initially, Eichmann's main job in the SD was in Intelligence. At the beginning, he dealt with the Freemasons; later

he gradually became an expert in the subjects of Judaism, Jews, Jewish organizations, Zionism, Herzl, and Jewish immigration. In appreciation of his efforts and achievements in the field of Jewish policy, he was promoted to *Untersturmführer* (second lieutenant) in January 1938.

Now he had real standing and prestige. In the same year, he was requested by Heydrich to prepare a memorandum about the international effort to encourage Jewish emigration from Europe. This was the beginning of a great advancement in Eichmann's career. This matter dealt with the future of the Jews in Austria, which had been annexed to the German Reich in March 1938. The SD made Eichmann responsible for the Jewish Emigration Office and, for the first time, he had real power. He had enactment authority in the security force and dictatorial authority over the helpless Jews. The summit of his achievements was the establishment of the Main Office of Jewish Emigration. The success of this office hinged on four factors: the ambitions of the SD and the despair of the Jews, together with the great effort of Eichmann to implement the emigration according to the SD doctrine, along with Eichmann's burning desire to achieve promotion. Moreover, in Vienna, Eichmann added a new twist to emigration by having the Jews themselves finance it and enlisting their cooperation, an action which was a precedent for the formation of the Judenrat.

Despite Eichmann's contentions that his efforts to encourage Jewish emigration were in the spirit of Zionism, the reality was that forced emigration was the realization of Nazi policy and that by forced, brutally implemented emigration the Nazis also got hold of Jewish possessions. Eichmann bragged that within a year of the annexation of Austria, about 100,000 Jews had emigrated from Austria legally and a few thousand Jews to Palestine illegally, and in total by November 1941, 128,000 Jews had left Austria. Eichmann's achievement was quickly rewarded by his promotion to *Obersturmführer* (first lieutenant). Eichmann's activities in Vienna became the model for policy that was enacted in Germany beginning in January 1939, when the Main Office of Emigration within the Reich was established. Heydrich was appointed commander and Heinrich Mueller was appointed his second in command.

A few weeks later, Czechoslovakia was conquered and Eichmann was asked to come to Prague to establish an additional emigration center. At this point, Eichmann had formed a staff from the Austrian Nazis, which included Frantz Novak, Anton Burger, Karl Rohm, and Alois Brunner as well as the Gunther brothers. Fritz Gunther was to be his deputy. Theodor Dannecker and Dieter Wisliceny were also among the group. These were to be at the heart of activities in the years to come. To Bohemia and Moravia, which became a German Protectorate, Eichmann took Brunner and Hans Gunther.

All of Eichmann's activities seemed to be quite efficient until September 1939, when Germany invaded Poland and World War II began. At this point, Eichmann's command changed radically.

With the outbreak of war, \*Himmler established the Main Office for the Security of the Reich (RSHA) commanded by Heydrich. Eichmann was appointed to chair the Jewish Department with Heinrich Mueller at the head. Consequently, Eichmann was serving under Heydrich.

During October 1939, Eichmann and his men were responsible for the expulsion of thousands of Jews from Germany, Austria, and the Protectorate of Bohemia-Moravia to a remote place in Poland called Nisko. Most of them perished; only about 300 of them survived. These deportations and those that came immediately afterwards became the basis for the development of methods of mass expulsions during the entire period of Nazi rule on the entire continent. It was Eichmann who at that time translated the German Foreign Office's plan to deport the Jews to the tropical island of Madagascar into a viable plan. The plan was never put into action.

In February 1940, the RSHA began a series of reorganizations. Eichmann's unit was renamed IVB4, the name by which it would become known forever: the "Department of Jewish Matters and Deportation." It was formally listed under the authority of the Gestapo. It was a victory for the SD in the struggle for control of anti-Jewish policy. Eichmann was now formally a Gestapo officer.

Now Eichmann worked furiously. As head of the Department of Emigration in Vienna, Prague, and Berlin, he had to evacuate hundreds of thousands of people to Poland to make room for ethnic Germans who had been evacuated from the Baltic countries. The deportation was carried out from the areas of Stettin and Posen, causing great chaos in the General Government and strong protests from Governor Hans \*Frank. This crisis crossed wires historically with the preparations for the invasion of the U.S.S.R. It seems that at this point, the expert in emigration became the expert in mass murder and genocide.

The month of September 1941 marks the beginning of Eichmann's activities on a mass scale. In mid-September, \*Hitler ordered Himmler to carry out a deportation of Jews from Germany, Austria, and the Protectorate. In October, Himmler officially prohibited Jewish emigration from the continent and in the same month Eichmann organized the deportation of 20,000 Jews from the Reich along with 5,000 Roma (gypsies) to the Lodz ghetto. In the same month, Eichmann was again promoted. This time, he was promoted to *Obersturmbannfuhrer* (lieutenant colonel), his highest rank. In October, Eichmann held a meeting of representatives of different institutions that were connected to the Jewish issue where he informed them of the deportation of German Jews. Likewise, they were required to report their activities in that matter. When all was ready, the trains from Germany and Austria began to move towards Poland, White Russia, and the Baltic area. Eichmann personally commanded all arrangements and traveled to Minsk, Lvov, Lublin, and Lodz, to check the progress of the preparations to receive the deportees.

At the beginning of 1942, Eichmann visited Auschwitz and Treblinka. Even so, most of his activities until then had

involved deportations and their organization, and not the genocide of European Jews. His involvement in the latter phase began with the convening of the \*Wannsee Conference on January 20, 1942.

At the Wannsee Conference, the coordination of all the German bodies connected with the implementation of the Final Solution was discussed. Eichmann had convened the conference, written Heydrich's speech, and written the protocol. At the end of the day, it was Eichmann, Muller, and Heydrich who joined together after all of their aims had been discussed. Eichmann had now turned from an emigration expert to one of the most important people in the implementation of the new policies against the Jews.

After Wannsee, Eichmann became the director of the largest murder project in history.

Eichmann now directed transportation from all parts of Europe to the extermination camps in Poland, and oversaw the number of deportees. He coordinated the train departure schedules with railroad authorities in different countries. In cooperation with the German Foreign Office, he organized the seizure of the huge quantity of possessions that the deported Jews left behind.

In defining Eichmann's role in this time period, it can be said that it was not Eichmann who determined the policy, yet he was an important link as an operative interpreter of the policy.

Although Eichmann was well aware of what was happening in the death camps, most of his activities were not in Poland and Eastern Europe. He was not involved in the activities of the *Einsatzgruppen*. His greatest impact was mostly in activities in Central and Western Europe. In all of those countries, except for Denmark, Norway, and Finland, representatives of his department spread out and were responsible for the deportations. In occupied France, Holland, Belgium, Greece, Slovakia, and the Protectorate of Bohemia-Moravia, as well as in the Reich, the orders were given by Hitler, Himmler, and Heydrich and carried out by the joint action of local collaborators and Eichmann's department. Yet Eichmann was informed and knew all along of the growing severity of the policy. Again and again, it can be seen how he intervened to reduce the number of Jews who received temporary exemptions from deportation orders. In Holland, for example, Eichmann fought to cancel the exemptions that were given to the country's Jewish diamond workers, who were very important for its economy.

Eichmann was a key figure in two places: in the Theresienstadt ghetto and in Hungary. The history of the Theresienstadt ghetto/camp in Bohemia is closely connected with the name of Eichmann. It begins with the order of Heydrich in October 1941 to evacuate 86,000 Jews from the Protectorate. The fear of chaos as with Nisko produced the decision to isolate them in the area of the Protectorate itself. Between January and June 1942, more than 50,000 Czech Jews were sent to the camp. In addition, Jews from Vienna and Jews of German nationality were later added. For most of them, the camp was a way station to Auschwitz.

It was Eichmann who realized the potential of Theresienstadt as a means of deceiving the world about the fate of the Jews. He made it into a “model camp,” where the Red Cross Committee was allowed to visit in order to counter the reports of Nazi atrocities. The day after the Red Cross Committee’s visit, one of the largest deportations was dispatched to Auschwitz.

In Hungary, which was conquered by the Germans on March 19, 1944, it was Eichmann himself who managed the deportations. Using the great experience he had acquired, Eichmann succeeded in sending off 437,402 Jews between May 15 and July 9, mostly to Auschwitz. More than 70% of them were murdered shortly after arriving at the camp. This “success” was made possible partly by the help the Nazis received from the Hungarians. Yet, at the beginning of July, the leader of Hungary, Miklos Horthy, ordered the cessation of this collaboration under international pressure. Eichmann was among those who fought most furiously to continue the deportations but was unable to continue for several months. He renewed his activities when the Hungarian Arrow Cross Fascists gained control of Hungary in October 1944. With his return, execution by gas in Auschwitz was stopped and he ordered marches of Jews to Germany through Austria to help with the German war industry. Around 76,000 Jews took part in these marches, which were called “death marches.” In Hungary, Eichmann met with various attempts to save the Jews. In Budapest, Raul \*Wallenberg, the Swedish diplomat, was active together with other representatives of neutral countries, against Eichmann’s activities. Eichmann also played an important part in the famous “blood-for-trucks negotiations.” In these, Joel \*Brandt of Budapest was sent to Istanbul with the offer to exchange Jews for trucks and other goods that would be given to the Germans. The plan was apparently an instance of German duplicity, as was the involvement with Eichmann’s approval of Wisliceny, a member of his department, in the “Europe Plan” in 1943, in which Jews would be exchanged for dollars. Eichmann worked to ruin two other plans in Bulgaria and Romania but had to allow the release of some of the Sephardi Jews from Greece and some Jews from the Land of Israel who had been seized in Europe in exchange for Germans who had been seized in the Land of Israel.

At the end of the war, Eichmann was captured, but managed to escape. Like thousands of escaping Nazis, in 1950, Eichmann used the “Rat Path” which led from Germany to Argentina through Italy. He lived with his family in Buenos Aires as Ricardo Klement and became a father to a third son. In 1960, he was abducted by the Israeli Mossad and brought to Israel. There his trial took place, in which he was found guilty and condemned to death.

### **The Eichmann Trial**

On May 23, 1960, the prime minister of Israel informed the Knesset, the Israeli public, and the world, in a short announcement of 62 words that Adolf Eichmann, who had been designated one of the most important Nazis, was in Israel and

would stand trial for his part in the “Final Solution of the Jewish Problem.”

The Eichmann Trial was one of the biggest media trials of the 20<sup>th</sup> century and it made the name of Adolf Eichmann a synonym for the essence of human evil and its sources.

It took Israel almost a year to prepare for the trial, which began on April 19, 1961. The interrogation was carried out by a special unit of the Israeli Police Force (Department 06). Eichmann was charged with “Crimes against the Jewish People,” “Crimes against Humanity,” “War Crimes,” and “Membership in an Enemy Organization” (SD, SS, and Gestapo). All of these were listed in Israel’s Nazi and Nazi Collaborators Punishment Law (1950), on the basis of which Eichmann was brought to trial.

The trial ended in August 1961. On December 15, 1961, the verdict and sentence were read. Eichmann was convicted and sentenced to death. Eichmann appealed to the Supreme Court. A panel of five Supreme Court justices rejected his appeal and confirmed the verdict and sentence. Eichmann was executed by hanging on June 1, 1962, almost two years after he was brought to Israel. It was the only death sentence ever carried out by the State of Israel. Eichmann’s body was cremated and his ashes were scattered outside the territorial waters of Israel.

Eichmann’s trial revealed to the Jews and the world what had happened to the Jews during World War II. Ben-Gurion called the trial “The Nuremberg of the Jews” because during the Nuremberg trials in Germany the Holocaust had been sidelined, while this time it was at the heart of the matter. In this, Ben-Gurion also wished to emphasize that in 1961, unlike during the course of Jewish history in the Diaspora, the Jews had a sovereign state, and as a result they could call to account those who had injured them. Thus it was asserted that the State of Israel represented all the Jewish people in the world.

The prosecutor at the trial was the attorney general, Gideon \*Hausner, who headed a prosecution team that numbered five people. The defense attorney was Robert Servatius of Germany, who had represented a number of German defendants in the Nuremberg trials. His co-consul was Dieter Wechtenbruch, an attorney from Munich. The panel of judges consisted of judges at two levels. The president of the court was a member of the Supreme Court, Moshe \*Landau, and alongside him sat two judges from district courts, Benjamin Halevy and Yitzhak Raveh. The trial took place in front of an audience in a hall in Jerusalem, while Eichmann sat in a bulletproof glass enclosure. The beginning of the trial focused on the motions of the defense attorney, who mainly challenged the right of the court to try Eichmann. The defense attorney’s main objection was that the judges, being Jews, could not judge Eichmann impartially. If that was not enough, Eichmann had been abducted from Argentina and brought to Israel illegally, in violation of international law. Finally, the defense attorney held that the law under which Eichmann was charged was retroactive and extraterritorial, in that it related to crimes committed before the State of Israel had existed and

were committed outside the territory of Israel, on European soil. The judges rejected all of these arguments. They rejected the first on the grounds that a judge is bound to restrain his feelings while on the bench, and if he did not he would not even be able to sit in judgment of a felony. The issue of retroactivity did not involve a binding principle. Usually it is cited in cases where a law was not law at the time of the crime. But in the case of the current trial, laws had been passed all over the world that did not constitute new judicial norms but make it possible to bring to trial criminals who knew very well at the time of their crimes that their actions were illegal. In the matter of the abduction, the court held that it was not the court's business to deal with how the defendant had been brought to court but with the legality of the accusation and venue. Finally, in the matter of extraterritoriality, the court held that it was not relevant, for two reasons. First, the intention to murder was also to exterminate the Jews of the Land of Israel, and second, that there is an existential connection between the Land of Israel and the will to ensure that people who commit crimes against the Jewish people will be brought to trial and punished for their crimes.

With the rejection of the objections, the trial began. Eichmann's answer to each of the accusations was: "In the spirit of the indictment – not guilty."

The documentary evidence that was brought before the court included 1,600 documents, many of them with Eichmann's signature, and 110 witnesses, mostly Holocaust survivors. The trial told the story of the Holocaust as the story of European Jewry but excluded the story of the fate of the Jews of Libya and Tunisia in North Africa. The prosecution described the fate of the Jews of Europe in a wide geographic context while describing the chronological stages of the fate of the Jews in each country. The prosecution put on record the stories of the camps in Europe and the activities of the *Einsatzgruppen*, while emphasizing that in each stage one could see the fingerprints of Eichmann.

The defense attorney did not question the authenticity of the Holocaust, but the central role that the defendant had in it. The defense was not able to bring witnesses to speak for Eichmann since SS and other Nazi personnel were not offered immunity if they came to Israel and were therefore subject to prosecution. As a result a group of jurists was sent to Germany to gather testimonies from SS men who were willing to testify. Clearly this was a deviation from the commonly accepted practice in criminal trials.

The court rejected the claims of the defense that Eichmann was mainly obediently fulfilling the orders of his commanders, and claimed that Eichmann had acted in a criminal manner on his own initiative. The outstanding example was the murder of hundreds of thousands of Hungarian Jews, where the defendant had become relentless in his implementation of the "Final Solution." The court did not accept the claims of the prosecution especially with regard to Eichmann's part in the *Einsatzgruppen* murders and the murders in the camps. The main accusation against Eichmann concerned his part in

what had occurred in Central Europe and in the west of the continent. The judges in their verdict did not rely on the testimony of witnesses when they came to convict Eichmann. The witnesses' testimony about their individual experiences had a powerful and enduring impact on Israel and the world, in contrast to their apparent lack of effect on the judges.

The Eichmann Trial left a lasting effect on the discourse and memory of the Holocaust as well as on Holocaust survivors, who at the time made up more than a quarter of the population of Israel.

Israel's public discourse shifted from an attitude that judged European Jews harshly and maintained that they had gone like "sheep to the slaughter," to deeper understanding of the desperate situation of the Jews at the time of the Nazi occupation and a more complex and varied insight into the essence of heroism. No longer was the latter understood only as armed combat but also as spiritual resistance. The Holocaust discourse underwent personalization. Israelis stopped speaking about "the six million" and began to speak about individuals with names and faces. Holocaust research, which until then had relied on German documents, began to focus on documents and materials that came from the victims. The Jerusalem school of Holocaust study began to flower. As a result, alternative interpretations of the behavior of the Jews, their leadership, and their choices in the Holocaust period were made. The status of Holocaust survivors in Israeli society underwent a dramatic change. For the first time, they were also seen as part of the Holocaust history, no less than the six million who were murdered. The Israelis, who perceived themselves as writing a new chapter in Jewish history, began to search for ways to rejoin the mainstream of Jewish history. The Holocaust survivors became the living bridge between the ruins of the Diaspora, its history and spiritual treasures, and the modern Israelis. It was the survivors who, in 1963, initiated the youth trips to Poland in search of the past.

Jews of the Diaspora also followed the trial with bated breath to discover the story of the Holocaust as it was revealed.

The trial's impact, however, transcended the borders of the State of Israel and the Jewish people. In Germany, the trials of Nazi criminals were sped up and, in 1963, the Auschwitz trials were held there.

The Western intellectual debate profited profoundly from the trial which introduced two ongoing controversies.

It was Yehiel Dinur (\*K. Zetnick), the survivor of Auschwitz and well-known writer, who described in his testimony what he called "Planet Auschwitz." By this he excluded Auschwitz from ordinary human experience. This phrase significantly increased the danger of mystification of the Shoah. An important variation of this theme can be found in the debate about the uniqueness of the Shoah as opposed to its universalistic aspects.

In the wake of the *New Yorker* articles that later became the book *Eichmann in Jerusalem* by Hannah \*Arendt, an intellectual and moral dialogue began about the essence of evil as

expressed in Arendt's theory of "the banality of evil." In this she had meant to say that Eichmann did not differ from millions of people around the world. What was crucial, she claimed, is the essence of the Nazi evil, which does not lie in its sadistic manifestations but rather in its ability to undermine basic morality of humanity.

The controversy over "the banality of evil" became one of the cornerstones in the discussion of evil and the sovereignty of people in making their choices. In this connection, one must mention the title of \*Righteous Among the Nations bestowed by Yad Vashem on gentiles who saved Jews during the Holocaust, a designation stemming from the need to illuminate the choice to do good.

Almost five decades after the trial, it can be said that for Diaspora Jews as well as for Israelis, the trial brought about a dramatic shift in the perception of national identity. Today it can be said that the heart of Jewish national identity is rooted in the Holocaust. Ironically, though, the result is the marginalization of the Jewish State in this identity.

[Hanna Yablonka (2<sup>nd</sup> ed.)]

**EICHTHAL, GUSTAVE D'** (1804–1886), French publicist, Saint-Simonian, and Hellenist. He was the son of a family of Jewish bankers originally named Seligmann. His parents adopted Catholicism, and Eichthal himself was baptized in childhood. In 1822 Eichthal met Auguste Comte who introduced him to the doctrines of Saint-Simon. Subsequently, Eichthal became active in favor of civil rights for Jews and Negroes. In 1837 Eichthal went to Austria but was unsuccessful in enlisting official support for Jewish emancipation. He visited Algeria in 1838 and prepared a project for organizing the Jewish community there. After visiting Greece in 1832, Eichthal advocated the use of Greek as a universal language. Despite his Saint-Simonian and cosmopolitan outlook, Eichthal died a fervent Catholic. His works include *Les trois grands peuples méditerranéens et le Christianisme* (1864); *Mélanges de critique biblique* (1886); and *La langue grecque* (1887).

**BIBLIOGRAPHY:** Loeb, in: *REJ*, 15 (1887), 153–5; Weill, *ibid.*, 31 (1895), 261–73.

**EICHTHAL-SELIGMANN**, family of German Court Jews and bankers. The family was descended from ARON SELIGMANN (d. 1744), a trader and banker of Leimen, near Heidelberg. His sons ARON and ELIAS served as Court Jews in the Palatinate and in Wuerttemberg; both died in the 1770s. Four sons of Elias – ARON ELIAS, MAYER, LIEBMANN, and LEMLE – followed their father's vocation in the Palatinate, Bavaria, Baden, and Saxonia. The eldest, Aron Elias (1747–1824), became successively court factor, court agent, court councilor, and court banker to the royal house of Bavaria. In 1814, as a

reward for his services as an army supplier during the Napoleonic Wars, he was made Freiherr (Baron) von Eichthal, the changed name and status being accompanied by a change of religion. All five sons of the first Freiherr Elias von Eichthal became bankers: ARNOLD (1772–1838) in Augsburg; DAVID (1775–1850) – who was also a factory owner in Karlsruhe; LOUIS ARON (ADOLPH) (1780–1850) in Paris, where he cooperated with the \*Péreire brothers and the \*Rothschilds in early French railroad development; BERNHARD (1784–1839), who was a financial councilor; and SIMON (LEONHARD) (1787–1854), who was court banker in Munich. Simon initiated the first Bavarian banking legislation in 1834, was a main shareholder in and first president of the Bavarian Mortgage and Exchange Bank, and pioneered Bavaria's railroad development. Simon's son CARL (1813–1880) was one of the founders of the Bayrische Vereinsbank. He was also a member of the "Zollparlament," composed of South-German delegates and the North-German Reichstag. A street in Munich is named after the family to mark their achievements in many community affairs.

Schnee, *Die Hoffinanz und der moderne Staat*, 4 (1963), 213–41; L. Huemert, *Die finanziellen Beziehungen juedischer Bankiers und Heereslieferanten zum bayerischen Staat* (1927).

[Joachim O. Ronall]

**EIDLITZ, LEOPOLD** (1823–1908), U.S. architect. Eidlitz was probably the first Jewish architect to practice in the United States. Born in Prague, he immigrated to America in 1843, and went into partnership with the German architect Otto Blesch. He was a versatile designer, known for his banks, his work on the Capitol at Albany, New York, and churches, including the Christ Church Cathedral in St. Louis (1867). The synagogue Shaaray Tefila in New York was erected by Blesch and Eidlitz in 1847. It was built in the Romanesque style, and represented a break with the classical style of synagogue design previously current in America. In 1868 Eidlitz built Temple Emanu-El, on Fifth Avenue, New York. The basic plan was Gothic, as were some of the decorative details such as the rose window, but the Moorish element was given particular prominence. Eidlitz wrote *The Nature and Function of Art* (1881).

**BIBLIOGRAPHY:** Roth, *Art*, 726–8; R. Wischnitzer, *Synagogue Architecture in the United States* (1955), 43–44, 74–76.

**EIDLITZ, (Abraham Moses) ZERAH BEN MEIR** (fl. c. 1720), rabbi and preacher in Prague. An orphan, he was educated in the home of Jonathan \*Eybeschuetz and was one of his outstanding pupils. He was a member of the *bet din* presided over by Ezekiel \*Landau, and headed a yeshivah for over 30 years. At first wealthy, he supported numerous scholars. Later becoming impoverished, however, he would not accept support; it is related that a sum he had received from the head of the community was found sealed up after his death with instructions to return it. Fourteen of his sermons were

printed under the title *Or la-Yesharim* (1785, reprinted 1942). His novellae on *Bezah* were published in Jerusalem in 1960, and further manuscripts exist. Eidlitz appreciated the value of secular sciences, considering them necessary for both scholars and layman but inferior to the Torah. He therefore wrote a textbook on mathematics, in Hebrew and Yiddish on facing pages, entitled *Melekheth Mahashevet*, of which only the first part appeared (Prague, 1785; the Hebrew section was reprinted in Zolkiew (Zholkva), 1837 and 1845, and an abridged Yiddish version in Warsaw, 1837). Some of his responsa were printed in works by his contemporaries. Jacob \*Emden listed Eidlitz among those suspected of \*Shabbateanism.

**BIBLIOGRAPHY:** Zinberg, *Sifrut*, 4 (1958), 173, 201; Klemperer, in: *HJ*, 13 (1951), 65f.; *Hiddushei R. Zerah Eidlitz al Massekhet-Bezah* (1960), 1–2, 7–20; I. Ta-Shema, in: *Ha-Sefer*, 9 (1961/62), 47; *Literaturblatt des Orients*, 9 (1848), 140, 524–7; Bers, in: *YIVO-Bleter*, 19 (January–June 1942), 69–79 (on *Melekheth Mahashevet*).

**EIFMAN, BORIS** (1946– ), Russian choreographer. He was born in Rubtsovsk, Siberia, where his parents were exiled before WW I and returned to Kishinev in the 1950s. At an early age Eifman showed a keen interest in ballet and dreamed of becoming a choreographer. He went to Leningrad where he was admitted to the ballet faculty of the conservatory. An autodidact, without taking any professional theater directing courses nor performing as a dancer, he became one of the world's prominent choreographers of his time. His first step as a choreographer was made in 1970 with his ballet *Gayane*, to the music of Kachaturian, performed in the Musorgsky Theater in Leningrad; this was a great achievement for a beginning choreographer. In 1997, he founded the theater of modern choreography named after him: the Boris Eifman Ballet Theater, which was extraordinary for Russia at that time. His theater's unusual repertoire included over 40 productions comprising tragedy, comedy, biblical story, fairy tales, and philosophical and psychological works. His theater became a laboratory where he experimented with different approaches and elaborated his own unique style, which combined modern art achievements and features of the classical school tradition. In Eifman's theater, the corps de ballet holds a place of pride and plays a role comparable to soloists. Turning to Russian literature he created in 1980 the ballet *The Idiot* based on Dostoyevsky's novel and set to the music of Tchaikovsky's 6<sup>th</sup> symphony. This performance played a very significant role in the cultural life of Russia. Another significant event was his ballet *Tchaikovsky* where Eifman used movement to penetrate the inner world of the musical genius. In 1990, he created *Don Quixote*, based on the original music of Mincus, and its original interpretations. The performance resulted in a political manifest, his creativity turned against totalitarian rule. In 1995 he returned to Dostoyevsky and created the ballet *The Karamozovs*, full of lust. A peak of his creativity is the ballet *Giselle*, based on the magical life the Russian dancer Olga Spessivtseva. Here, Eifman achieved the supreme blend of dance styles from classical to character dancing to expres-

sionist movements. After his visit to Israel in 1997 he created a ballet *My Jerusalem*, based on Mozart's requiem. One of his most impressive works dedicated to the perverse Russian history is *Russian Hamlet* based on the sad life of Tzar Pavel I, the son of the great Yekaterina, set to the music of Beethoven and Mahler. Many of his productions were televised. Boris Eifman was a philosopher and a very sensitive person, concerned with contemporary problems. Among his numerous awards are the People's Artist Award (1995), National Prize of Russia (1995), Theater Prize (1996 and 1997), Golden Mask Prize (1996 and 1999), the prestigious prize of Peace and Consent (1998), and the chevalier of Arts in France (1999).

[Yossi Tavor (2<sup>nd</sup> ed.)]

**EIG, ALEXANDER** (1895–1938), botanist. Born in Minsk, Belorussia, Eig was taken to Palestine at the age of 14. During World War I he volunteered for the Jewish Legion, and after the war devoted himself to the study of botany, specializing in the vegetation of Palestine. He worked for some years as a traveling librarian, and on his travels acquired a rich and varied collection of plants and grasses which he classified. From 1926 to 1929, at the invitation of Otto Warburg, Eig headed the department of botany of the Agricultural Experimental Station, which was transferred in 1929 to the Hebrew University of Jerusalem. Eig began investigating the geobotany of Palestine, and in 1931 published the first table of phytogeographic regions and the first phytogeographical map of the country. During the same period he also compiled, with the help of his colleagues, the first Hebrew catalog of the flora of Palestine. From 1931 to 1933, he traveled in Syria, Turkey, and Iraq doing further research. In addition to his scientific work at the Hebrew University, he continued to interest himself in general botanical research and published descriptions of many new species of plants. In 1937 he was appointed lecturer in botany at the Hebrew University and devoted much of his time to the development of its botany department. His collection of plants served as a basis for the department's herbarium. His important works include *A Contribution to the Knowledge of the Flora of Palestine* (1926), *The Vegetation of Palestine* (1927), *Les elements et les groupes phytogeographiques dans la flore palestinienne* (2 vols., 1931–32), and *The Vegetation of the Light Soils Belt of the Coastal Plain of Palestine* (1939).

**BIBLIOGRAPHY:** M. Zohary, in: *Palestine Journal of Botany*, Jerusalem Series, 1 (1938), 114–24, includes list of his publications.

**EILAT**, port and resort town at the southern extremity of Israel on the Red Sea coast. Eilat is the modern spelling for the biblical \*Elath, under which heading the town and its history are described.

**EILBERG, AMY** (1954– ), first woman to be ordained as a Conservative rabbi and admitted into the Rabbinical Assembly, the international association of Conservative/Masorti rabbis. Eilberg was the daughter of a prominent Philadelphia

family. Her father Joshua Eilberg served in Congress from 1967 to 1979. A product of the Conservative movement, she began her journey towards the rabbinate in the mid-late 1960s in the institutions of informal and youth education of the Conservative movement, United Synagogue Youth and Ramah Camps, where she discovered her passion for Jewish religious practice and her innate talent for Jewish leadership.

Eilberg's college and graduate school years coincided with the height of the Jewish feminist movement. She entered Brandeis University in fall 1972, the same year the Reform movement ordained its first female rabbi, Sally \*Priesand. At Brandeis, Eilberg enjoyed the mentorship of long-time Hillel rabbi Al Axelrad, who encouraged several pioneering women to become rabbis. As a freshman undergraduate, Eilberg was a student leader in a successful effort to make services at the campus Jewish chapel egalitarian. During her undergraduate years, Eilberg decided to pursue a path to the Conservative rabbinate, even though the Jewish Theological Seminary was, at that time, a decade away from its decision to ordain women.

In 1976, Eilberg entered the Seminary as an MA student in Talmud. After completing the masters program, she continued her academic work as a doctoral student in Talmud, studying primarily at Neveh Schechter (the name by which the Conservative movement's seminary in Israel was then known) and also at the Jewish Theological Seminary in New York. As a Talmud student, Eilberg was taught and mentored by such luminaries as Shamma \*Friedman, David \*Weiss-Halivni, Seymour \*Siegel, and Gordon Tucker as well as the Seminary's then chancellor Gerson \*Cohen.

While Eilberg and other women hoping to enter the rabbinical school pursued graduate studies, the battles surrounding women's ordination grew more intense. Chancellor Gerson Cohen established a "Commission on the Ordination of Women," charged to take testimony from communities around the country and which encouraged Seminary faculty to write position papers on the matter. A faculty vote that was to be held on December 19, 1979, was tabled in the face of a sharply divided group. Disappointed supporters established a popular and effective grassroots organization called GROW (Group for the Rabbinic Ordination of Women) that held public rallies, gathered support, and utilized the press to draw attention to their concerns.

Despite these setbacks, Eilberg remained committed to pursuing the rabbinate. In 1982, she entered the Masters of Social Work program of Smith College in order to train in the pastoral aspects of rabbinic work. In October 1983, following heated debate at both the Jewish Theological Seminary and in the Rabbinical Assembly, a vote was taken by the Seminary faculty to admit women to the Rabbinical School beginning with the incoming class of the fall 1984. Nineteen women, including Amy Eilberg, were admitted to the Rabbinical School. Since Eilberg had already completed most of the Rabbinical School curriculum, she was able to graduate in the same academic year, becoming the first female Conservative rabbi on May 14, 1985.

Subsequent to her ordination, Eilberg was drawn to pastoral work and served as a Jewish hospital chaplain. She also served as assistant rabbi at Har Zion Temple near Philadelphia. While in the Philadelphia area, she headed the Yad L'Chaim Jewish Hospice Program of the Philadelphia Board of Rabbis. These experiences in pastoral care came to serve as the basis for Eilberg's groundbreaking work in the nascent Jewish Healing movement. In 1991, Eilberg, together with Rabbi Nancy Flam (Reform), co-founded the Bay Area Jewish Healing Center. At the height of the AIDS crisis in San Francisco, the Jewish Healing Center offered spiritual care to Jews living with illness, death, and loss, as well as support to health professionals and Bikkur Holim volunteers, and conducted educational programming to inform the Jewish community about Jewish teachings on the challenges of illness and loss. Since the founding of the Healing Center in 1991, and the creation of the National Center for Jewish Healing in 1995, dozens of Jewish communities have launched their own Jewish healing programs and countless synagogues have embraced healing as a primary focus of communal concern.

Eilberg remained at the Jewish Healing Center through 1996, when, once again in the forefront of Jewish religious innovation, she was drawn to the practice of "Spiritual Direction," a counseling practice dedicated to supporting individuals in recognizing the ways in which God is present in their everyday life experience. Eilberg was also the co-founder of Yedidya, the Center for Jewish Spiritual Direction, and continued to write and lecture widely.

[Julie Schonfeld (2<sup>nd</sup> ed.)]

**EILON** (Heb. אֵילוֹן), kibbutz in northern Israel, near the Lebanese border, affiliated with Kibbutz Arzi Ha-Shomer ha-Z'air. It was founded in 1938 as a "tower and stockade" outpost by pioneers from Poland and joined by Israel-born youth. All its fields necessitated heavy reclamation work to clear the rocky ground. Fruit orchards and livestock were prominent farm branches. It also operated a metal and other factories. In 2002 the population of Eilon was 635. The name Eilon refers to the local vegetation of oak and pistachio trees ("allon, elah").

[Efraim Orni]

**EILOTT** (Heb. אֵילוֹת), southernmost kibbutz in Israel, 2½ mi. (4 km.) north of Eilat, affiliated with Ha-Kibbutz ha-Me'uhad, founded in 1963 by pioneers, the majority of whom were Israeli-born. From 1955, the members of the kibbutz maintained a camp on the Eilat shore, where its members tried fishing in the Red Sea, worked in various trades, and participated in laying the foundations of the new town of Eilat. The kibbutz planted date-palm orchards on the southernmost playa of the Aravah Valley and raises out-of-season vegetables, melons, and flowers. In 2002 its population was 286. The kibbutz continued to grow vegetables and date palms, as well as mangoes, cattle, and grapes. It had a packing house for agriculture products, a transformer factory, and a guesthouse.

About half its members worked outside the kibbutz. In 1994 the peace agreement between Israel and Jordan was signed in the kibbutz fields.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EILSHEMIUS, LOUIS M.** (1864–1941), U.S. painter and watercolorist. Born in Arlington, New Jersey, to wealthy and cultured parents, Eilshemius studied at the Art Students League (1884–86) and at the Académie Julian in Paris (1886–87) in addition to taking private lessons from the landscape painter Robert L. Minor (1884–86). Influenced by painters of the Barbizon School, Eilshemius' late 19<sup>th</sup>-century landscapes are mostly traditional representations. *Delaware Water Gap Village* (c. 1886, Metropolitan Museum of Art) shows a panoramic landscape in soft focus with limited yet rich earthy hues. Recognition came early when Eilshemius had paintings accepted at the Pennsylvania Academy of Fine Arts and the National Academy of Design while in his early twenties. This initial success was followed by years of critical neglect and often derision.

Around 1910, Eilshemius' art changed drastically when he began making unsophisticated, frankly naïve images that obviously rejected his training. From this period until his death, Eilshemius most frequently painted landscapes inhabited by nude, anatomically distorted female figures, and sometimes mysterious subjects derived from his imagination. In *Three Bathers* (1918, Hirshhorn Museum and Sculpture Garden), three simplified nudes pose awkwardly in a stream against a shallow, nondescript background. From then, critics began to call his work primitive, a designation Eilshemius disdained as it indicated a lack of training rather than the artist's goal to render "a silent poem" on canvas. Marcel Duchamp discovered Eilshemius at the first annual exhibition of the Society of Independent Artists in 1917. Thereafter, Duchamp helped promote the artist; he facilitated a 1920 one-man show of Eilshemius' work at the Société Anonyme, then one of the most progressive venues in the United States, followed by a second exhibition in 1924. While some members of the avant-garde praised Eilshemius, most critics negatively reviewed his work. Frustrated with lack of recognition, in 1921 Eilshemius stopped painting.

Nonetheless, several shows ensued, and interest and praise of Eilshemius' idiosyncratic paintings increased substantially. In 1939 three leading art dealers in New York City held solo exhibitions of Eilshemius' work, and a nearly 300-page biography of the artist was published. Indeed, from 1932 until his death, over 25 one-man shows were organized in New York. Hit by a car in 1932, Eilshemius was permanently paralyzed. He spent the remainder of his days writing letters to newspapers criticizing the art establishment.

[Samantha Baskind (2<sup>nd</sup> ed.)]

**EINAEUGLER, KAROL** (Ḥayyim; 1885–1952), lawyer and socialist leader, born in Lemberg. Member of a poor family, he became a socialist while still in secondary school. In 1905 he served as secretary of the founding committee of the \*Jewish Social Democratic Party (ZPS; the Bund of Galicia), later becoming one of its major leaders. In independent Poland, Ein-aegler won a reputation as a lawyer; he served as a member of the community council of Lvov and representative of the Bund for eastern Galicia. Between 1939 and 1948 he was interned at intervals in Soviet prisons, and returned to Poland seriously ill. He subsequently immigrated to the United States, where he maintained contact with Bundist groups there. Ein-aegler wrote "Der Ershter Yidisher May Oyfruf in Galitsie" ("The First Jewish May Day Proclamation in Galicia," in: *Historische Shriftn*, Yivo, 1939).

**BIBLIOGRAPHY:** LNYL, 1 (1956), 71–72; J.S. Hertz (ed.), *Doyres Bundistn*, 2 (1956), 187–90; idem (ed.), *Di Geshikhte fun Bund*, 3 (1966), index. **ADD. BIBLIOGRAPHY:** A. Reiss, *Bereshit Tenu'at ha-Po'olim be-Galicia* (1973), 210–11; J. Kisman, in: *Doyres Bundistn*, vol. 2 (1956), 187.

[Moshe Mishkinsky]

**EINBECK** (Heb. אֵינְבֵּק, אֵינְבֵּק), town in Lower Saxony (formerly in Hanover), Germany. Several Jews were burned there at the stake about the year 1298. A Jewish street and synagogue in Einbeck are first mentioned in 1355. An "old" Jewish cemetery is referred to in 1454. The Jews were expelled from Einbeck around 1579 at the instance of a pastor, Johann Velius. They made several attempts to return, and are again mentioned in Einbeck in 1667. They were granted letters of protection in 1673 and 1678, and although these were opposed by the local inhabitants the duke refused to withdraw them. In 1718 the elector of Hanover, George I of England, restricted further Jewish settlement in Einbeck and few Jews were authorized to reside there in the 18<sup>th</sup> century. The number of Jewish families increased from nine in 1806–13 to 16 in 1816, and 139 persons in 1880 (2.04% of the total population). A new synagogue was dedicated in 1896. It was destroyed by the Nazis in 1938. Around 60 Jews remained in Einbeck in 1933. About half emigrated and most of the others were deported to the east. In 1968 there were two Jewish residents.

**EIN FASHKHAH** (‘Ein Feshkha, Enot Zukkim), brackish springs on the western shore of the Dead Sea, just over 2 miles (3 km.) south of Kh. \*Qumran. The surrounding swamp, covering 1 km. in the 1950s, was crossed by both natural and artificial channels. The Ein Fashkhah springs fed a basin of 180–240 sq. yds. (150–200 sq. m.), up to 4 ft. (120 cm.) deep, with a maximum temperature of 27 degrees Celsius. The oasis has in recent times supported tall reeds, tamarisks, and oleanders. Today a wild nature reserve, this oasis is in danger of withering away with the recession of the Dead Sea and the

fresh water aquifers along its perimeter, a condition that has also inhibited seasonal sweetwater springs (e.g., Ein et-Tannur/Tanourih, Ein Ghazal) furnishing what was a relatively fertile area between Ein Fashkhah and the Wadi Qumran. The water of Ein Fashkhah, drunk by Bedouin, animals, and European visitors of the 19<sup>th</sup>–20<sup>th</sup> centuries, as well as being the former home of five species of small fish, in 2001 was tested as having a fairly high salinity of 4.5 to 23 mS/cm.

The region of Ein Fashkhah was visited by Felicien de Saulcy in 1851, who identified ancient ruins. These were excavated in 1956 and 1958 by Roland de Vaux, following his excavations at Kh. Qumran, and again in 2001 by Yitzhar Hirschfeld.

It is now clear that the first structure at Ein Fashkhah was an Iron Age II fort, located south of the springs, associated with a string of forts (at Qumran, Kh. Abu Tabak, Kh. es-Samrah, and Kh. el-Maqari) which guarded the road from the Dead Sea to Jerusalem via the pass at the Wadi Qumran. A large isolated building (60 × 64 m.) dating to the Iron Age was discovered by de Vaux, close to the spring of Ein Ghazal.

North of the pool of Ein Fashkhah, a structure (18 × 24 m.) was constructed in the first century B.C.E. De Vaux believed there were traces from the period 100–31 B.C.E., but the entire building is now reassigned to the Herodian period (by both Magness and Hirschfeld), after 37 B.C.E. This structure comprised a courtyard with a rectangular building on three sides. The exterior walls are 1 m. thick. Later, two ground floor rooms were built in the west. These had an upper story, including a balcony. North of this structure was an installation most likely used as a date-wine press (so Netzer), though alternative proposals have identified it as being associated with tanning (de Vaux), fish farming (Zeuner), opobalsam processing (Hirschfeld), or indigo manufacture (Bélis). Water was fed to a reservoir next to this installation from a now extinct spring north of the site. In between the date-wine press and the reservoir channel was a paved area, as also to the southeast. South of the building was an animal pen (34 × 34 m.) with a stable running along the northern side.

A long wall running north from the settlement of Ein Fashkhah towards Qumran (identified east of the isolated Iron Age building by de Vaux) would suggest an estate enclosure, most likely for date-palm cultivation (cf. Pliny, *Natural History* 5:17, 4 (73)). The wall may have been begun as early as the Iron Age, though its appearance adjoining the Herodian settlement of Ein Fashkhah indicates it is contemporary here. The continuation of the wall into the area of the Qumran settlement appears to indicate a linked estate. Ein Fashkhah may have been occupied by the \*Dead Sea sect, usually identified as \*Essene, who could have employed the spring-pool as a natural *mikveh*. The pottery forms of Ein Fashkhah are virtually identical to forms found at Qumran during the same period of occupation, but large cylindrical jars have not been discovered here.

The Herodian complex at Ein Fashkhah was partly destroyed by fire after the Romans took control of this region

in 68 C.E., though occupation continued after this on the north side of the main building. A coin of Domitian from Antioch (81–96 C.E.; locus 16) and a coin hoard of 17 coins of Agrippa II, dating from 78–95 C.E., were found, giving the *terminus post quem* for the abandonment of the settlement as 95 C.E. A single coin indicates that Bar Kokhba rebels may have camped here in 132–5 C.E.

In the Byzantine period there was occupation in the northeast corner of the stable (locus 20), probably for just one anchorite. This may be evidenced in the *Pratum Spirituale* of John Moschus (158), which testifies to a vegetable garden for the monastery of Marda (Kh. Mird), 5.5 miles (9 km.) away.

**EINFELD, SYDNEY** (1909–1995), Australian politician and communal leader. Born in Sydney, the son of a minister at Sydney’s Great Synagogue, Syd Einfeld became one of the leading Jewish politicians and communal leaders in modern Australia. He served as a Labour member in Australia’s federal House of Representatives in 1961–63 and as a member of the New South Wales parliament in 1965–81. From 1975 to 1983 he was deputy leader of the state’s branch of the Australian Labour Party, and was subsequently a popular minister for consumer affairs when Labour held office. Einfeld was probably the most important communal leader from New South Wales of his time, and served as president of the Executive Council of Australian Jewry, the community’s national body, in 1952–54, 1956–58, 1960–62, and 1964–66. Einfeld was also president of the Australian Jewish Welfare Society, the main immigrants’ aid body, and is regarded as very influential in liberalizing Australian policy towards Jewish refugees.

[William D. Rubinstein (2<sup>nd</sup> ed.)]

**EIN GEV** (Heb. עֵין גֵּב), kibbutz on the east shore of Lake Kinneret in Israel, situated on the narrow lowland strip between the lake and the rim of the Golan Plateau below Mt. \*Susita.

It was founded in 1937 as a “tower and stockade” settlement by a group of pioneers from Germany, Austria, and the Baltic countries who had previously worked at Kinneret. The kibbutz, which came under frequent attack during the Arab riots before World War II, was particularly vulnerable in its initial years when it was accessible only by boat from Tiberias. In the War of Independence (1948), Ein Gev was again isolated and suffered a severe Syrian air and artillery attack, which it repulsed. After the armistice it remained exposed to the Syrian positions on the Golan rim and on land north of it, which the Syrians held until the Six-Day War of 1967. Early in its history the kibbutz developed fishing in Lake Kinneret as well as tourism. The kibbutz operates a holiday resort, fish restaurant, and sailing boats. The Ein Gev Music Festival is held annually during Passover, and a 2,500-seat concert hall was erected. Farming is intensive, including bananas, dairy, and ostrich breeding. Near the kibbutz is the archaeological site of Susita. In 2002 the population of Ein Gev was 521. The name (“Waterhole Spring”) is Hebraized from the Arabic designation of the site, “Nuqayb.”

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EIN HA-EMEK** (Heb. עֵין הָעֵמֶק; “Spring of the Valley”), rural community in northern Israel, in the Manasseh Hills of Samaria. Ein ha-Emek began as a moshav affiliated with Tenu’at ha-Moshavim. It was founded in 1944 by Jewish farmers from Kurdistan who had been stonemasons in Jerusalem before settling the moshav. Its hill-type farming included in 1969 mainly deciduous fruit orchards and vineyards. Farming was phased out and over the years the settlers took up other occupations. In the 1980s the moshav became an ordinary rural community and began to undergo expansion, its population increasing from 312 in 1969 to 440 in the mid-1990s and 616 in 2002.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EIN HA-ḤORESH** (Heb. עֵין הַחֹרֶשׁ; “Plowman’s Spring”), kibbutz in central Israel, in the Ḥefer Plain, affiliated with Kibbutz Arzi ha-Shomer ha-Za’ir. It was founded on April 10, 1932, by pioneers from Eastern Europe who reclaimed the land. In 1968 it had 570 inhabitants; in 2002, 715. Ein ha-Ḥoresh engages in intensive farming, in citrus and avocado plantations, field crops, and milch cattle. It also ran a factory for industrial packaging materials. A culture center put on a variety of performances.

[Efraim Orni]

**EIN HA-MIFRAZ** (Heb. עֵין הַמִּפְרָץ; “Spring in the Bay”), kibbutz in Israel, south of Acre, affiliated with Kibbutz Arzi ha-Shomer ha-Za’ir. It was founded in 1938 by pioneers from Eastern Europe. In addition to defending themselves against Arab attacks from Acre during the riots that lasted until 1939, the settlers had to drain the salt swamps near the mouth of

the Na’aman River. Its economy was based on intensive farming (field crops, dairy cattle, fishery, and orchards) and two industrial enterprises (plastic products and cardboard packing material). The kibbutz was also a partner in the nearby power station. In 1968 the kibbutz had 580 inhabitants. In the mid-1990s the population increased to 760, but then dropped to 674 in 2002.

[Efraim Orni]

**EIN HA-NAZIV** (Heb. עֵין הַנְּצִיב), kibbutz in Israel, in the Beth Shean Valley, affiliated with Ha-Kibbutz ha-Dati, founded in 1946 by pioneers from Germany. Its economy was based on intensive farming and included dates, fishery, poultry, and dairy cattle. The kibbutz also operated a polyethylene foam factory and architectural firm. In 1969, it had 347 inhabitants; in 2002, 537. It is named after R. Naphtali Zevi Judah Berlin, head of the Volozhin yeshivah and one of the first Ḥovevei Zion.

**WEBSITE:** [www.hanatziv.org.il](http://www.hanatziv.org.il).

[Efraim Orni]

**EIN HA-SHELOSHAH** (Heb. עֵין הַשְּׁלֹשָׁה), kibbutz in southern Israel, in the northwestern Negev, on the border of the Gaza Strip, affiliated with Ha-No’ar ha-Ziyyoni. Ein ha-Sheloshah was founded in 1949 by former members of Loḥamei Ḥerut Israel and originally called Neveh Ya’ir, after the underground name of their commander Avraham Stern. They were succeeded one year later by a group of settlers from Argentina, Uruguay, and Morocco. Farm branches included citrus orchards and irrigated field crops. In 2002 the population of Ein ha-Sheloshah was 340. The settlement’s name (“Spring of the Three”) commemorates three South American members of the pioneer group who fell in Israel’s War of Independence.

[Efraim Orni]

**EIN HA-SHOFET** (Heb. עֵין הַשּׁוֹפֵט), kibbutz in Israel, in the Manasseh Hills, affiliated with Kibbutz Arzi ha-Shomer ha-Za’ir. Ein ha-Shofet was founded in 1937 by the first immigrants of Ha-Shomer ha-Za’ir from the United States and by a group from Poland. A “tower and stockade” settlement, the kibbutz was set up at a site that until then had been the headquarters for Arab bands attacking Jewish villages. It became part of the “settlement bridge” connecting the Sharon and the Jezreel Valley, the two principal Jewish regions at the time. Its economy was based on intensive farming (avocado plantations, field crops, and cattle) as well as factories manufacturing screws, electrical appliances, and automotive products. In 1968 Ein ha-Shofet had 590 inhabitants; in 2002, 715. The nearby Manasseh Forest is the largest in the country. The name Ein ha-Shofet (“The Judge’s Spring”) commemorates the American Zionist leader, Justice Louis Brandeis.

[Efraim Orni]

**EIN HOD** (Heb. עֵין הוֹד), artists’ village in northern Israel, on Mt. Carmel E. of Athlit, founded on the initiative of the painter Marcel Janco, in 1953, on the picturesque site of an abandoned

Arab village. Artists inhabit the village either permanently or seasonally. Ein Hod has workshops for ceramics, lithography, weaving, and mosaics; art galleries; and an open-air amphitheater. Courses and seminars are held in painting, sculpture, lithography, and weaving. Antiquities of the Roman and Byzantine periods have been found, and there are crusader structures. During Napoleon's campaign (1799), the village served as a vacation site for French soldiers. In the mid-1990s Ein Hod's population was 291; by 2002 it had increased to 437. The village's name, which means literally "Spring of Splendor," was adapted from the name of the abandoned Arab village 'Ayn al-Ḥawḍ ("The Garden Spring").

[Efraim Orni /Shaked Gilboa (2<sup>nd</sup> ed.)]

**EINHORN, DAVID** (1809–1879), Reform rabbi and theologian. Einhorn was born in Dispeck, Bavaria, and received his rabbinical training at Furth, near his birthplace. He studied philosophy at Erlangen, Wurzburg, and Munich. His thinking was influenced by the ideas of F.W. Schelling. In 1838 he was elected rabbi of the community at Wellhausen near Uffenheim, but the Bavarian government would not confirm his appointment on account of his liberal views. Four years later he became *Landesrabbiner* of Birkenfeld in the Grand Duchy of Oldenburg. At the Frankfurt Rabbinical Conference of 1845, he took a decided view in favor of introducing the vernacular into the service and of eliminating prayers for the restoration of sacrifices and a Jewish state. Three years earlier, in coming to the defense of the position taken up by Abraham \*Geiger in his controversy with Solomon Titkin, he had rejected the divine authority of the Talmud and upheld the right to diverge from ceremonial laws.

In 1847 Einhorn succeeded Samuel \*Holdheim as chief rabbi of Mecklenburg-Schwerin. There he was involved in controversy with Franz \*Delitzsch, the Christian Hebraist, for having pronounced a blessing in the synagogue over an uncircumcised child. Einhorn's radical religious standpoint jeopardized his position. In January 1852 he became rabbi of the Reform congregation of Budapest, but after two months the government closed the temple. While living in Budapest, Einhorn began his work *Das Prinzip des Mosaismus*, but completed only one volume (1854).

Denied any opportunity in Europe, Einhorn became rabbi of the Har Sinai Congregation of Baltimore (1855). His arrival in the United States coincided with the Cleveland Rabbinical Conference, which, under the leadership of Isaac Mayer \*Wise, adopted a platform designed to permit a broadly based union among the various tendencies in American Judaism. Einhorn regarded this platform as treachery to the cause of Reform and denounced it violently. This marked the beginning of a bitter feud between Einhorn, the uncompromising Reformer, and I.M. Wise, who was ready to moderate his Reform in the interests of unity. Einhorn expounded his ideas in his monthly magazine *Sinai* (Ger., 7 vols., 1856–62) and gave them expression in his prayer book *Olat Tamid* (1856), which

was no mere shortening of the traditional liturgy, but a new work written mainly in German.

Einhorn's sojourn in Baltimore was cut short in 1861, when his unsparing denunciation of slavery placed him in danger from the mob. He became rabbi of Congregation Kenesseth Israel, Philadelphia, and in 1866 moved to New York as rabbi of Congregation Adath Israel, which was later known as Temple Beth El. His was the dominant personality at the Philadelphia Rabbinical Conference which met in 1869 and adopted a thoroughgoing Reform platform.

Einhorn's farewell sermon, delivered after a quarter of a century in America, contained a plea for the cultivation of German as the vehicle for the ideas of Reform Judaism. If the dogmatic Reform upon which he insisted dominated neither the Union of American Hebrew Congregations nor Hebrew Union College at their inception, his spirit came to influence them later. Kaufman \*Kohler, his son-in-law and disciple, formulated the Pittsburgh Platform of 1885, which was the basis of American Reform for a generation, and later became president of Hebrew Union College; Einhorn's *Olat Tamid* served as the model for the *Union Prayer Book*.

A letter which Einhorn wrote in 1844 summed up his theological system: "In all its stages, Judaism shows its capacity for continuous development both as to its form and its spirit, insofar as the latter became ever clearer and purer in the human consciousness; and no Israelite who knows his religion will deny it the power of perfectibility. Its essence, which is truth uniting all men, was from the beginning intended to overcome the exclusiveness attached to the form, which is national; but insofar as the latter served as an armor of protection and as the priestly garb of Israel among the nations, it cannot with impunity be cast off until the former in its entire inner force and its all-encompassing extent will have penetrated the whole human family, and Israel (Mosaism) will have fulfilled its priestly mission at the arrival of the Messianic era." Little has been published concerning the personality of David Einhorn or analyzing his thought.

[Sefton D. Temkin]

**EINHORN, DAVID** (1886–1973), Yiddish poet and publicist. Born in Korelichi (Belorussia), his earliest poems were in Hebrew, but under the influence of socialist ideas he turned to Yiddish and made his debut in Bundist publications. His first volumes of verse, *Shtile Gezangen* ("Quiet Chants," 1909) and *Mayne Lider* ("My Poems," 1912), acclaimed by leading critics, expressed the tension between the declining traditional order and the heralded new society. In 1910 Einhorn helped organize the Boris Kletskin press, and was also the secretary of S.Y. \*Abramovitch. In 1912, after six months in prison for suspected revolutionary activities, Einhorn left Russia, moving to Paris and then in 1913 to Berne, Switzerland. There he studied at the university, wrote for *Di Yidishe Velt* and the children's periodi-

cal *Grininke Beymelekh*, and edited *Di Fraye Shtime* (1916–17). In 1917 his book, *Tsu a Yidishe Tokhter* (a present to his wife), appeared. He lived briefly in Warsaw, where he wrote for the Bundist *Lebns-Fragn*. In 1920 he moved to Berlin, and later, warning of the coming destruction of Europe, to Paris. He was among the first contributors to the *Algemayne Entsiklopedye*. In 1940 Einhorn immigrated to the U.S. and became a regular correspondent for the New York *Forverts*, publishing a weekly column (1956) “Tsvishn Tsvey Veltn” (“Between Two Worlds”), memoirs of the Yiddish literary world. Einhorn was active as a translator and editor, proclaimed a classical, coherent, and grammatically principled style (his poetry was criticized, especially by H. \*Leivick, for its stylistic simplicity), and preferred traditional Jewish motifs, his work becoming progressively more national in character. He was quite popular among Hebrew authors such as \*Agnon and \*Brenner.

[Ruth Wisse / Shifra Kuperman (2<sup>nd</sup> ed.)]

**EINHORN, IGNAZ (Eduard Horn; 1825–1875)**, Reform rabbi and leader in Hungary, economist, and politician. Einhorn, who was born in Nove Mesto, organized the Society for the Reform of Judaism in Pest in 1847. Later, as rabbi of the society's first Reform temple, he introduced several radical changes (such as observing the Sabbath on Sunday). A year later he helped to found the Society for the Propagation of Hungarian Language and Culture, and edited the first Jewish-Hungarian Yearbook. In 1848 he published his *Zur Judenfrage in Ungarn*, and established the weekly *Der Ungarische Israelit*. During the Hungarian national uprising in that year he volunteered for the national army as chaplain. After the revolt was suppressed, he fled to Leipzig, Germany, changing his name to Eduard Horn. On the publication of his treatise on *Ludwig Kossuth* (1851), the Hungarian government requested his extradition. He took refuge in Brussels, where he studied philosophy and economics, and later (1856) moved to Paris. He published several important works on economics and was made an honorary member of scientific societies in France and Belgium. In 1867 he received the Grand Prix of the French Academy for his *Leconomie politique avant les physiocrates*. After the Austro-Hungarian compromise in 1867 Einhorn returned to his native country. He was elected to parliament and in 1869 was appointed deputy undersecretary of commerce, the first Jew to occupy such a high post there. During his government service he was associated with drafting the laws granting the Jews equal rights. In the conflict between Orthodox and Reform Judaism he then supported the former. By government decree, a memorial tablet was affixed to the house where he was born; a street in Budapest was named after him.

[Aharon Fuerst]

**EINHORN, MAX (1862–1953)**, U.S. internist and gastroenterologist. Born in Grodno, Russia, he immigrated to the U.S. where he became professor of medicine at the College of Physicians and Surgeons at Columbia University from 1896 to 1940. He was visiting physician at New York's Lenox Hill Hospital and consulting physician to several other hospitals. His major work was on gastric, digestive, and intestinal disorders.

**EINHORN, MOSES (1896–1966)**, U.S. physician and editor. Born in Volkovysk, Russia, he was brought to Erez Israel in 1908. In 1916 he was forced to emigrate by the Turkish authorities and after short sojourns in Egypt and the Balkans, he went to the U.S. Einhorn made several contributions to gastroenterology and headed the gastroenterological department of the Bronx Hospital in New York City. He is best known for his promotion of the use of Hebrew medical terminology. In 1926, together with Asher Goldstein, he founded the Hebrew medical journal *Harofe ha-Ivri* which appeared twice a year in New York until 1965. This journal was dedicated to the study of Hebrew medicine and Hebrew medical terminology. Einhorn contributed to the founding of various medical libraries in Israel, and in 1964 established a special fund in his name for the granting of prizes in Hebrew medical literature by the Tel Aviv municipality.

[Eisig Silberschlag]

**EIN IRON** (Heb. עֵיִן עִירוֹן), moshav in central Israel, in the northeastern Sharon, affiliated with Tenu'at ha-Moshavim. It was founded in 1934 by settlers from Russia and Poland, who were later joined by a few families from Germany. The principal farm branches were citrus orchards and milch cattle. In 1969, its population was 197, increasing to 255 in the mid-1990s, and 384 in 2002.

[Efraim Orni]

**EIN KE-ELOHENU** (Heb. אֵין כְּאֵלֵינוּ; “There is none like our God”), hymn recited at the end of the Additional Service on Sabbaths and holidays in the Ashkenazi ritual and in the Sephardi ritual on weekdays after the Morning Service. This hymn is already mentioned in the prayer books of \*Amram Gaon (ninth century), \*Maimonides (12<sup>th</sup> century), and \*Rashi (13<sup>th</sup> century), where, however, the order of its stanzas differs from their present sequence. Now the initial letters of the first three verses form the word “Amen” and the other two verses start with “Barukh” and “Attah,” forming the phrase “Amen Barukh Attah” (“Amen, Blessed be Thou”). It is possible that originally there was a final verse starting with *Adonai*. Rashi states that *Ein ke-Elohenu* is recited, in the Ashkenazi ritual, on Sabbaths and holidays only, because on those days the *Amidah* consists of seven benedictions instead of the 19 on weekdays and through this hymn additional praises are recited, making up for those missing (cf. *Maḥzor Vitry*, no. 134; Zedekiah

b. Abraham ha-Rofe, *Shibbolei ha-Leket* (1966), 131f.). In the *Genizah* fragments, where the stanzas are in a different order from the present text, the hymn is followed immediately by a quotation from Psalms 90:1, which suggests that it may have been recited at the termination of the Sabbath.

**BIBLIOGRAPHY:** Davidson, *Ozar*, 1 (1929), 142; Eisenstein, *Dimim*, 14f.; Abrahams, *Companion*, clxvi–clxvii; Sendrey, *Music*, 2306. 2587–92.

[Meir Ydit]

**EIN KEREM** (Heb. עֵין כֶּרֶם), village on the western edge of Jerusalem, identified with biblical \*Beth-Cherem; since 1949 part of the Jerusalem municipality. Early Christian tradition dating back to the sixth century identifies Ein Kerem as the birthplace of \*John the Baptist in the house of Zacharias (*domum Zachariae*, Luke 1:40) and with the location of the visit paid to Elizabeth, John's mother, by her relative (συγγενίς) Mary, Jesus' mother (Luke 1:39–80). Theodosius (c. 530 C.E.) referred to the "dwelling place of Saint Elizabeth" about 5 miles from Jerusalem, and Procopius of Caesarea (550–58 C.E.) speaks of a well situated at the "Monastery of Holy Zacharias [father of John the Baptist]." In the seventh century, Epiphanius referred to Ein Kerem (garbled to "Carmel") as the family home of the forerunner (i.e., John the Baptist). References to "Encharim" also exist in the Georgian Lectionary (eighth century), in the *Commematorium de Casis Dei* (c. 808 C.E.), and in a work by Eutychius (tenth century). There are two churches associated with John the Baptist at Ein Kerem today: the Church of the Nativity of John on the northern hill and the Church of the Visitation on the southern hill. Outside the village is the Monastery of John in the Wilderness (Ein el-Habis). Numerous medieval and later travelers refer to Ein Kerem and its churches. The Franciscans established their first church in 1621, and after 1674 the Franciscan presence in the village became permanent.

The Franciscans remained the only Christians in Ein Kerem until the middle of the 19th century. In 1860 the Sisters of Our Lady of Zion settled in the village, followed by the nuns of the Russian Orthodox Church (1871), the White Fathers (1882), the Greek Orthodox Church (1894), and the Rosary Sisters (1911). A mosque (maqam 'umair) and minaret was built over the spring which gave the village its name. During the Israel War of Independence (1948) the inhabitants of the village – until then all Moslem Arabs – fled and were replaced by new immigrants mostly from Oriental countries. In 1949 Rahel Yannait \*Ben-Zvi brought the training school (after 1952 the Ein Kerem Agricultural School), of which she was director, from Talpiyyot in Jerusalem to Ein Kerem. In the 1950s and 1960s many Israeli artists (such as Yitzhak Greenfield) and academics settled in the village. Many of its residents offer guest accommodations to vacationers attracted by the rural setting.

[Walter Zanger / Shimon Gibson (2<sup>nd</sup> ed.)]

**EIN SHEMER** (Heb. עֵין שֶׁמֶר), kibbutz in central Israel, near the entrance to the Iron Valley. Affiliated with Kibbutz Arzi ha-Shomer ha-Za'ir, the site served as a camp for the \*Ha-Shomer association before World War I. After 1918 a laborers' camp was opened there, which was taken over by a group of \*Ha-Shomer ha-Za'ir members in 1924. The permanent settlement was established in 1927. The kibbutz has intensive farming, with field crops, avocado plantations, poultry, and dairy cattle, and maintained several manufacturing enterprises (food, plastics, and rubber). The kibbutz operates the Old Courtyard on its premises, a theme museum showing life in the traditional kibbutz. In 1968 Ein Shemer had 545 inhabitants, increasing to 605 in the mid-1990s and 758 in 2002. The name refers to Ha-Shomer and to Ha-Shomer ha-Za'ir as well as to the nearby Samaria (Shomron) Hill.

**WEBSITE:** www.courtyard.co.il.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EIN-SOF** (Heb. עֵין סוֹף; "The Infinite," lit. that which is boundless), name given in Kabbalah to God transcendent, in His pure essence: God in Himself, apart from His relationship to the created world. Since every name which was given to God referred to one of the characteristics or attributes by which He revealed Himself to His creatures, or which they ascribed to Him, there is no name or epithet for God from the point of view of His own being. Consequently, when the kabbalists wanted to be precise in their language they abstained from using names like *Elohim*, the Tetragrammaton, "the Holy One, blessed be He," and others. These names are all found either in the Written or the Oral Law. The Torah, however, refers only to God's manifestations and not to God's own being which is above and beyond His relationship to the created world. Therefore, neither in the Bible, nor in rabbinic tradition was there a term which could fulfill the need of the kabbalists in their speculations on the nature of God. "Know that *Ein-Sof* is not alluded to either in the Pentateuch, the Prophets, or the Hagiographa, nor in the writings of the rabbis. But the mystics had a vague tradition about it" (*Sefer Ma'arekhet ha-Elohut*). The term *Ein-Sof* is found in kabbalistic literature after 1200. However, it was apparently not coined as a technical term since this was not the style in which, in the medieval period, negative terms were coined. Most probably its source is to be found in those phrases stressing God's sublimity which is infinite (*ad le-ein sof*), or which emphasize the characteristics of the (Divine) thought, comprehension of which "has no end" (*ad le-ein sof*). The use of this epithet in early kabbalistic literature proved without doubt that the term grew out of this kind of expression. It originated, apparently, in the circle of \*Isaac the Blind, and his disciples. In the view of some kabbalists, the name *Ein-Sof* was likewise applicable to the first product of emanation, the *Sefirah Keter*, because of its com-

pletely concealed nature, and this double use of the word gave rise in kabbalistic literature to considerable confusion. There is no doubt that from the beginning the intention was to use the name in order to distinguish the absolute from the *Sefirot* which emanated from Him. The choice of this particular name may be explained by the emphasis placed on the infinity of God in the books of \*Saadiah Gaon which had a great influence on the circle of the Provençal kabbalists. The term also shows that the anthropomorphic language in which the kabbalists spoke of the living God of faith and revelation does not represent the totality of their theosophical theological approach. At first there was no definite article used in conjunction with *Ein-Sof*, and it was treated as a proper name, but after 1300 there were kabbalists who spoke of “the *Ein-Sof*.” At first, the term was used only rarely (even in the principal part of the \*Zohar its occurrence is very rare), but from about 1300 its use became habitual, and later Kabbalah even speaks of several “kinds of *Ein-Sof*” e.g., the enveloping *Ein-Sof*, the enveloped *Ein-Sof*, the upper *Ein-Sof*.

[Gershom Scholem]

Another possible source for the kabbalistic theory of *Ein-Sof* is the term *aperantos*, which occurs in a Gnostic source of late antiquity in a book in which interpretations of biblical verses and themes are found. According to some kabbalists, most eminently R. \*David ben Judah he-Ḥasid, within *Ein-Sof* there are ten supernal *Sefirot*, called *Zahzahot*, which are described by resorting to many classical anthropomorphic terms. This view of the *Ein-Sof* reverberated in Safedian Kabbalah.

**EINSTEIN, ALBERT** (1879–1955), physicist, discoverer of the theory of relativity, and Nobel Prize winner. Born in the German town of Ulm, son of the proprietor of a small electrochemical business, Einstein spent his early youth in Munich. He detested the military discipline of the German schools and joined his parents, leaving school after they moved to Italy. His interest in mathematics and physics started at an early age, and he avidly read books on mathematics. Unable to obtain an instructorship at the Zurich Polytechnic Institute, from which he graduated at the age of 21, he took a post at the patent office in Berne, having become in the meantime a Swiss citizen. This position left him ample time to carry on his own research. In 1905 he published three brilliant scientific papers, one dealing with the “Brownian motion,” the second one with the “photoelectric effect,” and the third on the “Special theory of relativity.” It was the last one which was to bring his name before the public. He demonstrated that motion is relative and that physical laws must be the same for all observers moving relative to each other, as well as his famous  $E = mc^2$  equation

showing that mass is equivalent to energy. Ironically, however, when he received the Nobel Prize for physics in 1921 it was for his explanation of the photoelectric effect. Immediately after the publication of that paper Einstein was offered a professorship at the University of Zurich which he at first refused, having become fond of his job at the patent office. In 1910 he joined the German University in Prague, where he held the position of professor ordinarius in physics, the highest academic rank. Despite his absorption in his scholarly pursuits he could not fail to notice the political strife and quarrels between the rival feelings of nationalism, and felt great sympathy for the Czechs and their aspirations. In 1912 Einstein returned to Switzerland, where he taught at the Polytechnic, the same place to which he had come as a poor student in 1896. His friend and colleague, Max Planck, succeeded in obtaining for him a professorship at the Prussian Academy of Science in Berlin, a research institute where Einstein could devote all his time to research. In 1916, amid a world in the throes of World War I, Einstein made another fundamental contribution to science contained in *Die Grundlagen der allgemeinen Relativitaetstheorie (Relativity, the Special and the General Theory, a Popular Exposition, 1920)*. In this theory he generalized the principle of relativity to all motion, uniform or not. The presence of large masses produces a gravitational field, which will result in a “warping” of the underlying (four-dimensional) space. That field will act on objects, such as planets or light rays, which will be deflected from their paths. His prediction of the deflection of starlight by the gravitational field of the sun was borne out by the expedition at the time of a solar eclipse in 1919. When the results of the solar eclipse observations became known to the general public, Einstein’s name became a household word. He was offered, but refused, great sums of money for articles, pictures, and advertisements as his fame mounted. During the early years after World War I he worked for the League of Nations Intellectual Cooperation Organization and became a familiar figure on public platforms speaking on social problems as well as his Theory of Relativity. He became more and more disappointed by the misuse of sciences in the hands of man. “In the hands of our generation these hard-won achievements are like a razor wielded by a child of three. The possession of marvelous means of production has brought care and hunger instead of freedom.” In 1932, Einstein accepted an invitation to spend the winter term at the California Institute of Technology. By January 1933, Hitler had come to power. Einstein promptly resigned from his position at the Royal Prussian Academy of Sciences and never returned to Germany. Many positions were offered him but he finally accepted a professorship at the Institute for Advanced Studies in Princeton, N.J., and later became an American citizen. During World War II secret news reached the U.S. physicists that the German uranium project was progressing. Einstein, when approached by his friend \*Szilard, signed a letter to President Roosevelt pointing out the feasibility of atomic energy. It was that letter which sparked the Manhattan Project and future developments of atomic energy. However, Einstein was op-

posed to the use of the atomic bomb, as were many other scientists, and wrote another letter which, however, arrived only after Roosevelt's death. In spite of his dislike for engaging in public affairs Einstein became chairman of the Emergency Committee of Atomic Scientists and urged the outlawing of the atomic and hydrogen bombs. During the McCarthy period Einstein advised scientists to refuse to testify before the Congressional Committee on Un-American Affairs. Despite his advanced age he continued to work on the "Unified Field Theory" which attempted as a first step to unify gravitation and electromagnetism into one theory. It is impossible to assess whether he would have succeeded in this momentous task, since he died before its completion.

Einstein was not only one of the greatest scientists of all time but also a generous person who took time and effort to help others and spoke out openly for his beliefs and principles. He never forgot that he had been a refugee himself and lent a helping hand to the many who asked for his intervention. The man who refused to write popular articles for his own benefit devoted hours to raising money for refugees and other worthwhile causes. Einstein was a Jew not only by birth but also by belief and action. He took an active part in Jewish affairs, wrote extensively, and attended many functions in order to raise money for Jewish causes. He was first introduced to Zionism during his stay in Prague, where Jewish intellectuals gathered in each other's homes talking about their dream of a Jewish Homeland. He and Weizmann had become acquainted, and, despite different outlooks – Weizmann regarded Einstein as an unpractical idealist and Einstein in turn thought Weizmann was too much of a "Realpolitiker" – remained allies and friends. In 1921 Weizmann asked Einstein to join him on a fundraising tour of America to buy land in Palestine and seek aid for the Hebrew University. Einstein readily agreed, since his interest in the University had been growing. The tour was highly successful. He visited Palestine and was greatly impressed by what he saw. Einstein appeared before the Anglo-American Committee of Inquiry on Palestine in 1946 and entered a strong plea for a Jewish Homeland. When the State of Israel was established he hailed the event as the fulfillment of an ancient dream, providing conditions in which the spiritual and cultural life of a Hebrew society could find free expression. After Weizmann's death he was asked by Ben-Gurion to stand as a candidate for the presidency of the State of Israel, which he declined "being deeply touched by the offer but not suited for the position." When he went to the hospital for the illness which proved to be his last he took with him the notes he had made for the television address he was to give on Israel's seventh Independence Day. The notes were expanded into an article which is included in *Einstein on Peace* (ed. by O. Nathan and H. Norden, 1960). Among his works are *About Zionism* (ed. and tr. by L. Simon, 1930), speeches and letters; *Mein Weltbild* (1934); *The World As I See It*, (1934); *Evolution of Physics* (with L. Infeld, 1938); *Out of My Later Years* (1950); and *The Meaning of Relativity* (1921, 1956<sup>6</sup>).

The Albert Einstein Archives at the Jewish National and University Library of the Hebrew University of Jerusalem ([www.albert-einstein.org](http://www.albert-einstein.org)) house Einstein's personal papers. Through 1998, eight volumes of a projected 30 volumes of Einstein's Collected Papers were published by Princeton University Press.

[Gerald E. Tauber]

**EINSTEIN, ALFRED** (1880–1952), musicologist. A cousin of the physicist Albert Einstein, he was born in Munich. Einstein was a music critic in Munich and Berlin, and became editor of the *Zeitschrift fuer Musikwissenschaft* in 1918. In 1933 he left Germany for Italy, reached the U.S. in 1939, and was professor at Smith College, Northampton, Mass. Einstein combined the qualities of a music critic with those of a precise scholar and bibliographer.

In 1919 Hugo Riemann charged him with the preparation of the ninth edition of his *Musiklexicon*. Einstein subsequently edited also the 10<sup>th</sup> and 11<sup>th</sup> editions of this basic reference work. Of more popular character was his *Das neue Musiklexicon*, translated and edited by him from A. Eaglefield Hull's *Dictionary of Modern Music and Musicians* (1924). His Mozart studies culminated in his version of Koechel's catalogue of Mozart's works (3<sup>rd</sup> ed., 1937). He also enlarged and revised E. Vogel's *Bibliothek der gedruckten weltlichen Vocal-musik Italiens* (1962). A prolific writer, Einstein compiled semi-popular books, such as his *Geschichte der Musik* (1930<sup>4</sup>; *Short History of Music*, 1954<sup>4</sup>), *Music in the Romantic Era* (1947), and biographies of Schuetz (1928), Gluck (1936), Mozart (1946), and Schubert (1951). He produced scholarly studies on Renaissance music and edited compositions by Renaissance, Baroque, and classical composers. Also outstanding are his three volumes on *The Italian Madrigal* (1949), and the first four volumes of Mozart's *Collected Works* prepared by him.

**BIBLIOGRAPHY:** Haggin, in: *Musical Review*, 24 (1963), 269–78; Hertzmann, in: *Musical Quarterly*, 27 (1941), 263–79, incl. bibl.; *Grove's Dict.*; Sendrey, Music, indexes; Riemann-Gurlitt; MGG; Baker, Biog Dict.

[Judith Cohen]

**EINSTEIN, ARIK** (1939– ), Israeli pop-rock singer, actor. Einstein's initial performances were as a member of an army entertainment troupe, which he joined after his actor father encouraged him to go for an audition. Following his release from the army, in 1959, he acted and sang in a satirical theatrical show called *Sambation*. Einstein's debut four-song EP record was released the following year, and over the next four years he sang with several pop-folk bands, such as Green Onion and *Ha-Ze'irim* ("The Young Ones").

During this time he also furthered his acting career with parts in such acclaimed theater productions as *Little Tel Aviv* and *Irma La Douce*. Einstein's film career began with a role alongside his father in *Nini*. In 1964 he appeared in Ephraim Kishon's *Sallah Shabati*, which took a bemused look at the difficulties faced by Jewish immigrants from Arab countries during the heyday of the Zionist movement in Israel. By 1972 he was an established star and played a lead role in the highly risqué Uri Zohar film *Mezizim* ("Peeping Toms").

Einstein's musical career took a significant leap in the mid-1960s when he joined singers Yehoram Gaon (who was later replaced by Israel Gurion) and Benny Amdursky to form the Yarkon Bridge Trio. Over the next two years the band was the most successful act on the Israeli pop scene. In 1965 and 1966 Einstein placed first in the annual Israeli Song Festival with *Ayelet ha-Hen* and *Leil Stav*, respectively, and became a household name.

In 1969 Einstein revealed a rawer side to his artistic temperament when he recorded the first Israeli rock record in Hebrew, *Puzi*. It was shortly after this that Einstein joined forces with singer-guitarist Shalom Hanokh and, together with other young artists such as Uri Zohar, American-born singer Josie Katz, and singer-songwriter Shmulik Krauss, produced a film called *Shablul* ("Snail"), which documented the making of the milestone rock record of the same name, with some loosely structured comedy sketches bridging the intervals in the music. Einstein also appeared in the comic skit series *Lul*, which was screened on Israeli television in July and September 1970, and was released as a full-length movie in 1988. In 1971 Einstein recorded an album of children's songs together with American-born guitarist Rob Huxley.

In 1973 Einstein changed musical direction, breaking away from the largely high energy rock material of the previous four years to produce a record of folk-oriented, more traditional songs called *Erez Yisrael ha-Tovah ve-ha-Yeshanah* ("Good Old Israel"). Over the next decade Einstein put out more nostalgia-tinted records, collaborating with songwriter-musicians such as Shem-Tov Levi, Yitzhak Klepter, Yoni Rechter, and Miki Gabrielov.

In 1982 he was involved in a serious road accident and his next album, *Shavir* ("Fragile"), released in 1983, revealed a

more vulnerable side to Einstein's character. Around this time he also stopped performing live. In the later 1980s and early 1990s Einstein produced several albums of children's songs, along with Levi and Rechter, and two video tapes called *Kemo Gedolim* ("Like Grownups") and *Kemo Gedolim 2*. In 1992, Einstein reunited with Zvi Shissel, who had produced *Shablul*, on a movie called *Kevalim* ("Cables"), a parody on cable television which had just become popular in Israel at the time. *Kevalim* also included some memorable musical collaborations, including a duet with singer Yehudit Ravitz, and comedy routines with well-known comic Moni Moshonov.

In 2001, Einstein renewed his professional relationship with Hanokh, recording a new version of *Aggadot Desheh*, written by the late Meir Ariel who grew up on the same kibbutz as Hanokh. Einstein and Hanokh also recorded a new album. In 2005 Einstein received a Lifetime Achievement Award from the Israeli artists' association, ACUM, in recognition of his songwriting and comedy sketch-writing contributions. He had maintained his position as the "prince" of Israeli pop music for four decades.

[Barry Davis (2<sup>nd</sup> ed.)]

**EINSTEIN, CARL** (1885–1940), German writer, art theoretician. Einstein drew philosophical inspiration from Nietzsche's apotheosis of aesthetics as well as from the reviews of causality of Schopenhauer and Mach. Intellectually challenged by the lectures of Georg Simmel during his studies at Berlin's Friedrich-Wilhelm-University, he composed his first novel, *Bebuquin oder die Dilettanten des Wunders* (1906–12), as a kaleidoscope of a world in which everything "exists only in its destruction." With its reflections on God and its somewhat preachy tone, Einstein's novel may also be regarded as a first step on the syncretistic-religious path he would follow in the years to come. Emphasizing a world of myth it also relates to the art of the primitive. The result was *Negerplastik* (1915), which was internationally acclaimed for its incorporation of a formerly ethnological field of study into the "world history of art" and constituted his theoretical contribution to Cubism.

His radical socialism brought Einstein into close contact with the "Malik" circle that grew up around George Grosz, Walter Mehring, and John Heartfield. The product of these encounters was Berlin Dadaism, which Einstein abandoned only a year later. In 1922 he was prosecuted for the "blasphemous" representation of Jesus in his drama *Die schlimme Botschaft*. His most ambitious work, *Die Kunst des 20. Jahrhunderts* (1925), a vast compendium, proved him not only a profound connoisseur of contemporary art but also a serious theoretician and made his name widely known throughout Europe.

In 1927, Einstein settled in Paris, where he coedited the journal *Documents – Doctrines, Archéologie, Beaux Arts, Ethnographie* and came into contact with French surrealism. He called for a takeover of modernity by the "romantic generation," a term he used to characterize the messianic categories of the artistic revolutions of the 1920s. The failure of modernity

in its capitulation to Fascism is the subject of *Die Fabrikation der Fiktionen*, written between 1930 and 1934.

During the Spanish Civil War, Einstein joined an anarchist militia in Aragon, fleeing after Franco's victory in 1939. Back in Paris, he was arrested by order of the French government (applying to all Germans living in France) and deported to a camp in Gurs. Released in June 1940, he attempted to escape the impending German invasion across the Pyrenees. He committed suicide near the Spanish border.

[Philipp Theisohn (2<sup>nd</sup> ed.)]

**EINSTEIN, LEWIS** (1877–1967), U.S. diplomat and author. Einstein was born to a wealthy New York City merchant family. He entered the U.S. diplomatic service in 1903. His postings included Paris, London, the delegation to the Algeciras Conference, Peking (Beijing), Constantinople during World War I, and Prague throughout the 1920s. Einstein's score of books and nearly 100 published articles, reviews, notes, and comments embraced the diverse worlds of Renaissance art, modern biography, Tudor manners, Civil War diplomacy and, always, contemporary geopolitics, preserving the often fragile link between diplomacy and letters. One of the most prophetic of his articles, "The United States and the Anglo-German Rivalry" (*National Review*, 60 (1913)), also explained Einstein's realistic approach to international affairs. His memoir *A Diplomat Looks Back* (1968) provides insight into Einstein's deftness as a diplomat as well as an appreciation of his refined and skeptical world view. Another prominent work is *Holmes-Einstein Letters: Correspondence of Mr. Justice Holmes and Lewis Einstein, 1903–1935* (1964).

[James F. Watts, Jr.]

**EIN VERED** (Heb. רֶעִין; "Rose Spring"), moshav in central Israel, in the southern Sharon. Affiliated with Tenu'at ha-Moshavim, it was founded on May 1, 1930 by settlers from Eastern Europe. Ein Vered was enlarged to absorb new immigrants after 1948. Farming was intensive, with citrus groves, field crops, beehives, and flowers as the principal branches. In 1969, there were 510 inhabitants; in the mid-1990s, 650; and in 2002, 965, as the moshav expanded.

[Efraim Orni]

**EIN YAHAV** (Heb. יָהָב; "Rock Spring"), moshav in southern Israel, in the central Arabah Valley, affiliated with Tenu'at ha-Moshavim. It was founded in 1950 as an observation post for experiments in desert farming and later became a \*Nahal outpost. In 1967 Ein Yahav was transferred to a permanent site nearer the Jordanian border to become a moshav. In spite of its being exposed to attacks by Arab infiltrators because of its isolation, the moshav developed benefiting from a fairly abundant spring and hot climate. Its special farm branches included date palm groves,

out-of-season vegetables, and flowers for export. Another specialty was turkey breeding. In 2002 the population of Ein Yahav was 457. Ein Yahav is the Hebraized version of the former Arab name "Ayn al-Wayba."

[Efraim Orni]

**EIN ZEITIM** (Heb. עֵין זַיְתִים), place in northern Israel, north of Safed. Jews resided in Ein Zeitim (in Arabic 'Ayn Zaytūn) from the 11<sup>th</sup> century C.E. In the 16<sup>th</sup> and early 17<sup>th</sup> centuries, 40 families of Moriscos (Arabic-speaking Jews) lived there and it was the site of a yeshivah, headed by R. Moses b. Makhir. After the 1837 earthquake in Safed, many Safed Jews fled to Ein Zeitim. A modern settlement was founded in 1891 by a Zionist group from Minsk, Russia, which planted olive groves and fruit orchards there. It was abandoned, however, before World War I. After 1918 Ein Zeitim was resettled but was again abandoned and destroyed in the 1929 Arab riots. A few families subsequently returned but were forced to leave again in the 1936 riots. A further attempt was made on January 17, 1946, when members of Ha-Kibbutz ha-Me'uhad settled there, but it dispersed after the establishment of the State of Israel. A training farm was set up in its stead, but lacked adequate farming land and dissolved. In the 1950s a forest was planted in the Ein Zeitim area, forming part of the large \*Biriyyah forest. The Ein Zeitim section has a large variety of trees, such as pine, cypress, eucalyptus, acacia, etc., as well as recreational facilities.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EINZIG, PAUL** (1897–1973), British economist. Born in Brasov, Romania, Einzig was educated in Budapest and after World War I settled in London where he was the first economic reporter on East European conditions. He became foreign editor of the *Financial News* and later political correspondent for that paper and the *Financial Times*. His main field was monetary policy and foreign exchange operations. Einzig's criticism of official policy, which drew considerable public attention, brought him into frequent conflict with cabinet ministers and central bankers. He advocated closer parliamentary scrutiny of public spending. Einzig wrote more than 50 books, including *Monetary Reform in Theory and Practice* (1936), *Primitive Money in its Ethnological, Historical and Economic Aspects* (1949), *How Money is Managed* (1954), *History of Foreign Exchange* (1962), *Foreign Exchange Crises* (1967), *The Case Against Floating Exchange Rates* (1970), and *Destiny of the Dollar* (1972). In 1960 he published an autobiography, *In the Centre of Things*.

**ADD. BIBLIOGRAPHY:** ODNB online.

[Joachim O. Ronall]

**EIN ZURIM** (Heb. עֵין צֻרִים; "Rock Spring"), kibbutz in S. Israel, 9.3 mi. (15 km.) N.E. of Ashkelon, affiliated with Ha-Kibbutz ha-Dati, originally founded in 1946 in the Hebron Hills by members of the religious youth movement Bnei Akiva. With other \*Ezyon Bloc settlements, it fought and fell

during the War of Independence (1948), and its survivors were taken to Jordan as prisoners of war.

On July 6, 1949, upon their release, they established their kibbutz at its new site as part of the Shafir region of religious settlements. Besides intensive farming, which included field crops, citrus groves, fruit orchards, dairy cattle, and turkeys, the kibbutz operated the Tadmor air-conditioning plant, a catering service and holiday guest house, and the Bottle Tree company, which specialized in the development and production of gifts incorporating citrus fruit and blossoms in specially designed bottles. Two religious institutions operate in the kibbutz: a yeshivah and the Jacob Herzog Center for Jewish Studies. In 1969 the population of Ein Zūrim was 330, increasing to 527 in 2002. A new settlement (Rosh Zūrim) was established on the original site in August 1969 by \*Naḥal Youth affiliated with Bnei Akiva.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EISEN, ARNOLD** (1951– ), U.S. professor of religious studies and author of works on Judaism in modern America. Raised in Philadelphia, Eisen received his undergraduate degree from the University of Pennsylvania; he earned a degree in the sociology of religion from Oxford University and a doctorate from the Hebrew University. He taught at Tel Aviv University and Columbia University, then was recruited by Stanford University in 1986 to help plan a program of Jewish studies. He was subsequently the Daniel E. Koshland Professor in Jewish Culture and Religion at Stanford.

Eisen is well known as an expert in modern Judaism. A trained sociologist, he considers the relationship between social and cultural contexts and religious ideas, and in particular examines the contemporary American Jewish experience. His work *The Chosen People in America: A Study in Jewish Religious Ideology* (1983) suggested that the conception of the Jews as God's chosen people faced a unique challenge in America, where Jews became integrated into the larger society to a greater extent than in Europe. Called a complex work, it nevertheless received critical praise.

*Galut: Modern Jewish Reflection on Homelessness and Homecoming* (1986), one of Eisen's best-known works, received the National Jewish Book Award in 1987. The work examines the concepts of exile and return, and presents the Jewish problem of living apart from and within a society of others. Eisen discusses three major aspects of Jewish life: religion (Judaism), ethnicity (Jewishness), and nationality ("Israeliness"). *Galut* has been considered an original contribution to the field of religious studies.

Eisen again won the National Jewish Book Award in 1998, for *Rethinking Modern Judaism: Ritual, Commandment, Community*. Here Eisen examines the transformation and evolution of modern Jewish religious belief and practice, considering the effects of secularization and modernity on Judaism, even among the Orthodox. Eisen's other works include *Taking Hold of Torah: Jewish Commitment and Community in Amer-*

*ica* (1997) and *The Jew Within: Self, Family, and Community in America* (with coauthor Steven M. Cohen, 2000). In *The Jew Within* Eisen and Cohen explore the new emphasis on personal Jewish identity characteristic of the Jew in the late 20<sup>th</sup> and early 21<sup>st</sup> century, an identity so different than the Holocaust-centered, Israel-centered portrayal of Jewish identity only 15 years earlier.

In 1999 Eisen received the Koret Prize for outstanding contributions to the Jewish community. He is a fellow of the American Academy for Jewish Research and also serves on its executive committee. His recent work includes the study of the increased involvement of women in modern American Judaism. In 2006 he was named chancellor of the Jewish Theological Seminary.

[Dorothy Bauhoff (2<sup>nd</sup> ed.)]

**EISENBAUM, ANTONI** (1791–1852), author and educator, one of the first advocates of \*assimilation in Poland. In 1823 he submitted a memorandum to Czar \*Alexander I, conceived from the standpoint of an assimilationist, urging measures to improve the condition of the Jews. At the end of that year he began the publication of \**Der Beobachter an der Weichsel*, subsidized by the government. Eisenbaum wrote articles for other Warsaw papers, urging emancipation for the Jews. In 1826 he was appointed supervisor, and in 1835 director, of the rabbinical seminary in Warsaw. The seminary aroused vehement opposition among traditionally minded Jews. Eisenbaum also acted as censor of Hebrew books in Poland (see \*Censorship).

**BIBLIOGRAPHY:** Linberg, in: *Perezhitoye*, 4 (1913), 119–48; J. Shatzky, *Geshikhte fun Yidn in Varshe*, 3 vols. (1947–53), index; S. Lastik, *Z dziejów Os'wiecenia Żydowskiego* (1961), 176–8; R. Mahler, *Ha-Ḥasidut ve-ha-Haskalah* (1961), 263; EG, *Varsha*, 1 (1961), 240–6.

[Nathan Michael Gelber]

**EISENBERG, AHARON ELIYAHU** (1863–1931), pioneer of Jewish settlement in Erez Israel. Eisenberg, born in Pinsk, Russia, settled in Erez Israel in 1886. He worked as a laborer in \*Rishon le-Zion, later settling in Wadi Hanin (now Nes Ziyonah), where he became one of the outstanding vineyard cultivators in the country. Eisenberg was one of those who acquired the land of \*Reḥovot from its previous owners (1890). He was entrusted with the task of cultivating the lands of members of the Menuḥah ve-Naḥalah Association (the group of Warsaw Zionists who established Reḥovot) living abroad. He joined the \*Benei Moshe association in 1893. In 1904 he established Agudat Neta'im, an association for planting and cultivating vineyards and orange groves on behalf of foreign investors. Eisenberg was instrumental in establishing small holdings for Jewish workers. He also helped settle Yemenite immigrants in Reḥovot. In 1920 he was chosen a delegate to the first Asefat ha-Nivḥarim and to the Palestine Advisory Council established by Sir Herbert \*Samuel in the same year. Eisenberg was a leading member of the Va'ad Leummi and participated in various delegations to Paris and London.

**BIBLIOGRAPHY:** A. Yaari, *Goodly Heritage* (1958), 191–8, 217; E. Ha-Dani (ed.), *A.E. Eisenberg* (Heb., 1947); M. Smilansky, *Mishpaḥat ha-Adamah*, 1 (1953), 116–27.

[Yehuda Slutsky]

**EISENBERG, SHOUL** (1921–1997), industrialist and philanthropist. Born in Munich, Eisenberg fled from Germany in 1938 and eventually settled in Japan. At the end of the war he laid the foundations of his worldwide industrial empire. In Japan, his companies became principal suppliers of raw materials for the country's steel industries and partners in a number of shipping enterprises. In South Korea, Eisenberg Companies developed many of its major industries. Eisenberg was the leader of the Tokyo Jewish community and he built its synagogue. He also made many gifts for projects in Israel where he and his family settled in the 1960s. An active participant in the economic conference called by the Israeli government in 1968, he established two large exporting companies. In 1980 he gained control of the Israel Corporation, one of Israel's large investment companies, which after his death was sold to the Ofer brothers in 1999. In 1978 he began to operate in China, with projects worth around \$1 billion.

[Morton Mayer Berman / Shaked Gilboa (2<sup>nd</sup> ed.)]

**EISENDRATH, MAURICE NATHAN** (1902–1973), U.S. rabbi and leader of Reform Judaism. Eisendrath was born in Chicago, Illinois, and received rabbinic ordination from Hebrew Union College, Cincinnati. After serving in pulpits at the Virginia Street Temple in Charleston, West Virginia (1926–29) and at Holy Blossom Toronto (1929–43), he established a towering reputation in Toronto, where he was involved in a weekly radio program at a time when radio was the dominant media of its age. *Forum on the Air* gave him prominence in Canada well beyond his own community. He used his forum to advance the ideas of prophetic Judaism, to push for anti-poverty assistance, to advocate civil rights and social justice, and to condemn the growing menace of Nazism.

In 1943, Eisendrath came to the Union of American Hebrew Congregations first as the interim director while Nelson Gleuck was away and later as the director and finally as its president, a position he held for almost three decades. During his administration the Reform movement grew in membership and changed its direction perceptibly. So too did Eisendrath. A committed pacifist at the beginning of his career, Eisendrath was forced to change his mind by Nazism, which could only be combated by force. He took Reform Judaism from an anti-Zionist movement, with some Zionist rabbis, into a more pro-Israel position, first declaring neutrality but not opposition to Israeli statehood in 1946 and later strongly supporting the new State.

He presided over the transfer of the movement's headquarters from Cincinnati to New York, and thus its integration into Jewish organizational life in the United States. He pushed for a shift in the balance of power from the South and Midwest to the East, and its ideological change from classi-

cal Reform to a new rapprochement with tradition. He was elected president of the World Union for Progressive Judaism in July 1972. Eisendrath was particularly active in interfaith activities and in social action, speaking out frequently during the 1960s for civil rights and later against the Vietnam War. With the big presence of Reform Judaism in the South, both moves took courage and spurred opposition. In protest, New York's Temple Emanu-El seceded from the Union for a time. Despite the opposition of two major congregations, New York's Emanu-El and Washington Hebrew Congregation, he established the Kivie Kaplan Religious Action Center in Washington to represent Reform Judaism in Congress and the White House, fortifying the connection between Liberal Judaism and American Liberalism. He also established the House of Living Judaism, headquarters of the Union. As a young rabbi, he was one of the founders of the Canadian Conference of Christians and Jews. Eisendrath was the author of *Spinoza* (1932), *Never Failing Stream* (1939), and *Can Faith Survive? The Thoughts and Afterthoughts of an American Rabbi* (1964), both the latter collections of essays on contemporary religious issues. He died at the biennial convention of the UAHC, on the eve of retirement.

[Jack Reimer / Michael Berenbaum (2<sup>nd</sup> ed.)]

**\*EISENHOWER, DWIGHT DAVID** (1890–1969), U.S. soldier, supreme commander of the Allies' European Theater of Operations during World War II, and 34<sup>th</sup> president of the United States. During World War II, he commanded the U.S. troops in the United Kingdom, and then the Allied forces landing in North Africa. There he pressured the French authorities to annul the anti-Jewish laws of the Vichy regime. As supreme commander of the Allied Expeditionary Forces, Eisenhower led the Normandy invasion in 1944. After the German surrender one of his first acts was to void all Nazi racial and antisemitic legislation.

Eisenhower's armies liberated tens of thousands of Jews in concentration camps. Upon the discovery of the remnant who refused to return to their native lands, and after pressure from President Harry Truman, he created the unprecedented position of adviser to the commanding general on Jewish affairs to speed the handling of the Jewish survivors. Chaplain Judah Naidich first filled the post and was succeeded by a series of civilians beginning with Judge Simon H. \*Rifkind. Separate \*displaced persons camps were created for Jews to improve their physical, cultural, and spiritual conditions. Eisenhower also ordered the admission into these camps of tens of thousands of Jews fleeing from Poland and Eastern Europe after the war (see \*Berihah). In October 1945 Eisenhower received David Ben-Gurion and acceded to his request for planes to bring Hebrew teachers and agricultural instructors

from Palestine to the camps, thus facilitating the later immigration of the displaced persons to Palestine.

During Eisenhower's presidential terms of office (1953–61), hundreds of millions of dollars in grants-in-aid were extended to Israel. An atomic energy agreement with Israel provided for training Israeli scientists and making heavy water available. Military equipment sent to Israel included training aircraft, signal supplies, and spare parts and ammunition. Relations between Eisenhower's administration and Israel reached their lowest ebb during and after the \*Sinai Campaign of October 1956, when the U.S. took the lead in the UN in demanding the withdrawal of Israeli forces, even threatening sanctions. Upon Israel's withdrawal, Eisenhower affirmed that Israel would have no cause to regret its decision, and pledged support for Israel's national existence and internal development. American policy, he stated, viewed the Gulf of Akaba and the Suez Canal as international waterways.

[Judah Nadich]

**EISENMAN, CHARLES** (1864?–1923), U.S. philanthropist. Eisenman was born in New York City. Moving to Cleveland, Ohio, he co-founded the K and E (later Kaynee) Company, manufacturing boys' clothing, in 1888. Eisenman retired as company president in 1906 and devoted himself entirely to philanthropic work. He was the founder and first president of the Cleveland Federation of Jewish Charities from 1904 until his death; he was active in the Cleveland Community Fund Council, the American Jewish Committee, the American Jewish Relief Committee, and other organizations. During World War I he was chairman of the Council of National Defense Committee on Purchases and Supplies, for which he received the Distinguished Service Medal. He advocated socially concerned business in a series of essays, *Everybody's Business* (1916).

[Edward L. Greenstein]

**EISENMAN, PETER** (1932– ), U.S. architect. Eisenman was born in Newark, New Jersey, and studied at Cornell (B.A. 1955) and Columbia universities (M.A.), receiving a second M.A. and Ph.D. from Cambridge University in England. He taught at Cambridge, Princeton, Yale, Harvard, Ohio State, and the Cooper Union in New York, where he was founder and director of the New York Institute for Architecture and Urban Studies (1967).

Unique among modern architects, until 1980 most of Eisenman's work was in theoretical writing and teaching. During this period in his career, he was the leader of a group known as the "New York Five," which included John Hejduk, Michael Graves, Charles Gwathmey, and Richard \*Meier. Eisenman Architects was established in 1980.

Eisenman's thought is often associated with that of post-modern philosophers Noam \*Chomsky and Jacques \*Derrida as well as Friedrich Nietzsche. Eisenman co-authored *Choral*

*Works* with Derrida. His architecture is sometimes viewed as a text that emphasizes concepts such as fragmentation, and in the case of the *Berlin Memorial to the Murdered Jews of Europe* (Denkmal), opened in 2005, irreparable loss. His work thus avoids the use of traditional compositional elements familiar to architects as well as pure aesthetics. Eisenman has noted: "You cannot have an architecture that doesn't relate to cultural issues, whether they be philosophic, artistic, musical, filmic, psychological. I think that there is no question that architecture moves culture in the same way that other disciplines do, but it is also affected by and affects other disciplines."

Eisenman experimented with ten house designs between 1960 and 1980, each one being numbered in sequence. Eisenman, with associates Richard Trott and Laurie Olin, designed the Wexner Center for the Arts (1983–89) at Ohio State University in Columbus, Ohio. The building serves as an early example of Eisenman's concept of deconstruction in architecture. The structure contains a white spine that links pre-existing buildings with new construction and was designed on a series of grids that attempts to link symbolically the city of Columbus with the university campus. Among his other designs, which mirror the principles of deconstruction but with added computer engineering in the 1990s, can be found the Emory University Center for the Arts (1991); the Arnoff Center for Design and Art at the University of Cincinnati (1996), which mirrors the Wexner Center with a spine bringing together pre-existing structures; the Staten Island Institute of Arts and Sciences, with its use of vast curved "fluid fractals"; Cardinal Stadium in Phoenix, Arizona, which features a retractable roof, retractable side, and the field that has the capacity to move in and out of the structure in order to grow natural grass. The City of Culture of Galicia is a monumental project in the Spanish city of Santiago de Compostela. The 810,000 square feet project also includes a history museum, a library, a landscaped forest, and a theater for ballet, opera, and symphonies. From an aerial perspective, the City of Culture appears as a series of structures highly integrated into the Galician landscape.

The architect's most controversial project was the *Berlin Memorial to the Murdered Jews of Europe*, finished in 2005. The project, from its inception in 1988, featured two competitions and a long and often bitter debate in German society about the need for such a monument.

While Christine Jakob-Marks' design was selected from the 1,200 submissions of the first competition of May 1994, it was vetoed by German Chancellor Helmut Kohl. In 1997, 25 artists were asked to send in revised proposals. Among the four finalists was a joint project by Peter Eisenman and sculptor Richard Serra. The original conception of the team was to create a "field of memory," and it envisioned 4,000 concrete pylons of varying sizes, laid out like a field of wheat and progressively sinking below ground level. Serra later removed himself from the project and after an intense debate the parliament finally decided on June 15, 1999 on the revised Eisenman plan. The design reduced the number of pylons to 2,700.

**EISENMANN, LOUIS** (1869–1937), French historian. Eisenmann, born in Haguenau, Alsace, moved with his family to France after the German annexation in 1871. In 1905 he became a professor of history at the University of Dijon, and in 1931 professor of Central European history at the Sorbonne. Eisenmann's special field of interest, in which he made important contributions, was Slavonic cultural history. Besides teaching, writing, and editing in this field, he served as general secretary of the Institute for Slavic Studies at the University of Paris. He was also an active director of the Center for the Study of Foreign Policy. Eisenmann's major writings deal with the Austro-Hungarian Empire. He wrote *Le compromis austro-hongrois de 1867* (1904), *La Hongrie contemporaine* (1921), *La Tchécoslovaquie* (1921), and *Un grand européen, Edouard Benes* (1934). He contributed sections to Paul Milyukov's classic work on Russian history, *Histoire de la Russie* (1932–33). Eisenmann played a prominent role as editor of two French historical journals, *Le monde slave* and *La revue historique*.

[William Korey]

**\*EISENMENGER, JOHANN ANDREAS** (1654–1704), author of a work which had a formative influence on modern antisemitic polemics. Eisenmenger, born in Mannheim, studied Hebrew while at Heidelberg University. During a visit to Amsterdam in 1680–81 he was shocked when three Christians adopted Judaism, and also by the criticism of Christianity expressed by David \*Lida, rabbi of the Ashkenazi community in Amsterdam. Eisenmenger therefore set out to examine Jewish writings to find material that would deter Christians from turning to Judaism. For 19 years he studied talmudic and midrashic literature with Jews, pretending that he wished to become a proselyte. In 1686 he was appointed lecturer at Heidelberg University, and, in conjunction with Johann \*Leusden, published in 1694, at Frankfurt, an unvocalized edition of the Bible to which David \*Gruenhut wrote an introduction describing Eisenmenger as a man of great learning. However, in 1699 the Frankfurt Jews learned that Eisenmenger was about to publish a work denouncing Judaism, titled *Entdecktes Judenthum* (“Judaism Unmasked”). As it was in German and not in Latin, they feared that it would inflame popular feelings against the Jews (especially as anti-Jewish riots occurred in Franconia, and in particular in \*Bamberg in 1699). The Frankfurt Jews turned to Samson \*Wertheimer in Vienna, and he and Samuel \*Oppenheimer persuaded the emperor to forbid the publication of the book, which had been printed in 2,500 copies. A Protestant professor from Giessen, a Jesuit from Mainz, and six rabbis from Frankfurt were asked to study Eisenmenger's book and comment on it. In the meantime, the king of Prussia asked the emperor to allow the publication of the book and the elector of the Palatinate also intervened

in Eisenmenger's favor. However the pleas of the Jews for its suppression were supported by the archbishop of Mainz, since Eisenmenger had also offended Catholic susceptibilities, as well as by the elector of Hanover. Eisenmenger, who had invested all his money in the printing, died suddenly in 1704. His heirs again induced the king of Prussia to intervene with the emperor to allow the book to be issued, but without success. The king of Prussia, therefore, permitted them to publish a second edition of 3,000 copies in Berlin in 1711. On the title page the place of publication is given as Koenigsberg, a city outside the emperor's jurisdiction. The city council of Frankfurt, the elector of the Palatinate, and the king of Prussia, meanwhile, made continual efforts to obtain permission for publication of the first edition; this was granted only in 1741. Eisenmenger's heirs claimed damages from the Jews of Frankfurt; their claim was finally quashed in 1773. In this book of two volumes, with over 2,000 pages, Eisenmenger had assembled passages to suit his argument from 182 books written in Hebrew, 13 in Yiddish, and eight written by apostates who had converted to Christianity. They were mostly extracts from talmudic literature, beginning with the Mishnah and concluding with commentaries, codes, and notes of the *rishonim* and *aḥaronim*. He cited them in the original language, providing a translation alongside. The translations are erroneous in places and often intentionally distorted. Eisenmenger's charges against the Jews include the \*blood libel and poisoning of wells. Possibly Eisenmenger did believe in what he wrote, although his negotiations with the Jews, and the fact that he was prepared not to publish his book against a certain price, cast some doubt on this assumption. An English edition was published in 1732–33. Among a number of other German and Austrian antisemites, A. \*Rohling quoted Eisenmenger, often inaccurately, in his venomous *Talmudjude* (1871), as Franz \*Delitzsh decisively proved. *Entdecktes Judenthum* was republished in 1893.

[Zvi Avneri]

**EISENSTADT** (Ger. also: **Weniger Maertersdorf**; Hung. **Kismarton**; Heb. עיר ברזל; א"ש), capital of \*Burgenland, E. Austria. Its community was the leading one of the “Seven Communities” of Burgenland, and from the end of the 17<sup>th</sup> century to the middle of the 19<sup>th</sup> century one of the most important communities in Europe. Jews are mentioned in the city records in 1373, and the bishop of Eisenstadt was permitted to settle Jews there in 1388. Others came to the city after the expulsions from Austria (1421), Styria (1496), and Sopron (1526). By 1569 the community numbered 81 persons, living in eight small houses. A Jewish quarter and community institutions are mentioned for the years 1547 to 1571. Each Jew had to

work eight days villenage services and pay ten florins in taxes yearly. The Jews were expelled from Eisenstadt in 1572 but returned soon afterward. In 1626 the community came under the protection of the aristocratic Hungarian Esterhazy family. The Jews had to leave Eisenstadt at the time of the expulsion from Austria in 1670 but were shortly afterward permitted to return. In 1675 Jews who had immigrated there from Mikulov (Nikolsburg), Moravia, were granted a letter of protection. The renewed version of 1690 served as model for the charters granted to all "Seven Communities" in the region. In return for yearly taxes and gifts on all possible occasions, the community was granted broad autonomy. Prince Esterhazy built near his farming estate a "Jewish street" of 20 houses, which formed a political community (see \*Politische Gemeinden) as Eisenstadt-Unterberg (Hung. Alsókörmartonhegy). Its leaders included the *Judenrichter*, before whom, from 1732, a mace was carried as symbol of his function. In 1900, only 38 of the 451 inhabitants on its territory were not Jewish. In 1704 and 1707, during the Kurucz revolts, Eisenstadt was destroyed, its inhabitants taking refuge in Wiener Neustadt. The community was restored with the help of Samson \*Wertheimer, who also served as its rabbi. He built a house there containing a *bet midrash* (maintained by Wertheimer's endowment until the 1840s). Meir \*Eisenstadt (Maharam Esh) was rabbi from 1717 until his death in 1744, and through him the local yeshivah became celebrated. This was the most prosperous period for the community because some of the wealthy Jewish families living in Vienna without residence rights paid heavily for a fictitious right of domicile in Eisenstadt. Some 35 Jewish house owners are on record in 1725. In 1735 the community numbered 113 families (24 living in Vienna), totaling 600 persons. The Jewish quarter was destroyed by a conflagration in 1795. A new synagogue was built in 1832. In 1836 the community numbered 191 families (908 persons) of whom 61 were part house owners and 12 owned their own houses. Azriel \*Hildesheimer was rabbi of Eisenstadt between 1851 and 1869, and his yeshivah, at which secular studies were also taught, attracted pupils from all over Europe. After the Revolution of 1848 when Jews were able to move freely, many left Eisenstadt.

In its days of fame as a center of Jewish learning the Eisenstadt community used to be referred to as "Little Jerusalem." It had many customs peculiar to itself. The entrances to the Jewish street were closed on Saturdays and holidays by chains. Above the entrance to the synagogue a silver ball was hung containing cord for *zizit*, free of charge, supplied by a donation (*keren zizit*). Those who were called to the Torah as an obligation, such as a bridegroom on the Sabbath before his wedding, paid a special due. The *shammash* served the rabbi a cup of wine after the sermon. On the eve of Simḥat Torah it was the women's task to adorn the Torah scrolls before the \**hakkafot*. At the beginning of the cherry season the first child to show the rabbi a worm in a cherry was rewarded, and the *shammash* would then proclaim in the street that henceforward it was forbidden to eat cherries without first examining them.

At the end of the 19<sup>th</sup> century, the \*Wolf family, who concentrated the wine export in their hands, were prominent in local and communal affairs. Sandor Wolf founded a private museum in 1902 and published books on Jewish and general local history. After World War I, Eisenstadt remained the only Jewish community in Europe to have the status of a political community (until 1938). The Jews there suffered economically because of the disruption of their former commercial ties.

The Jews were expelled from Eisenstadt immediately after the *Anschluss* in 1938; most of them moved to Vienna. Some were among the refugees thrust onto the land strip in the Danube (see \*Burgenland). On Nov. 10, 1938, the synagogue equipment and part of the houses in the Jewish street were destroyed by a mob. The synagogue building was demolished. (The trade-union headquarters was built on the site in 1952; it contains a plaque commemorating the synagogue.) Many of the tombstones in the Jewish cemetery were used to build anti-tank traps in 1945.

One hundred and nine Jews from Eisenstadt perished in the Holocaust. Five survivors returned after the war. The community was not reorganized. The Jewish collection of the Wolf museum was incorporated into the Burgenlaendisches Landesmuseum; in 1972 a Jewish museum was opened, the first of its kind in Austria. Some 23,500 documentary items are preserved in the *Juedisches Zentralarchiv der ehemaligen Judengemeinden des Burgenlandes*. Rabbi Akiva \*Eger the Younger was a native of Eisenstadt; a plaque on the house where he was born was destroyed by the Nazis. Moritz \*Benedikt, the professor of neuropathology in Vienna and liberal politician, was also born in Eisenstadt.

**EISENSTADT, ABRAHAM SELDIN** (1920– ), U.S. historian. Eisenstadt was born in New York City. He taught at Brooklyn College, where he was appointed professor of history. In 1998, he was one of 412 leading historians who signed an open letter deploring the proposal to impeach President Bill Clinton, on the grounds that "if successful, it will have the most serious implications for our constitutional order." Eisenstadt wrote *Charles McLean Andrews: A Study in American Historical Writing* (1956), and he edited *American History: Recent Interpretations* (2 vols., 1962) and *The Craft of American History* (2 vols., 1966), *Before Watergate: Problems of Corrup-*

tion in *American Society* (1979), and *Reconsidering Tocqueville's Democracy in America* (1988) as well as numerous volumes in Davidson, Harlan's American History Series.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**EISENSTADT, ABRAHAM ZEVI HIRSCH BEN JACOB** (1813–1868), halakhic authority. Eisenstadt, who was born in Bialystok, was appointed rabbi of Berestovitsa, district of Grodno, in 1836, and of Utina (Uttian), district of Kovno, in 1856. Eisenstadt took upon himself the task of collecting and digesting the enormous amount of halakhic material scattered throughout the responsa literature, and relating it to the relevant laws in Caro's Shulḥan Arukh, publishing his digest in *Pitḥei Teshuvah*. At the end of his introduction to *Even ha-Ezer* he enumerates 180 volumes of responsa and other works that he used. In the introduction he explains that the purpose of his book is to supply a missing link in the chain of *posek* literature, namely, the decisions to be found in responsa. In addition to establishing the *halakhah* he also gives the reasons and the essence of the arguments in the different responsa. This enabled rabbis to give decisions on matters and problems which had arisen as a result of changed conditions since Caro's code had appeared. Eisenstadt regarded the literature dealing with *Even ha-Ezer* as of supreme importance, as he believed that it was impossible to come to a practical decision on any of the laws discussed in it by relying upon the original text. As a result, his work on this section of the Shulḥan Arukh is very detailed. Since the *Sha'arei Teshuvah* (Dubnow, 1820), begun by Hayyim Mordecai Margolioth of Dubnow and completed by his brother Ephraim Zalman \*Margolioth, already met this need with regard to the *Orah Ḥayyim*, Eisenstadt confined himself to the other three sections of the Shulḥan Arukh. His own novellae on the Shulḥan Arukh are highly regarded by halakhists.

*Pitḥei Teshuvah* on *Yoreh De'ah* and *Even ha-Ezer* was published during Eisenstadt's lifetime (1836 and 1861) and on *Hoshen Mishpat* (1875) after his death. He also published *Seder Gittin va-Ḥalizah* by Michael b. Joseph of Cracow accompanied by his own commentary and glosses, also entitled *Pitḥei Teshuvah* (1863), in which he gave the sources of the book in the Shulḥan Arukh and among the *rishonim* and *aḥaronim*. Many of his responsa appear in the works of contemporary rabbis. Eisenstadt died in Koenigsberg where he had gone for medical treatment. His son BENJAMIN (1846–1920) was appointed to succeed him in Utina after his death, and served in this post for 52 years. He was the author of *Masot Binyamin* (1921), talmudic novellae. Benjamin's son ABRAHAM ZEVI (1871–1939) succeeded his father in Utina and served there for 19 years. He was one of the early Zionists. Leon \*Rabinovich, editor of *Ha-Meliz*, was also a grandson of Abraham Zevi Hirsch Eisenstadt.

[Shmuel Ashkenazi]

**EISENSTADT, BENZION** (1873–1951), U.S. Hebraist, rabbi, and scholar. Eisenstadt was born in Kletsk, Belorussia. He studied at Nishvitz with Rabbi Yoseph Grodzinski. In his youth he was attracted to modern Hebrew literature and while in his teens corresponded with Jewish scholars, such as Slonimski and Buber. While still in Russia he published *Zioni* (Warsaw, 1895; Parts 2–4, Vilna, 1899–1902), a biographical dictionary of contemporary rabbis and scholars, and *Rab-banei Minsk va-Ḥakameha*, on the rabbis and scholars of Minsk (Vilna, 1899), as well as *Ve-Zot li-Yehudah* (1901), annotations on *Noda bi-Yehudah*, the responsa of Ezekiel Landau.

In 1903 he immigrated to the U.S. where he served as a pulpit rabbi and continued writing biographical works on well-known rabbis, scholars, and communal leaders. They include *Ḥakhmei Yisrael be-Amerikah* (with photographs, 1903), *Dorot ha-Aḥaronim* (2 vols., 1913, 1917), *Anshei ha-Shem Be-Arẓot ha-Brit* (1933) on American rabbis and, posthumously, *Benei Ḥiyyon* (1952). He was an ardent Zionist, active in Miz-rachi and in charity for the then Palestine.

**EISENSTADT, ISAIAH (Isay; pseudonym: Yudin, Vitali; 1867–1937)**, pioneer of the Jewish socialist labor movement in Russia; born in Vilna. He became a member of Populist Narodnaya Volya ("People's Will") circles in the 1880s and was imprisoned for revolutionary activities. He returned to Vilna and in 1889 joined the Social Democrats. A Marxist theoretician, Eisenstadt also proved an extremely able organizer among the Jewish workers in Vilna and in Odessa. In 1896 he was exiled to Siberia, remaining in prison there until 1901. After his release, Eisenstadt became one of the main leaders of the \*Bund, his activities being suspended by frequent arrests; during the controversy within the party (1908–10) between those preferring the use of legal action and the "anti-legalists," Eisenstadt supported the latter. In the central committee of the Russian Social Democratic Workers' Party he endeavored to effect a compromise between the Mensheviks and Bolsheviks. After the Revolution of February 1917 Eisenstadt was active in Petrograd (Leningrad). He was elected vice chairman of the central committee of the Bund, and after its split with the Communists, became associated with the leadership of the Social Democratic Bund. He was subsequently imprisoned, and at the beginning of 1922 received permission to leave Soviet Russia. He reached Berlin, and continued his political activity among the Menshevik émigrés there and in Paris, gradually inclining to the leftist faction. His first wife LYUBA EISENSTADT-LEVINSON (1866–1903), also born in Vilna, became a Social Democrat while a student in Geneva. She was arrested at the Russian border and imprisoned for three years. From 1890 she was active as one of the leading propagandists for the party among the Jewish workers in Vilna and Bialystok. She was imprisoned with her husband in Siberia from 1896 to 1901. She died on a visit to New York.

[Moshe Mishkinsky]

**EISENSTADT, MEIR** (“MaHaRaM ESH” – Morenu Ha-Rav Meir Esh [short for Eisenstadt]; c. 1670–1744), Polish rabbinical authority. After serving as rabbi in Szydłowiec in Poland, he settled in Worms, where Samson \*Wertheimer appointed him head of the yeshivah. On the occupation of Worms by the French in 1701, he went to Prossnitz, Moravia, and there he was appointed rabbi. Among his disciples was Jonathan \*Eybeshuetz, whom he brought up after the death of the latter’s father. In 1714, with Wertheimer’s support, Meir was appointed rabbi of \*Eisenstadt and its “seven communities,” which by then had recovered from the expulsion of 1670 and from the havoc wrought by the Kurucz uprising (1704). Students from far and near flocked to the yeshivah which he had established. He fashioned the character of the community, which became distinguished for its piety, so that men of wealth and influence in nearby Vienna sought “right of residence” in Eisenstadt. In 1723 Meir was obliged to leave the community for a short time because of “informers and calumniators.” Upon his return he instituted a special prayer to be recited every Monday and Thursday, against “those who bring harm to Israel by their tongues and tear down the foundations of the community.” Meir issued a ban against card playing (except on Hanukkah and Purim). His works include *Panim Me’irot*, responsa and novellae on the Talmud (Amsterdam, 1715). His responsa, containing questions addressed to him by Akiva \*Eger, \*Moses Harif of Pressburg, and even rabbis of Italy and Turkey, testify to his wide authority. Other works are *Kotnot Or*, a homiletic commentary on the Pentateuch and the Five Scrolls, published together with *Or Hadash*, the commentary of his grandson Eliezer Kallire, under the general title of *Me’orei Esh* (1766), and *Or ha-Ganuz* (1766), novellae on *Ketubbot* and on the rules concerning *yein nesekeh* in the *Yoreh De’ah*.

Schwartz, *Shem ha-Gedolim me-Erez Hagar*, 2 (1914), 153f., no. 14; 3 (1915), s.v. *Panim Me’irot*; B. Wachstein, *Grabinschriften des alten Judenfriedhofes in Eisenstadt* (1922), 47–93.

[Aharon Fuerst]

**EISENSTADT, MENAHEM ZEVI** (d. 1966), Polish rabbi. Born in Warsaw, Eisenstadt studied in Brisk, Lithuania, under R. Ḥayyim Soloveitchik and his son, R. Isaac Ze’ev. For a while he served as a member of the Cracow City Council. At the beginning of World War II, Eisenstadt moved to Vilna, where he directed the exiled Yeshivat Ḥakhmei Lublin. In 1941 he immigrated to Erez Israel and lived in Tel Aviv. In 1947 he moved to the United States. In New York, he began the publication of an edition of Nahmanides’ biblical commentary, based on early manuscripts and early editions. His work was not completed, however, and only the commentary to Gene-

sis appeared (2 vols. 1959–62). He died in New York, and was buried in Jerusalem.

**BIBLIOGRAPHY:** (A.S.) B. Sofer-Schreiber, *Ketov Zot Zikkaron* (1957), 258; N. Ben-Menahem, *Be-Sha’arei Sefer* (1967), 11; *Beth Yaakov*, 7 (1966), 7, 38.

[Naphtali Ben-Menahem]

**EISENSTADT, MOSES ELEAZAR** (1869–1943), rabbi, educator, and author in Russia and France. Born in Nesvizh, Belorussia, he studied at the yeshivah of \*Volozhin, and from 1889 at the university and Hochschule fuer die Wissenschaft des Judentums in Berlin. He wrote his doctoral thesis on “Bible Criticism in Talmudic Literature” in 1898. From 1899 to 1910 Eisenstadt officiated as \*Kazyonny Ravvin (government-appointed rabbi) of Rostov, and from 1911 to 1923 held the same position in St. Petersburg. He subsequently immigrated to France, and in 1926 was appointed rabbi of the Ohel Ya’akov community of the Russian Jews in Paris. He also lectured in modern Hebrew literature at the rabbinical seminary. When the Nazis occupied Paris, he left for New York, and in 1942 was appointed rabbi of the Merkaz Beit Yisrael community of Russian Jews there. From an early age, he published articles, reviews, and stories in the Jewish press in Hebrew, Yiddish, Russian, and German. His books include *Be-Shuvi el Erez Moladeti* (“On My Return to My Fatherland,” 1893), and *Me-Ḥayyei Benei Lita* (“From the Lives of the Inhabitants of Lithuania,” 1893). In 1918, he was a member of the editorial board of the Jewish historical journal *He-Avar*, published in Petrograd.

**BIBLIOGRAPHY:** LNYL, 1 (1956), 66–67; Kressel, *Leksikon*, 1 (1965), 84.

**EISENSTADT, SAMUEL NOAH** (1923– ), Israel sociologist. Born in Warsaw, and educated at the Hebrew University of Jerusalem and at the London School of Economics, Eisenstadt joined the faculty of the Hebrew University in 1948 and became chairman of the department of sociology in 1951. Eisenstadt’s contributions have been chiefly in the fields of political and historical sociology, with special attention to the analysis of social structure and of bureaucracy. In 1973 Eisenstadt was awarded the Israel Prize for social sciences. His book *The Political Systems of Empires* (1963) analyzed the social structures of the major empires throughout world history; this work has been hailed as the most significant contribution to political sociology after that of Max Weber. Among his other works in this field are *Political Sociology* (1955), *The Absorption of Immigrants* (1954), and *From Generation to Generation: Age Groups and Social Structure* (1956). The latter are comparative studies based chiefly on materials referring to problems arising from mass immigration, and the integration of the many different cultures which are found in Israel. Eisenstadt brought the analysis of developmental and general social problems into the framework of sociological analysis and comparative institutional study through his *Essays on Comparative Institutions* (1965) and his *Comparative Social Problems* (1964). He also published “Bureaucracy, Bu-

reaucratization and Debureaucratization” in *Administrative Science Quarterly*, 4 (1959), 302–20, and *Israeli Society* (1967). Other books include *Tradition, Change, and Modernity* (1983), *Transformation of Israeli Society* (1986), and *European Civilization in a Comparative Perspective* (1987).

[Werner J. Cahnman and Pearl J. Lief]f

**EISENSTADTER, MEIR BEN JUDAH LEIB** (d. 1852), rabbi, author, and liturgical poet (*paytan*). Eisenstadter was born in Schossberg (Sastin), but in his youth moved to Eisenstadt, from which he took his name. He was also known as “Maharam Esh” (Hebrew acronym for Morenu ha-Rav Meir Eisenshtadt – “our teacher, the rabbi Eisenstadter”). He studied under Moses \*Sofer and married the daughter of David Deutsch, the rabbi of Nove Mesto in Slovakia, where Eisenstadter was appointed head of the yeshivah. After serving as rabbi in Baja, Balassagyarmat (1815–35), he was appointed rabbi of Ungvar in 1835 and was regarded, together with Moses \*Schick, as the leading rabbi of Hungary. In Ungvar, too, he headed a large yeshivah and many of the future rabbis of Hungary were his pupils. He took an active part in the communal life of Hungarian Jewry and exercised a profound influence on the course it was to take. He vehemently opposed the progressives who desired to introduce religious changes and reforms. He was the author of *Imrei Esh*, responsa in two parts (1852–64); *Imrei Yosher*, sermons (Ungvar, 1864); *Imrei Binah*, novellae on a number of tractates (1866), and, with the same title, his novellae and those of his son on the laws of \*shehitah, appended to A.Z. Schorr’s *Simlah Hadashah* (1927); *Imrei Esh*, in two parts, expositions of the Pentateuch with the novellae of his father-in-law and his son (1901); and *Zikhron Yehudah*, containing his testament and novellae (1900). The greatest rabbis of Hungary and Galicia including Solomon \*Kluger of Brod, Ḥayyim \*Halberstam of Neu-Sandec (Nowy Sacz), and Simon \*Sofer of Cracow addressed problems to him. His son Menahem succeeded him as rabbi in Ungvar.

Stern, *Melizei Esh al Hodshei Kislev-Tevet* (1962<sup>2</sup>), 112b, no. 436; H.Y. Braun, *Toledot Gedolei Yisrael Anshei Shem* (1943), 1–12; J. Spiegel, in: *Arim ve-Immahot be-Yisrael*, 4 (1950), 9–12; S. Reinhasz, in: *Encyklopedyah shel Galuyyot*, 7 (1959), 403–10.

[Itzhak Alfassi]

**EISENSTAEDT, ALFRED** (1898–1995), photographer. Born in Dirschau, West Prussia (now Tczew, Poland), Eisenstaedt was the pre-eminent photojournalist of his time, whose pioneering images for *Life* magazine helped define American photojournalism. Over a career that lasted more than 50 years, Eisenstaedt became famous as the quintessential *Life* photographer, producing more than 2,500 picture stories and 90 covers for the magazine. His most famous photograph, of an exuberant American sailor kissing a nurse in a dance-like dip in Times Square on V-J Day, August 14, 1945, summed up the euphoria many Americans felt as the war came to a close. It is the most

widely reproduced of the magazine’s millions of photographs. Another of his best-known images shows Joseph Goebbels, the Nazi propaganda minister, in 1933, glaring at the camera. “Here are the eyes of hate,” the photographer later wrote.

When Alfred was eight, his father, a merchant, moved the family to Berlin, and they remained there until Hitler came to power. At 17, Alfred was drafted into the German army and served on the Flanders front, where he was wounded in both legs. Sent home, he recuperated for a year before he could walk unaided. He used the time to visit museums and study light and composition. Although he became a belt and button salesman, he saved his money and bought photographic equipment. In 1927, while vacationing with his parents in Czechoslovakia, he took a photograph of a woman playing tennis. He was on a hillside 50 yards away, and the photo captured the long shadow the woman cast on the court. He sold it to *Der Welt Spiegel* for about \$12.

By the age of 31, he became a full-time photographer, working for Pacific and Atlantic Photos, which became the Associated Press. At the time he began working with the innovative Leica 35 mm. camera, which had been invented four years earlier. His assignments included portraits of statesmen and famous artists. By 1933 he was sent to Italy to shoot the first meeting of Hitler and Mussolini. Two years after Hitler took power, Eisenstaedt immigrated to the United States, where he was soon hired with three other photographers, including Margaret \*Bourke-White, to be the original photographers for the new *Life* magazine. The first issue carried five pages of Eisenstaedt’s pictures. He became known for his ability to bring back visually striking pictures from almost any assignment. Among the many celebrities he photographed were Churchill, John F. Kennedy, Chaplin, Marilyn Monroe, George Bernard Shaw, and a smoldering Marlene Dietrich in top hat and tails. His mastery of the Leica allowed him to capture his subjects in unguarded moments, creating a sense of intimacy. In a 1947 picture, for example, the physicist J. Robert \*Oppenheimer puffs on a cigarette as he stands in front of a blackboard covered with mathematical formulas.

Eisenstaedt became an American citizen in 1942 and traveled overseas to document the effects of the war. He received many awards and honors, including the Presidential Medal of Arts and the Master of Photography Award, given by the International Center of Photography. He continued to work until shortly before his death. In 1993 he photographed President Clinton, his wife, and their daughter on Martha’s Vineyard, Mass.

He was the subject of many exhibitions and was the author of many books, including *Witness to Our Time* (1966), *The Eye of Eisenstaedt* (1969), *Eisenstaedt’s Guide to Photography* (1978), and *Eisenstaedt: Germany* (1981). At age 81 he returned to Germany for the first time for an exhibition of pictures he had taken there in the 1920s and 1930s. Things in Germany seemed different, he said, from when he left. “You couldn’t call it prettier, but maybe more relaxed.”

[Stewart Kampel (2<sup>nd</sup> ed.)]

**EISENSTEIN, FERDINAND GOTTHOLD** (1823–1852), German mathematician. Eisenstein was brought up in poverty and succeeded in studying at a university despite considerable family opposition. In 1847 he became a lecturer at Berlin University. He made important contributions to algebra and to elliptic functions and their applications to number theory.

**EISENSTEIN, IRA** (1906–2001), U.S. rabbi and leader of the \*Reconstructionist movement. Born in New York City, Eisenstein grew up in Harlem along with his friend Milton \*Steinberg. Eisenstein was a grandson of Judah David \*Eisenstein, a traditional scholar who compiled the anthology *Ozer Dinim u-Minhagim*. He was ordained at the Jewish Theological Seminary in 1931. He later served as president of the \*Rabbinical Assembly from 1952 to 1954. As a son-in-law and leading disciple of Kaplan, the founder of Reconstructionist Judaism, Eisenstein was associate rabbi from 1931 to 1954 of Kaplan's Society for the Advancement of Judaism in New York City, the first Reconstructionist synagogue. Eisenstein was the associate chairman and later the editor of *The Reconstructionist* from 1935 to 1982, which in the 1930s and 1940s was the premier intellectual journal of the American Jewish community and which he was instrumental in creating. In 1954, the invitation was extended for Eisenstein to become the rabbi of Anshe Emet congregation in Chicago. The relationship with Anshe Emet did not endure, and in 1959 he returned to New York to become the president of the Jewish Reconstructionist Foundation, which he had founded. The foundation continued to publish the magazine, coordinated annual conventions of Reconstructionists, expanded the Reconstructionist Press, and began to issue a series of pamphlets on Reconstructionist ideas. One of these, titled "The Havurah Idea," was the first published program for what would in the 1960s and 1970s become a new and vital form of Jewish community.

While Mordecai \*Kaplan, who was deeply rooted in the Jewish Theological Seminary, was reluctant to see Reconstructionism become a separate denomination, Eisenstein advocated for the creation of institutions that could embody Reconstructionist ideas. He founded the Fellowship of Reconstructionist Congregations and Havurot in 1955. Following Kaplan's retirement from JTS in 1963, Eisenstein rallied Reconstructionist lay leaders in support of establishing a seminary for the training of Reconstructionist rabbis, and in 1968 he became the founding president of the \*Reconstructionist Rabbinical College (RRC) in Philadelphia, from which he retired in 1981.

In fulfillment of Kaplan's concept that American Jews "lived in two civilizations" Eisenstein's vision of rabbinic training mandated that RRC students simultaneously pursue a Ph.D. in religious studies at nearby Temple University where they would interact with faculty and students of many different religious traditions.

Eisenstein was coeditor of the controversial *New Haggadah* (1941), which eliminated the ten plagues as "unedifying" and celebrated Moses, rather than God, as the one who had

"liberated Israel." With Kaplan, Steinberg, and Eugene Kohn, Eisenstein helped edit the original Reconstructionist prayerbooks for Sabbath (1945), High Holidays (1948), and Festivals (1958). This liturgy applied Kaplan's key ideas such as eliminating the idea of Jews as the chosen people and the mention of miracles and the hope for a personal Messiah, although only Kaplan was "excommunicated" by a small sect of Orthodox rabbis upon the publication of the Sabbath Prayerbook.

Recognizing that Kaplan's major books were often seen as overly long and complex for the average reader, Eisenstein helped to popularize Kaplan's work in *Creative Judaism* (1936) and *What We Mean by Religion* (1938). He also wrote *Judaism under Freedom* (1956) and *Reconstructing Judaism* (1986) and co-edited *Mordecai M. Kaplan: An Evaluation* (1952). With his wife, the musicologist Judith Kaplan Eisenstein, he co-authored a number of cantatas based on Jewish themes.

[Jack Reimer / Richard Hirsch (2<sup>nd</sup> ed)]

**EISENSTEIN, JUDAH DAVID** (1854–1956), U.S. encyclopedist, anthropologist, and author. Eisenstein was born in Mezshirech, Poland, and in 1872 immigrated to the United States, where he became a successful coat manufacturer. He was a founder of the first Hebrew society in the United States, Shoharei Sefat Ever (1880), and one of its first Hebrew writers. Although he also undertook translations, e.g., in 1891 publishing the text of the American constitution in Hebrew and Yiddish, his fame rests on his anthologies, for which he earned the epithet "master of treasuries" (as all his anthologies bore the title *Ozar*, "Treasury"). He published a Jewish encyclopedia in ten volumes with the assistance of experts from various countries, *Ozar Yisrael* (1907–13). His other anthologies include *Ozar Midrashim* (2 vols., 1915); *Ozar Dinim u-Minhagim* (1917, "Laws and Customs"); *Ozar Derushim Nivharim* (1918, "Selected Homilies"); *Ozar Derashot* (1919, "Sermons"); *Ozar Perushim ve-Ziyyurim al Haggadah shel Pesah* (1920), on the *Haggadah*; *Ozar Massa'ot* (1926), anthology of Jewish travel literature; *Ozar Ma'amrei Tanakh* (1925), a biblical concordance; *Ozar Ma'amrei Hazal* (1922), rabbinic aphorisms; *Ozar Vikkuhim* (1928), disputations; *Ozar Musar u-Middot* (1941), on ethics and morals.

Eisenstein was the author of *Ma'amrei Bikkoret* (1897), a criticism of Rodkinson's translation of the Talmud; *History of the First Russian American Jewish Congregation* (1901); *Development of the Jewish Casuistic Literature in America* (1904); and other works. Eisenstein's *Commentary on the Torah*, edited by B.D. Perlow and I. Eisenstein, was published posthumously (1960). His autobiography and memoirs, *Ozar Zikhronotai* (1929), includes a bibliography of his articles.

[Abraham Meir Habermann]

**EISENSTEIN, JUDITH KAPLAN** (1909–1996), U.S. musicologist, educator, composer, and author. Born in New York

City, Eisenstein was the eldest of the four daughters of Rabbi Mordecai Menachem \*Kaplan, the philosopher and founder of Reconstructionist Judaism, and Lena (Rubin) Kaplan. In 1922, at the age of 12, she celebrated one of the earliest known bat mitzvah ceremonies in the U.S. at the Society for the Advancement of Judaism, where her father was the presiding rabbi. Judith Kaplan Eisenstein had a second bat mitzvah at the age of 82 where she was honored by a number of Jewish and feminist leaders.

Kaplan continued her Jewish education at the Jewish Theological Seminary Teachers Institute and her secular education at Columbia University Teachers College, from which she received her B.S. in 1928 and her M.A. in 1932 in music education. Following a brief first marriage that ended in divorce, Kaplan married Rabbi Ira \*Eisenstein, her father's assistant at the Society for the Advancement of Judaism, in 1934. This marriage endured for over 60 years; the couple had three children. From 1929 to 1954 Judith Eisenstein taught music education and the history of Jewish music at the Jewish Theological Seminary's Teachers Institute (now the Albert A. List College of Jewish Studies). While at the Teachers Institute she began her publishing career with a Jewish songbook for children, *Gateway to Jewish Song* (1937). She wrote several more books on Jewish music and on Jewish musical history for young readers; these include *Festival Songs* (1943) and *Songs of Childhood* (1955) with Frieda Prensky. In the years between 1942 and 1974, Eisenstein composed two song cycles and five cantatas on Jewish themes, written in collaboration with her husband. The most frequently performed of these is "What Is Torah?" (1942).

Eisenstein began doctoral studies at the School of Sacred Music of Hebrew Union College-Jewish Institute of Religion in New York in 1959. Her dissertation was entitled, "The Liturgical Chant of Provencal and West Sephardic Jews in Comparison to the Song of the Troubadours and the Cantigas." After receiving her Ph.D., she taught at HUC-JIR from 1966 to 1979. In 1978, when her husband became president of the Reconstructionist Rabbinical College, the Eisensteins moved to Philadelphia. Eisenstein taught at the RRC from 1978 to 1981. Her book, *Heritage of Music: The Music of the Jewish People*, was published in 1972 and reprinted in 1990. In 1987, she wrote and broadcast a series of 13 radio lectures on the history of Jewish music.

[Carole Kessner (2<sup>nd</sup> ed.)]

**EISENSTEIN, SERGEI MIKHAILOVICH** (1898–1948), Russian film director, son of a Jewish father who converted to Christianity and a non-Jewish mother. Eisenstein's work, revolutionary both in technique and in subject matter, was a major contribution to the modern art of the cinema. He was originally trained as a civil engineer, and served the Red Army

in this capacity during the Russian civil war. In 1920, however, Eisenstein took up stage work, joining first the Proletkult Theater in Moscow and then the avant-garde company of V. Meyerhold. He was a disciple of Meyerhold in stage direction. After deciding that the theater was not close enough to the masses, he turned his attention to the cinema. His first film was *The Strike* (1924), followed in 1925 by *Battleship Potemkin*, which had an immediate impact on contemporary film making. It demonstrated a new approach, the dramatic handling of crowd scenes, and the use of nonprofessional actors for greater realism. Eisenstein further developed his methods in *October* (1926), a film about the Russian Revolution, and *The General Line* (1929), which extolled Soviet agriculture. He was invited to Hollywood in 1931, but his scenarios proved unacceptable there. With the assistance of the novelist Upton Sinclair he spent 14 months in Mexico making a film on the Mexican revolution but he was recalled to the U.S.S.R. before its completion. Parts were edited in Hollywood as *Thunder Over Mexico* (1933), evoking much criticism as being untrue to Eisenstein's principles. Another section of the film was issued in 1940 as *Time in the Sun*. In the 1930s he encountered difficulties with the authorities, who saw film as an important propaganda tool. They criticized his esthetic approach, and he was unable to complete some of his works. In Russia, after these difficulties, he won the Order of Lenin for *Alexander Nevsky* (1938). Of his *Ivan the Terrible* trilogy, part 1 was shown in 1946, part 2 was suppressed until 1958, and part 3 was not shot. He expounded his theories in lectures and in two books, *The Film Sense* (1942) and *Film Form* (1949). Though he never affirmed his Jewish ancestry, he agreed to appear together with other known Jewish cultural activists in antifascist meetings on August 24, 1941, and in 1942. Eisenstein's memoirs, called *Beyond the Stars* and written in 1946, appeared as volume 4 of his selected works in 1997 (published by the British Film Institute). A previous version had appeared in 1983 as *Immoral Memories*.

**BIBLIOGRAPHY:** M. Seton, *Sergei Eisenstein* (Eng., 1952). **ADD. BIBLIOGRAPHY:** O. Bulgakowa, *Sergei Eisenstein, a Biography* (2002); A. Nesbit, *Sergei Eisenstein and the Shape of Thinking* (2003); R. Bergen, *Sergei Eisenstein: A Life in Conflict* (1999).

**EISLER, EDMUND MENAHEM** (1850–1942), writer who envisioned a Zionist utopia. Born in Tyrnau, Slovakia, Eisler was active for many years in Jewish literature and journalism. He contributed Hebrew poetry to the literary annual *Kokhevei Yizhak* (1877) but later wrote only in German. In 1882 he wrote a vision of a Zionist utopia in the form of a novel entitled *Ein Zukunftsbild*, which he published anonymously in 1885. The book relates the exodus of Jews from Europe and the establishment of a Jewish state under the rule of a king (the one who had conceived the idea of the exodus and the state was chosen as a monarch). It includes a detailed description of the constitution, how Hebrew functions as the official language of the country, and the division of the country into tribes according to the biblical account. There is even a description of

the war that the young country must wage against those who threaten to destroy it, and its total victory followed by peace. Eisler prophesied a Europe without Jews after anti-Jewish legislation and terrible persecution and predicted the path of the German “hob-nailed boot.” The novel fell into obscurity until it was rediscovered by Perez Sandler who identified its author and reprinted it in a Hebrew translation (by Y. Tolkes) in an anthology of Zionist utopias, *Hezyonei Medinah* (“Visions of a State,” 1954), with a monograph on this utopia and its author. The work predates Herzl’s novel *Altneuland* by 17 years, and a copy of it was found in Herzl’s personal library.

[Getzel Kressel]

**EISLER, GERHART** (1897–1968), East German Communist. Born in Leipzig, he was the son of Rudolf \*Eisler and became a convinced Communist after serving with the Austrian army in World War I. In 1930 he served as political secretary in the Far East bureau of the Communist Trade Union International in Shanghai. Eisler went to Spain in 1936 and later to France, where he was interned in 1940. On his release he left for the United States where he became a leading Communist agitator. In 1949 he was sentenced to a year’s imprisonment for contempt of Congress when he refused to be sworn as a witness before the House of Representatives’ Un-American Activities Committee. While free on bail pending an appeal, he escaped to England on a Polish liner, after paying 25 cents to tour it as a visitor. On arrival in England he was arrested on the application of the United States Embassy, and a political storm arose when it was suggested that there was collusion between the British and American secret services. Eventually Eisler was released and flew to Prague, where he engaged in Communist propaganda activities for four years. Later he was minister of information in East Germany (until 1952) and became chairman of the East German radio authority. He died while on a mission to the Soviet Union.

**BIBLIOGRAPHY:** C. Epstein, *The Last Revolutionaries – German Communists in their Centuries* (2003).

**EISLER, HANNS** (1898–1962), German composer; son of Rudolf \*Eisler. Eisler, born in Leipzig, was a pupil of Arnold \*Schoenberg and Anton von Webern in Vienna. His early compositions were in an advanced idiom, but Eisler soon adapted to the demands of “socialist realism.” He went to Berlin in 1924 and wrote the music for some of Bertolt Brecht’s plays, including *Die Rundkoepfe und die Spitzkoepfe* and the incidental music for *Galileo*. In 1937 he immigrated to the United States where he lectured at the New School for Social Research, New York, and then went to Hollywood. He was musical assistant to Charlie Chaplin (1942–47) and also composed scores for other filmmakers. He left in 1948 under “voluntary deportation” because of his political past. Settling in East Berlin, he became one of the ideological leaders of musical activity in East Germany. He taught at the Akademie der Kuenste and received a state prize for his composi-

tions in 1950. He composed the national anthem of the German Democratic Republic (to a text by Johannes Becher). He wrote an opera, *Johannes Faustus* (1953), which was criticized for its mysticism. His works include symphonies (e.g., *Deutsche Symphonie*, 1937), chamber music, cantatas, a *Suite for Orchestra with Capriccio* based on Jewish folksongs, operas, oratorios, and songs.

[Dora Leah Sowden]

**EISLER, MÁTYÁS** (1865–1931), Hungarian rabbi and scholar. Eisler was born in Paty, county of Pest, and was ordained at the rabbinical seminary of Budapest in 1891. He taught Hebrew at the *Israelitische Lehrbildungsanstalt* in 1890 and later at the University of Kolozsvár. He was chief rabbi of Kolozsvár from 1891 until his death. His scholarly interests included the history of the Jews of Transylvania and Hebrew linguistics, and among his works were *Az erdelyi zsidok mult abol...* (“From the Past of the Jews of Transylvania,” 1901) and *Agyök-beli hangok interdiagnostikus változásai az aram nyelvekben* (“Interdialectal Changes of Root Sounds in the Aramaic Languages,” 1889).

[Alexander Scheiber]

**EISLER, MORITZ** (1823–1902), educator and historian of Jewish philosophy. Eisler was born in Prossnitz, Moravia. In 1853 he became a teacher of religion at the Piarist high school and director of the communal school at Nikolsburg. In 1862 he founded an organization for the support of disabled Jewish teachers, their widows and orphans (which later became the “Maehrisch-Schlesischer Israelitischer Lehrerverein”) and served as its president until 1898. His *Vorlesungen ueber die juedische Philosophie des Mittelalters* (“Lectures On Jewish Philosophy in the Middle Ages,” 3 vols., 1870–83) became one of the first attempts to present, in popular fashion, the main systems of medieval Jewish philosophy. In addition, he published a number of essays on specific questions in the history of Jewish philosophy, including essays on \*Spinoza, \*Ibn Daud, and Ibn \*Zaddik.

**BIBLIOGRAPHY:** H. Heller, *Maehren’s Maenner der Gegenwart*, 1 (1889), 3, 28; *Kuerschners Deutscher Literatur-Kalender* (1902); Ch. D. Lippe, *Bibliographisches Lexicon*, 1 (1881), 92; 2 (1887), 52.

**EISLER, RUDOLF** (1873–1926), Austrian philosopher known for encyclopedic writings, especially his dictionaries of philosophy and biographies of philosophers. His works, which contributed greatly to the dissemination of philosophical ideas, include *Geschichte des Monismus* (1910), *Kritische Einfuehrung in die Philosophie* (1905), *Woerterbuch der philosophischen Begriffe und Ausdruecke* (1899), and his *Philosophen-Lexikon* (1912). He was the editor of the *Wissenschaftliche Volksbibliothek*. His *Kant-Lexikon* was published in 1930. Eisler was the

father of Gerhart \*Eisler, the Communist leader, and Hanns \*Eisler, the composer.

[Samuel Hugo Bergman]

**EISMANN, MOSES** (1847–1893), Hebrew journalist. Born in Tivrov, he began his literary activity in 1870 with an article in *Ha-Meliz*, concerning government-appointed rabbis. In *Bi-Fero'a Pera'ot be-Yisrael* (1882), he argued that there was only one solution to the “Jewish Question” – the Jewish settlement of Palestine, which in the course of time would become the home of all the scattered Jews. This was also the subject of his pamphlet *Inyanei ha-Yehudim: She'elat ha-Yezi'ah* (“Concerning Jewish Affairs: the Emigration Question,” Jerusalem, 1887). In 1890 he participated in the founding convention of Hovevei Zion in Odessa. He wrote Yiddish articles in *Der Veker*, edited by \*Lilienblum, as well as in other publications. He also wrote articles in Russian under a pseudonym.

His brother, DAVID EISMANN (1869–1922), wrote stories in Russian, published in seven volumes in 1911, dealing mainly with the Jewish intelligentsia, exposed to the cultural environment of Russian society.

**BIBLIOGRAPHY:** Z. Scharfstein, in: *Moznayim*, 43 (1964/65), 184–7; Waxman, *Literature*, 4 (1960<sup>2</sup>), 403–4.

[Baruch Shohetman]

**EISNER, KURT** (1867–1919), German socialist leader, who was founder and first prime minister of the Bavarian Republic. Born in Berlin, Eisner became a journalist. He was a contributor to the *Frankfurter Zeitung* from 1891 to 1893, and from 1893 to 1897 to the *Hessische Landeszeitung*. In 1897 he was imprisoned for nine months for lese majesty. In 1898 he joined the social-democratic journal *Vorwaerts* as political editor. In 1905 he had to leave because of disagreements with the orthodox left (Kautsky, Luxemburg, Mehring). Two years later, he became editor of the *Fraenkische Tagespost* (Nuernberg), and from 1910 he reported on the Bavarian Landtag as official correspondent for the *Muenchner Post*. A gifted writer, he had an intellectual and moral approach to political problems. At the beginning of World War I, Eisner favored the granting of war credits to the German government. However, he objected to the imperial policy of conquest and became a bitter opponent of the government's war policies. He was arrested and imprisoned in January 1918 for participating as one of the leaders in the Munich metal workers' peace strike but was released in October, in order to stand as Independent Social-Democratic candidate for the Reichstag. On November 7, 1918, Eisner headed the revolutionary uprising in Munich and next day became prime minister of the new republic of Bavaria. To affix the blame for the war on the German government, he revealed the contents of Bavarian government reports and as a result his enemies falsely accused him of taking huge bribes from the Allies to start the revolution. In the Bavarian elec-

tions that followed the uprising, Eisner's Independent Socialist Party received only a small number of votes. On February 21, 1919, on his way to the Landtag (parliament), to announce the resignation of his government, he was shot dead by the young Count Arco-Valley. Eisner's *Gesammelte Schriften* appeared in 1919 in two volumes.

**BIBLIOGRAPHY:** A. Mitchell, *Revolution in Bavaria 1918–1919: The Eisner Regime and the Soviet Republic* (1965), incl. bibl.; F. Fechenbach, *Der Revolutionaer Kurt Eisner* (1929); F. Schade, *Kurt Eisner und die bayerische Sozial-Demokratie* (1961), incl. bibl.; F. Wiesemann, in: K. Bosl (ed.), *Bayern im Umbruch* (1969), 387–426; F. Eisner, *Kurt Eisner* (Ger., 1979); A.E. Gurganus, *Kurt Eisner* (1984); B. Grau, *Kurt Eisner 1867–1919* (Ger., 2001).

[Bernhard Grau (2<sup>nd</sup> ed.)]

**EISNER, MARK** (1886–1953), U.S. lawyer and public official. Eisner was born in New York City. After serving in the New York State Assembly (1913–15), Eisner was appointed delegate to the state's Constitutional Convention (1915). An authority on taxation law, Eisner was collector of internal revenue for the New York district from 1915 to 1919, and lectured on his specialty at New York University and New York Law School. He formed a law partnership in 1924. When the New York City Board of Higher Education was established in 1926, Eisner was appointed a member by Mayor James J. Walker, later serving as chairman (1932–38). Eisner was active in other civic, professional, and communal organizations, including service as president of the \*American Association for Jewish Education (1939–47). He wrote *Lay View of Some of the Problems of Higher Education* (1936), and was an editor of *How Government Regulates Business* (1939).

**BIBLIOGRAPHY:** *New York Times* (March 30, 1953), 21.

[Morton Rosenstock]

**EISNER, MICHAEL DAMMANN** (1942– ), U.S. business executive. Born in Mount Kisco, N.Y., to Lester, a lawyer and administrator for the U.S. Department of Housing and Urban Development, and Margaret (née Dammann), co-founder of the American Safety Razor Company, Eisner grew up in the family's apartment on Fifth Avenue in New York City and graduated from Denison University in 1964. Following summer jobs as a page and a first job as a Federal Communications Commission logging clerk at NBC, Eisner landed a job in the CBS programming department. Unhappy, Eisner sent his resume out to hundreds of companies. ABC head Barry Diller convinced the board to bring Eisner on as assistant to the national programming director, a position he held from 1966 to 1968. From there Eisner rose to senior vice president for prime-time production and development, creating such programs as *Happy Days*, *Barney Miller*, and *Starsky and Hutch*. When Diller took over as chair of Paramount Pictures in 1976, he offered Eisner the position of studio president. Under Eisner, the studio released such hits as *Raiders of the Lost Ark*, *Grease*, *Ordinary People*, *Terms of Endearment*, *Flashdance*, *Trading Places*, *Beverly Hills Cop*, and *Airplane*. Eisner left

Paramount to become chair and CEO of Walt Disney Company in September 1984. At the time, Disney had not had a hit film since 1969 and its profits had fallen dramatically. Eisner reinvigorated the studio on several fronts, luring new executives, making popular films for adults like *Down and Out in Beverly Hills* (1985), re-releasing classic Disney films, creating new animated films such as *Beauty and the Beast* (1991) and *The Lion King* (1994) – and launching Broadway versions of the films – as well as computer animated films in partnership with Pixar such as *Toy Story* (1995) and *Finding Nemo* (2003). He also expanded the company in TV and cable (launching the Disney Channel and acquiring ABC and the Family Channel), expanded the existing Disneyland and Disneyworld resorts and established Disneyland theme parks in Europe outside Paris, France, and in Japan, and acquired Harvey and Bob Weinstein's specialty films division Miramax Films. Although in a 20-year period Eisner increased the value of the company 2000%, his management style and inability to groom a successor led to major conflicts. Former president of production Jeffrey Katzenberg left to found Dreamworks and won a \$250 million suit against Disney. Eisner hired former Creative Artist Agency founder Michael Ovitz and then a year later fired him, paying him a severance that exceeded \$100 million and spurred several stockholder lawsuits. The relationships with Pixar and Miramax soured. In 2003, Walt Disney's nephew Roy Disney asked Eisner to resign as head of the company. Following a vote to remove Eisner from the board, the Disney CEO announced he would retire at the end of his contract on September 30, 2006. However, subsequently, he announced he would step down on September 30, 2005, and would be succeeded by Robert Iger. Eisner's tenure at Disney has been the subject of several books, including Eisner's own 1998 account, *Work in Progress*, and *Disney Wars* by James Stewart (2005).

[Adam Wills (2<sup>nd</sup> ed.)]

**EISNER, PAVEL (Paul; 1889–1958)**, bilingual Czech-German writer, translator, and literary critic. His literary work made him a bridge-builder between Czech and German cultural circles in Czechoslovakia. Born in Prague, Eisner studied Slavic philology at the German University there and soon became known as the editor of a series of anthologies, mainly of Czech and Slovak folk literature (*Tschechische Anthologie, Slovakische Anthologie, Volkslieder der Slaven, Volksmaerchen der Slaven*). As editor of the literary supplement of the government-owned paper *Prager Presse*, he became one of the few interpreters – most of whom were Jews – of Czech literature to the German reading public. One of the most prolific writers of his time, he translated hundreds of poems and short stories by practically every modern Czech author of importance. On the other hand, he was also a tireless translator from German into Czech, acquainting the Czech reader with authors ranging from J.W. Goethe to Thomas Mann and from Heinrich \*Heine to Franz \*Kafka. He was the first, in his book *Německá literatura na půdě Československé republiky* (“German Literature on Czechoslovak Soil,” 1933), to analyze the contribu-

tion of the German Jewish writers from Prague. Czech-German-Jewish symbiosis is also the theme of his book of essays *Milenky* (“Lovers,” 1930) and of *Franz Kafka and Prague* (1950). However, the bulk of his literary studies, mainly in the fields of comparative literature, psychology of languages, and the mutual influence of national cultures, remains dispersed in a great number of Central European publications. Although prevented by a hearing defect from becoming a musician, he nevertheless kept in constant touch with musical life and not only translated foreign operas into Czech and libretti of Czech operas (by Dvořák, Martinů, Jeremiáš) into German, but also wrote several studies on the history of music, including one on Jewish music and musical instruments. Shielded by his non-Jewish wife, who was distantly related to Richard Wagner, Eisner escaped deportation during the Nazi occupation and was able to work in the Jewish Museum in Prague. Some of his last essays were published in *Věstník*, the monthly of the Jewish community of Prague. His best known work is *Chrám i tvrz* (“The Cathedral and the Fortress,” 1946), an exposition on the Czech language and its riches.

[Avigdor Dagan]

**EISNER, WILL (William Erwin; 1917–2005)**, U.S. comic book artist and author. Born in Brooklyn, N.Y., the son of Jewish immigrants, Eisner published his first drawings in his high school newspaper. He published his first comic in 1936 in *Wow, What a Magazine!*, where he met Jerry Iger. Together they created a comic book outfit, Eisner & Iger, that employed among other artists Bob \*Kane, creator of Batman and other superheroes. (Eisner turned down a comic called *Superman* by Jerry \*Siegel and Joe \*Shuster.)

In 1940 Eisner created the Spirit, a hero without superpowers. Fans called the strip the “Citizen Kane” of comics for its innovation, its seriousness, and its influences. A website devoted to the Spirit described the hero as a man “with no gimmicks or powers” other than “his freedom from society” and noted that Eisner called the Spirit a “middle-class crime fighter.” At the height of its popularity, the Spirit appeared in 20 newspapers, reaching 5 million readers every Sunday. In 1942, when Eisner was drafted into the army, he started drawing comics for the military. In late 1945 he went back to the Spirit, and with the help of other artists, including Jules \*Feiffer, he revived and deepened it. The Spirit expired in 1952. For the next 25 years, Eisner spent much of his time running the American Visual Corporation, a producer of education, army, and government comic books. Military manuals used to be dry and virtually unreadable but Eisner used words and pictures together to show soldiers how to do everything from cleaning their tanks to putting their lives back together after the war.

The Kitchen Sink Press reprinted all of the postwar Spirit comics from 1978 to 1998. Meanwhile, in the 1970s, Eisner was reborn as a comic artist. In 1978 he wrote and drew *A Contract*

with *God*, a comic book story about Frimme Hersh, a Jewish immigrant who becomes a slumlord in the Bronx when he discovers that God has forsaken him. With that book, Eisner became famous for his moody rain, which came to be called "Eisner spritz." His work over the years was also noted for wordless, emotional close-ups on characters' faces. Eisner is credited with coining the phrase "graphic novel" in 1978. Eisner's seriousness influenced the work of Art Spiegelman, author of *Maus*. Eisner wrote two books on comic art, *Comic and Sequential Art* in 1985 and *Graphic Storytelling* in 1996.

In 2004, Eisner took on Charles Dickens in *Fagin the Jew*, challenging most characterizations in *Oliver Twist* that stereotyped Jews. In Eisner's version of events, Fagin, who is in prison awaiting the hangman, confronts Dickens and demands a recasting of his characters without the prejudice in the novel. "A Jew is not Fagin," he tells the author, "any more than a Gentile is Sikes!" another character in the story. Eisner's *Last Day in Vietnam*, a collection of the military battle stories he wrote in Korea and Vietnam, was issued in 2005. His last work, *The Plot: The Secret Story of the Protocols of the Elders of Zion*, provided a graphic history of one of the most notorious works in the pantheon of antisemitism.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**EISS, ALEXANDER VON** (1832–1921), Austro-Hungarian soldier. Born in Piesling, Moravia, Eiss joined the army in 1848 and took part in Austria's wars against Italy (1849), France and Italy (1859), and Prussia and Italy (1866). He was one of the first Jewish officers to receive many decorations for heroism. Eiss was proud of his Jewish identity and fought more than 30 duels over insults to his people. In 1866 he was awarded the Order of the Iron Crown, which conferred hereditary knighthood upon him. After the conquest of Bosnia, Eiss was awarded the Order of Maria Theresa, after having rejected it years earlier when it entailed his conversion to Christianity. In 1896, after becoming a major-general, he retired from the army and became almost blind. He sometimes appeared in his general's uniform at Zionist meetings in Vienna. His proud Jewish stance brought him to the attention of Herzl, who made him responsible for administering the central organ of the Zionist Organization, *Die Welt*. Later, he also headed the Vienna office of the Jewish National Fund. Also his three sons became officers in the army; two of them fell in World War I.

**BIBLIOGRAPHY:** N. Agmon (Bistritzky) (ed.), *Megillat ha-Adamah*, 2 (1951), 56; H. Gold (ed.), *Die Juden und Judengemeinden Maehrens* (1929), 468. **ADD. BIBLIOGRAPHY:** E.A. Schmedl, *Juden in der k. (u.) k. Armee 1788–1918* (1989); I. Deák, *A Social and Political History of the Habsburg Officer Corps 1848–1918* (1990).

[Mordechai Kaplan]

**°EISSFELDT, OTTO** (1887–1973), German Lutheran Bible scholar. From 1913 to 1921 he was *privatdocent* in Berlin, and from 1921, professor in Halle (Saale). In his two principal fields, literary criticism and the history of religion, he was decisively influenced by his teachers Smend, with whom he stud-

ied at Goettingen, and Baudissin, who taught him in Berlin. (At Goettingen he studied with Wellhausen as well.) Following Smend, Eissfeldt postulated instead of Wellhausen's oldest Hexateuch source, J, two originally independent sources, J<sup>1</sup> and J<sup>2</sup>, or L (Lay source) and J, and also the continuation of the Hexateuch sources beyond Joshua (*Hexateuch-Synopse*, 1922; *Die Quellen des Richterbuches*, "The Sources of the Book of Judges," 1925; *Die aeltesten Traditionen Israels*, 1950; *Die Genesis der Genesis*, 1958). His comprehensive *Einleitung in das Alte Testament* (1934, 1964<sup>3</sup>; Eng. trans., *The Old Testament, An Introduction*, 1965) strives to preserve the heritage of Gunkel, being concerned with the smallest preliterary units and their "Situation in Life" (*Sitz im Leben*). Eissfeldt's inaugural lecture "Jahwe and Baal" given in Berlin (1914) prefigured the development of his work in the history of religion, which, to begin with, followed in the footsteps of Baudissin (the publication of his *Kyrios*, 1929); he concerned himself with numerous problems and figures in the Canaanite-Phoenician religion (*Der Gott Bethel*, 1930; *Der Gott Thabor*, 1934; *Molk als Opferbegriff im Punischen und Hebraeischen* ("Molek as a Sacrificial Term in Hebrew and Punic"), 1935; *Der Gott Karmel*, 1953), and after the discoveries at Ras Shamra the specific study of their Ugaritic manifestations (*Ras Shamra und Sanchunaton*, 1939; *El im ugaritischen Pantheon*, 1951). His chief aim was to arrive at a better understanding of the religion of the Israelites (*Baalsamen und Jahwe*, 1939; *Jahwe Zebaoth*, 1950; *El and Yahwe*, 1956; *Adonis und Adona*, 1970). He edited the *Handbuch zum Alten Testament* and, together with A. Alt, the third edition of R. Kittel's *Biblia Hebraica*. Many of his shorter articles were collected in *Kleine Schriften* (5 vols., 1962 ff.).

**ADD. BIBLIOGRAPHY:** G. Wallis, *DB*, 1, 327.

[Rudolf Smend]

**EISSLER, KURT R.** (1908–1999), psychoanalyst. Born in Vienna, Eissler worked at the Vienna Psychoanalytic Institute under August Eichhorn and applied his training to juvenile delinquents. When the Nazis took over Austria, he left Vienna and settled in the United States. On the basis of his Viennese experience he edited and contributed to the book *Searchlights on Delinquency* (1949). Eissler was the first analyst who in 1943 broke away from tradition and treated schizophrenics. He wrote *Limitations to Psychotherapy of Schizophrenics* (1943). His action at that time was considered a bold step and he attempted in his book *Objective Criteria of Recovery from Neuropsychiatric Disorders* (1947) to introduce research methods into this area of psychotherapy. Later he began research into the psychodynamics of dying. His wide scholarship was evident in works like *Goethe, a Psychoanalytic Study* (1963), *Leonardo da Vinci: Psychoanalytic Notes on the Enigma* (1961), and *Freud and the Seduction Theory: A Brief Love Affair* (2001). His wife, Ruth Eissler, also trained at the Vienna Psychoanalytic Institute, was known for her work with children.

**BIBLIOGRAPHY:** A. Grinstein, *Index of Psychoanalytic Writings*, 1 (1956), 435–7; 6 (1964), 3135–36.

[Miriam Gay]

**EITAN, RAPHAEL** (“**Raful**”; 1929–2004), Israeli soldier, 11<sup>th</sup> chief of staff of the IDF. Eitan was born in Israel and began his military career as an officer in the \*Palmah and was wounded in the battle for Jerusalem during the War of Independence.

In the 1956 Sinai Campaign he was one of the first to parachute into the Mitla Pass, and took a prominent part in the campaign in Sinai during the Six-Day War. He commanded the Israeli commando force which raided Beirut airport in 1968 and was later appointed chief infantry and paratroop officer. During the Yom Kippur War his unit played a key role in stemming the Syrian attack and advanced to within 25 miles of Damascus.

In 1978 he was appointed chief of staff in succession to Lt.-General Mordecai (“Motta”) \*Gur, taking up his appointment in April. During his service as chief of staff he initiated the “Raful Youth” project, a special program for youth from underprivileged backgrounds. In his position as chief of staff he commanded the Israeli forces in the 1982 Lebanon War. In 1983 he was criticized by the \*Kahan Commission – established to investigate the causes of the killing by Phalangist forces of Palestinians in the refugee camps of Sabra and Shatilla in west Beirut – for failure to try to prevent the massacre, but was not dismissed since his term as chief of staff was by then nearly over.

In 1983 Eitan formed the Tzomet political party, which united with the ultra-right-wing Tehiyah party before the elections for the Eleventh Knesset in 1984. He was elected to the Eleventh on the joint slate and to the Twelfth Knesset in 1988 with Tzomet running independently, having split with Tehiyah. Tzomet contested the 1992 elections on a hawkish, anti-religious platform and won eight seats, making it the fourth largest party in the Knesset; it remained in the opposition rather than join Yitzhak Rabin’s Labor-led coalition. He was elected again to the Knesset in the 1996 elections, running on the combined \*Likud-Gesher-Tzomet ticket, and was appointed minister of agriculture and environment and deputy prime minister in the \*Netanyahu government. His influence on government policy was minimal, and as a result he lost public support. In 1998 he announced his candidacy for prime minister, but withdrew later on. In the 1999 elections, Tzomet failed to win any seats and as a consequence Eitan retired from political and public life. He drowned in November 2004 when he was swept off a breakwater in Ashdod port on a stormy day.

[Fern Lee Seckbach / Rohan Saxena and Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**EITINGER, LEO S.** (1912–1996), psychiatrist and pioneer researcher in psychotraumatology. Born in Lomnice, Czechoslovakia, and graduating from medical school in 1937, Eitinger fled from the Nazis in 1939 and came to Norway as a refugee with a Nansen passport. He was given permission to work as a resident in psychiatry in Norway until the Nazi occupation of Norway in 1940. In 1942 he was deported to Auschwitz together with the Norwegian Jews and was one of the very few to survive. After the war he returned to Norway, where he

specialized in psychiatry. Eitinger wrote his doctoral thesis on “*Psykiatriske undersøkelser blant flyktninger i Norge*” (“Psychiatric Examination among Refugees in Norway,” 1958). In 1954 Eitinger was awarded the King’s Gold Medal for his study of the influence of military life on young Norwegian men’s mental health. He is regarded as one of the founders of victimology, the study of the effects of aggression upon the victim. After spending a year in Israel (1961–62) examining survivors of concentration camps, he published *Concentration Camp Survivors in Norway and Israel* (1964). This work, together with “Mortality and Morbidity after Excessive Stress” (1973), were his greatest achievements. He described a “concentration camp syndrome” comprising anxiety and depression in the survivors. He ascribed this to physical trauma. Eitinger, professor of psychiatry at Oslo University, was president of the Norwegian Psychiatric Association from 1963 to 1967. In 1966 he became head of the University Psychiatric Clinic. As professor emeritus, Leo Eitinger continued his research and writing uninterrupted. He was awarded the World Veterans Federation’s Prize in 1995 for his unrelenting work for war veterans. He was also appointed Commander of the Royal Norwegian St. Olav Order, an award given to him by the king of Norway for his great contribution to medical science. He and his wife, Lisl Eitinger, devoted their lives to the promotion of human rights and the fight against injustice and racism. In this spirit they established the University of Oslo’s Human Rights Award, the Lisl and Leo Eitinger Prize.

**BIBLIOGRAPHY:** L. Weisaeth, *Echoes of the Holocaust*, 5 (July 1997).

[Inger-Lise Grusd / Lynn Claire Feinberg (2<sup>nd</sup> ed.)]

**EITINGON, MAX** (1881–1943), psychoanalyst. Born in Mohilev, Russia, Eitington was raised in Leipzig, Germany, where his parents settled. He studied philosophy, first in Heidelberg and then in Marburg, where he was a pupil of Hermann \*Cohen. However, he subsequently moved to the study of medicine, and qualified as a physician at Zurich in 1909. There he joined the group of psychiatrists headed by Bleuler and Jung, who tried to give Sigmund \*Freud’s theories a broader basis by applying them to psychiatric diseases. While still a medical student in 1907, Eitington went to Vienna, where (as Freud himself disclosed) he was the first foreign visitor to study psychoanalysis at its source. Later he settled in Berlin. During World War I he served in the Austrian medical corps, and his encounter with war neuroses induced him to establish clinics for psychoanalytical treatment. In 1919 he was appointed a member of the so-called “Committee” – a small inner circle at the heart of the psychoanalytical movement. In 1920, together with Karl \*Abraham and E. Simmel, he founded the Berlin Psychoanalytic Polyclinic to provide treatment for the underprivileged and to establish a program for the teaching of psychoanalysis. This Polyclinic was in 1924 registered as the Berlin Institute for Psychoanalysis, and became the model on which later institutes were based. Eitington was elected president of the International Psychoanalytical Association

at the Innsbruck congress in 1927. He chaired three later congresses and resigned only in 1932. After the rise of the Nazis, Eitingon immigrated to Jerusalem. In 1933 he founded the Palestine Psychoanalytical Society and a year later he established the Psychoanalytical Institute (subsequently named in his memory), of which he remained the head until his death. His move to Palestine was a natural consequence of his lifelong interest in and devotion to Zionism. He placed the Psychoanalytical Institute, as well as his own experience, at the disposal of Youth Aliyah.

[Heinrich Zwi Winnik]

**EIZENBERG, JULIE** (1964– ), U.S. architect; president and founder of the architectural firm Koning Eizenberg Architects, Inc., a California corporation established in 1981 and based in Santa Monica. The vice president is Hendrick Koning. This husband-and-wife team is known in the U.S. and Australia for its imaginative, site-specific, and people-oriented approach. Both principals hold degrees in architecture from the University of Melbourne, Australia, and the University of California, Los Angeles. The firm has a reputation for its creative thinking. The postmodern approach to design results in buildings with clear, clean, straight lines applied to a variety of commercial, retail, hotel, and residential premises. The firm is also known for designing affordable housing, schools, and community buildings. Its long list of honors includes awards for such buildings as the Simone Hotel, the first new single-room occupancy to be built in Los Angeles in 30 years. This hotel, built in the “skid row” neighborhood, won the National AIA Honor Award in 1994 for providing subtle changes in the usual plans for low-cost housing. They planned especially for the safety, comfort, and dignity of the occupants. Good lighting in the rooms, kitchen, and lounges provided a cheerful atmosphere. The firm also won the national competition in 2001 for the design of two new schools for the Chicago Public Schools and for the Pittsburgh Children’s Museum expansion in 2000. Julie Eizenberg has lectured widely in the United States and Australia. She was the William Henry Bishop Visiting Professor at Yale University in 2004. Later projects in Los Angeles include the downtown LA Standard, 5<sup>th</sup> Street Family Housing, P.S. 1 Elementary School expansion, RAD Clothing, the Avalon Hotel, and the 25<sup>th</sup> Street Studio.

[Betty R. Rubenstein (2<sup>nd</sup> ed.)]

**EIZENSTAT, STUART** (1943– ), U.S. government adviser and special envoy and mediator for Holocaust property claims. Eizenstat was born in Chicago, Illinois, grew up in Atlanta, graduated with honors in political science from the Univer-

sity of North Carolina (1964), and received a law degree from Harvard Law School (1967). After law school, he worked in the Johnson White House as a staff aide and, in 1968, as the research director for Hubert Humphrey’s presidential campaign. In 1969, he clerked for Justice Newell Edenfield of the U.S. District Court of Georgia, and in 1970, he joined the Atlanta law firm Powell, Goldstein, Frazier, and Murphy. He continued his interest in politics in 1976, joining the Jimmy Carter presidential campaign as policy and issues director, and subsequently served as domestic policy advisor in the Carter White House. At that time, he was an anomaly in public life, a high-ranking practicing Jew whose children attended Jewish school. President Carter honored Eizenstat’s religious Jewish commitment by attending a Passover *seder* in his home. Since then, religiously committed American Jews have been quite comfortable in government service, comfortable as Americans and as observant Jews.

As domestic policy advisor, Eizenstat’s Jewish commitment and knowledge of the Holocaust influenced two major decisions. He was instrumental in recommending the establishment of the President’s Commission on the Holocaust, which led to the establishment of the United States Holocaust Memorial Museum, and in providing shelter in the United States for Iranian Jews, Bahais, and Christians who were fleeing Ayatollah Khomeini’s regime in Iran in 1979. Eizenstat succeeded in establishing a special visitor’s visa, which would expire only when the Shah of Iran was returned to power. This served as a measure to protect some 50,000 Iranian Jews, almost all of whom are American citizens today.

With the defeat of President Carter, Eizenstat resumed private legal practice in 1980 and also served as an adjunct lecturer at the Kennedy School of Government at Harvard University and a guest scholar at the Brookings Institution. In 1993, he returned to public service, holding several high-profile positions in the Clinton Administration. He first was named U.S. ambassador to the European Union. While serving as ambassador, he was asked to assume the role of the State Department’s special envoy for property claims in Central and Eastern Europe. In 1996, Eizenstat was named under secretary for international trade at the U.S. Department of Commerce and continued his role as special envoy for property claims. Eizenstat was asked to investigate U.S. and Allied efforts to recover billions of dollars of gold stolen by the Nazis from the central banks of the conquered countries and from Holocaust victims. Eleven U.S. government agencies participated; the report documented the complicity of the Swiss National Bank in converting looted gold into hard currency for the Nazis, the centrality of Switzerland to the Nazi economic effort, the inadequacies of U.S. postwar policies, and the inadequacy of reparations from the Allied nations to victims.

After moving to the State Department in 1997 as under secretary for economic, business, and agricultural affairs, Eizenstat became more immersed in the reparations issues, as Congressional hearings (led by Sen. \*D’Amato, R-NY) continued and U.S. class action lawsuits against three major Swiss

banks seized the world's attention. The United States government stepped up its involvement: Eizenstat was now deputy secretary of the U.S. Treasury and became the lead U.S. mediator not just in the class action lawsuits against the Swiss banks but in negotiations between Jewish organizations, such as the World Jewish Congress and the World Jewish Restitution Organization, and the governments and companies of Germany, Austria, and France. In his book, *Imperfect Justice: Looted Assets, Slave Labor, and the Unfinished Business of World War II*, Eizenstat recounts his efforts, which led to the disclosure of more than 20,000 dormant accounts in Swiss banks; \$8 billion in class action settlements against private Swiss, German, Austrian, and French companies and their governments; the negotiation with 40 countries of the Washington Principles on Art regarding the return of looted works of art; and – most importantly – the emergence of truth about the large-scale theft of property and the financial methods the Nazis used to sustain their war effort.

[Lisa Lubick-Daniel (2<sup>nd</sup> ed.)]

**EKRON** (Heb. עֶקְרוֹן), one of the capital cities of the Philistine Pentapolis. According to the Bible, Joshua allotted it to the tribe of Dan on its northeastern border with Judah (Josh. 15:11, 45–46; 19:43), and Judges 1:18 relates that it was captured by the tribe of Judah. In Joshua 13:3, however, and all later sources, Ekron appears as one of the five cities of the Philistine confederation. After the Ark of the Covenant, which was captured at Eben-Ezer, had brought misfortune to the Philistine cities that received it, the people of Ekron refused to admit it and proposed returning it to Israelite territory (1 Sam. 5:1ff.; 6:16–17). Cities in the region of Ekron and Gath were restored to Israel by Samuel (1 Sam. 7:14). In the story of David and Goliath, the Israelites pursued the Philistines to “the gates of Ekron” (1 Sam. 17:52). In the ninth century messengers of King Ahaziah of Israel consulted “Baal Zebub, the god of Ekron,” receiving a stern rebuke from Elijah (11 Kings 1:2–16). Amos (1:6–8) reprimanded Ekron and its sister cities for their slave trade and threatened it with destruction as did Jeremiah (25:20) and Zephaniah (2:4) in King Josiah's time (640–609 B.C.E.). Zephaniah threatened Ekron with being “rooted up” (תִּעְקַר), a play on words.

The siege of 'amqar(r)una (Ekron), which took place in 712 B.C.E., was depicted on a wall relief in the palace of Sargon II at Khorsabad. Sennacherib captured Ekron in 701 B.C.E. during his suppression of the rebellion led by King Hezekiah of Judah. According to Sennacherib's Royal Annals, Padi, king of Ekron, who was loyal to Assyria, was deposed by a part of the populace who handed him over to Hezekiah for imprisonment. Despite the help Ekron received from the Egyptians, Sennacherib took the city, executed the rebels, and forced Hezekiah to release Padi, whom he restored as ruler of the city. Padi also received territory taken from Judah. His successor, Ikausu, however, was not so fortunate and, together with Manasseh of Judah, paid heavy tribute to both Esarhaddon (particularly materials for the palace at Nineveh) and Ashur-

banipal during their campaigns against Syria, Egypt, and Cush, in the first half of the seventh century B.C.E.

In 147 B.C.E. Alexander Balas granted the city and its district to Jonathan the Hasmonean as a reward for his loyalty (1 Macc. 10:89; Jos., Antiq., 13:102). Eusebius describes it as “a very large Jewish village called Akkaron” (Onom. 29:9). Jerome situates it to the east of Azotus and Jamnia, mentioning also that some equated Accaron with Straton's Tower at Caesarea; similarly in the Talmud R. \*Abbahu mistakenly identifies Ekron with Caesarea (Meg. 6a). It is also mentioned in connection with a march by Baldwin I during the Crusades (c. 1200).

The biblical city of Ekron is now identified with Tel Migne (Khirbat al-Muqanna'), a large fortified mound (75 acres), situated 22 mi. southwest of Jerusalem on the frontier zone that once separated Philistia from Judah. J. Naveh was the first to identify Muqanna' with Ekron, correcting W.F. Albright who had suggested that it should be identified as biblical Eltekeh. Naveh's identification has been borne out by subsequent excavations at the site (14 seasons) that were undertaken between 1981 and 1996 by T. Dothan and S. Gitin on behalf of the W.F. Albright Institute of Archaeological Research and the Hebrew University. Apart from ceramic finds from the Chalcolithic and Early Bronze Ages, the earliest remains of a settlement at the site date from the Middle Bronze Age (MB II), including monumental platforms – the base of a fortifications rampart, and intramural burials. The Late Bronze Age settlement was apparently unfortified and restricted to the ten acres of the northeast acropolis/upper city, while the lower city was abandoned. Finds attest to links with Cyprus, the Aegean, and Anatolia, on the one hand, and Egypt, on the other. The final LB stratum was destroyed by fire.

Ekron saw a process of re-urbanization during the Iron Age I with the founding of the first Sea Peoples/Philistine city in the second quarter of the 12<sup>th</sup> century B.C.E. This fortified urban center, encompassing upper and lower cities, was characterized by a new material culture with Aegean affinities, including megaron-type buildings and local versions of Mycenaean (IIIC:1) wares. The Iron Age I city was destroyed in the first quarter of the tenth century B.C.E., either by the Egyptians (at the time of Pharaoh Siamun) or by the Israelites. The Iron Age IIA–B city (tenth–eighth centuries B.C.E.) was limited to the northeast acropolis/upper city. Following the Assyrian conquest in 701 B.C.E., when Ekron became an Assyrian vassal city-state, the city once again expanded encompassing the lower and upper cities and a new area of 25 acres to the north of the site. During the Iron Age II period, when the Aegean affinities of the Philistine material culture had ceased to exist, the Philistines themselves did not disappear but underwent a process of acculturation. Nevertheless, throughout this period the Philistines were able to maintain their ethnic identity. Excavations have shown that in the seventh century B.C.E. Ekron achieved its zenith of economic growth, with the largest industrial center for the mass production of olive oil yet known from antiquity. Seventh century

Ekron also produced a unique temple with a royal dedicatory inscription dating from the second quarter of the seventh century B.C.E. This inscription refers to two kings of Ekron who are also attested in the Neo-Assyrian annals, namely Padi and his son Ikausu, the builder of the temple, and identifies the site as Ekron. The city was substantially destroyed by fire at the time of the campaign of the Neo-Babylonian Nebuchadnezzar (604 B.C.E.). Although it was partially resettled in the sixth century B.C.E., the mound was largely abandoned with only very few remains surviving from later periods.

**ELAD** (Heb. עֵלָד), urban community with municipal council status. It is located in the center of Israel, 2.5 mi. (4 km.) south of \*Rosh ha-Ayin and occupying an area of about 1 sq. mi. (2.7 sq. km.). The town was geared to a religious population, mainly ultra-Orthodox Jews. The first settlers arrived in 1998. In 2002 its population was 15,100, about half 15 and under in age. Earnings in the town were about half the national average. An educational complex and industrial area were planned for the town's center.

[Shaked Gilboa (2<sup>nd</sup> ed.)]

**ELAH** (Heb. אֵלָח; 9<sup>th</sup> century B.C.E.), king of Israel in the period coinciding with the reign of King Asa of Judah; son of \*Baasha. According to 1 Kings 16:8, Elah reigned two years (c. 883–882 B.C.E.); however, in effect it was only a few months (a short time before and a short time after the official New Year's day). Elah was murdered, while in a state of intoxication, by \*Zimri, the captain of half his chariot force, in the house of Arza, who was Elah's steward, in the capital city Tirzah

(*ibid.* 9–10). The murder of Elah was apparently connected with the army's dissatisfaction over his indifference to the renewed campaign against the Philistines near Gibbethon. This campaign was undertaken as a continuation of the efforts of \*Nadab son of Jeroboam to ensure the security of the south-western border of the kingdom (*ibid.* 16; cf. 15:27).

**EL AL** (Heb. "Skyward"), the State of Israel's national airline; founded in November 1948. Its original mission was to facilitate the transportation of Jewish immigrants. Using surplus World War II aircraft – DC-4 Skymasters and C-46 Curtiss Commandos – and manned by volunteers from various parts of the world, it played a decisive role in rescuing Jewish communities in the Middle East. By 1949, however, El Al was flying scheduled routes between Israel and Rome and Paris. In the following year, it obtained the more modern Constellations, and with four of these planes routes were extended to include Athens, Vienna, Zurich, London, Nairobi, Johannesburg, and New York. Shortly afterward, Istanbul, Brussels, Amsterdam, Teheran, Frankfurt, Munich, and Copenhagen were added. By 1996, it served 50 intercontinental destinations including Cairo, Beijing, and New Delhi as well as nine cities in the U.S. In December 1957, El Al was the world's second air carrier to employ turboprops (four Bristol Britannias) for transcontinental service, and in January 1961 it procured three Boeing 707–420 intercontinental jet airliners. In June 1961 it inaugurated the first nonstop service between New York and Tel Aviv – then one of the world's longest nonstop scheduled commercial flights. El Al rapidly expanded its fleet to keep pace with the increasing development of tourism. By the mid-1960s it had two Boeing 720 B intermediate range jets, three standard intercontinental 707s, and two powerful 707–320 Bs; it leased additional jet planes as required. In February 1969 an eighth plane was added and later in the year the airline acquired its first 320 C mixed cargo-passenger plane. Development plans included the acquisition of Boeing 747 Jumbo jets and two Boeing supersonic airliners. In 2004 the company had 28 Boeing aircraft: five 747–200s, four 747–400s, three 737–700/800s, six 767s, six 757s, and four 777–200s.

The majority shareholder in El Al is the Israeli government. Nearly all training is carried out at the company's headquarters at Lydda (Lod) Airport. All food served aboard its aircraft is *kasher*. The airliner does not fly on Saturdays, the Jewish Sabbath. However, its subsidiary, Sundor, a charter airline company, works seven days a week. Sundor was established in 1977 for low-cost flights. In 2003 El Al employed more than 3,000 workers and had 77 offices all over the world. It flew to 40 direct destinations, and to many others by share agreements with several other aircraft companies. It carried over 1.3 million people a year and its annual turnover was about \$1.2 billion. Sundor carried 250,000 passengers during the years 2001–4 in two 757–200 aircraft.

After the Six-Day War, El Al became a target for one of the Arab terrorist organizations, the People's Front for the Lib-

eration of Palestine. A Boeing 707 was hijacked to Algeria in July 1968 but was later returned to Israel. In December 1968, an El Al plane was attacked on the ground at Athens airport and one passenger killed, and an attack on another at Zurich in February 1969 resulted in the death of one of the crew. A hijacking attempt in 1970 was foiled by the crew. A Constellation, straying off course, was shot down over Bulgaria in 1955 (all passengers were killed and Bulgaria later paid compensation).

El Al played a crucial role during the 1991 Persian Gulf conflict, acting as Israel's sole airliner with the world when all other airlines had ceased flying to Israel. It also played a vital role in the 1990s in bringing Russian and Ethiopian immigrants to Israel. In the last two decades of the 20<sup>th</sup> century, the company faced serious economic problems. The government began privatization in 2003, issuing stock to the public. In 2004 the company showed a profit due to its increased share in both passenger and cargo flights.

[Arnold Sherman / Shaked Gilboa (2<sup>nd</sup> ed.)]

**ELAM** (Heb. עֵילָם, *eylam*; Elamite *halhatamti*; Akk. *Elamtu*), region on the edge of the southwestern part of the Iranian plateau, modern Khuzistan, including the river valley around Susa and the highlands beyond. In Elamite Elam may mean “the lord-country,” but in Mesopotamian languages it was understood as “The Heights.” The word Elam probably derives from the Elamite, relying on a popular etymology in Akkadian relating it to *elû*, “high.” In classical sources it is referred to as Susiana, from Susa (Heb. שׁוּשָׁן, *Shūshan*), the capital of Elam.

### History

Elam was closely connected with Mesopotamia, serving as a source of its raw materials, wood, stone, and metals and as the route for precious metals and stones like lapis lazuli, the blue stone prized by the Mesopotamians, which were brought from as far away as Afghanistan. The Elamites also raided the valleys of the Diyala and the Tigris, and, according to the Sumerian King List, the Awan dynasty, the most ancient royal dynasty in Elam, ruled Sumer for a time. There is a poorly understood treaty between the Akkadian ruler Naram-Sin and an Elamite ruler from around 2200 B.C.E. In the 21<sup>st</sup> century B.C.E., the kings of the third dynasty of Ur in Mesopotamia annexed Elam, and Susa became a seat of Sumerian governors.

At the beginning of the 19<sup>th</sup> century B.C.E., an independent Elamite royal dynasty reigned in Anshan in the uplands and Susa on the plain. Elam exerted a widespread influence, and trading expeditions carried raw materials from Elam as far as Hazor in Canaan. In the middle of the 18<sup>th</sup> century B.C.E., Elam was consolidated under the rule of Kutir-Nahhunte I, whose reign coincided with the later years of \*Hammurapi of Babylon and with the reign of Hammurapi's son, Samsu-iluna.

From about this time on, and throughout the whole period, Babylonian influence is evidenced by the use of Akkadian as the written language of economic and cultural life.

During this period three rulers held power in Elam at one and the same time: the highest ruler, called in Sumerian the “Grand Regent” (Sumerian *sukkal-mah*), and two others, who were his sons, one ruling the highlands and the other the Susiana plain. The manner in which authority was divided among the three is not clear. But the rulers of Elam were members of one family, and succession to the throne was matrilineal. The old idea that one of the rulers was a nephew should be discarded. One of the son's mothers was the regent's sister, indicating a way of keeping power within the family that to moderns looks incestuous but must not have been seen as incestuous to Elamites.

Almost nothing is known about the history of Elam during the 17<sup>th</sup>-15<sup>th</sup> centuries B.C.E., but it appears to have suffered greatly from the migrations of the peoples who descended upon the Babylonian plain from the Zagros mountains. Elam rose to prominence again at the beginning of the 13<sup>th</sup> century B.C.E. The most famous king of that period was Untash-napirisha, who reigned during the first half of the 13<sup>th</sup> century and built his capital, Dur-Untash, the modern Tchoga Zambil (“Basket Hill”), 25 mi. (40 km.) southeast of Susa. Here was found the best preserved ziggurat, or temple tower, in all of the ancient Near East, still 82 ft. (25 m.) tall. The Elamite language and pantheon became more popular around Susa in the period. Untash-Napirisha honored both the lowland god Inshushinak and the highland god Napirisha in his temple complex.

The consolidation and rise of Elam in the 12<sup>th</sup> century B.C.E. coincided with the decline of Babylon during the rule of the last kings of the Kassite dynasty. The Elamites made several raids into Babylonia, plundered Sippar and its temples, and brought as booty to Susa royal monuments including the stele of the Code of Hammurapi now in the Louvre Museum. In 1159 B.C.E. the Elamites seized the city of Babylon itself and captured the statue of Marduk, its god, and snuffed out the long-lived Kassite dynasty. Elam's military ascendancy ended, however, with the renewal of Babylonian power during the reign of Nebuchadnezzar I (1125–1104 B.C.E.), who defeated the Elamites, captured Susa, and brought the statue of Marduk back to Babylon.

The decline of Elam was rapid and there are no further records of its history until the eighth century B.C.E. During this, the last period of Elam's history as an independent state, the Elamites joined forces with the Chaldean tribes in their wars against Sargon and Sennacherib, kings of Assyria, until their final defeat by Assurbanipal (669–627 B.C.E.), who devastated Elam. In a series of bloody battles (647–646 B.C.E.), the Assyrians razed most of the cities of Elam, especially Susa, deliberately desecrating its holy places, and destroying the temple of Inshushinak.

There were attempts at the beginning of the Neo-Babylonian period to rebuild Elam, but they were never totally suc-

successful. After the fall of the Assyrian Empire (612–610 B.C.E.), Elam was incorporated into the greater kingdom of Media; and after the defeat of Astyages, king of Media, by Cyrus, the Persian king, it became an integral part of his empire. Cyrus even called himself “King of Anshan,” thus adopting the ancient title of the Elamite rulers (see \*Cyrus). In the administrative division of the Persian Empire, Elam became the satrapy of Uja, Huja, or Huvja (whence Huz, in Middle Persian, and modern Khuzistan). Susa was rebuilt with magnificent palaces, and became a capital city of the Persian monarchs, second only to Persepolis. The Elamite language continued as the second language after Persian and equal with Akkadian in the royal inscriptions of the kings of Persia. The name Elam was still used in 1 Maccabees 6:1 (Elymais, Ἐλυμαίτις, attacked by Antiochus IV Epiphanes) and by Greek and Roman writers (Elamitai, Ἐλαμίται, Acts 2:9).

### Language

The Elamite language does not fall into any linguistic group known today. It can be divided into three strata: (1) Old Elamite (last quarter of the third millennium B.C.E.); (2) Middle Elamite (13<sup>th</sup>–7<sup>th</sup> cent. B.C.E.), the major stratum; and (3) Achaemenid Elamite (6<sup>th</sup>–4<sup>th</sup> cent. B.C.E.), known mainly from the bilingual and trilingual inscriptions of the Persian kings and archival texts from Persepolis.

Achaemenid Elamite was deciphered in the second half of the 19<sup>th</sup> century, and since the beginning of the 20<sup>th</sup> century great progress has been made in the understanding of Middle Elamite. Nevertheless, knowledge of the language remains imperfect; and particularly in the scantily documented older strata much is still obscure.

### Scripts

The most ancient Elamite script is pictographic “proto-Elamite,” employed at the beginning of the third millennium B.C.E., which has not yet been deciphered. A linear script which developed from it in the second half of the third millennium B.C.E. is still being worked out. During the reign of the kings of \*Akkad (24<sup>th</sup>–23<sup>rd</sup> cent. B.C.E.), the ancient scripts of Elam were superseded by the Mesopotamian cuneiform writing, which, adapted to the needs of the Elamite language, was from then on the only one in which it was written.

### In the Bible

Elam, located at the edge of the eastern border of the biblical world, is mentioned only a few times in the Bible. In the “Table of Nations” Elam is listed with the sons of Shem (Gen. 10:22; 1 Chron. 1:17), since from a geographic point of view it was apparently considered part of the Mesopotamian world. The odd narrative of Genesis 14 mentions \*Chedorlaomer, king of Elam – sometimes identified with Kutir-Nahhunte (around 1750 B.C.E. or the later one around 1200) – as head of an alliance with two other kings, those of Shinar and Goiim, meaning probably Babylonia and the Hittites.

In the “Prophecies Against the Nations” in Isaiah and Jeremiah, Elam is mentioned, together with Media, as one of the

“Peoples of the North” who would destroy Babylon (Isa. 21:2; Jer. 25:25). The only prophecy that may be related directly to a specific event in the history of Elam is Jeremiah 49:34–39, perhaps about Nebuchadnezzar’s encounter with Elam in his ninth year (596/5 B.C.E.). According to Ezra 4:9–10, Elamites were deported to Northern Israel in the aftermath of the Assyrian king Assurbanipal’s victory in the 640s, and thus constituted part of the peoples Jews later regarded as Samaritan non-Jews. In Isaiah 11:11 Elam is seen as a place of exile, in Ezekiel 32:24 as a typical foreign nation, and in Dan 8:2 as a site of a vision. Elam also appears as a personal name among returnees from exile, but also as a clan of Benjamin in 1 Chronicles 8:24.

[Hayim Tadmor / Daniel C. Snell (2<sup>nd</sup> ed.)]

**EL-AMARNA**, modern name of the site of Akhetaton, the capital city of Egypt, founded by Amenophis-Amenhotep IV (\*Akhenaton), the “heretical” pharaoh of the 18<sup>th</sup> Dynasty (14<sup>th</sup> cent. B.C.E.). On this site was discovered the El-Amarna archive.

### El-Amarna Letters

The El-Amarna Letters comprise a collection of cuneiform tablets named after al-‘Amārna, a plain on the east bank of the Nile about 190 mi. (304 km.) S. of Cairo, in the territory of the Beni-‘Amrān, or ‘Amārna, tribe. (Though often referred to as Tell ‘Amārna, or Tell el-‘Amārna, the location is not a tell, or mound.) Amarna was the site of the Egyptian capital, Akhetaton, for about 15 years around the middle of the 14<sup>th</sup> century B.C.E.; here, in 1887, through the chance discovery of a peasant, a part of the diplomatic correspondence in the royal archives was unearthed. The clandestine explorations of the natives which followed, and the later scientific excavations (1889–92, 1912–14, 1921–22, 1926–36), yielded about 355 letters – some might be better classified as lists (of gifts) – besides more than 20 other cuneiform documents (scribal exercises, vocabularies, mythological and epical texts). The entire Amarna (cuneiform) corpus numbers 379 tablets. Though incomplete and lacking nos. 359–379, the standard edition, with transliteration of the cuneiform and a German translation, remains that of the Norwegian scholar J.A. Knudtzon, *Die el-Amarna Tafeln* (1915 = EA; for nos. 359–379 and other translations, see bibl.). An authoritative annotated French translation by W. Moran appeared in 1987 followed by a revised English version by the same author in 1992.

With only three exceptions (EA 24, Hur 32, Hittite), the letters are all written in Akkadian, the lingua franca of the ancient Near East in the second millennium B.C.E. In general,

the language belongs to the “peripheral Akkadian” found at Nuzi, Alalakh, Ugarit, etc. Eloquent and moving as it may be at times, it lacks all elegance; it is awkward, often barbarous, betraying the scribes’ ignorance not only of Akkadian but of their own native speech. This is especially true of the letters from Phoenicia and Palestine, and for this reason they are one of the most important sources for the early Canaanite language (and therefore for the background of biblical Hebrew). From the glosses to Akkadian words, the non-Akkadian morphemes, the non-Akkadian use of morphemes common to the two languages, and the syntax in these letters, it is possible to reconstruct much of the Canaanite grammar in this period.

The Amarna letters are also an invaluable historical source. Together with contemporary Ugaritic and Hittite documents and other Egyptian records, they make the two decades or so which they cover the best known in the early history of Syria and Palestine. They span, in absolute dates, around 1385/1375–1355 B.C.E.: about the last decade of the reign of Amenophis III, the 17-year reign of Amenophis IV, and the three or four years before Tutankhaten (Tutankhamun), to whom EA 9 is addressed, abandoned the capital. (The difference of a decade in estimating the period is due to the still very mooted question of the co-regency of Amenophis IV with his father and predecessor; according as one accepts or denies a co-regency, the chronology of the Amarna letters must be lowered or raised.) Some (at least nine) of the letters, which are probably copies of the originals, have a pharaoh as author; the rest were written outside Egypt, and, with few exceptions, are addressed to the pharaoh or, less commonly, to a high Egyptian official at court. The correspondents are the kings of major states (Babylonia, Assyria, Mitanni in northern Mesopotamia, Hatti and Arzawa in Anatolia, Cyprus) and Egyptian vassals in Syria and Palestine. The letters (41) to and from the larger powers are in striking contrast with the vassals’ correspondence, and hardly hint at the political situation which motivates so many of them. According to the custom of independent nations at peace, their majesties exchange messages of mutual friendship, which are carried by their emissaries and accompanied by gifts; often their principal concern is the discussion and working out of marriages, a conventional bond of international amity. Were it not for the vassals’ letters and other contemporary sources it would be impossible to measure the real significance of the efforts of Tushratta of Mitanni to reestablish diplomatic relations with Amenophis III (EA 17) and to maintain them with his successor (EA 26); of his passing reference to a victory over the Hittites (EA 17); of the presence of Assyrians at the Egyptian court (EA 15–16), with its implications of rising Assyrian power (cf. EA 9:31–35) and Mitannian weakness; of the murder of Babylonian merchants in Palestine (EA 8); of the reported request of the Canaanites for Babylonian support in a rebellion against Egypt (EA 9), etc. The general impression these letters give is one of legendary Egyptian wealth in an era of relative peace and political stability.

This impression is dispelled by the remaining Amarna letters. The vassals from Tyre across to Damascus and northward were caught, directly or indirectly, in the struggle of the Mitanni to defend their control of northern Syria and even their own independence, and of the Egyptians to maintain their rule in the rest of Syria, against their common enemy, the resurgent Hittites under Suppiluliuma. Though their letters to the pharaoh are all filled with protests of unswerving loyalty, it is evident from the accusations against their fellow vassals that many of them were exploiting the situation to secure and expand their own power while toadying to both sides and avoiding for as long as possible an irrevocable commitment to one or the other. Most prominent in this group of letters, and most successful in this game of intrigue, sedition, and popular and palace revolts, were Abdi-ashirta and his sons, particularly Aziru, who made of Amurru an important minor state in central Syria east of the Orontes. The almost 70 letters of Rib-Adda of Byblos are a long, increasingly nervous denunciation of their advances along the coast and of Egyptian inaction. The latter is probably to be attributed, in part at least, to the tendency of the vassals’ accusations to cancel each other out; but it is also likely that the court felt Egyptian interests would be safeguarded best by a strong Amurru as a buffer against the Hittite thrust. Events proved Rib-Adda right: like so many of his neighbors (Ugarit, Kadesh, etc.), Aziru became a Hittite vassal.

In Palestine the situation reflected by the vassals’ letters, if less dire in its consequences for Egyptian rule, was not less chaotic. The letters reflect the same rivalries of the local rulers, the same charges against one another of perfidy, and the same signs of deep popular unrest. These petty kings are constantly at war with one another, plundering and seizing villages, at times forming small coalitions against a common enemy, which soon break up, regroup, and exchange the roles of enemies and allies. In central Palestine, in the struggles involving Gezer, Megiddo, Taanach, Acre, Jerusalem, Lachish, and (perhaps) Hebron, the main instigators were the rulers of Shechem, Lab’ayu and his sons, who in a movement comparable to that in contemporary Amurru, attempted to expand their city-state into a territorial state, with one important objective being the possession of the fertile Plain of Esdraelon. The local Egyptian administration, when not corrupt and supporting treason, was apparently really concerned only with the payment of tribute and with a few other Egyptian interests like the provisions for troops moving northward, and this policy seems to have had the court’s approval.

[William L. Moran]

**EL-ARISH** (Ar. العريش, *al-ʿArīsh*), town on the Mediterranean  
coast of the Sinai Peninsula, near where Wadi al-ʿArīsh (the  
biblical Naḥal Mizrayim; see Brook of \*Egypt) reaches the sea.  
It was Sinai's principal center through most historic periods  
due to a number of geographical assets: loess soil present in  
patches along Wadi al-ʿArīsh and, on other stretches, loess

hidden beneath a thin cover of coarse, porous sand allowing  
seepage of rainwater to the subsoil; an average yearly rainfall  
of more than 100 mm. (4 in.) which exceeds that of the rest  
of Sinai; an enrichment of its water supply by underground  
seepage and by seasonal surface flow in Wadi al-ʿArīsh; land  
communications leading to the east and west along the ancient  
*Via Maris* (sea road) and to the south, southwest, and south-  
east along the course of the wadi; and anchoring facilities on  
the beach near the wadi mouth. From the first century, it was  
known as a trade center by the name Rhinokoroura. Josephus  
mentions the town as part of Judea (Ant. 13:395) and Titus pre-  
pared his march on Palestine there (Wars 4:662). Until 1895 El-  
Arish served as the border town between Egypt and Palestine.  
Rabbi Judah \*al-Ḥarizi passed through El-Arīsh in 1218 but  
does not mention any Jews who might have been there.

### El-Arīsh Project

In the early 20<sup>th</sup> century, El-Arīsh and its region were sparsely  
settled. At that time, Davis \*Trietsch proposed the El-Arīsh  
project for northern Sinai as one of several alternatives for  
Jewish settlement in the Middle East. On the basis of \*Herzl's  
meeting in 1902 with Joseph \*Chamberlain, the area, including  
the Pelusian Plain, was designated to become an autonomous  
Jewish settlement sponsored by the British government. Lord  
Cromer, then the British consul-general in Egypt, requested  
that a commission of experts explore the region on the pros-  
pects of settlement and its findings were positive. Nevertheless,  
the Egyptian government, on Cromer's insistence, rejected the  
report, declaring itself unable to allocate water from the Nile  
for the settlement's irrigation needs. Cromer's refusal came in  
spite of Herzl's efforts to rescue the scheme by reducing the  
project's scope to the El-Arīsh vicinity and renouncing appro-  
priation of Nile waters for development.

### From 1948

During the Israel War of Independence (1948), an Israeli army  
unit under Operation Ayin temporarily took up positions just  
south of El-Arīsh (December 1948). In the \*Sinai Campaign,  
El-Arīsh fell to Israeli forces on Oct. 31, 1956, and was evacu-  
ated by them, according to the UN's request, in February 1957.  
In the \*Six-Day War it was taken by an Israeli column on June  
6, 1967, and remained under Israeli administration. Under the  
terms of Israel's peace agreement with Egypt, El-Arīsh was re-  
turned to Egypt.

After World War 1, the town expanded gradually, num-  
bering 7,000 inhabitants in 1932 and, according to Egyptian  
sources, 22,000 in 1956 and 45,000 in 1967. In the census con-  
ducted by Israel in August 1967, El-Arīsh had a population of  
29,973. The date-palm groves near the seashore continue to  
constitute an important economic branch. Sea fishing and  
trapping of quails are additional sources of income. Since  
the 1950s, plantations of rhicinus bushes have gained ground  
in the area between El-Arīsh and Rafiah (Rafah) and rhici-  
nus oil is produced in a factory in the town. Under Egyptian  
rule, administrative services to the Sinai Peninsula and espe-  
cially services to the Egyptian army became important in El-

Arish's economy, although more recently tourism, based on new hotels and general development, seems to be its main source of income.

**ELASA (Eleasah, Alasa)**, a town north of Jerusalem near Beth-Horon. Judah \*Maccabee encamped there before his last battle against \*Bacchides, whose army was at \*Beeroth, and was killed nearby in the fighting (1 Macc. 9:5–18). Some scholars read Hādasha (Adasa) instead of Elasa. The town was apparently named after Eleasah, a descendant of Benjamin (1 Chron. 2:39–40; 8:37; 9:43). It is identified with Khirbat al-Ishshī, southwest of al-Bira.

**ELASAH** (Heb. אֱלֶסָה; “God has made”), son of \*Shaphan, and one of Zedekiah's emissaries to Nebuchadnezzar, who brought the letter written by Jeremiah to the elders in exile (Jer. 29:3). Elasa was a member of one of the most influential pro-Babylonian families in the last years of the Kingdom of Judah. Shaphan, his father, was the scribe of Josiah (11 Kings 22:3ff.; et al.). His brother \*Ahikam was one of the men sent by King Josiah to the prophetess Huldah (11 Kings 22:12, 14; 11 Chron. 34:20). His other brother \*Jaazaniah is mentioned in Ezekiel 8:11 among the elders of Jerusalem.

**BIBLIOGRAPHY:** Yeivin, in: *Tarbiz*, 12 (1940/41), 257–8.

**ELATH** (in modern Israel, **Eilat**; Heb. אֵילַת, אֵילֹת, אֵילֹת), ancient harbor town in Transjordan at the northern end of the Red Sea near \*Ezion-Geber. Elath is first mentioned in the account of the Israelites' wanderings in the desert during the Exodus (Deut. 2:8). Solomon built a “navy of ships” at Ezion-Geber beside Elath; from there it sailed to Ophir manned by his servants and those of Hiram, king of Tyre (1 Kings 9:26; 1 Chron. 8:17). Later Uzziah (Azariah), king of Judah (785–733 B.C.E.), rebuilt Elath restoring it as the port of Judah on the Red Sea (11 Kings 14:22) but after his reign Judahite control of the Negev ceased. In the Hellenistic period it served for a time as a Ptolemaic port called Berenice (Jos., *Ant.*, 8:163) and it is later mentioned as a Nabatean port (renamed Aila) from which an important commercial highway led to Gaza (Strabo, *Geography*, 16:2, 30; Pliny, *Naturalis Historia*, 5:12). Aila continued to be a major commercial and military port in Roman and Byzantine times. In the third century the Tenth Legion, together with its headquarters, was transferred there from Jerusalem and it was thereafter a key point

in the Byzantine defense system in the south of the country. The Jewish population in the neighborhood of Aila was augmented by Jewish tribes expelled from Arabia by Muhammad during whose time the Muslims gained control of the town, which was called in Arabic \*Akaba. A Jewish community continued to exist there until the middle of the tenth century and possibly until the Crusader period. In 1116 Baldwin I, king of Jerusalem, captured the port; the fleet of Reynaud de Chatillon sailed from there to harass Arab maritime trade in the Red Sea. Saladin, who brought the Crusaders' rule to an end in 1170, erected a fortress at Akaba. By the 14<sup>th</sup> century the town was almost completely deserted and only under Turkish rule was an attempt made to develop it. The ancient site of Elath with remains from the Nabatean, Roman, Byzantine, and medieval periods has been located north of Akaba.

[Michael Avi-Yonah]

### Modern Eilat

Modern Eilat is 3 mi. (5 km.) west of \*Akaba along the coast. The site, a wasteland bearing the Arabic name Umm Rashrash, was included in the future Jewish state in the UN partition plan of 1947. In fact, it was occupied by Israel forces on March 13, 1949, in the bloodless “Operation *Uvdah*” (“Established Fact”), which was the last military move in the \*War of Independence. A first step in establishing a civilian settlement was made in December 1949 when members of Ha-Kibbutz ha-Me'uhad set up a temporary camp on the Eilat shore. They transferred their settlement in 1962 about 2 mi. (3 km.) further north, where it became kibbutz Eilat. The first water pipeline was laid in 1952 to Eilat to take water from the \*Be'er Orah and \*Yotvatah wells which, however, are strongly saline (1,500 mg. chlorine content per liter and with a strong magnesium content). In the ensuing years, the first dwellings were built. By December 1952 Eilat received local council status. As long as the Straits of Tiran were closed to Israel-bound shipping, Eilat's growth was extremely slow (275 inhabitants in 1953, 520 in 1956). A few services to excursionists, experimental coastal fishing, and mineral exploration provided the inhabitants' principal occupations. The turning point came with the opening of the straits in the \*Sinai Campaign (1956). Two months later, Eilat's population increased to 926 inhabitants. In view of its outstanding importance for Israel's development, Eilat was given city status in March 1959, although it had only 3,500 inhabitants, still far from the 20,000 population mark which in Israel normally warrants the accordance of this status. In 1963, the population rose to 7,000, and by 1968 reached 12,100, 80% veteran Israelis or Israel-born and the rest immigrants who were less than five years in the country. In the mid-1990s, Eilat's population reached 33,300 and by the end of 2002 it was already 42,100, spread over an area of 30 sq. mi. (80 sq. km.). Eilat's town planning, taking the local topography into account, endeavored to direct most of the city's living quarters to the hills rising at a short distance from the beach, to altitudes of 100–400 m. above sea level, where the climate is slightly cooler than on the shore. The many narrow gorges

cutting through the hilly area make planning and communications difficult.

The renewed blockade of the Tiran Straits in May 1967 by Egypt threatened Eilat's existence and future as Israel's gateway to East Africa, South and East Asia, and Australia. That move led to the \*Six-Day War, in which the Egyptian plan (according to documents found in Sinai) to cut off the city from the interior of Israel by pushing through to Jordanian territory in the Aravah Valley was foiled by Israel's victory, which subsequently accelerated Eilat's progress. From time to time in the period following June 1967, Arab saboteurs made attempts to attack Eilat despite the Jordanian government's fear that Israel's countermeasures against Jordan's only port, Akaba, would constitute an incomparably heavier blow for Jordan.

Great efforts were directed to creating the city's infrastructure. In 1957 the Eilat–Mizpeh Ramon–Beersheba road was built, and opened to traffic in January 1958. In 1967, the Eilat–Sedom highway was put into use. In 1969, construction began on the road leading from Eilat southward to Sharm el-Sheikh. With the sea bottom sloping steeply from the Eilat shore, port building there is relatively easy. From 1957 the original anchorage was repeatedly enlarged to cope with the mounting sea cargo traffic, and an oil port was installed in the southwest of the city. A new port was built at an investment of IL 20,000,000 (about \$ 5,700,000) and opened in 1964; in 1968, it employed 500 laborers and handled approximately 1,000,000 tons of import and export goods. Mineral exports (potash, phosphates, copper) through Eilat amounted to 110,000 tons in 1966/67. Because of Eilat's distance from Israel's central sectors, air communications are vital. The Elath airfield, situated just east of the city, was enlarged, and in 1969 10–12 daily flights (operated by Arkia Company) connected Eilat with Tel Aviv and Jerusalem. The city's water shortage was gradually reduced by seawater desalination. An experimental plant employing the freezing method, developed by Alexander \*Zarchin, was closed down after a few years of operation. In 1965, a thermal distillation plant was opened, which simultaneously supplied electricity to the town; its daily capacity was 4,000 m<sup>3</sup> (over a million gallons) of practically salt-free water which, when blended with brackish spring water, made the latter potable. In 1970 another plant was opened with a capacity of 2,000 m<sup>3</sup> (c. half a million gallons) a day.

Air conditioning is an absolute necessity in the Eilat climate and the local "desert cooler," which is relatively inexpensive to operate, reduces the temperature, and increases air humidity, was gradually introduced in all buildings in the city. The first 16 in. oil pipeline connecting Eilat with Haifa was laid in 1958/59. Work on the large 42 in. pipeline from Eilat to Ashkelon began in 1968 and was finished in 1970. A decisive factor in Eilat's economic life were the \*Timna Copper Works, which in 1968 employed 1,000 workers, nearly all residing in Eilat. However, in 1975 they were closed due to economic difficulties. Local industry, mostly small and medium-size enterprises, included branches connected with the local building trade, several jewelry workshops (for processing the

malachite "Eilat stone"), diamond-polishing plants, fish processing, metal products, and gypsum. Tourism and recreation always constituted one of the major branches in Eilat's economy. In 1968, Eilat had a marine museum and a modern art museum, municipal libraries, a concert and lecture hall, and an amphitheater. In 1970 the city's hotels had 2,000 beds; at the turn of the 20<sup>th</sup> century around 11,000 in five hotels, with considerable income derived from tourist services. Tourism was the main reason for the great Eilat shoreline project, providing for a number of artificial lagoons and land tongues. To encourage tourism further, the city received a VAT exemption in 1985. One of the city's tourist attractions is the coral reef in the Gulf of Elath where the diversified marine species of the Red Sea can be observed. Every year Eilat hosts two major cultural events: a jazz festival and a classical music festival with international participation.

**ELATH (Epstein), ELIAHU** (1903–1990), Israeli diplomat and Arabist. Born in Snovsk, Russia, Elath was active in the Zionist movement in Russia before settling in Palestine in 1924. He worked as a laborer in a number of settlements for a few years, meanwhile making a special study of the Bedouin. From 1934 to 1945 he was director of the Middle East section in the Jewish Agency's Political Department. As head of the Agency's Political Office in Washington, D.C., during 1945–48, Elath received the U.S. government recognition of the State of Israel in May 1948. With the de facto recognition of Israel he was appointed special representative of the Provisional Council of the Government of Israel, and from 1949 Israeli ambassador to Washington. From 1950 to 1959 he was ambassador in London. He served as president of the Hebrew University (1962–68) and chairman of the board of governors of the Afro-Asian Institute (1959–62). His books include *Ha-Bedu'im* (1933); *Ukhlosei Ever ha-Yarden ve-Hayyeihem* (1936); *Haj Amin al-Husseini* (Heb., 1968); *San Francisco Diary* (Heb., 1971); *Shivat Ziyyon ve-Arav* ("The Return to Zion and the Arabs," 1974) which deals with the contacts made between the Zionist and Arab leaders and the attempts to arrive at an understanding with them before the establishment of the State; *The Struggle for Statehood: Washington 1945–1948* (Heb., 3 vols., 1979–82).

**BIBLIOGRAPHY:** D. Lazar, *Rashim be-Yisrael*, 1 (1953), 185–91.

[Benjamin Jaffe]

**ELAZAR, DANIEL J.** (1934–1999), political scientist. Elazar was born in Minneapolis and received his M.A. and Ph.D. from the University of Chicago. He was appointed professor

of political science at Temple University in Philadelphia, where he founded and directed the Center for the Study of Federalism. A leading authority on the subject, he was a founding president of the International Association for Federal Studies. Elazar divided his time between the U.S. and Israel, where he was professor of intergovernmental relations at Bar-Ilan University. And, as founder and president of the Jerusalem Center for Public Affairs, he headed the major independent Jewish think tank concerned with seeking solutions to the pivotal problems facing Israel and world Jewry.

In 1986 he was appointed by President Reagan to be a member of the U.S. Advisory Commission on Intergovernmental Relations and was reappointed in 1991 by President Bush. He was secretary of the American Political Science Association and served as consultant to many federal, state, and local agencies, including the U.S. Departments of Education, Health and Human Services, and Housing and Urban Development, the National Governors' Association, the Education Commission of the States, and the Pennsylvania Science and Technology Commission, as well as to the governments of Israel, Canada, Cyprus, Italy, South Africa, and Spain.

Elazar was recognized as an expert on Jewish community organization worldwide, on the Jewish political tradition, and on Israel's government and politics. He was a consultant to the Israeli government, the Jewish Agency, the World Zionist Organization, the City of Jerusalem, and to most major Jewish organizations in the U.S. and Canada, Europe, South Africa, and Australia. Taking a leadership role in numerous local and national Jewish organizations, he was chairman of the Israel Political Science Association, a member of various consultative bodies of the Israeli government, active in the World Sephardi Federation, president of the American Sephardi Federation, and served on the International Council of Yad Vashem.

Elazar wrote or edited more than 60 books and many other publications, including *Community and Polity: The Organizational Dynamics of American Jewry* (1976), an in-depth study of the American Jewish community and its institutions; *People and Polity, The Organizational Dynamics of World Jewry* (1989), a study of the communities and institutions of World Jewry; *Israel: Building a New Society* (1986); *A Double Bond: The Constitutional Documents of American Jewry* (1992); *Israel at the Polls, 1992* (1994); *The Conservative Movement in Judaism: Dilemmas and Opportunities* (with R.M. Geffen, 2000); and *Israel at the Polls, 1999* (2001). Some of his books have sought a solution to the Israel-Palestinian problem based on federal principles. He was the founder and editor of *Publius*, the journal of Federalism, and the editor of the *Jewish Political Studies Review*. Together with his brother, David H. Elazar, he published *A Classification System for Libraries of Judaica*.

[Yitzhak Kerem / Ruth Beloff (2<sup>nd</sup> ed.)]

**ELAZAR, DAVID** ("Dado"; 1925–1976), Israeli soldier. Elazar was born in Sarajevo, Yugoslavia, and came to Israel in

1940, joining kibbutz Sha'ar ha-Amakim. In 1946 he became a member of the \*Palmaḥ and during the War of Independence carried out reconnaissance in Syria. In 1948 he was appointed company commander of the Harel Brigade and led the forces which broke through to the Old City of Jerusalem via the Zion Gate in May of that year.

He studied economics and Middle Eastern studies at the Hebrew University of Jerusalem. After the Sinai Campaign, in which he commanded the infantry brigade which fought in Gaza, he was transferred to the Armored Corps, and in 1961 succeeded General Ḥaim Bar-Lev as its commander, being promoted to the rank of major-general in 1962. In November 1964 Elazar was appointed o.c. Northern Command and was responsible for the capture of the Golan Heights in the Six-Day War. In 1969 he was appointed chief of the General Staff Branch, and in November 1971, chief of staff and promoted to the rank of lieutenant-general.

Following the publication of the interim report of the Agranat Commission on the \*Yom Kippur War, which was published early in 1974 and recommended that his term of office be terminated, Elazar submitted his resignation. Many felt he had been made a scapegoat for Israel's failures in the war. He was subsequently appointed head of the Zim Shipping Company.

A biography of Elazar, *Dado*, by Hanoch \*Bartov, appeared in 1978.

**ELAZAR, YA'AKOV** (1912–2002), last of a generation of Sephardi historians and personalities who lived through the course of the 20<sup>th</sup> century in the Ottoman, British, and Israeli periods and were active in the Sephardi life of Jerusalem. He was the last authority on active Sephardi life in Jerusalem, his death at the age of 90 symbolizing the end of an era.

A descendant of the Salonikan Elazar rabbinic family which moved to Jerusalem in 1878 and the Abulafia family of Tiberias on his mother's side, he lived and breathed the Sephardi life of Jerusalem. He was one of the younger members of the He-Ḥalutz ha-Mizrachi movement. From 1931 to 1936, he taught Hebrew in the revived Sephardi Jewish community of Hebron. He was elected to Va'ad ha-Kehillah in Jerusalem (1937), and the Asefat ha-Nivḥarim of the *yishuv* (1944). On "Black Saturday" (June 29, 1946), after 700 leaders of the Jewish *yishuv* were arrested, he gathered some 3,000 people in Jerusalem within hours for prayer and public protest against the British authorities.

He spoke the Jerusalemite Judeo-Spanish dialect, was an active researcher and authority on the Sephardim of the Old City of Jerusalem and the Sephardi courtyards, and was active in the Sephardi community of Jerusalem. His books include *Diyyur ve-Klitaḥ be-Yishuv ha-Yashan 1842–1919*, *Ḥazerot Bi-Yrushalayim ha-Atikah*, and *Yamei Avra: Ha-Shevitaḥ ha-Aravit April–Oktobor 1936*. He wrote about the Erez Israel Sephardi chief rabbis, the *Rishonei le-Ziyyon*, and advocated that the younger generation know and follow their teachings. He received *semikhah* for *sheḥitaḥ* from Chief Rabbi Jacob \*Meir

and published a bibliography of him in 1997, feeling that his former teacher was already forgotten.

As a Jerusalem Street Names Committee member, he proposed names of past Sephardi figures for streets. He received the distinction *Yakir Yerushalayim* and is buried in the section of prominent Jerusalemites in the Har Menuhot cemetery in Jerusalem. He was the uncle of the American Sephardi leader and political scientist Daniel \*Elazar and a cousin of Israel Defense Forces Chief of Staff David \*Elazar.

[Yitzhak Kerem (2<sup>nd</sup> ed.)]

**ELAZARI-VOLCANI (Wilkansky), YIZHAK** (1880–1955), agronomist and one of the planners of agricultural settlement in Erez Israel, brother of Meir Wilkansky. Born at Eisiskes, near Vilna, Elazari-Volcani studied at European universities and in 1908 immigrated to Erez Israel, where he managed the farm settlements of Ben Shemen and Huldah (1909–18). He was an active member of the Ha-Po'el ha-Za'ir party, which he represented at Zionist Congresses and in Zionist institutions. In 1921, he set up the experimental agricultural station of the Zionist Executive (today the Agricultural Research Station) and ran it until his retirement in 1951. He was one of the founders of the Institute for Agricultural Studies of the Hebrew University at Rehovot, which later became the university's faculty of agriculture. In 1938, he was appointed professor of agricultural economics, and held various public and scientific posts connected with agriculture.

Volcani was also a prolific writer and polemicist. His first writings were published in David \*Frischmann's journal *Ha-Dor* and he later contributed to J.H. \*Brenner's *Ha-Meorer*. Under the name of "E. Ziyoni," he was also one of the main contributors to Ha-Po'el ha-Zair from its foundation. He was the first to give a positive evaluation of Baron de Rothschild's settlement scheme, and contended that it laid healthy foundations for the continuation of Jewish settlement in Erez Israel. He also wrote literary studies and plays (under the pseudonym I. Avuyah). He published several books on agricultural subjects, settlement, etc. His collected articles on agriculture and other topics were published in ten volumes.

His brother, MEIR WILKANSKY (Elazari-Volcani) (1882–1949), Hebrew author, was born in Eisiskes, and immigrated to Erez Israel in 1904. He first worked as an agricultural laborer; between 1908 and 1918, he was secretary of the \*Palestine Office and, from 1918 until his retirement in 1942, head of the Palestine Land Development Company. Wilkansky was one of the first writers to depict the life of the pioneers of the Second Aliyah in Hebrew fiction. His stories include "Be'er Hafarnu," "Bahar," and "Yom Avodati ha-Rishon." His books include *Sippurim me-Hayyei ha-Arez* (1918), *Ba-Heder* (1934), *Bi-Ymei ha-Aliyyah* (1935), *Mi-Gal el Gal* (1943), and *Senuniyyot* (1963). He translated two of Goethe's works, *Die Leiden des jungen Werthers* and *Dichtung und Wahrheit* (Yefet series, 1911–12), and published two statistical pamphlets on Jewish settlement in Palestine (1918–19). Meir's son, RAANAN VOLCANI (1910–2002), became associate professor of animal hus-

bandry at the agricultural faculty of the Hebrew University in 1960 and head of the Husbandry Department of the National and University Institute of Agriculture at Rehovot.

[Getzel Kressel]

**ELBAZ**, North African family noted for its rabbis. The Elbaz family originally lived in Azzaouia, \*Morocco, from which it was expelled in 1668 by King Moulai Rashid along with 1,300 other families. They then settled in Fez and in Sefrou. Members of the family included MOSES BEN MAIMON \*ALBAZ OF TARRODANT, author of *Heikhal Kodesh*, a kabbalistic commentary to the prayer book (Amsterdam, 1653), SAMUEL BEN ISAAC, author of *Toledot Adam*, a brief history up to the burning of the books in Italy (Venice, 1585), JACOB, author of *Toledot Ya'akov*, sermons (Venice, 1609), and SAMUEL BEN ISAAC (1698–1749), talmudist and codifier, who was head of the *bet din* of Fez. He was a friend of Ḥayyim b. Moses Attar, who would make no legal decision without his consent. Samuel is the author of *Va-Yomer Shemu'el*, talmudic novellae (Casablanca, 1929); his other works are still in manuscript. Many of his decisions were published in Jacob Ibn Zur's *Mishpat u-Zedakah be-Ya'akov* (Alexandria, pt. 1, 1894; pt. 2, 1903). Some of his *piyyutim* are in manuscript at the Ben-Zvi Institute in Jerusalem (no. 2072). JUDAH (1770–1847) was a codifier who headed the *bet din* of Sefrou. Many of his decisions were published in *Avnei Shayish* (2 pts., Jerusalem, 1930–34), and in his son's *Hayyei Amram*. He was one of the major fundraisers for the *kolelim* in Erez Israel. His son AMRAM (1799–1857), codifier, judge, and poet, wrote *Hayyei Amram* (Meknes, 1949). Another son, SAMUEL (1790–1844), left behind a manuscript work on Rashi, *Ḥanokh la-Na'ar*. RAPHAEL MOSES (1823–1896), Samuel's son, was a talmudic scholar, kabbalist, poet, and scientist. He wrote many works, including *Halakhah le-Moshe*, responsa (Jerusalem, 1901); *Shir Ḥadash*, poems (Jerusalem, 1935); and *Eden mi-Kedem* (Fez, 1940). Still in manuscript are many of his writings, including *Kisse ha-Melakhim*, a history of ancient kings and of the Jews.

Elbaz, *Hayyei Amram* (1949), introduction.

[David Obadia]

**ELBERG, YEHUDA** (1912–2003), Yiddish journalist and novelist. Born in Zgierz, Poland, Elberg came from a rabbinical family and was ordained as a rabbi. He was a distant cousin of the literary \*Singer family. He began publishing stories and journalistic articles in Yiddish and Hebrew newspapers in 1932. His wartime activity involved smuggling people through

safe houses, and he himself avoided identification and deportation; he also took part in the Warsaw ghetto uprising. After the war he wrote as a correspondent for Israeli and American newspapers, and for the European Yiddish press.

Immigrating to New York via Paris, he began a lifelong friendship with Chaim \*Grade. In 1948 he arrived in New York and became active in Zionist causes. Shortly after the death of his first wife in 1955 he moved to Montreal, where he remained until his death.

Although he wrote belles lettres from the beginning of his career and published a book of short stories, *Unter Kuperne Himlen* ("Under Copper Skies"), in 1951, his greatest literary works came later in life. The novel *Afn Shpits fun a Mast* (*Ship of the Hunted*) appeared in 1974, followed in quick succession by five more novels and two collections of short stories between 1976 and 1987. His masterwork was the 1983 *Kalman Kalikes Imperye* (*The Empire of Kalman the Cripple*). In the 1990s he turned his attention to translating his work, publishing both *Ship of the Hunted* and *The Empire of Kalman the Cripple* in 1997. His short story "837" was made into a play and is frequently anthologized. These three works constitute his most important contributions to Yiddish literature. They have appeared in Spanish, Hebrew, French, and German as well as English. During the 1980s he won the Manger Prize and Israel's Prime Minister's Award for literature.

[Faith Jones (2<sup>nd</sup> ed.)]

**ELBLAG** (Ger. **Elbing**), a city near Gdansk (Danzig), Poland, from 1772 to 1945 in Germany. Jews were reported to have been burned there during the \*Black Death. There were no Jews living in Elblag after the first partition of Poland in 1772, but in 1783 Moses Simon was permitted to settle in the city and provide for visiting Jewish merchants, obtaining a trade license in 1800. There were 33 Jewish families in 1812 and 42 in 1816, all of whom had been granted the right of settlement despite opposition from the local merchants. The community opened a cemetery in 1811, an elementary school in 1823, and a synagogue and *mikveh* in 1824. A rabbi was engaged from 1879. In 1932 the community numbered 460 and maintained three charitable and five welfare organizations, and a school attended by 60 children. The synagogue was burned down by the Nazis on Nov. 10, 1938, and most of the homes and shops of the Jews there were looted. Part of the communal archives (1811–1936) are in the Central Archives for the History of the Jewish People in Jerusalem. There has not been an organized Jewish community in Elblag since World War II.

[Z'ev Wilhem Falk]

**ELBOGEN, ISMAR** (1874–1943), scholar, teacher, and public figure. Elbogen was born in Schildberg, Posen province, and studied at the Breslau Rabbinical Seminary. Israel \*Lewy, the famous Talmud critic, was the teacher who most influenced him. In 1899 he began teaching Jewish history and biblical exegesis at the Collegio Rabbinico Italiano in Florence. While in Italy he perfected his knowledge in Italian Jewish history and literature. In 1903 he joined the faculty of the Hochschule fuer die Wissenschaft des Judentums in Berlin, teaching many subjects and for many years was involved unofficially in directing the institution. He was involved in the organizational life of German Jews, heading important committees and commissions. In 1938, in the wake of Nazi persecution, Elbogen immigrated to New York. He was appointed research professor simultaneously at four institutions: Jewish Theological Seminary, Hebrew Union College, Jewish Institute of Religion, and Dropsie College.

His scholarly interests were chiefly in Jewish history and the history of Jewish liturgy. His major work, *Derjuedische Gottesdienst in seiner geschichtlichen Entwicklung* (1913<sup>3</sup>), is a comprehensive and important work on Jewish liturgy; it traces the history of the prayers said in the synagogue. His other works are devoted to Jewish history and are written in a popular style. His *Century of Jewish Life* (1944) was planned as a sequel to \*Graetz's history. Elbogen devoted his attention also to the history of \*Wissenschaft des Judentums and set forth a program for Jewish scholarship that, in addition to describing the Jewish past, would be a guide for the Jewish present and future. He was one of the editors for the periodical *Devir* (1923–24); *Germania Judaica* (2 vols., 1917–34); the jubilee edition of Moses Mendelssohn's collected works, of which only six volumes appeared (1929–32); *Zeitschrift fuer die Geschichte der Juden in Deutschland* (vols. 1–7, 1929–38); *Juedisches Lexikon* (4 vols. in 5, 1927–30); *Encyclopaedia Judaica* (vols. 1–9, 1928–34); *Eshkol* (2 vols., 1929–32); and *Universal Jewish Encyclopedia* (10 vols., 1939–43). He was an active participant in the Liberal movement in the German Jewish community. He took part in writing the Liberal prayer book for German Jews, *Tefillot le-Kol ha-Shanah: Gebetbuch fuer das ganze Jahr bearbeitet im Auftrage des Liberalen Kultus* (1932), which in the main reflects his spirit. He restored to the liturgy those prayers that had been removed by the reformers in their desire to eradicate the concept of Jewish peoplehood from the Jewish religion. He also wrote *Geschichte der Juden in Deutschland* (1935).

**BIBLIOGRAPHY:** R. Elbogen, in: *HJ*, 8 (1946), 69–94, a bibliography of I. Elbogen's writings; A. Marx, in: I. Elbogen, *Century of Jewish Life* (1944), xi–xx; M. Wiener, in: *HJ*, 6 (1944), 95–98; S.W. Baron, in: *JSS*, 6 (1944), 91–92; E. Rosenthal, in: *YLB1*, 8 (1963), 3–28; J.H. Kaplan, in: *CCARY*, 25 (1915), 403–13, a review of Elbogen's major work. **ADD. BIBLIOGRAPHY:** M.A. Meyer, *The Life and Thought of the Jewish Historian Ismar Elbogen* (2004).

**ELCAN, MARCUS** (c. 1757–1808), early settler of Richmond, Virginia. Elcan probably was born in Germany. He arrived

in Richmond by 1782, when his name appeared as witness to a deed, although he was listed as a member of Philadelphia's Mikveh Israel in the same year. A founder of Beth Shalome Congregation, Elcan was a successful merchant and highly respected citizen; his will provided an endowment of \$1,000 to the Richmond Charity School. A man of cultural attainments, he willed his considerable library of almost 200 volumes to Joseph Marx, a friend and one of his executors. Elcan's widow, Phila (c. 1760–1820), is buried in the cemetery of Touro Synagogue, Newport, Rhode Island.

**BIBLIOGRAPHY:** Rosenbloom, *Biog Dict*, 34.

[Saul Viener]

**ELCHE**, city on the east coast of Spain, near Alicante; important in the late Roman period. Greek inscriptions discovered in 1905 on a mosaic floor in Elche dating to some time between the third and fifth centuries are believed to refer to a synagogue. They seem to indicate that the community in Elche was organized along the same lines as other Jewish communities in Mediterranean countries. Nothing is known about the Jews in Elche under Muslim rule. After the capture of the city by James I of Aragon in 1263, Astruc \*Bonsenyor of Barcelona served as interpreter. Alfonso X of Castile granted land to Don Isaac ibn Wakar, the physician of Don Juan Manuel, in the neighborhood of Elche. A Jewish scribe was in charge of the office registers and taxes of the Muslim community there in 1308. In a document from 1314 dealing with a case between Muslims of Elche and a local Christian, a scribe had to translate Catalan passages into Arabic. Abraham al-Behbehi, the Jewish scribe, wrote the text in Judeo-Arabic, that is, in Arabic written in Hebrew characters. Apart from its linguistic interest, the document has great historical significance. It sheds light on the role Jews, experts in Arabic, played in a multicultural and multilingual society. Abraham b. Bahye farmed the taxes in Elche from 1381 to 1384. Nothing is known of the later fate of the community.

Hinojosa Montalvo, in: *Homenaje al Profesor Juan Torres Fontes*, vol. 1, (1987), 791–800; M. Guardia, in: M. Mentre (ed.), *L'art juif au Moyen Age*, (1988), 105–12.

[Haim Beinart / Yom Tov Assis (2<sup>nd</sup> ed.)]

**ELDAD (Scheib), ISRAEL** (1910–1996), Israeli underground leader, educator, geographer, writer, and translator from German; also known by his underground name and nom de plume Sambatyon. Eldad was born in Podvolochisk, in Eastern Galicia. In 1914 his family moved to Vilna, and finally settled in Lvov. He completed his studies at the rabbinical seminary in Vienna and studied for a doctorate in philosophy and history at the University of Vienna, writing his thesis on Schopenhauer. He returned to Poland to teach Jewish studies at the Jewish Teachers Seminary in Vilna. He was active in \*Be-

tar, and wrote literary and political articles for various Polish-Jewish publications in Yiddish. In 1938 he participated with Avraham \*Stern in the World Conference of Betar. Back in Vilna he and his wife lived with Menaḥem \*Begin's family.

In 1941 Eldad and his wife were allowed to leave Soviet-occupied Vilna and travel to Turkey, from which they then made their way to Palestine. In Palestine he taught Bible in Tel Aviv. He soon joined the leadership of the \*Leḥi underground, becoming its ideologue, and editor of its underground publications, the monthly *He-Ḥazit*, and the weekly *Ha-Ma'as*. After Avraham \*Stern was murdered by the British he became one of its triumvirate of leaders. In 1944 he was wounded in the back while trying to escape arrest by the British and was held in a prison hospital in Jerusalem, and later in the Latrun detention camp. In 1946 he managed to escape with the help of Leḥi members and continued his underground activities until the establishment of the State of Israel.

After the establishment of the State a breach occurred between the supporters of Nathan \*Yellin-Mor, who sought to establish a neo-socialist party, and Eldad's supporters, who took a right-wing, nationalist line and focused on extra-parliamentary activities. The political group that Eldad founded was called Ḥazit ha-Moledet, but after Count \*Bernadotte was assassinated in September 1948, the Israeli government declared the group to be illegal. Several of its members were detained while Eldad himself managed to escape detention. Eldad then started to publish a periodical called *Sulam*, which continued to appear until 1964. In *Sulam* he advocated Revisionist maximalism, according to which the goal of Zionism is a kingdom of Israel (*Malkhut Yisrael*), from the Nile and the Euphrates.

In the 1950s Eldad was frequently accused of incitement to violence and underground activities, but no concrete evidence was ever found. Upon orders from David \*Ben-Gurion as minister of defense Eldad was fired from his post as a high school teacher and was prohibited from teaching in the public school system. Even though the Supreme Court decided in his favor he could not find work as a teacher. Subsequently he established a students association called the Nationalist Cells and earned a living as a translator. Later on he became a lecturer in humanities at the Haifa Technion and Beersheba (now Ben-Gurion) University.

After the Six-Day War Eldad became a leading figure of the radical right and was one of the founders of the Greater Israel Movement. In the elections to the Seventh Knesset in 1969 he ran at the head of a list called Le-Erez Yisrael but failed to win a seat. In 1979 he was one of the founders of the Teḥiyya party with Geula \*Cohen but did not run for the Knesset.

Eldad published articles regularly in *Haaretz* and *Yedioth Aharonoth*.

His son, Arie Eldad, was elected to the Sixteenth Knesset, on the National Union list. Among his books are *Ma'aser Rishon* (1975<sup>3</sup>), memoirs of the underground, and *Hegyonot Mikra* (1984<sup>2</sup>) on the Bible.

**ADD. BIBLIOGRAPHY:** A. Amichal-Yavin, *Sambatyon: Ideology of the Mivhan Tamid (Biography of Dr. Yisrael Eldad)* (1995).

[Benjamin Jaffe / Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**ELDAD AND MEDAD** (Heb. **מְדָד, אֵלְדָד**), two of the elders (see \*Elder) chosen by Moses to assist him in governing the people following their protests about the inadequacy of their diet in the wilderness (Num. 11:26–27). Both names are based on the root *ydd*, “to love, be in love.” Thus, Eldad, “Beloved-of-El” and Medad, “Beloved.” In response to Moses’ complaint about the unbearable burden of administration placed upon his shoulders (verse 14), God commanded him to select 70 men known to him “as elders and officers of the people,” that is, from the traditional leadership, who would share the burden with him (verses 16–17). To enable them to perform their function, God endowed them with part of the spirit that had rested on Moses, whereupon they made ecstatic utterances. Eldad and Medad, who did not go out with the others to the Tent of Meeting, but remained in the camp, nevertheless also spoke in a state of \*ecstasy. When this was made known to Moses and Joshua, the latter suggested that they be restrained, but Moses answered him, “... Would that all the Lord’s people were prophets” (verses 26–29). Eldad and Medad are not otherwise identified or mentioned in the Bible.

#### In the *Aggadot*

The enigmatic appearance of the otherwise unknown Eldad and Medad as authors of an unrecorded prophecy (Num. 11:26ff.) provided a fertile field for aggadic interpretations. It appears that at least some of these are thinly disguised references to the conspiracy of R. Meir and R. Nathan against R. Simeon b. Gamaliel (Hor. 13b), an event which gave rise to many “biblical” *aggadot* (cf. A. Buechler, *Studies in Jewish History* (1956), 160–78). Thus, according to R. Simeon b. Yoḥai, Eldad and Medad, though chosen to be among the elders of Israel, considered themselves unworthy of such high dignity. Thereupon God said, “Because you have humbled yourselves, I will add to your greatness yet more greatness” (Sanh. 17a). Hence, unlike other prophets, they never ceased to prophesy, and they were granted additional advantages (Num. R. 15:19; Tanḥ. B., Num. 29). The moral of the story seems to be that R. Meir and R. Nathan should have humbled themselves instead of plotting against the patriarch. All the sources report that Eldad and Medad prophesied, “Moses shall die, and Joshua shall bring Israel into the (promised) land.” This prediction by the two prophets that the leader of Israel was to be replaced evidently alludes to the plan of the two rabbis to replace the patriarch. Other conjectures were that Eldad and Medad predicted the (imminent) arrival of the quails (cf. Num. 11:31) or else prophesied concerning Gog and Magog (Sanh. 17a; cf. Ezek. 38, 39). The latter suggestion was put forward by R. Naḥman who generally displayed a keen interest in messianic speculations (cf. Sanh. 96b–97a, 98b).

Joshua’s objection to prophesying by Eldad and Medad (Num. 11:28) was attributed either to the fact that it was unau-

thorized – a serious offense in rabbinic times – or to the nature of the prediction (Sanh. 17a). The restraint proposed by Joshua (**מְלָאִים**, *kela’em*) was interpreted by some as implying the imposition of public office which would cause them to “cease (or “perish”) of themselves” (*ibid.*), an unmistakable allusion to the ruinous burdens of the \*Boule office in the amoraic age. Earlier interpretations were even harsher: “Destroy them from the world,” or, according to R. Judah ha-Nasi (who many years after the plot against his father bore a grudge against R. Meir and R. Nathan (cf. Hor. 13b–14a)), “Chain them in bonds and fetters” (Sif. Num. 96).

While some late Midrashim make Eldad and Medad sons of Amram and half-brothers of Moses and Aaron, Targum Jonathan, Numbers 11:26, assigns their parentage to Jochebed and Elizaphan son of Parnach (Num. 34:25), whom she is supposed to have married during her temporary divorce from Amram. This strange Midrash may have been designed to counter in advance the charge against Moses’ marriage alliance with a Cushite woman (Num. 12:1) – who is in some sources identified with Zipporah (Targ. Jon., Num. 12:1; Sif. Num. 99 et al.) – whom he had married before the giving of the Torah. At that time, Jochebed, too, could have been divorced, remarried, and returned again to her first husband, Deuteronomy 24:4 notwithstanding. (It is noteworthy that the numerical value of the letters **פָּרְנַח** (*Parnach*) is identical with that of **עַמְרָם** (Amram); and **אֵלְיָצְפָן** (Elizaphan; “God has hidden”) is reminiscent of Jochebed’s hiding (**וַתִּצְפְּנֶהּ**, *va-tizpenehu*) of Moses, Ex. 2:2.) Other Midrashim (Num. R. 15:19; Tanḥ. B., Num. 29) identify Eldad and Medad with Elidad son of Chislon and Kemuel son of Shiptan (cf. Num. 34:21,24), due no doubt to the similarity or assonance of the names.

[Moses Aberbach]

**ELDAD HA-DANI** (late ninth century), traveler. His origins and personality remain a mystery. He professed to belong to the tribe of Dan, whence his name ha-Dani. Eldad claimed that the Danites together with the tribes of Naphtali, Gad, and Asher, while leading a nomadic existence, formed an independent kingdom under the rule of their king Addiel (or Uzziel). Their kingdom was in Havilah, the land of gold (cf. Gen. 2:11) near Ethiopia. The tribes, of whom the descendants of Samson and Delilah were outstanding for their valor, were constantly at war with their neighbors. Eldad also mentions the “sons of Moses,” who lived nearby but were cut off from the world by the \*Sambatyon, an impassable river of rolling stones and sand which stops only on the Sabbath when it is surrounded by fire or covered by a cloud. It is possible to see and speak with these “sons of Moses” but not to cross the river. Eldad relates how he and a companion of the tribe of Asher set out on a journey but were shipwrecked and fell into the hands of cannibals; his companion was eaten but he escaped a simi-

lar fate owing to an attack by other natives, fire worshipers, from whom he was eventually ransomed by a Jew of the tribe of Issachar. He further gives a colorful description of the Ten Tribes, their whereabouts and independent existence. Eldad's accounts are probably embroidered legends, based on Jewish rulers and kingdoms known to have existed: the Arabian king Joseph Dhu Nuwas (sixth century) of Ḥimyar who along with his subjects converted to Judaism; the Falashas (\*Beta Israel) in Ethiopia, who were possibly independent in the early Middle Ages; and the \*Khazar state, whose rulers along with many of their subjects converted to Judaism. His aim was probably to raise the spirits of the Jews by giving them news of tribes of Israel who lived in freedom and by creating an attractive Jewish utopia. The report of the existence of such Jewish kingdoms undoubtedly encouraged and comforted Eldad's hearers, by contradicting the Christian contention that Jewish independence had ceased after the destruction of the Second Temple. For the Jews his stories obviously had far-reaching messianic implications.

According to the 12<sup>th</sup>-century Karaite Judah \*Hadassi Eldad made two journeys, the first to Egypt, and the second to Africa. \*Zemaḥ b. Ḥayyim, *gaon* of Sura, writes that Eldad spoke to R. Isaac b. Mar and R. Simḥah in Babylonia. It seems therefore that Eldad was in the east before arriving in Kairouan (North Africa) about 880. In Africa Eldad conversed with Judah \*Ibn Quraysh. In 883 he sent a letter to the Jews of Spain and it appears from \*Ḥisdai ibn Shaprut's letter to the Khazar king that he also visited Spain.

The Jews of Kairouan consulted Zemaḥ Gaon about Eldad, especially concerning four *halakhot* of his on the laws concerning *sheḥitah* and *terefah*. The source of these laws is not known. While in parts there is some resemblance to Karaite laws, which caused certain scholars (Pinsker, Graetz) to conclude that he was a Karaite, most of the *halakhot* resemble the traditional talmudic law, both Babylonian and Jerusalem, although some Islamic influence seems discernible. The language shows traces of Arab usage. It is therefore probable that they reached Eldad from a country influenced by both the Arabic language and the Jerusalem Talmud.

Meir b. Baruch of Rothenburg and Abraham Ibn Ezra regarded Eldad as an impostor but his *halakhot*, even if mostly not accepted, were quoted by many of the outstanding scholars of the Middle Ages (Rashi, Asher b. Jehiel, the tosafists, et al.). Neither was he rejected by Zemaḥ Gaon, who stated that the possibility of different traditions existed. Eldad's accounts have been preserved in several versions. They first appeared in print in Mantua in 1480. Changes were made in several later editions in accordance with the manuscripts. Besides this there are also extant the *halakhot* sent from Kairouan to Zemaḥ Gaon (Constantinople, 1516).

[Azriel Shochat]

**ELDAR (Lederer), REUVEN** (1926– ), professor of medicine. Eldar was born in Osijek, Croatia, but raised in Novi Sad (Serbia), where he was active in the Zionist Ha-Shomer ha-Za'ir youth movement and the Maccabi Sports Club. Eldar immigrated to Israel in 1948. He studied in Jerusalem and then specialized in clinical neurology in London and New York. As a physician he was appointed chief medical officer of the Israel Defense Forces with the rank of brigadier general, serving for eight years. After his military career ended, he became director of Rambam Hospital in Haifa, followed by a WHO (World Health Organization) Mission to the Philippines. On his return in 1981, he joined the Faculty of Health Sciences at Ben-Gurion University in Beersheba. From 1986 until his retirement in 1992, Eldar was in charge of the Löwenstein Rehabilitation Center, Raanana. After his retirement he acted as a consultant to WHO on services for disabled persons and for the elderly, and completed another mission abroad, in war-torn Yugoslavia, advising on the rehabilitation of the wounded. Eldar served on the editorial board of several medical journals and published over 100 papers as well as the book *Quality of Medical Care* (in Croatian) in 2003.

**ELDER** (Heb. זָקֵן, *zaken*). In Israel, as among all other ancient peoples, the elder is not only a person of advanced age, but also a man of distinct social grade (cf. *šibum* in Akkadian, *senator* in Latin, *geron* in Greek, and *sheikh* in Arabic). The elders were the consulting body of the city, the nation, or the king respectively, and as such were considered “the wise” (cf. Ezek. 7:26 with Jer. 18:18). As a social institution, various types of elders are named: elders of a people (Israel, Judah, Moab, and Midian, Num. 22:4, 7; Egypt, Gen. 50:7); elders of an area (Gilead, Judg. 11:5–11); elders of a tribe (Deut. 31:28); elders of the Diaspora (Jer. 29:1); elders of the priests (11 Kings 19:2; Jer. 19:1); elders of the city (passim); and elders of the house (i.e., palace, Gen. 50:7; 11 Sam. 12:17). The most prominent are the elders of the people or the country and the elders of the city.

#### The Elders of the City

These elders represented their fellow citizens in local matters. Their functions are best exemplified by the pertinent laws of Deuteronomy. The city elders are involved in five laws: (1) blood redemption (19:12); (2) expiation of murder by an unknown culprit (21:3, 6); (3) the rebellious son (21:19); (4) defamation of a virgin (22:15); and (5) levirate (25:9). All these cases deal with protection of the family and local patriarchal interests. In the first, the elders tend to the appeasement of the murdered person's family by delivering the slayer into its hands; in the second, they see to it that their town atones for a homicide committed within its borders. In the next two in-

stances, the elders protect the family against a rebellious son and defend the family against defamation. In the last instance, the elders are concerned with preventing the extinction of a family in their town. No professional judgment is necessary in such cases: the elders preside over a case, whose consequences are clear beforehand. The same applies to Ruth 4:2ff., where the elders only confirm the act of levirate. In contrast, “the judges” in the laws of Deuteronomy have functions that are altogether different from those of the elders. The judges act in connection with disputes (19:17–18; 25:1–3) and controversies in the local courts (17:8ff.) that cannot be solved by the local patriarchal representatives, but need a higher and more objective judicial authority. Furthermore, disputes and controversies involve thorough investigation (cf. 19:18), which can be made only by qualified and professional people. These judges are nominated (cf. Deut. 16:19) in contradistinction to the elders, whose dignity is as a rule hereditary. In only one case in Deuteronomy do the elders act together with the judges: the case of the unknown murderer (21:1ff.). The elders of the town nearest the spot where the corpse was found have to perform the expiation rites on behalf of their town. In order to establish which town is nearest, the distances must be measured (see \**Eglah Arufah*). This has to be implemented by the judges and the elders of the country (21:2), i.e., by a higher authority. This case is important for an understanding of the composition of the courts in ancient Israel, especially since it has its antecedents in the judicial procedures of the other peoples in the ancient Near East. Among ancient Near Eastern peoples, a representative of the state joined the local authority (i.e., the elders) in order to settle disputes. In Mesopotamia the elders (*šibūtum*) cooperated with the mayor (*rabiānum* or *ḥazānum*), and in the Hittite state the commander of the garrison acted with the elders in settling disputes. In purely provincial matters, such as the returning of stray cattle, the elders themselves acted without resorting to government officials (Hittite Laws, para. 71). Only when investigation was involved was the case brought before a tribunal, which consisted of both state officials and elders. In ancient Israel, as in the Hittite state, the judges were associated or even identical with officers and military commanders (Ex. 18:21; Deut. 1:15). That the officer and the elder had much in common is evident from Isaiah 3:14, Ezra 10:8, et al. In 1 Kings 21:11, they act together (for the interchange of “noble” with “officer,” cf. Jer. 39:6 with 52:10; Jer. 27:20 with 11 Kings 24:14).

### The Elders of the People or Country

In the city-state, as it existed in Canaan, the elders of the city were identical with the elders of the state. In Israel, both before and during the monarchic period, the elders of the town and those of the people, country, and congregation operated separately. Matters that concerned the entire confederation or the nation were brought to the elders of the people, and after the division of the kingdom to the elders of Israel and Judah respectively, whereas the elders of the town dealt only with the local provincial problems (see above). It is not known how

the elders of the country were chosen, but it is possible that they were recruited from the city elders. One might argue that the monarchy had deprived the elders of their power and authority, but this was not the case. Even as powerful a king as Ahab had to consult “the elders of the land” before proclaiming war (1 Kings 20:7). It is needless to dwell here on the important role that the elders of Israel and Judah played at the time of David (11 Sam. 3:17; 5:3; 17:4, 15). The elders cooperated with Elisha against the king (11 Kings 6:32), and the elders of the land interfered in the trial of Jeremiah (Jer. 26:17). The “people of the land” or the “people of Judah,” who took action when the dynasty was at stake, seem to be identical with the elders of Judah.

The emergence of the elders has been explained in the Pentateuch etiologically. According to Exodus 18, it was Jethro who advised Moses to establish a judicial-social organ in order to help him judge the people. (In the desert setting of the narrative there was no distinction between the elders of the town and the elders of the congregation.) In Numbers 11, following Moses’ complaint that he cannot manage the people by himself, the Lord draws from some of the spirit of Moses and instills it in the 70 elders who are to assist him. In Deuteronomy 1:9ff., finally, Moses himself proposes that he pick men from the tribes in order to create the judicial body. These three traditions present different outlooks on the quality of the elder-judge in ancient Israel. In Exodus 18, the attributes of the chosen men are fear of God, trustworthiness, and honesty. In Numbers 11, it is the spirit of God, i.e., divine inspiration (cf. the judge in the period of the Judges, Judg. 3:10; 6:34; et al.), which makes a man a member of the elders’ council. In Deuteronomy 1, intellectual capacity (wisdom, understanding, and knowledge) makes a man fit to judge. The description in Deuteronomy is apparently the latest, since it reflects the aristocratic approach, which places wisdom at the top of the ladder of values (cf. e.g., Prov. 8:15–16; et al.).

### The Functions of the Elders of the People

The functions of the elders of the people were (1) to represent the people in the sacral covenant and in the proclamation of the law (Ex. 19:7; 24:1, 9; Deut. 27:1; 29:9; 31:9; Josh. 8:33; 24:1; cf. 11 Kings 23:1); (2) to appoint a leader or a king (1 Sam. 8:4; Judg. 11:5–11); (3) to proclaim war (Josh. 8:10; 11 Sam. 17:4–15; cf. 1 Kings 20:7); (4) to conduct political negotiations and make agreements (Ex. 3:16, 18; 4:29; Num. 16:25; 11 Sam. 3:17; 5:3); (5) to perform sacred ceremonies (Ex. 12:21; 18:12; Lev. 9:1; 1 Sam. 4:3; 1 Kings 8:1, 3; 1 Chron. 16:25); and (6) to act in times of national crisis (Ex. 17:5–6; Josh. 7:6; 1 Sam. 4:3; 1 Chron. 21:16). The elders held their meetings near the city gate (Deut. 21:19; 22:15; 25:7; Ruth 4:1ff.; Lam. 5:14), and more precisely in the square located next to the gate (Job 29:7). In the desert the assemblies were held “at the entrance of the Tent of Meeting” (see \**Congregation*). The place of the assembly had also been called “the threshing floor” (1 Kings 22:10), because of its smooth, stamped surface and its circular shape (cf. Sanh. 4:3). In texts from Ugarit, Danel the pious judge is presented

as sitting “before the gate, in the place of the mighty on the threshing floor” (Aqht A, v, lines 5ff., Pritchard, Texts, 151). Participation in the assembly of the elders was considered a great honor (Prov. 31:23; Job 29:7ff.), and appears as such also in Greek literature (*Iliad*, 1:490; 4:225; et al.).

[Moshe Weinfeld]

### In the Talmud

During the mishnaic period the name *zaken* (“elder”) was reserved for scholars, and particularly members of the Sanhedrin or *bet din*. The title was regarded as equivalent to a sage, and was unconnected with age, as was emphasized by regarding the word as a notarikon: “The *zaken* is none other than a sage, and the word means *zeh she-kanah hokhmah* (“one who has acquired wisdom”; Kid. 32b). Thus one reads of the elders of Bet Shammai and the elders of Bet Hillel (Ber. 11a), of the “elders of the *bet din*” who supervised the high priest before the Day of Atonement (Yoma 1:3 and 5), and of “Rabban Gamaliel and the elders who were traveling by ship” (Shab. 16:8; Ma’as Sh. 5:9; cf. also \**Zaken Mamre*). The word *zaken* hardly occurs with regard to local government (the “elders of the city” of Sot. 9:5 and 6 is a reference to Deut. 21:3), although in the Book of Judith, the elders of the city or of the people appear as the main authority of the beleaguered city. It seems that the institution of “the seven good men of the city” who were responsible for its affairs was confined to Babylon. The Mishnah (Meg. 3:1) states that if the people of a town sell a synagogue or other sacred object, the purchaser may not use it for purposes of lesser sanctity. Where the Babylonian Talmud (Meg. 26a, 27a) makes the reservation that this does not apply in cases where the “seven good men of the city” stipulated at the time of the sale that the synagogue or the sacred object could so be used, the parallel passage in the Jerusalem Talmud merely mentions the stipulation but has no reference to the seven communal leaders. Nevertheless Josephus (Ant. 4:214–4) refers to the seven men who ruled the city in Erez Israel, and the Syriac Baruch mentions “the seven elders of the people” (II Bar. 44:1).

[Louis Isaac Rabinowitz]

### Middle Ages and Modern Period

In the Middle Ages and early modern times the term “elder” or “elders” appears both as a titular synonym for scholar and sage as well as a frequent description for the unpaid lay members in the leadership on the boards of communities within the framework of the \*Councils of the Lands. It can also be regarded as an honorific description for members of the ruling aristocracy of wealth and learning in the communities of the period. The designation disappears almost entirely from the middle of the 18<sup>th</sup> century for both communal leaders as well as scholars (except for the fossilized expression *zaken ve-yoshev bi-yshivah* used as a title in ultra-conservative circles). Its disuse was the natural corollary of a diminished reverence for age and the rise of a mentality that refused to equate it with wisdom and leadership qualities. It is not accidental that antisemitic vilification in modern times fastened on the term

“elder” and attempted to turn it into a horror image. Exploiting the feelings of revulsion against the notion of scheming old men and recalling the use of the term in the Jewish hierarchy and tradition, it conjured up a new Jewish bogey in the shape of the \*Elders of Zion (“Sages de Sion”). The Nazis in their calculated policy of fragmentation and foisting a spurious leadership on the Jews turned to the use of the name *Judenaelteste* (“elders of the Jews”) for some of the functionaries in this leadership.

Reviv, in: *Journal of the Economic and Social History of the Orient*, 12 (1969), 283–97; Baron, *Community*, index. **ADD. BIBLIOGRAPHY:** T. Wills, *Elders of the City* (2001); A. Rof, “The Organization of the Judiciary in Deuteronomy,” in: M. Daviau et al. (eds.), *World of the Arameans* (2002), 92–112.

**ELDER, WILL** (1921– ), U.S. cartoonist. Elder, who was born in the Bronx, N.Y., attended the High School of Music and Art, where he began a lifelong friendship with a classmate and future collaborator, Harvey \*Kurtzman, in stinging and hilarious cartoon art. Elder’s penchant for zany humor flowered early with legendary stunts: when he failed to show up for class, he was discovered by a nervous teacher hanging by his neck in the school coat closet, his face chalked white. Another time he dressed joints of beef in clothing and spread them across train tracks, moaning, “Poor Schlomie! He fell on the tracks,” horrifying passers-by.

Elder began his comic book career in 1946, writing and drawing a feature called Rufus Debree in *Toy Town Comics*. After several cartooning positions, Elder in 1952 joined Kurtzman, creator of *Mad* magazine, which gave him a chance to display his zany style of humor. Elder penciled and inked his own stories from the first issue on. He was credited with being the main creator of the early, zany *Mad* “chicken fat” style. His art was most notable for having numerous visual jokes hidden in the nooks, crannies, and backgrounds of the stories he drew. Elder became such a sensation at *Mad* that issue number 22 featured a book-length biography of him. Elder and Kurtzman left *Mad* in 1956 and worked together on a number of projects, including some short-lived satirical magazines. In one of them, *Help!*, Elder and Kurtzman created an innocent Candide-like character, Goodman Beaver. Inspired by a lusty spoof of the comic-book character Archie, Elder and Kurtzman turned the innocent Goodman Beaver, a man, into a sexy woman and named her Little Annie Fanny. *Playboy* magazine published the four-to-seven-page stories, written by Kurtzman and painted by Elder, from 1962 to 1988. The strip took comic art to new heights with sophisticated and savage satire and carefully painted stories.

Over the years, Elder’s genres included crime, science fiction, horror, fantasy, war, and sex. In 2003, Fantagraphics published *Will Elder: The Mad Playboy of Art*, a definitive ca-

reer retrospective. It contained more than 100 pages of comics and other art work.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**ELDERS OF ZION, PROTOCOLS OF THE LEARNED**, antisemitic forgery aimed at showing the existence of international Jewish aspirations bent on world power. The specter of a worldwide Jewish conspiracy aiming at reducing the gentiles to slavery or exterminating them loomed up in the Christian imagination during the Middle Ages, growing out of legends about well-poisoning and plague-spreading. Some such stories claimed that a secret rabbinical conference had been held to work out a detailed plan for ritual genocide of the Christians. From the time of the Renaissance, at first in Spain, these legends turned on a political plot rather than a religious one; similar notions circulated in France and Germany, after Napoleon's convocation of the Great Sanhedrin (see French \*Sanhedrin) in 1807. They did not gain widespread popular credence, nor at first did the versions launched during the second half of the century by French Catholic authors like \*Baruel and Bailly, who associated \*Freemasons and Jews in an anti-Christian plot. In its latest version, the legend of the "Elders of Zion" was concocted in Paris in the last decade of the 19<sup>th</sup> century by an unknown author working for the Russian secret police (*Okhrana*); in all probability, it was intended to influence the policy of Czar \*Nicholas II toward the interests of the secret police. For his purposes, the anonymous forger adapted an old French political pamphlet by Maurice Joly attributing ambitions of world domination to Napoleon III, *Dialogue aux Enfers entre Machiavel et Montesquieu, ou la politique au dix-neuvième siècle* (1864), which does not contain the slightest allusion to Jews or to Judaism. This "dialogue" was transformed into the "protocols" of an alleged conference of the leaders of world Jewry, who stated in summing up that, under the cloak of modern democracy, they already controlled the policies of numerous European states and were therefore very close to their objective. However the calculations of the Russian police misfired on that occasion: Nicholas II, impressionable and antisemitic though he was, detected the fraud, writing "One does not defend a worthy cause by vile means" in the margin of the manuscript submitted to him. The first Russian public edition of the *Protocols*, which appeared in 1905, did not attract much attention and was taken seriously in a few mystic and sectarian circles only.

The worldwide success of the *Protocols* dates from 1919 to 1921; after the widespread slaughter in World War I, the Russian Revolution in 1917, and the risings in Germany, many people felt impelled to discover a "hidden cause" for such tragic and momentous events. The text was widely circulated during the Russian civil war by propagandists seeking to incite the masses against the "Jewish Revolution," and undoubtedly contributed to the extensive pogroms perpetrated in southern Russia between 1918 and 1920. After the defeat of the White armies, Russian émigrés publicized the *Protocols* in the West. Translations followed, but most reputable European newspa-

pers, such as the *Times* of London, questioned their authenticity. In 1921 the English journalist Philip Graves pointed out the close similarity between the text of the *Protocols* and Joly's pamphlet; from then on, balanced and responsible circles refused to take them seriously. This was no bar to an enormous circulation of the text, which was translated into all the main world languages. In the United States it was even sponsored (until 1927) by the influential and popular Henry Ford I.

However, well before the Nazi rise to power, the *Protocols* found the largest number of adherents in Germany. The theory of the occult power of the Jews' sworn enemies of German-Christian culture, perfectly suited those reactionary propagandists who attributed Germany's defeat to "a stab in the back." Right from the start the Nazi Party propagated this theme. The *Weltdienst* organization of Erfurt was specially formed to diffuse it and to strengthen ties with antisemites in other countries. In Berne in 1934 the Jewish community of Switzerland brought the distributors of the *Protocols* to trial, establishing in court that the work was a forgery, but this did nothing to diminish the zeal of its propagators. During World War II, the *Protocols of the Learned Elders of Zion* became an implicit justification for the genocide of the Jews; and Nazi propaganda relied on them until the last days of the Third Reich. Although from 1945 no more than bibliographical curiosity in the majority of civilized countries, the *Protocols* were reissued in numerous Arab states and President Nasser of Egypt publicly vouched for their authenticity, as did the Jordanian delegate to the United Nations in 1980. The Arab states continued to disseminate the *Protocols* in places as diverse as Sweden and the United States, joined in the latter by black Muslim groups and the Ku Klux Klan. A Spanish edition, published in 1963, was probably an attempt to prevent the revision of the Catholic Church's traditional attitude toward the Jews at the Ecumenical Council Vatican II. The *Protocols* were also circulated in Japan, Latin America, and the Soviet Union.

Research by Colin Holmes, a lecturer in economic history of Sheffield University, has revealed the source which enabled Philip Graves to expose the *Protocols* as a forgery. They were given to Graves by a Russian émigré, Michael Raslovleff, who fled to Constantinople after the Russian Revolution of 1917. Raslovleff, a self-confessed antisemite, gave the information to Graves because he was unwilling to "give a weapon of any kind to the Jews, whose friend I have never been."

[Leon Poliakov]

**ELEALEH** (Heb. אֵלְעָלָה, אֵלְעָלָה), biblical town in Transjordan, northeast of Heshbon. Elealeh is always mentioned together with Heshbon. It was settled by the tribe of Reuben and later reverted to Moab (Num. 32:3, 37; Isa. 15:4; 16:9; Jer. 48:34). Eusebius refers to it in the fourth century C.E. as a large village

(Onom. 84:10). The site is occupied at present by the Arab village al-ʿĀl, 2,986 ft. (910 m.) above sea level, halfway between Amman (Rabbath) and Madaba (Medba) in a region rich in vineyards. Remains of walls from the Early Bronze (pre-patriarchal) Age have been uncovered there as well as Moabite and Hellenistic potsherds. The ruins of a settlement from the Arab period are visible on the surface.

[Michael Avi-Yonah]

**ELEAZAR** (Heb. אֵלְעָזָר; “God/El-has-aided”), high priest after \*Aaron. Eleazar was Aaron’s third son (Ex. 6:23); his older brothers Nadab and \*Abihu perished after offering strange fire before the Lord (Lev. 10:1–7; Num. 3:4). During his father’s lifetime Eleazar served as the “head chieftain of the Levites” (Num. 3:32) and performed some of the functions of the high priest (*ibid.* 19:4). After Aaron’s death, Eleazar was appointed high priest in his father’s place (*ibid.* 20:28; Deut. 10:6). Together with Moses, he concluded the census of the people on the plains of Moab by the bank of the Jordan (Num. 26:1–3) and, together with Joshua, supervised the division of the land (Num. 34:17; Josh. 14:1 and elsewhere). In the text describing the appointment of Joshua as Moses’ successor, it is stated that Eleazar was to stand before Joshua when the latter inquired “by the judgment of the Urim” (Num. 27:18–22). Eleazar’s burial place was on the hill of his son \*Phinehas in Mount Ephraim (Josh. 24:33). The priestly family of \*Zadok traced its descent from Eleazar, who was regarded as the ancestor of 16 of the 24 priestly houses (1 Chron. 24:4–18).

**ELEAZAR** (2<sup>nd</sup> cent. B.C.E.), martyr during the religious persecution instigated by Antiochus Epiphanes (167 B.C.E.). “Eleazar, one of the foremost scribes, well advanced in years,” was compelled to eat swine’s flesh, but chose “death with glory rather than life with pollution, and of his own free will was tortured” after refusing to so much as pretend to partake of the forbidden meat. The principal source of this story is II Maccabees 16:18–31, while IV Maccabees 5–6 offers an elaborated version of the original. Eleazar’s martyrdom was subsequently extolled by the church fathers (Origen, Προτροπικὸς εἰς μαρτύριον, xxii–xxvii).

[Isaiah Gafni]

**ELEAZAR (Alatzar, Abenalazar)**, prominent Jewish family in the kingdom of Aragon in the Middle Ages. They were considered *francos* (“free”) for the special services which they had rendered to the kings of Aragon during the Christian Reconquest and as such exempted from taxes. The main branch of

the family lived in Saragossa. The founder of this branch was apparently ALAÇAR, treasurer of Ramon Berenguer of Aragon, who in 1135 granted him and his descendants a release from taxes. In 1212 ABULFATH ABENALAZAR, son of Alazrach, was transferred by King Pedro, together with his family, to the protection of the Knights of the Order of St. John. They were granted special protection, right of appeal to the king’s court of justice, and exemption from the discriminatory Jewish \*oath. This privilege was confirmed by James I in 1235 to Abulfath’s grandson, ALAÇAR B. ALAZRACH, who served as *alfaquim* (“physician-interpreter”) in Saragossa. The family’s omission to pay their share of the communal taxes and failure to participate in communal affairs alienated them from the Jewish community. However, in 1413 the community succeeded in obtaining an order from King Ferdinand I by which the Eleazar family was compelled to share the expenses of sending a delegation to the papal court. Their release in 1425 from the tax on meat and wine finally caused their excommunication by the Jewish community.

Other members of this family include the physician MOSSE ABEN ELEAZAR (active c. 1390), as a result of whose services to the Franciscans in Saragossa the Jews were permitted in 1385 to carry their dead to the cemetery on the road which passed by their church. Other physicians of the family include EZDRA ELEAZAR, in attendance on the royal court in 1387, and TODROS ALAZAR (second half of the 15<sup>th</sup> century). The wealthy DON MAIR ALAZAR (first half of the 15<sup>th</sup> century) established a Jewish hospital. One of the gates to the Jewish quarter of Saragossa situated near his house was named after him. Maestre MOSSE ALAZAR was in the service of the court of Aragon in 1384. The richest Jewish moneylender in Saragossa at the time of the Expulsion of 1492 was SOLOMON ELEAZAR: an inventory of pledges in his possession has been preserved. A secondary branch of the family lived in Valencia. JUDAH ELEAZAR (d. 1377) was the most forceful communal leader in the city and among the signatories of the regulations of the communities of Aragon issued in 1354. He gave considerable financial help to the king in the war against Castile, and in 1370 lent 110,000 solidos for equipping the ships which conveyed Pope Urban v from Rome to Avignon. Several less influential members of the Eleazar family lived in Calatayud and Huesca.

Serrano y Sanz, *Origenes de la Dominación Española en América* (1918), 12–13, 451–2; Cabezudo Astrain, in: *Sefarad*, 14 (1954), 377–9; 20 (1960), 412–3, 415–6; Lopez de Meneses, *ibid.*, 14 (1954), 109, 112, 114; Piles Ros, *ibid.*, 10 (1950), 370, 377, 378, 381, 384; A.M. Hershman, *Rabbi Isaac Ben Sheshet Perfet and His Times* (1943), 22, 159, 169.

**ELEAZAR BEN ANANIAS**, Zealot leader in Jerusalem during the Jewish war with Rome 66–70 C.E. Eleazar evidently already held the office of Captain of the Temple (*segan ha-Kohanim* – στρατηγός) during the procuratorship of \*Albinus, 62–64 C.E., and continued to hold that position until the de-

struction of the Temple. Son of the high priest \*Ananias and a member of the priestly circles who joined the revolt, he persuaded the priests to discontinue the practice of accepting offerings on behalf of aliens. Cessation of the sacrifice offered up for the emperor was tantamount to challenging Roman rule, and – according to Josephus – this action signaled the revolt against Rome. The Talmud attributes the action to Zechariah b. Avkulus (Git. 56a).

The discontinuation of sacrifices for the health of the emperor led to a struggle in Jerusalem between the Zealots and those favoring conciliation. Eleazar and his partisans gained possession of the Temple mount and the lower city while the peace party and troops of King \*Agrippa II occupied the upper city. With the help of the extremist \*Sicarii faction, however, Eleazar and his men succeeded in capturing this section too. The extremist elements then gained the upper hand, and attacked not only the Romans, but also their opponents among their compatriots. They set fire to the palaces of Agrippa, \*Berenice, and the high priest Ananias, as well as to the public archives where loan bonds were deposited. Ananias and his brother Hezekiah (see \*Ananias b. Nedebus) were put to death. When \*Menahem b. Judah the Galilean, a central figure among the extremists, attempted to seize the command for himself, he was foiled by Eleazar. After \*Cestius Gallus was defeated, Eleazar was appointed general of Idumea by the war party in Jerusalem, together with \*Jesus b. Zapphas. The appointment was evidently prompted by a desire to remove him from a key position in the command, and no more is known of him.

[Lea Roth]

**ELEAZAR BEN ARAKH** (second half of the first century C.E.), *tanna*. He was one of the most outstanding disciples of R. \*Johanan b. Zakkai, who described him as “an overflowing spring,” i.e., an inexhaustible source of innovative interpretation and insight into the meaning of the Torah. According to one tradition, he was considered to “outweigh all the sages of Israel” (*Avot* 2:8). Relatively few traditions are preserved in his name in the tannaitic sources. To his teacher’s question, “Which is the good way to which a man should cleave?” Eleazar answered, “A good heart,” a reply which, in R. Johanan’s opinion, embodied all those given by his other pupils (*Avot* 2:9). In addition he is associated with two other aggadic statements: the one “Be eager to study the Torah, and know what you should answer to an unbeliever ...” (*Avot* 2:14); and the other that God humbled Himself by speaking to Moses from the burning bush and not from some high mountain or elevated place (*Mekh. Sby.*, to 3:5; cf. *Mid. Hag.* to *Ex.* 3:2). Only two of his halakhic statements are cited in tannaitic sources (*Tosef. Ter.* 5:15; *TJ, Yev.* 2:1, 3c, and parallel passages; *Sifra* 2:8; *Hul.* 106a). According to two early traditions (*Mech.*

of Rabbi Shimon, 158–159; *Tos. Hag.* 2:1), Eleazar engaged, together with his teacher, in mystical speculation concerning the Divine Chariot (see \*Merkabah Mysticism). While this story may have an historical foundation, the literary figure of R. Eleazar – the “overflowing spring” – may also have been used here by later story tellers to exemplify *Hag.* 2:1, which permits mystical speculation only in the case of “a sage who understands by himself.” According to the *Mech. of Rabbi Shimon*, R. Eleazar expounded the secrets of the Chariot “on the basis of his own understanding” until “a fire surrounded him” – a sign of divine confirmation of his experience. The story as related by the *Tosefta* is a far more sober affair, involving a form of “scholastic” mysticism, which takes place wholly on the earthly plane, and which was strictly supervised by Rabban Johanan. The Babylonian Talmud (following the lead of the Jerusalem Talmud) combines and elaborates these two traditions, relating that while they were traveling together, Eleazar asked R. Johanan to teach him the secrets of the Chariot, to which the latter replied: “Have I not taught you that such speculations may not be conveyed to an individual, unless he is a scholar who is able to think and speculate for himself?” Having obtained R. Johanan’s permission, Eleazar began to expound the subject, whereupon fire immediately descended from heaven and enveloped all the trees in the field, which broke forth in song. R. Johanan then kissed his pupil and said: “Blessed be the Lord, God of Israel, who has granted our father Abraham a descendant capable of understanding, inquiring into, and expounding the Divine Chariot” (*Hag.* 14b). Later traditions tell a story of his having followed his wife’s advice to go to Emmaus instead of accompanying R. Johanan from Jerusalem to Jabneh. As a result of his isolation he is reputed to have forgotten his learning in Emmaus, “a place of bath-houses and luxury” (*Shab.* 147b; *ARN* 14:30; *ARN*<sup>2</sup> 29, 3; *Eccl.* R. 7:7). It is likely, however, that these traditions, rather than reflecting the historical truth of Rabbi Eleazar’s own life, reflect an attempt to explain the paucity of traditions preserved in his name despite the lavish praise bestowed upon him by his teacher as recorded in *Avot*.

[Shmuel Safrai / Stephen G. Wald (2<sup>nd</sup> ed.)]

**ELEAZAR BEN AZARIAH** (first–second century C.E.), one of the sages of Jabneh. He was one of the most prominent *tannaim* and is quoted dozens of times in the *Mishnah*, the *Tosefta*, and the tannaitic *Midrashim*, his statements touching on all areas of *halakhah* and *aggadah*. A priest, it is said that he could trace his ancestry back ten generations to Ezra (*TJ, Yev.* 1:6, 3a–6). Like many prominent *tannaim*, events mentioned briefly or in passing in the earlier sources were expanded and elaborated in the later talmudic literature. For example, Ben Azzai mentions in three places (*Zev.* 1:3; *Yad.* 3:5; 4:2) “the day that they seated R. Eleazar ben Azariah in the yeshivah.” The

Mishnah itself associates a series of important discussions and decisions with “that day” (Yad. 4:1–4). “That day” afterwards became the focus for a number of other important events mentioned or hinted at in tannaitic literature. For example, on that day the tractate *Eduyyot* was supposed to have been formulated (see however Epstein, *Tanna'im*, 422–4). “That day” was associated with the stories surrounding the removal of \*Rabban Gamaliel II from office. It is told that when Rabban Gamaliel was deposed as *nasi* because of his autocratic behavior toward Joshua b. Hananiah, Eleazar was chosen to succeed him. The selection was prompted not only by his aristocratic lineage, but also by his great wealth, the *nasi* being required to bear a considerable proportion of the expenses of his office (TJ, Ber. 4:1, 7d; *ibid.* 27–28a). When appointed *nasi* he was, according to a tradition preserved in both Talmuds, only about 18 years old, but a miracle was wrought for him and his hair turned gray (Ber. 28a). This legend probably originated in Eleazar’s remark (Ber. 1:5), “I am about (like one who is) 70 years old,” which has been interpreted to mean that he merely had the appearance of an old man (Ber. 28a). From elsewhere in the Jerusalem Talmud (Ber. 1:9, 3d), it would seem that he made this statement in his old age. It is told that on “the day” he was appointed *nasi*, the college was thrown open to all who wished to study, without restriction, contrary to the previous ruling of Rabban Gamaliel that “No disciple whose true character does not correspond to his outer bearing may enter the *bet ha-midrash*. On that day hundreds of benches were added to the *bet ha-midrash*, and there was no *halakhah* about which there was any doubt that was not elucidated” (see Ber. 28a). After a reconciliation between the sages and Rabban Gamaliel and his reinstatement as *nasi*, it was decided that they share the discourses on alternate Sabbaths with Eleazar’s known as “the Sabbath of Eleazar b. Azariah” (Ber. *ibid.*).

In another example, tannaitic literature tells of Eleazar ben Azariah’s journey, together with Rabban Gamaliel and other sages, to Rome (Sif. Deut. 20:3; cf. Ma’as. Sh. 5:9; Er. 4:1). In the later literature we hear many more details of their stay there, of their meetings with the members of the Jewish community, with the authorities, and with the emperor, and with prominent Romans who had been attracted to Judaism, of their return voyage, and of Eleazar’s pilgrimage, together with the *nasi* and the elders, to Jerusalem (Mak. 2:4a-b; et al.).

R. Eleazar was both a halakhist and an aggadist. A statement reported in the name of Judah ha-Nasi (or in that of his contemporary Issi b. Judah) praises him as being “a basket of spices” and “a spice-dealer’s basket,” i.e., carefully endeared by fragrant allusions to his vast, finely ordered learning, which enabled him to answer with equal facility questions on Bible, Mishnah, midrashic *halakhah*, or *aggadah* (ARN<sup>1</sup> 18:66; Git. 67a). Eleazar is the author of the observation that a Sanhedrin which executes a person once in 70 years is to be branded a murderous tribunal (Mak. 1:10). His exegetical practice is similar to that of the school of R. \*Ishmael in keeping with the view that “the words of the Bible are to be construed literally” (Kid. 17b) and that no special significance is to be attached to

the duplication of verbs in the infinitive construct since “the Bible speaks in the language of human beings” (BM 31b). He is thus at variance with the school of R. \*Akiva, which felt that such duplications of the verb required an halakhic interpretation. At times Eleazar explicitly controverts the exegetical principles of Akiva (Sifra 7:12 et al.).

He was famous for his aggadic comments. After hearing one of R. Eleazar’s aggadic interpretations of scripture, Joshua said, “The generation in which Eleazar b. Azariah lives is not forsaken” (Tosef., Sot. 7:12). In his aggadic interpretations he makes frequent use of two exegetical principles: the juxtaposition of biblical texts *semukhin* and the argument *a fortiori* (*kal va-homer*). On the significance of the Day of Atonement he declared: “The Day of Atonement can bring forgiveness for transgressions between man and the Almighty, but not for transgressions between one man and another until the one has obtained the other’s pardon” (Yoma 8:9). And again, “Where there is no Torah, there is no right conduct” (Avot 3:17). He also said: “A man should not say, ‘I have no desire to eat pig’s flesh’ ... but rather, ‘I would like to do so, but how can I, seeing that God has prohibited it?’” (Sifra 11:22). Eleazar’s wealth was proverbial, and it was said that “whoever sees Eleazar b. Azariah in a dream can expect riches” (Ber. 57b). He survived Rabban Gamaliel and was apparently alive at the time of the Jewish revolt under Trajan (115–117), although not at the outbreak of the Bar Kokhba revolt (131). When R. Eleazar b. Azariah died, it was stated “the crowns of wisdom have departed” (Sot. 49b).

**BIBLIOGRAPHY:** J. Bruell, *Mevo ha-Mishnah*, 1 (1876), 88–91; Derenbourg, in: MGWJ, 37 (1893), 395–8; Bacher, *Tann*, 1 (1903<sup>2</sup>), 212–32; Weiss, *Dor*, 2 (1904<sup>4</sup>), 85–91; Graetz, *Gesch*, 4 (1908<sup>4</sup>), 35ff.; Frankel, *Mishnah*, 96–99; Hyman, *Toledot*, 186–91; L. Ginzberg, *Perushim ve-Hiddushim ba-Yerushalmi*, 3 (1941), 168–220; Alon, *Toledot*, 1 (1958<sup>2</sup>), 368 (index); 2 (1961<sup>2</sup>), 273 (index); S. Lieberman, *Tosefta ki-Feshutah*, 5 (1962), 1162.

[Shmuel Safrai]

**ELEAZAR BEN DAMMA** (early second century C.E.), *tanna*. Eleazar is mentioned in two places in the early tannaitic sources, both in connection with R. \*Ishmael. In *Tosefta Shevuot* 3:4 Ben Damma asked R. Ishmael a question concerning a *halakhah*, who in responding called him “My son!” In *Tosef. Hul.* 2:22–23 it is told that “R. Eleazar Ben Damma was bitten by a snake and Jacob of Kefar Sama came to heal him in the name of Jesus b. Pandira. Ishmael said to him, ‘it is forbidden, Ben Damma.’ He rejoined ‘I will cite a verse to prove that he may heal me,’ but he did not manage to prove it before he died. Whereupon Ishmael said: ‘Happy art thou, Ben Damma, that thou hast departed from this world in peace and hast not transgressed the words of the sages’” (cf. TJ, Av. Zar. 2:2, 40d). A later Midrash (Koh. R. 1) retells the story from the *Tosefta*, but refers to Ben Damma as R. Ishmael’s nephew, a detail lacking in the earlier tradition. He is similarly described as R. Ishmael’s nephew in the Babylonian Talmud Ber. 56b, where he asked his “uncle” to interpret his dream for him. This elaboration of earlier stories, including

the filling in of the family ties between earlier talmudic figures, is characteristic of the later talmudic tradition, especially the Babylonian Talmud. The Babylonian Talmud also tells of his inclination toward Greek culture, as reflected in the following passage: “Ben Damma, son of Ishmael’s sister, once asked Ishmael, ‘May such as I who have studied the whole of the Torah study Greek wisdom?’ Ishmael thereupon read to him the verse, ‘This book of the law shall not depart from thy mouth, but thou shalt meditate therein day and night’ (Josh. 1:8) and added, ‘Go then and find a time that is neither day nor night’” (Men. 99b). His name is cited in *Heikhalot Rabbati*, 4, as one of those arrested by the Romans, but it appears that the reference is to Judah b. Damma, one of the \*Ten Martyrs enumerated in the *Elleh Ezkerah* published by Jellinek (*Beit ha-Midrash*, 2 (1967<sup>3</sup>), 64).

**BIBLIOGRAPHY:** Hyman, *Toledot*, 161.

[Jehonatan Etz-Chaim]

**ELEAZAR BEN DINAI** (c. second half of the first century C.E.), Zealot leader. Josephus relates that for 20 years he ravaged Judea until, by ruse, he was captured by the procurator Felix (53–60) and sent to Rome. He is first mentioned in the period of the procurator Fadus (44–46) in connection with the conflict in the Philadelphia (Rabbath Ammon) area of Transjordan between the Jews and their neighbors, some of whom were killed. Subsequently Eleazar was arrested together with the other Jewish leaders and was banished. In the quarrel between the Jews and Samaritans arising from the murder of a Galilean pilgrim during the procuratorship of Cumanus Ventidius (48–52), the Jews called upon Eleazar, who had taken refuge in the mountains for some years, to assist them in taking vengeance. In the Mishnah, Eleazar is mentioned as a murderer in whose time the incidence of open murder greatly increased, leading to the discontinuation of the \**Eglah Arufah* ceremony for an unsolved murder (see Deut. 21:1–9; Sot. 9:9), and he is mentioned elsewhere as one of those who sought to hasten the advent of the Messiah but failed (Song R. 2:7). Some are of the opinion that at first his deeds were well-intentioned but in the course of time he accustomed himself to acts of violence. It is almost certain that he was executed after being brought to Rome.

**BIBLIOGRAPHY:** Jos., *Ant.*, 20:2–4, 121, 161; Jos., *Wars*, 2:235, 253; Klausner, *Bayit Sheni*, 5 (1963), 15–17.

[Lea Roth]

**ELEAZAR BEN ḤALFON HA-KOHEN** (12<sup>th</sup>–13<sup>th</sup> century), Hebrew poet. Eleazar lived apparently in an Oriental country. About 15 poems from his *divan* survived in the Cairo \**Genizah*, where his name usually appears as “Eleazar” or “Eleazar ha-Kohen,” but in one, as “Eleazar ben Ḥalfon ha-Kohen.” One of the poems is a panegyric to \*Maimonides composed apparently during the latter’s lifetime. Eleazar, who seems to have been among the best of the Oriental Hebrew *paytanim*, adopted the Sephardi style of *piyyut* in its fullest detail. Many of his *piyyutim* were attributed by copyists to the

great poets of the Spanish era, and it is possible perhaps that some of the poems of his time, signed “Eleazar ha-Kohen,” should be ascribed to him.

**BIBLIOGRAPHY:** A. Scheiber, in: *Sinai*, 35 (1954), 183–6; idem, in: *Sefer Ḥayyim Schirman* (1970), 393–4; Ḥ. Schirman, *Shirim Ḥadashim min ha-Genizah* (1965), 106–16.

[Abraham David]

**ELEAZAR BEN HANANIAH BEN HEZEKIAH** (lived shortly before the destruction of the Temple in 70 C.E.), *tanna*. His full name was Eleazar b. Hananiah b. Hezekiah b. Garon. He is quoted in Sifre Deut. 294, and Mech. Baḥodesh 7, his position in this latter source appearing elsewhere in the name of Shammai. In \**Megillat Ta’anit* it is stated (p. 351) that “the group of Eleazar (Eliezer) b. Hananiah b. Hezekiah b. Garon wrote *Megillat Ta’anit*.” In the Talmud (Shab. 13b), however, the compilation of *Megillat Ta’anit* is ascribed to “Hananiah b. Hezekiah and his companions” (see: Noam, 29–31). Graetz, who adopted the reading of Eleazar b. Hananiah in *Shabbat*, identified him with the Eleazar b. Hananiah mentioned by Josephus as a leader of the Zealots in the rebellion against Rome, but his view has not found wide acceptance (Noam, 335–36).

**BIBLIOGRAPHY:** Hyman, *Toledot*, 176. **ADD. BIBLIOGRAPHY:** V. Noam, *Megillat Ta’anit* (2003).

[Stephen G. Wald (2<sup>nd</sup> ed.)]

**ELEAZAR BEN ḤARSOM**, in the *aggadah* described as a priest and a scholar. No mention is made of him in the extant tannaitic sources. In one place in the Jerusalem Talmud (Ta’an. 4:8, 69a; cf. Lam. R. 2:2) it is stated that “there were 10,000 cities on the king’s mountain; Eleazar b. Ḥarsom owned 1,000 of them, and corresponding to them he owned 1,000 ships on the sea, and all were destroyed.” It would seem from the context that they were destroyed during the Bar Kokhba revolt. In another place (Yoma 3:6, 40d) the Jerusalem Talmud relates that “his mother made him a tunic worth 20,000 *minas* and his brother priests would not allow him to wear it because [it was transparent and] he looked as though he were naked.” In the Babylonian Talmud (Yoma 35b) these two traditions about his wealth are joined together, and integrated with an image of Eleazar b. Ḥarsom as a wandering scholar, who took a sack of flour upon his shoulder and went from city to city and from province to province to study Torah. The moral of the story is stated explicitly at the end: “Eleazar b. Ḥarsom condemns the rich” who will not be able to justify their neglect of learning on the plea that the cares of their wealth prevented them from devoting themselves to study. In Kid. 49b he has turned into the very epitome of the wealthy man: “[If one betroths a woman] on the condition that he is wealthy, it is not necessary that he be as wealthy as Eleazar b. Ḥarsom.” His status as a priest is elaborated further in *Yoma* 9a, where – according to one alternative tradition – he is accorded the rank of High Priest during the time of the Second Temple. In the list of martyrs given in *Lamentations Rabbah* (2:2) it says “...there are some who exclude Tarfon and include Eleazar b. Ḥarsom,”

but his name is not included in the other lists (Mid. Ps. to 9; *Piyyutei Yannai*, ed. by M. Zulai (1938), 374). It is obvious that all these different traditions cannot refer to the same historical figure, nor is it likely that a high priest would be identified as a scholar with the title “rabbi.” Rather, each tradition must be seen as reflecting the narrative and moralistic concerns of each storyteller and each editor as determined by the specific context.

[Stephen G. Wald (2<sup>nd</sup> ed.)]

**ELEAZAR BEN JACOB HA-BAVLI** (c. 1195–1250), Hebrew poet of Baghdad. Eleazar seems to have been a sort of house poet for the well-to-do Jewish families of Iraq. He represents himself as a disciple of Moses ben Sheshet al-Andalusi, who introduced him to the techniques of Andalusian poetry. He was probably the first young Oriental poet met by Judah \*Al-Ḥarizi in his travels to the East, although he did not get a very positive evaluation. Some of Eleazar’s poems were extant in various manuscript collections and in Oriental *maḥzorim* and attracted the attention of 19<sup>th</sup>-century scholars (L. Dukes, A. Neubauer, E.N. Adler, S. Poznanski). It was only with the discovery of one of the manuscripts of his *dīwān*, which comprised 281 poems, by Elkan N. \*Adler in Aleppo in 1898 (Jewish Theological Seminary, New York, Ms. ENA 881), and its publication by H. \*Brody (1935) that he emerged as one of the great poets of the eastern Diaspora. Thanks to other manuscripts from the Firkovitch collection of St. Petersburg and from other libraries, Y. Yahalom has been able to reproduce the possible original structure of Eleazar’s *dīwān*, which contained more than 400 poems. Many of them are given over to praises and the familiar events of the notable Jews of the Iraqi community: births, circumcisions, weddings, and deaths of the families of his benefactors. Others are epigrams on secular subjects or short poems of didactic nature. He also wrote some Arabic poems, with his own Hebrew translation, and even verses with a mixture of both languages. While the *dīwān* contains mainly secular poetry, subsequent discoveries have brought to light about 50 of his religious poems. Nineteen such poems were published by S. \*Bernstein; by a comparison of style and the help of acrostics, D. Jarden identified some more religious poems. They have the characteristics of the classical *piyyut* and some of the Andalusian innovations.

In addition to its importance to poetry, the *dīwān* is a historical source of utmost significance for the history of Iraqi Jews during the 13<sup>th</sup> century. It provides a glimpse into the wealthy and highly educated leading Jewish families in Baghdad, Basra, Mosul, Wasit, Hilla, and other places in Iraq. The *dīwān* is replete with the names (more than 400) of not only the contemporary *geonim* but also of eminent Jewish personalities, among them physicians, scholars, astronomers, administrators, keepers of the mint, and other state dignitaries in the service of the Abbasid caliphate in its declining years. The high-sounding titles of the Jewish notabilities indicate

the social level and the great role played by them both in the community and in state and society. With the help of Arab chronicles, particularly of Ibn al-Fuwati, these personalities can be identified in their historical perspective.

Eleazar ha-Bavli also interested himself in the theory of Hebrew poetry and composed a book for teaching this theory to his Jewish audience. Substantial remnants of this work, written in Judeo-Arabic, have survived (published and translated into Hebrew by Yahalom, 2001). He studied 13 kinds of meter, the rhyme, the mistakes and deficiencies of the poets, and the figures of speech, following Arabic models. His method of studying Hebrew poetry was very different from that of his predecessor Moses \*Ibn Ezra in his *Shirat Yisrael*. The situation in which Eleazar wrote was quite dissimilar, and his main goal was probably to encourage the Jews of the East to compose Hebrew poetry in consonance with Arabic poetics, reproducing the opinions of similar Arabic books and offering many examples taken from his own secular and liturgical poetic production.

[Walter Joseph Fischel / Angel Sáenz-Badillos (2<sup>nd</sup> ed.)]

**ELEAZAR BEN JAIR** (first cent. C.E.), chief of the Sicarii who captured the fortress of \*Masada at the beginning of the Roman war (Jos., Wars, 2:447; 7:275ff.). Eleazar was commander of the besieged fortress from 66 until its fall in 73. According to Josephus he was a descendant of \*Judah the Galilean, to whom the founding of the “fourth philosophy” (see \*Sicarii) is attributed, though some identify him with Judah b. Hezekiah who, after Herod’s death, raised the standard of revolt in Galilee and captured Sepphoris. Apparently Eleazar already had a connection with Masada in the time of \*Menahem b. Judah, when he captured it and used the arms that he obtained there for the siege of Jerusalem. Josephus designates Eleazar, “head of the Sicarii ... a valiant man,” and ascribes to him a speech made to the defenders of Masada after the breach of its walls, first before a handful of fighters and afterward before all the besieged. This speech was possibly reconstructed from what Josephus heard from the woman belonging to Eleazar’s family who escaped at Masada by hiding

herself in the cistern there; although it has also been pointed out that the ascription of heroic speeches to the heroes of history was a literary device that characterized ancient historiography. These passages are the only sources where Eleazar is mentioned explicitly, and since Josephus is the only source for the final battle of Masada and the last days of the fighters, it should be treated with caution.

The image of Eleazar which emerges is not only multifaceted but contradictory. His colorful character made it difficult for Josephus to give a uniform or complete picture. He never fails to stress that Eleazar was one of the Sicarii, of whom he continually gives an unfavorable opinion. Yet, at the same time, when he comes to describe in detail the stand of Masada and its fall, he does not refrain from praising Eleazar. Doubts have been cast upon the reliability of Josephus' story of Masada. It has been argued (Ladouceur, but see comments by Rajak) that Eleazar's speech was written to act as a balance to Josephus' own opinions about self-inflicted death (Wars, 3:362–382). Nevertheless, the archaeological excavations at Masada – directed by Y. Yadin – even if they have not produced factual epigraphic testimony of what happened there, do not contradict the narrative. The many traces of fire throughout the whole area of the fortress are a small part of the mute testimony to the end of Masada. But the most remarkable part of the excavation was the discovery of 11 small sherds upon which names and appellations were marked (among them: “Ben ha-Naḥtom,” “ha-Amki,” “Yo'av,” “Ben Ya'ir,” etc.). These 11 *ostraka* have been tenuously connected by Yadin with the statement by Josephus (Wars, 7:395f.): “then, having chosen by lot ten of their number to despatch the rest ... these, having unswervingly slaughtered all, ordained the same rule of the lot for one another, that he on whom it fell should slay first the nine and then himself last of all.” The sherd bearing the name “Ben Ya'ir” strengthens the picture, unique of its kind, of Eleazar ben Jair.

[Abraham Lebanon]

**ELEAZAR BEN JUDAH OF BARTOTA** (first half of the second century C.E.), *tanna*. His cognomen is derived from a place Bartota, whose exact locality is unknown. It appears that Eleazar studied under R. \*Joshua for, on the authority of the latter's teachings, he challenges those of R. Akiva (Tosef., Bek. 7:6; cf. Tev. Yom 3:4–5). Among the sages who

quote him are R. Simeon b. Gamaliel (Or. 1:4) and R. Simeon b. Yoḥai (Tosef., Zav. 1:5). The Talmud (Shab. 32b) ascribes to R. Eleazar ben Judah (without the additional designation “of Bartota”) a statement warning about the penalties for neglecting to separate *ḥallah*.

The importance which Eleazar accorded to charity is reflected in his maxim quoted in *Avot* (3:7). “Render unto Him what is His, for thou and what thou hast are His, as David has said (1 Chron. 29:14), ‘For all things come of Thee, and of Thine own have we given to Thee.’” In keeping with this maxim, the Babylonian Talmud describes him as excessively generous, which was a source of embarrassment even to the collectors of charity. The Talmud relates (Ta’an. 24a) that on one occasion, when he was on his way to purchase a trousseau for his daughter, the collectors tried to avoid him, knowing that he would give them more than he could afford. Eleazar, however, ran after them and, discovering that they were collecting to make possible the marriage of two orphans, he gave them all he had, leaving himself only one *zuz*. With this, he bought a small quantity of grain which he deposited in the granary. Miraculously, it multiplied to fill the granary to the bursting point; but when told of this by his daughter, Eleazar insisted that this, too, be consecrated to charity.

[Jehonatan Etz-Chaim]

**ELEAZAR BEN JUDAH OF WORMS** (c. 1165–c. 1230), scholar in the fields of *halakhah*, theology, and exegesis in medieval Germany. Eleazar was the last major scholar of the Ḥasidei Ashkenaz movement (see \*Ḥasidei Ashkenaz). Born in Mainz, he traveled and studied in many of the centers of learning in Germany and northern France. He spent most of his life in Worms. Eleazar was a member of the \*Kalonymus family, one of the most important German-Jewish families of that period. His father \*Judah b. Kalonymus, one of the leading scholars of his generation, taught his son both *halakhah* and esoteric theology. \*Judah b. Samuel, he-Ḥasid (“the Pious”), the leading figure in the Ḥasidei Ashkenaz movement, to whom Eleazar was related, was, however, his main teacher in the latter field and R. Moses ha-Kohen and R. Eliezer of Metz were his most prominent teachers in *halakhah*. Eleazar witnessed and suffered personally from the new outburst of persecution of the Jews by the Crusaders at the end of the 12<sup>th</sup> and the beginning of the 13<sup>th</sup> century. On a number of occasions in his commentary on the prayers, one of his major works, he noted the events that befell Worms, especially during the persecutions that followed the fall of Jerusalem to Saladin. In one of these persecutions, Eleazar's wife, daughter, and son were murdered, and he was severely injured. Eleazar's wife was very active in the religious and cultural life of her community. It is reported that she led the women in prayer and even gave public lectures to the women on the Sabbath. This tragedy was described by him in detail both in a story and in a poem. His personal loss and the catastrophic situation in the Jewish communities in Germany explain his pessimistic

outlook concerning the prospects of German Jewry. He felt that the German Jewry of his time was but a small remnant after the disasters of 1096 and the following years, and that this remnant was continually diminishing. He expressed this feeling in his introduction to the *Sefer ha-Hokhmah* ("Book of Wisdom"), which was written in 1217 after the death of Judah the Pious. He explained in this introduction that he felt compelled to put his knowledge into writing, since oral tradition was about to die out because of the deteriorating situation in Germany.

His works may be divided into five categories: *halakhah*, liturgical poetry (*piyyutim*), theology, ethics, and exegesis. Eleazar's halakhic book *Sefer ha-Roke'ah* (Fano, 1505; reissued several times) followed the tradition of halakhic works of the tosafists of northern France and Germany. The book was intended to educate the common reader in the details of halakhic law. Therefore, the author did not discuss at length exegetical studies of the talmudic passages, but rather explained the law and its talmudic basis. Unlike other halakhic works written by the tosafists, Eleazar also includes recommended *minhagim* in his work, material which is not strictly halakhic. He drew extensively on the writings of his German predecessors and quoted more than 40 scholars.

Eleazar wrote many *piyyutim*. However, a reliable record of them has not yet been compiled. Many of his *piyyutim* were attributed to other writers (also named Eleazar), and some attributed to him were probably written by other writers. His poems, written in the then-current Ashkenazi tradition, express devotion to, and worship of, God. At the same time, they protest to God because of Israel's sufferings, and express hope for Israel's redemption and revenge on her tormentors.

His major theological work was *Sodei Razayya* ("Secrets of Secrets"). Four parts of this work were printed, although most of what is extant is found only in manuscripts. The first part, a study of the creation (*Sod Ma'aseh Bereshit*), describes how the earth, stars, elements, etc., were created. Eleazar wrote this part of his work as an exegesis based on the 22 letters of the Hebrew alphabet. This was in accordance with his belief (derived from *Sefer \*Yezirah*) that the alphabet, the word of God, was the source of existence. Eleazar included in this part ancient material from the *Heikhalot* and *\*Merkabah* literature especially the *Baraita de-Ma'aseh Bereshit* and *Shi'ur Komah*. More than half of this part, the introduction and the letters *Alef* to *Nun*, was included in the *Sefer \*Razi'el* (Amsterdam, 1701). The second part of the work, *Sod ha-Merkavah* ("Secret of the Divine Chariot"), deals with the secrets of the angels, the Holy Throne, the Chariot, the Divine Voice which speaks to the prophets, the Divine Glory revealed to them, and the ways of revelation and prophecy in general. Eleazar made use here of the teachings of *\*Saadia Gaon*, but also included long quotations from *Heikhalot* literature. Most of this part was printed by I. Kamelhar as *Sodei Razayya* (1936). The third and largest part *Sefer ha-Shem* ("The Book of the Holy Name") contains very little theological discussion; most of it is devoted to a systematic exegesis of the names of God, using

all the exegetical and homiletical methods which were used by the *Hasidim*. Eleazar defined three layers in God's manifestation: (a) the *Shekhinah* or *Kavod*, which has shape and form so it may be seen by prophets, (b) the *Borei*, which has a faint shape, hears prayers, and performs miracles and wonders, (c) *El Elyon*, which has no shape or form. The fourth part is a treatise on psychology, *Hokhmat ha-Nefesh* (Lemberg, 1876). The main problem analyzed is the various ways by which a connection is established between the soul and the divine world. Parts of this work discuss other problems, e.g., the meaning of dreams, the fate of the soul after death, etc. The fifth and last part of the work is a commentary on *Sefer Yezirah* (Przemysl, 1883) and contains detailed instructions for the creation of a *\*golem*. Eleazar wrote one other important theological work, *Sefer ha-Hokhmah*, in which he described the various fields of theological study, as well as the methods used in this study. A major part of this work is concerned with exegesis of Holy Names.

Eleazar's main contribution to *Hasidei Ashkenaz* ethical literature is contained in the first two chapters of *Roke'ah*. In the first he discusses the central values of this *Hasidism* (love and fear of God, prayer, humility, etc.). In the second, he describes in detail the ways of repentance. A discussion of the value of *hasidic* ethics is also found in Eleazar's introduction to *Sodei Razayya*.

Eleazar wrote many exegetical works, some of which have yet to be printed, and probably quite a few are now lost. His short commentary on the Torah, another on the Passover *Haggadah*, and a few short commentaries on various *piyyutim* (e.g., *Ha-Adderet ve-ha-Emunah* and *Ha-Ohez ba-Yad*) are extant. Eleazar's biblical commentaries have recently been published with annotations (Bene-Berak, 1985, 1988, and 2001; Los Angeles, 2004). *\*Abraham b. Azriel*, his pupil who wrote the *Arugat ha-Bosem*, used his teacher's exegetical works extensively. Eleazar's major work in this field, extant in several manuscripts (Vienna 108, Oxford 1204), is the commentary on the prayers. In this work, he comments on every part of the usual and special prayers. He uses three methods in his commentary: explanation of the content; theological interpretation; and research for its hidden harmony with other parts of sacred literature by use of *gematriot*. This important work was edited and published by Hershler (2 vols., Jerusalem 1992). Dozens of other short treatises by him or attributed to him are scattered through manuscript libraries, and no exhaustive bibliographical study has yet been made which could describe the vast variety of his work. It seems that not one of Eleazar's pupils was able to continue his work, especially in the field of esoteric theology. His best-known disciples, *Abraham b. Azriel* and *\*Isaac of Vienna*, dedicated their literary efforts to other fields.

In common with other *Hasidei Ashkenaz*, Eleazar became a legendary hero. According to a 13<sup>th</sup>-century story, Eleazar used a cloud to travel from place to place, especially when going to far-away circumcision ceremonies. As a pietist, his writings reflect a shift in emphasis away from the social-

religious programs of Judah b. Samuel he-Ḥasid to a more personalized, individual pietism. He was regarded as one of the early sages of secret lore, and in later centuries many ideas and works were attributed to him.

[Joseph Dan]

**ELEAZAR BEN MATTATHIAS** (2<sup>nd</sup> century B.C.E.), Hasmonean; the fourth of \*Mattathias' sons (1 Macc. 2:2–5). He was nicknamed Auran (אוראן; *ibid.* 2:5) which in the original source may have been written with a ה – i.e., Ḥauran (as in Syriac) – or with an *ayin* – i.e., Auran. Some see his nickname as derived from ḥor (“a hole”), with reference to his piercing the body of an elephant (see below), overlooking the fact that the name was accorded him during his lifetime. Other suggestions are equally unsatisfactory. Little is known of his role in the war of the Hasmoneans. In II Maccabees 8:23 it is stated that Judah appointed Eleazar to command part of the army, but the reading there should perhaps be Ezra instead of Eleazar. During the Syrian attack in the battle of Bet Zekharyah in 163 B.C.E., Eleazar broke through the Syrian ranks to reach an elephant on which he thought the king was riding. Thrusting his spear into its belly, he killed the beast, which fell on him and crushed him to death (1 Macc. 6:43–46).

[Uriel Rappaport]

**ELEAZAR BEN MATYA** (first half of the second century C.E.), *tanna*. Eleazar was one of the most important of the students of Jabneh (TJ, Shek. 5:1, 48a), and was apparently a pupil of \*Tarfon (Tosef., Ber. 4:16). \*Ben Azzai, \*Ben Zoma, Ḥanina b. Ḥakhinai, and Simeon ha-Teimani were his fellow students. He is mentioned as one of the four scholars of the Sanhedrin of Jabneh who “understood 70 languages” (TJ, Shek. 5:1, 48a). In general his halakhic and aggadic statements are based upon the interpretation of scriptural verses. This system was recognized by the *amoraim*, and Rav remarked about one of his halakhic interpretations given in the Mishnah: “Eleazar could have produced a pearl but he has produced a potsherd” (Yev. 94a). It is related of him that, together with Abba Ḥalafta and Ḥanina b. Ḥakhinai, he stood upon the 12 stones taken from the Jordan and erected in Gilgal by Joshua (Josh. 4). They

discussed their weight and concluded that the weight of each stone was 40 *se'ah* (Tosef., Sot. 8:6). Among his statements are (Tosef., Shevu. 3:4): “No man has the misfortune to hear [a curse] unless he has sinned ... he who sees transgressors, deserved to see them; who sees pious persons, has merited to see them,” and “If my father asks me for a drink of water and at the same time there is a precept to perform, I must neglect the honor due to my father and perform the precept. For the duty of observing the precept lies both upon my father and myself” (Kid. 32a).

**BIBLIOGRAPHY:** Hyman, *Toledot*, s.v.; Frankel, *Mishnah*, 141.

[Yitzhak Dov Gilat]

**ELEAZAR BEN MOSES HA-DARSHAN OF WUERZBURG** (mid-13<sup>th</sup> century), one of the later writers of the \*Hasidei Ashkenaz from the school of \*Judah b. Samuel he-Ḥasid and \*Eleazar of Worms. His father Moses was Judah's brother-in-law. None of his writings has been published. Two of his works, however, are found in manuscripts: a commentary on *Sefer \*Yezirah*, cited by Abraham \*Abulafia, the 13<sup>th</sup>-century kabbalist, and parts of his commentary on the Torah, which uses mainly the system of *gematria* and is known as *Sefer ha-Gematriyyot*. Probably portions of his other works are scattered in 13<sup>th</sup>-century Ashkenazi exegetical literature, and many quotations are found in the writings of later scholars, e.g., his son Moses b. Eleazar.

**BIBLIOGRAPHY:** M. Szulwas: in: *Alumamah*, 1 (1936), 152–3; *Kitvei A. Epstein*, 1 (1950), 213–44; J. Freimann, *Sefer Ḥasidim* (1924<sup>2</sup>), 3 (introd.); Urbach, *Tosafot*, 445; G. Scholem, *Reshit ha-Kabbalah* (1948), 204–5.

[Joseph Dan]

**ELEAZAR BEN PARTA** (c. early 2<sup>nd</sup> century C.E.), *tanna*. He is mentioned only once in the Mishnah (Git. 3:4), and four times in the Tosefta. In one of his homilies, he warns against evil speech by pointing out that if the spies (Num. 12) who spoke evil only of trees and stones (*ibid.* 13:32) “died by the plague before the Lord” (*ibid.* 14:37), how much greater must be the punishment of the one who speaks evil of his neighbor (Tosef., Ar. 2:11; Ar. 15a).

In the Babylonian Talmud he is described as one of the sages arrested by the Romans for the capital offense of contravening Hadrian's decree forbidding the public teaching of Torah and observance of the commandments. While in prison, he tried to comfort Hananiah b. Teradyon, a fellow prisoner, by pointing out that while the latter only faced one charge, he himself faced five and was therefore certainly doomed. Hananiah, however, replied that for this very reason Eleazar was more worthy of Divine salvation. Hananiah's tragic death and Eleazar's miraculous deliverance proved the truth of these words (Av. Zar. 17b).

In a late Midrash (Num. R. 23:1), Eleazar shows his ability to deduce practical lessons from scriptural texts. In reply to the query of some prominent coreligionists of Sepphoris

as to the legality of flight from their Roman persecutors on the Sabbath, Eleazar, not wishing to commit himself by giving them a direct answer, said: "Why do you ask me? Go and ask Jacob, Moses, and David," and referred them to biblical verses which mention distinguished leaders who had fled.

**BIBLIOGRAPHY:** Hyman, Toledot, 200f.; Bacher, Tann.

[Jehonatan Etz-Chaim]

**ELEAZAR** (in TJ usually **Lazar**) **BEN PEDAT** (d. 279), third century *amora*. He is the *amora* Eleazar mentioned without a patronymic. Scion of a priestly family (MK 28a), Eleazar was born in Babylon (Ber. 2:1, 4b). There he studied under \*Samuel (Er. 66a), and more particularly under \*Rav (Hul. 111b). After the latter's death, he migrated to Erez Israel. It was in Erez Israel that he referred to the academy of Rav as the "little sanctuary" (Meg. 29a; cf. Ezek. 11:16). He was still unmarried when he went to Erez Israel, and R. Ammi and R. Assi participated at his wedding in Tiberias (Ber. 16a). He emphasizes his great fortune in having had the privilege to migrate to Erez Israel and resume *semikhah* there, as well as being one of the scholars who was entrusted with the intercalation of the calendar (Kil. 112a). In Erez Israel he studied under Ḥanina, the *av bet din* of Sepphoris (Kil. 9:4, 32c). He quoted so many halakhic decisions and even more aggadic sayings in Ḥanina's name (Ber. 27b; Meg. 5a; et al.) that the Talmud remarks, "Everywhere Eleazar relies upon Ḥanina" (Ter. 8:5, 45c; et al.). In Caesarea, he studied under Hoshaya Rabbah (Ber. 32b), whom he refers to as the "father of the Mishnah" (Kid. 1:3, 60a; et al.). The Jerusalem Talmud also frequently cites traditions transmitted by Eleazar in the name of \*Ḥiyya b. Abba (BM 10:4, 12c), and in one instance even states that the opinions of the two scholars cannot be regarded as those of separate people since "Eleazar is the pupil of Ḥiyya Rabbah" (Kid. 1:4, 60b). It cannot mean that he was his actual disciple, since Ḥiyya had probably died by the time Eleazar migrated to Erez Israel. The intensity of Eleazar's study often made him oblivious to all worldly events (Er. 54b).

Although the Babylonian Talmud describes Eleazar as Johanan's "pupil" in Tiberias (BB 135b; Tem. 25b), the Jerusalem sources see the relationship rather as that of a typical "pupil-associate" (TJ, Sanh. 1, 18b; cf. TJ, Ber. 2:4b). Moreover, the phrase "both Johanan and Eleazar say," is often found in the Babylonian Talmud itself (Yoma 9b, et al.). Eleazar was, in fact, appointed Johanan's associate in the leadership of the council after the death of Simeon b. Lakish, Johanan's previous colleague (BM 84a), but the appointment was not a happy one, Eleazar being distinguished by his extensive knowledge in contrast to the profound acumen of Resh Lakish (Sanh. 24a). He was also one of the communal leaders of Erez Israel (Pe'ah 8:7, 21a), and he is sometimes referred to as serving as *dayyan*, in which capacity he consulted Johanan on difficult cases (Sanh. 3:13, 21d; BB 7b). During his last years Johanan took no active part as head of the council and it appears that Eleazar took his place (Meg. 1:13, 72b). During this period he became widely known as the "master [i.e., legal authority] of

the land of Israel" (Yoma 9b), and on many occasions sent rulings and decisions to Babylon which were transmitted by the \**Neḥutei* (Sanh. 63b). In fact it is stated that the words "they sent from there," i.e., from Erez Israel to Babylon, refers to Eleazar (*ibid.* 17b). Among those to whom he sent his decisions were Mar Ukva the exilarch, and Judah the principal of the academy of Pumbedita (BK 1:1, 2c).

After the death of Johanan in 279, Eleazar was appointed head of the council in Tiberias, but he died in the same year (see *Iggeret Sherira Gaon*).

#### Private Life

Eleazar was extremely poor (Ta'an. 25a). He was, nevertheless, loath to accept any gifts from the house of the \**nasi*. He excused himself by quoting the verse (Prov. 15:27), "He that hateth gifts shall live" (Meg. 28a). Moreover, despite his poverty, he sought to support other needy scholars. This he did in an honorable manner, supplying their needs in secret to save them embarrassment (BM 2:3, 8c). All but one of Eleazar's children died during his lifetime (Ber. 5b), his surviving son, Pedat, acting as an "*amora*" ("interpreter") in the *bet hamidrash* of Assi (Meg. 4:10, 75c).

#### Teaching

Eleazar was one of the great exponents of the Oral Law, and the Mishnah. He quoted numerous statements of both early and late *tannaim* and several *beraitot*, particularly in \**Midrash Halakhah*, without indicating their source. It was with regard to one of his interpretations (Sifra 4:1) that Johanan once remarked to Simon B. Lakish, "I saw the son of Pedat sitting and interpreting the Law, like Moses in the name of the Almighty" (i.e., he expounded the verse in the manner of the *tannaim*, cf. Rashi). He was also a great halakhist who profoundly influenced the methods of mishnaic exegesis. Although he naturally preferred to follow the text of the Mishnah rather than that of the various *beraitot*, he nevertheless examined the wording of each *mishnah* in the light of the earliest sources (BB 87a). He often employed the technique of dividing the *mishnayot*, saying, "The author of this section is not the author of that section" (Shab. 92b; Ker. 24b; et al.). He would reject a *mishnah* whose source he could not find, with the words, "I do not know who taught this" (BM 51a). He thus considerably corrected and explained the Mishnah. He is the author of the rule that whenever Judah ha-Nasi transmits a case, first as subject to a difference of opinion and then in an undisputed form, the *halakhah* is in accordance with the second form (Yev. 42b) (see \**Conflict of Opinion*).

Eleazar was also an exceptionally prolific and profound aggadist, whose sayings are frequently quoted in the Midrash and in both Talmuds. Among them may be mentioned, "In seven places in the Bible, God equates Himself with the lowliest of creatures" (Tanḥ. Va-Yera, 3); "The performance of charity is greater than all sacrifices" (Suk. 49b); "Let us be grateful to cheats [mendicants who are not in need], for were it not for them we would sin daily by becoming unused to giving charity to the poor" (Ket. 68a); "Let my sustenance be as bitter as

the olive, providing that it is from Thy hand, rather than as sweet as honey if I have to depend upon man" (Sanh. 108b); "Even when a sharp sword rests on his neck, man should not abandon hope of mercy" (Ber. 10a); "An unmarried person is less than a man ... as is he who owns no land" (Yev. 63a). Many of his sayings are devoted to fostering the sanctity and love of the Land of Israel: e.g., "Whoever resides in Israel lives without sin" (Ket. 111a); "Those who die outside Israel will not be resurrected" (*ibid.*). When told that his associate Ulla had died during one of his frequent visits to Babylon, he quoted Amos 7:17 and declared "Thou Ulla, 'shalt die in an unclean land'" (*ibid.*). He also ruled as a matter of *halakhah*, "Books which have merited to come to Israel, may not be taken out of the country" (Sanh. 3:10, 21). Although Eleazar's aggadic sayings embrace many spheres of Torah, he avoided esoteric study. He refused to receive instruction in this field from either his teacher Johanan or, many years later, from his friend Assi, who wished to attract him to the subject (Ḥag. 13a). His teachings were transmitted by numerous contemporaries and later scholars, particularly Abbahu, Rabbah b. Hana, and Zera (Shab. 12b, 134b; Suk. 43a; et al.).

**BIBLIOGRAPHY:** Bacher, *Pal Amor*, s.v.; Epstein, *Mishnah*, 292–307; Frankel, *Mevo*, 111b–113a; Halevy, *Dorot*, 2 (1923), 327–32; Hyman, *Toledot*, 192–9; Weiss, *Dor*, 3 (1904<sup>4</sup>), 76–80.

[Shmuel Safrai]

**ELEAZAR BEN SHAMMUA** (c. 150 C.E.), *tanna*. He is generally referred to simply as "Eleazar," without his patronymic. He is quoted frequently in the Mishnah, the Tosefta, and the Midrashei Halakhah, appearing together with R. Meir, R. Shimon, R. Johanan ha-Sandalar, and other students of R. Akiva. Many of Eleazar's *mishnayot* were incorporated into the Mishnah by Judah ha-Nasi. It is difficult, however, to determine the precise extent of this incorporation because of the repeated confusion throughout talmudic literature between Eleazar and Eliezer (b. Hyrcanus). Tannaitic sources record that when Eleazar and Johanan ha-Sandalar reached Sidon on their way to Nisibis to study under \*Judah b. Bathyra they recalled Erez Israel, and with tears streaming from their eyes, returned home, declaring, "Living in Erez Israel is equivalent to all the *mitzvot* of the Torah" (Sif. Deut. 80). He is the author of the law that the witnesses of its delivery validate a *get* (bill of divorce) or any other document, even if the document itself is unsigned by witnesses (Git. 9:4). Among his aggadic statements is: "The Bible and the sword came down from heaven, bound together. God said to the Jews: 'If you keep what is written in this book, you will be saved from the sword, but if not, you will ultimately be killed by the sword'" (Sif. Deut. 40). According to the Babylonian Talmud he was a kohen (Sot. 39a) and one of the last pupils of R. \*Akiva (Yev. 62b; cf. Gen. R. 61:3), whose views are cited on several occasions as the bases for some of Eleazar's statements (Ket. 40a; Zev. 93a; et al.). After the Bar Kokhba revolt Eleazar, among others, was ordained by \*Judah b. Bava, who consequently suffered martyrdom at the hands of the Romans (Sanh. 14a). Other

talmudic sources, however, do not mention Eleazar among Akiva's pupils at any of the gatherings of the sages after the period of the persecutions (TJ, Ḥag. 3:1, 78d; Song R. 2:5; Ber. 63b). Judah ha-Nasi, who was his pupil (Men. 18a), said that Eleazar's *bet ha-midrash* was so crowded that six pupils used to sit there in the space of one cubit (Er. 53a). Highly esteemed by the early *amoraim*, Eleazar was called by Rav "the happiest of the sages" (Ket. 40a), while Johanan said of him that his heart was as broad as the door of the temple porch (Er. 53a). The Talmud tells that he lived to an old age, and when asked by his pupils to what he attributed his longevity, replied: "I have never taken a short-cut through a synagogue; I have not stepped over the heads of the holy people (i.e., of other pupils to get to his place in the *bet midrash*); and I have not raised my hands (for the priestly benediction) without first reciting a blessing" (Meg. 27b). Later Midrashim include Eleazar among the \*Ten Martyrs of the Hadrianic persecutions.

[Shmuel Safrai]

**ELEAZAR BEN SIMEON**, Zealot leader during the Roman war of 66–70 C.E. Eleazar was a member of a distinguished priestly family of Jerusalem and a friend of \*Zechariah b. Avkilus. He played an important role in the war against \*Cestius Gallus, attacking the retreating Roman army and seizing military equipment, which was later to prove of great value in the defense of Jerusalem. Eleazar was not appointed a member of the governing council formed after the war against Cestius, probably because he was an extremist. The entry of Idumeans into Jerusalem, and the ensuing slaughter of those who had opposed the Zealots can be attributed to the machinations of Eleazar and his associates. Josephus attempted to exonerate Eleazar from responsibility for the massacres, putting the blame on \*John of Giscala. Josephus cannot be relied on in this, since he was probably influenced by his great hostility to John. Eleazar engaged in internecine warfare with John of Giscala inside Jerusalem. Eleazar's men entrenched themselves in the Temple, which occupied the highest position in the city, affording them a significant strategic advantage over their enemies. Eleazar was thus able to maintain a defense although he had only a few men at his disposal. A peace agreement between the warring factions was not reached until Passover of 70 C.E. when the siege of Jerusalem by the Romans had already begun. Coins inscribed "Eleazar the Priest" on one side and "Year One of the Redemption of Israel" on the obverse are extant. In the opinion of some historians Eleazar b. Simeon is the subject of the inscription but it is probable that the coins date from the rebellion of Bar Kokhba, and that "Eleazar the Priest" refers to the high priest of that time.

[Abraham Schalit]

**ELEAZAR BEN SIMEON**, *tanna* of the end of the second century C.E.; son and pupil of \*Simeon b. Yoḥai (Suk. 45b). He is mentioned by name very rarely in the Mishnah, though *amoraim* ascribe several anonymous *mishnayot* to him (Bek. 51b, et al.). He is quoted frequently in the *beraitot*, as well as approximately 75 times in the Tosefta, especially those of *Zevahim* and *Menahot*. His aggadic statements are few (e.g., Kid. 40b; Yev. 65b; Gen. R. 20:6). Later Palestinian sources state that after his death his contemporaries eulogized him as a biblical scholar, a student of the Mishnah, a preacher, and a poet (Lev. R. 30:1), this last remark causing him to be incorrectly identified with the *paytan* Eleazar \*Kallir (Tos. to Hag. 13a). The Babylonian Talmud incorporates accounts of his youth into stories related to his father. According to the well known *aggadah*, he escaped with his father from the Romans by hiding in a cave for 13 years (Shab. 33b; BM 85a). This story, mentioned in the introduction to the \*Zohar (1:11a), provided the literary framework for this pseudoepigraphic work of the 13<sup>th</sup> century, and caused its composition to be ascribed to them. According to the Talmud, Eleazar later became a noted scholar who engaged in halakhic controversy with his colleague, Judah ha-Nasi (BM 84b; et al.), as well as in halakhic and aggadic discussions with older scholars, such as Judah, Yose, and Meir (Sot. 34a; RH 4b; et al.). In contrast to his father's unyielding defiance of the Roman authorities, it is told that he accepted under compulsion a position in the Roman administration as an official responsible for the apprehension of thieves and robbers – a position that his grandfather, Yoḥai, had at one time held (Pes. 112a). Among others who reportedly censured him for this activity was his teacher, Joshua b. Karḥah, who reprimanded him by exclaiming: "Vinegar, the son of wine! How long will you continue to hand over the people of our God to be killed?" (BM 83b; et al.). It is related of his son Jose that he grew up without sufficient surveillance and was on the brink of turning to a life of crime. Judah ha-Nasi, however, placed him under the care of R. Simeon ben Issi, his maternal uncle, who directed and taught him, and he ultimately became the disciple of R. Judah ha-Nasi.

[Shmuel Safrai]

**ELEAZAR BEN YOSE I** (second half of second century C.E.), *tanna*. Eleazar was the second son of \*Yose b. Ḥalafta of Sepphoris (Shab. 118b; TJ, Yev. 1:1, 2b). He attained distinction as a scholar during the lifetime of his father, who quotes him and praises his statements (Sif. Deut. 148; cf. Pes. 117a; Yoma 67a). He cooperated with his father in intercalating the year (Tosef., Sanh. 2:1). The Talmud counts him among the scholars of the academy of Jabneh (Shab. 33b) and reports that \*Simeon b. Yoḥai held him in high esteem (Me'il. 17b). His *halakhot* are found in the Tosefta and *beraitot* but he is not mentioned in the Mishnah. Nevertheless, many statements

in the Mishnah which are quoted anonymously may in fact derive from the Mishnah of Eleazar b. Yose (Kelim 11:3; cf. Tosef., Kelim; BM 1:2; Nid. 8:1). Tannaitic sources relate that he gave rulings in Rome in connection with ritual purity (Tosef., Nid. 7:1; Mik. 4:7), and while there he saw the vessels plundered from the Temple at the time of its destruction. He testified that the veil was spattered with blood from the sacrifices of the Day of Atonement (Tosef., Yoma 3 end). Talmudic tradition explains that Eleazar journeyed to Rome together with Simeon b. Yoḥai in an attempt to persuade the emperor to abrogate the edicts against Jewish religious practices that were reinstated in the period of the Antonines (Me'il. 17a; see Alon, Toledot, 2 (1961<sup>2</sup>), 61). According to the *aggadah*, they were helped by a miracle. A demon possessed the emperor's daughter and they succeeded in exorcising it. The emperor took them into his treasure chamber and invited them to take whatever they desired. They saw the text of the edict, and consigned it to flames (*ibid.*). We are also told that while in Rome Eleazar had discussions with \*Mattiah b. Heresh, the leading scholar of the capital (Yoma 84b; Me'il. id), and saw the high priest's gold plate inscribed with the words "holy to the Lord" (the Tetragrammaton) in one line (Suk. 5a; et al.). According to the *aggadah* he also saw the insect that entered the nostrils of Titus and penetrated to his brain (Gen. R. 10:7, ed. Theodor Albeck, 82, note 3), as well as fragments of Solomon's throne that had been carried off by Nebuchadnezzar and taken from one nation to another until it reached the treasure house of Rome (Esth. R. 1:12). Eleazar also was reported to have visited Alexandria where an old Egyptian showed him hair and bones reputedly of the enslaved children of Israel embedded in a building from before the exodus from Egypt (Sanh. 111a and Dik. Sof. *ibid.*). He disputed with Samaritans and Sadducees, proving to them that their copies of the Torah scroll were forged and their commentaries false (Sot. 33b; Sanh. 90b). In addition to his halakhic powers he was also a gifted aggadist. He is quoted as saying: "All the charity and kindness practiced by Israel in this world bring abundant peace and serve as powerful advocates between Israel and its Father in heaven" (BB 10a).

**BIBLIOGRAPHY:** Hyman, Toledot, 177–80; Epstein, Tanna'im, 178f.; Bacher, Tann. s.v.

[Yitzhak Dov Gilat]

**ELEAZAR BEN YOSE II** (c. early fourth century), Palestinian *amora*. He may have been the son of the *amora* Yose who, together with Jonah, headed the academy at Tiberias. In any event Eleazar discussed halakhic problems with Yose, frequently put questions to him (TJ, Ber. 1:8, 3d; TJ, Ta'an. 2:2, 65c et al.), and expounded before him (TJ, Kil. 8:2, 31c; Ned. 4:9, 38d). Eleazar frequently quotes the statements of other *amoraim* such as Avin, Rav, Tanḥum b. Hiyya (TJ, Ma'as. 1:3, 49a; 2:1, 49c; Ber. end of ch. 7, 11d; RH 4:8, 59c et al.). His own deeds and sayings are also reported. For example, he, Abba b. Mari, and Mattaniah permitted a gift (of bread) to be carried to the

government representative (Ursicinus) on the Sabbath (TJ, Beḥah 1:6, 60c). In *Genesis Rabbah* (32:2), R. Menahemyah quotes him as saying: “No man loves his fellow craftsmen – but God does – as it is written, ‘For the Lord is righteous, He loveth righteousness’ [Ps. 11:7].”

**BIBLIOGRAPHY:** Hyman, Toledot, 177f.; Frankel, Mevo, 113b; Weiss, Dor, 2 (1904<sup>4</sup>), 166.

[Yitzhak Dov Gilat]

**ELEAZAR (Eliezer) BEN ZADOK**, name of at least two *tannaim*, both belonging to the same family, in which the names Zadok and Eleazar frequently recur.

(1) *Tanna* of the first and beginning of the second century C.E. His father was the *tanna*, \*Zadok, who, in an attempt to prevent the destruction of the Second Temple afflicted himself for 40 years. When he became ill, Johanan b. Zakkai obtained a physician from Vespasian and then accompanied by Eleazar he was permitted to leave Jerusalem, then under siege, in order to recover from the effects of his lengthy fast (Git. 56 a–b; Lam. R. 1:31). Eleazar’s teacher was Johanan b. ha-Ḥoranit (Tosef., Suk. 2:3). He was a priest (Bek. 36a; et al.) and transmitted information concerning the structures, procedures, and practice of the Temple (Mei. 3:7; Mid. 3:8; Suk. 49a; et al.). While living in Jerusalem he engaged in commerce and such was his honesty that he dedicated to communal use three hundred flasks of wine, which he had collected from the residue in his measuring containers (Tosef., Beḥah 3:8). He was an eyewitness of the suffering endured at the time of the destruction of the Second Temple and saw the daughter of Nakdimon b. \*Guryon, one of the wealthiest men in Jerusalem, picking up barley from under horses’ hooves in Acre (Tosef., Ket. 5:10), and Miriam, the daughter of Boethus and wife of the high priest Joshua b. Gamla, tied by her hair to the tails of horses and made to run from Jerusalem to Lydda (Lam. R. 1:47; cf. TJ, Ket. 5, end). After the destruction of the Second Temple he joined the sages of \*Jabneh, and as frequent visitor at the home of R. Gamaliel, reported the Sabbath and festival customs he witnessed there (Tosef., Beḥah 1:24; 2:13, 14; Pes. 37a; et al.). Eleazar frequently quotes halakhic traditions heard in his father’s home or from earlier sages, as well as explanations of halakhic terms and expressions gleaned from the schools in Jerusalem and Jabneh (Bek. 22a; Nid. 48b). His statements include, “Do good deeds for the sake of the Creator, for their own sake, do not make of them a crown with which to glorify yourself, nor a spade to dig with them” (Ned. 62a; cf. Avot 4:5). Some assume the existence of an earlier Eliezer b. Zadok whose entire life was spent in Jerusalem before the destruction of the Second Temple.

(2) *Tanna* of the second half of the second century C.E., apparently the grandson of Eleazar b. Zadok (1). He transmitted *halakhot* in the names of R. Meir (Kil. 7:2) and of R. Simeon b. Gamaliel (Tosef., Kelim; BM 9: end), engaged in halakhic discussions with R. Judah and R. Yose (Kelim 9:26, 2:6), and was close to Judah ha-Nasi and his household (Tosef., Suk. 2:2). Aibu (the father of Rav, according to Rashi) relates (Suk.

44b) that he once learned from Eleazar’s action that the shaking of the willow-branch on Tabernacles outside Jerusalem is a custom introduced by the prophets, and that no benediction is to be made over it (see, however, the readings in Dik. Sof., Suk. 136–7). Eleazar is the author of the statement, “No restriction may be imposed on the public unless the majority of the people can endure it” (Hor. 3b). It is difficult to decide to which Eleazar b. Zadok certain *halakhot* and statements are to be ascribed.

**BIBLIOGRAPHY:** A. Zacuto, *Yuhasin ha-Shalem*, ed. by Filipowski (1857), 26–27; Frankel, Mishnah, 97–99, 178; Hyman, Toledot, 201–5; Bacher, Tann, 1 pt. 1 (Heb., 1903), 36–38; S. Lieberman, *Tosefta ki-Feshutah*, 4 (1962), 850.

[Yitzhak Dov Gilat]

**ELEAZAR (Eliezer) HA-KAPPAR** (late second century C.E.), Palestinian *tanna*, sometimes referred to as Eleazar ha-Kappar Beribbi (i.e., the descendant of eminent scholars). It is occasionally difficult to distinguish between the statements of Eleazar and those of \*Bar Kappara, who was probably his son, and who was also called Eleazar ha-Kappar Beribbi. It is improbable, as some scholars believe, that the two were identical, since the son is sometimes specifically referred to as “Eleazar ben Eleazar ha-Kappar Beribbi” (e.g., Tosef., Beḥah 1:7). The father was apparently a member of \*Judah ha-Nasi’s *bet ha-midrash* (Tosef., Oho. 18:18), while the son was Judah’s pupil. Some of the halakhic and aggadic remarks contained in the Mishnah and the *beraitot* perhaps should be attributed to the father. Eleazar ha-Kappar (the first) may be the author of the maxim “Envy, cupidity, and the craving for honor take a man out of the world” (Avot 4:21), and of the aggadic statement: “Great is peace for all the blessings conclude with the word *shalom* [peace]” (Sif. Num. 42), since it is followed immediately by another tradition brought in the name of his son. In 1969 a stone, which was apparently the lintel over the main entrance to a *bet midrash*, was found in the Golan area, inscribed with the words: “This is the *bet midrash* of Rabbi Eliezer ha-Kappar.” It is unclear whether this inscription refers to the father or to the son.

**BIBLIOGRAPHY:** Frankel, Mishnah, 213; Kahana, in: *Ha-Asif* (1886), 330–3; Hyman, Toledot, 215–7; Bacher, Tann; *Hadashot Arheologyot* (April 1969), 1–2. **ADD. BIBLIOGRAPHY:** D. Urman, in: *IEJ* 22 (1972), 16–23; idem, in: *Beer-Sheva*, 2 (1985) (Hebrew), 7–25.

[Shmuel Safrai]

**ELEAZAR ḤISMA** (fl. first third of the second century C.E.), *tanna*, one of the sages of Jabneh. Some consider Ḥisma to have been his father’s name and refer to him as Eleazar b. Ḥisma, but it appears rather to have been his byname, meaning “the strong,” said to have been given to him because of the strength he displayed in overcoming his former ignorance (Lev. R. 23:4; for another interpretation, see *Midrash David on Avot* (1944), 75). A pupil of Joshua b. Hananiah and perhaps also of Akiva, he transmitted *halakhot* in the name of the former and, together with him, he gave an aggadic interpretation of a biblical passage (Tosef., Zav. 4:4; Mekh., Amalek,

176). Some of his statements are recorded in the Mishnah, *baraita*, and halakhic Midrashim. For example, on the verse (Deut. 23:25) which permits a laborer, while harvesting grapes, to eat the fruit, Eleazar commented: "A laborer may not eat more than his wage" (Sif. Deut. 266; BM 7:5). He objected to excessive demonstrativeness in prayer, applying to the person who "blinks with his eyes, gesticulates with his lips, or points with his fingers while reciting the *Shema*," the verse "thou hast not called upon me, O Jacob" (Isa. 43:22; Yoma 19:6). Though proficient in astronomy and mathematics, he did not ascribe too much importance to them; hence his statement: "(Even) ordinances concerning bird sacrifices and the purification of women constitute the essence of the law, whereas astronomy and geometry are (merely) auxiliaries to knowledge" (Avot 3:18). He remained extremely poor, as was expressed in R. Joshua's comment to Rabban Gamaliel: "Marvel at two of your disciples in Jabneh, Eleazar b. Hisma and \*Johanan b. Nuri (this is the correct reading: see Sif. Deut. 16), who can calculate how many drops the ocean contains, but have neither bread to eat nor clothes to wear." To enable them to earn a livelihood, Gamaliel wished to appoint them supervisors in the academy at Jabneh. When, in their modesty, they declined the offer, Gamaliel sent for them a second time, saying: "You imagine that I offer you rulership? It is servitude that I offer you," whereupon they accepted the appointment (Hor. 10a-b).

**BIBLIOGRAPHY:** Bacher, Tann, 1 (1903<sup>2</sup>), 368-70; Weiss, Dor, 2 (1904<sup>4</sup>), 110; Hyman, Toledot, 217-8; Frankel, Mishnah, 142; Alon, Toledot, 1 (1958<sup>3</sup>), 143, 299, 306.

[Yitzhak Dov Gilat]

**ELEAZAR OF MODI'IN** (**ha-Moda'i**; end of the first and the beginning of the second century C.E.), *tanna*. He came from Modi'in, the home of the Hasmoneans, and was principally renowned as an aggadist, earning the praise of R. Gamaliel who said of him: "We still have need of [the aggadic interpretation of] the Modi'ite" (Shab. 55b; BB 10b). Defining the nature of *aggadah*, Eleazar said that it captivates men's hearts (Mekh., Va-Yassa, 5). Even the sole *halakhah* quoted in his name has an aggadic flavor about it; disputing the view that wherever "Adonai" is mentioned in the Pentateuch in connection with Abraham it refers to God, except in Genesis 18:3, "Adonai [my Lord], if now I have found favor in Thy sight," Eleazar is cited as saying: "This too, is sacred"; i.e., it also refers to God (Shevu. 35b). Some of his contemporaries protested against his exaggerated aggadic interpretations: "O Man of Modi'in, how long will you rake words together" (Yoma 76a). In *Avot* (3:11) he is recorded as declaring: "He who profanes the sacred things and despises the festivals and puts his fellow-man to shame in public and rejects the covenant of Abraham our father and gives the Torah a meaning contrary to its right one, even though he is learned in the Torah and has good deeds to his credit, has no share in the world to come." His reference to rejecting the covenant of Abraham - that is, to those who disguised their circumcision in order to hide their Jewish origin - is aimed at the Jews who forsook their people during

the Bar Kokhba revolt (Tosef., Shab., 15:9). Most of his aggadic remarks are to be found in the *Mekhilta* on the portions dealing with the manna and with Amalek, where he is mentioned more than 40 times.

It is stated (TJ, Ta'an. 4:68d; Lam. R. 2:2) that Eleazar was the uncle of Bar Kokhba and was in Bethar during the final stages of its siege. Suspecting Eleazar's loyalty, Bar Kokhba struck him a mortal blow. "Immediately thereafter Bethar was taken and Ben Koziba was killed." It is thus probable that "Eleazar the priest," whose name occurs on coins of Bar Kokhba with that of "Simeon the prince of Israel" or by itself, refers to Eleazar of Modi'in. Although it is not stated in the sources that he was a priest, this may be taken for granted, since most of the scholars who bore this name, that of the son of Aaron the high priest, were *kohanim* (in contrast to Eliezer).

[Shmuel Safrai]

**ELEK (Fischer), ARTUR** (1876-1944), Hungarian author and art historian. A contributor to *Nyugat* and other literary periodicals, Elek translated French and Italian classics and wrote short stories. His major works were *Álarcos menet* ("Masked Procession," 1913), *A reneszánsz festőművészete* ("Renaissance Painting," 1927), and *Ujabb magyar költők lírai anthológiája* (1911), an anthology of modern Hungarian poetry. A convert to Christianity, he committed suicide during the Nazi occupation.

**ELEPHANT.** Archaeological finds of ivory objects made from elephant tusks have been found in Israel dating back to prehistoric and Chalcolithic times. It is assumed that wild elephants were still present in Syria during the second and first millennia B.C.E. until they were hunted to extinction. Alternatively, they may have been imported there from India (*Elephas maximus*) for the purposes of royal hunting, but this seems less likely. Thutmoses III is recorded as having hunted elephants during his campaign in Syria in the 15<sup>th</sup> century B.C.E.: "He [Thutmoses III] hunted 120 elephants at their mud hole. Then the biggest elephant began to fight before his Majesty. I [Amen-en-heb] was the one who cut off his hand while he was still alive, in the presence of his Majesty, while I was standing in the water between two rocks. Then my Lord rewarded me..." The lower jaws of elephants have been discovered in mid-second millennium deposits during archaeological excavations at the site of Atchana-Alalakh in Syria. While the elephant itself is not mentioned in the Bible, its ivory tusks (*Shenhabbim*) were brought from Ophir for Solomon (1 Kings 10:22; 11 Chron. 9:21). The word "*shenhav*" means the tooth (*shen*) of the elephant (*ev* in Egyptian, hence the name of the island Yev (Jab) - \*Elephantine). The word *shen* also signifies ivory, from which Solomon made his throne, overlaying it with

gold (1 Kings 10:18). The Bible also mentions “horns of ivory,” “houses of ivory,” “beds of ivory,” and “ivory palaces” (Ezek. 27:15; Amos 3:15; 6:4; Ps. 45:9). Reference is likewise made to “the ivory house” which Ahab built (1 Kings 22:39), the reference being to a house containing ivory vessels and ornaments. An examination of the ivory vessels, ornaments, and images uncovered at Megiddo and in Samaria shows that they were made from the African elephant *Loxodonta africana* (= *Elephas africanus*). Elephants were employed by Darius in his battle against Alexander the Great. At a later date, elephants were introduced into Erez Israel being used for military purposes in the Syrian-Greek army (1 Macc. 8:6; II Macc. 13:15). It was under one of these elephants that Eleazar the Hasmonean was crushed to death (1 Macc. 6:43–46). A painting of an elephant appears on the walls of a Sidonian tomb found at Marissa (Maresha). In mishnaic times, elephants were kept in some rich homes and the *baraita* deals with tasks carried out for its master by an elephant (Er. 31b). It is stated that the elephant feeds on branches and is rarely to be seen (TJ, Shab. 18:1, 16c). On seeing an elephant one recites the blessing, “Blessed is He who makes strange creatures” (Ber. 58b). The elephant’s period of gestation was said to be three years (Bek. 8a); it is now known, however, to be 18–22 months only.

[Jehuda Feliks / Shimon Gibson (2<sup>nd</sup> ed.)]

**ELEPHANTINE** (Aram. ܢܝ, *yb*; Eg. *’ibw*, *’bw*; Gr. *ieb*), “the city of ivories,” situated at the eastern bank of the southern end of a small island in the Nile, just north of the First Cataract and opposite the City of Sun (the Syene of Ezek. 29:10 and opposite modern Aswan). Its name relates to the natural rock formation along the river which, from even a short distance, looks like a herd of elephants. The Greek name Elephantine (Ἐλεφαντίνη; cf. Jos., *Bellum*, 4:611; Strabo, 16) was a rendering of the Egyptian name, itself preserved in the Aramaic name. Elephantine was sacred to the ram-headed god Khnum who was believed to control the annual inundation of the Nile from the First Cataract.

During the Old Kingdom, Elephantine was known as “The Door to the South” because it was the southernmost city of Egypt, and a frontier fortress defending access to Egypt from Nubia. During the Middle and New Kingdoms it was the center of the Egyptian administration of Nubia. Under Persian rule from 525 B.C.E., it was the center of Persian military command in Egypt, and there was a large mercenary camp at Elephantine which included companies or regiments (*degalim*, “banners”) of Jewish soldiers (חילא יהודה).

Elephantine became known to the modern world at the beginning of the 20<sup>th</sup> century with the discovery of the Aramaic documents known as the Elephantine Papyri, which were first published by A.E. Cowley in 1923. A second collection, edited by Emil G. Kraeling, was published in 1953.

The Jewish military colony is well known from the Elephantine Papyri. These describe the lives of the mercenaries who lived in Elephantine in the sixth and fifth centuries B.C.E. as well as their families and others.

Much of the significance of the papyri lies in their forensic detail, such as those relating to marriage and divorce or with matters relating to commerce and inheritance. Others shed light on previously unknown or obscure historical occasions.

### History of the Jewish Colony at Elephantine

There are no external sources on the history of the Elephantine community. When the southern frontier was exposed to Nubian raids, Jewish soldiers were sent to defend it, perhaps as early as during the Assyrian regime. The Jewish temple at Elephantine may have been built in the second half of the seventh century or at the beginning of the sixth but was constructed, in any event, before the Persian conquest of Egypt in the days of Cambyses’ rule, as mentioned in the letter of the Elephantine Jews themselves (Cowley 1923: 30). It is sometimes said that there is a connection between the building of the temple at Elephantine and Isaiah’s prophecy (19:19) concerning the “altar to the Lord in the midst of the land of Egypt” and the “pillar at the border thereof.”

It is not thought that the soldiers of the garrison built the temple. The description contained in the Elephantine Jews’ letter to Bagoas, the governor of Yahud (Cowley 30:9–12), attests to the great magnificence of the building, and apparently the Jewish mercenaries could not by themselves afford to erect such a splendid structure. Since there were also Jewish civilians living at Elephantine, the temple was probably not built until the civilians, together with the soldiers, financed the building project. Hence the temple was presumably not built in the early days of the Jewish settlement at Elephantine, but later when the community was better established and had achieved some prosperity and local standing.

The papyri indicate that there was a developed trade in property, such as homes and land. Other types of commerce also provided the Elephantine Jews with their livelihoods, for it was not only a frontier military post but also a center of commerce with Nubia, trading especially in ivory. The elite section of Elephantine society was probably small and its wealth limited. From the contributions to the temple (Cowley 22) and also from the gifts to Mivtaḥyah the daughter of Mahseiah (Cowley 15), it can be seen that silver was both uncommon and expensive.

In general, relations between the local Egyptians and the Jewish mercenaries and civilians were strained, although there were instances of marriage between Jews and Egyptians, in which case it would seem that the Egyptian partner

had to convert to Judaism. This is inferred by several scholars from the fact that the Egyptian Ašhor's sons had Jewish names (Yedonyah and Mahseiah (Cowley 20)). However, as Bohak has stated (2002: 185), it is not possible to trace a single Jewish family over several generations to accurately establish the constancy of their Judaism in the face of intermarriage with locals.

In any event, the position of the Jews declined with the ascension of Egyptian power. While they were soldiers in the service of the Persian king their position was relatively secure, but with the expulsion of the Persians from Egypt at the end of the fifth century B.C.E. and the rise of the Egyptian kingdom, the position of the Elephantine Jews worsened (cf. the fragmentary document Cowley 37, which refers to a dispute between the Elephantine Jews, who were wronged and "fear robbery because they are few," and the Egyptians).

In 410 B.C.E., the temple of the Elephantine Jews was destroyed by the priests of the adjoining temple of Khnum (Cowley 1923: 30) after it was looted for gold and silver. The most common explanation for the act of destruction is that the priests of Khnum were angered by the sacrifice by the Jews of animals sacred to Khnum, particularly the sacrifice of sheep during Passover (Cowley 1923: 21). Three years after the destruction, the Elephantine Jews applied to the Persian governor of Yehud for permission to rebuild the temple. Permission was given, but on condition that animal sacrifices would no longer be made there (Porten 1968: 292). It is not known how much longer after this the Jewish temple stood, but the account of the community in the papyri ends in 399 B.C.E.

Even after the end of Persian rule in Egypt, it is not certain whether the Jewish colony at Elephantine persisted or not. Military requirements probably made it necessary to keep an army on the frontier even after the expulsion of the Persians, and it was unlikely that even a new administration would dispense with the Jewish soldiers who, for several generations, had been trained and experienced in guarding the southern frontier. By the end of the Ptolemaic period, Egypt's eastern frontier at Pelusium was run by a Jewish guard, and the Macedonians at the beginning of the Greek period in Egypt probably did not dispense with the services of the Jewish guards on the southern frontier, although there was a fundamental change in organization.

### The Legal Papyri

The legal papyri shed light on the daily life of the Jewish military colony at Elephantine. Interestingly, both a husband and a wife had apparently equal power to unilaterally dissolve their marriage (Cowley 15; Kraeling 2, 7). Thus, the prospective bride had to consent to the marriage, and the prospective bridegroom was unable to obtain the father's consent without the girl's also: if she refused, her father could not compel her to marry him. As set out in another papyri (Cowley 15), a man asked the head of the family for the hand of the woman. If both agreed, the man recited the formula: "She is my wife

and I am her husband from this day for ever," and also paid a dowry to the bride's father.

The gifts presented by the bridegroom to the bride Mivtaḥyah, the daughter of Mahseiah b. Yedonyah, are also set out in Cowley 15, with a note of their value, which is explicitly given in case the marriage is dissolved. This could be effected at the request of either husband or wife by one of them declaring in public that he or she "hates" the other. The results differed depending on who initiated the divorce. According to Cowley, in the event of Mivtaḥyah's rejecting her husband Ašhor, she would have to cover the cost of the dissolution of the marriage contract, that is, seven and a half shekels but, even then, the goods and chattels which she brought into the marriage remained hers after the dissolution of that union.

However if Ašhor dissolved the marriage, he forfeited the dowry, but Mivtaḥyah had to return all that her husband had given her during their marriage. To protect a wife against her husband's capriciousness, a further regulation was laid down to the effect that if the husband arbitrarily divorced his wife with the plea that he had another wife or other children, he had to pay a heavy fine (according to Cowley 15, 20 karsah = 200 shekels) and all the conditions of the marriage agreement in whatever concerned the wife were annulled. All these stipulations refer to a marriage between free persons.

Dated 449 B.C.E., Kraeling 2 is the marriage document of Tamut, the handmaiden of Meshullam b. Zaccur. Married to Ananiah b. Azariah, she remained a handmaiden even after her marriage, but another papyrus (Kraeling 5) shows that she and her daughter Yehoyishma eventually gained their freedom after Tamut had been married for 18 years, although they both remained closely aligned to the family.

A woman's status at Elephantine could also be gauged from the gifts she received as a wife and a daughter (Kraeling 5, 9; Cowley 8). Inheritance laws were also revealed in the Elephantine papyri. It is evident that sons inherited, but less so in the case of daughters (where there were also sons in the family). It seems likely that a daughter's right to inherit existed only when there were no sons. Possibly this was the origin of the institution of the gifts made to daughters – a compensation for their being discriminated against in the matter of inheritance.

In three papyri, Cowley 15 and Kraeling 2 and 7, there are illuminating comments on the inheritance of a widow and a widower. Cowley 15 states that if Mivtaḥyah died without male or female issue, Ašhor "inherited her goods and chattels"; but if Ašhor died without Mivtaḥyah having borne his children, male or female, "she had the right to his goods and chattels." This difference in wording is explained by scholars as indicating that in such a case the widower's right to inherit the assets was established in law, but in the case of the widow it was a matter of some sort of agreement or negotiation.

The Elephantine papyri also give instances of transactions in landed and other property, the site of which was fixed according to the adjoining land or houses, a procedure familiar from many papyri of the Ptolemaic period and the days

of Roman rule of Egypt. With the help of these documents it is possible to reconstruct with some degree of certainty the location of the Jewish temple at Elephantine (cf. the plan in Kraeling, p. 81).

### The Religion of the Jews in Elephantine

The Elephantine Jews brought with them the religion of the early prophets shortly before the destruction of the First Temple. This religion placed the God of Judah, Yahu (a name which occurs in several variants in the papyri), at the center of faith and worship. This is revealed by the fact that those who ministered in the Elephantine Jews' temple are referred to in the papyri as *kohanim* ("priests"), while the gentile cults are said to have *kemarim* ("idoltrous priests") – exactly as in the Bible.

It is interesting to note that the Elephantine Jews saw nothing amiss in having their own temple even though a temple to the God of Israel existed in Jerusalem. They appealed to the high priest Jehohanan to take steps to rebuild their temple, destroyed by the priests of Khnum, without any thought that he might regard it as a grave sin. It is evident from the Elephantine Papyri (Cowley 30), that those who wrote the letter to the Persian governor were surprised that the high priest in Jerusalem had not answered them. However, perhaps the Jews at Elephantine were unaware of the upheaval in Jerusalem, the ousting of the temple hierarchy by the returnees from the Babylonian exile and their establishment of the old/new Temple and Torah-based cult.

The Elephantine Jews' temple was originally established to serve as a focus of worship for the Jewish military and civilian colony which, remote from the land of Judah, needed some religious center. If the Temple of Zerubbabel was built more or less according to the plan of the First Temple, the description of the Elephantine temple given in papyrus Cowley 30 shows that it had an altogether different shape. It was adorned with stone pillars and hewn stone and had a roof of cedar and five gates with bronze hinges. In the temple were also various articles of furniture as well as bowls of gold and silver.

On the altar, the full range of sacrifices were offered before the destruction of the temple (by the priests of Khnum in 410 B.C.E.) and after the rebuilding of the temple, animal sacrifice was no longer permitted. Whether the order of worship was like that observed in the Temple at Jerusalem cannot be ascertained. However, this is improbable, if only for the reason that Yahu was not the only god housed in the Elephantine temple, since a list of the Elephantine Jews' gifts to their temple (Cowley 22), totaling 31 karash and 8 shekels, states that 12 karash and 8 shekels were for Yahu (*ibid.*, p. 70:123), 7 karash for Ashambethel (*ibid.*, loc. cit.: 124), and 12 karash for Anathbethel (*ibid.*, loc. cit.: 125).

It seems clear that two goddesses dwelt alongside Yahu, and may have been worshipped with Him in the Elephantine temple. The element 'Asham' in Ashambethel is to be identified with the Ashmat of Samaria mentioned in Amos (8:14), while Bethel as an element in a compound proper noun current in

Judah in the days of Darius I is mentioned in Zechariah 7:2. The same applies to Anathbethel: Anath was well known in Erez Israel, as is indicated by place-names such as Anathoth and Beth-Anath.

This situation in Elephantine supports the assumption that the Jewish garrison there was an ancient one, with its origins in (if not before) the days of Manasseh. In the fifth century B.C.E., the relationship between the Jews at Elephantine and Jerusalem was not close, and no remains of the Pentateuch have been discovered at Elephantine, although the finding of the "Book of Ahikar" there shows that the community contained lovers of ethical and wisdom literature. It may also explain another, more interesting fact, namely that of the festivals of Israel only the observance of Passover is mentioned at Elephantine. Passover was observed in Jerusalem in the days of Hezekiah (II Chron. 30:13–27) and Josiah (II Kings 23:21–23; II Chron. 35:1–18). During the First Temple period no mention is made of Tabernacles – the first mention of its observance in Jerusalem belongs to the Second Temple period, in the time of Ezra (cf. Neh. 8:13–18), and its reintroduction in the fifth century had not yet spread beyond the borders of Judah. As some papyri are earlier than Ezra and Nehemiah and others only a few years later, the observance of Tabernacles was therefore unknown to them. The document referring to Passover (Cowley 21) contains King Darius II's edict of 419 B.C.E. (the fifth year of his reign) to the governor Arsames that the Jewish forces (and perhaps also Jews outside Elephantine) were to celebrate Passover.

Detailed religious instructions were given on what the Jews were to do to preserve the sanctity of the festival. The document is a copy of the original edict which was brought to the attention of Yedoniyah by Hananiah, apparently a Jew influential with the authorities. The contents of the document show that the rules of eating unleavened bread and of abstaining from leaven were known and properly observed at that time, in keeping with the commandments of the Torah.

### Organization of the Military Colony

With the help of the Elephantine Papyri, an extremely clear picture can be drawn of the organization of the Jewish military colony as it existed at the end of the fifth century B.C.E. The Elephantine Jews constituted a military unit known as "the Jewish force" (חילא יהודה). There were also Jews at Elephantine who were not part of the military establishment. Every Jewish soldier belonged to a *degel* (company or regiment), and was referred to as "a man of the *degel*" (*ba'al degel*, בעל דגל), the Jewish civilian as "a man of the town" (*ba'al kiryah*, בעל קריה; Cowley 5:9, 13:10). The names of the *degalim* are not Jewish but Persian or Babylonian, and the same applies to the higher command. At the head of the Jewish force was a commander of the garrison (יב חילא), above whom was the *fratarak*, corresponding more or less to a general. These were non-Jews.

The Elephantine documents also mention "a hundred" as a military unit, apparently smaller than a *degel*. Despite the extensive civilian freedom granted to them, as attested by the

Elephantine papyri, the Jews there, being soldiers, required the Persian regime's permission for any change which interfered with their military duties. As soldiers subject to military discipline, they were tried by the military authorities at Elephantine or at Syene. Nevertheless, they enjoyed a large measure of civilian freedom in everything pertaining to their personal lives. They led a normal family life, were allowed to transact business among themselves or with non-Jews, to buy and sell landed property and houses, and to bequeath these to their children. As soldiers, however, they received their rations from the king (Cowley 24), being allotted a monthly ration in grain (usually barley) and legumes (Cowley 2; Kraeling 11:3ff.) and payment in silver (Cowley 2:16, 11:6). At Elephantine there was a "royal storehouse" (Kraeling 3:9, et al.). Accountants (Cowley 26:4ff.) and scribes (Cowley 2:12, 14) supervised the disbursement of goods and funds. One administrative document (Cowley 24) shows:

Men:	22	2	30
Ardab (c. 1 quart):	1	1½	2½

The monetary system combined the Persian karash (83.3 grams) with the Egyptian shekel (8.76 grams), a half-shekel agio being added to make 10 shekels equal 1 karash.

It is nonetheless clear that their wealth derived from commerce. The documents show that the Elephantine Jews attained a certain degree of wealth and some of them, especially the civilians, a measure of opulence. They occupied an intermediate position between a professional soldier living by his sword and a civilian engaged in a craft, in commerce, or in cultivating the soil. The same situation obtained in the Hellenistic period when, for example, the cleruchies were both soldiers and farmers. The status of the fifth-century Elephantine Jews can also be compared to that of the Babylonian Jewish military colony sent at the command of Antiochus III to Phrygia and Lydia, where the colonists were settled on the soil and in the cities and constituted a garrison loyal to the Seleucids, at the same time cultivating the land allotted to them by the king.

An active civilian life at Elephantine is attested by the various civilian officials mentioned in the papyri, such as judges (Cowley 16:4–5, 9), state scribes (ספרֵי מדינתא: Cowley 17:1, 6), and others. It is however probable that these officials were not Jews but Persians or other non-Jews. At the head of the Elephantine Jewish community was its most prominent personality, who represented it both internally and externally. At the end of the fifth century B.C.E. the leader of the community was Yedonyah b. Gemariah who with his colleagues sent the famous letter about the temple to Bagoas.

[Abraham Schalit / Lidia Matassa (2<sup>nd</sup> ed.)]

**ELFENBEIN, ISRAEL** (1890–1964), U.S. rabbi and talmudic scholar. Elfenbein was born in Buczacz, eastern Galicia. He immigrated to the U.S. in 1906 and in 1915 was ordained at the Jewish Theological Seminary in New York. Between 1915 and 1940 Elfenbein was rabbi of congregations in Nashville, Chicago, and New York. In 1938 he became national executive director of the Mizrahi Education and Expansion Fund. Elfenbein's principal interest in scholarly research was medieval rabbinic literature. He made many contributions to scholarly periodicals and annuals. His major work was a collection of the responsa of Rashi, *Teshuvot Rashi* (3 vols. in one, 1943). Other works include *Maimonides the Man* (1946). Some of his more popular writings were collected in a volume published posthumously, *American Synagogue as a Leavening Force in Jewish Life*, edited by A. Burstein (1966).

**BIBLIOGRAPHY:** J.L. Maimon (ed.), *Sefer Yovel... Yisra'el Elfenbein* (1962), 9–13.

**ELFMAN, DANNY** (1953– ), U.S. composer-musician. Born in Amarillo, Texas, to teacher Milton and teacher/writer Blossom (née Bernstein) Elfman and raised in Los Angeles, Elfman played violin in public high school and later played the conga drums and violin with the avant-garde troupe Grand Magic Circus in France and Belgium. After spending a year touring West Africa at 18, Elfman returned to Los Angeles in 1971 following a bout with malaria. His brother, Richard, asked him to join his multimedia theater ensemble, the Mystic Nights of the Oingo Boingo, and help score his film *The Forbidden Zone* (1980), which starred Elfman as Satan. Elfman taught himself composition during this time by transcribing the music of jazz great Duke Ellington. While working on the film, Elfman and other members formed the new wave group Oingo Boingo in 1979. The group released a string of albums with IRS Records – *Oingo Boingo* (1980), *Only a Lad* (1981), *Nothing to Fear* (1982), and *Good for Your Soul* (1984). Elfman recorded his first solo album *So-Lo* in 1984 for MCA. The group scored a Top 40 hit with the theme to the movie *Weird Science* (1985). That same year, the feature film *Pee-Wee's Big Adventure* debuted with

Elfman's score, and marked the first collaboration between the composer and director Tim Burton. Oingo Boingo followed Elfman to MCA, releasing *Dead Man's Party* (1986), *Boi-ngo* (1987), *Boingo Alive* (1988), and *Dark at the End of the Tunnel* (1990), but failed to break out from its local fan base. Elfman and Burton's gothic-themed creations continued with *Beetle-juice* (1988), *Batman* (1989), and *Edward Scissorhands* (1990). He won a Grammy award for best instrumental composition in 1989 for "The Batman Theme" for the film *Batman*, and was nominated for best score. In 1990, he received two Emmy nominations for his theme for the animated TV series *The Simpsons*, and in 1991 he received another Grammy nod for his Gershwin-flavored score for the 1990 film *Dick Tracy*. He released an album of his film scores, *Music for a Darkened Theater, Vol. 1: Film and Television Music* (1990), which was followed by *Music for a Darkened Theater, Vol. 2: Film and Television Music* (1996). Elfman co-wrote, scored, and sang as Jack Skellington in Burton's *Nightmare Before Christmas* (1993). Oingo Boingo shortened its name to Boingo and released a self-titled album in 1994, but called it quits a year later. Elfman, already established as a composer, went on to score such films as *Men in Black* (1997), *Good Will Hunting* (1997), *Sleepy Hollow* (1999), *Spy Kids* (2001), *Spider-Man* (2002), and *Chicago* (2002), and the TV show *Desperate Housewives* (2004). Elfman's second marriage was to actress Bridget Fonda.

[Adam Wills (2<sup>nd</sup> ed.)]

**ELHANAN** (Heb. אֱלְחָנָן; "God has mercy"), the name of two biblical characters: (1) the son of Dodo of Beth-Lehem and one of David's "mighty men," mentioned after Asahel in the list of the 30 warriors (II Sam. 23:24; I Chron. 11:26); (2) the son of Jaare-Oregim of Bethlehem, one of the "servants of David." According to II Samuel 21:19 Elhanan killed \*Goliath, while according to I Chronicles 20:5 (where he is called the son of Jair) he killed Lahmi, the brother of Goliath. The former verse contradicts the story of \*David and Goliath in I Samuel 17. Among the various suggestions put forth to resolve this contradiction is B. Mazar's proposal that Elhanan the son of Jaare (עֲרִי) is to be identified with David son of Jesse (יֵשׁוּעַ). Elhanan was David's true name before he ascended the throne, while Jaare is a corruption of Jesse (see \*David). Some scholars believe that the Hebrew words *ʿet Golyat*, i.e., "Goliath," in the source II Samuel, was emended to *ʿaḥi Golyat*, i.e., "the brother of Goliath," in I Chronicles, in order to cover up the contradiction between the two accounts.

The *aggadah*, too, identifies Elhanan with David, and explains the word *oregim* in II Samuel 21:19 as "of those who weave (*oreg*) the curtains of the Temple" (Targum to this word).

IN THE AGGADAH: Ginzberg, Legends, 6 (1946), 260; I. Ḥasida, *Ishei ha-Tanakh* (1964), 62. **ADD. BIBLIOGRAPHY:** S. Japhet, I & II Chronicles

(1993), 363–69; S. Bar-Efrat, II Samuel (1996), 233–34; G. Knoppers, I Chronicles 10–29 (2004), 736.

**ELHANAN (Paulus Pragensis?; 16<sup>th</sup> century)**, apostate and author of missionary works, favored by the Hapsburg emperor \*Rudolf II. Born in Prague, Elhanan became converted to Christianity and was baptized in Chelm, Poland, although his wife and children did not follow suit. He received stipends from the Polish kings Sigismund Augustus and Henry of Valois. He conducted missionary activities among the Jews in Frankfurt in 1579. In 1580 at the Protestant University of Helmstaedt, he published his *Mysterium Novum*, prefaced by a poem in Hebrew, in which he attempted to prove by kabbalistic methods that Jesus was the messiah. He reached Catholic Vienna in 1581, and published a missionary treatise there. Having submitted his works to the emperor, he asked Rudolf to support him in order to publish his Hebrew translation of the New Testament. Possibly Elhanan is to be identified with the apostate Paulus Pragensis, who published a missionary pamphlet, *Symbolum Apostolicum*, in Protestant Wittenberg in 1580 and the *Jona Quadrilinguis* (Helmstedt, 1580) – the Book of Jonah in four languages: Hebrew, Greek, Latin, and German. Pragensis is said to have died after abjuring Christianity.

**BIBLIOGRAPHY:** Diamant, in: *Archiv fuer juedische Familienforschung*, 2:1–3 (1913/14), 17–24.

**ELHANAN BEN ḤUSHIEL** (first half 11<sup>th</sup> century), *av bet din* in \*Kairouan, Tunisia. Elhanan went to Kairouan from Italy with his father at the end of the tenth century. His name appears in verses contained in a letter of R. Ḥushiel to R. \*Shemariah ben Elhanan (publ. by S. Schechter in JQR, 11 (1899), 643–50). Scholars disagree as to whether Elhanan was the brother of R. \*Hananel b. R. Ḥushiel, the well-known commentator of the Talmud, whether there were two sages by the name of Ḥushiel at the same time in Kairouan, or whether Hananel and Elhanan are the same person under different names. Only two of his responsa are extant. In one, the questioner addresses him as: "Our teacher, the great rabbi, the head of the *bet din*, the head of the schools," from which it may be concluded that as well as being the *av bet din* in Kairouan he was also the head of one of the yeshivot in that city. He also appears to have written a commentary to the tractates *Bava Kamma* and *Bava Mezia*.

Harkavy* (1908), 186–7 (Heb. pt.); Aptowitzer, in: *Jahresbericht der Israelitisch-Theologischen Lehranstalt in Wien (1929–1932)*, 37–39 (1933), 3–50; Mann, in: JQR, 9 (1918/19), 160; idem, in: *Tarbiz*, 5 (1933/34), 286 ff.; Assaf, *ibid.*, 9 (1937/38), 22; Abramson, in: *Sinai*, 60 (1967), 149–59.

[Simha Assaf]

**ELHANAN BEN ISAAC OF DAMPIERRE** (d. 1184), *tosafist*; son of \*Isaac b. Samuel the Elder of Dampierre whom he predeceased. Elhanan was martyred, but the circumstances are unknown. Although he wrote *tosafot* to many tractates,

only those to *Avodah Zarah* up to p. 35a are extant (Husiatyn, 1901). His *tosafot* to *Yoma* served as the source of the *Tosafot Yeshanim* to that tractate. His father often quotes him, as do other earlier halakhic authorities. *Tosafot* also cite him frequently. Elhanan also wrote responsa which cannot, however, always be identified as his, since they were usually written together with his father and bear his father's signature. Comments on the Bible are quoted in his name and he was the author of *piyyutim*.

**BIBLIOGRAPHY:** Urbach, *Tosafot*, 211–7, 399; idem, in: *Sefer Assaf* (1953), 18–32; Davidson, *Ozar*, 4 (1933), 361 (index).

[Israel Moses Ta-Shma]

**ELHANAN BEN SHEMARIAH** (d. 1026), head of the academy in Fostat (Old Cairo), Egypt, at the beginning of the 11<sup>th</sup> century. Elhanan studied at the Pumbedita academy during the gaonate of \*Sherira with whom he later exchanged responsa as he did with the latter's son and successor \*Hai, and \*Samuel b. Hophni, head of the Surra academy. A number of Sherira Gaon's responsa to Elhanan are extant. Elhanan was honored by the title "the sixth" at the academy in Palestine. After the death of his father he became the head of the academy in Fostat. His academy received a grant from the royal treasury. When Caliph al-Ḥākim stopped this support, Elhanan turned for assistance to the Jewish communities, including those outside Egypt. It is believed that Elhanan wrote a talmudic commentary, and commentaries to the tractates *Bava Kamma* and *Avodah Zarah* have been attributed to him. His literary works, found in the Cairo \**Genizah*, include a poem against the \*Karaites following \*Saadia Gaon's approach. From a fragment of a book of Arabic sermons attributed to him, it appears he also studied philosophy.

**BIBLIOGRAPHY:** Poznański, in: *Festschrift A. Harkavy* (1908), 187–8 (Heb. pt.); Mann, *Egypt*, index; Mann, *Texts*, index; Assaf, in: *Tarbiz*, 9 (1937/38), 217–8; idem, *Teshuvot ha-Ge'onim* (1942), 114–6; Abramson, *Merkazim*, 105–55.

[Simha Assaf]

**ELHANAN BEN YAKAR** (first half of the 13<sup>th</sup> century), \*Ḥasidei Ashkenaz theologian. Elhanan, who lived in London, seems also to have traveled on the continent. In common with the Ḥasidei Ashkenaz, his main interest was in esoteric theology and all his known writings belong to this category. His family was related to that of R. \*Simeon b. Isaac ("the Great"), which also gave rise to the school of \*Judah he-Ḥasid in Germany. Elhanan received some traditions from the tosafists in France, as is proved by his statement that he studied the *Sefer \*Yezirah* with a pupil of R. \*Isaac ha-Zaken, one of the most prominent tosafists. All his works are based upon the *Sefer Yezirah*: two of the major ones are versions of a detailed exegesis of this work, and the third, *Sod ha-Sodot* (called in a later source, probably by mistake, *Yesod ha-Yesodot*), is a theological treatise which uses the *Sefer Yezirah* extensively. Elhanan was well acquainted with contemporary Christian theological works, both in Latin and French, and

included almost literal quotations from such works in his writings. In this he is unique, as far as is known, among the theologians of the Ḥasidei Ashkenaz movement. His writings contain, in addition to his own theology, also compilations and juxtapositions of various ideas taken from other sources and relating to problems he discussed. One such prominent source was the *baraita* attributed to \*Joseph b. Uzziel and the writings of the group of Ḥasidei Ashkenaz thinkers who based their doctrines on this pseudepigraphical text. Whole pages of Elhanan's writings are found in the commentary on *Sefer Yezirah* attributed to \*Saadia Gaon, which was written by one or several of that group. Elhanan discussed the major problems of Ḥasidei Ashkenaz theology in his writings: the creation, the relationship between the Creator and the Divine power revealed to the prophets, the "Special Cherub" or "Holy Cherub," etc. His theories frequently contain a stronger element of mystical speculation than those found in the writings of the continental Ḥasidei Ashkenaz.

Dan, in: *Tarbiz*, 35 (1965/66), 361–73.

[Joseph Dan]

**ELHANANI (Elchanowicz), ABA** (1918– ), Israel architect and town planner. He was born in Warsaw, studied at the Technion, Haifa, and was in private practice from 1947. Some of his chief buildings are the Philip Murray House and the Workers' Club, Eilat, high schools in Jerusalem and Tel Aviv, a synagogue in Tel Aviv, the Civic Center in Kfar Shmuel, and the President's House, Jerusalem. He prepared large commercial projects for Tel Aviv with Oscar Niemayer, and designed Israel Trade Fairs in several countries, including the U.S. and the U.S.S.R.

**ELHANANI, ARYEH** (1898–1985), Israeli architect, painter, and designer. Elhanani was born in Russia, where he studied art and architecture in Kiev between 1913 and 1917. He immigrated to Erez Israel in 1922 and began his career by designing trade fairs, and later pavilions for trade fairs abroad, designing inter alia the symbol of the Levant Fairs, a flying camel, and the Palmaḥ and IDF logos. In 1934 he sculpted *The Hebrew Worker*, located in Palmer Square, Tel Aviv. In the 1940s he undertook the planning of the buildings of the Weizmann Institute of Science in Rehovot, and from then continued designing institutes of higher learning and other public institutes such as Bar-Ilan University. Two of his most notable designs are the Yizkor Tent at Yad Vashem in Jerusalem and the Memorial Square at Yad Weizmann in Rehovot. His designs reflect the spirit of a nation reborn. He was awarded the Israel Prize in 1973. The Elhanani Prize for combining art and architecture is named after him.

**ELI** (Heb. אֵלִי; “[YHWH is] exalted”), a priest in the sanctuary of the Lord at \*Shiloh during the period of the Judges (1 Sam. 1:9). The father of \*Hophni and Phinehas, Eli’s ancestry is not recorded in the Bible, but his two sons bear Egyptian names, one of them identical with the name of Aaron’s grandson \*Phinehas; in addition it appears from 1 Samuel 2:27ff. that the house of Eli was believed to have been designated by the Lord for priesthood while Israel was still in Egypt. A later speculation traces Eli to \*Ithamar son of Aaron (Jos., Ant., 5:361; cf. 1 Chron. 24:3; Yal., Judges 68), and another connects him with the house of \*Eleazar (1v Ezra 1:2–3; cf. Ex. 6:23, 25).

The fact that the \*Ark was in Shiloh in Eli’s day proves that at that time Shiloh was the cultic center of the tribal confederation of which Eli was the head priest. According to the narrative in the first chapters of 1 Samuel, \*Elkanah made an annual pilgrimage to Shiloh. Here his wife \*Hannah made a vow in the presence of Eli and received from him the assurance that her prayer for a son would be answered (1 Sam. 1:11ff.). After her son \*Samuel was weaned, Hannah brought him to Eli to serve in the sanctuary in fulfillment of her vow (1:27–28). What follows is a two-fold account of the ascent of Samuel and the downfall of the house of Eli. Hophni and Phinehas proved to be corrupt priests (2:12–17, 29; 3:13); hence the prophecy to Eli in 1 Samuel 2:27–36, which appears to be connected with that to Samuel (3:11–14), concerning the fall of the house of Eli and the emergence of a new priestly house. From these prophecies it appears that Eli himself had also sinned (2:29; 3:13). At any rate, his two sons were destined to die on the same day (2:34; 4:11, 17) and Eli, too, met his death when the news reached him of the tragedy at the battle of \*Aphek (4:11–18). Following the death of Eli and his sons and the destruction of Shiloh, \*Nob became the religious center. According to 1 Samuel 22:20–23, the sole survivor of Saul’s slaughter of the priests at Nob was Abiathar son of Ahimelech son of Ahitub, a descendant of Eli who was deposed by Solomon (1 Sam. 14:3; cf. 1 Kings 2:27). Clearly, the priestly house of Eli continued in importance for a long time after him.

It should be noted that the prophecies to Eli do not forecast the destruction of Shiloh; nor do they reflect the true status of the house of Eli in later times. In contrast to the promise of perpetual poverty, Abiathar was able to retire to his estate (1 Kings 2:26). This indicates that the prophecies derive substantially from the time of Eli and were not adjusted to make them conform to later events.

### In the *Aggadah*

When Eli accused Hannah of being drunk (1 Sam. 1:13) she countered that his judging her wrongly proved him to be without divine inspiration (Ber. 31b). According to one opinion Eli was justified in his strictures, since a man who regards his neighbor as sinning is obligated to reprove him. But Hannah’s retort was also in place, for one who is unjustly accused is obliged to inform his accuser of the fact (*ibid.*), for “a man must justify himself before his fellowmen just as he must do so before God” (*Mishnat R. Eli’ezer*, 129). Because Eli had sus-

pected Hannah unjustly, he blessed her, “Go in peace” since one is obliged to appease and bless one he had wrongly suspected (Ber. 31b). The Bible brands both sons of Eli as wicked (1 Sam. 2:12), although Phinehas, in fact, did not sin. The Bible censures him as it does for having failed to protest Hophni’s behavior (Shab. 55b).

[Elimelech Epstein Halevy]

**BIBLIOGRAPHY:** Kaufmann Y., *Toledot*, 2 (1960), 150ff., 359ff., 370–1; S.R. Driver, *Notes on the Hebrew Text and the Topography of Samuel* (1960<sup>2</sup>), 1–50; Ginzberg, *Legends*, 4 (1913), 61f.; 6 (1928), 217, 220–3, 226–7.

**ELIACHAR, MENACHE** (1901–?), prominent Jerusalem businessman and communal worker. Eliachar, a scion of the distinguished Jerusalem family of that name, was born in the Old City of Jerusalem, the son of Isaac Eliachar, and on the death of his father in 1933 succeeded him as vice president of the Jerusalem Chamber of Commerce, becoming president in 1946, holding the position for more than 30 years. Eliachar played a prominent role in the industrial and commercial development of Jerusalem and represented Israel in the International Chamber of Commerce where he was successful in countering the Arab Boycott.

From an early age he took part in communal activity and was among the founders of the Binyanei ha-Ummah (Jerusalem Convention Center) and of the Economic Club of Jerusalem. He was instrumental in reclaiming thousands of dunams of land in Jerusalem from Arab owners which he placed at the disposal of the community, among them the land on which the Hebrew University and the Israel Museum stand.

On the occasion of his 75<sup>th</sup> birthday the title of Yakir Yerushalayim was conferred upon him and the school in the Givat Mordechai neighborhood was named in his honor.

**ELIAKIM, MARCEL** (1921– ), physician and medical educator. Eliakim was born in Plovdiv, Bulgaria. He studied in an American high school and graduated from a French high school in Bulgaria in 1943. He then began studies at the University of Sofia Medical School (1944–49). He immigrated to Israel in 1949 and graduated from the Hebrew University–Hadassah Medical School (first class, 1949–52) with distinction. He served in the scientific corps of the Israel Defense Forces from 1952 to 1954, where he was assigned to conduct a research project on Schistosomiasis in Israel.

Eliakim started working in the Department of Medicine of the Hadassah University Hospital under Professor M. Rachmilewitz in 1954, and became full professor of medicine in 1969. He then became head of the Department of Medicine (1969–89). After retirement from Hadassah, Eliakim became head of the Department of Medicine in Bikur Holim Hospital in Jerusalem (1989–97).

During the period 1960–61 Eliakim received a grant from the American army for research in cardiovascular physiology in the Medical School of the University of Pennsylvania. Upon his return to Israel he founded and was the first direc-

tor of the Institute for Postgraduate Medical Training of the Hebrew University. He also became chairman of the Board of Medicine of the Israel Medical Association in 1973. He served on the committee of higher education of the Ministry of Education (1976–79) and became dean of the Faculty of Medicine (1985–89). Eliakim founded the Israel Association for the Study of the Liver in 1973.

Eliakim published 221 scientific papers and wrote or edited four books. His research was concentrated in the field of Familial Mediterranean Fever, a disease affecting mostly Jews. Eliakim has educated a generation of physicians, many of whom have become leaders in medicine in Israel. Eliakim received many prizes, most important of which was the 75<sup>th</sup> Hadassah Anniversary prize for outstanding service in medicine (1987). He received the Worthy of Jerusalem award (1988) and the Israel Prize for medicine 2001.

[Rami Eliakim (2<sup>nd</sup> ed.)]

**ELIAKIM GOETZ BEN MEIR** (c. 1700), rabbi and author; grandson of R. Judah Loeb \*Hanneles. He was rabbi in Swarzedz and Hildesheim. In 1700 he left Germany to travel to Erez Israel, but on passing through Posen, where his father had been rabbi, he was persuaded to accept the rabbinate there, and was active until 1707. Goetz wrote (1) *Rappeduni be-Tappuhim*, a commentary on the 24 aggadic sayings of Rabba bar bar Ḥana (BB 73–74), published posthumously by his son Samvil, *dayyan* of Swarzedz (Berlin, 1712); (2) *Even ha-Shoham*, and *Me'irat Einayim*, a collection of responsa, the first part published by his son Meir (Dyhernfurth, 1733).

**BIBLIOGRAPHY:** Michael, Or, no. 465.

[Jacob Haberman]

**ELIANO, GIOVANNI BATTISTA** (1530–1589), apostate and anti-Jewish propagandist. Grandson on his mother's side of Elijah \*Levita, whence the surname he adopted, he was formerly known as Solomon Romano. Born in Rome, he traveled widely with his father in the Near East and was converted to Roman Catholicism in Venice in 1551. In the following year he was admitted by Ignatius of Loyola to the newly founded Society of Jesus and thereafter taught Hebrew and Arabic at the Collegio Romano. Together with his elder brother Joseph, converted as Vittorio Eliano, he was largely responsible for the condemnation and burning of the Talmud in Rome in 1553 (see \*Talmud, Burning of). Giovanni Battista subsequently returned to the Levant to spread Roman Catholic propaganda among the Copts and Maronites.

[Cecil Roth]

**ELIAS, ELI** (1912–2004), U.S. clothing manufacturer, Sephardi community leader. Elias was born in Rochester, N.Y., and studied drafting and machine designs while in high

school. In 1929, he moved to New York City and became a plant manager at his uncle's clothing factory. It was the start of a lifelong career in the garment business, both as a manufacturer of women's sportswear and as an industry leader. In 1931, Elias left his uncle's company to become a partner in Maybro Sportswear. He opened his own business, Elias Sportswear, in 1931. By 1946, his Brooklyn plant employed 1,200 workers. Elias shifted ownership of the company to his son Richard in 1979, after being named president and executive director of the New York Skirt and Sportswear Association. At its peak, the Association had almost 300 members and was one of the biggest garment contractor groups in New York City. Elias headed the Association until he retired at the age of 86. By that time, a surge of imports had reduced the membership to 11, and when Elias was asked about the future of the New York apparel industry in the face of increasing competition from abroad, he said he felt like saying *Kaddish*, the Hebrew prayer for the dead. In addition to heading the association, Elias organized the Federation of Apparel Manufacturers and the Garment Center Economic Security Council. For many years, he was a management trustee of many union benefit funds. He was a vice chairman of the board of the Garment Industry Development Corporation and a board member of the Council for American Fashion, the Educational Foundation for the Fashion Institute of Technology, and the High School of Fashion Industries, in New York City. Elias was also a founder of the Sephardic Temple of Cedarhurst, N.Y., and an honorary president of United Sephardim of Brooklyn. He helped launch the Sephardic Home for the Aged in Brooklyn and received the Home's first Humanitarian Award, commemorating more than 55 years of service.

[Mort Sheinman (2<sup>nd</sup> ed.)]

**ELIAS, JOSEPH** (d. 1927), Jewish community worker in Iraq. Elias graduated from the law school of Istanbul, became postmaster in the harbor of Fao (Fa'w), then an official in the judicial service of Basra and Mosul, and finally an advocate in Basra and Baghdad. From 1921 until his death he was chairman of the Arabic Literary Society in Baghdad and of the Zionist organization in Iraq. In 1924 he was elected to the Iraqi Parliament as delegate of the Jewish community of Baghdad, and the following year represented Iraqi Jewry at the opening ceremony of the Hebrew University in Jerusalem.

[Haim J. Cohen]

**ELIAS, NEY** (1844–1897), British explorer. Ney was born in Kent, the son of a Jewish merchant who converted to Christianity when he was a child. In 1892 he journeyed from Peking (Beijing) across the Gobi Desert by a hitherto unexplored route to St. Petersburg – a feat for which he received the gold medal of the Royal Geographical Society. He then traveled for the Indian government and in 1885 made an expedition

through Central Asia. Elias defined the boundaries (1889–90) between what became Thailand and Burma. His books include *A Visit to the Valley of Sheuli* (1876) and *The Tarikh-i-Rashidi* (1895), a history of the Moghuls.

**ADD. BIBLIOGRAPHY:** ODNB online; G.R. Morgan, *Ney Elias: Explorer and Envoy Extraordinary in High Asia* (1971).

**ELIAS, NORBERT** (1897–1990), sociologist. Born in Breslau, Germany (now Wrocław, Poland), Elias served in the German army during World War I, and then attended Breslau University. He was an active member of Blau-Weiss, the Zionist youth organization. After earning his doctorate in philosophy at Breslau in 1924, he moved to Heidelberg to work under Alfred Weber, and then to Frankfurt as Karl Mannheim's assistant. Elias fled Nazi Germany in 1933, first to Paris and then, in 1935, to London. His father died in Breslau in 1940, and his mother perished in Auschwitz around 1941.

In 1939 Elias published his seminal work *Ueber den Prozess der Zivilisation* (later translated into English as *The Civilizing Process*, 1978 and 1982). The work, largely ignored at the time, traced the process of change in standards of behavior – including those regarding acts of violence – through stages of European history, as manners and habits were transformed, in Elias' view, by changing thresholds of repugnance and increasing expectations of self-restraint. Elias linked this process to the formation of states and to the development of an interconnected society.

Elias received a senior research fellowship at the London School of Economics in 1939, but he was interred during the war as an enemy alien. In 1954 he obtained a post at Leicester University, from which he retired in 1962; he was a professor of sociology at the University of Ghana from 1962 to 1964. It was only during his retirement that Elias was acclaimed as a leading figure in his field. *Ueber den Prozess der Zivilisation* was republished in 1969, receiving international attention. The work was not, however, received without controversy; some considered it an extension of social Darwinism, overly Eurocentric, and suggested that its premise was refuted by the events of World War II and the Holocaust.

Elias wrote extensively in his later years; these works include *The Established and the Outsiders* (1965), *What Is Sociology?* (1978), *The Loneliness of the Dying* (1985), and *The Quest for Excitement* (1986), with Eric Dunning, on the sociology of sports. In 1971 he became professor emeritus of the University of Frankfurt, and in 1977 the city of Frankfurt named him the first recipient of the Theodor W. Adorno prize. In addition to other honors, he received the German Grosskreuz des Bundesdienstordens in 1986.

**BIBLIOGRAPHY:** R. van Krieken, *Norbert Elias: Key Sociologist* (1998).

[Dorothy Bauhoff (2<sup>nd</sup> ed.)]

**ELIASBERG, MORDECAI** (1817–1889), rabbi, one of the first \*Ḥibat Zion (Ḥovevei Zion) in Russia. Born in Lithuania, Eliasberg studied under noted rabbis in Lithuania, be-

came rabbi of Shishmory, Lithuania in 1853, and was rabbi of \*Bauska, Latvia from 1862 until his death. Active from his youth in Jewish public life in Russia, he explained to Max \*Lilienthal, who came to “enlighten” Russian Jewry, that the removal of legal restrictions on Jews was a prior condition to the achievement of this aim. Later he believed the basic principles behind Jewish demands should be the improvement of the economic situation of Russian Jewry and the achievement of equal rights. He supported the Haskalah movement, provided it did not weaken religion, and suggested the establishment of schools for commercial and vocational training. Eliasberg defended the first society for the settlement of Erez Israel, founded in Germany in 1862, against attacks by ultra-Orthodox circles, who feared that messianic redemption would be delayed if the land was settled by secular efforts, and in 1879 he published articles supporting Jewish agricultural settlement in Russia and in Erez Israel. After the pogroms in southern Russia (1881), Eliasberg was one of the first who vigorously supported the newly organized Ḥovevei Zion, orally and in writing, striving particularly to achieve harmony between the religious and the “free-thinking” circles in the movement. He was elected one of the leaders of Ḥovevei Zion at the movement's conference at Druzgenik (1887). During the controversy over the 1889 sabbatical year in Erez Israel, Eliasberg opposed those ultra-Orthodox rabbis who demanded the cessation of Jewish agricultural work in that year and appealed to Jewish farmers not to heed their injunctions. He also strongly attacked the *halukkah* methods in Jerusalem and those responsible for it, most of whom opposed the new settlement of Erez Israel.

Of his more than 20 works, only one, *Terumat Yad* (1875), was printed in his lifetime. *Shevil ha-Zahav*, dealing with topical matters and the settlement of Erez Israel, was published posthumously (1897) by his son Jonathan, who added a biography of his father. In 1947 a selection of Eliasberg's writings was published in Jerusalem.

[Getzel Kressel]

His son JONATHAN (1851–1898) was born in Kovno, Lithuania, and served as rabbi of Pumpian, Mariampol, and from 1886 until his death, of Volkovysk, Grodno district. His Torah novellae and ethical writings were published as a supplement to his father's *Terumat Yad* and his *Darkhei Hora'ah* was published independently (1884). In common with his father, he was one of the first rabbis to join the Ḥovevei Zion movement. Eliasberg strove to maintain harmony between the Orthodox and the progressive groups within the national movement, calling upon both sides “to be tolerant and patient with conflicting views.” In 1893 he approached \*Aḥad Ha-Am in connection with his essay “*Torah she-ba-Lev*,” which had aroused the anger of the Orthodox. (The author replied to the charges in his essay “*Divrei Shalom*.”) His Zionist articles were published in *Shivat Ziyon* (ed. by A.J. Slutski, 1900). After the first Zionist Congress, he joined the Zionist Organization.

**ELIASHIB** (Heb. אֵלִישִׁב; “may God restore”), a name attested in the Arad letters of the late seventh–early sixth century B.C.E. The Bible shows the popularity of the name in post-Exilic times, borne by three individuals married to foreign women (Ezra 10:24, 27, 36), a descendant of the Davidic dynasty (1 Chron. 3:24), and of the high priest who was the son of Joiakim (Neh. 12:10). The best known of these personalities was the high priest contemporary with Nehemiah. His house was located along the central portion of the eastern wall of Jerusalem and is mentioned in the account of the wall’s reconstruction (Neh. 3:20–21). He and his colleagues were responsible for rebuilding the stretch of wall guarding the northwestern approach to the Temple Mount – the Tower of Hananel, the Tower of the Hundred, and the Sheep Gate (Neh. 3:1). An Eliashib “the priest” was in charge of the Temple storehouses and he assigned one of these chambers to Nehemiah’s opponent Tobiah. This priest was somehow “related” to Tobiah (Neh. 13:4ff.), and many scholars identify him with the high priest; the lesser title, however, makes this unlikely. It is similarly unlikely that Eliashib, the father of Jehohanan, into whose Temple chamber Ezra retreated (Ezra 10:6), is identical with the high priest. A grandson of the high priest, however, did marry a daughter of Sanballat, another of Nehemiah’s opponents (Neh. 13:28). During the second term of his governorship, Nehemiah expelled Tobiah from his Temple chamber and chased the high priest away from his presence.

**ELIASHOV, SOLOMON BEN HAYYIM** (1841–1926), kabbalist. Eliashov, who was born in Zagara, Lithuania, studied in the yeshivah in Telz, but spent most of his life as a private citizen in Shavli in Samogitia, Lithuania and never took a rabbinic position. In 1915 he was expelled with the rest of his community to Russia and in 1922 (or 1924) he settled in Jerusalem. Eliashov was considered one of the greatest kabbalists in Russia at the end of the 19<sup>th</sup> century. His method was influenced by the tradition of \*Elijah b. Solomon, the Gaon of Vilna, and his disciples, and he generally opposed those who interpreted Kabbalah in an idealistic manner, particularly the kabbalistic commentaries of Moses Hayyim \*Luzzatto and the Chabad Hasidim. All his works on Kabbalah, which he rewrote in several versions, were compiled at the end of the 19<sup>th</sup> century under the general title *Sefer Leshem Shevo ve-Ahlamah* (Ex. 28:19). They include the following published works: *Sefer Hak-*

*damot u-She'arim* (Piotrkow, 1908); *Sefer ha-De'ah* (an abbreviation for *Derushei Olam ha-Tohu*) in two volumes (Piotrkow, 1911); *Sefer ha-Kelalim*, on the principles of *egressus* and *digressus* in the process of emanation, two volumes (Jerusalem, 1924–26, but actually completed only in 1930); *Sefer Helkei ha-Be'urim*, a commentary on Hayyim \*Vital's *Ez Hayyim* in two volumes (Jerusalem, 1935–49). His glosses and additions to *Ez Hayyim* were also published in the Warsaw 1890 edition of that work. The works of Eliashov contain a highly detailed systematic description of the Lurianic Kabbalah concerning the doctrine of *azilut* (“emanation”). It was said that Eliashov accomplished for the works of Isaac \*Luria what Moses \*Cordovero had done for the \*Zohar.

**ELIAS LE EVESKE (Elijah ben Berechiah ha-Kohen;** before 1200–after 1259), archpresbyter of English Jewry (1243–57). Born in London before 1200, Elias Le Eveske (or l'Eveske, as he was often known) was a prominent figure in the London Jewish community by 1230. His period of office coincided with the most outrageous of the royal exactions by Henry III. In 1253 he appeared before Earl Richard of Cornwall and the Royal Council and made a pathetic appeal for permission for the Jews to leave the country. He was deposed from office in 1257 and two years later became converted to Christianity, together with his two sons. His subsequent life is unknown.
