Then he found an object he could not at first identify by feel. He touched the weave of its handle, following this down to a clutch of leather strips. Something stabbed his left index finger and he snatched his hand back. He sucked his finger, tasted the salt of his own blood.

As lightly as he could, he touched the spot again. There was a small metallic object tied to the end of the thong. It had an almost familiar feel to it. It was a curved hook with a tooth on it.

All of the thongs ended with a fish hook.

When Billy realized that this was a whip he leapt back—and slammed into a piece of furniture that dominated the center of the room.

He turned around, feeling frantically. This was a wooden bed—no, too high. It was a table. The instant he felt the straps he knew what this place was for.

"Momma, it's a dungeon!"

For all its problems, Los Angeles was a lovely city. The way it shone at night like an ocean of stars, and the way it was now, kissed by that tart Pacific breeze, wreathed in flowers, the hills shining, water running down the gutters along Ridgeway—for all its problems, Los Angeles enjoyed a special connection to heaven.

As the Celica labored up the hills, Barton watched the peaceful day life

of the neighborhood. There a Mexican gardener was lovingly tending a trellis of climbing roses, and there an ancient lady was walking her silly little dog. The big floppy hat and old-fashioned cake makeup marked her as old Hollywood. Probably a founding member of the Extras Union.

He had triumphed this morning—or Uncle Squiggly had. It had been a fine show, and this afternoon's would be even better. He was going to gain some minor celebrity, too, with the article in *L.A. Style*. They wouldn't be cruel, and he felt more confident that the reporter wasn't going to check into Richie Williams's background too closely. Why bother? As far as Gina and the rest of the world were concerned, he was just another out-of-work actor. Richie held a card in the Extras Union.

He turned the last corner, pressed the gas pedal and began to ascend the last hill.

As Billy leaned over the table, feeling the straps, understanding exactly what it was, he felt something gently touch the top of his head. It went swinging away, then came back again. He grabbed the edge of a light fixture, felt the socket, the bulb. And here was the switch.

A moment later the room was flooded with a white glare that made Billy squint.

Here was the saw, here the soldering iron with a caked, black tip, the pincers polished and clean, the whip. A big knife lay on the table with some brown-stained paper towels partly covering its blade.

Then Billy saw that there was another, smaller room to one side. A bead curtain hung in front of its door. Behind the curtain there was a stack of at least a dozen black plastic lawn and leaf bags, all of them elaborately sealed with duct tape.

They gleamed in the harsh light, and when he approached them he

smelled a musty odor, like the time he found that dead rat under the furnace.

The room was deeper than he thought, and stuffed with the bags. There were more than a dozen. He touched one of them, finding it to be much more sturdy than a lawn and leaf bag. He pulled at the plastic, but it was far too thick to tear.

Billy took the knife and slit the nearest of the bags.

The odor that came out was completely unexpected in its revolting intensity. Billy had never smelled anything so totally dead. More than just a smell, it was an actual gas, thick and moist, pouring deep into his sinuses.

A nut-colored fist dropped down from the hole. Within the bag Billy saw the hollow shadow of a face.

At that moment a shaft of light poured down on him, overpowering even the wildly swinging fixture. Billy looked up in terror and in awe. For one vivid second he thought maybe it was the light of God.

Barton said: "You're already down there. Good!"

He descended the ladder from his bedroom with startling speed, sweeping down like an angel from the radiance above.

30.

Sometimes Mark Neary felt that all of his adult life he had been watching things die. He was now deep in the era that his radical youth had called the future.

But even as his hopes for the social body had faded, he had witnessed a glorious and secret increase. This was the growth of his children.

Before they were born, he'd had no notion of the true importance and scale of human souls. Nor had he known about helpless love, that cannot deny and cannot end. This kind of love persisted forever, and so did the relationships that emerged from it. Thus even if the child was lost, he persisted in the heart of the parent, frozen in the beauty of his life.

The neighborhood they searched was choked by dry and highly flammable brush and jammed with flimsy houses. It was so insanely appropriate that this place existed in the most geologically unstable place in North America. He could imagine the stilts snapping and the great houses tumbling over and over into the gullies and canyons, and then everything bursting into flames.

And yet children played, expensive cars whispered past, and the faces behind the windshields were bland.

He drove on, obedient to his daughter's crisp voice. Mary sat in the back, her eyes closed, exhausted by the ordeal of her own time behind the wheel.

"Take a left, then go up the hill."

"Heads up, Mary. We're about to rise to another possibility."

The house was maddeningly similar to many of the others they'd seen. The blank garage door faced the street, there was a dry patch of lawn.

Mary gasped.

"What?"

"A blue Mercedes."

It stood in the driveway of a multitiered, modern house on their left. For a moment Mark watched the shimmer of heat rising from its body. Then he looked back to the much smaller house at the end of the street.

All the windows on the front were closed by blinds. The garage door did not have a window in it at all.

"I'm going to have a closer look," Mark said.

"Be careful, honey."

Hardly aware of her voice, he got out of the car. Surveying the scene, he was fairly sure that Billy wasn't here. The empty street, the silent house—there was a sense of dry rot in the air, as if the place was home to the dead.

Mark stepped quickly up the stub end of the hill, pausing when he reached the driveway. He walked to his right, heading for the corner of the garage, which was bordered by a magnificent oleander tree covered by pink flowers so fragrant that they were in a curious way horrible. Even knowing how foolish this was, Mark went on, compelled

by instincts he was unaware of and could not even begin to control.

He maneuvered quickly through the tree into a very different space behind it. The oleander concealed a tangle of brush, twisting vines and rose creepers dense with thorns. Mark picked his way ahead in the sun-dappled dimness. There was a smell here of something dead.

He found two windows, but both were carefully painted on the inside with black paint. Mark examined them minutely. More than the location of the house or even the presence of the blue Mercedes next door, these painted windows raised his suspicions. Who would do this unless they were hiding something?

He ran his fingers along the edges of one of the window frames. It was aluminum and flimsy enough, but he couldn't risk the noise breaking it would make.

Mark was about twenty feet from the back of the garage. Beyond the edge of the wall he could see a flagstone walk which undoubtedly led to the back door.

In the distance a dog's voice rose. The animal was barking furiously. This made him draw back for a moment. But the dog was far away and its barking faded with the slightest shift of air. Mark began moving down the wall. The shade grew deep, caused by a tree that was choked in vines.

From behind the foliage there came music and gentle splashing. A neighbor was enjoying a quiet swim. Tiny birds flittered in the dry leaves that matted the ground.

He could see from the signs of long-ago trimming that the ugly, grasping brush around him had once been a verdant hedge faced by a strip of rosebushes and shaded by what was now the twisted ruin of a jacaranda tree.

He reached the end of the garage wall. Ahead a quarter-acre of unkempt lawn fell away into a deep canyon. The view was tremendous,

a sweltering plain lost in haze. He found it difficult to comprehend that such magnitude could be the outcome of human activity.

It made a sound, too, a continuous murmur that seemed to blend with the silence, intensifying Mark's sense of vulnerability.

He was unarmed, and without a weapon he knew that his odds of overpowering somebody were not good. How could a soft and untrained man possibly prevail against the resources of the abductor?

In the distance a helicopter thuttered. The sound died away, rose, died, then got suddenly louder. The machine boomed directly overhead, circling. As it wheeled he saw the police uniform on the pilot, was dazzled by sunlight struck from his aviator glasses.

Then the helicopter departed, disappearing into the haze.

Mark was astonished and angered by this futile and dangerous display of official presence. His guess was that they didn't know whether or not this was the house, and were searching at random. But what would Barton Royal think if he saw a police helicopter two hundred feet overhead? He would assume that he'd been discovered. Billy would bear the consequences.

The dwindling of the helicopter left him with a powerful sense of his own isolation and the incompetence of the authorities. That arrogant, cruel phone call—he'd never forget it.

He had to get to his boy before the police bungled things further.

As hesitant as an edgy kitten, he leaned around the wall that was concealing him. What he saw was a wood-framed screen door leading into a small kitchen. The atmosphere of emptiness and abandonment remained, and was so seductive that he stepped out into the open.

There came the thought that maybe the man had sensed trouble and gone, taking Billy ... or leaving him behind.

Suddenly Mark recalled his son with perfect and startling clarity. He saw the broad, light smile, the rounded nose, the pure, proud look in his eyes. In the memory of his boy Mark saw the man that had been emerging, and that stabbed him deep.

He stood in full view of the door, agog and unmoving, his legs spread apart, his fists clenched against the pain of his vision.

There was a noise, very faint, that at first seemed like the moan of deteriorated plumbing. Mark was confused and did not clearly understand its meaning: few people have heard the unique sound of great agony.

It stopped, then started again. He listened. Once more he risked a movement into the backyard.

Presently he could discern that the sound did not come from inside the house. His glance went to the concrete foundation. A narrow basement window had been blocked by bricks and rough mortar.

The sound rose again, so thin it might have been the wind, so high it seemed to penetrate to the very center of his head. But the emotions behind it—ferocity, despair—were unmistakable. That was no loose pipe, no straining motor. That was a human sound, a cry. It was coming from the bricked-up basement.

Farther back Billy went, back in among the bags full of other boys. Had he been older and quicker to understand the possibilities of self-defense the room offered, he would have taken the knife.

The thought had not crossed his mind.

As Barton tried to reach him, he screamed. Barton's eyes were shut tight, his teeth bared like the teeth of the dead boy Billy had seen.

For an instant Barton's fingers clutched his ankle. Shouting every

curse in his limited vocabulary, Billy yanked away and pushed another bag down.

Again Barton almost reached him and now he was all the way against the back wall.

Then Barton spoke in a low, growling voice. "Don't— make—me— touch—them."

Billy dug down, pushing at the heavy, sodden bags. Inside some there was sloshing, but others were dry and clattered like they were full of lumber.

There were so many!

Barton was dancing at the entrance to the little room, trying to get to Billy without coming into contact with the bags. Billy buried himself in the remains of his predecessors.

When Barton realized that he couldn't get Billy without dragging the bags out of the room, he really started screaming. He paced the floor of the other room. "I didn't," he shouted. "Mother, I did not!" He pounded his forehead against the wall. "There were just the two! Oh, yes, it was unfortunate!" He started crying then, arching his back, his head shaking so much his shoulders and arms shook too and it looked like some huge invisible dog was shaking the life out of him. The sound he made was so terrible to hear that Billy screamed too.

Then Barton went silent. An instant later he started hitting something, harder and harder, the sound of the blows rising in fury. As he lashed out he squealed, a sound high enough to vibrate Billy's teeth, and the blows went on and on. *Its me in his mind, it's me he's hitting!*

That realization made Billy scream again, and their voices melded as those of two singers might, singing a song of love.

Hit him again! Hit him again! Hit him again! Use the hooked whip, use it!

There had been two little mistakes, that was all. Just Jack, just Timmy.

This one is a fucking big mistake!

Where the hell did all these bags come from?

— My, what a fine-looking young man! We must be at least — let me guess—forty-teen !

— I'm gonna squiggle you so hard!

And why not? This was his room, his perfect place, and here he could do anything.

Let's see, here, while I've got him on his stomach . . .

He hefted the whip.

The boy on the table watched with evil, flickering eyes. Of course, he'd always understood this child's filthy secret: there was an ancient evil lurking in him. He brought the hooked whip down with all the strength in him, the muscles pulsing in his back, his arms working like pistons and the stinking little monster was howling and it was all coming out now, all of it like black fire out of him at last and he was free!

Except that the table was empty.

Of course it was: to get Billy he was going to have to touch them! He would have to pull down the bags and feel them in there, and face that they are bones and black liquid and the damp powder that the lime pellets leave.

I didn't do it, I couldn 't have!

"Billy for God's sake, come out of there. Come out of there and I'll—I'll —Billy, oh, remember what I have! Yes! I'll get one of those giant Butterfingers for you if you come out!"

He rushed up the ladder, heading for the kitchen. He'd put them in the fridge.

Mark had now been out of Mary's sight for more than seven minutes. She watched the spot where he had disappeared. Why in the world had he gone around behind the garage? What an incredibly foolish thing to do!

"Where the hell is he," she muttered.

"We better go get him, Momma."

That was her immediate impulse, too. But she saw the risks. If he'd been taken hostage himself, they could all end up in the hands of Barton Royal. Or maybe Mark was dead. She could see her poor husband getting himself killed.

The clock in the dashboard ticked busily away. Why had she agreed to wait here, anyway? She was the more resourceful of the two of them; she should have been the one to get out.

"Listen!"

Mary heard nothing. "What?"

Another helicopter had come. This one was black and much quieter. It flew in high, then stopped, hovering over the house. The sound of its rotors dwindled to nothing.

"They know," Sally said. "The police know!" She groaned. "Oh, Daddy, get back here!"

"I'll go get him."

"Momma, be careful!"

"I will, baby. But if I don't come back in five minutes, get out of the car and go next door. Tell them everything, tell them it's an emergency and to call the police."

"Billy's there, Momma."

"Oh, yes, he's there."

Billy heard Barton rush up the ladder and then the loud thud of the trapdoor. Once his mind would have leapt to the possibilities, but he had decided that he liked it back here. The dark was nice, and he enjoyed being with the other kids. He hadn't been with other kids in a long time.

Also, these kids were special: they were his brothers.

If he wanted to, he could hear them talking to him, but it wasn't very interesting, what they had to say. "Get up, Billy, run, grab the knife, turn off the light, break the bulb." But he couldn't do that. Then he would be a bad boy and get another licking.

Instead he scrunched himself down even farther in among the bags. He closed his eyes. This was where he belonged. It was his new room. This was where he was going to stay forever and ever. There was going to be just a little hard time and then he could come back and get to be in his own bag like his brothers. He loved his brothers so much.

"Hey, Timmy, are you gonna grow up and get old?"

(I don't think I'm gonna do that, Billy.)

"You have a really boss jacket, Timmy."

He stopped talking to his brothers and tried to pray again. "Dear God, send the angel Gabriel with his sword of fire. I need that at least.

Maybe even the archangel Michael with his sword of fire, too. OK?"

He waited but they didn't show up. OK, he'd try the Blessed Virgin. "Hail Mary full of grace—" Nah, no teenage girl in a blue nightgown is gonna be able to handle this.

"Come out, my dear, I have a lovely, huge Butterfinger and it's nice and cold and completely scrumpy!"

"Hey, guys, looks like I ran outa time." As a lover with the body of his love, he ran his hands along the creases and folds of the nearest bag. "See you around."

Barton could not imagine how this had happened. He vaguely remembered a boy named Danny, but that was—oh goodness—years ago. This appalling horror was completely impossible! No, no way at all was he responsible for these piles and piles of bags!

Nobody else came down here, except him and his boys.

Then a face appeared in the gloom of black plastic, a sinister, glaring nymph.

"Who are you?" Barton asked. He was completely mystified by this unexpected presence.

"I'm me!" The boy came crawling out. He tumbled onto the floor. "Hi, Barton."

Barton held out the candy, a trembling sacrifice. Light was pouring from the child, as if the sun itself had entered him. The hand that took the Butterfinger was colder than the frozen candy.

With great solemnity the boy unwrapped the candy. He did not simply tear back the paper, but took the whole bar out and dropped the paper to the floor. Barton picked it up and put it in his pocket.

"I love them cold like this, Father, because you can eat the chocolate off first," Billy said. "Do you like to eat the chocolate off first?"

Barton was beyond words. The voice was gold in his heart, as if all love had entered there. He rocked back on his heels, clutching himself.

Glory poured from Billy's eyes. "Is this your hobby?" he asked. He looked around the room, his eyebrows raised expectantly. "Is it?" Then he nipped the candy bar, taking off a large slab of chocolate, exposing the brown interior. "You have to be careful doing it this way, because if you eat off all the chocolate, then the inside's not as good." He took a bite of the crunchy center of the bar. "So is it your hobby? Killing kids?"

Barton was silent. Words were not a fatal weapon.

"How many of us are there?" Billy asked. He chewed the candy, a frown on his face. "Enough to make a pretty big club, I'll bet. The kids at my school have clubs, but I'm not gonna get in any. I guess that's why I obsess over Kafka. You gotta have something that makes you special." A smile came into his face, and as suddenly disappeared.

Barton found himself moving toward Billy with the precision of a dancer. Gentle, invisible hands were guiding him. He felt a vast presence coming close around him, and had the sense that it was somebody he had always known and always forgotten. Yes, taking his hand, guiding it toward the boy's arm, and curling his fingers around the arm.

Billy threw back his head and cried the most sorrowful cry that Barton had ever heard.

Exquisite.

Mark had seen him, he'd seen Barton Royal! He'd come scuttling right into the kitchen like some prehistoric crab, opened the refrigerator, gotten something and slammed it again.

He had his proof, he was a witness and would swear that Barton Royal was definitely in this house. He wasn't going to take any more crap from the cops, his boy was here!

Be careful, for God's sake, man! If you are heard, if you fucking well make a sound, Billy is dead.

He shrank back, farther into the gloom beside the garage. The prudent thing was obviously to go for the cops. But as he turned he heard a new sound, one so terrible that even his dulled instincts told him that it was a desperate, terminal cry.

More than that, he recognized this voice: it was Billy.

He stepped out of concealment, marched up to the door of the house. From the inside he smelled an odor of coolness and old food. It wasn't a clean house. In fact, it looked filthy. He tried the door. It was locked.

The scream came again, so faint and yet so very, very dark. It made him quail back, made him want to cover his ears, to run. But it also made him take out his keys and tear a hole in the screen.

Sticking his hand in, he felt for a deadbolt, encountered only another keyhole. The door locked on both sides. But how stupid, he simply tore out the whole screen and walked right in.

Barton Royal certainly wasn't expecting trouble.

Or was he? What about motion detectors?

Then the scream came again, a little louder now that he was inside the house. He clapped his hands to his ears, it was terrible to hear! *Billy, oh God help my boy, God help him!*

Where was he? The sound was so faint—muffled. Then he recalled the bricked-up window. Of course, they were in the basement.

Heedless of the dangers, Mark plunged off into the house.

"Shut up!"

Billy knew he was supposed to be quiet but it was just very hard because he saw those straps. If he didn't see the straps it would be easier, but every time he saw them the screams just came out by themselves.

"Sorry, Father!"

"Get up there, Son, go on!"

"Father, please—"

"Do it!"

He tried, but his body would not climb up onto the table. He belonged with his brothers, he knew that, and the only way to join them was to get up on the table. The trouble was, his arms and legs wouldn't do what his head told them. He just stood there.

So Father had to pick him up and lift him onto the table. There, that was much better. Now all he had to do was lie down. Father would take care of the rest.

But when Father leaned over him to grab the buckle of the chest strap Billy was astonished to find himself striking like a snake. The flesh beneath Father's chin crunched and tore and he reared back screaming. Blood spurted.

'I guess I did that,' Billy thought.

Then Father had a great big knife in his hands, and the blade was pale gray.

Mark heard that! Did he ever hear it! That wasn't Billy, that was a

grown man and he was in pain. The sound was right underfoot! There was nothing but a throw rug on the floor of this bedroom. Mark turned it back and saw the trapdoor, its ring handle recessed into the floor.

He pulled the door open.

Billy was right there, lying on a table beneath a dim bulb. Beside the table stood the crablike man. In his hand was a machete.

Barton looked up, his eyes squinting against the sudden increase of light.

"Billy!"

Billy smiled a tiny, distant smile, and cocked his head in a gesture almost of apology.

Barton Royal raised the blade.

Mark did not know what in the name of God to do.

Imagining his real dad's voice brought Billy much comfort, even if it was only a dream.

Then all of a sudden a man jumped down out of the light. He was all sweaty and crazy-looking and he had brown fluffy hair and bent-up glasses. Was it Jesus? Surely they didn't send Jesus for every dead kid, so it must be an angel. Maybe God did send an angel! That would be really neat!

Father—no, *Barton* —made a funny noise, like he was pretending to be a lion or something. He swung the knife at the man. It went *ssst!*

The impossible had happened. And so suddenly, so completely unexpectedly. It was the father! Simply fantastic! Somehow he had

been tracking them, he must have moved heaven and earth, he must be more cunning than he looked.

God, this kid was such a huge mistake.

No, it was all right. This wasn't the end. He just had to off this guy and get out of here, and then he would be safe. He had his absolute emergency escape route all planned. Two hours from now he could be in Tijuana, and from there down to Bogota, and back into the rain forest to hide until better days.

Again Barton swung the machete. The man cried out and jumped ineptly away, slamming into the wall behind him. Billy lay like a life-sized doll on the table.

"Why?" the man said. His face was twisted, his eyes bulging. "Why!"

"It was Billy! He wanted to come—and he was the first! I didn't hurt him. I've wanted a son all my life. I was good to him! There was just your Billy." He could not look at those anguished eyes, and turned his face away.

"You crazy, vicious bastard!"

Even though he was yelling Dad had tears in his voice. Billy did not like that. Dad was in big trouble!

There was an awful whistling sound and a snap and Dad was down. Then Barton was on top of him, snarling, and all of a sudden there was a terrible thud and Dad turned into something that looked like a pile of rags.

"Dad!"

There was no response.

He'd been smart, but Billy's father was no fighter. Now he'd finish off the child and be done with it.

But the whole closet was full of bodies!

Somebody else did that.

He chose his weapon. This would be simple, plain, quick: the butcher knife.

As he hefted it he became aware that there was something moving in the basement beyond the steel door.

Oh, God, it was opening! A huge, masked shadow loomed into the room. Another dropped down the ladder. Their plastic eyes were glistening, their guns dark blue in the light. "Freeze! Police!"

Then the blade to the heart.

Part Six

**THE BAND
OF BROTHERS**

31.

Mark Neary takes a breath, it doesn't work, he takes another, it doesn't work, he feels dizzy, his head hurts, he is in deep trouble, he knows it. "Gotta catch my breath—call my wife— get my breath—call my wife— gotta get my breath!"

"Two cc's, get it in there, OK, you have brain tissue exposed, doctor. Bleeding in the wound."

I'm lying down Billy needs me I'm spinning.

Headache!

There were men on the other side of Barton's room. They had guns and they stood by the far wall. They blocked the door.

His heart was fluttering like it was made of paper. Even when he was very still it did not stop.

He was peace, he was the dove. *I am the white dove, the dove that spreads wing over the cathedral of sacred shit.*

"There are too many tubes in my damn face!"

Then he saw movement, somebody coming through the line of uniformed men.

A woman, moving like a great, wary walking stick. Mother was so gray, so thin!

Her jaw was trembling. "I'm glad they got you."

You and me both!

Her arm came up, the flat of the palm, he turned his head away. "Fourteen, Barton, for God's sake fourteen innocent children!"

"Don't you hit him, lady!" The policemen crowded forward. "Just take it easy, ma'am."

"Fourteen!"

Stars exploded in his head. His face burned. The tubes came out and snaked around his face. *I'm sorry, Mother!* "Get her arms! Quick!"

They dragged her to the far side of the room.

My heart has fire in it.

Fire!

"The case was solved by a massive nationwide FBI-coordinated police investigation. The house was stormed on an emergency basis by tactical police force officers when it was learned that the boy's father had made an unauthorized entry."

'Momma they filled the bathtub up with blood, don't go splash in it, don't go boom! Momma I don't want no storm, it's blood! Open the drain it gonna go over my head! Momma don't go boom! Momma

don't put my ferryboat in here! Momma I gotta die now, Barton says to!

(Your brothers will help you.)

"In a related development all three are in serious condition at Cedars-Sinai Medical Center. Despite a self-inflicted stab wound to his heart, doctors are fighting to save Royal so that he can stand trial."

A woman is weeping. Her name is Mary Neary. She sits on a plastic chair in a waiting room with a gray linoleum floor and pale green walls. There are marks on the ceiling tiles from a long-ago leak. She clears her throat, takes a sip from a Styro-foam cup she is cradling in her hands.

Her daughter, Sally, is playing a word game with Dr. Richard Klass, a child psychiatrist on staff at the hospital.

The thing was, his heart didn't actually beat. It just sort of shook in his chest. If he so much as lifted his head, he began to lose consciousness.

He put out his hand, but Mother did not take it. "I've just been remembering," he said. "We sure had a great time in the old days, didn't we?"

"Son, why did you do it? *Why?*"

He watched a fly circling the ceiling light.

"Mother, you should have seen one of my Uncle Squiggly shows."

As if she was suddenly cold, she wrapped her arms around herself. Again she left.

"I bubble when I breathe, doctor."

The cardiologist smiled and nodded. He was thirty-six, he had five children, he was from Calcutta. He did not feel that his patient would live. For the press he remained guarded, but not blatantly pessimistic.

'Oh you opened the drain I am going down please Momma get me, get Billy, I gotta get outa here Momma, I gonna go down! I slipping, my head is in Momma, I gonna go down, my body is in, the blood is taking me Momma, I am in the drain, I am going down. Momma the devil gonna get Billy! He got claws they is long they gonna go all over me!'

(We are your brothers. We are here.)

"Mr. Neary?" "Yes?"

"Can you feel this?" "Needle in my foot!" "This?" "Tickles."

"Very good. Now, relax your neck, please. Good. Any pain?" "Jesus!"

There appears to be no lasting neurological insult to this patient, but the wound continues to heal slowly.

'Oh God why is he like this, he's like plastic, doctor, I can't get through to him, he just stares! Billy! Billy! Remember our lullaby? "Billy boy, Billy boy, where are you going, charming Billy." Sure you do, God in heaven help my poor baby!'

Barton peered into the blackness that had surrounded his bed. Had the room gotten dark, or was it him? A boy walked out of the shadows. He was an angry boy, a familiar boy. Barton knew exactly why he was

here. "You'll never get me, *never!*"

Things were moving in the boy's eyes. How strange that looked. Barton tried to raise himself, to discern just what that was.

Worms!

Danny was this boy's name. He had long, long arms, and they opened for Barton.

No!

The boy embraced him. Oh, and it was almost like love!

(Why did you do it? Only the truth, please.)

"It was fun!"

Impaled baby.

Danny drew back and raised his hands and Barton got heavy, too heavy! His heart began rattling. Something was happening to gravity.

"This is an examination of William Neary, age twelve years and nine months, a traumatized child. The characteristic state of tonus called waxy flexibility is fully evident. The patient can be manipulated and holds postures. Mutism, stupor, apparent absence of will are all present. I do not believe, however, that this child is catatonic. I feel that this is a stress response so extreme that it mimics catastrophic psychosis. The prognosis is nevertheless doubtful."

'I gotta get outa here Momma, it dark, big spider man got his arms all around me, I do-do on myself, I goin' down the hole Momma!'

He sees his brothers for the first time. There is no recognition.

(We will help you.)

"Help him! You've got to help him! I know he's suffering terribly, you can see it in his eyes, Dr. Klass, please!" The doctor feels he should embrace the patient's mother in order to effect some transference of anxiety.

When Barton woke up again there were more boys in the room. They came closer and closer, their hair trailing behind them, their fingernails scraping the linoleum, their faces as pure as purest light.

"Mother!"

(She went home.)

"She went home?"

"When can I see Billy?" "In a couple more days, honey."

"Christ, Mary, I'm fine. They've got me walking up and down the ward, you saw me!" "In a few days!" "Mary, what's the matter?" "Mark, please—" "He's not dead! Don't you dare tell me he's dead!"

"Sally, just hold my head for a while. I've been up—"

"Twenty hours, Momma. We can go back to the motel if you need some sleep."

"But it's helping! As long as I hold him, he seems to be better. Just let me get a thirty-second nap, just close my eyes . . ."

A sunken, wobbly remnant, she sinks elaborately to the couch.

"Doctor, she's out."

"Your mother is suffering from complete exhaustion. I think we should just let her sleep right here."

They get a gray blanket from the ward closet and tuck it around her. The life of the waiting room goes on, people arrive, sit and depart, lives are won and lost, tragedy strikes, joy descends, Mary sleeps through an entire day.

"Sir, what are you doing in here with an IV tree?"

"What room is William Neary in?"

"You can't come on the children's pavilion, you're an inpatient!"

"I'm his dad!"

"Psychiatric wing, room 2102."

Mark hurries along, pulling his tree of intravenous lines, his mind racing: psychiatric, psychiatric, psychiatric—he maneuvers himself down the corridor. Its long, waxed floors are treacherous, it makes him dizzy to walk too fast. 'Forty-eight stitches I'm surprised my head wasn't cut in two where does this hall end Jesus.'

He is so tiny! Oh, just look, look how small he s gotten! He is so quiet!

"Billy?" Why doesn't he react, his eyes are wide open. "Billy!"

What's the matter here?

The spider opens up its mouth and this man comes out wearing robe of Jesus and he got a coat tree in his hand that's funny and where'd you get those dumb-dumb glasses Daddy?

Mark Neary cannot bear the sight of his broken child. His heart is sick with woe and suddenly he is very, very tired. Like a leaf he slips to the floor, barely noticing the IV tubes ripping from his arms. The lights dim. Then there are nurses. Then he is watching ceiling fixtures go past overhead.

It will be two days before he can leave his bed again.

Barton wanted to hear a Mozart symphony. He wanted to eat a blood orange.

Danny had a green Sohio truck with lights that really turned on. When he went with Uncle Barton he made sure to bring his truck.

(You laid us on the table!)

I didn 't do that.

(Our screams made you sweat with pleasure!)

Every act of life is etched forever in the flesh of the soul.

Mary is slumped by Billy's bedside with her head in her hands. She has cuddled him, she has talked to him, she has sung a thousand songs, she has poured her very soul into his empty gaze, and now the woman is spent.

Sally is stroking her brother's head. In a hoarse voice, she sings:

"Where have you been, Billy boy, Billy boy,

Where have you been, charming Billy?"

It is clear to her that Mother cannot go on. It is also clear that she must. "Come on, Momma, let's do it together."

Listlessly Mary joins in, barely lifting her voice, placing her hand on her son's chest.

"Where have you been, Billy boy —"

He mocks them with his emptiness. "Oh, what's the use," Mary wails, "he doesn't hear a thing!"

"Momma, we have to! We have to try! Now come on!" Again they start.

'Where have you been, charming Billy?

I have been to see my wife —Momma, come on—

She's a young thing and cannot leave her mother!"

"Oh, Momma, look!" An expression has replaced the emptiness. He stares up at them with the astonished eyes of a newborn baby.

"Let's go, Momma! He is looking at us, he sees us!"

Mary sings furiously now. "Where have you been, Billy boy, Billy boy —"

"Hey in there, I see you, yes I do, little brother dear, I see you!"

They are calling him, a chant: "Billy, Billy, Billy, Billy."

Sally chokes, clears her throat. She stops.

"I gotta have a Coke, I'm dying. You want a Coke, Momma?" She jabs at the nurse's button.

Mary remembers that he had such soft hair when he was a baby, like a blond cloud sitting on top of his head.

"I ww—mm!"

"Momma, Momma listen!"

"Mmm! Uhh!"

His voice, the lips hardly moving, but his voice!

"Billy! Billy! Billy!"

"Mmm! I—ww—"

Mary couldn't understand, she wanted to understand, she bore down on him, pressing her face into his narrow, sour little face. "What, Billy, Mommy is here, Mommy hears you!"

"I want a Dr Pepper!"

Barton took his new plane out of the blue box. Oh, so beautiful! Attach the wheels! Attach the wings! Hook up the propeller to the rubber band! Put on the tail!

"No Barton, oh, no!"

"Oh, Barton, that *hurts!*"

Instruction number fifteen: "Wind propeller one hundred and sixty

turns to achieve maximum flight."

He ran up the tall hill. There were clouds piled in the west and sun blazing in the east. The breeze went right through him, it was so pure and he was so good!

"It's hot, Barton, it's so hot!"

"Doctor," Barton said carefully, "it hurts."

"Yes," the doctor replied, smiling, "it will, for a time."

"I want a Whopper with a large fries and a chocolate shake and a fried cherry pie for dessert."

"He still likes that yuck."

"We're gonna get him *just* what he likes, right, Billy?"

"Right, Mommy!"

While he waited for them to come back he read to his brothers. He read *The Lost World*, about finding the land of dinosaurs and the jungle drums beating out the warning, "We will kill you if we can, we will kill you if we can." He said to his brothers, "If only for one second we could go back to the Jurassic and see a real *Tyrannosaurus rex*." Then he asked, "I wonder if dinosaurs got gas?" Maybe going back to the Jurassic wasn't such a hot idea.

Seeing the Burger King bag reminded Billy of home, and for the first time he thought of Jerry and Amanda and all the kids and hanging out together trying to out-cool each other. He also recalled the fact that he was dead-bone broke. Since he obviously wasn't going to win the American Legion Short Story Contest, maybe he should become a pickpocket.

Then they opened the bags and he bit into the Whopper and it was like

being home and all of a sudden he was really very glad.

After he was finished Sally produced a small white box of her own. "You try making this on a motel hotplate!" "Divinity!" She folded her arms. "Eat some. Go ahead, I dare you."

The wind was taking his plane higher and higher. At first he was glad, but when it became a tiny black dot he grew worried, then angry. "Come back," he cried, "come back!"

They belong to the wind, they can't come back.

He jumped, he waved his arms.

He heard the voices of the women they would never love, the wailing of their unborn children.

His head fell to one side. The light of other fires invaded his eyes. He was so terribly heavy!

The sky opened like the skin of a rotten fruit, and there came forth the furious legions.

32.

Mom and Dad came into Billy's room with Dr. Klass. Billy watched them walk right through his brothers like they weren't there. He didn't like it when they ignored his brothers. But he would not stand for it when they told him his brothers didn't exist. How dare they, the liars!

But he'd made a concession. He no longer talked to his brothers when the grown-ups were around. Only he and Sally could talk to them. Since they were his brothers, they were hers, too. They were brothers to all kids.

Dad still looked really weird with his huge bandage and the one eye made gigantic by the big lens they had to put in his glasses. Barton had cut a hole in his head. Billy wished he could see in the hole, but he didn't have the nerve to ask.

Right now his dad looked scared. He looked to his mother. She was scared, too.

Dr. Klass took him by the hand. It was OK, but it still made him feel creepy-crawly when they touched him. When the nurse bathed him he had to shut his eyes and sing real loud.

"Billy, we want you to know that Barton Royal died last night just after midnight."

That was OK. No it wasn't. He busted out crying, he just couldn't help it.

Dad rolled his goofy eye at Mom. She pushed past Dr. Klass and put her arms around Billy. Mom smelled so good, Billy liked her so much.

"This is good," Dr. Klass said, "he's unloading some stuff here."

"I missed the funeral!"

As Mommy hugged him he pulled his face away so he wouldn't touch her skin. He sure loved her, but she had skin like a salamander.

"The funeral is at two-thirty," Dr. Klass said, "but we have more important things to do than go to an old funeral. You and I are gonna write another play about Barton today."

"I'm gonna go to the funeral!"

"No, Billy."

"Yes I am, Mom! I have to!"

Dad talked, his voice low. "Billy, you're in the hospital. You aren't even near well yet. You have bandages all over your bottom and you—"

His brothers were all yelling and screaming. He had to go!

"I can go in my bandages. Don't you want me *ever* to get well?"

That shut them right up, as he had figured it would. Sally, who was sitting over by the window working a puzzle and not saying anything, gave him a wink. She knew all about why he had to go to the funeral.

"We'll have our own funeral, Billy," Dr. Klass said. He was a nice guy, but he could dork out at a moment's notice. He had just dorked out.

Billy knew how to shut him up. "Gee, I'll make the gravestone and we can use a real coffin," he said like he was all excited about it. "I know

they have coffins in hospitals for when people die."

"Ah—"

He looked up at Mom and Dad. "I've gotta go. It's real important to me."

His father bowed his head, then came down on the bed with him and Mom. They held each other's hands.

"I'll navigate," Sally said.

It was a long drive to Anaheim, and they had to start out right away. Mom drove, Dad sat beside her. Billy lay with his head in Sally's lap. Although she claimed she was finding lice and cooties and stuff, he knew she was just rubbing his head.

Billy had never been to a graveyard before. When they got there all kinds of reporters came thundering up yelling questions. Ever since he had seen himself on TV in just his underpants Billy didn't like those jerks.

It wasn't a very good graveyard, he decided. The headstones were mostly small. Here and there somebody had left a few withered flowers in a bottle. When the wind blew, sand swept the stones like dry rain.

Barton's grave site was the only active spot in the whole enormous place. There were three folding chairs, a couple of men in white T-shirts with shovels in their hands, another man in a frayed black suit.

There was also a woman, as Billy had hoped there would be. His brothers had been worried she wouldn't come. He could feel their relief.

The woman sat very still on one of the folding chairs, her brows knitted in the merciless sun. All the time as Billy and his family were coming closer, she watched them.

By the time they had arrived she was staring down at her own feet. She stood. "Make it quick, please, Reverend," she said. Her voice sounded so much like Barton's it made Billy want to vomit.

The man opened a paperback of the Bible and read in a nervous voice: "In the day when the keepers of the house shall tremble, and the strong men shall bow themselves—"

"Two verses after," the woman snapped. She blinked her eyes. "Where I marked."

The Reverend cleared his throat. "Also when they shall be afraid of that which is high, and fears shall be in the way, and the almond tree shall flourish . . ."

Billy heard his brothers repeating in the air, "and the grasshoppers shall be a burden, and desire shall fail. .." He joined his living voice to their dead ones: "because man goeth to his long home ..." which was all he remembered.

Barton's mother clutched her hands together, looking straight at him. She looked sad, but also scared.

Dad raised his head. Billy saw the pride that had come into his face, and was glad. "Or ever the silver cord be loosed," Dad and Mom said together, "or the golden bowl be broken—"

They stopped, silenced by the power of the same deep feelings that had compelled Billy to bring them here in the first place.

Barton's mother spoke in tiny words. "Then shall the dust— the dust —" Her composure was broken by the most desperate grief.

She covered her face and shook.

The coffin was lowered by a machine with an angry, screaming whine. Billy watched it drop into the dark hole and with it his life with Barton, and the dim life before. He had come here seeking an ending. He

asked his heart, 'Do I hate Barton?' and heard a silence that let him raise his eyes from the grave.

Barton's mother recovered herself enough to throw a clod of soil into the hole. Billy heard it rattle on the coffin.

Now it was time to perform his mission. His brothers gathered around him. They were excited. He had taken them on a big adventure. He dug in his pocket and pulled out the fourteen construction paper notes. On each he had written a name. One by one he dropped them into the grave. Sally, who had helped him make them, said his brothers' names with him.

"Chuck."

"Danny."

"Jack."

"Timmy."

"Andy."

Dad added his voice.

"Ezra."

Mom did, too. Their chant was ragged because only he and Sally knew the names by heart.

"Liam."

"Unknown Child Number One."

"Unknown Child Number Two."

The sweating preacher and the two workers joined their voices.

"Unknown Child Number Three."

"Unknown Child Number Four."

"Unknown Child Number Five."

Mrs. Royal started to do it, too.

"No," Billy said. "Not you."

She nodded her head. She whispered, "No."

"Unknown Child Number Six."

"Unknown Child Number Seven."

Billy stopped. He looked to Barton's mother. He had a last note, which he handed to her.

When she saw what it said she gasped as if stabbed.

"Read it aloud," he told her.

She shook her head. Her eyes were closed tight.

"Read it," one of the workers said.

She muttered something. Then she cleared her throat. "Billy."

"OK." Billy nodded at the grave.

"I want to keep it," she said in a quavering voice.

"Throw it in!"

Billy watched it flutter down, twirling round and round and round, until it hit the side of the coffin and slid into the dark.

A crow rose from a tree, wheeled screaming over the party, and strove for the sky on its black wings. Billy looked from the cheap, gray coffin in its hole up to the raucous, flapping creature in the sky.

"I'm ready to go," he said to his parents.

His father took his hand. In the rough coolness of his fingers Billy felt the future, he and Sally growing up, Mom and Dad getting old and dying. The thought did not upset him. On the contrary, it filled him with a joy that seemed deeper than his own soul, as if it entered him not only from his father's trembling hand, but from the whole contents of the world.

When they got into the car together, Billy was fascinated by details for the first time since his passion. He noticed the way the radio worked and the fact that it had no cassette player. He noticed that there was a climate control as well as a cruise control. He noticed the hole where the cigarette lighter was supposed to be—and wondered what would happen if he put his finger in.

As they pulled away from the curb Billy looked back. Mrs. Royal remained at the grave. She stood watching them leave, her body as narrow as a stake. One hand came up, hesitating, tentative, as if to wave. But she did not wave. Instead her fingers touched her cheek, trembled against the empty skin.

He closed his eyes, listening to the kind old hum of the tires.

By the time they turned onto the highway the day had reached its moment of high sun. Everywhere the shadows were in retreat. Sally started to sing:

"The ants go marching two by two,

The little one stops to go to the zoo —"

"Those aren't the right words."

"You're supposed to make up the words, Billy."

"Are not."

"Are!"

"Are absolutely not no way uh-uh."

"Well, I do!"

Billy sang, "The little one stops to do some doo!"

"Billy Neary, that's gross!"

The journey back had begun.

Author's Note

The theft of a child is perhaps the cruelest of all crimes, unique for its spectacular inhumanity and corrosive potency. Fortunately it is not an everyday crime; neither, however, should it be ignored. The numbers do not matter; the spectre of this crime diminishes as does no other the joy of parenthood and the innocence of the young. Childhood is not immortal; childhood could die. If it does, this will have been among its harshest poisons.

—Whitley Strieber

(Continued from front flap)

forty-four-year-old, fat and sweaty, searching the world for his own lost boyhood. When he sees Billy he knows that he has found the extraordinary creature he has been looking for—the perfect child that he never was. And he knows that in a matter of a few short hours he will have Billy all to himself, to love, to cherish— But Barton Royal is a very angry man. And Billy is very small.

Though Mary and Mark Neary can hardly believe that their son is gone, they suspect with every passing minute that he is in ever deepening danger. But even their worst fears cannot comprehend the gruesome and chilling reality of Barton's hideous world and the secret black room beneath his house where Billy is held prisoner.

Presented from both Billy's and his kidnapper's points of view, *Billy* is a story so terrifying—and yet so passionately committed to the value of the human spirit—that it will leave you breathless.

Whitley Strieber has long been hailed as a master of suspense. In *Billy*, he delivers a psychological thriller that will establish him as a writer of awesome versatility and power.

Whitley Strieber is the author of the bestsellers *Communion*, *Transformation*, and *Majestic*. He lives in New York City.

"One horrific read!"
-Portland Oregonian

"*Catmagic* manages to combine nearly every conceivable fantasy element into one horrific tale! An enriching read, balancing psychological ramifications with horror-tale action."

—Portland *Oregonian*

"Strieber has a gift for producing tension, and *Catmagic* is a real page turner that paws stealthily through the reader's mind like the feline that rules its pages."

—*Rocky Mountain News*

"I am really, really pleased to see Whitley Strieber back in dark fantasy, and with *Catmagic* he returns with style. It is a hell of a good read."

—Charles L. Grant

"*Catmagic*, like everything Whitley Strieber writes, is touched by the magic of his imagination and an undercurrent of disturbing darkness."

—David Morrell

"A legend for adults—poetic, moving, and terrifying."

—Ramsey Campbell

WHITLEY STRIEBER

**CAT
MAGIC**

A TOM DOHERTY ASSOCIATES BOOK

This book is dedicated to something that may be a cat. He is enormous, black as death, and usually gone. He has a shredded ear and a kink in his tail. If he is around, he might enjoy being stroked, and then again he might hurt you if you so much as touch a hair. He never purrs. He likes to stare.

This is a work of fiction. All the characters and events portrayed in this book are fictional, and any resemblance to real people or incidents is purely coincidental.

THE RELATIONSHIP BETWEEN *COMMUNION AND CATMAGIC*

I wrote *Catmagic* in 1984, well before I was consciously aware of the visitors who figure in *Communion*.

Communion is a story of how it felt to have personal contact with the visitors. The mysterious small beings that figure prominently in *Catmagic* seem to be an unconscious rendering of them, created before I was aware that

they may be real. It could be that the message of the book—which involves respect for earth and all her creatures, and the seeking of higher consciousness—is somehow derived from my inner understanding of the meaning of the visitors.

The hardcover edition appeared under a pseudonym, Jonathan Barry, primarily because it was published too close to the publication date of another of my books and would have created a conflict. I am the sole author of *Catmagic*.

Catmagic concerns Witches and Witchcraft, also known as the religion of Wicca. It is about the spiritual path of real Witches. It has nothing to do with tomfoolery like alleged "black magic." The Witches I met in doing research for *Catmagic* were no more evil than Christians or Buddhists or Hindus, or the practitioners of any other perfectly legitimate religion, among which Wicca can certainly be numbered. They were good people, passionate in their concern for the welfare of the natural world and the growth of their own souls.

Certainly there are a few people who distort Witchcraft and mock its ancient rituals in ceremonies that glorify evil. I met two such people. They turned out to be secretly associated with another religion. They were calling themselves Witches and engaging in painfully silly black magic rituals involving dead goats in an effort to discredit Wicca. Others who do evil in the name of Witchcraft are mentally disordered or, simply, charlatans. Such people should no more be counted Witches than practitioners of the black mass should be considered Catholics.

To learn more about the "old religion," the reader is invited to write Circle Wicca, Box 219, Mt. Horeb, Wisconsin, 53572.

—Whitley Strieber

PROLOGUE

Stone Mountain is the only truly rough peak in the Peconics. Its gray, cracked ridges stretch for about three miles in that otherwise benign chain. They are so loose and treacherous that even the most obsessive rock climbers avoid them as offering too unsubtle a doom. The Appalachian Trail, deferring to the fact that old Stone has been known to slice a good pair of Beans to shreds, skirts the mountain and passes through the orchard-choked exurbia of the little town of Maywell, which huddles beneath the mountain like an Israelite at the feet of Pharaoh.

From the grand and crumbling Collier estate at one end of town to the dark Victorian buildings of Maywell College at the other, the ridges look down on the whole of Maywell. This is not an area of superhighways and roaring commuter buses; Maywell has been bypassed by the roads and the developers. Once again, old Stone is to blame. No highway construction company would bid on a road to cross that miserable expanse of cracked granite, so Maywell remains much as it was a century ago, a town as pretty as it can be, alone, and largely content with its own gentle self.

Maywell prospers in a quiet way, on the orchards and the farms whose produce is trucked off to Philadelphia and New York, and on the maintenance of Maywell College, an institution small in both size and reputation, but more than adequate to provide the town its full share of raucous students and middle culture.

Maywell does not really like the modern world. It has a tendency to look to sorter eras with well-dressed, genteel longing. It is peaceful, moral, and respectable.

It is, in short, just the sort of place where peculiar things happen.

These things may be grim and awful, as was the raising by Brother Simon Pierce of his Resurrection Tabernacle, or pretty much the opposite of grim, such as the witchy goings-on out at the Collier estate.

They may be odd, as in the case of poor Dr. Walker. He was a brilliant biologist whose abrasive personality and dogged obsession with his own bizarre theories made him tiresome to his peers at Yale.

Eventually, when he raved to the newspapers about bringing frogs back to life, he was hurled out. So now he continues his career in this forgotten corner of the academy, teaching freshmen the intricacies of the zygote and

plotting the breakthroughs that will vindicate his genius.

Besides its beauty and isolation and its smattering of eccentrics, Maywell has something else odd about it.

This is a bit more serious. This is quite terrible and quite wonderful—if such words have any clear meaning. *Terrible* conjures images of huge, gaping beasts or sulking psychopaths; *wonderful* brings a silken princess and a thornless rose.

Both words might conjure a cat.

Certainly either suggests the great King of the Cats, a creature known almost exclusively to students of obscure Celtic mythology, and holding sway, according to Robert Graves, “upon a chair of old silver” whence he gave “vituperative answers to inquirers who tried to deceive him.” No doubt he/she accounts in part for the androgynous nature of Puss In Boots and was the progenitor of the first Cinderella story,

“The Cat-Cinderella,” which is itself a folk memory of the very ancient legend of the cat as friend of Ishtar, the fierce old mother goddess who once swayed over Sumeria.

Among the fragments of the old mystery religion of the Greeks is the identification of the goddess Diana with a cat. From deep time, the female witch has identified a male cat as her familiar. And, of course, there were the Egyptian cats, most of whom were mummified and persist to this day stacked in the basements of museums.

The extraordinary creature that inhabited the ridges of Stone Mountain, though, was no candidate for a museum. Indeed, at the moment it was very intensely alive, and not out on the windy ridges, but wandering far more delightful realms.

All was not perfect: long ago it had been touched by one of Constance Collier’s spells, and something was tied to its ear.

This was an invisible thread, which led from the delightful realms all the way into Maywell, where it joined the other invisible threads being woven on the loom of the town’s life.

The other threads turned and twisted constantly, crossing as the druggist married the grocer’s daughter, slipping apart when he died, becoming knotted when she also passed on, and so on, the cloth never finished, its invisible patterns ceaselessly shimmering and changing.

Only one of the townspeople, Constance Collier, had both the wisdom and inclination to sit occasionally at the sacred loom and maneuver the threads

around a bit, perhaps granting some indigent follower of hers a little good fortune or causing the business affairs of one of her adversaries to come unraveled.

She never touched the thread connected to the mythical cat's imaginary ear, and hadn't since she had first tied it, a deed she had done on a soft spring day when she was still full of hope. Many long years had passed since then, while Constance had plotted and spelled and hexed and waited. But she had never needed to call the cat. She had gone from being a beautiful young woman to a wise old one, and had become patient with her lifetime of waiting.

If the thread was pulled, it would bring the cat back to Stone Mountain, and down into innocent, unsuspecting Maywell. There was, however, only one reason to do this appalling thing.

Of late Constance had known renewed hope. There was a chance, after all, that the final chapter in a very old story would at last be written.

Constance, Dr. Walker, Brother Pierce—three of the main characters are in place. There remains only one more, and she is already approaching the town, chugging along in her ancient Volkswagen Beetle.

Even more promising, it is jammed with luggage and easels.

An observer of the invisible could see that the particular thread that is tied to the cat's ear has wafted down and fallen across Morris Stage Road. The old Volks wheezes, its gears grind, and it moves closer.

Hidden breezes blow the thread about, entangling it in the lower limbs of an autumn-fired birch. Now the thread is tight.

Closer and closer the car comes, its blond young driver peering out. There are no exit markers here. She has been told to take the third right after the big crossroads. She is counting and staring as the car sweeps into the thread. She experiences nothing more than a trickle and a sneeze, but off in the cat's realm things are quite different. The cat is dragged, howling with pain and anger, all the way to the dreary, windswept ridges of old Stone.

For a moment nothing more happens, but that is only because the cat's eyes are shut tight.

As the shock wears off, it blinks, then begins to gaze.

Huge, golden cat eyes appear, hanging above an otherwise empty expanse of rock.

The cat glares down into the weave of Maywell's life, to see what fool has dared this conjuring.

BOOK ONE:

Godfather Death

The glacier knocks in the cupboard,

The desert sighs in the bed,

And a crack in the tea-cup opens

A lane to the land of the dead.

—W. H. Auden, “As I Walked Out One Evening”

Chapter 1

The frog wanted desperately to hop. But it couldn't hop. It jerked, then jerked again. It stayed where it was, clamped down tight. It flexed, tightened, jerked. The hot, dry hurting kept on. The frog worked its tongue. Pain. It tried to move its head. Pain. Things were piercing it. Again and again it tried to hop. But it stayed right where it was, in this hard white place with no leaves and no whirring wings and no sharp delicious bugs to wrestle from the air.

It tried to hop.

Still, it did not move.

It tried. Tried. Tried.

It hurt, it had to move, it had to *hop*.

"There we go—no—hell. Bonnie, the animal is still too slick."

Painful, tormenting, scraping all over its back, hot and dry. It hopped hopped hopped.

"Thanks. Now... yeah!"

"That did it, George. The probe's well seated. I haw a good signal."

"Okay, Clark. Let's get started."

On Stone Mountain the creature—which was still only eyes—began spinning itself a cat body so it would be ready as soon as the sun went down. Two sparrows, who saw something astonishing create its own solid presence out of thin air, took flight, screaming in the silence. A raccoon stiffened and stared, and mewed. What it saw had no taxonomic classification. No, indeed, for it belonged to a rare law, this creature of mercy. Pacing now, it waited for the sunlight to rise away from the streets of the town. And suffered along with the frog.

The frog understood nothing it saw around it. There were long strands sweeping out above its eyes. It could see every turn and wrinkle in the wires leading from its skull. But it did not understand the wires. It saw them as legs, and thought of bugs.

It liked to use its good eyes, to see sharp. Seeing sharp meant eating well. But there were no wings whirring, no fat bodies, no good scent connected with the sight of these long legs. The frog's tongue swelled with the blood of hunger. It wanted to see insects, to smell dampness, to be in green water. It

wanted to hop. But it was stuck right where it was.

“That looks like a good, steady electroencephalograph to me, Clark. The frog’s normal. Not too happy, but normal.”

“Don’t let it jerk out my electrodes, Bonnie. I hate frogs. Give me something big any day.”

“Like what?”

“Like a person, Bonnie dear.”

“Constance wouldn’t like that.”

“No, and she doesn’t like this either.”

“You’re doing it.”

“She might not like our work, but she appreciates the necessity, at least. That’s more than I can say for the Stohlmeyer people. Sometimes I think they’re secret followers of Brother Pierce.”

“God, don’t bring him up. I don’t want my hands to shake while I’m working.”

A silence fell among the three people in the lab. They all knew the eventual object of their experiment, the goal given them five years ago by Constance Collier: to kill a human being and return him or her back to life. Her goal, her program.

But Constance didn’t like all the animal killing they had to do to succeed. “I feel every one of those deaths,” she had told George. “Maybe I’ve made a mistake. Maybe you ought to stop.”

He would never stop. He had pursued this goal at Yale and destroyed his career mere. He would pursue it at Maywell and drag his name up out of the mud. He was going to vindicate himself in this little backwater. One day this college would be famous because of what he had done here.

The technician, Clark, finally spoke. “Okay, folks, I’m ready to proceed.”

“I’m set,” said Dr. Walker.

“Bonnie, how about the audiovisual?” Clark asked.

“Up and running.”

“Right. Here we go. Beginning the count. Five.”

The frog felt heavy, as if it were buried in mud. Heavy and smothering. Its heart began to beat harder.

“Four.”

Something tickled inside the frog. It was terrible, this feeling, like nothing else the frog had known, tickling under its skin, like water spiders running there. The frog tried to move, to escape the tickling, but the weight seemed to

bear down the more. Fear made its eyes bulge.

“Three.”

It was as if the frog were being tom apart. It had a vision of talons, of huge whistling wings.

Death came to it then, and its heart slowed.

The smell of water rose up around the terrified creature, then became a vision, water in darkness. The talons let go, and the frog fell into the quiet water, then it was dawn and flies were rising, and the frog was on a lily pad singing up the sun.

“Two.”

The dream sank to dark, and the frog felt itself falling into nothingness.

“One.”

The black parted, and the water dream of a moment ago lay before the frog, and this time it was real.

The frog was free. It hopped easily to the good-smelling water, and the water splashed around it and made its skin jitter with pleasure as it dove down into a black bass pool. Reefs of tadpoles swept past and sticklebacks darted in shafts of sunlight, then the frog went up again and broke the surface amid blooming lilies.

“We have complete termination. It’s dead, George.”

Cloaked by darkness at last, the cat began to move down the mountain. As it did, its form flickered and grew ever more solid. When it crossed the ridge, it was a shadow of a cat, a shudder in the light, a wisp of colder air. When it reached the edge of Maywell, it was a scampering, dark suggestion of something quite familiar.

By the time it came into the streetlight at the corner of Indian and Bridge it was quite clearly an old black tomcat with a tom ear and a proud, bent tail.

At least, that’s what it looked like. Animals and children, though, were not deceived. They sensed the true shape of this vast and terrible being, and were filled with dread.

All over the town cats awakened and stared at darkened windows. Strays slid beneath porches or huddled under cars. Birds stirred in their trees and dogs at their masters’ feet. Here and there a napping infant screamed. On the grounds of the Collier estate old Constance paused in her walk, closed her eyes, and entered the immense space within herself. She knew she should try to stop Tom, but she did not.

George would manage, he was a survivor. And the poor frog!

In any case, her gesture would probably be futile. Such a deep violation of the laws of life was making the cat awfully mad. Constance's interference wouldn't even be noticed.

The black tom began his progress across Maywell, intent only on one goal; Animal Room Two, Terrarium D-22, Wolff Biology Building. He hurried down the sidewalk on the right side of Bartlett Street, past the tall homes that had housed the same Maywell families for generations, the Haspells and the Lohses and the Coxons, families whose ancestors had seen the Revolution from those leaded-glass windows, who had leaped in the springtime fields and left mandrakes for the fairy.

The tom passed a red Mustang convertible beneath which an elderly and very arthritic tabby hid.

The tom heard its wheezing breath, saw the pain in its eyes. Frightened of the enormous spirit it saw stalking down the walk, the tabby yowled miserably.

The tom stopped. He lowered his head, concentrated on the neglected, dying animal before him. A sensitive paw reached out and touched the cowering tabby. *I give you the gift of death, old cat. You have earned it.* Instantly the tabby's body slumped. The tom watched its soul leap up like smoke into the starry sky.

None of the tabby's fleas crossed to the tom. They chose rather to risk the cold autumn ground.

The tom continued on its way, and everything sensitive to it took notice as they might the transit of a wendigo. As it passed the Coxon house, it brought a vision to the innocently open mind of little Kim, the eleven-month-old baby. She began to wail in her crib. She didn't know words, but in a painful, true flash from the enormous mind that was passing, she had seen her own end, far from now in a sleek blue thing she did not yet know was called a car, in the bellowing water of a flooded river, on another autumn night.

And in the prime of youth.

Hearing the desolation in her cries, Kim's mother came into the nursery, picked her up, and clucked and sang and patted. "Oh, had a burp," her mother said. "Such a big burp!" When the wailing passed, she put Kim down.

The frog found fat, lovely flies skimming along the surface of the water. It

caught them, aiming with its keen eyes, darting its tongue.

Something the frog might have called a goddess, had it known of such things, marched the water, raining desire down on the feeding bull, making it forget its feeding and follow.

“Monitor the blood flow in die extremities. We’ll wait until it stops completely before we bring our baby back.”

The frog was jumping and leaping for the green goddess, wanting to show that it was the greatest bull, the bull of bulls, huge and strong and thunder-voiced. It dove deep, shot to the surface, dove again.

“That’s the last of it, George. No more blood flow.”

“So we can confirm one absolutely dead *Rana catesbeiana*?”

“By any definition. Even the Stohlmeyer Foundation’s.”

“This time. Doctor, they’ll accept our protocols. For sure.”

“Thanks, Bonnie.” George Walker kissed her straw-sweet twenty-year-old hair. He stood to his full height, six feet of slim but fiftyish male. God, he thought, the beauty of her youth! “I have ninety seconds of null readings, Doctor.”

“Good, Clark. I think we’ll convince ‘em this time.”

“For sure,” Bonnie repeated.

And if we don’t, George thought, you kids are going to be’ out of Maywell State College on your tight little asses just like me. No Stohlmeyer grant means no professorship—and no assistantships either. But then again, what would Clark care—he had the Covenstead to return to. Bonnie was too wild to live in Constance Collier’s witch village. As for George, he kept his house in town. He had his reasons for staying away from the estate, chief among them his career. It was one thing for people to commute into New York from the Covenstead, another for them to try and work in the town.

Any professor foolish enough to have open contact with the witches could forget things like tenure.

If the Stohlmeyer grant ended, Constance might find George some money for his work, but the grant was the validation that the college trustees needed to allow him to continue it here. Loss of the grant meant loss of career. George could not bear that thought: he had worked so hard, and been so misunderstood.

“Let’s earn some gold, kiddies, and bring this little sucker back to life.”

The frog heard, thrumming in the whole air, a rush as of bird wings. It was

low and large, too large even to be a bird. Was it wind?

The frog saw scud on the surface of the waters, saw the lilies tearing, saw the leaves of cypress and willow lift into the black sky, heard the thrumming rise to a scream. It waited no longer, but rather leaped for the dark, safe deeps.

A shimmering, golden goddess of a frog swam there. The bull's heart was captured and he went deeper and deeper after her, his loins tingling, his muscles singing in the quiet. She lured him farther and farther, deeper than any frog should go. Come, she said with her quickness. Swim, she said with her grace.

Swim! Swim!

The wind was seething behind him, roaring through the lilies, ripping the green and quiet waters, the holy pond.

Swim, little one, the goddess called, swim with all your soul!

The black tom began to run. He rounded a corner onto, Meecham Street. The neighborhood changed from houses to a row of neat little shops. Bixter's Ice Cream was open, its video games clattering and buzzing. Beside it the B. Dalton bookstore was just closing up. Joan Kominski locked her register and turned out her lights. The passing tom, unnoticed by her, shot her a vision of her own future: she was in a hospital room dragging breaths that would not fill her lungs. The hallucination was so detailed that she could smell the oxygen, see a picture of a clown on the wall, hazy beyond the plastic oxygen tent, taste her own drowning fluids. And feel Mike's hand in hers and hear him calling "Doctor, Doctor!"

She paused, stunned. With shaking hands she lit a cigarette. She stood in her darkened bookshop, smoking, calming herself down.

The tom trotted quickly down Main and crossed the Morris Stage Road. Mike Kominski was roaring home full of Amtrak martinis, late as usual from his job in New York, and it would not do to be caught in front of that particular Lincoln.

The wind was just behind the frog now and he knew it was dry and he knew it was hot. He swam and swam in the roiling, dirtying, darkening waters. Ahead the maiden frog, the goddess, glimmered, urging him to rush on and on, deep to her, deep to her!

"We're getting an electrical field!"

The wind touched his back and it was hot and ugly and hard. It must be deathwind, for it smelled of the man-place.

He must not surrender to it! Ahead she flashed her gold beauty. He swam as he had never swum before, the water hissing past his nose and eyes, his whole body surging with the effort of it. Her eyes shone and her skin gleamed.

The wind touched him again.

“Heartbeat!”

No!

The wind surrounded him.

“It’s coming to rhythm.”

The wind sucked at him—

“It’s getting steady.”

His whole heaven collapsed. But she did not abandon him. Alone of all that beauty, the most beautiful part remained. When she saw him being dragged back, she turned and came, too, swimming fearlessly into the dry agony that had captured him. She ceased to animate his determination and concentrated on giving him courage. She went deep, deep into him, into the secret place where glowed the strength of his spirit.

Then he hurt all over and he was hungry and he was hot and it was white and there were no fly smells and it was bleak again.

“It’s alive, George!”

“Damn right it is.” George Walker could hardly restrain himself. He stood up from the bank of instruments, he clapped his hands. And Bonnie leaped, a blond streak of joy, into his arms. He kissed her moist lips.

He enjoyed the deliciousness of the girl while young Clark looked on, glasses steaming. Relax, Clark, let an old man get a little. What does it matter, you get all you need on the Covenstead.

George did not have that privilege. His relationship to Constance was too deep a secret; he could not go on the Covenstead except by dark of night, and then only in those rare instances when he was called.

And as for living among the witches—well, if his work here was ever done, maybe. He had never told Constance his dream of retiring to the hidden witch village.

He was afraid to. If she said to him what he feared, that it was not his fate to find peace in this life, he did not think he could stand it.

Sometimes the loneliness of his position was very hard to bear.

“We’ve got to get it out of the halter,” Clark said, his voice full of testy eagerness. “It’ll dehydrate. We really don’t need a damaged specimen, do we, folks.”

Bonnie broke away from George’s hovering presence. “I’ll bag it and return it to the terrarium.”

“The isolate,” George said. “And band it with the date and time. Under no circumstances do we mix this little piece of gold up with the other beasties.”

The frog was soon in the awful, waterless pond with the magic walls. It knew what it had to do here. Sit. A hop meant a hurt on the nose. The magic wall could not be seen, but it was as hard as the skin of a floating log.

So the frog sat. Remembering its heaven was almost enough to make it turn itself inside out with agony. It begged the golden frog to help.

I cannot!

Take me back, please.

I cannot!

Dried, dead flies scattered down, sticking to its nose. The frog’s tongue did not go to get them.

Please, please.

I cannot!

The frog felt a cleaving that in higher things is called love, for the lost green water. All it could do, though, was sit, inert and mute, silent.

Frogs are not made for anguish. Nor to have their deaths stolen from them. Nor to be dragged back from their humble paradise.

Frogs are made for joy.

The Wolff Building crouched dark and ugly ahead. Nobody saw the incredible way the tom entered the building, nor saw it slip down the corridor to just the right door.

But the instant the cat went through that door the frog knew.

The frog saw dangerous eyes on the other side of the magic wall. Once it would have hopped away from such terrible eyes, but now it only sat, apathetic. In its brain there repeated the image of the deep water and the golden lover it had lost.

Even when the huge black head of the tom came oozing right through the magic wall, the frog did not hop. Had it understood the miracle involved in a cat pushing its head through solid glass without breaking it, the frog might

have jumped. But it did not understand the magic wall. As far as it knew, the only purpose of glass was to disappoint frogs.

The cat nudged the frog with its muzzle, then opened its mouth. The sharp frog eyes saw the tongue, the white fangs, the gently pulsating throat. And it saw more.

Instead of terror, the frog felt eagerness. For down in the cat's throat it saw its lost beauty, her skin touched by sunlight. She lay in a crystal pond, tadpoles swimming about her flanks.

Heaven was in the belly of the cat. The frog laid his head in the tom's mouth.

This was one death it did not have to suffer. The tom snapped its jaws down so fast the frog felt nothing.

But then it had already died once and that was quite enough. It saw a fierce flash of light and heard a sound like tearing leaves, and was gone.

The cat tasted the cold, sour flesh of the frog, gobbled, drank down the cool blood, felt the eyes sticky against its tongue, the skin slick and bland, the muscles salty. It swallowed the frog.

When it returned to the night, the moon had risen red in the east, its light diffused by haze from the Peconic Valley Power Company's plant twenty miles away in Willowbrook, Pennsylvania. The tom proceeded along North Street toward Maywell's one and only housing development, "The Lanes," built by Willowbrook Resources in 1960. The development's sameness had over the years been camouflaged by trees. Each of the streets had been named after a familiar variety. The birches planted on Birch were tall and blue in the moonlight, the spruce on Spruce dark green. On Elm there were oak saplings and one or two still-struggling Dutch elm victims.

The cat passed down Maple Lane until it reached the Walker house, a substantial raised ranch with pale yellow aluminum siding and a '79 Volvo in the driveway. Beside it was Amanda's ancient VW Beetle.

The tom went between the two cars, through the closed garage door, and into the game room beyond. It was indifferent to the fact that the lights were on; it knew that the room was empty. It slipped behind the sofa just as Amanda, nervous and hollow-eyed, entered. It cocked its ears toward her, and heard much more than her breathing, her movements. It heard the voice of her mind, the thready whisper of her soul.

She looked around, shaking her head. Here she was again, back in this awful house. She knew that this was a triumphal return to Maywell, but having to stay in this place cast a brown shadow on her victory. Too bad she couldn't afford the Maywell Motor Inn. But she was lucky to have managed to get enough gas for the Volks, given the present state of her finances.

This house... this town... the only thing about any of it that brought even a flicker of a fond memory was the thought of Constance Collier herself, with her wild colony of witches out on the estate, and her flamboyant seasonal rituals, the fires burning on the hillsides and the wild rides through the town.

It all seemed so peaceful now. As she had gotten older, Constance must have mellowed.

Sneaking out to the Collier estate to see the witches dancing naked in their April fields had been desperately exciting, one of the few thrills of being a child in this staid community.

Always, though, there had been this house waiting at the end of a happy day. She had come home to the resentments and the sorrows: this was a place of unspoken anger, where people wept at night.

She looked around her. Everything was brown and sad. Since George had bought it from his brother, it had—if possible—gotten even worse. There was an open chill on it now, as if hate was glaring into every room, from the walls, the doors, the very air. There was no more hypocrisy here, at least. The body of the house now reflected its soul.

Standing in the family room, Amanda felt the weight of the place. She remembered one awful night when she had come in from watching—almost participating in—the Halloween ritual on the Collier estate. Her father had slammed her up against that very wall. “Never, never get near that place!” His voice had been desolate with sorrow.

What would he think now? In a few days she was going to be working with Constance Collier.

She wouldn't participate in witchcraft. She had no time for such fantasies. Of course, it would be interesting to learn more about what went on at the estate.

She dropped down onto the old couch, the same one that had been here in her childhood. She was twenty and living on her own when she discovered that it was not necessary to be sad. Life could be rich and fulfilling. There was an aesthetic to living that had to be carefully learned, though, or there was the danger of falling down the same pit that had swallowed her parents,

the pit of spiritual bankruptcy and moral indifference.

Through the dirty glass sliding doors she could see the backyard. The old maple where she had spent so many summer hours was still here, and her throat tightened a little to see it. Ten years ago she might have been in that maple on an afternoon like this, sitting in the palace of leaves.

Ten years. The silences were growing longer. Her relationships with her parents continued, dragging themselves out in her mind. If she had to stay here, memories that were now no more than haunting would soon become unbearable.

She hoped that Constance Collier would have some space for her out on the estate. Then this hard journey would become much easier.

The only thing that would ever have brought her back to Maywell was Constance Collier. Now she was here, chosen to paint the illustrations for the renowned writer's new translation of Grimm's. It was the biggest and best commission she had ever had.

Mandy had come a long way for a twenty-three-year-old woman. A long, hard way. Of course the Caldecott Award for her *Rose and Dragon* illustrations had helped. She believed that the work itself, though, was what had attracted the secretive and distant Constance Collier's attention to an anonymous former townie.

She could create whole, complete worlds in her imagination, and paint them down to the last strand of golden hair.

Hands dropped onto her shoulders. "Oh!"

"Sorry. I didn't mean to startle you."

"Uncle George."

She could only feel kindness toward him, since he had been so willing to let her stay here. As soon as she came in, she had understood the reason for his eagerness: without Kate and the kids, this place was more grim than it had ever been before.

"You're looking lovely, Amanda."

"Why not? I've escaped Manhattan, and tomorrow I meet Constance Collier."

As he looked at her, his eyes brimmed with what she suspected might even be desire. Had she been a damn fool to stay with him? Perhaps she should have gone straight to the estate. But Miss Collier hadn't offered her accommodation. All of her old town habits came back. She dared not be forward with Maywell's leading citizen. Her agent had agreed. "Don't

jeopardize the project by making demands right at first,” Will T. Turner had advised.

“Have you got anything to drink?” Amanda asked. George padded off in his big sheepskin slippers, across the chipped linoleum of the game-room floor.

“Old Mr. Boston brandy good enough for you?”

She took it and sipped. “Mmm. Just the thing to relax.”

“I’m glad you’re here, Mandy.” He stood close to her. “I’m sorry the house was such a mess when you came. I just completely forgot. We’ve been very busy over at the lab.”

“Doing good things?”

“I’m hopeful.”

She nodded, sipped again.

“It’s just that I’m so damn tired.” He snorted out a laugh. “We were very successful today. Very successful.”

“Do you want to tell me about it?”

“Not really. Except to say that it was rather a triumph.” His eyes regarded her steadily.

If she stayed in this house, George was certain to make passes at her. She did not need that. She would have to risk giving Constance offense and request a room at the estate when they met in the morning.

She was ready to ask George some polite question about his triumph, when something unusual happened. One of her most treasured talents was the ability to have detailed visualizations on demand. But they never came like this, unbidden.

And yet, despite the fact that she was healthy and not in the least tired, she found herself in the grip of just such an uncalled vision.

She saw a haggard George, crouching in a dark room, perhaps even the awful cold room in this house’s basement. Her mother used to store coats there, in what had been billed in the brochure as a wine cellar.

It was where Mandy and Charlie Picano had gone for prolonged kissing behind the coatrack.

It was where their cat Punch had died, starved to death while the family was on vacation. Nobody had noticed that he had been shut in there.

It was where the children had whispered tales of witchcraft in Maywell, and Marcia Cummings had insisted that witches were good.

In Mandy’s vision a woman lay on a table in the room, which had been

transformed from a place of mystery into a torture chamber. The woman was dead, but George was not sad.

At the moment George was smiling. Mandy recoiled at the sight of his cadaverous grin.

“Mandy?” His smile faded. He began watching her closely.

She threw back her brandy.

“You’re good at that.”

“I’ve become a city girl, remember. And I’m tired from the drive. I want to go to bed.”

“I’m sorry I forgot to make up the guest room.”

“Don’t worry about it. I can make a bed.”

When she started for the room, he followed her. As they walked together through the quiet house, she hoped against hope that it would not be—but of course it was her old room.

He paused before the door and took her shoulders in his hands. He kissed her forehead. “Good night, Mandy.”

She fought down the shaking. When he kissed her, his lips felt like two leather straps. “Good night, George.” She turned to face her past.

George and Kate had raised two kids here and not even changed the wallpaper. Mandy remembered selecting it at Chasen’s on Main, being torn between the cornflowers and these repeating rose arbors. She had chosen the roses and then planted a rose garden beneath her window. Over three years her roses had flourished, and she had secretly called herself the Rose Girl. Only Marcia knew it! told Aunt Constance,” she had whispered when they were naked beneath the covers of a soft June night.

“You told her?”

“She said to give you a message. ‘Tell the Rose Girl that I love her and watch over her.’ ”

“Me?”

Marcia had squeezed her, and they had slept in one another’s arms, two ten-year-olds so innocent that their nakedness meant only friendship to them. “She loves us all. Let me take you to meet her.”

That was strictly forbidden. Dad hated Constance Collier, hated Maywell. He was only here because Peconic made him be here in his capacity as regional manager.

How Mandy had dreamed, lying in that bed beneath the window. Sometimes she saw witch lights on Stone Mountain; sometimes she watched

the red moon rising, or the stars.

There was dust in this house, dust and loneliness. And something else, too, she reflected as she closed the guest room door. There was a place in the living room wall that had recently been patched, as if a fist had been slammed into it. Shades of Dad. "George is a violent man," Kate had told her. And Kate had left him.

Mandy brushed her teeth and lay down on her bed in the dark. The moon made a pale shadow across the floor. A hollow autumn wind muttered in the dry leaves. Down the street a dog howled.

The old tom came out of his hiding place and proceeded across the game room, through the big eat-in kitchen, pausing in the living room. Against the perspective of the furniture the cat seemed unnaturally large.

It had a weathered, surprisingly kind face. And that kinked tail was endearing. The shredded ear, though, was almost comical, making it seem as if the whole cat was lopsided.

The tom waited on the sun porch where Mandy's easel and canvases were installed, waited amid the smell of linseed oil and paint. It saw the skill in her brushstrokes, and drank in the energy of the young woman. Poor, confused young woman. She had no idea how dangerous this story would be to her, as it unfolded.

She had painted a haunted landscape with a fairy stealing down a moonlit path... painted it with skill and even passion, and more than a little of her own heart's truth. But what a relentlessly sentimental notion of a fairy. It looked like a bug, with those wings. And it was far too small. The picture had the fatal defect of charm.

Settling sounds began to come from the bedrooms. The cat grew still. It closed its eyes, concentrating on every nuance of their beings. It felt as they felt, sensed as they sensed, shook its dirty old body as they tossed and turned, gazed with George as he adored the mental images of his women, Bonnie and his lost Kate, and Mandy, felt the pulsing, stifled sensation in his loins, and knew with him the dreadful weight of time.

The old tom waited until the moon was at the top of the sky to begin.

Then it moved off to commit the next act of the story.

It stole into George's bedroom, listened a moment to his sleep. In one quick motion it leaped upon his bed. It heard his heart laboring softly and faithfully on toward its eventual breaking end, listened to his stomach digesting the day's meals, felt his dreams, haunted dreams of frogs and death

and girls and loss.

The tom walked softly up his sleeping body, until its big head hung over his throat. It looked down at the pulsing artery in George Walker's neck. It opened its mouth, its fangs just inches from the flesh. George Walker sighed, as if inwardly aware of the death overlooking him.

The cat gagged softly and regurgitated. Something green and slimy slipped out of its mouth and onto George's face. By the time he had taken the first shocked breath of awakening, the cat was in the enclosed porch, passing the easels and paints. By the time George was gasping and fumbling for the light, the cat was going through the back door.

It slipped beneath the back porch as lights pierced the windows of the house and Mandy's feet pounded down the hall while George Walker screamed and screamed.

Chapter 2

One moment Mandy was asleep, the next she was running down the hall toward George's bedroom. His screams called her deep instincts, so high they were, so like a panicked baby's. Her first, hideous thought was of fire.

Then she saw him, crouched in the middle of the bed, his fists clutching his thin hair. Moonlight streamed over him, making him seem a dangerous shadow. She fumbled for the light switch, found it at last behind the door, turned it on.

The suffusing yellow light changed him to a crumpled old man. Something obscene and wet and green lay on the sheet before him. He was screaming at it. She went to him. Another bellow gushed out of him. His eyes were staring, oblivious to everything except the sticky mass on the bed. Each time he screamed, flecks of bloody sputum flew from his mouth.

"George!"

She grasped his shoulders, shook him. He was as rigid as wood. His skin was cold. He shrieked again.

"George!"

There were a series of broken gasps. Then another shriek, cracking, pitched like the cry of a bird.

"Hey!" She grabbed his cheeks, leaned into his face. His nostrils flared, his lips parted for another scream. She slapped him hard across the right cheek. The scream shattered, became a sob. She turned his face and slapped him on the left cheek. "George, wake up! You're dreaming!"

He raised his hands to ward off her blows. For a moment they remained like that, she holding his chin, he seeking sanity in her eyes. Then he sank against her, sobbing bitterly. She held his thin frame against her breast. "George, hush now, it's all right. It's all right."

"The hell it is!" His voice was hoarse. "Look at that! You know what that is?"

It was green, blotched with brown, so wet that it had made an irregular damp spot on the sheet. "What?"

"A skin." He sighed. "The skin of a frog. *My frog*." Then he was crying, silently, bitterly, his shoulders shaking, the tears streaming from his eyes.

He could only be referring to the frogs he used in his lab. But what in the world would one of them be doing here? She looked at it. Lying there on his

bed, in a place so wildly wrong, it made her feel all the power of the wind that souged around the house. Her thoughts went to snapping clean sheets and sunny rooms and she shuddered.

“Why is it here, George?”

“It really isn’t very mysterious.” He cleared his throat. “I need a drink.”

“Now, you take it easy. I’ll get it. You stay put.”

“Not in here.” He got out of bed. In four spider steps he was across the room. He took his robe from the closet.

She followed him into the game room, where he had already started pouring Black Label into a highball glass.

“Cheers,” he said. “Here’s to *religion!*”

She had accumulated a fair number of questions in the past few minutes. But she did not press him now. He needed space to calm himself down. Although he was talking instead of screaming, she saw the wildness of his panic still in his eyes. “Come here,” she said, patting the couch beside her. He sat down. She laid her arm around his shoulders.

Soon enough, he began to explain. “This was undoubtedly the work of a religious fanatic named Pierce.

He has one of these fundamentalist churches here. Brother Simon Pierce. A Bible-thumping charlatan.”

“Yes?”

“He—they, I should say—they’ve demonstrated against my work. He preaches against it. Death is God’s business, that sort of thing.”

“The mess in your bed—”

He snorted out a bitter laugh. “You don’t understand, do you?”

“No.”

“That is the skin of a frog I killed and brought back to life this afternoon.”

So that had been the triumph he had referred to earlier. “You actually succeeded?”

“You bet I did. Well-nigh perfectly.” He uttered a sharp laugh. “Of course you know we’re already virtually canceled by the Stohlmeyer Foundation?”

He said it like it should have been general knowledge. “I didn’t know that. Why in the world would they cancel such an incredible project?”

“Precisely because it is incredible. The academic world doesn’t like breakthroughs. It doesn’t like upset and bother. It wants nice, safe confirmations of old theories. The unusual is frowned on, the extraordinary actively discouraged. So my grant money runs out in a couple of weeks.

Unless, of course, I should produce a result so spectacular that it gets massive press attention. Then Stohlmeyer'd be forced to renew my funding or face embarrassment. This frog was to be my spectacular."

"You can repeat the experiment on another frog."

"Not in the time I have. It takes a lot of prep. To satisfy the protocols the review committee imposed on us, we have to prove the animal to be completely healthy before we use it. That takes a good week of observation and testing." He paused, stared into his drink. "Oh, God, when I think of how close I came." His shoulders sagged. "My problem with Brother Pierce started out so innocently. Three months ago I gave an interview to *The Collegian*. The very next Sunday Pierce was on my case. The seeds of ego bear bitter fruit, goddammit!"

She thought she ought to say something encouraging. She didn't much like George, but he was suffering now. "You can keep going. I know you can."

"The frog was just a first step. Next we were going to do a series on rhesus monkeys, then the big one. The experiment beyond the spectacular. It would have made me famous. Famous, Mandy! I would have rehabilitated my career. The Yale Sciences Board would have had to swallow their slap in the face. Maywell would have to stop treating me like dirt just because I've failed elsewhere. It's rime that I got a little recognition, don't you think?"

Beneath her hand she could feel the bones of his shoulder. He was much too obsessed with his work ever to get any exercise. He was wasting away.

He slammed his fist into his palm. "It's breaking and entering! Malicious mischief! I'm going to call the sheriffs office." He got to his feet.

"You're sure it's your frog? Maybe it's another animal. Just symbolic."

"That fanatic broke into my lab, killed my property, came over here, broke into my house, and assaulted me!" As he spoke, his voice rose to a pitch of renewed rage..He dialed the phone. "This is George Walker, 232 Maple. Yes, I haw a crime to report! Breaking and entering. Assault. Who's the victim? I'm the victim! And I know who did it. I know exactly who did it!"

He listened a moment further, then slammed down me phone.

"They're going to come by in a few minutes. Oh, *hell!*" He picked up the phone again. "Bonnie? Hi, hon. Sorry to disturb you in the middle of the night. Look, will you do me a massive favor? I think the lab got hit by Pierce. Yeah, by Pierce. I'm 90 percent certain. And I've got reason to believe he destroyed the frog." There was silence, punctuated by a burst of language from the other end of the line. "Go over there and check. And call me as soon

as you can. I've got to have complete confirmation before the sheriff gets here. That's a love, Bonnie. I'll repay in grades." He put the receiver down. "She's general lab assistant. Her dorm is just across the quad from Wolff. I ought to hear from her inside often minutes."

Mandy had a strong feeling that he shouldn't have called the sheriff's office. "George, try to calm down before the sheriff gets here."

"Why? I've just been assaulted, I've had my experiment set back, maybe even ruined if I can't get another extension from Stohlmeyer. Why, pray tell, should I be calm? If anything, I ought to be raving mad. And I am!"

"Just stay away from the liquor. And brush your teeth. If they smell you've been drinking, they're going to ignore you."

"Mandy, I was assaulted in my own bed!"

"Think about what happened, George. How is it going to look to a cop?"

She left him to dwell on that. Alone in her own room again, she fumbled through the closet for her robe. Deep tiredness weighed upon her. It was just after three o'clock. The moon had dropped low, leaving the room in shadow. By the moonlight that lingered outside she could still see the bulk of Stone Mountain rising behind the house, its thick coat of evergreens punctuated by gray-glowing tumbles of rock—

Mandy pulled on her robe and opened the window so that the cold air would refresh her. It smelled of the sweet rot of autumn leaves faintly tinged by old smoke. She could see Ursa Major wheeling above the dark high ridge of the mountain.

The Great Bear. Woman's stars. The little girls of Athens once danced beneath them, honoring Artemis the wild huntress, who prowled the autumn hills in the shape of a bear. As a child Mandy's favorite cuddly had been a stuffed bear named Sid.

Car lights shone on the back fence as the sheriff turned into the driveway. Mandy drew her robe close around her and went back to George.

He swept the front door open before the bell even rang. "Come on in."

"You the complainant?"

"I sure am."

The deputy was a lean man, his face all angles and lines exaggerated by the porch light. At his hip he had a big pistol, too big for the thin hand that rested on its butt. There were dark glasses in his top pocket, one chewed fret dangling out. His lips were dry and cracked. There was what appeared to be a food stain on the crown of his hat. He moved forward into the house, and

Mandy smelled chili on his breath. He regarded George. "Assault?"

"That's right."

"You hurt?"

"Mentally I'm seriously injured." The phone rang. George rushed to get it while Mandy stared back at the deputy, whose eyes had filmed in an unpleasantly intimate way the moment he saw her. Once she would have hated him, but too many whistles and whispers and unwanted touches had taught her indifference to men like this. As she had matured, their sexual insecurity had become obvious to her. She thought of them as frightened kids, unable to grow up, trapped on the rock of adolescence.

George's voice rose and fell as he talked into the telephone.

"Would you like a cup of coffee. Deputy?"

"Yes, ma'am. It tastes pretty good about this time of night."

"Come on." She led him to the kitchen, made him a cup of instant. She was just pouring the water when George burst into the room.

"Just as I thought, the frog's gone! That damn preacher got in there somehow and took it. And killed it. Shit!"

The deputy shot Mandy a questioning glance. "There was vandalism at Dr. Walker's lab," she said.

"Now, that'd be a college matter. We don't go on the campus."

"It started there," George snapped, "but it ended here. Come on." He led the deputy into his bedroom. The remains of the frog lay on the white bed sheet, drying to dull green. "There is where it ended. Brother Pierce or one of his robots came in here in the middle of the night and dropped that thing on my face!"

"Who did you say?"

"Pierce! That fundamentalist lunatic! He hates me and my work. He preaches against me! He's even led a demonstration."

The deputy put his coffee mug down. "You saw this man?"

"Of course not. I was asleep."

"Now, if I understand you right, you're preferring a charge?"

"Of course I am! I'm charging that fanatic with destroying university property worth God knows how much, with breaking into my lab and my home, with throwing that thing at me with intent to harm me—"

"Brother Pierce is a respected religious leader in Maywell, Dr. Walker. I don't think you ought to just go charging him like this, with no witnesses or nothin'."

“He’s the obvious culprit.”

The deputy glanced at Mandy. “The Lord will be on Brother Pierce’s side,” he said softly. His gaze returned to George, narrowed. “You just ought to know that. Not to mention the law.”

“The law? I’m the injured party!”

“You’re not hurt.” He ran his finger around the edge of the mug. Then he looked directly into George’s eyes. He smiled. “Not yet.” His voice was almost a whisper.

Poor George. No judge of men. Mandy saw his mouth drop open, then saw understanding slowly enter his face. He shook his head. “The college supports this town. You ought to be ashamed of yourselves.”

“You high-handed professors don’t run Maywell. And the college ain’t even the biggest employer. That’s Peconic Valley Power. Anyway, I’m just givin’ you some good advice. There’s penalties against preferring false charges. Stiff penalties, Doctor.”

“Ah. So now *I’m* going to be arrested. That makes a great deal of sense.”

“Listen, ma’am, why don’t you put him back to bed? And keep him off the hootch. It don’t do him no good.”

The deputy moved to leave. In an instant George was on him, spinning him around, grabbing the front of his jacket.

And staring into the barrel of his pistol.

The gun had come up swiftly. It hung between the two men, its potential silencing them both. They looked down at it. Mandy could hear them breathing, could see sweat on George’s brow.

“You take your hands off me, mister, and I’ll put my piece away.”

Mandy closed her eyes in the long moment before the two men separated. She saw the deputy to the door. He was about to say something to her, but she closed it too quickly to give him the chance.

“Useless! Utterly fucking useless! I’m telling you, Mandy, I hate this godforsaken little town. These people get someone like me, do they care? Hell, no! I’m going to immortalize this place. That lab of mine will be a museum someday. People will come here to see where the mystery of death was solved at last! And this rotten little town spits in my face.”

Mandy listened to her uncle rave. Outside the deputy’s car started up, its lights flaring briefly against the front window. Then its sound dwindled into the night. “It’s late. George. We’d better get some sleep.”

“Sleep? I’m going to the lab. I’ve got work to do.”

Her impulse was to try to stop him, but she realized that her efforts would only put him under greater pressure. She let him go.

In ten minutes his Volvo was cranking up, then rattling off down the street. She heard its tires squeal at the corner, then silence fell about her.

She returned to her bedroom. Too bad the door didn't lock. The idea of staying alone in a house that had been entered as easily and recently as this one did not appeal to her at all. She hadn't been in bed five minutes before she thought she heard a noise.

It was a scraping sound, and it came from the sun porch. She sat up in bed, looking into the dark and listening. The night settled close around her. The moon had set, the crickets stopped. The world had entered predawn thrall.

Again it came. Definitely from the sun porch. Carefully she pushed back the blanket and sheets and swung to the floor. Her first thought was to go to the kitchen and get a knife. But she'd have to cross the sun porch to do that. She went instead down the hallway, feeling her way in the dense shadows, until she had reached the entrance to the porch. While the stars rode and dry leaves whispered past the windows she waited. There was a feeling of sickness building in her stomach; her skin sang with the tickle of dread. She could not endure the suspense of staying here; she had to act. She would turn on the porch lights. They would surely scare away whoever was lurking beyond the door.

The switch clicked loudly. And she clapped her fist to her mouth to stifle a scream. What she saw made her back away on shaky legs. Then she realized that those glowing eyes were an animal.

Only an animal!

She laughed around her knuckles. Her heart slowed its awful pounding. The cat meowed.

"You poor cold baby," she said, coming into the light. "Let me get you some milk."

A stray cat at the door. What a joke. She had been terrified. As she went across the sun porch, through the dining room, and into the kitchen, she turned on more lights. She opened the huge yellow refrigerator and found it almost empty. There was a dried-up sausage of indeterminate age and make, a package of Oscar Mayer cotto salami, a loaf of Pepperidge Farm Bread, and down on the bottom shelf a pint carton of half-and-half. That the cat would love.

She filled a saucer and went back to the sun porch. When she opened the

back door, cold air came in, and with it a very fast, very large cat. She spilled a good bit of the milk jerking back as the animal made its rush.

It began lapping frantically at the spills on the floor.

“You *are* hungry, you poor creature!”

She closed the door behind it and put the saucer down beside its great head. It really was the most enormous cat. Black as sin, even its nose. It had a kink in the end of its tail and a ravaged ear.

“You poor, ugly old thing.” Gingerly she touched its back, half expecting it to bolt. But this was no wild creature. It arched to her touch, then drank all the harder. A starving, grateful, and very domestic beast. “You’re so sweet!”

She felt around its neck, but there was no sign of a collar. Her every touch drew a reaction from the animal. She found herself stroking it while it lapped at the milk, just to feel the undulating muscles beneath the soft black fur.

The cat finished and raised its head. When their eyes met, Mandy was fascinated. The eyes had a slightly sinister quality, the way they gazed so steadily back at her. They were sharply intelligent. The cat nosed her hand. It was silent; she could not seem to get it to purr, almost as if it was too independent for such an abject expression of gratitude.

“Are you still hungry?”

It stiffened, looked behind and above her. With the silence and grace of an angel it leaped over her head and into the hallway that led from the bedrooms to the sun porch. It was an amazing jump. “Kitty?”

From the direction of her bedroom there came a loud meow, sharp with beckoning. Mandy stood up, feeling a twinge of fear in her confusion, and followed the animal.

Questions. How could a mere cat jump like that? And where had it come from? And what sort of cat was it?

And wasn’t it beautiful, sharp-faced and glowing, lying on the foot of her bed, beckoning her with one open eye?

Fleas?

Ringworm?

Fever?

A meow, as soft as some heavenward breeze. And she was tired. She slipped into her bed. “You be a good watchcat, now.”

Almost as if drugged, she slept. She dreamed she was Alice, falling forever down the dark well of Wonderland.

Chapter 3

George dumped the bedroll he had brought up from his car onto the floor of the lab.

“What the hell is this? You going camping?”

“Living here is the only certain way to guard this lab. Brother Pierce has flunkies at the sheriffs office. To be safe, we have to assume he’s also got them among the campus cops.”

“I hadn’t thought of that.” Clark touched the bedroll with his toe. “I suppose you’re right.”

“I am right. This is Pierce’s town, not Constance’s—a fact which we ignore at our peril.”

“Constance was unhappy to hear what happened. She sends you a good wish.”

“Why not an effective spell against that cretin? I’m telling you, Clark, Connie’s got to either support me or abandon me. There’s no middle territory with this.”

Clark looked steadily at him. “I think a little equivocation is inevitable, given the personal consequences she faces if you succeed.”

George sighed. He couldn’t really blame Constance Collier. He understood why she rejected him; his work involved the transfer of power at the Covenstead. Of course it was hard for Connie. One leaf falls, another takes its place. The trees persists, but for the blazing leaf autumn is a catastrophe.

“She has to accept it. She’s getting old. God, they initiated her with a bullet to the head. She should be glad that science might take the risk out of it for Amanda.”

“Nothing will take the risk out of it. The risk is on the other side. You might ensure that the body will come alive again, but nobody can be certain that the soul will find its way back.”

“So Connie says. But at least the inheritor’s soul will have a body to return to. In the past that often wasn’t the case.”

“The problem is, they don’t always want to come back.”

“Well, that isn’t our concern. We’re only responsible for the body. Speaking of which, let’s get to work and see if this lab’s been booby-trapped or what.”

Clark moved to his station. He began testing their most important pieces of

equipment, the devices that killed and restarted the intercranial electrical field. With this apparatus they were learning to turn brains on and off like electric switches. “How seriously booby-trapped?”

George went to him. “A problem?”

“Not yet. It just occurred to me that it might blow up in my face. A booby trap could be a bomb, if they’re really serious.”

“Surely even Simon Pierce isn’t a terrorist.” When he thought about it, though, George wondered if they might not be in greater danger than he had realized.

Clark obviously shared his concern. “They’ve killed more than one witch, George.”

“The Gregorys?” It was supposed to have been an accident, the Gregory fire last winter. All four members of the family had been killed in their home. Libby Gregory was high priestess of one of the town covens.

George peered into the forest of wires that led to the isolation chamber where they had killed and restarted the frog. His gaze traveled along the red leads to each electro-magnetic coil. He was looking for a new wire snaking off to God knew what. “I think it’s okay.”

“Maybe we’d better stand back, just in case. And warn Bonnie.”

“Let’s do more than that. Let’s set the switches and then hit the generator from the other room. And open all the windows.”

They went into the main control room. Beyond, in the menagerie, Bonnie could be seen cleaning cages.

“Hey, Bonnie, we’re turning on the step-up transformer. Duck and cover, dearie.”

“What’s going on?”

“Look at this. I say ‘duck and cover’ and the first thing you do is poke your nose out. What if we were under attack? Do you realize that an atomic blast can vaporize you at four thousand feet? Unless you duck and cover, in which case you burn more slowly,”

“George, you’re so weird.”

“Weird and wonderful, my little chickadee. If we live through this, let’s go to bed together.”

“Clark, thrash that man.”

“Now, Clark, don’t deny an old man his pleasures.”

“I’m not interested in Bonnie. I have other plans.”

Bonnie bristled at that. “Constance going to marry you off to some

pubescent priestess, eh, so you can mind the babies while your wife spends all night lathered with ointment balling the priests?”

“You could live on the Covenstead if you would accept its rule,” Clark said gently. “It might do you a great deal of good.”

“I guess I’m too much of a rebel. Smelling all that health food when I go out there gives me an overwhelming compulsion to eat about four Big Macs. I’m best off being a town witch where I don’t have to live by a rule.”

“We don’t live by rules, Bonnie. We all agree on how we live.”

“Which means only that you’re willing to push a broom for the anointed and take orders from teenage girls.”

“No, that’s a complete misconception. There’s no fixed hierarchy on the Covenstead. Bonnie, I wish you’d just give a chance for a couple of weeks —”

“Okay, kids, let’s not get into that discussion right now when we could be sitting on Brother Pierce’s Fat Man on our way to Hiroshima. I’ve powered up the transformer. I’m going to open the lines.”

George stepped into the animal room with Bonnie and closed the door.

“George, is it really dangerous, or is your paranoia getting the better of you?”

“We’ve got to take precautions. They were in this lab, after all.”

“The other animals are fine, by the way,” Bonnie said. “Just the one frog missing.”

George shook his head. “The one frog.”

“I ran blood tests on Tess and Gort, to be sure there were no slow poisons or anything. They’re in good shape.”

“Small blessings count in this impoverished place. We can’t begin to afford new rhesus monkeys.”

“The lines are open,” Clark called. “I’m activating the cage.”

“Wait. Get out of (here.)”

“I have to watch the readings. If we overpulse we’ll burn out the whole thing.”

“It might be dangerous.”

Clark set his jaw. “Constance assigned me to this lab.” He needed to explain himself no further. George understood the loyalty of the witches to their queen. As a member of a town coven, he felt it himself, although less strongly.

The lights dimmed when Clark turned on the extremely intense magnetic

field that was the heart of the device. It was so powerful that electrons within it were forced to stasis. Electric motors in the field would stop, batteries cease to emit energy. And sensitive electrical systems, such as brains and nerves, would cease to function. A few seconds in this magnetic limbo sufficed to stop the animal's nervous system and render it effectively dead, although completely undamaged. As time passed, of course, cells would begin to deteriorate. Enough time and the deterioration would become irreversible. But before then the animal could be restarted by turning off the field and shocking its heart back into action.

The system was potentially safer than anesthesia, and the suspension of critical body functions opened up undreamed-of surgical possibilities. George felt that his work was important even beyond Constance's wish to use it in the ancient ritual of initiation. If things went right, he had a chance at immortality here. He dreamed of a Nobel, a chair at MIT, himself strolling the byways of Cambridge in a ratty tweed suit, ripe in age and honor.

The witch ritual was the most important thing right now, though. He loved the craft, its spirit and its aims. And the danger and drama of true initiation, the walk in the world of the dead: that was the greatest possible human adventure, and he was excited to be a part of it.

The ancient ritual now persisted in the West only at the Covenstead. Animists such as American Indians had stopped practicing it. Among the Apache, to become a shaman it had once been necessary to throw oneself off a cliff. Those who lived passed the initiation. Those who died, died.

George listened to the humming of the apparatus. It sounded fine. "What kind of readings, Clark?"

"Looks like we're okay. No unusual power drains, no sign of damage."

George returned to the main lab. He put his hand on Clark's shoulder. "That was a brave thing to do, staying in here."

"A calculated risk. I thought perhaps they wouldn't have the technical skill to hook a bomb into this system even if they wanted to."

Clark powered down the field. The lights flickered again, and the cage made a faint crackling noise. A sharp stench of ozone filled the air. George pressed the floor switch that turned on the ventilators. He realized that he was shaking. He was surprised that there hadn't been any damage to the equipment.

Suddenly he was weeping. Most men would have looked away, embarrassed. True to the custom of the witches, though, Clark threw his arms

around George and comforted him.

“You know,” he said softly, “no matter how hard this is, we’ve got to keep going. I don’t want to be maudlin, but frankly, an awful lot of people will be helped by our work. We have a mission, and that can’t be forgotten.”

Bonnie came in and put her hand on his shoulder. “George, we’re with you, I’m with you.”

He wished she had been the one hugging him. But when Clark let him go, she judged the moment ended and also walked into the animal room.

This was followed by silence: it was not pleasant to know they were under siege. As it penetrated, this hard truth deepened their upset even more. “What I don’t get is, Pierce takes the exact frog we were working on,” George said. “How did he know which one?”

“The isolate terrarium,” Clark replied. “It’s separate from the rest.”

“I guess. I hope we’ve seen the last of him.”

Clark stopped working. For a moment he appeared reluctant to speak. Then he seemed to gather some internal force to himself. “Frankly, George, this Brother Pierce is a lot more powerful around here even than you realize. Oh, I admit he’s been having his attendance problems lately, at least if you believe the paper. But the man has more charisma in his big toe than your average fire-breathing demagogue does in his whole *corpus delicti*. You oughta see this campus on a Sunday morning when Brother Pierce is working some big issue. Empty. And people are not sleeping it off, they are down at the Tabernacle for the Sunday Student Worship. Even the drug scene at Bixter’s is getting noticeably smaller. We’re becoming a Bible college.”

“That’s what we get for admitting all these Jersey rednecks. We ought to recruit out of state.”

“My point is, we’re surrounded by the guy. He’s everywhere. If a fundamentalist preacher can get something going on a modern college campus, he’s all but unstoppable. And Brother Pierce owns Maywell State. Simple as that.”

“So what’s our alternative? Shut down the lab and go home?”

“It amounts to a further impetus to work fast, in my opinion. Even beyond the funding problem. The longer we take, the more trouble he can cause us.”

“What do you suggest?”

“Damn the experimental protocols and go for the big win. I think the way to go is to move directly to the rhesus experiment.” Clark’s eyes were hollow. “Despite the problems we’re bound to encounter.”

“But what about the Stohlmeyer people? We’d be violating our own experimental protocols.”

“We have an obligation.” His voice shook. “Constance tells me that time is short. She can’t wait much longer.”

“It’s a hell of a risk.”

“What if this place is bombed or burned down? The risk of that could be even greater.”

Since the monkeys were already under health-status observation, it would take less time to work one of them up than to recast the frog experiment. In addition to proving an experimental animal’s health, they had to measure the tiny voltages in its brain and adjust all of their instruments to them so that the creature wouldn’t be in effect shorted out when they nullified its internal electrical field. It was a long, complex task. But they had been measuring the monkeys regularly for weeks, Clark had a point. It would indeed be faster to go straight to the monkeys and forget the frogs. The risks were clear: if they failed, Stohlmeyer would cut them off. Then there was the equipment difficulty. “Monkeys are a lot bigger than frogs. How do we get money to expand the field?”

With a rueful look Clark withdrew his wallet, pulled out a VISA card. “All I have.”

“Three thousand dollars on a credit card?”

“One thousand, sadly enough. And you’re good for another, unless I miss my guess. Or did Kate pick your bones?”

George’s bitter reply echoed through the dank, animal-scented lab. “I’m good for another thousand only if I can get a loan on my car.”

“We could try Constance. It’s just a little cash. Surely she can give us that without exposing the link between the lab and the Covenstead.”

Bonnie called from the animal room, “You know how conservative she is, George. You’ll never get it out of her.”

“She wants speed, yet she doesn’t like us to kill a few animals. And she won’t give us any money! Constance either has to commit to this or forget it. You tell her that, Clark. Unless she gives me the money to expand the cages, I’m throwing in the towel.”

“No, George. No, you aren’t. You know we can’t risk a financial link between the Covenstead and this lab. And you need your Stohlmeyer. Otherwise, how will you gain legitimacy in the outside world?

Research funded by witchcraft? Come on.”

“Constance could find a way,” Bonnie called. “She’s just tight with money.”

Clark ignored her. “We’ll manage, George, somehow. I wish I was rich, I’d kick in the whole amount.

Since she’s so committed, maybe Bonnie can kick in.”

George’s eyes brightened. “Hey, Bonnie, that’s a wonderful idea. You’ll surely invest money in your brilliant professor.”

A loud guffaw from the animal room. George opened the door between the two rooms, letting an even more powerful burst of odor into the lab. Swamp water and frog piss, sour bananas and monkey shit.

“It’s our rice bowls, Bonnie. All three of us.”

“I seem to recall that I’m on a scholarship. Where am I supposed to get money?”

“You buy plenty of dope over at Bixter’s, my dear girl,” Clark said. “I’ve seen you score a quarter-k at a time.”

“What’re you, the house dick? Do they keep conduct cards on us out at the Covenstead now? Eh, Mr.Starch?”

“You poor woman. You’re a witch, and you’re still not free. We know that the difference between good and evil is illusion. We also know not to confuse the two.”

“Goody.”

“The real truth is that you know that nobody cares at the Covenstead whether you’re a bad little girl or not.”

“Oh, no, they just get those condescending smiles on their faces—”

“They don’t care! Your bondage is your guilt. But it’s yours, Bonnie. You should take a lesson from Constance. She knows what it is to be free.”

“Bonnie’s bound, Connie’s free. Sounds like some kind of a spell to me.”

“I can’t get through to you. You just do not understand that the evil *is* the guilt.”

Bonnie sneered. “Drop the holier-than-thou condescension, will you? It bores me. I can be a damned good witch without your help, Clark.”

Shaking his head, he went into the animal room. “Let’s concentrate on the problem at hand. If we don’t come up with three grand worth of coils for the rhesus field, we are out of business.”

George followed Clark. Bonnie was preparing a likely-looking frog for its physical. “If we compress the observation time to forty-eight hours, we can be on-line with this beauty by Thursday night.”

“There’s yellow gik coming out of its anus, Bonnie dear,” Clark said.

“That’s A & D ointment. I just took its temperature.”

“Clark makes a good point, Bonnie. If we expanded the field we could go with a rhesus tomorrow morning. As soon as we get the coils.”

“I have no money. And we couldn’t pry another purchase order out of accounting with a crowbar. So let me finish getting little frogger here measured.”

“Bonnie, we can get two thousand dollars between the two of us. Surely you’re good for another thou.”

“Wrong.”

George went close to her. There were two ways to characterize this little witch: one, she was delicious and delightful; two, she was one stubborn lady. At night she swam through his senses. But only in fantasy. She wouldn’t take her old professor seriously. “Even in the animal room you smell like an angel.” She smiled. “Bonnie, you know what this means to me. I’m past fifty, darling.”

“I’m well aware of that.”

“Aside from making me as sexually interesting to you as it so obviously does, it means that I will die a sad old man if I don’t succeed with this experiment. You’re young, you have your life ahead of you. This is my last throw, honey. After this, sunset and bye-bye.”

She put the frog back into its terrarium. “George Walker, you are a hypocrite, a charmer, and a bastard. If I gave you a thousand, it would be out of other people’s money. Their happiness money. And they would be so mad if they couldn’t get high. Mad at me.”

“What do I have to do, go down on bended knee?” Even as he spoke, his eyes went to the two rhesus monkeys in their big cage. They stared back at him, sullen and bored. He could sense their hatred.

“It might be fun to watch but it wouldn’t help.”

George went over to the rhesus cage. He was tempted to make a face back at the ugly beasts. “How much smaller is Tess than Gort?”

“Tess is eighteen pounds. Gort’s twenty-two.”

“I mean in body mass?”

“Tess is 56.75 cubic centimeters of monkey. She’s approximately 77 percent of Gort’s mass. What are you getting at?”

“Tess might fit into a three-foot field. That’s only nine more coils. You wouldn’t have to give any money.”

“Good. My customers would kill me very, very slowly if I stole their money. And that’s what it would amount to. I’ve got about sixty dollars of my own.”

George put his hands on her trim hips. She did not move away and she did not respond. She simply became very still. Such plans he had for this slip of a girl! If the rhesus phase succeeded, she was next. Dear little Bonnie was going to be the first person to die and live to tell about it. Assuming he could convince her. Assuming the mere suggestion didn’t send her running for the nearest bus depot. But the problem of convincing her didn’t need to be faced just yet.

George wrote out a purchase order for the coils. When they were delivered, Tess, poor dear, would have a most extraordinary experience. Oblivious to her future, she sat in her cage delousing her mate and rolling her lips back. If George worked at it, he could probably get Techtronics to deliver before noon today. They had trucks up to the college all the time.

Dear little Tess. Not a big rhesus, not a scared rhesus. Not yet.

Chapter 4

Mandy didn't need a map to find her way to the Collier estate.

It took up the whole southwestern corner of the Maywell township and went beyond. The lands of the original grant included Stone and Storm mountains and the valley between them, an area of eighty thousand acres in New Jersey and Pennsylvania. Mandy drove down Bridge Street toward the entrance to the estate.

A stillness filled the morning air. Red and yellow and orange trees overhung the old brick street. Here and there children dawdled past on their way to school. Beside Bridge Street and sometimes beneath it Maywell Brook shimmered in the sunlight. Autumn was the slow season for water, and the brook sighed along its gouged, muddy bed. It was all so familiar, so peaceful, as if she had left only a few hours ago. But the years had changed the familiarity of Maywell. Once this place had been, simply, life. Now it hurt to be here.

Mandy glanced at her watch. 9:20. She was due to meet the great lady in ten minutes. The great and dangerous lady. As a child Mandy had been cautioned never to speak to Constance Collier—not that she ever had. Except for her occasional forbidden intrusions onto the estate with other kids to watch witch rituals, she had only once or twice glimpsed the legendary figure sitting regally in the back of her enormous old Cadillac limousine, driven to some local function by one of her earnest acolytes.

On one memorable occasion she and Constance had locked gazes, as the old lady was driven slowly down Maple in her big black car. That was when life at the Walker house was entering the deepest level of hell. A quart bottle of gin went into the garbage every two days, and the arguments made *Who's Afraid of Virginia Woolf* sound like a Marx Brothers film.

High up in her maple, Mandy had observed the car. It was moving very slowly. As it drew near she realized that the old woman was watching her carefully.

Sometimes she dreamed of that car, coming unlit down the night street, and sometimes of the old lady drifting out of it like mist which would slip across the lawn, beneath the shadow of the maple tree... and then she would see the tall, severe shadow in the hall, or feel a bony hand on her forehead...

Once she heard her father screaming in the basement, and there was a low,

sharp voice between the screams, and little Mandy had thought. She's in the house. Constance Collier is in the house.

In the morning she had decided that it had to have been a dream.

In those days Constance had seemed frightening. Now the fact that she was a witch was a matter of indifference to Mandy. What she was interested in was this illustration assignment. There was no reason Amanda Walker couldn't become the next Michael Hague or even the next Arthur Rackham. Beyond that, though, illustrating a Grimm's offered her a chance to express her craft to the fullest.

Mandy was convinced that her visions of the fairy tales were original and powerful and new. Surely they would stun the art world if they were ever painted.

All that stood between her and success was this final interview. It promised to be hard. How had Will described Constance Collier? Quixotic. Rude. Imperious. And you were never late to an appointment with her. *Not ever* was the way he had put it. From her own past, Mandy could easily imagine Miss Collier to be even harder to deal with than Will had said.

Soon the forbidding brick wall that marked the townside edge of the estate appeared out the right window of the Volks. It was vine-covered but in excellent repair. Iron spikes jutted up from it, hooked out at their tops. Perhaps the incursions from the town had grown more aggressive in recent years. There was no scaling that wall now and dropping over, sweaty and breathless, knees skinned and heart pounding.

The main gate, which Mandy had never before entered, was securely closed. Mandy pulled up and got out of her car. The gate was simple, almost stark, made of wrought-iron bars topped by more spikes. It might as well have enclosed a prison. Along the top of it were the familiar brass letters, "This Land of Dark," from a line of Constance Collier's great poem. *Faery*: "Entered she this land of dark, borne by the mist's own hand."

How very quiet this place was, and how old. The trees soared huge and silent. The only sound was that of an occasional leaf whispering to the ground.

Beyond the gate was a narrow dirt road, curving off into a thick forest the kids had always avoided, preferring to go the long way around, by the fields.

Mandy pulled and pushed at the gate until her feet scraped on the brick paving. The hinges didn't even creak.

She looked left and right—and saw a small gateman's house with its iron

door hanging open. Inside was a disused telephone on a frayed cord. She picked it up, put it to her ear. "Hello?" Dead. "Great." It was now 9:30 exactly. "Marvelous." She was getting off to a wonderful start. She would be fired before she even met her employer.

But she mustn't be fired. This just had to work, it had to. Her alternatives were bleak: illustrating the covers of paperbacks or maybe getting into advertising. To Mandy there was no thought more horrifying than that of being forced to abandon her vision and just use her skill. She had seen such people, had even interviewed in a few ad agencies. It had chilled her to walk down the long rows of trendy offices, each with its light box and drafting table, and see the gray people huddling there in frayed designer jeans and Yves Saint Laurent shirts.

She deliberated climbing the gate.

Then she saw that there was another door in the back of the gateman's house, one that led into the estate. It opened easily. As she pushed it, paper rattled. There was a note taped to the back, where it couldn't be seen from the street. "Please be sure this locks behind you, Miss Walker."

Obviously this was the way she had been intended to come. Nice of Will T. Turner to tell her. He really was a very marginal person.

Once inside the estate she went around to the back of the main gate and looked for some sort of a handle. There was nothing.

Furious that none of these procedures had been explained to her, she hurried back to her car and parked it as far off the road as possible, then dragged her precious portfolio out of the back seat and reentered the estate on foot. All of her most important work was in this worn black case, everything she had ever drawn or painted relating to Grimm's fairy tales.

The portfolio was heavy. Mandy couldn't be too mad at Will. He tried hard. If she had been planning intelligently, she would have called Miss Collier last night to reconfirm, and found out about this hike.

A few moments after she started off she found herself slowing her pace, despite her lateness. Finally she stopped altogether. She simply could not help it. She was in a wonderful cathedral of trees, their black trunks stretching to crowns of brilliant autumn color. Leaves littered the dirt road, marking the dust with bright splotches.

This was awesome. Too many months in Manhattan had made her forget the passionate silence of the woods. She began to walk again, now also noticing the rich scent of the air, cleansed by autumn rot.

This place was not only beautiful and dark and huge, it was also something else she could not quite name. The very slightest of shivers coursed through her body and she began to walk a little faster. It was as if the woods itself was not entirely unconscious.

She had no idea how long this road might be. In any case it was longer than necessary to make her thoroughly late. She marched along lugging the portfolio, trying to hum and not succeeding.

Her imagination was really too vivid for this. “You know I’m here, don’t you,” she whispered. Leaves stirred down. The trees filtered the bright morning sun to golden haze.

The colors here were magnificent: these must be very robust trees. Plants die gaily because they are sure of their own resurrection. Not so higher creatures. All things that share the terror of final death are brothers, from the microbe to the man.

The road curved upward, finally cresting a hundred yards ahead. Long before she was close to the top, Mandy was breathing hard. Even so the chill of morning had vitalized her. She felt physically wonderful, her whole body singing.

What, she wondered, was the origin of the legend of the watcher in the woods? This place was so alive, but not in a human sort of a way. Trees were enigmatic beings. She knew that man had once acknowledged this alienness by considering them the temples of his most mysterious gods, the forest spirits. Now those gods were cast low. Who once had been worshiped in the woods was today captured in fairy tales and called a troll.

Grimm’s was the net, after all, in which the Christian world had captured the old gods, diminishing their power (or so it thought) by making them the stuff of children’s stories.

Just this side of the crest she came to a darker place in the forest, where the trunks of the trees seemed more enormous, the carpet of leaves thicker.

She saw a small face, very still, peering at her from a hole at the base of one of the trees. Her imagination, of course.

She bent close, and watched with horror as it took on the absolutely solid appearance of something quite real. She started away from it, giving a little, involuntary cry. The sound was rendered tiny by the immensity of the place. And the face was quite terrible.

It just didn’t seem possible that something so small, so strikingly inhuman, could be there—but she could still see it in outline even from ten feet away.

As she watched it, an awful coldness seemed to slide up out of the ground and possess her whole body. She dragged her portfolio around to the front, a fragile shield.

She backed to the far edge of the road. She was suddenly freezing cold, almost sick, fighting the impulse to panic flight.

Her mind worked frantically, seeking some way of explaining the impossible presence. A dwarf? No.

Perhaps a statuette. Yes, that must be it.

But she could see the moisture gleaming on its eyeballs.

She decided to get out of here. She would phone Constance Collier from the safety of some coffee shop in town.

Her watch told her it was 9:45. By the time she got back to the car and drove into town it would be 10:15 at least. Over the phone Miss Collier could so easily tell her to forget the whole thing.

There really was no choice. Reason said that she was not facing some supernatural creature, not a troll, not one of Constance Collier's faeries. Such things were not real, not anymore.

But a mad dwarf from some nearby mental institution could be very real. And wasn't there a Peconic Valley Institute for the Criminally Insane?

Either she walked past it or she gave up this job.

Shaking, her hands clutching the portfolio, she started off for the crest of the hill. More than anything, she expected to find that the apparition in the hole was gone, a figment of her vivid imagination. But it was still there—staring out of blank stone eyes.

She stooped to look more closely at what was now quite clearly a little statue. It was a sneering, evil tittle elf, a creature of the cracks and holes of the world. Perhaps a mandrake, or a little fee guarding the lands of Faery.

A woods of fabulous spells,
Old sticks and roots and holes,
Leannan's grand dominion...

When she remembered those lines from *Faery*, the menace of the woods evaporated like a rotten mist. As with new eyes she looked around her. What had been hostile was now suffused with wonderment. The little face was not sneering, it was grimacing to frighten any who might threaten its queen. One

of her doughty fairy soldiers.

Mandy was delighted. These were the actual woods of the poem. Here a twenty-year-old Constance Collier had written the dream of *Leannan*, the Fairy Queen...

With a newly confident tread, full of gladness and awe, Mandy marched to the top of the rise.

Spreading before her was a magnificent vista indeed. The road had been carefully planned to take advantage of it. It meandered down across the rolling green fields to a long lake dusted with lilies and swans, and thence across the wide pasture that led to the house. How typical of Will T. Turner to describe this place simply as "crumbling." Had he been forced to leave his car at the gate and come on foot also? Probably trudged this very road, thinking that the gate was rusted closed, the leaves not raked, that there were rather too many lilies in the pond, and the green was high with cockle-burs and dandelions.

And he never noticed that he was in the Land of Dark, where lived the Faery of Constance Collier's extraordinary creation. Poor Will T. Turner.

Emerging from the woods, Mandy set out across the fields, filling her nostrils with the dry, sharp scent of autumn brush, her mind flashing image after image of paintings that must be painted here.

Late or not, Constance Collier had an illustrator. Amanda Walker had decided that she would not be driven off, not even at the point of a gun.

I'll do Hansel and Gretel in the woods, of course. And Briar-Rose's castle from this vista, with the thornbushes choking the ramparts in just this light.

Everywhere she looked there were more glories, wonderful wooden fences all tumbling down, a shattered hayrick, a great rusting contraption of scythes that must once have mowed the lawns.

How exactly right Constance Collier was to let it go to its natural state. If ever there had been happy land, this was it.

Oh, Pollyanna, smite on. You are heading toward a rough meeting with a very difficult old lady. Constance Collier eats illustrators for breakfast. She had quite literally fired the great Hammond Morris by burning the pictures he had done for *Voyage to Dawn*. When she heard that story, Mandy had felt contempt for Constance Collier. But she hadn't been offered this job then.

As she approached the house, she began to see that it was indeed in serious disrepair. The architecture was Palladian and very elegant, red brick and white columns, a lovely curved side porch, tall empty windows. Leaves were

everywhere, choking the gutters, matting the walks, blowing about on the porch.

There wasn't a sound. Despite the cool air, the bright morning sun was making Mandy sweat. Her portfolio had grown heavier, and she was glad to lean it against the wall when she finally reached the house. She went up between the tall, peeling columns and hunted for a doorbell. She settled for knocking.

Her blows echoed back from within. There wasn't an answering sound, not the clatter of feet, not a call.

When she knocked again, though, there was a startling flutter of wings at the edge of the porch. Six or seven huge crows wheeled about in the front yard, then settled into an oak and commenced to caw at one another.

"Hello!"

The sound of her voice caused the crows to rise again. They rushed back and forth across the weedy yard, their wings snapping with every turn.

When she knocked, the door rattled. It was obviously unlocked. Telling herself that old people are hard of hearing, Mandy turned the blackened brass knob and pushed the door open.

Inside was a shadowy central hallway with rooms to the left and right. The hall runner was old but fine, the lighting fixtures elegantly fluted. When Mandy pushed the buttons on the switchplate, none of them turned on. She looked at them; bits of wax revealed that they were now used for candles. Halfway down the hall a brand-new Panasonic vacuum cleaner could be seen in an open broom closet. At least there was some electricity still in the house. This touch of modern technology gave her hope, until she saw that the machine was not only new but not even completely unpacked. Its body was still in a plastic bag; as a matter of fact, all the packing material was visible beyond the end of the hall, in the kitchen. Somebody had been wrapping it up, perhaps to send it back.

As she proceeded into the house, the crows crowded onto the front porch, cawing and bickering among themselves, their voices echoing in the silence. But also, there were softer voices, and they were nearby. "You've got to be more careful," said a man. An older man, whispering. An elderly woman: "I *must* keep on. By the Goddess, I'm so close!"

"Miss Collier?"

A gasp at the top of the stairs, then silence. Mandy sensed that she had interrupted a very private conversation. She would have returned to the front

door, but by this time she was closer to the kitchen, so she hurried toward the back.

In the center of the kitchen was a heavy oaken table, its legs elaborately carved with gargoyles and grapevines. On it there was a toasting frame, of the kind meant to be held over an open fire, and a partially cut loaf of homemade raisin bread.

As Mandy crossed the floor, she noticed that there were candles in the lighting fixture that hung down from the ceiling.

And then she saw something really amazing: an ancient iron hand pump at the sink in place of the usual faucet. Attached to the wall behind it was a small hot water geyser such as Mandy had seen in the cheap hotels she had stayed in during her European days.

The stove, to the right of the sink, was a huge woodburning iron monster with eight burners across its massive top. “Royal Dawn” was embossed in the ironwork on the oven doors. The witch could have cooked Gretel in such an oven and had room left over for a couple of nice casseroles.

A thrill of childhood fear touched her. She’d never seen this place, but Jimmy Murphy and Bonnie Haver had sneaked in and seen a beautiful young woman cooking at this very stove. “She was pretty but her face was glowing in the firelight,” Jimmy had said. “She was so scary I thought I was going to pee in my pants.”

That had happened ten years ago, half a lifetime for Mandy. If Constance remembered, it probably seemed like yesterday.

From beyond the kitchen window there came the first loud sound Mandy had heard at this house, and it more or less astonished her. It was a splash, followed immediately by the distinct *boing* of a diving board.

Could Constance Collier possibly be in swimming—a woman past eighty, and in autumn? Mandy hurried out the back door and down an overgrown brick walk, which curved around a tangle of cedars. She came now upon another surprise. The walk ended in some brick steps, which led into a formal garden—overgrown, of course—surrounding a swimming pool inlaid with elaborate mosaics which shimmered beneath the agitated water.

A young man, lithe and pale, his blond hair streaming like smoke behind him in the water, swam vigorously from one end of the pool to the other.

“Hello?”

Oblivious, he swam another lap.

“Excuse me.”

He stopped, touched the edge of the pool. “Oh.” When he stood up in the waist-deep water, Mandy saw that he was naked.

She was instantly angry at him for flustering her, and spoke quickly. “I’m sorry to disturb you. I’m looking for Miss Collier.”

“She’s not in the house?” He showed no inclination to hide himself. She tried to keep her eyes on his face.

“I called. Nobody answered me.”

“She’s supposed to be in there having an argument with my father.” He came out of the water, grabbed a towel from the grass, and began drying himself. “Were her birds there?”

“Her birds?”

“The seven ravens. They’re almost always with her. If they were there, so was she.”

As the boy approached, the towel around his shoulders, Mandy realized that he was younger than he had seemed. Perhaps he was sixteen. Adolescent down brushed his top lip. “I’m Robin,” he said. Mandy knew she was coloring; Robin was very, very beautiful, in all the ways she enjoyed in the male. His muscles were firm but not knotty. His skin was smooth, yet he did not look soft. And his genitals were, well, very much there.

He had been waiting for some moments before she realized that he was holding out his hand. She took it, pumped it once. He held firmly to her hand, raised it to his lips, and kissed it. She felt the warmth of his breath on her skin. He smiled slightly, glancing down at his own turgidity. Mandy battled not to shake, and she inwardly cursed the heat she could feel in her cheeks. “I’m Amanda Walker,” she said evenly. “The illustrator. I’m doing the Grimm’s project with Miss Collier.”

He shook his head. “I don’t know anything about it. Perhaps Ivy can help you. My sister.” He took a step closer to her. She could see his teeth behind his half-opened lips. His smile was so subtle that it managed to imply passion and politeness at the same time. Nothing could be read in his obsidian eyes, which contrasted oddly with the blond hair and sunny Nordic skin.

“My sister is sunning herself in the maze, where the breeze can’t get to her.”

Mandy had not realized that the great tangle of cedar in the center of the garden was, or had been, a maze. She was glad to turn away from the young man, though. He had a nerve not even wrapping his towel around himself.

Close up, the maze smelled strongly of cedar oil. Mandy found the

entrance and went a short distance in.

Robin's renewed splashes were absorbed by the thick and long-untended growth. There remained only the faint screaming of the crows. The creosote path was so overgrown that Mandy had to go on her hands and knees to make any progress.

It wasn't a difficult maze, because the way in was marked by a string. No wonder; there was no fun to be had struggling through these weedy corridors full of spiderwebs and sticky cedar balls.

At the center of the maze was a complete surprise, a delightful secret garden. It was perhaps thirty feet square, and peopled by statuary. All the figures were characters from Constance Collier's books: there was Pandoric, the wicked homed boy; opposite him his mother Drydana, who had the power to turn herself into a woodpecker. At opposite ends of the garden were Braura the huge maiden bear, rearing up, her bronze claws gleaming in the sun, facing Elpot, the King of the Cats, who had one shredded ear and knew among other dungs how to fly. In the middle, on a marble pediment, stood the Fairy Queen, the tiny *Leannan*, Constance Collier's greatest creation, beautifully sculpted, with her trim waist and alabaster arms, her firm nose and delicate lips, and her wide gray eyes. The sculptor had captured not only Miss Collier's description of her character but the deeper wildness that sent the *Leannan* racing through her forests, "the wild huntress screaming so shrilly that it froze the footsteps of whom she sought."

"Excuse me. Who are you, may I ask?"

"Oh, I'm sorry! The statue—I'm Amanda Walker. The illustrator. I'm here for my appointment with Miss Collier."

"You were meeting her in here?"

"Well, not actually in this spot. But here, yes, at the estate."

Ivy rummaged among the things that had been spread out around her, pulled out a blue-faced watch. "It's 10:30. She's still with my father."

"Do you know if she was expecting me?"

"I don't know. I've been here almost all morning."

Ivy was every bit as handsome as her brother. Mandy found her presence, though, even more disturbing. There was something confusing about her looks, the strong-muscled arms and legs, the tiny breasts beneath the prim black bathing suit, the soft, gentle face with those dark humorous eyes. If such a woman were to embrace her, Mandy wondered, what would happen then?

“I’m afraid I’m terribly late. I was due at 9:30.” The girl stared at her, almost as if she thought her mad. “A mistake,” Mandy added miserably. “Please help me.”

The girl smiled at that. “You sound like you’re desperate.”

“I know she doesn’t like people to be late. The job is very important to me. And I’m so late!”

“You she’ll forgive, Amanda.”

“Where can I find her, can you tell me that?”

“Look what I have here.” The girl bent down and picked up a big, colorfully illustrated book that Mandy recognized at once.

“The Hobbes edition of *Faery*!”

“Signed and hand-colored by Hobbes just for Connie. Isn’t it wonderful?” She gave the precious volume to Mandy almost indifferently.

“But this—it’s extraordinary. I didn’t even know it existed.” She looked down at the leather embossed cover. Reverently she opened it. Tucked inside was a photograph of Hobbes sitting with a much younger Constance Collier on the pediment of this very statue. He wore a wing collar and a striped shirt, the cuffs rolled up to the elbows. She was in a long dress, its top of lace. Her dark Celtic eyes gazed merrily at her companion, who looked rather stunned.

This book was not illustrated with washed etchings as Mandy had assumed but with the delicate original watercolors that had been their models.

A Hobbes watercolor of this quality went for five thousand dollars. And how many were here? At least twenty. “My God.”

“See *Leannan* sinking dead,
her eyes pearled by dew,
Falling all ruined upon
fearsome Braura’s bed.”

Amanda was surprised at Ivy’s erudition. “You know *Faery*?”

“Of course. Why do you think we’re here, Robin and I? We are students, just as you are a student.”

“I’m an illustrator.”

“That was only a pretext to get you here. You’ll see. She’s got all sorts of ideas for you.”

Just then a new voice cracked from among the cedars:

“There you are, you prowling ninny! Come out of there! Why didn’t you

come upstairs? You must have heard us.”

“Miss Collier?”

A tall, thin woman in a dusty suit appeared among the shrubs. She burst forth brushing spiderwebs and twigs from her tweeds. “What in Goddess’ name are you doing in here? Oh! What do you have in your hands, you stupid girl!”

Mandy was horrified. All she could do was hold out the priceless book and hope that Ivy would own up to her wrongdoing.

“Don’t give it to me! I’ll drop it on the way back. Oh, be careful, careful! Don’t let those cedars touch the leather, they’ll start acid rot going! How could anybody be so thoughtless! Come on!”

Mandy’s heart pounded as she hurried along behind Constance Collier, the precious book cradled in her arms. Back in the maze she heard soft laughter and realized that brother had joined sister from some hidden entrance, and both were enjoying the joke together—

She followed Constance through the kitchen and into a tall library, its bookcases laden with calfskin and morocco bindings. A heavy silence descended, punctuated only by the crows. Finally Constance spoke.

“Put it on the table. There. Now, young woman, are you mad? You must be to come in here and take the very best volume I have and carry it out into the sun, and then you go into that dirty old maze—it’s criminal.”

“I didn’t—”

“No excuses! If you want to work with me, the first thing you’ve got to learn is to stop making excuses. I consider excuses loathsome.”

Mandy knew she was turning scarlet, and hated herself for it. Blushing was a curse. But there was nothing she could do about it. She could only hope against hope and push ahead. “I brought my portfolio, Miss Collier. Of the ideas I’ve had for the Grimm’s illustrations.” Should she add that it contained *all* the really good ideas she had ever had for Grimm’s, and amounted to the best of her life’s work? No point. The sketches and paintings would speak for themselves.

Constance Collier replaced the Hobbes in a slipcase on the leather-covered library table. “He killed my husband, in case you’ve ever wondered. Hobbes killed Jack.”

Mandy recalled that Jack Collier had died under somewhat sensational circumstances back in the early twenties. A hunting accident or something. “I didn’t know that.”

“Shot him. Shot us both.” She stared at the book for some moments. “You come highly recommended.” She looked up, her face for the first time clear to Mandy. It had the startlingly simian appearance that is sometimes associated with great age. Here and there were vestiges of the legendary beauty of the twenties and thirties, the dramatically straight, thick eyebrows, the narrow, angled nose. Gone, though, were those full, mysterious lips and the amazing lusciousness of complexion that Stieglitz had captured in his portraits of her.

Oddly enough, the same years which had devoured her sensuality had granted Constance Collier a deeper mystery yet: despite the fact that she was slack and dry, almost a leaf of a woman, her eyes shone with intense light. Mandy found herself very badly wanting to know her. Such eyes must hide wonderful things, or why would they shine so?

Mandy could readily imagine herself becoming a student of Constance Collier’s. All the childhood mystery would be dispelled. More, she was fascinated by this place, the ancient kitchen, the candles, the maze, the strange adolescents. She *had* to be allowed to stay!

“I think I left my portfolio on the porch.”

As Mandy went toward the front of the house, the cawing of the crows got louder and louder, until it was a bitter, crazy cacophony, full of inscrutable passions.

The flock rose like an angry belch of smoke when Mandy opened the door.

She stood, shocked beyond words. Her own scream was so naked with rage that it made her clamp her lips shut—

The crows had tom her portfolio and all of her drawings to tiny bits and scattered them about the yard.

She stood staring, disbelieving, shattered. Her whole past, everything she had done that was fine, had been destroyed by the brainless creatures.

She hardly noticed when Constance Collier stole near, a knowing and sympathetic look on her face, and placed a consoling hand on her hunched shoulder.

Chapter 5

The acid, frightened stink of Long-hands made Tess scream. Her voice woke Gort, who screamed with her. She ran the cage, feeling the wind rushing in her face, perch to far bars, far bars to back wall, bang against back wall to front bars, swing back to perch.

She had gone far, but she was no farther from Long-hands. There was stinking fear coming from him, and it infected her. Tess screamed. Again she ran the cage. Her own fear confused her, made her hands do what they shouldn't. She hit Gort.

At once he showed his fearsome teeth and she thought how great was this monkey and cast her eyes down an instant to say, I am yours.

In that moment Long-hands reached his fingers around her. She screamed and screamed and bit the fingers so furiously there wouldn't *be* any hard fingers anymore, but Long-hands only made a growl, "Sheuht!" and kept on taking her out of her home.

She hated it outside of the place where she had all her smells and all Gort's smells, and where Gort kept his body. Out here she couldn't run the cage, perch to far bars, far bars to back wall, over and over with the wind in her fur and Gort running too the other way, and passing each other and then tumbling down on the floor in their good smells together so glad.

Long-hands had her now, had her good. She tried to twist around and bite his face but she could not; she was being carried by Long-hands far away from Gort. She screamed. Gort screamed. Then she was brought into a man-smelling place and there was a bang and the wall closed up and she was away from Gort and all alone.

"She's all worked up, Bonnie. What's the matter with her?"

"She's kind of high-strung, you know that."

"We can't put her in the field like this. She's liable to crack the coils."

Tess heard their growling, heard the fear in Long-hands' voice, and knew the truth that he might have Tess but he was scared of Tess, so she showed him her teeth. She bared her strong, sharp teeth to make him submit. But Long-hands did not fulfill the law, he only held her farther away and kept up his frightened growling.

"She'll have to be sedated!"

"The protocols—"

“Leave it off the report. Dose her or we can forget using her.”

“Stohlmeyer will never accept it.”

“Bonnie, don’t you understand English? Dose her and do not make a record of it!”

“We’re getting sloppy, George. That’s very sloppy.”

“Do what I tell you! We’ll let her sleep it off and then run the experiment when she’s groggy.”

Little Yellow bared her teeth at Long-hands, but Long-hands did not submit to her any more than he had to Tess. She realized his power then, and understood that it must be so great that it smelled like fear. If Tess could not frighten such a monkey, and Little Yellow, the bringer of food herself, couldn’t do it, then Long-hands was just too powerful.

She grew calmer, knowing that there was nothing for her but to submit to the power of the awful Long-hands.

“Well, well, Tess, you finally getting tired? You bitch. I think we can skip the Valium, Bonnie. She’s just gone as limp as a dishrag.”

“Handling does that to them sometimes. But it’ll only last a few minutes.”

Long-hands put Tess in a cage so small that she couldn’t even turn around. Certainly she couldn’t run it.

All she could do was lie down and feel the hard bumpers push on her stomach and her knees and her hands and her head. But this was Long-hands’ will, and Tess was not strong enough to break it.

“Okay, Clark, she’s in the damn thing.”

“I’m getting a good reading. Nice and strong. It’s a pleasure to work with something that has a decent microvolt level. Those frogs are almost below the threshold of observability.”

Tess soon realized that the little cage didn’t smell like Long-hands. So that meant he had freed Tess. But Tess couldn’t move, not unless she pulled and kicked.

“Hurry up! She’s getting crazy again!”

“Ready on the countdown.”

“Forget the countdown! Just do it! Go!”

“Okay, power’s up. I’m activating the field—now!”

The whole world collapsed on Tess. She lost everything, her strength, her voice, her smells, her sounds.

She screamed and screamed and screamed but there was no noise, there was no calling to Gort or even Long-hands to help Tess out of this awful

nothingness. And falling! Falling and she couldn't find branches, she couldn't clutch leaves!

To the ground, the leopards, the hyenas, the stinking monkey-eating monsters that slip as shadows in darkness!

Terror slammed her like a great hand, she saw bared teeth and heard snarling death-growls, and she clutched and climbed and kicked—emptiness.

Then she smelled the most beautiful scent she had ever known, the best and most beloved of all scents, from when she lived in the forest where they ate green pellets sweet off the trees and danced between branches. She smelled the milky-soft breast scent of her mother.

Mother, it's me!

She clutched soft mother fur and warm skin. And mother took her between her legs where it was so, so safe, and began preening her.

Around them there arose the whole old forest again, the same trees, the same delicious green water, the same thunder-cold-joyful waterfall, the sweet, fresh smells of monkeys everywhere.

Mother again. Forest again. And all around in the trees the gib-gabber chatter of the Roaring-water-nearby troupe, the Clown, the Great Gray, the Little Browns, all the girl squealers.

Her mother preened down behind her ears where the mites got itchy and thick.

“Beautiful! Bring her up.”

The voice that had resounded across the sky left a smoking yellow rip where it had passed.

Mother hissed danger and Tess grabbed fur and they were off! They swung with the troupe through the bending, sighing trees.

A white wind was following them. White, dead! It was crushing the whole forest, the tall trees falling before it like sticks. It gasped and wheezed, sounding like something enormous marching through the wood.

Mother swept along, faster and faster, raging as she went, screaming back at the huge monster that had come through the tear in the sky. Its feet stomped and thundered the ground, its breath washed over them.

Tess screamed when she smelled it, for it was the odor of Long-hands and Little Yellow and their awful place-without-monkeys where Tess never, ever wanted to go again!

Do not take me from my forest, do not take me from my troupe!

The giant came closer and closer. Mother was screaming, carrying her Tess

now low to the ground, now high in the branches, darting and turning as only a mother could, rushing along beneath low shrubs and among the rocks, uncaring of her own cuts, then grabbing a branch and sweeping up higher and higher to the very top of the forest and leaping as if she had wings.

There was a great thud.

The forest evaporated.

Mother fell screaming away into nowhere.

Tess felt the hard little cage poking her from all sides. Agony exploded in her.

“Good Christ, Bonnie, tranq her down, tranq her down!”

“I’ll get the gun. I can’t do it by hand, she’s too wild!”

“Oh, Christ, look at that—open the cage—Clark, give me a hand. She’s going to crack the ceramics.”

Tess leaped up into the hateful stinking ugly place, her heart breaking for mother and forest and all the joys just tasted. She jumped to the floor and ran, crashing into walls, screaming so loud she heard Gort screaming back from the other room.

Not that hateful place again, not that poor old Gort when she could have mother and forest and the troupe! No no no no no!

Monkeys cannot beg for mercy. They can only make the gesture of submission. She made it. She made it to the walls, to the ceiling, to the floor, seeking the terrible giant who had dragged her back here, trying to somehow say, I submit; I, Tess, submit to your power.

So let me go home.

The monkey stopped moving. Bonnie went up and checked its eyes. “She’s unconscious.”

“I was afraid she’d break those coils.” Bonnie gathered the creature up in her arms and returned her to her cage. She reconnected the electrocardiographic leads to the sockets in the animal room so that Clark could continue his monitoring.

“It’s amazing, isn’t it?” George said. He stared down at the sleeping rhesus.

“I have to admit it, George. Yes, it is. A higher animal.”

“Clark, are you okay on the readings?”

“She looks normal from here, George. Looks good.”

“Bonnie, I told you this job would be an adventure.”

“It’s certainly that.”

George reached in and touched the fur of the comatose rhesus. “She hates my guts, you know that? She nearly bit through those handling gloves.”

“You show her you’re afraid of her. She tries to dominate you.”

George drew close to Bonnie. “I wonder what she experienced.”

“Nothing too pleasant, judging from the way she acted when we brought her back.”

“I think we can be sure that was a side effect related to the reestablishment of the brain’s electrical field. I suspect she’ll be fine when she wakes up.”

“You might be right.”

“You don’t sound convinced.”

“I’m convinced. I’ll be even more convinced when she wakes up normal.”

“Let’s go look over Clark’s shoulder. The EEG ought to tell us a lot.”

Clark was standing before the electroencephalograph watching the readout. His face was sharp with concentration.

“How’s it look?”

“Still normal in every way.” He smiled. “The Stohlmeyer Foundation is going to like this.”

“What must that monkey know?” Bonnie asked. “I wonder if death is like a dream or just black? Probably a sort of descent into zero.”

George was watching her closely. He realized that this was the moment to broach the subject of Bonnie’s taking the journey herself. “It’s going to be the greatest adventure in human history to find that out.”

“Nobel Prize time, George,” Clark said.

“Assuming we proceed to a human trial,” George added. There. He had said it. All three of them knew that two more coils would make the cage large enough for Bonnie’s body mass. And they could get two more the same way they got the others. No money, just some more lies and another hot purchase order.

All that stood in their way was Bonnie herself.

“Somebody’s going to get the answer to a hell of a secret,” she muttered.

“Somebody’s going to become very famous. A heroine.”

Her eyes snapped to meet his. She had caught the gender. “I know I’m the obvious choice. But the cage isn’t big enough for me.”

“If Tess wakes up all right, that’ll be the deciding factor. I can get two more coils with no problem.”

Realizing for the first time what George was driving at, Clark went gray.

“Constance isn’t going to be comfortable with this. We haven’t done the testing we said we would do. She might forbid us.”

“Hell, don’t tell Constance! Don’t tell her a thing! Just do your job, Clark.”

“My job is to report to her, you know that.”

George could picture Connie’s reaction to his precipitate scheme: “Oh, no, don’t let him do that. He’s so impatient.” Then, next day: “Clark, you must tell George to hurry. Time is very short.” George had to convince Clark not to report to her. “Now, Clark, you and I both know what Constance will say. She’ll say that time is short.”

“You’ll never convince her to go to a human trial so soon.”

“It isn’t her business! I make the scientific decisions. You go to her if you want to, but I won’t be here when you come back. I just can’t work with the Stohlmeyer people looking over one shoulder and Constance looking over the other!”

“I have to inform her.”

“Do it and the project is over. Canceled.” Clark squirmed. Good, he was afraid to take responsibility for that. George pressed his argument. “Tess is alive.”

“You’re a witch, Clark,” Bonnie said. “Be faithful to the needs of the witches. If Constance dies before her successor is initiated, what will become of the Covenstead?”

Good for Bonnie! There was a game girl’. “So make your choice, Clark. Report to Constance and I quit.

Or do your job right here and now and we all succeed together.”

Bonnie put her hand to her throat. “I wish we could smoke in here. I’d really like a cigarette.” She laughed. “I’ve decided to do it,” she said. There was wonder in her voice, fear in her eyes. Now she whispered. “I want to know... to be the first.” Her tongue moved along her lips. Once again George saw how very beautiful she was, the delicate lines of her face, the casual sensuality of her mouth, the frankness of her eyes. She was precious to him, and he ached to kiss her, and feel that mouth open to him. Her cheeks were flushed.

“You’ll be an adventurer. Afterward someone as beautiful as you—the press’ll make you a star.”

“Constance will never allow press,” Clark put in.

“Constance will have no choice,” George snapped. “If Bonnie wants press, by the gods she gets press!”

Bonnie went over to the apparatus on the lab bench. She touched the gleaming black coils of the electromagnets. "I could sit in it as is if you could make it a little higher."

"No. I want you lying down. Safety." He did not add that, as a dead body, she would slump over from a sitting position and simply fall to the floor, taking the whole apparatus with her. She walked around the bench, looking at the array of devices. "You know," she said at last, "I am going to know once I do this. I mean, you guys, I am going to *know*." She smiled, and when she did, George thought her as soft as a newly opened rose. "I'm a second-rate witch, but I'll bet I'd be a first-rate media sensation." She smiled her brightest smile. "I wonder if I can act. Maybe I could parlay it into a film career."

"Not if you can act." Clark muttered.

Privately George doubted that she would be all that famous outside of scientific circles. What she was going to bring back, after all, was the news that death was death. Nothing. Blackness. Not much newspaper copy in that. "You'll be like an astronaut," he said.

She came to him and kissed his cheek. The two of them drew closer together, the explorers.

In her cage Tess screamed once, her anguish surfacing even through the drug-induced sleep. Then she subsided, and slept on.

Chapter 6

It had been hours since she left the Collier estate, and Mandy's rage and despair had not subsided in the least. She had driven around town until she was no longer too mad to cry. Then she had taken to the privacy of her uncle's house and locked herself in her bedroom.

Now even the tears were exhausted. She lay on her bed listening to the evening sounds of the neighborhood. A leaf blower roared, a child called again and again a name she could not quite understand.

She certainly wasn't interested in the banalities of a small-town evening. Her mind still orbited her loss: that portfolio had contained images from her soul. Without it she felt herself more alone than she could ever remember being, the center of a very private circle of pain.

The big black cat appeared. She stared, confused. Where had it come from? The bedroom door was locked.

It leaped onto the bed and rubbed against her thigh. Its fur felt silky and nice beneath her hand. As she stroked it the cat stretched. She seemed to remember from her childhood that Uncle George disliked cats, but until he came home and demanded it be put out, this magnificent beast was staying here. The cat moved suddenly to the far side of the bed. "Here, kitty," she said, and patted the place beside her. Her words sounded silly: you didn't say "kitty" to a near panther like this. It lay down and commenced staring at her. She found herself gazing back into its eyes. "You're such a nice old tom," she murmured. It really was very beautiful, with its night-black fur and green eyes. She listened for purring, but there was none.

One could look very deeply into this cat's eyes. If ail cats were like this one, gypsies would tell fortunes by gazing into their eyes. But cats generally look away.

In his eyes she could see her own face. How did she appear to him? Was she lovely, ugly, or what? Did he think of her as a goddess or a child? She touched his shredded ear and got a throaty growl in response. "Sorry." In apology she stroked his back. His muscles shuddered beneath her hand, as would a man she was stroking to arousal.

As would a man. But she had no man. And she had no work. Some of those paintings had consumed months.

Constance Collier had been furious with her crows and most apologetic,

but nothing could alter the loss of the portfolio. Given that Mandy was twenty-three, unmarried, childless, and most essentially alone those paintings and sketches had been her family, her center, the reason and sense of her life.

The tears came back, stinging her eyes. Furiously trying to quell them, she told herself that the pictures were not everything. Of course not *everything*, but they were her best. Among them were her treasures: her portrait of Godfather Death, which in some miraculous way had captured the laughter as well as the menace of Old Nick.

How could she ever do that again?

Or Rapunzel shaking out her hair, all that blond glory bursting in strands of morning sun—painted strand by delicate strand. Will T. Turner had made her laugh by comparing her technique with the masterful Van Eyck brothers of fifteenth-century Holland. But there was something in it: she had spent a great deal of time studying their work. Detail. Care. Richness of vision. Not the ideals of twentieth-century art perhaps, but she thought of herself as being from long, long ago. She was lost in this quick age. Her art belonged to the perfect grace of the past—even the very distant past.

Once she had dreamed of a time before the bison had left the plains of France, when winter had the name of a demon and cracked his breath like a whip... and she had been a queen reigning in a reindeer-skin tent... and making paintings in the sacred caves, the brush gliding in her fingers as if by magic, and the bison and the ibex racing across the plains of her mind.

When she woke up from that dream, she had wept to be herself, and to hear the droning of a bus in the street outside, and smell the smell of coffee on the morning air.

She had hurled herself into her work, spending four months on the little painting of Sleeping Beauty's castle behind its wall of thorns. And in among the thorns she had hidden the old world, the running deer and the flailing mammoth, the fish snapping in the water and the men like ghosts among the protecting gnarls.

The Sleeping Beauty carried in her soul all the promise of the future; the potion that drugged her was the past.

An artist's work is the issue of her body, and Mandy felt as if her children had been killed by Miss Collier's crows. The Seven Ravens indeed. The Seven Monsters.

She imagined an image in the cat's eyes; herself dead, her sea-pale skin soft against a pale sheet. We trust our souls to such frail vessels, a bit of skin,

a beating heart, paint upon paper.

Suddenly she came up short. That had been a very vivid image, and it was not the first image of her own death she had experienced in the past few days. Was she somehow in danger here? There had been all sorts of rumors about the witches, but none that suggested evildoing.

“Is that what you’re telling me, old cat? Be careful of Constance?”

No, she knew what the cat was saying: Be careful of George. Yes, of course, George. He might come to her in her girlhood bed, come with pleas that became demands and the gleaming of a knife in the moonlight.

Tom preened himself. He stared at her. He could certainly capture her with those eyes. She kissed his forehead. “Who are you? Who are you really?” His cat face of secrets seemed to laugh.

Once right out under that maple tree, she had dreamed of being a mother. A vision had come, of leading children to the banks of a river and watching as they splashed at the lily pads.

Knights had come, plunging their horses into the water, and she had escaped in a silver fairy coach.

She had painted those children—who were really fairies—as Jack and Jill. Quick, passionate strokes, Mandy seventeen and flaming like a comet, the two jewels of children laughing down their hillside to eternity.

That painting had been destroyed.

“It can be a blessed thing to lose the past,” Constance Collier had said. “Sometimes what seems a treasure can really be a burden. You oughtn’t to hate my birds for giving you a chance to start fresh.

Great paintings have been made on this land. Give it a chance, and it will nourish you, too.”

The ravens had circled and circled, then alighted in a fine old maple and stared at Mandy with their blank yellow eyes.

Abruptly the cat raised its head.

“What’s the matter, Tom?”

The cat gazed long at her, then licked her hand.

“Surely you can’t be hungry?” She had remembered only one thing on the tear-blind way home from Constance Collier’s house, and that was to buy a bag of Cat Chow. Tom had eaten heartily not half an hour ago.

The cat got up and stood over her, looming, enormous, its breath coming in sharp little growls.

A patter of fear touched her heart. It was, after all, a stray. “What on earth

is the matter with you?”

For more than a few seconds the cat stared. Then a shudder passed through the animal and it went to the foot of the bed, jumped down, and moved off toward the door.

“No, you don’t.” She had lived with more than one cat and she suspected she knew exactly what this was about. “I fixed up a litter box for you in the mudroom.” She got up, unlocked the door, and took the animal by the scruff. It was heavy, but she was able to drag it across the linoleum floors of the dining room and kitchen. “Litter!” She pressed its nose into the box she had set up for it. “You stay in here for a while, Tom, you’ll get the idea.” She shut the cat in the mudroom and went back to the kitchen. It was nearly eight, she had been lying in that bedroom long enough. A nice little meal would be just the thing to cheer her up. She opened the refrigerator.

Until the accident she had been intending to clean up George’s house for him, and to fill the fridge and the cabinets with food. He was not much of a bachelor. Without Kate and the kids his life had obviously lost much cohesion. Kate had left him so abruptly. One day here, the next gone.

As Mandy had not done any shopping for human food, her choices were rather limited. She touched the stiff old sausage on the top shelf. What might it contain, besides bacteria?

She was forced to settle for a very dubious sausage sandwich. By the time she had gotten the big iron skillet out of the cabinet and put the bread in the toaster she had exhausted the small reserve of psychic energy her long brood had built up.

The cat yowled. In a while it would get desperate enough to use the litter box. Probably it had its own accustomed litter outside. Maybe she shouldn’t domesticate it. Maybe she had no right. This might be as much of a country animal as the ravens.

“Those birds aren’t pets,” Constance Collier had said, “they just live here. I suspect the flock’s ancestors inhabited this place long before the house was built.” She had paused then and regarded the birds.

“Animals are in eternity,” she had added. “How long do you suppose ravens and trees have been together on this very spot? One maple giving way to another—how long? A hundred thousand years? It’s been that long since the glacier receded from the Peconic Valley.”

Mandy couldn’t be too angry at someone who thought such thoughts.

There came hissing from the mudroom. Loud hissing. “Black Tom, Black

Tom run from the fire, run from the fire!” Mandy chanted as she sauntered back to see what was amiss. “What’s your trouble, kitten-cat?”

The growl that replied clapped like angry thunder. Mandy drew back.

Then she peered through the glass panes in the door.

The mudroom was empty.

At last the calls of the suffering, bereft monkey had become too strong for the cat to ignore. Tom had paced the little room looking for some explainable route of escape but had found none.

Its patience exhausted, it soared up from the house, wheeling across the evening town, just touching the top of the streetlight at the end of Maple, swishing through the crowns of trees. Birds fluttered away as it came. Dogs and cats dashed about below, panicked by its passage. A rat, falling from a wire, died before it touched the ground.

Tom flew through the evening hush, feeling the sleepy breath of the sky, crossing streets and alleys and houses faster and faster, passing over Bixter’s and through the frying-hamburger odor coming from its chimney, then over Brother Pierce’s Tabernacle, from which there rose the high-pitched excitement of a man too frightened of death not to preach damnation.

Then it reached the campus.

It was full of righteous fury. This experiment was unlawful. Constance didn’t seem to care. Why didn’t she put a stop to it? Was Tom being used by Constance yet again? Despite his great powers, she had outsmarted him more than once, the cunning devil of a woman.

Had it dared, it would have come here with a sword of fire. But it knew that it had not the right to destroy George Walker unless doing so furthered the overall plan of Constance and the *Leannan*. Those were always the terms of the spell by which Constance conjured the King of the Cats into a brief earthly life.

The tom entered the lab. At least it could take pleasure in relieving the suffering of the rhesus. Far from being forbidden, this was a required stitch in the weave of the story.

The King of the Cats swept into the laboratory where George Walker sat eating a Stouffer’s pizza in his underwear, his sleeping bag arranged on the floor beside him. George did not even stop chewing as it blew past him and through the closed door into the animal room.

The beast with the raped soul lay on its belly in the bottom of a miserable

little cage, its mate crouching beside it. They had been preening one another. Now they slept.

They did not see the air shimmer before them, roiling and flickering. First there was nothing but a fanged grin hanging there, then green eyes above.

To make this kill quick and quiet, the cat needed the dexterity of a human shape, and a silent weapon.

It concentrated, remembering the smelt, the shape, the heft of the human it knew best.

The eyes shattered and re-formed, now hooded with pallid skin, and the lips became those of an old woman, proud and delicate and firm.

Then the whole of the withered old body, quite naked, appeared suddenly in the air, dropped a few feet with a gasp, and stood poised, its fierce, kind face working with the palsy of years, a long, bright needle gleaming between the thumb and forefinger of its right hand.

Because one of this mated pair had been so terribly wronged, both could be blessed with death at the same time. They had earned that very special joy.

It was with the greatest pleasure that the shape of Constance Collier raised the long, sharp knitting needle and drove it deep into the eye of one of the monkeys, then through the heart of the other.

An instant later only the weapon remained to mark her, swift passage, that and the thin streams of blood running to the floor from the bodies of Tess and Gort.

Chapter 7

Without the cat the house was unpleasantly quiet. Small signs of her own past were everywhere, appearing before her like carp in turbid water, rising with their accusatory eyes. Overhead in her bedroom was the light fixture she had bought with three months' allowance, the roses she had painted on it faded to ugly smudges. On the game room wall there remained a faint streak from the crayon mural she had drawn there when she was ten and home alone, for which infraction her mother had given her the only spanking of her life.

She had hated the path worn across the living room carpet, and she hated it now. There were still holes in the sun porch ceiling where Mother had hung her plants.

Through her adolescence she had heard the tired acts of her parents' bedroom from this sun porch, sitting out here in the night with her legs tucked up under her, swinging in the porch swing to the creaky rhythm that shook half the house. The only reason she came out here was that not only the squeaking but the groans penetrated her own bedroom.

She had the awful feeling that she had not lived her youth. Where were the passions, the loves? All destroyed, pecked to pieces. But those were no real loves, those paintings. Could she really love? So far she'd had only casual relationships.

It was awful here. She ought to go down to Bixter's and see if the Pong machine was still there. Of course it wasn't, but they probably still made their famous creme de menthe soda, and there was always the magazine rack.

She sat listening to the water drip, still trying to work the loss of her portfolio to the back of consciousness and still not having much success.

She wished Tom would come back.

The telephone tempted her. Maybe a good talk would help. But she had lost her most recent male friend from half-intentional neglect, and the thought of falling back on him now only made her feel trapped. She could count on him to listen, though. Richard. Tall, sweet, sloppy in love. A sexual sentimentalist, capable of waxing talkatively nostalgic about the most private moment of love.

His love might be sticky, but it was also simple, and that she respected.

When his phone didn't answer, she supposed it was fate and hung up.

Didn't George ever come home from his lab? Everywhere she looked in this house she saw evidence of more deterioration. She had found newspapers from over a year ago lying beside a chair in the game room. George's sheets were slick with dirt; she doubted he had changed them since Kate left. There was a stack of *Persian Society* magazines on the floor of his bedroom with, oddly enough, all the pictures of the cats cut out.

She imagined that she heard his tread, saw his gaunt, haunted figure. She remembered the hate and terror in his voice when he had found the remains of his frog.

George had wept. Afterward, in his misery, he had stared longingly at her. He was full of tormented need. Any young, attractive woman, if she wished, could make him worship her.

Worship. A cold, distancing word. She would rather have passion from a man. But from George, nothing. The idea of being intimate with him made her want to bathe.

Even so, she wouldn't have minded a nice chat.

An hour passed. Nine o'clock and the old family clock that still dominated the living room chimed eight rusty hours.

The clock had been too massive for her parents to keep when they moved to their trailer retirement in Florida. It told the cycles of the moon on its face, the sickle, the half, the full. They rode a landscape dusted with small blue flowers. Dim within it there could be seen twelve shadowed figures dancing about a thirteenth.

Nine o'clock, Friday, October 18, 1987. The silence that followed the chimes seemed invested with obscure dangers, as if it were there to prove the menace of the house. Mandy thought again of the cat.

A search for him wouldn't hurt. She went out into the backyard.

Overhead, stars cluttered the racing gaps in the clouds. A sickle moon had risen and rode the quick sky.

Wind swept leaves to running like night smoke from the trees, rustling over eaves and dancing branches against windows. The cat was nowhere to be seen. Mandy drew the collar of her sweater close about her neck and went back to the house.

She locked the porch door behind her. All the windows were locked already; she had done that earlier.

The house was as tight against intrusion as she could make it.

She found herself returning to the mudroom. The ceiling light darkened the

windows and made the white walls glare. The mystery of the cat bothered her more in the dark. There was no place in here it could be hiding. Certainly not under the sink, which was the only enclosed space. Even so she checked there, finding a moldering box of Spic & Span and a pile of dirty, dried rags made from old undershirts.

Before the sink was the trapdoor to the cellar. She had not opened it earlier—what point, the cat could not have gone down there. She did not want to be alone here, not with the shadows and the moon clock.

Maybe the trapdoor had been ajar, falling closed as the animal passed. When she pulled the ring, the door came up with oiled ease. From below rose the familiar odor of the basement, unchanged since her girlhood. She peered down into the darkness. There was a click, followed by the faint roar of the furnace starting. Yellow, flickering light from the firebox reflected off the walls.

“Kitty?”

There was no other sound.

Mandy reached into the dark and felt for a light switch, then remembered that there was only a string at the bottom of the stairs. She began to descend the rough wooden steps in the faint shaft of light from the mudroom above.

She reached the floor, found the string, pulled it. No light: the bulb was long since burned out.

Once her eyes got used to it, the combination of the glowing firebox and the mudroom light made it possible for her to see a little. She glanced around, ducking beneath the fat tentacles that issued from the top of the furnace, the ducts carrying their heat to the reaches of the house. This was the way she had come on the most secret missions of pubescent love, a willowy, confident little girl, her nervous chosen boy in tow.

Opposite the furnace was a door set in a roughly made wall of cheap pine paneling, the builder’s fifty-dollar “wine cellar,” and the scene of those early experiments, one or two of which had left indelibly torrid impressions, the first, confused genital contact and the exploding pillow of pleasure that came with it. She had held his shaft in that room, too afraid and excited to move, listening with half an ear to *General Hospital* on the TV in the family room above.

On the door now was a rude sign painted in red ink:

“Kitten Kate Club. Keep Out!”

The sight of the rough letters pierced Mandy’s heart: this must have also

been George's kid's secret room.

More evidence of lives departed. Did those kids also remember their little room, even now whisper about it?

It was not easy for Mandy to open the door, but she did it. When she saw what was on the other side, she could not even scream.

She just stood, gasping, disbelieving, staring. The walls, the floor, the ceiling, were painted and scratched and clawed with images of cats. Panthers crouched, wildcats leaped, toms and pussies lounged and crawled and spat, and here and there was a photograph of a dismembered cat. Spiked to the wall were bits of cats, fur, and shattered bones, and in one corner a gape-jawed feline skull.

There was a dirty sheet wadded on the floor. The place stank of something like rancid grease. A votive candle stood in the center of the mess.

There was hatred here that seemed beyond the capacity of a human being. She realized that this was no children's place.

Only an adult mind had the patience to create this. A tortured, confused mind. Profoundly insane.

No wonder Kate had taken her children and run.

Mandy shrank back, closed the door to the ugly secret, then returned quickly to the mudroom. Her cat wasn't in the basement. She wished she did not know what was. She dropped the trapdoor, went back to the kitchen, turned on a light. She sat at the kitchen table, her head in her hands, feeling the secret of the house like a festering, rotting sore on her own body.

How odd the Girl's life looks—
Behind this soft Eclipse—

She whispered the words into the yellow Formica tabletop. Emily Dickinson knew secrets of women. So perfect to call me predicament a soft eclipse. Emily... you knew so much, wise Emily. And you hid on your little farmstead, far from life, far from the madness of men. I wish I were there with you right now.

Behind this soft eclipse...

To George, womankind, it seemed, was a cat. Kitten Kate.

So sick. So sad. So dangerous. She must leave here at once.

She stood up, thinking to go and gather her things. But there was movement outside. As footsteps ran up the front walk, her flesh crawled.

“Mandy!” The voice was high, shredded like that of a desperate woman.

“Mandy, let me in!”

“George?”

“Yes!” He howled out the word, rattling the knob as he did so. His voice was literally squeaking with rage: Miserably frightened, feeling trapped, Mandy unbolted the door.

He swarmed past her, muttering, stalking as dangerously as a spider through the shadowy house.

“Sonofabitch! Son of a fucking bitch!”

He disappeared into the bedroom. At once thuds and crashes started. “George!” She found him hunting through the bottom drawer of the dresser. Scattered around him on the floor were shirts and belts and about a dozen fat bullets. “George, what are you doing?”

“That sonofabitching Jesus freak killed my rhesus! My *rhesus!*” He produced a large black target pistol with a long barrel, began scrambling for the bullets.

“George, what’s got into you? Put that stupid thing down!”

“I’m gonna blow that bastard away! I was right next door in the lab and somehow or other he got in and killed my monkeys with a knitting needle.” He stopped, every muscle in his body tensing, his eyes screwed closed, his lips twisted back from his teeth. He clutched the gun in white, trembling fingers. “He stabbed them!” A huge, terrible sob tore through him, more a bellow than a cry—

He got up.

“Give me the gun, George.” He laughed, started for the door. Had she thought about it, she probably wouldn’t have dared to stop him. But her instincts were stronger than reason: she grabbed his elbow and spun him around. “You don’t even have any proof.”

“I don’t need proof! There’s nobody in the world who hates me like he hates me.”

“His whole congregation. You said yourself he preached against you. It could have been any one of them.”

“He may not be *personally* guilty, but—”

“You aren’t a court of law. You have no right to take his life. Go talk to him, threaten him, even spit on him if that makes you feel better, because, George, I am sure he is a bastard. But you give that gun to me.” She fought down her terror. He was so crazy. She couldn’t let him destroy himself and

another human being, too. She must not fail to get the weapon.

He swayed, then bowed his head. "You're right, of course. I really can't afford to be put in jail."

"Of course not. Give it to me, George."

Suspicion flashed through his eyes, to be replaced by an expression too mixed to come into a sane face: it was made of cruelty and love and something that might have been laughter.

He gave her the pistol, which she returned to its place at the back of the drawer.

"George, I want you to try and calm yourself down. You need rest, and I think you could use a doctor, too."

"I need to frighten that maniac into leaving me alone. And I think I know how to do it."

"Now, look, George."

"I'll go mad if I don't confront him! I've got to do what I can for myself, don't you see that?"

There was no way out of this. The man was going to have his battle. "Come on, then," she said. "If you insist on going, I suppose I can't object. At least let me drive you."

"You don't need to get involved."

"I said I'll drive you. I don't want you getting into trouble."

"He ruined me!"

"You'll keep working! You'll find a way."

She had hoped that he would calm down riding around in the Volks. Then they would stop somewhere, have a drink, and she would take him home. When he was asleep, she would leave for a motel.

Tomorrow she would deal with the issue of the Collier estate and the job.

He looked all in, shivering, huddled in his seat. "My only alternative now is to go to a human test and hope the Stohlmeyer people overlook the sloppy pretesting. That's all I can do to save the project."

"A human test?"

"It'll be safe enough. Hey, you took a wrong turn. The Tabernacle's at the corner of North and Willow."

Too bad he had noticed that. She took a right onto Taylor from Bridge Street, still trying to engage him in a diversionary conversation. "I met the great Constance Collier. It was quite an experience."

He couldn't have been less interested. "I'll bet."

Dull pain returned as she recalled her own tragedy, but she said nothing about it now. “Her estate is perfectly beautiful, And she seems rather good-hearted, actually. Despite all I’ve been told.”

“Constance Collier is a great woman. She means an enormous amount to me. Since your time, Brother Pierce has become her sworn enemy. He came in 1981, after you left. Last year he and his minions tried to get Miss Collier to put her name on something called *The Christian Faery*, and she responded by suing them for using her characters. He claims she’s a pagan.”

“That’s part of being a witch, isn’t it?”

“To some extent. At any rate, witches certainly aren’t Christian. That’s what’s gotten him so worked up.

Take a right on North Street. We’re almost there.”

The Tabernacle was a low building, obviously a cheaply converted warehouse. Cars were parked helter-skelter in the dusty lot that surrounded it. Light shone from within through windows that had been covered by “stained glass” Con-Tact paper. A wide sign, clean and bright and professionally painted, loomed twenty feet above the roof of the building. I AM THE LIGHT, proclaimed the black letters against the white background. Enormous carbon-arc floods crackled at the four corners of the sign, blasting it with preternatural brightness. From behind the stained-glass windows came a powerful roar of song: “O God, our help in ages past...”

Mandy could tell by the cars that Brother Pierce’s followers were working people, most no doubt unemployed and desperate in this steel and coal country, clinging to his simple answers for support in a hard time. Despite herself she was moved by the power and resolution in their voices.

“I didn’t expect a service,” George snapped. “But I guess the guy’s always got a service going on here nowadays. The whole damn township worships at his alligator-shod feet. The ones who don’t follow Constance, that is.”

“Why don’t we go have a drink? Come back after it’s over.”

George ignored her. Before Mandy could stop him he was through the door. She followed.

The church was not filled to capacity, but there was a very respectable crowd. Mandy had thought that the fundamentalist movement was on the wane—but easily three hundred people were here, and on a weeknight. There were many young people, no doubt students from the college.

“Welcome, brother and sister!” A puffy, sweating usher rolled toward them from his station near the door. He continued over the last bars of the

hymn. “I believe you’re new, aren’t you? Praise the Lord who has brought you into his Light.”

“I want to see Brother Pierce!”

The usher’s voice dropped to a whisper as the hymn stopped. “Well, now, he’s the one with the white hair, the tall man right up at the front.” He smiled. “That is Brother Pierce. If you’re here to offer repentance, you’re not too late. He hasn’t called the sinners forth yet.”

“I want to see Brother Pierce!”

“George, keep it down!”

“Brother Pierce! I’m Dr. George Walker of the Biology Department!”

Faces turned, some expressions quizzical, some darkening at his tone. At the front of the church the bright blue eyes framed by the white mane of hair flickered to intense life. It occurred to Mandy that both of these men might be psychotic. And yet there was something very different about them: where George seemed cruel, there was about Brother Pierce something of the terrible kindness of the ignorant—the sort of kindness that used to burn witches to make sure they would go to heaven.

“I want to know why you killed my laboratory animals, Brother Pierce. Why you destroyed my experiment! Was it because it would free people from the fear of death, which is what you use to enslave them?” His voice cracked and trembled, but did not die away.

Now accompanied by three much younger men, the usher rushed up the aisle behind George. Mandy came after them, her mind spinning. George enraged was a human fireball. It took courage to challenge a fanatic in the middle of a crowd of his followers.

“I said I am Dr. George Walker—”

“*I know who you are!*” Brother Pierce’s right arm came up, his finger pointed. “And I know you cannot help being here. The demon brought you, for you are but his instrument. But I love you in Christ, George, we all do.” He raised his arms, nodded.

The entire congregation responded: “We love you in Christ.” The joy among them, the warmth, was at once overpowering and affecting. Mandy was not sure she would have recoiled had one of them taken her hand.

“You shut up,” George roared, “all of you! You killed my animals and I want restitution. I demand restitution!”

“Good people, we have never done violence to this man, much less to the poor creatures he sees fit to torment in his heathen experiments.”

“You killed my frog, you killed both of my rhesus monkeys!”

“We did nothing of the kind. Satan has closed your eyes to the good of the world. I urge you to kneel and pray with us for the deliverance of your soul.” He turned and knelt to the cross that hung against the back wall.

“You lying bastard!”

“O Lord, we beg you to open your heart to this lost one, that he may be delivered from the spell of the Deceiver!”

“Shut up, you old shit! You *shit!*”

Two of the young men took George’s shoulders. He shrugged them off, took a menacing step toward Brother Pierce.

Mandy had to act. If she didn’t, these people were going to throw off the patina of loving-kindness and give George the beating of his life. “Leave him alone!” She pushed past the ushers. “I’ll take him home.”

She put her arm around his waist. “Come on, George.”

“Go with her,” Brother Pierce said sweetly. “Go with that unholy harlot!” His blue eyes were glaring at her, lit to shimmering coals by the fire in him. “You pagan.”

George was most definitely not the only madman here. She must have given some sign of her thoughts, because Brother Pierce instantly sensed her dismay and raised his accusing finger. He pointed it directly at her.

“You demon! You dare to bring your filth up from the pit.”

She tried to reply through a dry mouth, but her words were only whispered. “I’m a perfectly decent—”

Brother Pierce’s voice rose in an instant to a spitting, overamplified bellow. “Yea, you are a demon! For I see you as you are. Oh, yes! Yea, ‘they had tails like unto scorpions, and there were stings in their tails.

And they had a king over them, which is the angel of the bottomless pit, whose name in the Hebrew tongue is Abaddon!’ ”

Mandy was too astonished to make a sound, even to move. Why was this man suddenly so enraged, and at her? Why was he attacking her instead of George?

“You are the pagan’s servant! You sit at the feet of the evil that we bear among us!”

Oh. He must know that she was to be working with Constance. Big deal. “Come on, George,” she managed to say despite her fluffy mouth. “These people aren’t worth our time.”

“I’ll get you, Pierce. I’ll see you behind bars!”

“George, forget it. He’s a superstitious fool.”

“I call down the Love of the Lord upon you, I lay your sins in his Light. Lord, Lord, help us to love these poor lost ones, help us to save them!”

Mandy turned away, her temper just barely under control. “We oughta come back and burn this place down,” George murmured as they went together down the aisle—

“I couldn’t agree more,” she hissed.

Back in the car they sat silently for a moment. “Maybe we can have that drink now,” Mandy said as she tried to control her shaking. “Then I’ll take you home and put you to bed.”

George remained quiet until the car was in motion. “I can’t go home now,” he said suddenly. “I’ve got to prepare for the next step.”

There was no need to ask what he meant; she knew. Having delivered his threat to Brother Pierce, he was going to go back to his lab and test his process on a human being.

Should she warn his co-workers of the state he was in? No. That would be pointlessly destructive.

Maybe George kept the true depths of his madness in the basement of his mind as well as the house.

Tonight’s performance was quite understandable even in a sane man. She contented herself with an admonition.

“Be careful, George. Don’t hurt anybody.”

“Just take me back to my lab. I’ve got work to do.”

Chapter 8

Despite its gracious old homes, its broad trees, the elegance of its brick streets, Mandy now realized that in the years since she left town, Maywell had become seriously infected. There was no glib explanation for what had sickened it. The infection was hidden; it lurked behind the glowing windows of evening, drifted like smoke in the soft laughter of the night. Five years ago people had tolerated Constance Collier.

Now, because of the coming of a single man, they were being taught to hate her.

Mandy could not return to George's house, and now for more than personal reasons. The thought of meeting Brother Pierce's people prowling the night made her go cold. Between them and the basement room, there was no peace for her in her old home.

After she dropped George off at his lab, Mandy drove for a time, trying to calm down. Once the town's beauty had also been its truth, but its bleaker comers, the impoverished houses along Bartlett, the run-down trailer park near Brother Pierce's Tabernacle, seemed its greater reality now. Had the Grimm's project not been of such importance to her career, she would have left right now, and forever. But as she rolled past Church Row on Main Street, with the town common on one side and the three churches on the other, the white Episcopal with its elegant steeple, the Presbyterian neo-Gothic, and the ancient Friends Meeting House that predated the Revolutionary War, she could almost believe that Maywell was healthy still, and that Brother Pierce's glaring, buzzing sign was not glowing just beyond the trees.

A black truck charged her lights. She swerved and jammed on her brakes. "Damn." What was happening to her? She considered herself a steady and deliberate soul, and here she was drifting out of her lane.

But there was a reason, for a vivid imagining was sweeping through her. It came like the white wind that sometimes invaded her dreams, so powerfully that she just had time to stop the car before she lost all contact with Maywell.

The road in front of her disappeared, the trees lining it became a high stockade, the air grew thick with the stink of roasting meat and burning hair.

Screams of agony mixed with low merriment. She was no longer sitting in a car, but rather standing against a rough wooden stake. She felt a coarser

cloth upon her skin and knew the weight of a thick, sputtering taper in her hands. Chains lashed her body to the stake. She heard the gobbling crackle of a great fire, then saw red glowing in the faggots that were stacked around her feet, almost up to her waist.

She remembered words of consolation from long ago, when someone had said to her, "If you are to be taken to the pyre, never fear. Drugs will reach you, and you will feel naught!"

When was that? Not in this life. She stared helplessly at an impossible, spectral crowd rushing at her, men and women and dirty little weasels of children, all bearing fiery torches and bunches of twigs, which they threw at her feet.

Then a long tongue of fire licked her legs, so hot it felt cold for an instant. Then it was as if somebody were whipping her furiously, as if she were being scraped to death with a red-hot file. With a hiss her hair flared up. She felt her face dissolve like a skin of milk.

Oh, they have ruined me, they have destroyed my beauty. And I was the most beautiful thing they had.

I was their witch.

As abruptly as if a projector had been turned off, Maywell reappeared around her, the lamplit brick street, the dancing shadows of the trees. She sat a moment, too stunned by the hallucination to move.

She slumped at the wheel.

That witch-burning crowd had been *real*.

She recalled that modern anthropologists now believed that witchcraft was an earlier, pre-Christian religion, nothing more. Christianity had branded them evil and turned their Horned God into the Devil because they were competition. Too revered to be branded a demon, their Mother Goddess had become the Blessed Virgin.

Or so said some anthropologists.

There was a deeper mystery, though. Mandy saw in her mind's eye the rage coming into Brother Pierce's kindly face... she heard Constance's ravens screaming, remembered the strange, lascivious young man, Robin, his naked skin shining in the morning sun.

What was moving in among the trees? A great, broad-shouldered shape, gliding swiftly closer.

With frantic hands she restarted the car. She had to reassert the Mandy she knew and trusted. She thought of herself as a woman of strength and

effectiveness. She had an excellent imagination, but she did *not* hallucinate like this, not out in a public street.

Nobody was going to burn anybody to death. No matter how neurotic this little town might have become, this was still the twentieth century. Maywell was no isolated medieval village; it was a modern town, linked to the rest of the world in thousands of different ways.

She remembered more the tone of Brother Pierce's voice than the words, that tone, and the hurt behind the hating glare in his eyes. They really were the saddest eyes she had ever seen.

Somewhere in her mind the hallucination was still proceeding, asserting its presence just at the edge of awareness. As dreams sometimes do, it had doubled back on itself. She had not yet been burned. She stood before a trembling, excited bishop to receive her sentence.

He put the red taper between her small white hands.

Quiet, you! That part of her, the wild image-maker, must not be allowed to surface at times like this.

Where the devil was her self-discipline?

Be quiet, I order you, Amanda of the heart!

There now. With a conscious effort of will she directed her attention away from the flaming maiden within her to the cute old ice-cream shop she was passing. It was Bixter's, and she'd never seen a place that looked more like home, or safer. She'd spent an awful lot of good time at Bixter's. Right out there, in the alley where they parked the delivery truck, she'd smoked her first and last cigarette, a Parliament that had been given to her by Joanie Waldron, who had married the Kominski kid when they were in their late teens.

Beyond the front window she could see the wonderful old marble soda fountain, its spigots gleaming chrome and brass. There were the same wrought-iron chairs and charming little tables, and large numbers of students from the college. How she and her friends had enjoyed being mistaken for college girls by the occasional out-of-towner. How they had trembled when the college boys were attracted to them, cool, distant Bradley Hughes and men like Gerald Coyne and Martin Hiscott.

Mandy could not face Bixter's, not the Bixter's of this sadly changed Maywell. Home might have been hell, but Bixter's was a place a kid could relax.

She turned onto the Morris Stage Road and began heading back toward

Route 80.

She could go back to New York easily enough. Her loft was waiting. Her friends were waiting.

Or she could turn up ahead on Albarts Street and drive over to the Collier estate. If she dared.

But of course she dared. She was going to illustrate the new Collier Grimm's! She herself, Amanda Walker. It was a book as great, potentially, as the Hobbes-illustrated *Faery*.

A poem came to mind. "For too long you have gathered flowers, and leaned against the bamboo." Nan Parton had sent her that, and those lines applied right now, on this junction between New York and the estate. A poem of Wu Tsao. "One smile from you when we meet, and I become speechless and forget every word." Romantic, intense Nan, so angry within that her canvases seemed to have been scourged.

She could hear Nan now: go to the estate, it's even more important than it seems. Don't retreat now. If you do, you might never have another chance.

"For too long you have gathered flowers..."

Brave Nan, *you* would go.

Albarts Street came up on the left, marked by a flashing yellow light strung across the center of the Morris Stage Road.

God, Nan, I wish you were here to help me. The icons from the East Village: Robert when I'm lonely, Nan when I need courage. I loved her. "My dear," went the end of Nan's poem, "let me buy a red-painted boat and carry you away." In the night, in the heavy gloom of her Bowery loft, she had come back to find Nan there weeping, her brave Nan. She was crouched naked on the futon Mandy used for a bed, clutching the sheets to her face, kissing them. Mandy had crept out, shocked and embarrassed.

When she had come back. Nan was gone.

Dry with fear, she guided the car between the stately homes, beneath the ordered arch of trees, toward the Collier estate.

The thought of walking up to the house through that forest at night gave her pause. She could turn a corner, but she couldn't possibly do that.

But cars must go there all the time, so somewhere in Maywell there must be another entrance to the estate, one that a car could take. Dimly, she remembered a way in behind the old town graveyard.

Hadn't some of the kids once gone in that way on Halloween... and ended up at a wonderful celebration where they'd been given hard cider, among

other things.

She turned onto Bridge Street and drove along the wall, past the high gate with its motto and the trees beyond, so great and so at peace that they seemed not to be plants at all, but the bodies of gods.

She stopped beneath the streetlight at the corner of Bartlett and rummaged in her glove compartment for the map of Maywell she had bought at the EXXON station on the way into town.

Yes, there was that road. It became a dotted line on estate property just beyond the graveyard. She went back to the end of Bridge and turned onto Mound Road. Soon she was passing directly through the public graveyard. The Indian mound that gave the road its name rose abruptly beyond the edge of the graveyard. Maywell had been burying its European-descended dead here for three hundred years. The Iroquois used to expose theirs atop the mound. Before them, the Mound Builders had buried theirs within.

How long had burials taken place here? Thousands of years, probably.

By the usual standards of the United States this was a very, very old place. Once outside the graveyard the road turned abruptly west, toward the bulk of Stone Mountain, becoming strewn with leaves and narrowing to a car-width strip of asphalt.

She passed a “Do Not Enter” sign attached to a tree. As soon as she did, the road deteriorated, losing its asphalt and becoming a clay track planked here and there by rotting boards.

This was a desolate spot... the sort of place she might encounter—she did not quite know who, unless it was Brother Pierce with his terrible eyes and his spitting rage.

He seemed so familiar to her, as if, in some circle between the worlds, she and he had always been enemies.

Her firelit screams shattered the night.

Image of an owl alighting on the top of a charred stake, soft dangerous thing of darkness...

She was jarred back to reality when her head banged against the roof of the car.

You stupid dreamer, where the *hell* have you been? There wasn't even a road anymore. She was driving across naked heath. The Volks was struggling, bottoming and slurring about in the soil.

The Volks began to skid. Mandy downshifted to second, then to first. The tires caught again and the car lurched forward—only to get stuck even more.

She got out of the car and walked around to the back. The tires had tom through the thin covering of grass to the boggy earth beneath. For all she knew she might have driven this Volkswagen back to the Middle Ages. Maybe Brother Pierce was on his way in his bishop's robes, trembling with eagerness to burn her.

She gathered dry grass and stuffed it down under the tires. Then she tried again to get out of the mud.

The car shuddered, the tires whined, then she lurched forward with a roar from the engine—and promptly sank again.

She turned off the engine. It was dark out here and she was at least two miles from Maywell, perhaps half that far from Constance Collier's house—assuming she could find it. She hit the heels of her hands against the steering wheel. Give a city person a few trees and an unpaved road and watch the fun. She'd grown up here, she knew the condition of these old roads. Why had she allowed herself to get into this jam?

There was nothing to do but walk. She didn't care to stay with the car all night. A VW Beetle is no place to sleep if you are much more than three feet tall. At five-nine Mandy would be tortured by knobs and bumps and comers.

She felt around the glove box for her flashlight, turned it on, and was delighted to discover that it cast a beam. "At least—" The beam faded and died. Better put new batteries on her shopping list, she thought bitterly. She slammed the hood and set out on foot in the general direction she had been driving.

She would eventually see the house off to the right if she could just keep going in a straight line. With Stone Mountain on her left that wouldn't be very hard. She hadn't gone twenty feet before the ground got mushy.

She might walk toward Stone Mountain on the theory that the land would rise in that direction. She took a step and almost pitched forward. That way lay actual open water, lying in a pool across a sheet of mud.

Perhaps the other direction would be more productive. In fact she could see forest hugging the land like a black cloud over there.

It must be the forest of the guardian *fee*, the little stone fairy she had seen when she first came here. Well, what the hell, the forest was a lot safer than this bog. She should have left her car on Albarts and walked in as she had before.

Mandy strode along, her feet sucking busily, her eyes barely able to discern the ground in front of her.

She hoped that the blackness ahead really was that forest.

If it was, she would soon see the lights of the Collier house off to her right.

When she saw lights, though, they were not to the right. They glowed with deep radiance, but so softly that they might not be there at all. She stopped and stared toward them.

Very, very faintly she could hear the rhythmic jangle of a tambourine. There was a tang in the air, too, of wood-smoke. This must be the village where Constance's followers lived. If so, she was deeper into the estate than she had ever come as a girl. The witch village was a place of dark town legend.

She could see the dim outline of walls of wattle and straw, heavy thatched roofs. Candles flickered here and there behind leaded glass. Mandy found her way between two of the cottages and into the muddy track that separated this row from its opposite.

Candle lanterns hung before doors. Round stones for walking jutted from the track between the two rows of cottages. It was a scene from the Middle Ages, but the peace of it was far, far deeper than had ever been known in that tormented era. Mandy stepped along the stones. Just when she was sure the village was uninhabited, she heard the tambourine again, and this time noticed that it was accompanied by a low chant.

She knew then that this was indeed the witch village. She had come to this place of childhood legend.

At the far end of the path was a round wattled building very different from the cottages. Mandy went up to it and paused before the shut door. The tambourine was quite distinct now, as was the voice of the chanting woman. Mandy couldn't make out the words, but the tone was pure and firm and full of love.

Then there came a cry.

The voice and the tambourine stopped.

Behind her in the path Mandy heard panting. It was loud and close; when she whirled around, it became deep, chesty growling. It began to advance toward her. She had the impression that she was being menaced by a huge dog and backed around the edge of the building. This was one of the reasons that the townspeople stayed away from the estate.

There was a sense of quick movement and Mandy could feel the heat of its presence where she had just been standing. Then, in the faint light of a candle she caught sight of a long tail with a kink at the end.

“It’s you! You, Tom!”

He growled again, a most uncatlike sound.

“Tom?”

When she tried to approach the building again, he spat at her.

“My God.”

The cat was on guard here. It was very obvious that it wanted her away from the round building. How could that nice old cat possibly act this way?

Unless, in the dark, she had made a mistake. Maybe she wasn’t facing Tom at all.

Maybe this was something else.

When it growled again, she trotted, then ran around the building and onto the heath behind it.

She listened as she moved. Of course it was just the cat. Toms are crochety. If she’d held out her hand, he’d probably have rubbed against it.

Even so she did not stop. She had to climb a sharp rise. This must be one of the hummocks she had seen from fee house. At the top she was forced to pause for breath. Just stood, gasping, the night close about her, longing for just a gleam of saving light, listening for paws padding through the grass. She’d deal with that cat again, but not until daylight.

She tried to take her bearings. The little village was bordered on one side by the bog, on the other by these hummocks. It must be invisible from every direction except Stone Mountain itself.

Ahead, Mandy was soon relieved to see the lights of the Collier mansion. They were soft, but there were so many of them it could only be that great house. Her confidence renewed, she set off across the tumbling little hills, losing sight of the house in the valleys, regaining it on the hilltops. With the sliver of moon now free from clouds there was even a small amount of light. She had the luxury of being able to miss stones with her ravaged shoes.

She came suddenly to the edge of the gardens. The smell of the land changed, became at once more complex. Then she realized what was underfoot: she was walking through an extensive herb garden. Too bad she couldn’t see well enough to find a path. She hated to crush the plants. Come morning Constance no doubt would rage at her about the damage.

She was soon crossing tall grass. Up a steep slope she found the swimming pool, its water reflecting the moon. The windows of the house glowed with the loveliest light Mandy thought she had ever seen. She mounted the porch steps. The whole place was lit by candles, in holders, in chandeliers, in the

wall sconces in the hall.

There came from the library Constance Collier's voice, speaking with a gentleness and humor Mandy had not before heard from those lips.

"Miss Collier?"

The voice went right on. Mandy entered the kitchen foyer, then passed through the kitchen proper. There were no candles lit in here and she had to move carefully to avoid bruising herself against the big table.

When she reached the library, she paused at the door. The room was crowded; Constance Collier was obviously giving some sort of a talk.

And the gentleness in that voice! Where was Will T. Turner's harridan now? Mandy approached the doorway, emboldened by the sweetness of the voice to a greater confidence than she had felt here before. "Mrs. Collier?"

"Yes!"

"You're welcome here, Amanda. Take a seat and listen if you will." There was a single candle glowing in the room, lighting Constance Collier's old face in such a way that the lovely young woman she once had been seemed to flicker in its shadows, ready to emerge again. As astonishing as Constance was her audience.

They were children, easily two dozen of them, arrayed at her feet, so rapt with attention that they didn't even react to the interruption. They ranged in age from perhaps four to thirteen or fourteen. All were dressed in simple gray homespun. Constance herself was in a white linen dress embroidered across the bodice with green vines and pink buds. A lovely effect, so simple that it was elegant. On a young woman that dress would have been heart-stopping.

Lounging against a far corner Mandy saw Robin. His sister Ivy sat on a chair beside him. They also wore gray homespun now. When Mandy's eyes met his, he smiled a very small, very audacious smile. He shocked her, and the shock was delicious—which annoyed her.

"Now listen," Constance said. "This is the story of Godfather Death."

"The thing you must understand is that this story is very, very old. It is far older than fairy tales, and fairy tales are ancient things. This story does not come to us from the fairy-folk but down the human line. I suppose it has been told since we were granted the right of speech. And before then—well, it was in our hearts.

"A long, long time ago, when this world was still young and we were younger still, there was a woman whose fields were not great enough to support her growing family. She had been blessed with many daughters, and

they had all found men and raised families of their own-, until not even the woman's best harvest-leaping would bring up sufficient corn to feed everybody.

"Then one Lammas night her first daughter came in with yet another child. The mother took the baby and praised her daughter, but when the daughter had gone she wept, for the child must be exposed. Her heart heavy, the mother stole out in the cold of the night to give the boy to the sky.

"She was going along the road when she met a tall man with great horns on his head and eyes as fierce as a wolf's. This was not a bonded man at all, but some great hunter come in for the season's Sabbat. The mother held out the child and said, "Please, stranger, take this child of your own kind, and be his godfather."

The stranger took the boy and gave the woman a wand of rowan in return. "This is a miraculous twig; with it you can heal the sick. But be careful, for if you see Death standing at the head of the sickbed, touch the patient with the rowan and she will recover. If Death stands at the foot, however, say 'She will die.' "

"So she became a great physician and very wealthy, and her whole family prospered. One day the Queen called her to the bedside of her own child, a great and powerful hunter who had been gored by a stag. Death was standing at the head, and the boy lived. Then a second time the boy was gored, this time by a long-toothed tiger. Again Death stood at the head, and the boy was cured. But the third time, when the boy was sick with love, Death was at the foot of the bed and the youth had to die.

"The woman went then to visit the godfather and tell him all that had transpired. But when she went into the house, she found that things were most strange there. On the first floor a great black cat was fighting a dog and there was a terrible row. 'Where does the godfather live?' the woman asked. At once the cat changed into the Queen's dead son and sang:

"Rowan, rowan, silver twig of life
Cast my shadow on blood of strife."

"The woman went deeper into the house. On the walls were the shadows of the many animals the godfather had slain, stags and bear and bison And there were shadows of men there, too. On the floor there were many dead babies, the children who had been given to the sky. 'Where does the godfather live?'

the mother asked these children.

“They sprang up and sang:

“Rowan, rowan, silver twig of life
Cast my shadow on skull of strife.”

“So the mother went deeper, for farther on she could see a room scattered with skulls. When she touched them with the rowan wand, they came alive and spoke:

“Rowan, rowan, curse me not
For godfather has caused my flesh to rot.”

“Deeper yet the mother could smell a dreadful odor. She came then to a rotting forest, all the trees blackening with death, all the animals fallen down, and the grass withered like the curled fingers of dead children. Only the rowan bush remained untouched, and it glowed with life, its little buds opening even as she watched.

“She knew then where to find the godfather. Indeed, he was hidden in the rowan bush. When she saw him, she said, ‘Godfather, what are these strange apparitions in your house? At the entrance I saw your animals become children—’

” ‘And I saw your hair become gray, old mother.’

” ‘Then I saw the shadows of all your kills on the walls.’

” ‘Ah. So you know then why you are here.’

” ‘Then I found a room full of skulls.’

” ‘You found your own people.’

” ‘Then a rotted forest.’

” ‘The world to come.’

” ‘Then the rowan bush.’

“So he leaped out and made as if to grab her, but she was a quick old woman and she got away from him. When she looked back and saw his horns and his red eyes, she realized who he was and ran all the faster—

“She was so fleet that she came back into her own land, and when her people saw her they fell to rejoicing, for their old mother had become a young maiden again.”

Constance Collier stopped. She smiled down at the children. “That story

came from my grandmother, who had it from hers. I've told it now and again to some people who know, and they suppose it to be a survival of the time when we lived as often as not in caves. And that's what the godfather's house is, eh, a cave, and painted just the way they painted them at Lascaux thousands and thousands of years ago. So this must be a story about such paintings and the lives of the people who made them."

Mandy was entranced. That story could well be exactly as ancient as Constance claimed. It bore a close relation to "Godfather Death" in Grimm's. But this was a feminized version, sounding as if it was from the era when women were just becoming agriculturists, and men were still hunters.

Looking about her at these rough-clad children, at the beautiful wild boy in the corner, at Constance dressed like a princess herself, Mandy was filled with deep wonder and excitement. Something extraordinary was happening here, something that appealed deeply to her. And there was such love among these people that even when they were silent there was a sense of laughter.

"Now take the fire and off you go," Constance said to the assembled children. There were a couple of pleas for one more short one, and one piped request: "I want my dad to come live with us."

Silence followed the words. The joy was for the moment suspended in a graver mood. Constance reached her hand out and touched the cheek of a ten-year-old boy. "That is a matter for the circle, Jerry.

Next time you're there you make a picture of your father in your head, and imagine him among us, and make sure you see him smiling and happy."

"Will he come then?"

"The magic you do in the circle will help him."

The children fell in behind an older girl who carried a candle in a brass lantern. Single file the group went down the hall and out the back of the house. Soon the lantern was bobbing along on the hummocks.

Now was Mandy's chance to warn Constance Collier about the crazy old preacher. "I was at Brother Pierce's Tabernacle."

She looked up sharply. "Why?"

"It has to do with some trouble my uncle is having with him. He's a scientist, and—but that isn't important. I was there to help my uncle. And Pierce knew all about me, what I'm doing here and all."

"He reads the paper."

"I think he hates you."

Constance Collier's expression gentled again. "But you do not. You are

attracted to us. You identify with me.”

“Well, perhaps.”

“Come with me, Amanda. We’ll send those pesky ravens along to guide the children.” She went to the window and clapped her hands sharply seven times. Wings began to flutter and sleepy bird voices harped and shrieked. There followed a chorus of enthusiastic cawing and the crows burst up from the shrub beneath the window, where they had apparently been sleeping. Their cawing echoed in the sky and was soon greeted by laughter and cheering from the children. “They are good sometimes, dear, when they feel like it.”

“What are you?”

Constance Collier laughed. “An old woman who wishes to be young again. A dreamer, I suppose.”

“Excuse me, Miss Collier, but I know it isn’t that simple.”

Constance looked at her a long time. “In the end I will reveal every single secret to you. But only when I’m ready, so indulge your old benefactor.” She smelled more of minty incense than perfume. In the candlelight her skin seemed as alive as a girl’s. She touched Mandy’s face with unexpectedly warm fingers. “I could love you like a daughter.” Then, as if shocked by her own display of feeling, she rushed off. She called from the dark of the house: “Yours is the second room on the left, top of the stairs. We rise here with me dawn, which tomorrow will come shortly after six. Someone will be in to wake you.”

Mandy wasn’t convinced that such a thing would be possible at that hour.

“I have something wonderful for you to do tomorrow. Something marvelous. But you must set out just at dawn or there’s no point.”

“But Miss Collier—” There was no answer to her call, Constance Collier was gone.

Robin and Ivy began moving through the house with snuffers, putting out the candles. Mandy was too uneasy about the boy to question him, and she didn’t trust the girl at all. In the end she went upstairs. Her room was candlelit, with a basin of water and a chamber pot peeking out from under the ancient curtained bed.

Mandy undressed, putting her jeans, blouse, and underthings across the back of the blue stuffed chair that sat in front of the fireplace. She went to the writing desk and picked up the candle in its pewter ring-handled holder. Crossing back to the bed, she felt as if she had slipped into some unfamiliar

space in the world.

The time of mysteries in the night.

But this was Maywell, New Jersey, in the month of October, the year of our Lord nineteen hundred and eighty-seven.

It was also the time and place to climb into a wonderfully cozy curtained bed, curl up, and make sure she dreamed of peaceful voices and not strident ones, of children in candlelight and fabulous tales from long ago, and left the terrors behind.

She did not see Tom, who spent the night curled up on the canopy of her bed. And as he was not a purring cat, she didn't hear him either.

She was steeping heavily by the time Robin came into her room. He drew close to the curtained bed, parted the drapes, and peeked inside. When he was certain that she slept, he reached down and laid his hand on her naked breast, feeling its fullness and warmth. He whispered softly to her, an ancient spell:

“I'll come to thee in cat-time
I'll come and make thee mine.”

And then, the necessary words uttered, he crept off to his own bed.

Tom watched him go, switched his tail a few times, then settled in for the long night's vigil. In the bed below him, Mandy breathed as softly as a sleeping deer.

Chapter 9

On the night that the demon-sent doctor and the beautiful young witch came, Sister Winifred had been leading what remained of the congregation in “Rock of Ages.” Brother Pierce, winded from his last exhortation, surveyed the crowd. About a third were gone. They loved the Lord, of course, but in the absence of an intense issue their faith waned. They began to worry about money or work or just getting the washing done, and they drifted away.

He loved them so much, each one of them, and longed with all his heart and soul to see them on their way to heaven.

To keep them on the road, there had to be a great question before the congregation, something with drama and importance, that would threaten them, each one, personally, their homes and their children. *That* was the kind of issue that could be used to rekindle their faith. As they sang he prayed. At once he felt a stirring within himself. When he looked up he was surprised to see the shadow of a cat in the doorway at the back of the church. Cats made him sneeze. He was about to signal the usher to shoo it off when it went of its own accord.

Simon kept the faith of Christ as best he could. Of course, Christ was a long, long time ago. It took a little imagination to believe that the cruelties he had suffered were really enough to wash away the sins of the world. Christian belief was the only thing that Simon had ever found which would hold at bay the fiery wind of guilt that roared day and night through his soul.

He was so sorry for what he had done. A few moments of pleasure, a few moments of anger—then a lifetime of remorse and eternity in hell. He refused to confess himself publicly and to ask God’s forgiveness. In part this was because he felt that he deserved hell for what he had done. There was, however, the other possibility, that the whole thing—religion—was a product of the human imagination. If that was the case, he would be confessing and going to jail for the rest of his life for nothing. He was a believer, but he preferred to cut the cards himself.

Tonight Simon felt exceptionally tired. He had been slaving over the leaves all afternoon and now he was working like a dog, trying to get that spark to come into the eyes of his congregation. It wasn’t working.

He was just losing his magic. Six months ago he’d had this whole town wound around his little finger.

Well, not all of it: the old families and the college professors who lived in the elegant houses on Albarts and streets like that weren't interested. If they went to church at all, it was to places like Saint Marks with its dried-up Rector Williams, who looked like he'd been sucked up in a prune-making machine.

Simon got the poor, the welfare cases, the unemployed. Guys who used to work full-time over at the Peconic Quarry, which now ran maybe three shifts a month, others who once moved steel at the now abandoned Mohawk Fabricating Mill. These men had wives and children and souls and hopes, and they weren't getting anywhere. Simon's congregation had numbered two thousand souls at this time last year.

Now he had about fourteen hundred, a thousand workers and their families and four hundred Maywell students. His campus ministry worked surprisingly well, perhaps because the Maywell college kids were, in their own way, as much rejects as the steelworkers. These were the kids who hadn't made Princeton by a long distance, who hadn't even made Jersey State.

It had occurred to him to stand up and give them a little hellfire. Guilt was what made them keep coming back. Guilt, or was it hell? Sometimes their eyes really sparked when he described his ideas of hell. From some deep place in himself he knew what it was to burn. As a matter of fact, he was an expert on agony, both physical and spiritual. He could visualize burning flesh, sometimes even smell it as he preached. The trouble with his congregation was that they did not understand hell. It could be as small as a grain of sand, as large as a whole lifetime. And it did not have to be flames; it could be another kind of burning, the blue fire that consumes the spirit.

He knew all of this because he lived with it every day. His greatest secret was this: hell was with and in him. It was here, right now. He carried hell in his pocket.

He could feel it there now, dry and gnarled and unspeakably horrible. Their sins the Lord might forgive. If he could save just one from the torment he was already enduring, there was at least some small sense to his life.

But to do his work he needed their faith. He must kindle and rekindle it, and keep it burning white hot!

Instead he saw it dwindling. Those who came here came more and more out of habit, not because they couldn't stay away. At first they had poured through those doors with eager faces. Then they had come more slowly, then

out of duty. Now some of them didn't come at all.

What worked best to keep them was controversy. Simon had first come to Maywell because of the rumors of witches there that had spread through the underground fundamentalist movement.

Such a place seemed an ideal mission for a really committed preacher. They needed Christ in Maywell; not the sweet, empty Christ of Catholics and the Presbyterians, but Simon's Christ, a living Christ who would save you right then and there, in front of everybody, if you could feel it deeply enough.

Simon had built his church on the stones of controversy. Issues and public statements of protest had brought his people together, made them see themselves as a separate band, changed them from congregation to band of brothers.

They had collected evil books and records, stealing them from the library, buying them or shoplifting them from the Dalton's and the Record Room. Then they had made a bonfire of them out behind the Tabernacle and burned over four thousand separate items. Chief among these offerings were copies of the works of Constance Collier.

After the burnings Simon had seen an article in the *Campus Courier* suggesting that Dr. George Walker was engaged in fantastically evil experiments of reviving the dead. To combat this man, Simon had scheduled a ten-week series and thoroughly condemned him. He had even discerned a link between Dr. Walker and Constance Collier. One of Walker's assistants, Clark Jeffers, lived on the Collier estate.

The creation of *The Christian Faery* had been another massive project. The intention had been to replace Collier's demon-inspired *Faery* with the purified work. Getting godless children's books off the shelves of the library and out of the local bookstore was almost as important as book burning itself.

Constance Collier had reacted with venom.

She was a focus of pagan evil. He had heard rumors of the sinful activities on her estate, rumors having to do with odd sex and the raising of demons with magic rituals. It was impossible to be a witch and not a worshiper of demons.

Now the *Courier* had carried a story about Amanda Walker and her work illustrating the heathen, paganistic Grimm's fairy tales—for none other than Constance Collier!

Dr. George Walker. Amanda Walker. A witch working for him, she working for a witch—this was a cabal, all of it, a pagan cabal right in the

middle of this God-fearing Christian community!

God-fearing and clean-living... but it was no wonder that they were afflicted by pagans and demons, for they were not led by a clean man.

He touched the small bulge in his pocket that was his own personal torment. But tonight the hand was only a hard, dead little knot.

The hymn ended. Brother Pierce cleared his throat.

He didn't know what he would say next. But he trusted in the Lord to help him. Closing his eyes, he took a deep breath. His whole being seemed to stir. Out of the corner of his eye he saw the outline of a cat against the stained-glass window nearest his pulpit. It was on the outside, pressing itself against the glass.

He did not have time to be angry about it, though, for energy suddenly began pouring through him, coming from above, from below, from everywhere. His body seemed about to burst into tingling life.

Then the words appeared, rolling off his tongue as if of their own accord. "There is evil running as a shadow in these bright streets of Maywell. Yes, it even enters here, a place we have tried to make sacred! The evil doctor comes among us with his whore and makes lying accusations." He pointed upward with his right hand, and felt to his deepest core the warm, the righteous, the sweet presence of the Saviour. By God's grace he felt this, for he could now speak directly to beloved Jesus Christ. "I say to you, Lord, your people are innocent. Yea, even as the Lamb!"

People were suddenly back alive, their faces shining, their eyes quick with excitement. He heard whispers: "He is here, the Lord is here."

"We can feel it," he shouted. "O Lord, thank you and praise your holy name." He smiled a great chasm of a smile. "O Lord, what a night!"

People began to shout. "Praise the Lord!"

But there was another reality in this church, and if he looked past his own joy and faith, he could see it.

The ones toward the back of the room were not included in the excitement. They sat, their faces fixed in pious expressions. He knew that they couldn't feel a thing.

He was being prevented from reaching even to the last row in his own church!

He had to find a focus that would mean something to the man sitting in the otherwise empty row at the far back, who was either deep in personal prayer or asleep.

He cooled his throat with the water Winifred kept behind his pulpit in a green plastic pitcher.

His mind fumed morbidly to a vision of the Tabernacle dark and empty, a “For lease” sign on the front door.

A family of four defected from a front row. A front row family and the service not yet ended. So much for his ecstatic moment. He hadn’t even inspired the front sitters, beyond a few automatic praise-Gods.

The ones leaving didn’t so much as look embarrassed.

Fighting himself, he quelled his urge to scream at the defectors, to run after them, it was hard. This church was his life, his first and only success. He had known cold and hunger and despair. The Tabernacle was the only good thing feat had ever come to him. He was a man of many pasts. He had been a nightclub comic in Los Angeles, working the toilets, telling sorry jokes to scabrous drunks for fifty dollars a week.

“Little Red Riding Hood gets stopped by the Big Bad Wolf. ‘Okay, Little Red,’ the wolf says, ‘pull down your panties and bend over. You’re gonna get it up the ass.’ Little Red Riding Hood pulls a .357 Magnum out of her basket. ‘The hell I am,’ she says, ‘you’re gonna eat me, just like it says in the story.’”

Was his problem that they knew, that some of his past somehow clung to him, a stink of cigar smoke and cheap booze, of midnight bus rides and nights in motels without names? Humor. When he got a laugh, it was like a blessing from on high.

There were worse things, though, that clung to him, things far worse than the residue of a few scabrous jokes. During the seventies he had been a social worker for the city of Atlanta, specializing in home placement for unwanted children. There had been trouble, big trouble. She had been a lovely butterfly of a girl, soft and smooth and saucy. Once he had been proud of how he had helped her.

Despite the dropping of the charges, he remained the object of persistent suspicion in Atlanta welfare circles. His little twenty-second mistake—not knowing his own strength—had condemned him for all eternity, but it had also kindled in him this fire to save others.

Everybody in the church was watching him. It was up to him to keep them a little longer or let them go.

He hated for them to leave on such a dismal note. One little flicker of life, hope springing up, the feeling of Jesus right here in the room, then this

emptiness.

His mind flashed to a bright, gleaming image of Amanda Walker. That niece of the doctor's was so perishingly, delicately beautiful. And yet her eyes were full of firmness and intelligence. She was just the kind of woman he dreamed of, as lovely as an opening rose, yet strong enough to take him well in hand.

Firmly in hand. When he imagined offering her his guilty heart and asking forgiveness, he felt a shaft of agonized longing in his breast, just as if some demonic arrow had pierced him.

The restlessness in the room was getting worse. What the devil had this service started out about, anyway? He couldn't even remember. To buy a few seconds he took another pull at his water. Sister Winifred minced across from the choir box and refilled it.

Nervously, feeling more and more helpless, he flipped the pages of his Bible. Sometimes this worked.

Why had he thought of the woman now? Maybe the Bible would give the answer.

Then he saw a word flashing past, a promising word: harlot. What a friend he had in the Lord! He cried out the passage to which he had been led: "Wherefore, O harlot, hear the word of the Lord: Thus saith the Lord God: Because thy filthiness was poured out, and thy nakedness discovered through thy whoredoms with thy lovers, and with all the idols of thy abominations, and by the blood of thy children!"

He paused. The faces were on him again, the eyes coming back to life. He felt much better. "Well, now, wasn't that some witness! Oh, yes!" His laughter, ironic, angry, crackled through the silent crowd. "The very whore was among us, witnessing to the lies of the demon doctor." He pointed straight down the empty aisle. "And worse, she is going to the house of the pagan, to help her make more evil books for our children. Mark my words, that beautiful girl bears the mark of the demon upon her white flesh. And I warn you, she is here as an agent of the Dark One, come to spread corruption and confusion among the children!"

There was response then, a little shocked whispering among the older folk. The young people just stared.

As good as it had sounded to him, this was obviously not quite right. Something was still missing, the focus, the damned focus. He plunged on. "Is it not our duty to cast the abomination from our midst, to cast out the shadow

of evil that so vexes us, that turns the hearts of our children from the service of the Lord? And who is the whore's helper and employer? That woman, oh, yes, the pagan of the hills, none other. Yea, they are the unholy, the denizens come up from the deep. Yea, they are of Leviathan's army, oh, yes!"

Faces hardened. "Praise God!" came the shouts. This was a little better. Just a little.

"So I say to you, evil walks and talks in the form of woman, yea, even a woman dressed in the clothing of a man, in those bottom-wiggler jeans. 'The woman shall not wear that which pertaineth unto a man, for that is an abomination unto the Lord!' "

Ah. There was a marked improvement in the interest level. Nobody was leaving now: the room was touched by new energy.

Were they only shocked by his fury, or did they believe the news he brought of the evil among them? He took a drink, stared from face to face. "Repent ye," he shouted at one, "Repent," at another—"O Lord, give us strength!"

Instead of blazing up with righteous love, those he had eye contact with glanced away. Despite the improvement he wasn't reaching them really yet.

He needed a simple, incendiary *word* that they could rally to, a fiery word that would entangle all three demons in one net of truth.

A glance at his watch told him it was closing in on 10:30. The service had been going on far too long, given the restlessness of the crowd. It was bad psychology to have people feel relief when the service ended. They ought to be left uplifted and longing for more. "Leave them feeling as children who have just been praised by their fine old father," a mentor had said. He struggled, he prayed in his heart, but no word came. He would have to drop the matter for the time being and go on to the last part of the service.

May the Lord find his word for him.

"So repent you now, good people, come forth, come forth and bring your sins before man and God! Come, have no fear of the love of God nor the ears of your brothers and sisters in Christ. Jesus *wants* your sins. So be free with them, and bring them to his Holy Altar!"

He signaled Winifred, who started the organ. The choir hummed obediently along, "Amazing Grace."

Brother Pierce bowed his head.

A tall man stood up from deep kneeling. He wore a gray-striped suit and a vest. He looked much more prosperous than the run of the congregation. As

he came forward, Brother Pierce recalled his name: Roland Howells, chief teller of the Maywell State Bank & Trust. Not a tither. According to Mazie Knowland, who worked at the regional IRS office, Howells' 1981 income tax return showed \$28,000 gross salary. Contribution that year of exactly \$600.

What would he repent, this secret miser?

Howells came to the place appointed for confession and knelt before the congregation. "My name is Roland Howells."

"Speak up! If we can't hear you, neither will the Lord!"

"I am Roland Howells! I have to confess that I have been cruel to my wife, I have shouted, I have taken the name of the Lord in vain, and before God I have struck her."

"Thou shalt not take the name of the Lord thy God in vain. Brother Roland!"

"Praise God, brothers and sisters, forgive me and pray for me. My wife took my son and left my bed and board, because I was hard and full of anger."

Something struck Brother Pierce as he listened to this man's trouble. Quite often lately members of the congregation had come forward to witness to the breakup of their families.

Very often. Sometimes three or four in a single service. Maywell was a quiet, settled place of barely five thousand inhabitants Not your divorcing kind of town. Brother Pierce Shook the penitent's hand, wondering. "The Lord will return them to you if you pray well, brother."

"I hope so. Brother Pierce. I sure do miss them. They're out there on the estate, I know that, I got a phone call."

Good God. Those words immediately brought another witness, a woman of perhaps fifty, her fingers nicotine-stained, face slick and pallid. There was something *abolished* about that wasteland of fat, smelly skin, probably full of the kind of imperfections that ruined a kiss to the flesh, moles and seedwarts and prickly little hairs.

"My name is Margaret Lysander. I also lost my family to the estate. My husband, my daughter, my son.

They didn't want me to come here, and when I got saved, they left for the witches."

Another one, and even purer gold than the first. The witches were stealing wives and husbands and children from God-fearing Christians, and that was a fact.

Here was something as deeply personal as there could be. A threat to the family was a threat to the very soul.

Something kept entering his mind, then flitting away, an uncaptured thought. A word. He put his fingers in his pocket and wound them around the dry, sharp-boned little fist that lived there.

Maggie Lysander started in again. "I was a good mamma to my kids," she said. "I didn't treat 'em except as the Lord lays down in the Good Book, and as you teach us. Brother Pierce."

"Amen, sister."

"It was like they was just bewitched."

Brother Pierce fairly reeled. Of course, it was so *obvious!* Bewitched. Witch! Witch! It wasn't anything wrong with his followers that was making their families walk out on them, it was the witch! And who was a known pagan who would not give her work over to the service of Jesus Christ? Why, the very one who employed the whore and was behind the evil professor!

Brother Pierce waved his arms with excitement. The Good Lord was in him now, in him deep and in him strong! "Oh, I *feel* the blood of the Lamb flowing in my veins, ohhh, I feel the Lord moving in me!" The Tongues were coming upon him. Maggie Lysander shrank away, the congregation sighed with suppressed excitement. This is what they came for, this was what made Brother Pierce special. Very well. Now they were going to get their money's worth.

He held his hands out before him, making them shake and tremble as if they were no longer his own.

They were going under the power of the Lord. Then his arms, then his legs and his whole body. He felt himself spinning, saw faces whirl past, faces and rafters and linoleum flooring. He grabbed on to the pulpit.

His mind emptied to make way for the coming of the Word. "Ohhhh Lord!"

"Praise his Name!"

"Praise him!"

"Ohhh, ye have the hand of the witch upon you! God's people are under the palm of the witch! The witch comes among you, oh, praise God, the filthy sorceress with her charms and dirty talk, she poisons the lives of your children and breaks up your homes, Ohhh Lord! And we cannot raise a finger against her! Ohhh Lord! We cannot do a thing on our own! We got to put down our human ways and let the *Lord God* do it his way! Ohhh, we got a

witch in the dark of the night a-coming to poison your chosen people!” It was as if a fire had been kindled down deep in his soul, a white fire of the breath of the Lamb, a red fire of his blood. Brother Pierce stalked down the aisle. “You and you and you, you got the witches’ charm right on your forehead, Ohhh Lord, she’s bringin’ us division in our houses and death, Lord, we cannot free ourselves, come into our hearts, O Lord, come right now among us!”

Maggie Lysander was the first among the congregation to catch on. Good girl. She arched her back and clapped her hands to her face and shrieked high and savage. “Lord! Lord! I got you in me!” She began to gyrate. Winifred started in on the organ, a syncopated “Rock of Ages” to sort of encourage things along a little. Brother Pierce grabbed a man and kissed him on the mouth. “The Lord is in *you-uh!*” The man shook and swayed and soon was joined by a dozen people around him, then a dozen more, then more and more. “The Lord is in *us-uh! Ohhhhh!*” Then more and more, some were shrieking and crying, some were clapping, stamping. Brother Pierce felt climax in his soul, all his false vanity burning away before the fiery coming of the Lamb. The Word was upon him. “Oh Lammaadossachristi! Ohhh rostoleuroxisatime! Lestochristomentisator!”

Maggie Lysander screamed. “Mathama! Lopadoa destona deutcheber!”

“Ohh, Laaaededmedema! Memkakopolesto, yeaaaoooh!” That was a good one! He shut his eyes and swayed and clapped. “Praise the Lord God-uh! Praa-aise the Lord God Almighty-uh, yea though they walk through the valleassstomana! Oohabeiiatking! Ohhseettalbmnen! Beestalthnot, statltnot suffer, belsallnot suffer, salnot *not—thou shall not suffer a witch to live-uh!* There it was, oh, beautiful and true and good! A rich bitch of a witch of a stuck-up Mrs. Constance and her filthy whore of a too pretty-o goddamn girl!

“Thou shalt not suffer a witch to live! Oh, boy! Oh, the Lord has me! Listen to the Word! Oh, boy!

Ohhhaletitmeanta!”

He was jumping and leaping, and they were all jumping and clapping in heady rhythm, oh, yes, and he kissed one and another, a fat face, a sweated brow, pretty lips, flesh of flesh, his people, his dear people, the people God had given him to make new in the Word. “Lammasuckum!”

He fell among the surging crowd of them, and they were touching him, tearing his clothes, putting their hands against his naked flesh, and raising him high now on a sea of hands, “Praaaaise God! God! God!”

They were not gentle, they hurt him, grabbing him and touching him, grabbing his hair, the flesh beneath his tom shirt, grabbing him so it hurt and felt good at the same time, and calling out in tongues, and embracing him among them, men and women and children with their hands on him, praising the Lord God and touching him.

They carried him forth into the cold of the night, beneath the bright enormous buzzing sign where the last white moths of the season fluttered, and beneath the night sky also, Ohhhh Lord! They loved him, they loved him, the Lord made them love him and he cried and they all cried and praised God together right out in the middle of the parking lot, and then they hugged each other. O God be praised and thanked, he was getting his people back!

The congregation linked arms. Spontaneously and without manipulation they began singing "That Old Rugged Cross," that old, old song from the past days, his boyhood of sorrow and pain, and all the sorrow and pain of them all, the sweet, decent, good, shamefully bewitched children of the Lord God.

One song followed another into the night. Sometime after twelve a fine mist began to fall. They went to their cars then, with no particular plan to do what they did, to drive the night in procession, flashing their lights and honking their horns, out Bridge Street and past the high brick walls of the Collier estate, until the rain changed to sleet, and the sleet to snow, and with much honking and waving and shouted praises, the congregation returned to their homes.

An hour later Brother Pierce lay sweating on his own bed in the trailer behind the Tabernacle, listening to good old country music all the way from WSB a million miles away in Nashville, sucking a bottle of Black Label, his mind clattering with his success. Just like that his congregation was united behind him once again. United against the witch.

If he could keep this going, he guessed he'd even see a tithe from the likes of Miser Howells. This was real inspiration.

Toward morning he knew he was not going to sleep. He had to point up the seriousness of his new issue. Had to leave a message that people *cared*, that they *hated*, that they were with their good Brother Pierce all the way.

He put a can of gasoline from the toolshed into his car and drove off about two hours before dawn.

Soon he was out on the lonely road near the Collier wall. A huge cat arched its back in his headlights, then darted to the roadside. Brother Pierce stopped his car. He got out. In his left hand he was carrying a whiskey bottle

full of gasoline. He lit a rag stuffed in the neck and hurled it against the wall.

The bloom of gasoline fire swelled and jumped madly at the trees. It was not strong enough to do damage, and was not meant to be. What Brother Pierce wanted was for people to see the black scar this would leave on the wall.

Snowflakes whirled among the flames.

It took less than five minutes for the fire to flicker out. But it left a nice, big mark behind.

People would see and it would make them think. Thou shall not suffer a witch to live.

It was just a suggestion.

Chapter 10

Mandy awoke to a clink and clatter beyond the curtains of her bed. She had slept so heavily that for a moment she didn't remember where she was. Then she stuck her head out to a slap of cold air and the sight of Ivy building a fire in the hearth.

"Good morning." Maybe it was the cold air or the amazing sight of the snow beyond the window, but her grogginess passed at once.

"Oh, hi. I'm sorry, I was trying to keep quiet."

"I don't mind. What time is it?" The sky beyond the windows was gray, saying only that the clouds were low and dawn had not yet come.

"Onto six. You've another twenty minutes before the bell." She put a bundle on the chair. "Here are clothes."

Ivy's voice was warm, and her eyes when they met Mandy's were full of friendship. Yesterday the girl had seemed so reserved—and so mean, creating the trouble with the Hobbes edition and all. She had certainly had a change of mood. Mandy remained angry with her over the business with the book. It wasn't unreasonable, she thought, to want an apology. Ivy cheerfully poked up the fire.

When it blazed she stepped to the center of the room, hands on hips. "How's your pot?"

"My—oh, I used it, if that's what you mean."

"That's what I mean," Ivy said. She reached under the bed, hauled it out, and glided away with the big blue porcelain pot cradled in her arms.

"Breakfast in the kitchen at 6:30," she called over her shoulder. A moment later Mandy heard her tell Constance that "the lady" was up. How old was Ivy? Seventeen, perhaps. Certainly she was too old to be calling twenty-three-year-old Mandy a "lady."

It took no small amount of courage to step naked into the freezing-cold room. A curtained bed, she had found, was a most delicious luxury. Maybe the style had been abandoned because it was simply too comfortable. She dashed over to the chair and opened the bundle, finding a bra and panties, and some of the homespun that the others wore, what seemed a shapeless dress that, when she wore it, clung most beautifully.

The cloth was so cold against her skin it made her hop and gasp.

She had just tied the belt when she heard a meow at the window. There

stood Tom, pressing against the glass, looking annoyed to be out in the snow.

Down at the village he had seemed dangerous. But now he was a cold old cat, and she couldn't resist letting him in. When she raised the sash, the burst of freezing air that engulfed her made her squeal.

"Come in here, you! Hurry up!"

The cat rushed past her and in an instant was curled up in front of the fireplace.

"You're a weird one, kitty-cat. How'd you get out here in the first place? Did you follow me?"

The cat stared at her. She wanted to stroke him but thought better of it.

"If you ever want a kiss," she said softly, "you know who loves you." She puckered up and went "mmmmm," but the cool seriousness of the cat's gaze silenced her.

This was unexpected. Could an animal see into a human soul?

Nervously she returned to her preparations. She had to break the ice on her pitcher to wash. The soap was homemade and smelled powerfully of peppermint. It smelled, as a matter of fact, very much like Constance Collier, like Ivy, like Robin. It smelled like this house. And it wasn't only mint, was it? There was in it a hint of some more exotic herb.

After her wash she dragged on her muddy shoes and wished she had some heavier ones, and also a good jacket or sweater.

And she wished Tom would stop that staring! Could there be laughter in a cat's eyes? Either he loved her or he disdained her. Or worse, both. Even though she was dressed, she still felt naked.

It took the faint tapping of flakes at her window to draw her mind away from him. October 19 and already it was snowing. If such weather held, this was going to be a long, cold winter. She peered through the hazy glass. What magic she saw, the world transformed to philosophical purity, silent but for the hiss of snow against snow and the rattling of bare limbs.

As the sky lightened she saw that the snow had touched the autumn colors of the trees with white. The perfection of the colors together, the pillowy razor of white, the staring reds, the oranges and browns, went to the center of her, for the scene the snow had created was truly a wonder of nature.

When Constance came along, swathed in a huge woolen robe, nothing but a face in the dark folds, Mandy was still motionless before the window. "I know," Constance said, touching her shoulder with long, light ringers. "You'll need the clothes we got you. Why didn't Ivy—" She went to the

door. “Ivy?”

Louder: “Ivy!”

From downstairs: “I’m in the kitchen, Connie.”

“We need Amanda’s warm things. She’s practically naked, the poor girl.” She turned around. “Ivy’s quite new to big-house responsibilities. But she has a good heart. A very good heart.”

Her footsteps sounded on the stairs. A few moments later she appeared with another stack of clothes topped by a pair of stout hiking boots. “I’m sorry, Mandy. I completely forgot the rest—the important stuff, too. I think it’s too cold for me today.” She looked down at Mandy’s feet. “What’s your shoe size?”

“Seven and a half.”

“Hiking boots have to be a little bigger to make room for the socks. I think I guessed right, though.”

“I’m glad you thought of them at all.”

“You need good shoes. You must learn every inch of this estate as if it were your own,” Constance said.

There was a beautiful hand-knit wool sweater of rich, iridescent brown, and beneath it something huge and dark and gray. Mandy put on the sweater and unfolded the mysterious garment.

It was a hooded, ankle-length cloak made of the tightest homespun she had ever seen. Down the front were monogrammed a five-pointed star, a triangle, a sickle moon, and two other, more obscure symbols.

It was tied about the neck with a red silk ribbon.

“This is wonderful.”

“You like it?”

She swept it across her shoulders and tied the ribbon. Ivy raised the hood. The cloak was heavy and warm and altogether magnificent. “Oh, Constance, I love it. Really love it!”

“It took half a year to make. The weavers started in April, We made it just for you.”

Mandy looked at her. What she had just said didn’t make sense.

“I’ve been watching you ever since you were a girl,”

Constance added. “And when I saw your work in Charles Bell’s book, I knew it was time for you to come to me.” She smiled. “Change your domes and come down to breakfast. We’re wasting time.”

The table, when Mandy arrived, was spread with a redchecked oilcloth. A

fire roared in the huge old stove and the windows ran with condensation. Mandy sat down to a plate of pancakes and syrup. There was a side dish of blackberries and a pitcher of fresh cream. Tea of an herb unknown to her completed the meal. “Everything you’re eating came from this estate. It can feed you four seasons of the year. And if you like homespun it can clothe you, too.”

“The village—”

“It’s an experiment. The villagers are trying to live really close to the land. Everything at the village comes from the surrounding fields and forests. The village lives by the breath of the earth, which is the weather, and the heartbeat of the earth, which is the seasons. And they live close to one another, too, unled except by the necessities that the land imposes.”

“Who are they, Constance? Are they witches, like we thought in the town?”

“Friends. Most of them are from Maywell. Some from farther away. They’re people who want to be reinitiated into personal contact with the earth. The village is an effort to balance old ways with new.” She smiled. “Because we have drifted so far from our relationship with the planet, many people have a tremendous need to rediscover their inner love for her. That’s what the village is about. It is only me first of its kind, I hope and trust.”

Tom came into the room. He stood beside Constance’s chair, looking up at her.

Mandy dug into her pancakes. They were sour and heavy and delicious, made of a rough-ground flour and raised by their own rot, with neither baking powder nor yeast added. With one of those swift, amazing leaps of his, Tom jumped onto the top of Constance’s head. Mandy was so startled she all but threw her fork. But Constance hardly seemed to notice the creature that had draped itself over her scalp like some kind of lunatic far hat with eyes.

The eyes sought Mandy. Didn’t he ever stop staring?

“Amanda, today I want you to begin your work. To try to do something very special and very difficult.”

Constance had leaned forward. Her tone was serious. But she looked—well—fantastically odd with the cat on her head.

“I want you to take your sketchbook and go out onto Stone Mountain and find the *Leannan Sidhe* and draw a picture of her.”

Mandy remembered the statue in the maze. “The Fairy Queen—do you mean mere’s a statue of her up there, too?”

“Go across the hummocks to the foot of Stone Mountain. You’ll find a path starting at a grove of birch.

Just a track. It’ll be tricky to negotiate. Climb the mountain until you come to a big rowan bush. Really huge. Do you know what rowan looks like?”

Tom crawled down her shoulder and disappeared under the table.

“To me a bush is a bush, Constance. I have no idea.”

“Look for smooth gray bark, red-orange leaves, and clumps of red berries. You really can’t miss it. It’s the only one like it on the mountain. Just beyond it you’ll find a large round stone mat’s got figures etched into it. But they’re weathered, so you won’t be able to make them out. You sit yourself down on that stone. Sooner or later fairy will come. The Queen is instantly recognizable.”

Surely her leg was being pulled. “You mean—real fairies?”

“I mean real fairies. They’re about three feet tall, very broad-shouldered the men, and they’ll be wearing their whites because of the snow. White breeches and tunics, mottled white caps. And she will be in white, too. A white gown of silken lace. She’s blond, and she’ll have rowan in her hair. You’ll see.”

She was so serious about this that Mandy became embarrassed. Constance Collier must be senile. “You see these fairies?”

“My dear, fairy are quite commonplace in the Peconic Mountains. They live all through this end of Jersey and Pennsylvania. And they are not tinkerbelles and tom-tits, either, they are very real. Don’t look for pixies, look for small, solid beings who are very real. They are as much a part of the planet as people and trees and cats. Much more man we. They’re a Paleolithic survival, dear. The fairy were exterminated in western Europe during the Middle Ages because they’re pagans. They follow the Goddess. This country is so big the fairy never got discovered. Even to this day there are parts of Stone Mountain that man hasn’t explored. And all a fairy needs to hide is a bush not much bigger than a pillow.”

Mandy felt cut adrift from reality. This woman was rational and sane and serious.

“They built the burial mound you drove past coming here. And the hummocks out in the back pasture—those are the remains of a fairy city built before the Iroquois conquered this valley.” She tossed her head. “The same families that built those houses have been up there on roe mountain for thousands of years, waiting for the day when they can come down and

reclaim their city.”

“What are they—I mean—what about language? Do they speak English? What should I say? And what if she wants money to sit for me? Tell me what to do.”

“Show the Queen respect. Bear in mind that we have been on this land three hundred years, and the Indians two thousand years. The fairy have been here since before the ice. Think of that. A hundred thousand years, maybe longer. You are on their land, we all are. Their Queen is the highest and most sacred being you will ever see in your life.” She paused. “Of course they may not show her, they’re unpredictable that way.”

As she had spoken, Constance Collier’s voice had rolled through the room, commanding, powerful, full of strength and assurance. It was the opposite of senile. This was the very voice of wisdom, and in spite of their incredible nature, Mandy found herself forced to listen to Constance’s words.

“Time is short, girl. Go your way. And don’t make a fool of yourself by getting lost.”

Ivy shrieked and jumped back from the table.

For an instant Mandy thought she was reacting to the wild things Constance was saying, but then Tom’s head appeared from under the tablecloth.

“I’m sorry! He stuck his nose between my legs!”

“Honestly, Ivy. You’re awfully edgy this morning.”

“His nose is cold.”

“You know to keep your legs crossed when he’s around.” She looked at Mandy. “Watch out for him.

He can be a tricky devil.”

Ivy moved away from the table. With a glance at her watch Constance told Mandy to get started.

“But I have no idea what to do!”

“I gave you your instructions. I want you to fall back on your own ingenuity. Amanda, darling, this is only the second test, and it’s not the hardest. Please get going.”

“Now, wait a minute. What test? You must be some sort of a lunatic if you think I’m going to go traipsing around snow-covered mountains looking for fairies! I was brought here to illustrate a children’s book. *That* I’m willing to do.” And that was that—

“I can’t tell you what I’m offering you, Amanda.” She looked at the cat,

who was now sitting on the drainboard licking the lip of the hand pump at the sink. “If I did he wouldn’t like it.”

“The cat wouldn’t like it?”

She nodded. “Something very odd might happen. You’d be surprised at what he can do.”

He continued licking the drips off the pump.

“I don’t mind if you’re eccentric. In fact, I’m flattered that you trust me enough to be yourself with me.”

“Amanda, this is *not* senility or eccentricity. What’s more, it’s terribly important.” Her voice was pleading now. “You must do it. More is at stake than you can possibly know.”

“What? What’s at stake? I came here to illustrate—”

“Hush! Forget that book. It was just a pretext to get you here.” She reached across the table, grabbed Mandy’s collar with trembling fingers. “You must trust me, just for a little while. Amanda, I’d rather kill myself than lie to you. Please trust me.”

Tears appeared at the edges of Constance’s eyes. Mandy reached up and took the old woman’s hands in her own. “I can do with a hike. I’m sure I’ll be fine.”

She simply could not turn down such a heartfelt appeal. The only thing to do was just open her mind and let things happen. Whatever she found on the mountain, she found.

If there really *were* fairies—well, what fun. She got up, drew her cloak around her, and went out. The door slammed behind her. She pulled up her hood against the gusts of Snow. The flakes were small and very hard, and they rattled against the thick wool. Mandy set out, her boots crunching the powdery half-inch thickness that crusted the ground, her face stinging in the fresh wind off the mountain. The clouds were low and gray; the sun was a smear in the east. As she walked along, Mandy’s heart thrilled.

She was so gay she thought to sing. Whatever happened on Stone Mountain, it was going to be highest adventure.

Even if she was *really* intended to enlist her imagination and draw the most wonderful Fairy Queen ever created.

She went down past the maze and through the herb garden.

Beyond the garden the land sloped farther down, then rose abruptly up the side of the first of the hummocks. When she reached the top she saw a group of men far off to the south working on her car with ropes and wooden

pulleys. They wore deep brown homespun, and she could just catch the edges of a work song, the rhythm of the chant but not the words. The tone of their voices fairly lilted. The joy in them, open and unrestrained, carried clearly across the air.

Down the hummock she scrambled, trying to avoid getting her cloak caught in the bushes at its base.

“Amanda!”

A male voice. “Who’s that?”

A bush trembled. Instinctively Mandy backed away. There had been something harsh about that call, something that made her cautious.

A face, youthful. Satyr-like, appeared in the shrubs. With a great shudder of snow Robin stood up. He came close to her. “Where are you going?” he asked. He stood directly in front of her, dressed in a long wool cape, wool trousers, and a heavy coat belted at the waist. “You’re going to the rowan, aren’t you?”

Mandy said nothing.

“You know how the fairies keep themselves such a deep secret? If somebody sees them they don’t like, that person never comes back.”

Still Mandy said nothing. Robin seized her and kissed her with cold lips. “I love you!”

He was still a boy, and the road between seventeen and twenty-three is a long one. It was years since she had heard “I love you” uttered with such enthusiasm. “Thank you,” she said. How pale and controlled by comparison.

“Connie didn’t tell you anything about how to act, did she? About how to survive.”

“I didn’t get the impression they were dangerous.”

“Oh, but they are. They’re very dangerous. They have the fairy whisper. Nobody knows what it is, because it kills instantly. And they have tiny arrows made of splinters. The poison on the arrows gives you a heart attack, and no doctor can ever tell that you were poisoned. Hunters that die in the woods of cardiac arrest—half of them paid with their lives for seeing fairy.”

“Constance never even hinted at danger.”

“But there is! You’re being tested. Constance thinks you’re the Maiden, but they can’t be sure until the *Leannan* looks into your heart. She has all the fairy knowledge. She’ll read you like a chalkboard and either kill you or accept you. It’s all the same to the *Leannan*.”

“You’re telling me I could be killed?”

“If you aren’t just exactly who you’re supposed to be, the fairy can’t let you go. Surely you can see that.

They don’t want civilization meddling in their affairs. Anthropologists after them, for heaven’s sake. They saw what happened to the Indians, and they know that all their own kind in Europe were exterminated.

They’re very defensive, the fairy.”

Mandy began to entertain the notion of turning back. “Can you answer me one question?”

“Probably not.”

“Why me? Why am I being put through this—initiation or whatever it is.”

“You mean you don’t even know that? Constance is really playing it close with you.”

“She must be.”

“You’re unique, Amanda. She’s been watching you all of your life. Why do you think your father was transferred to Maywell? She brought him here so you would be close to her. What Constance knows—it’s impossible to tell, but she had the help of the *Leannan* at her disposal, as well as all the traditional lore of the witches. She commands a high and rare science, and you have to be very careful around her. You are old in the craft, Connie says.”

“Which craft?”

“Oh, wow, you’re really in a hole. Wicca, darling, witchcraft.”

“I thought that was it. All the town rumors are true, then. Everything.”

“Oh, not everything. By no means. All the good rumors, let’s say, and none of the bad! We’re learning the old ways again from Connie, and from the *Leannan* and her folk. And you are going to be our next Maiden, which is a sort of protector, especially if we’re under pressure from the outside. And our group is growing so fast, it’s only a question of time before the pressure starts. The very word ‘witch’ conjures up terrible images in people’s minds. They think we’re evil.”

“The wicked witch.”

“A false impression. Witchcraft is—well, you’ll see when you get to know us better.” His voice had taken on an edge of conviction. In many ways Robin was certainly a boy, but his love for what he believed was a mature emotion.

“Amanda!” It was Constance, calling from the edge of the herb garden.

Robin’s eyes narrowed. “She musn’t see me. Run, run to the top of the

hummock! Wave to her, tell her you're on your way."

As Mandy found footing in the snow she heard his voice behind her, a barely audible whisper: "Blessed be, my love, blessed, blessed be!"

Blessed be? The witches' greeting and good-bye. Mandy had read of it in Margaret Murray's famous book, *The Witch Cult in Western Europe*. Nobody interested in fairy tales could escape without reading Murray.

She remembered her own dreams of being burned... and of being in a cage—awful dreams. She shuddered and went on.

Constance stood like a fur-wrapped stick a hundred yards behind. "Please hurry," she cried. "Plea-ase!"

The *Leannan* doesn't wait for anybody very long!" Her voice was snatched by the wind and carried off among the rattling trees.

Far ahead of her she saw Tom jumping through the snow. She looked past him, to the dark tremendous mountain.

And she found that she was at least as curious as she was uneasy. She wanted to see the fairy. Oh, *if* there were such beings. A nonhuman intelligence sharing the earth with man. It was so enormous a thought that she couldn't even begin to play out its implications, so she simply filed it in a corner of her mind to deal with later.

From where she was now she could see a few curls of smoke off in the direction of the village. It was interesting to imagine life there, wearing homespun and using candles within hiking distance of modern America. There was undeniable appeal in the idea of reacquiring ancient ways. The witch rituals, for example, were so very old and strange that they had been ultimately terrifying to the superstitious medieval world. Now anthropologists understood them as a remnant of human prehistory. The Old Religion, the way of the earth. Wasn't "witch" an early English word for wise, or had that theory been discredited?

Crossing toward the tumbled, frowning face of the mountain, she heard off in the direction of the village a girl singing in a clear voice.

"Lost on gray hills, in autumn's dread splendor,
The wandering one, wandering one
Will the moon ever find her?"

The lilting, sweet-haunted song did not fade until Mandy was battling her way up Stone Mountain.

The more she committed herself to it, the more brutal the climb seemed to become. The “track” was a miserable affair, twisting and turning, as often as not blocked by fallen stones or an outgrowth of brambles. But for the glowing snow there was little light, and would be no more unless the sun broke through the clouds that were coming down from the north.

As Mandy struggled along, her feet grew cold despite the thick woolen socks and the good boots. Time and again she slipped on an icy spot or was deceived by the snow into stepping into a hole. She had been climbing what seemed to be an hour when the incline finally grew less steep., She stopped to look for the rowan bush.

Everything was a jumble. She couldn't possibly tell one plant from another. She turned around and found that she hadn't come more than two hundred feet. She was just now getting level with the roof of the distant house, which stood on its dark hill among its trees, seeming most forlorn and distant at this empty hour.

The wind belled her cloak and made her remember the world within that curtained bed. And Robin. “I love you,” he had said. How could he love somebody he didn't know?

She wiped the snow from her eyebrows and continued on.

Now the wind whispered, now it howled through the shaking trees. A fine hiss of snow made its way deep into her hood and reminded her painfully of her ears. She pulled the silken ribbon together. The track was now a mayhem of sharp rocks. To make any progress at all she had to crawl.

Paradoxically that very fact made her go on. The harder it became to climb it, the more she responded to the challenge of the mountain. She had not been given gloves, and her hands soon smarted from the cold and the stones. Her sketch-book, stuffed in her waist, jabbed her breastbone with first one corner and then the other.

If she had any sense, she would find some overhang, cuddle up under it, and make a few sketches of the Fairy Queen from imagination. Surely that was all Constance really intended. There could not be a Paleolithic species still surviving in these hills. And even if there were, they would be dirty, miserable, and scarce. Savages had none of the awesome beauty Constance had attributed to the *Leannan*. Savages living on a mountainside as rough as this would be little better than animals themselves.

The Paleolithic was thousands of years ago. Beyond memory. Beyond time. The whole notion was ridiculous.

And yet, Constance and Robin had both been so serious. Her whole life was dreams and visions and longing for miracles. Now she might be close to one—just might be. She struggled on. The wind roared without ceasing, like some immense tide restless in the rocks. Constance Collier had neglected to mention another little matter of some importance: the rowan must be on the very brow of the mountain, that dark, bare spine that got covered with deadly ice in the winter.

When she did come to the top, it happened so abruptly that she at first did not understand where she was. She almost staggered out onto a menacing slickness of ice as smooth as glass. She lurched and slid, then toppled amid her flapping, flopping cloak. Her sketchbook bent completely in two. She felt her pencils scattering out of her pockets.

Scuttling about, she retrieved them.

When she raised her head, she was frozen, but not by cold. This was a place of wonder. She could see to the north the long brow of the mountain, its gnarled trees huddling against it like warped children. The west wrinkled off forever. Beyond the Peconics were the Endless Mountains and the haze the northwestern fastness of Pennsylvania.

This was the border of one of the continent's last empty corners. Below lay Maywell in its shield of snow, the steeple of the Episcopal Church marking the dead center of the town. She could see The Lanes and almost make out Uncle George's house. The college's black buildings squatted beyond the diagonal line of the Morris Stage Road. Directly below was the Collier estate. Huddling almost invisibly at the very foot of the mountain, the witch village blended so perfectly with the landscape that even looking at it she wasn't completely sure it was there. After some time she counted twenty cottages, ten on each side of the central path. Foundations and walls for twelve more were in the process of being laid. The round building dominated the village. Occasionally a figure huddled from one door to another. Among the snowy hummocks tiny human dots raced about—the children of the village were out with sleds.

So very hidden, so secret, was the witch village. Through all of her growing up in the town, she had heard of only one incident of townspeople meeting villagers on their own ground—and those kids hadn't seen the village itself. Now she was seeing the whole estate, village and all, and it was lovely.

It did not prove nearly as hard as she had expected to find the rowan. An

imposing bush, it stood easily ten feet high, its northern side angled from the wind, the rest of it rich with berries, a gay-painted creature in this impossibly hostile place.

The rowan was so very alive that Mandy loved it immediately. It stood fast in its bed of ice and stones.

But it was also a great, gangling adolescent of a thing. When the wind made it gyrate, she wanted to laugh.

She made her way around it, touching twigs and berries as she went. Somehow she kept expecting to see Tom, but he wasn't about. Naturally not. There was a cat who liked a fireplace. A romp along the lower reaches of the mountain had been quite enough for him.

She found the round stone Constance had described. It was perhaps eight feet in diameter and two thick, standing at a slight angle on the surface of the mountain. It was black basalt, completely out of place in this granite geology. The surface was carved over every inch, but time and wind had worked it, too, so only the presence of the etching could be detected, not its content.

Basalt is a hard stone. Mandy ran her hand along the ice-crusting edge. The thing must be very old. What tremendous effort it must have been to bring it here, for it was certainly an import.

Just as she had been told to do, Mandy went to the center of the stone and sat down. She folded her cloak under her and sat cross-legged, so that she made a sort of a tent and was at the same time insulated from the icy rock. She faced southeast, away from the wind. This cloak had been exactly the right garment for what she was expected to do, which was sit and wait... and wonder how crazy she was to have come here.

Some adventure to get this cold. Not to mention thirsty and hungry. An image of those delicious unfinished pancakes came to mind. She saw the dark-flecked surface of them, the slightly crumbly interior, the amber glow of the syrup oozing along the plate. The memory confirmed the fact that she had very quickly ceased to enjoy this. She was up here alone and this was a damned cold place and she was freezing.

No sooner had the thought of leaving crossed her mind than a bird, of all things, fluttered out of the rowan and flapped about her head. It wasn't in the least afraid. This place must be very little visited. The dusty little sparrow was what city people called a trash bird. First with one bright, blank eye and then the other it looked at her. She had the distinct impression not only that it was a girl bird but that it felt kind of friendly toward her.

If she had brought crumbs she could have fed it, the little thing was so unafraid. She had never fed a wild bird before. "Sweet, sweet," she said. It flew away.

The next moment a squirrel, its fur rich and gray-black, came ambling along. It stopped at the rowan and ate berries for a time. Then it, too, came over to the rock and looked at the strange creature there.

"Hi," Mandy said.

The squirrel raised itself up on its haunches and wiggled its nose at her. Then, as abruptly as if it had been called, it jumped and raced away over the edge of the mountain. It had not been gone ten seconds before Mandy felt the pressure of paws on her back. She turned around and startled a raccoon, which tumbled about in the snow, righted itself, mewed at her, and went on with its casual sniffing of her cloak. Then it poked its frigid nose at her hands, smelling them carefully. "Well, I like you, too."

The sound of her voice made the coon look up at her. It mewed back, the cry so full of question that she ached to answer. But she could only smile, as she did not speak coon.

She began to understand Constance's sending her here. There might not be any fairies, but it was nevertheless a magical spot and a fine place to let the images flow in her mind. Despite the cold, the ice, despite everything, she could create extraordinary fairies here. There are places of life and places of death. Here on this inhospitable mountain between the sky and the rowan Amanda knew a feeling so strong it shocked her. Especially because it was not an aggressive feeling at all, but one of the peace and rightness of this world. No matter the fate of man, the loss or regaining of the old cup of kindness, peace abides.

A quick, hairy movement beyond the rowan brought her back to the present. She almost screamed when she saw what was there. Surely it couldn't be. But it was, and it had just noticed her. It moved like a great black furry rock, humping quickly along. There was nothing cute about the bear's black little eyes or the fog coming from its muzzle. She sat dead still, her attention fixed on the approaching beast.

The closer it got the faster it came. She could hear it breathing now, hear the clatter of its claws on the ice. A terrible, buzzing fear froze her.

When it bellowed she knew it, too, was a female, as the other animals had also been. If each animal could be said to represent an attribute of woman, this bear was the power of her protective instinct. Her greatest and most

dangerous power. A she-bear protecting her cubs is the most fearsome of creatures.

Slowly, carefully, Mandy spread her arms, palms open. Why the gesture? She did not know. Now she could smell the bear, a thick odor of rancid fur. Its coat was shiny with secretions. Mandy found herself looking into the animal's eyes. She saw there a femininity so savage, so full of implacable power, that it drew a choked little sound from her throat. The bear grumbled reply, stared a moment, then became indifferent to her.

It walked on past, crashing off into the fastness of the mountain. Perhaps this bear was without cubs, or they were not nearby.

While it had diverted her attention something else had happened, something which filled her soul with a coldness far greater than that of the wind.

About the rowan there stood six small men in snow-white coats and breeches. On their feet were white pointed shoes, and on their heads close-fitting caps just as Constance had described.

It wasn't possible. And yet, here they were.

Robin's warning rushed back into her mind.

She screamed, a single, sharp cry, quickly controlled.

These men had sharp faces with pointed noses and large eyes. Perhaps they looked so different precisely because they were so almost-human. But then one of them licked his lips, and Mandy got a glimpse of tiny teeth more like a rat's than a man's.

Together they raised bows, and mounted arrows on them made of twigs. There came then on the air the ringing of small bells and a whisper of tiny feet in the snow.

She appeared from behind the stone, all blond, her hair as soft as elder blow, her eyes startlingly dark brown, her body lightly dressed in the very lace Constance had promised. She was wee, not nearly as large as her six guards. On her head was a garland of rowan, berries and stems and leaves. Seeing such beauty, how ineffable, how frail, how strong, Mandy thought she would simply sink away. By comparison she herself was coarse. All delicacy seemed to have concentrated itself in this single small creature. Around her neck there was drawn a silver chain, and at her throat hung a gleaming sickle of moon.

Mandy instinctively lowered her eyes. It was more bearable this way, just looking at the woman's feet, no more than two inches long, naked in the

snow. Then the feet rose out of her line of sight. She looked up, startled. The girl was floating in the air. Wings flapped and she was gone. A great gray owl hooted from the top of the rowan, its horns darkly silhouetted against the sky. It took flight, racing round and round the rowan. Next hoofs clattered on the stones, and a black mare reared into nothingness, its neighs echoing off to silence.

An ancient woman, drooling, her teeth yellow, one eye put out, her hands fantastic with arthritis, scraped up on a stick. “Oh, my God! Can I help you?”

She held out her hands then and was as suddenly gone, the maiden spinning forth from her flying gray hair. The girl took Mandy’s large hands in her own tiny ones. She was grave now, her eyes limpid—and yet so very *aware*. They were scary. Her lips parted as if she would speak. Mandy remembered Robin’s warning about the whisper. The girl’s voice was as much the wind’s as her own. “You’re trembling,” she said.

“I’m cold.”

“Come a little way with me.”

Mandy started to stand up, but she was stopped by the astonishing sensation of being enclosed in enormous, invisible hands. Woman’s hands, immense and strong and soft. They drew her close to an invisible breast, clutched her, enfolded her. It was a terrifyingly wrong sensation; there was nobody here, and nobody could ever be so huge. She struggled, she tried to scream, she felt her stomach unmooring with fright.

But she found herself being cuddled in warm perfumed folds that could be felt and smelled and even tasted, so rich they were. All of the tension, the discomfort, the fear in Mandy’s body melted away. Then, just as she was beginning to enjoy herself, she was set down. She wobbled, she cried out, she flailed at the air.

Never had she felt so thoroughly explored, so—somehow—examined. She had the eerie feeling that whatever had held her had also been in her mind. And was still there, looking and discovering, moving like a strange voice in her thoughts. But it wasn’t ugly at all, it was young and so very, very happy and so glad to meet her. She couldn’t help herself, she burst out laughing.

The lady laughed, too.

“Who *are* you?” Mandy asked her.

But she was gone, they were all gone, as clouds upon the air.

BOOK TWO:

The Sleeping Beauty

*That such have died enables us
The tranquil to die:
That such have lived, certificate
For immortality.*

—Emily Dickinson

Chapter 11

The tom moved quickly, nervously, through the silent animal room. The terrariums were empty, the bloodstained monkey cage was empty. Even though the animals were gone, the room was still full of the ammonia stink of captured things. The tom hated this room, but he hated more the people next door, hated them enough to use them mercilessly. Because of their guilty dislike of themselves, he did not consider Bonnie and Dr. Walker capable of being true witches, and Clark understood enough to take care of himself.

He could feel the faint rush of microwaves from the newly installed motion detector in the center of the room. Such things were not powerful in his world, and they neither surprised nor impressed him. When he wanted Dr. Walker to come in here, he would trip the alarm, but not until then.

Despite his disapproval of her, the tom could not help but feel a little compassion for Bonnie. She was about to suffer a most interesting death.

* * *

George preferred to think of himself and Bonnie as wanderers in a deadly jungle. Somehow Clark was not with them, perhaps because he was so dedicated a technician, too realistic to have a commitment to the romance of the experiment, and no sense of the art of the work.

Unless at least one of them was awake and on guard, they had to assume their experiment would be ruined by Brother Pierce and his fanatics. There were various things George would like to do to Brother Pierce, chief among them being dismemberment. Slow, considered dismemberment, the lifting off of appendages. No. Burn him. Do it with a candle. Or tattoo his crimes on him. People did not understand the politics of pain, how it must settle in the victim and remain there for a time. An image from his dreams, of cat claws, hung a moment in his thoughts. He could light a fire in agony's tower on behalf of all destroyed things. He raged, and he hurt, and felt a fine rush of guilt: he could have delivered his body to Bonnie's will just then.

But he enjoyed too much the intricate mechanics of killing her, enjoyed her trembles and the faint scent of her sweat and the coolness of the skin to which he would soon attach electrodes.

He surveyed this tangled technical realm of his and saw that it was well

sealed against the rages of Brother Pierce.

It had taken a trip all the way to Altoona to find locks for the lab doors that were both secure and cheap.

Somehow George had installed them, reading the sketchy instructions, going by trial and error. His fingers were thoroughly mutilated but the tumblers worked smoothly and the steel protective plates were tight against the doors. He had put bolts on the windows and had bought a fifty-dollar motion detector at Radio Shack. It sat in the middle of the now empty animal room, ready to give warning if anybody should come that way. He had tried to buy a closed-circuit TV camera for the hall outside the lab, but he couldn't afford the four hundred dollars.

"This is just wonderful," Clark said. He was staring at a piece of interoffice correspondence. "Really very nice."

Bonnie was eating boysenberry yogurt; George had been staring at the coils that surrounded the outline of her body that they had chalked on the lab table. "What?" she asked.

Her eyes, so green, so full of fire, regarded Clark calmly. George himself was shaking, not with excitement or desire, but with the thought of just how risky this was going to be for her.

"It's a very politely worded requisition for our lab space. 'In view of the impending completion of your grant-related activities there,' it says. You'll never guess what they're going to put in here."

"A bar?"

"Fruit flies. They're going to use it as a fruit fly hatchery for Biology One."

"I wish I had a Bio One assistantship. No offense, George, but it's a secure job." Even Bonnie's voice was calm.

"I don't know," Clark said, "the work's too predictable. Boring as hell, raising generation after generation of fruit flies."

"Some people," Bonnie said around a spoonful of yogurt, "are better than others at fruit flies." She laughed, high and sharp, betraying a first sign of nervousness. "Your trouble is you're not committed to your work. I don't think you care. Take me, I'm the opposite. I'm dying to keep my job."

George looked at her. There was panic in there behind the brittle humor. He did not relish the prospect of her getting balky. What would he do if she tried to back out?

"I think we'd be best off if you went in with as calm an attitude as

possible. I'd like to see you in alpha before we put you under."

"In alpha! You think I can lie there meditating while you kill me? Look, if you want to talk about it, let's be completely frank with one another. Shall we?"

"Of course."

"Then I'll drop my act and tell you the truth. Yeah, you guessed it. I am scared to death! Absolutely."

She laughed again, this time without even the pretense of mirth. "S' funny, scared to death. But what if—" She stopped. The silence thickened rapidly. She stared down at her yogurt container. On the other side of the room Clark muttered numbers and worked with calipers, positioning the coils so that the fields they created would touch without overlapping.

"Are you afraid we can't bring you back? I just want you to think of the principles involved. You know you'll be returning. The physics is basic, so is the biology. Nothing's going to go wrong."

"Oh, George, you really don't understand, do you? Not at all!"

"Understand what? Tell me what you're driving at, then I'll see if I understand."

"George, what if something is *out there*?"

He restrained himself from laughing with relief. He had been afraid that he was going to have to cope with real death panic. But this sort of fear wasn't that bad. "Come on, now, you're a scientist and a witch. You *know* what's out there."

"Oh, no. I don't think you understand. I've enjoyed the witch rituals and all, but I was baptized a Catholic. They brand your soul at birth."

"Oh, Bonnie, come on. That's absurd. Belief is relative. Death will be exactly what you expect it to be."

"I just keep thinking, what if there really is a hell? And then I think, what if I fall in and I can't get out? I know it's stupid, it's highly unsophisticated, but there it is."

"That's what's scaring you?"

"That's it. I don't think I can help expecting some kind of Catholic hell. Or worse, a Catholic heaven, which is a form of hell where the good are brainwashed into wanting to sing at all times."

"You know what it's going to be like? Shall I tell you?"

"I wish you could."

"My dear, beautiful Bonnie." He caressed her cheek. It was so warm, so

soft—he kissed it. “I would never do anything I thought might hurt you in any way.”

He imagined her hanging from the ceiling, himself at her feet, and she comes down from her garrote transformed into a virgin of retribution and takes him at last to the black chamber.

The chamber in his basement.

No! Don’t think of that. Not now.

“You’re going to kill me, and I’m going to find out I’m still a Catholic after it’s too late. The Devil—”

“You know where that legend came from! The Homed God isn’t a devil any more than the Mother Goddess is a virgin. The King of the Netherworld and the Queen of Heaven are the oldest of seasonal deities.”

“I’m being sacrificed for a lark. So *you* can find out what it’s like.”

When he spoke, it was as if the words were formed by an outer mechanism, a device that had been made to seem human: “Oh, that’s low,” said the outer George Walker. “That’s a low blow. Let’s get our priorities in order here. I think that’s what we haven’t done. First, we are performing this experiment for a reason, and it’s an important one. The craft needs it. Constance needs it, and we all love her, don’t we?

Second, we will be giving mankind a new tool. A person killed in this way and cryogenically frozen could last indefinitely. What’s more we’ll revolutionize surgery, make ultra-long space voyages more practical.”

“Don’t patronize me! I’m scared, that’s all. I don’t know what I’m facing.”

Clark came over. “I hate to interrupt this charming conversation, but our electronics are ready.”

Bonnie stood up as if she had been sitting on a tack. Then she slumped, Clark caught her from behind.

“I know it’s stupid but I’m so scared I can’t move!”

George saw the tears brimming in her eyes. He had to act quickly. That was the merciful thing to do—and also, she might be on the point of changing her mind. “Hey, now, take it easy.” He sat her back down on her stool, “Clark, do you think you could bring in that swivel chair from the other room?”

When Clark opened the door to the animal room, the motion detector started warbling. After a moment he cut it off and came back with the chair.

“Better restart the detector. Don’t give them any chances at all.”

“Okay.”

As Clark went back, George moved Bonnie to the more comfortable chair. He stroked her hair.

“Because I’m a woman you think you can cuddle away all my fears.” Her voice was ugly and low. “Get me my cigarettes.” She drew herself away from him.

“The no-smoking rule—”

“Get me my cigarettes!”

He got them from her purse, held them out to her. When she took one, he lit it for her. She smoked in silence for a time, Clark came back and stood over them with his arms folded, his expression dark and analytical. The only sound in the lab was the intimate noise of Bonnie’s smoking, the crinkle of the burning tobacco, the blowing sound when she expelled the smoke.

“When I was a little girl, I went to Our Lady of Grace School right here in Maywell. It’s a lovely old school, run by the Sisters of Mercy. Sister Saint Stephen, Sister Saint Martin, Sister Saint Agnes. And Mother Star of the Sea.” She laughed. “Good old Mother Star of the Sea. I’m glad she’s safely dead.

Sometimes I still have nightmares about her.” Goose bumps appeared on Bonnie’s arms. “Oh, God, she’s waiting for me. I can feel it, she is! Mother, I’m sorry. Please forgive me. Mother.”

George listened to her exploring her private fears. He thought she might be an angel, this lovely girl, an angel come to torment him with her innocence. If she had risen up and taken him and jammed him in the coils, he would have let her.

“The thing is, it’s so easy for a Catholic to go to hell. I’ve got so many mortal sins. Hundreds.”

“You’re a witch. You’re in a coven.”

“Listen, a Catholic can go through a whole life, be all sorts of things. But when it comes time to die, the first thing that crosses your mind is ‘Dear God, where did I put my rosary?’ ”

“Sin is a relative thing, Bonnie. No church can tell you whether or not you’ve sinned. *You* have to believe it. That is one of the most freeing things I’ve learned from Connie.”

“You haven’t learned it quite right. What she teaches is that the conscience never lies. I’ve sinned, George, by the lights of church and craft alike. What if some devil captures me and never lets me come back?”

George didn’t like the drift of this. “Ready,” he snapped.

Bonnie took a long drag on her cigarette. “You wouldn’t believe some of the things I’ve done. Poor Mother Star of the Sea. I’m still guilty as hell about her. I guess I always will be.”

“What happened?” Clark asked. George could have choked him.

She snorted. “Baby boy, I’ve done things you would not believe. Things that would blow even your wiccan mind away.”

George laughed, trying hard to lighten this conversation. Casting about in his mind, he thought he had come across a way to reassure her and regain control of the situation. “Bonnie, do yourself a favor and forget Catholic sins. How about the real sins against humanity? I mean, like murder. Have you ever murdered anybody?”

Clark shifted on his feet. “Let her talk about her sins. It could be important.”

“Clark, please be quiet! Bonnie?”

“It depends entirely on your definition of abortion. If you say it’s murder, I’m six times guilty.”

That was a bad move, Georgie boy. Still, he kept fighting. “You’re as innocent as any other accidental mother! Abortion isn’t a crime, is it? An aborted fetus is simply somebody who didn’t happen.”

“Mother Star of the Sea always taught that hell is very, very small, because the souls in it are so turned away from God, so concentrated on themselves, that they’ve literally gotten tiny.” She looked at her cigarette. “The whole of hell could be hidden in one corner of a little coal was the metaphor she used.”

He had to pull her back to their shared hopes or he was going to lose her. “This is science, Bonnie. Our morality is that of science and craft.”

For the longest time she kept looking at the glowing end of the cigarette. “I think I see it,” she said. “Hell has come for me. It’s hiding in my cigarette.”

“I told you not to smoke. Now let’s get going.”

“It’s waiting for me.”

In a desperate effort to distract her, George took her cheeks in his hands, turned her face to him, and kissed her full on the mouth. He probed against her teeth with his tongue. She resisted, then she opened her mouth to him. He concentrated on the pleasure of the contact. No matter the circumstances, a kiss is a kiss.

“Bonnie, I love you. I love you too much to let anything happen to you. Let me tell you—”

“George, with all respect this isn’t going to work. I don’t think—”

“Hush! Don’t say another word. It can work and it will. You know in your heart just what will happen when I turn off your electrical functioning. You are going to go to sleep. Black sleep. Emptiness. Nothing.

Gone.”

“George, how do you *know* that? You can’t!”

“But I do! And so do you. And so does every human being. We live a little time and then we die and that is the end. Why do you think we’re so afraid of death? Because in our heart of hearts we all know it’s the end. No more George, no more Bonnie. Over. Done. That’s what scares us, not some medieval mumbo jumbo about hell.”

“So I’ll just be—like—asleep? That’s what you’re saying?”

“Exactly.”

She stubbed out her cigarette. “I don’t believe you.” A flicker of smile crossed her face. She drew George close to her, pressed her lips against his ear. “You be sure and bring me back, because if you do I am going to take you to my room and take off your clothes and love you senseless.”

“I’ll get a heart attack!”

“That’s me general idea, you old fart! I just want to make sure you don’t give up on me. I want total motivation.”

Here was the old Bonnie again, sexy and tough and humorous. Her words had really steamed him up.

Getting into her would be quite an experience. Quite remarkable.

He hoped it would actually happen. As time went on and he became more and more a beggar to the altar of womanhood, he had learned to control such hopes. But Lord, not even as a twenty-five-year-old Lothario had he ever received such a hot proposition. Not even from Kate, and he had married her.

Married her because she was soft and hard at the same time.

He wanted someone to twist the guilt out of his bowels even as they caressed him. As well as a woman, he wanted a judge.

Bonnie touched the chalked outline of her own body. “That lab bench is cold.”

“Think of how famous you’ll be. You’ll be on the cover of magazines. Personal appearances. TV. Lecture tours. For a while you’ll probably be the most famous person in the world.”

“Maybe I’ll even get to meet a few people where I’m going. Bring back the rest of *Answered Prayers* from Truman Capote.”

“Funny girl.” He glanced at Clark, gave him a quick nod that said let’s go.

Clark responded instantly. “I’m ready to wire you up, dear.” Bonnie was wearing jeans and an MSC sweatshirt. She pulled off the shirt without even a trace of embarrassment. She wore no bra, and her breasts were as succulent as the pears of autumn, Clark hardly seemed to notice, making George wonder for a moment if they might not be old lovers. But they weren’t, of course. They simply belonged to the unfortunate new generation, which took bodies for granted. Sex for them wasn’t dirty, poor suckers.

George helped her onto the lab bench. “It’s really cold in here,” she said. “Put a towel over me after you’re finished, okay, Clark?”

“Yeah.” He greased her ankles and wrists and attached electrodes, then taped others down on her chest, forehead, and neck. George wished he was the one doing it, especially that blushing chest. “You’re right, lemme see here.” Clark went over to the array of monitoring instruments. “Is the tape rolling, George?”

“No.”

“It’s set up,” Bonnie said. “I didn’t turn it on. All you have to do is press the ‘play’ and ‘record’ switches on the front of the machine.”

George found the buttons on the videotape recorder. When he pushed them down, the machine whirred.

He could see the tape inside begin to spin. “It’s running.”

“Right,” Clark replied. “Here I go. This is life signs monitoring for Bonnie Haver. I have the following metabolic signs. Heart rate 77, blood pressure 120 systolic, 70 diastolic. The subject weighed at the beginning of the experiment 128 pounds. She is a blond Caucasian female, eyes green, distinguishing marks a crescent-shaped scar on the left breast below the nipple. She is twenty-three years, four months, and eight days old.”

Clark was an efficient man. George nodded to him from his own station before the instrument bank. He ran the quickest on the coils, sending a brief jolt of current through it to test connections.

“Oh! I felt that!”

“Just the test burst. What did you feel?”

“Like I fell right through the table.”

“Good. That means it’s working.” George began to adjust power to the coils, making certain that there would be uniform voltages at all points around her body. He did not know quite what would happen if some part of it was not correctly nulled. What, for example, would be the implication of a

dead heart and a living brain? He certainly did not intend to perform that experiment on a human subject.

Clark continued. "I am now going to read out the electrical status of the subject. Microvoltage loads are well within the normal range. Brain readings are as follows: alpha, .003 microvolts; beta, .014 microvolts; delta, .003 microvolts; lambda, .060 microvolts; theta, .0014 microvolts. Oscillation rate is nineteen. The brain is in deltoid activity level. All indications are normal, and suggest a resting person, somewhat tense.

That completes this statement of the subject's current physical condition."

Now it was George's turn. "Thank you, Mr. Jeffers. The condition of the null-electric apparatus is as follows: the coils are all at uniform resting voltage of .00012 microvolts, equal to the ambient charge of the atmosphere present in the laboratory, as measured by the Forest-Hayward atmospheric voltmeter, calibrated to standard zero September 19, 1985, in this same setting. Since calibration no variances have occurred and no adjustments have been made. Thus I conclude that the instrument is accurate and the null-electric field is completely inactive at this time. A brief operational test confirmed by instrumentation and by subject perception that the field can be activated. That completes my statement of the condition of the instrumentation." He paused a moment. "I think, at this point, we might have the privilege of hearing from the subject."

"I feel more or less normal. My stomach's slightly acidic and I must confess that I'm tense. My breathing feels normal and unrestricted. I'm cold. I guess I'm also a little scared.", "Bonnie, are you willing to go ahead with the experiment?"

A tiny voice. Hopefully audible to the microphone. "Yes." At the moment the motion detector in the animal room began warbling. George felt a surge of blood; Bonnie jerked and gasped; even Clark raised his eyebrows. "Visitors?"

"I'll go," George said. "Just stay calm. Odds are it's a false alarm." His lie was mostly for Bonnie's sake.

"Remember, that motion detector was cheap." He had not told them of the pistol he had brought from home and he did not tell them now. But he drew his windbreaker on. The gun was in the pocket.

The door to the animal room was closed. George watched the knob to see if it was being turned from the other side. He reached into his pocket and grasped the pistol. Then he put his hand on the knob and began slowly

turning it himself. He was scared, but more than that he was mad. If he found any of Brother Pierce's crazies in there, he just might start shooting.

Clark appeared beside him. "Take it easy, George. If you're planning to use that gun, take it out of your pocket. It won't do you any good where it is now."

George was impressed not only that he had noticed the pistol, but that he seemed to know how to handle a situation like this. "You an auxiliary cop or something?"

"I'm a Burt Reynolds fan."

George hefted the pistol. "Ready, Burt?"

"Ready."

He opened the door.

And saw something so impossibly dreadful that it made him jerk back. All the anger boiling in his soul threatened to erupt. He hated, hated, and yet—

Cat of fire, burning across a summer night of youth, cat of torment—

It sat, as black as space and enormous, on the windowsill. The window behind it was locked.

"Maybe it's a stray," Clark said. He went over and turned off the motion detector.

George managed to force words from a chalky mouth. "What's it doing in here?"

"Maybe it's been here all along—in a cabinet or something. Sleeping."

George stared at it. The thing was really huge. "What is it, some kind of a throwback?"

"Probably got a little wildcat in its genetic mix."

"Well, I'm going to get it out of here. I hate cats. They're vermin, as far as I'm concerned." He stuffed the pistol in his pocket and moved toward the animal, which promptly arched its back and hissed. Loud.

"Unwise move, George. That cat prefers to stay."

"I can't use the motion detector with that thing wandering around in here." He held out his hand. "Kitty?"

Sssst!

"Most unwise move. Maybe if we went over to the gym and found a badminton net, we could throw it over him—"

"All right! I get your point. We'll lock the door between the rooms and worry about it later."

"My thoughts exactly. The experiment will only take three minutes."

Nobody's going to stop us in that short a time. They couldn't even get the door broken down. So we're home free, right? If we stop delaying."

George closed and locked the door. He kept his windbreaker on, though, with the pistol close at hand.

When he brought in the motion detector, he had checked every nook and cranny in that room for stray frogs. He had looked in the cabinets, even under them. The room had been empty.

"Okay, Bonnie, we are going to start. Please report your out-of-the-ordinary sensations, if any."

"Nothing so far."

George flipped the seven switches that activated the coils. He began turning the rheostats. "Establishing a voltage base at .17 microvolts."

"Oh. Ohhh. I definitely feel that. It's a tingling."

"Blood pressure down to 110 over 68."

"I'm sort of—all floaty. Oh, this is weird!"

When she stopped talking, George was startled to hear the distinct growl of a cat. He frowned, tried to look over the top of his instrument panel toward the door to the animal room. Although he could only see the top half, he could tell that it was very certainly closed. God, did he ever have the jitters. Cats were loathsome creatures. They needed to be drowned, every one of them. Or to be set afire and left to run like meteors in among the old sycamores of home. How his own cruelty disgusted him.

"Microvolts to .50."

"Blood pressure 80 over 66. Brain to alpha."

"I'm kind of sleepy and I sort of have this tickle in the middle of my chest where my heart is. And it aches a tittle." Her voice cracked. "All of a sudden I feel sad."

"Microvolts to .75. Damn!" Just for an instant he had seen the eyes of a cat hanging in midair over Bonnie. Glaring down at her.

"What is it?"

"No—forget it. I thought I was getting a bad reading But it's okay. Fine." He tried to slow down his own thundering heart, to control the sweat tickling his top lip. "Bonnie, can you hear me?"

"Mnun?"

"She's showing theta peaks now, George. Oscillation is only five. She'll be unconscious in a few more seconds."

"Microvolts to .90."

“Blood pressure dropping. Theta dropping out. Oscillation null. Intercranial activity null.”

“But you still have some blood pressure?”

“Twenty over five. Dropping slowly.”

“Microvolts to 1.00.”

“The heart and blood have stopped. The brain has stopped. Dr. Walker, clinically Bonnie has died.”

George looked across at the still form on the bench. She was staring sightlessly at the ceiling. On her face was an expression that stunned George silent.

Had she, too, seen the eyes of the cat?

Chapter 12

Bonnie fell out of the world. She felt her blood forget her, her heart forget her, her brain forget her, her bones forget her.

Throughout life the body holds on to the soul. Death is a forgetting, and when the body forgets, it loosens its grip, and the soul falls out.

That is the simplicity of death.

It was so dark and so hollow here. There was no noise, no smell, no *feel*. And yet its hollowness was very, very huge.

Something was chasing her.

“Why am I still awake?”

She answered her own question, and at once: because you expected to be. Death is whatever you expect. If you expect heaven, you get it, or hell, or nothing. And you are also your own judge: you give yourself what you deserve. The fundamentalist creates his own hell, the Catholic his purgatory, the agnostics wander empty plains, muttering to themselves.

As she had died, a cat had come leaping out of the ceiling, Now it was behind her, stalking her. She sensed that it was dangerous. If she refused to believe in it, maybe it would disappear. Maybe it would stop chasing her down the hall to hell.

Torquemada burns, Sartre stalks in gray oblivion, Milton ascends dismal glories, Blake leaps with his demons.

It is all the same to death.

Helpless to change her own deepest beliefs, Bonnie joined her fate to that of the human majority. This was the death she contrived for herself: the big black cat came leaping and snarling toward her. As it got closer it got bigger and bigger and bigger.

She could not scream, not even when its face was the size of the risen moon, and she saw galaxies behind its eyes.

It roared, and she looked down its throat. She did not see a black carnivorous maw, but rather a long corridor, somehow familiar. A woman was walking this way along the familiar green linoleum floor.

Bonnie opened her eyes wide, staring in disbelief at the absolute reality of the linoleum, the glossy green paint halfway up the walls, the jittering fluorescent fixtures on the ceiling.

This was Our Lady of Grace School, circa 1973. “No, please, it can’t be.”

The oncoming nun was a juggernaut of black and white, the whimple framing a face made of prunes and daggers. Bonnie wanted to hide, for she knew who this skeletal creature was.

“Mother Star of the Sea!”

“Exactly, my dear. Come with me.”

“What happened to the cat?”

“Never mind that.”

Bonnie looked at the hand held out to her, the awful hand made of weathered, gnawed bones, glowing inwardly with fire where the marrow should be. “No! Get away from me!”

“Deep in my wound. Lord, hide and shelter me!”

“I hate ‘Soul of My Saviour.’ Don’t sing it to me.”

“Why, Bonnie, I’m dismayed. Our war really ended with ‘Soul of My Saviour.’ Don’t you remember?”

“I don’t!”

“Oh, yes, Bonnie, you do.”

With a rattle of tiles and jangling of fixtures the hall swayed and re-formed itself into the seventh-grade classroom.

“I tried hard,” Mother Star of the Sea snarled. “I’ve been eagerly awaiting my chance to deal with you.

Now, watch this.”

The classroom spun into full existence. They were all there, Stacey and Mandy and Patty and Jenette, the whole gum-popping crowd.

Bonnie sat in the next to last desk, Stacey behind her. “Having fun, Bonnie?”

“Shut up, Stacey, Mother will hear you.”

Mother in her glory sat reading, officiating at study hall. Bonnie was enjoying herself and did not want her fun to be ruined by Stacey’s meddling. She fixed the image of Zack Miller in her mind, the image of him sweating over his mop and bucket in the girl’s bathroom just when she happened to be peeing and sort of left the door open and—

“Oh, Bonnie, you’re *doing* it.”

“Shut up! Mother might hear you!”

“She can’t hear or see.” Then Stacey’s cool, fat hand was reaching around the back of the desk, slipping under the elastic of her skirt, going down to meet her own fingers. “Where is it?” Her whisper seemed to Bonnie to carry across the study hall. Mother SS remained engrossed in her Breviary.

“No! This is a sin!”

“I can make it feel really marvie, ask Ellie and Jill how good I am. I’m the best in the class.”

“Get out of here! This isn’t even youryouryour...” But it was her business, the intimate touch.

“This is a sin!”

“Only for Catholics. I’m a Unitarian, remember. My mom and dad tell me it’s okay if we’re in private.”

“The seventh-grade classroom is private?”

“The back row. She can’t even see this far. Consider us behind a curtain.” The other girls tittered and glanced, and Jenette stared openly, cracking her gum in rhythm to the jiggling of the two desks.

Stacey was terribly good, so good that it was some time before Bonnie became aware of what all the other girls had known from the moment it began to happen.

There was a shadow cast across her desk where no shadow should be. “Mother Star of the Sea!”

The punishment was severe: you may not continue at Our Lady of Grace, no, you will be left forever to your sin and struck down in anathema for your sin. In the eternal agony to follow. God will remember how you did this *unattractive* thing in study hall.

—But it’s not a sin! This is the twentieth century!

—You go to Our Lady. Therefore it is a sin—

The worst part of the punishment was the first note home, the sheer disgust of parents, the sneering laughter of the despised younger brother.

“In view of the fact that we do not have the budget to provide a psychologist, we simply cannot allow students with these tendencies to attend Our Lady. We would suggest that Bonnie enter PS 1 as soon as possible, and that she take advantage of their counseling program.”

The expulsion lowered her in the estimation of her father, it embittered her mother. It would mean spending the balance of the year in the virtual prison that was PS 1, a girl with a history of the unspeakable, watched constantly by the human raptors who circled those bitter skies.

Bitter Bonnie did a worse thing to her tormentor: “Mother SS was in on it!”

“What’s that?”

“She—she—” Burst into tears, play it for all it’s worth. “Mother taught us

how. She does it to herself.

She made me—made me—” Another burst of tears.

Her father stormed over to Our Lady, had a fiery meeting with the principal, Sister Saint Thomas. Poor Mother Star of the Sea. Once she had been principal, had been demoted on some hazy canonical basis.

Now this new cloud.

Bonnie was reinstated. Her first day back, what pleasure, she walked the halls surrounded by a surging pack of girls, while Mother Star of the Sea wept silently, standing against the wall near the chapel. The old lady could not even continue out the year, she who had loved the girls and had such hope for them—

Retirement will be a form of execution, slow but certain. Still, at this moment in time she remains a teacher, will be until the end of the week: she must teach the killing child her music:

“Oh, brother. Mother, not ‘Soul of My Saviour’ again!” ‘Twas on a cold and rainy afternoon in October, dear. You had already destroyed me, but it remained my responsibility to teach you. How I prayed for a miracle. ‘Let her confess,’ I prayed.

“All right now, girls, in the key of G, and briskly, please.” Snick, snick, snick, ruler against the edge of the desk. “Ah-one, ah-two, ah-three!”

“Blood of my Saviour, bathe me in Thy tide;
Wash me ye wa-ters, gushing from His side!”
(Olay)

“Stop! Who said that? Who said that horrible word! Olay, indeed! You dare to mock Our Lord’s suffering? Who was it? You? Was it you, Stacey Banks? Or you—yes, you, Bonnie, you black-souled beast! Bonnie, that was a sin’. No, don’t put out your hand, dear.” Mother Star of the Sea smiles. “Live with your sin!”

Bonnie can see now, she can see Mother Star of the Sea’s face, and it is the face of despair, so infiltrated by hate that it lives on even though—”You’re dead!”

“So what? So are you. We’re both as dead as doornails.”

“I’m going back! George is going to bring me back!”

“You sinned against me. You destroyed my career and my life with your accusations. I wasn’t the best teacher. God knows, not the best nun. But you

destroyed me. Don't you want to atone for that?"

"George has a machine, he's taking me back."

"You, my dear, are falling through nowhere at the rate of ten million light-years a second. No human agency has the power to get you back to your body. You are dead."

Bonnie tumbled over and over and over through all the terrible deaths of her memory, the death of her mother with the stone weight of the cancer in her stomach starving her crazy and making her throw up at the same time, through me deaths of her own babies interrupted in their amniotic heavens by long steel, then more deaths and more: people burning, drowning, falling, the life being crushed out of them, knives hacking their guts and bullets shattering their thoughts, ruin racing through the body of me world as cheerfully as a capering clown.

Merciful God, does death mean this?

Bonnie realized with a shattering burst of passion that she *wanted* the hell toward which she was falling.

She looked at her own soul, looked closely at it, and thought she must never, ever look anywhere but at that one flickering dot because it was something, after all, something in this horrible black hollowness. Its light was so very cold. But it was not *nothing*, not like what she was falling through.

She wanted to atone. Poor Mother Star of the Sea!

"So, children, that is why C. S. Lewis described hell as tiny. The souls within it are so concentrated on themselves, to the exclusion of God and all else, that the whole of Satan's Lair could fit in a single crumb of the coal on Father Flaherty's cigar."

"Yes, Mother Star of the Sea." (Olay)

"Who said that? I'm getting awfully *bored* by your olays, Bonnie. Please, haven't you done enough?" In the eye, a tear.

"Olay!"

"You impudent little—go stand in the hall."

Confessional, Our Lady of Grace Parish; "Bless me. Father, for I have sinned. I—am—Mother Star of the Sea's—*lover*, Another nail in an already sealed coffin. Just for the fun of it."

"Whaa-a-at! Who's this? What'd you just say?"

"Even though she's been caught, she still won't stop. Father, she—she—"

"Yes, my dear, pray to Our Lord for guidance."

That was the end of Mother Star of the Sea, right then, that day. Pack your

two black bags and off you go.

No more music class, no more “Soul of Our Saviour.”

“You wretched girl, you not only got me retired, I was anathematized by the Order. How I suffered! I didn’t have anything to eat!”

“You were strict. You were mean.”

“Not as mean as you! You ruined my life. All I did was make your palms sting. Because of you I did sm.

Yes, I sinned. By my own lights, I sinned. I got mad at their refusal to listen to reason, and I did break my vows. I spent the last four years of my life working in a Woolworth’s and going to the movies on Sunday. In my bitterness I denied the Church, I denied the Risen Lord, and I did it because of the cloud your accusations had spread over my life. Now I’m here, because I cannot believe that my denials weren’t sins.” Her long, thin fingers came forth, skillful narrow things that twined in Bonnie’s hair and slipped coldly behind her ears. “I’d really like a vacation. Now you’ve come, I get one.”

The cat surrounded them like a shadow, its flanks seething, its eyes everywhere, in their hearts, in the most secret places of their souls.

Mother Star of the Sea’s soul shivered and shifted, becoming a cloud of hot needles that swirled about Bonnie’s head. “I’ve got to get free,” the needles whispered and hissed. “Just for one delicious, precious second!”

“But you’re here for the long pull, aren’t you?”

“You’d deny me my respite? You don’t know what this is like!”

“I’m going to be leaving soon. Just passing through.”

“You’ve been here a million years already. The world’s gone. It ended. The sun blew up thousands of years ago!” She rasped and swirled, crazed by her passion to escape. “Hell is being condemned to time for all eternity. It never ends and it is never pleasant. Of the two of us, you committed me greater sin, and you must pay the greater price.”

Bonnie tried to back away. George had told her this would be like sleep! How arrogant of him, how absurd.

It is not what the mind thinks that creates the afterlife, but what the unconscious believes.

And the unconscious never lies.

“George, where are you? George!”

Mother Star of the Sea reappeared out of the snickering, jabbing swarm of needles. “Yes, George, I want my vacation and I want it now!”

As if behind the screen of the cat’s eyes Bonnie saw George tinkering in

the lab. “Hurry, hurry.”

“Oh, yes, George, I’ve got my valise packed. Ah, what fun!” The electric wind of George’s device shattered into the nothingness, negating for a moment the whole primacy of death.

Somebody was carried back into Bonnie’s body on that wind. But it wasn’t Bonnie. No, Bonnie went down deeper, to a charming place centered by a certain gingerbread cottage with a particularly vile stove inside. Yes, indeed. Hansel and Gretel aren’t the only ones to have visited there.

It was somebody else who reinhabited her body, fitting into the glimmers and flickers between the nerves where the soul is hidden. She came to do the will of her tremendous master.

The cat had a use for her. Just for a little while, she would slip through the weave of life, doing the bidding of the gods.

It was not Bonnie who returned to that lovely body on the lab table. No, it was Mother Star of the Sea, of course. And she had not come back for fun.

Chapter 13

George stood over her, looking down at Bonnie. As the last of her living flush faded, he touched her face.

When she was this still, he could really see her beauty. His body stirred as it had not since Kate. Kitten Kate.

“George?”

Bonnie’s hair was golden, very beautiful.

“George, she’s been down long enough.”

Bonnie, Bonnie. Pretty Bonnie. How cool her skin was becoming, how like alabaster. How perfect.

“The blood’s going to pool.”

George bent down between the gleaming black coils, drawing closer and closer to her face. He inhaled the fading sweetness of her skin, then kissed her cheek, lingering his lips against the softness. Bonnie had the nicest down on her cheek. He laid his lips on hers.

“For God’s sake, George, we’ve got to bring her back. There’s going to be irreversible brain damage in a minute.”

Bonnie was perfection.

“George! It’ll be murder, I swear!”

Clark could be a hell of a bitch. George went back to his instrument panel. “I’m going to go with a slowly ascending level rather than the quick jump we used on Tess. I think maybe we’ll get a more stable electrical response from the brain that way.”

“Just do it. Right now!”

He began raising the voltage levels in the brain.

“Am I supposed to get a reading?” Clark called from his station.

“Of course.”

“I’m not getting a thing.”

“Christ.” George glanced over at her. What on earth had made him wait so long? She had been unexpectedly beautiful dead. He had not been prepared for that. He raised the voltages to their full output levels. “Now?”

“Leave it on! Try artificial fibrillation. Maybe if the heart would restart—”

George rushed to the lab bench, pulled the fibrillator out of the wooden case on the floor. The thing wasn’t even plugged in. He had been that careless. He felt like a criminal. Shaking, fumbling, he got the piug into the

socket and held the electrodes against Bonnie's chest. "Give it a shot, Clark!"

The device snapped and jerked in George's hands. Bonnie's lungs expanded with a whoosh.

"No heartbeat!"

"Hit it again. Oh, *Jesus*'."

The fibrillator snapped again. This time there was a gargling sound from Bonnie's throat, "Clark?"

"I think I got—yeah, there's one. There's another! She's starting! We have a heartbeat."

"Bonnie! Bonnie!"

"D-d-d—"

"Bonnie, come back to us! Come back!"

"Heart rate 45. Blood pressure 55 over 30. She's responding, George. I hope to God there's no brain damage."

Her eyes were fluttering, her mouth working. She coughed, gasped, jerked her head from side to side.

"Bonnie, baby, Bonnie, *baby*."

"I'm gonna—" She tried to lift herself, failed, then made a mess all over George's beautiful equipment. He groaned to see it.

"Bonnie?"

"Yeah?"

"Come on, honey, let's get you out of there. Clark, give me a hand." While Clark removed her electrodes George got some paper towels and cleaned her up as best he could. Together they sat her up. She swayed, dangling her legs over the edge of the bench.

"My feet are asleep," she said.

Had George heard correctly? Was that Bonnie's voice?

"My dear," he said, "what a low voice you have."

When she looked up at them, George was confused. In a way that was hard to define, her face was not right. Her cheeks, which had been rounded, were now drawn inward by a tension that had not been there before. Her lips were held in a prim, angry line. And her eyes—she had a predatory look.

"Oh, my God," Clark whispered.

"Bonnie—what strange eyes you have. Do you feel all right?"

"I'm a little woozy, but I think my circulation's getting better." She stepped to the floor. "There! See, I'm okay."

Something was not right here. The voice was radically different. And her

face, her eyes... he didn't understand.

"George," Clark said, "come in here." He nodded toward the animal room.

"What about that cat?"

"Never mind the damn cat, just get in here!" Clark closed the door behind them. "What's wrong with her?"

"I don't know."

"Something's terribly wrong with her."

"I—what can I say?"

"Look, man, we're getting in trouble here, you and me. Careers are on the line." He paused. "The whole damn thing is videotaped."

George saw where he was leading. "We've got to help her. She's the main consideration."

"I'm a biologist. I can't help her. George, I'm telling you right now I'm pulling out of the project. Right out.

I don't care what happens with my degree. I don't care what Constance thinks. In fact, I'm reporting to her that the whole experiment is a failure and we've got to shut down. If you ask me, you're going to end up in jail or sued by outraged relatives before this is all over."

"Clark, just take it easy. It isn't that bad."

"That isn't Bonnie in there, you know it as well as I do. It's something else—something we've unleashed."

"That's an unsupported value judgment. The only thing that's definite is that there is a change of expression."

"A change of expression? The woman has another face, somebody else's, voice. She sounds like an older woman. A different woman."

"There's no proof that these effects are related to the experiment. They might have happened anyway."

"What a load of—you can't seriously advocate that! The girl was fine before we did this to her. Normal in every way!"

"There was nothing in the experiment that could have caused the effect we're apparently seeing. And I must stress that we've hardly had a chance to evaluate her. Probably we're dealing with minor sequelae to the blood pressure changes. My guess is they'll pass off—"

A scream pealed in the lab. When George threw open the door, Bonnie was reeling around the center of the room with the cat on her head. Its claws were in her hair, and it was trying to reach her throat with its teeth. "My God!"

George was revolted. A human being touched by a cat. And yet the

suffering involved in being bitten by those teeth would be so extreme that it would be fascinating. He fought to get his hands under control enough to grab at the loathsome thing.

At last he did it, felt muscles pulsing beneath its skin, heard its hissing, smelled its breath like an electrical fire. He got the head and pulled it back away from Bonnie's neck. Claws savaged his hands as he dragged the cat off her. It writhed furiously, screaming, its head turning and twisting, claws slashing.

Clutching the scruff of its neck, he took it into the animal room and tossed it into the empty monkey cage.

"This is crazy!"

He returned to the lab to find Clark standing at the door, staring down the hall. Bonnie was gone.

Mother Star of the Sea had to get moving. The damned cat was going berserk with impatience. There was no time to waste, not a single second. You took hell with you, even on vacation.

She did exactly what she was supposed to do—she ran. She did not know where she was going or even why she was here. That wasn't her business. She Just had to run. It that had brought her here would direct her movements.

There was one thing, though, she wanted to do on her own, and she wanted it so desperately that she risked the wrath of the cat for it.

For all the time she had been dead, she had been longing for one simple thing that was only available in life. Her last one had been stolen by a nurse's aide on the cancer ward at Perpetual Light Hospital. Her very last one, and she had done her terminal suffocation without even the small pleasure it would have brought.

Mother Star of the Sea fumbled in the pockets of Bonnie's jeans for some change. Thirty cents. Good.

She crossed a two-lane highway and went down into the familiar old town, looking for the right kind of store.

Bixter's. Of course. She went in. At the counter was a display so beautiful she almost wept to see it. With a trembling hand she picked out from among the stacks of M&Ms and Hersseys and Oh Henry!'s a lovely, fat, fresh Snickers bar. She shook as she held her coins out to the girl at the register.

"Thirty-two."

"Excuse me?"

“Thirty-two cents. A Snickers is thirty-two cents.”

Mother Star of the Sea wasn't really surprised. Her guilt didn't miss a trick. She was here, sure, but she had no intention of letting up on herself. Her suffering would stay with her. She knew better than to try and steal the candy. What would happen then she couldn't even guess, but it would certainly be worse than not getting the damn Snickers at all. “Too bad,” she croaked. She put it back and left the store.

As she walked down the street, a little bit of hell amid all these happy souls, she found she hated them.

They ate, they slept, they fornicated—and she couldn't even have a goddamn candy bar. Mother Star of the Sea begrudged them their silly, complacent lives. What a joke it all was. They thought they'd die, most of them, and face some sort of judgment. Saint Peter or whoever.

You could say not guilty, but it didn't matter a bit if you *knew* otherwise.

I am now walking around in a body I once hated with a passion so great it drew tears to my eyes. She looked down at the hands. They were smooth and pretty now, but in 1973 they had been plump, warty little things. Had she ever ruled them? She didn't recall, but she certainly hoped so. She raised one to wipe her nose. The arm was stronger than she had thought it would be, and she almost knocked herself out. Staggering, she recovered.

She was in here and she couldn't get out! How *horrible*. How funny.

Maybe I'm crazy. Perhaps I'm really Bonnie, but I *think* I'm the old dead nun. I'm Bonnie, and I've become my own guilt.

This speculation made her hate the people around her even more. In a few minutes the distance between her and her fellow human beings had become as wide as the black eternal pit into which she had fallen.

How she hated them, those bright faces, those innocent eyes, those sexy curves and jutting trousers. Two children passed. Their faces were smeared with chocolate. She smelled the aroma of Snickers on their sour children's breath. She would have gleefully roasted them over a slow fire.

As she walked along she noticed a trail of ants winding its way across the sidewalk. They were helpless.

Unlike the people, they could be hurt. She pranced up and down, stomping them to ant butter.

“Are you all right, miss?”

A cop. “Yeah. I just don't like ants.”

“We got a lot of 'em this year. I been puttin' out them ant motels at my

place all fall.”

She crossed the street. Wherever was she going, anyway? Hell if she knew. Let the cat take care of it.

The cat always knew just what it wanted. If you refused or hesitated in hell, The damn thing became a real tiger.

Something buzzed in her left ear like an enormous wasp, perhaps a cat struggling to make human sounds.

The words were clear enough, though. They told her just what was next. Cross Ames and walk a block farther on. Then take a left on North Street, down a block, and there it would be, huddled up against the back of the Tabernacle, Brother Pierce’s shabby old Airstream trailer with “God Is Love” painted down the sides. She arrived panting.

“Brother Pierce? Brother Pierce, are you in there?”

She hammered on the screen door that had been attached by coat hanger wires to the frame. The interior of the trailer was dark and quiet, warm from the sun despite the chilly day.

“Brother Pierce?”

She opened the screen door and stepped in. The trailer was not large. One side of it consisted of a reeking, unmade bed, the other of a desk and plastic-covered table littered with dishes.

She was careful to close and latch the door. The places where the cat’s claws had penetrated her scalp burned like fire. She didn’t care to encounter that creature again.

This was certainly a dreary little hole. Hot. Stinky. She cast around for some cigarettes, found a stale-looking pack of Saratoga 100s, put one in her mouth. Amazingly enough, she also located a book of matches. At least she would be allowed *some* small pleasure. But when she saw that there were just two matches left in the book, their phosphorus tips crumbling, she didn’t even try to light one. What was the point? Without further ado she tossed cigarette and matches over her shoulder.

The voice had not told her what she was supposed to do here, so she stood, as inert as an undirected zombie.

As the minutes passed, Mother Star of the Sea came to seem less a self and more a memory. Bonnie was returning, the old nun dissolving away. It occurred to the reappearing woman that the Mother Star of the Sea delusion could be an unexpected consequence of her temporary death.

It made her feel cold and clammy to realize that she had memories from

the time she had been dead.

Death hadn't been blackness or emptiness, not at all.

It had been Mother Star of the Sea and... oh, dear.

That problem. But she hadn't—or had she—ruined Mother Star of the Sea's life?

She certainly had. And she had gone to hell for doing it. In a little while she was going back. Forever.

Mother Star of the Sea was standing in the back of the trailer, her habit billowing like great wings. There was a great pile of whiskey bottles behind her.

Bonnie rushed wildly from the grim apparition—and into the arms of a short, fat gasping man who was on his way in the door. “I got to see Brother Pierce,” the man wailed.

“He's not here.”

The man wrung his hands. “I got to see him!”

“You'll have to wait.”

“I can't wait! No time.” She heard brakes squeal around the side of the trailer. “Oh, Jesus! Tell him there's gonna be a witch ride through the town tonight. Big secret, we ain't supposed to know! Tell him!”

Three more men hurried around the trailer. Then fatso was off, puffing and blowing, his pursuers close behind. Their car came swinging around the corner raising dust, driven by a fourth man.

A witch ride? She could never say that!

“May I help you, daughter?”

“Oh.”

“I am Simon Pierce.” He did not smile so much as reveal his teeth.

“I—” She wanted to tell him she was just leaving, but she couldn't very well do that. This was his home and she was standing right in the middle of it.

“I ask that members of the congregation never come in here.” He chuckled. “I am an inveterate bottle collector and some of my prizes are very delicate. Worthless, of course, except to me.” He stared at her, his eyes full of calculation. “Who are you, daughter?”

“I'm—a messenger! I have a message for you from, from—” She waited for the buzzing voice in her ear.

There was only silence.

“Bill Peters? Bill sent you?”

She had to think up something. “That’s it,” she babbled. “Bill sent me. He said to tell you there’s going to be a witch ride tonight.” It had burst from her on its own.

“Bill said that? Where is he?”

“Some men were after him—”

“Say no more. Bless you, daughter! You have brought me gold. *Gold!*”

So this was why she had been sent here. The cat of hell wanted to be certain that Brother Pierce knew about the witch ride.

He strode past her and got on the phone. Her last sight of him was of his back as he bent over the instrument, talking with excitement and relish. She had to get to the lab right now. She was remembering an incredible wealth of detail, and she had to tell George. Mother Star of the Sea, indeed. Guilty secrets of the dead.

She hurried up North Street to the place where it forms a triangle with Meecham and the Morris Stage Road. Bonnie was a careful girl. She negotiated the Meecham part of the crossing and paused on the pedestrian island, waiting for a break in the MSR traffic. She waited for some time. This was the commuter hour, and there was a steady stream of cars coming back to town from their day’s journeys.

There was a loud feline growl behind her. She whirled, shocked. All she saw were eyes and teeth, hanging in the air. But the eyes were glaring things, and the teeth curved like tyrannic fingernails.

She hurled herself away from the horror—and into the middle of the Morris Stage Road. The last thing she saw was the onrushing grillwork of a huge Lincoln. Mike Kominski didn’t even have time to swerve.

Her message delivered, Tom returned the messenger to its eternal abode.

Chapter 14

THE WILD HUNT

The moon had risen high, casting its light upon the mountain. Mandy stood beside the house with Constance, holding her cold, dry hand and watching the golden sickle in the sky.

“I want to stay here forever, Constance.”

“Yes.” There was shyness in her tone. Despite the march of years she had much still of youth in her “But you must be certain Would you give your life for it?”

Mandy raised her eyebrows, regarded Constance. “I’ve teamed to be suspicious of questions like that.”

“Well, no need to answer just this instant. You’ve been given a reprieve The ravens are announcing a visitor.”

Mandy heard their gleeful blaring babble of half-aware voices. She could detect the pleasure and excitement in their tone. “They know the visitor. Somebody they’re glad to see.

“Very good, dear. You’re learning how to listen to them.”

“Just the tone. Not the words.”

“The two are one and the same among birds. If you’re careful, you’ll hear the celebration in their greeting.” She smiled. “Ravens only celebrate one thing, and that is food. So we will find that our visitor is feeding them as he comes up the road.”

“He?”

“The female’s voices are sharpest. It’s a he.”

They went back inside and down the long central hall to the front of the house. Ivy had not yet lit the candles. That wouldn’t occur until the moon cleared the trees. “It’s nice to do things that remind us this old planet *rolls*,” Ivy had said. “It’s going somewhere, and we’re going there, too.”

Rise of moon, setting of sun, tumble of stars, all were noticed on the Collier estate.

A man in hat, down jacket, and snow boots was just mounting the final rise to the house. As he walked, he tossed bits of something to the darting, gleeful birds.

Mandy was no longer so desolate about the work they had destroyed. One glimpse of the *Leannan* had made her past efforts seem callow, at least the efforts at fairies. Their destruction was a grace; she would not have been able to bear them now.

“Well, look who it is. Ivy! Robin! Your father’s come for a visit.”

As she and Constance watched him making his way up the walk in his cloud of ravens, Mandy heard a rattle of footsteps from the house. A moment later Robin and Ivy burst past them and met him at the steps. With a cry of happiness Ivy threw herself into his arms. “Dad!”

“Hey, baby! Hiya, Bill.”

“Their outside names are Margaret and Bill,” Constance commented. She offered no further explanation as their father stomped the snow off his boots on the wide front porch.

“Lord, Connie, why don’t you get somebody in to plow that road? Tumbuli’d do it for a hundred bucks.”

“Hello, Steven. Come on in and dry your boots by the fire. We’ve got some hot mulled wine.”

He tramped through the door rubbing his hands. “Nobody mulls wine like you people,” he rumbled.

Mandy was fascinated. Robin had talked about the danger of outsiders learning too much, but here was one outsider who seemed familiar enough with them.

Ivy soon brought wine in steaming mugs. “Oh, that is good,” Steven said, leaning into the warmth. His face, reflecting the firelight, communicated strength and gentleness. His eyes were set in tangled brows, but the way they twinkled suggested that he did not take the witches quite as seriously as they themselves did. He seemed so at peace, so accepting. She could understand why he was trusted here.

“Snow in October! We had three inches down in the town.” He looked askance at Constance. “Sure is unusual, snow in October. I wonder if *she* was as surprised as we were.” He chuckled. “It is beautiful, though, the white against the autumn colors.”

“It’ll melt.”

“Good! I can get my compost finished. Say, she didn’t tell you when, did she?”

Constance risked. “That is no business of the Episcopalians.”

“Hell, Connie, I’m not just a church deacon. I’m also a gardener. I need to

know. And you got my kids, you old witch. I think I'm entitled to a few favors."

"Steven, I'd like you to meet Amanda Walker. She's going to be with us from now on. Amanda, this is Steven Cross. He's my neighbor across the road."

Mandy smiled. She knew the name Cross, of course. It was one of the old Maywell names. There had been Crosses in the Founder's Excursion in 1702. Mother Star of the Sea had drilled that into their heads in History, along with the equally important fact that two of the founding families, the Stemleighs and the Albarts, were Roman Catholic.

"My Lord, you do get the pretty ones." His big hand lingered in her own. Then he turned his eyes on Constance once again. "I thought I'd better come up." His voice lowered. "Something happened last night." He cast a significant glance in Mandy's direction. "Pretty serious."

"She can hear. She's going to team it all."

His eyebrows shot up. "You mean she's the new—"

"That's right. But don't congratulate her yet, she only just survived the first challenge. Now, why did you come? What's happened?"

"About midnight last night I noticed a lot of traffic out on Bridge Road. I went down the front walk and took a look. There was a regular procession, Connie."

"Who?"

"Brother Pierce has gotten wind of something."

"Maybe he's managed to slip a spy into one of the town covens. I wouldn't be surprised. That's the way it usually happened in the old days."

"I hope none of the ones who use our facilities."

"I doubt it. The covens that meet at Saint George's have been going for years."

"How about Leonora Brown's group—"

"The Priestess Quest. She is rather new at it. Have you met any of her coven?"

"The rector says it's a good group."

"And your Charlie knows people. No, I don't think my problem is there. I'd be more inclined to nose about the Kominski group. She's got three covens now. I cautioned her about growing too fast."

Steven smiled. "You folks sell ecstasy. That's a hard thing to beat in this day and age. People want to join, Connie. I don't think you realize how much

you're affecting me life of Maywell. Far more than you did even five years ago."

"I realize it. Never assume I don't know what I'm doing. And my people can keep their secrets."

He tucked his chin into his chest. His eyes were no longer twinkling. "Please forgive me, but I beg to differ. Not only Brother Pierce but everybody else in town knows there's some kind of a big do on tonight."

"Of course. They have to know."

He rocked back with surprise. "What? Oh, Connie, come on!"

"The essence of the ritual is danger. If it wasn't dangerous it wouldn't work. To be real, magic must be serious. We aren't playing games here."

Mandy listened with the utmost care. She believed these words.

Cross's voice rose as he spoke. "Connie, I don't think you understand what your people are doing. They're *recruiting* all over town, even in the churches. Even from Pierce."

"They aren't recruiting. We don't recruit. Witches are rare. It takes a very special person to become a witch."

He shook his head. "Whatever, you're going public. Connie, you people are way out in never-never land and this is a very conservative little town."

"There's a long tradition of toleration here in Maywell."

"Maywell is a Christian community, of course it's tolerant. Except for Pierce, that is. And he is far from tolerant." Steven stopped, looked a long time at the floor. Finally he spoke again. "You're in danger. All of you. This business of public rituals is highly irresponsible. And the recruitment—"

"We do not recruit!"

"Whatever it is! It's going to get you in trouble, mark my words. You've got families breaking up over this thing. Let me tell you how Maywell thinks of you. The tolerant ones—us, the Catholics, most of the established churches—still figure live and let live, but the more noise you make the more uneasy we get.

As for Brother Pierce's followers, watch out. They're running around with torches in the night, my dear."

Connie smiled softly. "We have to do what we do and be what we are. Nobody really has a choice in such matters. If it means that we lose the toleration of the town, then that's what must be. But we love you and respect you. Carry that message to your congregation, Steven. Wilt you do that?"

"You know I'll do what I can. But my strong sense of it is that things are

about to get out of hand. Puti back for a while.”

“I’m sorry, Steven.”

He drank deeply of his wine. “What’s in this mull, anyway?”

“Stool of toad, leg of worm.”

“Thank you. I’ll have to write that down. There was more than a procession out there last night. There’s a big burned place on the wall about a hundred yards from the gate, back toward town.”

Constance’s eyes narrowed. “A burned place?”

“The grass is scorched, the wall is covered with soot, and the overhanging branches are blackened.

Somebody’s awful mad at you, Connie.”

Constance’s eyes twinkled. “Pierce, of course.”

“Probably. But you’ve got plenty of enemies besides him. Could be some husband whose wife has moved to your village. Could be a whole group of ‘em.”

“There are only two families affected by the village in that way. And one of the husbands is about to come around. The other is too obsessed with his work to bother about us.”

“Then blame Brother Pierce. From what I hear he’s out to cauterize this place to a cinder. Burn out the witch infection.” He coughed. “This wine is loosening up my chest as well as my tongue. Your darned snowstorm gave me a cold, dear!”

“We don’t affect the weather. That’s just a superstition.”

Steven answered with a deeper hack.

“Ivy, what do you think your father’s cough needs?”

“Well, it’s bronchial, a lot of loose phlegm. Not very serious. I’d say onion broth.”

“Very good. But why are you sure it isn’t serious?”

“There’s no rasp in it, so not much inflammation, and none of the thickness associated with pneumonia.

And it doesn’t have the crack of a tumor cough.”

“See there, Steven. Your daughter is possibly going to be a quite competent herbal doctor. Ivy, give him the recipe.”

“Cut up six small white onions and boil them in a cup of honey. Boil them down for two hours. Strain out the liquid and take it hot, in small doses. You’ll cough a lot at first—”

“I’m sure.”

“Then it’ll stop, Dad. Your cough’ll be cured.”

“I’ll use up my Robitussin first, baby. I love you dearly, but I don’t think Mom’s gonna let me boil down onions in the kitchen.”

Ivy went and sat on the arm of his chair. She stroked what he had left of hair. Robin, sitting on the floor before him, took his mug and refilled it from the pitcher they had left by the fire. Mandy was for a moment conscious of the depth of the love that flowed between this man and his two children. He looked again at Constance. “Please tell me you’re at least going to be careful.”

“Tonight is a bad night for us to be careful.”

There was that suggestion of danger again.

“Don’t go down in the town.”

“We go wherever our ritual leads. The essence of the hunt is danger.”

“You’ve said that! Now, look, if you’re going to be crazy, at least do me one small favor. Tell Sheriff Williams your plan.”

“I did that, of course.” She laughed. “I even had to pay a hoof tax of fifteen cents.”

“I’m glad he knows. I don’t want the poor guy to get a heart attack.”

“Johnny Williams is a good man, Steven. We used to dance together out at Rollo’s Road House.”

“You remember that? When did that place close down—during the war?”

“Before the war. The reason I remember is that Johnny reminds me every time I see him.” There had come into Constance’s face a fey expression. To say she had once been a coquette would not be accurate. She still was one.

On the distance came the single boom of a gong. “The moon hangs two fingers over the mountain,”

Constance said. “We have a lot to do before midnight.”

He slapped his palm against his head. “I’m telling you half of this town is up *in arms*, Connie, and you propose to go thundering through its streets on horseback at midnight? You must be mad!”

“Half the town may be up in arms, but the other half is mine.”

“Not half, dear. Perhaps a fourth.”

“Many of the others are friends.”

“Oh, come on. You act like you haven’t heard what I said. You make a spectacle of yourself and you’re going to lose the friends you do have.”

Mandy saw something fierce in the look Steven gave Constance, something he himself might not even have been aware of. The gong boomed

again.

“I gather that means I have to go.”

“That’s what it means, Steven.”

He got up. “Thanks a heap for the wine. And don’t say I didn’t warn you if you have trouble tonight.” He tromped out, his children trailing behind him. “Your mother sends her love. Her apples are ripe, and she says to tell you she’s going to have thirty bushels. All grown without spells.”

“That’s what she thinks,” Ivy said. “I first spelled the orchard on Beltane Day.”

“I’ll tell her that. I’m sure she’ll throw away her fertilizer.”

“I wish she would. She doesn’t need it. It shocks her trees. They’re getting old before their time.”

“We’ve got a good harvest, too,” Robin added. “Pumpkins and corn and squash and wheat and oats.

And an incredible blackberry crop. We’re going to be making the herbal stuff again.”

There was an awkwardness now between the three of them. “It’ll be a good harvest, then,” Steven said.

“The best,” his son said. A pause grew, spread into a silence.

“Your sisters miss you.” Steven paused at the door. He opened his arms to his son and daughter. “You know,” An instant later he was off into the night. Soon the calls of the ravens began again, diminishing with him as he departed. “Hey! Lay off that hat! I’m outa bread!”

Then he was gone.

Ivy went about with her taper, and soon the house shone with the deep light of the candles. Mandy saw Robin hurrying through the kitchen. The slam of the door made her gasp. She was alert with anticipation.

She understood that she was at the center of this ritual. Naturally she was apprehensive. She told herself that was all it was—apprehension. She would not admit to deep fear, the curdling terror that comes when one faces a true unknown.

“What am I going to do tonight?” she asked Constance.

Her mentor took both of her hands. “You are the huntress, dear.” She wasn’t surprised. “I hope you know how to ride bareback.”

“I couldn’t possibly! I haven’t ridden a horse since I was sixteen.”

“Well, give it a try. You’ll have to go sky-clad, too.”

“What’s that supposed to mean?”

“You’ll see. Now, come on, the moon doesn’t wait.”

The next thing Mandy knew she was following Constance down the path through the herb garden. The idea of hesitating never crossed her mind.

When they reached the village, they slipped between two of the cottages to find the place most wonderfully transformed from Mandy’s brief visit when she first entered the estate. There were candles everywhere, making pools of light along the snowy paths, gleaming in the windows of the cottages, in the lanterns before the houses, too. Holly decorated all the doors. “You’re to hunt the Holly King tonight, my dear Amanda,” Constance said. “As usual the rules of the game will be simple. Just do your best.”

Here she went again with the vague instructions. Mandy remembered struggling up Stone Mountain, not knowing where the hell she was going. “What if I fall off the horse?” she muttered, knowing there would be no reply.

She was being tested. Very well. She raised her chin.

Fiercely she determined to pass every test they could give her.

Constance stopped in the middle of the village. She looked most wonderful, hooded, her cloak touching the ground. Her face was lit by the candles, and the moon rode high above her. “If at any point you fail, my dear, we burn this village and go home. We quit.”

A stone seemed to knock in her chest. “It’s that important? Me?” Now all of her posturing seemed hollow.

“This is *your* night, my dear You have taken your place with the *Leannan* as I took mine fifty years ago.

To further prove yourself, you must capture the Holly King and make him your own. It symbolizes your strength. The Holly King is all of us, our covenstead, our way of life. If you want to lead us, you must first catch us.”

Mandy’s mind was still battling through the possible meanings of what she had just heard when Constance marched up to the doors of the great round building at the head of the town and threw them open.

The room within was an astonishment of light and odor: it appeared to be a combination barn and ritual chamber. Around the walls were stalls full of horses and cattle and goats. Mandy saw fine mounts, their rumps gleaming, their tails beautifully curried. The smell was not unpleasant, just intensely animal. The stalls, though, formed only the outermost circle. The greater part of the space was taken up by a beaten-earth floor, upon which sat perhaps four dozen people—men, women, and children.

In the center of the circle was Robin, his head crowned by holly, his body gleaming as if it had been waxed. He was, as were they all, quite naked. When he smiled at her, she was glad.

A familiar black tail hung down from a rafter, flicking occasionally.

There was a skirl of bagpipes and a rattle of bones. Six couples came into the circle around Robin. A young woman of perhaps eighteen dashed round and round it with an enormous broadsword, pointing it at the ground. The bagpipes wailed wildly. Mandy thought of all the movies she had ever seen of Scotsmen in war, and knew the sense of this magnificent noise. In hands such as held them now, the pipes were an instrument of courage.

Brother Pierce's face, sharp with hate, seemed to swim before her.

The group in the circle began to dance round their Holly King, clapping and chanting:

“Fire of life,
Pass, pass, pass!
Fire and flame, in Goddess' name,
Pass, pass, pass!
Heart and hand of Holly King,
Pass, pass, pass!”

She understood it all now. They were going to make her ride a horse through a hostile town in the nude, chasing a guy with weeds in his hair.

She was thinking to get out of here when strong hands suddenly grabbed her and whirled her away among swirling chains of people. They snatched at her cloak until it was swept off, then at her jacket, at her blouse, at her jeans. Soon she was naked above the waist. There was so much laughter that the violence of the undressing was almost dispelled. They lifted her at last over their heads, and in passing her from hand to hand finally got the jeans away from her.

She was shrieking from all those unexpected touches when she found herself delivered to the center of the inmost circle and laid at the feet of the Holly King.

Robin's eyes were big with desire. She could see, between his crossed legs, his standing flesh.

Close to him there was a strange smell, like mildew and rancid lard and menthol cough drops. A moment later she knew why. He dipped his fingers

in a bowl of thick salve and dropped a huge glob of it on her belly.

“Hey!”

They held her arms above her head, put their hands around her ankles. In their faces was such love, though, she made no attempt to escape them.

When Robin began spreading the salve up and down her stomach, she discovered that the touch of his hands could be pleasant. He spread the slick stink over her whole body, leaving only her private parts untouched. She tingled, grew warm. The sensation was not unlike that of Ben Gay, but deeper and not in the least relaxing. On the contrary, she wanted to run and jump and yell; she fairly could have flown.

The young woman who had wielded the sword came and knelt beside Mandy. “There’s a little sting,” she whispered. “Don’t mind, it soon ends.” She took some of the salve and nibbed it smartly into Mandy’s privates.

A little sting! It was all she could do not to shriek with the agony of it. As if anticipating her problem the bagpipes wailed again and the bones were joined by drums.

No wonder there were legends of witches flying. This salve made her feel as if she were floating. More than floating. If she closed her eyes, she just might sweep up into the rafters with Tom.

They got her to her feet and danced her about, clapping, turning, twisting to a new music. The pipes were gone now, replaced by flute and drum and bone, the old instruments of such dances, softer perhaps without the roaring pipes but in their way just as exciting.

“Corn rigs, an’ barley rigs,
An’ corn rigs are bonnie;
I’ll ne’er forget that happy night,
Amang the rigs wi’ Mandy!”

Happiness filled Mandy Walker. The hell with her concerns, this was fun. She really danced for the first time in her life, naked and free amid the smells of animals and the sweat of people—and her own phenomenal stench—round and round and round till the rafters garlanded with holly spun and the Holly King on his throne of floor spun, with his smiling lips and dark wonderful eyes, the gleam there so intense it made her burst with laughter.

There was the feeling that she had danced this dance before.

Just then the dance stopped. Annoyance flashed through Mandy. Then she

heard what had frozen the others. From far away the long sound of a horn. A hunter's horn.

Constance. She was out there somewhere, calling them to the hunt.

The stillness was only momentary. There followed a great roar of excitement. Mandy found herself astride a huge black horse, a snorting, excited, stamping giant of a stallion.

She was naked. She had only the mane for reins. Then they had drawn her through the doors, so quickly that she almost hit her head.

"I've got to have my cloak!"

Somebody gave the horse a swat and like blazes they were off through the middle of the village, the hoofs of her mount shattering candles as he galloped. In another instant they were out in the night, pounding along, her fingers frantic in his mane, her body slipping and sliding around because of the salve, the horsehair skinning her legs. And, she felt sure, they were heading toward the bog.

"Whoa! Hey, horse, come on! Oh, stop!" She tugged at the mane. The animal gave a snort and thundered on.

All she could do was clutch and hope. Maybe she would only be knocked out when she fell. Not killed.

Please not killed at such a prime moment.

The salve was having a more and more powerful effect on her. For example, she wasn't in the least cold.

And she could hardly feel the pain of the horsehair against her thighs. Even while she clutched and cried, the swiftness of the animal's flight began to seem less a terror.

It became exhilarating, scary in the same sense that a roller coaster is scary. She put one hand along the beast's pumping neck. It was a lovely creature, this horse.

It snorted.

"Take it easy, horse."

She felt beneath her its muscles surging, its blood singing in its veins, its sweat mingling with her slickness as they pounded down the night.

She found that she could sit up for a few seconds and, while she did, actually enjoy the wind rushing past her face.

Then she could sit up longer. She could press her knees against the horse's flanks and sit straight.

It was more than good, this ride. She tossed her head and dug in her knees

and shrieked out all the joy and wildness and power that had sprung up in her soul. And her mount neighed reply. She heard the maleness in his voice and knew he had responded to something in her own that she had never before known was there. She was a *woman* upon this creature, no passive cipher but a woman full of strength and pride and beauty.

She felt an intimacy with the animal flesh beneath her so raw that it startled her. He neighed again, a rich, delighted sound, and literally burst forward. They pounded, pounded, pounded, his foam flying back in her face, his smell filling her nostrils when the charged air didn't, pounded and pounded but were not spent, never that, never tired, only growing stronger and stronger together as they hunted down the night itself.

Hunted, yes! She was here to hunt Robin. She tossed her head and screamed again, screamed from the bottom of her belly to the top of her head, a high, slicing sword of a cry.

Far off she heard the huntsman's horn reply. Far, far off to the north.

She had not even to say whoa this time, nor to touch the mane of her horse. Only transfer the pressure from the knees to the ankles and he dropped back to a trot. Lighter pressure made him walk. Raising her legs altogether made him stop.

The horn pealed out once more. Behind her, wasn't it? Her horse turned his head back, met her eyes in the moonlight with one of his own. He was blowing hard, slick with froth, trembling with eagerness.

This was no ordinary horse. He *knew* where to go, she felt it. He knew how to find the Holly King. All she had to do was surrender to his simpler, clearer mind and his instincts.

For all she knew no horse was ordinary. Maybe there was no such thing as an ordinary horse or an ordinary ferret or an ordinary duck, for that matter, no more than there were ordinary fairies or ordinary people or ordinary cats.

She gave him knee and they were off again, rushing around the edge of the bog, up through the hummocks with the house gleaming in the distance, farther north in the valley than she had ever been, through acres and acres of fields, some smelling cut and rich with the blood of the land, others still ripening, corn and gram and pumpkins and squash, earth weighted with fruit. She wondered if the snow had destroyed much of the crop.

They trotted down a path between sentinel rows of corn, which clattered with their passing. Now the land began to rise and they went through an orchard, the horse's hoofs crunching the culls and adding cider to the thick,

delicious chaos of scents.

“Holly,” she whispered, “King of Holly...”

No, still farther north. Low in the sky she saw Polaris, hanging above the dark mystery of the land. That way lay the Holly King.

But how far? They were passing houses now, with electric lights and dogs reduced to hoarse yapping by the bizarre sight and even more fantastic odor of the intruders.

They approached a house lit by candles, which were quickly snuffed out. People came bursting out of the door, running after her, cloaked against the cold, racing up and touching her legs with a slap, then dropping back into the dark.

Her mount’s hoofs clattered on the brick streets, echoing in the stillness. She was acutely aware of her nakedness.

Then a car gunned its motor and shot forward. She was impaled by the lights; she heard a powerful engine crying out the rage of the driver as the lights bore down. She dug her knees into her horse’s thighs and pulled his mane sharply right. He burst into a gallop, climbing a steep lawn. The car followed, engine growling and tires screaming, then whining as it came to a stop at the curb.

She shrieked as her horse leaped back fences, stormed through porches, and jumped empty swimming pools. Then they were in an alley, then through it to the next street. Perhaps there had been a cordon arranged for them, but they were out of it now. She was glad, she felt the wildness again, the freedom, the sheer mad, sweating, gasping thunder of the ride.

And she knew she was closer to the Holly King. By long habit she wanted men, and waited for them.

Never before had she allowed herself the feeling of just taking what she wanted.

They went past Church Row and across the town common beyond. “Find him,” she whispered to her mount. “Find him for me!”

Behind them other cars were muttering and growling, their lights prowling the streets that surrounded the common.

Then she saw the blazing sign of Brother Pierce’s Tabernacle. People were running in and out, cars were coming and going—the place was like a wasp nest disturbed by a stick. She knew, at the same moment, that *he* was close by.

Her horse stopped. “Come on.” She pressed with her knees. He turned his

head and looked at her. “So this is the place,” she murmured.

She dismounted, stood a moment on shaky legs, getting used to the ground again. Snow crunched beneath her feet. The salve was not so strong now; she felt how icy cold this night really was. Half a block from the Tabernacle there was another candlelit house. More witches. But he was not in that house. No, he was outside. They were to meet in the night.

He was a clever boy, to go so close to Brother Pierce’s Tabernacle. Clever boy. But she wasn’t afraid of anything anymore, not even this.

She would have ridden right down the aisle of the Tabernacle if necessary. Maybe it was the ride or the salve or being naked in the streets, but she was very excited. She had never wanted anyone like she wanted the Holly King.

Her horse turned its head, pricked its ears toward a sound behind them.

And did not even have a chance to scream when the blast of a shotgun shattered its brains. The great body shuddered and collapsed. “Okay, whore, put your hands up!”

She started to run.

“Stop!”

The hell with that. She had darkness on her side at least. She ran. A shot thundered behind her and something hissed past her right shoulder. Buckshot. Keep going.

“I got the damn horse!”

My horse, my horse, my beautiful magic friend of a horse!

“She’s headin’ toward North Street!”

“Get her, man!”

She flew, forcing herself not to shriek the cry that came to her throat. There would be time for rage later.

My horse!

In their thirty minutes together she and that stallion had become friends in passion, fellow celebrants of gender.

A flash of white ahead of her, a stifled cry, and she realized she had flushed the Holly King! Her beautiful horse had been taking her right to his hiding place.

When he sprinted across North Street, she saw him clear in the streetlight, his skin pale, his long legs pumping, his holly on his head.

Others saw him, too. Car lights flared and engines roared from both ends of the street. By the time Mandy was crossing there were only seconds to spare. Then brakes squealed and furious voices were all shouting together,

“It’s the witch, it’s the witch!”

Behind her she heard clumsy crashing in the shrubs. She knew she was back on estate land, beyond the far limit of Maywell. North Street, where the estate’s wall ended, was also the border of the town. Here were the ruins of Willowbrook, an unfinished housing development that had been started and died after Mandy had left Maywell.

She stopped on an overgrown street to listen for the Holly King. The crashing behind her got closer only slowly, accompanied by a steady smoke of curses. Then, just as she was certain she had lost him, a shrub moved almost at her feet.

Instantly she pounced—and connected with his hot skin and pricking crown. She ripped it from his head and tossed it high in the air. He gasped, started to run again, but she grabbed his wrist and screamed out her triumph with all her victorious soul, uncaring of the people behind her, even of the flashlight beams that were probing for her position.

He pushed at her, he tried to break her grip. Her blood was so high that she raised her fist and slammed it across his face. He made a long, rattling groan and sank down.

“Oh, God, I killed him!”

But no, he was crawling. It was another trick! She leaped at him, grabbed him around the waist, straddled him, sat on him, pinned him to the ground.

And felt, to her infinite delight, his bursting rigid essence jamming up between her legs.

A flashlight beam skimmed her head and there was a brutal shout of triumph.

She could not move for the spear of pleasure he had thrust into her. “We’ve got to run,” she whispered, but she simply sat there, staring down at his blood-running face, feeling him in her, and knowing joy so extreme that it almost made her lose her senses.

Then she heard ravens. And yells, frantic yells. The flashlight beams began to flail about in the sky to a great roar of the most fierce cawing Mandy had ever heard. The cacophony retreated rapidly toward the Tabernacle.

When the Holly King was spent beneath her, she got up, put his crown on her own head, and found herself surrounded by other witches, all gasping from their long run. They were wearing ordinary clothing, caps, jackets, hiking boots. Apparently only the principals in the rituals were expected to go naked in the town.

Without a word they clustered about her, tied her cloak around her, and gave her a sweet, delicious drink of hot wine and honey.

She walked with them all the way around the western edge of the town and beneath the cliffs of Stone Mountain, back to the estate. Gentle hands carried her lover.

She sat in the center of the circle. They laid him, quite asleep, before her.

Her people then indulged in the revels of the night. There was so little she understood of their rituals, except that the bodies flashing about her in the circle meant ecstasy.

There were twelve of them, six men and six women, dancing about the inner circle of which she and the Holly King were the center. They moved to the right, dancing and clapping, chanting a single word: Moom, Moom, Moom, Moom.

They shouted, they whispered, they danced until the chant merged and changed and grew into another word, which she at first could not quite understand:

Moomamaamannamuaman adamoom amandoom.

Then she heard it—her own name. Amanda. She listened to it weaving about in the chant, and watched the sweat-slick nakedness of the people dancing in her honor, and wondered. Whom do they take me for? Who am I?

Chapter 15

For George, Bonnie's death was a great, black boulder, crushing him as a foot might crush an ant.

Clark had called him mad and disowned the project, then had gone back to the Covenstead to tell Constance all that had happened.

They had been together in the faculty commons when they got the news.

"There's been a student killed out on MSR," Pearl Davenport had shouted, her head popping in the door.

Clark went a dull shade of gray.

The long call of the sirens swept up and down the room.

"George, where the hell did Bonnie go?"

"Oh, Christ, oh, Christ."

"Pearl, who—"

"Clark, it was a girl. She got hit. I was coming across the damn road, there was an awful crunch, and this—oh, Jesus—this little rag goes flying halfway to heaven."

"It was a girl! Who, Pearl, honey?"

"Blond. Petite. I didn't see her clearly. I think she had on a college sweatshirt, Spacy-looking, that's all.

Then she's in the road and oh, I don't want to think about it."

Clark: "Pearl, come here, sit down. Henrietta, bring her some coffee." Bustle at the courtesy counter, gray Henrietta, Snow Queen of Frosh Bio, darting over with a Styrofoam cup.

Clark grabbed George's arm, grabbed it hard: "It's her, buddy."

Clark's rusting Datsun slipped and slid along, past the snowy playing fields and the track house, out the gates to the blue flashing lights of the Highway Patrol and the red shuddering ones of the Sheriff's Department. There was a scar in the road, maroon, mix of blood and rubber. The driver had tried hard to stop. "This goddamn comer!"

"Clark, we don't know!"

"The hell. She was crazy. She wandered into the street."

"We do not *know*."

He slammed on the brakes, clutched George's shoulders, his red, sweated face plunging into George's own, screaming, "You fucking *asshole*! We know! It was her and we killed her. You and I in our arrogance killed her!"

Jesus, to do an experiment like that on a human being without so much as a *single* successful animal test, without any safeguards—we ought to be horsewhipped, both of us. Connie is going to ask us, where was your conscience?” He made a sound like shaking leaves.

“Now, hold it. Calm down. We’ve got to think this thing through. We’ve got to be rational. Assume it is Bonnie. There’s no way this can be attributed to us. It was an auto accident. Happens all the time. We’re in the clear.”

“My conscience is far from clear. I might end up spending the rest of my life in atonement.”

“You speak of Connie. She pushed us.”

“She never asked us to be careless.”

“She pushed us! If anybody should atone, it’s Constance Collier.”

Clark did not reply. When George finally looked at him, he was laughing, but in total silence, his shoulders shaking, his face expressionless. “George,” he whispered, “if you don’t get out of my car right now, I am going to kick your head through that window.”

“Please, Clark—”

“George. I’m warning you.”

“We’ve got to work together.”

“Go.” He swiveled in his seat, raised his legs to his chin. His feet were inches from George’s head. “I’ll kill you, you self-serving bastard, I swear I will.” Then the man cried, bitterly and long, heaving, his eyes staring, and George knew who it was that quiet Clark had loved, and that he had given his beloved to the demands of his craft.

They were two lost men, George Walker and Clark Jeffers, Clark’s tears, though, told George that they were lost in different forests. The depth of his own sorrow was so great, he could not bear these tears. If he cared, he knew, he would go into his basement and light his candle, and die there.

George got out into an autumn evening brisked by the crackle of police radios, rendered urgent by the guttering of motors and the low voices of uniformed men with measuring tapes. Stone Mountain had a halo of deep orange. The mountainside itself was black, Clark did not drive away. He was watching George from inside the car, and George knew what he had to do. He walked up to an officer who was taking up a flare. “Excuse me.”

“Yeah?”

“I’d like some information. Was—”

“Look, I don’t have authorization to talk to reporters. Anyway, next of kin

haven't been notified yet."

"No, you don't understand. I'm Dr. George Walker from the college. The girl—I'm afraid—"

"She was a student, if that's what you mean."

"I know that. But you must, if she was identified, you must—was her name Bonnie Haver?"

"You knew her, then. I'm sorry. She didn't suffer. It was instantaneous I'm sorry."

George couldn't move. He wanted to somehow show grief, but there was only this awful, dead coldness within him.

He walked One foot before the other, across the rest of MSR and the pedestrian island, across the last hundred feet of Meecham where it angled into MSR, then down North Street.

He knew Clark was watching him go. He could feel his own end as the fall of an angel, wings dissolving in the thin moonlight.

May well was soft in the evening, so soft it seemed to want to seduce. As soft as a caress. Wind stirred from the north, rustling down the valley, drawing whorls of snow from the lawns that lined the street.

A cat appeared down the street, a huge black thing every bit as ugly as the one that had menaced him in the lab. He stomped. "Move!" The animal darted toward a house.

"Bonnie, Bonnie belle beauty, Bonnie belle, gone to hell. Bonnie belle beauty-o. Oh, shi-i-t!"

He had to laugh, really. What an absurd career his had been, not even big enough to be a cosmic joke. It was just a dreary reality, the smell of Lysol on the tab floor, the deaths of frogs and monkeys.

She walked in beauty, died in God knows what kind of horror. "Oh, Constance, why did you want it?"

What was it for!"

In his mind's eye he saw the old woman, serene, regal, standing before him in the formal drawing room of that tumbledown old house of hers. "George, I must challenge death. I must be able to kill, and then return to life, a human being, and to do it no later than December of 1987, Do you think it's possible?"

"Constance, the research is just in its infancy. There isn't all that much money."

"I can't give you money. There must be no traceable connection. Please,

George, it's vital to the future of the Covenstead."

He could not say that it was impossible. Tears filled his eyes again. Soon he would have to go to Connie and tell her everything. How could he ever ask forgiveness?

He passed Brother Pierce's Tabernacle, heard him roaring within. Cars were arriving, people were hurrying up to the doors. Here and there a pickup stood with rifles racked in the rear window. Honkies.

Rednecks. Slime.

"Slime! Hey, Brother Slime!" He gathered a snowball and hurled it up at the massive sign. God is Love, indeed. God is a sphere with no circumference and no center. God is nowhere. And God doesn't give a damn.

People had paused in the parking lot, big people with ugly little faces punched into the fronts of their fat heads. "Hiya, boys. Praise the Lord!"

"Amen, brother."

George continued more briskly, passing Stone and then Dodge. Going home. All of a sudden, he couldn't breathe. Going home? His house was dark and cold. "Kate? Please, Katie."

Kitten Kate and the kids. The gone.

She had cried and he had laughed. But he cried now, on his way down Bridge Street, past Elm with its shadowed houses and onto Maple. He struggled to his own shadowed house, to the front door, then the cold, dark living room.

What the hell are you crying about? Remember Saul Jones:

"She's moved out? Good You'll go for an uncontested. She gets me kids and you get the house." That was not a completely undesirable outcome. The other way around would have been disastrous. Truth be told, he could get along without his caterwauling, whining, wheedling, disappointed kids. The disappointed generation. Let them all live on the Covenstead. They even had their own school out there, fully licensed and accredited.

"*You* are leaving *me*, baby," he had said. "And unless you give me the house and the car I'll put up a fight for the kids." That worried her enough to stop trouble before it started.

"They're already gone. They left last night. It was their idea in the first place."

"You seduced them!"

"You get psychiatric help and we'll come back."

"I'll get a girlfriend."

“How about a cat instead!”

“You bitch.”

“You’re crazy, George. I’m going to tell Constance. She’ll assign you a counselor and make you go.”

Constance did nothing of the kind. She was too practical. She needed George’s work too much to risk his rebellion.

“Why, Constance? Why!” He had never been told the reason his research was so important to her. Now he wanted to know. It might help to dampen this fire in him. He could feel the red gargoyle of his anger turning on him, and it scared him. “Why! You tell me, you have to!” Constance stood before him, her smile sad and enigmatic. “Your grief is your chance to grow, George. I never said it was easy.”

Miserable at the memory, he jammed his fists into his eyes until he saw green stars. He sank to the middle of his dusty living-room floor bellowing as hard as Clark had. Long sobs wracked him. He poured his misery and grief and defeat out into the indifferent house.

Oh, Kitten Kate, I need you now. I was so glad the day you left. That wonderful morning when I slept until noon and watched the Miami game and drank eleven Buds. Lord, what a day! I was a laughing angel boy again, my mamma’s genius. No longer was I your husband, the accused failure.

But we were young together, Kate, and we shared some tilings. Remember that line, Kate—”Something amazing, a boy falling out of the sky.” Oh, baby, something amazing, all right. I loved you and I threw you away, and I fell, baby, right out of the sky. Okay, I confess. I fell right out of the sky.

“Something amazing... a delicate ship passing by saw something amazing...” He could never remember all of her favorite poem. “A delicate ship passing by saw something amazing, a boy falling out of the sky.” Just that one line.

The house smelted faintly of linseed oil from the box of paints Mandy had left on the sun porch. He liked that odor; it reminded him of the six weeks of the summer of 1968 he had spent in Florence. There had been college students from all over the world there, art students, working on the restoration of the Uffizi masterpieces which had been damaged in the flood of the year before.

He had met Irish magical Roisin, with whom he had cohabitated for weeks, before he had found, jammed into her suitcase, the terrible rubble of a dead owl.

He had run terrified from her. Roisin, lost in the dangerous clutter of time.

Upon the dead waters, the last leaf finally sinks.

This sniveling had gone on long enough. It was time for the scum to be punished. He owed Kate, he owed the kids, he owed Constance, and now he owed Bonnie, too. He went to the mudroom.

He opened the trapdoor.

He descended to Kitten Kate.

Here he sometimes slept, with the cat eyes he had pasted on the wall staring at him, with the cat faces glaring at him, with the marching, running, jumping cats all around him, the long cats and the slinky cats, the cats of death and hell. He had burned one once, he and his dear childhood friend Kevin. They had burned a cat named Silverbell, a huge black cat with a loping walk and a kinked tail. Cat of Claire Jonas.

They had massaged Sterno into its fur and touched a match to it.

He slammed his head against the back wall, the one that had cinder blocks behind the thickness of cutout cats and drawn cats and pasted cat parts, the tufts of fur, the crisp bits of skin. This was the painful wall.

“Jenny went in there today, George. I told you what’d happen if you didn’t tear it down and the kids saw it.” Kate’s foot went *slam* against the floor.

“Look, I’ll get help.”

“How many times have you said that? Fifty? I want a divorce, George. I cannot stay here any longer—I do not want the kids exposed to whatever the hell’s going wrong with you.”

“I told you, I’ll go to a shrink. Constance will know somebody.”

“You’ll never do it. Anyway, you probably need an exorcist more than a shrink. That room is evil! Evil, George, and horrible and completely crazy and your daughter has seen it. You know what she said?

‘Gee,’ she said, ‘is this why Daddy hits me so hard?’ ”

“I always knew it. Somehow or another cats would destroy me.”

He looked around his room. This room was a cat. It was in a sense all cats.

It was Tink Tink reeeooooowww! across the green lawn a streak of popping blue fire, reeaaaaooooo poppop *crackle* rreeeeeeaaaaooooo!

What the hell, it was funny, she goes to the door, Claire opens it, and there’s this burning cat ali wound up on itself, rolling around on the porch.

They took her to the vet, and George couldn’t forget it even now: one yellow eye staring, the other burned away.

Put to sleep. Lullabye and okay, close your goddamn eyes, Bonnie! Golden slumbers fill your—oh, crap, I am missing my chance, somehow or other.

Come on, honey, wind of the western sea, blow, blow—

Oh. Go to sleep, Jenny, please go to sleep.

Not for you, Daddy!

George undressed. He knelt. He lit the candle. He arched over it, bending low, feeling the warmth rise to heat, to small pain. His chest was marked by a dozen round, red scars, the aftereffects of similar torments.

In the Kitten Kate Room, before the marching, the jumping, the yellow-eyed and creeping cats of the world, George knelt and forced his shaking, jerking body into the crackle-hungry flames, until a spot just below his left nipple, a fresh spot, sputtered and oozed red.

“God.” He pitched back from the flame, clawing at the agony of the wound, rolling, rubbing his filthy basement sheet into the crisped skin. Bacon chest. Is that funny-haha or funny-weird?

Very fine. Shirt back on, tuck it in nice and neat, do a good job, oops, no oozing through allowed. There was a stack of old newspapers back behind the door. Let’s see. September 14, 1983, *The Collegian*. Picture of Dot Chambers, Sorority Mavin, “Hazing Rituals to Be Reviewed.”

The SAOs had to cut out their Long March, and the Phi Zetas their paddling.

There is so much anger in this world. He plastered Dot Chambers down on his leaking flesh, then winked out the candle between thumb and forefinger and climbed back up the ladder to the mudroom.

A little torment could cure so much anger, so much grief. Bonnie was a volunteer. She took a risk in a noble cause and lost. The witches would give her body back to the earth. He would be forgiven. The experiment would be forgotten. Whyever Constance had needed it, this would be changed. The world would roll out and the Covenstead would live on, without anybody ever having returned from the dead.

He got a beer and went prowling about, wondering after little Mandy dear. Doing illustrations for Constance, was she? She’d be a witch soon, that was for sure.

Witch. Bitch. Kate gave good head once, back before the beginning of the end of time. Bobbing Kate—head down there giving head. You could make a lifetime of memories of Kate, had ye the inclination.

When he sighed, Dot crinkled. Okay, all right, you win. He threw back the Bud and went to the kitchen for another.

No?

All done. The refrigerator light filled the gloomy kitchen with an even gloomier glow. Gloom and glow, gloom and glow, Edelweiss, Edelweiss... remember *The Sound of Music* and Kate a girl then, the old Chevy II, back in the days of Martin Luther King and Bull Connors and the Yippies and oh what a fine ringing, singing time.

Bang.

One brief shining moment. Shamalot. A-a-a-y! I was gonna be a great scientist. Man, I won the science fair. I won a Westinghouse scholarship. (Almost.) I won tenure. (Almost.) Bang.

“So in the very moment of defeat he says to himself, wait a second. The experiment has been troubled by external conditions. There is as yet no definitive reason for shutting it down.”

Once the death was connected with his lab, everything would be impounded, his records and his equipment both.

George put on his jacket, zipped it, went out through the mudroom to the garage. All right. He was entitled to take his own property off the campus. They were his goddamn coils.

He didn't need the monitoring equipment, not really. Just the video camera. He'd take his own VCR down from the game room. Dear me, reduced to home experimenting. Down among the cats, where the air smells like burned beef jerky.

All right, okay, home experimentation isn't totally invalid. Here's some precedent: synthetic rubber was discovered on a wood stove. Penicillin was an accident.

As he guided the car down the driveway, he looked back at his house and thought, one day this place will be a museum. And that basement window there, the one between the rosebushes, people will point to it and say, that is where subject X took the ultimate journey, right behind that window. And in the end Constance will thank me. Yes, she will thank me for what I am going to do.

The streets were dark and surprisingly empty. He thumbed the knob that lit his watch. 12:47 A.M. A hell of a lot of time had passed unnoticed. He must have been in Kitten Kate for considerably longer than it had seemed.

Well, good. He needed time there. Good. It meant he had suffered longer, and therefore put himself back together for more time. The longer he suffered in the Kitten Kate room, the more chance he had for a happy life. He was filled with strength. Power. The power of pain. Dear little Dot, plastered to

my breast, who will it be?

Must be a she, of course, because only a she will fit my seven-coil array. Mandy was not enormous, and sooner or later, she would come back here.

Mandy, dear, you're five-nine if you're an inch. You'll fit. Just barely, but you'll fit.

Wasn't there a song somewhere about Amanda? "Farewell, Amanda... de de dan... sweet Amanda." He smiled. "Farewell, Amanda—remember me when you're stepping on the stars above." That was it. You'll step on the stars, Amanda.

I think.

He turned onto Ames, crossed the little bridge there, and saw glaring in his car lights a most unusual sight.

A huge black horse, a nude woman astride it bareback, the two of them surrounded by a flock of dark, darting birds. Hoofs clattered and crows cawed and the woman let out such a shriek that George screamed, too, involuntarily, screamed until his throat would break.

Hazing ritual? Too late in the season for that. Streaker prank? Fad was over.

George followed in his car, bearing down on the whole apparition, horse and woman and birds. The horse was not three feet in front of the Volvo when it leaped high into the air, across the sidewalk, and into the middle of a lawn. It continued on, snow clouds rising from its hoofs, around the house and into the backyard. George sat there, staring after it. He was sobered. Again he heard the woman scream.

Engines were roaring, lights rushing past. Pickup trucks, shotguns, guys with beer cans and cigars. Must be college revels, however improbable.

It grew much colder.

George drove onto the campus, went to the lab, and began loading the coils into cardboard boxes. Four trips back and forth and his car was full. There remained only one thing to get: the tranquilizer gun. There was enough scopolamine in one of those cartridges to close a human being down for a good hour.

He pocketed it. His pistol was nowhere to be found, Clark, no doubt, making sure the doctor didn't do himself in.

No, not yet. The good doctor had been in a tailspin, yessir. But the good doctor was now flying again.

He had a fine plan. He was going to become the spider of the house. Do a

little web sitting.

Sooner or later, dear little Mandy would be bound to return, if only to get her things.

When she did, he was going to kill her.

Farewell, Amanda.

And bring her back to a normal life.

Hello, again. (Applause.)

Together they would share their triumph with the world—

Chapter 16

Mandy awoke to the sound of dripping water. She opened her eyes and found herself looking across a dirt floor. Her shoulders ached, her thighs ached, and greasy male flesh wrapped her body. Robin, in the truth of the morning, needed a bath.

As she became fully conscious, she was struck by powerful, pounding emotions. There was sorrow over the horse that had been killed, but at the same time something new moved in her, a sense of tautness, as if a little steel had impregnated her bones, and her muscles had been filled with the energy of a coiled spring. Robin was not a large, distant model of her father, but somehow smaller, and she knew that she could share power with a man, or even take it from him if she wished.

Beyond these newly discovered feelings and powers, though, there was something much greater. Over the past twenty-four hours it had emerged as the new center of her understanding, revising everything. It was her memory of the *Leannan Sidhe*, the Fairy Queen. To lie back in the straw and know she had seen the *Leannan* and that the fairy were real gave her the most exquisite possible joy. For her the meaning of the world had deepened and grown much richer. The joy that filled her extended itself beyond love of the *Leannan* to include Robin and Constance and the whole Covenstead. She had reached, she thought, the center of the world's beauty.

She indulged in an elaborate stretch, feeling every muscle, every limb.

The water was gurgling, tinkling, pinging all around the outside of the wattled building. Here and there a drip came through the thatch. The unseasonable snow was melting.

Around her people sighed and snored. She was the only person awake, but the animals were snuffling about in their stalls. Across a tossed expanse of sleeping humanity a soft-eyed goat was munching hay.

Besides her enormous sense of personal well-being, there was a physical reality she could not ignore.

She felt sticky and clammy, dirtier than she had been since the days of tattered sneakers and sand piles.

She could not recall wanting a shower quite as much as she wanted one now. The dripping sounds made her long to feel a warm stream sluicing across her skin, to smell the gentle billows of Ivory as they washed away the

battles of the night.

She stared back at the eerie lozenges floating in the goat's eyes. Somehow it did not seem entirely innocent, this goat. Who knows what is in the mind of the animal—the simple emptiness that seems to be there or a silent, motionless intelligence? Its ears pricked forward. Her staring had made it curious.

There came the memory of thunder in the dark. The hard flash of the shotgun, the quivering of her devastated horse.

Her horse? She hardly knew his name.

But for a little while that horse had been part of her. He was the shaded man she had touched once or twice inside herself. In every woman, she thought, there lives a father and a bandit of a man, who is somehow reached through that mad love of horses that affects many an adolescent woman. Mandy could remember owning pictures of horses and going to the county fair to see the trotters.

You do not just kill a magnificent horse.

Robin's hand dangled across her thigh. She took it to her lips and kissed it. How unfamiliar it was. She decided that she did not actually love him. She felt passion for him. For her, this was a very rare experience. Her relationships with men were not straightforward. There had been too much anger between her and her father for her to ever trust herself to a man—

Idly she ran her fingers in his hair, touched his sleeping face. Would she love him, this man who had been given to her, or did the gift preclude that desperate, clinging thing?

Through the smoke hole far above came a blast of light. Outside chickens were cackling, and a rooster set up a lusty crowing. A cow kicked her stall and something made a chortling sound.

Something else moved in the far shadows, disturbing the dark near the wall. When Mandy raised her head to look more closely, the movement stopped.

She was not deceived, though. Even her brief experience with raw nature had already changed her perceptions. Animal cunning did not fool her so easily. She knew something was there.

Stillness settled, and as it did, the shadows began to move again. Something slid along, changing the curve of a leg, the thickness of a thigh, the length of an arm, as it moved among the sleepers.

Mandy understood all at once what she was seeing, and when she did she

jammed her fist in her mouth to keep from screaming. It moved steadily across the room, its head held just above the floor, its tongue darting, its eyes polished knobs.

Mandy watched it come into the center of the circle. Midway down its length was a lump about the size of a rat. It was at least six feet long, a great red and yellow creature, fairly glowing with reptilian health. It was on its way home after its predawn hunt.

The snake was no fool. It did not attempt to go near the animal stalls, but rather headed toward the door, crossing sleeping people with impunity, staying strictly away from the hoofed things. As it slid across a child's bottom, she giggled in her sleep.

Not ten seconds after it had disappeared into a crack in the wattling beside the door, the great gong boomed. Somebody coughed. The child awoke laughing. Other shadows began rising in the half light.

Cloaks and jackets and shirts were found. Mandy chose to watch the activity out of half-closed eyes.

She didn't want to miss any chance, however small, to learn more about these people. She was now able to accept that she was important to them, and thus it bothered her all the more that they were such strangers to her. She had already learned that direct questions didn't help much. Ask them their names and they would say Flame or Wild Aster or Garnet or some such thing. But never a legal identification.

As if he existed half in her imagination and half in reality, she saw Tom clinging in the rafters, a vividness fading. He had done terrible things, that cat. You could hear his fury in the way he breathed.

The general shuffle in the room awoke Robin. He shifted, stretched, then groaned.

"Hi," she said.

"I must be alive. I ache all over."

"You aren't alone. I'm hungry as well as sore."

He laughed. "You're lucky you don't have to eat and run. I've got to commute all the way to New York."

Surely he was joking. The Holly King couldn't possibly be a commuter.

"Don't look so amazed. You make me feel like I've got two heads or something. I go to the Pratt Institute. I'm studying design. It's no big deal. A lot of us commute. The Covenstead has to exist in the real world, after all. And it's out there, believe me, belching smoke and vomiting a continuous

stream of Big Macs and VCRs.”

He stood up and took a couple of halting steps. “Damn. I might be cutting class this morning. Look at my feet.”

She touched the cuts, the swellings, the bruises. He had run barefoot as well as naked last night.

Considering which, his feet were actually in fairly good condition.

Now that she was fully awake she recalled the Wild Hunt in exact detail. And she wondered about the morality of such an escapade. She and Robin had abused their bodies. Above all, there was the death of the horse and the terrible chase that could so easily have ended in their murder. One of the things the Wild Hunt had given her was the willingness to ask hard questions. She did not know it, but she was beginning to take the first, hesitant steps toward rule. “Why did you go into the town?”

“The Wild Hunt would hardly be wild if there was no danger. And the town covens would have been bitterly disappointed.”

“You could have found danger in the woods.”

“Safer danger? Come on. Our enemy lives in Maywell.”

“I lost my horse.”

“Raven was a great creature.”

“I loved him.”

“He was part of you last night, wasn’t he?”

“More than you realize.”

“Then he still is, Amanda. Now and always. And you should thank Brother Pierce for that. He gave you Raven.”

“That’s ridiculous!”

“No air is sweeter than that we breathe after we have escaped our enemy.” Robin touched her face.

“Come on,” he said, “let’s find us some breakfast.”

She found herself willing to accept his touch and the consolation in his voice. The Wild Hunt was over.

Nobody needed to tell her that she had passed that test as well. From the new power and assurance she felt within, she knew it.

They went out into a mild morning. The ground was sodden, everything wet with runoff. The temperature was easily fifty. The air smelled of hot bread and wood fires, with a colder breath coming off the mountain. Robin inhaled, looked around. “If the snow had come a week earlier or stayed a day longer, it would have destroyed our crops.”

“You’re lucky.”

“Some people around here think the *Leannan* can control the weather. All the covens cast spells for a thaw, though. Maybe that’s what did it.”

“Show me some spells ”

“Soon.”

“Oh, come on. I’m sick of being kept in suspense by you people. I want to know now!”

“Look—quick!” He pointed toward a tangle at the base of the mountain.

“What?”

He laughed. “Fairy. You have to be quick to see them.”

“I’d like to see them up close again.”

“They don’t let you do that.”

“I’d like to see the *Leannan* again. Really see her.”

“Except for Constance, you’re the only human being who’s ever seen the *Leannan*. Unless there are some who saw her and didn’t survive the experience.” What he said both chilled and delighted her. She tossed her head, laughing somewhere deep inside. She remembered the silver-blond hair, the face with its laughing, sultry smile. “Do you wonder what she’s like?”

“Of course.” His voice was sharp, she thought a bit disappointed.

They came to a cottage near the center of the village. Inside Ivy was making oatmeal in a kettle over the open fire. Mandy had never actually been inside one of the cottages before. It was low-ceilinged, with rush beds against two of the walls. They were concealed by dark brown draperies of homespun. Each bed was wide enough for two. In the center of the room was a large table on which there were four earthenware bowls. A loaf of black bread sat on a board in the middle of the table. Beside it was a large wedge of pale cheese and a pitcher. There were earthenware cups and wooden spoons. A young man in a gray pinstripe suit laid plates out beside the bowls.

“Morning, Ivy,” Robin said. “Morning, Yellowjacket.”

“You both look like hell,” Ivy replied. “And you smell worse. Go down to the sweat lodge, please.”

There’ll still be plenty of food left when you’re endurable.”

Robin took Mandy’s arm, guided her out. “It’s her house,” he said. “Better not rile her.”

“I’d love a bath anyway.”

“You know about the sweat lodge? I was hoping it’d be a surprise.”

“Whatever are you talking about?”

“The sweat lodge. I designed it, you know. The structure, all the equipment. Everything.”

She had not noticed the long, low building hugging the edge of the village before. Smoke came from tall chimneys at either end, it was made of brick, with a roof of cedar shakes.

There were shoes and boots lined up along the doorstep. An overhang protected articles of clothing from the elements. “Hang your other clothes under your cloak.”

“I’m not wearing any other clothes.”

They disrobed together. She stood, feeling the prick of the morning air, her hands touching her breasts.

“I hope it’s warm in there.”

He opened the door into a steamy wonderland. The odor alone was unforgettable, a heady ambrosia of pine and cedar and soap. Cedar beams sweated above. There were three tubs made of glazed bricks.

Under them fireboxes glowed. People sat up to their necks in the water. A woman lay nearby on a wooden table being gently massaged by another. Two men did stretching exercises together on the wet slate floor. People talked quietly, laughed. Men shaved before a long, dripping mirror, their faces lathered light green. A girl, blond and tall, tossed wood into the fires, then went to a large canvas mechanism. She dipped the canvas bucket in one of the pools and raised it by a winch to the ceiling. “Shower’s ready,”

she said to Robin and Mandy.

At last, a wish granted. The soap, however, wasn’t Ivory. The bars were heavy and green, and flecked with herbs. They created dense lather that smelled of mint and left Mandy’s body feeling smooth and very clean, almost as if her skin had somehow been penetrated and renewed from within.

“Get rinsed,” the girl said. “Your water’s almost over.” As Mandy finished she heard the girl telling some of the people in the tubs to hurry.

“Maywell has only one bus into New York,” Robin said as he dried himself with a huge, rough towel. “If we miss it we miss work. So we do our ritual sweats in the evening. This is just your ordinary garden-variety communal bath.” Saying that, he got into one of the big tubs. Mandy followed, slipping down into the delicious water. The other soakers were just getting out, and she and Robin soon had the tub to themselves.

“What do you people do in New York? My impression was that you were

living out here in isolation, fanning and things like that.”

“We’ve got a great farm. But people have jobs, too. Careers. Some of us don’t choose to give them up.

In addition to this, our economy isn’t completely internalized. We have to go outside for a few things.”

“You mean matches—”

“We don’t need matches. We use rushes and waxed tapers and take from fire to fire.”

“Candles, kerosene?”

“I doubt if the whole Covenstead uses ten gallons of kerosene in a year. Wax comes from our own bees.

We have fine hives, and Selena Martin is an outstanding mistress of bees.”

“Medicine, then. Surgery. Advanced diagnostics.”

The attendant interrupted. “I’m going to damp back the fire now. It’s past time and you have your bus, Robin.”

Robin only nodded. “Would you believe me if I told you that modern medicine is to some extent an addiction. The more you rely on it, the more you need it. When we get sick, really sick, the medical team goes to work. We use herbal remedies extensively and effectively. As far as diagnostics are concerned, Constance is extraordinary. And she can heal, too. When a witch chooses death, the whole Covenstead celebrates. It is sad to be saying good-bye, but we’re also happy for the dying witch. You will learn about the Land of Summer, where we believe we go to await rebirth. Witches do not deny death. For us a death is as rich and joyous an occasion as a birth or a marriage.”

“I always think of it as a tragedy.”

“That’s just a cultural habit. Death is just another stage of life, perhaps the fullest, best stage.”

“But what if somebody—some female witch—is dying in abject agony from breast cancer? What then?

Do you dance and sing?”

His eyes filmed for a moment, then cleared. “A hard death is a blessing also. Anyway, we have powerful drugs for pain, not to mention hypnosis. All of that is Connie’s province. I don’t know much about it.”

“What is she, beyond leader?”

“Oh, she’s not a leader at all. Connie is much closer to being a mother than a ruler. She’s where you go when you have need—advice, encouragement,

medicine, whatever your need is, she is there for you.”

So that was to be her own role. Life was turning, Connie had grown old. “She wants me to be her assistant. That’s why they call me Maiden.”

“She has no assistant. She is Crone. Once she was Maiden. As she matured, the character of the Covenstead changed. When she was Maiden, things were much wilder, more intense. Then in her Motherhood we were builders, knitters, carpenters. Now she is Crone, and we are a contemplative Covenstead. When she passes—” He stopped suddenly, and she held out her hand to him. “I’m sorry.

She will die, or she would not have brought you here to be initiated. You will never be anybody’s assistant. When you are Maiden, we will belong to your will and your will only, just as we belong to Connie now.” He raised his head, smiled. “You will not rule us, though. We rule ourselves, each one of us. The only hierarchy of the Covenstead is that of heart and hearth.”

“Robin, this is just fascinating. But I have to admit that the water’s getting awfully cold.”

“Yeah, that’s a fact. Maybe we’d better go for breakfast, assuming Ivy’s saved anything for us.”

On the way back to the cottage they passed women and men hurrying off in the direction of the main house. They carried briefcases, wore topcoats, even some hats. Others had gathered into a work gang and were marching toward the fields. These wore plain homespun trousers and jerkins, men and women alike.

“What about taxes?” Mandy asked suddenly. “And those suits and ties. Surely you didn’t weave those.”

“The suits are bought. As far as taxes are concerned, the IRS knows where we are, and we pay our taxes. You have trouble writing off Bell, Book, and Candle as a business expense, though, so don’t even think about it.”

“It’s been tried?”

He looked at her, his face expressionless. “It’s been tried. Many of our priestesses and priests are recognized by the IRS as clergy. At least they were, until this year.”

“What happened this year?”

“Senator Stennis happened. He tacked an amendment on the Postal Appropriations Bill forbidding the IRS to grant tax exemptions to people who practice witchcraft.”

“What! That’s government interference in religion.”

“Fundamentalist Christians are not interested in preserving the Bill of Rights when it comes to people who disagree with their religious beliefs. The amendment passed by voice vote. Senators were afraid to go on record as supporting witchcraft.”

This cold wind from the outside world made Mandy remember her own dream life, the intense vision—almost a hallucination—of being burned to death.

She was to become responsible for these people. Would there come a time when the senators and the fundamentalist preachers would gain power in America and the flames would rise again? She knew already that she loved the Covenstead and wanted it to persist. If she had to burn she would, to ensure its survival. She would do whatever she had to for them, and in the end she was sure she would defeat people like the fundamentalists, whose very lives seemed to imply the existence of real evil in the world. If there was a Satan, Mandy thought, fundamentalist Christianity was one of his central means of capturing souls. They prayed to Jesus but did the work of their demon hearts, burning books, trampling the rights of others, spitting on America’s noble and ancient tradition of tolerance. She thought of Brother Pierce, of his kind, sad eyes. There was a man in service to evil, and not a bad man, either. A trapped man. And the sadness in his eyes told her that he knew the truth of his false religion. How different it was from the ever-opening flower that is the true spirit of Christianity.

As they walked through the Covenstead, Mandy noticed as much as she could, trying to form true impressions of this society. If she was to be their Maiden, she had an enormous amount of homework to do.

The village was different from every other place she had ever experienced. The very air seemed different.

There was no subtle message of oppression here in the way men strode and women walked. Rather, there was a sort of disciplined openness that was hard to characterize. Women managed it, she knew that. But there was no sense that one of the sexes had been overpowered by the other. The irritant of sexual politics had been subdued.

The moment they reentered Ivy’s cottage this impression strengthened. The almost indefinable sense of possession rested somewhere between Yellowjacket and Ivy. Although it flowed out of her, it stifled neither of them.

Robin was on his way to the kettle when Ivy handed him a chunk of bread

and a slice of cheese. “Drink some yogurt and you’re off,” she said. “There’s no time.”

“I’m not so sure I’m going. My feet are a mess.” He poured thick, brown liquid from the pitcher into a cup, drank it down, and took his bread and cheese. Yellowjacket got up to leave. “Good-bye, Ivy, and thank you. Good-bye, Amanda.”

He and Ivy kissed at the door. “Lawyers turn her on,” Robin whispered. “She’s no fool. Utopian communities may disintegrate, but law degrees last for life.”

“You’re not a very convincing cynic, Robin.” She kissed him, a pert, shy little kiss that surprised her almost as much as it did him. It was not love that made her do it. It would be most accurate to say that she felt poetry for Robin. She watched him eating, his long hands working the utensils, his rough homespun sweater revealing his strength. She had made love to that man last night.

Or had she? No, she had made love with the Holly King. And that was the difference between them: he was the Holly King only in the dark, on the Wild Hunt. But she was always Amanda.

“Let me look at those feet, brother.” Ivy knelt before him.

“The right one’s the worst.”

“I can see that. Broken blisters.” She felt the lesions. “Fortunately the puncture wounds are from thorns, not nails. But just to be safe I think you’d better get Dr. Forbes to give you a tetanus shot before he goes to town.”

“How delightful.”

Amanda was interested to hear this exchange. “Who’s Dr. Forbes?”

“A witch,” Robin said. “His witch name is Periwinkle Star, which is why we ail still call him Dr. Forbes.

He does all our vaccinations and immunizations and such. I think I forgot to mention him because I don’t like shots.”

“I’ll make up an arnica salve for you when you come back,” Ivy said. “But you’d better be prepared to show me your needle mark.”

Looking disconsolate, Robin left the cottage—

“He’ll be fine in a couple of hours,” Ivy said, banging about in the kitchen. “As soon as he’s sure he’s missed the bus to the city, he’s probably going to improve tremendously.” She regarded Mandy. “I’ve got bacon,” she said.

“It’s from a village hog, and it’s great. We’re very proud of it.”

“Bacon?”

“Thick bacon. Don’t you like bacon?”

“I do, but somehow I formed the impression that this place was vegetarian.”

“Some of us are. But *I’m* not, and I didn’t think you were. Plus, you’re eating like you’re really hungry. I think you can use the protein.” She commenced serving. Mandy moved to help, but Ivy wouldn’t let her.

“You’re practically Maiden of the Covenstead. Let me express my respect by serving table, if you don’t find it too uncomfortable.”

Her first impulse was to say that she did feel uncomfortable, but the truth was different. Deep inside herself, the position they were putting her in seemed very right.

She worried, though. The challenges of the past two days had made her aware of a passivity in her personality she hadn’t even known was there. By thrusting her into one incredibly difficult situation after another Constance and the witches had shown her how rarely she really took charge of her own life, and how good at it she was when she did. The trouble was, she had seen the passivity, but she had not surmounted it, not completely. If she was to take responsibility for all of these people and their remarkable way of life—especially during a time of persecution—she had to reach deep into herself and transform the passive into the strong.

She had spent her life placing herself in situations and waiting for things to happen, and that was not enough. Now she was to be Maiden of the Covenstead. Not President or Queen, but Maiden. To her it was a beautiful word. Not as cold as “crone” or as warm as “mother.” Maiden. It had a suggestion of home in it, but also another element, one that was fierce.

Maiden was a word of both love and power. She remembered herself on the hunt, how she had screamed.

Maiden meant woman’s softness. It meant tentative beginnings. But there was also the connotation of the Maid of Orleans, and Athene the Maiden of Battle, and the Maiden Huntress Diana. The Maiden, singing softly, seated on a creekside stone... the Maiden astride Raven, galloping to the battles of the night. It was a long, long time ago that women had such a role in this man’s world. She remembered reading a hymn to Ishtar, written at the dawn of time:

Ruler of weapons, arbitress of the battle
Framer of all decrees, wearer of the crown of dominion,
Thou merciful Maiden...

She sat down to the meal Ivy was making for her. Alone in her own place Ivy exuded loving decency.

The bitch of the maze was no more. In fact the whole incident—everything that had happened to Mandy on the Collier estate—was obviously part of this great testing of her spirit. The choreography of it all was subtle but not invisible. She knew the object: to help her find her strength and live from it so that she could be Maiden.

“I’ve got to get out to the farm,” Ivy said as she laid a plate of brown bacon before Mandy. “We’re harvesting pumpkins.” She laughed. “The Vine Coven is going to be making a *lot* of pumpkin pies and pumpkin bread and pumpkin soup this year. We’ve got a great crop.”

“The farm is organized according to covens?”

“There are three farmer covens, one shepherd, and one husbandry. The others are all more generalized.”

“What are their names?”

“Well—we’re Vine. And there’s Demeter. They do the grains. And Rowan does the orchard and stuff.

Hard labor is Rock Coven, lo is the husbandry coven. They raised the hog that gave the bacon that’s in your mouth. His name was Hiram, by the way. He was a very friendly guy. He used to root in the kids’ pockets.” Mandy stopped chewing. ” ‘Who eats flesh must do it with conscience, otherwise the weight of death will enter your blood.’ Constance always says that when she sees us eating meat.”

Slowly Mandy began to chew again. This time the bacon tasted very different, much richer and more succulent. The hog had given its life. Its sacrifice was somehow present in the meat and could be tasted by a sensitive palate. All of her life she had eaten meat and never thought twice about the suffering that went into providing it. Never before had she thought to honor the animals who gave their lives for her.

There was something strange here, strange and terrifying, that seemed to hover at the edge of consciousness. Mandy was afraid, and ate no more bacon.

Ivy continued. “Besides those of us in the covens, there are people like you who haven’t been initiated into the Covenstead yet, or taken into a specific coven. They—not you—are sort of outsiders. They live in the two end cottages.”

Mandy smiled. “You’ve told me more about the organization of this place than anybody else.”

“Well, since you captured the Holly King—”

“I’ve passed muster?”

Ivy smiled. “Let’s say that Connie’s very pleased with your progress.” Her cheeks colored. “The rest of us, to tell you the truth, are awed.” Her face became grave. “What was the *Leannan* like?” she asked in a low voice.

“Very small. Pale, blond. Her eyes were dark, almost the color of sandalwood. She was beautiful, but not in a simple way. Her face was gay and sort of light—that’s the best way I can describe it. But it was also very *aware*. It was the loveliest face I’ve ever seen. Also somehow the most dangerous.”

Ivy stared a long time into Mandy’s eyes. “What a wonderful experience that must have been. I’d give a great deal to see the *Leannan*.”

Mandy could only nod. It was not easy to talk about the *Leannan*. Sometimes she seemed like a memory, then like a dream. Ivy began to clatter in a chest. “I’ve really got to mix Robin’s salve and go.

Please make use of my house. And if you want to, you can handle my tools. In fact, it’d be a privilege if you did.”

“Your tools?”

She gestured toward the hearth. “My witch things. Just don’t touch the drying herbs. Connie’ll be furious with me if I don’t pass my herbals exam this term.” A silence fell between them. Ivy looked at Mandy with the very plainest sorrow in her eyes. She continued, but with effort. “It’s really a good day for harvest. We needed that. Grasshopper counted over four hundred good pumpkins!” She busied herself at her hearth for a few minutes, crushing dried herbs in a mortar, then mixing them with purified fat. She left the salve with a note for Robin, and an admonition for him to get out into the fields since he wasn’t going to New York. “His feet aren’t that bad. And we need the help.” Then she was gone, the door closing behind her with a creak and a decisive click.

Mandy stood in the middle of the compact room. Deep silence settled. Soon the smell of the bacon made her forget her misgivings about eating Hiram, and she sat down again. She was in a state of great sensitivity. Her whole body was tingling with life. Her senses were pretemporarily acute. She noticed, for example, that she could actually hear herself eating. Her jaws creaked, her teeth ground, her lips smacked. They were not unpleasant

sounds. She also began to notice, very faintly, the music of a harp mingling with her own sounds. Maybe it was next door, maybe farther away. She couldn't tell. But it was sweetly done, a tune that reminded her of a thousand tunes, of moments and days that were lost.

Normally Mandy did not think much about her past. Life had been too hard to dwell upon. Nobody in the family had cared about her or been interested in her desire to be an artist. She was an encumbrance to her mother and father, an interruption in the titanic duel that defined their marriage.

One hot afternoon when she was seventeen she had seen some framed canvases tucked away in the garage rafters. She had climbed up and discovered six paintings of her mother, all enormous, all profoundly awful. They managed to mix sentimentality with bad technique and ghastly color choice. In them Mother looked like a corpse with the hands and thighs of a hairless gorilla. She was a voluptuous woman, but not coarse.

The fact that the paintings were by her father had revealed a lot to Mandy, crouching up there in the dust, a secret witness to his failure. Their ignoring of their daughter's talent wasn't a side effect of a failed marriage, it was purposeful.

She had left that attic furious at her parents for their tragic self-absorption and their indifference to their own child. She became sullen and hostile, then openly rebellious. There were blows, and Mandy had screamed out her contempt for the hidden paintings. Dad had wept then, and Mother had crept away, her cheeks blazing. It was not until some time later that Mandy understood what had been behind their reactions. They thought of the paintings as a sort of personal pornography, but they did not destroy them because they were their only link to the time when their marriage had been good. Not long after that Mandy moved to New York.

She finished her meal and got up from the table. The harp had faded, and with it her painful memories of the past. They had been teaching memories, though. She saw that she should have been more compassionate toward her parents. It was too late now, though.

She didn't know quite what to do with herself. Should she explore the village? Could she? And what of the library up at the main house—what did it contain?

Before she left, she stopped to look at Ivy's ritual tools, which were lying on a piece of white linen on the mantelpiece. Chief among them were a long silver sword and a shorter knife, hooked at the end. There was red cord neatly

wound, and a small cauldron. Mandy could see things in it, but she did not know what they were and she dared not reach in and touch them.

“It’s a fine cauldron.”

“Constance!”

“Good morning, dear. I brought you some clean things.”

Constance strode into the middle of the cottage and put a bundle on the rough table. Mandy unwrapped the clothes.

They were beautiful—a cream-colored silk blouse, a tweed suit, hose, Gucci shoes. A small makeup kit completed the package. “Constance, these clothes—what’s it all about?”

“You should dress your part. You’re a princess now, to half the people of Maywell. Soon you’ll be their queen.”

“Maiden, I thought it was called.”

“That’s the first turn of the cycle. Maiden, then Mother, then Crone. I am, obviously. Crone. And I’m at the end of my time.”

“Constance, you’re healthier than most women half your age.”

“Don’t you patronize me, girl. When a woman in my position says she’s near death, you accept it. As a matter of fact, you don’t have much time before I go across. Now, don’t stand there like a scarecrow.

Dress!”

“I can’t wear these things—I’m on a farm.”

“You’ll be going down to the town this morning.”

Mandy dressed. There was even perfume in the makeup kit. Norell. Constance did everything right.

“Why am I going to town?”

“You’ll see.”

Mandy would have none of that, not anymore. “I am not as passive as you think, Constance. So far you’ve done pretty much what you wanted with me. But I’m afraid from now on I’m going to need reasons before I agree. I could have gotten my head blown off last night.”

Constance shrugged. “You want to be Maiden of this Covenstead, don’t you?”

“Do I have a choice?”

“Certainly. Fail one of the tests and you won’t inherit your birthright.”

“What would happen to me if I did fail? For example, say I hadn’t found the Holly King last night.”

“Oh, you were going to find the Holly King no matter what, as long as you

stayed alive. In these tests the only way you can fail is to get yourself killed. So if you'd been shot dead instead of my horse—”

“My God. Do you mean to tell me that the purpose of all this is to see if I can stay alive? Oh, Constance, that's awful. It's downright immoral. I won't do any more. I quit.”

“No, not you. You've got too much determination, my little warrior. You'll see it through. All your instincts make you want to protect the Covenstead. I know, I'm the same type as you.”

“Constance, this is absolutely crazy. I won't hear of it. I won't!”

“Don't you ever call me crazy, you little whelp. If you had any idea how hard this is for me—what sacrifices have *really* been made for you—you would go down on your knees to thank me.”

“So tell me! Why *should* I thank you for trying to get me killed. I'd very much like to know.”

“Oh, what force you have. Reading your history, I've wondered what you were like.”

“Don't try to change the subject. I want to know, and I want to know now.”

“Well, what you really want to know is why you should risk your life. You cannot love the Covenstead like I do, more than your own life. You hardly know the Covenstead. But you will come to love it exactly as I do.”

“I can see that.”

“You must prepare yourself.”

“I know. Find my inner strength so that I can rule. I've understood that. It seems to me that I've also done it.”

She looked Mandy up and down. “Yes, perhaps so. You did well with the *Leannan* and with the Holly King. In the sense that you're still alive.”

“The *Leannan*... the fact that she exists is what I cling to. No matter how I feel, that tells me something about this is very real and very important.”

“Oh, little creature, how innocent you are. I suppose there's still enough arrogance left in me to make it impossible for me to see how anyone could take my place. Then I see the fire in you, and I think: you can do it. And I'll tell you something. You're going to have a terribly difficult reign. There will be persecution of witches, environmental disaster, perhaps even a world war that will burn us along with the rest. But somehow, if you survive the initiation, I think I agree with the *Leannan Sidhe*. You are well chosen.”

“I guess I'm complaining because I'm not used to this constant sense of

jeopardy. I sort of see the need, but still, haven't I proved myself yet?"

"Do you know the story of Persephone in Hades?"

"Of course."

"You haven't proved yourself until you have gone to the world of the dead and returned to tell the tale.

And I won't say another word about it, except that a young woman—not a very good witch, but a witch—died for you yesterday, and I want you to respect her memory and not be such a complainer."

"Died for me? In the Wild Hunt?"

"Before that. In an entirely different part of the process, one that relates to the Great Test."

"I wish you wouldn't be so damned cryptic."

"You haven't complained before. If that woman's death is to have any meaning, don't complain now. And don't overdo that eye shadow. The Vamp look went out some time ago."

"I wish I was in control!"

"The only one in control around here is the *Leannan*. She knows something about you of which you're totally unaware. The *Leannan* knows who you really are."

"I'm me. That's the long and short of it."

"You're an ancient and very powerful witch."

Those words seemed to explode in Mandy's brain like a white slash of lightning. She cringed, such was the power of this fiery internal bolt of recognition.

Constance continued. "You're terrified of your own history. That's part of what makes you such a passenger in your life. You will drift until you begin to do what you were born to do."

"You say the *Leannan* is in control. She's like a ghost. We hardly see her, let alone talk to her. Most of them have never seen her."

"She's not fifty feet away from this spot. She's even played her harp for you. Haven't you heard?"

"The music was very nice."

Constance snorted. "It was designed to evoke conscience, and it did. You learned from it. Now, listen, you must act. You must begin now, immediately. Show yourself in the town. The town covens need a boost of morale."

"Who's my armed guard?"

“You can’t use a guard.”

“How about Raven? *He* could have used one.”

“Let’s go up to the house. Your car’s there and you’re due at your uncle’s within the hour.”

“At my—since when? I don’t want to go to my uncle’s. Has that ever occurred to you?”

“You’ve got canvases and frames and paints there. Clothes. Books. You need to pick them up.”

“I don’t want to leave here. If I’m so important, I must be able to make a few decisions. And my decision is, I’m staying right here on the Covenstead.”

“The prospect of Maidenhood is making you imperious, Amanda. I’m not sure I like you imperious.”

“Then don’t come in here and order me around. I’ve had more than my share of terrifying and difficult experiences orchestrated by you, and I have no intention of having any more.”

“What possible terror could your uncle hold for you?”

“I just don’t want to deal with him. He’s disturbed, and he’s not going to become my problem.”

“After what happened to Raven last night, and the business of the young woman, I just want you to give the town covens a morale boost.”

“Why don’t you go?”

“You’re the one they’re excited about.”

“How can you be sure of that? My impression is that I’m quite the outsider.”

Constance looked a long time at her. “You were born to your role.”

“You hardly know me.”

“You say that! You’re naked in your work, dear girl. I know you from your painting. And I *know* that your visual skill is more than ordinary, or even extraordinary. It’s almost unique.”

“I’m not that good.”

“As a painter, no. There is something inherently banal about fantasies of elves and such, I’ll grant you that.

But the detail with which you render them, the depth of vision, suggests an imagination of great power. I know, I’ve spent time over your work.”

“So have I.”

“The *Leannan* says you have the birthright and I say you have the power.

If you can visualize, you can do magic, which is a matter of making the real world run parallel to the inner one of images and dreams. You have the strength to visit the House of the Godfather and come back. I did it, and I am less than you.”

Visit the House of the Godfather?

In the story Constance had told the children the other night, the Godfather was death.

The visit to me town suddenly seemed even more dangerous.

She wished she could just be left alone to wander around and learn more about the Covenstead, maybe even do a little painting. Some portraits of the witches, sketches of Ravens before the memory grew too static.

Constance looked straight into her eyes. “That, my dear, is not your fate. The days of painting and dreaming are behind you. You have a great work to do.”

What could Mandy say? Constance had just read her mind. “What are you, Constance?”

“You’ve asked me that before.”

“What are you?”

“The best friend you ever had!” Her voice rang through the cottage. In the silence that followed the harp started again. This time the tune turned Mandy’s heart, for she had not heard it since she was very small.

Sweet and low, sweet and low,
Wind of the western sea.
Low, low, breathe and blow,
Wind of the western sea...

The harp notes were from a small instrument, plucked by fingers able to touch the strings with great precision. Behind the gravity of Constance’s expression was hidden a smile. “The Leannan wants you to go, Amanda.”

The music, Constance’s loving expression, Mandy’s memories, all combined to create a moment of great beauty. Mandy found that she had not the heart to refuse them what they asked.

“Your uncle needs you now. Help him. He is your father’s brother, after all.”

Her father’s brother. Maybe in another age that would have meant a lot. The harp whispered, the harp sang.

Mandy dressed in the clothes. Constance embraced her and kissed her, and wished her well. "Blessed be," Constance whispered.

Mandy started on her journey.

Chapter 17

High morning was relentlessly bright, with water and melting snow sparkling off every twig and tuft of grass. Amanda guided her little Volks along, aware of the expensive crinkle of her suit and the creamy scent of her perfume.

She understood that she was entering the world of death and that there was great and ancient precedent for her journey. In the passage of the seasons Persephone moves through the netherworld to return to life in the spring. She is the corn seed hiding in the winter field, springing up alive again in the summer, giving humankind nourishment and prosperity.

Amanda was to make Persephone's passage, and she was to do it now, dressed as if for a sacrifice.

Constance had obviously walked death's edge herself when Hobbes shot her. Among ancient cultures everywhere: the Indians, many African tribes, the peoples of Siberia—wherever the old religion persisted—it was necessary to make this journey in order to become a guide for others.

The Volks hummed on. Nice of them to pull it out of the mud for her. Nice of them to tell her how to leave the estate by car. She was supposed to follow an almost hidden track through the hummocks and northward into the farm.

It was eerie in among the sharp little hills, especially considering how old they were and what they were said to contain. What must the fairy city have been? Were there silver towers, or painted gates, or pearl-white roofs sweltering under the prehistoric sky? Or had the fairy come from some far place, from the stars, even recently?

Did their ancient cities exist only in the minds of their human followers? Somehow she thought they lived in structures very much like the round meeting hall of the witches. Theirs was a whole civilization of magic, based on the simplest of goods. Their glories were those of thought unbound.

To them the mind of man was easy to control. Thus the *Leannan* could seem to change her shape or even become invisible.

The fairy would never emerge, though, into this world, not as it was, a place of illusions. They would do no more than watch from their far hills and their flights in the sky.

The goal of the witches was to create a world where even fairy could be understood, which meant one where men no longer thought of the earth as

something separate from themselves, but viewed humanity as one organ in the living body of the planet, and could see the universe all in its truth, without the self-deception that the human species was separate from the deeper continuity of the planet to which it belonged.

The *Leannan* was without question the loveliest form Amanda had ever seen or imagined. She almost wept to remember the music of that tiny, perfect harp, to imagine those fingers working the golden whiskers.

Just in time she downshifted to compensate for a length of muddy sand, and found herself out of the valley of the hummocks and on the witch farm.

Riding through it last night, she had known that it was fertile, but by day the fecundity of the place was startling.

There were no tractors rattling here, and the air smelled of the sweat of the plants, not the sharp odors of fertilizer and insecticide.

The scent was an intoxication, pouring in her open windows as she drove along the narrow road between rows of corn. It was mixed of wet hay and cut stems and the rot of the season. Among the fallen stalks and the brown vines the farming covens worked. Amanda came to a group of women laboring with scythes in wheat. They moved along the roadside, their tools whistling in the air, the stalks falling with a hiss and a swish, and the rattle of the wheat berries dropping onto canvas. They chanted as they worked:

“Where have you gone, John Barleycorn,
Where have you gone, John Barley?”

“I’ve gone to the fields where the stalks are grown,
You’ll find me in the fields, John Barley.”

The chant was whispered, as if to the stalks themselves. Rapture moved in the faces of the reapers as the wheat fell. Nearby a group of children rolled and laughed in the stalks, and three men bundled hay.

Never before had Amanda had such an impression of how very old some human things have become.

Mankind has been fanning for a long time now. She did not sense the presence of actual deities in these fields, but the mystery and the energy of the old gods seemed very real indeed. Demeter was the Goddess Earth, also called Gaia, known among Catholics as the Blessed Virgin Mary. Out of her rich belly her daughter Persephone emerged, escaping from Hades. Among

the Romans Persephone's name was Proserpina, and she was the goddess of health and well-being, as well as death.

Amanda had to learn what Proserpina knew. That knowledge was to be found in the world of the dead.

With it she could bring prosperity to the Covenstead.

There were chants going among many of the teams, the round voices of the workers harmonizing with the roar of insects and the bright calling of the children. As Amanda drove carefully along, she became conscious of how rich life in fields really was. How was it that such magic had been forgotten?

Where is mankind going, that we would choose to leave farms such as this behind? Too much of the joy of working with the earth has been sacrificed. No prayer is needed to assist the fertilized plantings of Iowa and Kansas and California, but without prayer we are less human than we were, and our farms are less alive, our food less true to the needs of our flesh.

And yet, our flight from the magical and the prayerful was not without sense: there was terror somewhere here, beneath the swelling light of the sun.

"Hello, Amanda!" A tall woman held a huge pumpkin aloft, her figure tiny in the sweep of the land.

Amanda waved from her window and tooted her horn. The woman, though, had put down the pumpkin and was running across the field. Amanda was stunned to recognize Kate, George's former wife. She stopped the car and got out.

"Amanda, look at you, "Now you've grown!"

She embraced Kate, whose hair had gone gray, but whose face was radiant, flushed with sunshine and work. She wore a loose homespun dress tied by a black cord. On her feet were thong sandals wrapped to her ankles. In her hair was a silver pin of the quarter moon.

"Kate, I didn't realize that you'd come here."

"We all did. George became impossible."

Amanda nodded.

"Constance has told us many times about the coming of the Maiden, but I had no idea that it was you.

When I heard your name I thought, is it possible? Then I saw you. Our Amanda. I just can't believe it."

Silence fell. There was obviously something else on Kate's mind. She was still smiling, but there was pain in the smile.

"I spent a night at your house," Amanda said. "I'm going there now to pick

up my things.”

“You’ve seen him? Constance won’t let him on the estate anymore. Is he well? Or is that the right question?”

George was certainly not well. “You’re forbidden to see him?”

“God, no. Connie doesn’t do that sort of thing. Afraid to see him. Amanda, something happened to him, something dark that has to do with Constance. Don’t think she’s all sweetness and light. She isn’t! She drew him into an involvement with death. She saw things about him that made him become obsessed. It was like death entered the house. We were in one of the Kominski covens. We were so happy. It was new and it was fun. Then George started these sessions up at the estate with Constance. The next thing I knew, he had started that series of experiments, trying to kill things and bring them back to life.”

Suddenly she stopped, looked around. “Let’s continue this in the car.” Amanda followed her in. They rolled up the windows. “I think Constance did something to his mind. He changed. All of a sudden he wanted a ritual chamber in the basement.”

“The Kitten Kate Room?”

“God, yes! It was so crazy. What in the world do cats have to do with it? He went in there and performed acts of self-abuse. He injured himself with candles. I trusted Constance and I sent him to her, and he got even worse! His work came to dominate his life. He’d spend literally days in that lab with that awful girl, Bonnie Haver, a tramp and a drug addict.”

“Bonnie Haver? You mean the one from Our Lady?”

“Yeah, you must have been in the same class, or close to it.”

“I remember her. She was involved in a horrible scandal. More than one horrible scandal.”

“She’s no better now than she was then! She had a terrible effect on George. The more he saw of her, the more time he spent in that hideous, demented room. My God, Amanda, I could smell the burning skin. It was hideous, hideous!” She slammed her hand against the dashboard. She was crying too hard to go on.

There was certainly a dark side to Constance. Dark and subtle.

The words of what had once been a favorite poem of hers came to mind.

I am the mower Damon, known
Through all the meadows I have mown.

For a moment she could see him, huge and dark, straddling the fields with his great scythe like a fiery ray of sun. I am the Godfather Damon.

“He was such a brilliant man. Now he’s crazy.” Known in all the meadows

Snick. Snick. Snick. Down go the stalks. To his cool cave descending... All the meadows he has mown. “Why did you come here?”

“I wanted to, I was desperate to live here. So were the kids! Poor George—it’s terrible what’s happened to him, but still, I love the Covenstead.”

“Have you confronted Constance?”

“Of course! She listened, then she embraced me and sent me on my way. End of story. Amanda, they’re all saying that you’re going to be Maiden of the Covenstead. Please, if you are, remember what I’ve suffered. My husband has been destroyed for some scheme of Constance’s.”

“I’ll remember, Kate. And I will make Constance tell me what it’s all about as soon as I get back from town.”

Kate kissed her cheek. Her eyes were big with sorrow. “I want my husband,” she said. Then she went back to her work.

Driving along, Amanda had the sense that something larger and darker even than she had thought was occurring. The trouble with this play was that the actors were not allowed to know the plot. Thus they were not actors at all, but puppets. She didn’t like being a puppet, not in such a fierce and dangerous mystery.

By the time she began passing the vegetable patches she was trembling. The warm, pellucid air was pearl-white with haze from the rapid snow melt. She sensed the close presence of a terrible contrivance of magic, terrible and beautiful, as sweet as light, yet so very dangerous. She recalled the *Leannan*’s guards, with their rat teeth. The *Leannan*, too, must have such teeth. Were they evolved from rodents, the fairy, as we are from apes, or had they come to earth from another planet? And Constance—what did she really know, and what did she really intend to accomplish?

She thought, as she rounded the last quick turn in the road, that she heard a horse galloping. Just here she had cried out for the sheer exhilaration of it, upon Raven’s back, when they were flying together. Oh, horse.

The border of the estate was marked by a neglected wire fence, a few posts, and a faded sign warning against trespass. There were blackberry thickets full of human laughter—the gay laughter of men picking berries

together, and from the sound having a good time of it.

Then she crossed a rickety wooden bridge into the outside world. Beyond a mowed field mere was a row of shuttered houses. She remembered their lights darkening down last night, the cloaked people running out, the excited voices, the rustle of feet in dry grass, the snapping hiss of quick-drawn breath.

They had touched her for luck as she rode by.

The road went from gravel to asphalt as it passed through the field. Then there was a yellowed wooden sign: Corn Row. Beyond that was a brick street, neatly curbed, overhung by nearly bare trees. There were tall houses set along either side, fanciful Victorians with curved porches and towers and widow's watches edged by gingerbread. A man with a cap pulled low over his face peered at her from one of the yards. He had something fat and green in his hand. His face was rigid.

As she picked up speed, she saw him lean far back, raise his arm, and throw the thing. She jammed on the accelerator. The car roared, and at the same moment what he had thrown hit the roof with a thud and a splash.

She turned on two wheels to Bridge Street. Her car filled with the reek of gasoline. She thought, no, no, not that, they mustn't set me on fire! More than anything she hated fire. The idea of being consumed by it haunted her nightmares. She prepared to stop and jump.

For whatever reason the gasoline bomb did not ignite. As she picked up speed again, she saw in her rearview mirror the man dash across the street.

They must wait there, she thought, just at the edge of the estate, for anyone who dares to come out. No wonder the nearby witches' houses were shuttered during the day. They must be under virtual siege for their beliefs.

As she proceeded down Bridge Street toward The Lanes, the peaceful life of the town surrounded her.

A blue delivery truck from Hiscott's Drugstore went past, followed by a small school bus full of kids. It turned onto Main Street, heading for the red brick school which took up one side of Church Row. In the distance bells rang. Early yet: 8:30.

Under the larger trees the melt fell like rain, and Amanda had to turn on her windshield wipers. The stink of the gasoline slowly faded. Amanda kept her speed high; she felt dreadfully exposed in the streets of this town. There was a strong temptation to turn around and go back to the estate. But she could not.

She did not understand the whole of what she was to do in the town, but she intended to follow Constance's instructions. Deep within herself, she sensed that she understood very well what she was doing, even though her conscious mind refused to recognize the sense of it.

Her plan was to go to George's house, get her things, and get out as quickly as possible. If that was all that happened, then the visit could be seen as a further test of courage. Maybe the man with the gasoline bomb was really a follower of Constance's. Perhaps that's why the bomb didn't ignite.

"The essence of initiation," Constance had said, "is the confrontation with the Godfather. To lead people in the ways of the hidden world, we must know death."

The shadow of the mower seemed to darken the whole town, Damon in the field of souls. Constance had said that Amanda did not love the Covenstead as much as her own life. But she was here, allowing herself to be acted upon by Constance, delivering herself to whatever new danger her teacher had devised.

The mower mowed, his scythe whistling.

She came to the corner of Maple Lane and turned left. Leaves cluttered George's lawn. No curtains blocked the windows of his house, which were black from the darkness within. His Volvo stood in the driveway. Amanda pulled in beside it, turned off her car, and set the brake. With the shrubs mostly bare the Volks could be seen all the way to the end of the street. It would not take somebody with a gasoline bomb long to discover where she had gone.

She ran a finger through the oily film on the roof of her car.

The house was silent. She went up to the front door, tried the handle. The door swung open.

The front hall was dark, the living room off to the left empty. She went in, intending to cross the dining room and see if George was in the back.

Halfway to the bedroom she heard Jane Pauley talking about French green beans. George was in the kitchen huddled over the little portable TV, absently stuffing Fritos in his mouth. An R.C. cola stood open on the counter beside him.

"George?"

"Oh, Good Lord, Amanda! You scared the hell out of me!" His smile was stiff on his face and he seemed very tired. "I assumed you had gone to live on the estate."

“I do think it would be more convenient for me to stay there. I’ll be doing all my work there.”

His eyes had gone all alight. The suddenness of his movements suggested nothing so much as stifled rage.

“The estate is really very quiet,” she said carefully.

“No, Amanda, it’s not quiet. Just last night they had a ritual. Surely you know about it. I was coming up Stone when I saw a naked girl riding a big black horse. Beautiful. She took off across the lawns before I could see her face.” He laughed, and the laughter changed to a wheezing cough.

How should she respond to him? He seemed to know nothing about her, yet he was supposed to be a witch, too. She decided to be careful. “Constance mentioned that there had been an event last night in the town.”

“Everybody from here to Morris Plains is talking about it. And you remember Brother Pierce. That beauty. He’s having a conniption. There was a run-in. Some of his people shot this girl’s horse and then got themselves mauled by a flock of trained crows over in the Wiliowbrook ruins. Oh, boy, the whole town’s going crazy! I was looking for some news on the Altoona station but they didn’t mention it. It’s a local sensation, though.”

It wasn’t like him to chatter. George had not struck her as being any more of a talker than her father, whose specialty was the long silence.

The sooner she understood the nature of this latest test, the sooner she could go back to the safety of the estate. “Never mind the town, George. I want to know how you’re doing.”

“Me? Extremely well. My experiment could hardly be going better.”

“Brother Pierce leaving you alone?”

“Your friends’ve made sure of that. He’s thoroughly preoccupied with witches now.” He smiled a little.

“You ought to see what they’ve put up in front of the Tabernacle. In a way it’s funny.”

Why was George so uneasy? Why was she so scared? “I have a question for you,” she said quickly.

“Are you my Godfather?”

“It’s been years since I thought about that. But yes, I am supposed to be responsible for your spiritual well-being.”

“So you are.” (Known in all the meadows you have mown.)

“The one and only.” He grinned.

This test was about death, all right. Her death. Constance had gone too far.

“I’ve got a lot of work to do up at the estate. I think I’ll just get my canvases and stuff—”

“Brother Pierce and his people have erected a stake in front of the Tabernacle. A stake surrounded by piles of wood. It’s a most dramatic display.”

She could still smell the gasoline fumes.

“Hardly surprising.”

“They shot that horse. Beautiful thing. I heard it. I was the first person there after the sheriff. He’s a witch, too, people say.”

Amanda remembered his fundamentalist deputy. That department must be a tense sort of place. “How horrible, to kill an animal that way.” She kept her voice as steady as she could. She had the sense that if she moved too suddenly, he was going to make a grab for her.

“I saw it. Fine animal. The poor thing didn’t die right away. I hate to hear a horse scream. Sheriff had to put it out of its misery.”

She stared into his jack-o’-lantern smile. Until now she had consoled herself that Raven hadn’t suffered.

A vision swam up of his whole end, as it had really happened:

For a few seconds he lay in silence, confused, not understanding what had happened to him. When he realized that the ground was under his side and he was no longer running, he tried to get up. That was when the pain hit, the thrumming, pounding pain that flared from his nose to his neck. When he screamed, laughter replied and a vicious kick to the muzzle. He shrieked through bloody, shattered nose bones.

He could only see out of one eye. Even so, when he could quiet himself he had looked for her.

Then he had seen the North Star. And he had begun galloping into great, snowy mountains. The sheriffs shot of mercy had sped him on—

“Amanda, I’m sorry. I didn’t mean to upset you.” He made a clumsy movement toward her.

“I’m not upset. It’s just that I don’t like cruelty to animals.”

“Amanda—”

“George, I have to go now.”

He laughed sharply, then suddenly stopped “I’m nervous. Sometimes I think Maywell might be hell.”

“Maybe you have a point.” She wanted to get out of here.

“Give me your hand, darling.”

“No, George.”

“You’re my goddaughter! I want us to be friends.”

She had to play for time. “What’s troubling you, George?” As she spoke she stepped away from him.

“Troubling? Nothing at all, I’m fine.”

“You look terrible.” She took another step back. The point of the test was to go into the cave of Godfather Death and bring back something precious. She was here, and the treasure was the tools of her art.

“I’ve been working late. And I don’t eat well on my own.” He waved his bottle of cola. “Amanda, I’m awfully glad to see you.”

How could someone so pitiful be so frightening? “Take it easy, George.”

“I’m not going to hurt you.”

“Stay right there, George. Don’t come any closer, please.”

“Amanda, you don’t understand. I’m offering you a place in immortality.” What was this? It didn’t sound like part of the script. “Immortality! You’ll know the secret of the ages!”

“George, calm down.”

He waved his cola. Saliva flew from his mouth. “They might hate me and they might laugh at me and they might destroy my work, but they will never kill my ideas! No, my ideas will go on and on down the halls of time and in the end they will triumph.” He smiled as a marionette smiles. She saw his truth in that smile.

He had failed, totally and completely, and his failure had driven him crazy.

Her only thought now was to get away, but he had placed himself between her and the front door. She was forced to try and talk her way out. “George, get hold of yourself. If something’s wrong, you and I can sit down and discuss it like two civilized people. I can help you, George.”

“You certainly can! You’re young and strong and just the right size!”

What did he mean?

When he lunged at her, she managed to make a dash for the door.

He moved with tailored grace. His long arms came around her neck. Such was the force of his maneuver that the cola bottle slammed into a thousand pieces against the far wall.

Rape must be on his mind. Just the right size, she thought bitterly. Indeed. She might put up more of a fight than he expected.

He moved so suddenly, though, that he dragged her right off her feet.

“We’re going to the basement now.”

Oh, you idiot, don't struggle so! Everything's going to be just fine. You don't have a thing to worry about."

"You bastard! You try to rape me and I'll kick your balls off." She would, too.

"Rape? I'd never do that. I've got too much respect for women."

"Look, George, you're—slop pulling at me! Where are you trying to take me?"

"Basement, dear. My equipment's down there."

She writhed, remembering the room full of cat pictures. The lair of Hades. God, this *was* contrived. He was Hades, and he had surprised her despite her caution, just as in the old myth. He was dragging her down into the netherworld.

"Come on, quit that kicking. You're not going to get away from me."

"Let me go, George, I'm warning you!" She couldn't quite get into position to hurt him. If he got her down there, she had failed the test.

"It's a gift I'm giving you. You'll know what it is to die and come back to life Think of it, you'll *know*. You'll be famous, Amanda."

It took a few seconds for her to understand what he was planning. When she did, panic overwhelmed her and she screamed. He was about to kill her in his machine! Kill her! This was no game. Constance had literally sent her to her death.

"It's not tested! You might murder me!"

"It works perfectly. It's safe."

"Then why is it in the basement and not in your lab? George, please listen to me. You've got to get yourself together."

She was babbling and she knew it. Her body, her bones, her young blood, were panic-stricken. She exploded with effort. Twisting, contorting herself, she managed to dig her nails into his cheek. As he reared back she kicked behind her, jamming her heel again and again into his shin, tearing and pulling and twisting.

And suddenly falling free.

She stumbled to her feet and rushed to the kitchen door He was not three feet away, snarling, a flap of bloody skin dangling from his nose, plunging toward her.

Then she was through the door, running as fast as she could around the back of his Volvo, slipping in the wet grass, falling down.

He leaped on her so hard her breath whistled out of her mouth. Even so she

wriggled free of him and managed to stagger to her car. She got in, fumbling frantically with her key. Just as she jammed it into the starter his arm came snaking in the window and his fingers twined her hair.

“Immortality, you tittle beauty! You’re happy about it! Happy!”

It hurt so much when he yanked her hair that she saw flashes. But she started the car. With her last bit of strength she engaged reverse and let out the clutch.

Something pricked her shoulder. When she looked he was withdrawing a syringe. She bellowed, grabbed at her arm. “It’s just scopolamine, Amanda,” he said, his voice full of apology. “It won’t hurt you.”

She stared in horror at the shoulder. It was as if a warm tropic wave washed over her. In the distance she heard the car ticking over. Quick! You’re too slow!

She pressed the gas pedal. From far, far away there came kindly laughter. “I’ve got the key, dear I took it out. You can’t drive the car, the engine isn’t even running.”

What happened to the engine?

“Let’s go back in the house now.”

“No-o-o... no thank you...” Was that her voice? So empty, so distant.

“Come on. Right now.”

He opened the door. Then his hand was under her elbow.

“Let’s go, Amanda. We have a lot of work to do ”

She rose up out of the car even though she didn’t want to. There just didn’t seem to be any way to resist As he took her into the house she cast a sorrowful look back. Then he closed the door and began nudging her down the long hall toward the mudroom.

“Tom?”

“What’s that?”

He was in the game room, lying like a long black python along the back of the couch, his kinked tail switching, his eyes gleaming.

“Tom, help me! Tom!”

George looked around. “There’s nobody here but us, dear.” For some reason he could not see the cat.

Tom kneaded the couch and yawned.

“Please, Tom, please!”

“Be careful, honey,” George said, “you have to climb down a ladder.”

“Oh, a ladder. Please...”

“That’s it. All the way down, now. Right. You stand there. Stand still.”

She couldn’t move if she wanted to. His voice was the only command she could respond to.

“Oops, you were swaying. Did you realize that? I had to give you quite a dose of scope, honey. You’ll be out like a light within the minute. Come on, now, hurry along.”

The Kitten Kate Room again. She didn’t like the Kitten Kate Room. On the ceiling was a picture of a galaxy spiraling through eternity. Superimposed on it was a lean black cat. Black and dangerous and lovely. “Tom, help me!”

“Cross your wrists in front of you, please. Sorry I don’t have any straps, I know they’d be more comfortable. But I can’t risk you moving in your sleep and wrecking the coils. Also, when you wake up you’re going to be a tad upset, I think, so it’s better this way. Isn’t it better, dear?”

Dimly, distantly, she felt her wrists and ankles being bound, felt rope swinging round and round her body, felt the world swinging away.

She dreamed long, vague dreams of the beautiful lady of the mountain, and the Holly King and Raven, and all that new world.

And Tom... yawning while George killed her.

The first thing she saw when she was conscious again was the terrible face of the panther in the ceiling.

“Hello, Amanda. How do you feel?”

“I’ve got a headache.” She tried to move, realized she was still tied. Her confusion was complete. She was bound down tight, surrounded by shining brown ceramic devices of some kind. She tried again to move, but the ropes held fast.

“I was killed! You killed me, didn’t you?”

He put his hand on her face. “We’re going to begin the experiment now, dear. I had to let the drug wear off first. You’ve been asleep all day.”

The blackest despair covered the little sprig of hope that had started to grow in her. “No! No!”

“Not so loud, dear. These houses are close together.”

“Help! *Help me!*”

“Hush, now!”

She heard a buzz, felt the table sway. A terrible tickling swarmed in her chest, centered on her heart.

“See you in a few minutes. Toodle-oo!”

The dark took her.

Chapter 18

RED MOON

moom moom
hear my call
moom moom
speak to me

—Anselm Holto,
“Troll Chanting”

No wind passed her and she impacted nothing, but she knew she was falling. She heaved and twisted. It was excruciating to anticipate a splattering end that never came.

She screamed, but there was no sound. She called out, “Don’t kill me! George, please, please.” Her voice was dead.

So this is what it was like This—this billowing emptiness. Her body was not a body anymore. It seemed more smoke than flesh, thick and cold. But aware, and conscious and very scared. George had succeeded in killing her. Of course he’d never bring her back. If he could, he would still have a lab and official approval. She had come into the cave of Godfather Death and gotten herself killed. The final test was over, and she would never inherit the Covenstead.

She began to cringe in her falling, waiting for the shattering crunch, her ribs jamming full force into her shoulders. If terror was a creature, she was dropping down its throat.”

But she had no ribs, and there would be no impact. She was falling into nowhere, and she herself was becoming nothing.

There mumbled in her mind the ragged thought: I’m dissolving.

She didn’t think she could bear it, not falling and falling and never hitting, in absolute silence and absolute dark.

“Please, I can’t die. I’ve got to get back.”

A terrible, thin face flickered nearby, as if in response to her cry. She batted at it, a starved husk of a face with white worms for eyes. But it had delicate eyebrows and a familiar pale shape. Amanda rejected it with all the force of her soul.

“Daughter,” it said, “welcome to hell.”

“Mother! My God, what happened to you?”

The face shifted and congealed, wrinkling and collapsing on itself. “I lived,” it gargled, “I lived wrong...”

And then was gone.

“No, Mamma, no.” How horrible, how hideous, what a tragedy. She said she had lived wrong—but how wrong? What had she done?

“Mamma!”

The face reappeared, dissolving, just inches before Amanda’s eyes. The skin was sloughing off the bones, and the hair was growing long and ragged. Decay that must have taken a year in Mother’s coffin was being re-created in seconds. Amanda screamed and hit, and her blows went right through the apparition.

“Mamma, why?”

“I need this. I chose it, I must atone for my life.”

“*What?*”

“From the time you were six I hated you.”

“You didn’t hate me. Mamma! You—” But it was true, wasn’t it? Remember the hot sorrowing nights when she would not come, remember how she scorned your art, remember how she sat, as still and rigid as a wooden mother, that time Dad beat you up? “Mamma, I forgive! I forgive you!” Worms, get out of her eyes! Skin, come back! Hair, stop growing!

“We judge ourselves when we die, honey, and we are never wrong.”

“I forgive you.”

“I have to forgive myself, and that’s going to take some time.”

“You don’t deserve to suffer like this!”

“I told Mother Star of the Sea to discourage your interest in art,”

“Mamma, I know that. And she ignored you.”

“You got into the Pratt Institute. And I threw out the letter of acceptance.”

“Since then I’ve taught at Pratt two semesters. I’m beyond caring about Pratt.”

“I wanted to destroy you. I wanted to hurt you.” The face glowed as it spoke, as if with fire from inside.

“Mamma, I forgive.”

“I was jealous! You were beautiful and talented and I was—me.”
Something was moving behind her, something complicated.

“I forgive you!”

“I can’t forgive myself.”

Amanda saw it more clearly now, a huge black hulk of a thing with piercing green eyes.

When it opened its mouth, a great mewling scream filled the still air. Mamma recoiled, her rotted flesh fluttering from her brown bones, as the cat came closer. He was tremendous, but his face was familiar: there was that shredded ear—

Amanda was stunned to see him. Tom must be death or the devil or something. But he had been so cute, lapping milk and cuddling in her bed.

There came a crackling sound as he took a chunk out of Mamma’s skull. Amanda could see the brain within, as crunchy as a sponge that has been dipped in Clorox and let dry. When Tom’s long pink tongue scooped it out, Mamma made a sort of babbling sound. Then her eyes became blank.

While Amanda shrieked, her stomach twisting, her throat burning, her skin tickling with dread, Tom ate.

At last there remained not even a tuft of Mother’s rough hair.

Then Amanda saw that Tom was staring at her.

There was a new sensation involved in facing those eyes. She could actually *feel* his stare driving like wild snow into her soul, seeking every hidden crack and cranny of her being.

Was this the Last Judgment? Did a cat—no, it couldn’t be Tom, not sitting in judgment over her.

“Please—”

The eyes grew bright and fierce.

“No. No! Keep away from me!”

The mouth opened.

Down Tom’s gullet Amanda saw fires dancing, and a vast legion of tragedies, each as immense and personal as her own.

Hell was inside him.

“Who are you? Why are you after me?”

There was no answer but the oily gush of his breath and the burnt-hair stink of the cooking dead.

He was getting larger and larger, so large that she could walk into his

gaping jaws if she wished. But she didn't wish! "I'm not guilty of anything! I got murdered and I'm not going in there! I've got to get back because my life isn't over and they need me!"

At once the jaws snapped shut. Then she landed, as lightly as a feather, upon a gray and silent field. Her body felt substantial, solid. Or rather, almost solid. When she looked down she could see herself, but she had the feeling that she could have walked through a wall. She peered around her at the storm-turned line of the horizon. This was empty country. Tom curled about her legs. He looked up at her out of his little cat's eyes and seemed ready to wink.

After what she had seen, she was afraid of those eyes. Maybe they would become big and menacing once again, and those jaws would open—

He carried everlasting tragedy in his belly.

And yet he was the only other thing here, so in a way she was glad for his presence. Without looking at him she bent down and stroked him. His fur was full of electricity. "I wish you could talk. I wish you could tell me what's going on."

He didn't speak, but a gentle force turned her head. She was stunned at what she saw: the quietest, most perfect landscape of trees and green hills, blue sky flecked with white clouds, and in the shadows of the sky something wonderful that had no definite shape. It was, rather, the presence of a condition—an emotional color—as if goodness filled that air. Amanda's first love, a boy who had died in a fire, came walking toward her. "I remember you," he said, and there was something eternal in his voice. "I've been waiting for you." He opened his arms, and what flowed from him was as a fine old song.

Other voices soon joined the song, then overwhelmed it. They were soft and yet solid, chanting: "Moom moom hear our call. Moom moom hear our call..." The chant went on and on, splitting and filling the soft air of summer that caressed her.

She recognized those voices—it was Ivy and Robin and Constance and the others. "I can hear you"

Her heart almost broke: before her lay heaven, behind her life. The name the witches were calling evoked in Amanda powerful, hitherto hidden feelings. Moom! So familiar. How Moom had loved her life.

"I've got to go back. The witches need me."

Her old friend laughed very gently. "Tom guards the line between here and

life, Amanda. You can't make it past him. And nobody who goes down his throat ever comes out again."

The chant went on.

"Hey! I hear you!" It tore her soul. Despite what her dead friend had said, she turned back from heaven.

The air around her shivered and began to fade. And she knew it was doing that because she had just made a firm and unshakable decision: she was going back to life, somehow, if she could.

A cold wind sprang up. Ugly gray clouds swarmed across the sky. Her first love became a black, dancing skeleton in a bombed landscape, and replacing the song of heaven there arose a great multitude of sorrowful cries. They echoed out of the clouds like high thunder, and Amanda saw that the gray hid monstrous flying things.

Terror began to grow in her. The things in the clouds had wings and black scales and long red nails. She knew that they were demons.

Above their banshee cries there remained the chant: "Moom moom moom moom," on and on and on.

She wanted to somehow open the sky, to part those dreary gray clouds, to get through to the chanters.

Tom had returned, sullen and slinking, mewing loudly. "Tom, they're calling me back, I can hear them!

Please, Tom, tell me how to get to them! They need me! Oh, God, I can feel how bad they need me!"

She ran, she jumped, she clawed the air. When she scrambled up the gnarled remnant of a tree, she could hear the sucking eagerness of the demons in the clouds.

How absurd, she thought, to have chosen this. Nobody ever came back from the dead, not with all of hell barring the way. The dark once entered...

Guardian: a great maroon scorpion with the blue-eyed face of a little girl.

Guardian: a white bird that warbled lies.

Guardian: something that once had been a nun. Mother Star of the Sea.

Amanda hadn't thought of her since sixth grade.

Tom spoke, a fierce, rasping voice in her head. "They are death's soldiers, the demons."

"Then death is evil."

"Death is death, neither good nor bad. It's just there."

She ran. It was brutal, simple instinct, the reaction of the monkey to the

slinking panther. The ground beneath her was spongy and had the slickness of skin. Maybe it was skin. This hideous place could easily be on the back of some inconceivable monster. She slipped and slid in the soft, glittering folds of it, and smelted the sweet stink of it.

The cat ran along beside her for a while. Then she saw it prancing in front. Then the clouds spit a drop of hot, sticky rain.

The drop tickled her face. She raised her shadows of hands and touched the ooze. It was full of hair-fine worms. The tickle on her face changed to an itch, then at once to a dull ache. She reached up again and pulled away a great gout of skin. It was seething with the threadlike creatures. She threw it down in disgust and wiped her hands on the rubbery ground.

The sensation in her face was awful, an ache and a salty cut and the itching of a scab. She raised her eyes to the sky, which was tossing and bulging down at her, as if great fingers punched behind the clouds. "Let me go home' I don't belong here and you're not going to keep me!" She would have thrown something but she had nothing to throw.

Somebody whispered in her ear, and she knew it was a demon; "You've got a lot to learn, baby."

"Don't you dare call me that! I'm Amanda Walker and I'm not your baby."

The clouds twisted and stormed, became a great, dark skull filled with lightning, and began to draw closer to her. The grinning jaws bellowed thunder so loud she held her ears and screamed, but her own voice was lost.

And she had an odd thought: the demons in those clouds don't hate me. They're just doing their job.

"Your body can't receive you back. Dead is dead. The ones who do return end up as ghosts, useless victims of the winds."

This was a new voice, not big like the storm. Rather it was soft and small and full of peace. Amanda had heard something like it before, at the fairy stone. If a voice could be called sacred—she went to her knees. "I thought death was something like going down a long, hollow tube and then meeting my grandfather or somebody and being welcomed, and—"

"Each person creates his own death."

Amanda was increasingly sure she knew that voice. And if she was right—then maybe things were going to get better. "Who are you?"

For just an instant Amanda glimpsed a bright, tiny woman, quite perfect, with rowan in her hair.

"*Leannan*, it is you. I was hoping it was. Listen, please help me get out of

here. I've got to find a way to go back without ending up in hell."

The *Leannan* regarded her. "You've set yourself a difficult problem."

"But I don't deserve hell. I'm not guilty of anything."

"If you want my help, then come with me." Tom was at her side, looking large indeed next to the Fairy Queen. "Don't worry about your demons. They won't stop you going deeper into death."

"Oh, no, that's not what I want. I'm going to get out of this. I've got to go back to the Covenstead!" She turned—and found herself facing a narrow man with a sneer on his face and rape in his eyes. He grabbed her throat with a wet hand. Suddenly both he and she were as solid as living bodies. She could smell his rancid skin, see his oily tongue, hear his breath bubbling in his nostrils. "Hey, baby," he said, "let's dance."

"Oh, God! Oh, God, help me!"

He brought out a long, serrated knife. "This is God " When he started squeezing her throat, she suffered very real agony. "This is just the beginning, you stinking bitch. I'm gonna cut your heart out and eat it right in front of your eyes!"

The blade caressed sensitive skin, and she saw a long spike of flecked drool start in the corner of his mouth. "*Leannan*, please, you said you'd help me!"

"Then you must follow me."

"I'm sorry. I will."

At once the rapist began to change. His form wavered and he rolled his eyes. His knife fell into dust, his whole body shivered, twisting back on itself.

Then Tom was there, swishing his tail.

"It was you! All the time, it was you! You're evil, you're a monster. A *monster!*"

"He obeys the law, Amanda. And so must you." A hand so small it felt like a little, warm mouse came into her own. "Come with me. I want to show you your past, so you can learn what's drawn you so against your better judgment to your witches. Perhaps then you'll see that you should go to what you think of as heaven, which I call the Land of Summer. You've long since earned your peace."

"I want to go back. I've got to."

The *Leannan* sighed. "You're very strong," she said ruefully. But the small hand squeezed Amanda's fingers.

Amanda walked along with the *Leannan*. She wasn't at all sure she wanted

to, but every other choice seemed worse. She had expended her last bit of resistance facing Tom the rapist.

She suspected that he was only the first in a long line of guardians of the gates of life. The scorpion, for example, was worse. And the little bird far worse. And then there was Mother Star of the Sea. Dear God, she was the very personification of guilt. In school she had managed to make Amanda feel hell-bound for having an untied shoe.

“Will you please hurry up, Amanda? I’m having trouble with my damn fire.”

That was Constance Collier—and this place—they weren’t on the field of skin anymore, they were—oh, God, this was all familiar. “Oh, *Leannan*, thank you, thank you!” All the time she had been bringing Amanda back to the Covenstead. Deeper into death, indeed.

“The veil between life and death is thin here. But make no mistake. I have not brought you closer to the resurrection you seek. Let Constance show you your first life. Perhaps then you’ll see that you have the right to the summer you have earned.”

The meadow was clear and bright, and Constance was sharply outlined by the sun. Things were still very strange: there were people around her, for example, but they were mere shadows, seated in a vague circle. Connie was stirring a great, iron cauldron, and that was very clear, too.

She smiled at Amanda. “You’re slow as molasses, girl!” Her voice renewed Amanda’s determination. Despite what the *Leannan* said, she could hear how very desperately Connie wanted her to return. The old woman waved her long staff for emphasis. “By the very Goddess we’ve got to get you back.”

Amanda ran up to the edge of the circle. “Constance, am I really dead? This is crazy—if I’m dead how can you be here?”

“Go round the circle once widdershins and you can come in. Then I’ll tell you.” Amanda began to walk.

“Not that way. That’s sunward. Widdershins is the other direction.”

Inside the circle even the air was different. It had less of the sparkle of spirit air, and smelled of fields and farm. She could just see, if she looked very, very closely, the faces of the people huddled around its edges. She recognized Ivy, and her heart panged to see Robin. But they certainly did not see her.

“Where is this place?”

“We can meet here for a time. The witches’ circle lies between the worlds.”

“I’m on the estate?”

“The circle is in both places.”

“What places? Have you given me some kind of a drug?”

“Oh, little baby, the drug is death! You are really and truly dead. And we don’t even know if your lunatic of an uncle will get himself back together enough to return you to life. He doesn’t *want* to, that’s for sure.”

“But you sent me to him! If you knew this would happen—”

“To be the witches’ guide in life, you must learn the secrets of death. And to do that you’ve got to die.

Unless there’s a chance you won’t come back, you aren’t really dead.”

“The *Leannan* said that you were going to show me why I don’t need to return. But you seem to want me back so much.”

“I’m going to show you your first life. How you take what you see is your business. Now I’m going to swirl the cauldron and you lean over and look into it. Be mindful of what appears, young woman!”

The cauldron gurgled and gargled almost like a living throat; it boiled and bubbled. Soon Amanda began to see things rolling about in the murky waters. Shadows, faces... things that made her look more closely.

“That’s right, that’s good.” Constance swirled harder.

“The tennis shoes you wore when you were ten, some snapshots of you then. Baby treasures, too, Holly your dolly and first friend. And Old Moll with her nose askew, and calico Kitten Stew—remember them?”

“I remember.”

“Look, then. Look at life in the classroom.”

Something was wrong with this picture. Her childhood had not been a time of such terror. Or had it?

The waters turned and turned. She remembered sixth grade. There was Daisy O’Neill and Jenny Parks sitting by the window, and Bonnie Haver in the back, plump Stacey behind her.

Two swishing rows of girls came down the chapel aisle behind Mother Star of the Sea. They chanted to the *Stabat Mater* tune:

“Touch your lips to a weenie on Friday,
And you arc doomed.
Be a whiner or a masturbator,

And you are doomed.
Drown a baby or steal Mother's eraser,
And you are doomed."

"Now, wait a minute," Amanda said. "Eating meat on Friday isn't a sin anymore."

Bonnie Haver: "But you did it when it was, so you are doomed."

"I'm not even a Catholic! Mother Star of the Sea might have secretly baptized me that afternoon I fell asleep at my desk, but—"

"You are doomed."

Just at the edge of the circle Amanda saw the blade-faced man again. He was wearing a long slack coat.

In his hand was a smoking soldering iron. He held it up. "How about some scars, girl?"

Constance brandished her staff and shouted: "Away, Tom! Come as her friend or don't come at all."

"He's a demon, Connie, and I think the *Leannan* might be one, too!"

"No, Amanda, they're not demons, not those two. They're gods. Or angels, your Mother Star of the Sea would call them. In any case, they're a couple of whores. All gods are. They'll be whatever you want them to be and do what you want them to do. If you declare yourself guilty, they'll take you to hell and give you to your demons. Or they'll sing with you in heaven. It's up to you."

Despite herself, Amanda found that she was looking deep into her own soul, where the moss of forgetfulness grew. And under the moss she saw: "I *did* tease that nun. And I did it on purpose, because I wanted to make her suffer. Oh, God, I did it for the sake of hate."

The man with the soldering iron stepped right through into the center of the circle. With a shout Connie pitched back and fell among the shadows of her witches. Amanda looked at the blue, smoking tip of the iron.

"Now, my dear, open your legs."

She would not. She was guilty, but not *that* guilty, "I was just a little girl. It was the innocent anger of a child."

The man twisted and hissed at her, then in a yowling instant was Tom again, curling about her feet, his tail low and sullen behind him.

Connie came shambling back, brushing corn silk from her cloak. This field had just been harvested.

“The particular deity you call Tom is your familiar, dear. You must learn to control him. Until you do, be careful. Remember that he follows your wishes. If you stay on this guilt trip, watch it.”

Amanda looked at the cat. He winked one green eye.

“No, dear, ignore him. Look into the cauldron again. See what you’ve suffered on behalf of the witches.

You needn’t feel guilty if you don’t wish to make such a sacrifice again.”

“I thought you wanted me back, Connie.”

“Not out of guilt. Out of love. Now, look. Look deep!”

There was somebody in the cauldron, a tall and furious somebody from a far place and a farther time.

“You’re beginning to see who you were. You’ve been a witch for a long, long time.”

“That other one down there—I remember him, too. He burned me!”

“He always does. But don’t be attracted by his bishop’s robe. Go back farther, to when he wore simpler things.”

Amanda looked deeper into the cauldron. Just then it shook as if someone had kicked at it. She seemed to slip and slide away from the edge. The waters, which had been clearing, grew murky again.

“What’s going on?” Constance rasped. “Who’s messing up the chant?”

“I’m sorry.”

“What’s the matter with you. Ivy? Can’t you tell she’s here? Can’t you see her?”

“Connie, I’m trying my best!”

“This is the most important circle we’ve ever cast! Don’t you dare break it. Now, chant, girl, *chant!*”

“I said I’m trying.”

When the chant became smooth, the cauldron cleared again. But it lasted only a moment. Soon the waters were more turbid than before.

“Ivy, you are breaking the chant.”

“I’m sitting in a damned ant bed, Connie. They’re swarming all over me.”

“*Chant!*”

The waters came clear. Amanda peered in. As before, her childhood floated at the surface. Below came the various colors of other lives, whole finished worlds swimming in dim old seas.

Back Amanda went through the babble of time, to a tiny brown village huddled beneath something vast and tumbled white, a mountain upon a

mountain of pure ice, a glacier.

“This was the first life, Amanda. You had just fallen from the eyelashes of the Goddess. You were new then.”

Too late Amanda realized that she had leaned beyond the limit of balance. She fell into the boiling cauldron.

There was a shock of intense pain, then she was suddenly sitting in a reeking tent. It smelled of rancid grease and human filth, sour breath and sweat. She gasped, shocked that she had suddenly reacquired weight and substance. Her mind humbled about in an unknown tongue. Her body was smaller but heavier, her breasts enormous pendula, sweaty and jiggling with milk. She was swinging them back and forth over a fire.

Upon her head was a crescent of horn, around her neck a necklace cunning-twined of last summer's vine, the one upon which the Red Goddess Flowers grew.

She was Moom, Daughter of the Red Goddess. Moom, the happy, the rich, the good! Round her thighs were fastened leather garters, one on each, made of the softest doeskin, well chewed. They were marked with the waxing and waning phases of the Red Goddess and signified the rule of the wearer, who could dance in them, work in them, give love in them, and never need for an instant to remove them.

Wearing them, she was the Goddess. Without, she was only Moom. She kept the knots tight, never mind that it made her feet tingle. Other women envied the garters and liked to lie upon her lap and gaze for hours at them. Chief among these was Leem, who would have been the great queen ahead of Moom had she not stolen a cave bear cub to keep her warm at night. Its mother came in a rage and bit off her hand.

No maimed woman could keep hold of garters.

The ritual of the raising of milk went on. As she swayed and wove herself about above the flames, Moom heard the leather of the tent slap against the frame. The whole tent shuddered. A frigid gust leaked in, making the men and the children in the outer circle press against the women who surrounded the fire.

Moom felt the milk oozing out of her bones, sensed it running along the milk channels in her flesh, knew it was filling her breasts.

They soon became huge and tight, brown-gleaming in the firelight, their nipples rigid and dripping.

The women sat back on their haunches now. All were engorged. They

began to clap. Three times sharp, three times soft, three times fast, three times slow. They hummed the music of the bees, to bring summer luck to the family. First their daughters and their sons came to them and took each according to his age, the youngest as much as they willed, the older less, and so on. Through this the men waited.

Then each man brought to the fire something of their mysteries, a great black haunch of bison, a liver from an ibex, a mammoth's stomach still stuffed with flowers and roots. All of these things they set in the immense earthenware cauldron, the family's greatest treasure. They dropped brands in it until it hissed and smoked and filled the tent with wonderful smells.

Moom chewed the blue flesh of the stomach while her husbands took breast upon her, and then ate the flow of her monthly blood.

Thus Moom's family shared the food of men and women, in the lost winter of a long time ago, not too far from what would one day be called Alesia, men later Eleusis, the central place of the mysteries of antiquity.

It was there, in the hard spring of her fifteenth year, that Moom met the most terrible of ends.

The water had flooded their lands that Maymoon, running down from the White King's icy haunches until the men said, "The White King's piss is going to drown the world."

Moom said, "We belong to our place."

The men said, "We cannot live in the White King's piss. We've got to get out of here."

As a portent a great piece of the White King, so large that it reached far past the top of the sky, toppled into the meadow with a roar that loosened teeth and sent the leather tent flying about in tatters.

So they left, all but handless Leem, whom they abandoned to the winds. They went down the long stone ridges, into the forests where the little animals lived. Life in the forest was hard, for a hunter could spend all day seeking a beast not large enough to fill a single mouth. Moom, though, had been granted the secrets of mushrooms and berries, so they did not starve.

Beyond the forest there were plains so full of bison that the very air smelled of them. Moom wondered if they were not a single beast with many bodies, so closely did they cling to one another.

In the center of these plains, where mere flowed water, men had made many leather tents, and even some of grass and mud, more tents than Moom had ever imagined in one place.

“I am Alis,” said the man of the place, when Moom brought her family down among the dwellings. “We are Alesians.”

“We are Moom.” She slapped her belly. “I am *the* Moom! The powerful! Full of milk and blood and babies.”

Alis laughed. He was tall and graybeard. “Eighteen times I have brought back the sun! Oh, I am *the* Alis!

The most powerful!”

She was confused and amazed. Challenged by a man, who could not even let the Red Goddess Moon into his baby closet? How could it be that he was so foolish? She did not know that Leem had come here ahead of them, traveling fast because she was alone, and contrived this treachery. “You might dry up the Goddess! I wouldn’t risk that if I were you!”

The lands of the Alis, she noticed, were yellow and dusty despite their river.

He threw her down and took her garters and put them on. Then he strapped a leather flap to his loins to cover his bull. He danced the women’s mystery dance, slapping his belly and shrieking the birth cries.

Then the Alesians made cages of strong saplings and put Moom and her women inside.

When hot stones were piled high around it, Moom ran her cage, and shouted and shrieked in agony unspeakable. AH one day as the sun crossed the sky of Alesia she suffered. And she saw Leem, jeering among the men, waving her stub of an arm. The bars at the end were covered with Moom’s roasting blood, and she was purple. She was cracked. She smelled like the last of the cauldron. Her hair was nubble that crumbled off in her hands.

She called at last: “I am Moom!” And died.

The Alesians ate Moom and her women. They remained beside the river a full season after that, but the men made no milk and birthed no young. In time other women came and took Moom’s garters off Alis’s legs, and the Alesians went away with them.

Amanda lay weeping, exhausted, in the shimmering, dying circle. The figures around her were exhausted, too, dwindled from ghosts to embers. Somewhere a bell was ringing.

“Amanda! By the four winds rise! Amanda!”

She couldn’t. She was too tired. Black fingers came from the sky, sweeping down around her.

“Amanda, you must wake up. The demons are taking you.”

The voice was dulled by the thick, black clouds. “You’re innocent, Amanda. You’ve sacrificed enough!”

She was becoming heavy and dreamy. She remembered summertime and cherry Kool-Aid and Mamma’s delicious gingerbread, and her own little backyard playhouse. “I used to pretend it was made of candy...”

“Amanda, you fool! You’re letting them deceive you! They can’t take you to Summer. They want to destroy you!”

“The cottage in the forest... gingerbread...”

“They’re monsters. They want to eat your soul.”

How silly Connie sounded. “Oh, Connie, it’s just Tom and another one of his tricks.”

“Tom’s a friend! But these things—oh. God.” The smoke smelled like honeysuckle. Amanda remembered the backyard, the sprinkler ticking. Mamma humming an old tune.

“Chant, witches! Chant with all your hearts and souls! Can’t you see what’s happening to her? She’s *not guilty* and they’re going to take her to hell anyway, because she dares to try and return to life. Please by the Goddess chant!”

The smoke had become a crowd of dark shapes. One of them shifted and focused, and grew into the solid form of a very pretty girl of about twelve, wearing a blue dress. One hand was hidden behind her, and in the other she held a leash. There was a bear on the leash, a bigger, more friendly bear than Amanda had ever seen before. It leaned down when it saw her, and regarded her with eyes so intelligent that their stare was a kind of song.

The bear said: “I am a very special bear, my dear, for I can give you visions. And they’re better than that cauldron nonsense.” With that it followed its mistress off into the dark beyond the circle. From Constance’s throat there came a last, fading cry: “Don’t forget, Amanda, you are not guilty...”

Amanda followed the girl, and her wonderful bear.

Chapter 19

Simon Pierce stood surveying what he could see of the Collier estate from across a tumbledown fence.

He was looking into a blackberry patch, beyond it cornfields, it was lovely land, and tended with love, too. Most of the nearby fields were already harvested. The nearest thing worth burning was a stand of uncut corn three hundred yards away.

For hundreds of years the people of Maywell had kept away from this place. There wasn't even an occasional hiker. Nobody came onto the estate without an invitation from Constance Collier. Most would say that it was out of respect for her privacy, but Brother Pierce had heard darker rumors. There had been spells and curses that Worked. Early Jones, back in the 1820s, had tried to cut wood in Collier land. His wife gave birth to horribly deformed twins. He himself died of a strange, progressive weakness of the limbs. More recently the Wilson brothers had hunted Stone Mountain. They had reported glimpsing "little men" who scared the animals away. Two years ago they had been found back in the Endless Mountains, far from the estate, lying dead around their campfire. They had both had heart attacks while they slept. Natural causes, or Constance Collier?

Simon did not want to cross into that woman's land. But he had to. He had driven his congregation to a high pitch of excitement. They had to do something, and he had to lead them. Burn the cornfields. It was simple and practical, and he thought they could get away with it. The ethics of doing it bothered him a good deal, though, especially now that he saw with his own eyes how honorably tended was this land. It was painful to burn good land. He had been brought up to think of the land as the great source of prosperity. Still, this land was good because it was witched. Beneath its fertility was a foulness.

Simon motioned to the man behind him and started down the road. At first he moved along beside it, but the absence of opposition emboldened him to step onto the strip of grass between the ruts.

"Careful, Brother Simon. Better stay off the road."

"We're here to do the work of the Lord. We have no call to skulk and hide, Brother Benson."

"This is private property. If we're seen here the sheriff'll have a reason to

fire me.”

“Wherefore, if God so clothe the grass of the field, which today is, and tomorrow is cast into the oven, shall he not much more clothe you, O ye of little faith?” Simon felt sad for the poor, mistaken pagans, and found the deputy sheriff’s whining a disappointment. “You put yourself in the hands of God, Brother Benson. If the Lord wants you fired, you’ll be fired. You walk proud now, for you are on a mission of mercy, to teach these ignorant ones the power of the Lord.”

His mind turned and turned with the complexity of the situation. Simon liked things clear, but they were far from that. He needed the witches as a galvanizing issue; he also felt terribly sorry for them. He was not a man to hurt others.

He felt down deep in his pocket for the shrunken, brown talisman of his own wrongdoing. It was nestled there, reminding him for life of his terrible sin. Its presence gave him satisfaction: often he prayed with it,

“Lord, take me soon. I want to burn for what I did to her. Please, Lord, send me down to the deepest fire.” While awaiting his descent into his own richly deserved hell, Simon Pierce saved the souls of others.

He grasped the hard nubbin that was the hand. Once it had been white. Once soft and sweet to kiss. The hand had been connected to the precious body of one of the Lord’s finest creations, an innocent tittle girl.

Before he found the Lord, Simon had been so confused, so disturbed and angry. His mother hadn’t been a good mother. After his father had disappeared on a Bible-selling trip that never ended, she had whored, bringing man after man home, and he would hear her bed banging against the wall between the two rooms, and once one of the men came to him naked, and she hit him in the side of the head with a steak mallet and pushed him out on the fire escape.

She would drink and take diet pills and whip Simon, cursing him while she did it, then subside into long states of suppressed fury.

Sometimes even now he dreamed that he had been brought up in an orphanage. He had to work to remember his real childhood. In his teens he’d been impoverished, living in a slum with his wasted old ruin of a mother, and she went crazy one night and tried to set them both on fire. At the age of fourteen he lost her. It was bitter because he was so lonely without her, and yet she had been so bad.

As he grew older, moved from one foster home to another, he found that

his exploding adolescent sexuality was all twisted. He could not love women, not even those his own age. He just couldn't face them. His feelings concentrated on little girls. They were so helpless, and he felt so safe with them.

Then had come Atlanta, and his conversion, and this stem life of remorse. He was doing two good things today: strengthening his own people and bringing the witches a chance to see the error of their ways.

If this was so good, though, why did it feel so bad? Sometimes he saw Christ as a red-eyed monster of his own making, and he wondered, Do I worship the Lord, or have I been deceived by a demon in a beard? He fought the tears that had appeared at the edges of his eyes.

The air was warm, the sun spreading long shadows across the fields. He glanced at his watch. 4:30. To throw the witches off, they had decided to come in broad daylight, when they would be least expected.

Indeed, all was quiet. There was the familiar melancholy of harvested fields, but there was something else, too, something awful. You could smell it. The place was just plain too fertile. It looked good until you really looked, then you saw the obscenity. God never intended His land to work this hard.

This richness was a gift from Satan. Thinking thus, it would not hurt so much to burn the land.

"Hey, look here."

"What is it. Brother Turner?"

"Just about forty quarts of blackberries." The short man was smiling, standing next to a massive blackberry bush to the right of the gate. He held up a steel bucket. "We can have a feast!" The other men laughed. Turner took a handful of berries and began to eat them.

Simon knew just what he had to do. He leaped at Turner, grabbed his wrist, and flung the berries aside.

"Don't be a fool! That's witch poison!"

"They smell fresh."

"I'm tellin' you, if you want to eat the produce of the Devil's farm you go swear on the Devil's Bible! You eat only of the garden of the Lord." He snatched the bucket from Turner. "Do not ever put this sort of foulness to your tips!"

Now would come the first test, for Simon and for them all. The blackberries were fat and had been picked with proper care. None were broken. Simon knew how meticulous the work of blackberry picking could

be, with the thorns and the delicacy of the berries. So much effort was in this bucket. To lay it waste took strength.

“Jesus,” he whispered, “I love you.” He poured the berries out onto the ground. He kicked the ‘sodden mass. “Come on, this is what we’re here for! This *garbage* is probably going to be sold right in Maywell.

Your children might be the ones to eat these devil’s berries!”

There were several full buckets by the bush. He took another and raised it high over his head. For a shivering moment, he held it there. The bucket was heavy. When he flung it to the ground, it hit with a thud and a splash of fat, ripe fruit.

Simon stood, surveying the rest of the buckets. A curious feeling, almost of relief, replaced his former regret. He recognized this as the Spirit of the Lord working in him. “Praise God!” Sad it may be, but this was certainly labor in His vineyard.

But the other men hung back. Deputy Benson still stood near the gate, his hand nervously resting on the butt of his pistol. His badge, Simon noticed, was not on his chest—as if people wouldn’t recognize him without it.

Simon shuddered. Now the Spirit of the Lord twisted and turned in him, and met up with the softer spirit of the hand. The hand had belonged to a wonderful little person, a saint, Simon was sure, and it did not like these evil fields. The hand revealed to him that death itself swarmed in the stubble, as if the borderland of the Lord’s world was back there at that gate. Brother Turner stooped over and picked something up.

“What’s this?”

Simon examined the plump little packet of cloth. “Open it.”

“I don’t want to open it.”

Simon took it from him. He undid the thong that held the package together. Lying within was a withered image of a fat little man with roots growing out of it every which way. He threw it down. “Mandrake,” he said. “They put them in the fields to get the Devil’s blessing.”

“I’m gonna take that little thing home—”

“Leave it. Turner. This isn’t a game. They’ve charged that thing up with so much satanic force it just might come alive at night and get down in your throat.”

“Lord.”

“You don’t know what it’ll do. People these days have no idea of the Devil’s *power*. Just sheer power!

You take that thing, and it will drag you right down to hell, mark my words.”

The men backed away from the poppet. The hand told Simon to get out of this foul place. The hand said,

“Do God’s work, and do it fast.”

“We will baptize ourselves here, my brothers. We will each of us take a bucket and cast it down.”

Let blood, and blood will flow. But first the knife must slash the skin. After they participated in the destruction of the berries, Simon knew that his followers would grow more bold. And then the next act would embolden them further, and so on until the grand plan that God had given him could be fulfilled.

He looked across the wide fields. Beyond them he could see the slate roof of the Collier mansion, just visible above the trees.

The hand stirred in his pocket, touching and tickling and thrilling.

She had thrilled him unforgettably, that gentle child.

He spread his arms beneath the fire of the sun, for a vision came upon him. He saw all this land as it *would be*, cleansed in the fire, all these fields as black as death, and the house beyond the trees a smoldering ruin. “On yonder hill,” he said, pointing directly at the roofs of the house, “I will build my church.” And he saw it as clearly as could be: a fine brick church, with a tall steeple and a graceful portico. As proper a place of worship as Rugged Cross in Atlanta, a real House of the Lord, where His fire and His righteousness prevailed. “Oh, the Lord has shown me such a sight. Rising from the ashes of the witch house, the triumph of His Name!”

“I hear something.” Deputy Benson pointed. In the silence that followed his words, Simon heard it also, human voices twisted to an unholy rhythm. “Moom! Moom! Moom!” And within the longer notes, bright children’s voices chanting faster, “Moom moom moom! Moom moom moom!” There was another voice, this one single. An old woman was calling somebody.

“What’s that name?”

“Amanda. She’s calling the name Amanda.”

“Amanda Walker. The devil woman herself. The devil rider.”

“We’re not certain it was her. It could have been any one of them.”

Simon fumed on the deputy. He was getting tired of Benson’s way of sapping energy with his satanic hesitation and questioning. “Praise the Lord,

Deputy.” He snatched up a bucket of the berries, “For you.”

Benson was the kind of man who used to get into trouble in bars before he got himself saved and became a man of the law. He smiled past his false teeth. “Sure, Brother. Praise the Lord.”

“Praise His Name!” This was an important moment. If Benson didn’t pour out those blackberries—

He did it. He turned that bucket over and they spilled right into the road in a pretty pile. O Lord, wonderful are Thy ways! Just for good measure the deputy lifted his right foot and stepped carefully into the berries, crushing them good.

The Spirit of God came upon them all. Previously hesitant, the other men now went about eagerly destroying the rest of the blackberries. Brother Pierce kept an ear cocked to that devil chant. No telling how many demons were over there beyond that stand of dry cornstalks. He was not here in strength, not yet, and couldn’t withstand a supernatural attack. He did not want his people to end up having to run off this place. He wanted them to walk away.

You had to build a thing like this. Boldness would grow with success.

There were blackberries and blackberry juice all over the ground, staining the road, the dry grass beside it, and the shoes of some of the men. Simon could have kissed those stained shoes, and he would have been kissing the holy feet of the Lord. “I think we oughta light the fire right over in that stubble. It’ll spread to the standing corn on its own.”

“The ground’s awful muddy,” Turner said.

“The sun’s dried the stubble. We’ll be okay.”

Turner hefted the five-gallon can of gasoline. “I still think we oughta do it in the corn. We aren’t gonna cause ‘em any trouble burnin’ a harvested field.”

“The fire will spread. The Lord doesn’t want us to get too near the demons.” The chant made Simon’s scalp tingle.

He walked a little distance into the field. The chant was hypnotic, intoxicating. They had to hurry. “Okay, now, pour it out in a line right across the road. We’re gonna be behind it, see. They’ll come runnin’ soon as they see the smoke. So the fire’s gotta be between us and them.”

“Good tactics,” Deputy Benson commented. “Let’s not get caught.”

“We are doing the work of the Lord, Brother Benson. I am proud to be acting in His Name.”

“Yeah, but I still don’t want to get caught by a bunch of damn witches.”

Simon allowed himself a small smile. Brother Benson would have a lot of trouble explaining himself to his boss. A lot of trouble, given that the sheriff was himself a witch, Who knew, maybe good Brother Benson was a spy for the witches.

The gasoline smelled nice. Simon had always liked the odor of it. When he was a very little boy and things were still good, and his dad would bring the DeSoto in hot from a long day on the road, Simon would like to sit on the bumper and smell the smell of gasoline fumes coming out of the grille. That was a wonderful odor, and he remembered it fondly even to this day.

“Step back,” Benson said. He had a match lit. He leaned forward and tossed it into the just-soaked grass. There was a crackling sound, and a wall of fire spread a hundred feet across the field and twenty feet into the air.

“Ohh! Oh—God, God, God!”

Turner was on fire! His arms and his chest blossomed with angry, orange flames. Frantic, he flapped his hands. The flames sounded like an awning fluttering in the wind.

Benson grabbed him—and got a fireball of a hand in the cheek. He jerked away, his own hair and shoulder burning.

“A curse, a witch curse on us!”

Turner was burning bad, his face a horrible mask of terror and agony, his chest and arms blazing. “Help me! Oaaahhhh Qod! Aaaahhh!” He started running, then fell in the road. He was hitting his head with his fiery hands, and his hair was burning with blue spatters of flame.

Two of the men had their coats off. Then they were on top of Turner, smothering the flames. Greasy smoke came out from under their coats.

When he was put out, Simon rushed to his follower, knelt beside him. He almost screamed to see the hideous damage the fire had done. He had to force calm into his voice. “You’re gonna be all right.” he said, “God will heal you.” But the man was far from all right. His hair was melted black, his cheeks and shoulders were livid red where they weren’t crisped. And his hands, the poor man’s hands were just two seared stumps.

Simon couldn’t control himself anymore. He wept. Poor Turner’s eyes rolled in his head.

“Hey! You men!”

A young woman in jeans leaped right through the fire they had set, followed by two more, and then three young men. Simon jumped to his feet. He was genuinely terrified now. It was a curse and a spell, too—those

witches weren't even hurt by the fire. "O Jesus, they're demons incarnate!"

Simon turned around, saw most of his men spread out along the road, running for all they were worth.

First in line was Deputy Benson, clutching a handkerchief to the cheek Turner had burned.

Simon looked at the two men who had stayed with him. Then he looked down at Turner, whose eyes were rolling, whose legs were moving slowly, as if in some terrible dream he ran yet from the fire that had consumed him.

The witches had stopped. They were standing together, staring in surprise at the burned man. Simon saw hard, inhuman faces, evil grins. "Let's get goin'!" he yelled.

"What about him?"

"He's a dead man."

Three more witches jumped through the flames. They carried shovels. On the other side of the fire somebody was shouting instructions.

Simon gave way to the same kind of wild, panicky flight that had overcome the rest of the group. As he ran he heard his last two supporters, their feet pounding close behind.

Those witches were a well-organized bunch. They were already burying the flames, damn their black hearts. As Simon reached the gate he turned to see their progress—and his feet flew out from under him.

He landed with a thud and a splash. He had slipped down in the blackberries. Davis and Nunnally raced past. For a moment Simon thought he was going to be caught by fierce witch women, who were coming up the road in their blowing cloaks. They waved long wooden staffs. He scrambled to his feet and hurried on. His right leg hurt like hell and his hands and clothing were stained purple.

"Simon," he heard behind him, "Simon Pierce, you fool." It was a familiar voice, a very familiar voice.

"Don't run away from me! Don't be afraid."

He hesitated. That was a voice from his own church! He had heard it raised in song and in prayer. He had heard that woman get saved. She was one of the ones who had walked out on her husband, taking her two youngest children. He turned around. "Effie, by the love of Jesus, let me take you home."

"Oh, Simon, no. I can't do mat." She came up to him, her cheeks flushed red, her eyes flashing. "You're making a great mistake. These are God's

people, too. We just worship in a different way.”

“The damned worship Satan different from the way the saved worship the Lord.”

“You don’t understand. This is the best, the happiest, the most morally pure place I have ever been. I’m strong and healthy. Even my allergies have disappeared. And you ought to see Feather—that’s little Sally’s witch name—she’s no longer the shy little girl her daddy used to beat. Now she’s high priestess of the Children’s Coven, and she’s so devoted. Oh, Simon, this place is full of love, just as Christ is full of love. You cannot be Christian and have so much hate.”

“You serve the Devil!”

She raised her head, proud and defiant. “No, sir, you are the one with the torch in your hand. If there is a Devil, you are the servant.”

Simon extended his hand to his lost follower, but she drew back from him. The other witches were crowding around, those who weren’t back with Turner. Simon turned and walked briskly off their land.

The van was already in motion when he reached it. “Stop! Wait for me!” Eddie Martin was driving; it was his van. Simon hit the gleaming black side of the thing. “Eddie, please!”

Finally it stopped. The back door slid open and Simon pulled himself in. It was a comfortable van, with seats around the sides and a big cooler just behind the driver. Eddie would fill that cooler with Bud for hunting trips into Pennsylvania. You could shoot right through your limit of deer back there in the Endless Mountains.

“We left Turner! Oh, Jesus, we left Turner!”

“Take it easy, Benson,” Eddie said from behind the wheel. “Look at it this way. We did damage to Satan’s farm and most of us have lived to tell about it.”

Simon couldn’t have said it better himself. Eddie was the Lord’s kind of a man.

“The witches might have killed us all,” Simon added. “Running is no shame in the service of the Lord, men. The important thing is that we will return!”

“A man is dead. There’s gonna be all hell break loose around here. We ain’t had a murder in Maywell in twenty years, not since Old Coughlin went around the bend and shot up the Unitarian Church.”

“Who said the word murder. Brother Benson?”

“The man was set on fire by—by a spell!”

“Here you are a man of the law and you don’t even know the law. The State of New Jersey isn’t gonna buy any stories about spells, true or not. The coroner will rule it an accident. We’re the only ones who know what it *really* was, and we can’t prove a thing, can we?”

“That mandrake thing. We’ll go get that.”

“You’d still have to prove black magic, which has been around since the day Satan got thrown down into hell, and it ain’t been proved yet. No, Brother, this is our own private problem. We know there was a spell worked, and a hex on that poor man of God, but the State of New Jersey doesn’t know and doesn’t care. Why do you think the state’s got witches living in it anyway? Don’t tell me the bureaucrats don’t know about ‘em. Those government people, they *like* the work of Satan being done in their midst!

Sure they do! We are soldiers, every one of us, soldiers of the Lord. But you ask the State of New Jersey, and the state will say, an accident!”

There was a chorus of amens. Poor Turner had died hard in the service of the Lord, but he had given them all a great blessing. His death made him a martyr, and would be proof positive to the whole congregation that the witches were evil and had to be destroyed. Simon would create such a funeral for that fallen saint as Maywell had never seen before.

The Lord’s people were not going to give up because of a martyrdom. Far from it, the tragedy would strengthen them. They had been plunged into the tempering bath of blood. Before this they had been a bunch of scared children.

Now they would become a fiery sword, wielded by the righteous hand of God.

Chapter 20

TORTURE

The bear was easy for Amanda to follow because it wore bells, and when it capered they jangled gaily.

Summer airs danced about Amanda's head, and she went laughing behind the great black beast, through the alleyways and yards of her own early childhood.

They were going toward a certain gate, a very important one.

The little girl leading the bear stopped beside Dad's precious flowering plum tree, the one in Metuchen, in those fine days before they had come to Maywell.

She was sweet of face, her dress blue lace, her right hand always held behind her back, a charming pose.

She beckoned with her left, and Amanda could not resist running toward the old back gate mat led into their yard.

The old back gate, the old yard: here it was always a warm June day in about 1969, a year of highest happiness, long before the troubles started in Amanda's family.

She opened the gate and stepped through. Even the air smelled good! She was almost shaking with joy.

Just around the corner of the house she could hear herself laughing, her own six-year-old voice, bell-high and full of joy. Her impulse was to hurry forward, but she hesitated. This was the wrong direction. She had to find the cauldron again, to get back into contact with the witches. Why had she followed the bear?

Had she been hypnotized?

She turned around to go back. Instantly everything changed. There was a great screaming and clanking, walls arose, a rafted ceiling slammed down, and the next thing she knew she was upended and tied to a board in an echoing lumber mill. Logs thundered past on a flume. Down her belly there came a great ringing roar and she saw the blurry gleam of a saw and knew that it was going to chew her in half. She jerked, she writhed, she bellowed. At a far window she saw Tom, arching his back and spitting, then pacing

behind the glass, his eyes terrible.

The little girl's right hand, detached from her body, appeared in the air and pulled a lever. The blare of the saw grew even more shrill and the board began to vibrate. Amanda soon felt wind tickling the bottoms of her feet, then sharp heat as the saw drew close.

Then it was between her legs, the spinning steel skinning her ankles and the sides of her knees.

She suddenly remembered herself when she was ten, reading *The Mad Monk* under the sheets, reading by flashlight the forbidden gore.

He had sawed a woman in half. He had done it slow.

And she, in her summer bed, had imagined not the hard screaming agony of being split asunder, but the softer terror of the breeze in intimate pans that signaled the approach of the whirling tool.

She felt that little wind now, right up at the top of her thighs. Hot sawdust was spewing up, then shifting down and tickling her belly. Soon the sound would deepen from the efficient pitch of steel cuffing wood to a more liquid choffling.

The girl leaned her gentle face over Amanda and looked at her. Her eyes were no longer blue. They were the red of apple skin.

"Don't try to go back. You keep making that mistake We don't want to hurt you, Amanda. We don't even dislike you. Far from it, we want to make you one of us." And her eyes turned dead-water green.

Amanda was disgusted with herself She had been deceived so easily. How stupid to follow a cheap carnival trick of a talking bear. But she would not relent, not even now. She was, after all, dead. The saw and the body it was about to cut were both illusions.

But when the blade touched her and she felt the searing horror of its teeth in her secret skin, what resolve she had developed dissolved. "I promise I won't go back!"

"I don't believe you." The sound of the blade changed. Amanda felt as if she were being ruthlessly pinched, her skin being compressed to ridges and then tom off.

"I'll never go back! I'll obey you! I swear!"

"By what?"

"Oh, stop the saw. Stop it!"

"By what do you swear?"

"By—by—"

“By your own immortal soul?”

“By my soul! Oh, yes, by my soul!” Could a demon hear a lie? Amanda hoped not.

“Very well, I give you back your summer day.”

Instantly they were in the old yard again, Amanda and this strange little creature. As the girl walked along ahead of her, Amanda noticed that she had a stump at the end of the arm she usually kept hidden.

The girl didn’t mention it and Amanda didn’t dare, so they went on in silence. There was washing on the line, including Amanda’s own very favorite pink flap-bottom pj’s. “Is childhood heaven?”

“Or hell. Whichever you prefer. Many a child has its own dead self as a silent observer of its life.”

“But time—the past—how—”

The little girl shrugged, “It’s not important.” She squatted down in the grass, motioned with her stub for Amanda to sit beside her. “You made the right decision coming with me and Ursa. The witches call this place the Land of Summer. Christians know it as Heaven. And your old backyard is just the beginning.

There are winged palaces the other side of the highway, and the pleasure of the sight of God just behind the drive-in bank.”

This wasn’t heaven at all, and Amanda knew it. She looked sadly back toward the gate. Tom was gone.

Beyond it was the long gray plain where her Journey through death had begun. Ever so faintly she could hear the hoarse chanting of the witches.

“They need me. Without me they’ll give up.”

“You don’t have to go back there, Amanda. You’ve done your share for the witches.”

“But I’ve never been needed before, not like this. It’s not because I’ll feel guilty if I don’t help them. I know I’ve already done a great deal in past lives, I’ve seen Moom. But I love them.”

For an instant the girl’s eyes became as bright as bloody suns. “Ursa,” she called, “I need you.”

The bear came up, its bells jangling in a way that should have been merry. It leaned closer to Amanda. Its breath seemed sweet, or did it? When she smelled that thick, hot odor, she thought of night-blooming flowers, or perhaps of rotted ones.

“So *Leannan* and Constance succeeded in relieving your guilt, and yet you

still want to go back. Strong girl.”

“I told you, I love my witches.”

“You love torture—because that’s what you’ll get if you go back.”

“Then that’s what I’ll get.”

The girl smiled. “We’re so much alike, you and I. You’re a good magician, Amanda, and I’m a bad one.”

She laughed a little. “I was a monster by the age of eight, and dead from murder before I was thirteen.”

Amanda looked into the eyes. They were totally without depth. They seemed painted. She saw nothing, no wisdom, no help, not even any hate. Demons might sometimes look like people, and sometimes like nightmares, but they seemed, essentially, to be machines.

“Since you’re so stubborn, Amanda, I’m going to show you a past very like the future you’ll be facing if you go back.”

“You mean I have a choice? I can go back?”

“We serve you, Amanda. Your demons are part of you.”

“I’m going to go back.”

“I will show you the worst terror you can know.”

“No matter what, you won’t stop me.”

“I will show you death by fire.”

“I’ve got to go—now!” Amanda leaped up.

“Ursa,” the girl said lazily, “stop her, please.” The bear’s claws came around her face like bars. Its immense force pulled her back to the soft grass.

“I said I would show you what will happen to you. You tittle fool, it’s happened before. Just look!”

The voice was far bigger than the girl—even than the bear. It was as if the whole place, the grass, the trees, the sick yellow sky, had bellowed out the words. And the claws one by one popped through Amanda’s skin and into her skull and sank coldly into her brain.

And brought with them visions.

She saw the earth as it was when the green muck first oozed upon it, a foaming cauldron of a planet, swept by bitter winds and howling in the agony of its birth, the sun blue and furious, comets and meteors swarming in unsettled splendor, the electric distempered sky striking life again and again into the ooze.

Ursa sent her forward through the cries and tinkling of five billion years, to a dripping afternoon on a hill overlooking a dark medieval town. There was a

newly built manor nearby, with ugly little slits of windows and snapping red flags.

She no longer felt like a ghost. But also, she was not her familiar old self, Amanda of the careful artist's fingers and the dreams. Her name here was Marian, and she despised that manor. It belonged to the Bishop of Lincoln, and she hated him even more than she did his house.

She sat upon her hill cursing the palace below her. She was the Lady of the Forest, the Queen of the Witches. The garters she wore were not so different from Moom's, but they were not on dirty naked legs. These garters reposed against skin as pale as cream.

She was the great ruler of the countryside. Her beauty melted the most violent hearts, and in this time there were many such. Her mother had reigned openly, but because of the Christians Marian was almost a fugitive, coming to her Ceremonial hill only on the greatest occasions. The rest of the time she hid in Sherwood Forest, defended by Robin Goodfellow and his fairymen.

This special morning, though, she sat upon her stool and received her subjects. Last night had been Mayeve, and Robin as Godfather had drawn the moon down upon her. She had felt it come into her womb and shine there through the festivals of the dark. How the women had shrieked in the greenwood last night, while the pipes wailed and the drums mumbled low. Robin in his antlers had pranced and danced until his great stone of a devil's tail had stood straight up before him, and he and Marian had joined the common rapture.

The bishop, she knew, was in a fury about the rutting festival.

He had gotten a decree from Rome, he said, that proved she and hers were demons incarnate. She had not replied to him, that Sunday after Candlemas when he had challenged her from the steps of his miserable cathedral. She was Maid of England, after all. It was not for her to speak to a mere bishop; even the King knelt to her, did he not, in secret?

Even Edward kissed her garters in Mab's cave, during the Mysteries.

So she sat upon Mabhill and let the wind flounce her hair, and handfasted those who had made merry in the night, and pretended not to notice the arrival of the bishop and his chain-mailed soldiery.

A youth saw him and raised a hand against him, saying, "Kneel thou to the Maid of England." In response the Bishop of Lincoln raised his eyes to the Silent God of the Catholics. The youth, who was of fairy blood and wide and short and strong, reached up and pushed the white miter from the bishop's

head.

He was bald but for his tonsure, and the long brown curls of it waggled in the wind. Goodfolk laughed, and when they did, one of the soldiers goosed the fairy with a dagger. The fairy staggered as blood spurted from the wound the point had made in his buttocks.

The bishop and his men had the laugh this time, and at the fairy's expense. Soon they left the hill and returned into the town, closing the gates behind them.

"The bishop has blooded a fairy," people whispered. In the following days this terrifying news ran through the whole county, and soon all the churches, most of them so new their stones were yet white, became empty.

In the subsequent months the bishop fell into want and had to let many of his men at arms go.

Of those who remained, not a night passed that the fairy did not poison one with their tiny arrows. At Midsummer's Eve the bishop came and knelt to Marian and kissed the garters of the Maid of England.

Midsummer's Eve was a great joy that year of 1129, with all the handfasted couples from Mayeve leaping the fire, and the bishop and his priests dancing for the Goddess along with the goodfolk of the county.

But that bishop was a sly one. Never for a moment did he despair of the Silent God, nor forget his pope in the storied kingdom of Rome. There came a black ship into the harbor at Grimsby, sent up, it was said, from the great Catholic fortress of Canterbury. Upon this ship were seventy tall knights and seventy knaves, and horses for all. They took march across the Lincoln Wolds and climbed the Heights.

"My lady," a fairy messenger said at last, "they have crossed the Trent upon boats made from the sacred tree's that grow on the bank."

She only nodded, and let him withdraw before recommencing her weeping. None but she knew how she had prayed and spelled against these knights. And all for naught. That they were across the Trent meant only one thing; her hour was upon her. The Goddess was calling her Maid back to the red moon.

But her people needed her. Without her their faith would wither and die. They would become godless, or worse. Catholic. Alone in her palace, deep in Sherwood Forest, she waited and prayed. Her prayer took the form of a vision quest to the Cauldron of the Crone. She peered long into the bubbling stew of her own past.

Always before, this sort of quest had been rewarded with wisdom.

But not this time. No, her *lang syne*—the memory of her past lives—was closed to her.

And what of this fine palace of timber and wattle made, and her Robin? She sighed to think of the beams falling down, and becoming food for the termites and the fungi, and her marvelous dancing Robin stopped in his dance forever.

After the knights had crossed the Trent there came a week of slowly rising tension. They dared not enter the Maid's woodland domain, for even their hard armor would not be protection enough here, where her flames could kill them as they slept or poison their food supplies.

But the knights did not need to come into the forest. They knew the cold truth: if they waited long enough, the Maid would be obliged to come to them.

The days grew shorter, and the deep wind of the north came back to Sherwood Forest. Robin made ceaseless forays into the camp of the black knights, but their defenses were strong and always defeated him. Worse, the knight's sheet-metal armor was proof against even the most cunning fairy archers. Their straw-thin poisoned arrows could penetrate chain mail, but they bounced harmlessly off the sheet.

Hallows' drew nigh, and with it the timeless custom of the Maid's Progress. Never in remembered history had a Maid failed to carry out this ritual. To remain in hiding now would be to say that the Old Religion was powerless, or that its ceremonies did not matter more than the mere life of a Maid.

She could only hope that the Bishop of Lincoln would in the end hesitate to kill her, for fear that the country people would rise against him.

But he was such a clever man. To simple eyes it would seem that he had no part of these knights. The sheriff of Nottingham was his knave in the matter and commanded the troop. Few of the country folk knew the truth of who was really behind the expedition.

The red moon rose on Hallows' Eve and the fairy came with the silver carriage. It had been fashioned long ages ago by a fairy metalsmith. The carriage was a buttercup of silver, with silver wheels. It was drawn by eight fairy horses, small fellows but stronger even than their masters.

They traveled along the lower paths of the forest, where the trees were so tremendous that the ways between were barely wide enough for the fanciful vehicle.

She never reached Mabhill this Hallows' Eve. Just as they left the forest, the sheriff of Nottingham shouted from behind a long fence, "Hallo, be ye the Queen of the Witches?"

She said nothing.

"If ye be or not, you cannot pass. I am seeking the Maid of England, to kiss her garters and make merry with her. Be ye she?"

She could not refuse his request; to do so would be heresy, "I am the Maid, good sir," she said, and raised her skirts for him.

But he did not come to her. Instead knights jumped out of holes and bowers and laid steel hands on her.

The fairy fought with their little swords, but they could not match lances. Two of the knights fell to poison by lucky shots against the cracks in their armor, but most of the arrows loosed from the protection of the woods fell harmlessly. "Look how they fight us with twigs, the picts," laughed the powerful Catholic soldiers.

The Silent God was not so weak as Manan had hoped.

They put her into a cage made of rushes and earned her all the night, arriving the next morning in Lincoln Town. The Maid had never actually been in a town before, and she was astonished to see the chickens and pigs swarming about right in the offal of the citizens. No wonder the people of the towns were sickly folk and given to riotings. Smoke hung low in the streets, and trolls wandered about snarling for farthings.

Bread was stacked in great quantities in the houses, and bladders of wine lay by the doors. There were many barrels full of apples and cider. The sick lay about in comers, and filthy children ran back and forth with bits of garbage in their black little hands. She was most amazed, staring at the wonders and horrors of this place from her cramped cage.

At last the Bishop of Lincoln came down the way. He was preceded by blaring crumhorns and soldiers in white armor, riding upon a horse with his own chest gleaming gold and his helmet of burnished brass.

He might look grand, but Marian was the Maid of England, the Goddess Earth, and she met his eyes directly, even from the cage. He said naught, for he was proud in this place, and imagined that he had dominion over earth. But how was that? Would he build a prison around the greenwood or trap the sky?

How did he intend to capture her?

They took her in procession, with dancing, up the muddy street and

through the tall wooden gate of the bishop's palace. Upon that gate she saw a terrible sight, one that made her freeze inside. There were many spikes fitted to it, and on each spike was the head of a fairy. Some were black with rot and some gone to white bone, and others still dripped blood.

How dared this man kill fairy? They would set pox on him and all that was his. They would poison him.

But they had not managed it, for he rode fair and high, did he not?

No matter what, she would never pray to the Silent God, Her life belonged to the Goddess; indeed she was the Goddess. In the Mysteries it was revealed that every woman is the Goddess. She is water as well as thirsty throat; she is the quenching, too. And the Homed God, the Godfather whom the Catholics call the Devil, is Death her consort, both taker and giver of life.

The Catholics claimed that human beings were born of sin. But what was it? Marian had never seen any.

Could it be poured from a cup or sold in the market? No. They said it lived in the soul, this sin. But where? The Crone of the Cauldron lived there, and the Cauldron contained only truth in its spiritual stew.

She knew, she had tasted of it many times.

They carried her into a tall, dark hall most artfully wrought of stone. Compared with this, her own palace was rough indeed. But her home smelled at least of the forest, not as this did of greasy fires and sour beer.

"We will begin at once," the bishop said. They took her down a winding stone stair. She was given a draught of milk by a young woman who worshiped her for a moment and then slipped away. Soon the bishop came prancing down the stairs. He had affected humble brown robes.

"Hangman, the first degree."

She did not mind when they disrobed her. She was used to being naked before others. Clothes were only proof against the wind, after ail. But when they laid hands on her garters, she at first almost swooned with astonishment. Then she fought their fumbling, clumsy fingers. She fought with all the fury of the legendary maid Boadicea who had fought the Romans, and did not stop lighting even when twenty of them sat upon her, laughing and flatulent, most of them stiff to wood from scuffling about with her.

In the end they took the ancient garters of the Goddess, and it was the first moment since time began that they had not been on the thighs of the Maid of England. She cried out and at last spoke to the Bishop. "I command you, my knave, to have me unhande, that I may replace the garters."

“Rack her.”

There commenced an excruciation beyond belief. She was bound in a wooden bed so that she could not get up. It creaked, and when it did the most terrible pain came into her legs and arms. After a time it creaked again and hot agony shot down her spine. Her belly tore on its moorings. Bile came up, and when she spat it out, there was a great deal of laughter all about.

“Confess that you are a witch and a poisoner,”

“I am the Maid of England, sir. You must know I be a witch. Of course I am a witch!”

“You have poisoned the wells of Lincolnshire. Confess it.”

“The fairy poxed you, sir. Give them back their deadheads and make no more, and they will raise the curse soon enough.”

“The second degree, please, hangman.”

The men took her from the wooden bed and bade her stand, but she could not stand. So they made her kneel before the hangman while he cut off her tresses. How long and black they were, lying upon the vile stone floor. She sang to them a little and mourned that they would be with her no longer.

They poured a black liquor over her head and ignited it. The torment was awful, her ears and scalp raging with a pain as if the skin were being rubbed off the bone. Her body wanted to run, but she fell to the floor at once when she tried. There were great knots around her legs, and she could not move them for aught.

“I am broken,” she moaned.

“Then you say it, you are witch and poisoner. It is you who poisoned the wells of Lincolnshire, Lady!”

“I told you, give them their deadheads—oh, I hurt so, sir, really I do. Do you not know that I am the Goddess Consecrate? Oh, where are my garters?”

“The third degree.”

Her head ached so badly that she could hardly think anymore. She could still feel, though, as they lifted her high and put her wrists in rings. They horsewhipped her mercilessly. She fainted then, and the Goddess herself came to her and made her a promise that gave her courage. “Only a little more will you suffer, my daughter. Your body will soon give up the ghost, and I will receive you.”

The Goddess appeared in her dream as bear. But when Manan awoke there was another animal present, a great black cat she knew well. He strode about the chamber snarling and spitting at the bishop.

“Look there—her familiar has come to save her! Capture it and we will burn it with her!”

The man who touched old Tom got the flesh ripped from the bone of his finger. Then Tom leaped into the rafters. Soon only his green eyes could be seen. Then with a flick of his tail and an angry scream he was gone. “There you see, girl, your devil abandons you.”

“The Goddess cannot abandon me any more than the air can abandon me.”

“The fourth degree.”

They laid her in a wooden box made with boards between her legs. Then they hammered wedges between these boards and thus crushed and split the bones of her legs, causing her a torment that made her break her throat with shrieking.

“Say that you poisoned the wells.”

But she was insensible, and could say nothing.

She awoke to the distant crowing of cocks. A boy, most frightened, came to her and laid poultices upon her legs and back, and gave her thick beer, as much as she could drink, and worshiped her. “Oh, Goddess,” he murmured, “the peasants in the country weep that the townsfolk have got you.”

“My child.” She could say no more, and soon brought up the beer.

Then there was a dismal blast of crumhorns and sackbuts and the hangman returned. She screamed in terror to see him, but when they were alone he also worshiped her and wept bitterly. To let him know she shared his misfortune, she laid her hand upon his head, but she had not the strength to speak.

Soon the soldiers reappeared and put a conical crown of paper upon her head. Then they took her in hand and dragged her out into the misty morning. There was a stake erected in the middle of the bishop’s close. The high sheriff of Lincoln and the sheriff of Nottingham both came, and other lords, and the high sheriff read aloud a charge:

“You have been found guilty of treason against the King, by calling yourself Queen of England, and have carried out a program against his subjects by poisoning of wells and suchlike, and you keep familiars and say you are a witch. By my authority as sheriff of this shire I command that you be tied upon this stake and burned forthwith for treason, and your ashes be cast into the river and never buried in consecrated ground, because you are a witch.”

She could not imagine a horror as great as being consumed by fire. She rolled her eyes with terror, she struggled despite the pain in her legs. She was

weak from her injuries and could not get away. Soon she stood against the tall wooden stake, lashed so tightly there she thought she would be tom into parts. She wept openly before all the nobles and ladies of the shire, even many who had worshiped her, and forgot in her dread that she was Maid.

“Do not bring the torch,” she screamed. “Oh, put it away! Put it away!” But the hangman, still weeping, laid it upon the faggots at her feet.

There was an awful time, watching the fire creep and grow in the wood.

Quite suddenly it pierced her feet as with hissing irons. She certainly could not bear it, and she shook what of her she could shake, which was her head. Then the flames caught to the robe they had wrapped her in and began eating her flesh.

“Oh, Goddess, Goddess!” She raised her face to the sky, to see if she could find the Lady of the Clouds—and she did. Yes, there, the Lady in her endless, ever-changing glory of forms, dancing across the morning as gaily as ever on a Mayfair’s day.

While the flames devoured her she looked upon the white dancing shapes of the clouds, serene in endless blue.

Then she died.

And Amanda, lolling in the Land of Summer, understood the message of this memory. With twisting dread she foresaw what waited for her if she returned to life: another, slower fire.

Chapter 21

Constance stirred her cauldron with the fury of the possessed. She was old, though, and her body protested. These slack arms could not stir forever.

“Amanda, listen to me! Amanda!”

Despite all of her knowledge and her understanding of a situation she had in large measure created, Constance had not expected what was happening. Something immense and strange was coming down the road, a furious, disappointed little girl who somehow lived both in the other world and in this.

Her body was gone to rot but her spirit longed to finish its uncompleted life.

The moment Constance sensed this dead child’s rage she knew she might never get Mandy back. There is no demon more angry than one who does not deserve its fate. The child had been cheated of her lifetime. Her bitterness made her want to hurt others. She had not yet understood the depth of compassion. Without life to teach her, she might never understand.

Why this demon was in Amanda’s death Constance could not imagine. It was as if there were forces outside of Amanda’s own soul commanding her to journey onward. And she was going. Constance could feel it. She stirred and groaned and sweated, but the veils between the worlds got thicker and thicker.

She felt the loneliness that came when a spirit turned away from the circle. “Amanda!”

The little girl was the key. But what had been done to her to make her as she was? Why was she still partly alive? And how could such a thing be? A child like that ought to be far, far into Summer by now.

The only explanation was that some part of her must still be in this world, by some rare process clinging to actual, physical life. Whatever it was, it kept her chained to bitter memories. The only protection from her would be to find out how to break this strange connection.

In her mind’s eye Constance could see the child, pretty enough, dressed in blue—and bearing a stump where her right hand ought to be.

So that was it, the hand.

What gave it life, though? Only devotion and attention could do that, and what warped soul would have so intense a relationship with the severed hand

of a dead child?

Dimly in her vision she could see Brother Pierce approaching. Yes, it was time for him. She had foreseen that correctly, in her long nights of meditation before the *Leannan*, submitting her mind to the shattering guidance of that powerful being. The *Leannan* could have met Constance anywhere, but their meetings took place in the Mabcave on the back of Stone Mountain.

Constance preferred it that way. In her agony she was sometimes noisy. A glance from the *Leannan* could shatter the ego. Many times the *Leannan* had shown her the awful details of the death she had chosen for Constance. Not knowing the future is hard, but knowing it can be excruciation.

In her male form as the King of the Cats, the *Leannan* wove on the loom of time. She wove the life of May well just as she did the journey of Amanda. But it was a rough weave. The will and effort of humankind was what would make it fine.

Now came this angular, guilt-ridden man, straggling along with a few of his followers.

Tom, who had been stalking round and round the witches' circle, stopped and crouched to the ground. A glance at Constance told her everything: the hand was not expected. It contained a fury that did not belong to the world of the living.

It was capable of vast destruction.

A moment later flames roared to life on the far side of the cornfield. Despite them, and the screams that were uncoiling above their crackle, Constance and the Vine Coven tried to keep their circle.

"Moom moom moom moom moom moom," went the chant, turning and flowing between the worlds, almost a thing apart from its creators. "Moom moom moom moom."

There was the barest chance that Constance could relieve the hate of the wronged child, but only if she could understand. To her it was obvious that the hand was connected to Brother Pierce. But why had he kept it? She rowed in the cauldron with her hazel staff, looking for answers.

Shadows flickered in the steamy water, bits and edges of the little girl's horror, her bitter runaway's life, and the man who had taken advantage of her dreams and then denied her everything.

Constance rowed and rowed, but she was old and used up, and the world in the water wasn't patient with her. Her muscles had been defeated ten minutes ago; only her will forced her on. Still, she got no specific vision of what had

been done to the little girl to cause this rage. And where was file hand? On Brother Pierce's person. Good God, it was in his pocket.

She felt her life as a tattered edge; she wanted to drop the hazel rod. Tom glared at her. In his eyes she saw the *Leannan's* image. *Leannan* whipped Constance with a vision of her own dying. Blue flames raced across a ceiling of her future, yellow flames spouted through a floor. The gnarling fire turned her to a black hump. She heard the crackling hiss of her own burning skin. Then there came the pain: she screamed in agony, terrifying the poor Vine Coven. "Chant," she shouted, "chant for your fives!"

"Moom moom moom moom!"

Other witches began rushing past the Vine Coven, cloaks and flaps of canvas grabbed from harvest wagons in their hands, running to the distant screams and flames. Nearby cornstalks were already rattling with wind from the inferno.

The cauldron circle wasn't strong enough to help the enraged child, and so there was little hope for Amanda. "Moom moom moom moom, hear our call! Moom moom moom moom."

There must be no end to the swirling of the cauldron or Amanda would be lost forever. Black wings beat in Constance's mind. "I'm fainting! Help me!"

Tom jumped up on her head and dug his claws into her scalp. The pain of it would have kept Rip Van Winkle awake.

"Moom moom moom moom moom—"

The waters roiled and sputtered, deep with scent of herb and shape of frond, boiling-pot of a few common herbs, window into the human soul. Black, dangerous, interesting waters.

Constance was frantic. Even Tom's claws and his tail tickling her nose could not keep her conscious much longer.

"Moom moom moom moom!"

Black water covered Constance. Row, row, row your boat, gently down the stream. Merrily, merrily, merrily, life is but a dream.

She awoke a few seconds later to find the circle shattered, and with it Amanda's last contact with this world.

Why in the name of all holies didn't George Walker resuscitate her? He was supposed to have done it long before now. All of Constance's planning to create a safe journey through the netherworld had been useless. "The only thing you are doing," the *Leannan* had cautioned her, "is sending Bonnie Haver to a terrible end. When you die yourself, how will you explain the

arrogance of what you have done? Will you take her place in hell? What will you do, Constance? Look at you, holding your head high, you arrogant creature! There is no guarantee for Amanda any more than there is for any shaman who attempts the journey. If there was a guarantee of her return, she wouldn't really be dead. You revolt me, not seeing that. How dare you be so stupid, so willful, after all you have been taught. Amanda couldn't enter death if she had a guarantee. She'd come back with mere hallucinations. You're a shameful fool, Constance."

That voice had cut more by its tone even than by its hard words. "I give myself to your mercy,"

Constance had murmured through her tears. The *Leannan's* laughter had tinkled in the cave. Then Tom had come forth, great and roaring, a panther with teeth of steel, and driven her out.

There could be no guarantee. And, absent one, Amanda had died, finally and actually.

"Constance! There's a man on fire!"

She could smell the awful barbecue and gasoline of the burning man, and the matted stench of his burnt hair. They all smelted it.

"Moomoomoom—moom..."

"Chant!"

"Connie, we've lost her. She isn't here anymore."

"Chant!"

Something awful happened. Tom leaped down into the cauldron, disappearing into its boiling interior with an awful howl. Then, rising from the water, came the little girl. She waved her stub of an arm, triumphant. *I am the hand, the hand that takes.*

"You poor child."

A cry from beyond the cornfield and me smoke; "Help us! Help us! This man is dying!" The lo Coven was out there.

They had been in among the corn rows gathering culls for their pigs.

When the fire began crackling in nearby cornstalks, the Vine Coven finally gave up. Between Connie's exhaustion and Amanda's wandering, and now this little girl, they lost all hope.

But then things changed again. Brother Pierce was running, and taking the hand with him. As he ran, the little girl disappeared in a shower of sparks, her eyes flashing toward the departing figure.

Without the demon to block it, the way to Amanda was clear.

“We’ve still got a chance!”

“Moomoomoomoomoom...”

But there wasn’t even a whisper of Amanda.

It really was a great blow. After Constance’s own death the Covenstead would go on, but it would be a diminished thing indeed, weak and prone to the ordinary destructions of life. Without the wisdom of death and the connection to the old traditions Amanda would have brought back, it would last a generation, perhaps two, then fade away.

The Maywell Covenstead would not be the rebirth of a fine and peaceful old way of life after all.

Mankind would continue as before, unable to stop the rape of war, the bleeding of the earth, moving helplessly toward the coming end.

“Help us,” came another call from the corn.

Joan and Joringel were carrying the burned man between them on a canvas tarp. The worst thing about him was his hands, flaking black lumps. “Take him to the house,” Constance commanded.

“It’s too far. He needs help *now*.”

Constance did not like the idea of an outsider, no matter how comatose, being in the village. Joan and Joringel went right past her, crashing through the cornfield, indifferent to the toppling stalks and the flying ears of the corn as yet unharvested.

Constance was wretched with despair over the loss of Amanda, but she had no choice. The situation demanded her presence. She broke circle and followed the others to the village.

Tom didn’t follow, though, because he wasn’t there anymore. As swift as smoke he had crossed Maywell to a certain house. He moved on soundless pads across the basement floor, coming swiftly to the Kitten Kate Room.

What a pleasure it was going to be to deal with this cat-hating maniac. George was going to die a most hideous deserved death. Tom had planned it carefully. But now was not quite the time. Not just yet. He leaped up on the table where lay Mandy and George.

The maniac was weeping softly as he caressed the body of his niece. The cat snuffled at his leg, looked long at his trembling, supine body.

Tom jumped down again and began circling the table. He was panting with rage. “Meow.” The sound penetrated George’s trance deeply enough to wake him, but not so deeply that he was conscious of the presence of a cat. “Uh? Oh, I’m—God, I passed right out!” He leaped from the table, ran over to his

controls.

He felt the blood drain out of him. It had been fifteen minutes! Mandy was irretrievably dead. Fifteen minutes of such ineffable sweetness. He had lain upon her, had kissed the stillness of her lips, had felt her eyebrows tickling his cheeks, had pressed his loins against the quieted sepulcher of her body.

He cried openly, to see what he had done. This had been a last chance, and he had been hypnotized with the pleasure of caressing her dead body. He had ruined everything for himself. Now he was simply a murderer.

“Meow.”

What the hell was that? It couldn't be a cat, not in here, not alive.

He loathed the torture cats on the walls of this room, with their probing eyes and inflammable fur. But their feline skill at causing pain fascinated him.

Something was going very wrong. What if the torture cats were—

But they were just magazine cutouts. He had made them himself, selecting over the years the best and most dramatic of all the cat pictures he had seen.

A huge black Tom rushed along the floor—and with a faint hiss transformed itself into Silverbell at the moment of her burning.

“No! It's not you, you're not alive!” He backed away from Silverbell's blackened, smoking form.

Silverbell growled. She moved forward, wobbling slightly because one paw was burned off. She was between him and the door.

“Getaway!”

He told himself she wasn't real. She was dead. Silverbell, who seemed to have forgotten mis, growled again.

“Won't you ever forgive me? Please forgive me!”

“Forgive yourself,” snarled a tiny, extremely harsh woman's voice.

The voice was so small he could barely hear it, but it smashed into his soul with the force of a hurricane.

Before such power only the truth was left him, and he screamed it out: “I can't! Can't! Can't! Can't!”

The cat was close now, so close that he could see its smoked oyster of a tongue pressing between carbon-blackened teeth.

He kicked the cat hard, and its crisp skin shattered. But muscles and bones, even tom asunder, immediately took up the chase, oozing across the floor.

“God! Oh, God, I've gone nuts. I'm stark raving mad.”

He stomped on the crawling, sliding ruins of the cat, stomped and stomped

until they were only wet marks on the floor. “Jesus. That was a hell of a hallucination. I’ll be needing a Thorazine drip if I keep this sort of thing up. I’ve got to get myself together. Come on, guy. You have a dead body to dispose of.”

There was another meow. Confused, George looked to the ceiling where it had come from.

It was a seething, squirming mass of living cats. George did not even have a chance to scream before they began dropping to the floor, screeching and spitting.

Next the walls came alive. As he watched, a huge Persian bulged and oozed into life and leaped at his throat. It grabbed his shoulders with strong claws. Then it sank its teeth into his neck. He felt them pop through his windpipe and deflect the passage of air.

Off the ceiling they came, out of the walls they came, all the cats he had ever known and feared, biting, scratching, squalling, killing him by their sheer suffocating numbers. When the smothering began to hurt, he threw some of them off. But more came, until he was nothing but a jerking hump in the swarm.

He was killed by the living flesh of his guilt.

The cats gobbled him, chewing and swallowing him in chunks, until at the end there was left only a belt, a pair of shoes, and three Bic pens.

The cats returned to the ceiling and the walls. The room grew quiet. Mandy lay in absolute stillness.

Some time later a fly entered the Kitten Kate Room. It circled for a few moments, seeking just the right place to undertake its project.

The fly landed on Mandy’s upper lip. It preened itself carefully, then turned around and began to lay its eggs.

It laid them in the cathedral of her left nostril.

Chapter 22

MOTHER STAR OF THE SEA

The thing the demons couldn't understand was that Marian hadn't died in despair any more than had Moom. She had seen visions of the Goddess from her pyre and been laid in Summer afterward, where her soul had been renewed. Knowing that another fire awaited her return did not stop Amanda from wanting to go back to the Covenstead.

"But you can't, you're dead!"

"George wilt revive me."

"It's too late for that. He's dead, too."

The girl in blue waved her empty wrist, and a hole opened up in the ground. "Go on, look. He's created a lovely hell for himself."

Down the hole Amanda saw George laid out on an operating table, his whole belly opened, his pink insides exposed. She could see the froth of his screams, but thankfully was spared the sound.

Kittens were cavorting in his entrails, batting his intestines about as they might wriggling caterpillars.

She was stunned and appalled to see that she herself was his demon, standing over him with the scalpel that had opened him up. The demon image of herself looked up at her, smiled, and waved the scalpel like a child waving a treasured lollipop.

"Stop it! Please stop it!"

"How? Only he can do that, and he obviously doesn't want to."

"But he can't have chosen such torture, and not from me. I don't hate him!"

The girl snickered. "That image down there isn't you. It's part of him—his impression of you."

"I'm not cruel, I could never do that. Why did he—"

"Demons serve their victims. Only a demon of you can punish away his guilt for murdering you." A brush from her stub closed the hole. "Enough of that. I can show you beautiful things, Amanda."

"That's a lie."

“I offer you the Land of Summer.”

“No. I’m going back.”

“Without the witches to guide you, you can’t. And I destroyed their circle.”
She held up her wrist.

“Something of me is left in the living world. My hand is still there, and it isn’t dead. So I use it to manipulate life.” She laughed aloud, a harsh and bitter cackle.

As she did so, the illusion of the little girl shifted for a slight instant, and Amanda saw what *really* wore that frilly blue dress. It was a hard-shelled something, dark red and many-legged and misbegotten, and it bore the name of Abadon.

It looked at her through its many-lensed eyes, and in every lens she saw the gentle, smiling face of the *Leannan*. “You! It’s really you, it’s all you!”

“No. All except you. I am not part of you.”

“You are my demon. You must be part of me.”

“Oh, the devil take you, Amanda! Why didn’t you educate yourself more thoroughly? Don’t you know that I’m not only *Leannan*, not only Tom, not only Abadon and not really any of them. See what sort of a cat I really am?” She changed again, spitting and grinning, sharp lightning sparking from the buzzing tips of her fur.

“Schrödinger’s Cat!”

“That’s only a concept. More than that.”

Was it against the law of the universe for anything to be only what it seemed?

“Nothing is against the law. The law is its own violation. That is the core of all events, that is Schrödinger’s Cat. Just relax. I’ll take you farther than you ever could have gone yourself.” With that Abadon snapped his scorpion’s tail, Tom hissed, and the conceptual cat spat, and the *Leannan* laughed a laugh so mean it startled Amanda.

She stepped back, stunned by the realization that the world of the dead was at least in part a great slaughterhouse for souls, and the handless child folded into all of these other forms was one of the master butchers. She was leading Amanda toward the clicking maw of something so remorseless that it was willing to devour the frail and precious immortal bits of human beings, a sort of predator of the netherworld, that ate all the best of men as men ate full-ripened fruit or the tenderest parts of animals.

Nothing any man had ever done to any man was as bad as this.

“We’ve got to get going,” the thing in the shape of the little girl said briskly. “Oh, Amanda, you’re just going to love deep Summer. It always makes me so glad when I can take somebody there. I really feel that it makes my job worthwhile.”

Amanda did the only thing she could do: she started to run away.

In an instant Abaddon shed its disguise and leaped on her, grabbing her in enormous pincers and scuttling away with her.

Amanda fought it with teeth and fists. She had expected it to be impossibly strong, so she was surprised when huge plates of its shell came off in her hands. Then she discovered that it was no more difficult to open the pincers than it might be to push aside heavy doors.

When she freed herself, the thing slumped back, whipping its sting about and howling with rage and pain.

“You’re a cheater, you don’t play the game!”

“I told you, I’m going back.”

“You’re dead, you haven’t got the right! This is just the border of hell, baby. There’s terror beyond belief between here and life.”

“I’m going back, and that’s that!”

“You are in violation of the law! Have you heard, ever, of anybody returning from the dead?”

“Osiris. Christ. Lazarus.”

“And little Amanda Walker from Maywell, New Jersey. Don’t make me laugh. Now, come on, you’re wanted elsewhere.”

Amanda strode back toward the garden gate, determined this time to go through it, and stay gone. She opened it and stepped forth.

Before her was a forest, a most unusual forest. From here it didn’t look too nice. It seemed to be made of enormous human legs, festering with sores and ooze.

Amanda reached the gate. Behind her the girl in blue waved her ragged wrist and laughed her angry laugh.

The odor of the forest was pretty bad. Gas gangrene must smell like this, Amanda imagined, clinging to your nasal surfaces as oil clings to water.

“But I don’t have nasal surfaces. I am dead. All of this is an illusion.”

From far behind her there came a shout: “Give my regards to Mother Star of the Sea.” Then the *Leannan*’s needle-sharp laughter once again, merging with another very different sound.

This noise came from beyond the forest, and it was more welcome by far.

One witch, still chanting.

Robin.

“I hear you! I’m coming back!”

But the chanting did not get stronger as Amanda entered (he forest. The stumps grew taller and taller, absorbing all noises. She felt awful and alone and small. A little white bird fluttered gaily. “Come with me, me, me!”

Of course the bird was trouble. Big trouble. But; at the same time, she was out of alternatives. The only place the forest opened up to let her through was where the bird went. She began to follow. It didn’t seem likely but you never knew. Maybe she would get through.

It stank fantastically in among the towers of rotted flesh. They were too close together to pass without touching. Soon she was covered with ooze and scrapings. The bird flew eagerly ahead, deeper and deeper into the forest.

Amanda had to fight with all her strength to retain self-control. She was almost mad with revulsion. The wounds seemed to spit at her. And there was even a sense that unseen hands were caressing her from inside the cracks in the stumps.

What ungodly creatures must make their homes in these filthy things.

“Don’t touch me!”

Nothing replied except the bird, which warbled furiously. “Come on, on, on!”

Amanda couldn’t stand any more. She stopped walking. She stared down at the ground.

And saw that it was a seething mat of long-bodied beetles. “Oh, no! Oh, I can’t bear any more of this!

Why won’t it stop? What have I done?”

“You didn’t play the game! You won’t judge yourself, not you! you! you!” The bird’s eyes were silver pins of hate.

“I am not guilty, that’s how I judge myself! Not guilty!” She stomped into the crunchy surface beneath her. “My name is Amanda Walker and I am not guilty. My name is Maid Marian and I am not guilty. My name is All Women and I am not guilty!”

The beetles were beginning to bore into her feet. She hopped. “I am Moom, full of blood and milk and babies!”

You, woman, are burning in the evidence of your name.

Amanda sank down into the crawling, hurrying masses of beetles. They swept over her like a wave but she just didn’t care. Let the worst happen. She

had gotten herself sent to a very special hell, the one hell not of the condemned's own making: the hell of those who refuse to face their own consciences.

"I don't deserve this! I do not!"

Somewhere far away, something tremendous and kind agreed with her and took an instant's pity on her.

It allowed her to hear a music human beings almost never hear, the sublime harmony that rules and arranges all things.

The final government of the world is this music, coming from no throat nor bird, but from what fingers the harp of creation.

The blessed music of the *Leannan's* harp faded into the rustle of the beetles. It wasn't much, but it suffused Amanda with a new and rare strength. Despite the beetles she raised herself to her full height.

Even so, her face did not clear their mass. In these few seconds she had sunken deep into the hordes of them, so deep that she was swimming beneath their surface.

If she opened her mouth—

She raised her arms, she began to claw slippery handfuls of them, pulling herself upward, crushing hundreds of them at a time in her struggles.

Music, indeed! *This* part of creation at least was all disharmony.

The voice of the *Leannan*: "You chose this, remember."

Amanda's lips were tingling, and feelers were coming in between her teeth and tickling her tongue.

"I don't really have a body! So this isn't actually happening."

But it felt more real than the sharpest living moment.

Her flailing right hand connected with something solid. She felt, she grabbed, she clutched. And she pulled herself out onto the root structure of one of the stumps. The bird was fluttering and shrieking. "I thought you were a goner, goner, goner!"

Amanda dragged herself up out of the morass of beetles. As long as you stood *on* the dam things, they were no problem. Just don't relax. Never relax, not if you are trying to cheat death.

Amanda took a deep breath, and when she did, became aware of a most perplexing new odor.

It was the tang of gingerbread.

She moved by her nose, in the direction of the smell. "That's right, right, right," the bird shrilled. Soon another scent was added, of warm chocolate.

And then one of jelly beans. And then just a hint—wasn't it—of searing steak?

The bird darted, it flopped, it peered at her with its silver eyes. Amanda followed because the smells were from life. They brought tears of remembrance. She had loved gingerbread, and she had baked it often.

It was the essential smell of the best of her past, a mamma-smell from before Amanda could even talk.

Poor Mamma. What a tragedy to leave life unatoned. It is so much harder later.

“Here we are, are, are!” The bird swooped off into a clearing. Amanda's eyes almost popped out when she saw what was there. Nestled in the center of the clearing, in its own pool of thin yellow light, was a most charming little cottage. It was decorated with chocolate drops and jelly beans and taffy whorls. The walls and roof were made of slabs of gingerbread, the chimney was a gleaming licorice top hat. Thick green smoke poured out of it, rising into the hazy air.

Amanda wondered who she saw moving behind that rock-candy window.

The trees pressed closer. The creature in the cottage bustled back and forth past the frosted window, and the smoke poured from the licorice chimney. The little bird spiraled up into the sky and disappeared.

Lucky little bird.

Amanda had no intention of going into that cottage. But not to worry, the door was opening.

The wind curled some smoke across the clearing, and Amanda caught a whiff of overcooked pork. A strangely familiar smell. School food.

There was a dark figure in the open doorway. Amanda stared, almost unable to believe what she was seeing, the long black dress, the white around the face, the silver cross on the breast.

What was a nun doing in a place like this? “I'm Mother Star of the Sea. Glad you've come to see me.”

Amanda thought it better not to say hello.

“Come on in, Amanda, darling. Time for our lesson to begin.”

Oh, yes, it was her all right, despite the fact that she now had the rough voice of a stevedore.

“I think I'll stay out here.”

“Oh, no, my dear. Look, I've got all sorts of goodies for you—candies, cakes, gingerbread.”

“No, I’m okay out here.”

Mother Star of the Sea came forward, prancing, mincing, her arms akimbo, her head lolling from side to side, her jaw snapping.

Perhaps she intended to be amusing, but she could hardly have chosen a more unwelcome appearance.

Ever since she I was three and she’d been chased by a man dressed up as Mr. Peanut, Amanda had loathed and despised all forms of puppets. Little puppets made her skin crawl, but big puppets—life-sized puppets—they rattled their gums in her nightmares.

Even though Mother Star of the Sea was a tremendous puppet, she moved with sinister human purpose.

In another second she was going to grab Amanda with those intricate hinged hands.

Her painted eyes were blank, yet curiously avid. When Amanda turned to run, she found herself pressing against the rubbery flesh of one of the trees that surrounded the cottage. The skin was gray and weak and it gave way. Inside something sucked and swarmed about on itself—a fat, brown serpent of a thing lubricated with yellow mucus.

It had the head of a human being. She thought, perhaps, the face was familiar. Was it Hitler? Stalin? She couldn’t be sure. It bubbled words, “Help me, he-e-lp me...” Then it snarled, its body whipped out, and in an instant coils as hard as iron had swarmed around her.

She saw flashes, she heard an old song, “Lili Marlene,” a German song from World War II. And she felt hot wires digging into every part of her body, digging and exploring.

She felt herself disappearing, becoming less than nothing.

The wires were its teeth: it was eating her soul.

But then there came a rippling surge in the rock flesh, and the song changed to hissing, spitting invective, a *Götterdämmerung* of gutter German. It spat.

Then Amanda was free.

Mother Star of the Sea: “Don’t go near those trees!”

“I didn’t know!”

“Now, will you *please* come with me? The class is waiting.”

“The class?”

“Of course, Our Lady of Grace is a school, isn’t it? Therefore we have classes, or haven’t you put those two amazingly unrelated facts together yet,

my bright girl?” She clamped Amanda’s ear into one of her mechanical hands and started dragging her toward the cottage. “These woods are really far more dangerous than any place on earth. There you can do no worse than die. But here—oh, dear!”

Our Lady of Grace had been a grim place, a Gothic pile full of pale nuns and semidelinquent girls in jumpers and oxford shoes. “But I went to public school!”

“Not when you were eleven. We had you then.”

That was true. “It was only a few months.” Mamma had gotten hepatitis that year and Dad couldn’t begin to cope: they weren’t Catholic, but Our Lady was the closest place Amanda could be stashed.

Mother Star of the Sea clapped her hands. “I’m in the hells of all my girls’ It’s so *nice* to be needed.”

Amanda had hated Our Lady. Sausages were called bangers there and you had to eat them especially if you thought they were greasy and awful, and you had to kneel before the Madonna of the Upstairs Hall when you were bad. And they gave tongue-tashings that made you feel guilty for just being alive.

“You taught me music.”

“And you’re still dancing to my tune!”

“No.”

“All right, now, in you go.”

The cottage was really a classroom. That classroom. It was the most terrible place in her life, so terrible that she had crusted her memory of it with thick amnesia. There she had learned injustice, she had learned to hate, she had learned what evil is.

“Or was it that simple, my dear? Didn’t I love you?”

Didn’t I hold you when you cried, sent to school by your father with a black eye? Amanda, you’ve hurt me. You’ve wronged my lovely name. Aren’t you ashamed?”

The chalk-dust smell of the classroom made her clench her fists. She remembered that Bonnie Haver had once stolen her crayons. When Amanda complained. Mother Star of the Sea blamed her for not finishing her work, and punished her while Bonnie went free.

“I was afraid of Bonnie, dear. She destroyed me, you know. I couldn’t punish her, I had to let her go.”

That afternoon after gym Bonnie and two other girls, Daisy and Mary, had

—
“They drew on me with crayons! They drew all over me and you made me kneel to the Madonna of the Hall because I was a filthy, dirty little girl. They drew on me with my own crayons, and you punished me, you punished me again and again and again, and I said one day I would see you burn in hell, you evil, sadistic old bag of bones!”

“So here you are, feeling guilty for hating me. As you should. And punished you will be!” Her voice got lower, like the growl of a hunting cougar. “Sit down.”

“The desks—they have straps. I don’t think—”

“Have a goddamn seat! I’m your teacher. You’re here to learn about yourself. Now, sit in the desk.”

Amanda sat. With a great clatter of fingers Mother Star of the Sea strapped her into the chair. “There.

Bonnie dear, time to come out and play.”

“Oh, no, not her. Not that—”

“Bully? Yes, she was a bully when she was eleven. Too bad you didn’t know her more recently. She’s gotten really mean.”

Amanda writhed. She really didn’t understand this at all. Why was she here? This wasn’t her hell. She hadn’t done anything to be ashamed of at Our Lady. She’d been a good girl.

“You shouldn’t have despised me. It’s a sin called calumny.”

“You deserved it! You did!”

“I deserved compassion. It would have soothed me like rain.”

What little evil she had done, she had done in those months at Our Lady. There she had hated and hurt, and spread disappointment—but only because she was herself so sad.

Bonnie pranced down the aisle, blond and delicious in her schoolgirl greens, her ponytail flouncing behind her, a vicious-looking ruler in her rattling hand.

“Open your palms.”

“I haven’t done anything.”

“No, but I’ve got a right to my fun. Now, open your palms. This is going to hurt you more than it does me.”

This was crazy. She was getting the same kind of injustice she had gotten at Our Lady, and for no better reason.

“Both hands. Perhaps we can beat some sense into you. Remember, dear,

we just *might* be your friends.”

Unwillingly, sure she was making a mistake, Amanda did as she was told. The ruler whistled a familiar tune, then came down cr-a-ack across two quivering palms.

“That’s one?”

From the front of the classroom Mother Star of the Sea commenced a wooden rumble of applause.

Again the ruler snapped. Despite herself, Amanda yelled. It fell once more. Then another time and another and another. Her palms became purple. The room was echoing with her cries and the laughter of her tormentor.

“Oh,” Bonnie said, pushing an akimbo curl out of her left eye, “that was fun.”

So this was how the demons torture the damned in hell, very artfully.

“Please let me out of here!”

“What? Let the pig out of the slaughterhouse? Come on, dear, there isn’t a chance of escape. Smile, or we’ll feed you to the trees.” Bonnie glared down at her with sparkling, furious eyes. “This cottage is the heart of the forest. And Mother Star of the Sea—she’s Satan herself.”

Amanda looked at her pulsing, agonized hands. “If she’s Satan, who are you?”

“I’m her wife.”

The straps were tight. Amanda bowed her head in defeat and sorrow. She wept, and her tears were real.

They were the first sign of life in the basement where her body lay, a miracle in the secret dark. They fell from the dead, open eyes of her corpse, rolled down her cold cheeks, and dripped onto one of the Bic pens George had dropped when he was doing his own dying.

They dripped also onto the Covenstead, in the sorrow of the afternoon, onto Ivy’s cottage. They made their way through the thatch and pattered down in front of Robin, who sat frozen with grief, staring at the tabletop, and at nothing at all.

Chapter 23

As far as Ivy and Robin were concerned, a drip of perfectly ordinary water spattered on the oilcloth table that stood in the middle of Ivy's cottage. "I hate thatch," she muttered. From the hollow of his loss Robin lifted his eyes and watched his sister stomp about. "Damn," she said, "double damn!"

"Water bind it, no one find it."

"I'm not angry, Robin!"

"I didn't say you were."

"Oh, no. You just recited the last two lines of the anger spell instead. Anyway you're right. Of course I'm mad. A man got burned to death and my thatch is leaking and we lost Amanda!"

Robin got up from the table and put his arms around her. He kissed the tears that were forming in her eyes. She laid her head against his chest. "How are we going to go on without her?" she whispered.

The question intensified Robin's own grief. Outside, the evening wind whispered through the grass.

Constance had carefully prepared him for her coming so that when he finally met her he felt a kind of ecstasy. She was a luminous woman, worth the year's anticipation, all the rituals, and the long hours of instruction. He did not love her, although she was physically appealing. Not until the Wild Hunt did his heart open to Amanda. It was not her increasing power that won him, but rather the open, innocent way she threw herself into the ritual hunt, doing her best to succeed. Her courage and her vulnerability were what made him love her, as well as the old tales and the dim memories... when he was Robin to Maid Marian, so very long ago.

"Now she was dead, and his grief was like a brown cloud spreading not only through his new love but through his hopes for the future as well.

The unstated truth lay in the silence that had fallen between Robin and his sister. The combination of the pressures from Brother Pierce and the death of Amanda could kill the witches' dream. You could feel as a sort of weight on the air that the heart of this place was beating more weakly than it ever had before.

Robin took a deep breath. He could never stand this kind of silence for long. "If we're *real* witches, maybe we can do something about it."

"Like what, aside from burying Amanda?"

“What if we raised the cone of power?”

“In our present state of mind we’d never succeed.”

“Then we’d better change our state of mind! Look, what if the Vine Coven raised such a cone of power you could see it with your eyes closed on a sunny day. Then what?”

“So what do we do with it?”

“Don’t you see—we raise it over Amanda’s body, and we send a wish with it, for her to return to life.”

“Bill—”

“Please use my right name. We’re still witches.”

“Sorry, Robin. Amanda Walker is really, truly dead. Her body is rotting in a basement over on Maple Lane. We don’t even know if there *is* a life after death, in the final analysis.”

“You sensed her in the cauldron circle this morning-. We all did.”

“We felt something. The same kind of strange, enigmatic something we always feel.”

“It was Amanda—I could even see her, sort of.”

“You understand, don’t you, that this whole business of witchcraft could just be—I don’t know—sort of self-hypnosis.”

“Oh, no, it’s not. It isn’t hypnosis at all. You know as well as I do that it’s magical thinking, which is a very different thing. The *Leannan*’s power stems from magical thinking. You and I can do it, to an extent.

We can create vivid visions in our minds, which affect reality. You know, you do magic.”

“I know, I guess I’m just losing heart. I feel like I’ve been kicked in the stomach.”

“We’ve got to try!”

“But you’re talking about raising the dead. That’s a lot more than magical thinking. That’d be a true miracle.”

“I can’t think of her as dead. She was so alive. When I heard her on the Wild Hunt, that unchained voice echoing through the whole of Maywell—well, I discovered how powerful a sudden love can be.”

“Robin, if we try and fail, don’t you see that it’ll demoralize the Covenstead even more? People are in despair. Not only that, they’re scared to death of Brother Pierce. They’re saying we’re under a curse, and I for one think they’re right.”

“Surely people who’re willing to believe in curses are willing to believe

the dead can be raised.”

“She’s been dead for hours!”

“It’s been done in history. Not often, but it has been done.”

“History is a tissue of lies.”

There were voices outside, latecomers back from their day’s commute. Their laughter was comforting.

As soon as they heard the news, though, they became as silent as the rest of the witches.

Soon the six o’clock gong rang. There were no cooking odors among the cottages, and no lights in the night of mourning.

Despite Ivy’s arguments, Robin made the decision that they were going to try this impossible thing. But he had to be careful. Ivy wouldn’t be alone in objecting. People didn’t like to attempt things they thought were beyond their power. Failures weaken magic, and too many failures destroy it.

He had to handle this very carefully. “It’s time to go in and get her,” he said, “if we’re going to bury her here on the Covenstead.”

“Up on the mountain. Near where she saw the *Leannan*.”

“Yes, there.”

He went out into the village, knocking on the doors of the dark houses until he had the Vine Coven assembled. Some of the others wanted to come, too, which was fine with him..The only trouble was a lack of transportation.

“Why don’t (he rest of you prepare a lying-in-state?”

“At me house?” a voice asked from the dark.

If he sent them up to the house, they would all discover the secret of how dejected Connie had become.

She had retreated there, he knew, to hide that fact from her people. “I have a feeling Amanda would have preferred it on the Fairy Stone.”

There was general agreement to that. The Vine Coven set off, going in the Covenstead’s two station wagons. As they drove out through the silent farm, past the blackened field that Brother Pierce and his men had burned, Robin wondered if they might really have somehow brought a curse down upon themselves.

They reached the edge of the farm, then the limit of the estate itself. The lights of the cars played on the scar of the fire, and then on the purple stains in the road. He still had stickers in his hands from picking those blackberries.

There was a sharp *ping* from the hood.

Ivy, sitting beside him, peered forward. Just then there was another one.

This time a long crack slit the windshield.

From the back seat somebody screamed.

Robin hit the horn to warn the wagon behind them and jammed the accelerator to the floor. The car lunged and slurried until the tires caught the asphalt. Then it shot ahead, its old engine roaring and rattling.

Somebody shouted a charm. "Things of the night, take flight."

Robin was forced to slow down out of fear that he would lose control in the turn. People in the car were silent, stunned by surprise and fear. "They weren't actual bullets," he said, "or the windshield would be shattered. Pellets or even BB's. We weren't in any real danger."

He did not add what they all knew, that it was only a matter of time before this sort of thing escalated to open warfare. The people lurking at the gates were building courage.

"They must have somebody there all the time. I hadn't realized that."

"We'll post guards," Wistena said. "We'll have to."

Robin pulled over, motioned the following wagon to come parallel. "You folks all right?"

Grape was driving. She gave him a tight smile. They went on, down West Street to Main, then up Main and across Bridge to The Lanes. There were a lot of cars in front of 24 Maple Lane.

From the house there came soft singing. The town covens must have assembled there spontaneously as soon as Constance had called them with news of the tragedy.

It occurred to Robin that he was going to have to see Amanda's dead body in a few minutes. He feared for his own ability to believe in her life, then. Ivy touched him. "You're trembling, brother."

From behind, Wisteria put her hand on his shoulder. "We're all with you, Robin. Remember, she's in the Land of Summer now. The Goddess is taking care of her daughter."

It was very hard, this new experience of grief.

Sky-flower opened his door for him. They had been initiated on the same day, he and she.

Robin began to approach the house. It was full of people, of course, not only the town witches but a large part of the Christian community as well. Most of the genuine Christians of Maywell viewed the witches with wary respect. Only Brother Pierce's followers hated, and Robin did not think of them as Christians.

A queen had died, and she would be honored among all the good people of this town. He could hear that they were singing one of the Covenstead's own songs, one of the most beautiful.

“Somewhere there is a river
Somewhere there is new youth.
Oh, let me drink the cooling water
Let me bathe my soul in truth.”

Just as the song ended, Sheriff Williams came tromping up the basement stairs. “Evening, Robin,” he said. He embraced Robin, pressing him against his cigar-smelling shoulder.

“We got shot at, Sheriff. Just at the entrance to the estate.”

“I’ve got my deputy out there.”

“We didn’t see him.”

“Well, I’ll talk to him about it.” He looked at Robin out of stricken eyes. The sheriff had given up a great deal for his beliefs and his lifelong love of Constance Collier.

“You going down to the basement, Robin?”

“I’m going down.”

To get through the house they had to step over people, covens sitting close to one another, clustering around their priestesses and priests, and Catholics and Episcopalians and Methodists with their pastors.

Even people who had not known her sensed the wonder of her.

When they reached the mudroom and Robin saw the ugly little hatch to the cellar, his throat constricted.

She had gone down into that dark place to face death.

“She tried to get away,” the sheriff said laconically.

“Made it as far as her car. He dragged her back.”

Robin could hardly bear to listen.

“Fred, we’re coming down.”

“Okay.”

“Robin?”

“Yes, Sheriff?”

“Look, it’s kind of bad.”

“I want to. I’ve got to.”

The sheriff put a big hand on Robin’s neck. “In love with a witch. I know

just what you're going through, boy."

"We will gather at the river,
the beautiful, beautiful river..."

They were singing again, the strong voice of the Episcopal rector leading the rest.

The basement stank of dank earth and something else, something like overheated electrical wiring.

Something awful. "We haven't moved her, Robin," Fred Harris said. "We'll carry her up as soon as the casket comes."

Casket. Robin hated that word. He remembered their one experience of lovemaking, upon the humid earth, the moon setting red and low, she so full of all the furious urgency of the hunt, her body running with sweat and slick with the oils of the ritual, reeking of horse and human heat and the thick scent of love.

Cold caressed Robin as he moved forward toward the little room where Mandy lay. Lights had been hung by the sheriff's people, and the place glared harshly.

"What is this? What are all these... cats?"

"He was crazy. We just didn't know how bad he was. Not even Connie."

"Where is he. Sheriff?"

"We found his belt and some ballpoint pens down here. And there was blood on the floor. There's no sign of a body."

"Why do you think he's dead?"

"She isn't wounded, so the blood must have come from him. He's dead, all right." He gestured at the vast bloodstain. "People don't bleed that much and live. Who killed him and what they did with the body we do not yet know."

"This room is—"

"She had courage to come here."

Robin could hardly bring himself to go to her, so hideous was the place, jammed with the jumble of George's strange scientific apparatus, haunted by the pictures of cats.

Robin forced himself to cross the basement, past the bulging furnace, to the little chamber. Closer, the profusion of cats was almost unbelievable. Perhaps because of all of the cat images, this place seemed connected to him,

almost a part of him. “Tom is a black spark,” Constance had once said, “from the eye of Death.”

“Kate should have told us about this,” Robin said. “She was probably afraid. Look at the place.”

When he thought about it, Robin realized that it was impossible that Kate Walker had kept this secret from Constance. Of course Connie knew all about it. She knew exactly how dangerous George Walker was. When Robin peered into the death chamber, he felt the presence there as a thickening of the dark.

“Tom, is that you?”

“Who?”

“Connie’s familiar. The one she was going to give to Mandy. I sense his presence.”

“There’s nothing like that here, Robin.”

“I don’t think Tom’s going to show himself.”

“That cat scares the hell out of me. It’s too old, for one thing. At least forty, by my count. In my time as a witch, it’s appeared once when Connie was a girl and Hoboes shot her to make her a shaman—that was in the twenties, for God’s sake—then when Simon Pierce came to town, and now I’ve seen it around, sulking along here and there.”

Robin didn’t bother to mention that Connie owned a painting of Tom done in 1654.

He took a deep breath He could delay no longer, and looked down at the form on the table.

Even in death she glowed. Her beauty, Robin thought, could defy the grave. Her face had been caught in a living expression. Her eyes were open, the fine brows knitted as if in puzzlement. Her hands were clasped in her lap. “We removed the bindings,” Fred Harris said. “She was tied to the table.”

Robin prayed in his own private, wordless way, to the Goddess who awed him and the God he loved He let their images ride in his mind, the tall, pale Goddess and her shadowed consort, moving as ever in the Land of Summer. He wanted their comfort now.

Through the basement windows there came a honking of many horns and the ragged sound of human rage. “Damn,” the sheriff said, “they just ain’t gonna leave us alone, are they?” The honking horns obtained an angry rhythm, their notes long and bitter.

“One of theirs died today, too.”

“Robin, that man was trying to burn down your farm!”

“He died a hard death.”

The people outside were literally growling, their voices dull and deep, as the fall of rain upon a place already drowned. “I’d better get up there and give them a little hell,” the sheriff said. He fumed off across the basement.

Robin went around to the head of the table. He thought to close her eyes. “You can’t, buddy,” Fred Harris said. “Too late to change the expression.”

He did not want her to stare like this. It wasn’t a dead expression. Despite how cold it was, her body retained the suppleness of living muscle. In a way this was much more awful than the fixed stare of an ordinary corpse.

She was so obviously not at peace. “Isn’t there any way at all?”

“I can make ‘em look closed, but I have to take her back to my workroom.”

Her eyes were the shade of the moon dimming toward morning. Constance had said: “Every one of us has a hidden name, our *real* name. When you call her to the circle, call Moom.”

“Moon?” they had asked.

“No, with an ‘m.’ Moom is her real name. The *Leannan* calls her that.”

“Good-bye, Moom. Fare you well.” He visualized her on an old forest road, suitcase in hand, walking quickly away. Long breaths of sorrow filled him.

He was granted a vision of Moom: a dumpy little brown ball of a human being, reeking of fire smoke and rancid fat, full of thigh-slapping pride and laughter. That was the young Moom. Now the ancient soul seemed to stand over him, its face grave with the wisdom of very long time. “I feel her. She’s right in this room.”

“Come on, now, the casket’s arrived.”

Robin wanted just another minute alone with her, but there were a whole lot of people waiting and outside the din was getting louder. There were thuds. Rocks hitting the house. Sheriff Williams could be heard shouting, but he wasn’t having much effect. Upstairs the singing went on. “Amazing Grace,” then the Pentagram Chant. “Pentagram glow, bring us tight and glow, oh, glow, pentagram glow...” Ivy led it in her powerful voice.

“You go on up, Robin. Tell some of my guys to come down and help me.”

“I’ll help you.”

“You don’t have to—I’ve got plenty of men upstairs.”

“I don’t mind touching her. I want to.”

Her body was slack and cold. To put his hands on her like this, when in his

imagination she was so warm and full of life, was really very difficult. But it was right. This was his responsibility, this body.

They got her strapped to the stretcher and carried her across the basement. Other hands took her up the ladder. When Robin arrived at the top, the stretcher was just going around the corner into the living room. The house was full of winking yellow light. The Bees had arrived with boxes of their handmade candles.

Others unstrapped her from the stretcher and laid her in the simple coffin favored by the witches of Maywell, a box of hand-rubbed pine, tightly made. "Let the flesh return quickly to the Mother," Connie said. The box was a concession to state burial laws.

Ruby of the Rock Coven came to the head of the coffin. She looked long at Amanda. "We'll go back in procession," she said. "Rock will carry her all the way to the mountain."

They closed the coffin then, and Fred Harris bustled up. "You're going to walk all that way? That's two miles."

Ruby was Fred's daughter Sally in the outside world. Robin wouldn't have challenged her like that.

"There are plenty of us," she snapped. "We want to do it this way."

"That crowd out there—"

"There's a crowd in here, too!"

"Okay, honey, I meant no offense. I was just pointing out the facts."

"We want to show our strength. And to respect our dead." With that Ruby was joined by the rest of her coven. They surrounded the coffin and took its gleaming brass handles. Others gathered before and behind them, witches and town people alike, all carrying candles.

The local churches preached acceptance, and the witches in turn respected them. Together the group, Christians and witches alike, filed out into the rage of the night.

Brother Pierce was standing in the back of a jeep, his jutting jaw flashing in the glare of gasoline lanterns and powerful searchlights. After the Israeli invasion of Lebanon in 1982 a wave of survivalism had swept his congregation. World War III had not broken out, but they had not abandoned their preparations.

Station wagons, jeeps, pickups, and powerful four-wheel-drive trucks were their vehicles of choice.

"You are the harlot of the Devil," he roared, pointing at the advancing

procession. “You killed a man today, you murdering demons!”

Ivy was the first to start singing. “Amazing Grace, how sweet the sound, that saved a wretch like me. I once was lost but now am found, was blind but now I see.”

“You see nothing but the darkness and evil of your hearts! What are you doing—celebrating our sorrow?”

Brother Pierce and his flock had been attracted to the house by the crowd assembled there, not by any knowledge of what had happened to Amanda.

His spitting voice mingled with the hymn. For an instant Robin saw his face clearly in the sweep of a searchlight from one of the trucks. His expression was not one of hate. It was beyond that. You couldn’t look at it.

The entire crowd lapsed to silence when the coffin was -brought out the door. In the back of his jeep Brother Pierce made a sullen hissing sound. Slowly one of the lights came about and fixed on the Rock Coven and its burden—

They were humming softly, a nameless song of woe.

Brother Pierce pointed at them. “Rejoice, for death has taken one of the evil!” He hugged himself, twisting and smiling to the night sky. “For wickedness burneth as the fire; it shall devour the briars and thorns, and shall kindle in the thickets of the forest, and they shall mount up like the lifting up of smoke!

Oh glory, oh hallelujah!”

He began to clap, and each clap of his long, narrow hands exploded through Robin’s sorrow. But Ruby had been right, so very right! They belonged here, with their burden.

A song burst from the throats of Brother Pierce’s followers: “We’re gonna tell the world about this!

We’re gonna tell the nations about that! The battle’s done, the victory’s been won. There’s joy, joy, joy in our hearts.”

How quickly they forgot their own dead.

The procession left the street at last, leaving Brother Pierce and his jubilant mob behind. Father Evans fell in beside Robin. “I hope you can forgive them, Robin.” His head was bowed. “I’m trying myself.”

“Are you succeeding?”

“No.”

“It’s that much harder for us, Father. For me, I loved her, you know.”

“The rector told me how important she was to you. Still and all, that nude

ride—”

“That’s our way!”

“Okay, let’s not get into that. Just know that it sure upset the Catholics. You oughtn’t do things that violate the town ordinances.”

“We had a parade license.”

“The nudity—”

Robin really didn’t want to have an argument with Father Evans. “I doubt if you’ll see another Wild Hunt.

This Covenstead will probably disband.”

“If I’m ever needed—”

“Thank you, Father.”

The procession straggled along, a bobbing line of lights, an occasional murmur of song. Up front the pallbearers were chanting quietly to keep themselves going. The Rock Coven was determined to carry her all the way. They were a heavy work team, building and maintaining roads on the estate, rooting stumps, making wattle and erecting cottages, hauling beams. Still, there was a weight in that box that must drag them down more by far than the heaviest stump.

As they marched they drew more and more people from their homes, until it seemed as if all the town that was not with Brother Pierce was in the procession.

“Are there any more candles?”

“Dad!”

“Connie called me. It’s a terrible thing, son.”

Robin couldn’t answer. His mother had come down from the house as well. She and Ivy were walking together just behind.

They entered the main gate of the estate, which had been thrown open for the occasion. “Who was she, son, really?”

“She’d been coming to us for a long, long time. We belonged to her.”

The great old forest that separated the estate from Maywell was filled with the peace of nature. Some small creature screamed among the trees, and great wings swept away. By the time they passed the house the procession was more tightly packed, in part because there were more people and in part because the Rock Coven, struggling at the front with the coffin, was slowing down. The house was totally dark.

It was some little time before Robin saw Constance standing on the front porch. Around her the ravens clustered in unaccustomed silence. In her black

cloak and hood she might have been a statue, faintly sinister in the light of the moon. She raised her head and Robin thought she might be about to speak. But then she came forward. She joined her people, and Robin was very glad—

The coveners had laid a way of hooded candles up the mountainside, each one carefully placed among stones to avoid the danger of fire. Even so, it was rough going, and not everybody was prepared for the journey. Even some of the town witches fell by the wayside. They joined others gathering in the fields, and as Robin negotiated the rough path he heard them beginning to sing together. Ahead the Rock Coven struggled mightily with their burden.

When Robin reached the Fairy Stone, the coffin was already placed upon it. People made a ring of candles around it, which guttered in the wind, flickering reflections of the mourners in the polish of the casket. The witches formed a circle. Behind them the townspeople who had made it this far. Stood or sat.

A deep silence came. Far off the wind moaned, its voice echoing through all the Endless Mountains. The moon stood bright and high amid the stars. Robin looked up at it, and the living intensity of its gaze awed him. This night, he thought, the old moon is an eye into eternity.

Chapter 24

REQUIEM FOR A WITCH

There had never before been a funeral like this in the Covenstead. In the deep silence there was a black flash of movement, then Tom jumped up and stood on the lid of the coffin.

His eyes were so fierce that Robin literally could not meet them for more than an instant. They burned green and they challenged, almost accused.

Constance Collier walked forward until she stood before the coffin, face-to-face with the huge, glaring creature that crouched upon it. The wind whipped her cloak. She spoke in a clear, soft voice, directly to Tom.

“O Great Irusan, King of the Cats, keeper of the doors of death, take this daughter of life safely through the shadowed abode. Keep her in your timeless kindness, lead her into the cleansing water. Smile upon the descent of the living, O Great God, as they go in thy lands of dark and laughter.”

She turned. “Robin. Come here.”

He forced himself to approach her, and thus also the cat Tom seemed to have become twice his normal size, the tips of his fur glowing blue, his claws digging into the lid of the coffin. “We want you to invoke now, young man,” Constance said.

“Invoke?”

“Call Ama. The Dark Mother.”

Constance stood behind him, a trembling wraith, her breath rattling, her right hand steadily rustling the cloth of her cloak. The wind had been rising since they had arrived on the mountain. Now it seemed to gather itself and pour down upon them in a great, cold breath. Their candles sputtered and guttered out, the flames driven away by its enormous force.

Robin was not dressed for this; he was cold. Jeans and a sweater were never meant to keep out the breath of such things as were approaching this circle.

He searched his mind, but he could recall no familiar form for calling Ama. She was the aspect of the Goddess associated with empty fields and winter’s waiting. She was also the mistress of secrets.

As best he could, he invented an invocation. “I call to you, sterile Mother. I call to you, Ama of the empty fields. I call to you, mystery Mother. Take

your daughter through Death's cold pleasure, lead her, gentle Mother, all the way to the Land of Summer." His voice was snatched and harried by the wind.

Without the candlelight the faces of those around him had been transformed by the moon, which hung more than half full, high over the mountains. Very faintly, from down in the valley, Robin could hear the others singing.

"Silver water of the sky
Flow forever, flow forever
Until I know why,
Until I know why."

The Song of Sorrows. It had not often been sung in this place.

Suddenly Father Evans began to speak. "May I add something, Connie, on behalf of your visitors?"

"Of course, Al."

"This is from Ecclesiastes. Take it as a message from my God to yours." He bowed his head. "In the day when the keepers of the house shall tremble, and the strong men shall bow themselves, and the grinders cease because they are few, and those that look out of the windows be darkened, and the doors shall be shut in the streets, when the sound of the grinding is low, and he shall rise up at the voice of the bird, and all the daughters of music shall be brought low:

"Also when they shall be afraid of that which is high, and fears shall be in the way, and the almond tree shall flourish, and the grasshopper shall be a burden, and desire shall fail: because man goeth to his long home, and the mourners go about the streets:

"Or even the silver cord be loosed, or the golden bowl be broken, or the pitcher be broken at the fountain, or the wheel broken at the cistern.

"Then shall the dust return to the earth as it was; and the spirit shall return to whom gave it."

There was silence then, for a very long time Constance spoke again: "Let us tell the story of the descent of the Goddess. Heed it well, for each of us shall go also upon that bourne."

Always before Robin had heard this story in the joyous context of the Sabbats. He gave the opening:

“The Lord of the Flies, Godfather and Comforter, stood before the door into silence.”

All the witches responded: “And the Lady came unto him, and sought the matter of the mystery of death; so she journeyed through the portal on behalf of those who had to die.”

“Strip thyself, Bejeweled Lady, for the cold is cold and thy bones are bones.”

Softly, gently, Tom began to howl. Only at the rarest of moments will a cat do this, in high sorrow and in the night.

Constance continued, her voice cast low beneath his keening cry. “So she gave her clothing to the earth, and was bound with the memory of summer, and went thus with open eyes into the empty voice of the pit.

“She came before Death in the nakedness of her truth, and such was the beauty of her nakedness that Death knelt himself down, and lay at her feet as a gift the Sword of Changes.”

The witches sighed in unity with the wind, and one spoke for them all, “Ours is the faith of the wind, ours the calling in the night.”

“Then Death kissed the feet of Summer, saying, ‘Blessed be the feet that brought you in the path of the Lord of Ice. Let me love thee, and warm myself in thee.’ ”

The witches made a sound as of whispering snow.

“But Summer loved not the purple hour, and asked of him, why do you pin frost to my flowers?”

The witches were humming a wordless inner song. Behind them the townspeople glanced at each other in wonder, for they had never heard such a sound. High and yet vibrant, deep and yet full of laughter, and sorrowing with the sorrow we all know, but which is not named in any human language.

” ‘Lady,’ Death said, ‘I am helpless against me dropping web of time. All which comes to me, comes.

And all which departs, departs. Lady, let me lie upon thee.’ ”

The humming grew louder, merging with the cat’s voice.

“The Lady said only, ‘I am Summer.’ ”

“Then Death scourged her, and there were storms and ashes.”

The humming stopped. Tom crouched as if ready to spring at Constance’s throat. She stood before him, her head high, the wind billowing her cloak.

“And she gave voice to her love in the fertile voice of the bee, and death was glad before her.”

“Now the mystery of mysteries: love death, ye who would find the portal of the moon, the door that leads back into life.”

All together: “Upon us, O Summer, leave the five kisses of resurrection. Blessed be.”

Constance had thrown back her hood. “Blessed be.” She glanced around. “Cemunos blows his horn this night, my children. Rocks, in the morning take her and bury her back in the mountains.”

“But the *Leannan* doesn’t let us go beyond the Stone.”

“The law is lifted for this burial. She is wanted there.” She took Robin’s hands in hers. “You Vines, will you watch over her tonight?”

“I will,” Robin said. The other Vines joined him. They stood close together as the rest of the procession wound its way down among the rocks. Soon the last sound of the departing crowd was absorbed by the night.

All became silent but for the wind and the rustle of Tom pattering about in the dry brush. The coven joined hands.

It was not until Wisteria said in a soft voice, “Look over by the rowan,” that Robin even thought of the fairy. But they had been here of course, observing everything. He saw them now, dark small shapes stealing forth from the great shrub. Their jackets and caps hardly reflected the moonlight at all.

Robin’s heart began to pound. A chill swept his body. He reached out, and found the hands of other coveners waiting for his own.

The fairy came close, at least a dozen of them, pausing not ten feet in front of the coven. They had bows no more than a foot long, and arrows that looked insignificant to Robin’s eyes. But he knew not to move an inch; those arrows were infamously lethal. Constance said that in the distant past they had killed mammoths with them.

The rustling grew louder.

The fairy smelled strong and sweet and nothing like human beings at all. Were they bearded or not?

Young or old? He couldn’t see.

Then there was a change. One moment the air was empty, the next a little woman was standing above the coffin. She shone in the moon, or perhaps she gave her own light. Robin looked upon her face, and saw in it such love and joy that he clapped like a delighted child, he could not help it.

Wisteria lifted shaking hands to her. She reached forward and touched Wisteria’s fingers. Then the other Vines crowded close about the coffin, and

each in turn was touched.

Close to her Robin could see the perfection of her body, the smooth, unearthly light of her skin. She came face-to-face with him. A thousand feelings roared through him: mad, lascivious passion, tender love, terror, lust, pleasure, laughter, all the wildest extremes of the heart.

She parted her lips and closed her eyes and raised her face to be kissed. He was shaking so badly he could hardly hold his lips open. He drew close to her, and into a scent that engaged his deepest, most private memories. In the single instant of that kiss he knew his whole *lang syne*, from the moment he had found Moom cracking walnuts in the forest to the awful night he had seen the bishop's men capture Marian, through the sad houses of all the years to now.

There was a rush of frowning forests and dances, and then the *Leannan* turned away from him and stepped off into the dark.

She seemed to go upward, and all eyes followed her. At first what they saw was incomprehensible. Then Grape screamed. Across the sky, enormous beyond understanding, blotting out the stars, were two enormous cat's eyes.

They glared until the witches hid their faces, and huddled like rabbits beneath a circling hawk.

It was some time before anybody moved or spoke. One by one, though, they looked up again.

They were alone with the night.

Robin was seething with an energy beyond anything he had ever felt before from even the most intense ritual. Around him the other coveners were the same, their eyes glowing with the light that had spread from the *Leannan's* body.

He knew he had to act, or give up. "Please," he said, "let's try to reach Amanda. Let's try the cone of power."

Without a word of protest they made the circle. They were with him.

BOOK THREE:

The Black Cat

*Within that porch, across the way,
I see two naked eyes this night:
Two eyes that neither shut nor blink,
Searching my face with a green light.*

*But cats to me are strange—
I cannot sleep if one is near:
And though I'm sure I see those eyes
I'm not so sure a body's there!*

—William Henry Davis, “The Cat”

Chapter 25

The class of one sat before her teacher.

Mother Star of the Sea capered, her habit flying about her, wimple on the floor, naked wooden head bobbing, smile working as she darted in and out, pinching her student and scolding like a parrot.

Mandy was being pinched away by crumbs and bits. The worst part of it was how badly she missed herself.

“Somebody,” she wailed, “somebody!”

“Will I do?” Bonnie Haver reappeared.

“Get me out of here! Somebody, please!”

Mother Star of the Sea rattled to attention. “You vant out? Jawohl! Outenzee hellhole! Sure. You can be a ghost, you have that right. So, soul, take flight!”

Amazingly, Mandy was free! Blowing like a bit of pollen on the autumn wind, blowing through long black mountains.

Familiar mountains.

The Endless Mountains. And there was the Fairy Stone. Mandy’s heart hurt to see the witches huddling together against the wind, and her own coffin.

It was high night in the Endless Mountains. Mandy had become one with the air, guttering the candles about the coffin, whistling through sweaters and under cloaks, caressing the ones she had loved and lost.

She was here, but she was helpless. So this was what ghosts were all about.

So close to her people and yet so separated, Mandy felt a desolation of loss. She could hardly stay still enough to touch her own clean coffin, much less return to the body that lay within. She slipped and eddied about while they prayed into the hollow darkness. She came close to Robin, and the grief in his face tormented her terribly.

“I love you,” she said, and the wind of her words made Robin shake in his sweater. “I’m right here with you. Can’t you hear me?”

He huddled into his clothing and lowered his head-before the persistent gusts that were the spirit body of his lover.

She roared in anger because they could not see her, but only managed to put out all their candles. Then she quieted herself.

The night upon the mountain became as still as a bedroom. She heard their

soft voices as they spoke encouragement to one another. How tired and beaten they were. Her heart suffered for them. She was so close, but so helpless.

In life we think of ghosts as rarities. We do not know that every rustle and squeak, every scratch of twig upon the screen or moan of wind along the eaves, is someone passing in the journeys of the night.

Mandy saw the first hopeful thing that had come to her since she died: Tom ran across the sky. His eyes were stars, his body the whole firmament, his tail the kink in the Milky Way.

Mandy wanted to hammer on her coffin, to dive into her body. Please! Let me go back to them!

As she flitted and blew along, she saw the *Leannan* coming across the mountain with her guards. As they crept into the rowan, Mandy had the odd thought that one could look on the fairy as a species that had developed a technology of, the spiritual world, Just as man has developed one of the physical. Using this magic, the Fairy Queen could rule here and also walk in the world of the dead. The science that supported her must be a strange and glorious thing—theories that were experienced as dreams; snatches of song that were powerful machines.

For her part, Mandy wasn't in control even of herself. One moment she could be close to the ground, the next high in the air. Then she might be in Robin's hair, then scudding among the stones.

Was the *Leannan* going to kiss him? She hoped so, that would help him! She began to plead on his behalf: "Please, *Leannan*—"

Then she saw puppet grins nearby. "No, not yet, don't take me back!"

"But Mandy, this is the perfect time."

"You said I had the right!"

"You did, but you've used it up."

No sooner could she smell the candy stink of the cottage than she felt herself falling down its licorice chimney.

She was back in hell's schoolroom.

Robin heard the wind wailing, its voice echoing through the Endless Mountains to the north, and moaning south in the gentler reaches of the Peconics.

He couldn't even start the cone of power, so overcome he was by the *Leannan's* kiss. Her loveliness had struck him temporarily dumb.

More than that, it had sent through him a current that seemed to have washed every cell of his flesh with new sensitivity. He looked out on the world from revised eyes, and the world was not the same. Beneath him the soil now seemed a surging flesh. Every stone was an eye, every blade of grass a nerve ending. Earth was not just alive, it was more than that: it was shockingly aware. It knew him as it knew every man, woman, and child, every tree and every animal that was resident upon its body. And it was watching them all, quietly, endlessly, like a mother dreaming over her children. Wisteria began raising the cone of power, and Robin was grateful to her, to them all. Finn hands took his own. The coven was confident in their rituals; they had the balance of professionals. They raised the cone with a series of sounds, called the Chants of the Long Tones.

Wisteria started the whispery humming.

Soon other voices joined, each so familiar to Robin, each the voice of someone who was far more than a friend or even a lover. People who do real magic together become close in ways that words cannot say.

They chanted into the silence of the mountains, into the wind, into the living sky. Robin looked to the center of the circle, just above the coffin, for the shimmering red moon the coven sometimes saw when they raised the cone of power, but only the darkness there returned his glance.

At first Mandy did not understand. What were those funny little joints her demons were putting together—wooden knuckles? They were building hands, arms, a new puppet.

Then she screamed, she pushed and struggled at the straps that bound her once again to her chair. Lying on teacher's desk was a gleaming, enameled wooden head. And on that head was a caricature of her own face.

"I couldn't smile like that. I've never hated anybody enough"

"Oh, no? We're *your* demons, Mandy. We make whatever serves your guilt. Do you think the real Mother Star of the Sea would be in hell—not that good woman, took!"

Suddenly there appeared in Mandy's lap a shimmering mirror, and in the mirror was an explosion of loveliness such as she had never imagined, smooth and cool and green, long hills and the perfect voice of joy, a young woman raising song. It hurt to see her, this real Mother Star of the Sea.

"She'll never know you chose her to be your demon." The puppet Mother snapped her jaws. "She's a saint! I'm your sin, not hers."

Full of snide laughter, she and Bonnie assembled their new marionette. Mandy watched, stumped in her straps.

Mother Star of the Sea approached. She was wearing a surgeon's mask. In her hand was a hacksaw. "I'm going to take out *your* brain and put it in *this* head." Bonnie opened the hinged top of the noggin. "Think of it, a miracle of modern science."

Mandy looked desperately about. Bonnie was behind her now. Strong hands held her head steady.

Mother Star of the Sea laid the saw against her temple.

This is just an illusion, she thought miserably. I don't have a body.

The first cut crunched through her hair. Then a prancing migraine—fire in her skull, nails being driven between bone and brain—made tears flow and her nose run. Her eyes rolled in agony with each rhythmic burr of the blade.

After this was done she was never, ever going to go back, she knew that. She was going to become some inconceivable part of hell.

She was dimly aware of three new schoolgirls at the front of the room testing the joints of the puppet, making it snap its jaw and rattle its fingers.

Somehow, in her agony and despair, she had an idea. What was the opposite of the demon's anger? Not love. They would jeer at that. It was compassion, rich, deep, abiding compassion. She could damp the fires of her own guilt with it.

She summoned up what strength lay at her command, she forced herself to think, to form words, to talk:

"I forgive you," she said. "I forgive all of you."

The sawing stopped.

The girls playing with the puppet dropped it and stared at her, their eyes glassy.

Bonnie released her head.

"Damn," Mother Star of the Sea said.

"I forgive you and I—I love you. I love you all no-matter what you do to me."

There was thick silence. Then Mother Star of the Sea burst out laughing. "That old cliché! Love thy neighbor! What a load of crap!"

But she had thrown her saw to the floor.

"Unstrap me."

Bonnie came dutifully forward. In a moment Mandy was free. She stood up, she turned.

There were tears in the eyes that watched her. These were all part of her, every one, no matter what else they had become.

“I’m sorry.” It was all she could say. To turn one’s back on guilt is not difficult. After all, the deeds had been done, the wrongs committed. She understood how she had turned away from her mother and father when she could have embraced them in their need. But the past was the past, she did not need these demons to punish her. Mother and Dad were dead. Her best had not been good enough to heal their lives. Any effort she had made on their behalf would have failed. The lesson was, she should have tried.

The lesson had been learned. It was possible to melt the heat of Mother’s anger with her own soul’s spring. Compassion, acceptance of self. I did wrong, and now I have paid. She left the demon schoolroom.

Behind her there arose a great howling and clattering of puppet joints. She walked on, though. They were tragic and she could not help them, but she would never forget those parts of herself.

As she moved through the forest, the stumps shook and swayed and seemed to beckon her closer to their rotted sides.

Death never gave up.

“I am leaving you. I can’t help you.”

Soon she came to the border of the terrible woods, heart pounded, her mind sang with her triumph.

The view before her was so vast, so extremely awesome, that she almost lost her balance.

Beyond the formless edge of the world of the dead a whole galaxy was revolving, its stars shining in colors too subtle and exquisite to be named. The light of stars is their voice; their language is the color of that light.

The earth, a small green ball, lay in a tremendous, withered palm. Evil, huge beyond imagining.

I am the hand. The hand that takes.

All about wheeled other empires of stars. Hundreds of billions of fiery beings going in the orbits of their time, carrying planets and lives and rivers and storms.

The voices of the stars were raised in vespers, for the whole universe was at evening.

I am the hand.

But not only that. Death is also rebirth. In the very act of taking life, she returns it to the land. Spring flows from winter; the rose takes root in the

rotted flesh of the shrew.

She may be the hand that takes, but she is also a little girl running along a lane between lilac hedges, beneath kindly old oaks, who converse as she passes new growth of purest green.

She could not see details of the earth below her. She did not even know what she might be standing on.

She was just here, millions of miles out in space, lost.

Then she heard a familiar human sound, a vastly distant whisper of a chant.

The coven. But how could she hear them—from here the earth was no more than a pinprick in the night.

If she heard them, though, perhaps she might find them. Behind her was death, before her the whole gulf of space. She did the only thing she could: she jumped. She sailed out and down, trusting, hoping, that she would land in the right place.'

There came a familiar girlish voice in her ear: "I'm going right along with you. I'll be there waiting for you when you land. I am death, and you will not escape me." The girl with the missing hand shot off, leaving a blazing track in the sky.

As she had at the moment of death, Mandy felt the awful, windless falling. She tried to will herself in the direction of the chant. There lay home.

High above the witches' circle a meteor passed in the sky, glowing across the face of the moon. They had been working for two hours, and still the cone had not appeared. Every few moments the Chant of the Long Tones was interrupted by the sound of Ivy clearing her throat. Grape was shivering. Earlier Wisteria had endured a coughing fit.

The wind pushed and challenged and demanded. Every time another frigid wave covered him Robin gasped, and for an instant forgot the chant.

But he tried, they all tried, and when it was right the chant was very, very strong, a sound that was wind and water, the grinding of the earth in the depths of a mine, the furious silence of the night-hunting bird.

Again Robin collected himself for another effort. He took a breath and closed his eyes, and expelled his tone from the bottom of his gut.

I am the hand.

The voice was not Mandy, but it was hovering just above the coffin. "Who are you?" Grape whispered.

I am the hand that takes.

It was a freezing, bitter voice. Robin chanted on, filled with dread. This morning something had come into Vine's circle from the other world and displaced the wraith of Mandy. That other thing had been a little, maimed girl, who had jumped about the pentagram for a moment and then darted off again. Was she back?

The coveners chanted desperately, trying to keep the circle clear for Mandy.

A blizzard swarmed down the face of the mountain. Mandy's mind, her heart, her whole being, were now concentrated on one thing: find the circle—

Wisteria huddled in on herself. Grape and Ivy leaned against one another. Even clasped hands had grown cold. The moon had long ago crossed the top of the sky. There were no more meteors to bring an instant of wonder to this freezing effort. The Chant of the Long Tones sank low, and still the spiraling cone of power did not appear.

Robin watched the sky for another sign and listened for another word.

But there was no sound, and the only lights in the sky were moon and stars.

Magic is just the physics of another reality, he told himself. It's perfectly believable. The physics would serve him whenever he wanted it. But the cone of power just wouldn't appear. Magic. It encouraged you one moment, the next tried to convince you it didn't even exist.

If it is a physics, it is a damned contrary one.

Robin might have seen a cat crossing the sky. Might have seen a witch passing the moon. Might have heard a word.

It came again, very, very faint: "Please..." That was all.

"Hey! Did anybody else hear that? Wasn't that Mandy's voice?"

"She's here."

"Moom moom moom moom moom moom moom mooooom!"

Oh yes I hear you yes I hear you down in hills in the dark. And I see you. This time, I haven't been sent and I can't be taken back. I got here on my own—

Mandy began to journey toward the faint glow that was the Vine Coven's circle. She was a wraith again, but now the circle directed her and helped her. The wind of her demons was not going to blow her aside.

Tom appeared ahead, switching his tail. When his eyes met Mandy's she came to a stop. She had never seen such menace. There was no way to move

past that cat, not just yet.

After the one single, faint cry the witches had heard no more. They had tried and tried to chant it up again and finally exhausted themselves.

All of the Vine Coven but Robin slept. He sat rigid and still, facing the coffin through a rim of frozen tears.

Dawn was not far off. Robin stood up to gauge the time. Moonset had come and gone and only the stars lit the sky. He put his hand on the lid of the coffin, looked down at the constellation reflected in the wood.

Ursa Major. The Great Bear, symbol of feminine courage.

The eastern sky was glowing now, just a little.

Robin wondered how he would face the day. Or the Vines, when they woke up all stiff and grumpy from their freezing vigil, and remembered how hard they had tried, and how completely they had failed.

A sound from the coffin startled him profoundly. He lifted his hand as if the lid were hot. It came again, louder. Of all the things it sounded like—a rattle, a mutter of thunder, gargling—it sounded most like a fart.

Robin's fingers went to the latches. He thought something must be going wrong with the body. He opened the coffin.

In the thin light he saw her, clear and pure, lying in her rumpled silk suit, her feet in gleaming Gucci pumps. But her face—he was shattered by its beauty. That such a creature could be a mere human seemed beyond possibility. A great, rasping sob escaped him.

If love killed, let it kill him now. Maybe they would be reunited in death.

She sighed then, and he realized what all the noises were—corpse gas.

With a thousand regrets he closed the lid and turned away. He was walking toward the rowan tree when a movement in its shadows startled him. Then he realized that the fairy had returned. All around they stood, and not five or six, but dozens and dozens of them, the men in black jackets, women in dark green gowns, and children everywhere, wee mischievous creatures darting about among their parents.

There were more than dozens—he could see them even on the far ridges, lining the naked cliffs like dark little clumps of shrub.

Come to do her honor, in some secret dawn ceremony of their own. Not even Constance had seen a fairy funeral. Who knew what their rituals were?

The coffin shifted. All around him the fairy clapped and laughed.

Robin knew, then, that this was not a funeral.

He grew afraid. The whole of the mystery had settled on this place and he had not even known it was coming. A wave of energy, tingling and electric, set all of his hairs to singing. He shuddered and turned around.

The coffin was still closed. But then thunder blasted in Robin's throat, a roar of astonished Joy: sitting upon it was Amanda Walker.

He fell to his knees, he could not speak, could hardly bear to look at her. His mind didn't whirl with thoughts or fill with glee. On the contrary, he went quiet inside.

He heard a scrape as she came down from the coffin. "Robin?"

A seizure took him. There was nothing he could do to avoid toppling forward. His fists came up to his chest, a sound between a grunt and a groan issued from between helplessly clenched teeth. He knew all that was happening, but from a distance, as if it were occurring on a stage.

She crouched down in front of him and took his face in her hands. Her touch was as wonderfully alive as the *Leannan's*. He wanted to speak, but he couldn't. "I'm here," she said.

His emotions burst forth in him. Then he lifted his head and shouted glory. All around him the fairy were singing, a sound like the tumbling of small water.

Wisteria awoke. She smiled, and kept on smiling.

Then Ivy opened her eyes. When she saw Mandy she screamed loud enough to rattle the mountains all the way to Pennsylvania.

That woke everybody else up, all except Grape. In the excitement they did not notice that she remained huddled where she was.

Amanda embraced them, one after the other, and after she had held them, each was sure that she or he felt noticeably warmer. When she slipped her hand into Robin's, there stirred in him the very laud of gladness. "Let's go down," Amanda said. "We have to break the grief of the others as soon as we can."

It was not until they started forward that Ivy noticed Grape. "Robin, help me. If you can believe it, Grape's still asleep."

"No," Amanda said. "I'm afraid she's dead." Robin looked into Amanda's eyes, but only for an instant.

There was no way to describe them. Simply put, they were terrifying.

"She's not dead, Amanda, she's just—Grape? Grape!"

The corpse fell over. It was already cold and stiff. Suddenly the fairy were all around. One of them did something to Robin's knee and made him fall

back away from Grape.

“Let them take her.”

“She—why did she die?”

“She gave herself in return for me. Death cannot be cheated.”

Robin went close to Amanda. He wanted to kiss her, but he dared not, even though she seemed as sweet as womanflesh could be. Light was hesitating in the sky when the coven started for the village.

Already the east was yellow-green, Saturn a lantern in the last blue of night. As they walked, the fairy put Grape into the coffin that had been Amanda’s and carried her off into the depths of the hills.

“Honor her, and be glad for her,” Amanda said.

On their way down the mountain a great happiness came upon them all and they began to sing.

“With a hey! and the sun.
With a hey! and the sun.
We go merry, we go gay,
We go in morning’s way!”

Tom watched, with a fury of love in his green eyes. He lay where the night still lingered in the western sky.

His gaze shifted away from the triumphant procession, moving past the edge of the Collier estate and into the predawn town. It went to a certain trailer behind a certain tabernacle and rested upon an object in the pajama pocket of sleeping Brother Pierce. That object held the key to the end of the drama, the last confrontation.

There was movement in the pocket. Somebody besides Amanda had used the chant as a beacon. The owner of the hand had also returned. As nothing of her physical body remained but the hand itself, she was concentrating all her considerable energy there.

Already she was learning to use the old, dead flesh. Slowly, persistently, the withered, dead hand clutched and opened, then clutched again.

Brother Pierce slept on.

The hand opened. The hand clutched. As love had given Amanda new life, so hate was giving it to the hand. If hate had been visible, it would have appeared in the form of a murdered girl in a blue dress.

Or Abaddon, the scorpion truth of Revelation.

I am the hand, the hand that takes.

The visible part, lying in the preacher's pocket, opened and clutched, opened and clutched, with a dry, crackling sound. Then it touched the preacher, caressed him.

It did not wake him, but it made him sigh.

Chapter 26

“You sure you want this thing open?”

Brother Pierce was getting exasperated with the funeral director. That question had come at least six times over the last half hour. “His brothers and sisters in Christ want to say good-bye to him.”

“But I can’t do anything with him.”

The man just would not see the point. “All of that business with wax and face powder and whatnot—we don’t hold with that.”

“I’ll have to break his arms. You can’t leave those fists like that, up against the face.”

“You’ll do no such thing! Leave him just like he is.”

“Now, look here, Brother Pierce, I’ve got a reputation to uphold. I am not going to have a poor burned man go out of here for a viewing in that condition! He even smells burnt. No, sir, it’s just unthinkable.”

Brother Pierce regarded Fred Harris. Your typical small-town businessman. Episcopalian. Daughter a witch. Probably a witch lover himself. Too bad he was the only funeral director in Maywell. “I will have people see what those witches do to a good Christian soul! I will have them see! The poor man had suffered terribly. Let it be a testament, let it be for a reason.

Harris sighed. “The death was ruled accidental. If he hadn’t had that gasoline—”

“You were not there. You did not witness—” Brother Pierce stopped himself. He was just about to say too much. So far nobody knew exactly who had been out there with Turner. The witches hadn’t managed to give the sheriff’s office any particularly clear descriptions. Simon had not needed to swear his own men to secrecy. The little community of the Tabernacle could be trusted to cling together in any trouble. He looked into the undertaker’s suspicious eyes and prayed silently that the Lord might flood his starving soul with so much grace that he would lose his hatred of good Christian people. What a blessing it would be to see the stone fall away from the tomb of his heart, and Christ rise within as the lily in the spring.

Harris gave him a sharp, appraising look. Simon reached into his pocket, grasped the hand. It was there to remind him that he was full of sin, and for all his prayers no better than the worst sinner himself. That poor little girl’s

murder could never be atoned, but even so, he was determined to do only good with his life. Afterward he would be glad to go to the hell he so richly deserved. “We love you, Brother Harris, and we want your funeral home to have a fine reputation. But we also love Brother Turner and we cannot have communion with his martyrdom if it is hidden in makeup.”

Harris touched the coffin gingerly, with a respect that had not been there a moment ago, Simon thought.

“Even so, it’s leaving here closed. Brother Pierce. What you do with it once you get it to your church is your business, I guess.” With that he lowered the lid on the staring, blackened corpse.

Brother Pierce stayed right with the coffin. He could honor the dead at least by constant attendance.

Harris’s two assistants rolled the coffin into the funeral home’s Cadillac hearse. Simon hated hearses, which were as black and lonely as the whole big sky. He kept his fist closed around the hand. Over the years the guilt it brought him had ceased to be a torture and become a comfort. When his punishment finally came, he would welcome it. The bottom of the pit would be a relief.

Riding toward the Tabernacle, his mind returned to the accident. That fire had just jumped at poor Turner. Enveloped him. He saw it again, red and ugly, spreading all over the man. He saw the agony on Turner’s face, the astonishment, the terror, most of all the sadness.

There came to Simon a shuddering thought. Wasn’t it Turner who had first picked up the mandrake? Of course, yes. Turner. He must have been infected by the evil spelt in it.

Sweat began to tickle Simon’s neck. He clutched and rubbed at the hand. Could spells travel, jump across that long gray sky, maybe, and settle in the Tabernacle?

In his mind he saw flames leaping from every window of his church, and heard the hiss of the fire wind and the dreadful screams of his beloved people trapped inside. A gigantic, misshapen mandrake leaned in against the shaking, bulging door, holding it closed against the congregation.

“Brother Pierce!”

“Wha—what?”

“Are you all right?”

“Of course.”

They rode on. Simon was shaking, covered with sweat. What had he done

to cause them to call out?

Had he screamed, or maybe moaned? Yes, maybe that. He must have moaned.

“I feel such grief for my brother.”

“I’m sorry for you.”

Simon was very relieved when they reached the Tabernacle. He watched them take the coffin out of the hearse and roll it on the catafalque through the big double doors at the back. “That’s fine. I can take it from here.”

When they finally drove away, he could not have been more glad.

He looked fondly around the Tabernacle, the rows of pews he had bought from the closed Presbyterian church in Compton, the pulpit that had been a conference-room lectern, bought for eleven dollars at the Maywell Motel fire sale, the organ they had gotten full price from Wurlitzer, and the paint and the simulated stained glass and all the evidence everywhere of the hard work of the Lord’s people.

No images, unless you counted the empty cross at the front. “We keep his portrait in our hearts, brothers and sisters, that is the beginning and end of the images of the Lord.”

The Tabernacle was cold. He checked his watch. An hour to go before the funeral. He went to the thermostat and turned it up to seventy. By the time people arrived it would be comfortable enough. There was no reason for the oil bill to go above four hundred a month in autumn, not with all the body heat the congregation generated.

He rolled the catafalque to the front of the Tabernacle. His funerals were always simple, needing essentially no preparation. Simon required contributions to the Tabernacle in lieu of sending flowers, so there were no wreaths to worry about. For a moment he clasped his hands and thought of God sitting on his throne in heaven. God in heaven. “O Lord, let me do right by you. Please, I love you so much.” He bowed his head. “I’m sorry. Lord, to ask for help. I know I’m dirty in your eyes, but I’m still trying down here. Don’t help me, but help my people. Give them the strength they need to get rid of the witches.”

The hand seemed almost to warm as he prayed. It helped him so much. Without it he’d be lost. He’d never know what moves to make. The hand was his guide.

He remembered it milky white, dangling from her smooth arm, the fingers tapering, nails bitten and lined with dirt from play. She was a picture, so

pretty. She had come on to him, had snapped her gum and run her tongue along her teeth, and given him that steady, godless gaze.

If only he hadn't been so darned sad, so alone. When she snuggled close, he had embraced her right there and then in the middle of the foster-home rec room, and caressed her lank hair, and looked into her round blue eyes. "Get me out of here," she had murmured. "It's such a dump."

"I can't, hon, I'm just a social worker." She had raised her face to him, and he had thought perhaps she was an angel, despite the chewing gum, "Adopt me, Simon," she had whispered.

"Oh, hon, I can't, I haven't got the money to raise a girl proper."

"Simon, on the books I'd be your daughter, but I'd really be your wife."

He remembered the smell of her breath, deep-sweet and juicy.

She had done things to him, things that felt so good he was as if tied in that chair. Never had he known the touch of such beauty. He had thought he was dying it was so good.

O Lord, I am Thy servant, and Thou art the kingdom and the power and the glory!

Afterward he just got so dam mad at her, she had damned his soul with those pretty white hands. She laughed at him and tossed her head like a little filly, and he took her by the neck and crushed the gristle of her windpipe, and all of a sudden her cream-perfect face was tight and blue.

Oh, God, he hadn't been able to get her breathing. Her throat was purple where his hands had been and she grabbed at it and her eyes rolled and she died right there and then.

He had tried to blow air into her lungs, to give her artificial respiration, but she wouldn't come back to life, so he was faced with this dead body.

"Lord, please, I've got to stop thinking about it!" If this kept up, he was sure to start hitting the bottle he kept in his trailer. It was less than half an hour before the congregation would start to arrive. Maybe one good drink would clear his head.

He went back to his trailer. Even though he usually didn't drink much, over the years the back of the trailer had become crowded with bottles. He couldn't very well throw them away.

Not that he pretended to be a teetotaler. But a preacher ought to be upright. So he kept his liquor to himself and followed even the smallest drink with a couple of peppermint Certs.

The opening of a fresh bottle was always a small festivity. He drank good

whiskey. Twelve years old, smooth as a bunny's ears. "Lord," he said as always, "forgive me what I cannot help." He took a fair pull.

Soon an echo of contentment was spreading through his body. "Thank you, O Lord, for this gift." He knelt on the floor of his trailer. "Thank you for this kindness."

Here he was, a preacher thanking Jesus for liquor. Now, there was something that would make a real man of God laugh out loud.

He lay back on his bed, reminding himself once again to change the sheets. He didn't have a maid—he never allowed people in here.

He took out the hand. It lay on his palm, small and complex, a thing of clutching angles. A cut-off thing.

And yet, not cut off. In a way still alive.

Probably death was just nothing. The end. Sure there was a God, but God didn't give much of a damn.

God was sq very far away. Heaven was the other side of the sky, and the sky was too damn big to ever cross.

He looked quickly at the hand. Hadn't it moved just then, just when he thought how far away heaven was?

Sometimes he thought the hand could whisper to him.

He should have given her the knife and showed her how to cut a man's neck so the blood spurted out in a pulsating stream, and she'd move his hair aside and turn his head a little and—zip. She would have done it. She would have done anything for him.

"I am destruction."

He was going to give them one hell of a funeral. Let's see, how many Turners were there? Betty and—what—two kids? Three of 'em altogether. More than enough grief there for a fine show.

A change in the way the tight brown leather of the hand reflected the light startled him. He looked at it again. Was there subtle movement, or was that just the light flickering?

He put the hand down on the floor beside his cot and got the Bible from underneath. He'd do readings, the reference to death in Numbers, then the 116th Psalm, then the last and most important part, the Abadon passage from Revelation 9. The funeral would then wind its way down to the town graveyard just the other side of the Collier estate.

He was going to give fire to the faint of heart, he was going to burn wickedness in white heat.

He was going to burn the wickedness of the harlot in the hell of the flames, and at last destroy the abomination of the earth that infected this town and was tearing as a long-nailed claw tears at its God-fearing heart.

Another movement made him look again at the hand. What he saw shocked him. Always it had been closed. The thing was dry. And yet, as a flower of night, it had opened. He touched it in wonder, then picked it up. It was as stiff open as it had been closed.

He kissed the palm.

For a long time he lay inhaling its dry, faintly organic odor, remembering the salt-sweet smell of it in life, suffering an agony of helpless regret.

“Brother?”

He stuffed the hand in his pocket as he leaped off his cot. Had so much time passed? “I’m sorry, Sister Winifred. I was resting in preparation for the service. I must have dropped off.” He smoothed back his hair, splashed some water on his face, and ate his Certs while Sister Winifred waited at the door of the trailer.

She had a look of quiet happiness about her. “Brother,” she said as they went toward the Tabernacle, “is there any provision we can make for those standing in the parking lot?”

He stopped. “Wait a minute? Are you telling me I’ve got an overflow crowd?”

She nodded, at once pleased and solemn, remembering the nature of the occasion. Brother Pierce was careful to hide his own elation. One good thing about this witch business was that it was really an inspiration to the people. A man had lost his life, but the Lord willing, his sacrifice would not have been in vain.

“Tell you what you do. Sister. You stick that P.A from the movie projector out on the front stoop. And leave the doors open. They’ll hear us. They will hear the Word of the Lord.”

Shyly, and so quickly that he could hardly notice, she touched the bulge of the hand in his pocket. He was shocked, and drew back. There was on her face a knowing sort of a smile. “Praise the Lord,” she whispered. Did she think it was his member?

The light of the packed Tabernacle washed him with energy. He was glad to see how intense those faces were today, and the sincerity in the tears. It humbled him to feel every stare upon himself when he mounted his pulpit.

He looked from face to face, nodding to the weeping Turner family. For

the moment the coffin was closed. He would do the revelation after his first reading. “Now we are gathered here to seek in the Kingdom of God for succor, my beloved brothers and sisters, for He who cherishes us shall now comfort us in our loss.”

“Oh, yes,” from a few mouths.

“For a man is dead, and he was a good man! Yes, he was a good man!”

“Oh, yes!”

“And this man was killed by the spell of the mandrake, a spell woven by witches against us, and he was burned in the fire of their evil hearts!”

“Oh, yes!”

“I tell you this: we will avenge his death, for the people of the Lord will not let the evil of witchcraft fester among them, growing out of all proportion as cancer grows, for in this congregation we have the power of His holy name, we have the cure for the cancer of evil!”

“We have the cure!”

“I recall from the Good Book, from the chapter of the Numbers where God spoke out of the mouth of Balak, and said, ‘Who can count the dust of Jacob, and the number of the fourth part of Israel? Let me die the death of the righteous, and let my last end be like his!’ And I say to you, I say to you, I would join him in a minute if I thought it would bring us peace from the torment of these witches! Oh, these spellbinders and these devils are riding the horses of hell in our streets, and burning the fathers of our houses, for they are the very fire of evil!”

“Praise the Lord, praise His Name!”

“Now I am going to ask that you give one another the kiss of peace, and I am going to open this coffin, and I tell you this, Betty Turner, you are to come up here and embrace your husband, and each of your children will do it, too, for you must see and remember, all of you, the work of the dread hand of Satan, and bid good-bye to our lost brother.”

Something moved in his pocket. And in his mind he thought he heard whispered approval. The hand of the little girl, cut off for a lot of reasons. He told himself that he did it to prevent identification.

No, he remembered too well the work of the knife. It had been pleasure that animated him, a steaming pile of rotted pleasure, to take a part of her softness...

It was not soft now. It had become an instrument of the Lord’s work. Praise be the hand, may it bring him his punishment in its curled, brown

fingers.

He went down to the catafalque. The lid of the coffin opened smoothly. He could sense people craning to see, could hear the gasps, the stifled screams. Brother Turner lay, a blackened hulk of a thing, his head scorched bald, his carbonized fists raised before his chest. His eyes were half closed, his lips parted. He had died of suffocation, from seared lungs.

“The beautiful naked witch will burn as he has burned, in the slow fire of purification!”

It was all in planning, too. Simon did not make idle threats. He would at once avenge the lost brother and cleanse for them the souls of the witches.

Tomorrow night he would burn their elegant red brick devil-house with its fine white columns, the kind of house exactly that the filthy scum rich lived in back in Houston. Then he would take that woman of theirs, the one with the soft white hands and the flowing hair, the one who had abominated the streets of Maywell with her naked ride, and he would tie her up in her nakedness and burn her before the witness of his people.

Then he would say to the witches, disband. Be gone. God does not want you here.

The hand touched him so intimately that it almost made him cry out again, as it had so long ago in Houston.

“Betty Turner, come forward and embrace your husband!”

“Oh, please, I—we just can’t!”

“You can and you must, for it is the will of God! I call on the rest of you, help her and her children to take courage! Come forward and embrace your brother, every one of you, embrace him and touch his agonized flesh and know what evil the witches do to the body of the Lamb!”

Sister Winifred was the first to go. That was a plucky lady. She jerked back when she laid her cheek against the dead face and the dried crackling pricked her. Moving up and down the aisle, Simon exhorted.

“Here is the patience of the saints: here are they that keep the commandments of God and the faith of Jesus! Help them now, give them strength!”

The weeping of the Turner family filled the Tabernacle, that and the shuffling of the faithful up to the coffin.

“And I heard a voice from heaven saying unto me, Write, Blessed are the dead which die in the Lord from henceforth:”

“Yea, saith the Spirit, that they may rest from their labors; and their works

do follow them.”

Betty Turner clapped her hands to her face. “Close it,” she wailed, “please close it!”

“And I looked, and behold a white cloud, and upon the cloud one sat like unto the Son of man, having on his head a golden crown, and in his hand a sharp sickle.”

Some of the men began to push the open coffin toward the rear of the church so that more could embrace (he dead saint.

“And another angel came out from the altar, which had power over fire; and cried with a loud cry to him that had the sharp sickle, saying. Thrust in thy sharp sickle, and gather the clusters of the vine of the earth; for her grapes are fully ripe.”

There began among the congregation soft clapping. Simon nodded to Winifred, who started the organ going, very low, “Gather at the River.” Best to stick to the simple, familiar songs, Brother Pierce always maintained. That was the way into the most hearts and souls.

He was pleased with the strength of feeling in the congregation.

This funeral was going to give the men the courage they needed tomorrow night. It would take more than his pitiful sermonizing to inspire those men to face the witches again.

Harris signaled from the door. He was waiting with his hearse; the town graveyard closed at dusk.

“We will recite Psalm 116, brothers and sisters, as we go into the outer darkness, to return the flesh to the dust of the earth.”

He began the psalm.

“I love the Lord, because he hath heard my voice and my supplications.”

They put the coffin in the hearse. Simon rode in the funeral car with the Turners. Betty, a handsome woman, was flushed with her grief, her breasts heaving rhythmically beneath her black dress, her eye shadow running down her face. She had a golden harlot of a daughter, and a son of freckles and sandy hair, whose face shone with faith despite his grief. Simon read as the car moved off toward the graveyard.

“The sorrows of death compassed me, and the pains of hell got hold upon me: I found trouble and sorrow.”

Betty Turner leaned her head against Simon’s shoulder. “I’m sorry I couldn’t hug him. But I just couldn’t, and now I’ll never see him again.”

Simon covered her hand with his.

“The Lord preserveth the simple: I was brought low, and he helped me.

“Return unto thy rest, O my soul; for the Lord hath dealt bountifully with thee.”

Betty Turner drew a ragged breath. Her daughter’s eyes filmed. “Now, don’t start in again, honey,” Betty said. “You’ll start me, too.”

“Take comfort in the Word of the Lord,” Simon said. “This is His Word also. ‘Precious in the sight of the Lord is the death of his saints.’ Your husband was a saint, my dear sister. A saint”

The son’s face clouded. Simon assumed he was remembering the truth of their private misery. That life with Turner had been miserable Simon had no doubt. Turner was a drunken, red-faced roach of a man with his hair full of grease, mean as a hog and twice as fat.

“Let Israel now say that his mercy endureth forever.”

“Brother Pierce,” the daughter asked, “do you know the whole Bible?”

Simon smiled. It was such a simple, pure question, from that darling, soft child. How could lips be so red, or eyes so blue, or hands so very smooth? He fought the ravaging that he felt, and forced his face to gentleness.

The hand stirred.

He twisted and squirmed, but it remained close against him. He forced himself to answer the girl’s question, know about half. Every day I learn a new verse.

“Is there anything,” the boy asked, “that can make us proud of Dad?”

“Willy.”

“Sorry, Mom.”

“There is a verse, son, from the 119th Psalm. It goes like this. ‘This is my comfort in my affliction: for thy word hath quickened me. The proud have held me greatly in derision: yet I have not declined from thy law. I remembered thy judgments of old, O Lord, and have comforted myself.’ So we must all do the same, son.”

The boy thought about this. “Can I watch,” he asked at last, “when you burn the witch?”

“Oh, hush, now! Whoever said he was going to do such a thing?”

Simon felt himself grow cold. He had said little of his ideas, yet here they were coming out of the mouth of a child. There must be a lot of whispering going through the congregation. Sometimes he wondered who the leader was—himself or the intangible spirit of the group. “Do not admonish your son, Sister Turner, for a child might speak in the tongue of the Lord.”

When the car stopped, dusk was already far advanced. Betty Turner sank back into her seat. "I just don't know how I'm going to get through this! I dread the burial." She looked at Simon with stricken eyes. "There's no way you could call him a good man. He drank. He beat us up. He was lazy and he two-timed me. He left us poor. But he was a person." She glanced out the rear window, toward the sunlight that still clung to the cliffs of Stone Mountain. "Those witches killed him just when he was trying hardest to get himself saved. You see, that man wanted to live in the Lord. But the flesh is weak!"

She and her son and daughter, tears in their eyes, left the funeral car and walked toward the gravesite behind the coffin of the dead father.

Easily a hundred cars had come. Brother Pierce went to the grave, which had been lined with green artificial turf by Harris's people, and provided with a sling for the coffin. Simon saw that he had the biggest graveside turnout in the history of the Tabernacle. That was wonderful, but it meant that there might be spies in among the crowd, witches and people sent by the sheriff and such.

Very well. He would not threaten anybody, nor even mention the vision he was having, of that young naked-rider witch lying in the midst of a fire, and she can't get away, and she is burning and her screams are peeling through the night. And for just a few minutes, Simon is happy. He doesn't even need the hand.

And it is because for these few minutes he is vanquishing the sin of that poor misguided girl.

He could only be at peace, he decided, when he was sending a soul to heaven. She had shone in the night like a goddess, had Amanda of the long flowing hair. Of course it was her. He had noticed that hair when she visited the Tabernacle with her insane uncle. Oh, yes. The uncle was dead now, dead in that coffin they had taken from his house.

The deputy sheriff had said it was her in the coffin, but he was misled. She was young and perfect. No, it was him. If anybody were to dig up that coffin, they would find the old whoremaster of a scientist in it.

Simon stood in the thickening dark, among the dense crowd. The coffin was behind him, ready to be lowered into the grave. Betty Turner stood on his right, her daughter on his left, the son beside the daughter. Simon began reciting the familiar lines of Genesis 3:

"In the sweat of thy face shall thou eat bread, till thou return unto the

ground; for out of it wast thou taken: for dust thou art, and unto dust shalt thou return.”

He paused The hand felt warm now, and heavier than it had been in years It felt alive. He glanced down, but the bulge in his pocket was the same as ever Best to put it down to nervousness and forget it The witches had him spooked.

“Everybody knows why we are here. We are here to bury one of our own. And we are here to make a statement that those witches must not forget. We know you, and we burn with hatred for the evil that is in you, sons and daughters of Satan. For there is written upon your foreheads, ‘And they had tails like unto scorpions, and there were stings in their tails. And they had a king over them, which is the angel of the bottomless pit, whose name is Abaddon.’” He pointed past the tall shadow of the burial mound, toward the darkening mountain.

He remained silent, pointing.

Let the spies guess what it meant. His own people knew. It meant tomorrow night and fire.

He flipped the lever that set the coffin to lowering, then thrust into his pocket to reassure himself that there was nothing genuinely wrong with the hand.

Whereupon it twined its warm, living fingers in his own—

Chapter 27

On her way down the mountainside Amanda had become aware for the first time of the density of flesh.

Every muscle and joint was stiff. The easy shorthand of movement she had enjoyed in the other world was replaced by a weighty crawling that she found most unnatural. Physical life was an astonishing limitation. She had never understood before the real effect of flesh on the soul, to stifle it in thick dying folds.

They had to carry her the final distance to the house. She had slept deeply, without dreaming. She was awakened by the whisper of the sun's return. She could hear its light sweeping into the room. It poured across the floor, yellowing the damask curtains of the bed. She slipped from beneath the covers and parted the curtains, letting in the golden haze.

The quality of the light reminded her of where she had been and, above all, what she had learned. The whole secret carnival paraded in her mind's eye. It was impossibly beautiful, a series of images acutely charged with meaning. There were the terrors, Bonnie and the demon-girl Abaddon, and of course Mother Star of the Sea. There were also her two fleeting moments of heaven, and in retrospect they had far more impact on her than did her long journey through her own guilt. Her few moments in the old backyard of her childhood were suffused in memory with the richest light that could be imagined, a light that illuminated both physically and emotionally. To know that she had left this light caused her the most intense suffering. She twisted and turned in the bed, experiencing her body as a tangle of iron chains.

Then there was that short flash of Mother Star of the Sea's real fate, her own heaven. Hidden in her had been a great and compassionate spirit, trying by sheer strength of will to save the souls of the girls she was teaching. Did she know that she had become their demon, the arbiter of their guilt?

Yes, she knew, and upon that knowledge rested the palace of her happiness. For she also knew that she provided them with a safe means of working through the sour material of conscience after death. They used their memories' of their stern, uncompromising teacher when they died to cleanse their souls for heaven. Because they had her, their work went quickly. To give them this enormous blessing, she had sacrificed love on earth and accepted a lonely death.

She understood the silence of Lazarus. How could you make voice from the air of so dun a world as this, after heaven? And she had seen only the edges, not the whole light of it. She felt actual physical pain, as if the air were being crushed by very longing from her lungs, and her blood boiling with a need beyond addiction.

She wanted nothing so much as to tighten into a little knotted ball and wait until she could return.

A shadow bulged in the canopy above her. "Tom?"

He didn't stir. Nor did he purr. She found him awesome now, having seen him out of disguise. She wished she could thank him, but she had no idea how. She could hardly give him, say, a catnip mouse.

She looked down at her own flushed nakedness. It might be heavy and coarse, but she could still love this body of hers. Her blood sang in her veins, her skin thrilled at the simple contact of the air. She touched her own thigh, sensing the electricity of the contact between flesh and flesh.

There was also something else, a new and more objective awareness of the world around her. She saw the Covenstead as a tiny eccentricity of life, a final refuge of magical thinking. In her own mind she could see the blue stretches of reason and the bright shapes that defined the inner realm of her magic. She had acquired access to more of her mind than she had previously known. Her attention rushed into this vast new space. In it she saw Constance, who looked up at her with hollow, awestruck eyes. Instantly she knew Constance. Her knowledge was not verbal, but it was total. The experience had a powerful emotional impact on her. Without being able to say how, she understood the hidden meaning of this tragic and enigmatic figure.

Constance stared at her, and she was shocked to realize that this was a shared experience. They were somehow linked. Then Amanda saw Ivy, then Kate, then Robin. His love poured out of his eyes, a perfumed glow. He was coming toward this room, bringing his innocence and his helplessness. She wanted to cherish and protect him. But for Constance, none of them were aware of her careful scrutiny.

Their attentions were not strong enough to enable them to see by this other light.

Outside the bed there was a small voice. "Amanda?" She pushed back the covers and raised her head into the full light of the sun. Beside her bed stood Robin, just as she had known he would. Instantly she knew what troubled

him. Her heart opened to him. “Look at me,” she said.

He raised his eyes. His sense of rejection was easy to read. After his initial jubilation at her return, he had begun to see her as unreachably strange. There was nothing she could do but show him that she valued him and needed him.

“Please,” she said, “kiss me.”

A peck.

So he was not so much awed as angry. “Robin?”

“Your breakfast is ready.”

She got out of the bed and put on her robe, which she found neatly folded across the back of the big blue chair. “Robin, I love you.”

“Thank you. I love you, too. We all do.”

She felt a sharpness within her, a taste of salt. “I mean I love *you*.” She looked at him. “Holly King.” Did he know how long was their association, through how many lives they had danced together? No, not really. He had been told, but his awareness lay at the side of his mind, shrouded in dark curtains of doubt and confusion. The trouble with reason is that it is only one part of the mind. In him, as in all of them except Constance, it was a great, central bulk of a thing, condemning them to perceiving only the linear and the expected.

She saw that mankind was exactly like the dinosaurs. The reptiles had chosen physical overgrowth at the expense of all other development and so had perished. So also mankind, since the beginning of recorded history, has been crushing all parts of the mind except the reason, until this excessive mental growth threatens him with extinction.

Reason is useful for building buildings, but it cannot build a happy life, nor enable a human being to see the sacredness or the richness of the earth. It cannot allow him to feel with his own blood just how painful it is to hurt the land. We live in maya, the world of illusion. There is no need for most of what we have, not for all these transformations of material that we have accomplished—

We have built a civilization that is exactly like a poison in the earth, or a viral growth, or an exploding cancer.

Amanda saw it all so clearly, and as well that the Covenstead might be tiny—just a few people, after all—but because it stood against this terrible, fundamental human mistake, it was incredibly important.

May the idea of the Covenstead, rich and open and unchained by the hungers of the consuming society, spread through the world, freeing man

from his own mind, and the terrible hypnosis that is going to extinguish the species if it is not broken soon.

“Amanda!”

Robin’s voice interrupted her. She was breathing hard, staring. “Sorry. I’m fine. I was in another world.”

Slumping in his black sweatshirt and faded jeans, his muddy working boots, he could not have looked more forlorn. “I’m sure.”

“No, I don’t mean—oh, Robin, I was preoccupied.” How could she tell him what wonders she now perceived? The mists had lifted from her vision. To her, people had been revealed as magic architectures of almost unbelievable beauty, and him especially.

She went to him, gathered his unresponsive body in her arms. “Please kiss me.” She opened her lips and waited, remembering the hungry passion of the kisses they had traded at the culmination of the Wild Hunt.

He held her stiffly.

“I’m only a person, Robin.”

“I know that. It’s just that—I saw you—”

She put her finger over his lips. “You don’t know what you saw.”

“The hell I don’t. I saw you dead!”

What could she do to bring him back to her? Nobody could be natural and at ease with a miracle.

She realized, as the strengthening sunlight set her blood to racing, that they were all going to react much the same way. “The last thing I need is worship. I’m still me, Robin. And I love you exactly as I did before. Or no, that’s a lie.”

“I’m sure it is.”

“I love you a million times more. More than you can possibly imagine!”

His expression closed. How stupid of her to say that! But the words were already out. They swarmed in the air, vibrating his whole being to a sort of brown despair. He was thinking he’d like to get this over with and get out to the fields. “I don’t want to keep you from the harvest,” she said.

“You can even read my mind. What are you, Amanda?”

She had asked that same question of Constance. From this side it was a bitter question to hear. “I know that I love you.”

“Quit patronizing me! I mean, what happened to you? What did you find out?”

She wondered how she could ever tell it. If death is truly what one makes

it, then there was little to say.

“Something’s out there,” she said. He raised his eyebrows. “Surprise is important. I can’t deny you that.”

Robin held out his hands to her. She went to him, but she was little comforted by his stiff, nervous hug.

“Tell me anyway.”

“There is another world. It grows out of the mind when it is freed from the body. When you die you find your conscience waiting for you. It cannot lie. If you suffer then, it is because you choose to do so. If you go on into the highlands, it is because you feel ready to accept the joy of heaven.”

“Am I ready?”

She could see so easily into his soul Like her own, his guilts seemed terribly small. He was unsure that it was right to leave his parents, and he worried about not being able to provide for them in their old age.

She slipped her hand into his. “You should reconcile yourself with your parents. Growth for you lies in the direction of understanding how you really feel about them.”

“We’ve come to a pretty good understanding already.”

She heard the lie. But it was not her place to correct him. He had to travel his own path. “Robin, I have so much to tell you. I relived our past together.”

On the surface he barely heard her, so preoccupied was he by what he imagined as the distance between them. But his essence heard, and looked out of his eyes with graceful eagerness. “May I know?” he asked. The acid in his voice, so contrived, seemed silly to her, but she did not laugh.

“You didn’t choose the name Robin by accident. It’s been your name before. We were lovers a long time ago, when I had a house in the forest.”

How they had loved, in the warm Sherwood nights, when the cat watched from the branch, and the stars coursed beyond the treetops. “I don’t remember.”

Oh, but she knew that was a lie. He did remember, and very well. She saw it in his eyes. “The log palace? The fairy? The coming of the sheriff of Nottingham?”

“You’re telling me I was Robin Hood?”

“Yes. You were Robin Hood.”

He looked askance at her. He smiled just a little.

“You really were.”

He burst out laughing, and when he did the wall between them fell at last.

He kissed her easily, and there was hunger in it, the real hunger of essence seeking essence. “Oh, Amanda, I’m so glad you came back!

We tried all night, we raised the cone of power, but nothing seemed to help. I worked and worked and worked and I was sure I had lost you. Then the *Leannan* came and a little while later there you were!”

He was covering her face with kisses now, and they were kisses of passion. “You’re so beautiful, I love you so much, I didn’t think I could live without you!”

She delivered herself to his embraces. They went back into the bed and she drew down his pants and underpants and opened her robe to him. There, in the secrecy of the curtained bed, they made furious, shaking, gleeful love, laughing and kissing as they did it. She opened herself to him and let him seek the center of her pleasure.

When he spent himself, she attained a level of ecstasy so intense that for an instant she blacked out.

Afterward it was as if the rich dark of her womb was vibrating, announcing the presence of new life.

They had conceived a baby just then, she knew. But that as for another phase of life in the Covenstead.

Just now, would keep her condition a secret.

They lay awhile, linked. She followed his semen on its journey, feeling it struggle up her fallopian tubes, a swirling, struggling cataclysm in the dark, until finally one bright speck of him reached the egg, and there burst forth a light that sang. The connection to the egg held, and a new voice jabbered up in her. She smiled, beatified by her womanhood. “Can you keep a secret?”

“Of course.”

She saw how thin was his real ability to do this. Keeping a secret is one of the most difficult of disciplines.

“You must keep it for about three days. Can you do that?”

“Certainly. Come on, tell me.”

“You made it,” she said. “I just got pregnant.”

His eyes widened. “How—”

“I felt it all. The whole thing.”

He fell on her in a wild excess of passion. “I was scared of you, my love. I was scared to death, but you cured me of it. You opened me up somehow.”

“You opened yourself up. When you saw there was still room to laugh.”

He laid his mouth on hers. She touched him all over, feeling every

delicious inch of him.

Robin's kiss went on and on, lingering now, probing now, seeking in the miracle of their joined selves.

Finally he cuddled beside her. There came from him a whisper so soft it was almost unarticulated... a thought. "Was it just dark, death? Were you telling me the truth?"

She hugged him. "You can look forward to great wonders."

He went up on an elbow. "I still can't believe it. You actually came back to life. This is a scientific fact.

And you have memories, knowledge from the world of the dead. This is incredible."

She had to forgive him; he did not mean to make her feel lonely. "The better you know yourself before you die, the better off you'll be."

"Is there a moral order? Such a thing as sin? Is there a hell?"

"As far as moral orders are concerned, we make our own choices. We are our own judges. And we are never wrong."

"So, like, if Hitler *thinks* he's doing good, then he goes to heaven? Is that right?"

"After death, all illusions fall away. We know ourselves, exactly as we are. I think I had a glimpse of Hitler."

"In heaven?"

The memory so thoroughly revolted her that she almost screamed. "No."

Tom's head appeared between the curtains. For a moment the two of them just looked at it. It was much too far from the floor, and he certainly wasn't dangling from the canopy.

"Is there a chair out there?" Robin asked nervously.

"Not that I recall."

Tom extended his tongue and slowly, sensuously, licked his chops.

"He must be—he has to be—"

"I think it's his idea of a joke. Don't let it upset you."

"The cat is floating in midair and you tell me not to get upset! Jesus! Scat, damn you!"

Instead Tom came in, rolling and playing in the air.

"I think he's celebrating."

He floated past and out the other side of the curtains. Robin was silent for some little time. Once or twice he started to talk. Then he shook his head.

"As I recall," he said at last, "you like pancakes."

“This is truth.”

“Would you like some now?”

She regarded him with deep fondness. “Would I ever.” They both dressed, and she brushed her hair and washed her face, and they went down to the kitchen. She had expected light and activity, but the room was cold.

“They’re all down at the village,” Robin said. “They’ve a feast for you. As you might imagine, there is a great of excitement. Only the Vine Coven’s really greeted.

“I barely remember coming down the mountain. I was terribly tired.”

“You walked like a zombie.” He hesitated at his own words, then looked away, as if he had unthinkingly called attention to some deformity of hers.

The two of them went out into me morning.

There was more than one veteran in Simon’s congregation. His call had been heard, as a matter of fact, by no fewer than seven vets, three of them tough young steelworkers on indefinite layoff. All had been trained in modem infiltration techniques during the Vietnam War.

At Betty Turner’s request the command post was in her home. Simon sat before his makeshift desk in the family room, which had been renamed the Operations Room.

“I got the radios. Brother,” Tim Faulkner said. He put a big box down on the floor. “Just what the doctor ordered. Three hand-held CBs, all tuned to the same channel.”

Charlie Reilly tromped in with a map, which he proceeded to unroll against the wall. “Give me a hand, Tim, I want to tape this thing up.”

Simon had never seen such an elaborate topographical map. It showed contour in great detail, brown lines against me various shades of background color.

“This is the National Guard ‘63 update of the Geodetic Survey map of the Maywell Quadrant,” Reilly said. He and Tim Faulkner finished taping it to the wall.

It brought a military look to this headquarters. Simon took pleasure in the calm and professional atmosphere. He had been trying not to think about the hand coming to life. It was almost the only thing he *could* think about. Either it was a miracle to proclaim or a spell from which he must protect his people.

But which?

“Davis is down at the County Courthouse,” Deputy Peters said, “getting

me blueprints of the Collier place. Once we have those we'll be ready to get this operation set."

Eddie Martin spoke up. He was wearing green army fatigues and a camouflage flak vest. "I want to develop a mission analysis with detailed operational orders. And I don't want anybody handling weapons or gasoline who doesn't know what they're doing. We're not a bunch of assholes. We're organized, we've got structure, and we're in the right. So let's act that way."

Even Simon's original men had acquired new efficiency. He had little to do but watch. The martyrdom had filled his people with the grace of God. How he loved these people, deeply, abidingly, with his whole soul. They would help themselves and the witches, too. Let the poor people suffer in this life so that they would be happy in the next. Only one person among them all would not be going to heaven. Such was his joy and his deep, inner sadness that Simon wept quietly, the tears moving coldly down his cheeks. He sat bunched at his card table, nervously touching what was in his pocket.

The witches' barn was crowded. In the center was a great circular table, heaped with all kinds of food.

People stood round it or sat on the floor. When Amanda and Robin came there was an intense stir, suddenly hushed. Amanda was not surprised to see Constance a miserable shadow of herself sitting off in a corner. She would need much support and reassurance. Her fate was upon her, visible to Amanda as a sizzling, burning finger that pointed directly at the center of the old woman's skull.

"Connie?"

When Constance met her eyes, Amanda knew at once that she was aware of it, too.

After a life lived between the worlds, the old woman was afraid of death. Connie's black ravens stood in a line along and above her.

Amanda made her way through the silent, watching crowd of people to her benefactor. She sat down on the floor in front of her. "Connie, how can I help ___"

"I'm not afraid of death. It's pain." She saw Connie burning in agony, her ravens swarming, their wings dipped in blue flames.

"Oh, Connie!"

"Whisper!"

"Can't you stop it? There must be some way, surely."

“When my fire burns, I’ll be there. Nothing can change it.”

Amanda saw that. The closer the future comes to the present, the more possibilities become probable.

Then they become inevitable.

Connie smiled, a study in sadness. “Nature must feed, Amanda.”

“Yes, Connie. You can lean on me now. You can tell me all your fears. Nothing is hidden from me.”

Constance seemed to sag. In her eyes there was incredible gratitude. “I need you. I’ve needed you for years.”

She would have taken the old woman in her arms there and then, but a woman came up, offering Amanda a bowl of sweet yogurt, all but bowing and scraping. Constance looked very sad. “It takes an independent spirit to do magic. They won’t be witches long if they become your followers, young woman.”

“I don’t want that.”

“You certainly don’t! They’re awed of your knowledge of death, but they all have the same information hidden in their hearts. We just forget it for a little while, so don’t take advantage of your fellowman’s poor memory.”

“I’ll try not to.” Rather than have the woman grovel there, she took the proffered bowl and ate it while the whole of the lo Coven, who managed the dairy, looked on with pride. “It is human nature to seek the confirmation of princes,” she said. “That’s why royal families are forced to spend so much time making inspections. I can teach them not to regard me as a royal person.”

“Let them be in awe of you, but let them make their own decisions. It’ll be hard, especially when you can see farther than they can. But they must learn from their own mistakes.”

“I know. We can’t teach people anything. They have to have their experience.”

Constance moved her hands beneath her dress and brought out a blackened, ancient garter. “This is yours,” she said. “I’ve been keeping it for you.” And so, without ceremony, she was being offered the very garter of Maidenhood. She recognized it of old, and took it. The leather was very, very old, as black as carbon. The clasp was of bone. Dimly, as if she were an echo of a cry, Amanda remembered Moom. Moom’s laughter, Moom’s pain, Moom’s courage. She had given birth to six children and died before she was fifteen.

Moom had owned two garters. And so had Marian.

“Where’s my other garter, Connie?”

Constance waved her hand. “Lost to fire during the time of Innocent VIII.” The room was stuffy, the smell of the food heavy. Two children, Ariadne and Feather, actually knelt when they brought a plate of pancakes.

Amanda knew that she had to act, and quickly, to avoid becoming the resident Goddess-Queen. It was right for the witches to have a queen, but she must be no more than first among equals.

She held up the garter. “I’ve been given this. It belongs to the Covenstead and it can only be worn by an initiated priestess. Am I right?”

There were murmurs of agreement.

“Fine. Initiate me just as you would any apprentice. And if you elect me, I will wear your garter to the best of my liability.” She thought of Moom, who would have tom any woman apart who had tried to take this garter. And Marian, to whom the sacrilege of removing it was unthinkable. She put it in her pocket and took Connie’s hand. “You want anything from the table, Connie?”

“No.” Her voice dropped. “You know what I’m going through.”

“Yes, Connie.”

“I wish you could hold me.”

“I will, Connie, when we’re alone. As long as you want me to. I’ll be with you, Connie, even at the very end.”

“I feel so strange without the garter! So sad.”

She took Connie’s hand, for a moment held it tightly. The moment between them seemed to deepen. But Amanda knew that she had to break the moment. As much as she wanted to comfort Connie, this time belonged to the Covenstead. “If I don’t go over to that table and serve myself, I’m going to get more of bowing and scraping.”

“You don’t need that. Go, do your duty.”

There were pitchers of apple cider and a little blackberry juice. No whole berries, though. Too bad.

Amanda had seen them on the bushes, fat and delicious-looking. There were elder-blow pancakes and pumpkin pies and squash cooked in herbs and honey, huge loaves of dark bread and white goat’s milk cheese. There were pitchers of cream and milk and pots of pungent tea. Slabs of the pig Hiram’s bacon.

Long before she had tasted it all, Amanda had managed to satisfy even her

fierce appetite. Her body wanted to confirm its renewed connection to life, and it did that by eating.

She moved through a fog of silent, fascinated stares. “I haven’t eaten since yesterday morning,” she said.

“If you ever resurrect anybody else, don’t forget to feed them. You come back hungry.”

A little nervous laughter, as lame as her attempt to relieve the tension. Connie put a gentle hand on Amanda’s arm, drew her aside. “Take a lesson from Manan. She was very clever at being queen. She knew how to rule without coercion, and reign without causing awe. But even when she played hide and seek with the children or raced horses with the men, nobody ever forgot she was queen. It’s a trick, Amanda, to be first and equal at the same time.” Then Connie said something that disquieted Amanda.

“It’s an illusion, just as the peace and happiness of this moment are an illusion.”

“What do you mean?”

“Go outside and look at the sky. Look with your new eyes.”

Amanda stood up, told Robin to stay behind, and went out on her own into the quiet village. A drift of smoke rose from the sweat-lodge chimney.

As her eyes followed the smoke into the sky, she almost fell over backward with terror and shock. She was looking up the side of a towering leg covered with gleaming black fur. It was so tremendous that it was almost beyond seeing.

She looked up and up the rippling, muscular sweep of black fur to the vast, expanding chest perhaps a thousand feet above, and right into the grinning Cheshire face of the largest and most menacing black cat she had ever seen.

And Tom was looking straight back at her. There was instantaneous communication between them, deeper than spoken words. Tom was at once a part of what menaced the Covenstead and what protected it. The aim of the Leannan was to test the witches. The aim of that other darkness, that which controlled Brother Pierce, was to destroy them, as it was to destroy everything that gave mankind a chance of survival and growth.

This *Samhain* was indeed a season of learning and of dying.

That which menaced the Covenstead was far larger than Tom. Indeed, it towered over him, an immense presence of hate that swept up from Maywell and across the sky, drawing its strength from the immense heart of evil, and all the smaller hearts of men and women who would kill what they do not

understand, who would despise ways which are not their own. She saw it clearly, even as it shrank back from her.

What had possessed Brother Pierce and those like him fed on fear, and hated both man and God.

“This long central hallway suggests to me that the way to go is to jimmy the front door and work through with the gasoline sprayers until we reach the kitchen, here. Then we get the hell out. On a radio signal the fire team goes through the same way. We put a two-minute timer on the fuses. By the time the place starts burning we’re approximately ‘three hundred yards away, just at the edge of the forest.”

“I’d rather you had three minutes,” Brother Pierce said. He did not want another Turner.

“If we leave it go too long, they’ll smell the fumes.”

“How many people altogether on the place?” Bill Peters asked.

Bob Krueger answered. “There’s twenty-one commuters to Philly and New York. Plus they’re running a damn good three-hundred-acre farm using only hand tools. We can’t see they have less than seventy people working that land. Add in children and boost the total ten percent to be on the safe side, and a reasonable guess is a hundred and thirty.”

Bill rubbed his cheek with his right hand. “Where the hell do they live?”

“They’re out there,” Eddie Martin said. “Got to be. We’ve targeted twenty-three houses in town as witch-owned, but the estate witches ain’t living there, or we’d see ‘em move out to the farm every day.”

Bill thumped the blueprint. “They sure as hell don’t live in this house. Not unless they’re jamming together.”

“They might be. Anyway, I don’t think it’s a concern.”

“It’s a concern, all right. We’ve got to know where these people are. You’re talkin’ sixteen guys in our group. We’re no match for over a hundred. If we aren’t careful, we could all end up captured or worse.

With these people, maybe a lot worse.”

Simon thought of the house burning and lowered his eyes, praying once again to the Lord for guidance.

They were witches and they must be evil, but was it his place to pass sentence on them? He was tempted just to say the whole attack was canceled and that the Lord had given him a better idea.

Unfortunately the Lord was quiet, and Simon had no better idea. “Please,

Lord,” he called in his heart, “help me to do your will. Help me, O Lord.” But the Lord remained silent. The planning session went on.

Amanda looked up at the creature above her. Its great eyes glared down. It was waiting, and she had the feeling that there was very little time. But what did it want her to do?

She looked into the eyes. They were too knowing to be safe, but they were also very, very good. There was even humor there somewhere. In a flash he crouched down.

Amanda backed up. She could see the huge face superimposed on the village, hear the breathing, even hear the damp sound when he blinked. She could feel he was calling to her. Despite all his awesome power, he could not succeed without her.

“How can I help? Please tell me!”

In his eyes she saw men running on dark streets, she saw gasoline tins and roiling orange fire, and she heard Constance screaming in agony.

“Can’t you stop them, Tom?”

Then in the cat’s gleaming eyes Amanda saw the whole Covenstead on fire. She was so horrified she jumped back and fell down.

She stared into the morning sky. And sure enough, what she feared to see was there. Poised over the barn was a flaming finger exactly like the one that threatened Constance. Amanda went back to the barn and drank a long draught of cider. People gathered round her then, and began kissing her one after another. She kissed them all, soft lips of women, thin lips of men, wet lips of children. She kissed them as openly and intimately as she had Robin, and shared her breath with them all.

Some went away shocked, all silent. None but Amanda and Constance saw the fingers, and Constance kept to her corner, from time to time jerking her head as if to get out from under the thing that hissed in the air above her.

But that was not the way to escape. Amanda’s mind was tormented with the problem. This was why she had been returned to her people. She was here to save their way of life.

There seemed to be no direction in which to turn. She sensed that she might as well try to change the course of the Amazon as alter the fate that overhung the Covenstead.

She knew the emotion that came to fill her, knew it all too well. It was absolute and unreasoning. She fought it but it would not subside. Her fear

was like ice in the depths of her belly, freezing everything, freezing hope. She could see Brother Pierce as if through a vault of night, his spirit tortured, his mind made up. He personified man's deep, visceral fear of the unknown. There was so much hate and so much ignorance. She had no power against it.

But she had to have power. Somehow she had to save the Covenstead. She saw Simon Pierce standing alone in the center of his night. In his hand was a torch, and fire was in his eye.

Chapter 28

NIGHT ON THE SURFACE OF A STAR

In hush of afternoon Amanda went alone to the ruins of the fairy village. She needed time alone to think about the Covenstead's problem. Tom had communicated to her that there was no escape from fate.

They had to live through whatever lay ahead, or die in it.

She climbed a hummock until she was isolated, as Maid Marian had been so long ago, overlooking her dominion. A small black stone came to hand. It was smooth with time, a flung aged to gentleness.

In it she could feel the record of all it had ever known, whole eons collapsed to sighs. The stone was wise, and it had a message for her.

The stone said; you must embrace the fire. Amanda saw the whole Covenstead consumed by quick red flames.

The leaves, the stems, rustled with a hurrying breeze.

"Act," it whispered, "act."

The secret is—

She saw the horses kicking in the barn as their manes began to smoke and curl.

The Fairy Queen spoke: "This is the destiny of the night: you are warned that children of the fairy danced here once, but they do not dance now. The demon has different forms in different times, but it kills the same way. It is the hammer of witches."

"How do I stop it? Tell me how!"

She saw the *Leannan* for a moment, standing in among a tangle of weeds. "I don't know. If I did, my fairy would be able to reclaim this place, and they cannot."

"Why not? What stands against you?"

There was no answer.

Amanda sat a long time, her eyes closed, listening to her body work and to the breeze worrying the dry grass. The body may be heavy and slow and coarse, but it was so wonderfully real. Once tasted, the life of the flesh could never be forgotten.

Destruction, wars, fire—

Had Brother Pierce no epiphany?

When she opened her eyes, she was astonished to find how long the shadows had gotten. So many hours, so little time.

Her people had come. They formed a circle around the base of the hummock. They chanted her name.

“Amanda, Amanda, Amanda, Amanda.”

It was deeply moving to hear the word of the smell and taste and look of herself. Moom, also, had been thus moved, and Marian.

You must act, the wind had said.

But how?

The stone educated her. Images, words, thoughts, poured through her mind. She saw the whole massive mechanism of oppression. It came not only from the sorrowful heart of Brother Pierce but from the bleak, loveless minds of fundamentalist legislators assaulting witchcraft in Congress, and their followers persecuting witches in the dark of night. It was as if some great consciousness had possessed them and perverted their desire to do good, sweeping a black hand across their eyes.

Then the stone showed her the condition of other witches in the world, the desecrated Grove of the Unicorn in Georgia, being vandalized by fundamentalist Christians before television cameras, the act gleefully broadcast on an evening news program. She saw Oz, a witch in New Mexico, being slandered on a “Christian” television program, and more: she saw the restless, questing hatred that animated this new persecution of the Old Religion, the articulate men in their fine suits arguing in Congress, and the spreading madness of the Brother Pierces of the world, and the sadness hidden in the hearts of them all as they prayed to the Risen Lord even as their hate chained them to the service of the Dark One *Leannan* would not name.

Then she saw the future, as it might very well be, a future so hard that she must not even share it with Constance. She saw prisons full of witches, steel bars and raping guards, and long, agonizing laws on the shimmering digital books of tomorrow, and she saw the glimmer of coals where witch places had been.

She knew with steel clarity and a gentle heart what she had to do. “Take me to the children,” she said. “I want them to initiate me.”

Ivy: “Amanda, that isn’t the way we ought to do it. You’re to be welcomed, not initiated. Death initiated you. And the honor goes to the

Vines.”

Robin: “We have it all planned. We’ve invented a really beautiful ritual.”
She went back to the village.

People there were preparing for the rite, which was to take place at moonrise in the stone circle the Covenstead used for its major rituals.

An awesome ceremonial was not right. If the kids made up a ritual, it was bound to be simple and full of fun, and so powerful and rich with real magic.

On a small wooden table in the middle of the circle were Ivy’s athame, cup, cord, and scourge, the traditional tools of initiation.

A group of six or seven people were making decorative sheaves of wheat to dress the altar. A crown of rowan had been woven for Amanda.

“Windwalker, will you round up the children for me?”

He looked up from his work. By day he was an advertising executive. His mundane name was Bemie Katz. He worked with the children’s coven.

“They’re halfway between here and the mountain. There’s a game of follow the leader going on.”

“That makes it easy. Find the leader.”

He went off through the village calling the name of Ariadne. She was one of the middle girls, a gangling child of eleven, brown of eye and quick to smile. Amanda remembered her kneeling with her plate of pancakes, like an Egyptian slave girl.

A perfect choice for high priestess of the initiation—

Soon she appeared at a flamboyant run, her green skirt whipping about her legs, her hair flying behind her. She came up, wide-eyed, just managing to stop at the edge of the circle. “It’s not cast,” Amanda said. “Come on in.”

Behind her, straggling along, were the rest of the children of the Covenstead, twenty-eight kids in all.

“Good game?”

Ariadne nodded. She was breathing hard. “Up to the Fairy Stone, then back down the mountain.”

Amanda remembered Grape, gone forever beyond the Stone. There had been a quiet ceremony in the Covenstead just after dawn, but they had not awakened her for it. What had happened to Grape? Did she also wander, as Amanda had, in hard kingdoms?

The *Leannan* spoke again in Amanda’s mind, this time testily. “She’s in the Land of Summer. She’s perfectly happy.” Amanda was startled to hear the voice so close. It was like wind or remembered melody. Anyone could

have heard it had they known what to listen for.

Amanda spoke to the children. "Come and sit around me, all of you. I have something I want you to do."

They gathered round, all freckles and smears and wide eyes. "All right, now listen closely. I'm going to be initiated after we go to sweat lodge."

"You're the Maiden already." This from a grave boy, dark hair, thin, intense face.

"But I'm not a member of your Covenstead. I don't belong to you, not yet. You have to initiate me first.

And I want you kids to do it, as a very special favor to me."

They stared at her, waiting for more.

"You need to select a priestess."

There was silence.

"Come on, discuss it. Do you want Ariadne? Or maybe somebody else?"

"I want Feather," came a soft voice.

"Wait a minute," Ariadne said, "you can't say that. You *are* Feather!"

"I'm a better witch, Ariadne, you know I am."

"But you can't choose yourself It's not fair. I'm the high priestess of the children's coven."

Feather was a girl with a smile hidden in her face and the glow of early puberty about her.

"I want Feather, too," a boy said.

"Ariadne," another replied. "It ought to be her."

"Feather is nicer."

"Ariadne pulled you out of the bog last month."

"All right, kids," Amanda said, "you can have an election. All in favor of Ariadne, raise your hands."

She counted fourteen.

"And in favor of Feather."

Fourteen again. Both girls had voted for themselves. Amanda could not imagine a better outcome. "Very well, you'll do it together. Which of you knows best the Way of the Altar?"

Ariadne nodded to Feather.

"Feather will be first priestess, then. Will the two of you choose a priest?"

They consulted for some time in whispers, laughing frequently as they went through the list of boys.

"We choose Robin," Feather told her.

“Robin? You mean the adult Robin?”

“You should always be initiated by your lover, don’t you know that?”

“I have a lot to learn about witchcraft.” But even as she spoke the words, she knew they were not true.

In Marian’s memory alone there was a vast amount of lore, of the herbs and the spells and the ways of the forest. From Moom came the simple heart of it all, the chants and dances.

Somebody was banging the gong for sweat lodge. Amanda went with the children to the wide foyer of the building. Smoke was rising from both chimneys, and the wooden flaps covered the windows. The adult witches were gathering at the lodge entrance, hanging up their clothes and pulling off their workboots.

Long shadows were creeping from under trees and around the comers of buildings as the witches passed into the big lodge. The steam had been filled with the aroma of the forest, drawn from damp herbs laid on the hot rocks.

Amanda strode naked into the center of the room and lay on one of the long benches. The children went first to the stone tubs and crowded in together, squealing and laughing as they attacked one another with soap and rush broom.

Amanda contemplated them, the fire-marked children. Why must there be such hate for such happiness?

“Hey, lazy!” She looked up, startled. Ivy proceeded to shove her down the bench. “Give me some room there, Maiden.” Ivy lay down beside her. “I understand the point you’re trying to make with the kid’s initiation,” she said. “It’s a good idea.” She laughed. “A lot of the coveners from the town and some of the Christians are coming. What we had planned was a procession around the estate, with you riding a horse.”

It was Amanda’s turn to laugh. “You’re not serious?”

“Not entirely.” She gave Amanda an arch look. “You really are rather awesome. The Catholics are calling you a miracle. I think the Episcopalians favor a medical explanation. But everybody agrees, you’re something quite unusual.”

“I’m just me.”

Ivy smiled at her. “An awful lot of people saw you dead. Now you’re alive again, walking around.

Naturally there is a little awe.”

Amanda thought of the finger in the sky. “I’m not nearly as powerful as

you think.”

“Don’t patronize.”

There came in the splashing of the children’s water a sparkling whisper, “Hurry, Amanda, every moment counts.”

“Surely, *Leannan*, there is still time.”

“No. There is no time.”

“I think we gotta give ‘em warning,” Deputy Peters said. His eyes were red, his face was perspiring.

Simon watched him carefully. Bill Peters was so damn afraid. Even the tone of his voice could cause people to lose their courage.

“We can’t, Bill, we’ll risk a fight.” Eddie Martin was certainly more Simon’s sort of man. Strong, decisive, looked like he’d beat hell out of the first person to cross him. His wife had complained of him once in a private session with Simon. “You cleave to him,” Simon had told her. “The Good Book says a man’s supposed to cleave to his wife,” she had replied, “not the wife to her husband. You men just read it backward. And anyway, he doesn’t cleave. He hollers.” A decent girl, Simon had tried to treat her kindly. He had blessed her and told her to place her troubles in the hands of the Lord.

“We are talking about murder, you guys! My God, if we burn a hundred and thirty people—we can’t risk it, we’re crazy.”

Simon listened, but at the same time did not. The meeting had been going on for some time, and he suspected that it was going to resolve itself no matter what he said.

Lately he found himself turning more and more to his past, as if the approaching crisis was returning him to his own great guilt, and to the hand. He had only known her for a few days, but he had thousands and thousands of detailed memories of her, of how she had laughed and what hopes she had cherished, and what she had enjoyed. She wanted to be a lawyer, and her favorite thing in the world was Double Bubble bubble gum. He remembered her talk, her ideas and ways, the anger and the bitterness at a fate she could not control, and how very much she had wanted to be held.

He was snapped back to the meeting by Eddie Martin’s voice. “Now, look here. Deputy, we are talking about something that has to be done! This town’s got cancer. If you want to get rid of cancer, you take a burning brand and you just burn it right out.”

“I’m telling you, if we burn that house, old Williams is going to be pretty

mad, but in the end he's going to give up on it. But if even one person goes up, he'll have the state police in here and every damn one of us'll be in jail within the week."

Simon spoke mildly, softly. "Thou shall not suffer a witch to live."

Eddie Martin slapped his fist against the table.

Hard silence followed.

"But also, 'Let none of you imagine evil against his neighbor.' We must punish them until they come to their senses, and when they do, then let us love them."

Feet shuffled. There were a few coughs. Simon sensed that they did not really understand him, and that was sad. He knew the truth about Christianity, its deep, inner decency and tolerance. Why, when he preached, didn't it come out that way? He just couldn't figure it out. But here they were. Would Jesus be comfortable in this meeting?

Bob Krueger spoke a compromise. "We set everything up, then we pull back almost to the road, see.

Then we fire a few shots into the air with a shotgun. That'll wake up every damn witch from here to hell.

They'll have time to get out of the house but not time to catch us. Or even see us."

"That's a good idea," Deputy Peters said.

"Vote," Eddie Martin said.

They tied it up. Eddie looked long at Simon. "You gotta break it, Brother." If he were to vote against Eddie's wishes, how would he take it?

"I must seek the counsel of the Lord."

Just then Mrs. Turner came in with two big pizza boxes. Her son followed with three six-packs of beer.

There was no merriment as the men began to eat. Simon had never been in battle, but he could imagine that men must be like this the night before an assault.

As they dug into the food, Simon left the room to pray in private. Unfortunately Eddie Martin followed him. They went together into the garage. Eddie was stiff with rage. "I'm not satisfied. Brother Pierce.

Seven of 'em voted against me. Seven cowards."

"They'd call themselves prudent."

Eddie sucked in breath. "What do *you* call them. Brother?"

Now, this had to be handled very, very carefully. He didn't want to lose

either half of the group. “Brother Martin, I think we are walking in the way of the Lord, and we are doing His work, in His vineyard. I trust in His wisdom.”

“I trust in His wisdom, too. That’s why we gotta do things the rough way. Burn ‘em. Make sure the survivors leave and *never* come back—if there are any damn survivors.”

“Williams was already over to my place, asking all kinds of questions about poor Brother Turner, rest his soul. If the witches die, there’ll be no doubt in his mind about who did it. And it will be a crime of national importance. We’ll look evil, and they will look like martyrs.”

“We’re about to burn down a house worth an easy quarter million dollars. Probably more. Williams is gonna be asking questions anyway.” Eddie Martin came close to Simon. He stank of machine oil from cleaning guns. His eyes were bloodshot. “I’ll tell you what we ought to do. We ought to capture every one of those bitches and all the little toads they got as men, and have us a public execution. And then when Williams pokes his nose around—just blow his head right off. I’d do it myself, and I’d be proud!”

This was too much, and Simon knew it. He had never seen a look like the one in Eddie Martin’s eyes.

“Have a caution, Brother.”

“Why? You know you got more than half this town on your side? Sure you do! Even got some of the Episcopalans, who don’t hold with the town covens meeting in their damn basement. And Catholics who got upset about that nude ride. Hell, you got every law enforcement person except the sheriff himself.

And Tom Murphy, he’s state police major up to Elsemere, runs the whole damn county. He’s been around the Tabernacle a couple of times. I seen that man prayin’ his heart out with you, Brother Pierce.”

Everything Eddie said was true. The more public the witches became, the more powerful Simon got. He knew that, but he did not know just how to handle this situation. If he voted to warn the witches, he lost Eddie and his six supporters for sure. If he voted against warning, he probably wouldn’t lose the others.

But they risked committing a crime of extraordinary ferocity, one that could not be justified anywhere in the Bible. Or could it? “Thou shalt not suffer a witch to live.”

Eddie had been out here long enough. Simon wanted to take this before the Lord. “Where lives are involved. Brother Martin, I have to pray. Please leave

me alone for a few minutes.”

After Eddie left, Simon knelt down beside the Turners’ old Dodge wagon, facing the back door of the garage. A tattered toy puppet lay on the floor between him and the door, its head cut open, no doubt in some childhood game. He noticed then that there were a number of other dolls lying on a shelf near the door, all with their heads in disrepair. A lot of anger in the Turner house.

“O Lord,” he whispered, “please help me now. It is in my power to send the witches into the fire of your divine justice. Hear me, O Lord, and let me know what to do.” He knelt there, staring at the dolls. Soon the concrete floor started hurting his knees. “O Lord, just send me some kind of a sign.”

There was nothing. Simon knelt a while longer, his mind full of wordless prayer. At last, sorry that his need had been too little to interest the Lord, he began to rise. Just then he heard something odd—a mewling sound on the far side of the garage. He peered around the car.

The sound came again, much louder this time. He couldn’t see anything over the top of the car. But when he looked under it, he saw well enough.

There was a black panther in this garage with him. Even as he started to get to his feet, it sailed soundlessly across the hood of the car and blocked his way. There it stood, huge, its massive, kinked tail flicking, its one good ear cocked toward him.

He was dumbfounded. There weren’t any panthers in May well. “Help!”

It growled and leaped at his throat. The thing almost knocked his breath out of him. Then it was on him.

He couldn’t believe this.

A panther with terrible eyes, laughing and green and cruel. “Help me!”

“We’re coming!”

The men came through the door in a bunch and stopped, shocked. The panther had Simon down. He knew it was about to kill him.

“What the hell—”

“Get a gun. It’s gonna tear me apart any second.” He could smell its breath, an odor like rotten meat. He tried to control his shaking, because it seemed to excite the cat, which began to breathe harder and harder, washing him with the foul stink.

Suddenly the cat yowled. Something invisible was pulling at its powerful neck, forcing its head back away from Simon.

Well, glory be, he understood now. The cat was a witch spell and the Lord

was protecting him from it.

His men were bunched up at the door. They had guns, but Simon knew that bullets wouldn't hurt this panther. It was a spirit thing, had to be—despite the tom ear and busted tail.

“Brace yourself!”

When the bolts clicked, the panther didn't even bat an eye. Instead it opened its mouth wide and with a lunging motion went for Simon's jugular. “Oh, God!”

It stood gagging, unable to reach him. He could see the faint outlines of immense fingers around the thing's neck. And a tremendous, dark, *something* standing behind it, holding it back.

The sheer strangeness of it all terrified him. A shot exploded over the sound of his screams.

The big cat leaped straight up into the air shrieking in rage. And the shadowy form leaped right after it.

Simon sat up. He felt his throat. No injury. “O my dear Lord,” he said. His heart was thundering, his blood roaring in his veins.

“It's up in the rafters,” Tom Faulkner said softly. “Nobody move.” He cast the beam of his flashlight toward the dark directly above Simon, who was still sitting on the floor.

Tom was the first to cry out. Then Bill Peters took it up, then they were all shouting, backing toward the door, and Simon himself was scuttling along the floor, trying to get to his feet, too terrified to make his body work right.

The only tiling left up there was a pair of eyes and a big cat grin. Then the eyes closed, and the grin faded.

“It's gone,” Eddie Martin cried. “The damn thing just evaporated!”

The beams of half a dozen flashlights confirmed that the garage was empty.

“That, my friends, was what you call a witch spell. Praise God, it was a thing sent after us from the depths of hell! And the Lord Himself saved me from it. The Lord saved me. Glory hallelujah, I have seen the hand of God.”

Now Simon knew exactly what God wanted.

Thou shalt not suffer a witch to live!

Chapter 29

DAUGHTER OF THE MOON

“When we were kids we used to try to imagine what death was like. Like an explosion, a little girl—I think her name was Nancy—said. Nothing, one boy said. He was killed in the Great War, which was just as well. From his idea of death you can see he was an afflicted bore.”

“Connie, you must collect yourself.”

Constance’s reply was bitter. “Thank you, Amanda. I need advice from someone older and wiser. I’m very grateful.”

“I’ve come up here to invite you to attend my initiation.”

“Ah! Into what? Fire?”

“Into the Covenstead.”

“I can’t get that *thing* to go away that’s over my head!”

“Oh, Connie!”

“Don’t pity me, you little whelp! Pity yourself. You’ve got one, too. We all do. The whole Covenstead’s as good as dead.”

“Connie, *please!*”

“I’m only telling you the truth. Here, take a pull.” She started to hand Amanda a bottle of Madeira, then stared at it fixedly for a moment. “Old women can get drunk on any damn thing.” She laughed.

“Something’s in the air. Don’t you smell it—burning hair?” She got up from her bed and came to Amanda, put her head on her shoulder. Amanda embraced her. “I am not afraid of death, but of the manner of dying. I don’t want to burn.” She moaned, nuzzling into Amanda’s shirt. “You’re so young and warm and strong. But be clever. Even you cannot resist it.”

“I’ve got to save the Covenstead.”

“Yes.

That’s why you’ve been dead. You’ve passed all the tests. You have the strength and the wisdom.” She was shaking. “Oh, Amanda, I’m so frightened.”

Constance had always been her strength and her support. To be witness to the old woman’s terror was itself terrifying. But Amanda kept her feelings to herself. She held Constance in strong arms. “The Covenstead will survive.”

“The Covenstead is to be tested by fire. Remember that the *Leannan* is as much with you as she is against you. If the Covenstead proves itself weak, it will certainly die,”

Compared with what she had been through with Mother Star of the Sea and Bonnie, the onslaught of Brother Pierce did not seem so terrible. After all, he was a mere wave from the outside, expending itself on the outside. Her demons had come from within her own soul. “We will not die. I’m stronger than Pierce.”

Connie clutched her. “You have come to us as a warrior Maiden, to see the witches through another era of persecution. The fundamentalists will grow and grow in power, and they are the direct agents of darkness.” She sobbed. “They’re so innocent, and so deceived. Brother Pierce may well fail. You *are* strong. But what about the next, and the one after that, and the one following? Will you still be strong, ten years from now, twenty? Will you be strong in prison, or in exile? What if you lose your freedoms, your right to a fair trial, your right to due process? Believe me, Amanda, there is a dark time for witches coming, and we have never been more necessary.”

“I am not afraid.”

Connie hugged her more tightly. “All power to you then, Maiden. I don’t know where you get your courage.”

“Well, one place I get it is out of being sensible.” She moved away from Constance and picked up the telephone. She dialed the sheriff’s office.

“Sheriff Williams, please.”

“May I say who’s calling?”

“Just say it’s important.”

He came on the line.

“Sheriff, this is Amanda Walker.”

“Oh! I heard about last night. Amanda, I was so deeply moved. I’m sorry I won’t be at your welcoming, but I don’t trust my deputy anymore and I’ve got to stick close to the office.”

“Never mind that right now. I’m calling you to tell you that this Covenstead is in danger.”

“I know that. Simon Pierce is after you.”

“I want you to deputize everybody in the town you feel you can trust, and bring them out here tonight with all the weapons at their disposal. Some people are already coming to the initiation, but they won’t be enough.”

“I’d better call in the state police.”

“Do that if you think it’ll help. But get people out here no later than nine. I want all the approaches guarded.” She looked at Constance, who was nodding on her bed, about to slump over onto her side.

“And I want you to personally guard Connie. I want you right in the room with her at all times, do you understand that?”

“I’m already moving.”

“Sheriff, thank you. I love you. I love all of you so much.” She hung up the phone. Where was the self-involved little artist of a week ago, the one who used to paint pictures of imaginary elves? If she spent the rest of her artistic career painting a portrait of the *Leannan* and captured a tenth of her beauty, her career would be a success. Or if she painted Tom somewhat as he was, or Raven as he had been.

But it wasn’t time to think about that now. She had to go back to the village and go through her ritual initiation.

Getting Connie settled, she wished she could relieve some of the poor woman’s terror. To know when you are going to die is a hard thing, but to know that it is going to be by fire must be very much worse.

The gong sounded. Amanda tucked the quilt around Connie’s chin, kissed her head, and quietly left the room.

“I’m telling you, we go late. Catch ‘em all sleeping.”

“Early. We’ll take ‘em by surprise.”

“When they’re not asleep? They’ll be all over the place. The house’ll be full of ‘em.”

“They’ll be out in the fields. It’s harvest time and they’ve still got a lot of standing corn.”

The group had been arguing ever since the appearance of the thing in the garage. Again Simon saw those eyes. Despite the help of the Lord, he was, quite frankly, frightened. There were real supernatural events happening in Maywell. Opposition to the witches had become far more than a means of ensuring the loyalty of his own congregation. The Christian brotherhood itself was at stake in this little town. The witches could command real, live demons with green eyes and the bodies of panthers.

The demon had been terrible, but the Lord had shown He was stronger. Simon was a sinner, too, of course, but his own crime must seem small to God beside that of the witches, who were willing to call hell-things into the world. “We’ve got to destroy them!”

A chorus of Amens.

The beeper Deputy Peters carried at his waist started warbling. “Gotta call in,” he said. Everybody fell silent as he made contact with the sheriff's office. He said a few words, listened, hung up. He looked toward them, his face pale. “I just got told to get down to the office by nine P.M. I'm on desk duty all night.”

“He wants to keep tabs on you.”

“Which means he suspects something. But he suspects it for later. After nine.”

Brother Pierce spoke. “That decides it. We move as soon as the sun goes down. We move fast, and we hit 'em hard.”

Eddie Martin rolled up his maps. Other men began assembling the equipment. Afterward Brother Pierce led them all in prayer.

The sun rode the edge of the sky. All the Covenstead and many of its friends and supporters crowded around Amanda, except for the children, who sat in the circle they had cast. Robin and Ivy's father Steven was there, and the Episcopal rector and Father Evans.

They intended a Christian presence here, no doubt as a gentle reminder to the witches that they could always return to the Church. Amanda accepted that. Between them they had brought twenty parishioners.

For the past hour the children's coven had been working furiously and noisily, creating their ritual.

Ariadne and Feather stood in the center of the circle now, Robin behind them.. The great sword of the Covenstead lay on the ground before the two girls. Ariadne held the cords, Feather the scourge. Robin took the athame from the small table they were using as an altar and used it to symbolically open the circle for Amanda to enter.

The Christians began the ritual with a benediction. “O Lord,” Father Evans prayed, “let the light enter their hearts, let thy hand touch them in blessing.”

At the same moment that the sun touched the edge of the horizon Amanda stepped into the circle.

Previous to her experience in death, she had considered the circle a symbolic place. But the symbols of this world are the concrete reality of the other. She vividly recalled the cauldron circle, and Connie stirring and calling. The cauldron, full of the energy of the spells that had been cast into it, had been as real as a rock, the people around it vague, flickering shadows.

Robin stepped forward between the two girls. All three dropped their cloaks to the ground Amanda did likewise. The four of them stood naked in the crisp air. Amanda felt goose bumps rising on her skin.

Because of the cold, the rest of the coveners remained clothed. Steven was just outside the circle, watching his son. Father Evans had a bemused expression on his face.

Feather gave Robin a sheet of loose-leaf paper on which a dozen different young hands had written in red pencil. Robin read:

“This is the Charge of the Coven:

Keep our secrets hidden in your heart,
Master our ways; if you cannot do it do not start.

Perfect your inner sight
That you may to the circle add your light.

The Craft of the Wise is sought, not found.
It is everywhere, so look around.

Tonight you will vow before the Goddess and the God
To give your all to the hidden synod.”

“Will you answer this Charge?”

Amanda nodded. “I will.”

Feather spoke. “Then kneel and take our pentacle.” She handed Amanda a five-pointed star of silver, enclosed in a circle of gold. “Say with me, I have heard the Charge of the Coven. Before the Goddess and the God and all the wise, I swear I have taken it into my heart.”

Amanda felt the presence of the witches around her, the whispering power of the circle, the nearness of the *Leannan*. Full of joy, she swore.

The gong of the Covenstead sounded.

Robin took the paper on which the charge had been written and burned it in a little golden bowl. “By smoke, by fire, fix these words. By wind, by air, by earth be it done!”

He came and knelt beside Amanda. Feather stood behind her and Ariadne

knelt on the other side. They made a circle, Ariadne and Robin clasping their left hands before her knees and their right hands on the back of her head. Feather laid hers on theirs. The three spoke together. "Do you to the Goddess and the God give all between these hands, without reservation or hesitation?"

"I do."

"Say it then: I am a child of Earth and Sun, I am daughter of the Moon."

Amanda said the words.

"I love the planet of my birth, and the star of my life, and me moon who granted me my humanity."

Amanda repeated after them.

The whole circle spoke. "By our will and the goodness of the Goddess, may all the powers of the craft enter your body, and especially the secret wisdom of our coven." Their voices dropped to a whisper.

"Be as the animals. Their simplicity makes their anger small, their love great."

Silence fell.

Amanda could hear the wind bothering the weeds, and the silver cries of birds at evening.

From behind her Feather spoke: "Stand up I'm going to mark you as a witch." She took herbed oil that smelled of rust and peppermint, and made an X on Amanda's lips. "Blessed be the mouth that speaks its love of the earth." Then she marked Amanda's breasts. "Blessed be the heart that beats its love of life."

Then she marked Amanda's genitals. "Blessed be the loins that give birth to the world."

Amanda thought of the life growing inside her. Just barely there, but so very there. Her darkness was flowering.

Ariadne took the scourge. "This is the Charge of Remembrance." She hit Amanda across the buttocks with it, just hard enough to sting. "Remember that you belong to the dust and will return." Again she struck her.

"Remember that you belong to the coven and will never leave." Again the cords touched Amanda's flesh. "Remember that you are daughter of the moon."

Three more times the gong rang, its voice echoing off the vastness of Stone Mountain.

"Guess what," Feather said, "you're a real, live witch." She smiled "It's official."

The children's coven crowded around her, laughing, hugging her and one another. Nearby a harp began to play. As the rhythm grew more and more intricate and faster and faster, it beckoned, then demanded that there be dancing.

They went round and round together, Amanda and Robin and the children, the other witches and their guests joining outside the circle. The harp sang to quicken blood. The moon, fat and red, slipped swiftly up the purple sky.

The last of Simon's men scaled the wall and dropped down into the leaves below. "We're clear," Simon whispered to the others. "Let's go."

Eddie Martin led. They filed along the inside of the wall, seeking the road that led into the estate from the main gate. The darkness was almost absolute, and dry twigs kept brushing Simon's face, scratching at him. This must be virgin forest on this side of the wall. The trees were giants, ready to crush you.

There were fifteen men divided into three groups of five each. The lead group Eddie called the Suppression Team. Their job was to pin down any opposition on the way in. The second group was the Fire Team. Three of them carried gasoline in five-gallon sprayers. The other two were responsible for the timed fuses. The last group was the Support Team, and Simon was part of this. Their mission was to remain a few hundred yards behind the others, providing cover and diversions—if necessary drawing fire.

Even though the sun was just down and the moon rising, the forest was so dark that Eddie from time to time had to flicker his flashlight ahead. Simon, running along among his men, was not surprised to find himself afraid. They all were. Somehow the fear made the Lord's work seem even more important.

There came a soft word from ahead. The road had been found. The group gathered itself together.

Simon was cold, and confused about directions. Fortunately Eddie Martin and the others were good at this son of a thing. They knew exactly what they were doing.

"Okay, everybody gather round." There was warmth in the little group huddling around Eddie. "We have to move fast. We could be under surveillance even now."

Silently, feverishly, Simon said a prayer: "Lord, let thy will be done." He said it again and again and again as they moved along. The witches were human beings, he couldn't forget that. He touched the hand.

“Suppression Team, front and center.” There was shuffling movement among the shadowy forms.

“Lemme set my watch. Okay, you’ve got two minutes lead, then the Fire Team will follow. Take off!”

They hurried away, their footsteps muffled by the leaves that littered the road. A flicker of light from time to time marked their progress. “Damn that Faulkner,” Eddie murmured, “he can’t stay away from his light!” Soon his watch peeped. “All right, Fire Team, let’s go.” As they trotted into the dark, Bob Krueger set his own watch. He was deputy leader of the Support Team. Simon was content to let him do the commanding. Give him a pulpit and Simon could convince turnips to dance, but he was no good at military maneuvers. Back in 1962 he had failed his induction physical for reasons the draft board had refused to disclose, even to him.

The next thing Simon knew they were marching up a slight incline. The smell of the woods was almost overpowering. The presence of the witches in Maywell had sensitized Simon to the devil’s ways, and this woods was definitely infested with demonic force.

They went farther and farther, deeper and deeper into the forest. Simon could sense the unseen things crowding about them, it was all he could do not to take a shotgun from one of the men and start blasting away.

As they reached the top of the rise they had been climbing, the blackness ahead began to change, then to tighten. They were coming to the end of the woods.

“What the hell is that?”

“Quiet!”

“Something’s moving.”

Simon couldn’t tell who was talking, but he could hear the slow dragging shuffle. It was emerging from the forest, parallel with them. “Oh, God.”

“Be quiet.”

A light snaked out.

There was nothing there. The light moved left, right, left again. Then Simon saw it—a stone statuette of a broad-shouldered man no more than three feet tall, a powerful little man with a furious, grimacing face.

“It’s some kind of a charm. Pass it by.”

They kept on walking. Simon looked back once only. He might have seen the shadow of the thing moving slowly up the road.

“Okay, halt,” Krueger said. They had come into a pasture. Now all that

separated them from the house was a few hundred yards of field.

The moon was riding the treetops. It cast its pale light upon the scene below: empty, disused fields crossed by the road. And on that road two clumps of dark figures, spaced a few hundred yards apart, going forward at a steady pace.

“Okay, guys, it’s our turn. Move out.”

The Support Team started off. Simon felt the moonlight on the back of his neck like a living finger. The darkness had been hard, but this was harder. “O Lord,” he prayed, “thy rod and thy staff—”

Far in the distance crows began to call. Their voices shattered the silence, echoing up and down the valley. Simon actually ducked. He remembered those damned birds, and somebody should have thought of them before. During that nude ride the other night they had saved the witches with their fierce pecking attacks.

Their noise grew more intense as the Support Team reached the house. The crows were swooping and flapping frantically in the front yard, but they didn’t attack. When Simon stepped up onto the porch, he sensed the charged presence of the house.

In among the gracious columns he could see that the front door was gaping. From the shadows within there came a powerful odor of gasoline.

Chapter 30

After the initiation the group retired to the barn. Carpets had been laid on the floor and a fire built in the central fireplace. The room was warm, tenderly lit by the flames. Incense scented the air. One of the members of the Vine Coven played the panpipes, the long, sweet notes swelling in the quiet. The Christian delegations were gone. After the ceremony their cars had moved slowly off across the farm.

For the sake of the witches' safety Amanda would have preferred them to stay, but they could not be allowed to witness this.

Amanda had never known that there could be such intimacy among a large group of people. They were deeply in love with one another, all of them. It was upon this foundation that their society rested. How anybody could find such gentleness threatening was beyond Amanda's comprehension. And yet she herself would once have been shocked at the spectacle before her.

Even though it was an act shared among many people, it was as intensely private as a wedding night.

Robin lay beside Amanda, his hand resting on her thigh, his eyes closed. She turned on her side and regarded him.

"Are you asleep?"

"Hardly."

"Robin. I'm so happy."

He kissed her cheek. "You belong to us now."

"I feel that."

"There was dissension about you once, when you first came here. A couple of covens even thought about leaving the Covenstead."

"What kind of dissension?"

"Over you being an outsider."

"I'm not an outsider."

He smiled at her, leaned over, and began kissing her.

She could see a vague, colorful haze around most of the people here. Where the lights of the couples touched there played deep blue of heartrending beauty. She remembered that color: it was the same as the sky of the Land of Summer. Love, she now understood, was so connected to death that the two were like an old married couple, serenely embracing.

Amanda gazed at Robin, enjoying the wonder of him. "You raised the cone

of power. Without you I couldn't have found my way back."

"Vine Coven did it."

"Each did it, and all. If you're a witch, everything you do is magic. The craft of the wise is the art of expressing the true relationship between humanity and the earth."

"Which is?"

"I can't explain magic any more than a Japanese monk can explain Zen. Every human being is a hologram of the whole species. Each contains all. That's the basis of magic. And earth is not an inert ball of rock. It is aware, it thinks, it knows we're here. That's magic, too."

"Why do I find that thought chilling?"

"The earth will give back exactly what it gets." She was silent a moment. "Humanity is supposed to function as a single being, the brain of the planet. Instead we are all scattered, each going his own selfish way. The earth gets selfishness, it will return selfishness of its own. You have to feel the world as a whole, mankind as a whole. Let illusion drop away. Differences, ideologies, fears, all disappear. Hate evaporates with the rest of illusion. Only love remains." His expression was blank. "Don't you sense it?"

The love, the compassion?"

"I can hardly imagine what your perceptions must be."

A disquiet came upon her. How could such a simple thing be so opaque to him? But what about her, a week ago? She had to bring what she had learned into the world. But not now. There was work yet to do. Brother Pierce and his followers would come once deep night had fallen, she felt sure of it.

And yet, in her mind's eye she saw him moving through the woods, saw him approaching the house in darkness... as if he was already there.

It was not long after eight, though. She must be projecting images from later tonight. Surely they weren't already here, when it was still gloaming. Soon the sheriff would come and the danger would be over.

Even so, she heard the hissing fire that still lingered above the Covenstead. The thought of it made her dig her fingernails into her palms. If all was well, why did danger still point its finger?

Robin was aware of none of this. She returned his smile, all the while feeling the most acute loneliness.

She and she alone understood enough to protect this place. She was very uneasy.

Outside there was a dull boom, followed at once by a low, steady roar.

Amanda started, then raised her head. “No, be quiet. It’s only a jet.”

She saw fire.

Somebody started humming. Others took it up, and soon the whole room was filled with a gentle, human music. It was the sound of over a hundred people all married together.

For a little while it seemed as if the marriage was even bigger than the Covenstead, that it extended forever outward, covering the whole earth and including everything—air, rocks, plants, all matter living and otherwise, and all people whose hearts could join.

When the hum died away, the roar did not. It had gotten louder and was now punctuated by deep crackling sounds.

Amanda’s throat almost closed, her breath came in a long gasp. Everybody in the room knew at once what it was. Somewhere on the estate there was a great fire.

People jumped up in their fright and rushed naked for the door. A mistake, and Amanda acted instantly.

“Stop! All of you!” They froze, turned, their faces tormented by their feelings. “We get our clothes on first. We do not panic.”

“I think it’s the house,” Robin said as he rumbled with his jeans.

Amanda got jeans and sweatshirt on, and jammed her feet into her boots. She was among the first through the door.

Red, flickering reflections covered Stone Mountain. From the direction of the main house there arose a tower of sparks. Smoke was billowing up into the sky. “Connie!”

As she ran, Amanda felt a fool. Why had she not heeded the warning of her own mind, then her own ears? She had been seduced by the moment. She raced frantically across the hummocks, her legs pumping. “Connie!”

Flames were literally bursting out of every downstairs window, snatching and licking at the bricks. The upstairs windows glowed.

Smoke shot from the chimneys. Sparks climbed in whorls and eddies up the sky.

She had never before realized how long the distance was between the house and the village. She ran and ran and yet seemed never to get any closer. Her wind began to come hard and her legs to ache.

At last she reached the edge of the herb garden. The tang of smoke was heavy on the air. Wood and something else.

Gasoline.

“You’re killing her, you’re killing her!”

Connie’s crows were flying round and round the house, screaming horribly whenever they went through the flames. When they saw Amanda, they came and fluttered and shrieked about her head. She rushed straight to the kitchen door.

A blistering wave of heat slammed her back. The kitchen was blazing. Beyond it was a sea of flames.

She couldn’t get in that way. “Connie!”

She ran around to the front.

Flames had climbed the columns of the portico. The front door itself was gone. She could see inside, to the black profiles of the hall furniture. As she watched, a chunk of ceiling collapsed into the hall and was lost in sparks.

She backed away, shielding her face. Robin came rushing up, followed by half a dozen others. Three of them went to hook up garden hoses.

The crows were throwing themselves against the window of Connie’s bedroom. “She’s in there, Robin!”

His arm came around her waist.

She broke away. “I’m not going to let her burn!”

“There’s no way—”

If only she had asked the sheriff to come at eight instead of nine. A thousand if-onlys, and the hell with them all. She was going to do her best. Others were trying to save what they could from the library. One group was looking for a ladder in the toolshed. They dared not try to get the one in the basement.

Amanda began climbing a gutter. The bricks behind it were hot to the touch. Smoke was coming out around some of them.

The wall was bulging, ready to collapse, and the gutter was loose. Amanda climbed anyway, hand over hand, her feet barely able to keep her from slipping back down.

“Amanda, stop! It’s too dangerous.”

Struggling with the shaky gutter, she continued up. Beside her the downstairs window belched flames.

She could smell her own hair beginning to burn. A few feet farther up, the crows were hurling themselves again and again against a window. She felt something cold running down her back, saw water steaming on the bricks around her. They were trying to protect her with the garden hoses.

What a fool she had been not to have gotten things organized before!

Wasting time with rituals and pleasures.

She was now parallel with the window. The crows flew madly about in a stink of burning feathers. She reached out and tried to get her fingers under the edge of the window frame. No luck, it was too tight.

She climbed a little farther. Water played around her, making things dangerously slick. But the others weren't thinking of that. They were afraid she would burn.

How could anybody believe that other human beings could deserve a horror such as this? She hammered with her one free hand on the glass. "Connie! Connie!"

Slowly, unwillingly, the glass began to give way. Again and again Amanda slapped at it. Finally lines of fracture started to cross its surface.

The gutter made a scraping sound. Amanda felt it sway outward, away from the wall. "It's falling," Robin bellowed. "You've got to come down!"

The glass shattered. Amanda cleaned out the shards and, levering on the window frame, was able to pull herself over onto the sill. The crows flew past her into the room.

Connie lay on her bed with her hands folded neatly on her breast. Her face was in repose. Flames were popping up through the floorboards. The doorway was a sheet of fire. Even as Amanda watched, the bedclothes caught with a snapping sound.

The crows rushed madly about in the room, becoming smoking, blazing meteors in the superheated air near the ceiling. Their voices high with suffering, they tried to protect Connie with their bodies.

"Connie, wake up!"

The combination of the crows and Amanda's screaming did it at last. Connie's eyes opened. For a long moment she simply stared at the ceiling, which was shot with fingers of red flame from the doorway

"Connie, come to me! Quick!"

Her eyes met Amanda's. "Don't be a fool. You can't protect me from my fate. Get out of here!"

"Come with me."

She sat up on the bed, and when she did, something terrible happened to her. There must have been a layer of superheated air in the room just above the level of the bed. Her hair burst into flames. She screamed then and began beating her burning scalp. Then she leaped to the floor. Her eyes were wide, her lips twisted away from clenched teeth. "Goddess!"

The whole top half of her body started on fire. She danced. She made barking noises. Urine sprayed around her. Then she pitched back onto the floor, burning fiercely. Her legs hammered, her arms moved in slow arcs.

A white-hot stone of grief and rage slammed into Amanda heart. Robin screamed above the roar of the fire. "Hurry, Amanda! The wall's caving in!"

The frantic voices and the heat compelled her to turn away from Connie. To keep from catching fire herself she had to crouch low. In seconds the room was going to be a mass of fire. She reached the window, climbed out, swung to the gutter. With a wrenching scrape it separated from the wall. The ground whirled beneath her. Bits of burning tar from the roof dropped past her like meteors. If she didn't get away from here, she was going to become a torch.

Dark figures raced about in the reflection of the flames. The garden hoses played frantically. Excruciating pain stabbed her shoulder. There was fire on her but she couldn't even slap at it without losing her precarious grip on the gutter.

Flames now poured out of the window of Connie's room. Above the window the roof was a pillar of fire.

The hoses had managed to put out the fire on her shoulder, but another brand of tar hit her arm. She screamed in agony.

The gutter began to break. She braced for a thirty-foot fall to the ground.

Then there were arms around her, big, burly arms.

Robin and Ivy's dad. "Steven!" He was on top of the longest free-standing ladder they had been able to find. Balancing, grunting with effort, he carried her down.

Then she was being dragged away by grasping, struggling people. She managed to get up and run with them, and not a moment too soon. With a roar and a great burst of withering beat the whole side of the house gave way.

They went far out into the herb garden before they turned around. The house was an inferno.

Beyond it red lights twinkled. The township's volunteer fire department was arriving.

Silence settled over the witches. There was nothing they could do, nothing the firemen could do beyond making sure that the conflagration didn't spread to forest and field. They stopped their truck in the front yard and began deploying hoses.

Amanda felt tears on her cheeks. She was not sad so much as bitter, and

incredibly angry with herself for being so careless. Despite the clearest portents and warnings, she had underestimated Brother Pierce and his followers. Sheriff Williams came running up, his pistol in his hand. His eyes were stricken. “Did they get her? Is she killed?”

Their faces told him. He dropped his pistol and sank to his knees, shaking hands covering his face. “I love you. Constance! I love you! O Goddess, help me!”

Steven held Amanda, and Robin kissed her face, kissed it frantically. His eyes spoke the terror he had known when she was in the house.

Ivy came rushing up and put a salve on her arm and shoulder. “Third degree on the arm,” she muttered.

“Not too much of it, though.”

The salve helped.

Father Evans was back, and most of the others who had attended the initiation. “My dear girl, I’m so sorry for you all. I just want you to know that it wasn’t my people who did this, not a bit of it! I have preached to them that you aren’t evil, that you are simply doing things differently from us.” He faced the rum of the house. “Please forgive them. Lord, those who did this thing.”

“It was Simon Pierce,” Sheriff Williams said. “I’m going to put that man away for the rest of his life! And I’m going to disband that Tabernacle of his as a menace to the public safety.”

“You do that,” Amanda said. Her heart was full of woe and fierce hate for the ones who were oppressing the Covenstead. She intended to make Maywell safe for the people she loved. They had as much a right to the freedom of their practice as anybody, and they were not going to be denied that freedom.

After his speech, the sheriff had bowed his head and covered his face with his hands. He stood swaying and silent.

“Sheriff Williams,” she said. She put her arm around his shoulder. “Come on. We need you now.”

“She’s dead! I loved her, you know. I loved her every day of my life for fifty years. She was a wonderful woman. Truly, one of the greats.”

“I know how much you loved her. And I respect it enormously.”

“I hope she’s happy I have faith that she is.”

“I know where she went,” Amanda said. “I can tell you for certain that she’s happy.”

“You—”

“I do know.”

“That means an awful lot to me. Thank you for saying that.” He was silent a moment. “I remember her first coven. Back in 1931 it was. We were just kids! Hell, I wasn’t even twenty. That was the Appletree Coven. We met around a crab apple tree out by the edge of the woods.” He gestured off toward the dark. “Hobbes and her and Jack and me and five or six others. It was quite a secret.” He stopped. His shoulders shook. “She was so beautiful. Like you are. Her skin was like pearl. I just fell for her. Totally and completely. I’ve been on her side ever since.” He hugged himself. “She was the Goddess personified, as far as I was concerned.” There was a long silence. “Oh... all that went so bad... there were terrible times! Hobbes—” The sheriff sobbed. “Why couldn’t she have gone peacefully? Why did she have to burn?”

“I saw it happen. She didn’t even know. She never felt a thing.” Best to keep the truth to herself. She needed this man to get himself together. He was very important to them now. He took something from his pocket. “I keep these as trouble stones,” he said, hefting a small object in his hand.

“To me trouble is a piece of flint.” He threw the stone. “Earth bind it, no one find it!”

He took a deep breath and contained his grief, at least for the time being. “Okay, let’s get to work. Can I assume arson?”

Robin spoke. “The whole downstairs caught at the same time. And we all smelled burning gasoline.”

The sheriff went to his car. He spoke into the radio. “This is Williams. Constance Collier’s just been killed in an arson fire. I want you to go get that Brother Pierce of yours and lock him up until I get back to question him.”

“On what charge?”

“Murder one! Now, move or it’s your ass!” He put the microphone back on its dashboard hook. “I shoulda gotten rid of that damn Peters months ago.” He shook his head. “Who’d have known how crazy they really were. How damn crazy!”

The house now consisted of five standing chimneys and two blackened columns. The rest was flaring rubble.

Amanda thought of the treasures that had been lost with Connie. The library now consisted of a couple of stacks of scorched, sodden books. The magnificent Hobbes Faery was not among them.

Steven remained close beside Amanda. She suspected that he was as drawn

to her as his son. "Thank you," she said, and kissed his cheek. She tasted the tears there.

Robin hugged her.

Amanda realized that the whole Covenstead had gathered around her. For a moment she was afraid, but then her ages of experience came to her aid. On behalf of all the witches she spoke:

"We've had a loss. A terrible loss. But I want all of you to think not of what has been taken from us, but of what Constance Collier gave us before she died. And what she would want us to do. What she would demand of us if she were here. We all want to mourn. I'd like to go crawl under a rock somewhere and just forget this world exists for a while."

"But we cannot do that, not one of us. Connie would scorn us if we did. We've got to save this Covenstead, and the way to start is to protect it from further damage right now, tonight. I don't think we can assume that Pierce will give up until the whole place is destroyed."

"Nor can we assume that he's gone. Every one of us is in danger. So I want every coven to be aware of where all of its members are at all times. Nobody wanders off." She motioned to Sheriff Williams.

"Before we organize, find out if anybody's missing. Look around you. Are you all accounted for?"

There was general movement. "The Nighthawks are in the volunteer fire department. They're over by the pumper."

"Except for the Nighthawks? Good. Now I want everybody who knows how to handle a pistol or a rifle to step forward." About a third of the coveners, most of them from the town, gathered around Amanda and the sheriff. Generally the town witches kept guns. What weapons were on the Covenstead had been stored in the house. "Deputize them."

"I did that before I came out, like you said on the phone. I was just finishing up when the fire alarm came through. We were planning to get here a little early, just to be on the safe side."

It hurt to hear that. But Amanda continued. "I think we ought to divide up. The main group will go to the village, some people armed. And get some fire extinguishers from the truck. I'm sure they've got them."

That thatch could go up in a matter of seconds if our friends manage to get to it with a torch. I want the Rock Coven to stay with me."

"If you shoot," Sheriff Williams said, "do so only in self-defense."

Most of the coveners went off toward the village. Amanda watched them

go, the moonlight gleaming off their weapons long after they themselves could no longer be seen.

“Now I want the rest of you to guard the Covenstead. That means the main gate, the West Street entrance near the blackberry patch, and the old road through the graveyard.” She left them to do their own organizing and went over to the pumper. A couple of the firemen were sitting on the running board drinking coffee. “How long do you intend to stay?”

“Until we’re sure it isn’t going to flare up again. Probably means all night, a fire this big.”

“Good. Watch the horizon, too. Especially toward the fields and off in the direction of the village. The same people who started this fire might not be finished.” With that she went back to the sheriff.

“Amanda,” he said, “I wish I could convince you to hide out in town until I have Pierce behind bars.”

That was out of the question. “I can’t leave the Covenstead.”

“I know that. Just wishin’ out loud.”

“Robin and Ivy, let’s go back to the village. That’s where I belong.”

They crossed the path through the herb garden and descended into the dark of the fairy mounds. The moon rode the middle sky.

On their way Amanda cried, silently, privately. Without speaking Ivy and Robin took her hands.

The village was very quiet.

“Where are they?” Ivy asked, standing among the cottages. “Hello?”

“Don’t move an inch. Don’t even breathe.”

The voice was hard and scared and mean. A man came hesitantly forward from between two cottages.

In one hand he held a shotgun. A flashlight flickered, paused a moment on Amanda’s face. Her throat tightened, her tongue felt thick in her mouth. They were being captured, right in the middle of their own village.

“Well, look what we got,” said another voice. It was terrible to hear, mad but powerful, cruel but ever so smooth. She remembered it well. Hate came forth in the shape of a man, smiling. “The rest of your people are under guard in that barn over there,” Brother Pierce said. He was Alis of the Alesians, he was the Bishop of Lincoln.

Other men were bringing the three guard covens toward the village. “Looks like we got the drop on you folks,” Brother Pierce said. “We’ve just been waiting and watching. We knew you’d fall into our trap.”

He motioned them into the barn with the others, but when Amanda started to follow, he put his hand on her shoulder. “Not you, young woman. You’re coming with me. There’s a lesson I want to teach you.”

Brother Simon Pierce put a rope around Amanda’s neck, knotted it, and led her off toward the dark face of Stone Mountain.

Chapter 31

In the dark Amanda stumbled and fell hard against her burned arm. The pain drew an involuntary shriek.

She hadn't wanted to scream, she had wanted to go in silence.

Nothing was served by this man seeing her weakness. He stood over her, his rifle crossing his chest, a tower in the moonlight. She looked up at the gleaming face, the amethyst eyes. Did he, too, remember the other times, when he was other men... Did he know the kinship between the two of them, the long association. In some ways he was as much the dark side of her own spirit as Tom was of the *Leannan's*.

How had so few of them managed to capture so many witches? For a moment it seemed almost impossible, even with the advantage of surprise.

Then she saw the help they had.

It was visible as thin smoke, hanging just beside him, the handless girl and also something else, at one glance lace and blue, at another slow-clicking claws.

"Abadon."

"That's one of God's words. Don't you make a spell with it!" He brandished his rifle. "I'll blow your brains out right here and now!" She fought her panic back just enough for silence.

The ghostly child whispered in his ear, and after a moment he spoke again. "Let me tell you something.

Miss Witch Woman, so you understand. Get on your feet." She stood up.

There must be some way to communicate with him. "Do you know what's there, attached to what you carry in your pocket? Surely you do. It's talking to you—"

He slapped her across the mouth. The blow hit with a bright yellow flash. As best she could, she swallowed her anger.

She was unable to look for more than an instant into his eyes. They were sheened with hurt, not hate. She could hardly bear to imagine the suffering of this man.

They reminded her of other eyes—Mother Star of the Sea's. They were desolate buttons, the eyes of an abandoned doll, the eyes of guilt. The Led man's voice came as a murmur of wind; "Remember that Mother Star of the Sea is part of you. Remember, she is your guilt." The voice faded, and

Amanda considered its message. If she could release herself from her own guilt, she could release this man from his. Had she the compassion to love somebody who had so hurt her, and was about to hurt her more?

Fighting him could not save her now. Only love could do that.

“You come with me, and you come fast If I don’t get back to your village inside of an hour, my men are going to set that round cow barn of yours on fire, and all the devils in the damn thing are going to burn and their children with them. So I suggest we get a move on.”

The night was growing much colder. Amanda shuddered and set off, walking quickly. Tears obscured her vision. She told herself to be calm, but it was very hard. They had not climbed long before he spoke again, his voice rough. “Stop here.”

He was walking behind her. She felt him draw close, felt his rifle between their bodies. His breath trembled down her neck.

“What do you know about spells?”

“I—”

“You are one.”

“If there is anything, any black panther or walking statue or anything at all tike that, I am going to let them burn your people. And I am going to burn you very, very slowly. Do you understand that?”

She saw Tom in the tangle of brush at the foot of Stone Mountain, saw him by his moonlit eyes. It was all she could do not to call to him.

She expected him to spring at Brother Pierce’s throat, to kill him, or at the very least to grow enormous and scare him away.

Tom’s eyes were fixed on her. He was panting.

There was a long silence. Pierce’s lips came close to her ear. “Listen, you and me, we have a problem.

My people are kind of like, they’re out for blood.”

“You burned Constance Collier to death!”

“There was a sign from the Lord.”

They were very close to Tom now. Amanda could just see his crouched form in among the rocks. Any moment he would spring.

Closer they came. Now she could see his tail switching in the moonlight. She moved forward more quickly, to give him room for his jump.

But something happened to prevent him. It was very quick and very damaging: a needle of a claw sliced out from the ghost child and narrowly missed blinding Tom. With a scream he bounded off into the darkness.

“What the hell—”

“It was just a cat. I saw it.”

“Just a cat! You people got a few cats, don’t you?” After a moment of studying the brush Pierce continued on, pushing her with the side of his gun.

Dread filled Amanda. Hate dominated love. The flower always died. Every birth ends in death. Perhaps that was the true lesson of the Sabbat that was upon them. *Samhain* is about the tragedy of the dead, not their persistence in the spirit world.

As she had on other last journeys, Amanda sought solace in the sky. The sweep of the heavens reminded her that peace, in the end, would come. Worse things than this have happened, and better things, and as does joy, sorrow has an end. Nobody will ever know all of the secrets in the stars, the worlds that have come and gone.

They were more than halfway to the Fairy Stone. No matter his reluctance she knew that she would soon be burning again, and he tending her fire. It was a cruel homecoming for them both. His guilt came along beside him and he didn’t even see her. The little murdered girl glared at him, but he was blind to her childish stare. In her form Amanda could see the flickering image of the blood-red scorpion, Abadon. It seemed an amazingly dangerous thing, this creature. Was this a denizen of some real and final hell she had not suspected before? Abadon was not an invention of Brother Pierce’s guilt. It had an independent life of its own. The way it looked at him, so steadily, so... carefully, suggested that it thought it would soon devour his soul.

The wind hit them as they reached the rocky crest. Amanda began to shiver uncontrollably. A sweatshirt was no proof against this cold.

The wind sighed in the bare trees and whistled across the stones. Listen as she might, she heard no words in it. There was only the peace of its movement, as it flowed its own secret way.

Ahead, glowing in the moonlight, she saw the Fairy Stone, and before it the gangling rowan bush.

“Get to work, sweetheart.”

“Doing what?”

“Gathering firewood! It’s as cold as the devil’s behind up here.”

He was going to make her build her own pyre. Would he also make her light it? An awful quivering started inside, in her skin and meat that would soon be dripping grease. The stake was an agony beyond the conception of those who had never endured it. Her legs resisted by growing heavy, her

hands by getting clumsy. The branches and twigs she was gathering seemed to cling to her like claws.

Before, she had always defied him. Now she must attempt something new. Was there enough love in her to include this evil being? “You can be free of your guilt,” she said miserably, hopelessly. “I can help you.” She knew that he had murdered the little girl, she could see it in his eyes, marked indelibly there, that one moment repeating and repeating in their glassy reflection. “She will forgive you, Simon. She has already forgiven you.”

“How the hell do you know about that? Devil musta told you!” The butt of his rifle whistled in the wind, then she was flying against the Fairy Stone, her kindling flung about her. “Pick it up! Load it up on that rock. I want the whole country to see this fire. It’s a beacon to the people of the Lord, that they have been made free!”

She scuttled around gathering twigs. Her side hurt where he had hit her, her shoulder and arm where she had been burned earlier. So much pain.

She had to get through to him. There was no other hope. “Simon—”

“You shut your mouth and keep working!”

He feared, therefore he hated. On the surface he hated women, deeper inside he hated the woman in himself. At his core he hated life.

Mistakes, recriminations, and guilt are the central bondage of evil. Finally she had a good-sized pile of brush and kindling. “Come here, witch.”

She went to him. She looked straight into the desolation of his eyes.

I am trapped, those eyes said. And I hate you for it.

The wind scurried, hissing against the Fairy Stone. *I am the hand that takes.* The sheer power of his own guilt was opening the stiff fist in Brother Pierce’s pocket, opening it and clutching his thigh with the bony fingers. A question, dark with terror, concentrated in Pierce’s eyes. She could see the moonlight reflecting on them as on two brown glass balls.

“I can free you, Simon. I have the power to forgive sin.”

The eyes narrowed. “You’re crazy.”

“The hand is alive. I can see it moving in your pocket. Not only that, I can see what it’s attached to—a little girl you once knew.” She spoke softly, trying to calm him with her tone. Carefully she reached toward him. “Face the wrong you did her and forgiveness will come.”

“Wrong *I* did? We aren’t exactly here to talk about my guilt, are we? You’re the witch, the spellmaker, the devil worshiper.” He snorted, trying to deride her. “You’re evil incarnate.”

“I’m just a woman. What you’ve got in your pocket might well be evil incarnate.”

“You shut your mouth about that, Miss Witch!”

“For heaven’s sake, Simon, you’re carrying the hand of a murdered child. You can’t tell me what’s evil and what’s not.”

He looked at her out of eyes sharp with suspicion. “You know too damn much,” he murmured. “Maybe you’d better go over and lie down in that kindling now.”

That terrible command brought back the harshest of memories: the feel of the cage that had held Moom, the way the bars had bent but never broken; the hideous three minutes that Marian’s fire took to crawl to her through the wood, then the swooning torment when it first touched her feet.

She told herself that she was reconciled. Beyond death, this time, she knew that summer awaited. She could smell the air of it, and already hear the music.

Even so the command made her sink helplessly to the ground. Her mind might be reconciled, but her body refused to go willingly into such torture. “I’m sorry.”

He twined his fingers in her hair and dragged her to the pyre. “Put your arms over your head.” When he grasped her wrists, a shock of knowledge swept through her. She saw the guilt that lay yet in his hands.

“You murdered that little girl and cut off her hands so they couldn’t identify the body. Then you kept one of them. You did that, didn’t you?”

“I am a man of God! How dare you blaspheme me!”

“You can still find your way out of this.”

“You’re a lying witch and you’re gonna burn!”

He crossed her wrists and wound the end of a long leash around them. Then he looped wire around her ankles.

She remembered how as Marian she had watched the clouds. She would do the same with the stars.

He tightened the leash. As long as he kept it taut, she could struggle all she wanted, but she could not get away.

Even as he worked, she saw the sadness in his eyes. His surface personality might really hate her, might really be about to burn her, but his deeper essence loathed what he was doing. She got a flickering image of herself escaping across Stone Mountain. “You were going to let me go. Why have you changed your mind?”

“How come you know so much about me? Nobody in the world knows what you know.”

She remembered Connie beating at her flaming head.

Why do they burn us? They want to banish the dark.

And Moom thinks, “But I *am* the dark. I give life in the dark. What comes from me, comes from there.

Babies come from the dark!”

The voice of Grape: “I’m waiting for you, Amanda. This time you will not wander the underworld. You’re coming home.”

“Stop that heathen muttering. I warned you, no witch spells”

She felt her soul gathering the memories it would take on its journey, pausing at the door that leads out of the body.

“Goddess,” she whispered, “open it fast once the fire starts. Please don’t let me suffer long.”

He twisted his leash tighter around her wrists. Her hands bulged from the pressure. For a time she was silent. A moan escaped on an exhaled breath.

The next one became a sob. “You killed a child, Simon.

But you can atone, even for that. I can help you atone.”

“I am not guilty! Before God, praise His Name, I am not!”

He looked at her, into her eyes. “Could you really help me?”

“Of course I could. Of course!”

The torment of the leash grew less. By the Goddess he was letting her go. Then he sighed a long sigh, tightened the leash again, and laid her face-up in the dry brush and sticks.

Her disappointment made her burst into tears. Through her own suffering, though, she kept trying to understand him, to find the insight that was the key to his need. He wanted her help, she could see that.

Why wouldn’t he allow himself to accept it?

Then she saw into the nature of the hell he was inventing for himself. In the heart of his guilt he would be forever devoured. It was surprising that he could not yet see the shadow of his demon, the ghost child, for the more hatred Simon conjured in himself the more real she became. From all around them there came the scuttling of Abaddon’s long, jointed legs.

He was the first human being she had encountered who had condemned himself to the eternal hell.

Tom hovered just at the horizon, huge in the mountains, his black shape like a cloud along the ridges. He gazed at her with fixed intensity.

Amanda kept on trying to reach Simon. “The child will let you atone.”

He peered down into her face. There was a distinct odor of pizza on his breath. “I’m sorry I did it. I just—all of a sudden, she touched me and it felt too good, and all of a sudden—oh. God, she was just lyin’ there dead. A kid and dead.”

He clasped his hands together and looked into Amanda’s eyes. His essence seemed to call out to her,

“Help me, don’t let me do this to myself. Help me!”

The clicking of Abaddon’s pincers mingled with the windclatter of the rowan’s limbs.

Amanda’s tight-bound arms hurt so terribly that she had to force herself not to bellow. There was only one way for her to save herself: she had to save this man.

“I cut off her hands and tossed her in a river. I couldn’t have any ID. But I’m sorry, damned sorry.” Even his sorrow was ugly.

“You don’t have to endure your guilt. You can relieve it if you’ve got the courage.”

“I’m so scared,” he whispered. “I deserve eternal damnation for what I did.”

“You deserve what you choose to deserve. Your guilt can end, Simon. Untie me and we’ll talk.”

For some time he didn’t move. At least there was a struggle going on in him, or so it appeared.

She kept hoping, but when finally he met her eyes, the pity she saw filled her with despair. He would not look so sorrowful if he had decided to set her free. “You’re right to think this is hard for me. I don’t enjoy making people suffer, in fact I’d like nothing better than to let you free. But I’d be ‘doing a real sin then.

You need the suffering I’m going to give you. I’ll spare you God’s fire by burning you in mine. You see, you don’t understand that this is a good deed I’m doing. When you’re dead and in heaven you’ll thank me. Fifteen minutes of torment will save you from an eternity of spiritual fire.”

With a little, fascinated smile on his face, he began to spark his cigarette lighter. Amanda turned away.

Her stomach churned, her womb contracted around the tiny life within.

She thought of the Covenstead. This was to be their last Samhain, then. Where had they erred? Why had the powers abandoned them?

With a click and an orange flicker, then another click, Simon got his lighter going. He cradled the whipping flame in his hands, then applied it to some dry leaves at the edge of her pyre.

“I’ll pray with you as long as I can.”

“Put it out!”

“As the fire burneth, let her soul be cleansed, O Lord.”

She tried to roll away but she couldn’t. She twisted and groaned. Remembering Marian’s death, she concentrated on the sky. Summer is waiting, she told herself. The flames rose from blue to orange and began to dance in the wind. When the first heat touched her, the fire was perhaps three inches from her thigh.

The little girl came close then. It was amazing that Simon could not yet see her. Amanda looked right at her. Her eyes were so stilt, so knowing, so very angry. By moonlight Amanda could see the freckles on her nose.

“You think you’re going to hell, don’t you, Simon? You think there’s no way out for you. There is a way out.”

A flicker of interest registered in Simon’s eyes.

The fire came closer. He tightened his leash until she thought her arms would break. She began to cough in the tangy smoke. She could see coals raging in the center of the spreading flames. Sparks flew to the sky when she struggled.

“Simon! The Lord wants you in heaven. He wants everybody, doesn’t he?”

The heat was rising fast.

“O Lord, on behalf of this your daughter I ask mercy and forgiveness in this time of her agony. Let your purifying fire cleanse her of the sins of the earth.”

Tom paced just beyond the circle of firelight. She screamed at him. “Please help me!”

Simon licked dry lips. His eyes reflected the fire. The heat against her thigh was becoming a torment. Her clothes were smoking. Simon had started to shake.

“You ask God to forgive me, but you’re the one who needs forgiveness. You’re the sinner here, Simon.

The hand is proof of that.”

“I am the light—”

“You’re no better than the rest of us! Scared and guilty and lost. Now put out this fire and rejoin the human race.”

“I killed her. I admit it, sure I do. I confess it. But what’s the good, she’s still dead.”

“Worse sins have been forgiven. If you have courage, you can atone—oh, for the love of all that’s holy I’m catching on fire!”

The wind was making the fire caress her hip. “I beg you, I beg you, please stop!”

“I’m sorry! I’m so sorry!”

Miserably Amanda writhed. There must be some way to reach this man. “Oh, please!” In another moment the flames were going to cover her.

Simon’s face in the firelight was that of a little boy.

She squirmed, she kicked, she shrieked.

Watching her, his expression changed. There came into it a glimmer of something she hadn’t seen there before, that might be remorse. “The hand is —”

“Guilt. Your guilt. But you can atone for your crime. I can show you how!” The flames were licking along her leg.

“I can’t! I can’t ever atone!”

“Put the fire out! That’s a start.”

The flames spread to her shirt.

“Oh, put it out! *Put it out!*”

He was divided, his hands alternately reaching for her then pulling away. The heat was starting to drive him back.

“You’d be free, Simon! Free of your guilt!” Her body wanted to give up to the maddening anguish of the fire, but she had to keep trying. “Think of it, Simon. All these years you haven’t slept a peaceful night!

You could, Simon, you could have peace!”

“O God—” He burst into tears. Then he was moving, he was coming forward, his hand shielding his face, and suddenly the leash was loose and she was able to leap up, to roll, to free herself.

Pain boiled in her chest and leg but it had worked. She was free, she was not being burned anymore and Simon Pierce was kneeling among the broken coals, fumbling in his pocket, then bringing out something small and strange, the hand, dead but splotched with areas of living skin.

He held it cupped in his two palms.

Amanda backed away, for something beyond conception was happening beside him. The air filled with a sighing sound as of a thousand children murmuring for home, as by threads and tatters a girl of twelve spun into final,

true, and absolute reality.

A small, dark shape scuttled toward the rowan. Fairy were here, maybe even the *Leannan*.

The girl reached out and took the hand from Simon. “Oh, no,” he said. “Oh, Betty. Oh, no.”

The girl twirled in the firelight. Her hands, both attached again, were spread wide. She was not smiling.

“You’ve got to forgive me, darlin’. It was one of those crimes of passion, like they say. But you’re dead, darlin’. Please, I don’t want to see you like this! You’re dead.”

A great roar of wind came sweeping out of the sky and with it a raging, furious voice screaming every foul word in every language of man.

The murdered child’s fury slammed across the landscape, echoing from valley to valley. Simon cringed before her, who bellowed loud enough to break rock.

Then silence came again, filled only by his shaking breaths. “She’s the Devil! Lord, O Lord, she’s the Devil come after me!”

“I’m not the Devil,” she said. “I loved you, I really did.” She drew his face up by the chin, making him meet her eyes.

Amanda could see Abaddon hiding in the body of the child, ready to burst out and grab him and drag him down. She had to help him. “You’re guilty, but not eternally guilty, Simon! Nobody is eternally guilty.”

There came a ringing as of great bells back in the chambers of mountains. With each tintinnabulation a flock of unlived days fluttered by on moth’s wings. The life that the girl had been denied, the nights exquisite, the wearing days, the hard incredible pain of birthing, the old shadow again and the reaped field of experience, all came up and sank back again, dissolving into a powder of shadows.

Simon saw what he had denied her, and Abaddon began to flex in her body. “She’ll have another life, many lives. She has time.” He sank down, he covered his head, he made a long sound beyond a sob.

“Betty,” he whispered, “Betty, Betty, Betty. I can’t give you back your life, Betty. I can’t give you back what I took.”

“Simon, think how many others have taken lives. Millions. You aren’t alone and you don’t deserve eternal damnation for it. Accept your guilt and atone, but don’t pretend it’s worse than it is.”

“Atone? My atonement is hell eternal.”

“Your atonement is what satisfies her, and she won’t keep you for all eternity. You are not that bad.”

He looked at Amanda with gratitude, and in that moment Amanda knew that he had accepted that his own guilt had limits.

From the shadows came a strange fairy music, not the harp, but a harsher sound as if of drums and bells and rattling stalks. This music made Simon look curiously in the direction of the rowan.

But there was nothing to be seen, not to his untrained eye. Amanda saw it all, though.

He gasped. A shaking hand went up to touch his hair as his gun, forgotten, clattered to the ground. Off in the dark the fairy musicians pointed horns at him. They did not make a sound that could be heard, but Amanda could feel it in the air all around her. Simon put his hands to his ears and crumpled forward.

Rendered white and narrow as silk, his hair fell away.

He uttered a sound like wind spending itself. His flesh sloughed from his bones, his fingernails grew long.

His eyes sank, his hands became crone claws.

Amanda remembered him at the Tabernacle, pointing and shouting a terrible sentence from the Book of Revelation. She spoke aloud, but her voice was small: “And they had tails like unto scorpions, and there were stings in their tails. And they had a king over them, which is the angel of the bottomless pit, whose name is Abaddon.”

The horns made great brown noises, which sucked the youth from him. He fell forward, already little more than a terribly aged skeleton.

The girl murmured a pitying word and caught him, cradling him in her arms. There was something like satisfaction in her face. Her overseeing his hell would in the end relieve the suffering of them both, her anger and his guilt.

Amanda could hear the snap of his skeletal jaw, a noise no bigger than somebody clicking the teeth of a comb.

The girl carried her burden away across the Fairy Stone, in among the crowd of fairy that lined the far ridge of the mountain.

When Tom came bounding up at last, Amanda at first wanted to greet him, then felt anger as sharp as cut glass. “You old cat, why didn’t you help me?” She looked out into the dark, at the departing shadows of the fairy. “And you, why did you wait so long!”

She knew, of course. They had not been able to do anything to Brother Pierce as long as he wanted eternal damnation, for they could not be a part of his hate. It was ironic that his own self-loathing protected him from his destruction. As soon as he found the least glimpse of his good core, though, he could not condemn himself for eternity. Then they could become a part of his justice.

Amanda followed the progress of the girl climbing into the mountains, still carrying her burden. As they went, the girl changed. She became like smoke, men more solid, until she was the *Leannan* sweeping through the heights and glens, carrying an extraordinarily shrunken man in her arms.

When she realized that the ghost child had also been the Queen of the Fairy, she knew that the last test was over. They had all been tempered in the *Leannan*'s terrible fire. The strength and wisdom Amanda had been given were her weapons against the coming age of persecution, of which Brother Pierce was only the beginning.

She began making her way down the mountain, thinking of the other witches. Her injuries made her progress slow, and as she moved along, she heard gunfire and the roaring of some great animal, shouts and finally screams as high as wind in wire. Pain or no pain, there was only one thing for her to do. She leaped ahead, rushing along the rough path as fast as she could. Her injuries screamed, almost rendering her insensible, but she ran on.

She looked around for Tom, who had been slinking ahead through the undergrowth. "Help us," she screamed. "Help us!" He was nowhere to be seen.

Terrible imaginings of the murder of her people swam through her mind, of Kate being shot, of Robin burning and Ivy burning and all the Covenstead in ruins, of animals kicking at fire in their stalls.

By the time she entered the village her head was crashing with pain and exhaustion. She needed medical attention, and soon.

An awful silence had settled on the Covenstead. The village stood in darkness, in shadows. She saw nobody. She went close to the barn.

A faint sound came from within—singing, low and sad. The people were alive, at least. But their tone said all: they were preparing to die.

She peered down the pathway between the cottages. Where Brother Pierce's men? There wasn't a soul around.

Then she noticed Tom. He crouched low, facing the shadows beside the sweat lodge. He was huge, and amazingly terrifying, a great, black lion with a

flowing mane and golden eyes. He was the size of a car.

Huddled before him were Brother Pierce's men.

Tom yawned. Nearby the *Leannan's* harp began to play. It was odd, to think of her at once back on the mountain with Simon, playing her harp in these shadows, and stalking about as Tom. Amanda loved the *Leannan Sidhe*, and the warmth in her heart made the music grow sweeter. Is it that God is lonely? Is that why we exist?

Amanda saw what had happened here. Their usefulness expended, the *Leannan* could have taken Brother Pierce's men, too. Or could she? Maybe she had not the right; maybe it was not their time to die.

Tom gazed at Amanda and swished his broken tail. His pink tongue appeared for a moment between his teeth, and he licked his whiskered cheeks. She picked up a discarded 30-30, found it to be empty, and tried a shotgun. It had two shells left. When she pointed it at Pierce's silent, staring men, Tom leaped up in a shower of sparks and became a cat again. Then he closed his eyes and soon was purring the first purr she had ever heard from him.

She threw open the door of the barn with a shout of joy. "We're free! We've won!" Robin swept her into his arms.

There followed a time of people holding one another close, joyous in their lives but remembering their dead. Sheriff Williams was called, and Brother Pierce's men were led off to the county jail.

The silence of the night engulfed the village and soon brought rest to the exhausted little group.

As far as Brother Pierce himself was concerned, a search was mounted for him the next day by the sheriff's office and the state police. Nothing was found, not so much as a discarded gum wrapper. Over subsequent weeks wells were sounded, Maywell Pond was dragged, and the mountains were walked.

Tom would scamper along with the searchers, his tail bobbing in the tail grass, his good ear pricked to any sound.

But nothing was ever heard, nothing found.

Simon Pierce was never seen again.

Dedication

In memory of Dr. Paul Hill the author of Unconventional Flying Objects, a thirty-year veteran of NASA and a true hero of our age.

This book is dedicated to the children of the close encounter experience. Our generation will find the answers, but it is theirs that will gain the heavens.

I have no greater joy than to hear that my children walk in truth.

Acknowledgments

I would like to acknowledge the work of my wife, Anne Strieber, without whose brilliant, patient, and insightful support, Confirmation could never have been written.

Monsignor Corrado Balducci, Tim Edwards, Britt and Lee Elders, Karen and Jose Escamilla, Michael Hesemann, Alice Leavy, Dr. Roger Leir, Jesse and John Long, William Mallow, Jaime Maussan, Daniel Munoz, and Richard Strieber all gave generously of their time on behalf of the book.

I would also like to thank Dr. Mark Carlotto, Kim Carlsberg, Colonel Philip Corso, Jim Dilettoso, Dr. Jack Kasher, Tom King, Derrel Sims, Yvonne Smith, and John “Bro” Wilkie. Their contributions to the understanding of the UFO and close encounter experiences were of enormous help to me.

In addition, I would like to thank the witnesses who contributed their stories to this book, as well as the many unnamed scientists, military and medical personnel who gave generously of their time and expertise.

Any errors in this book are my own.

Introduction

Something Truly New

UFOs are nonsense and alien abduction is a fantasy—so says science and so says the press. But science also keeps the door open, as it has for the past fifty years, waiting for some sort of evidence that would make the subject worthy of study.

Such evidence has been found and will be discussed in detail in this book.

In an interview with *Nova* in 1996, the late Dr. Carl Sagan said that for the UFO phenomenon “to be taken seriously, you need physical evidence that can be examined at leisure by skeptical scientists: a scraping of the hull of the ship, and the discovery that it contains isotopic ratios that aren’t present on earth, chemical elements which form the so-called island of stability, very heavy elements that don’t exist on earth, or material of absolutely bizarre properties of many sorts—electrical conductivity or ductility. There are many things like that that would instantly give serious credence to an account.”

The new evidence deserves just that sort of approach. From the beginning, the scientific community has, very appropriately, supported a policy of isolating the UFO phenomenon and everything connected with it from the mainstream of its efforts because there just wasn’t any way to support the incredibly improbable idea that there could be anybody here except us. So the whole phenomenon has been explained as a combination of hallucinations, confused misperceptions of ordinary events, and outright fraud. In any case, what possible tools of science could be used to extract hard evidence from a collection of wild stories?

The evidence exists, and so do the tools. An organized effort can be made in three different major areas that will reap a scientific harvest substantial enough to offer us, no matter its origins, a rich return of new knowledge. Moreover, this effort may well answer the key questions once and for all: Is somebody here? If so, what are they doing?

In my ten years of experience as a publicly identified close encounter witness, I have met dozens of scientists, political leaders, reporters—all sorts of people who might be concerned with a matter like this—and, with a few exceptions, I have found them open-minded and fascinated but unwilling to

change their position of denial until substantial amounts of physical evidence became available. I have agreed completely with this posture, because science should not spend time and money tilting at windmills, and the public should not be seduced by misplaced scientific and official interest into believing that aliens are here if that isn't true.

But many scientists are becoming aware of what is happening, and even as I write this, there is a new level of interest building. On October 10, 1997, a panel of nine scientists released a statement that "some UFO evidence may be worthy of scientific investigation." Before coming to this conclusion, they reviewed evidence provided them by UFO investigators and promised a report in a few months that "makes recommendations for further research."

Among the scientists involved were panelists from France, Germany, and the United States. France was represented by Jean-Jacques Velasco, who heads the ongoing official investigation of UFO reports being conducted by CNES, the French space agency. Also attending were Thomas Holzer of the High Altitude Observatory, Peter Sturrock of Stanford University, Randy Jokipii and Jay Melosh of the University of Arizona, James Papike of the University of New Mexico, Guenther Reitz from Germany, and Francois Louange and Bernard Veyret also from France. These scientists were not asserting any particular belief about UFOs but only seeking to "play a more active role in helping to unravel this fifty year old mystery."¹⁴

In addition to scientific support, the religious community is beginning to respond to the growing evidence. I am grateful that Monsignor Corrado Balducci of the Vatican has allowed an interview with him to be added as an appendix to this book in which he states his opinion that the growing body of witness testimony "should not be ignored," and that superstitions about our visitors being demons should be abandoned along with official denial of the reality of the phenomenon. Among other things, Monsignor Balducci is an expert on demonology.

Over the course of this book, I will be suggesting specific directions for research in a number of areas, among them behavioral science, brain science, psychology, atmospheric science, propulsion technology, materials analysis, and, if it becomes apparent that aliens really are present, then a whole new area of cultural anthropology as well.

Ironically, even as it asks the best questions I have ever come up with, this book does provide some key answers, and they present an incredible picture indeed. What it all means, science must tell us. But if I am right about what it

suggests, what is by far the most extraordinary event in history is unfolding right now.

Gone are the arguments that science has nothing to work with. Behavioral science has not only the witnesses but also physical proof that something unknown has happened to at least some of them, in the form of apparent implants that have been removed from their bodies. Any surgeon can remove these objects, usually in a simple office procedure, and there seem to be thousands of witnesses displaying the signs of their presence, which can easily be confirmed by X ray. This potential harvest of objects also means that materials science can acquire a substantial sample for study. And it doesn't end there. Fantastic advances taking place right now suggest that we may soon actually be able to find out, in an absolutely physical way, exactly what parts of the wild alien abduction stories are true and what are not.

The evidence, if it is properly addressed by science, has the power to change completely the way we deal with this issue, possibly providing us with wonderful new discoveries and information. But there are problems. Not everybody is open-minded. Not everybody is ready to entertain such evidence as may be presented.

Certain important elements of the American press were once much more flexible in the way they approached the phenomenon, but for the past twenty years, the opposite has been true. On January 13, 1979, *The New York Times* published a story entitled "CIA Papers Detail UFO Surveillance," claiming that declassified documents confirmed that the government was deeply concerned about UFOs. Director of Central Intelligence Stansfield Turner was "so upset" about this article^[2] that he conducted an internal survey to determine whether the claim was true. Donald Wortman, deputy director for administration, reported to him that there was "no organized Agency effort to do research in connection with UFO phenomena...."

Since this event, the American press has generally closed the door on the UFO phenomenon. Perhaps, though, it now has needed justification to reexamine its position.

Some of the evidence that I will present is extremely provocative, even incendiary, and raises a concern that by denying the reality of the mystery, the press may actually have ended up spreading the very sort of false belief that it has been trying to prevent.

Understand, I don't think that anybody is to blame for this. It happened because the idea of aliens being here was so improbable and the evidence was

so equivocal. But as a society, it would seem that we can now take the whole question another step forward and maybe at last start to move toward some satisfactory answers. Taking an interest need not imply a commitment to belief in alien contact, but we must seriously ask who or what is causing the UFO and close encounter phenomena, why it is taking place, and, above all, what its significance may be.

It is also necessary to face the fact that the existence of the evidence means that there really may be aliens here—aliens who are creating an extraordinary theater in the sky while at the same time entering the personal lives of many people in extremely bizarre and secretive ways. Unless we deal with the hard evidence that has come to light in an organized and effective manner, we are going to remain passive to what could be not only a valuable knowledge resource but also an intrusion into our world that may or may not be in our best interest. Given its intimacy and the incredibly provocative nature of many contact reports, that does not seem wise.

Part One

THEATER IN THE SKY

The heavens declare the glory of God;
and the firmament showeth his handiwork.

—Psalms 19:1

Chapter One

Miracle over Mexico

So, what is all this evidence? Alien bodies, perhaps, or faster-than-light communications equipment? This is not a book of proof of alien presence but of evidence that confirms that an unknown phenomenon is unfolding among us. This phenomenon emerges in three distinct areas: the first is a dramatic growth in amateur video recording of strange things in the sky; the second is the unexpectedly huge body of close encounter testimony that is far, far different from anything that has thus far appeared in print; the third is the unexplained objects that have been surgically removed from some close encounter witnesses, myself included, who claim to have been implanted with them during their encounters.

All three of these areas present provocative evidence, but it would seem appropriate to begin with unidentified flying objects: what we see in the skies. To do this, the first place to go must be Mexico, which has, since 1991, enjoyed the most incredible and best documented series of UFO sightings in history. In this book, incidentally, the term “UFO” means only that an object is unknown. It is not an assertion that the object is an alien spacecraft.

On July 11, 1991, people all over Mexico City were watching the sky. But the weather was cloudy, and that made their anticipation uneasy. Still, there were people on the roofs, on every street corner, in the parks. By 1:15, everybody was looking upward. But would the clouds part?

Slowly, it got darker, and as it did, the clouds did indeed open. There was the sun, a corner eaten by shadow, then a half, then more. Then the moment came: a total eclipse. Video cameras were trained at the heavens as an estimated ten million people observed one of nature’s greatest wonders.

But they saw considerably more than an eclipse. They also observed an object immediately below the blacked-out disk of the sun, and to some people this object looked very much like a UFO.

At six minutes and fifty-four seconds, this was an eclipse of unusually long duration, so a considerable amount of video was made of the object. The eclipse was doubly important to the Mexican people, because it also marked the beginning of a new age in the calendars of many ancient Mexican tribes^[3],

including that of the Aztecs, who founded Mexico City and still form a large part of its population. The Aztecs saw this eclipse as the moment of passage from the Fifth Sun to the Sixth. The earliest known Mesoamerican eclipse predictions, and the first one mentioning this event, come from the Dresden Codex, one of the remaining Mayan calendrical texts.^[4] Both the Mayas and the Aztecs consider this eclipse to be a fundamental change of age.

Even though the object seen beside the sun created a local sensation, the only report of it that reached most people in the United States was a statement that it was a misperception of the planet Venus. UFO researchers in the States have claimed that videotapes of Venus can be made that appear similar to the Mexican video, specifically, to the ones that show what appears to be a structured metallic object with a shadowed base and currents of disturbed air swirling around it. In an effort to substantiate these claims and explain the Mexican videos, I and others have made our own videos of Venus. But, no matter whether in lighting conditions similar to that of the eclipse or not, this has proved to be impossible. Venus doesn't look a thing like the Mexican videos, in fact. In general, it seems that when claims like these are made, the claimants must duplicate their work in public. Moreover, Venus was not below the sun during the eclipse, which is where the unusual object was located.

Given that a number of stars became visible during the eclipse and appeared on amateur video as early as 1:04 P.M., it has been easy to dismiss all of the recordings as simple mistakes. But some of these videos almost certainly are not of celestial objects, as will be seen.

Perhaps because of the fact that the place and time of the object's appearance fit one of their own important mythologies, the Mexican people were not so ready to dismiss it. One man who was particularly interested was Jaime Maussan, the anchor of Mexico's version of *Sixty Minutes* and one of the country's most popular television personalities. On the air one night after the eclipse, he made what was to prove to be a historic request. Responding to the high level of public interest, he asked, as a guest on the program *What Is Your Opinion?*, for viewer reaction to the reports. The call-in program, which normally went off the air when interest faded around midnight, continued until 10:30 the next morning.

Maussan, who had asked people to send in their videos, was deluged with tapes, a process that has now continued for seven years. The objects—or whatever controls them—seem almost to respond to all the attention.

Although this massive wave of sightings has not been commented on outside of the UFO press and a few paranormal-themed television programs in the United States, it stands as the largest-scale and longest such wave in history.^[5] It is impossible that some of the videos were hoaxed by their makers, because they were made in public while hundreds, thousands, and sometimes even millions of people were observing the objects. Some of these same videos, such as one of a metallic cylinder hanging motionless in the sky in broad daylight, were made as crowds visibly reacted.

Few places could have been found that were better suited than Mexico to what happened there: Generally open-minded people had access to excellent technology that could make a visual record of anything they wanted, and do so easily and inexpensively. So as the eclipse of July 11, 1991, reached totality, millions of eyes—and many camcorders—pointed upward. Later, hundreds of people would submit copies of the videos they made that day to Jaime Maussan. Many of these were indeed of stars, but his investigation would disclose that seventeen of them appeared to be of unexplained objects.

Still, none of the seventeen anomalous videos in Maussan's possession was gathered by atmospheric scientists or astronomers. They are not perfect. The people making them were not generally thinking of things like triangulation. Often only the object and surrounding sky are visible, so the relative location of the object cannot be determined.

However, there exists one image that completely defies explanation. It was taken by a Mr. Fuentes at 1:23 P.M. and shows the object leaping across the sky. Because the height of the object is unknown, the distance of the movement also cannot be determined. It appears to be a substantial motion, and if the object is far away, then it could be many miles. Since the object moves only once and does not return to its point of origin, this cannot be explained by the sort of shimmering, bouncing, or momentary defocusing that might result from atmospheric disturbances. The object makes a sudden, arrow-straight motion from one stationary position to another and does not shimmer or bounce either before, during, or after the motion. Admittedly, the speed of the motion (just at a second in duration) suggests the possibility that it may be the result of some sort of transient atmospheric effect on a star, but the fact that it does not return to its original position also rules out that possibility. In fact, the object remains motionless in the second position.

A television executive, Guillermo Arreguin of Televisa, was observing an object as well and made a professional quality recording of it on his personal

equipment. This video reveals an object with a definite elongated shape, inward sloping sides, and flat upper and lower surfaces. It is shadowed on the bottom and appears to be disturbing the air around it and emitting a faint violet light from the shadowed area. Seen by the naked eye, it was reported that this object looked nothing like a star.

So if it was not a star, could it have been a secret aircraft hovering over Mexico at high altitude? If so, then it was an extraordinary plane, because at approximately the same time, eighty-five miles southeast of Mexico City in Puebla, Efrain Breton and his family were observing the eclipse with, among other things, a video camera. According to their time-stamp, they were recording the object at 1:22 P.M., but there is no indication that they noticed the movement that was recorded by Fuentes. Given that these were not professional recordings, it's easily possible that the times on the tapes were not exact.

In the Puebla video as well as some of those taken in Mexico City, a faint star can be observed in the same position above the object. This leads to the conclusion that the videos are of the same object, which must be extremely high. In fact, to be visible in two different places that far apart, the object would need to be at an altitude of more than fifty thousand feet, giving it a probable diameter of at least a quarter of a mile.

Both the Breton and Arreguin videos reveal the same lower-surface shadowing and atmospheric effects, an additional strong suggestion that it is, in fact, the same object. If it is, then its size and height suggest that it lies well outside the envelope of functionality even of the most extremely advanced aircraft. If it was Venus, then the combination of rapid atmospheric cooling and the brightness of the planet at that particular time must have been what caused the shimmering air that is visible on the images beneath the object. It is hard to see how Venus could be this radically distorted, however, when a star visible nearby in the same frame is perfectly normal. This probably defeats the claim that the object was Venus.

Unfortunately, the Fuentes video, which shows the object in sudden movement, does not also show it in relation to the star that appears in the Breton and Arreguin videos. So it cannot be concluded that the object that made the impossible motion and the one that was seen in Puebla and Mexico City to have a shadowed base are the same thing.

The likelihood that the objects are manmade is diminished by another video, this one made at approximately the same time by Luis Rodolfo Lara in

the town of Tepeji Del Rio. In this video, the object is seen to be maneuvering in relation to two other smaller objects, also moving, that appear above it. In this video as well, a faint pinkish colored area appears beneath the object, accompanied by apparent atmospheric distortion.

Could this be, then, a rigid device held aloft by the same mechanism that powers a hot-air balloon? It is clear that there is something glowing and distorting the atmosphere underneath the object in some of the videos, but there is no point of origin visible, which would be the case if this was heat being produced by a kerosene burner. The problem with this theory is that the object recorded in Puebla and Mexico City must be the same, and therefore the balloon would have to have been gigantic and operating at the upper edge of the atmosphere, almost in outer space. This would have been well outside of the capability of a hot-air balloon no matter how large.

So it is not unreasonable to entertain the notion that this object, contrary to all the assertions that it was Venus, was not a known object at all. If it was Venus, then another video should be produced showing the planet distorting in a similar manner while stars visible in the same frame remain unaffected. Using an analog VHS camera of the type generally available in 1991 and in use during the eclipse, I have not personally been able to achieve this effect, although I did see some slight distortion of Venus and other stars shot on the twilight horizon on the evening of October 17, 1997.

In the United States, the stories coming out of Mexico were ghettoized, in the sense that reports were more or less confined to media that cover the paranormal and thus isolated from the general public. Astronomers, meteorologists, and atmospheric scientists all ignored the phenomenon. Among the few serious investigators are Britt and Lee Elders, who have produced a series of excellent video digests of the material after engaging in years of on-site investigation, meeting witnesses, following up stories, and having the video examined by professionals. Their fascinating digests cull the material and concentrate on what is provably strange.

Like the Elders, I have found Maussan and his associate Daniel Munoz to be extremely competent and thorough investigators who are more than willing to share data and to assist outside investigators.

After July 11, 1991, there developed in Mexico a heated debate about the videos. In general, though, the Mexican people came to agree that the object was an unknown. Many millions had seen it and had observed with the naked eye considerably more structural detail than was transmitted by video. So

word of mouth supported the idea that it wasn't Venus or a star. The parts of the Mexican scientific and astronomical communities that supported the American contention that the object was Venus offered no evidence. Nobody did the obvious, which was to create, in public, sample videos of the planet or a star showing the same effect.

If the Mexico sightings had begun and ended on July 11, the vast number of witnesses still would have made them one of the most remarkable cases ever recorded. However, this is not what happened. In fact, July 11 was the beginning of an extended period of sightings that, very simply, ranks as the best-recorded series of unknown events in history, and which, as of August 1997, involves what could well be the clearest daylight video image of a UFO ever made.

After the July 1991 eclipse, the state of Puebla had so many sightings that viewing them became a nightly ritual. These objects were, for the most part, lights in the night sky. There was no detail to distinguish them from stars, except for their slow movement. They appeared to concentrate in the area of Mt. Popocatepetl, the volcano that dominates the area.

However, the proliferation of genuine sightings and all the excitement also caused the appearance of probable hoaxes. In September of 1991, during a television discussion about the phenomenon being broadcast by Super Channel 3 in Puebla, there was a major sighting in the area—as the panel discussed UFOs, one hovered in the sky above the city. This object was flashing a strobe light on an irregular interval and might have been an airplane except that it remained almost motionless for twenty-six minutes.

Over the village of Metepec near Puebla, the same phenomenon was repeated the next night. Meanwhile, in Puebla, an object hovered over Super Channel 3's transmission tower. This object glowed with internal light, but did not strobe. It first hovered, then moved, meaning that it was not a celestial object.

However, none of these objects ever did anything that suggested that it wasn't a balloon. There were none of the characteristic dramatic maneuvers that would have proved that they were real UFOs.

The next extraordinary event that happened in Mexico was the beginning of one of the most astonishing sequences of UFO videos ever made, and in this case there was no question of authenticity.

The first event in the sequence took place on September 16, 1991, at the National Independence Day parade. There were flybys of aircraft during this

parade, including flights of jets and helicopters. Vincente Sanchez Guerrero, a member of Maussan's crew, was there obtaining footage for news coverage of the event. There was no expectation that anything unusual would happen.

An unknown object was recorded by Sanchez hovering beneath a flight of jets. The object, clearly visible in front of a heavy cloud cover, oscillates light and dark surfaces in a pattern of vertical movement. After the planes pass, it begins to ascend, gathering speed until it moves above the upper edge of the background of cloud cover and becomes visible against the open sky.

Adding to this already amazing display was the completely incredible fact that it was repeated at the next two annual parades as well. The result was that UFOs were recorded maneuvering among the aircraft at three successive air shows, on September 16, 1991, 1992, and 1993.

The 1992 event was recorded by Demetrio Feria, a professional videographer who was taping the parade. Immediately after a flight of jets passed, a small object was observed moving just below a thin cloud cover, almost directly overhead. This object displayed a dark surface, but there was insufficient detail to determine anything other than its slightly elongated disk shape and the fact that half of it was darkly shadowed, the other half reflecting sunlight.

The next year, one of the most profoundly inexplicable of all UFO videos was made at this air show. Filmed by Alejandro Leal, who was taping a flight of helicopters, the object appears as a small, shiny ball that proceeds to maneuver among the helicopters, displaying an ability to avoid them and not be affected by their rotor wash as it passes beneath and beside them.

The object can be estimated to be between eighteen inches and three feet in diameter. It can't be a balloon because it moves upward of seventy miles an hour and engages in a broadly curving and obviously organized maneuver. It passes through the flight of helicopters but does not get blown away or even disturbed, not even slightly, as would happen to anything that was dependent on the air for its lift. Instead, this object makes an easy, assured movement that no design dependent on the air for lift could accomplish. The object isn't an aircraft of any kind, because it isn't flying. Instead, it is vectoring inside the air mass, its lift being accomplished by some means that is independent of the air.

It seems possible, then, that the amount of notice afforded them at the first air show brought the objects back for a second and third time. This evidence of intelligent planning minors what was happening in the Puebla area but

with the difference that the daytime video record provides far more convincing evidence that the UFOs were genuine.

It would be worth considering the possibility that whatever is behind the appearance of these objects may actually be seeking notice and is well aware of the conditions under which it may be obtained.

That the objects sometimes seek notice and react to observers is further made evident by a video recorded by Felipe Gonzalez on July 25, 1992. In this case, the object first appeared near a billow of cumulus cloud on a fine day. While both the object and the cloud are clearly visible, it is not possible to determine the size of the object because there is no way to tell how far away from the cloud it is.

The video is quite clear, and as this is broad daylight, the object cannot be a star. Also, it has an angular shape, tapering to a sharp end. It cannot be a balloon, because of this sharp point.

So maybe it is a model airplane, or even a real one that has had its appearance distorted by some atmospheric phenomenon.

Again, this would seem to be impossible because of the absolutely remarkable flight characteristics displayed by the object. This one moves slowly toward the cloud, slows down, speeds up, briefly stops, then slips behind the cloud. A moment later it appears in a small cleft in the clouds, darts across the clear space between them, then seems to hide with just an edge peeking out from behind the cloud—almost as if it is aware of the observer.

The object then disappears behind the cloud again. A moment later, it reappears in a broader cleft. It crosses this cleft, pausing for a moment in the center, then slips behind the cloud on the far side. Incredibly, it stops there completely for a moment, then disappears and reappears, “peeking out” from behind the cloud. It looks exactly as if it was playing with the observer, then finally is gone behind the cloud. Whether it was playing games or not, the motion displayed cannot be attributed to any known form of aircraft or aerial device at all.

Could it then be a computer simulation? This would be quite possible in 1997, but in 1992 it would have taken a considerable amount of computer power to accomplish. In either situation, there would be a characteristic signature of digital enhancement from the use of such programs. Because information is being added to the existing image, there are slight distortions in the surrounding pixels that can be detected on a computer. But this image,

when examined, shows no evidence of such distortions. Not only that, in a pixel-by-pixel examination, the sky color is seen to be blurred across the object, the opposite of what would happen if it was a digital inclusion. A similar effect could be created, but on a detailed examination the evidence of this work would be detectable.

Also in 1992, on June 25, Demetrio Feria had taped an object racing across the sky beneath cloud cover at 5:30 in the afternoon in the Federal District of Mexico which, once again, could not have been a star, a balloon, or a plane. As it moves, apparently at a very high speed, it oscillates slightly, turning a darker area toward and then away from the observer. This appears to be a solid, coherently structured object. The daylight image is plain to see.

This same pattern of oscillating movement was recorded by Tim Edwards in Salida, Colorado, during a period in 1995 when he taped a remarkably strange video sequence, footage that takes the UFO phenomenon to the same level of strangeness that the witness testimony has taken the close encounter reports.

To begin this journey into high-level strangeness, we must go first to June 6, 1994, to a tape made at 6:16 P.M. by Juan Flores Arroyo in Mexico City. The Arroyo family were outside with their video camera when they noticed a bright object in the still blue sky. This was precisely the sort of UFO that the skeptics generally dismiss as an unusually bright star. In this case, however, video evidence exists that clearly shows this not to be the case.

What it *does* show would appear at first glance, to be impossible. The object remains stationary for a short time, glowing brightly. It then becomes somewhat more dim and proceeds to eject a slightly less clear version of itself, which slowly moves away and disappears. The famous “Doctor X” case reported from France in 1957 contains a version of this observation. The doctor, who along with his son had a legendary close encounter, saw a UFO double as it approached him.

It is one thing for testimony about such a phenomenon to be offered, another one entirely for it to be recorded by a video camera.

What might something like this mean? It could be, simply, that the object ejected some sort of waste material that then floated away and dissipated. It could also be that it created a projection of itself akin to the holographic projections of personnel and equipment that have been theorized by nonlethal weapons researchers for military applications.

No matter the weather conditions, stars never appear to double in the sky,

with the secondary image slowly floating off like a puff of smoke. It could not be a flare, because the object was not bright enough, and there was no slow descent. It could not be a firework, because its duration in the sky is much too long. There is a video of something similar from the United States that is connected to one of the strongest and most disturbing of all close encounter cases, which involves not only video and still photography of a UFO but also an apparent implant found in the witness and surgically removed.

There is a great deal of video from Mexico that really cannot be explained. There is also a great deal showing stars and other commonplace phenomena that have been misinterpreted by witnesses. But there are other cases where the matter is not clear cut, and some of these are quite interesting.

On May 3, 1994, in the border city of Juarez, Francisco Javier recorded something that has the appearance of an open clam with some sort of material lodged between its two halves. This object was strobing blue-white flashes from a faintly visible structure on its bottom as it moved slowly through the night sky. It offered no maneuver that could not be accomplished by a balloon or slow-moving aircraft.

On May 5 in the same city, Rosi Uribe recorded an object like an elongated plate with a glowing domed superstructure moving slowly along and strobing in the same manner. This object was recorded for some minutes and was close enough to reveal a certain amount of detail in the video image. The platelike surface was lit by what appeared to be a glow being emitted from the roof of the superstructure, which has a number of dark areas along its face.

Although it is not possible to gain an exact measurement of the size of the object, because its distance from the camera is unknown, the video includes a view of the city the object is traveling over, and it can be estimated that it is at an altitude of approximately fifteen hundred feet. The amount of detail visible suggests that the object is fairly large, although not huge.

Video was made of a similar structure over Stuttgart, Germany on May 29, 1993. Although it wasn't strobing, it appeared identical in shape to the elongated plate recorded by Uribe. Taken at 10:00 P.M., this video also shows the object moving slowly and at very low altitude. This time, though, the entire surface is glowing bright red-orange. The object is quite low, and its movement against the foreground of hills, trees, and flat, unlit landscape suggests that it is traveling at slow speed. There is something eerie about this

video, because the object is so low and moving so slowly that it seems as if it ought to fall out of the sky.

That something so bizarre would be seen in two such widely separated parts of the world is interesting. But it also appeared again, this time in 1995 over Miami, Florida. The Miami tape offers enough detail to determine that the object could easily be precisely the same thing recorded over Juarez. This tape also shows an airliner near the unknown object, and so it is difficult to conclude that some sort of bizarre atmospheric effect transformed an ordinary plane into what appeared to the video camera to be a UFO.

But the object never, in any of the videos, does anything that a dirigible or blimp couldn't do. So could it then be some sort of hoax, constructed for the purpose of attracting attention and spreading false belief in UFOs? Possibly, but it is hard to imagine the hoaxer transporting his "flying saucer" from city to city in the hope that it will get the desired notice. Some UFO investigators have suggested that videos like this could be blimps, and a German television station has claimed that the Stuttgart video is an advertising blimp. No reason was given for this by the station beyond the fact that there appears to be no other way to explain the object.

In general, for amateur video to be definitively ruled an unknown, it would seem essential that, among other things, some maneuver be recorded that cannot be accomplished by any known aircraft. But given that there is so much amateur video that fulfills this criterion, has not been digitally enhanced, and was taken under conditions so public that a simple hoax must be ruled out, a dedicated scientific effort would almost certainly result in high-quality professional recordings. This could lead to valuable insights into, among other things, what keeps the objects aloft. As we desperately need some form of engine that can efficiently transport large numbers of people, supplies, and equipment into space, this would seem to be a valuable area of research. But the present emotional climate within the scientific community still makes such research difficult.

Throughout the 1990s, UFOs have continued to appear in Mexican skies. For example, on January 28, 1996, an enormous light entered Mexico from the north, proceeded to the center of the country, then turned east and crossed Yucatan, disappearing over the Gulf of Mexico. While Americans watched the Super Bowl, this awesome display was seen by millions. It appeared to involve something breaking up at high altitude, and for the first part of its flight followed a ballistic trajectory typical of a descending meteor. However,

the turn it made is hard to explain. It would be highly unusual for all the fragments of a large meteor to leave a ballistic trajectory at the same time and turn in the same direction.

On August 6, 1997, what is perhaps the clearest video of a UFO ever made was recorded over a wealthy suburb of Mexico City. As of October 15, there were, in addition to the video, twenty-four eyewitnesses, including two who have been added to the small but disturbing number of witnesses who have suffered unusual injuries.

Chapter Two

August 6, 1997

In the southwestern quadrant of the huge Federal District of Mexico lies the wealthy suburb of Bosques de las Lomas. It is the richest suburb of Mexico City and so far had not been an area of UFO sightings. But on August 6, 1997, that changed.

On that day, a group of young men in an office observed a strange object in the air beside a nearby building. This object caught their eye because it was in motion; it was rotating and oscillating at the same time. They pointed their digital video camera at it and took approximately ninety seconds of what may be the clearest imagery of a UFO yet made.

This video came to the attention of Jaime Maussan in September of 1997. In this case, the witness who filmed it wanted to remain anonymous, but a search of the area has uncovered twenty-four other people who saw the object, including one who apparently suffered physical side effects from standing approximately fifty feet below the object for a few minutes and another who may have experienced more serious injuries.

The video was taken from a window approximately three hundred feet from the object, which has a diameter between forty and sixty feet. The object is gray and smooth-sided, a familiar top-shaped UFO with a domed upper surface that flares out to curling edges that surround a relatively flat bottom, which is pale in color but surrounded by a darker ring. The two ends of the object appear to be slightly darkened and remain motionless. Somehow, the rest of the object seems to be rotating, or some sort of film on the surface is being agitated by regular waves of motion that create this appearance.

The setting in which the object appears, at an initial altitude of about a hundred feet, is a cityscape, with the object hovering over an area of low buildings. There is a high-rise apartment building in the right foreground. No people are visible in the video at any time. The object hovers for about ten seconds, rotating and oscillating in a clumsy-looking manner. Continuing with these same motions, it then accelerates toward the apartment building, moving at slow speed, probably no more than ten or fifteen miles an hour. It

also ascends approximately another hundred feet and can then be seen moving along just above the roof of the apartment building and some distance beyond it.

It finally moves behind another building and never re-emerges. Neither a moment of appearance nor of disappearance is recorded on the video, and the object never moves at a speed that would rule out hoax, although the clarity of the image and the strangeness of the object are enough to make this video worth examination.

On August 3, 1997, three days before the object was recorded on video, it was reportedly observed by a number of witnesses, including one who, as of this writing in October of 1997, is hospitalized with unexplained and uncontrolled normal pressure hydrocephalus (NPH), the first symptoms of which occurred after he had watched the object at low altitude overhead for half an hour.

This man is in his thirties, but NPH is a disease of the elderly. It is usually attributed to surface inflammation of the brain due to subarachnoid hemorrhage or diffuse meningitis.^[6] But this syndrome is so rare that there is little information about it, and often there is no evidence of what may be causing it in a given case. It should be noted that the witness showed evidence of drunkenness on admission to the hospital.

A few days after watching it, he began to experience problems with movement and was diagnosed at that time. Whether his proximity to the object was a causative factor remains unknown, but since this disease is associated with inflammation of the surface of the brain, and the witness was standing under the object for so long, the possibility must be considered, especially in view of the injuries to another witness.

This witness, who happened to be standing immediately beneath the object as it was being videotaped, also experienced physical side effects. In her case, these took the form of burns to her face and arms. She could feel a weight from above, as if some invisible force was making her body feel heavier. In addition, she felt as if she was experiencing a static charge over her whole body. The day after the sighting, she developed a sunburn on her face and arms, the areas of her body that had been exposed to the object. This sunburn persisted until early September, when it finally faded, with—so far—no lasting effects. An ordinary sunburn that persists for three weeks is unusual, and the long duration of this burn suggests that there was energy present beyond the infrared, which is the component of sunlight that causes burns.

The possibility exists that these witnesses were exposed to ultraviolet, radio, microwaves, radar, X rays, or an unknown form of energy.

So, were these people injured by this object, and was it a genuine UFO? Among the other witnesses was one who saw it just before it disappeared, and her testimony is useful. As it went out of view of the group with the video camera, it came into her line of sight. A fashion photographer, she rushed to get her camera. Unfortunately, when she returned, she saw only a violet haze in the air, which rapidly dissipated. This violet haze is a known aspect of the UFO phenomenon, and scientists have already theorized about its possible significance. (It will be discussed in more detail in Chapter Five.) Another convincing detail is the fact that Maussan, who received the video on September 26, went to the area to interview people at random in order to find out if anybody could remember seeing it. The first such person he found was the twelve-year-old daughter of a street vender, who was able to describe it in detail before seeing the video.

Maussan provided both me and Jim Dilettoso of Village Labs in Tempe, Arizona, and Britt and Lee Elders, with copies of the tape for analysis. Mr. Dilettoso sought to determine whether the object might be suspended from a helicopter above it and outside of the frame of the camera, or, if it was a balloon, then tethered to a cable underneath. To accomplish this analysis, he located the axis of the object by finding the point around which it was oscillating. He then drew a straight line through this point and followed the movements of this line frame by frame to see if it intersected at an apex above the object. He found that this line of axis remained unbroken for as many as ten frames at a time, but then it “jumped,” meaning that any cable would have broken. So the object cannot be dangling from a wire or affixed to a tether. The tether possibility is made even less likely by the fact that the center of the undersurface is completely free of any markings or variations that would indicate the presence of a hook, and the rotation would seem to preclude tethering to the outside edges. Dilettoso also estimated the diameter of the object as between forty and sixty feet, meaning that it is, at its thickest point, approximately twelve to sixteen feet thick.

The fact that there is considerable motion caused by handholding the camera reduces the likelihood that the image of the UFO has been digitally added to the tape. To do this would require a massive effort because no two frames are ever in the same place. At best, an illusion of motion could be created this way, that would be obvious on frame-by-frame analysis of the

video. Mr. Dilettoso also ascertained that, although the video had been made with a digital camera, it had not had digital information added to it later, which makes it less likely that this video is a special effect. However, it should also be noted that, if it was made digitally and then the digital tape was shot from a screen, no digital signature would appear on the new tape, effectively covering the digital track. To determine whether there might have been any tampering concealed in this way, I transferred the segments of the image where the object passed behind building walls into digital format and, using Adobe Photoshop 4.0, examined the pixels of the moving object to see whether any of them were in the wrong place. If the object was a digital image, it would be extremely unlikely that this part of its motion across the field could be accomplished without some pixels falling out of place and appearing in front of the building. But the image was clean.

So the object was almost certainly physical, either a radio-controlled model of a UFO or the real thing. If radio controlled, then it was probably held aloft by helium or hydrogen, because there appear to be no air vents that would enable a column of air to be emitted from a concealed propeller. If it was an untethered balloon, then it was probably controlled by jetting air through a duct that would account for the darkened areas at the two ends of the object parallel to the camera. The “rotation” then would be something like a loose Mylar covering blowing in the wind.

The one remaining question became whether or not the object was flying or moving by some other means. If flying, then it can be concluded that it was a model. But if it wasn't, then it was a genuine UFO. An object that is flying, such as a balloon or a plane, is held aloft by air. In fact, everything that we make that moves through the air is either flying or, like a bullet or a rocket, on a propelled ballistic trajectory. This UFO was certainly not on a trajectory of any kind, since it hovered and maneuvered in an entirely independent manner. So the crucial question became, was it vectoring—that is to say, being held aloft by some means that was independent of the air?

If flying, then the object would exhibit a reaction to the air around it as it accelerated. Also, since it was oscillating, its center of gravity was off its axis, or there was a tilted gyroscope inside the object. In either case, some of the oscillation would be transferred into any lateral motion, causing the object to describe a series of partial curves as it moved across the sky. Also, as it nears the building, it ascends. Then it stops at a certain altitude and rises no farther. As this is a very difficult maneuver for a lighter-than-air craft to

accomplish without complex and sensitive controls, it seemed impossible that there would be no wobbling at the top of the ascent, especially as the volume of gas that could be contained inside this object would be too small to sustain the weight of a pilot, meaning that the object had to be radio controlled. If this was a lighter-than-air craft, the ascent had to be accomplished by airflow, as nothing was dropped from it before it rose to lessen its weight. In any case, regaining control over this type of ascent by use of airflow from an upward-directed fan or propeller would not be possible without some sort of bouncing or wobble.

Working at Bauhaus Media in San Antonio, I examined the tape to see if actual motions could be determined. We examined the image at various levels to see if we could detect any signs of downdraft below the craft. There were some possible indications of air movement, but they were not persistent and were probably due to the smog and debris in the air at the time. We then stabilized the critical first section of the recording, removing all camera shake from the image of the object itself. We did this from a few seconds before the object begins its acceleration to where it completes its ascent. To accomplish this, we used Avid Illusion software on a Silicon Graphics O2 computer. To get the cleanest possible image off the VHS tape, we utilized an uncompressed serial digital interface straight from the copy in our possession.

This process had the effect of transferring all camera movement out of the object, so that only the motions that it had itself made in relation to a fixed surface nearby (the corner of a building) remained.

We observed a slight upward tilt in the direction of motion at the moment of acceleration. However, this same angle comes and goes even when the object is hovering and appears to be a side effect of its oscillation. There was no additional “buck” resulting from acceleration. In addition, the ascent appeared smooth. It was not affected at all by the oscillations. When the object completed its ascent, it did so without the slightest wobble or adjustment. The end of the ascent is as clean and abrupt as the beginning.

So the probability exists that this object was not air-dependent. Even saying this, though, hoaxers can be extremely clever, and in the absence of absolutely impossible maneuvers, such as disappearing on camera or accelerating so quickly that the movement cannot be explained, fraud cannot be completely ruled out.

If I was hoaxing something like this, I might very well choose to make my balloon oscillate in order to disguise the fact that it was air-dependent. Still, it

seems impossible to do this while also accomplishing straight trajectories and a perfectly clean ascent. Given all the witnesses, the physical injuries reported, and the fact that the object also displays the “walking” effect of a tilt-to-control device as it moves above the top of the building, there is every reason to accept the video as worthy of consideration as possibly genuine. Tilt-to-control involves moving forward by slipping off a supporting column of air or energy, then raising the leading edge to bring the column directly under the craft again. Platforms designed by long-time NASA aeronautical engineer Paul Hill using air for tilt-to-control support were tested in the 1950s. (His assertion that he based his designs on observations of UFOs will be discussed in Chapter Six.) But the Mexican craft was probably not using air for support, because of the precision of movement observed.

If it is a genuine unknown, then it should be of interest to scientists working on propulsion technologies. This leading-edge research is beginning to be carried out in numerous labs, due to the fact that current engines, based on heat energy, have already outlived their usefulness.

At the present time, the idea of colonizing the solar system with millions and then billions of people seems far-fetched, but within a very few years it will be seen as a necessity if humanity is to continue to maintain a growth-based economy and to thrive. In addition, we must find a way to relieve Earth of its growing burden of radioactive and other pollutants, and the ability inexpensively to get them into space and incinerate them in the sun would be a practical alternative if we could leave Earth’s gravity cheaply and efficiently, instead of relying on rockets with all their expense and pollution.

The combination of the way the object maneuvered, the nature of the sensations and injuries experienced by the witness who stood under it, and the violet haze that persisted after its sudden disappearance might combine to give somebody who is aware of the various new propulsion technologies now under discussion some valuable information.

With this in mind, I took the video to some scientists who had attended NASA’s Breakthrough Propulsion Physics Workshop that was held August 12-14, 1997, at the Lewis Research Center in Cleveland. Papers were presented at this workshop, which, among other things, discussed leading-edge ideas such as whether the vacuum of space can be engineered to extract energy from it.^[2]

The idea of “engineering the vacuum” was first proposed by Nobel prize winner Dr. T. D. Lee in his book *Particle Physics and Introduction to Field*

Theory.^[8] The theory is based on the fact that “empty” space isn’t empty at all. In fact, it contains many different energetic processes, some of which may be exploitable for a whole new type of power.

Interestingly enough, a system that drew its energy from the vacuum would work as well in an air envelope, because the subatomic source of its energy is present everywhere. Dr. Robert Forward of the Hughes Research Laboratory has already demonstrated that the vacuum can be exploited for energy.^[9]

The physicist who looked at the tape was intrigued and disappointed at the same time. He was intrigued for the same reason that I was: There is a reasonable likelihood that the tape is authentic, and if it is, then it is the clearest image of a UFO in operation that has ever been made. The disappointment came from the fact that there is no “clincher” in the tape. The object performs no maneuver that would be completely impossible for a radio-controlled model. However, the way that it functioned was fascinating to him. It is quite possible that something that relied on a column of energy to hold it up might make slow speed maneuvers very much like those that appear on the tape.

Unfortunately, the video did not reveal any of the signs of excited air around the object, such as that seen in some of the earlier Mexican video, that might have helped in making some guesses about the nature of the supporting field. The image is not quite enough to enable us to close the book and say that UFOs are definitively real. To do that, we need an actual UFO in our hands, or a professionally made record that shows enough detail to convince absolutely that the object under observation is a real unknown. Such a record could be obtained with considered scientific effort, and the existing videos and films are, of course, available for examination.

Interestingly enough, such film has not only been made in the past but also has been analyzed by scientists, pilots, and aeronautical engineers (this will be discussed in Chapter Six.) But before we turn to that material, it would seem productive to go a little deeper into the Mexican experience. If UFOs are spacecraft, then perhaps they have aliens aboard, and maybe somebody might at some point have made a video of such a creature. Maybe so.

Chapter Three

Alien Shadows

Video has appeared on TV around the world that claims to depict aliens. Best known is the “alien autopsy” film aired on television in 1995. However, this film has come under criticism because of authentication problems. Allegedly made from film taken of an autopsy of an alien whose spacecraft crashed in the New Mexico desert in 1947, the video shows a humanlike body with large eyes and six-fingered hands. If it is a real body, it isn’t human, because the six fingers are all different, and human beings have genetic information for only five different fingers. In a human being, a sixth finger must always be a repeat of one of the other five. In addition, when the leg is manipulated, the movement of the femur within the hip socket appears to be anatomically correct, a subtlety that would be hard for a special effects artist to duplicate.

The owners of this video have never produced any of the original 16-mm film with image on it for testing. The original film would need to be displayed along with laboratory aging results in order to verify its authenticity. What has been done so far is to display the aging results of some white film leader in the Fox television program that aired in the United States. Because of the lack of verification, this video, as subtly convincing as it is, must remain open to question.

I was asked by a television program to view two videos of apparent aliens. One had allegedly been smuggled out of the legendary Area 51 and come into the hands of the owner of a small video concern. The other was said to have appeared anonymously in the mailbox of the owner of another small video concern.

I don’t spend time and money on anonymous evidence, but I was willing to look at the videos. In the one supposedly from Area 51, there appears a figure with a huge head and black, platelike eyes. It is behind glass, and seated near it is a man who appears to be concentrating. There is no movement at first, but soon the alien’s huge head begins to wobble. Its tiny mouth opens, and fluid begins to issue from it. The creature is obviously in distress. As it collapses, two people in white protective clothing appear and begin trying to

collect the fluid, as if for examination. In the lower right quadrant of the screen, there is a bright, bouncing green light that appears like a laser.

I saw this video in the company of a number of other close encounter witnesses. Although I was given little reason to believe that it was real, and so stated at the time, the edited version of my statements that appeared publicly included only my emotional reaction to the harsh situation and obvious distress of the creature.

The next video, given to me by the same program, "Strange Universe," involved an alien body being drawn out of a black plastic bag by what I assume is a mortician or coroner. It's very realistic, but there isn't any way to verify it, either. Also, there appears to be some sort of an overlay in the video designed to obscure the image, and the video was made with an old camera, which hardly seems likely if it was really the work of some sort of supersecret government agency.

The one other piece of video of an apparent alien that has been produced does not suffer from anonymous authorship. On the contrary, not only is the author of this image known, but it is part of what is arguably one of the strangest and best-documented series of UFO appearances that have ever been investigated.

On the night of September 12, 1994, a new radar system was being tested at Mexico City's international airport. During the test, a large stationary radar return appeared on observers' screens. This return persisted for five hours, with the object showing little, if any, movement. Then it abruptly disappeared.

Technicians evaluating the radar had concluded that they were seeing a malfunction, but two nights later the object again appeared over Metepec, about forty miles from Mexico City. This time the airport in Toluca also got it under visual observation. People on the streets of Metepec noticed it as well, among them a witness who had a video camera. She was not able to get it to work that night. But the next night, September 15, with the camera now working, she noticed a glow in a cornfield behind her home. When she looked more closely, she observed what appeared to be a living creature of some sort standing near the corn. The creature was clearly visible and for a very disturbing reason: Its head glowed from within.

She described what she saw to Jaime Maussan: "I saw it turn its head and look at me in the window where I was standing. It seemed that it was also surprised. Its eyes were sad. They looked like the eyes of a monkey, very

deep, but also sad. It moved in a way that made me think I had caught him by surprise. That's when it turned back and disappeared. That's what happened, not more, not less."

When asked if it could have been fake, she states that it displayed facial movements and "had eyes like ours." She further said, "I want to tell you something straight. I don't know anything about these things." Commenting to Maussan about his work, she continued, "When I see you on TV, I change the channel. Because I do not believe in these things. Not at all. I believe that we are a million light-years behind these people."

An interesting internal contradiction in her statement, obviously. She doesn't believe, and yet she feels that we are far behind "these people." Frankly, if she had not seen an image that she couldn't explain and finds it almost impossible to believe, I doubt that she would have made this contradictory statement. She would have said one or the other. This innocent lapse of logic, as the weirdly impossible memory overlays the long-held beliefs and produces the contradiction, is strong evidence of her sincerity.

The figure observed on the video is glowing in a featureless dark background. It seems to be hunched forward, or the head set into the shoulders in such a way that the chin, which is long and narrow, comes down as far as the center of the chest. The body, which is revealed by the glow that is either emanating from the head or coming down from above, appears to be wrapped in gray-tan material. This material can be seen flowing onto the ground around the figure. As the witness taped the figure, she described it to the friend who was with her but not in the room. "It's horrible," she said, "it's looking at me. It's a dwarf, it's horrible." She stated that it seemed extremely sad, an impression that many close encounter witnesses report.

In addition to its long, narrow chin, the face displays the dark and sunken eyes that the witness describes, as well as two extrusions on the upper part of the forehead. Each is about three inches long and jointed forward at a ninety-degree angle.

The body covering displays folds like a blanket or shroud. There is no visible tailoring. This material conceals whether the creature has feet. As the creature moves away, it seems slow and hunched, as if it is carrying a great weight. Its movement is steady enough but appears laborious as it disappears into the cornfield behind the house.

So, was this a practical joke at her expense, or was it real? The tape is analog, not a digital composite, so if it was a prank, then it was played by

constructing a figure, perhaps out of papier mâché and a light, then turning it on, with the operator guiding it from under the blanket. It would be a simple effect to accomplish, and the poor quality of the video makes it impossible to distinguish enough detail to determine this.

The next morning, the cornfield behind her house was found to be trampled down, as if something heavy had wandered through it, crushing a couple of acres of corn.

Even given this strange side effect, if it ended there this story would have to be added to the long list that cannot be resolved due to the lack of professional involvement and investigation while the event was in progress.

But the story does not end there. Maussan followed up the sighting reports with a request for information from the Mexico City airport tower, which is how he learned about the radar observations and the Toluca visual contact. Over the next month, the tower informed him of six more radar contacts around the area with what appeared to be the same object and gave him the coordinates. He followed up by overlying the locations in a helicopter. In each case, there was a field of crushed plants beneath the place where the radar contact had occurred, looking exactly like the cornfield behind the Metepec witness's house. In one of these fields, Maussan found and made a videotape of a bizarre plant that appeared to be a pumpkin vine out of which was growing the leaves of other plants. Unfortunately, as no scientists were involved, this plant was not collected. Little can be gained from the video except to say that it looks strange.

It seems reasonable to think that there might have been some connection between the objects sighted on radar and the crushed fields that appeared below them. Unfortunately, though, there is nothing about the Metepec video that makes it possible to state for certain that the witness was not the victim of a hoax. Still, it is probably the closest thing there is, at present, to a video of a visitor with authenticating support.

Most of the videos from Mexico, and most earlier photographs, film, and videos of UFOs, show what appear to be machines flying around in the sky by wondrous means. But beyond the strange actions and maneuvers of what seem to be structured aerial devices of some sort, and the one alien video, there lies another world of much more problematic videos that suggest that the camera has uncovered skyborne phenomena of ultrahigh-level strangeness. This video record, taken as a whole, is so strange that it is, almost beyond conjecture. And yet it is there, readily accessible to whatever

analysis can be applied. It leads one to the fascinating conclusion that, if it does not prove accessible to conventional explanation, then our world has not been completely explored, in the sense that it contains a large-scale phenomenon of some kind that we have not yet noticed.

The first of these strange tapes is also the last of the Mexico videos that I will discuss. I consider this a door into the next level of the UFO video. From here on, the path becomes really dark, the way completely unknown.

Carlos Diaz is a photographer. He is also a native Mexican, an Indian of Toltec ancestry. He lives in a small town in northern Mexico and has impressed people such as Maussan and Dr. John Mack with his simplicity and honesty. He has never asked any money for his videos and has been entirely forthcoming in explaining them. According to his explanation, he created them at night near his home, in general by going outside at times that somehow seemed to him to be appointed and awaiting the appearance of the object. In other words, he feels, like so many witnesses, a sense that he is “called” to his meetings.

What Mr. Diaz has produced is a group of videos of a low-hovering object that appears to be a bladder glowing with internal light, or some kind of discrete plasma. It appears and disappears instantaneously, and at times its orange glow varies slightly.

A close examination reveals dots of light that are apparently internal to the object. Mr. Diaz has taken a number of stills of it, which could easily be hoaxed with simple equipment. However, he has also made a video that is much more interesting because it is not as easy to dismiss.

This video is approximately thirty-five seconds long and is divided into two shots. It was taken at night. In the first shot, Mr. Diaz’s rural house can be observed in the foreground. In the dark sky above the house, there is a bright object. It is luminous but not radiant, with the result that color and shape can be distinguished. The camera is then zoomed, and some detail can be observed as well. At this point, its configuration is somewhat like the glowing object taped near Stuttgart that I referred to in the previous chapter.

The witness is approaching the object, walking with the camera trained on it. It is thus impossible to tell if the apparent small maneuvers are a result of camera movement.

There is then a cut, and the object appears in more detail and at a different angle. The rural sounds—a rooster crowing, crickets chirping—continue across the cut. What has happened is that the witness has moved closer to the

object, walking through a field and up onto a hillside with the camera off, then turned it on again. Aside from testimony, there is no way to tell how long the camera was off.

It does appear that a slight oscillating maneuver that was beginning to occur just as the camera was turned off is just ending as it is turned back on. The object then remains completely motionless. It is visible against a featureless black background.

Carlos Diaz has struck investigators who have met him as a very honest man. There is not the least indication that these tapes are hoaxed. But the only way it is possible to tell that the camera is still outside, or that it is the same night, is Mr. Diaz's testimony. The object remains visible for about ten seconds and then disappears, as if a switch has been thrown on its light source.

Some might argue that the video could have been created in any number of simple ways. It could involve, for example, an object with a light inside suspended from a wire or lying on a tabletop. There is no way to evaluate this piece of video except to confirm that the form was not added digitally. But given how many other simpler, cheaper, and more undetectable analog methods could have been used, this isn't proof of anything.

The first part of the video would have been harder to fake. The zoom from the first frame containing background detail to the final one containing only the object against a black background is continuous. It could be possible to do a double exposure, first exposing the background, then repeating the zoom against a black surface with the lighted object suspended in front of it. If this was the case, though, the camera motion that occurs when the witness begins to walk would be a major problem to adjust perfectly so that the object's movements were consistent with it.

Diaz has impressed researchers who have met him and does not appear motivated to exploit his video beyond a natural desire that it receive the notice he feels that it deserves. In other words, he is like most legitimate witnesses with hard evidence—neither hungry for publicity nor unwilling to stand up, if asked, for what he has seen. So if we grant that his video may be genuine, then what is it and how does it differ from other videos of unknown objects?

Mr. Diaz has claimed a certain level of communication with the object and regards it as a plasma that is, itself, a living creature. If seeming plasmic structures like this one and the fiercely glowing object that was taped near

Stuttgart are real, then what would they be? Creatures? Natural formations? Technological objects?

If they are creatures, then they are so different from anything that we identify as a living organism that we would have to redefine our concept of life in order to include them. It is easy to say a phrase like “plasmic being,” but what would that actually mean? A living gas? Electrons that think?

These are not questions that can be answered, not yet. We can, however, explore the whole area further. Come with me into the realm of the *really* strange.

Chapter Four

An Undiscovered Country

In March of 1994 in the town of Midway, New Mexico, video producers Karen and Jose Escamilla made a video of something that they did not understand. The recording was made at about ten in the morning on a clear day and shows a rod-shaped shadow racing across the sky. At first, the Escamillas assumed that the shadow was an insect or bird passing near the lens of the camera. But they remained curious about it, and over the course of the next few months they discovered that more such images could be obtained.

In September, they began experimenting. Along with the shadows, which Karen Escamilla named “rods,” they shot birds and insects at two-thousand frames per second. They found that even the flapping wings of insects could be seen at this very high shutter speed, but the rods appeared the same, revealing no more detail than they had at lower shutter speeds.

Now quite intrigued, the Escamillas began filming the rods more extensively. They are not readily visible with the naked eye; they move at such a high speed that they can hardly be registered. But a video camera is different. Unlike an eye, it does not need to follow an object in order for it to be noticed. It simply records everything that passes its lens and emits light in the sensitivity range of its receptor system. To record the rods, the Escamillas used a simple procedure: They set up a camera, aiming it at a fixed point in the sky, and let it run. They then examined the video and sometimes found some of these objects.

The objects they filmed appeared to them to be between fifty and a hundred feet long, but there was no certain way to tell. In one of the most spectacular videos, the objects are seen speeding just above the peaks of a mountain range. One of them hits a mountain and, slightly bent and foreshortened, moves off more slowly in another direction. Because these objects were obviously moving just above this mountain range, their size has been determined to be five hundred feet in length. Another video shows the rods plunging into the ground and disappearing, which seems to contradict what happened when they hit the mountain, almost as if parts of the earth

were solid to them and others were not.

Of course, most of the objects that appear when a video camera is set up and allowed to record the sky undisturbed are birds, bits of dust or seedpods, insects, and other normal airborne debris. I have proved this to my own satisfaction by experiment. What's more, the closer the object and the faster it moves, the stranger it looks. A fly, for example, can turn out looking like some kind of otherworldly flying centipede if it is a few feet from a lens that is correctly focused. But the images discussed in this chapter, the Escamillas' included, were made with focus set on infinity. At this focus, little or nothing is recorded of objects passing at close enough range to induce this type of distortion. Moreover, this sort of shadow doesn't strike and bounce off a mountainside, or dive into the ground.

Lest it be assumed that the Escamillas somehow faked their video, or that they have mistaken an artifact for something real, it should be noted that the rods have been photographed before. In 1976, Trevor James Constable published *The Cosmic Pulse of Life*.^[10] In this book, he maintains that there are living creatures of unknown species and genus who inhabit the sky much in the same way that fish inhabit the sea. He published a number of pictures in the book made on infrared film.^[11] They bear a striking resemblance to the video that is being made by the Escamillas and others.

Some of the most arresting video was made near Monterrey, Mexico, by Santiago Yturria. Escamilla and Yturria taped the objects extensively around Monterrey, and on one of the tapes a rod actually passes between Mexican investigator Jeronimo Flores and the camera that is recording an image of him. As the shot was being made at an extremely high shutter speed (one ten thousandth of a second), any bird, insect, or piece of ordinary debris would almost certainly have been visible, or at least more clear, in still frame. But what happened was similar to the other rod footage. The object remained as indistinct in still frame as it was in the moving video. Even at that high a shutter speed, no new information appeared.

In December of 1995, Escamilla recorded the rods moving over a building in Roswell, New Mexico. The camera was a little less than half a mile from the building. Two rods were recorded moving above it. Unfortunately, it was not possible from this video to determine if they had been behind the building or between the building and the camera. In any case, they were certainly behind a group of telephone wires which enabled him to estimate that the objects were ten to a hundred feet in length. By observation, it is clear that

they were moving at very high speed. No matter what they were, they were at least two hundred feet from the camera and must thus have been moving at a far higher velocity than any bird or insect.

Although their range is unknown, the rodlike shadows seem accessible to being recorded in any number of different places. As of October 1997, Escamilla reports that rods have been filmed in twenty-three states of the United States and in Mexico. These videos continue to be made. On June 15, 1997, a rod was filmed speeding past the Empire State Building in New York City.

Although some scientists who have seen the video agree that it is mysterious, there has been no organized study of the objects, largely because of a lack of publicity and no professionally gathered evidence entering the scientific data stream. This would appear to be an interesting opportunity for the atmospheric sciences.

Interestingly enough, there was some comment about skyborne life forms even before Constable's book was published. I believe that the first mention of this concept was made by Sir Arthur Conan Doyle, in his short story "The Horror of the Heights," which concerns an early ascent to the then-appalling altitude of forty thousand feet. When he reaches this level, the narrator makes the following comment: "But soon my attention was drawn to a new phenomenon—the serpents of the outer air. These were long, thin, fantastic coils of vapour-like material, which turned and twisted with great speed, flying round and round at such a pace that the eyes could hardly follow them." Will fact turn out to mirror fiction? We shall see.

Three other videographers, Tom King of Phoenix, John Bro Wilkie of Los Angeles, and Tim Edwards of Salida, Colorado, have all taped an equally strange phenomenon that may be related in some way to what the Escamillas have found.

The method they use was evolved independently by Wilkie and Edwards, then utilized successfully by King as well. This discovery began with the observation that objects become much more visible in the high light levels that occur near the disk of the sun. If the disk itself is blocked out, the video camera can record detail from this area that cannot be observed with the naked eye for any length of time. I must add that doing this also challenges the ability of a video system to make accurate recordings, and many bizarre images of ordinary objects can be obtained this way. But the images I will discuss here have, frankly, surprised me. I believe that I am, so far, the only

person to have extracted this particular material from these videos, so it's perfectly possible that somebody else will be able to demonstrate that they bear some relation to the ordinary world. If not, then the tapes that have been made by these men, especially some made by Edwards in the fall of 1995, are quite simply the strangest video recordings ever made.

On an August afternoon in 1995, Edwards, a Salida, Colorado, restaurateur, had gone outside with his six-year-old daughter to talk to two men who were working on his roof. As he talked to the workers, his daughter kept trying to draw his attention to something in the sky. Finally, he looked up and saw something quite unusual.

Fortunately, he thought to go inside and get his video camera. What he filmed was a glowing strip in the sky that had rectangular areas of light flowing along its surface. Although to the naked eye it appeared to be a structured object like some sort of gigantic cylinder or platform, on the video recording it presents an almost organic appearance. Jim Dilettoso of Village Labs was able to estimate its altitude at seventy-five thousand feet and its length at approximately one mile.

Less conclusive were the efforts to determine what it was. Some researchers concluded after a look at the tape that it was sunlight reflecting on a kite string. But the object was reportedly seen by observers as far away as California, and seventeen witnesses have been documented throughout Colorado. Additionally, a precisely similar phenomenon was taped on November 8, 1990, in Krasnodar, Russia. For these reasons, the kite string theory is probably not worth pursuing unless its proponents can duplicate the phenomenon using this medium.

If this is something that can be explained, then practically the only thing it could be might be a bizarre exhaust trail left by a high-flying secret aircraft. It is difficult to explain the pulsations of light passing down the object in terms of condensation from a known aircraft's exhaust system. There is alleged to exist a type of engine that emits detonations in series that would produce a contrail looking like string of pearls, but, as with any contrail, this would extend if it was still being ejected. This object does not extend. Instead, it remains at a discreet length as it moves across the sky.

Then perhaps it is a cloud formed by such an engine during a power maneuver, something like the thick contrail that results when a fighter briefly engages its afterburner at high altitude, leaving an isolated segment floating in the sky.

But the only thing moving in connection with this material is the pulsating light. If this is an isolated segment of contrail, then where is the flow of energy coming from that is causing this movement? As it is not getting longer, it is not still being produced by the aircraft that generated it. Thus there can no motive power to transmit the pulses along its surface.

In addition, each pulse moves down its length in less than a second, meaning that the pulses are traveling at a very high rate of speed. It is hard to see how they could represent emission from any sort of engine, given that the forward velocity of the plane or rocket producing them would also have to be exceedingly high. So the greater likelihood is that the object is unknown and the lights are some sort of sequential flashing process.

Almost as if it was a kind of beacon, it got Edwards to begin searching the skies. After the object was shown on television, he was contacted by Tom King, who also began using the method of taping into sunglow. Along with Wilkie, these men have taped for many hours and produced much anomalous material. After their efforts came to my attention, I contacted them, and they kindly consented to give me copies of their tapes. On a first look, these appeared to me to be tapes of commonplace objects that had been distorted by speed and extreme lighting conditions. Nevertheless, I watched carefully. What I hoped to do was to identify the seedpods, insects, birds, and dust particles that I thought I was seeing, so that I could explain the phenomenon.

The material that I was viewing on Edwards' tapes appeared to be in essentially three areas of sky. There was very close material, which moved at quite high speed. This took the form of white, blurry objects that raced around in the sort of tight trajectories that might be associated with blown material like seedpods. Farther out, there were racing balls of light; these, I thought, might be insects or birds distorted by speed and high light levels. There were, at this level, also shadowy objects racing past and flares of material that appeared to be blowing spiderweb.

Initially, the objects that most arrested my curiosity were higher than any of these. These were cylinders that seemed, because of their distance from the camera, to be moving slowly across the sky, as if with the wind. They were not drifting, though, but always moved in a straight line and always in the same direction.

I accidentally hit the wrong button on the VCR and made a surprising discovery. The frozen frame presented a radically different and unexpected picture. The flying bits of fluff had a very unusual structure to them. As I

began moving through the tape frame by frame, I realized that I was looking at something far more interesting than I had assumed. First, the cylindrical objects that I had thought were birds or planes now revealed some surprising features. As I advanced the frames, I saw that dark surfaces were rotating into visibility, then disappearing again as the objects moved. These surfaces displayed blocky designs of dark and light. Both the objects and their motion appeared to be similar to the video made by Demetrio Feria at the Mexican national air show in 1992.

Then I observed one of the closer objects. I had assumed that it was a bit of dust flying past near the lens of the camera. What I saw was astonishing: a segmented object looking like some sort of flying rope with a series of elongated domes on top. The rearmost segment had an opening at its end that appeared to be ejecting violet material that looked something like the emission recorded underneath the object sighted over Mexico City and Puebla in July of 1991.

I could hardly believe what I was seeing. I am not easily able to accept strange things like this at face value, and my first thought was that I might be looking at an image of a flying insect that had been severely distorted. When I showed this to San Antonio video producer Leonard Buchanan, his impression also was that the segmented appearance was caused by the object moving so rapidly that more than one image of it appeared on the same frame. This is not an uncommon phenomenon in video.

The trouble was for me that insects and birds on the tapes were clearly visible. In still frame, enough detail could sometimes be seen to identify species. So what species was this? Even assuming that there was only one segment actually present, what was it—a seed-pod? It seemed to be moving extremely fast, but without knowing how exactly far it was from the camera, speed could not be determined. It could not have been fewer than fifteen feet away, because the lens was set to focus at infinity. Any closer, and it would have been out of focus.

The tapes were made by aiming the camera just above the edge of a roof, which was used to block out the disk of the sun. The angle of the shot was so low that the roofline is visible in the bottom of the frame as a dark, straight line.

Lip compression is a phenomenon that causes wind to speed up as it passes an edge. This is why eaves howl during a windstorm. Could the objects have been subject to winds that were sped up by lip compression? Certainly they

could, and maybe that was the cause of the rapid motion.

The problem with this is that the objects move in many different directions, often making U-turns in the air. They do not circulate like clouds of dust or flocks of midges and mayflies caught in small vortices. In fact, they do not move as if they are being blown by wind.

They take a number of forms. The most common does not appear to be a segmented shape that is repeated, but rather a pair of twined cords. Though some of them appear to be emitting violet material, most of them show no evidence of motive power. They have no wings and do not function like any sort of flying craft that we might be familiar with, including conventional UFOs. Like the Escamillas' rods, they seem more like some sort of unknown life-form than any conceivable air or space craft.

The last form that I observed was by far the most bizarre. My best efforts at explanation did not offer even a suggestion of a conventional alternative. This phenomenon appears to occur in the middle to far distance. There are two observations. The first is a cylindrical object that transforms just as it leaves the live area of the tape into something with two appendages and a blunt triangular wing. The transformation takes place over only three frames. The object then leaves the live area of the tape, and no more information is thus available.

A second object appears in the lower right corner of the screen, moves upward toward the center of the live area, then takes a curving dive and disappears. At first this object looks like a tiny flying man. On closer observation, it appears to have four equilateral oblong appendages, squared and possibly segmented. They are slightly darker on the flat ends, suggesting the possibility of shadow visible in a hollow interior. There is nothing to indicate the presence of a head.

The object flexes in its dive, as if it is pliant and under some sort of muscular or other tensioning control. It then leaves the live area, and there is no more information to be gained. At normal speed, these objects are mere blurs. Only by looking at them frame by frame can the detail be seen.

Another amazing object has been taped by John Wilkie over a house in Los Angeles. It is visible only in one frame of the tape. It appears over the roof of a house and consists of three visible segments that look something like streamlined crab shells. Their curving rear areas appear to be open, and they are connected together by a black, ribbonlike spine.

What is it, and what are the other forms that have been recorded? UFO

researchers describe them in terms of aliens and spacecraft, but that is only one theory. They are not visible to the naked eye and so might be a newly discovered phenomenon that has been present for a long time. If this is the case, then its presence offers a rich new source of information and insight into life and the world.

Because the evidence has been presented by amateurs in the context of the UFO debate, it has never been seriously examined by science. But the phenomenon appears to be quite real, and therefore any culturally induced hesitancy of this kind would seem to be inappropriate and irrelevant. The fact that the objects are observed in so many places and do not appear hard to tape suggests that they are rather common. Obviously, something like this is readily accessible to scientific study.

It is possible to speculate that something as complex as our atmosphere might harbor undiscovered life-forms, especially if they leave no spoor or other signs of their presence and are not visible to the naked eye, as would seem to be the case here.

It is not enough, though, to concentrate on only one level of the phenomenon. To identify what it is, it would seem that the whole array must be included, from the high-altitude cylinders to the web-like arrays to the middle- and low-level material.

If it is a single phenomenon, though, then what might it be? Surely no single creature would appear in so many different forms at the same time. There are, of course, plants with radically different male and female components and colony insects with many different forms. But there is something about this whole phenomenon that seems to fight the conclusion that it is, in any expected sense, a simple life-form of some kind.

It is not to be expected that alien life will be easily accessible to understanding. It may operate according to principles that are unknown to us and function according to logic that is difficult for us to see or anticipate.

We have enormous problems communicating even with terrestrial animals on their own terms. We understand only rudiments of the language of dogs and know little about how the world appears to them. Animals with complex languages, such as dolphins, offer us almost no access to their minds. Even more complex aliens may be expected to be correspondingly harder to understand.

Could we, then, be looking directly into the eyes of aliens when we look at this array of phenomena? On August 31, 1997, John Walker published a

fascinating series of speculations about this subject on the Internet.^[12] He hypothesizes that people report the bewildering variety of objects that they do “because they’re living, space-dwelling creatures.” He goes on to suggest that they might have originated as planetary organisms and thus congregate near planets and on them to carry out mating and reproduction, much as migratory turtles do on certain shorelines and islands. “Having evolved from originally planet-bound life, they need the environment of Earth (matter/gravitational field/etc.) to reproduce, just as toads and other amphibians must return to the water to bear their young.” He further suggests that the possible presence of aliens might be due to the fact that they are “passengers on rather than builders of the craft,” in the same sense that we use horses, and therefore that the aliens themselves may have no more idea of how their “craft” work than the average horseman does of the life that animates his mount.

Although these are only speculations, they do illustrate the wonderfully imaginative thinking that would potentially sweep science and society as we attempted to come to terms with the true weirdness of the UFO and close encounter phenomena.

But before we jump to conclusions about such matters, it would seem sensible to descend a little deeper into the labyrinth of UFOs—whether they exist, what powers them, and what sort of response humanity may already have mounted to their presence. To do this, we must go to the only part of space that we have even begun to colonize, the near-Earth orbital environment. There we will find one of the most interesting, controversial, and ignored mysteries of modern times.

Chapter Five

Never a Straight Answer

On September 15, 1991, just as the Mexican phenomenon was beginning, an array of unusual objects appeared on a videotape made aboard the space shuttle *Discovery* during mission STS-48. This video was recorded off the live public feed being broadcast from the shuttle by NASA Select TV by Donald Ratch on an ordinary VHS video recorder.

The videotape was made from output from a camera in the shuttle's payload bay between 20:30 and 20:45 GMT near the west coast of Australia. It shows approximately a dozen objects moving in different directions in the area of the orbiter. One of these objects, which has come to be called the "target," appears near the air horizon and is first observed moving in a path that follows the horizon. The objects suddenly stop, then an instant later there is a flash. Immediately, the objects move off at high speed on different trajectories. Two seconds later two streaks come up from below, moving through the area previously occupied by the "target." It has been hypothesized that the two streaks are pulses of energy from some sort of a beam weapon.^[13] Previously, that was only a hypothesis, but as will be seen, it has recently gained some surprising support. Shortly after the event, the shuttle camera pitches down, revealing that there are several more objects, one triangular in shape, moving below the orbiter.

There was considerable controversy about this tape. It was shown on national television and has appeared in UFO documentaries. Responding to congressional inquiries, NASA stated that "the objects seen are orbiter generated debris illuminated by the sun. The flicker of light is the result of firing of the attitude thrusters on the orbiter, and the abrupt motions of the particles result from the impact of gas jets from the thrusters."^[14]

Because this explanation was so easy to believe and the alternatives are so incredible, Kress's statement was accepted without question by the press and received little scientific criticism. The controversy was effectively ended. But, in fact, NASA's explanation does not appear to have been a correct one, and scientists who did not agree with it have presented a powerful case that it was wrong.

Professional analysis of this tape has come from two scientists, one a physicist, Dr. Jack Kasher,^[15] and the other an imaging specialist, Dr. Mark J. Carlotto of TASC, an advanced photo analysis group in Reading, Massachusetts.^[16] Dr. Kasher was a NASA consultant in 1991, and worked on the Strategic Defense Initiative (Star Wars) from 1972 until 1992 at the Lawrence Livermore National Laboratory.

Mr. Kress stated that the flash of light was the result of the firing of attitude adjustment jets on the shuttle. (The Orbital Maneuvering System/Reaction Control System [RCS] provides thrust for changes in the speed and attitude of the shuttle.) The orbiter has three groups of these thrusters—one group each in pods located on the left and right sides of the aft fuselage and another group in the nose—but at the time of the event, no such thruster firing was ordered by mission control. About two minutes after the event, however, mission control did order such a firing, to initiate a movement preparatory to a supply water dump.^[17] This maneuver took place fifteen minutes after the event.

According to NASA, the movement involved was six degrees, a change of angle that would have been easily observable on the tape, as the air horizon (the top of the canopy of Earth's air) and the ground horizon are both clearly visible, and so is a star. And yet there is not the slightest change in the shuttle's attitude in relation to the horizons or the star after the flash. Carlotto observes that, following the claimed thruster firing, "There is no significant change in the direction of M2" (his designation for the star). He continues, "Yet the apparent motion of all objects including the star must change if the attitude of the spacecraft was altered by the thruster." He concludes, "The lack of any change in attitude following the flash implies that the flash was not due to a thruster firing."^[18]

Given that mission control did not order such a maneuver, and the shuttle's position did not change, it seems impossible to dispute the contention that the flash was not caused by the firing of attitude adjustment jets. So that part of NASA's explanation is incorrect.

Speaking for NASA, Mr. Kress further claims that the change in the trajectories of the objects takes place because they are hit by gases from the thrusters. If this was the case, the "target" would have moved in an entirely different manner. For example, the firing of a thruster could not have caused the object to stop at all, let alone half a second *before* the flash that represented the supposed firing. Carlotto's analysis of the tape agrees with

my own observation. He states, “Prior to the flash...the object slows and seems to stop.”

NASA also claims that the objects were “ice particles,” which were small and close to the shuttle. But the aft bulkhead camera that took the pictures was focused on infinity when they were made. This is conclusively proved by the fact that the camera pans down to include a view of the shuttle’s open cargo bay door immediately after the sequence of events under discussion. At no time is there a break in recording, so the camera was not turned off and then returned to service at another focal setting. What happens as the camera pans down is that its focal system detects the nearby cargo bay door, and the focus is then seen to move off infinity to a closer setting, causing the cargo bay door to come into focus.

In addition, it appears from Dr. Carlotto’s analysis that the “target” object first appears and moves below the air horizon—in other words, it was coming up out of the air canopy, not moving on a trajectory near the orbiter as it must have been doing if it was an ice particle ejected from the shuttle itself. “A slight tail at the beginning of the track [of the “target”] suggests that the object may be moving up and out of the atmosphere.... Instead of changing abruptly as one would expect of a particle suddenly coming into sunlight, the brightness increases gradually over a one second period.”^[19] He contends that this is more consistent with a bright object coming out of a cloud layer within the atmosphere, or possibly a very large and distant object moving from shadow into daylight. However, Carlotto states in his paper that he cannot “speculate on what they might be.”^[20]

The combination of these observations and the fact that the camera was set on infinity when the “ice particles” were recorded suggests in the strongest terms that this part of NASA’s explanation is also wrong. In addition, Carlotto analyzed the appearance of ice particles that were released in the separation of the Apollo Command Module from the LEM/Saturn V third stage in an earlier Apollo mission. He found that all of these particles moved in the same trajectories, and that their light levels changed at a rate of seven cycles per second as they tumbled, in contrast to the half-a-cycle-per-second rate of the objects in the mission STS-48 video.

After his analysis, Dr. Kasher concluded, “Once the idea of ice particles has been discarded, there aren’t many options left.”

Let’s examine the sequence *as if* these objects are not ice particles but some unknown form of material. Here is the sequence of events: The dots of

light are moving in various different directions. They stop. A moment later, a flash occurs. After a further half-second pause, they begin to accelerate in directions that are different from the routes they were taking before the flash. The main object proceeds away from the area, accelerating at very high velocity. Then a fascinating, indeed disturbing, phenomenon becomes visible, when the two streaks of light come up from below, moving through the frame in approximately the same area just previously occupied by the most prominent piece of material.

Dr. Kasher says, "One possible explanation is that we were firing at them."

Could such a thing be true? If so, then it could mean that part of the defense system possesses technology far in advance of what is publicly known and is actively engaged in hostilities against whatever those dots of light represent. Conceivably, it might also mean, then, that the horrifying video referred to in Chapter Four of the alien apparently dying while under interrogation is real. If so, it would certainly be clear why the intelligence community and the military would be protecting this secret so obsessively.

If it is not a video of ice particles, then the following narrative would appear to explain it: A group of unknown objects are approaching the orbiter. They are targeted. But they detect the targeting process. They stop, presumably in order to determine the intended trajectory of some sort of incoming fire. A flash of light takes place, which must have revealed this information, because they then move off at high speed on new trajectories of their own. All of this takes place in fewer than two seconds. A second later, two pulses of light come up from below, moving through the area where the "target" object was previously maneuvering.

If this is a correct analysis of this tape, then it suggests that an attempt was made to destroy the target object or to warn it away from the shuttle by parties in possession of a sophisticated weapons system that has the ability to locate and fire at targets in near space.

Could such a weapon be possessed by the United States and actually have been in the area that the shuttle was passing through at the time this event took place?

The shuttle was on a course north of Australia and near its west coast. There is a large American installation at Pine Gap near Alice Springs in central Australia that the Australian government has told its citizens is a "research facility." When the incident took place, the shuttle was between twelve hundred and fifty and fifteen hundred miles northwest of Pine Gap.

The facility is managed by the supersecret U.S. National Reconnaissance Office, ostensibly a signals-acquisition organization loosely connected to the Air Force but reporting to the CIA. The installation is as well-known locally as Area 51 is in the United States, as the source of numerous strange flashes of light and UFO sightings. Some of this activity was videotaped at Alice Springs on November 26, 1996, and shows lights maneuvering in a manner inconsistent with aircraft.

Unfortunately, video of moving lights is hardly proof of anything, and the fact that they were taken near Pine Gap does not mean that they had anything to do with that facility. Rumors about Pine Gap are no more conclusive than rumors about Area 51.

However, Pine Gap is most certainly not a research facility. It is, in fact, America's largest satellite intelligence-gathering facility and is one of the largest ground satellite stations in the world. It collects data from a group of satellites manufactured by TRW Space Systems. Visible on the surface at Pine Gap are eight large radomes and about twenty other buildings. The guidance section, housed in a fifty-six-hundred-square-meter facility, is divided into a Station Keeping Section that controls satellites on geostationary orbit, a Signals Processing Section, and an Analysis Section.

The base is serviced by the U.S. Military Airlift Command, which schedules two C-141 Starlifter flights a week, transporting parts and supplies to the facility and probably hard data in the form of tapes or other media back to the United States. The facility is provided with high-frequency communications operating under the International call sign VL5TY and transmitting encrypted communications to Clark Field in the Philippines. KW-7 and KW-13 cryptographic machines are used for teletype and voice encryption to TRW facilities in Redondo Beach, California, reaching the Communications Vault in Building M-4. About half of the daily Pine Gap signals traffic is directed to CIA HQ in Langley, Virginia. The rest goes to the National Security Agency, the National Reconnaissance Office, and the Pentagon.

Whether Pine Gap was involved in the events that took place during shuttle mission STS-48 is unknown. The available hard evidence is on the shuttle videotape.

If the events depicted on that tape involve military action, then a targeting effort began to be made from the ground station sometime after the "target" moved above the horizon and began to approach the shuttle. This targeting

process would have relied on a high-intensity return from the target to enable final acquisition and aiming of the weapon. The pulse of light observed would thus have been designed to reflect against the objects, providing the ground-based targeting system with an accurate fix during the instant of reflection.

This would mean that the targeting system probably would be optically based, in other words, a telescopic system. So does a laser weapon targeted by an optical telescope exist in the American weapons inventory?

Actually, one does.

The Mid-Infrared Advanced Chemical Laser (MIRACL) is an antisatellite and antimissile laser defense system currently under test at the army's High Energy Laser Systems Test Facility at White Sands, New Mexico. This is a ground-based laser designed to emit pulses of light energy sufficiently powerful to destroy an incoming missile warhead or an orbiting satellite.

It is intended to be targeted by a telescopic system also under test called the SEALITE Beam Director. This consists of a large-aperture (1.8-meter) gimballed telescope and optics that are designed to point the MIRACL or other laser beam weapons onto a target. It works by optically locating its targets and then feeding their coordinates into the laser beam guidance system.

Colonel Philip Corso, a retired United States Army intelligence officer, in his controversial book *The Day After Roswell*, suggests that such a weapons system has been functional since 1974. He claims that a high-energy laser based system has been developed that can shoot down alien spacecraft.^[21]

On August 28, 1997, it was announced that the army was exploring the idea of testing MIRACL against a sixty-million-dollar air force satellite. An article that appeared in *The New York Times* on September 1, discussed the various political issues that have arisen connected with such a test, primarily whether it might trigger a continuation of the arms race, as other countries struggle to match America's growing ability to engage in near-space military action.^[22] On October 23, 1997, news reports suggested that the laser had malfunctioned and not blown up the satellite.^[23] Given the project's political sensitivity, however, and the level of security involved, there is no way to tell if this is true, or whether this is the only weapon we possess with these capabilities. The *Times* article also said, "The United States has no demonstrated way of shooting down satellites, though experts speculate that it may have secret ways that could work in an emergency."

Colonel Corso claims in his book that alien craft tried to disrupt our space program for years. “They had buzzed our capsules traveling through space, interfered with our transmissions, and pulsed us with EMP bursts.”^[24] Electromagnetic pulses are bursts of energy that can short out electronic components such as computer chips and guidance systems and would definitely be a serious threat to our spacecraft and satellites.

If this sort of hostility has actually been taking place, then the events recorded by the shuttle’s camera may make a very different sort of sense. It could be that the objects were positioning themselves to act against the shuttle or to threaten it in some way.

If so, then what the onboard camera recorded was the targeting, acquisition, and firing of a high-speed weapons system that, although it did not hit anything, did cause the objects to leave the area.

Unfortunately, there is no single piece of evidence that overwhelmingly confirms that we have a record, in this videotape, of military action that was triggered when these objects came too close to the *Discovery*. And even if that is the case, a substantial amount of further evidence would be necessary before we could be certain that the action involved our own military. If one alien force is here, why not another that is hostile to it?

If the objects had been identifiable as satellites, missiles, or spacecraft owned by a hostile human power, there would be no question but that this is a record of military action against them.

Beyond the bare facts, though, there is nothing more that can be concluded, except that NASA has come through this particular test with its usual flying colors: Never A Straight Answer has once again lived up to its nickname.

What if there is a secret war being fought against an alien presence? One thing is certain: It has to be the least visible war in history and the least dangerous to civilians. We certainly aren’t getting blown up, and no *Independence Day*—style invasion seems to be happening.

Not only that, the aliens display remarkable strategic innocence, even stupidity. The reason is that they must have sat passively by for at least fifty years while we painstakingly struggled toward a level of technology with which we could successfully oppose them. It is as if human armies were in the habit of waiting to attack until they were sure that their enemies could defend themselves.

If we are fighting, then the mere fact that we *can* fight means that the aliens are not hostile. If they were, they would have obviously attacked us

and won at least a generation ago. There aren't any reasons why hostile aliens would wait for us to catch up technologically before engaging in battle. But there are many that might motivate friendly but misunderstood ones to act in just this manner.

I would be astonished if the United States had gotten itself tangled up in some sort of a secret war with aliens. Even given the effectiveness of the national system of secrecy, it is hard to see how a multibillion-dollar effort like this could be completely concealed for generations.

But if aliens appeared during the early years of the Cold War, I wouldn't be at all surprised to find that the United States had greeted them with gunfire and took an essentially hostile stance, one that included the firing of an occasional warning shot.

Whatever rationale might have evolved to justify such a policy internally might be hard to sell to the public, for the simple reason that it is likely to be wrong. Otherwise, why haven't the "hostile aliens" blown us all to hell already?

If they are not hostile, then they would have three options. One would be to overpower us. Another would be to leave. The third would be to wait until we calmed down, while engaging in a slow program of acclimatization.

The United States, having made one of history's most spectacular mistakes—a mistake great enough to cause the public to demand an end to the whole system of secrecy behind which the policy was evolved—would have an overwhelming motive to continue hostilities, especially if they were what was preventing public interaction with the aliens and, along with it, the revelation of the mistake.

The visitors, seeing that it was not the people but the leaders who couldn't handle their presence, might well take their case directly to the ordinary citizen—thus showing up in our bedrooms in the middle of the night, as they appear to have done.

But before we descend too deeply into speculation, perhaps it makes some sense to take a look at the possible technology of the UFOs and see if their flight characteristics emerge out of the world of the imagination, or if they make any aeronautical sense. What are these things flying around in the sky? Can they really be spacecraft?

Surprisingly enough, these seemingly magical objects have already been carefully observed by scientists with outstanding credentials, with unexpected results.

Chapter Six

Hidden Hardware

The most extraordinary book ever written about UFOs was finished in 1974, but not published until 1995, after its author's death. Paul R. Hill's *Unconventional Flying Objects* takes an aeronautical engineer's look at the UFO, with startling results.^[25]

But why was it hidden, even by Dr. Hill himself, for so many years? I was not able to get an answer to this question, but it certainly suggests cover-up, especially because of the overwhelming importance of this book. We owe its publication to his daughter, Julie M. Hill, who found it among his effects. If it had been published in 1955 or 1965 or 1975, it would have caused a massive international sensation. But its publication in 1995, only after the doctor had died and the UFO question has been publicly declared moot, has hardly been noticed.

There is a fascinating book mentioned by Dr. Hill that examines the way science assimilates new and unexplained phenomena, called *The Structure of Scientific Revolutions*, by Dr. Thomas S. Kuhn. Kuhn explains that theories that supersede established beliefs enter science when tools and methodologies are devised that end any controversy about the data that inspired them. The scientific establishment resists the new information as long as it can. Often, it rejects the new ideas so completely that the case is closed and the matter is forgotten. But the data, in the end, always prevail. In this sense, the treatment of the UFO phenomenon has been typical of what happens when new data challenge current beliefs. Applying Kuhn's theories, it seems likely that the UFO phenomenon is about to be integrated into science despite what currently appears to be almost total rejection.

The degree to which science will reject knowledge at any given time is dependent on how remote it is from what science already accepts. As this whole field is extremely remote, to say the least, it isn't surprising that the abundant evidence—at least of strange flying objects—that has been accumulating for fifty years continues to be ignored.

On the other hand, even the most improbable evidence will be accepted if it confirms theory. For example, the “omega minus” particle became accepted

in physics even though there were only two events in two hundred thousand trials that indicated that it was real. By contrast, experiments, for example, in psychic transfer do not enter the area of accepted knowledge no matter how many successful trials take place.^[26]

When Galileo was one of the few people with a telescope, his theory that Earth and the planets orbited the sun was resisted to the point that the church, acting on the advice of some of the most qualified scientists and theologians of that era, almost arranged to have him burned at the stake as a heretic. But as the number of telescopes kept growing and observer after observer saw for himself or herself the truth of Galileo's claims, his theories were gradually adopted.

Like Galileo's data and other controversies of science such as the notion that meteors fall from the sky, the theory of gravity, and whether electricity and then radio actually existed, the UFO phenomenon will be recognized as soon as there are instruments deployed that can reliably acquire the relevant data. These instruments do not have to be invented. The video-recording equipment, high-speed cameras, telescopes, and other needed devices already exist. The key is that they be made use of by qualified scientists, so that a data stream can begin.

As compelling as the amateur video is, it is not a scientific data stream. In addition, the unpredictable appearance of UFOs makes it harder, but by no means impossible, for this phenomenon to be captured professionally. This is because UFO appearances seem to run in waves, and the deployment of sufficient resources during these periods would be likely eventually to bring results. In addition, the odd phenomena recorded by the Escamillas, Edwards, King, and Wilkie seem more general and persistent than ordinary UFO appearances and should thus also be more readily accessible to organized sky recording by atmospheric scientists.

Of course, there will be resistance to any effort to engage in data acquisition of this kind, emanating from the same kinds of sources that Kuhn identifies as being centers of resistance in the past: established authorities (whether civil or institutional to science) who have committed themselves to the idea that the phenomenon is nonsense.

People who have made a professional commitment to a certain theory are threatened when that theory is challenged. In the case of this phenomenon, both science and the press have so completely committed themselves to the idea that the whole area of study is without value that they can be expected to

continue to resist fiercely, even in the face of overwhelming evidence that a real mystery is present. If the history of science is any indication of what will happen now, there will be continued resistance to the funding of data acquisition, despite the fact that this would now seem to be outrageously irresponsible. If the process of assimilation of these data is being further deranged by some sort of a government cover-up, then the battle will be all the more fierce and difficult.

That such a cover-up exists is suggested by the fact that Hill did not publish his book during his lifetime. It is clear from statements he makes in it that it was always his plan to publish after his retirement. But instead, he seems to have been unable to do this, and the project had to wait until after his death. In his introduction, written in 1974, he commented that “at last, the UFO witness, long the butt of ridicule from all sides, had some of the heavy guns of science on his side for a change.” He made this statement because scientists such as atmospheric physicist Dr. James E. McDonald, Professor James Harder, Dr. J. Allen Hynek, and Dr. David Saunders were vociferously disagreeing with the Air Force’s then recently published Project Blue Book conclusion that the UFO phenomenon was not worth studying. Clearly, he thought that science was changing its position more than twenty years ago.

But this did not happen. In part, it was probably due to some sort of government action undertaken within the scientific community in defense of the Air Force and its Blue Book conclusions. Possibly, Dr. Hill’s own failure to publish his book came about as a result of action of this sort. Also, however, the failure of science to respond to the questions raised by such powerful and well-credentialed professionals as Dr. McDonald was due to its continued inability to acquire useful data. Worse, such data as had been acquired were ignored and even suppressed, and the officially sanctioned fictions promoted by Project Blue Book went unchallenged.

Dr. Hill was employed as an aeronautical scientist throughout his career, which began in 1936 with a professorship at the Polytechnic College of Engineering in Oakland. He was then assigned to the Langley Research Center, first under the National Advisory Committee on Aeronautics (NACA), and then under NASA when it formed. He was there from 1939 until 1970, retiring with an Exceptional Service Medal for Outstanding Scientific Leadership.

The reason he was interested in unidentified flying objects was that he had two sightings that suggested strongly to him that the phenomenon was real

and caused him to set out to understand what he had seen. On July 16, 1952, his first sighting took place. It was made during the 1952 UFO flap, arguably one of the most dramatic theatricals of this type that has ever occurred. Dr. Hill's sighting is mentioned in Major Edward Ruppelt's *Report on Unidentified Flying Objects*.^[27]

The Langley Research Center where Hill worked was in Hampton, Virginia, in the middle of an area full of defense installations and "almost surrounded by water." On July 16, 1952, two Pan Am pilots made local headlines by reporting a sighting from their plane over Hampton Roads. The moment he read the news, Hill was excited. He had already noticed the tendency of UFOs to reappear in a given area during a "flap." He reported that he thought, "This is the night. They may be back." He went to the area where the sighting had been reported in order to attempt an orderly gathering of data, something that cries out to be done today.

At 7:55 in the evening, he and a friend parked their car on the Hampton Roads waterfront and waited. At 8:00 a flight of UFOs came up over the southern horizon. They were moving in parallel, at an estimated speed of five hundred miles an hour "at what was learned later by triangulation to be 15,000 to 18,000 feet altitude." Hill described them as glowing amber and determined that they were spheres thirteen to twenty feet in diameter.

As an aeronautical engineer, he was in a position to make an entirely professional observation, which he proceeded to do. It seemed almost as if the craft were displaying themselves to Dr. Hill, as they came to a stop in the air directly over his head. He observed them to "jitter" slightly, a description that seems reminiscent of the motion observed in the object that was videotaped in Mexico City on August 6, 1997. They then leaped one ahead of the other faster than the eye could follow—something that was also recorded in the Fuentes video in July of 1991. Moving a little off the zenith, they began revolving in a horizontal circle "at a rate of at least once per second," then shifted their revolutions to the vertical.

Hill described himself as being "awe-stricken." As an aeronautical engineer, he knew the extraordinary flight capabilities that he was observing.

Soon a third sphere came from the same direction as the first two and joined them. As they crossed the lower Chesapeake Bay, a fourth sphere appeared, coming down the coast from the direction of Norfolk, Virginia. The objects disappeared to the south.

Dr. Hill followed up this observation by investigating whether anybody

else in the local area had observed it. He found that the Norfolk paper had reported the object that he had seen coming from that direction. It had been observed by a bus driver and his single passenger in Norfolk just a few minutes before it appeared at Hampton Roads. In addition, a ferryboat full of passengers waiting to go from Hampton Roads to Washington had seen the whole incident. The story was carried on the morning of July 17 by the *Newport News Daily Press*, with a detailed description from an Air Force captain and fighter pilot.

Dr. Hill investigated why local aircraft spotters had reported nothing. (In those early Cold War days, spotters were still employed all over the United States, as a backup to radar systems, to watch for enemy planes.) He got a list of them and visited them individually in their homes. They had all seen the UFOs. He reports, “The head spotter said that he had been instructed by the Richmond Filter Center, operated by the Air Force, to report aircraft, and no nonsense, and so he had said nothing.” It was from them that he obtained the data needed to triangulate the altitude.

He also reported the observation to his boss at NACA, who dismissed his story completely. His report to Air Force Intelligence resulted in a complaint that he should have called Tactical Air Command during the sighting so that they could have tried an intercept.

He then made an interesting comment, especially so in view of what appears to be on the mission STS-48 tape: “At the time, I already had a growing aversion to the Air Force’s attempted intercepts, but why discuss policy at the bottom of the totem pole?” This seems to indicate that he was aware of an Air Force intercept policy, with which he disagreed, and suggests that he had access to policy makers at a higher level than the local Air Force intelligence office. But he did not elaborate.

Through the 1950s, he continually updated his database of sightings, with the result that he began to be able to make determinations about the craft and how they might be powered.

In 1962, he had another sighting over Hampton Roads. It was a cloudy day, and he was in a car, with a broad view through the windshield of the southern part of Chesapeake Bay and the Roads. “Over the southern end of the Chesapeake Bay, I was surprised to see a fat aluminum or metallic colored ‘fuselage’ nearly the size of a small freighter, but shaped more like a dirigible, approaching from the rear.” It was about a thousand feet up and moving slowly. “It looked like a big, pointed-nose dirigible, but had not even

a tail surface as an appendage.” Dirigibles had by then ceased to be operated by the United States military, and the dirigible hangar at Langley was long since torn down. It was much longer than the Goodyear blimp and had no identifying marks.

Any question of its being a blimp then ended, as it began to accelerate “very rapidly and at the same time to emit a straw-yellow, or pale flame-colored wake or plume, short at first but growing in length as the speed increased.” Its angle of attack also rose to about five degrees with the horizontal. Hill calculated that its acceleration across the distance of five miles in four seconds, starting at a speed of one hundred miles per hour, gave it a speed at the point of disappearance into the cloud cover of eighty-nine hundred miles per hour. The g forces involved would have been one hundred times Earth’s gravity, easily enough to destroy any manmade device and kill all of its occupants. Despite the plume of energetic material being emitted, there was no sound.

After his 1952 sighting, Dr. Hill was forbidden by the director of NACA to do or say anything that might create an impression that NACA had any belief or interest in UFOs. The result of this was that he collected data unofficially for twenty-five years, becoming NASA’s backroom specialist on UFOs. It is interesting to note how early present government policy regarding this matter began. Even as it was officially keeping an open mind in the 1950s, one of the primary professional sources of confirming evidence was silenced.

Dr. Hill became a sort of clearinghouse for all UFO reports that reached NASA’s attention. He thus had access to many of the best cases of the era. As a result, he was able to observe films that were made by professionals in the 1950s and 1960s. Among these was a film shot in 1952 by a Navy chief photographer, Warrant Officer Delbert Newhouse, while vacationing in Tremonton, Utah.

With two thousand hours of flying time as an aerial photographer and twenty-one years in the navy, Newhouse is obviously classifiable as a photographic professional with a specialty in reconnaissance. Like Dr. Hill himself, Newhouse appears to have been given a remarkable opportunity to record the operation of UFOs during the summer of 1952.

He was driving down a highway when he noticed some unusual objects in the sky. Immediately aware that they were outside of his very extensive experience, he stopped the car and took out his movie camera. Using a 3-inch telephoto lens and color film, he obtained a good record of the phenomenon.

Because he realized the importance of what he was seeing, he adopted a professional stance. While the disks maneuvered in formation, he held the camera steady. When one left the group, he moved the camera ahead of the object, then let it fly through the frame so that he could get a record of its angular velocity.

Dr. Hill reported that he studied this film carefully, along with fighter pilots and other professionals. Nobody involved concluded that the films were of the usual suspects—aircraft, birds, or stars—or even marsh gas, a favorite debunking explanation at the time.^[28]

So they were judged to be genuine unknowns, photographed by a professional in 1952. They represented concrete evidence, obtained at a level of confidence consistent with scientific demands for professional-level data input. But why did we not conclude, in 1952, that UFOs were what these professionals thought they were: intelligently guided objects? It is hard to see how science ended up in the position of rejecting evidence like this, especially when the Cold War was causing the American military to engage in a frantic search for new weapons of all kinds—unless, of course, the evidence was classified in order to enable a search for the motive power of the craft to be undertaken outside of Soviet scrutiny.

This was an extremely serious issue at the time. In 1949, the USSR had detonated an atomic bomb. In 1953, both countries exploded hydrogen bombs. A top-secret 1953 RAND study, now declassified, showed that American airbases were vulnerable to Soviet long-range bombers.

The United States, Canada, and Britain had a joint flying saucer project called Project-Y, which had as its objective the production of a flying saucer-type aircraft. Dr. Hill worked on the precursor to this project, using his observations of UFO tilt-to-control maneuvers as the basis of designs that eventually became the AVRO Flying Platform. A tilt-to-control design rests on a column of energy—or, in the case of a flying platform, air. It sits level to hover, tilts forward to accelerate, tilts backward to stop, banks to turn, and descends by “falling-leaf” or wobbling motions.

So not only was professional-quality film in the system, it was being used as the springboard for aeronautical design considered important enough at the time to be highly classified. Even though there is little documentation suggesting that propulsion experiments were also undertaken, it is hard to see that this would not have been done. The greater likelihood is that such work was also classified and remains so. The only reason that the flying platform

studies were ever declassified is that they were not successful.

If—fantastically—the data really have been ignored just as the government claims, then we need to stop doing that, because we have at our disposal the capacity both to collect more and to evaluate it and can conceivably deduce how to engineer the propulsion system of the UFO from observation, if there is enough of it and it is properly documented.

Even though Hill did not duplicate the propulsion system, he made significant progress toward an understanding of the technology. He analyzed a number of cases where force-field effects were reported, such as people being affected by sunburns or other physical symptoms, cars stopped due to electrical failure, and, in one case, roof tiles being swept off a house. (A mysterious shutdown of a vehicle's electrical system and engine often seems to take place when a UFO is near.) Not only did he make it clear that the strange maneuvers of the UFOs made good physical sense if it was granted that they were operating within some sort of force field, he also came to the conclusion that this field must be what he called a “direct acceleration field.” Hill proposed that this type of engine would be far better at developing thrust than the heat engine that we have been using for two hundred years. He called it the field engine and suggested that, because of the way the objects repel all mass, not just electrically charged or magnetic objects, that this engine must generate a field that can cancel gravity.^[29]

Dr. Hill also addressed the matter of the plasma that seems to surround UFOs, stating that “there is really no secret as to what this illuminated sheath of ionized and excited air molecules is.” Through an analysis of its characteristics, he identified it as an air plasma. He went on to say that “the ion sheath also accounts for some daytime UFO characteristics such as a shimmering haze, nebulosity of the atmosphere or even smoke-like effects....” This description precisely fits the phenomena observed in some of the Mexican tapes made more than forty years later.

It would seem probable that this plasma is generated by the field engine, and therefore that a correct analysis of the plasma might lead closer to an understanding of the engine. Dr. Hill offered many observations on the possible origin of this plasma, concluding that it must be caused by the ionizing radiation of X-ray frequencies. This would certainly account for the deep burns experienced by the Mexican witnesses who were injured by the August 6 UFO.

Because of the aeronautical behavior of UFOs, Dr. Hill ruled out the

electromagnetic field as a power source. It is not a static field, but one that, as it spreads at ultra-high speed, cannot be concentrated enough to generate useful thrust in the atmosphere.

When he looked at static fields as possible power sources, he found that the motions of the UFOs were consistent with the presence of such a field around them, as anything using a static field will obey Newtonian dynamics when it comes near objects or engages in flight maneuvers.

There are three types of static-energy field that might conceivably hold something up: the magnetic field, the electric field, and the repulsive-force field. In his analysis of which type of field might be involved with the objects, Dr. Hill narrowed his search to the repulsive-force field.

This did not mean that he rejected the many reports of electrical effects, such as the blanking of radio reception and interference with auto ignitions, but rather that he did not believe that these effects were signatures of the primary field that was being used to hold the craft up.

There is a popular notion that the motive power of UFOs must be a magnetic field that opposes the magnetic field of Earth. This cannot be true, because Earth's magnetic field is parallel to the planet only at the equator. Because the so-called magnetic dip increases toward the poles, UFOs would have to maneuver at increasingly extreme angles as they left the area of the equator, and this is not seen to happen. In fact, by the time they reached the arctic circles, they would slide down the angle of Earth's magnetic field and hit the ground unless they greatly increased the power of their internal magnetic field. But this, in turn, would drive the object toward the pole, where it would eventually come to rest.

The question then is, can we determine what kind of force field might be capable of holding these objects up and enabling them to maneuver as freely as they are seen to do on the Mexican videotapes and films such as that made by Delbert Newhouse?

In 1967, Russian physicist Andrei Sakharov published a study suggesting that all of the general relativistic phenomena, including gravity and inertia, among others, could result from changes in the energy of the vacuum brought about by the presence of matter.^[30] This went significantly beyond Einstein's own theory that inertia must be accounted for as a reaction to the gravity of distant galaxies, and raised an implication that, if inertia was actually dependent on the quantum-fluctuation of energy within the vacuum, then it might be accessible to engineering. For example, the vacuum could be mined

for virtually limitless energy, and inertia could be exploited by the very kind of field-effect engine that Dr. Hall had proposed that UFOs were using.

Despite this, it is still difficult to imagine how even a field-effect engine could generate speeds faster than light. If it couldn't, then it would take millennia to traverse interstellar distances.

Lately, there has been a popular notion that a “warp” drive would solve this problem by bending space until any two points were, in effect, joined. Then interstellar travel would be instantaneous. In 1994, physicist Miguel Alcubierre showed in a delightful and elegant paper that one way inertia could be engineered was by expanding space behind a vessel and shrinking it ahead, effectively moving the ship faster than light.^[31] But a recent study suggests that the amount of energy necessary to sustain such a warp is about ten billion times the energy locked up in all the visible mass in the universe.^[32] According to *The New Scientist* of July 26, 1997, Alcubierre commented, “I’m not really surprised. I always thought the amount of energy needed would be ridiculous.” So it would seem that alien fans who assume that the visitors must be hopping around in warp ships might need to find another assumption.

Or will they? In 1941 it was conclusively proved that man could never reach the moon because it would take a million tons of fuel to send a one-pound payload that far. But nobody considered the idea of a multistage rocket that would send only a small part of its total mass to the destination.

Einstein’s general theory of relativity doesn’t prohibit faster-than-light movement. What it prohibits is acceleration across the speed of light. If a particle starts out faster than light, it doesn’t violate the theory. One way around the barrier would be to move through a higher dimension where it doesn’t exist. This possibility, suggested by a branch of physics called string theory, would work by gaining access to higher dimensions, which are compressed inside particles, and using them as a sort of shortcut. But these extra dimensions—there are ten of them—are more than a billion billion times smaller than a proton, and “inflating” them will also take a great deal of energy.

This would be another means of manipulating the vacuum, which, despite the problems outlined by Pfennig and Ford, may still be a key to ultrarapid movement over long distances.

Perhaps one of those phenomena might involve the ability to move through what is popularly called a wormhole, a structure that links two distant points

in space, if it could be kept open long enough. To do this, we must learn to find, store, and manipulate exotic matter that has some very weird properties indeed.

These are almost unimaginably exotic possibilities. And maybe they *don't* work and therefore nobody is moving faster than light. This might mean that the visitors have come here slowly—and the probability that this is true has been the reason that skeptics have, for years, maintained that they could not be here at all. But the mathematics of interstellar travel at even a small fraction of the speed of light do not actually support the skeptical arguments. On the contrary, if there are any interstellar civilizations in the galaxy at all, it is logical to expect that they have already arrived here.^[33] However, if they do not have the ability to travel faster than light, then it is also probable that their journey has been one-way but that they retain an ability to communicate with their home planet using some version of quantum communications that are at present in the experimental phase here.^[34] Such communications would be based on the fact that particles that are said to be in a state of quantum entanglement both respond simultaneously to changes in either one.^[35] Right now, we have been able to observe this phenomenon in particles as far as seven miles apart,^[36] and there is no theoretical reason why this instantaneous “spooky action at a distance” as Einstein called it, would be in any way changed by physical distance. So if visitors have come here slowly, they may well also have carried communications devices containing half of many billions of entangled pairs, and therefore continue to enjoy rich instantaneous communication with home even though it might take quite a long time for a physical journey to be made.

During the time they have journeyed, they will have been victims of time dilation: On the ship, only a few years will have passed, but their home world will have gotten thousands of years older. If their civilization has fallen, maybe they are more deeply alone than we can possibly imagine, and perhaps this accounts for the profound sadness that close encounter witnesses so often report.

There could be other methods of transferring a species across interstellar space that would work even if “classical” speeds are all that can be achieved—speeds in the low millions of miles per hour, for example. In the late 1950s, Dr. John Von Neumann, one of the pioneers of modern computer science, and called by the press “the smartest man in the world,” postulated that there could be created something that has come to be known as the Von

Neumann Machine.^[37] Such a machine would be capable of duplicating the species that created it, traveling the universe until it found a suitable planet.

So even if there is to be no “warp drive,” and even if interstellar travel is extremely slow, not only is it possible that somebody is here, but they might be in close touch with home despite the vast physical distances involved.

Even though the United States government appears to have possessed ample evidence that UFOs were real as far back as 1952, over the 1960s and 1970s it went out of the UFO business completely—at least, as far as the public was concerned. The Project Blue Book committee, chaired by Dr. Brian O’Brian and including Dr. Carl Sagan, declared that the UFO phenomenon did not threaten national security and that the committee could find “no UFO case which represented technological or scientific advances outside of a terrestrial framework.” This was based on an assumption that interstellar travel was just too unlikely, an assumption that appears not to be all that supportable.

In retrospect, it is fair to ask if the committee’s statement was a lie, given the fact that it should have had access to the Newhouse film and should have been aware of Dr. Hill’s work. He was well-known throughout the space sciences community as NASA’s “UFO clearinghouse” by the time the report was published. And yet there is no evidence that he was even consulted. Given his credentials and the records and film he had available, his testimony alone would have been enough to compel the committee to come to an opposite conclusion.

Despite all this, the intelligence community and the Air Force continue to maintain that there is nothing wrong and aggressively to engage in the denial of UFO reports. In 1997, the CIA announced that it had used UFO stories as a cover for early flights of the U-2 spy plane,^[38] but this still doesn’t explain Dr. Hill’s observations or the films he refers to. If UFOs are secret aircraft, then it means that as far back as 1962 we were in possession of vessels that could accelerate from a speed of one hundred to eighty-nine hundred miles an hour in four seconds.

This would mean that a part of humankind has technology so extraordinary that the rest of us are virtually a different, lesser species, confined to an overcrowded, dying planet while the others traverse the heavens like gods.

Frankly, it seems much more likely that UFOs have a nonhuman origin, if only because the technology they displayed back in the 1950s could have been used to bring the Cold War to a quick end, had either side had access to

it, and this did not happen. What did happen—and what is happening—is indistinguishable from what would happen if aliens were not only here but also actively enforcing the secrecy that surrounds them.

As Dr. Hill's book makes clear, the government apparently did have evidence made by professionals that UFOs were real. It even invested in flying platform research that its own creator claims was inspired by observations of them, and at the time this research was highly classified. Whether the aliens—if that's what they are—and the government are hostile to one another, they agree on one thing: Both sides want the public to remain ignorant at the present time.

Now, why would that be?

Over the next two sections of this book, the answer to that question will become clear.

Part Two

CLOSE ENCOUNTER

Much madness is divinest sense
To a discerning eye ...
Assent, and you are sane;
Demur,—you're straightway dangerous
And handled with a chain.

—*Emily Dickinson,*
“Much Madness is Divinest Sense”

Chapter Seven

An Emergency Situation

The evidence that UFOs are flying around in our skies is so extensive that it is reasonable to consider that these unconventional objects are in some way real, and that many of them seem to be under intelligent control.

The immediate question, then, is what sort of intelligence is involved—alien, human, or something else—and what does it want with us?

All sorts of arguments can be made for one hypothesis or another about what the visitors are, but there is little hard evidence to support any of them. What there is consists of a few brief videos of apparent aliens, some of the most famous of which may be fakes.

Nevertheless, it would appear that this intelligence has deposited a most unusual message among us, one that involves a compelling, possibly urgent, mystery. Very often, something happens to witnesses during encounter that leaves a total and complete blank that has been called “missing time.” As somebody who has experienced it myself, I can attest to the fact that it is much more profound than simple forgetfulness. Missing time is different in the sense that you are left with a blankness, as if part of reality has been somehow removed. Memory can be lost, but I doubt if anybody who has experienced missing time would ever consider that this eerie inner absence is anything like normal forgetfulness.

Despite the barrier presented by missing time, an enormous number of people have claimed to have seen visitors and come back with some amazingly provocative memories. Just as waves of UFO sightings had been reported in the 1950s, in the 1960s people began reporting strange and intimate encounters with aliens. These reports have risen until, over the ten years since my own encounter and the publication of *Communion* in 1987, I have received nearly a quarter of a million letters claiming contact, with more than thirty thousand of them offering detailed descriptions of the encounters.

These letters present a completely new picture of the experience, one that has not yet been described by anybody, not the media, not UFO investigators, not the smattering of professionals who have the courage to deal with the subject.

There are three issues connected with these letters. The first is, do they originate in real experience? The second is, how, if at all, does some sort of filtering alter the memories? The third is the great mystery of close encounter, the fact that many witnesses report periods of time within their experiences that involve total amnesia. If we are ever going to understand this, we must bring light to that darkness.

Reading the letters and discovering their extreme strangeness, it became clear to me and my wife, Anne, that almost nothing is known about close encounter. Its complexity, its weirdness, and its amazing frequency suggested to us that we were literally looking at a message from another world that seemed to be relying on the witnesses themselves as its medium of communication.

Scientists tell us that we are dealing with dreams and hallucinations. The press agrees. The public, on the other hand, seems to suspect that the encounters are with aliens. Some behavioral scientists have theorized a perceptual level they call the “imaginal,” which is more substantial than ordinary imagination but less so than physical reality.^[39] But this work has never gone beyond the theoretical stage.

Unfortunately, the lack of authoritative answers has meant that hucksters and false experts have been exploiting public ignorance, and speculative cosmologies have emerged that not only treat the notion that aliens may be present as fact but even include detailed beliefs about where they are from and what they may be doing here. So powerful have these fantasies become that in March of 1997, a cult—most members aging and tired of waiting for “the landing”—committed mass suicide on behalf of their particular system of beliefs.

As we construct a picture of what people are actually reporting, certain things will become clear. First, this is the strangest thing that has ever happened. Second, compared to past descriptions of encounters with fairies, angels, sylphs, and so on, the modern experience is vastly more bizarre. Most of its imagery is, in fact, stunningly new. We are thus faced with the same problem that Montezuma’s observers confronted when they were unable to communicate the real meaning of Cortez’s attack to him until it was too late.

Having been able to examine so many thousands of narratives, I am in a position to construct a general picture of what people actually say about their encounters, which is almost totally different from the picture that has been built up in the press.

Not only that, the natural memory presented in the letters is mostly different from the narratives that emerge out of hypnosis. Even though there is a curious symmetry to the natural recall, it is not the sort of easily understood narrative of abduction and torment that the hypnosis-derived stories suggest.

The one thing that I wish I could do and cannot is to apply statistical analysis to the testimony. There has never been a large-scale study done of the authors of these narratives. It may even be that some of the letters that I quote are hoaxes. But because every letter quoted represents many others that are similar, at least in overall structure if not in detailed content, this remains a representative sample as I could derive without professional support.

What is it actually like to have one of these encounters? From personal experience, I can tell you that there is little in life with more impact. It has been ten years since my first adult encounter, and I still remember it as vividly as if it was still happening. I think about it, remember the sounds, the look of it, the feelings that I had. How many dreams do I remember from ten years ago? None. My dreams have been forgotten, but that encounter is like a memory of meeting the president or being in a plane crash: It has come to rest in my mind as an extremely intense, entirely real experience. Understand, I am not by this claiming that it *was* real, only that it felt real then and it still does.

But what *happens*? What are the visitors like and how do they act? Moreover, if they are really independent entities of some kind, then what are their motives, and is it safe or dangerous to be exposed to them? And where are they from—another planet, another reality, or somewhere in the secret interior of ourselves? Can we ever identify them, or is it that we simply do not have the tools and the language to accomplish this?

One thing is certain: To properly address the issue of what is happening to people, we must abandon beliefs and embrace questions. The first belief to put aside is that close encounter, as we undergo it now, is a continuation of past experience of the unexplained. The fact is that the letters reveal something that is far more elaborate than what has been reported in the past. In this sense, they are like the reports of crop circles. Even though the first description of one dates from 1687, appearing in a woodcut from Hertfordshire, England, titled “The Mowing Devil,” the crop circles of the past were trivial affairs compared to the extraordinary complexity of what appears today. And lest it be assumed that crop circles have been explained,

they have not. Of course there are fakes. They're created every year, but even the best of them are distinguishable from the real anomalies.^[40] The fakes are made with rollers, and the crops show evidence of mechanical crushing and bending. The mysterious ones—in general also the more complex and beautiful—are made in some unknown manner. The crop stems are bent, but not by pressure, because no breakage takes place. Even the gray film that coats growing stalks remains undisturbed, something that would be impossible if any conventional means of bending them was used. This does not prove that aliens are responsible. The use of unknown means suggests unknown origin but does not prove it.

The original descriptions of close encounter are, in a sense, as distinctive as genuinely mysterious crop circles. Even more telling, the arresting image of the large-headed alien with the huge black eyes that now appears throughout our culture was not present until recently. Although there exist a few suggestions in Sumerian and prehistoric Israeli art, and possibly from some cave paintings in Africa, this image was not part of the culture in any really large-scale way before the last few decades, or our art would be full of it.^[41]

The close encounter experience, which has been the subject of a great deal of hysterical speculation and misguided reportage, is surrounded by false information. The first inaccuracy to address is that witnesses report seeing the same thing again and again, suggesting that some sort of organized scientific study of human beings by aliens is taking place. Witnesses do not report the same thing again and again, not even as a response to the lurid imagery that fills videos, books, and television shows.

And yet, dismissing the reports as hallucination doesn't work either. Multiple-witness contacts, which have hitherto been considered extremely rare, are actually commonplace and as such are, quite simply, indistinguishable from descriptions of real events.

It is obvious why the materials sciences have not studied the UFO phenomenon: Until now, there has been no material to study. But it is less clear why the behavioral sciences have not more carefully considered the condition of witnesses. Probably, the reason is that most behavioral scientists assume that the commonly publicized abduction scenario is the beginning and end of the story—and thus that there is no story.

The *Chicago Tribune*, on April 23, 1997, published an article that amounts to a compendium of the commonly held assumptions.^[42] According to the

Tribune article, people who report these experiences are usually disturbed and looking into their past to understand why they feel that way. But the reality is different. Many of my correspondents describe events that have just happened to them, and few describe any mental disturbance beyond the fact that they are very naturally confused, curious, and sometimes frightened by what has happened.

That they are normal people is borne out by a number of studies of the broader spectrum of witnesses, none of which were referenced by the *Tribune*. Nor were all of these studies conducted by researchers sympathetic to the witnesses' claims. For example, in the November 1993 issue of the *Journal of American Psychology*, Nicholas Spanos reports on a study of close encounter witnesses. The study showed that such people are "neither psychologically disturbed nor especially fond of fashioning elaborate fantasies."^[43] He theorizes that many of the encounters occurred during dreams that were mistakenly recalled as actual events, and others involved nightmares associated with sleep paralysis. To an extent this is probably true, but it does not explain the many encounters that start while the witness is wide awake, or the multiple-witness cases.

The *Tribune* article goes on to explain that "hypnosis is invariably the preferred method" in dealing therapeutically with these disturbances, with the result that false memories are elicited. But most witnesses never get near a hypnotist, and in any case, it isn't at all clear that hypnosis is without value as a tool in memory recovery. In the hands of a skilled professional, it can obviously be useful. Unfortunately, close encounter witnesses who are subjected to it are often working with investigators who hypnotize them again and again until their story agrees with an accepted scenario, and do become victims of the misuse of the technique.

We will build our image of close encounter out of the natural memories of people who have had continuous recall of their experiences from the time they happened. Recovered memory and recall generated under hypnosis form a small part of the close encounter narrative actually available and will not be used here at all.

The *Tribune* article goes on to say that the typical abduction story "adheres to a script" involving the humiliation of the witness and featuring a ritual strapping to a table, followed by strange medical experiments and sexual intrusions.

Even if this sort of script were commonplace, which it is not, why would

the UFO stories take such a frightening turn? Interviewed for the article, University of Washington psychologist Elizabeth Loftus suggested that “you get more attention these days if you tell a story with sex in it.” This implies that witnesses are seeking publicity or notice of some kind. In reality, witnesses are so desperate that their anonymity be preserved that it takes requests to about ten people to find one who will allow his or her story to be told publicly—then, for the most part, only if anonymity is strictly preserved. They have good reason for this reticence, too. I know of only a few witnesses whose names have appeared publicly who have not suffered tremendously as a result. Even a brief appearance on the radio or television can lead to a ruined life.

So the picture presented in the *Tribune* of the close encounter witness as a disturbed individual seeking attention, who has been further damaged by hypnosis, would not appear to reflect the vast majority of actual people reporting this experience. That it adheres to a script is deeply believed by some UFO groups. In the Mutual UFO Network’s Information Center in Seguin, Texas, there is an illustration—engraved as if in stone and looking like an Egyptian frieze—of what is now believed to be the typical abduction experience. The human victim is carried by coldly robotic aliens into a UFO, placed on a table, and subjected to horrendous and inexplicable medical procedures.

But we get only a smattering of letters that describe this. The reason that it came to be assumed that this was the whole of the close encounter experience is that it was heavily publicized and is easy to understand: Alien scientists are studying us and exploiting us. They’re cold and uncaring, emotionless, ruthless, and cruel. In other words, they are the enemy, the *other*—not so very different from the cold, often mechanistic imagery generated about outsiders by tribal cultures.

But if this scenario was not true, why would researchers who are making a sincere effort to understand what is going on assert that it represents fact? It is too easy to assume that they are simply incompetent or conspiring to create a false impression. Knowing many of them as well as I do, I feel quite certain that they are entirely sincere, and I would not doubt that there is something useful to be understood from this story. Later, one of the most compelling of the implant cases will turn out to be involved with the very sort of sexual assault that they claim is happening.

And if our close encounters are indeed with aliens, wouldn’t they have an

obvious motive for obtaining sexual and genetic material? If we found creatures on another planet, these are among the first things we would want for study. Additionally, we might very well breed animals from that planet for scientific reasons. Whether or not we would do the same with intelligent species we found there would depend on our approach to the ethical issues.

What appears, swimming up like some shadowy creature of the dark unconscious ocean, is very bizarre, but also—in an odd way—very logical. To enter the world of these narratives is to discover what appears to be the working of a nonhuman mind, or of a part of the human mind so hidden that it has never before gained a voice.

Individually, the stories are incredible. But taken together, they are beyond the incredible. Whether it comes from deep within us or from out among the stars, we are most certainly dealing with a communication from another world. Again and again, the letters present one consistency: The witness is challenged, often with devastating power, to look at self and life in a new way. The challenge cannot be ignored, because to do so is to surrender oneself to a descent into total psychological and spiritual chaos.

This, then, is the threat and promise of the close encounter experience, as recounted by thousands and thousands of witnesses: whether it is to be welcomed, borne, or fought, it must be faced. We must wake up and stop being passive to it. In doing this, we must also face its central mystery: What happens during missing time?

In *Communion*, I theorized that it may be what the force of evolution looks like when it applies itself to a conscious mind. I would suggest that this is probably the best of my many notions about the visitors, especially because it refers only to their effect in our world, a question we can usefully address no matter whether “they” are aliens or not.

Where are they from? Until we can begin to see the real magnitude of that question and cope with its complexity, it is probably better that we don't have any biological remains to lead us to the certitude that they are from another world.

What, after all, might one mean by the term “another world”? Obviously, that could mean another planet upon which has evolved a species with an ability to reach here. But it could also mean another *sort* of world altogether, one that swims in the ocean of our being, or one that contains us in the same sense that the universe contains its stars. It could mean something extraordinary about us as well, after all, could “another world.”

Whatever it means, there is one thing about it that we *can* examine and, if we keep our wits about us, even understand. That is the message that has appeared among us and within us, in the form of all these letters from all these people, each of whom bears a tiny part of the whole enormous document. It is in decoding this message that we will probably find the first true answers about the motives of the visitors and get our first real hints of their true nature.

But it isn't simply a matter of collating letters and extracting "the facts." There really aren't any facts of that sort to be had, not yet. What is available is a sort of tool, one that can teach us how it feels to grapple with missing time and to cope with experiences that unfold on a larger-than-ordinary mental scale.

As we journey through this wild country, we will find again and again that the message points not toward the alien but toward the human: Who are we, who would react as we have to this strange intrusion into our lives and souls, at once hiding from it and displaying ourselves to it like testing adolescents?

If it is possible to find out, it would seem that it must begin with a careful examination of testaments like these.

Chapter Eight

The Journey Begins

It is the wee hours of the morning, and all is quiet. Softly, swiftly, a shadow comes, passing above the houses, moving less quickly now, coming closer and closer yet, stopping, hovering in the night sky above one certain house, blotting out the stars. A sleeper sighs, stirs. Briefly, light shines down on the house. A dog grumbles, the sleeper begins to dream.

And then, eyes fly open, the sleeper sits up, astonishment bringing a cry that is instantly stifled—

The mystery begins: Is the sleeper seeing figures of dream, or real, flesh-and-blood creatures... or perhaps something so strange that we are going to have a hard time even finding words to describe it? Hard, but because of those hundreds of thousands of people who have already tried, no longer impossible. We can weave their descriptions together to create a tapestry, shimmering with strange colors, suggestive of new meanings—a tapestry of language about things that we have not thus far named... at least not in any way that seems deeply true.

The visitors approach in many different ways. Often, it's studied and careful, especially when groups of people have their encounters together. But equally often, there is total, stunning surprise.

"I went to bed late and I reckon my head had been on the pillow for less than thirty seconds, when, for want of a better word, it exploded." Thus begins a testament that exemplifies one of the most characteristic manifestations of the close encounter experience: the overwhelming, devastating, and total assault on the deepest sense of being and worth.

Although the established picture of the experience is that it usually wakes people up and is therefore explainable as sleep disturbance, that is very far from true. Equally often, it starts when they are wide awake: "The next thing I remember is the breath being knocked out of me as I somehow went through the windshield of the car."

Even testimony as incredible as this is not all that uncommon. Incidents while driving usually happen on the highway rather than city streets, and the witness ends up unharmed but in possession of some extremely bizarre

memories. Sometimes, when the encounter ends, the car is found to be miles from where it was when the experience started. Other times, it appears as if no time has passed at all.

Encounters often involve more than one witness and are indistinguishable from real experiences in their structure—although not their content. It was from such encounters, starting in the early 1970s, that the modern image of the alien with the long thin face and huge black eyes emerged.

One day in 1984, two friends were traveling together when "my car was completely immersed in light inside and my hair felt like it was standing up on my arms and head. Even my complete body seemed quickened now at this moment I know something is going on and the light seemed to be centered in behind us. As I started looking over at Fred, I noticed in the rear view mirror an image.

"There sitting in the back seat was this white beautiful creature with very bony thin arms, legs and rib cage, long skinny arms with very long fingers twiddling them while slightly turning its head looking us over. Its eyes were very large and tear drop shaped, its nose and mouth area were small. Eyes were very black, chin was prominent almost like the lower jaw of an ant. I knew instantly this creature was highly intelligent.^[44]

The two witnesses stared at each other in amazement, and then they had a period of missing time. They have discussed the matter often over the years, but without coming to any understanding of what happened to them. It is possible, of course, to dismiss their experience as a seizure-related hallucination that was communicated from one party to the other by suggestion, but this seems disingenuous, in the sense that it amounts to rejecting it simply because it is too strange to accept.

At the same time, the question begs to be asked: What *did* happen in that car—if anything? As I said earlier, I have not personally investigated all of these letters, and it's perfectly possible that hoaxes are involved. The problem is, as will be seen, they're *all* this strange—or stranger. Surely a hoax would unfold along more accepted lines, involving perhaps a vivid tale of being taken aboard a UFO and treated to the sort of interaction described in conventional abduction literature. After all, isn't the hoaxer's objective to be believed?

Who is going to believe a story like this, though? Two men are riding in a car that, after a bath of light from above, ends up with an edgy, finger-twiddling alien sitting in the back seat? Perhaps the story should at least be

entertained, if only because it contains so many elements that are hardly present in the published literature but are commonplace to the actual reports. For example, the alien seems to have come in right through the roof of the car. Just as it is not unusual for people to find themselves flying through windshields, roofs, and solid walls, it is also quite ordinary for the aliens themselves to pass through solid objects and to appear and disappear at will.

How such reports relate to reality is not known, but there is some interesting research (to be discussed in Chapter Twelve) that opens up the possibility that we may one day be able to differentiate between memories of actual, physical events and memories that a witness only thinks are real.

Encounters often involve groups of witnesses, and when they do, they often begin with the appearance of a UFO. Soon after, one or more of the people who saw it have a close encounter. However, it is extremely rare that the close encounter feels "normal." Witnesses begin to drift mentally; they seem to become almost hypnotized; they experience the sensation of static electricity tickling their skin, they have allergic reactions. But if these symptoms are seizure-related, then why would two people become seized at the same time, and why don't the cars involved get wrecked? And what about the imagery? In 1984, the particularly arresting alien image that was reported above was not yet commonplace. The letter does not say if either man had a preexisting awareness of it.

But it was around, certainly, in 1984. However, some of the most vivid alien imagery comes from long before the form had acquired a place in the culture. A typical example is this description of something that happened when this witness was five, back in 1954:

“Something came through the wall that looked like a man, but it was not human. Whatever it was, it had substance and was solid matter. It bent forward until its face, if one can call it a face, was only about two feet from mine. The most dominant physical feature of this thing was its long, thin nose and it had arms and legs that were thin as broomsticks.”

If this was just a child's fantasy, then why aren't there descriptions of images like this from earlier eras? Did this form of fantasy just begin? In fact, this sort of imagery doesn't start to be remarked on in the psychological literature until the 1970s, when the mental health community was just starting to grapple with the alien encounter experience.

The experience develops in many different ways, and many do not involve the alien image at all. Hundreds of witnesses report, for example, that they

see balls of light that seem to have conscious direction. They are a commonplace of the experience that links it to other visitation imagery. In many cultures, they are associated with the souls of the dead, and it will be seen later that there is something about the close encounter experience that is deeply involved with death and the dead.

Another initiating event involves the blow to the body. “As I lay on the bed sleeping, I was suddenly awakened by some kind of force which hit me right in the center of my chest.”

Sometimes this seems to shock the witness into a wider view of reality, not unlike a Zen slap. One Zen practitioner, after reading *Communion*, said to me, “fifteen seconds with the visitors, fifteen years of meditation.” I would not entirely agree, but certainly this is a blow that sends the mind off on a long, long journey into places where mystery, dream, and truth mix in a maddening but potentially fruitful brew of questions.

Sometimes the shock of the approach is even more impressive than the Zen slap: “They were dressed like 1920s thugs, and came into the bedroom with old fashioned Tommy Guns, aiming at me and blazing away. I felt the pellets bounce off my torso, and for several days I had pains in the chest.... They seem to delve into nascent fears, test a person, and then return with all kinds of amazing compensations.”

So in part—and perhaps great part—this communication would appear to be about us. It starts with a stunning surprise, then builds from there upon the wreckage of shattered beliefs. What it seems to be about, on this level, is the destruction of the witness’s faith in his or her assumptions about reality. One witness’s head explodes, another goes blasting out through a windshield, a third is slammed in the chest, a fourth gets attacked with machine guns. In other words, the message is: wake up, the world is not as you thought.

But the delivery of this message does not end the experience. Far from it. At this point things get really strange and really provocative, because this is when the witness usually ends up facing the mystery of missing time.

Hypnosis has been used to try to access it, but so far this effort has suffered from the total lack of reference points. Given that there is absolutely no basic memory to provide a foundation, there is no way to tell if the recovered memories are real. To explore the issue further, it is necessary to add more dimension to the approach phase of the experience, because this is where many of the richest and most detailed material comes from. Here is an example:

“Directly in the middle of the yard was a large metal saucer-like vehicle. The vehicle was much smaller than I might have guessed.

“As long as I felt like an observer, I was content to watch this peculiar drama unfold. There were four or five small kids walking out of the ship onto the lawn. I can remember thinking that this was absolutely an amazing stunt that these individuals were pulling off.

“These kids were much smaller than I was and were no threat to me. I would estimate that they were probably the size of a five or six year old. They were wearing body hugging dull silver/gray suits that seemed to cover them completely from head to toe.

“Why did their parents allow them out so late? These type of thoughts were the prevailing ones in my mind at the time.

“The tiny occupants walked across the lawn heading toward the end of the driveway. They walked down the driveway and stood directly in front of me, but fifteen feet or so down from my window. I found it humorous that they would not be able to climb up to my window.

“As soon as I had presented this thought, I noticed two of them take something from nowhere and let the item unfold before them. I quickly saw that it was a ladder of some sort. I perceived it to be a rope ladder with metal hooks on the ends. I became completely amused at the simplicity of the tools which a seemingly advanced group of beings were forced to use to enter my domain. For sure this was an elaborate hoax.

“I heard the metal ends of the ladder as they gripped tightly on the window sill directly in front of my face. I saw them with my own two eyes right in front of my nose. My heart started racing as fear began to consume me. The tiny kids were about to climb up to my window, but why?

“I saw the fingers of the first to reach my window as they reached up to pull themselves up by the ledge. These were *not* people fingers. There were only four of them and they were a different color. They seemed to have a bulbous look to them.

“It was when the head started to peep up over the ledge directly two inches in front of my face that I lost it. The head was donning no helmet. It was completely hairless with wrinkles like frown marks across the brow line. The color was that of a dead person, kind of ashen. It was about to pull itself up to where we would be eye to eye when I became so terrified that I was no longer able to witness this scenario any longer. I flew out of the room screaming.”

Usually, when people are awake during the approach, they feel a sense of menace and they flee or, if they can't, they struggle. Although I am trying to base this discussion on letters that are representative of the whole, I would like at this point to turn to one that is unique, because if it is true, the insight it offers is so valuable. I have met this woman, a teacher and a grandmother, a gentle and straightforward person. She told this extraordinary story, I believe, just as she remembered it.

“In 1976 I was vacuuming my living room floor at about noon. Suddenly I felt quite ill and thought I was going to vomit, so I sat down on the couch to see if the sick feeling would subside. I then saw that I was not alone; there were three strange little people standing alongside the couch, just looking at me. I froze with fear, as I had never seen anything like them before, not even in the movies.

“Two of them were short and fat, about four to four and a half feet tall, with broad faces and enormous black eyes, but with only a hint of where a nose or mouth might have been, almost like a pencil drawing. They had wispy bits of brown hair at the back of their heads, and they didn't have blue suits on like the ones you described in *Communion*; instead, they were wearing brown shrouds. These, I knew instinctively, were the workers. The other was female, thin and about five feet tall. She wore a black shroud and had black wispy hair at the back of her head. Her face was very elongated, with huge, dark, piercing eyes, and once again just a hint of where a nose or mouth would have been.

“The tall thin one started to speak to me with her mind, and told me I was to go with them. I answered with my own mind that I wouldn't go. Somehow, telepathic communication seemed perfectly normal at the time, and I felt quite comfortable communicating that way. This doesn't mean that I wasn't frightened—I was beside myself with fear.”

As her mind came under the control of whatever was affecting her, she naturally experienced extreme terror. She describes herself as literally crawling toward the front door in her effort to escape. There she saw a vision of her husband. Gratefully, she embraced him, only to be dragged back. At that point her resistance broke and she gave up trying to escape.

From that moment on, there is no memory, not for hours. When her husband finally did arrive home, she could hardly believe that it was really him. He had been at work all day. It seemed that they had drawn an illusion of the most powerful figure she knew out of her mind and broken her will by

showing her that they could overcome it.

Nothing has enabled her to recall one second of what happened after she was overpowered. She lost about four hours of memory, which seem to be completely inaccessible to recovery.

For the most part, the structure of the ordinary doesn't depart until missing time begins. In many cases, there are substantial numbers of witnesses, often whole families, involved together in the encounter. These encounters, especially when they start during the day when people are awake, are remembered in great detail. It is from the ultrahigh-level strangeness of this detail that my own suspicion that we are dealing with an alien presence comes.

"At about nine P.M., what I thought was a large car with bright headlights rolled down our gravel driveway." The witness looked outside but saw no car and so dismissed the incident—for the moment.

"We slept until about seven A.M., and when I was back at the kitchen sink after breakfast, I looked out the window to see a woman in a red windbreaker jacket enter the stables. She was wearing white pants and was holding a long stick in her hand.

"Then I saw a man jump off the pumphouse nearby. He was small, with brown hair, and seemed to bounce in a way that had no relation to gravity.

"Next, I left to do some marketing, and when I returned, my husband walked up to me and said, 'There are people in the trees! We've been trying to talk to them but they won't answer.'

"I looked and saw that whoever was up there had constructed some sort of platform.

"We went upstairs to look out of the bedroom window. I said to my daughter, 'Do you see what I see?' She said, 'Yes, Mom, there's two of them. What's that thing coming out of that one's head?'

"There was some kind of beautiful beaded antenna sticking out of the left side of the head of one of the beings. One of them looked slightly oriental, and the other seemed more Caucasian, but smaller and with a brown mustache. One of them had on a remarkable piece of jewelry—it was a band striped in different metals of all colors: silver, gold, platinum, green, red, purple and black.

"Since they continued to ignore us, we went downstairs and outside again. I let out our Rottweiler dog. This caused a commotion, and I saw ten or twelve pairs of legs, all wearing white pants, scamper away up the hill. I let

go of the dog and as I approached the house, I saw a woman who was the same type of being you describe in your books. She was dressed in a kelly green jumpsuit and was too long and thin to be a human being. She was climbing among the branches of one of the trees next to the house. I said, 'You have no right to do that without my permission, you should have asked.'

"Back upstairs, at the bathroom window this time, I was able to get a closer look at her. She was unlike anything I've ever seen. Her arms were long and unbelievably thin, and she had some sort of faun colored soft leather flight cap on, of the type that pilots used to wear in the old-fashioned cockpits of early planes. She was also wearing goggles from the same era, although the lenses were shaped to fit her large, slanted eyes. She had soft looking gloves on, and her jumpsuit was closed down the front with some sort of metal fasteners. She looked like she was engaged in filming, and aimed a black video-type gadget directly at me."

The witness's husband came in, but the being had disappeared. The witness then ran downstairs and outside, still attempting to get a better look at what was going on.

"Then I saw the most incredible being that I have ever seen. It was almost indescribable—a silver crystal, moving mass of energy and light with the exact same striped band of jewelry that I described before on it."

Later, the family felt unsure about this whole experience. It had been vivid at the time, but the high level of strangeness made it hard later for all of them to be certain that it had been real.

There was, however, a sequel that suggested that it was all too real. "I got very ill after that visit. The following week, I lost thirteen pounds. I needed two liters of intravenous fluids the following Friday. My littlest one has ground her teeth down, and pulls the covers entirely over her head every night, but we're more calm about it than we used to be."

So what happened to this family? A careful reading of the letter suggests that there was a great deal of missing time involved, and that whatever happened was so stressful that this woman and her youngest child were left with severe trauma.

Again, missing time. So the question must be asked, is there any way to raise that curtain, because if we don't raise it, we aren't going to be able to understand what is happening to us.

And so the visitors approach, the sleeper awakens, and we learn a little bit

more. But the gate to the unknown is barely open. We can't yet guess what happens during missing time.

Or is that really true? With care and cunning, we might be able to shine more light than one might think into that particular dark corner.

Chapter Nine

Beyond the Dark

The moment that human eyes meet visitor eyes, the world usually goes black. But not always. Not all of the assaults—if they are assaults—are successful, and a great deal can be learned from the people who actually fight off the visitors. This next series of cases offer a startling sense of continuity as each witness in succession penetrates the darkness a little more deeply. This first case is an example of the witness fighting off what was apparently an attempt at abduction. The witness had lain back on his bed only to feel, as mentioned in the last chapter, a sensation of his head literally exploding. He then went deeper into the experience, much deeper.

“After a few seconds, the vacuum of what used to be me was filled by an entity of total evil. This evil thing so terrified me that I wanted to start fighting, until I became conscious that I was unable to move my limbs. Although I was screaming to my wife to wake up and help me, my lips barely moved and the screams were whispers.”

This state is characteristic of people in hypnagogic trances, a harmless, mildly seized condition that can occur during the process of waking up. In this state, the subject will often observe the “old hag,” a hideous apparition that generally sits on the victim’s chest. The condition persists until the individual manages to break the paralysis, whereupon the whole thing evaporates like a mirage.

In this case, the initial sensation passed as soon as the witness could move and scream—a situation characteristic of a waking dream and in no way remarkable. But what happened next is totally beyond explanation:

“We had decided to turn off the light and get some sleep, when we both said, ‘What’s that noise?’

“We heard a low humming sound. A quick glance at the clock told us it was two-thirty A.M. The humming soon changed to a deep, fast throbbing. It didn’t sound like a plane, or a truck, or a car. It got louder and stopped right over the roof of the house, directly above our bedroom. There were no flashing or glowing lights, just a very loud thumping sound right over our double bed. We froze; what on earth could be on the roof?”

By now both of them were wide awake and terrified. When I met and talked to this witness, the fear that he had experienced on that night was still in his eyes, despite the years that had passed.

The next thing he knew, “Something invisible grabbed me by the chest and started pulling with amazing force. I felt like my soul, not my body, was being pulled up vertically towards the loud throbbing noise, and although I thought it would be futile, I screamed for Sally to lie on top of me. When she did this, the sensation of pulling eased a little.”

What was being drawn out of this man? I have discussed it with him, and his impression was that the part of him that could think and feel was being separated from the physical part of his body.

“I was screaming and struggling against an invisible ‘beam,’ with my wife lying on top of me in my bed at two-thirty A.M. What a sight we would have presented if someone had walked in! It might have seemed funny later, if it hadn’t gone on for another two hours.”

A shocking situation and indicative of just how persistent the close encounter experience can be when somebody has been singled out. But, in this case, his will proved stronger than whatever was hovering over his house, and the attempt eventually ended. Toward dawn, the couple fell asleep. Subsequently, this very successful man has gone on to pursue his career without any further nocturnal interruptions.

It is not enough to say that some wandering demon came along and tried to rip this man’s soul from his body. As Monsignor Balducci points out in the appendix, we can do better than to approach the situation with assumptions like this that do not actually fit the situation. It isn’t even obvious that this was a negative experience, because the witness became deeply aware of himself in a new and richly rewarding way. He was plunged directly into the mystery of the soul by his experience.

Amazingly, even though this man stayed in his bed, the story can still be continued. This is because this precise thing has happened to other people at other times, and not everybody has managed to fight off the attack. So our original objective of recovering something from the missing time experience still has not been defeated. Although the two had never met, this next witness faced exactly the same experience as the first one, except that his struggle against the pulling force did not succeed.

“Then I was pulled up and through the ceiling head first. I reappeared in a large room with a high ceiling, or no ceiling. I seemed to be floating. I looked

up and saw long ropes hanging down, lots of them. They were thick, maybe six inches around, and that part of the room was full of them. I was close to one rope and it looked like it had white cocoon webbing all over it.”

It is not entirely unexpected that this extraordinary memory from the dark would be so strange. In all probability, one of the reasons that we cannot remember missing time is that what happens there is so bizarre and so hard to understand that it simply does not come together in a coherent enough way to form a memory. The witness is left with a feeling that something important has taken place, but he or she cannot form it into a structure. But not in the case of this witness. As the situation developed, his memory continued its penetration of the unknown:

“I saw someone across from me, about twenty feet away. He was white and misty and I knew it was a male. Someone was observing me close up on my left, out of my field of vision. As I became aware of this, I said, ‘May I look at you?’ The answer was, ‘No, you may not.’ It was female and also firm, as if talking to a child. I obeyed as if I was indeed a child.

“I started to turn to my left to see who it was that had spoken to me. As I did, I started to panic and screamed bloody murder. I saw the top of a bald white head, and holes for eyes.”

With the advent of fear, the light of memory is extinguished. The next thing the witness knew, he was back in his bed and wondering whether he had been dreaming. But he at least took us to the portals of the cave, even though we have as yet shone no light on what happens in its depths.

This next event also took place in the predawn hours, which is the time when sleep is deepest, when most deaths and births occur, when our dreams are at their most powerful, and when most close encounters take place.

“I was trying to go back to sleep when I really felt strange. It was like I was being forced to close my eyes and fall asleep. I knew I was not dreaming. I fought this feeling and struggled with all my strength. It was horrible. I felt I was being taken, not my body but my soul.

“I remember that ‘they’ won and I couldn’t fight anymore.”

Like the woman who had been caught while vacuuming and the one who had been captured by the beings coming up the ladder, the next part of this interaction was a total blank. But this time a new wrinkle was added. So far, all of the encounters we have been discussing were one-time-only affairs. This case, though, proved to be different.

The witness reports that her experience began recurring almost daily. She

continues, “I then became unexpectedly pregnant.” The experiences became less during the pregnancy, but when she brought her daughter home, “the first night was extremely restless. I sensed evil, as if something was trying to get my baby. I stayed up all night praying by her side. I did wake up to see a short shadow at our doorway.”

During her work as a nurse, she had a powerful conversation with a dying patient during which he suggested to her that she not fight. She decided to follow his advice, with fascinating results.

“Since he told me not to fight it, I don’t. It’s not so scary anymore. I let it happen. Just once, I remember hearing a female voice say, ‘Come here.’ It sounded either very old, or computerized.”

“I have grown spiritually so much in the last eight months. I now call the experiences a spiritual awakening.”

Unfortunately, she does not tell us what precisely is creating her newfound spirituality, but she has indeed taken us a little deeper.

There have been whole books written about missing time and what it may contain. But most of these stories have either come from long series of hypnosis sessions or have been derived from channeled information. So this information seems even harder to take at face value than the more conventional memories and dreams reported here. And beyond these letters, there just isn’t much that has been recovered in natural memory from those concealed hours.

So if we cannot penetrate missing time any more deeply without resorting to unproved memory recovery techniques, is it necessary to stop?

Actually, no. There is an indirect approach. As simple as it is, it also offers the twin advantages of continuing to stay with natural memory and to support it whenever possible with more than one witness.

It would seem that there are people who don’t have missing time at all.

“My greatest experience was when I was walking home late one night from a friend’s house. As I was crossing a bridge, I noticed something strange. I was glowing; everything was glowing. What looked like a glowing fishnet crossed the entire sky. To my left, upriver and above at about two thousand feet, something that looked like a giant manta ray without a tail sat motionless.”

The witness sat on the bank of the river where he had been walking and watched the phenomenon from early morning until noon. Nobody else saw it—maybe because he was having a waking dream. But, then again, it was a

very strange one:

“What appeared to be a blue glowing ball with sparks flying off of it hovered at eye level just barely out of my left field of vision, keeping a distance of about a hundred feet from me.”

Encounter has a lot of peripheral effects, among them dark blue, fast-moving figures such as the woman vacuuming her living room saw, and, as this witness describes, glowing balls of light. They are generally seen in peripheral vision, and people often mention that they are somewhere to the left.

This suggests a neurological component involved in these observations that may well in some way be seizure-related. This is not to say that the observations are hallucinations but rather that the brain of the witness is being affected and his or her perceptual abilities interfered with.

After making the observations reported above, this witness proceeded on his way and found himself observing numerous people in the area who, as he puts it, “didn’t seem to fit into the local culture.” More disconcerting, they seemed to know him.

Behind this seemingly simple comment there lies an almost totally unremarked but not too surprising aspect of the experience: the implication that there is a human connection of some kind, that not all of the visitors are strange alien forms, but rather that people are often involved.

It is when people are involved on the “other” side of an encounter that missing time seems most often not to occur at all.

Even though some extremely strange aliens have been reported, any discussion of the forms the visitors take must begin with the human. From the beginning, there has existed this undercurrent of human involvement.

If there are aliens here, then it obviously wouldn’t be impossible that they would be working with human beings. If so, then it is unfortunate that these people are also isolated behind a veil of secrecy.

In discussing the experience in terms of its human component, it is possible to go deeper than the mere fact that people are seen in the company of aliens. There’s more to it than that—much more. For example, there is this sort of story:

“Suddenly I felt something smooth rubbing my open right hand, and when I opened my eyes I was surprised to find that a hybrid child was holding my wrist with both hands and rubbing the top of his head with my own hand! He was looking right at me and grinning, and for some reason this tickled me; he

was so cute.

“There was also a normal little girl with dark brown, longish hair, wearing a dress with petticoats. She was about four, and was trying to pry open the fingers of my left hand. I asked the hybrid what he was doing and he telepathically said, ‘I’m chewing purple gum.’”

This charming anecdote did not lead to any great revelations, but it does take our concept of the experience a step farther away from the stories of alien scientists here engaging in some sort of an organized study of humankind. It would seem that the imagery connected with close encounter is light-years beyond this. Certainly it doesn’t fit our folklore in any meaningful way, beyond the fact that some of the visitors are small like elves and seem to possess the power of gods. But what they do—well, there isn’t any folklore about fairies who chew purple gum.

But how does this relate to the quest to crack the shell of missing time? To answer that question, we can go a little deeper, into the stories that explore the connection between close encounter and death. By looking at these stories—which are generally absent from current close encounter literature—we may begin to see why the fears that surround the hidden hours are so incredibly deep.

“About twelve years ago, when I was six to eight months pregnant, I woke up and saw this white form standing beside my bed. It showed me something and I said, ‘Hey, that’s my kid!’ I then felt a kick in my stomach. For a long time after that, I thought something was going to happen to the child I was carrying. As it turned out, during my ninth month, my five year old son was killed in an accident a few yards away from the house. I gave birth three weeks later.”

The close encounter experience has been terribly trivialized by the attempt to force it to appear comprehensible and believable. It is not possible to understand, and it is awfully hard to believe—or even to theorize about what *might* be happening.

But stories connecting it with birth and death abound among the letters we have received, so it makes sense to follow them, as far as they may take us from present ideas about the form of the contact experience. By doing this, we come to the borderland between life and death—and what are probably some of the most powerful experiences human beings have ever had.

In the 1960s, a mother and her small daughter were driving by night across the Mojave Desert. “About two hours outside of Flagstaff, my daughter

began to shout that she saw a spaceship in the sky.” She looked in the direction that the child was pointing and observed “first two and then three lights moving rapidly in the sky, turning at ninety degree angles, pulsating and disappearing.” She then pulled off the road onto a dirt track. They were sitting there watching the sky “when suddenly in front of the car there appeared a huge, dark and glowing object with a partial row of lights in the middle.”

She then remembered her breath being knocked out of her and being pulled through the windshield of the car. She found herself in a large room with some very strange-looking people. She was filled “with a feeling of love or long-lost family; it was almost like a homecoming.” Her daughter was not there, though, and this concerned her.

“They kept saying ‘Welcome, welcome!’ in my mind, and laughing. They then told me some strange things about human origins and alien intervention on the planet earth at various times in the past and future.

“There was a whole generation of beings that came to earth in the far past and took up earth life. They were from the family of Ranm. They said that was why the old god names were as they were on earth: Rama, Brahma, Ra, Abraham, etc., in order that humans might remember. But so much confusion set in that the names became designations for gods or heroes, and that wasn’t the point at all.”

Once reassured that her daughter would be fine, she “was strangely soothed and unusually happy.” But not for long. She was told that they were in some way sorry about her daughter, but they did not say why. When she was returned to the car, “my daughter was in the back seat crying.” She told her horrified mother never to touch her again. “I tried to calm her and ask her what had happened to her and she shouted, ‘I’ll never tell you! Leave me alone!’“

They then drove to California, the mother hoping that the incident would be forgotten. But, as is characteristic of close encounter witnesses, she soon began having difficulty sleeping and became ill. “My hair began to fall out and my mouth started bleeding, and I was exhausted.”

Her daughter was suffering, too, and one night woke up screaming. When her mother calmed her, “she said very factually, ‘Mommy, I’m going to die. The spaceship people told me so. They said little bugs had gotten into my body and they were sorry, but there was nothing they could do since I’m a little girl.’“

She then began to display symptoms as well: high fever and swollen joints. She was diagnosed with rheumatoid arthritis, but there was also concern that she had been exposed to radiation. They returned to their home in Texas, where “she was diagnosed with a very rare cancer of the nervous system, neuroblastoma, and it had metastasized, and she had just a few months to live.

“Before her death, she began to draw extraordinary pictures that were more advanced than a ten year old’s, even though she was only three and a half.”

This terrible event continued to have unusual repercussions in the grieving mother’s life. After the child’s funeral, a friend called from a city two hundred miles away, saying that she had to drive to see her immediately. “Without glasses, she was legally blind, but she drove anyway. She said that two nights before at about two-twenty A.M., she was awakened by a noise and then saw her roof begin to dissolve. In the air above, she saw a type of spaceship. Two tall beings appeared, and in between them was my daughter. They told her they hadn’t been able to get through to me because of something, but to let me know that my daughter was okay and was with them! She thought at that point that she’d gone completely insane. I broke my promise to myself to never tell the story of the experience in the desert and told her what had happened that night, and we both cried and cried.”

If this was the only such story, it would be powerful enough, but the fact is that it is one among a whole class of the stories that emerge when there is no missing time.

Another such event took place a few years ago in the southeastern United States. A husband and wife were sitting in their downstairs living room at about ten o’clock at night, with the elderly family dog sleeping on the floor between them. Even though he had already been walked, he suddenly became nervous and began to pace. The wife decided to take him out again.

As she opened the front door, two things happened simultaneously. The first was that an orange ball of light swept away from the house, disappearing across a nearby line of trees. The next second, the couple’s ten-year-old son came running downstairs yelling excitedly that “little blue men” had brought his older brother into the bedroom, and the older boy had a message: tell his mom and dad that he was okay.

I was deeply moved when the man narrating this story to me over the telephone concluded it with the statement: “Mr. Strieber, our seventeen-year-old died in an auto accident last week, and we want to know if there’s any

way that this story might be true.”

I talked to him for a long time, trying to be supportive without making claims that could not be substantiated. I could not tell this man that aliens with the power over life and death had brought his son to him to relieve the agony of grief that he and his family were enduring. But I could say that there were others out there like them, whose lives had been lit in just the same way by the strange and powerful light of close encounter.

Does this suggest, though, that human beings come into this world with some sort of a life plan, and that whoever is behind the close encounters understands this level of reality and can actually see and even adjust such plans? If so, then if they ever come out into the open, we can expect our lives and our world to change in some extremely fundamental ways.

Among them would be confirmation that the soul exists and probably also that it can in some way be touched by science. In the past, as scientific understanding has increased, the borders of what is considered to be supernatural have been pushed farther and farther back. What was witchcraft in 1650 was science in 1750, and, if the soul exists, I suspect that the same process will eventually include it within the boundaries of the known. So our science may someday also include a technology of the soul, and the curtain between the worlds of the living and the dead will finally be raised.

Then there will be no more missing time. But we need not wait in order to continue to explore it, because we have not yet come to the end of the letters. There are other mysteries, tales of sexual encounter and journeys to other worlds, trips through time and meetings with some very remarkable creatures indeed, and the most amazing stories of all, those that come to us from childhood, when our eyes were too wide open for us not to see.

Chapter Ten

Innocence

Perhaps the reason memories from childhood are so rich is that our minds are more flexible when we are young and more capable of being open to what adults reject as impossible.

One witness wrote of a childhood adventure he'd had near Hamilton Air Force Base in California. "In a small gully we encountered a shimmering mirage effect that reflected the sides of the gully as mirrors reflect the sides of a magician's box. Going through the mirage, we found a large tunnel that led deep into the hill."

Once inside, this group of small boys with BB guns made an unusual discovery.

"The tunnel led into a landing area divided into four bays, equipped with a conventional bench at the back and a variety of metal parts hanging on the walls. We examined the benches, and then entered a large door that was fully four inches thick, approx. 12' high, and 7' wide. This size is the most important thing to recall.

"Entering the base proper, we were fully functional and free to go where we wanted, under no restrictions. A groove ran down the middle of the tunnel floor. This divided into four other grooves, one of which led to what seemed to be a landing bay."

They had extraordinary adventures, including seeing UFOs parked, what looked like a greenhouse, and an area containing alien babies. In the end, though, they began to suffer from a familiar problem.

"Finally, a box-like device moved out from behind the UFO, and my vision blurred and I got groggy.

"I noticed a weird, full-sized figure coming towards me like a robot with a red target painted on its chest. I found out later it is body armor. The target is designed to attract fire to the center of the armor, the safest spot. At this point I got really groggy.

"I came out of it surrounded by a circle of larger beings, heavier built, all staring at me every which way I turned. I panicked, and broke out of this ring to the tunnel where my other friends were. We tried to mount a counter-attack

to get our friend (who was left behind), but panicked and ran outside. At a loss about how to get our friend, we hollered for him to come out several times. He finally did, but in a badly shaken state.”

He had a vague memory of being told to “forget everything.” “I awoke at sunset, with my friends kicking me awake and, slowly, we went home exhausted and totally unaware of what had just happened.”

But he did not remain unaware. He made other visits to the base. “I also saw a conventionally furnished room, where aliens and humans were freely mixing with each other. They had human males working with them as ‘front men,’ so to speak.”

Other children have had unexpected fun with their encounters: “In many ways I was a ‘different’ sort of child; for one thing, I was nocturnal, which led to my falling asleep at school a lot. I often told my parents that small doctors visited me at night.”

This witness was often found standing on the doorstep of her apartment in the middle of the night, ringing the bell to get in. Once, at the age of four or five, she appeared there wearing only her underpants. Her pajamas were neatly folded on the foot of her bed.

But where did she go on those long-past nights?

The motif of schools and teachers is fairly common among childhood memories.

“We met in the garage at my grandfather’s house, and I would sit out there for hours talking with a tall, thin gray lady with a pointed chin who told me to call her Grandmother. Grandmother put me through a kind of schooling. She taught me to use my mind and senses for telepathic and other communication. She showed me pictures of the earth from space and little video pictures of what would happen to the earth when I was about fifty. She was a loving, patient teacher. Her skin felt like very soft leather, and she had a pleasant but cheesy smell. She quit coming when my mother objected to what I was learning.”

Later this witness touched on the possibility of recontact and is still considering doing it. She believes that close encounter witnesses are volunteers, that others “literally don’t see what we see,” that the visitors are “not emotional, and their loving approach is not an emotional love,” and that “they are here to help, as they define help.”

But what is meant by help is not what we might expect. Rather than giving us plans to build a starship, the message of the encounter experience seems to

be about us: Hidden behind the wall of missing time isn't some revelation concerning the aliens and their hardware but, rather, one that concerns us and our hidden—or forgotten—potentials.

One witness remembers two men from his childhood in the 1940s, who seemed perfectly normal, except for what they taught him, which was far from the usual sort of lesson.

“Milt asked if I'd like to learn how to fly. They would hold my trousers belt in back and we would run along and they'd let me go. I would go three to five feet, then I'd bite the sand. [This took place at meetings on a beach.] Then the other one would pick me up and send me back, all the time saying to me, 'Think no thoughts. That is important and necessary. Then float.' I could go twenty to thirty feet at times. It was great! I went at a rate of one to three miles an hour, I'd guess.”

He also saw the two men going in and out of the sea in what he describes as a capsule that looked to him like a silver Airstream trailer. Inside the capsule, he once saw a being that looked like one of the visitors, with a narrow face and huge black eyes. His imagery, as it dates from before the idea of the flying saucer had been introduced into the culture, reflects shapes and forms that were familiar in the 1940s, such as silver trailers.

Witnesses often report that they are told that our world is “a school,” and if we are coming into contact with vastly advanced aliens, it isn't unreasonable to consider that they might think of it in just this way.

“One of my first memories is of being in a classroom with other children. We were a select few. I was very happy to see my teacher, the lady on the cover of *Communion*. I loved her teaching. I was about age nine.

“My next clear memory is from age eleven. I remember being in her office. Her husband was also there. She had a radio on her desk that was playing my favorite kind of music. The three of us were dancing to this music.”

Like so many who seem to live altogether outside of the constraint of missing time, the witness quoted above has seen her encounter experience evolve over her whole life. She recalls an adult meeting with her old teacher. “I then found myself in a well-lit hallway facing an old friend. She was standing in the doorway to her office.” A moment later, she found herself back in bed. Then another lesson unfolded. “About twenty seconds later, I saw a small gray box in front of me. There was a hand over it, also gray. It was a clawed hand, and it held a silver wand. The top of the box was tapped once. This created a great wave of knowledge that went through me.

Physically, it felt like a slow-moving ocean wave. In that wave was knowledge of myself.”

Many witnesses describe a box. More than one has thought of it as Pandora’s box, and perhaps that is not too far wrong, given what seems to be inside.

Many families report encounters across the generations, and I have numerous letters from parents describing things happening to their children that are similar to what they remember from their own childhoods.

“My earliest memory was probably from before the age of four, when I clearly remember being taken from my bed and led to a clearing near the bluffs overlooking our local lake. Someone was holding my hand, and I was frightened when it was put into another child’s and I was told I was the one to complete the circle.

“As I did, the sky above us lit up so brightly that I was able to see all the children quite well. I realized that I didn’t know any of them. They weren’t neighborhood friends, but I felt a sense of connection, a family feeling, a sense of familiarity.”

Her further memories are unclear. She recalls a soothing male voice telling them what she describes as “very important things about our future and the reason we had all been summoned to that place.”

This is typical of the encounter experience: One is so often left with a sense that something tremendously important is happening, so rarely with any clear idea of what that is. In a sense, then, what we *can* say is that the experience creates powerful questions in people, questions that change minds, that open them and compel them to grow. It is thus a challenge of the deepest kind, probably viewed by the inner self as momentous. Depending on how widespread it is, it could conceivably be having a phenomenal hidden evolutionary effect on humankind—but how much greater that effect would be if we understood!

Another witness, now a state official, as a boy observed with his mother an incident of jets scrambling to intercept UFOs. His father was involved in the incident in an official capacity but would tell them little of what happened.

Afterward, though, the boy was deeply affected. Like another witness quoted in this chapter, and like me and many others, his experience was signaled by an increase in nocturnal activity.

“During this period, in the fifties, I began sleepwalking almost routinely.” Often his mother would catch him, sometimes outside in the street. But not

always. “I still remember these episodes to this day, and how the night felt, so vast.” All he recalled of any interaction were vague memories of shadowy figures in the house, and he never had any encounter memories that were more specific. Despite that, this story illustrates the profound changes that can take place in a person after something as simple as a sighting. Some deep part of him began trying to go somewhere. Was he trying to meet the visitors, or to run from them? He never got to the end of that particular journey, and perhaps the fact that he didn’t tells us a little more about what lies behind the curtain of missing time. If we have a soul, and the soul has a plan, then maybe we fear to see the blueprint. Perhaps looking at it would transform life’s fertile spontaneity into a rigid drama devoid of surprise—would, in short, rob us of our reason for living.

In this sense, then, we would prefer the blindness of missing time, because we do not want to wake up to knowledge that would so damage us.

And indeed, sleepwalking is such a common motif that it would almost seem to be a metaphor for the limited contact that is available to us or that we prefer. “When I was a small child, my parents found me on numerous occasions sleepwalking in our neighborhood. Once on a family camping trip, my father failed to lock the camper door.

Subsequently, he found me miles from our camper up on the mountain walking around in my nightgown. From then on, all doors were securely locked at night.”

Another thing that childhood encounters are associated with is unusual intelligence and what appear to be changes in intelligence.

A typical example: “My son started reading at one year of age and started first grade with a seventh grade reading level. He has an incredible obsession with astronomy, just like you said you did when you were younger.

“He told me that he has been having abduction-related dreams about ten or so in all. He’s described visitors appearing in the room and talking to him. He’s got a lot of fears, very much so, and in fact he’s slept with my wife and I quite a lot.

“Once we were waiting for darkness so we could use the telescope when he decided to talk to me about the nature of time, space and ‘aliens.’ He basically went into an unprompted lecture to us. Pulling out a pad of paper and a pen, he went on to draw a matrix showing where humans exist on the scale of living things, both intelligent and non-intelligent, and pointed out how far we are from the visitors’ level. He described abductions as an attempt

on the part of the visitors to accelerate the process of development, bringing us closer to their level. He said, ‘we are like babies in a baby carriage and the aliens are like a mother pushing us along. But they are pushing it very fast and we don’t have a safety strap holding us in.’

I knew nothing about this boy when I met him across a table at a book signing, but looking into his eyes was a startling, even electrifying, experience. He was shy, but those young eyes flashed with a brilliance that I often see in children who are close to this experience. I had the odd feeling that he somehow knew the secrets that we adults are struggling so hard to crack. It is possible for human beings, especially young ones, to know and understand more than they can put into words, and I am to this day haunted by the expression on his face. I was not surprised to get his father’s letter.

Much useful information can be obtained from children who are being properly supported in their experience, by parents who do not ask excessive questions, draw too much attention to their stories, try to impose religious beliefs on them, or deny them.

It’s difficult, because there is a tendency to want to explain things to kids, emerging naturally out of our desire to protect them, relieve their fears, and satisfy their curiosity.

Parents often find themselves dealing with this experience under the most difficult of circumstances. There are cases where the whole family is under the pressure of visitation, and there are symptoms of implants present as well. This is a dreadful situation to have to cope with alone, but such is the social ignorance and superstition surrounding close encounter that parents have no idea how to get help. Although it is difficult, an effort can be made to find a nonjudgmental caregiver if professional support is needed.

It is especially hard to cope with the experience when powerful and sensitive matters such as birth and death are involved, and this is very often the case. The close encounter experience unfolds at the points of greatest question that human life possesses: What is the meaning of a life? What happens when we die? What is a human being?

“We saw UFOs all the time,” writes one parent, describing events that happened in the 1970s, when her children were young. “My second son dreamed he was taken to a base for UFOs.”

They then had an incident occur at about eleven at night that unsettled the whole family. “I started to take a step [toward a window] when there was a brilliant flash of light. It lasted a very long time. Before I could move, my son

exploded out of his room at the top of the stairs and my daughter came pounding down the upstairs hallway. They were both demanding to know the same thing: ‘what was that?’

“This is what we discovered: we had lost upward of an hour of time. Where did it go?”

Later, this correspondent may have received an important clue, one that leads to the conclusion that the amnesia might come not only from the confusion and deep threat that lie behind missing time but also from the fact that what happens there is on a much larger scale than ordinary life—a scale that is so large that it is hard for the human mind even to sample it, let alone grasp its full meaning. Powerful feelings are engaged when somebody comes face to face with it, that sometimes lead the witness toward a painful sense of having been raped, but more often in the opposite direction, toward insights that encompass even the secrets of the future, and as such seem to be almost dangerous to remember.

In our attempt to unlock missing time, we have journeyed far from the factual matrix that should govern any book about hard evidence. But if we are to take a realistic look at what people are reporting, it is important to digress in this way. The shocking relationship between these stories and hard fact will be dealt with soon.

Even so, something occasionally happens in the hallucinatory world of close encounter that seems to draw us a little closer to the facts.

A witness who was attending a school function met somebody for the first time whom she felt strongly she had seen somewhere before. He felt the same way, but they couldn’t place each other.

As they lived in different towns, they kept up their new—or renewed—acquaintance by mail and over the phone. After the school year ended, they visited. “Suddenly I found myself asking if he believed in the visitors. ‘I don’t want to talk about it,’ was his response. The fear in his voice was chilling. Then images began streaming through my head. They were of him as a child, asleep on a couch in a house I had never seen. I was terrified, I couldn’t stop talking, the words just came out. I described the room he was in. Jacob said, ‘I hated that room because those ugly little children would come in and take me away!’ He was crying and I was shaking uncontrollably. This went on all night.” They eventually went to bed in separate rooms where my correspondent’s situation became even more shocking.

Believing that the event had ended, she closed her eyes. As soon as she did

so, she had an experience similar to the one frequently reported by others, with a being seeming to intrude into the darkness of her mind.

“I saw a tall, thin figure with huge inky black, liquid eyes. She (it seemed feminine) was bathed in a pale blue light. She reached a thin arm toward me.”

After her initial shock, she came to feel that this creature was not really hostile to her. It seemed then that her friend’s fear was somewhat misplaced, and she entered the fairly large group who feel that the visitors are in some way trying to help us. Whether this is true or not, they are certainly putting us under pressure, and pressure is often a very productive state. The next letter illustrates the sense of being educated and pressured at the same time that is characteristic of many stories:

“I may have been ten when I woke up to find myself sitting in a rectangular room. A blackboard was across the wall. There were only long benches to sit on. These benches were full. Maybe four benches contained forty kids, all the same age. Everyone was sitting with their spines stiff from terror! Then I saw why.

“An insect-like humanoid entered the room. He was the teacher. His skin was gray and ugly, with an oversized brain cavity. He seemed nude and was bent over, trying to keep his head up. I was terrified. I really went stiff when I saw it stop writing on the blackboard and turn to look directly at me. He seemed really angry, really hating me. (New student?) His face was weird: no mouth, a little nose and big eyes, not black or Asian. He had no hair anywhere. Also, he needed a walking stick to walk about.”

There is something at once terrifying and hilarious about this story, with its image of a fearsome alien hobbling about on a cane. But the thought of those children, literally “stiff” with terror, suggests a darker interpretation, that they are being placed under pressure so ferocious that we can hardly even bear to face it.

And yet we *are* facing it a little. Gradually, as we come to see that we can do this, no matter whether the close encounter experience represents a dialogue with aliens or a new kind of dialogue with ourselves, it is still filled with all sorts of valuable potentials.

This next witness is another person who had his childhood experiences in the 1930s and ‘40s, long before there was extensive alien imagery in the culture. As so often, his experience was intimately involved with the largest issues of life and death.

In 1935, he was suffering from pneumonia, at that time a dangerous and

often rapidly fatal disease. “One evening right at dark two beings came to the windows in an elongated envelope. They and their conveyance were like Northern Lights, and they asked me to go with them, and each took a hand. When they touched me it was like being lightly tickled, and very pleasurable. [This sensation is commonly described.] I couldn’t see them as being like us. The odd part was that you could see through them, but they were there and we talked without sound.”

The imagery described here accurately expresses the same sort of encounter that is reported today, with the difference that the choice of words such as “elongated envelope” for “flying saucer” are obviously from a time before today’s catchphrases were known. And now we would describe talking “without sound” as telepathy. But since we have no more idea how this is done than we do what a UFO is, maybe these earlier, more neutral descriptive phrases are actually more accurate. In any case, this experience evolved to a level that is rarely reached but seems close to the very core of encounter.

“They took me to a huge pavilion where pairs were waltzing. My impression was that the males were dressed in black with white trim. The females were dressed the opposite way. There was no ceiling, but crystals hung above and made music beyond comparison that sounded to me like wind chimes.”

He had three visits to this place, on the last of which he received a message. A female asked him why he was afraid of the dark, then told him “that both the light and the dark are my benefactors, and they would make them equal. She took a crystal and placed it in the palm of my left hand. For a second it resembled the Star of David, two triangles, then melted and ran between my fingers.”

So the witness is taught on his third trip something about the nature of the three forces: positive, negative, and equalizing, that Buckminster Fuller years later would describe as the building blocks of the universe.

We are dealing here with a communication about the most fundamental forces of nature—the positive and negative energies that dance together to create the friction on which reality itself depends. If it were not for this dance, repeated from the subatomic level to the moral, there would be no life, and life would be devoid of choices, and what now seems filled with purpose and meaning would be blind and empty and dead.

He had physical consequences that were oddly related to the metaphoric

ones. “In a few weeks it became apparent that my night vision had changed. My eyes would adjust to allow me sight when it was pitch black.”

He also became nocturnal, and whatever had taken an interest in him quickly began using that to its advantage. Late one night on a Boy Scout trip, when he was the only one left awake, he found himself watching undulating shafts of light that fascinated him. “The shafts of light began a strange movement, and there was my envelope, and something like an oval cylinder; it just seemed correct to go into it. In an instant there was the pavilion, but the ‘others’ were not dancing. They seemed to be conversing, but not with me, when a lady asked me to ‘step on the dais’ because I was their ‘conductor.’”

He asks, “What is the purpose of the ‘conductor?’ My being is as common as the earth.”

Perhaps that is exactly why he was so exalted in the fantastic world that conceals itself within the mind and soul and the dancing universe that embraces us.

Chapter Eleven

Worlds Beyond

It could be that scale is the essential problem with this communication. Our difficulty understanding it may be because it is being delivered in thoughts that are on a larger scale of time and meaning than we are used to. Since we can understand it at all, though, it would also seem that we can rise to it and close the gap that its presence suggests must exist between ourselves and the visitors.

Even given the small amount of decoding that can be attempted, it seems reasonably clear that this message has the coherence, subtlety, and grandeur that one would associate with the marvelously rich consciousness of somebody old and brilliant, but it also contains a logic so strange that an alien origin does seem possible. Again and again, the voice behind the letters speaks: The world is not what it seems, it is greater, stranger, more wonderful than you dare to see.

If the visitors are really aliens and are communicating with us in this way—not only using the sky as a theater but also using the mind—then wouldn't they have deposited information about their own world somewhere along the way? This would be such an efficient way of helping us to narrow the question of what they are, and thus work faster to close the gap that is keeping us apart, that it seems inevitable that the witness reports would abound with this sort of information. And they do.

“We went to a beautiful planet, (I think it was another planet) that was very hot. It was hard to breathe. I remember seeing a flower and wanting to pick it up. They said not to because it could harm me. We were on what seemed to be a mesa. It was filled with vegetation, but no insects and no animals were present. My friend remembers picking a fruit off of a nearby tree that resembled a pomegranate. The grays said we could eat the fruit, it wouldn't hurt us. We were told to scatter the seeds when we were done.”

This couple are deeply involved in the encounter experience, the man having had contact for nearly thirty years. On the occasion described above, they recall going on a three-day journey that ended with a return to Earth on what appeared to them to be a spaceship. Then they made a discovery that

will surprise nobody involved in this experience. “According to the clock we were only gone for a half hour of our time. How could that be?”

We are beginning to understand the physics of time, and in recent years it has become clear that movement through it is a theoretical possibility.^[45] But physical? Perhaps, but at present it seems that we could affect movement through time only “by manipulating matter and energy in the most extreme and fanciful manner.”^[46] But *something* happened to these people. Is it a shared fantasy or dream? if so, what caused it? Or did they actually physically go to another world over three days that were somehow compressed into half an hour?

Given how little we know about contact, it would be inappropriate to make a decision based on the logic of reality as we now understand it. What if the visitors are five hundred years in advance of us? We can’t imagine what they might be able to accomplish in terms of alteration of consciousness or even movement through time. Look at our world as it was five hundred years ago: No one had ridden in a car, flown, listened to a radio, or felt refrigeration. The world of five hundred years ago was almost unimaginably less capable than our own.

But who is to say that the visitors are only five hundred years ahead of us? What if they are billions of years in advance of us, if they have had consciousness since before earthly life even began?

What might they be? What might they have accomplished? The possibilities are breathtakingly limitless.

Whether journeys like the one just described actually happen or not, a desert-like landscape is so frequently mentioned in the letters that it is worth considering that it might be a real place. Often, the desert is red. But whether the visitors are the Martians of fiction and legend or not, it seems clear that they aren’t from the Mars that we see today. But it is also true that the planet once had flowing water, and there also exists a certain amount of evidence that simple life-forms might have existed there in the incredibly distant past.

Mars probably died about the time life on Earth began, and it just doesn’t seem possible that evolution to consciousness could have taken place during the early part of the solar system’s life, given the experience of Earth, where it has taken three and a half billion years for it to evolve.

Surely, also, if they had been here over all of time, we would have noticed them before this, and that simply has not happened. And yet the universe is a very strange place, and all of our understanding of the time it takes evolution

to unfold comes from a sample of just one planet.

Not only does the desert recur as a motif in the stories, cities are often seen, and there is in this material also a curious consistency.

“I was standing in the middle of a red plain. The ground beneath my feet was dust...like what I imagine moondust would be like. There were no rocks, no chunks of anything.

“I appeared to be in the middle of a street. There were large, tan buildings running up and down this street, in all sorts of strange configurations. They were not elaborate at all—just very angular. On the whole, they looked like Spanish missions, if those missions had been designed by Salvador Dali. They were made of some crenellated metallic material that on first glance looked like adobe.

“The sky above my head was white. Not bright white or cloudy white—it was more like the sky glowed, like it had some innate property of light.

“On the street were dozens of the ‘gray’ creatures. They appeared to be gliding back and forth up and down the street. They gave off this feeling that I was sort of distasteful to them. I felt big and dirty and ugly.”

The visions of the desert planet go on and on. Here is another:

“This dream involved a repeated scene from inside a low-flying vehicle, of a desert landscape below. There seemed little or no perspective, but speed was slow enough to allow a good view of an absolutely vegetationless desert landscape, of reddish brown color. I somehow associate a school with this desert location so old that our best efforts to measure its age would be totally inadequate.”

However, this is not the only image that is reported, and a distant planet perhaps in another age is not the only place that is described. People have had other experiences with time.

“We flew over this weird looking landscape. It looked like the trees turned into grass, we were going so fast. When we slowed down it was evening. Almost as though we had traveled an entire day. I looked down at this log house and saw this woman as she nervously waved to her husband and two children, who were heading away from the house in a buckboard being pulled by two horses. I looked at this lady who was wearing this old, worn and dusty dress with a dirty white apron around her waist. The next thing I remember, I’m standing on the ground near where she’s hanging up her laundry. The interesting thing is that like these visitors, I, too, am wearing a hood. I remember she looked around one of the sheets she was hanging up and

screamed.”

Not a particularly surprising reaction, certainly, as a pioneer wife confronts an unknown far greater than anything she could possibly have imagined. But her ordeal was not over yet.

“One of them said that this lady’s condition was worse than he thought, and she would have to leave with them if she was to live. Next thing I know, I’m looking down on this house and watching her husband and children as they come home. I can tell he’s calling for her. As I watch him head into the house, the children look up and see the vehicle we’re all sitting in, but by that time the husband is in a panic because he can’t find his wife. I don’t know what happened to this lady after I was dropped off.”

I made an effort to find out if any record of such an incident exists from the past. The problem is that the reader does not know where the incident occurred, and if there is a past record, it is lost in a newspaper archive or buried in a pioneer diary in a museum somewhere.

Another witness had an experience that may have been related to movement through time and also leads us to an exploration of yet another aspect of close encounter: the confrontation with the double.

“I was riding down a highway in my town when I looked across the median and there was someone waving rather frantically in the westbound part of the lanes. I took a left, deciding to see who it was.

“I pulled over into a Dairy Queen, and he took the second entrance in. We were driver side to driver side, headed in opposite directions. Then it hit me.

“The closer we came to each other, the bigger his smile and the brighter his eyes got. HE WAS ME! He just smiled, waved slowly, passed me by, and took off!”

He drove a very similar car as well. The witness never saw him again but is doubtless a haunted man.

There are many wrinkles to the time-travel theme. “I walked up to an old white, wood-frame house. A small boy about ten with blond hair came out to talk to me. I asked, ‘Where’s your mother?’ and he replied, ‘She’s gone right now.’ He went back into the house. It then dawned on me what had happened. I had gone back in time, to see myself as a child and to see my mother. It felt like I really had gone back in time, or anyway everything looked right.”

Does all of this mean that time is not the fixed, immutable reality that we assume, but that we can somehow free ourselves from it? If so, what an

amazing blessing that would be—and also, in a sense, what a tragedy.

If we could travel through time, we would lose something of our species' childhood, because we would come to know everything that was true about us and everything that was not. Huge areas of the past, now rich with mystery and wellsprings of cherished belief, would cease to be in question.

In a sense, every time we answer a question, the world gets a little smaller. A hundred years ago, radio was a breathtaking mystery, a spark dancing with promise. In this age, it's commonplace and not very interesting, as the leading edge of communications science is already beginning to explore quantum entanglement as a means of sending messages that would be able to travel unlimited distances instantaneously.

Another witness had a number of dramatic UFO sightings in the company of friends and family members, that evolved into a dream glimpse of another world and an unforgettably powerful message.

He and his mother were together at the time. "We saw what started out as a bright light that started to get bigger. We realized that it was coming closer. It stopped and did nothing but hover for a few minutes. Then the most beautiful 'spikes' shot out from it. Some were short and others were long." The spikes changed color from white to purple as the UFO rotated. They then heard and felt a hum and went out on their porch to observe more. "We didn't see a bright light. Instead, we saw a large black disk. As it flew over us, we saw what appeared to be lights, or perhaps windows, all along the outside of the craft." It then went away, and the two of them calmly reentered the house and retired for the night—the sort of inexplicable response that characterizes the experience.

He then began to have a dream "of somehow being told the world was about to end and I was one of the many who were chosen to go to another planet to survive.

"We were led to a cliff at dusk, and a big spaceship of some kind came down to rescue us. The next thing I remember is walking through the streets of this place with the other survivors. The buildings were small and square, one story stucco or clay. We were led to a building where two robot-type beings told us that the planet was where we'd be living and we would be the rulers, guided by them."

Reading this, I was once again struck by the consistency of so many of the letters about other worlds. Only a few mention tropical or temperate places. Most have the desert motif, and stucco or adobe buildings predominate to

such an extent that one wonders if people are reporting visions of a real place.

Along with the appearance of impossible and wonderful beings, time travel, meetings with the dead, and journeys to other worlds, warnings that our own is soon to end are a commonplace of the close encounter experience. There is many a witness waiting for the moment when the ships come in waves to collect the chosen and take them to some other world.

Warnings such as these, along with the plethora of seemingly impossible experiences that accompany them, do not necessarily signal a great change in the physical world. What they most certainly do signal—quite indisputably so, in fact—is a profound change in another world, one that is at once more durable and fragile than the physical—the world of the mind. And this is true whether the architects of the experience are aliens or not. In fact, if they are not aliens, then it is even more true.

In the high summer of the Roman Empire, during one of the most peaceful eras in history, the Roman world was filled with portents of doom and undercurrents that seemed to indicate that the whole meaning of the world, as it was then understood, was wrong. Millennial preachers scoured the empire proclaiming that the end was coming by fire and the wrath of an angry God.

Given that we are still waiting two thousand years later, it would appear that God is not as easily angered as was thought. But the classical world was certainly ending, soon to be engulfed in the tide of compassion and fervor that marked the rise of Christianity.

The reason the Romans felt doomed in the midst of plenty was that they could instinctively see that the imbalances inherent to their empire's structure would eventually destroy it.

It is this sort of an ending that we are facing now, and I think that our mind, at a very deep level, understands that the modern economy, dependent as it is on perpetual growth for its prosperity, is coming to a crossroads. Either we find a way to expand into space on a massive scale, or growth is going to stop.

One of these things has to happen, and either one of them is going to change our world fundamentally, making it within a hundred years completely unrecognizable to us.

And so we are in much the same position as the ancient Romans were. We, also, live at a time of fundamental change, and the content of the close encounter experience, with all its warnings and portents of devastation and its completely new look at reality, is, at least in part, a response to this.

Still, the experience involves enormous issues of perception. Put simply, are any of these stories factual? I am tempted to take a stand on behalf of some of them, because they involve multiple witnesses or seem to have happened to people in completely normal states of mind. What else would an honest, normal woman who looked up from her housework to find a bizarre team of aliens watching her report except the truth?

Combined with the fact that there are UFOs flying around in the skies, it seems that stories like this should just be taken at face value. If not, then there has to be some compelling reason, something stronger than denial based on the improbability of the situation. In general, when perfectly ordinary people offer reports like these in a world that is filled with evidence of UFOs, it seems illogical to assume that they must be false.

But the stranger the stories get, the less easy it is to be certain about them. So we have to decide, where do we draw the line? Certainly most of these memories are consistent, at least in one way: They are consistently strange. The one thing that links the story of the family who arrived at their country home to find aliens leaping around in the trees to that of the terrified child who ended up in a classroom with a mean-tempered old alien teacher on a cane is strangeness. Both stories are impossibly absurd, and yet both are being reported by perfectly rational people in normal memory.

If we are to conclude that all of these stories are nonsense, then we must also conclude either that thousands and thousands of people sent me hoax letters, or that something is wrong with ordinary human memory. But might it not also be interesting to entertain the notion that, as Dr. Carl Sagan suggested, real aliens would be almost unimaginably strange?

In all of these stories, there is a curious sense of impossibility and reality intermixing in some way, a kind of mad stew of meanings and implications—in other words, a thread of chaos woven into their very texture that threatens to destroy the whole fabric.

One thing is undeniable: Contact can leave witnesses in a fruitful if uneasy state, filled with questions too provocative to ignore and too bizarre to answer. Like the paradoxes of philosophy and the unanswerable koans of Zen, the very impossibility of their memories urges the minds of the witnesses toward change, with the result that those who do not become locked in fear report spiritual awakening.

We are curious creatures, and I think that it is time that we let the close encounter experience beguile us a little instead of rejecting the mystery as

either too silly to bother with or hopelessly inaccessible to solution.

Before continuing on to a discussion of the physical evidence that supports the reality of these memories—and that evidence is as appalling as it is compelling—I would like to explore some of the issues of perception that attach to the close encounter experience and may explain some of its strangeness and how to make it become more consistent and clear.

If there are aliens here, why would they combine the spectacularly public airborne theater of the UFO phenomenon with the secretive theater of encounter—a penetration of the individual so deep that it involves nocturnal raids not only into our bedrooms but into levels of our mind that we generally cannot reach ourselves?

If this represents some sort of an attempt at contact, then these two activities may not be contradictory at all. They may both be expressions of the same central policy, which would be to enable us—or compel us—to include imagery of our visitors in the group of assumptions and perceptions that we refer to as reality. This would be to help us acclimatize ourselves to their much larger scale of thought and learn to integrate the rich new reality that they represent. Aliens or no aliens, the next phase in the evolution of mind is likely to take consciousness to the point that it is no longer dependent on time to structure meaning but is centered beyond both space and time.

So we have defeated missing time to a degree and even gone beyond it. We have seen the outlines of a coherent and quite incredible communication. But we have also seen a lot of obvious dream material and some that seems seizure-related.

Where, then, are the facts? If somebody is trying to say something, why don't they just say it instead of depositing it in our unconscious like this and making it so difficult to understand?

It may be that they are being as clear as they possibly can. And it also may be that we possess effective tools that are finally going to enable us to get things into focus.

Chapter Twelve

Yes Or No

What can possibly be made of stories like these? Why would normal people be generating such incredibly bizarre tales out of their ordinary memories?

Is it because aliens are here, and aliens—real ones—are just as strange as we thought they would be? Or is it that expectations built up within the culture have led the fantasy-prone to recast ordinary nightmares into hallucinations of alien contact?

Behavioral scientists have offered many theories of why certain people might come to believe that they have had close encounters. Until the Spanos study (discussed in Chapter Eight) and others like it, there were theories that witnesses must be fantasy-prone or boundary-deficit personalities, or persons otherwise marginalized and given to occult interests.^[47] Multiple-witness cases were explained as instances of group hallucination induced when a number of fantasy-prone individuals came together.

The terms “fantasy-prone” and “boundary-deficit” both describe individuals “whose ability to distinguish between imagination and reality is diminished relative to a ‘normal’ individual.”^[48] Such people have a tendency to alter memories, combine subconscious and hallucinatory events into fantasies, and to experience imaginary events “with the same vividness and emotional impact of reality.”^[49]

A 1988 study by Ph.D. student Julie Parnell involved more than two hundred participants in a UFO conference.^[50] Two personality tests were administered, the Minnesota Multiphasic Personality Inventory (MMPI) and either the 16 Personality Factors Test (16PF) or the Adjective Check List (ACL). Like the Spanos study, this one did not find evidence for psychopathology.

In my case, the Bender Gestalt, the Wechsler Adult Intelligence Scale Revised, the House-Tree-Person Test, the Thematic Apperception Test, the Human Figure Drawings Test, and the Rorschach were all administered to me by Dr. Maryellen Duane on March 7, 1986, a few months after my December 1985 close encounter. Among the findings were that I was a bright individual

who “appeared to be under a good deal of stress,” was suffering from fatigue, and “appeared to be very frightened and to feel powerless.” She saw “a good deal of inner turmoil” and was concerned that my stressed condition not compromise my ability to separate fantasy from reality.

I did not show any evidence of being a fantasy-prone personality, though, and the general high level of stress and turmoil that I displayed seems consistent with the picture presented by victims of post-traumatic stress disorder (PTSD). “A fantasy origin for PTSD would be a novelty, because all prior experience indicates some external source as the cause,” according to Bullard.^[51] But stress disorder also appears to cause a tendency to fantasy, so it is conceivable that alien fantasies could arise as a secondary consequence to explainable stress factors.

In part, the results of my personal tests were what has led me to adhere strictly to the notion that the close encounter experience—especially my own experiences—should remain open to question until there is absolute proof of origin. I continue to stand by that belief, although the physical evidence to be presented in the next section must stand as a possible indication that the time for neutrality is passing.

Many psychologists quite logically take the position that any memory that contains elements that are unexplained by present theories of reality must in some way be incorrect. This position originated when it was discovered that the claims of people reporting satanic ritual abuse could not be substantiated by investigation, and that there were cases of claimed child abuse that the parents felt certain had never happened.

Eventually a group of accused parents came together, founding an organization called the False Memory Syndrome Foundation. Its assertions about the distortion of memory have been taken by the media to mean that all unusual memories must be false, whether they were repressed or not.

On May 23, 1993, in the *Middletown Record*, reporter Joseph de Rivera explained, “in March of 1992, the False Memory Syndrome Foundation began collecting cases of parents who reported that they had been falsely accused on the basis of ‘memories’ recovered during therapy.” He went on to report that memories recovered in so-called trauma-search therapy, where the therapist searches backward from a presented disorder to find the trauma that caused it is fundamentally flawed. “The problem with this reasonable-sounding procedure is that a patient in distress is vulnerable to influence by suggestion.”^[52]

Of course, it is important that innocent people not be incarcerated for crimes that did not happen, but at the same time, it is not at all obvious that we understand memory well enough to conclude that there is no such thing as repression.

Although the validity of the mechanism of the repression of traumatic memory, primarily in abuse cases, has been questioned by some psychologists, reports of such repression have been present in the psychological literature for years.^[53]

On November 23, 1996, an Associated Press story was filed about a woman who had been attacked and gang-raped after a college Halloween party.^[54] She remembered nothing about it until fellow students started telling her that there was a videotape of the crime. It turned out that five men had raped her and taped themselves doing it. The victim is seen in the tape to be physically helpless and was said to be drunk. She did not even talk to police until five days after the event, when pain from her injuries triggered her memory.

But would her memories of the content of the attack have been accurate if they had been recovered by trauma therapy instead of videotape? If trauma can alter and derange memory, they may not have been. There have been theoretical attempts to explain how false memories can be generated, most notably by Elizabeth F. Loftus in *The Myth of Repressed Memory*.^[55] She theorizes that suggestion can end up being assimilated and perceived in the same way as real memory, and that a complex mixture of cultural influences and confused childhood perceptions can be accidentally molded by well-meaning therapists into bizarre structures that essentially mirror their own fears. It seems to me that an inexplicable attack on an adult might well be misinterpreted through a similar process of culturally induced distortion.

As there is little to no evidence that the more lurid descriptions of satanic cults reflect actual groups that operate in the real world, there must be truth in what Loftus says. In *Remembering Satan*,^[56] Lawrence Wright demonstrates that satanic rituals recalled by members of a family involved in an abuse case simply did not happen. Unless all the investigators were also Satanists, the family had not remembered whatever did happen—if anything—correctly.

Could it be that bizarre memories—even those that are never repressed—are simply distortions of other types of trauma? If so, then why are otherwise normal people doing this?

One of the problems psychology has faced is that no clear mechanism of

distortion has been identified. This has led some researchers to go so far as to conclude that all seemingly impossible memories must be wrong, that if bizarre memories of satanic cults are provably false, then it's safe to conclude that even more bizarre close encounter accounts must be false as well.

The fact that close encounter memories have been thought to be inaccessible without trauma therapy that usually involves hypnosis has made them even more suspect. Anyway, who would believe for a moment that anybody saw aliens in the trees or got abducted out of the living room in broad daylight by a giant telepathic insect? Or take my case—four books full of one impossible story after another.

It is reasonable to ask a simple question: Are there *any* facts associated with these memories? I can point to the many multiple-witness cases and to the structure of most of the memories, which would be perfectly believable if they didn't involve aliens. A man reports that he was educated by a crotchety old nun on a cane and all the children were afraid of her. A normal memory, accepted at face value, completely believed. But if he reports the same thing, except that the teacher was a crotchety old alien on a cane—well then, that's a different story entirely. We laugh. We dismiss it. Completely disbelieved.

The mind can deceive itself. False memories can even be induced in a laboratory setting. In fact, it has been decisively proved that people often distort memories of past events. But to the extent that a flock of birds, say, becomes a troupe of tree-climbing aliens—to a whole group of people? Or a husband and wife misremember a passing airplane as a demonic force trying to separate soul from body?

Memory has been shown to change over time but not to this extent. The February 1997 *Journal of Psychiatry* reported a study of Operation Desert Storm veterans that showed that their memories of traumatic events changed in the two-year postwar period.^[57] Although there was no way to tell if the original memories were accurate in the first place, forty-one veterans recalled events two years later that they had not originally reported, and twenty-seven did not remember events that were in their after-battle reports.

The study found further that veterans displaying the most serious symptoms of post-traumatic stress disorder showed the greatest amount of memory distortion. This is noteworthy, because it suggests a relationship between the level of distortion of the memory and the seriousness of the stress that accompanied the precipitating incident.

Interestingly enough, the extremely bizarre nature of the close encounter

reports by this measure becomes a chillingly powerful argument that the witnesses are remembering something—even though inaccurately—that they not only perceived as real but that also delivered an ultrahigh level of trauma.

According to the story in *Science News*, Dr. Bessel van der Kolk of Harvard Medical School viewed the Desert Storm study as inconclusive. “This is an article about people’s willingness to report traumatic experience to strangers,” he said. “It says nothing about the critical issue of whether these recollections are in fact reflections of reality.”

And so the central issue remains: How do we tell where reality stops and fantasy starts? Interestingly, if it can be proved that close encounter recall is based on real, physical experience, then it is less likely that the sensory parts of the memories will be distorted than intellectual ones such as the battle reports that were used in the Desert Storm study. In *Psychological Trauma*, Dr. van der Kolk proposes that traumatic events that are first processed as sensations or feelings may be preserved differently from intellectualized material. He notes, “Clinicians and researchers dealing with traumatized patients have repeatedly observed that the sensory experiences and visual images related to the trauma seem not to fade over time and appear to be less subject to distortion than ordinary experiences.”^[58]

But if close encounter is physically real, then we must also contend with the fact that the physical sensations involved may be seriously altered, just as the witnesses report. It may be expected that extraordinary distortions occur, possibly beyond anything that has yet been studied. But until we know how the mechanism of distortion works, we cannot filter out the fantasy.

However, there are a number of avenues of approach that suggest that science can make real progress toward the creation of just such a filter, because of the fact that memories can be evaluated biologically. This is connected to brain-imaging research, an area of exploration that has gained enormously in recent years because of the development of the PET scanner, which enables researchers to observe the brain while it is actually at work.

Two studies, conducted independently, suggest that severe and repeated sexual abuse in childhood actually damages a part of the brain called the hippocampus, which is a sort of switching mechanism that organizes and integrates memory. These studies were reported at the May 1995 meeting of the American Psychiatric Association by scientists from the University of California at San Diego and Yale University School of Medicine.^[59] Apparently, severe trauma may unleash hormones that injure the

hippocampus, thus leaving a measurable signature of abuse in the brain of the victim. It should be noted, however, that not all victims of abuse exhibit this change, and a study conducted by McGill University scientists on twins suggested that, in men, there may need to be a genetic disposition for the change to show up. Nevertheless, it would seem possible that other forms of abuse may also leave signatures in the brain—scars, as it were, that prove that something bad actually did happen to the victim.

Obviously, though, that gets us only partway down the road, if it develops that damage to the hippocampus will occur only in some trauma victims and not in all. But there is yet another study that might eventually enable us to sort the whole thing out.

In 1996, research was reported by a team of Harvard scientists led by Dr. Daniel Schacter^[60] that suggests that the brain actually processes false and real memories differently, even though the witness may believe that all the memories are real. For example, a true memory of hearing a word will induce brain activity not only in the hippocampal area but also the left tempoparietal area where the brain decodes sounds. If the word was only believed to be heard, there will be no left temporal activity because no sound was ever decoded.

If this research proves out, it would have dramatic implications in the whole area of memory studies and would open a new door into the mysterious memories and life experiences of the close encounter witnesses. Dr. Schacter was quoted by the *Times* as saying, “we believe we have a clue now about how false memory works.”

In addition, Dr. van der Kolk reports, “Contemporary biological researchers have shown that medications that stimulate autonomic arousal may precipitate visual images and affect states associated with previous traumatic experiences in people with Post Traumatic Stress Disorder but not in control subjects.^[61]”

It is this biological approach to the problem that is most likely to lead to a solution. If real trauma is present in the close encounter witness, it is going to have some sort of a biological signature. And conceivably, using the technique proposed by Dr. Schacter, we may be able to construct a true narrative out of witness testimony, if it proves to have its origin in real trauma. This would work by reducing the testimony to a series of very narrow yes or no questions, each of which related to one of the physical experiences reported. Then, by determining the way the brain processed the

answers, we could isolate the parts of the memories that were based on factual events. For example, if a witness believed that he had seen a shadowy figure in his bedroom shortly before a missing time experience, it might be possible to determine, by observing which parts of the brain process the memory, whether a visual image was actually present.

Using such methods, a picture of the close encounter experience could possibly be constructed that is based entirely on whatever factual realities lie behind it.

But the research that has been done so far has been limited to simple false memories induced in the laboratory, where witnesses were deceived into believing that a certain item had been in a set when it actually was not there. Whether it will be also applicable to extremely complex memories remains to be seen, but it does seem to hold out significant promise.

We can hope that, as science begins to come to terms with close encounter, it will realize that it has many tools that it can apply even to the anecdotal evidence with a reasonable expectation of useful results. And then at last this phenomenon will leave the realm of confusion and fear and fiction, and find its true place in the area of human experience we consider to be real.

It would be wonderful for close encounter witnesses if some progress could be made in understanding their memories. From personal experience of it, I know how overwhelming the stress response can be. The most debilitating problem is sleep disturbance, which often becomes chronic. Although I no longer suffer from the problem, I experienced “guarded sleep” for years after my first encounter. Associated with lack of sleep is depression, which can be devastating. An inability to trust others and strong separation anxiety that emerges whenever a loved one so much as leaves the house are also symptoms shared by close encounter witnesses and sufferers of post-traumatic stress disorder.

What distinguishes close encounter from ordinary high-stress experience is another group of symptoms altogether, and because they are so different from other stress-related symptoms, it may be inferred that whatever induces close encounter memories is no garden variety stressor.

What basically happens is that the witness’s whole sense of reality explodes. People become psychic, they begin to believe that they can see into the future, they take spontaneous journeys through time, they begin to see vivid images in the region of the brain known in folklore as the “third eye,” they levitate, they believe that they take on the appearance of alien forms for

periods of time, they acquire wisdom and new compassion, their children become preternaturally brilliant, they take journeys out of the body, they become healers, they acquire relationships with the dead, they become deeply concerned with the welfare of the environment.

They begin to feel that their sexuality is involved, they come to feel that they are breeders of some sort, they begin to think that they have relatives living on other planets, they believe that they acquire ongoing relationships with the aliens who visit them.

Fortunately, not everybody has all of these side effects, but few people come away with none of them.

When we understand why the experience causes people to think that they have changed in these ways, we will also understand what it is that is happening to them. And then, perhaps, we will begin also to understand something of the mind that seems to be behind all the wonder and terror of the experience. And no matter the origin of that mind, whether it is alien or from right here at home, that is going to be one extraordinary discovery.

If the mind of the alien does not originate between our own ears, then there may be some interesting physical reasons for the perceptual distortion that appears to occur, that goes beyond stress-related issues.

If a nonhuman intelligence is responsible for what is happening, then there are likely to be problems involved in the process of interaction that are fundamentally different from any that we have experienced before. It is not obvious that contact will ever be a smooth process.

In fact, *if* it is happening, then there may be a complex and subtle mix of reasons for the perceptual problems that are occurring. First, it is unlikely, once fact is separated from fantasy, that what remains is going to be particularly believable or easy to understand. The bizarre combination of the sublime and the gothic that characterizes so many experiences, for example, is likely to conceal motives and expectations that are very different from our own. More than that, the secrecy that seems central to the whole contact process must be a major contributor to witness confusion.

Even beyond these problems, though, there is the issue of whether perception will be deranged by the mere process of encounter. There are indications from physics that the observer plays a role in the actual construction of reality. In his seminal book on quantum physics, Dr. John Von Neumann shows how quantum theory indicates that the observer may have an active part to play in the creation of reality.^[62] Von Neumann says that

physical objects would, essentially, not exist in any definite form if an observer was not perceiving them. Reality, when not being observed, exists as a sort of wave form of possibilities called a superposition, which acquires definite form only when it is observed. We never perceive the true texture of the universe, and can never see it, because everything we observe turns into the forms we are wired to see.

Although there has been a lot of controversy about this idea, the problem of the observer in quantum physics has not yet been solved. If it is true that the observer's expectations somehow govern the shape of reality, then close encounter could conceivably be an extremely difficult process.

I and thousands like me have found close encounter to be psychologically devastating, impossible to remember clearly, and full of perceptual distortion. Dream mixes with reality. Things that seem physical one moment become hallucinatory the next. Aliens change before our eyes into the very images of our worst fears. What appear to be living creatures become intermixed with our nightmares.

In other words, when we try to interact with them, we experience an outbreak of perceptual chaos. Could it be that this is what happens when two differently wired observers attempt to turn the same possibilities into a reality coherent to them? If so, then the fearsome pressure on the ego that takes place during encounter would be explained, because it would be experiencing a situation that would be doubly frightening: It would appear to the ego that a deeper, more total annihilation than the individual had thought possible was at hand. Of course, it would all be an illusion: No matter whose consciousness prevails, it seems probable that the superposition is going to resolve into the same physical appearance. This is because, whereas there is evidence that the resolution of superposition into matter may depend upon the observer, there is no evidence that the process of observation itself governs the structure of the universe.

So if there isn't an actual battle going on between the two minds to create different realities out of the same universal stuff, then this psychological side effect must be controllable. Even if the physical content of the world is somehow at stake, we still have a weapon available. This is because understanding itself would be a powerful form of control in such a situation.

I have had many close encounters. Despite my best efforts, I have on only one occasion been able to alleviate some of the internal chaos. I did this by performing an inner movement of my attention that I learned over many

years of meditation. I moved my attention out of my personality, which felt as if it was coming unanchored and about to be destroyed, and concentrated it on the sensation of my physical body. This brought the situation nicely into focus. During the few moments that this lasted, I saw four rather tired looking people, quite small, wearing dark blue clothing. Their faces were sloppily smeared with a greasy substance of the same color. It was night and the blue material seemed intended as camouflage. There was a period of perhaps two minutes during which we simply stared at one another. Then they left, moving quickly, their coloring making them seem to disappear. But there was no trick to it. They did not evaporate like smoke. They moved off into the dark.

There is obviously much that can be done to understand the degree to which the close encounter experience is real, and the biological evaluation of memory looks especially promising. This is going to become particularly important, because, given the possibilities just explored, and what unfolds in the next part of this story, it seems urgent that we gain the clearest possible understanding of what the close encounter witnesses are trying to tell us. It could be, after all, that what is happening to them today will be happening to the whole world tomorrow.

Part Three

HARD EVIDENCE

The Lord shall preserve us from all evil;
He shall preserve our souls.
The Lord shall preserve our going out and our coming in,
From this time forth, and even for evermore.

—*Psalm 121*

Chapter Thirteen

Early Days

It was a winter night so silent that it seemed to bear a sort of innocence. But it was not an innocent moment, because I had just woken up and I couldn't move. Instead of enjoying the sweet, contemplative quiet of the country in the deep hours, a helpless commotion of fear made me want to run. I was paralyzed and helpless despite the fact that something was being stealthily pushed up my nose. Then I heard a terrific crack between my eyes, and the world went black.

The next morning, I woke up exhausted, as if I had been struggling and fighting all night. There were even spots of blood on the pillow. But Anne hadn't been disturbed, and nobody else had been in the house. So it must have been a dream...except by February of 1988 I had been through too much: I knew the stories other witnesses told of getting strange little objects pushed deep into their sinus cavities. Typical of the reader comments was this one: "I protested as much as possible, which can't be much when they coerce as you know, and then they stuck something up my nose."

Because of reading letters like this, I thought *maybe* it had been a bad dream, but it also made me frantic. Clearly, my most logical strategy was to undergo a thorough physical and neurological examination, which would include both a CAT scan and an MRI scan.

The day after the incident, I began experiencing fearsome cluster headaches, so there was ample medical reason to undergo the tests. I did not tell the neurologist about my experiences, although the doctor who referred me knew the story.

The neurological exam revealed mild bilateral asymmetry, with the left side of my body being somewhat more developed than the right, but nothing to suggest the presence of disease. On March 16, 1988, I had the CAT scan. The finding was completely normal.

I then proceeded on March 18 to the MRI scan. The results were somewhat different. "Occasional punctate foci of high signal intensity are located in the cerebral white matter of the frontal lobes bilaterally, as well as the left temporo-parietal region."

The neurologist did not view this finding as a matter of concern, and indeed, no evidence of disease process related to it has emerged over the nine years since the test was conducted.

However, another MRI scan specifically of the nasal cavity conducted in 1989 revealed some deviation and apparent scarring consistent with a mild insult to the upper part of the left nostril. No discrete objects were observed in any of the tests.

I might also note that the phrase “increased signal intensity” in an MRI scan means, to us lay people, that a greater reflectivity is being observed from a given area. This return could be because of deposits of some kind, such as calcifications in soft tissue, microvascular disease, the dead nerve tissue that results from loss of the myelin sheath, or, conceivably, a foreign body. Unfortunately, it would be unlikely that an exact diagnosis could be achieved without more aggressive testing, even exploratory surgery, and only a serious medical problem would justify such a course. So the matter was left there, and I had to be content with knowing that something *might* have happened on that night. But if it had, and something had been inserted into my brain, then was my mind being influenced, even changed? What was happening to me, to all of us? I was beginning to feel that the harder I tried to find the answers, the more difficult the questions were becoming.

When I questioned my doctor about whether something could be introduced into the brain through the sinuses, he responded that this would be the easiest way to get to the temporal lobe—which is, of course, the seat of consciousness. However, it would be medically extremely dangerous, because of the danger of carrying bacteria-laden debris from the nasal cavity up into the brain along with any surgical instrument that was introduced from that direction. So I was left to suppose either that it was a dream or that whoever had done it had greater command of antisepsis than we do, because there had been no infection.

I decided, in 1989, to undertake a study, through the Communion Foundation, of people who reported intracranial implants, whether through the nose or by other means. At the time, I had no idea that two witnesses, Betty Stewart Dagenais and Jesse Long, were both struggling out on the West Coast with implant issues of their own, and it would not be until 1996 that I discovered what had happened in their quite shocking cases.

I felt that we should do MRI scans of people who had reported brain implants or nasal intrusions and see if we could gather evidence that was

more definitive than what had been obtained in my own case. We looked through our file of letters and soon found a number of witnesses who reported one or both of these symptoms.

Some of them had, like me, already been disturbed enough by what they remembered happening to them to seek medical attention.

One witness who had experienced pain in her ear and head after an encounter, leading to full-scale migraine, had an MRI scan with a result that sent a chill down my spine:

“There are several small areas of increased signal intensity present in the white matter in the frontal areas bilaterally, with three bright signals seen on the right side, measuring about 4 to 5 mm. in size. A 6 to 7 mm. bright signal is seen in the frontal white matter on the left side, with small punctate lesions anterior to this. These are in a periventricular location. Also two areas of increased signal intensity are seen in the white matter in the temporal lobes, one on each side.” The doctor concluded that the areas of increased signal intensity were “suspicious for demyelinating disease in a young individual.” (The witness was in her forties.)

This was a virtual carbon copy of my own finding. Did it mean that we both shared the same exotic disease, one that might cause vivid hallucinations? I was eager to get an answer to this question, but my research was unavailing. So-called unknown bright objects are found in about 1 percent of all brains scanned, and the finding is usually considered innocuous, although it may be associated with chronic fatigue syndrome in some cases—but not in mine, as I have always had a normal to high energy level. This finding has also been seen in patients with myelin-related diseases such as multiple sclerosis, which occurs when an unknown process destroys myelin and causes the nerves it encases to die. But the demyelination associated with MS presents a characteristic pattern of destruction centering in certain nerves associated with motor control, and that was not present in either scan. This is why the other witness’s radiologist noted only a “suspicion” of possible demyelinating disease and mine did not mention it at all. The defining factor is that neither of us has shown symptoms of such disease over the years since the tests were done.

If such returns from an MRI scan are not caused by demyelination or another disorder, another possibility is a foreign object. Back in 1989, a number of witnesses had reported expelling BB-sized objects from their nasal cavities, but at that time I was not aware of any that had been collected, so

exactly what these reports meant I could not determine.

Like me, the witness who sent me this other MRI report had experienced severe headaches. So, assuming that she was not suffering from a disease, then what might be the matter with her?

She had vivid memories of a machine of some sort being placed against her forehead, and had woken up to find that triangular areas of her eyebrows had lost their hair, and red dots like small puncture wounds had appeared in the center of the hairless areas.

“I began waking up in the morning with bare patches in my eyebrows. The bare patches were in the shape of triangles. I used an eyebrow pencil to cover them—but after months of this, I thinned them out.”

She experienced a disturbance to the peripheral vision in her left eye, a symptom that she shares with other witnesses. When her doctor told her that the unknown bright objects in her brain were behind her eyebrows, she was horrified. She has a rather clear image associated with her apparent implantation. She remembers seeing a group of tubes coming out of a white base. The ends of these tubes were ringed by small lights and had needles in the center that she believes produced the marks in her eyebrows.

“While lying flat on my back the white base is placed above my head. The tubes are flexible, the tiny lights are white and warm. Once they are in place the needle slowly penetrates into my skull. It is done very slow in order not to crack the skull.”

One can well understand why she complained of headaches.

She ends her letter, “for some damned reason I am connected to the unknown—the hidden. And we all know that man hates what he cannot understand. So where does that leave people like us? Dissected, prodded, hated.”

One thing about my proposed MRI study concerned me. It was that witnesses were reporting that the small objects being expelled from their noses were metallic. My problem was that magnetic resonance imaging places the patient in a powerful magnetic field. If there was something metallic embedded in an organ, there would be a danger that the magnetic field would cause the object to move. Obviously, this could result in injury, maybe quite serious injury in the case of a sensitive organ like the brain.

I did not want to abandon the study, but I also did not want anybody to get hurt.

My decision was to concentrate on people who had already had MRI scans

with no consequences and to preinterview the potential subjects carefully, so that I could be certain that they understood that there was a certain level of risk, however remote. I was surprised to find that absolutely nobody even considered dropping out of the project.

The way we found witnesses was to announce the project in the Communion Letter, which we were publishing at the time, as well as to cull our correspondence for people who provided descriptions of objects being put up their noses or otherwise introduced into their cranial areas. We concentrated on the brain largely because it didn't occur to us that there might be implants elsewhere in the body. I saw this as an intrusion into the seat of consciousness, and to me the brain was the place to go to find the evidence.

The letters that came in began to form a picture, and it was a disturbing one. "I was abducted and missing for five hours when I was between eleven and thirteen, some twenty-odd years ago. A few years ago I had an MRI scan done twice on my head. The doctor had no explanation for me for what the spots were that showed up on my brain."

This was another witness with spots in the temporal lobe, a finding that was beginning to become familiar to me.

One possible explanation I ruled out was that these were imaging artifacts—glitches in the scan caused by the equipment. There are many image artifacts associated with MRI scans, such as movement artifacts, flow artifacts, and central point artifacts. Movement and flow artifacts appear as fuzzy or smeared areas, but central point artifacts are bright dots of light. The radiologist I was working with said, however, that they are easily recognized and were not what we were seeing.

I cannot claim that there is a large-scale pattern of people who display unknown bright objects in their brains reporting close encounters, because the studies necessary to determine this have never been attempted. But certainly such an effort would be worthwhile. It would also be worthwhile to find witnesses willing to submit their bodies to postmortem autopsy, in order to determine exactly what has happened to their brains.

One witness sent us two diagnostic reports on his brain. The first said, "Skull X ray—Foreign body of possible metallic origin noted in the mid-brain." The second was slightly more informative: "X rays show a small metal object in the temporal right lobe causing temporal lobe syndrome." The skull itself showed no sign of any trauma, and no entry point for this object

was observed.

This witness was having a complicated response to the presence of this object, which could have involved either close encounter or hallucinations or both. In any case, we very sadly could not include him in the MRI study, largely because of concerns about the effect of the magnetic field on what had already been identified in X ray as a metallic object. In addition, the radiologist was concerned that his X rays might show other disease process in the brain and felt that he should remain under care at home.

I felt tremendous sadness when I finally wrote this witness telling him that he could not participate in the program, but the danger of causing the metallic object to move was just too great. This is why witnesses who want to find out if their brains contain objects should always begin with X ray. Usually, metal shows up clearly on X ray, and if such a thing as this witness had is present, then an MRI scan should be attempted only if the doctors involved still feel that it is indicated.

Another witness sent us material showing that she had something near her pituitary gland. But was it a growth or an unknown object?

This witness, Dr. Colette Dowell, has been mentioned by various UFO researchers and featured on the television program *Encounters*. On February 2, 1986, Dr. Dowell had a CAT scan of her brain and pituitary. The finding was that she had a normal pituitary, but “there is, in addition, a 3 mm. non-enhancing nodule in the left lobe which could represent a microadenoma.” The key word here was “could.” It was not a definitive diagnosis, which was why we were interested in looking more deeply into this case. What would the much more detailed MRI picture show us?

Dr. Dowell had experienced a disappearing pregnancy with no apparent miscarriage at age fifteen and suffered from menstrual difficulties. As menstrual and other problems of the female reproductive system can be caused by pituitary adenoma, these complaints were what led to her CAT scan.

She wrote us, “Since I was a teenager I have been experiencing ‘UFO’ dreams. I do not know the origin of these paranormal experiences.” She stated that, from an early age, she felt watched. She reported, “I felt there were two Colettes, one from this planet and one up in the stars.”

She further notes, “in 1988 while camping in my van near Chesapeake Bay, a vibrating energy permeated my vehicle and continued through my body with the focus being my third eye or pituitary region.” This led to an

even greater sense of clairvoyance. She had numerous abduction dreams. By 1989, her alien-related thoughts and apparent experiences so distressed her that she consulted a number of psychiatrists. But tests revealed a personality within normal range.

Dr. Dowell may indeed have a pituitary adenoma, as she has experienced other symptoms associated with this disease, including vision disturbances and galactorrhea, or lactation outside of pregnancy.

The anterior pituitary, which is the location of the object, is like a glandular clearinghouse. In it, hypothalamic neurohormones regulate the creation and secretion of six major peptide hormones, which are then secreted in bursts, or in circadian or diurnal rhythmic patterns. Enlarging adenomas can cause many symptoms, the most obvious of which are headache and visual disturbances. False pregnancy is not a symptom of pituitary adenoma.

As Dr. Dowell was one of the most interesting and articulate of our candidates, on June 6, 1989, an MRI scan was undertaken on her. To minimize the number of slices taken and thus the cost of the scans, candidates were asked to indicate the area where they thought they had an implant. Most indicated the sinus region, but Dr. Dowell's scan was done, for obvious reasons and at her insistence, in the pituitary area.

The impression was, "A 3 mm. zone of high intensity within the posterior sella turcica, as noted correlating with the patient's demonstrated microadenoma." At the time, the radiologist felt that the object observed on the MRI scan and the one revealed by the CAT scan could be two different objects, but he eventually concluded on his report that they were the same.

Dr. Dowell's MRI scan has had quite an extensive amount of review over the years, as certain abnormalities associated with it have continued to suggest that it might not be an ordinary adenoma after all. Among those reviewing it have been four physicians, three psychiatrists, and two ophthalmologists, as well as a panel of five neuroradiologists from the Cedars-Sinai Medical Center.

Only one of these doctors would identify this as a normal-appearing situation, and he refused to identify it as an adenoma, instead stating that it was within normal range for an MRI scan of this area, and no disease process was present at all. The others would not offer opinions. The problem is that on an MRI scan, an adenoma does not usually appear as a 3-mm punctate zone. A small zone of high signal return is more often associated with calcium or other nontissue deposits, and the doctor who would discuss it said

that it appeared to him to be a calcification.

Some UFO researchers have identified Dr. Dowell's object as an implant, but its nature has never been determined, any more than it has been definitively determined that the unknown bright objects in the brains of other witnesses have been put there by somebody and have not occurred naturally. Dr. Dowell is adamant that its true nature is unknown.

I talked to Dr. Dowell on September 4, 1997, and discovered that she was no longer having the vivid experiences that had been with her for so long, and there was an interesting reason for this. Like some of the other witnesses mentioned in this book, she was diagnosed with disturbances in her peripheral vision. In her case, these were thought to be a side effect of pituitary adenoma. Oddly, her medical records show that this has turned out to be a transient symptom for her. Unless the adenoma is removed, it is unusual for a symptom like this to disappear in such a case. But Dr. Dowell has had a study done that showed her peripheral vision to be normal after two examinations that showed otherwise.

She provided me with the medical records confirming this. On August 20, 1990, she was diagnosed with bitemporal quadrantanopsia, the vision dysfunction typical of pituitary adenoma. On March 29, 1994, she was again tested, and the visual field was found to be unchanged from 1990. The presence of the probable adenoma was again confirmed by another MRI scan. At this point, surgery was obviously becoming an option. Then, just ten days later, on April 4, 1994, she was retested to validate the previous test. The report states that the "results indicate no visual field defect—unexplained improvement."

Dr. Dowell has also ceased to lactate abnormally and has not had any of the sudden "jolts" of energy in her forehead region that used to disturb her so frequently. She states, "This is not to say that my symptoms won't appear again, just that they have subsided."

Dr. Dowell has experienced an unfortunately chaotic diagnostic history. Some of the doctors have even claimed that her scans were normal, despite symptoms like abnormal lactation and visual disturbances that are typical of pituitary adenoma.

It seems possible that the object observed in the CAT scan and the one in the MRI scan are indeed two different things, and two of the doctors agreed that this was so. But were either or both objects implants? There is no way to know. So she has been left to wonder whether she is an abductee with an

implant that can be seen—at least at times—near her pituitary, or is simply suffering from a conventional abnormality that for whatever reason has a rather unconventional presenting appearance.

This case illustrates a fundamental medical problem that will crop up again and again as I narrate the further history of possible implants and certain ones—for there are some whose existence is beyond question. This is that we need and do not have an appropriate array of tests not only to diagnose these objects but also to identify their effects and functions.

Fortunately, not all stories are as hard to end as Dr. Dowell's. I would hope that some thought might be given to testing Dr. Dowell further, using some of the techniques suggested in the Communion Foundation's proposed implant study protocol.

But those are today's issues. Back in 1989, it was with high hopes that I continued to gather witnesses for our MRI study. Dr. Dowell's object was inaccessible because it was buried deep in her brain. These other witnesses mostly had memories of nasal intrusions.

I could hardly sleep the night before the tests began, I was so excited at the prospect of finding an implant at last.

Chapter Fourteen

The One Within

Before I report in detail on those studies, I must add yet another dimension to the picture that we are painting of this bizarre situation.

It is easy to conclude that implants must be tracking devices or mind control machines of some sort, put in us by aliens. But recall that Dr. Dowell, as a child, felt that she was not entirely of this world—that she was actually living two lives at the same time, one on Earth and another as an “alien” among the stars.

She was not alone. In point of fact, this blurring of self is experienced by many close encounter witnesses, and it would seem appropriate to introduce it into the discussion during the survey of implants, lest we forget that one thing that the questions raised here do not have are simple, pat answers. But if implants don’t do conventional things, then what else might they do? Even if they are tools of communication, it could be of a very extraordinary kind.

The deeper you mine the close encounter experience—always refusing to submit to the temptation to rush to explanations—the richer and more profound are the questions that it returns. There is a subtle but continuous suggestion that the experience involves some sort of inhabitation or—less distressing—a kind of blurring of normal and alien selves. Given the incredible stress of encounter, it really isn’t too surprising that there would be unusual side effects like this. Other highly stressful experiences can lead to similar personality disruptions.

Witnesses are left with the sense that the visitors are somehow inside them, or using some means to look through their eyes, or dwelling in their bodies, or living parallel lives to them in other worlds. In some cases there are physical sensations involved, and witnesses will report that they feel as if part of their vision is being stolen, and they somehow perceive less of the world than they did before their body began to be “shared.” In other cases, like Dr. Dowell, they feel as if they are in two worlds at once.

Occasionally, a witness will find that he or she has suddenly changed physical appearance and actually looks like an alien. Incredibly, this shape-shifting phenomenon is also sometimes witnessed by others.

One night a witness woke up and found that his arms were long and thin, and he felt light and seemed to be pulsing with the delicious electricity that eastern traditions identify as kundalini. He discovered that, in this state, he could fly. He went upstairs to his son's room and woke him. The boy seemed delighted to see him and acted as if he was greeting an old friend. Next morning, though, things were different. The boy remembered the experience vividly but as a nightmare. He recalled the "alien" as a monster that had flown around his room like a giant bat.

Another time, a witness cried out that the visitors coming near her were so ugly. One of them placed a blue-gloved hand on her wrist and said, "My dear, one day you will look just like us."

A member of the psychological community came out of the bathroom one morning and found his companion terrified. "You changed all of a sudden into this weird being. Your body was really thin and your arms were long and thin also. You had these huge eyes with a slightly larger head." At the time, the witness says, his friend knew nothing about my books. He changed back to normal, but does not report if the relationship survived.

It would obviously be inappropriate to jump to the conclusion that people are literally turning into alien forms at times. But something quite unusual must be happening in these cases. Whatever it is, it does suggest that there may be some sort of more active participation on our part, perhaps one we cannot articulate clearly, probably because it represents action being taken that is far from our conscious understanding of our own natures. It is a reminder that, whenever you ask the question "Who are the aliens?" you must ask in the same breath, "Who are we?"

Other witnesses have reported being told, "We will come from within you," and one was given the particularly haunting explanation, "It is me within thee."

Although this might refer to an aspect of the experience so strange that we simply do not have enough information even to begin to describe it accurately, it might also mean in a completely straightforward way exactly what it says, which is that the first confirmed alien artifacts are going to be found inside our own bodies.

Back in 1989, we gathered our witnesses for the MRI project, and one by one they went through their scans. Three of them displayed completely normal scans, but four did not. Here are the findings and the stories behind them.

This first examination was of a witness who had reported a recent nasal intrusion. The MRI revealed a “slight increase intensity in the right turbinates.” This was assumed to be “suggestive of recent minor allergic changes or upper respiratory infection,” and the MRI was judged normal.

We were all frustrated with this scan, because, although it showed that the nose was irritated, there was no return of an object or sign of trauma.

The witness comes from a family that has recorded dozens of close encounters since the early 1960s. The fact that there was so much multiple witness in this case was what had drawn my interest in the first place. Though I would have loved to get physical proof, in those days I was still vacillating about whether this was at its core a previously undetected hallucinatory phenomenon. For me, the implant project was in part a search for abnormalities that might induce seizure. I was considering, for example, the possibility that allergies were involved, largely because of the terrific allergic responses that I and some of my friends who had encounters at my cabin had experienced when the visitors came close.

Could it be that the allergies triggered the visitors, or was it the other way around? A secondary aim of the MRI project, then, was to see if there might be, for example, a connection between restricted airways and close encounter events. It is thought that airway flows might affect brain activity, and we considered that this might be a useful area of exploration.

The first witness also reported a number of childhood encounters with apparent nocturnal intruders, coupled with missing time and nosebleeds. The father had experienced intruders and nosebleeds in his childhood as well and had comforted his son by telling him that these things were normal for children. The witness’s childhood intruder experiences and nosebleeds took place in 1967 and 1973, in an area of the country that had notable UFO flaps in both of those years.

The case was somewhat compromised because much of the material was dream recall, but it was strengthened by the fact that the witness and his father had seen a UFO while together.

After seeking out a psychologist to help him deal with his memories, he discovered that his sister also had a lifetime of encounter recollections, which she had recorded in a diary without discussing them with the family. He discovered that the dates in the diary coincided with his own memories and dreams, so the case was reasonable.

In the end, though, it did not offer much more than had been available

before: lots of suggestive detail, now including the fact that there was nasal passage irritation in a man who believed that he had experienced nasal intrusions. But there was no object.

The second of these witnesses scanned had also reported a nasal intrusion. Her MRI report stated: “inflammatory changes in the paranasal sinuses. Otherwise normal examination.” Once again, there was no object present.

I might note here that inflammatory changes like these are a very common MRI finding. Think of how many times people have a slight cold or allergy and irritate their nasal passages just by blowing too hard, and you can see how impossible it was to draw any hard-and-fast conclusion from such an observation.

Still, we now had two people who reported nasal intrusions, and both had irritated nasal passages. In neither case was there any sinusitis present. So these results were actually slightly supportive.

The next study, also of a witness with a memory of nasal intrusion, offered something a little more tangible: “Small polyp right anterior ethmoid cell. Evidence of mild inflammatory changes within the nasal turbinates.”

I thought, at last. All we had to do was to remove the polyp and dissect it. Either it was an implant or it wasn't.

The ethmoid cell is located in the ethmoid bone between and below the eyes, at the root of the nose. Given where the needles were believed to be going, an object in this area would be a possibility.

However, the radiologist was not looking for something as easily identifiable as this. The polyp returned like organic material, not metal. Medically, it was trivial and probably the result of allergy. It could easily simply disappear on its own. Even if it didn't, it wasn't causing any sort of symptom or giving the patient any discomfort. It was not, in short, a candidate for surgical removal.

So it had to be abandoned as possible evidence, and we all became very frustrated people. The witness wrote, “Aside from learning that there actually is something in my head, I learned from you guys how important it is to keep a sense of humor about this.”

Reluctantly, we brought the MRI study to a close. We had nothing but suggestions and implications, and when we did find a possible surgical candidate, we could not fulfill enough conventional criteria to justify the attempt.

As the clouds of autumn gathered, I found myself in a lonelier position

than ever. I had been publicly branded as a cult leader and compared in print and on television and radio to the murderous fanatic Jim Jones, who orchestrated the mass suicide of his entire following. For the most part, the public recognized this lie for what it was, and a television poll showed that ninety-five percent of the viewers of one program did not believe it. Nevertheless, there are always a few eager to hate, and the afternoon after these charges had been repeated on one of the national breakfast programs, I was assaulted in Washington National Airport by being spat upon.

I slipped, in 1989, from being sad and frustrated into a state of clinical depression. The visitors were still in my life. Letters were pouring in. There were fantastic UFO sightings being reported by the Belgian military and civil air authorities. And I had been inches from proof that what I regarded as a desperate but totally rejected emergency was really happening.

I was frantic to break down the fortress of secrecy that has kept the average person ignorant and helpless, to restore my own reputation, and, above all, to trigger the explosion of scientific inquiry that would follow any disclosure that aliens were really here. I wanted it, but as I looked up into the dark of the night, I thought that it was really very far away. How would I ever make any progress? Where would I go from here?

I could not do anything but wait. Time alone was my friend, but time also worked against me, in the sense that, if the visitors were becoming progressively closer, they might eventually overwhelm all of us. To lie in bed at night knowing that you were being falsely turned into a national pariah even as the visitors came slipping through the dark was not easy.

And then there was always the horror of being alone with it. What if this was something evil, and implanted people were controlled people, lost to the power of a force as malevolent as it was incomprehensible?

At times I deliberated finding a surgeon willing to do an exploratory on me and extract one of the bright objects in my brain so that it could be dissected. But what if it was only a cluster of dead tissue? And who would do such a surgery whom I could also trust?

I didn't want to take the risk, and in this, I was not alone. Unknown to me, a witness in Washington State was going through very much the same thing. Betty Stewart Dagenais had experienced contact for many years. This contact had involved a phenomenon that witnesses call "toning," which are sounds that range from things like the raspy burr of digital transmission to series of discrete beeps heard in the head or beside the ear.

I had noticed a few instances of such toning in my own life but nothing that I could describe as recurrent or easily identifiable as an artifact of the encounter phenomenon. In my case, the reason was that I was diagnosed with tinnitus in my left ear in 1976, the result of damage from a truck backfiring near my head. This resulted in a slight but continuous ringing and could also have caused transient sounds. Another cause of such sounds would be circulatory. Such sounds would normally not involve beeps but rather a high-pitched noise building to a peak and then subsiding. A tumor pressing against the aural nerve might also be to blame, either for continuous or transient sounds. Normally, psychological factors do not enter into this, but with all the fear connected with the close encounter issue, I would think that it would be possible for people to experience normal sound transients and then proceed to hallucinate episodes like discrete beeps, relating them to imagined contact experiences.

But Mrs. Dagenais's contacts were too extensive for that, and, in her case, there would soon be physical evidence that suggested a connection between the sounds and her encounters. She had a lump in the pinna, or outside structure, of her left ear that she associated with a close encounter. At the time, I was only vaguely aware of the possibility that objects might be found other than in the nasal cavity or the brain. Budd Hopkins had suggested that a certain type of small scar was associated with close encounter, but we had no way of verifying this at the time.

The scars were called scoop marks because of the fact that they appeared to involve a removal of tissue just below the surface of a small area of the skin, most often on the calf, causing the epidermis to sink. I had never seen one on a witness, and at the time it did not occur to me that they might be associated with objects placed in areas of the body that were more accessible than the cranium.

Betty Dagenais had a very different sort of problem. In 1986, she had been told directly by her abductors that she would die if she had the object in her earlobe taken out. So she endured her encounters as best she could, the way most people endure them, in silence, alone, and without any real help.

I do not possess a record of her encounter experiences, as she never wrote me or communicated with me. I don't know if she knew about my books.

Mrs. Dagenais was obviously deeply concerned about what was happening to her, though, and as we get into the stories of implantees whom I do know and have interviewed, I think that it will become clear why this would be so.

In 1989, Betty Dagenais died of natural causes. There was no question that her death was in any way unusual. She left instructions that her ear was to be autopsied. This was done, and the material extracted from it remained with her family until 1994 when its existence came to the attention of some interested parties. On January 6, 1995, Mrs. Dagenais's dark, one-millimeter-diameter implant was subjected to electromicroscopic analysis by an engineer, and found to be made of aluminum, titanium, silicon, and traces of other minerals. He commented, "Titanium could be used in a transmitter or receiver, as could aluminum." A quality control technician with a specialty in electronics was also questioned about what a device consisting primarily of those elements might be used for. He replied that it "would be a transducer and can be used to transmit signals." He was not told that the device had come from the body of a close encounter witness.

To my knowledge, this was the first implant that was ever subjected to laboratory analysis. But, although interesting, these results cannot be called conclusive. The reason is that the object has an imperfect pedigree. It was not kept under controlled conditions after it was removed from Mrs. Dagenais's body, so it could be that what was examined and what was removed from Mrs. Dagenais are not the same objects. Even though there is no evidence of this, it would obviously be better if objects were analyzed immediately after their removal. This is especially important if their composition is ordinary.

Also in 1989, close encounter witness Jesse Long, a distant cousin of Amelia Earhart, was coming to the end of more than thirty years of enduring what is without a doubt one of the most wondrous and terrible human experiences ever recorded. This diffident, careful, and altogether remarkable man has recorded what he remembers of his lifetime of encounters in an amazing manuscript, as yet unpublished.

Unknown to me and to practically anybody else, Mr. Long had presented himself at a doctor's office to have an implant removed from his shin that had been inserted when he was four years old. Fortunately for all of us after it came out, he kept it against a time when it might be analyzed. In this case, it is less important that the object remained untouched by science for all those years, because of what has been found.

Chapter Fifteen

Dr. Roger Leir's Discovery

Jesse Long's remarkable object remained unexamined until 1996, and between 1989 and 1994, to my knowledge there was nothing of significance done about implants by anybody.

"Psychic surgeons" claimed to be able to remove them, and some even charged fees for this service. Abduction researchers said that they existed but that they turned to powder or disappeared when extracted because the aliens didn't want them analyzed. So they became rather mythical, a sort of Holy Grail.

I went through those long, frustrating years struggling with my continuing experience, persecution that would not stop, and consequent depression. I was haunted and hunted at the same time.

Although after the MRI study I gave up hope of ever finding a physical implant, not everybody did, which turned out to be fortunate. In June of 1994, UFO investigator Derrel Sims of Houston met Roger Leir, D.P.M., at a conference in California. When Mr. Sims became aware that Dr. Leir was something quite rare, a medical professional who was also interested enough in the UFO question to be a member of the Mutual UFO Network, he told him that he knew some witnesses in Houston who believed that they had implants and might want to have them removed.

Roger Leir is among a small company of scientists like Dr. Hill and Dr. John Mack who are too curious about the world around them to dismiss the unlikely as impossible. And like the others, he is a good scientist. He was interested because he wanted to know if there was anything real to the witnesses' claims. He saw that he had an opportunity to conduct a test.

He made an offer to Sims: If the people involved would fly to California at their own expense, he and a colleague would make all the necessary arrangements and perform the surgeries at no charge.

Up until this time, it does not appear that there had ever been any formal attempt to remove and then study such an object. With the exception of the work done on Colette Dowell, the results of our MRI study had never been published. The only object that might possibly be considered an anomaly was

the one in Dr. Dowell's head, and there was a good likelihood that, despite all the questions about it, it was a pituitary adenoma. The existence of the Dagenais and Long implants was hardly known, and they had not yet been studied. But witnesses claimed—swore—that this happened to them. And if there were actual implants, well, that would be a terribly important thing to find out. Perhaps because the area was so unknown, Leir was intrigued. His approach was, "Let's see if there's anything there."

It turned out that X-ray images had already been obtained of objects in two people. One individual had two objects in her left foot, another had one in his left hand. Both of these people were close encounter witnesses, and both felt that the objects involved had been implanted into their bodies by aliens.

It must be added at this juncture that an immediate objection is that it isn't all that uncommon for foreign objects to become embedded in feet and hands. So maybe these were just innocuous objects, a bit of gravel that came to be under the skin of a hand during a fall, a small piece of iron that got into a shoe and worked its way into the foot, or, in the case of a T-shaped object, a surgical inclusion.

If they were naturally occurring objects, they would either have been rejected or, if the body could not accomplish that, been encapsulated. Sometimes an encapsulation can involve tissue, but in general it also involves the deposition of minerals around the unwanted material. A surgery would answer the question of how the body had responded to the objects, not to mention making material available for analysis.

There are obviously any number of things that can work their way under the skin, especially of a hand or foot. Graphite debris left when a pencil lead pierces the skin would be the closest thing in external appearance, for example, to an implant. Commonly, pencil lead leaves a mark under the skin that can remain for years as a faint gray discoloration. It is medically trivial, and not in any way comparable to these objects, which were much larger and also deeper than a pencil lead would ordinarily be found.

If not a pencil lead, then the objects could be bits of shrapnel or other debris—nailheads, bits of gravel, any number of things.

According to the witnesses, they had entered in the following ways:

The woman recalled an encounter and abduction that had taken place nearly thirty years previously. But at the time she was not aware of any object being placed in her body. However, when her foot was X-rayed in connection with an unrelated problem, the returns for two unknown objects in her left big

toe had appeared. She could not recall any accident that might have driven these objects into her foot, and they were large enough to have caused quite noticeable pain and trauma. So she had become concerned that they were connected to her close encounter, and she wanted them out.

Dr. Leir could see from the X-ray that the objects seemed to be metal. They were deep in the tissue of the big toe, one on each side of the bone. One appeared to be small and seedlike; the other was a distinct “T” shape that he at first assumed had been placed by a surgeon. But there was no scar and no surgery was reported by the witness.

The second witness had quite an unusual story to tell. At the age of six, he had observed a basketball-sized object floating in the air in an open space behind his house. As he walked up to it, the thing had exploded, leaving him with the feeling that a fragment of it had been embedded in his hand. No wound remained, and nothing was done.

When, as an adult, he was X-rayed, he was surprised and disturbed to discover that there was actually something there. The strange incident was the only thing that had ever happened to him that had involved a possible injury to his hand.

Over the course of the next few weeks, plans were made to carry out the surgeries. Leir presented these X-rays to a radiologist, who confirmed that they appeared to be of metal objects.

Prior to their meeting at Dr. Leir’s office, neither of these witnesses had come into contact with each other. They had not, for example, been involved in the same accident, or been exposed to similar metal fragments in a shared work situation—or any work situation, for that matter.

Dr. Leir and his colleague, a general surgeon, were aware of how controversial these surgeries might turn out to be and were concerned about creating a very high-quality record of the proceedings. As a result, all of the operations were recorded on video, and the excised objects were also photographed at the moment of removal. There were a number of witnesses present, among them Alice Leavy, the state section director for the Ventura–Santa Barbara MUFON, whose own case would later become one of the best documented on record. The general surgeon who was present and did all above-the-ankle procedures and the witnesses will not be named in this discussion.

The surgeon doesn’t want to expose himself to the danger of license-related attacks such as those that have occurred against other professionals

who have expressed a public interest in this subject, including Dr. Leir himself and, of course, Harvard professor Dr. John Mack, whose book *Abduction: Human Encounters with Aliens*, brought him challenges both to his professional credentials and his tenure.

There were a number of other people in attendance at these surgeries. The surgical nurse was Denise Messina; the video photographer was Mike Evans, who also holds a degree in nursing. Jack and Ruth Carlson created a paper record of the event. The closed-circuit television system that allowed the surgeries to be witnessed from outside of the operating room was devised by Bert Clemens.

Among the witnesses in that room were Derrel Sims, Alice Leavy, and the coordinator of the event, Janet Wamick.

I mention the names of all of these people because I want to make it as clear as possible that these surgeries were not performed in isolation. Careful records were kept, and each step of the procedures can be seen on the video that was made. This is important, because it can be observed that there was no scar tissue above the objects before the surgeries, and the objects were actually brought out of the wounds and displayed on camera, proving that something was really removed.

The patients were processed in a manner that had been carefully planned. First, a full medical history was taken. Next, the patients were asked to provide as complete a history of their close encounter experiences as they could. They were then interviewed by a psychologist.

Prior to surgery, new X-rays were taken and reviewed. Also at that time, small quantities of blood were removed from each patient for the purpose of creating a transport medium for the objects that would soon be excised. The blood was then centrifuged and the serum extracted. An anticoagulant was added to the serum, and the medium was ready.

The first patient, who had the two objects in her toe, was then taken into the operating room. Even using the X-ray as a guide, it took more than an hour to locate the first object. In and of itself, this is not unusual when attempting to excise objects from deep tissue. However, despite hypnosis performed by Sims, who is a certified hypnoanesthesiologist, and extensive anesthesia to the toe, the patient began to respond to the probing, reporting bursts of pain. With this problem controlled, further probing of the area revealed a small gray object. At the moment that it was excised from the surrounding tissue, the patient reported another burst of pain.

Dr. Leir has had extensive experience removing foreign objects from the foot, and he reports that this type of reaction occurs when the object is involved with a nerve. The disturbance to the adjacent nerve fibers will overcome even heavy local anesthesia. However, this response is sufficiently unusual that the additional risk of general anesthesia is not indicated in surgeries of this type.

Once it was removed, Leir found that the tiny object was enclosed in a very dense membrane. He was surprised to discover that this tissue was so tough that he could not remove the object from the structure enclosing it even with aggressive use of a scalpel.

Leaving the object still encased in the membrane, he turned his attention to the other side of the toe. This too required a lengthy dissection, and the patient was similarly sensitive when the object was finally located. It was enclosed in the same type of dark membrane as the first object.

One of these objects was tiny and hard, about the size and shape of a cantaloupe seed, about two millimeters in diameter. The other was T-shaped, as it had been on the X-ray, and somewhat larger, around three millimeters on a side. This object had the appearance of something that had been constructed out of two straight pieces.

The incision was then closed, and the surgery on the second patient soon commenced. This surgery proceeded similarly to the first, with the patient immediately reporting discomfort when the object was probed.

This object was strikingly similar in appearance to one of the objects that had been removed from the first patient, as it also resembled a cantaloupe seed and was about the same size.

If these were the result of accidents, how could it be that two people who had never met would end up bearing such similar objects in their extremities? If these were identifiable bits of debris this would not be hard to understand. But there was no obvious way to identify them, and in all of their quite extensive careers, neither surgeon had ever seen anything like them.

The combination of the fact that these objects were present in these people, and that two of them were nearly identical, is obviously compelling and disturbing evidence. Although it does not prove that aliens were responsible, it strongly suggests that the objects were artificially inserted into these people by somebody.

It developed that the membranes were almost as strange as the objects that they enclosed. After they became dry they weakened and it was possible to

remove them and send them, along with surrounding tissue, for pathology study. The biopsies were performed at a local lab, which was informed that the tissue had been dissected from the area around some foreign bodies, which had also been removed. The lab was given no information about the unusual situation.

It was confirmed that the sensitivity of the patients to the surgery was due to the fact that nerve tissue had somehow grown to surround the objects. One of the reports stated that the fragments submitted contained “fibroconnective tissue and fat demonstrating peripheral nerve and pressure receptors.” This growth of nerve tissue is a very unusual finding.

The membranes themselves were formed out of superficial rather than deep tissue. As the body does not possess genetic instructions that enable it to create skin deep inside muscle tissue, it is hard to see how these membranes could have grown naturally. In any case, they were the probable reason that the underlying objects were not rejected.

At this point, a misfortune occurred, as funds could not be found to carry out analysis of the recovered materials. I was not aware that the surgery had even happened, or I would have immediately offered to undertake this work.

Thus it was not until nearly a year later that the objects were actually placed under analysis. The benefactor was the National Institute of Discovery Sciences (NIDS), which is managed by former United States Army nonlethal weapons specialist Dr. John Alexander.

NIDS contracted with New Mexico Tech to do a study, and the following battery of tests were applied to the objects:

DENSITY IMMERSION USING TOLUENE
MECHANICAL PROPERTIES ANALYSIS
X-RAY SPECTROSCOPY
SCANNING ELECTRON MICROSCOPY
X-RAY DIFFRACTION ANALYSIS
ELECTRICAL/MAGNETIC PROPERTIES ANALYSIS.

Two of the three samples were found to be essentially similar in density, the third one lighter. One of these was then broken. A core was observed of shiny metallic material. The lighter sample, which had been the T-shaped object, had no core. There was a dramatic difference in hardness between the samples. The seedlike objects were as hard as quartz, while the lighter T-shaped one was as soft as calcite.

The two seedlike objects both had insulating outer shells that were composed of iron, phosphorus, and calcium, with small amounts of chlorine present.

The lighter sample had a very complex structure and composition. Its small, harder areas were essentially similar to the heavier objects. The more extensive lighter material consisted of iron, silicon, phosphorous, molybdenum, chlorine, sodium, and calcium, with a trace of copper.

The cores of all the objects were found to be iron-carbon, probably ferrite, as the sample was ferromagnetic.

The lab initially had not been told anything about the possible origin of the materials. Later, they were informed that they had been dissected during surgeries. In a letter of opinion, they offered the hypothesis that the object might be made of meteoric material and suggested a number of different meteorites that had displayed similar contents. It was noted that iron meteorites contain a small amount of nickel, but the fact that this was not present in these objects could be due to their being fragments of a larger sample.

It was also hypothesized that an iron sliver embedded in the body could cause a calcification reaction, and that the mineral cladding observed might be due to this. In any case, the minerals would have prevented tissue rejection even if the membranes did not. However, what meteoric iron was doing in the hands and feet of these people is not known. If they had been struck by micrometeors, then there would surely have been scar tissue. And the T-shaped object, obviously not a surgical staple or nailhead or something else common, seems to be a construction of an unknown kind, made from unusual materials.

A year later, another group of surgeries were held, this time involving three patients including Alice Leavy.

My wife, Anne, and I were among the many witnesses to these surgeries, and observed them on closed-circuit television. As I watched the monitor, I found myself quite overcome with emotion, and the attendant psychologist very kindly took time out to help me. Even so, I was unable to remain in the room and had to go out for an hour simply to collect myself. The reason I felt such powerful emotions was that I have been trying so long to get science and society to admit the existence of the close encounter problem, and the idea that we might actually be closer to this excited me but also made me feel very aware of the injustice associated with the scorn and abuse that close

encounter witnesses endure.

I saw Dr. Leir and his colleagues as heroes, and time has only made me more sure of this opinion. As I write this, Dr. Leir has finished his own book about his work, titled *The Aliens and the Scalpel*, but I cannot yet report that it has a publisher.

There were three surgeries performed on the afternoon of May 18, 1996. I witnessed one of them on the closed-circuit monitor and observed a second in part on the monitor and in part firsthand. I watched this one through a window in the door of the operating room because I wanted to be able to say that I had personally seen the object extracted. I saw it being probed for, found, and drawn out.

In addition to video, still photography was again used to record these surgeries. Like me, I have no doubt that the doctors were concerned that there would be accusations of some sort of sleight of hand. I satisfied myself, in one case, that the surgery was absolutely normal, and the photographic record proves that the others were no different.

Given all the witnesses and the visual record, questioning that these operations happened, it would seem to me, would be a way of putting off the real question that they have raised: What are implants and why are they being found in people's bodies?

The particular surgery I observed personally was one that I considered to be of paramount importance, that of Alice Leavy. At the time, I had no way of knowing what would happen in Alice's life later, but there were already two reasons why I considered this surgery so important.

The first was that Alice's first awareness of the existence of the implant had come during a hypnosis session. Unlike the other patients, she did have a small scoopmark scar above the area where the object was found, but she had no memory of what caused this injury.

So in Alice's case, this surgery would to a degree test the question of how well hypnosis worked to find the facts in close encounters.

This type of hypnosis, where the witness is regressed to find evidence that is totally absent from natural memory, is the most severely criticized. But in this case, the efficacy of the hypnosis was immediately challenged with X ray, and it was found that an apparent foreign object was present in the area concerned. And then the object was removed.

So it appeared that hypnosis did have an efficacy here. Without it, Alice would never have suspected that an object was present, as the small scar was

innocuous and there was no indication of any lump under the skin.

There was another reason why the case was so important. This was the location of the object. It would be highly unlikely that a foreign body would get lodged deep in a calf muscle, unless the person had been a victim of shrapnel from an explosion, or had experienced the end of some kind of projectile breaking off in the tissue, or been hit by a bullet or BB. But Alice had never had any such injury.

Of the three surgeries performed, one involved excision of a triangular metallic object from a man's jaw, and two involved BB-sized grayish-white balls being removed from the legs. The metallic triangle from the jaw area also was covered with a membrane similar to one that covered an object Dr. Leir had removed from another patient's neck in an undocumented surgery.

So far, none of the objects removed has appeared to be particularly unusual. All are made of known materials. What is strange about them is that they were in these people at all.

What happened afterward was in many ways even more stunning than the removals themselves. I had wondered what might happen when an implant was taken out. If it had been inserted by aliens, would they react to what had been done?

In early December of 1996, I followed up the surgeries with a phone call to Alice Leavy. How was she doing? Fine. Had anything unusual happened after the removal?

Some people had felt as if they had lost a sense of intuition when their object was removed, but Alice was glad that hers was gone.

In her own quiet way, she then shocked me almost speechless by saying, "They came back and stayed for six days."

What in the world did she mean?

Thus begins the story of the Camarillo, California, sighting sequence. At 4:55 in the afternoon of December 2, 1996, an object was observed about fifty degrees up in the northern sky by a member of a family friendly to Alice. This object might easily have been an early star, but it was observed to be moving slowly, either rising into the northern sky or coming closer to the viewer, it was impossible to tell which.

It emitted a pure white light and was not in any way similar to aircraft, which could be seen in the area at the same time. Sunlight reflecting off their fuselages had a reddish hue.

At 5:10 P.M., the object changed color, from pure white to reddish-peach,

suggesting that the setting sun was at least in part responsible for the light. But the thought that it might be a balloon was ended when, a moment later, a small pinpoint object of the same color appeared below the main object, moving downward. Soon, small puffs of some sort of substance began to be emitted from the top of the larger object, a process now familiar from the Mexican videos and Dr. Hill's discussion of it as a plasmic effect. Then another small object separated from the main object on its left side. The two objects moved in tandem, then disappeared in what looked like a puff of smoke or mist. The sighting ended at 5:12.

The witness reported this event to Alice Leavy, and she arranged for a group to visit the location the next afternoon, armed with a video camera and still cameras with telephoto lenses.

The object appeared at 4:46 P.M. It was more defined than the evening before and had a spherical appearance. After some problems, video recording commenced. At 5:09, the object became reddish. Then a tiny dot of light was observed through binoculars to emerge out of the top of the larger object and move away from it. This was not visible on the videotape, however, due to the lack of detail resolution.

The object then changed, becoming a vertical chain of smaller objects that soon vanished. This transformation was recorded on the video, and much detail was captured by the still cameras as well, including the satellite objects exiting the large object.

I have seen some of the still photographs and can verify their remarkable combination of clarity and impossibility. Being that the object's actions were observed by half a dozen witnesses, both through binoculars and with the naked eye, and recorded on video and photographed at the same time, it is hard to maintain a case that they are anything that can be explained. After analyzing the video, Jerry Barber of Sunland Video Productions thought that the object, when it moved, might have accelerated at five thousand miles an hour.

So Alice Leavy, from whose leg one of the most inexplicable implants was removed, a few months later ended up witness to one of the best documented UFO sightings in recent United States history.

Of course, it is impossible to tell if this represented an attempt to communicate with her, but given the ultrahigh-level strangeness of everything else in the UFO and close encounter world, the possibility must at least be entertained.

But perhaps the lights in the sky have nothing to do with the implants in people's bodies. Up until the Camarillo sightings, the witness testimony itself offered the only link. Still, the case is far from perfect. We don't have any convincing video of a witness being taken aboard a UFO and only one that may even show an alien. Not only isn't there any physical or visual evidence that witnesses and UFOs are connected, there is no direct evidence that aliens are involved.

So how can we be sure? The answer is that we cannot, not just yet. The objects that Leir removed shouldn't have been in the witnesses, true, and that some that came from unrelated witnesses were identical is startlingly suggestive of intentional implantation, but the only way to determine that they were put there by aliens would be to prove that they were of non-Earth origin. So we know that they didn't belong where they were found but not who put them there. And we are far from knowing why.

Even the fact that Alice both had an object removed and then ended up being treated to a fabulous UFO sighting could be coincidence. I don't think that it's possible to say that the sighting can be explained in any normal manner, not given what is on the videotape and the photographs, but there is no nonspeculative way to relate it to the removed implant.

Still, it is also true that Alice experienced a dramatic increase in close encounter activity after the implant was removed, something that has also been reported by other witnesses. Alice was kind enough to share some entries from her personal journal with me, and I will let her tell the story of what happened to her after her surgery.

"July 11, 1996. I felt different since the surgery. No longer had the drive I once had to investigate UFO abduction. Just felt different. That evening, around 11:00 P.M., I started to get a bad headache. Unusual. On the right side of my face behind my temple and eye. I took a pain killer. (Aspirin-Free P.M.) I went to sleep around 12:10 P.M." Her husband and one of her two daughters were also asleep. The second daughter was watching television in her room. "Sometime between 12:15 and 1:00, she noticed her TV having double images on a few channels." She then turned off her TV and went to sleep at 1:00 A.M. The following events then unfolded: "Bill [Alice's husband] says that at 1:05 A.M. he awoke as a bright white light was shining into our bedroom. He thought it was time to get up and get ready to go to work, as it was so bright. He sat up in bed, looked at his clock—it was 1:05 A.M. He thought, 'Oh, good, I can go back to sleep, it's not time to get up.'

He then looked at my side of the bed, and noticed that the covers were pulled back and I was gone.”

He assumed that she was in the bathroom or something, but she reports that the medication made her sleep heavily all night and that she had no memory of getting up. The feeling of illness and exhaustion that she next reports will be familiar from some of the close encounter stories reported in Part Two of this book. “When I awoke my right ear hurt, and it was wet inside. All day I was very ill. I had an earache in my right ear, a headache and my stomach was very upset.” They also found that their dog had apparently panicked during the night, to the extent that it had scratched three large holes in the carpet in their family room, something that it had never done before.

These sorts of disturbances, with their vague implications of some sort of an outside factor being responsible, are very typical of what many witnesses report. Usually, they must be set aside as probable dreams and misperceptions, but in this case, the presence of the implant means that we could as easily be looking at fragmentary memories of a very real intrusion of some sort. But who came, and why?

It is going to require a methodical and scientific study to answer these questions. Since there are thousands of witnesses with implants, and many ready right now to submit to surgery and donate their objects to science, it would seem logical to seek a harvest of them. Still, because they suggest a reality that is so very far from the expectations of science and society, the tendency to continue to ignore the problem will persist. False and sabotaged research may be produced to facilitate continued rejection of the data.

Even if the objects are made of ordinary material, it may be that they contain extraordinary technology that we cannot detect. For example, if somebody had been given a transistor to analyze in 1915, he or she would have been able to report on its composition but would have had no idea of its function. It would not even have been possible to determine that it had a function. We may well be in the same situation with these objects.

It would be persuasive, I felt, if there existed an implant made of unusual materials, or showing obvious signs of the presence of technology that we do not understand. So for me the question became, could it be possible to find an object that not only was extracted from a close encounter witness but was also a mineral or technological mystery?

Meet Jesse Long and his friend Junior.

Chapter Sixteen

Jesse's Story

It is a summer afternoon in 1957, in the small country town of Rogersville, Tennessee. Jesse Long and his brother, Johnny, are playing in their yard when a man in a dark uniform gestures to them from the edge of the woods nearby.

Modern children would have reacted by running. But America in 1957 was a different place, the more so in rural areas. The boys, age five and four, look curiously toward the man. When he gestures to them with a long rod that he's carrying, they go over to see what he wants. Jesse is a little uneasy, so he takes John, who is seventeen months younger, by the hand.

The man leads them into the woods.

Soon they arrive at the top of a small hill, where stands what Jesse remembers as a little round house. The man then points the rod at them. It emits a bluish-white light, which paralyzes them. At this point, Jesse feels fear.

In the house, the boys are separated. Johnny is taken into a room where he finds toys. He plays with them, watched over by what appears to be a giant insect like a praying mantis. He does not feel fear for himself, but he does hear his brother screaming and crying in the next room.

Jesse is not having such a benign experience. He has come face-to-face with a tall man, very thin but human looking, with unusually large but otherwise normal eyes. He is told to remain calm and that they don't want to hurt him. Figures he cannot see work around the lower half of his body. He experiences pain from his leg, and he screams and cries.

The next thing he knows, he and his brother are back in the sandbox where they had been playing. They had both been told not to talk about it, and this is a more than normal suggestion. They want to tell, in order to get comfort and reassurance from their parents, but they cannot. Somehow, this terrifying and bizarre experience is simply swallowed by these two children.

It is not, however, reconciled, nor is it forgotten. Both of them remember the encounter.

John, who is an artist, as an adult built a sculpture of a giant praying mantis

and lives in a house constructed to resemble the round house on the hill.

Afterward, Jesse becomes fearful. He is so scared at night that he often hides under the covers. For him to sleep, the window at the head of his bed must be shut and the curtains drawn.

I first heard of Jesse Long in 1996 from a friend, special effects artist Steve Neill, as one of a number of close encounter witnesses who went public and as a result experienced damage to their careers. I had told Steve of my new plans to begin analysis of materials and do controlled studies of implants, plans that were inspired by the Dagenais case and the work of Dr. Leir and Derrel Sims.

Steve said that there was a man in Los Angeles who possessed an implant, and that when it had been removed from him, he'd had the surgery photographed and videotaped.

I called Jesse Long and found that he did indeed possess this object, along with the videotape and photographs of the removal. As we talked, I quickly realized that this was potentially a good case with which to begin my new effort. It had two interesting elements: a second witness who had natural memory of the event, and a physical implant to back it up. But it wasn't perfect. In a perfect case, there would be adult witnesses to the abduction as well as an implant that had been removed under controlled conditions and then placed directly into the hands of analyzing scientists.

Despite these weaknesses, on the mental ten-scale I had originally developed to help me evaluate letters, this case was a seven, which was extremely high. Most cases are a two or a three. Five would be the highest number so far achieved.

A one is a dream memory corroborated in some way by physical effects. An example would be somebody dreaming that he or she had contact, only to find a day or so later that there were confirmed UFO reports in the area. A two would add some kind of physical side effect to the encounter, such as a bloody nose. In a three case, there would be waking memory instead of or in addition to the dream memory. Four adds parties to the abduction, such as two people in the same family dreaming the same dream. In a five, they have shared waking experience. Six adds observers who independently see UFOs in the area during the abduction. Seven adds other conscious witnesses who observe aliens. Eight adds evidence such as an implant observable under the skin. In a nine case, there is extensive conscious encounter added to an extracted implant. In a ten case, the implant would be extracted under

controlled conditions and immediately transferred to a lab.

Beyond that, and off the scale, would be proof that the implant could not have come into the body naturally, and the final proof would be an implant that demonstrably could not have been manufactured on Earth.

Talking to Jesse, I got a very positive impression of his sincerity. But I also know that sincere belief may support false memories.

I was rather surprised to learn that his implant had been removed as long ago as 1989 and that he had not been able to find what he regarded as a satisfactory situation for it to be studied. He'd had two offers, though, one apparently from NASA and one from a private foundation. The NASA offer had come to him in a completely unbidden telephone call. He did not even know how they had gotten his name. They offered to fly him to Houston, but he was too unsure of the situation to respond positively. The private foundation wanted the implant but did not want him to come along with it and would not tell him whether they would release the results to him.

So the object had stayed in a small case on a chain around his neck, held there day and night for seven years.

Mr. Long was without personal resources to conduct the study on his own, because, since 1989, his career had been virtually destroyed. In that year, after the object was removed, he had begun to talk publicly about his situation. No sooner had he appeared on a fairly obscure public access television show than his formerly thriving business as a script supervisor began to decline.

I have heard this tale of woe so many times from witnesses who go public that I always suggest in the strongest terms that they remain anonymous.

There are many reasons for the persecution. Local skeptics groups actively engage in persecution of witnesses. UFO groups who do not agree with a witness's interpretation will do the same, as will religious groups, especially fundamentalists. There may be government intervention at times.

I am not much of a conspiracy theorist, but I do believe that a combination of cultural bias and even small amounts of active persecution can destroy lives and careers, because I have seen it. In point of fact, I do not know of a single witness who has gone public in the United States and not suffered economic and social hardship as a result.

Mr. Long's profession of script supervisor is quite competitive, and I have no doubt that his public statements were used against him. A script supervisor needs to be clearheaded, and the suggestion that he might have some sort of a

mental problem was probably what devastated his career.

On another level, it was interesting to me that we had undertaken our MRI study in 1989, Betty Dagenais's implant had been autopsied in 1989 and Jesse's object had been removed in 1989. Only now, in 1996, was anything more being done.

Why had all this time passed with nothing happening? I had been through a devastating depression, suffered a financial attack that led to the loss of my famous cabin and almost to my suicide, and had only gradually rebuilt my life. I don't know what happened to the Dagenais object during that period. Jesse's implant had remained in his immediate possession.

In 1995, I was in San Antonio a good deal, and I had met Catherine Cooke, the head of a local organization called the Mind-Science Foundation. This foundation had been created by Tom Slick, a wealthy oilman who engaged in the first scientific search for the abominable snowman, and sought to bring science to the study of rejected phenomena such as psychism. Slick also founded the Southwest Research Institute (SWRI), and I realized that it was conceivable that Mind-Science, with its mandate to explore the frontier, and Southwest, with its fabulous scientific resources, could work together to study implants. There would be resistance, of course, but I felt that, with Cathy Cooke's support, I might be able to make a little headway.

Cooke enthusiastically agreed to help fund the Long study, and we were soon ready to fly Jesse to Texas.

Southwest Research Center is divided into two parts: the nonprofit Biomedical Research Division and the Southwest Research Institute, which is not-for-profit and subsists on contracted research for government, industry, and the individual. We would be buying analysis from the Materials Sciences Division of Southwest Research Institute which would not be asked to make any commitment about the object. In any event, most of the scientists involved in the work didn't know where it had come from, and the staff member scientist involved, Dr. William Mallow, was never asked his opinion about UFOs.

Before I can turn to a discussion of the results of our studies, and why they made this such an incredible case, it is important to complete Jesse's story. For it is somewhere between the physical evidence and narratives like this that we are likely to find the beginnings of a real answer to the question of what UFOs and the close encounter experience may mean.

So far, nothing that I have told of Jesse's experience has been from

memories extracted with hypnosis. These are things that Jesse remembered in natural memory.

I have seen two childhood photographs of him. Jesse appears to be extremely uneasy. When I showed one of the pictures to a specialist in child psychology, she said that Jesse appeared to be grief stricken. Since he was not in grief when the picture was made, she thought that it might indicate that he was depressed.

This is not a usual state for a child and could well be related to an effort to conceal what the child regarded as a frightful secret. In one of the photographs, Jesse is touching his shin, in what he reports became an almost compulsive childhood gesture.

Jesse's next strong memory of something unusual is a vivid experience of flying over Florence, Alabama, the town to which the family had recently moved. He did not feel that this was a dream, not even at the time, but he also could not understand how it could be anything else.

The next winter, this harassed child became frightened of Santa Claus, because he could get into the house when people were asleep and nobody could stop him. Fears of the Sandman, the Easter Bunny and such sometimes seem to occur in children who are having trouble with the close encounter experience and may be related to memories of the figures they see and the apparent ease with which they gain access to the child.

When Jesse was twelve, a dreadfully disturbing event took place: Shadowy figures began to show him babies and tell him they were his children.

It is hard to think of anything more upsetting for a little boy just beginning to cope with puberty. I have never heard of a child fixating on a fear like this, or even dreaming about such a thing—nowhere except inside the close encounter experience.

Later, we will explore further the way that the experience connects to sexuality and genetics, because no discussion of it can be complete without reference to these two areas.

It is difficult to know how, as a child, Jesse really felt about these experiences. He is too gentle and straightforward a man to express much raw emotion, but when he said to me, "I was scared," I felt a wave of sympathy pour through me.

What external force would do this to a child? What child would have a nightmare like this?

His experiences continued. He would recall seeing craft flying above the

streets of the town and be terrified that they were coming for him.

The matter did not end with the close of childhood. In college, he saw a light come down from the sky and land in a field behind his house. He went out to see what was happening—only to find himself suddenly turned around and walking in the opposite direction, with no way to explain what happened to half an hour of his life. He had been walking toward the light, then experienced missing time and found himself walking away.

Of course, the time is not missing. The victim's memory is what is missing.

The picture Jesse presents is one that is very typical of people who are troubled by their encounters. It is hard to distinguish between the behaviors and feelings reported in many such cases and stories that might be told by a child who was trying to cope with repeated nocturnal visitations by an abusive human intruder by imposing imaginative reconstructions on acts that are too terrifying or dangerous to remember accurately.

In Jesse's case, though, the display of the babies stands out. It is an unusual memory for a child, even one whose mind is trying to screen conventional abuse with more palatable memories, or dissociating from the abused part of the self.

Long continued to struggle in his adult life. For the most part, he remembered what he referred to as "silhouettes," small figures moving very quickly in his house.

Through all of this time, the strange object remained embedded under the skin of his leg. Occasionally, there was mild irritation, but he made no effort to have it removed.

He moved to Los Angeles and began his career. As a member of the union, his future seemed secure. He was coping as best he could with his strange dream life and also living with wild mood swings and many other symptoms of a high level of stress that did not appear to have any clear source in his life.

He remembered a good childhood and was still in close touch with other members of his family, including his parents. Around this time, John built the house in the woods that was shaped like a UFO.

In 1989, Long read Budd Hopkins's book *Intruders*. He was startled by the similarity between his own memories and some of the stories told in the book, and he wrote Hopkins a letter describing his experiences.

At this point, a skeptic would say that he took a step into the fantasy world

of the abduction researchers. And previously any responsible party would have to say that, at the very least, his reading of a book on the subject by a writer like Hopkins or myself would quite possibly reconstruct disturbed but essentially normal memories around the imagery of alien abduction.

But things are changing, and Long's case is one of the first to reflect this change. Not only did he have his memories, he also had the object in his leg.

Hopkins referred Long to a support group in Los Angeles, and he eventually ended up working with Yvonne Smith, who has devoted her life to helping people who suffer from what I believe ought to be called contact trauma.

According to members of her group whom I have talked to, Yvonne has been successful in relieving them of stress. She uses hypnosis, and although it is effective in helping them to come to terms with their emotions, whether it is also an effective mnemonic tool is still an open question. As is suggested by the case of Alice Leavy, it is probably better than has been suggested by those who would deny the validity of the whole close encounter experience.

Some of the problems with hypnosis have been dimensionalized in a recent study conducted by Dr. Joseph Green, a psychologist at Ohio State University, and Dr. Steven Jay Lynn, a psychologist at SUNY Binghamton. They reported on their study at the annual meeting of the American Psychological Association in August of 1997.

In the study, forty-eight students who had passed a susceptibility test that showed them to be highly hypnotizable were divided into two groups. Prior to regression, thirty-two of the students were warned that hypnosis could lead to false memories and told that it could not make people remember things that they would not ordinarily remember. Sixteen students were given no such warning.

The students were asked to select an uneventful night from the previous week during which they had experienced normal sleep with no recalled dreams. Under hypnosis, they were asked if they had heard a loud noise at four in the morning. Afterward, they were again asked this question.

Forty-four percent of the students who had not been forewarned reported that they had indeed heard it. Only twenty-eight percent of those warned made such a report.

This suggests that false memories can be induced in hypnotized subjects simply by asking questions. Also, though, people warned that this may happen may have an easier time discriminating.

I know Yvonne Smith both personally and by reputation, and I can say with assurance that she would never intentionally lead a witness. In fact, most researchers using hypnosis are well aware of these problems and compensate for them as best they can.

We cannot know, however, the degree to which the volatile situation and the hypnotic process may combine together to induce inaccuracies in witness memory. It is also clear, though, that regression offers both positive therapeutic effects for witnesses and may possibly be uncovering some very real experiences.

Nevertheless, extreme care has to be taken, and when a witness enters hypnosis, a line is crossed. This is especially true when the witness's natural memories are vague or even nonexistent. But that was not Jesse's situation. He went into hypnosis with a considerable store of intact natural memory.

In his work with Yvonne Smith, Jesse found that his uncertain experiences of the little "silhouettes" that came for him in the night concealed a great deal of suppressed memory, and it was extremely disturbing. He remembered instances of forced extraction of semen and being frequently shown children who were claimed to be the offspring of these assaults.

This led him to decide to have the object in his leg surgically removed, and this was done in May of 1989. There were no complications, and the surgery took only a few minutes. The object on the tape and in the photographs looks very much like the one that Jesse showed me in 1996. Although I cannot say that it is the same object, some quite shocking discoveries about it have made what happened to it in the years between 1989 and 1996 less important. No matter where it was during those years, and when it was put into his body, it is one very strange object.

A few months after it was removed, he had a horrendous experience, remembered in full consciousness, in which his visitors reappeared, apparently searching for the object. Not finding it, they left a painful injury in his leg in the form of a hole burned by a bright light, apparently a laser.

An event that took place in 1992, some years after the removal, suggests that the excision of the object had not ended his experiences. This happened in Atlanta, during the filming of a feature for which he was doing script supervision. It had been a long time between films, and he considered himself extremely lucky to get this job.

He had been provided with an apartment for the duration of the film's location time in Atlanta, and one night he was awakened by a noise. He

found himself paralyzed. He could see that there were shadows standing in the room. Terrified, he tried to protect himself, but he could not move. He was somehow transported to another location and placed in a reclining chair with his feet raised and his head back. A moment later a woman so thin that she appeared to be in an advanced state of starvation came onto him. As he puts it, "I began to feel and see that a sex act was taking place."

He pleaded for her to stop. He was so frightened and revolted that his struggles finally overwhelmed the paralysis enough to enable him to grab the woman's shoulders and push her off his body.

Up to this point, nothing in this situation is beyond conventional explanation. The "old hag" attack is a commonplace of psychology, a type of hypnagogic hallucination first described more than a hundred years ago. In a normal situation of this type, the breaking of the paralysis would cause the apparition simply to disappear. The victim, shaken and horrified, would eventually return to normal sleep.

In this case, though, that is not what happened. Paralysis did not cause the apparition to disappear. Instead, the woman fought fiercely, clawing Jesse's left arm as he thrust her away from him.

There was no further memory, but upon awakening the next morning, his attention was immediately drawn to a group of scratches on his left arm. Unlike the "old hag" nightmare, which is usually vividly remembered the morning after, Jesse had only a confused jumble of memories, much more like a trauma victim immediately after an assault or accident.

He and another member of the crew habitually took a walk together after breakfast, and this morning he showed her the marks. That afternoon, they were watching second unit film footage taken from a helicopter that had been flying at treetop level. While watching this, Jesse suddenly recalled being removed from his apartment and going up into the sky.

This unlocked a flood of memory, which came back so powerfully that he had a panic attack and collapsed. A 911 call was made, and he ended up in an emergency room with a diagnosis of shock.

Even though his work on the film was completely satisfactory, rumors about the incident got around Hollywood, and since then he has been hired only on rare occasions.

Did Jesse have a nightmare that was exacerbated by hysteria caused by his exposure to the UFO community? If so, why did it have such a strange structure, leave physical traces, and come into memory when triggered by a

mnemonic? This pattern fits spontaneous recollection of memories suppressed by trauma, not nightmare.

We do not know exactly what happened to Jesse Long. There is at present no way to be certain what parts of his story are fact. More than that, even when we are able to determine which of his memories his brain processes as real, physical events, we will just be at the beginning. This is because memories are not naked records of events, they are interpretations.

To find out the truth, we are going to have to locate a base in fact that is founded in an understanding of what actually happens to people like Jesse.

It is no longer responsible to dismiss a story like his as a disturbance that is probably due to child abuse that the victim has been induced to misinterpret to be alien abduction.

The reason is simple: Jesse's implant.

Chapter Seventeen

“Junior”

In the introduction to this book, I quoted Dr. Carl Sagan’s famous challenge, outlining what science needs to make the whole issue of UFOs and aliens worth studying. Among the things he said would be needed was, “material of absolutely bizarre properties of many sorts—electrical conductivity or ductility.”

As part of my proposal to Catherine Cooke and Dr. William Mallow that their foundation engage in a study of implants and suggested that the first object to be studied should be Jesse’s implant. Initially, we laid ambitious plans to undertake a program that would start with witnesses who still had implants in their bodies, then extract these objects and study them under the kind of controlled conditions that could lead to the publication of papers in the peer-reviewed scientific press.

However, the Mind-Science Foundation is both small and not directly concerned with the essentially physical issues that surround the question of implants. Its small size made the board wary of the liability implications of a human subjects study, and there was the question of whether its charter directed it to enter this area.

A letter from Dr. William H. Stone, chairman of the Scientific Advisory Committee sent to Ms. Cooke and other members of the board stated, in regard to the implant project, that they had “ranked it low in terms of adding to the knowledge base of ‘mind science.’ It went on to say that “the issue of liability was raised by every voting member of the Committee.”

If studies like this are to proceed beyond where they are now, it is going to require commitment from organizations whose charters charge them with solving problems like those that an implant poses. These problems are very complex and involve everything from the behavioral, memory, and mental health issues brought by the hosts, to their overall physiological condition, to the detailed state of tissues surrounding the object, to the obvious materials and technological issues connected with the object itself.

It is obviously not within the purview of a small foundation devoted to studying the human mind to undertake such a study, but it is to be

congratulated for at least taking the project seriously and attempting to find a way to do it.

It is well within the Communion Foundation's chartered aims, but again, to do the study on a large enough scale will require greater resources than it possesses. Also, because of all the controversy and the extremely high level of resistance from science, the study needs the support of more established institutions.

Such institutions must not allow a cultural bias against the possibility of an alien presence being responsible to stop them. I have often met open-minded scientists who end up jumping through hoops to avoid this one possibility. All possibilities must be faced head on.

I met Jesse Long for the first time on June 18, 1996, when he drove to San Antonio with the object that he calls "Junior." He was not willing for it to leave his sight, not even to be brought by courier to the lab. So we had agreed that he would accompany it personally to San Antonio and stay with it as it moved from equipment station to equipment station, being tested.

When I first saw it, I was quite disappointed. Jesse kept it in a round plastic container on a piece of dark foam material, and it looked like nothing more than a sliver of glass. I had already interviewed him on the telephone, and I was quite familiar with his case, so my immediate thought was that this was just an ordinary sliver of glass, and I was looking at a possible case of child abuse that had been distorted into memories of alien abduction by a combination of cultural forces and the subject's inability to face the truth.

I almost suggested to Dr. Mallow that the tests not proceed. The Mind-Science Foundation had kindly provided the funds for the testing, and I thought that it was my responsibility to cut their losses. Mallow, however, who has been with SWRI since 1954, immediately noticed things about the object that piqued his interest.

For example, even though it appeared to be glass, it held an unusual pliancy, and there was a faint clouded effect that interested him.

The following tests were applied:

SCANNING ELECTRON MICROSCOPE EXAMINATION WITH SPECTRAL ANALYSIS
FTIR (INFRARED) SPECTROSCOPY
X-RAY DIFFRACTION

As we went into the darkened electron microscope area, I recalled my

youthful fascination with this astonishing technology. I was looking at an instrument that could see almost to the atomic level, and I was suitably awed.

It operated effortlessly, and the journey down to the surface of Jesse's object was, I believe, the most extraordinary that I have ever taken.

Dr. Mallow's report described the object as follows: "A glass-like fragment resembling the shard of a broken bottle; about 1.5 cm. long, 3 mm. wide tapering to 1 mm. at the tip, and 1 to 1.5 mm. thick; colorless and slightly clouded when viewed against a black background. The narrow tip appears to have been broken and blunted as opposed to a fine point. The 1 mm. cross-section of the tip appeared dark when viewed at an angle or directly."

There was no reason, at this point, to believe that this was not exactly what it appeared to be—a glass shard, completely trivial. However, as the electron microscope looked more closely, some unusual details began to emerge. "The narrow tip contained a carbonaceous inclusion, dark and globular in form, at approximately 1000X magnification."

This material appeared to be a tiny quantity of dried blood that had been forced into this well-defined indentation in the tip of the object. Could the tip of this thing be structured? Were we looking at accident or design?

More work needs to be done to determine this. What can be said at present is that it did not appear like the irregular tip of an ordinary glass shard. In addition, there was a groove running down the body of the object from the tip, and it seemed possible that one edge of the object's surface had been sharpened and then melted in order to smooth rough edges. But these were just initial observations.

A more definite piece of odd evidence was observed: "The wide end of the shard contained a bulbous and spheroidal outcropping suggesting rapid cooling of a liquid or a melt."

If the strange condition of the tip and the apparent attempt to melt rough edges were both taken together, did it not suggest that this object was not a glass shard at all but something manufactured? If so, then we could be looking at something that had been purposely built to penetrate the skin.

There were a couple of features about it that were already interesting in this regard, the main one being that there had been no attempt by Jesse's body to reject the object. Normally, foreign objects will be rejected by the body, either floated out the entry wound or, if that isn't possible, then encapsulated in minerals that will enable the rejection process to stop.

The object had remained in Jesse's body for thirty-four years without being rejected but had come out completely clean. It had not been encapsulated at all, which meant that it was not recognized by the body as a foreign object.

There was only one reason why the object might have caused this kind of response: It had to be made of a substance that the body does not reject. There is one, called Bioglass, which is a glass formula developed in the 1970s for use in dental implants that the body recognizes as bone and does not reject. However, the body integrates Bioglass, so why, after thirty-four years, was this object still free?

Since Jesse had definitively claimed that the object had been in his body since 1957, I would have been very concerned if it was, in fact, Bioglass. To me, this would raise a suggestion that this object had been manufactured much more recently than 1957.

I said nothing about any of this to the lab personnel. Their tests were thorough. If it was Bioglass, they were going to find that out when they did comparative work on the spectroscopy and identified the formula.

The scanning electron microscope's spectral analysis was not unusual. "Silica dominated the spectra with calcium, magnesium, and some potassium, sulfur, iron and zinc in very low levels." Nothing odd there except the sulfur.

"The X-ray fluorescence, which can penetrate the mass, revealed a very remarkable composition. I was astonished by the levels of calcium, phosphorous, and most surprising, sulfur in this specimen. No known glass or transparent ceramic was available in the 1950s with 6% phosphorus, 22% calcium, and certainly not with sulfur at any measurable level, let alone 22.42%. A 1970s patent for Bioglass does resemble the implant, except for the sulfur content." This was confusing. If the object was Bioglass, then where had the sulfur come from? Maybe it was responsible, in some way, for the fact that the object had not functioned in the body in the same way that bioactive ceramics do. What happens when a bioactive ceramic is inserted into the body is that the surface of the ceramic forms a biologically active layer that works as a bonding interface with the surrounding tissue. And not only do bioactive ceramics bond, the bonding layer can be stronger than the implant material itself.

None of the eleven different formulas for bioactive ceramics, including five Bioglass formulas, contained any sulfur. There was also a small amount of potassium (1.10 percent) found in Jesse's implant, which is not part of these formulae.

So this was interesting, and Dr. Mallow suggested that another set of tests be run. Prior to doing that, however, it was discovered that the object was smaller than the minimum required size for the X-ray fluorescence instrument that had been used to detect the sulfur, so that result probably was not reliable.

Without the sulfur, the formula was conceivably close enough to Bioglass to end the story of this implant. This is because what had happened to it during the seven years between 1989 and 1996 now became all-important. Unless we could say that we knew for certain that this was definitely the same object that had been in Jesse's leg since he was a child, the only possible conclusion would be, "Bioglass, probably manufactured sometime after 1970."

What disturbed me about drawing this conclusion, though, was the extremely aggressive and unpleasant nature of Jesse's story. If his perceptions were accurate, then somebody had been exploiting him in a brutal manner. I did not want to allow an excess of skepticism to deprive him of his one tangible piece of evidence that the torment that had followed him throughout his whole life was real. If I did that, I might end what chance he may have of receiving the support, or at least the sympathy, of society.

The fact that Jesse's abductors had been so secretive and that he had been routinely subdued, with no effort made to convince him to comply voluntarily meant to me that there was a strong possibility that what was being done to him would turn out to be unwanted even if it was explained.

Anybody engaged in an activity like this would take pains to conceal the least shard of evidence. So, did the subtle hints of manufacture mean that this was a piece of technology in disguise, and we were on the point of discarding it because we were being deceived by what was, in effect, an attempt to camouflage it as something ordinary?

This bit of glass would have been discarded as unimportant by any doctor who might have removed it during Jesse's childhood. Now, without the sulfur, we were back to Bioglass. But there was a second inspection of the object conducted in December of 1996, largely because of Dr. Mallow's insatiable curiosity about materials. Since he had not found the correct formula the first time, he wanted another crack at it.

This time, scanning electron microscopy, X-ray diffractometry and, despite the previous problems, X-ray fluorescence would be employed in analysis.

It had been determined that X-ray fluorescence could be used even though

the object was very small, as long as there was some adjustment made for the readings that would be obtained from the part of the X-ray beam that reflected back from the surface on which the object was placed. So when the test was run, a blank was also run using only the mounting component as a reference, and the values obtained in this test were then subtracted from those in the test containing the object.

This resulted in a reading that was similar to the reading obtained from the surface scans run off the electron microscope and left no further doubt that sulfur was not a component of this object.

Under X-ray diffraction, the object was confirmed to be amorphous, not crystalline. But we had a further interesting issue appear this time, again suggesting some sort of manufacturing process. “An orange peel effect at 140X, which is not typical of fused silica or a glass shard, was observed.”

The lab broke a number of glass jars and examined the breaks microscopically, and could find no instances where this texture occurred.

Further efforts were made to induce normal glass to exhibit this surface effect. “One shard was caustic treated using 10-normal sodium hydroxide, boiled for 30 minutes, and another acid exposed for a short period (1-2 minutes).” This was done to see if artificial biochemical aging could produce the effects. No such structures appeared.

Could it be, I asked on reading the report, that these structures might have appeared if we had aged Bioglass?

Then I was told that the new, more accurate readings showed that the formula was not Bioglass at all. In fact, there were some very strange features about this formula, the first one of which was that, since it wasn't Bioglass, why hadn't it been rejected?

The object was actually stranger than it would have been if the original formula had been correct. And then it got even stranger.

The ordinary glass shards were subjected to scanning electron microscope examination and “induced such severe charging and scatter, they could not be photographed or analyzed.” This is absolutely typical of glass and occurs because it does not conduct electricity. For such substances to be examined by SEM, they must first be coated with a superthin film of gold. This is standard operating procedure in a laboratory.

“In contrast, JL's implant did not charge, and photographed and analyzed easily.”

The problem with this was the formula, which was now confirmed by two

instruments: The object was not just a piece of ordinary glass; it was 99.3 percent silica by weight, more like fused quartz. Ordinary glass is nonconductive, and with this high a silica content, there is no way to see how it should have been possible to examine the object with the SEM without first making the surface electrically conductive.

So it was now strange on three levels: (1) it *wasn't* Bioglass, but it had not been rejected by the body; (2) it was an unusual formula with a very high amorphous silica content and strange surface features; and (3) it was electrically conductive, which should have been impossible.

“In conclusion, the implant *does* exhibit unique surface characteristics that cannot be explained by any assumed biochemical effect arising from extended exposure to a host's body fluids, even after 30 years of *in vivo* exposure. Since there is no known precedence for such a situation as this, we cannot make a reasoned judgment for the anomalous surface topography and general morphology of the shard.”

The exact formula for the implant is: silicon, 99.3 percent; potassium, 0.02 percent; calcium 0.27 percent; and iron, 0.03 percent. The rest of the material (.38 percent) consisted of traces too small to be identified without destructive testing of the object.

I wanted to know if the iron could have made it conductive. The answer was that many glasses contain even larger traces of iron and do not conduct. It would take a much larger proportion of iron in the formula to accomplish this. Dr. Mallow hypothesized that the strange surface structure might be the answer to the conductivity. The effect cannot be caused by a film because the object was cleaned with water, acetone, and alcohol, but it is possible that something exists down in the cracks between the surface cobbles that is providing the conductivity. If so, did this substance come from Jesse's body, or was it applied to the surface as part of a construction? There is at present no definitive answer to this question. But it should be noted that the fact that the object was electrically conductive also made it functional: This could have worked like a radio crystal, receiving its power either from an external source or from the body.

“One interesting observation worth noting is the extreme heat required to generate a glass of 99% silica. Most boro-silicate glasses and flint glasses are processed at under 2500F (1500-2000F), but a glass of 99% silica would require over 3000F to process easily (blow, cast or mold).” Such a glass would have started out as quartz, diatomaceous silica, or pyrogenic silica. In

this case, diatomaceous silica was ruled out because there were none of the microscopic anatomical features from the skeletons of the diatoms (tiny sea creatures) that would have been present if this material had been used.

High silica content glass is a substance that is difficult to make and to stabilize but that offers certain significant advantages in terms of things like refractivity and heat conductivity. The manufacture of this glass would have involved an extreme range of heat and a considerable amount of technological expertise. For example, the insulating tiles on the space shuttle, notoriously difficult to produce, are made from pyrogenic silica, an ultrahigh silica content glass.

Is this some kind of a trick, then, something made in a laboratory that would, on examination, appear strange enough to generate the belief that it was an implant?

Possibly, except then how did they create the object's surface, and what was this odd artifact doing in somebody's body? Pictures taken of Jesse as a child show his scar; that same scar is visible in photographs of the removal of the object, with the object being drawn out from under it. And even if the conductivity can be explained, the cobbled surface is still strange, and what such an object might have been doing inside somebody's body is a complete unknown.

Although no known technologies seem associated with the object, it is interesting to note that such a material might have a technological application that we can understand. It could conceivably modulate signals, receiving and possibly transmitting on specific frequencies like a commonplace radio crystal. It might be possible to study the object further in order to determine this, but before that happens, it would be helpful if other such objects could be located and harvested for purposes of comparison.

The report concluded: "The questions outnumber the answers." And that, at the moment, is where the matter stands.

Chapter Eighteen

My Implant

After I discovered in 1988 that there were some unknown bright objects in my brain, I was in a terrific quandary. There seemed to be nothing further that I could do to resolve the question of whether these objects meant anything. What worried me was that, because of my books, I had become a person who was looked to for answers. Even if inappropriate, this was inevitable. But what if my mind was somehow being influenced from the outside?

My books were being taken as a sort of message by many people that spiritually evolved aliens were here trying to influence humankind in a positive way. Although I had tried to tell my story as I had experienced it, I thought that what I had also done was raise a series of questions. Yet, when I read the books months after writing them, I could see a disturbing difference between what I had written and what I had intended.

In general, while the books frequently raised and repeated questions through their pages, the descriptive material was so vivid that, as often as they were raised, its impact obscured them. And no matter how often I raised them again publicly, I was generally introduced on radio and television as “alien abductee Whitley Strieber.” As I would always point out, I didn’t know what had happened to me. Still, I appeared to have become a propagandist for aliens, when what I was trying to do was conduct a public inquiry into whether they even existed.

In the early 1990s, my concern that my public presence was really a form of advocacy for something I thought should remain in question was one thing that caused me to back away from the whole field. I began writing fiction again: *Billy*, *Unholy Fire*, and *The Forbidden Zone*. At the same time, the adventure with the visitors continued to become steadily more intimate and intense.

I set conditions that I thought would be impossible for them to meet if they were figments of my imagination. As I described in *Breakthrough*, they met these conditions with an astounding series of encounters that left me feeling that I had to return to the subject. Still and always, though, I wondered if my mind was really independent of them...or some human agency that might be

behind them.

Then an event took place that continues to haunt me. I have never recorded it before because it happened after *Breakthrough* was finished and there was no place for it in my book about childhood, *The Secret School*. But I have spoken about it in lectures and have thought a great deal about it.

The night of May 24, 1995, was cool but still at our cabin in upstate New York, and we left our bedroom windows opened. Even through the tumultuous and terrible years that have followed, I have never forgotten those few minutes of extreme terror and wonder that came into my life because we did that.

I had been sleeping lightly but peacefully when, at 3:15, I heard the distinctive sound of car tires crunching on our gravel driveway outside. This brought me instantly to consciousness. There was a locked gate halfway down the drive, well away from the house. But this car was *here*, right under the bedroom window. We were totally isolated; the only thing that kept us in communication with the outside world was a single telephone line, and that could easily be cut.

Then I heard the garage door going up, which couldn't happen without the alarm going off. But it was happening.

As I opened my eyes, I heard a voice behind the house, on the opposite side from the driveway, say, quite clearly in the silence, "Condition red." I thought that I was being invaded by crazy people or perhaps some sort of intelligence community team.

I wanted to do three things: get my gun out of the bedside drawer, turn on all the outside lights, and call the sheriff's office if I could. As I turned to open the drawer, I saw something that terrified me to my very core: Somebody was standing in the hall just outside the bedroom. I couldn't see this person very well. It was dark in the room, which was lit only by the LEDs from the burglar alarm, which still showed itself as armed.

Immediately, two people moved into the room, a young woman in black, featureless clothing, and behind her a man, taller, with a full beard. The woman said something, or generated some sort of a sound, I don't know which, and I was rendered helpless. But my eyes were wide open, and I was totally conscious. I was unable to speak or move, though. I was absolutely beside myself with terror and rage. I'd always feared that some night these sorts of people would show up, and God only knew what was going to happen to me and Anne now.

They came close to the bed. The woman looked perfectly human. She was small, with a grave, rather pretty face. Then, slipping and sliding along behind them, I saw something else. I did not see it well, but it seemed to me by the way it moved—a graceful, almost serpentine motion—that it was one of the nonhuman forms that have become so familiar to me. Then the young woman, who was now right beside the bed, reached down and pushed my eyes closed.

A blast of pure fury went through me. The sensation of helplessness was hideous, the feeling of vulnerability appalling. I was turned halfway on my side and could not tell what might be happening to Anne. I wanted to help her, I wanted to get us out of here. I cursed myself for having continued to live in this isolated place so long.

Then I felt myself lifted up, bending at the waist, with the lower part of my body still on the bed. When I was laid back down again, my head was in somebody's lap. They were sitting on the bed, and I was facing their midriff, meaning that the left side of my face and my left ear were exposed.

Somebody began doing something to my ear, and all the while there was a voice speaking in a sort of singsong. I have never been able to remember what was said. The next thing I knew, I was plunged into the kind of blackness that comes when you are on the operating table and the anesthesia hits. The moment I woke up the next morning, I turned toward Anne. I shook her awake. Even though hours had passed, in my mind it seemed as if the incident had happened just a second ago.

She was fine. As usual, she had not been disturbed during the night. She recalls now that as I described the incident to her, I mentioned that the people had come in a white Jeep Cherokee. I do not know how to account for the fact that I said that, except that there could be components of my experience that I have forgotten. Maybe I got out of bed and looked out the window before I was overcome. If I did this, I would have seen right into the driveway.

My immediate desire was to investigate the incident. Remembering that the garage door had been opened, I threw on some clothes and went downstairs. When I entered the garage, I found that the door behind our car was indeed wide open. But the burglar alarm was still armed and was not indicating this breach of the perimeter in any way. I disarmed the system, anticipating that later I would look at its readout for the night and see if it recorded any entries into the house.

I got into the car with the idea of driving down to the gate and seeing if it was also open. As I backed out, I felt a strange tickling sensation. Then I noticed that there was static everywhere in the car. When I moved my hand off the steering wheel, it made a spark. Touching the back of the passenger seat caused another one. I had just backed the car free when I noticed this. I leaped out, worrying that something might happen to me in that environment.

Although I did not think to examine the driveway for new tracks until that moment, it didn't matter because I hadn't driven over it yet. When I did look for tracks, I couldn't make out anything unusual. We came and went all the time, as did various trucks and so forth, so there was no way to tell much. The shale surface did not, in any case, take deep or detailed tracks.

I went back in the house and tried to settle down. I tried the phone; it was fine. I pulled the last twelve hours of activity on the alarm system, but all it showed was the normal arming and disarming. Whatever had happened had bypassed the system. I shaved and finished dressing, then checked the car. It seemed to have returned to normal inside, so I went down to the gate. It was closed, and it worked perfectly. There were no ruts suggesting that a vehicle might have gone around it and through the woods.

I called the man who had installed the alarm system, and he came out later in the day to check it. Everything worked, including the switch on the garage door. But he explained that a switch like this could be defeated magnetically. If a powerful enough magnet was held near it before the door was opened, it wouldn't trip. But the magnet would have to be very powerful.

Still, that didn't explain why the circuit had never broken. When I'd gone downstairs four hours after the incident, the door was still wide open and the alarm was still on. He replaced the switch and adjusted its placement, but there was nothing really decisive that he could do. I had already been through a terrifying series of incidents where somebody had been calling the system from the outside, disarming it over the phone, then coming in and, in one case stealing a check and leaving a virus on the computer, in others placing firebombs in the basement. The installer had closed off the part of the system that enabled it to answer calls, and I had complained to the New York State Police Criminal Investigation Division about the intrusion. There had been no investigation.

Late that afternoon, my left ear began to hurt. The pinna, or outside, of the ear was sore. Anne looked at it, and it was red. We felt it and found a swelling just behind the crown. The outer part of the swelling seemed hard.

On the inside edge of the pinna there was something that felt almost like a coiled wire.

I thought: implant. And immediately I wondered if I should try to get it operated on. In those days, I was still unaware of Roger Leir's work, so I assumed that the surgery would have to be done by somebody who knew nothing about the possibility. I knew, also, that this would mean that I would not get to keep the materials—if any—that came out. They would go to tissue pathology, be examined for cancerous tissue, and that would be that.

I went to my doctor in New York anyway, though, just to be certain that the swelling wasn't a sign of some disease that was unrelated to the incident. He thought that it was a little strange but essentially innocuous. He counseled me that, if it grew or became irritated again, to come back for a biopsy.

Over the next few months, we were compelled for financial reasons to leave our beloved home forever and began to split our time between small apartments in New York and San Antonio, keeping to a tight budget. In the agony of these days, I wished often that I could return to being a non-controversial fiction writer, but I just could not let this go, not after all that had happened.

The next thing I knew, I had heard of Roger Leir's work, and I immediately thought that I might get my implant removed as well. But then I heard of the warning that had been made to Betty Stewart Dagenais, that she would die if her object was removed. The problem was that our objects were in exactly the same place: on the puma of the left ear.

So how was I to take this? Was the warning general or specific? Was it even real? All close encounter witnesses deal with a tangled knot of imagination and reality in their memories. Nobody—myself included—can be certain about anything. So I hesitated. Dr. Leir felt the object and commented on the same structures that I could feel. His six patients had not been harmed by their removals. Jesse Long had not been injured.

So, I decided to see if I could find a doctor willing to remove it. I did not go to Dr. Leir because I thought that he would become open to charges that he was the only one discovering these things in people. So I found a general practitioner in San Antonio. For his own peace of mind and because of the weird sequel that involves him, I am not going to name him. However, the procedure was recorded on videotape, and the laboratory analysis of what was removed is a matter of record as well. There is also the scar on my ear.

The surgery was conducted on October 9, 1997, in San Antonio. The

diagnosis was a foreign object in the pinna of the left ear that became irritated when I slept on it and interrupted my sleep. The doctor was aware of who I was but conducted the surgery only on the basis of this diagnosis. Prior to surgery, an X ray was taken that did not show a return that would suggest, for example, the presence of a metallic object. But the doctor could palpate the object, which he described as a “hard mass fixed to the pinna of the ear.”

The surgery was an in-office procedure with local anesthesia. I was conscious the whole time, and there was little pain. The operation proceeded normally until the surgeon actually uncovered the object. It appeared to be a discrete white oval shape that was to a degree intermixed with the cartilage surrounding it. When the doctor attempted to dissect it out, however, there was an unusual reaction.

He commented, “I can’t even feel it anymore.” Far from being fixed, which he had determined on quite a careful examination of the ear prior to the surgery, the object was proving to be highly mobile.

He opened up the incision a little more to try to regain the object, but it was no longer present. He tried dissecting away some of the cartilage. He said, “I have the cartilage exposed,” but he still could not find the object. He continued, “It’s like it moved. I had it marked, and it’s like it’s lower.” He concluded, “The whole idea is that I can see the cartilage, but it’s intermixed in the cartilage. And at this point it would take literally excising the cartilage, and we’re not going to do that. But it did move down and it did diminish in size, which is even more odd because lidocaine causes things to swell up.”

At this point, the surgery was concluded. What we had were two small samples. One was almost certainly ordinary cartilage, but the other might have been a piece of the object. These were taken to Southwest Research, where they were observed under a microscope. The first sample was indeed cartilage. The second appeared to be collagen, possibly of an unusual structure, but this was uncertain because the cutting involved in removing it could have caused its appearance. However, it contained crystals a few microns in size that appeared similar to Jesse Long’s much larger object. The crystals were examined under the scanning electron microscope and found to consist of calcium carbonate or possibly calcium phosphate.

As calcium, carbon, and phosphorus are present in the body, the crystals could conceivably have appeared as a result of laboratory procedures. Before being examined, the material was removed from the preservative saline solution, dried in alcohol, then placed under the bright light of the FTIR

microscope. It is possible that this caused the crystals to precipitate, but why they would appear as discrete formations rather than in the sort of clumps that normally occur in precipitation was unclear. However, it would be far from a typical finding, as calcereous inclusions are not found in crystalline species in cartilage even given preparation. But with just this rather ambiguous evidence, it would be inappropriate to conclude that anything otherworldly is involved. But it's my ear, and I know when I first noticed the swelling, so I must confess that I am suspicious that the unusual nature of the finding means that we are stumbling around with some kind of technological inclusion that is very far beyond our understanding. But this is hardly a scientific conclusion. What is needed, yet again, is more evidence—more funny lumps in more ears, as it were.

There are two diseases that might cause crystals to appear in tissue. One is gout, but that's ruled out because the crystals would have been formed of uric acid. The second is somewhat more interesting. Pseudogout deposits crystals of calcium pyrophosphate in joints.^[63] But it is not a disease of the pinna of the ear, and I have none of its arthritislike symptoms. It is conceivable, though, since it also lodges in cartilage, that this is the explanation for this object. The doctor felt that this should be ruled out because he did not feel that the disease involves the ear.

Over the years since I noticed the object, there have been some instances in which it seems to have become active. The first of these took place during my first meeting with my new literary agent just a few weeks after the object appeared. My left ear became hot, and I began hearing warbling noises. I excused myself and went into the men's room, where I observed the ear to be bright red. I soaked paper towels in cold water, but before I could apply them, the heat and the sound both stopped abruptly. The second incident took place while I was describing this incident to Dr. Mallow, during one of my first meetings with him. He was able to observe the ear turn bright red but could not hear any of the accompanying sounds. This incident also ended abruptly. The third time, I was in a slide program prepared by artist and close encounter witness Steve Neill. Slide after slide of the familiar little aliens with the huge black eyes were flashing on the screen, when suddenly the warbling sound started in my left ear again, and the exterior of my ear became hot. A few moments later, I was called out of the room. Fellow witness Kim Carlsberg, who has published a book about her experiences,^[64] was upset. Her left ear had become hot and was glowing bright red exactly

like mine. I could not feel anything in the cartilage, but we ended up sitting there and staring at each other in helpless perplexity as our ears slowly returned to normal. Another witness had something similar removed from her forehead, which proved to be filled with microscopic strands of silica.

There was an extremely peculiar sequel to my surgery. It seems that some days before doing the surgery on me, my doctor had scheduled the removal of a lump from his own back after a biopsy that suggested the possible presence of precancerous cells. This lump was excised by his dermatologist on October 27, 1997. It was not precancerous but instead contained what he reported to me was a “small gray inclusion that was unlike anything the dermatologist had ever seen before.”

Absolutely nobody involved ever dreamed that this would happen. We were not prepared for it, and the inclusion was lost to study. A very frustrating and disappointing outcome for me, I can assure you. The doctor said, when I explained to him the possible importance of objects like this, “Wait a minute. You’re telling me that I busted one alien implant, and got another one taken out?”

“If that’s what they were, you sure did.”

“So what happens to me now?”

I was able to reassure him that nothing untoward has happened to Roger Leir and his colleagues...at least, not so far. But if the upsurge in close encounter activity that has been reported by other witnesses who have had their objects removed is any example, it is possible that this doctor—who doesn’t remember anything in his life to do with aliens—might be headed for some interesting times.

I could not conclude from my surgery and the analysis of the material removed if it was all natural and explainable or if it was really something unknown. The doctor who did the surgery felt strongly that the movement of the object was quite unusual, because it had so clearly been fixed when he examined it, both initially and just prior to the incision being made.

At the moment, this is where the story ends—almost. As of October 30, 1997, my ear has healed. The object has returned to its former shape and size, including the suggestion of a coiled structure on the inside of the pinna. And last night, while I was out walking the dog with my wife, the ear became very hot, and the tones recurred for about thirty seconds.

I tell this story in such detail because I think that a great many people who have strange objects in their bodies are going to have the experience of

getting the objects removed and then being unable to tell for certain what they are. All of the stories will not be as clear as those of Jesse Long and Alice Leavy. A lot of us are going to end up living just as I must live, in a state of question about what might be happening to them.

Although I can say that this has not affected my health in any negative way, it is not an easy thing to live with. I am haunted by implants. What do they do? How might they be affecting my work? Above all, are the objects in my brain and ear even implants? There are credible natural explanations for both of them...at least, on the surface.

Anyway, the press always snickers at the idea of implants, so shouldn't we dismiss them as goofy, even paranoid, nonsense? In a society as heavily burdened with secrets as ours is in the late twentieth century, I don't think that would be wise. In this society, anybody who isn't at least somewhat paranoid probably isn't entirely sane.

I would never rule out the possibility of a human connection in the close encounter experience. Many witnesses besides me have seen human beings during their encounters. There is a whole subgroup whose entire abduction experience involves only people, mostly in military uniforms. And given what will emerge in the next chapter, I don't think that any thoughtful American can assume that the intelligence community can be trusted not to engage secretly in mind control research.

I wish that I could report that I couldn't find evidence of any such research, but that is very far from true. In fact, the truth is quite shocking, because not only has there been a great deal of research, the American intelligence community has mounted a shameful series of attempts to develop outright mind control, engaging in the process in some of the most horrific experiments ever undertaken by man.

Chapter Nineteen

What Do the Implant Data Mean?

The great strengths of the surgeries performed by Dr. Leir is that all were carefully recorded, that some of the objects were identical, and that none of them should have been in the witnesses. The weaknesses are that there was a time lag between the surgeries and the analysis of the objects, and the objects were not found to be made of unusual materials, although it is hard to see how a T-shaped structured object cored with meteoric iron would have come into somebody's body by accident, or how two totally unrelated people would bear virtually identical objects of the same odd substance.

The Jesse Long case reveals an object that, after two laboratory examinations, remains hard to characterize. It is an unusual substance, fused quartz, with a composition of ninety-nine percent amorphous silica. It has probably been melted and honed, suggesting that it was manufactured. In addition, its cobbled surface is unusual. How it could conduct electricity is not clear, as its surface was cleaned of impurities, and silica is nonconductive. On the other hand, there is no way to confirm that the object actually entered Jesse's leg in 1957 because there are no medical records attesting to this. There could be something else under the childhood scar visible in old photographs of him. Moreover, the seven-year gap between its excision and the analysis means that we cannot be certain that what was analyzed and what was removed are the same thing. In this case, though, the fact that the object is so mysterious outweighs the lack of a clear record of possession.

Beyond these first few cases, there are thousands more. Many more implants can be excised, conditions can be controlled more rigorously, and a very extensive array of studies can be applied both to the objects and their bearers. We can also attempt things like relating the type of encounter to the type of implant, to see if there is some correlation. We can use new techniques to determine from brain biology and function what parts of the witnesses' memories are factual. Before excision of the objects, we can subject implanted witnesses to all sorts of psychological and physical tests, to attempt to determine what the objects do. Afterward, we can search for

technology in the objects, then engage in much more thorough materials analysis than has yet been done. In the end, we can probably make educated guesses about the purpose of the objects.

Scientists all over the world are racing to achieve implantable nanotechnologies of all kinds. Already, we implant animals with transponders that emit identifying signals when excited by incoming radio signals on the correct frequency. But they are too short range for tracking, and are used for identification purposes, and only in animals.

Four companies distribute veterinary-grade implants, Destron/IDI, American Veterinary Identification Devices, Identichip, and Infopet Identification Systems. The devices that they manufacture are tiny but not yet small enough to fit comfortably under human skin, which is much thinner than that of most animals. Radio tracking can be accomplished in animal husbandry but only with collars. An implantable tracking device is quite possible, though. Certainly, the miniaturization technology is already available. Hughes Missile Systems manufactures a trackable microchip called the Hughes Position Locating Reporting System for use in vehicles from trucks to missiles. The reason this device cannot be used as an animal implant is that it would require a battery if it did not have a vehicle electrical system as a power source.

Human implantables are already well into the planning stage. Miami surgeon Dr. Daniel Man has patented an implantable chip that could be used to locate lost children or senile patients who have wandered away. A similar project, called KIDSCAN, would bounce a signal off a satellite that would function as a locator.

Advances in piezoelectric technology and decreases in the size and power requirements of circuits of all kinds suggest that it will not be long before tracking devices like these can be implanted in animals and, perhaps soon after, human beings. It is always possible that there are “black” projects that have outstripped what is known and available publicly.

It could be that the conductivity of the Long implant represents a solution to the problem of how to deliver energy to a tiny object without a battery. The Leir objects could offer a magnetic signature without needing any internal energy source at all. How far away this signal might be read would depend on the type of energy pulse applied to it and the sensitivity of the equipment reading the return.

We are making at least as much progress with implantable drug delivery

systems as we are with signaling devices. There are systems that encapsulate drugs in nonbiodegradable membranes, such as the Norplant system, and drugs that are delivered via injectable micro-capsules. Beyond this, there are sophisticated implants under development that would be injected into the vascular system and would emit their drug loads in a highly controlled manner. Using variants of such technologies, anti-cancer drugs, for example, will be deliverable directly into the interior of tumors.

Depending on the application, such implants might be made either of biodegradable materials or of fibers along the lines of Q-Fiber, an amorphous, high-purity silica fiber manufactured by the Manville Division of Schuller International.

These would appear as fibrous clusters of material with a predetermined void size between the fibers that would carry a biodegradable matrix with one or more drugs dispersed through the matrix. Although such devices are under patent application, they have not yet been manufactured. There is little reason to doubt that they will be, however. And it may be that we already have a prototype.

One of the strangest implants ever found was contributed by Dr. John Mack. Expelled from a witness's nose, it is described as an organic, plasticlike, three-lobed fiber with an internal structure organized into intricate layers in a seemingly irregular manner. The specimen was a "tough," pinkish-colored, one-inch-long, kinky, wirelike object. A pathologist found it to be about twenty to thirty microns in thickness, and it could be stretched out more than three inches. It was reported to have a gelatinous sheath with bumpy outcroppings; it was clearly not a hair. A radiologist found it to be radiolucent, thus not metallic. Neither the pathologist nor the radiologist was able to identify the object, so further tests were done. Using the scanning electron microscope for energy dispersive spectroscopy showed the specimen to consist primarily of carbon and oxygen, with carbon being the dominant element. It was, in short, a carbon fiber filament filled with hollow areas.

Nobody could identify the origin or function of this object, but it is conceivable that it is a carbon-fiber equivalent to the Q-Fiber implant described above that is as yet unpatented and still in the design phase.

As fascinating as this possibility appears, the most urgent issue that close encounter witnesses connect with implants is not tracking or drug delivery. It is mind control. For many of us, this is the bottom line:

Do these things mean that somebody is doing something to our minds?

Mind control has been an objective of intelligence services throughout this century. In 1977 it was revealed in a hearing before the Select Committee on Health and Scientific Research of the Committee on Human Resources of the United States Senate that the CIA had spent more than twenty-six million dollars on the notorious MK-ULTRA project, which operated from 1950 until 1971 or later. MK-ULTRA is most famous for the frightful tests of LSD on victims who were not informed that they were being given the drug. This led to the congressional hearings^[65] that eventually forced the CIA to release some of its MK-ULTRA files.^[66] They told of a massive undertaking that involved 186 researchers in the academic community, fifteen foundations, twelve hospitals and clinics, three prisons, and numerous pharmaceutical companies. The envisioned scale of this project was so large, according to the select committee's files, that, at one point in the early 1950s, CIA ordered a hundred million tabs of LSD (then called EA-1729) from Sandoz Pharmaceuticals. As this was enough LSD to dose half the American population, one wonders what was intended.

MK-ULTRA involved 149 subprojects, and, with 23,000 victims, is the worst known misuse of governmental authority for illegal medical experiments to occur outside of the Nazi death camps, although it is perfectly possible that totalitarian governments have engaged in worse programs that remain unknown.

The disturbing areas of this research, insofar as implants are involved, concern the possibility of using them as receivers for energy that disrupts or alters the mind, or invades it with thought, or as drug delivery systems. It is possible, of course, that the object that was expelled from the nose of Dr. Mack's patient, if it was an implant designed to deliver drugs, represents an illegal use of such a device. There is another instance where this might be a possibility as well, but it does not involve a drug delivery system.

One of the patients that Dr. Leir and his associate assisted was a man with a story very different from those told by the others, all of whom felt that they had been implanted by aliens. This man worked for a defense contractor and had a low-level security clearance. He developed dental problems and was sent by his employer to a dental surgeon, who operated on his jaw.

Afterward this man began to hear voices that sounded to him like CB radio transmissions. The sudden onset of this symptom was related in his mind to the dental surgery so he returned to the dentist, only to be told that the surgery could not be responsible.

The area was X-rayed on a visit to another dentist, and a triangular object was observed to be embedded in the witness's jaw just below the surgical site. The witness found his way into Dr. Leir's surgery, and a triangular metallic object was subsequently removed from his jaw. However, the voices did not subside, and psychological testing suggested the presence of possible disorder. So it is impossible to tell exactly what happened to this man. Perhaps the object came there by accident during his dental surgery, and the voices were part of a coincidental disease process. Perhaps signals heard consequent to the implantation of the object initiated an abnormal reaction that appears now that the object has been removed as bipolar disorder.

Like the story of the Mack implant, though, this one also raises questions about whether the secret government has really abandoned mind control experiments with innocent citizens as the victims.

As the CIA has steadfastly refused to release all of the MK-ULTRA documents, contending that not all of them were relevant to the case that was brought against it, there is no way to tell if it is really out of this business. In addition, there may be substantial additional documentation that has never been placed in the public record. Mind control research was transferred from the Technical Services Staff to the Office of Research and Development in 1962, and no ORD records on the subject have ever been released at all.^[67]

United States mind control research probably began during World War II when Colgate University professor George Estabrook suggested to the War Department that there could be military uses for hypnosis. In 1946, Estabrook destroyed his diaries, and no information on his activities has been forthcoming from the government. During his lifetime, he did occasionally suggest that his work had involved the "creation of hypno-programmed couriers and hypnotically-induced split personalities."^[68]

After the war, the CIA sought data derived from the death camp experiments of the Nazis, importing alleged Nazi scientists and doctors like Karl Tauboeck, Friedrich Hoffman, Theodor Wagener-Jauregg, Kurt Rarh, and Hans Turnit, who variously engaged in experiments in Germany during World War II with drugs designed to induce paralysis and with lethal gasses.

^[69] Given that the American intelligence community imported these people and allowed them to continue their research here, it may be conjectured that it has enjoyed the use of scientific discoveries made in the Nazi system, possibly in the death camps.

The Office of Naval Intelligence, allegedly as early as the 1950s, funded

the work of neuroscientist Jose Delgado, who specialized in the area of intracerebral implants and electronic brain stimulation. His book *Physical Control of the Mind: Toward a Psychocivilized Society* suggests that behavior could be modified by brain implants that would, for example, cause such physical pain when violent behavior was contemplated that the potential criminal would become unable to act as soon as he or she so much as thought of a crime. By extension, of course, it can be seen that all sorts of behaviors could thus be modified, especially given that Delgado achieved much more subtle results. He was able not only to induce extreme moods like passion and exhaustion but also, as he reports, using “radio stimulation of different points in the amygdala and hippocampus,” to produce “a variety of effects, including pleasant sensations, elation, deep, thoughtful concentration, odd feelings, super relaxation, colored visions and other responses.”^[70]

Delgado also figured in an experiment that involved making a cat’s ear into a microphone that could pick up conversations the animal was hearing.^[71] Obviously, it would also be possible to implant a tiny speaker like a hearing aid that could be a source for voices. Such a device could touch any number of different cranial bones, including the jaw, and still transmit signals that would be low-level hearable.

According to Alan Scheflin and Edward Opton in *The Mind Manipulators*,^[72] Joseph A. Meyer of the National Security Agency has allegedly proposed implanting half of all Americans arrested, whether convicted of a crime or not, so that they could be subjected to continuous monitoring thereafter.

The use of hypnosis in remote control of subjects would be possible given present technologies, conceivably even if the subjects had to be placed in the trance state from a distance. Afterward, a fairly simple device could be effective in triggering a posthypnotic suggestion. This could be something, for example, that would produce beeps such as those that Betty Dagenais claimed to have heard coming from her implant. It could also be that by hypnotic suggestion the victim could be made to remain consciously unaware of the signals. The signals could be used to trigger all sorts of posthypnotic responses.

There has been a rumor that a device invented by Dr. Delgado, which he called the stimoceiver,^[73] has been evolved into a something that is capable of inducing a hypnotic state via radio transmission. The stimoceiver was developed in the 1950s, and there is a famous film of Dr. Delgado disabling a charging bull in the Madrid bullring by using a radio transmitter that sent

signals to a device embedded in the animal's brain. The technology that grew out of the stimoceiver is known as radio hypnotic intracerebral control and electronic dissolution of memory (RHIC-EDOM). Whether RHIC-EDOM programs actually exist is a matter of conjecture.

In 1977, Senator Richard Schweiker (D., Penn.) questioned MK-ULTRA administrator Dr. Sidney Gottlieb regarding these rumors, asking first if MK-ULTRA involved the use of hypnosis.^[74] Gottlieb replied that it did. The senator then asked if "any of these projects involve something called radio hypnotic intracerebral control." Gottlieb replied in the negative, but when Schweiker pressed him he stated that "there was a current interest, running interest, all the time in what affects people standing in the field of radio energy."

One reason that Senator Schweiker was so concerned involved rumors about laboratories where fantastically horrible experiments were being conducted into the effect of radio transmissions into the human brain. But it was not until July 28, 1985, that such experiments received any substantive public exposure. On that date, David Remnick published an article in the *Washington Post* titled "The Experiments of Dr. D. Ewen Cameron," which was subsequently entered into the Congressional Record.^[75] Cameron's laboratory was founded in Montreal at the behest of the CIA, with funding by private foundations. In its Radio Telemetry Laboratory, according to the report, was the Grid Room in which the subject was strapped into a chair (being given a dose of paralyzing curare if there was resistance), then wired to an EEG. Using LSD and electroshock, the subject was "de-patterned" until his or her mind was empty. This was enhanced by an artificial-sleep program that kept subjects in a state of artificial coma for as long as two months at a time. Reprogramming was undertaken by the use of endlessly repeated messages for sixteen hours a day.

According to the article, Dr. Cameron, who was president of both the Canadian and American Psychiatric Associations, was assisted by Dr. Walter Freeman, who during his career performed four thousand frontal lobotomies and was honorary president of the Second International Conference on Psychosurgery in 1970.

According to a paper presented by Harlan E. Girard at the NATO Advanced Research Workshop in the Coherent and Emergent Phenomena on Bio-Molecular Systems at the University of Arizona in January of 1991, research into brain emissions and brain deprogramming has been matched by

research into reception methodologies. This paper, “Effects of Gigahertz Radiation on the Human Nervous System: Recent Developments in the Technology of Political Control,” describes research into the use of radio activated electrodes implanted deep in the brain to achieve control over subjects.^[76]

Unfortunately, most information regarding such research has largely disappeared from public view since the early 1980s, so it is at present impossible even to guess how far this area of intelligence research has progressed. However, the existence of the Girard paper would suggest that it is still ongoing.

At present, many congresspeople maintain what are called “wavie” files of letters from people complaining that they have been negatively affected by radio and microwave interference. It is assumed that these are troubled individuals, and in the case of the man whose object was dissected by Dr. Leir, it was not possible to tell if he was suffering from a naturally occurring psychological disorder or one caused by his apparent implantation. To my knowledge, as of October 1997, his implant had not been subjected to study.

The degree of sophistication in implant technology that may have been achieved behind the screen of classification is not clear from the available information. Because of the Supreme Court decision rendered in 1986 that held that CIA need not disclose the names of scientists and institutions involved in MK-ULTRA, the CIA has been able to hold back substantial documentation involving mind control experimentation.

In an editorial on May 30, 1997, *The New York Times* stated that “the Central Intelligence Agency has a way of exceeding the worst expectations about its behavior.”^[77] The CIA has been fighting openness, possibly by destroying documents, and it can be assumed that incriminating records will continue to be destroyed as demands for openness increase. Projects can also be transferred into the hands of defense industry companies and, with destruction of evidentiary records within the agency, become effectively isolated from any oversight.

To have this type of research taking place behind the veil of classification is dangerous to the welfare of our nation and of humankind. Research into mind control should be conducted—if at all—in the most public possible manner. Instead, we have no way to tell if it still goes on, but a certain amount of evidence suggests that it might be taking place, and using unwitting citizens as “volunteers,” as happened during the MK-ULTRA

years.

I have not dealt with the issue of MK-ULTRA and children in this book, because there is a paucity of hard evidence. However, there are a number of people, many of them terribly disturbed, who claim that they were the victims of mind control and brainwashing experiments as children, and numerous close encounter witnesses offer testimony that their encounters began in childhood. A psychologist, Valerie B. Wolf, gave testimony on March 15, 1995, before the President's Advisory Committee on Human Radiation Experiments to the effect that a number of her patients had been telling her that they had, as children, suffered horrific abuse involving brutal mind control experiments, and that she had discovered, on reading committee testimony, that some of the doctors named in radiation experiments had also been named by her patients long before their documented activities, such as injecting uninformed experimental subjects with plutonium, had been disclosed.

Aside from this disturbing fact, little documentation exists that may support their claims, but one piece of possible evidence suggesting that the CIA was indeed interested in children comes in the form of a 1964 memo from Richard Helms, who was then CIA plans director. He stated, "Cybernetics can be used in molding of a child's character, the inculcation of knowledge and techniques, the amassing of experience, the establishment of social behavior patterns...all functions which can be summarized as control of the growth processes of the individual."^[78] The CIA has a special definition of "cybernetics" all its own. According to a CIA directive distributed by Mankind Research Unlimited, the "Cybernetic Technique" is "a means by which information of modest rate can be fed to humans utilizing other senses than sight or hearing."^[79]

To allay fears that the CIA has utilized children in mind control experiments or in any other manner, as well as to reassure the public that there is no mind control experimentation now taking place, all of its files on this and subsequent ORD programs in this area should be released.^[80]

But even that will not completely solve the problem. The gathering of secret intelligence is useful, even to a republic like ours, and should obviously continue. But the secret agencies do more than that. They are proactive. They evolve and enact policy. In the past, they have engaged in horrific experiments designed to control and disrupt the human mind. During the Cold War, the line between intelligence gathering and the expression of

state power became blurred as a result of this irresponsible and inappropriate secret proactivity. And it still is.

Some of our current politicians realize this and have been trying to achieve more openness. This has been marginally successful, but the secret government—the civilian intelligence community and its military counterparts—has proved that it will do anything it can, even violate the law if necessary, to keep its secrets. A memo from the inspector general of the CIA to the director dated October 20, 1975, states, “A number of documents concerning the destruction of MK-ULTRA drug records are attached at Tab A. In general, they show that the records were destroyed on the instruction of Dr. Sidney Gottlieb, then Chief, TSD, on 31 January, 1973. Both Branch files and records retrieved from Archives were destroyed.” In addition, it states, “The destruction of MK-ULTRA drug files was ordered by Mr. Helms.”

This practice of losing and destroying records does not end with the CIA and has survived into modern times. Recent events surrounding the “Gulf War Syndrome” controversy make a case in point. On January 28, 1997, “the Pentagon claimed that all full copies of the chemical-warfare logs maintained by the military during the 1991 Persian Gulf War had disappeared, even though copies on paper and on computer disks had been stored after the war in locked safes at two locations in the United States.”^[81] To its credit, Congress has fought back against this outrage. “After a 20-month investigation, the panel that has led the chief Congressional inquiry into the illnesses of Persian Gulf War veterans will ask that the Defense Department and the Department of Veterans Affairs be stripped of their authority over the issue.”^[82]

This process of “lying by losing” may well have also saved the Air Force from having to admit that anything unusual happened at Roswell, New Mexico, in July of 1947, the date of a famous alleged UFO crash. In the General Accounting Office report on this matter, initiated by Congressman Stuart Schiff (R., New Mexico), it was stated that all of the outgoing records from the Roswell army air field from 1945 through 1949 had been improperly “destroyed,” which effectively ended the investigation.^[83] Nevertheless, on March 18, 1997, the accountant who was stationed at the Roswell air base publicly stated that he remembered paying the bills for the equipment used during the cleanup.^[84] On March 19, 1997, the *Newark Star Ledger* reported that a series of apparent arson fires set over a two week period at the Iron Mountain storage facility in South Brunswick had

destroyed in excess of a million records. Whether these records were pertinent probably will never be known. In addition to classified documents, this Iron Mountain facility stored many corporate records, so there could have been other motives for this arson.

Unfortunately, because UFOs represent rejected knowledge, no serious press institution, *The New York Times* included, has bothered to investigate this deficiency in the GAO report. Instead, the absurd stories promulgated by the air force in the summer of 1997 to explain Roswell were treated as essentially factual in the serious press, the *Times* included.

It does not appear that the kind of large-scale reform needed to change the overall situation will be taken anytime soon, but until the black budget is ended and pertinent records are revealed, we will never learn the true history of our country's secret activities in the latter half of the twentieth century. Thus we will not know the degree to which, if any, the intelligence community and the defense industry are responsible for the implantation of the objects that have recently been removed or the many others that remain in people's bodies.

The Congress may be uneasy, but the Senate is firmly on the side of secrecy. For all of its posturing about greater openness, the fact remains that on June 19, 1997, the Senate passed the latest black budget by a vote of ninety-eight to one.

Chapter Twenty

“A New World, If You Can Take It”

Of course there exists a possibility that aspects of the close encounter phenomenon have been induced as a side effect of illegal mind control experiments. But unless a substantial part of humankind has moved far ahead of the rest of us technologically and somehow managed to keep this secret, the massive scale of the overall phenomenon would seem to preclude this. Although there has been no study of the number of witnesses reporting implants, when the Communion Foundation attempted to start its study in 1996, in just twenty-four hours it received more than a hundred responses from people who had both close encounter memories and visible surface signs of implants. This suggests that the number could be very large.

So a human factor is unlikely to be the entire explanation for close encounter, and it is hard to see how any human agency could be responsible for the breathtaking hardware that has been put on display in our skies for at least the past fifty years. Of course, if there are aliens here and they have co-opted our own military and intelligence infrastructure, then there could be the very combination of human and apparent alien activities that are being reported.

Hypnosis and mind control experiments of the type discussed in the previous chapter could easily have advanced to the operational level by now, and this could offer an explanation for some implants and even some UFO claims. But witnesses have been reporting these things since long before the knowledge appears to have been available to organizations like the CIA, and there is a smattering of historical evidence that suggests that encounters have been taking place on a smaller scale almost forever.

One thing is clear: Given the data, the answers to the questions posed in this book are certain to be extremely bizarre. But we don't need to answer the more difficult origins questions before we can usefully address the issue of the significance of the phenomenon to human life and the human future. Even though it might be a long time before we make a definitive determination about origins, there is much that can be learned about effects, because they are unfolding in our skies and happening in our minds and bodies.

The first thing that is clear is that the phenomenon is putting humankind under great pressure. No matter its origins and the motives of whoever is creating it, whether this pressure is destructive or evolutionary depends on how we respond to it. There are two kinds of people in the close encounter experience: those who are being destroyed by the pressure, and those who are surviving and growing because of it. As the experience continues to spread and grow in complexity even after fifty years, it is important to make the choice to use it however we can, regardless of the motives behind it.

If the visitors ever come crashing into every life in the same way that they burst into the lives of witnesses, a tremendous amount of strength is going to be needed for us to face this. Careful science is going to have to be done beforehand if we are to expect rational, considered, and mature behavior on the part of the individual and society. To live with this complex experience and make use of it, we are going to have to face the fact that we, also, are complex, and we live in an ethical and moral world that is like the ethical context of the phenomenon, full of ambiguities, a place in which plain good and plain evil are rare.

There is a very individualistic, laissez-faire quality to close encounter. It is between the individual and the visitors. It tries to bypass official institutions, and I suspect that it has been effective in doing this, because if certain knowledge of an alien presence had reached Congress and the White House, it would surely have leaked. That it may be known by intelligence or military officers who have illegally used our secrecy system to conceal their activities from their own superiors or isolated themselves from accountability within defense industry companies I would not doubt. Our enormous system of secrecy is a holdover from the Cold War era, and you could hide something the size of a small country inside its arcane byways. If there is ever aggressive reform of the system or radical budget cutting, such activities, if they exist, will come to light, as long as the records concerning them are not destroyed first.

Only if the government has been threatened into silence by a powerful alien force bent on carrying out its policies without interference could it be that the secret may be more widely known. If so, then it is understandable that even politicians could keep it, given the extraordinary nature of the threat.

On July 4, 1997, Anne and I met Colonel Philip Corso, the author of *The Day After Roswell*. Colonel Corso, a brilliant and fascinating man of eighty-

two, told a remarkable story of an attempt he and his superior officers had made to bleed technological information gleaned from recovered UFO debris into the defense industry. He had no obvious motive to write this book. He received an insignificant payment for it and has no pressing financial needs that I was able to discover. What he was doing was breaking an oath that he had kept throughout a sterling career, and his true motive for doing that must have been quite powerful.

Colonel Corso entered military intelligence during World War II and so he would have signed a draconian secrecy agreement that made the release of any classified material at all an act of treason.

I asked him if he had violated such an agreement to write his book, and he replied that he had waited until his commanding officer had died, out of loyalty to him.

It was an indirect reply and suggested to me either that he did not violate his oath because the book isn't true, or that he was released from it to write the book and was not able to reveal that.

Although I have no way of determining how accurate his book is in detail, I do feel that it is in general a true account. This is because he was telling his version of the same story that so many other military men, among them Colonel Jesse Marcel and General Arthur Exon, have told. To my knowledge, I was the first person outside of the military to whom General Exon talked. I was introduced to him by my uncle, Colonel Edward Strieber, who had been his lifelong friend and a member of his command.

These two officers did not offer me the rich treasury of detail that I wanted, but I would be extremely surprised if they were lying. Among the things that Exon was very specific about was that everybody "from Truman on down" had known about the Roswell incident from the day it happened, and that it was known to be an alien spacecraft "almost as soon as we got on the scene."

One thing that Exon said is relevant in terms of Corso's book. When I asked him if any technology had been recovered, he replied that a lot of it had stayed with the Army, except for the airframe. The reason it would have happened this way is that the crash took place just as the Air Force was being split off from the Army and made into a separate service. So parts that did not seem relevant to flight might well have been left with the Army. They would have gone to Army Research and Development, and that is where Corso was employed, under Lieutenant General Arthur G. Trudeau, in the 1960s, when he claims that he was ordered to feed them into the defense industry in order

to increase the speed of technological development.

In private conversation, Corso appeared to me to possess a knowledge of the visitors that went beyond what he had recorded in his book. So I was fascinated when he told me that they had communicated to the military that they were offering something to humankind, which was “a new world, if you can take it.”

This statement fits the situation that we are living with right now. Under the scenario that it suggests, the visitors are not going to give us anything. But what we can take, we can keep. The reason would be that there is such a great knowledge gap between us and them that they fear—or know—that our culture would be disempowered if we were exposed to theirs.

In “Searching for Extraterrestrial Civilization,” T. B. H. Kuiper and M. Morris theorize that “complete contact with a superior civilization (in which their store of knowledge is made available to us) would abort further development through a ‘culture shock’ effect. If we were contacted before we reached this threshold, instead of enriching the galactic store of knowledge we would merely absorb it.” Given that the insights of new minds might be the only thing in the universe that such a species might desire, “by intervening in our natural progress now, members of an extraterrestrial society could easily extinguish the only resource on this planet that could be of any value to them.”^[85]

This suggests a positive motive both for the visitors’ reticence and the government’s parallel policy of secrecy. It also suggests that they will fight us and resist us at every turn—not to destroy us but to prevent the very thing that has ruined practically every indigenous culture on this planet that has come up against our own Western technological civilization: the descent of the less technologically potent culture into nonmeaning.

If this is a true picture of the situation, we need to get a lot more aggressive. Either we are going to close the gap between us or we are not. They will not act any more than they must to help us, and everything they do diminishes our future value not only to them but also to ourselves. To wrest knowledge from them, we need to be tough and smart and courageous, not passive and secretive and scared. Science needs to admit that the whole phenomenon represents knowledge that should not have been rejected and start exploiting that knowledge.

The vast majority of the American people believe that the government is covering up something about UFOs. There is an assumption that it is

concealing immense knowledge. But if this was true, then it must have obtained a substantial amount of that knowledge from the pool of close encounter witnesses, and that it has not done. It wouldn't have been a matter of questioning one or two of them but of sampling thousands, if only because the experience is so complex and varied.

We have not only received letters from more than two hundred thousand witnesses, we have spoken personally to thousands of them as well. Surely, given all this dialogue, if there had been any extensive effort of this kind made, we would have learned at least a little bit about it. Rather than concealing knowledge, what the government may be hiding is the fact that it has been told by the visitors that either we make the progress we need to make on our own, or we do not get to join the cosmos. Any decent human being would put up with practically anything to keep such a secret. The government would be in precisely the position of doing what Corso says it has done. Under this scenario, all the leaks and the gradual acclimatization of humankind that have been occurring would involve the government trying to fudge the rules as much as it dared by slipping what technology it could into private hands.

But if we are to make any progress with this, the first step is probably to quit looking to the government for the big answers. For whatever reason, given the evidence at hand, the government has been unable to act. One area where it could possibly be of help involves validation: If it is able, it should admit at least that it is aware that UFOs may be intelligently guided objects. Then we could finally get past the denial that pervades our society and start harvesting the valuable knowledge that is currently being thrown away.

It is not a matter of examining the evidence that is now available, which is diminished as a source of really clear answers by the fact that it has generally been gathered by amateurs and investigated by people like me who, while sincere, have limited resources. What is needed is a group of well-conceived and organized scientific programs that will methodically obtain fresh evidence at a professional level of recovery, then analyze it as deeply as possible—and that will not be sponsored exclusively by groups and individuals who start out with such a heavy bias against the rejected idea that UFOs may be real and close encounters actual experience that they simply create another level of confusion.

The rewards of doing this objectively could be very great. As there is already enough UFO evidence to suggest that they are genuine anomalies, a

really good-quality record of these objects might very well lead to insights into their power engineering that would help us provide for ourselves a new means of transport that would get us out into the solar system on a large scale and maybe even beyond. Perhaps, if the visitors are aliens, we will even be able to trace them back to their point of origin and answer that question as well.

In the process, I expect that we can colonize this solar system and see a billion healthy and prosperous human beings living off-planet by the end of the next century. If we can gain this new means of transport, we can guarantee the future health of the growth economy that now sustains us, which at present is limited by the ability of Earth to meet its needs.

By properly questioning and examining the close encounter witnesses, perhaps using the PET scanning technique referred to earlier, we can also uncover the reality that triggers the wild encounter memories and provide a baseline in fact to support the use of hypnosis to learn more. With patience and careful effort, we can, in all likelihood, build a true picture of what happens during missing time by piecing together fragments of memory from many different people.

I hope this book will not cause a rush to judgment, with skeptics trying to prove that evidence so far retrieved is worthless while UFO believers conclude that it is proof. Both approaches are a waste of time, because the conclusive evidence has not yet been gathered.

What can be said now is that these questions are worth scientific time and effort. We need a program to recover implants under controlled conditions, such as the one I originally proposed to the Mind-Science Foundation, which would involve first examining the witnesses, then extracting objects and analyzing them immediately thereafter.

Obviously, the presence of evidence of things like implants also could mean that we are in a lot of trouble. But before we become certain of that, we might examine some of the compelling reasons for another species to exploit us that might not be evil.

Here is one example. Let's turn the table for a moment. It's, say, five hundred years in the future. Humanity now fills the solar system with a teeming, fabulous civilization, wondrous beyond compare. But something is terribly wrong. For whatever reason, we are in need of something from some other species. And this something is vital to us: Without it we will go extinct.

This donor species, whom we have found living on a planet of a distant

star, isn't nearly as advanced as we are. In fact, they're primitive, although not so primitive that they couldn't conceivably organize themselves to resist us if they were inspired to do so. Even though there is a gap between us, we see that they are very bright, and they might just possibly respond positively. We send a task force, which takes generations to arrive, but when it finally does, it begins by making an attempt to contact their official world. From their standpoint, they see vast numbers of UFOs, as happened here over the ten years between 1947 and 1957. We show ourselves to their scientists and military personnel, as happened with Dr. Hill and Chief Newhouse, among others. We show ourselves to their government, as happened during the massive sightings over Washington in July of 1952.

But they do not react well. Because of paranoia induced by conflicts internal to their species, they fear that we might be a danger to them. Having just endured a long period of territorial conflict, they are obsessed by the idea that they must control their own space. As a result, they shoot before they talk. We find that we can't communicate with them at all. Worse, we don't see how we can overcome their fears. When we do make any direct contact, they tend to integrate us into their religious mythology, identifying us with their version of demons. Worse, because they don't understand the way that the process of contact artificially threatens the personality with a false sense of ego-annihilation, they can't overcome their fears.

They are completely unable to cope with us, so we can't ask them for what we need, and even if we could, they couldn't understand the request.

As we get to know them, it becomes an additional concern to us that any sudden introduction of our technology will destroy their own initiative and devalue their culture. We know this because of what happened here on Earth between 1550 and 1950. As technological civilization spread, the native cultures that weren't subjugated and destroyed succumbed to irrelevance and died.

Our exoanthropologists warn that this could happen to this entire planet if we were to put in an appearance before they are able to communicate with us meaningfully and absorb the shock of our presence. They would become scientific and technological beggars, soon declining into a pallid shadow of our own civilization. So what are we to do—sit back and go extinct because they are too primitive to understand that what they are giving up will save us?

We know that we could overcome their resistance by a slow process of acclimatization and education. But we'll have to be extremely careful. If

we're too friendly, they are going to start looking for technological handouts. Worse, they might not want to give us what we need. So we decide to keep our presence secret for two reasons. The first is to enable us to exploit them without their resisting. The second is to enable them to maintain their self-empowerment by inducing them to take from us what they need for their own growth, rather than destroying them by giving it to them.

Our ethical situation seems clear: We take what we need to survive while at the same time carrying out the acclimatization attempt. At the same time that we finish exploiting them, we hope that they will have made enough progress to close the gap between us and join us as a cosmic species.

We will have taken some part of their heart from them while giving them the chance to take a new world from us. As a result of our actions, both species may be saved from extinction.

If something like this is happening here, it would explain why some witnesses have awful experiences and others are given what is essentially an education, and some end up in both situations. It might also explain why the close encounter aspect of the phenomenon is so extremely clandestine while the air show that's been going on for the past fifty years could hardly be more public. It explains why many people are taken to an evolutionary edge by their experiences.

From where I sit, having come to know so many people who are in contact, having heard them speak of their struggles and their triumphs, their terrible fears and private agonies, I do not see humankind as being fundamentally helpless before this. The helplessness that we have displayed so far has been induced by ignorance, and the ignorance has been caused by secrecy on the part of the visitors—and, perhaps, official secrecy as well.

Humanity is not a frightened infant but more a giant in bondage, and the chains that bear us down are fashioned from these secrets.

From all I have seen, I believe that the greatest of the secrets is that we are well capable of understanding every mystery that the phenomenon has presented to us. The science of the visitors that appears so magical is accessible to the human intellect. If our minds and the institutions we have founded, especially our scientific institutions, were able to deal meaningfully with this, bringing the immense resources of the human community to bear, we would quickly wrest control of our destiny back from whoever has taken it.

A new world awaits, one that offers access not only to such things as the

breathtaking propulsion system used by the visitors but also to age-old secrets such as whether a soul exists and, if so, then the potential to enter its world in a scientifically meaningful way. I suspect that we stand ready, most of us, to offer everything we possess to this effort. We are soldiers, it would seem, drafted into a war. Ours is the cause of a human future in the stars, and it is a struggle that we must not lose, for if we do lose it, then the glory that is the human mind will never be expressed fully and properly into the universe, and the goal for which we were doubtless created will not be fulfilled.

What is contact and who are the visitors?

For whatever reason, if it knows or if it does not, the government cannot tell us. No authority can lead us—none except the authority of the individual will, fully informed and correctly educated, and so made free. Behind all the secrecy and confusion that shadow this situation stand the visitors and the truth about what they are and what they are doing. It is on their heads that the greatest blame for the negative effects of any policy of concealment must rest. But it is also true that the gulf between us is obviously vast, and it could turn out that they are already doing all they can on our behalf without risking our disempowerment.

In the end, it is to one another that we must turn to regain our freedoms and overthrow the culture of denial and the policy of secrecy that together have so diminished and hindered us; but above all, it is upon our scientific institutions and the foundations that support them that the greatest responsibility rests.

The visitors may be at once tempting us with their theater in the sky and forcing us into action by the outrageous invasion of our bodies represented by close encounter. Whatever they are doing, it seems clear that they are not preparing for some great event where they finally put in an overwhelming appearance. Anybody who has a close encounter ends up feeling that something big is about to happen. The sense of incipience is part of the experience, part of what drives us forward, what lures us to do battle with the impossible. But the reality may be very different: If we are to get anything out of this, I suspect that we are going to have to take it.

In all the past fifty years, there has been no instance of the visitors directly adding resources. Nobody gets the plans to a starship. Nobody gets a map back to the home world. What we get instead are fear, confusion, cryptic messages, and a feeling of being pushed around—and the sense of something beyond price, lying just out of reach.

In short, we get a prescription tailor-made to drive us so crazy with

questions and terror and outraged pride that we are finally going to stand up for ourselves. I think, in other words, that the visitors are looking for a fight—but it is a strange one, because if we don't win, they also will lose.

A new world is on offer—if we can take it. If we can tear the raw truth out of their hands, and if we can bear it when we get it, then we are going to get off this little planet where we are so clearly beginning to suffocate. Otherwise, we are probably going to die here, if not from the environmental effects of overpopulation, then because of some natural catastrophe or other, just like the dinosaurs and all the others.

Getting out into space in large numbers means becoming an immortal species, and that is what I want for us, because I see a huge genetic content that has not yet been expressed, billions and trillions of lives yet un-lived, and on the reaches of future time, I see the pure light of children who will not be born if we do not escape this place.

If this new world is anything like what the close encounter experience suggests, it is going to mean that humankind will gain scientific tools that reveal final truths. If there is a soul, we are going to find it and find out what it means. If there is none, then we are going to face the fact that we are fabulous little lights, soon gone. But does that not make us, in a way, even more precious? Does it not mean that we have an overwhelming obligation to fill each expiring moment with wonder?

There is a gap between us and the visitors, and they cannot close it without destroying our ability to innovate on our own. But if we embrace the question now, there can be a spark, and then everything will change. That spark will occur when science suddenly realizes the value of the discoveries that lie in this direction and rushes to take advantage of what fear and confusion have been making it shun for fifty years.

Suddenly, we will begin to capitalize on the phenomenon instead of rejecting it. And when science and society acknowledge it, the visitors will respond—but I doubt that it will be with the catharsis that by then every human heart will be longing for. Rather than satisfying us, they are likely to tempt us further and further—with outrages, with dazzling displays, with promises—with whatever it takes. And then, when we are finally traversing space on our own, I wouldn't be at all surprised to find that they disappear. When we meet the visitors, it will be because we have gone to their place of origin and done it on our own.

The knowledge that will lead us there is all around us, in the skies, in our

bodies, in our minds. All we need to take it is the courage.

Appendix

**An interview with Monsignor Corrado Balducci of the Congregation for
the Evangelization of Peoples and Propagation of the Faith, The Vatican**

*by Michael Hesemann
Editor, Magazin 2000*

**Translated by Matthias Schubnell, Ph.D.
UNIVERSITY OF THE INCARNATE WORD**

EXTRATERRESTRIALS AND CHRISTIANITY

THIS INTERVIEW WAS CONDUCTED BY MICHAEL HESEMANN,
EDITOR-IN-CHIEF OF *MAGAZIN 2000*

Monsignor Balducci, in August 1996, NASA announced the discovery of traces of extraterrestrial life on a meteorite stemming from Mars. How did the Catholic Church react?

The Catholic Church did not react at all because it accepts all truly scientific discoveries. Science—true science—originates with God. God has revealed his secrets in nature, and science discovers them when it explores nature.

God has spoken to us, has told us what truth is. There can be no contradiction between God's revelation in scripture and in his creation, and thus there is no contradiction between true science and the true proof of God's existence. The Catholic Church welcomes scientific progress, for it is necessary to reveal God's miracles. The Church uses science as a tool to prove a miracle, for only scientific research can provide evidence whether an occurrence is the result of natural, divine, or demonic forces.

Is there a conflict between the belief in extraterrestrial life and the Christian faith? Or is it acceptable for a Catholic to believe in extraterrestrials?

There is no conflict, not at all! It is reasonable to believe and to affirm that extraterrestrials exist. Their existence can no longer be denied, for there is too much evidence for the existence of extraterrestrials and flying saucers as documented by UFO research. To assert categorically that they are illusions and hallucinations, or that eyewitness accounts are not credible, is wrong. This would mean to question the value of such testimony per se, and this would have serious consequences for religion itself, since religion is founded on an historical incidence, on the birth of a human being, Jesus Christ, who was not only man, but also God, and of whom we have knowledge through testimony, the gospels. Religion is based on the testimony of human beings who had become witnesses to God's revelation. When human reason attempts to prove that this is impossible, that such testimony is unreliable, then faith

will collapse, and humans would become ignorant. It is right to have faith, but it is sensible when human reason can explain everything.

How would Rome, how would the Church react if contact with extraterrestrials were made?

If such a contact were to occur, it would confirm the truth that extraterrestrials exist. The question is whether these extraterrestrials are inferior or superior to us, and both possibilities are quite feasible; however, such an occurrence would not call into question the teachings of Christianity.

There is a passage in Holy Scripture, in the New Testament, in which St. Paul refers to Jesus Christ as the King of the universe, not just the King of the world. This then means that everything in the universe, including extraterrestrials, UFOs, etc., are reconcilable with God, because He is the King of the universe.

For science, such contact with extraterrestrials will prove once and for all the existence of extraterrestrial life, and the Church and science will unify this knowledge with the other truths of which we are aware.

Jesus taught: Venture out and teach the gospel to all peoples. Would the Church teach the gospel to extraterrestrials?

This question leads us far into the future and is, of course, hypothetical. If I made contact with extraterrestrials, I would first of all ask them what their opinion is of a higher being, what their concept of God is. It might be that they are much more religious than we are. This question is still highly speculative. It is, however, not a speculation, not a fantasy that UFOs exist, but it is a speculative question about this modality, for it is possible that we must help them to believe more deeply, and conversely, that they are superior to us in their faith.

Once this question is answered, when these contacts are no longer limited to exceptional occurrences, we shall know what we need to do. As I pointed out, it is very important to lend credence to the eyewitness accounts, but we must be very careful to be sure that they are authentic. I have also heard of people who claimed to have had contacts, but who unfortunately were not mentally sound. We must not exclude everything, yet we should not reach too far with our curiosity.

Certain is that the Christian religion, that theology, does not rule out the

existence of extraterrestrials. We know with certainty of the existence of God, of the angels, and of us. We need not discuss our existence, for we can see and feel each other. Science allows us to think about the existence of other inhabited worlds. There are also clues which seem to confirm this, such as the existence of flying saucers, which also indicate that extraterrestrials are further evolved than we are, for UFOs are machines that we, too, might build one day, but only in the distant future.

If we compare our nature with that of angels, we note a difference: angels have only one spiritual side, while humans have a spiritual and material side. The spiritual aspect of humans is strongly conditioned by their material aspect; in fact, it is subordinated to it. Our spiritual nature cannot exist without our material nature, while it is extremely rare that the spiritual side dominates the material side, and these exceptions lead us into the realm of parapsychology. Our spiritual side cannot be active without our material side. This is the argument of relation. There can also be a form of existence which is exclusively spiritual, that of the angels. The angels are nearly perfect, but our soul is not, otherwise the deceased would reach perfection the very moment their soul is separated from their body. Yet they are not perfect, for their soul remains, even after the separation from the body, conditioned by their material side, and thus imperfect. The soul of angels is pure, while that of humans is not. Thomas Aquinas discusses this argument of relation. It is possible that beings exist whose soul is a little more independent from this instrument, the body, and thus the grandiose possibilities of the spirit manifest themselves more clearly. Possibly, and this is strictly hypothetical, there is a kind of “lighter matter,” matter that is more spiritual than material. Let us be mindful that extraterrestrials are able to traverse outer space and travel through time and space. Where does our soul travel when it is separated from the body? To the moon? Of course not—it exists beyond time and space. Space and time are simply categories in our thought. If we consider now experience with extraterrestrials, which is documented by the UFO research, we find clear indications that these are beings whose soul is more independent from the body, from the material. While they do have a body, their body, the material aspect of it, is no longer so dominant. The body should only be an instrument of the spirit, it should follow the soul, not condition it. When we see what these flying saucers are capable of, how fast and nearly weightlessly they can move, indeed faster than the laws of gravity allow, as UFO research has shown, we cannot help but acknowledge that

extraterrestrials are superior to us.

If we now assume logically that extraterrestrials also have a spiritual and a material side, we must ask ourselves which side is dominant, what value, what influence the material side has for them. Perhaps extraterrestrials are beings whose material side only follows the spiritual side. This is, of course, only speculation.

When we speak of flying saucers and extraterrestrials, we always assume that these beings are our superiors. It is, of course, also possible that they are like us or that they are spiritually even inferior to us, even though they are scientifically more advanced.

When we talk about other inhabited worlds, we are thinking, of course, first of our solar system, our tiny part in this huge space with its billions and billions of suns and milky ways, with its distances of billions of light years which are so large that when the light of a star reaches us, it is possible that this star no longer exists. How can we deny that other inhabited worlds exist in this enormous universe? God did not tell us everything, but St. Paul refers to Christ as the King of the universe. This is so because he is one with God, the creator of all life, of plant life, animal life, human life, and the elevated life, since before he created humans, he created angels. As many theologians and church teachers, but especially St. Paul, have said: Everything originates in Christ. For we believe that Christ is God's son, but at the same time also God himself. This is the secret of the Holy Trinity. And that is a fact, not speculation. For, as I said in the beginning, we can prove this man's existence as well as his divinity, and in addition God's word, for God can not lie, and there is nothing He does not know. What He reveals to us pertains to the way we need to live in order to join Him one day, and that is the most important thing that should concern us. However, God has told us nothing about the inhabitability of other worlds, because he thought it unnecessary. He has left it up to us to explore this possibility, just as he has left it up to us to discover ourselves.

Christianity's fundamental teaching concerning the conditio humana asserts that man has fallen through original sin and has been saved through Christ's sacrificial death. Do you think it is possible that other extraterrestrial beings have not fallen through original sin and thus perhaps still exist in an edenic state of harmony with God's laws?

Only in the future will we be able to answer this question, when open contact has taken place. It may also be that on other inhabited worlds beings exist that are subject to original sin. The creation of humans belongs to our world. Naturally, it is also possible that God has created humans and animals and plants in other worlds, but the creation story we know relates to our world.

In our world, the fall of man occurred through our ancestors. Only our ancestors are responsible, and they have not traveled to other worlds or colonized other planets. For this reason I would assume that original sin pertains only to us humans. Perhaps extraterrestrials have also been subjected to a test, the same, a similar or a different test, to find out how they would behave—but this test was ours, not that of other beings who are not the successors of Adam and Eve.

Is it possible that other humans are closer to God because they have never distanced themselves from Him?

Not necessarily. The angels live in the immediate proximity of God, and still a separation has occurred; the fall of a group of angels has come to pass. The angels have seen God, have lived with him, and have been subject to a test that we do not know anything about. Not God, but they have subjected themselves to this test; we must not think in our categories here. But of what nature was this test? It was a sin of hubris, but what caused it? In the gospels we find no clear indication of the nature of this test. These beings have been created with incredible potentialities, potentialities which are unthinkable for us, because we belong to a different category. The Holy Father has recently addressed this question.

These beings had such great potentialities that some of them said: Why do we need God when we have such an enormous potential ourselves? Others perhaps said: Well, perhaps we do not need God anymore, but we should be grateful to God that He had created us and given us these possibilities. Let us worship Him, let us adore Him, for He is infinitely perfect, infinitely good. The fall of the angels resulted from the sin of autosufficiency, the fallacy that one could exist without God, that one need not thank God for one's existence.

The situation of these fallen angels, that of the Devil, will always remain the same into eternity, according to the New Testament. The angels who have committed this sin will remain evil spirits forever. Now one might ask: Why

does God, who is so good, not absolve them of their sins? The answer is that they have never asked for His forgiveness. If each of these angels were to say, “Lord, forgive me,” they would be immediately forgiven.

Do you think it possible that some of the angels might be extraterrestrials from planets located closer to God?

The angels, God’s messengers, have always concerned themselves with humanity. They have helped humans to live according to God’s will. And it is certain that they are still doing this today. The existence of guardian angels is not established as an absolute truth of faith, but it is quite certain. Each human being has his or her own angel that follows him or her everywhere. Thus, the angels help humans to better themselves. That is the Church’s doctrine. But you asked whether the extraterrestrials are angels.

Well, if you ask whether the angels can assume a body to reveal themselves, I would have to say yes—that is possible, but it would be an exceptional case. Normally, they affect us through inspiration; both good and demonic influence originate from them. Then there are visible appearances of angels. We know of appearances of the Virgin Mary—not all of them are authentic, and often we need science to answer this question. I would not assume that angels use flying saucers. But of course they can utilize them to show us something.

As you know, in March 1983 I gave a presentation at the “Croce” bookstore in Rome on Giorgio Dibitonto’s book, *Angels in Starships*. I was told on that occasion that it was the first time a theologian and priest had made a presentation on a book about UFOs; I had read and very much liked the book. In the end, I praise it as a book that shows us the infinite love of God, the Virgin Mary, and the angels for us. It is a book that awakens in us a desire for an exchange of our love with God. But I did not want to imply, neither then nor now, that angels really come to us in flying saucers. Such a claim requires scientific proof. Let science prove that angels travel in flying saucers! I shall neither rule this out nor affirm it.

What is your position on the UFO phenomenon?

My position concerning the UFO phenomenon? UFOs exist, there’s no question about that; nobody can deny it anymore. Some may say, to be on the safe side, that much originates in the human psyche, is derived from human

complexes and dysfunctions, that they are hallucinations, etc. This may be true in some cases, but not in all. One thing is certain: the UFO phenomenon exists; the wealth of evidence is obvious and cannot be denied.

We cannot trace everything back to “psychic problems” because if we do we would question human testimony per se. And that is very dangerous. The human testimony is a very important element that helps us in our social life. If we question it, we may soon reach the point where we question the testimony of Christ’s existence.

How do you interpret the UFO phenomenon in the theological context?

I would prefer to speak of a human interpretation and not of the theology because it is not necessary to be Christian in order to determine that something is real. It is entirely sufficient to be rational. I could try to interpret it theologically, even though it is actually controversial.

The same is true of the UFO research. First: The UFO research is already quite advanced as far as its methodology is concerned; that is undeniable. Like parapsychology, it deals with phenomena that have existed since the beginning of humankind.

Second: The explanations of the UFO research should be sought in this world or, to put it more succinctly, in science and not in the world of angels or the Virgin Mary or the demons. The phenomena should be explained from within themselves. That is why scientific progress is very important. Each individual event should be thoroughly examined, not as a miracle, but as something supernatural; not as a divine or demonic incident, but as physical reality, as part of nature. Over time, scientific progress will come to the aid of parapsychology and UFO research.

Thank you, Monsignor.

Monsignor Corrado Balducci is a member of the Curia of the Roman Catholic Church, a prelate of the Congregation for the Evangelization of Peoples and Propagation of the Faith, a noted theologian and expert on demonology. He has been an exorcist for the Archdiocese of Rome and is the author of two books on the subject, *La possession diabolica* (Rome, 1973) and *Il diavolo* (Monferrato, 1990).

Michael Hesemann is a cultural anthropologist and historian. He is the

editor-in-chief of *Magazin 2000*, published in German and Czech, and the author of *UFOs: A Secret History* (Marlowe & Co.), *Beyond Roswell* (Marlowe & Co.), and *Cosmic Connections* (Gateway Ltd.).

Afterword

The Communion Foundation solicits contributions for its work in UFO studies. It exists to foster understanding of the UFO and close encounter phenomena. Among its planned activities are a study of implants, a sky search, and research into the biology of memory. It also seeks close encounter narratives for its files.

Contributions may be made in any amount and are tax deductible. Please send contributions and narratives to:

The Communion Foundation
5928 Broadway
San Antonio, TX 78209

News of the foundation's activities will be posted on its Web page:
<http://www.strieber.com>

Because of the volume of mail, Whitley Strieber cannot reply personally to letters or E-mail, but every narrative is read and evaluated.

Many of the videos and books mentioned in this volume are available from their publishers. Further ordering information can be found on the Web page.

Further Reading

There are many good books on UFOs, the close encounter experience, and related subjects. There are as many, or perhaps even more, bad ones. This is a very short list of books that rank among the classics in the field.

Timothy Good, *Above Top Secret: The Worldwide UFO Cover-up*, Morrow, New York, NY, 1989. Exhaustively researched, highly accurate, thorough, and altogether amazing.

Paul R. Hill, *Unconventional Flying Objects: A Scientific Analysis*, Hampton Roads Publishing Company, Inc., Charlottesville, VA, 1995. The best book about UFOs ever written.

Richard Haines, ed., *UFO Phenomena and the Behavioral Scientist*, Scarecrow Press, Metuchen, NJ, 1979. Where any behavioral scientist should begin.

Budd Hopkins, *Missing Time*, Marek, New York, NY, 1981. Established alien abduction as a phenomenon worth attention.

J. Allen Hynek, *The UFO Experience*, Regnery, Washington, D.C., 1972. The classic casebook, by one of the great originators of the field.

Carl G. Jung, *Flying Saucers*, Princeton University Press, Princeton, NJ, 1978. Still among the most thoughtful and useful books ever written about the phenomenon.

John E. Mack, M.D., *Abduction: Human Encounters With Aliens*, Random House, New York, NY, 1994. The book that establishes abduction as a legitimate unknown. Mack is a Pulitzer Prize-winning psychiatrist on the faculty at Harvard.

Prevailing Winds Research: *The Mind Control Reader*, Prevailing Winds, Santa Barbara, CA, 1994. A solidly researched compendium, carefully annotated: the beginning of any journey into intelligence community abuse of the public.

Carl Sagan & Thornton Page, ed., *UFOs: A Scientific Debate*, W.W. Norton, New York, NY, 1974. Twenty-three years old, but it still identifies the outlines of the controversy with decisive clarity.

The Internet

There is a vast amount of information on the internet about UFOs and related subjects, and most of it is bunk. However, there are some really excellent resources out there, also. These are among the best.

CNI NEWS

www.cninews.com

News about contact with nonhuman intelligence. Edited with rigor and precision by Michael Lindemann, this site offers well-filtered news of UFOs, close encounters, and all sorts of unusual events.

THE NATIONAL UFO REPORTING CENTER

www.nwlink.com/~ufocntr

Peter Davenport runs this outstanding operation, where he and his colleagues assemble and organize sighting reports from all over the world. Can be counted on for reliability.

THE ART BELL WEBSITE

www.artbell.com

A huge site, full of fun, passion, wildness, and surprises. Art Bell runs a late night radio program that will—and does—entertain practically any possibility and any claim. Art is the best in the world at what he does. He presents, you decide.

SCIENCE, LOGIC, AND THE UFO DEBATE

www.primenet.com/~bdzeiler/index.html

This site is constructed around debate, with a bias—stated—toward the hypothesis that aliens are responsible for UFOs. But the debate offered is very real. Intelligence abounds here.

SCIENCE FRONTIERS

www.knowledge.co.uk/frontiers

The site of William Corliss, who for three decades has been assembling reports of anomalies gathered from the scientific press. Fascinating unanswered questions of science are revealed here.

JOURNAL AND SOCIETY OF SCIENTIFIC EXPLORATION

www.jse.com

The Society of Scientific Exploration explores the extreme edge of the possible, but with a solid scientific approach. Breathtaking ideas abound.

UFO Photos

UFO Photos

"Platform" videotaped by Tim Edwards. Its estimated altitude was 50,000 feet, and it was more than a mile long.
CREDIT: TIM EDWARDS

Structure taped over Edwards's house. This is not a distorted video image. It was low and close, moving at high speed.
CREDIT: TIM EDWARDS

This object dives above the roof of the house, flexing like a living body. Its entire motion takes place under a second.
CREDIT: TIM EDWARDS

This appears in a single frame of video shot by John Bro Wilkie over Los Angeles.
CREDIT: JOHN BRO WILKIE

The UFO videotaped over Mexico City on August 6, 1997. The best and most thoroughly authenticated video of a UFO presently on record.

CREDIT: JAIME MAUSSAN

T3RCHER

MILENIO

Probable UFO over Jaurez, Mexico.

Similar object over Miami, Florida.

A third one over Stuttgart, Germany.

Insect shot by Jose Escamilla at a shutter speed of 1/10,000.

"Rod" shot by Escamilla at the same shutter speed.

Probable UFO with object leaving it (faintly visible on lower right) shot by Alice Leavy two months after her implant removal.

Implant Photos

Implant Photos

1: THE STRIEBER IMPLANT STUDY

March, 1988, MRI scan of Whitley Strieber's brain showing unknown bright object in right temporal lobe. (left side of picture)

Object in sinus of witness.

Object in sinus of second witness.

2. THE LEIR SURGERIES

A typical implant as it appears under the skin before removal. CREDIT: MICHAEL PORTONOVA.

Roger Leir and his surgical team removing an object from the leg of Alice Levy.

CREDIT: MICHAEL PORTONOVA.

X ray of T-shaped object and "Canteloupe seed" in the foot of a witness, found not to be a surgical inclusion. This object has a core of apparent meteoric iron.

X ray of object found in the jaw of a defense worker.

3. THE JESSE LONG STORY

Jesse Long as a child. Implant scar is visible on his left shin.

Jesse Long's brother's house, built before he had any conscious memory of his possible abduction to "the round house on the hill" that Jesse remembers.

Jesse's implant being removed in 1989.

The implant that Jesse calls "Junior."

Junior's strange properties being explained to Jesse at the lab.

Electronmicrograph of Junior's cobbled surface.

Proteinaceous inclusion in the tip of the object.

Scratches from an abduction-related attack that took place four years after Jesse's implant was removed and caused him to need emergency room treatment for shock.

Triangular abduction-related injury on Jesse's abdomen that also occurred after his implant removal.

Press**

CAT MAGIC

Some people in Maywell, New Jersey, commute to New York. Some are working on a lab project that will change the world—if it is allowed to succeed.

And some people are witches.

Amanda Walker is not a witch—yet. She’s an artist, looking for work—unaware that someone has a desperate need for her, a dark plan that may require Amanda to enter death itself.

If she is allowed to live long enough to make the choice.

Amanda’s tale is far stranger than she knows. It is ancient beyond memory. In times of great change it must be relived, in all its fear and hope, its wisdom and its passion.

One of those times is now.

THE WOLFEN

In the dark, they are watching...
They are waiting for you.

No one has ever lived to tell the horrifying truth about them. Yet even now the Wolfen are gathered in the night-dark alleys ... unseen, poised ... ready to destroy their helpless human prey. Only one man and one woman, trained cops, willing to risk their lives, stand in the way.

MIRACULOUS JOURNEY

Is death really the end? Why do we fear death? As Anne Strieber faces this inevitable transition, she and her husband Whitley explore the deep meaning of this journey, and find in it a richness of meaning that is largely ignored by a society obsessed with avoiding death at all costs. In 2004, Anne Strieber had a brain hemorrhage that led, most recently, to a brain tumor that is of a type that is generally fatal. So now, after a long struggle, she faces death. Instead of turning away from it, Anne explores the miracle of life and the mystery that death represents. Is it an annihilating end, or a journey into a new kind of freedom? Whitley and Anne Strieber explore this question from the perspective of the love that illuminates their long marriage, and find that, in facing death, it is possible to find the true miracle of why we live our lives in the first place. Life is the miraculous journey, death at once an end and a joyous new beginning.

THE SECRET OF ORENDA

Orenda: Feel the Magic

Deep in the forest there lives the world's greatest and most beautiful secret. Known only to a few initiates, the people of Orenda continue the ancient ways of magic from mankind's lost past. But even the wildest places are under threat, and this ancient tribe, who know nothing of the modern world, are discovered—and become a sensation.

Must their magic die, absorbed in the hectic modern world? Lawyer Mary Russell says no. Chief Charles Hay says no. Worldwalker Jim Hyam says no.

But the world says yes. And the world comes, in planes, in SUVs, in off-road vehicles, with cameras, forms to fill out, laws to follow and guns to make sure.

Who will win? Feel the magic.

TRANSFORMATION – BOOK II OF THE COMMUNION SERIES

The author of *Communion* has seen a new vision of this magnificent, mysterious, and fiercely alive universe through the shattering effects of an assault from the unknown. The visitors are sweeping up from where they are buried under layers of denial and false assurance to say: There is something more to us and our universe.

BREAKTHROUGH – BOOK III OF THE COMMUNION SERIES

In his worldwide bestseller *Communion*, Whitley Strieber told of his remarkable encounters with alien beings, and convinced millions of us that we are not alone. But that was just the beginning of his incredible true-life odyssey.

Since then Strieber has been led by the visitors on an astounding journey of revelation, and with their inspiration, has discovered a passageway to profound personal insight. He has seen them enter the lives of others and witnessed the extraordinary effects of their presence. And he has received their vast wisdom about the wonder of life and the rich, almost totally unexplored experience we call death.

Powerfully moving and stunning in its implications, *Breakthrough* gives us a truly illuminating look at these mysterious, yet prescient, agents of change and reveals their inspiring message of hope for our chaotic and troubled world.

THE SECRET SCHOOL

In *The Secret School*, Strieber returns to his youth to recount a summer he spent in a “secret school” in the woods near his childhood home. It was there that he learned the nine lessons that forever changed his life and prepared him for the chilling events narrated in his previous three books. His recollection was triggered by his first encounter in 1985, but for years still remained half-hidden in shadow. Only now has he begun to reconstruct these childhood summers spent in secret adventure, these summers that planted the seeds for his adult encounters with alien visitors.

Jumping between a child’s-eye view and an adult’s hindsight, Strieber deftly weaves an adventure that stretches across decades, landing (or rather, lifting off) at the place his new life started when he met extraterrestrials. Strieber fans everywhere will not want to miss his haunting odyssey into the past and the startling new insights these memories provide about the meanings of his alien encounters and the future destiny of mankind.

from nuclear terrorism.*

ACKNOWLEDGMENTS

I would like to acknowledge the help of technical specialists, Arabists, and so many others who were kind enough to contribute their time and expertise to this project. I wish that I could acknowledge each individual personally, but various circumstances obviously prevent that. Any errors are, of course, my own.

But the day of the Lord will come as a thief in the night; in which the heavens shall pass away with a great noise, and the elements shall melt with fervent heat, the earth also and the works that are therein shall be burned up.

—2 Peter 3

'Tis light makes color visible: at night
Red, green, and russet vanish from thy sight.
So to thee light by darkness is made known . . .

—Rumi, “Reality and Appearance”

CRITICAL MASS

1

NIGHT RIDE

Jim Deutsch was driving much too fast, but it was urgent that he interview the children before they died. He was not close to the end of this investigation, and they almost certainly possessed crucial information. If he did not get it, he had not the slightest doubt that more people were going to be joining them in death—many more, and soon.

What he had to find out was something he was very much afraid he already knew: why these little children, just smuggled in from Mexico, were radioactive. He had spent his career in counterproliferation, and the sudden appearance of radiation-sick kids in a border town was a definite worry. Of course, they could have been brought over in a truck full of smuggled X-ray isotopes, or gotten into some other innocuous material. But he doubted that. He had to get solid evidence and work it up convincingly, in order to get the massive search going that he feared was needed.

When the speedometer moved through a hundred, he forced himself to let the car slow down. He took a deep breath, held it, then let it out. He loosened his hands, and felt blood rush back into his fingers.

The South Texas countryside rolled past, a wilderness of mesquite brush, the sky to the west deep orange. To his Connecticut eye, it was almost hellishly ugly. But his was a war fought in nightmarish places, and this terrain was certainly better than dry, stripped Afghanistan, or the lethal, magnificent mountains of Iran.

When the brush gave way to threadbare fields, he glimpsed cattle staring and old oil wells pumping with a lazy sensuality. He could imagine the Texans of the past racing up and down this road in their Cadillacs and Lincolns, whooping. Wildcatters, they had been called, those buccaneers of the oil fields.

He had been in many of the world's isolated places, and felt here the same disappointing and reassuring silence. Cities with their bustle and promise lured him, and also repelled him. He liked to hang out at Dom u Dorogi in Moscow listening to blues, or Sway in New York, with its Middle Eastern

decor that always drew him into his memories. In the end, though, he would need the night and the silence where he had made his life. He would need the danger, foolish addiction that it was.

Ahead, a figure rode a horse right down the middle of the highway, a silhouette against the late sky. With foolhardy and trusting slowness, the old man walked his beast onto the shoulder. Jim shot past him at a distance of no more than thirty feet, glimpsing a narrow man on a tall roan. He seemed so needful, slouching along in the last sun, that Jim wished he had prayer left in him.

Again, he let his rented Taurus ease back to eighty. Mesquite brush whipped past, now. To the west, the sky faded. Texas Highway 57 was as empty as any road he'd known in Siberia or Afghanistan.

He considered the dying children, ahead in the border town of Eagle Pass. He wanted to believe that they'd been brought across with some piece of smuggled radiological equipment. But that was the sort of thing that the suits at Langley would want to think, and that was what they must not be allowed to think. On his end of the intelligence community, you survived by expecting the worst. On their end, he who made waves was in the most danger. But their danger was demotion. His was death.

His fear was that a bomb had come across and it was in motion, right now. He needed to find it, or at least find its trail, and he thought it must start with these poor kids. If he got lucky, they'd have some specific information. If not, he'd take what he got and go from there.

He wished that he trusted the system, but he was far too experienced for that. If he had, he would have called this thing in the second he heard about those kids. But he had feared what would happen—he'd find himself looking at orders not to waste his time. Wrong orders, and they would result in catastrophe.

The front face of the intelligence community appeared formidable, but that was the work of media experts, not a reflection of reality. It was the filter of analysis in the secret rooms that didn't work, and not understanding that—or not accepting it—had been his potentially fatal mistake. He had assumed that the system would absorb the information that he and his strings of agents gathered, and respond correctly.

But that hadn't happened when he was in Afghanistan or Pakistan or Siberia, so here he was in Texas, chasing after nukes that should have been caught before they left whatever benighted place they had come from.

Instead, they were here, and the Mexican border was now the front line of a battle that belonged twelve thousand miles away.

Something had been wrong out there, very wrong. The CIA had extensive operations devoted to monitoring the nuclear materials black market. He had been part of that, operating out of U.S. embassies, and available to do things like penetrate storage facilities and inventory their contents. He was also good at finding people and obtaining information. He was good at running, too. He'd escaped across many a border in his time.

But he shouldn't have needed to do that sort of thing. He shouldn't have been compromised, not ever. After 9/11, there had been a number of decoy companies created by the CIA to draw the interest of terrorists and smugglers by operating things like false weapons sales organizations.

But there had been dissention about these fronts. They hadn't attracted their targets because they'd been too far from the centers of Muslim extremism—all except one, Brewster Jennings, which had operated in the Middle East and had been effective.

However, Jim had believed since he had first engaged with it in 2002 that it was penetrated by somebody. Soon after he began working with this organization, his life had become dangerous. People knew. Turkish intelligence had him identified. Friends in Pakistani intelligence warned him that they were building a dossier on his activities.

Then had come the Valerie Plame affair in 2003, and the name of her front operation, which was Brewster Jennings, became as famous a name as Microsoft or Toyota.

The result of all this was simple: too many men like him had been compromised. Some must have lost their lives. He, who had been working halfway across the world, was now working in the United States, because there was now fissionable material in Mexico, possibly in Canada, too, and it was on its way here, no question.

As he sped toward the dying children, the fear he lived with every second of his life rose up in him, the sick, desperate urgency that dragged him awake nights and haunted his days. He was in the dark and he was falling, and he could not stop falling.

Somewhere along the road, every intelligence agent meets a demon question, one that absolutely must be answered but that has no answer, and Jim's fear told him that his was lying in the hospital at the end of this road.

His stomach forced acid into his throat as he churned down the two-lane

highway, speeding through silent towns called Batesville and La Pryor. Between them, he pushed the Taurus hard. Surely there wouldn't be a highway patrolman hiding along here, to come out with his lights flashing and entangle Jim in delay. His car was waking up buzzards asleep on the roadside, for God's sake.

He operated out of Dallas, where he officed in a little cell in the Earle Cabell Federal Building, just down the hall from the FBI. He was now a CIA contract employee, his status a fiction that allowed him—allegedly—to work within the continental United States. He suspected that his activities were not legal. He suspected that if he ever ended up under the bright lights of a congressional hearing, he would be alone.

He'd been transferred here from Kabul six months ago, after a quarter ton of U-235 had been intercepted on its way into Laredo and his supervisors had finally understood that the danger they had been fighting in distant places had arrived on their doorstep. He liased with the FBI Weapons of Mass Destruction coordinator in Dallas, which was another problem. The Office of National Intelligence might have improved interagency cooperation at the top, but the old "stovepipe" system still operated when it came to the nuts and bolts of intelligence gathering. His FBI counterparts shared only what they were legally required to share. Or did they? Did he, for that matter?

To counteract his lack of eyes and ears, he'd requested the right to recruit in the field, but had been turned down. These past few months, he could have used some good agents along the border, really used them.

Maybe then he would have been on top of this case before children lay dying. Maybe he would have made an interception. But this was going to be a chase, because whatever had been on its way across the border was now in country and being positioned.

U-235 didn't matter. This would not turn out to be about uranium. In fact, he thought the U-235 that had been brought over before was a test carried out to see how U.S. safeguards worked.

Nuclear materials are hard to detect if they're properly shielded. The most reliable detection systems react not only to radiation but also to the presence of the kind of bulk necessary to conceal it.

Whatever he was chasing now had been highly radioactive, and it had been brought across with illegals, probably in a truck. Could it be plutonium dioxide, perhaps, ready to be transformed into a metal, or intended to be used in some sort of low-yield bomb? It was shipped as a powder, which could

have leaked. But if that was the case, why hadn't the radiation detectors on whatever bridge it had crossed screamed bloody murder?

Maybe, while the truck was on the bridge, there had been nothing to detect. No leaks. But the new systems were designed to see shielding as well as emissions, and there were new brand-new detectors in Eagle Pass; he'd seen the installation reports. They would have seen a bomb, surely.

But for whatever reason, they hadn't.

At this morning's meeting, the regional Weapons of Mass Destruction coordinator, Cynthia Spears, had read a report from the Laredo Field Office about the radioactive kids. "They are illegals aged ten, eight, and four, believed to have been off-loaded by coyotes when they got sick."

The moment he'd heard those words, he'd booked a flight to San Antonio, then been compelled to drive from there because of the lack of air service to Eagle Pass. He knew little about the community. In 2007, the mayor had refused to allow Homeland Security surveyors to enter the town to survey for the wall. Later, it had been built, but it was of no concern to Jim. Walls had no relevance to him. The things that concerned him came across bridges in disguise, not through the river under cover of night.

The more he thought about it, the more certain he became that he was dealing with plutonium and that these children had somehow been exposed during handling, after it had crossed the border.

Plutonium was potentially much more of a threat than highly enriched uranium. It took far less plutonium to make a bomb, and therefore it was more portable. But it was also harder to make plutonium go critical and explode. If the builders had the right parts, though—well, it was possible. You could even get a low-yield plutonium bomb out of a simple gun-type detonation system of the kind used with uranium bombs.

Every country that had ever produced nuclear weapons materials had experienced some loss. Most highly enriched uranium and plutonium that had been lost by Western governments was accounted for in one way or another. But that was not true of Russia. During the collapse of the Soviet Union, highly enriched uranium and plutonium had gone missing and so had numerous critical parts.

He drove harder than ever, pushing the car relentlessly. In the movies, he would have had access to a government-issue Gulfstream or something. In the real world, no chance.

He fought the illusion that the road was actually getting longer, stretching

away in front of him like an expanding rubber band.

This came from the desert lights phenomenon, the sense that distant lights weren't getting closer. For a fair amount of time, he'd seen lights ahead—but at least it was a city, and not the dim cluster of lanterns that marked most settlements along the ragged edges of the world.

“Come on,” he muttered. *Were* the lights receding?

Nah, the Global Positioning System now had him twelve miles out. Experimentally, he opened his cell phone. Nope. Okay, noted. At least he was not going into some squat Kazakh burg full of bored sadists in threadbare uniforms who would thoroughly enjoy a night of waterboarding an American.

Gradually, the lights resolved into individual buildings, an Exxon station, a trailer back from the road, and he was soon moving through the outskirts of Eagle Pass.

But no, this was the middle of town. Eagle Pass appeared to be all outskirts, but it was low-slung, that was all, and quiet at this hour. A peaceful place.

Towns like Ozersk and Trekhgorny and Seversk, where he'd worked from time to time, might be isolated, but they were more lively than this at night. Drunk Russians—which after a certain hour in Siberia is, essentially, everybody—do not go gently. But here in this little border town, you sensed a peace, the same peace you felt throughout the developed world. He called it profound peace, soul peace. Eagle Pass enjoyed the same soul peace that blessed the rest of America. People felt safe here, which was another reason that things like 9/11 were so destructive. They slammed the American spirit right in the face.

Of course, human and drug smuggling were big business on the Mexican side of the border, and the violence involved was certainly known to cross over. Still, this was very certainly not the third world.

In cities like Islamabad or Kabul or Tashkent, you can smell the old, sour stench of hate, and see the fear that lives in people's eyes, the blood-soaked remembrance of crimes long past, and waiting retribution. You come back to this country after a few years of that and you want to kiss the ground.

Then he saw it ahead, the outline of a big building just visible in the last light. The hospital. Inside, maybe a key that would save a million lives and, with them, the way of life now called freedom. The dying children and, God willing, some clues.

He drove into the parking lot, pulled the car in between a weathered

Toyota and a Ford truck. How deeply American was this place, how kind and how very ordinary.

He got out of the car and hurried toward the great, dark building to challenge its secrets.

DELIVERANCE BY DEATH

As he approached the hospital's wide main doors, instinct made him check the locations of fire escapes and exits, count the stories, and note whether or not you could get off the roof. He had no reason to be concerned; it was just habit.

The lobby was large, the floors white and polished. There were people sitting here and there in the chairs, some reading, others simply waiting. He passed the gift shop and a row of plantings, and approached the information desk. There was faint music, no hospital smell, a sense of order.

He remembered hospitals like great broken skeletons, echoing with the voices of the unattended.

"I'm Dr. Henry Franklin," he lied to the receptionist. "I have an appointment to visit the Morales children."

She punched at a keyboard. "Uh, uh-oh, they're critical. I'm afraid they're in intensive care, no visitors."

"I'm from the Centers for Disease Control," he said, the falsehood emerging with practiced smoothness.

She made a call, spoke Spanish. "There's a guy out here. I think it's a reporter. He's claiming to be from CDC."

He was a fair linguist, which was one of the reasons he had been an efficient case officer. He rarely let people he dealt with know when he spoke their language, and he didn't do that now.

"May I see some identification?"

He drew out his wallet and showed her the CDC card he'd armed it with. As a nominal CIA operative, he had access to a variety of false IDs, some of which he could use legally, all of which could survive an in-depth background check . . . he hoped.

"Please, Doctor, come with me," a nurse in green scrubs said. She'd appeared silently, a young woman whose dark looks reminded him of his former wife, the gorgeous Nabila, still present in his heart. She was furiously complex and needed urgently to be cherished—too Arab, in the end, to

endure an unruly American husband such as himself.

The implacable demands of his work kept him away from her too much, and this made her feel unloved, and, in the end, she had walked out of the marriage. He was still heartsick at the loss and grieved as if she were dead.

People raised in the restless Western tradition understood nothing of what it was like behind the doors of Muslim households, of how right it could feel to be enclosed in deep tradition and intimate privacy. She had made coming home an entry into another, better world, gorgeously peaceful. Sentiment aside, though, he was an old rogue puma. Home is the hunter, home from the hill—except not him. This hunter only came home on leave, assuming he was close enough to manage it.

He missed her now, as he followed the nurse up the corridor. He watched the dark hair, the fluorescent overhead lights glowing on the olive skin, the smooth surge of her private body, and imagined her private ways.

Then they were at the entrance to an intensive-care unit. The doors opened onto a forest of equipment, patients enveloped in technology, nurses in their greens, a group of doctors conferring quietly at the foot of a bed. Again, he was reminded of other hospitals, where he was sometimes the only person present with even rudimentary medical knowledge, sitting with men of courage who were dying in squalor, able to offer them nothing more than a hand. The edges of the world may seem tattered and ugly and corrupt, but there are heroes there.

“She’s in and out,” Nurse Martinez said. “Rodrigo is conscious now.”

“Has the FBI been here?”

“Just the border patrol, to take them back if they survive.”

“The parents?”

“No parents.”

“But they know they’re illegals?”

“Sure.” The sudden clipped tone reflected the quiet fury of the Mexicans, their disdain for the whole process that was unfolding at the border, the way it reminded them of ancient defeats, and made them cling even more fiercely to the bitter certainty that being Mexican did not make you less.

She stopped before three shut green curtains, then drew one back.

And there he was, a shocking picture of childhood gone wrong, a little boy festooned with IVs, his vitals monitor indicating a temperature of 105, a blood pressure of 171 over 107, and an oxygen exchange number that Jim knew was ominously low.

A drain, black with blood, led from the boy's mouth. Mouth bleeding: 300 REMs exposure. Probably fatal in a healthy adult. This scrawny boy was already dead.

"Can he speak?"

"If he will."

"Hello, my son," Jim said in Spanish, causing Nurse Martinez to glance at him. "Will you tell me where you sat in the truck?"

They had been brought across Bridge 1 right here in Eagle Pass, Jim felt sure of it. He would not ask the boy direct questions, though. Jim had done too many interrogations to try that. Only the stupid were direct. Only the stupid were violent. He prided himself on being able to extract information without the subject realizing that he was being interrogated.

The boy's eyes met Jim's. Mahogany, sad as a dying animal's, waiting blankly. His throat worked, his mouth opened, and the interior was red, as if filled with tomato soup. "It was in the front."

"Do you mean with the driver?"

He shook his head.

So they'd been in the body of the truck, pushed up against the front wall. "And what was there with you? A box, perhaps?"

Rodrigo shook his head. His skin, mottled from burst capillaries, looked like colored tissue paper, as fragile as if it could be ripped by the friction of a thumb. There was internal hemorrhaging as well, Jim thought, and soon that blood pressure would start crashing, and that would be the end of this poor damn kid. The eyes settled on Jim's face, and he knew the look, defiant: *I haven't told you everything.*

"No box, then, Rodrigo. But there was something there." Sick fear swayed Jim. There was a question now, to which the answer, at all costs, must not be "yes." "Rodrigo, was the thing round, and it had lots of wires?"

Rodrigo's mouth opened. There was a deep sound, gagging, bubbling, as if his guts were boiling. Consciousness ebbed.

"Can we bring him back?"

"You're not a doctor."

"Can we bring him back?"

"What's this about? Who are you?"

"Nurse, I have to get him to answer my question. Reduce his morphine drip."

"I can't touch that drip!"

Jim reached up and turned it off.

“How dare you!”

Jim stood to his full height, causing him to loom over her. “This is a national security matter. You will cooperate.”

“I—”

Rodrigo groaned. Jim went back down to him, laid his hand on the poor little guy’s sweating brow. “What did it look like?”

“Black,” the boy said. “We sat on it.”

“Round? Black and round?”

Rodrigo frowned a little.

“Was it a box, Rodrigo?”

He nodded—and Jim knew, suddenly, what had been done. These children—in fact, everybody in that truck—had been used as a human shield. The bodies were there to confuse the mass detector and, hopefully, absorb enough radiation to get past the particle monitor.

But that wouldn’t work. It might help, but the instruments were too sensitive. And, in any case, why in the world hadn’t Customs and Border stopped a truck obviously loaded with illegals?

Jim wanted to scoop this little guy up into his arms and take him away, but he had no key to heaven. He had no kids, but he hoped that he would, one day, and if so, they would be cherished with this man’s whole soul, to make up for the horrors he had seen across the shuddering mass of the third world.

“Where were these children found?”

“On Main, a couple of blocks from the bridge. The police brought them in.”

In an adult, radiation exposure at this level would cause immediate fatigue and nausea, followed by a few days of recovery, the so-called walking-dead phase. Rapid and irreversible decline would then commence.

“Has there been a dosage evaluation?”

“We’re estimating three to four hundred REMs for the older children, a bit less for the little one.”

He’d get a satellite lookdown of the area from the National-Geospatial Intelligence Agency. From Nabila’s brother, Rashid, who worked in their reconnaissance unit. If he was lucky, Rashid might actually find a picture of the truck. With the computers they had available, whether or not a truck had stopped in the street near where the children had been found could be determined in an hour or less. If they were lucky, they’d get the make, the

year, conceivably the license plate and a visual of whoever had taken the kids out and laid them on the sidewalk.

Interesting to see if Nabila and Rashid were on speaking terms again. Rashid had been against the marriage, called it an abomination. He'd been right, but for the wrong reasons. He and Nabby were among a tiny handful of Muslims in the intelligence community, and they were there only because of political pull. At a time when you could not understand the enemy without at least understanding Arabic, American's clandestine services had locked arms to keep Arabic speakers out. In Jim's opinion, that made Nabby and Rashid crucial personnel—but they were nevertheless treated with suspicion, and their activities were carefully watched.

Silently, Nurse Martinez closed the curtain around Rodrigo's bed. "I won't be able to rouse him. It's not a coma, but the sleep is profound."

It would, Jim knew, turn into death, and he thought that could happen at any time. But the boy had done all that was needed of him. He had informed Jim that he had crossed the Rio Grande in a truck with a plutonium bomb for a companion. So the burning question now became, how could that happen? Who in the world could miss a thing like that? Even if the detectors failed, they searched all vehicles, especially trucks.

Then the nurse opened the curtain around the little girl's bed, and Jim did not understand what he was seeing, not at first. Then he realized that she was under a tent of lead.

"She's emitting," the nurse said.

He contained his shock. There was only one way the girl could be that radioactive, and the knowledge of what that was drew a coldness into his belly. She had been made to carry unshielded plutonium or plutonium dioxide on her person, in her rectum, her vagina, her stomach. Poor damn little thing! The stuff was so heavy, she couldn't have carried much.

"These kids were the only victims found?"

"Yes."

"No other cases of radiation sickness in the area? At all?"

"I don't think so."

"I'll need to know the exact spot on Main where they were found."

"Of course." She drew him a little map.

He left the hospital, trying not to run. The moment he got to his car, he threw open the trunk and unlocked the silver case that held his detection equipment. His standing orders required him to contact the FBI Weapons of

Mass Destruction Directorate in the event he became aware of the presence of a nuclear weapon inside the United States. He wasn't actually sure of this, though. The situation was highly suspicious, to say the least, but he needed harder evidence if he was going to get a massive interdiction response.

Among his tools were brushes and a vacuum to gather dust, cameras, an ultrasensitive GPS device, a Geiger counter, and a device that could detect the kind of high-explosive materials likely to be used in nuclear detonators.

He put the Geiger counter on the front seat beside him, and headed for the address the nurse had given him.

A nuclear bomb could be loose in the United States. If it was, it would be on its way to its target right now and they would be wasting no time. Certainly anybody capable of injecting a plutonium nuke across the U.S. border understood U.S. detection systems well enough to know that it was going to be found, and soon.

So they would be moving as fast as possible. If he was lucky, there were maybe a few days until the thing was detonated. But for all he knew, it could be in the air right now, approaching Los Angeles or Denver or some other vast concentration of innocent Americans.

He left the parking lot, forcing himself to drive as carefully as possible, forcing himself to continue to think clearly and calmly.

The thing was out there. Oh yes. He just needed to lock down a little more evidence to make sure the whole system took notice, and this was treated like the emergency that it was.

RESSMAN AIR SERVICE

Todd Ressman was beginning to think his business might actually work. Last year, he'd cleared a little money, and so far this year, every month had seen positive cash flow. It had been a long haul, very long, since he'd been laid off during the death of Eastern Airlines in 1991. But what's nearly twenty years in a guy's life?

He'd done charter work, off-the-books work, piloted for discounters, worked in Africa and Asia . . . and in the end gotten together enough cash for a down payment on his cargo-modified Piper Cheyenne. He'd put down sixty grand, all of his savings. He wasn't going to move people, not after all his years in the damn airlines. Cargo didn't complain, and had few other alternatives. If you were going to get something moved out of Colorado Springs fast, he was the go-to guy, and tonight he was taking a machine tool and a crate of frozen chickens to the Pahrump Valley Airport in Nevada. He was slotted for flight level 18, and at economical cruising speed he expected to land just after midnight.

The flight would cost him \$3,118.23 and would generate revenue of \$5,004.19. If he got something in Pahrump, the run would be even better. What he might get there he couldn't imagine, however. The town's chief industry was sod, followed by prostitution and gambling. And speaking of chicken, the Chicken Ranch airport was one of the drop-ins, for God's sake, but not for a cargo operator, obviously. Nevertheless, he'd learned in the years he'd been running his service that the worst thing you could do was anticipate. His business ran on the unexpected.

The tool he had, for example, looked like some kind of disassembled drill press. It was heavy, but not heavy enough to take up all of his poundage. The chickens in their sealed crate had been a late addition.

Who would spend all this money to move a drill press, or, more fantastically, chickens that couldn't be worth but a few hundred dollars?

He knew the answer, which was always the same: folks had their reasons.

He'd take off in a few minutes, into what promised to be a gorgeous night.

This was why he did it, why at fifty-eight years of age he was still going up every day of his life. He never got used to it, never tired of it. Back on Eastern, he'd flown sixes, then sevens, then twenty-sevens. He'd seen Eastern in its glory days and in its Lorenzo days. The death of that airline had not been pretty, nossir. Frank Lorenzo had destroyed it surgically, pulling off one valuable part after another, until there was nothing left but a lot of wretched old planes and men and women who would not quit until the thing was simply liquidated, which was what had happened.

Well, that was groundside stuff. Todd wasn't really interested. What he wanted in his life was his two PT6A-28s roaring on the wings of his lovely, quick airframe, his glowing instruments before him and the stars in the sky.

He got aboard and checked his stow, making certain that all the tie-downs were secure. Thirty years in the air had taught him that the sky had a lot of ways to hurt you and the best method of dealing with that was to respect the fact that airplanes that usually wanted to fly sometimes decided not to do that anymore.

He could have been flying with another pilot, but why spend the money? Generally, he rented ground crew by the hour. He was based out of Colorado Springs but really would take anything anywhere in the United States, Canada, and, less willingly, Mexico. He spent two or three weeks flying, usually, then went back to C.S. and his house and Jennie, whom he had met on the old LaGuardia-Pittsburgh run pushing twenty-eight years ago.

He looked over his manifest. The drill press was from Goward Machines, destined for some outfit called Mottram Repair. They must need it bad, to move it like this. As for the chickens, they were going from Blaylock Packers to an individual, Thomas Gorling. Todd could figure out most of his cargoes, but this one had him stumped. He had it back against the bulkhead, well secured. You always had to ask yourself, what happens if this airplane turns upside down? Given a small plane and a big, violent sky, that could happen. Had happened. In fact, in his years in the air just about every damn thing had happened. He'd experienced fires, crazy passengers, every known malfunction you could imagine. Usually, the Cheyenne was a pretty tolerable traveler, but she could get obstreperous when she was running heavy and there were crosswinds about.

He went into the Fixed Base Operation. A couple of other pilots were hanging around, guys waiting for their jetsetters to get poured out of their limos. He could have made steady money flying bigs, but he wanted to be his

own man and no way could he afford a jet. It was a struggle to make the payments he did have. But it was his plane. His life. He went when he was ready to go. Or not.

Nobody said anything when he came in. Why should they? They knew what he was, a guy on the bottom rung, fingernails dug into his airplane, scratching through the sky on fumes and maxed-out credit cards.

He checked his flight plan, then went into the hangar. He was looking for something, he supposed. Not really thinking about it directly. Just looking.

There were a couple of mechanics there. “Hey,” he said. “I’m the guy moving the chickens.”

They were heads into a Citation that looked like it had a hydraulic leak in the left-wing leading-edge controls. That would’ve made for some complicated landings, for sure.

“Yeah,” one of them finally responded.

Todd didn’t want to crack the cargo, but the truth be told, it was bothering him. He’d four-one-oned Pahrump and hadn’t located anybody called Gorling. Of course, maybe he was staying at one of the whorehouses or a motel, who the hell knew?

But chickens? Come on, the guy was paying close to a thousand bucks, here.

“Who brought them in?”

“Christ. Lemme think. Coulda been—yeah, a fridge truck.”

“Mexican fellas?”

“White men, all.”

He went back inside, spoke to the FBO operator, a girl of about thirty, dark and tired looking, with a name tag that said: “Lucy.” “I need a phone number for this chicken guy,” he said. “Lemme see the manifest.”

No phone number for the receiving party. So what was supposed to happen? He just dumped the crate in Pahrump and good-bye, Charlie? He’d been paid; that wasn’t the problem. But he liked things to work right. There were no tracking numbers in this business, and there wasn’t one damn thing about Mr. Gorling on this manifest.

“The hell with it,” Todd said.

“Isn’t there a Chicken Ranch in Pahrump?” Lucy asked.

“Funny girl.”

“Chickens are a funny cargo for you guys. I could understand caviar or wine, but not chickens.”

“Unless it’s not chickens.”

There was a silence, then. The two pilots lounging in the ready room both perked up. Everybody knew the rules. You had to report suspicious cargo. But was it suspicious? Todd had five hundred dollars of his profit riding on the poultry, so he didn’t want a bunch of FBI crew cuts out here fisting the cavities. On the other hand, he was damned if he was going to move illegal drugs. Legal ones he carried all the time. One of his main money cargoes, matter of fact.

“So maybe I gotta crack the chickens, seeing as it’s not a good manifest.”

“You try Information?”

“I did indeed. No cigar.”

She hit an intercom button on her desk. “Marty, Julio? Captain Freighter needs to crack his chickens.”

He could hear her words echoing in the hangar, could hear, also, the snickers of the jet pilots.

He went back out on the apron, looked sadly at his beautifully loaded baby. She was all ready to go, looking like she was born for the sky.

The two mechanics came across from the hangar, moving slow. Who wanted to manhandle cargo? Not their jobs.

“Sorry about this, guys,” he said. “I got a sour manifest.”

Then Lucy came out. She had a weather fax in her hand. “I got a line moving in,” she said. He looked northward and saw it, the flickering of lightning just below the horizon. Ahead of it would be winds, strong ones. He knew his front-range flying. He had about twenty minutes to get in the air and get out of here, or he wasn’t going upstairs for hours.

“Well, fellas,” he said, “looks like you’re gonna get to earn your money another way.” He took the FBO’s copy of the manifest. “Oops,” he said, jotting down a phone number beside Mr. Gorling’s name. “Bastard gave us a dud contact number. How were we to know?”

He got in his plane and pulled the door closed.

Ten minutes later he was rotating. Ahead, as he rose, he saw the squall line racing down the range, alive with lightning.

He banked west, and flew off into the stars.

A thousand feet below him a man watched Todd’s plane rising into the sky. The man had been trained, and carefully, to recognize the silhouette of the Cheyenne. He got into his car and drew his cell phone from his pocket.

For some moments, he studied his watch. Then he made a call. “Mother,”

he said, in his soft, calm voice, the voice of the dutiful son, “I am nearly home.”

THE BRASADA

Jim had quickly found the spot where the kids had been dropped, but then he'd lost the trail. They had been radioactive because they were near something radioactive, but it wasn't leaking particles, and frankly, that made it look more and more like an X-ray isotope. It could have been that illegals had been concealed behind a shipment of perfectly legal isotopes and the children, with their small bodies, had been sickened by the radiation and tossed off the truck to die.

However, he had been to all local public transportation hubs, which consisted exclusively of bus stops. There was an airport but no regular flights. Conceivably, the bomb could have been shipped as air cargo, but he had found a faint radiation signature at the Kerrville Bus Company station on Jefferson, in the cargo-holding area. The bus company had no record of any isotopes or X-ray equipment being moved, so he had logged this as evidence to be followed up.

He couldn't personally track down every bus that had left the station in the past two weeks. It could be done by the FBI, but it was a dangerously slow way of working, no matter how efficient they might be. What they would most need to know was exactly when the device had arrived at the bus depot. That would narrow the search to just a few busses, and enable them to catch up with the bomb . . . if there was a bomb.

To find this out, he needed to investigate the two bridges that crossed the Rio Grande in Eagle Pass. If X-ray isotopes had been brought in, they would have been logged. Both bridges had advanced spectroscopic portal radiation monitors, ASPs, installed on them. This was state-of-the-art equipment, and after some false starts in the early going the system was testing to a high degree of reliability. In any case, if the plutonium was not detectable because of shielding, the presence of an unusual mass such as a lead container in any crossing vehicle would have triggered an immediate alert and a search of the vehicle.

He hoped that his visit to the bridges wouldn't make the Customs and

Border boys uneasy, wondering who the hell he was and tripping him up every way they could. You think ordinary people don't like bureaucrats. Bureaucrats *really* don't like bureaucrats. As he drove, he opened his briefcase and fished out another set of creds, one of the many that he had developed for work along the Texas-Mexico border. Strictly speaking, identifying himself to a federal officer with a false credential was illegal, but his ambiguous status enabled him to get away with a lot. Annoying, but also useful at a moment like this.

He turned into the station parking area, which was full. He pulled up behind a couple of dusty official Blazers and cut his engine.

"Excuse me, no parking; you'll have to get that vehicle in motion."

Jim showed him his Customs and Border inspector credential. "What's your name, Officer?"

The guy looked over the cred. Then he looked up at Jim. The eyes of this very large young man were nasty little pins, full of hostile suspicion. "Arthur Kenneally," he said at last.

Kenneally was maybe twenty-two, spit and polish all the way, although heavy. And sad, Jim thought, and wondered if that meant something. "I need to take a quick look at your ASP," he said.

Arthur stared at him.

"You have an advanced spectroscopic portal radiation monitor on this bridge. An ASP. I need to check it out."

"There's no ASP on this bridge."

Jim was practiced at concealing surprise, but not this time, and he hoped that the flush he felt surging up his neck would not be visible in the parking-lot lights. "Are you sure?" It was all he could think to ask.

"I work here."

"What about the Camino Bridge?"

"Mister, there's nothin' like that on either bridge."

"Are they out for maintenance?"

"Look, there are no ASPs here. None whatsoever. Do you get that? The number is zero. And you're double-parked, Sir. If we need to go hunting, we gotta scramble these vehicles."

Jim watched him. Why was he so defensive?

"Sir?"

"That's okay, Kenneally. I'm moving out." A tingling crept through his body, his muscles tensed. He returned to his car, backed out, turned around,

and drove into town. It was hard to stay on the road, hard even to think clearly. He recognized that he was panicking. But he had a major problem here, no question.

Homeland Security had placed ASPs on every bridge that crossed the Rio Grande. They had been problematic at first, but as improved devices became available, the bridges had been high priority. He'd been shown the deployment records by Cynthia Spears. But the records were wrong, which meant only one thing—at some level, there had been sabotage. Either the devices had never actually been deployed or they had been removed.

Was it local? Did that account for Officer Kenneally's manner—he knew that the monitors had been ditched, and therefore was part of some sort of illegal group, probably accepting bribes to allow trucks to pass without proper search? Or was the problem farther up the line, in Dallas, where the deployment of the ASPs had been managed, or even in Washington, where the whole national program was directed?

This felt an awful lot like what had happened in southern Russia, when Jim discovered that facilities listed as secured by the National Nuclear Security Administration were, in fact, not secure at all. And then—because of what was going on with Brewster Jennings and possibly the NNSA itself—his reports would sink into the system and die.

This had to be reported, of course, and maybe with the same lack of effect, but his mission wasn't to fix the problem on the bridge or even investigate it. It was his job to find what had already been brought in, and he needed to remain focused on that, because lack of information about when the truck had crossed was going to be a serious challenge.

The mere fact that this had been done to these bridges increased his conviction that this was not about X-ray isotopes.

Time was the enemy now, and he drove harder even than he had coming down. He would return not to Dallas but to San Antonio, where he would engage the FBI as fully as he could manage. He didn't have proof, but he certainly had evidence enough to justify an investigation of what was going on at those crossings and an extensive search for any possible nuclear devices that may have been allowed into the country.

In addition to the FBI's Weapons of Mass Destruction Directorate, the National Nuclear Security Administration's Office of Emergency Operations needed to be informed, and OEO needed to deploy all thirty-six of their teams to this region, armed with all possible radiation-detection and

explosive-suppression equipment. The two FBI teams that specialized in disabling firing systems would need to be put on full alert. The staff at G-Tunnel, the five-thousand-foot-deep shaft where the device might need to be detonated, had to be warned that they were liable to receive a hot nuke within hours.

He was out on the highway now, driving into the dark, heading for San Antonio as fast as he could go, and it was here that the car took the first blow.

For an instant it shot forward; then there was another crash from behind as he instinctively hit the brakes. Struggling for control, he gripped the wheel. What was this, a shredded tire? A glance in the rearview mirror revealed only blackness.

A third crash knocked his head forward and back, and he understood that this was not about the tires. Somebody was ramming him from behind.

He switched on his high beams and accelerated, drawing away from the other vehicle, feeling his heart match the drumming of the engine.

So it was Customs and Borders, had to be. That bastard hadn't been a pissed-off bureaucrat, he'd been a scared-shitless crook. That would be a Customs and Border Protection truck back there, most likely, with Kenneally in it.

He smashed the accelerator to the floor, drawing farther away from his pursuer.

Long experience told him not to think more about who was back there. Speculations like that only slowed you down.

Given the fact that he might not get out of this, he needed to report at once. He flipped open his cell phone—and froze, horrified, when he saw that there were no signal bars.

His pursuers had known to wait for the dead spot, of course.

He had to get this report moving!

Wham! This time the car swerved, went up on two wheels, and almost left the road. As he fought the steering, something in the rear began clattering. Flashes in the mirror told him that his bumper was dragging, making sparks. Another blow might split the gas tank, and then this little game would be over.

His mouth was dry now, his palms sweating enough to add to the danger of losing control.

Wham!

The car shuddered; he felt the wheels slewing, regained control, but barely.

No smell of gas, and—at least at the moment—no flames.

Then the rear window flew to pieces, spraying him with tiny bullets of glass. The flashes that accompanied it told him that he was being fired on with an automatic weapon.

Back to the drawing boards on the identity of his pursuers, because he'd seen that particular spray of light before, and that was a Kalashnikov, not exactly the kind of weapon used by Customs and Borders. There were incidents of ranchers reporting men with these weapons moving up the coyote trails, but they were drug runners, not U.S. officers.

He felt that coldness along the neck that comes with being profoundly exposed to a gun. Too familiar.

It chattered again, its rasp now clearer and closer.

He took the only choice left to him, and veered off the road into what Texans called the *brasada*, the brush country. Behind him, he heard the squeal of tires, then the roar of the truck's engine as the driver geared down to go off-road. Jim could feel his car wallowing in the soft soil.

The Kalashnikov rattled again—and suddenly there was light behind him, a lot of light, flickering. They'd gotten his tank and he was on fire. Now he had only the gas left in the line, maybe a couple of miles, maybe less, and if that fire ran up the line, he would need to get out of here fast.

As he continued on, he began to hear the fire, a sound like a fluttering flag, and smell it, too, the sweetness of burning gas, the nasty sharpness of the carpet in the trunk.

He had to keep maneuvering to avoid contorted mesquite trees and that was slowing him down and he thought that there was a significant risk of an explosion, so he opened the door and rolled out of the car and kept rolling, and the truck passed him at a distance of six inches.

He scrambled to his feet and blundered off into the tangle of thorny mesquite branches, cacti, and, he had no doubt, snakes. Both his training and experience made it clear that he was in an endgame situation. His pursuers were heavily armed. Already they were off the truck and he could hear them moving in the brush, speaking quick, quiet Spanish: "Over there, Raul. Three meters, that's it. Forward."

He had the uneasy thought that these were military personnel. Mexico was a complex society, the evolution of half a millennium of exquisite corruption. Certainly the military could be involved in something like this. That would be an important route of investigation, assuming that he survived.

But he had to survive—*had to*. If they broke this one little link in the chain, the bomb would be free and clear. He cursed himself for hitting the road before making his emergency calls.

He smelled the sourness of new sweat, the sharp sweetness of old, some sort of liquor, and many cigarettes. There was a human being within feet of his position, and upwind of him. He could taste this man, and the fear that would make him an animal in an instant.

If the man had professional experience, Jim was about to be caught. He'd seen it many times, the way a pro would just know his adversary was there and fire into him, and the guy had better have good cover. This man, however, blundered past his quarry. But then he stopped. Took a step back. Now he was two feet to Jim's right, facing in this direction.

Jim listened to the man's breathing. It was soft, meaning a relatively light individual. Then there was a rustle, and the sound of the breath ended.

The man had turned away.

Jim did not like to use his killing skills, but this was a situation that demanded every resource at his disposal. In this incredible situation, millions of lives might depend on his life.

He didn't even have his pistol, because he had stashed it in the glove compartment to avoid any metal detectors in the hospital. It was still there.

He deserved to be put up on charges. And now, maybe, they would need to include murder.

He stood up and was behind the man in a step, and grasped his head between the flats of his hands, and did something that he had done just twice before in his life, and detested. He snapped the man's neck, using the hard sideways motion he'd practiced on dummies and used in Iran when a camp he had established to take readings near an underground nuclear facility's venting system had been spotted by a couple of poor damn shepherds.

The body went instantly limp, but he wasn't dead yet, Jim knew. There was still air in the man's lungs that could possibly be used to make a sound. Jim had heard that sighing croak before. It wasn't a loud noise, but it would be audible in this silence.

As soon as Jim lowered him to the ground, he stepped on the man's back hard, pressing until he heard the air hiss out of his nose. He would smother now, as he slid into death, and Jim would add that last bubbling hiss to his own nightmares.

To his left, more breath. Another man, a larger one. Now to Jim's right, the

rustle of a shoe pressing something dry.

And then the sun, so bright it seemed to roar, and he knew that he had been pinioned by a searchlight. “Now,” a voice said in English with a Mexican accent, “now come.”

For an instant, shock froze him—and not only the shock of being hit by the light but the fact that the voice had a Mexican accent. But no, he’d heard it on the bridge, all right. It was Kenneally. Scratch the accent. The kid was no actor.

Jim threw himself to the left, to the ground, then pushed himself with his feet. As he reversed course, the light wove about. He took off as fast as he could, because he knew that these seconds were his life.

The searchlight lost him, then came racing back. He dropped down; it passed him, returned . . . then went on.

He had been able to use its beam to see ahead, and now twisted and turned among the trees for a hundred feet, moving silently away while it sought him in other directions.

Abruptly he burst into clear land, felt the give of softness under his feet, saw the dark building more clearly now. His heart thundered; his breath roared.

There was a house, but he also knew that the three hundred open feet stretching before it could be where his career ended.

He sprinted ahead, pushing himself as hard as he could, hunched low, legs churning. But still it seemed slow, a kind of drifting dance, and from behind him there came the unmistakable, resounding crash of a .45 automatic.

Stumbling onto the porch, he shouted, “Federal officer; I need help!”

THE DOGS OF NIGHT

The house was small, it was dark, and it was silent. Jim hammered on the door. “Federal officer!” He prepared to break it down.

Lights came on inside, then on poles in the pasture that surrounded the house. In those lights he saw figures. Simple uniforms, perhaps official Mexican, perhaps not. Frozen now, calculating the changed odds.

Then the voice of the man in the house, a gravelly shout: “Awright, boys, time to go on home. My dogs is hungry tonight.”

The man connected to the voice then came onto the porch, and Jim recognized him. He’d been riding horseback down the highway near here as Jim had driven past. It was the same tattered, ropelike old man, unmistakable. With him came a pack of dogs as lean and ornery looking as their master.

At the far edge of the light, a gun chinked. The Kalashnikov had been reloaded, was now being cocked.

“Watch out.”

“Boys—*take ’em!*”

A dozen snarling, eager dogs swarmed off into the dark. The Kalashnikov chattered wildly, the flashes arcing in a crazy motion. Then there was a shattering blast beside Jim’s head and he thought he’d been hit—but a fountain of sparks spewed away into the night. What had happened was that the old man had fired a shotgun, a big one. Then again, *whoom!*

The old man turned to him, gave him the meanest, most toothless, most dangerous-looking grin he’d seen since Afghanistan. “Jus’ tryin’ to warn ’em off ’fore they get et.”

From off in the dark came the barking of the dogs, faint screams, growling, then louder screams that grew quickly frantic.

“Well, they gettin’ et,” the old man said. “Them dogs is gonna go blood on me, Vas-kez don’t stop his invadin’.” He dropped down into an ancient steel lawn chair that guarded the porch. “Gawddamn ticker, it gets goin’, it don’t stop. Gonna be the death’a me, of course. Now, what we got here?”

“I’m a federal officer—”

“Oh, how surprising. I’d never have thought that of a feller in a Sunday go-to-meetin’ suit, getting chased through the damn *brasada* in the middle of the night.”

“Who is Vasquez?”

“Emilio Vas-kez, local border control officer, Mex side. Moves flesh. He works closely with our border boys. Money changes hands.”

“Where can I find this man?”

“In his office in Piedras Negras, be my guess. Me, I never cross. Be a one-way trip.”

Piedras Negras, the Place of Black Stones, the Mexican city across the Rio Grande from Eagle Pass.

“You say that Customs and Borders know Mr. Vasquez?”

The old guy gave Jim a look that was a lot more careful than he had expected to see. “Now, you listen up, Mr. Federal Officer. This is Texas, here. It’s another country, see. You got your border cops and whatnot, but that’s only in the towns. Out here, there’s another law, old-time Texas law.” He rose from the chair, cupped his hands over his mouth, and called, “Boy-ees! C’mon, you devils! *Boy-eeees!*” Then he looked at Jim, eyes twinkling. “Won’t need to feed ’em for a week, best guess.” He stared off into the dark. “Might be one or two of those fellers still out there though. They must want you bad, Federal Officer.”

“Let’s go inside,” Jim said. “I need to make a call.”

As they entered the dark house, the old man turned on a floor lamp.

“Kill that!”

“Vas-kez ain’t gonna come up here, not when the dogs’re out.”

“For my sake.” He picked up the phone—and got silence. “Does this need to be turned on?”

“It’s a phone.” The old man took it, listened. Cursing under his breath, he returned to the porch. “Vas-kez, you damn cur, you cut my line again! I’m comin’ over there, fella, and I’m goin’ huntin! I know where you live, goddamn you!”

The dogs returned, quick shapes speeding under the thin light from the light poles. Jim stood in the shadows alongside the house, holding his cell phone at arm’s length. Still no signal. He closed the phone. The dogs, he noticed, looked more like hyenas. “What are those, anyway?”

“Dingoes,” the old man said, “smarties. I feed cattle, and these dogs are my caballeros. A man and twelve of these fellas can handle a herd of three

hundred head very easily.”

Kenneally had been working with what looked like the Mexican military. But it could be anybody, even other Customs and Borders officers in disguise, who knew? The kid was in it, though, in deep, and somebody was going to want to talk to him, for sure. Not Jim, though. All Jim wanted was to track down the bomb, if there was one.

“I need to get back to my office,” he said. “I’ll pay you to drive me, or I’ll buy your vehicle.”

“Where’s your office?”

Was it dangerous to reveal that information? He wished he knew more about what he was dealing with. What if they came up out of the brush later and worked this man over? What might he reveal when his eyeballs were being washed with acid? “El Paso,” Jim lied.

The old man was silent so long that Jim thought he hadn’t heard. “Problem is,” he finally said, “if I sell you the truck for what it’s worth, which is about fifteen dollars, how am I gonna get another truck? And I can’t go to El Paso; I got three hundred head on feed; they need papa.”

Legally, Jim could not commandeer the truck. “How much do you need, then?”

“Ten thousand is gonna do me a decent replacement.”

He couldn’t write the man a personal check for that amount, because the expenditure wouldn’t get approved and money transferred to his account before the check bounced. “Mister, I want to appeal to your patriotism.”

“I am sorry to tell you, but I am faithful to an America that has been gone so long you never had the good fortune to know it. That makes me a real patriot, fella.”

“I hear you and I understand and I agree.”

“You only think you do, and that’s the problem with all’a you people.”

Jim had no choice. He would lie again. “Sir, I am going to commandeer the truck. I have the legal right to do this. I will leave you a receipt, and I will have it returned to you as soon as possible.”

“Billions of dollars thrown down the drain every day, and all you can do is steal one old man’s old truck. You oughtta be ashamed, Federal Officer. Course you’re not, ’cause you’re the same as the rest of ’em, just somehow lost the thread of freedom. I shoulda let ’em pop you, see how my dogs do on white meat.”

Jim respected this man’s suspicion of government, but what could he do?

“The vehicle will be returned by six o’clock tomorrow night, and you’ll be compensated fairly.” He held out his hand. “I am taking the keys.”

That brought a moment between the two of them, not pleasant. Jim could see the old man considering what to do—shoot him, set his dogs on him, or give him the truck.

He waited for the decision. The old man took in a breath, let it out as a sigh. “There goes one perfectly good truck,” he said, “Federal Officer.”

As Jim went to the truck, he watched the dogs carefully. They were no longer in the slightest interested in the night out beyond the house pasture, but they were tracking him with their eyes. A snap of the old man’s fingers and he’d be torn apart.

The truck was ancient, its radio torn out, its cab dusty with old feed. He felt rotten taking it, even for a day. Worse, he’d have to rely on what was going to be a very busy San Antonio FBI to return it.

He opened his wallet and counted out as much as he dared to go light, a hundred dollars. “I’m sorry I’m not good for more. But I might need my cash.”

The old man took the money. “My tax refund?” he asked with bitter irony.

“Is there any way out of here that doesn’t involve Fifty-seven?”

“Well, you can use my track over to Eighty-three, then head down to Crystal City, then over toward Big Wells on Eighty-five. That’ll get you to the interstate.”

He went as fast as he could, listening to the brush scrape the truck, glimpsing a snake rushing in its headlights. As he drove, he pulled the battery out of his cell phone. He didn’t know exactly what sort of detection equipment his pursuers might possess, and he didn’t intend to experiment.

The truck was gasping by the time he reached Highway 83, another empty strip disappearing into the dark. His situation was extremely serious. With so few roads in the area, he understood that he was still in extraordinary danger. He’d been in similar situations before, though, and he knew from experience that the keys were misdirection and speed.

But they knew the area; he didn’t. So much for misdirection. And as far as speed was concerned, as he accelerated onto the highway he found that the old F-150 topped out at under fifty. He kept the lights off, navigating by the faint glow of the road between the dark masses of brush that choked both sides. When he needed to slow down, he downshifted to avoid flashing the brake lights.

The highway made a sharp curve, and he found himself in a small community called Carrizo Springs. As soon as he could, he left the main road, pulling into a closed gas station and around the side of the building. He sure as hell needed a weapon. Maybe the thing to do was roust out the local cops. There had to be a sheriff's station here, maybe even a local police force. He needed to get that report called in, and fast. He must not be the only person alive with this information.

There was a pay phone out near the station's air stop, but it was out of order, long since shut down. Beside it, though, there still hung a badly weathered phone book. He found an address for the Dimmit County constable's office and headed for it. The streets of the small community were empty at eleven, and when he found it the police station was closed. There was an emergency number, but that meant using the cell phone. Probably safe, probably it would work, but what if these things weren't true and they caught up with him and killed him? You didn't take a job like this unless you were willing to die for your duty, and he had no problem with that. But he did have a problem with not getting that information through.

The problem was easily solved, though. On his way here, he had seen a motel with a lit sign, and he returned there now.

He drove past the motel, then turned a corner and cut his lights. Nobody appeared, so he went back and pulled up in front. Inside the lobby, he could see an empty clerk's counter. Hopefully there'd be somebody back in there somewhere.

As he prepared to enter the dimly lit lobby, the great cities of the American West surged and crackled with the energy of life. Las Vegas, Los Angeles, San Francisco—they were all gigantic jewel boxes packed with innocent humanity. In Las Vegas the Strip glowed and hummed with late-night excitement, but in the little community of Pahrump a few miles away all was quiet. Ressman had landed, delivered his cargo, and flown on. The crate had now been in the cage at the Pahrump Valley Airport for two hours. It was all alone, just a large, black box with a bill of lading taped to it indicating that it contained frozen chickens. The airport was dark, and the road leading up to it was even darker, the silence absolute.

After a time, though, a truck appeared on that road. It moved so slowly and quietly that not even an armadillo scuffling along in the nearby brush was disturbed by its passing. In the truck were two young men, their faces vague in the faint light from the dashboard.

The truck parked for a time. There were flashlights, and careful shadows as the two men entered the cargo cage and brought out the box. A moment later the truck left, its gears grinding. The cargo cage was now empty, the moon low in the western sky. The armadillo crossed the road, snuffling busily for beetles.

The Las Vegas metro area is home to over 4 million people, Los Angeles to more than 13 million. Denver, San Francisco, and Phoenix also are not far from Pahrump.

Las Vegas was a glittering target, as was San Francisco. But 43 percent of all goods that enter the United States come in through the port of Los Angeles. Destroy it, and the United States of America is plunged into chaos.

VIRTUAL NATION

Nabila al-Rahbi found the new website so easily that it crossed her mind that it might have been pushed just to her. The enemy knew, perhaps, not exactly who she was but certainly that she was here. Her work was to find terrorist websites—real ones—and determine who ran them and who visited them and uncover the links from one person to the next across the web. Unlike National Security Agency units trolling for e-mails, text messages, and such, her work was much more focused and personal. She was one of a tiny number of people in the intelligence community who could read Arabic, Farsi, and the other essential languages of terrorism. Her security clearance, however, was so narrowly focused that she couldn't even enter most of the offices on her floor, let alone talk shop with anybody. She came to work, reported upchannel, and went home.

She looked at the new page, comparing the simple Arabic to the English translation that had been provided by whoever had created it: “This from the Mahdi: Women of the West, you must assume the *hijab* or there will be a serious consequence.” The translation was accurate enough.

According to Shia tradition, also endorsed in this case by many Sufis, the Mahdi was the Muslim savior. Most Shia were “twelvers,” who believed that the Twelfth Imam, who went into hiding in the year 940, was the Mahdi. He was expected to return at the end of time, to join with Jesus and unite the world in peace. Sunni, far more numerous than Shia, did not have any specific doctrine about the Mahdi, but the idea had appeal. So whoever might be claiming to be the Mahdi was not being stupid. He could expect the support of Shia, and would appeal to the hopes of all Muslims, including the Sunni.

She worked with the site a bit, but this was all it contained, just the words printed against a beige background. It demanded that every woman in the West, presumably, take the veil. Well, the hell with that. She was a Muslim woman herself and she wore the veil when she chose to wear the veil, and that was what was right. Some stupid idiot had posted this, but the world was

full of them, wasn't it, Muslim and otherwise?

She considered herself devout but also an American patriot, loyal to the country where she had been born, proud to be spending her life fighting for the ideals it represented, and very much a part of American culture. There wasn't the slightest reason that a Muslim couldn't embrace the modern world and modern law. Those who said otherwise were, quite simply, heretics. In fact, as far as she was concerned, Salafism, the reform doctrine developed in the eighteenth century by Muhammad ibn Abd-al-Wahhab, had been distorted into heresy, and that failing had started with ibn Abd-al-Wahhab himself. There was nothing wrong with Tawid—the Salafi doctrine of the oneness of God—but much of the rest of the teaching was like the Book of Leviticus in the Jewish Bible. Leviticus had been written while the Jews were captive in Babylon, and was designed to give them special rules so that they wouldn't forget their identity. Ibn Abd-al-Wahhab had been the first to sense the lure of the West, and had created his reform movement to ensure that Muslims would not be absorbed into the new and seductive culture that was emerging in Europe. In her not-so-humble opinion.

When she jogged through the park with the wind in her flowing black hair, feeling her limbs naked, she was proud of her womanhood and her government for respecting it, and when she bent to prayer she was filled with the joy that she liked to believe drew so many to the Muslim faith. Allah was there, part of you, part of your heart. You had only to listen and let yourself be loved, and never mind the cruel heresies that were currently afflicting the faith like a nasty virus.

Stupid though the little site was, because of the threat it contained her standing orders required her to identify it by server and, if possible, owner and report it upchannel.

She did a quick WHOIS, knowing in advance that it would lead nowhere. Next, a traceroute went to a server in Russia, but there was a masking attempt, so she would look a little further. First she downloaded and saved the site, then continued her analysis. The real server was not in Russia, which was a plus. Soon, she found herself in the GÉANT2 topology. The server was in Finland. A university, she saw.

And then the website was down. They'd seen her looking at them, and pulled it. This was unusual. Generally, they left sites up longer, so that more than one intelligence and media group would find them. Whoever had put this up had not wanted to stay around for long. Taking no chances, then,

which could mean that this actually mattered in some way.

She saved the traceroute, knowing that she would be questioned about it by people who knew essentially nothing about what she did or how she did it but thought they did because they had learned a few terms. They could not even begin to understand the ever-changing complexity of the Internet, certainly not its delicious symmetry and chaotic beauty, or the organic way that it grew.

With the site down, she entered the traceroute itself into Grabber, a program developed by In-Q-Tel that would do far more than any ordinary tracing effort. In moments, she knew that the hosting server was on the campus of the Finnish State University of Technology, an institution about 160 miles from Helsinki that offered degrees in technology and economics.

A few keystrokes got her to the identity of the server itself, and she found that it—not very surprisingly—supported an on-campus Internet cafe. The place was called Origo. There were a hundred workstations there. The site had been created on station 13 at 1406 local time yesterday. She went to Google Maps and was soon looking at the university. But where was Origo? Ah, in the library. Good enough.

She would search the student body and faculty against all databases, of course. She stared at her screen. If they were just kids fooling around, why had they taken it down the moment they saw her? She was herself spoofed to a server at Keele University in Staffordshire, so her hit would have appeared completely innocuous . . . unless somebody really good was watching. Could that Russian connection mean the FSB was involved? Russian intelligence had superb hackers, for sure.

So maybe this was a Russian attempt to see how good their American counterparts were, akin to Russian bombers approaching U.S. airspace. That would explain why the site was simple but contained a clear threat. They'd want to watch her investigate.

She recognized, at this point, that she would probably never know, but then again, one learns early that intelligence work has little to do with complete sentences. Ellipses and question marks were in the nature of the product. There were no slam dunks, unfortunately, which was why people like directors brought in from outside the community so often made mistakes.

She pulled out of the Keene spoof and came back on from a Kinko's in Tallahassee, Florida. She reset Grabber and waited for results.

If she got anything substantial on anyone at the university, she would

request that SUPO, the Finnish intelligence service, be informed of the website and asked for additional information about any possible persons of interest she might have turned up. If the CIA elected to act on its own, some operational type would probably drive up from the embassy in Helsinki, take a few pictures in Origo, then return with the inevitable “no result” report.

Nabila put the site together out of her download and looked again, seeking hidden codes. Was that why it was so simple? Was it actually a coded message, not intended to be found by her office, and had her snooping spooked them?

Her job was to assume that it was important. But even when she looked deep, it seemed entirely clean. Unless the message itself was the code.

What might “a serious consequence” mean? Could be anything. Probably had to do with women. Shoot the queen, maybe, or blow up some monument symbolic of women’s freedom? Perhaps she should feed it to the Brits. They’d be all over any suggestion of danger to the queen. She was surrounded by clever depth, as it was called, not just muscle but really smart security management, like the president. Nabila supposed that was why the old lady had once woken up in Buckingham Palace to find an intruder sitting on her bed.

The site, if you could call it that, was just one page, very rudimentary.

Had it been created, perhaps, by a child? Maybe, but not an Arab child, who would have covered it with Saudi flags and jihadist rhetoric. Perhaps it had been made by some little Finnish boy playing at terrorist. Did any Finnish schools teach Arabic? God knew, not many American schools did. Nabila’s comfort level with it was probably the only reason she even had a job in the intelligence community. She’d never believed that Daddy’s pull would have been all that was needed. Some pull; he’d been little more than a glorified lobbyist.

She stared longer at her copy of the page. Beige background, a few words in the Verdana typeface, a few more in a Kufi-style Arabic typeface.

What was troubling her, she decided, was the directness of that threat. There were no quotations from the Quran, none of the usual justifications and other bunk that, as what she considered to be a sane and truly devout Muslim, she found so deeply offensive.

She considered carefully. First, the site was rudimentary, but whoever had created it had been sophisticated enough to spoof its server address, then to pull it down the moment Nabila got past the spoof. So this was the work of an

individual or group with at least a moderate amount of sophistication. The second thing that contributed to her uneasiness was more serious. It was that no Arab would state a threat so bluntly unless he was absolutely certain of both his ability to carry it out and his intention to do so.

She had a lot of resources. Every day she gathered hits on the many false flag websites the CIA owned, looking for patterns of interest that might lead back to identifiable individuals who were just beginning to explore terrorism. And that was just a small part of her work. She knew all of the serious terror sites, of course, everything that could be known about them. She knew, also, that she was a target, certainly of the Base, Al Qaeda, and of the Iranians, probably also of the Saudi intelligence service, the Istakhbarat, and Mossad.

She did not rate a full security detail, but she was driven everywhere and watched, always.

She sat back in her chair and went through the cigarette motions, folding a stick of sugarless gum into her mouth instead.

When it came to Internet terror sites, nothing was as it seemed. Many an apparent terrorist website was anything but. Pretending to be a terrorist group could be very financially rewarding to con men, and very productive of useful intelligence to organizations like the CIA, Mossad, the FSB, and, as always, the Istakhbarat. Many sites were run by con artists who cared nothing about Islam. Others were Mossad and CIA false flag operations—fake terrorist groups, basically—which gleefully took contributions from the very same Saudis who collected American oil revenue.

She loved her work here. Fundamentalism was going to destroy Islam, which she regarded as an act of sacred communion between man and God. Truth to tell, although she loved being of Saudi extraction, she was soured by the fact that it put such a limit on her advancement. Would a Muslim woman, a daughter of Arabia, ever become anything more than what she was? A department head, for example? No.

Because of the concerns that would arise, she did not dare to go to the native country of her parents, and had not done so since she was taken there as a child. One day, she would do hajj, of course, but she kept putting it off. After the promotion.

She picked up the phone, spoke to her supervisor. “Marge, Nabila. I’ve got one that’s bothering me a little. I’m shipping you the download now. The site itself was taken offline less than a minute after Referer dropped the link in my lap.” Referer was a system of ’bots that ceaselessly searched the Web

looking for new sites that fulfilled a broad range of criteria having to do with terrorism, including threats, money transfer, indications of personnel movement, and a myriad of other factors. It was an excellent system. Gone were the days when the CIA was a technological fool.

“Have you translated it?”

“It’s bilingual, and the English is correct.”

“I’m waiting.”

“Sent from this end.”

Marge Pearson had been in the Soviet Russia Division back in the Stone Age. With thirty years in the CIA, she had not the slightest intention of retiring, and praise Allah for that. She was a company legend, and Nabila counted herself extremely lucky to have such an influential and respected boss. A recommendation from Marge meant automatic advancement, and she was generous to her kids, Marge was. So, maybe even Nabby had a shot.

“I’m looking at it. I see; that’s a very direct threat.”

“That’s what’s bothering me.”

“We’ll move this one along.”

Nabila could almost hear Marge thinking. She decided to help a little. “An Arab would not make a threat this direct unless he could carry it out, and intended to do so.”

“This could cause a run on scarves.”

“That’ll be the day.” She cherished the safety of the West. The idea of Šarī’ah being imposed here was too horrifying to contemplate. Šarī’ah was an ancient and imperfect system that had only one place in the world of modern jurisprudence: it should be considered suggestive where appropriate, advisory and nothing more. Western law was one of the greatest of all human inventions, and the more it spread the better the world would become. It was that simple. Šarī’ah was from a time before human rights were really understood, and therefore it should be considered a historical artifact, not a living system of laws.

“Nabila, I want this to go to the prelim, but I’ll need more if it’s going to make the final.”

Nabila swallowed her surprise. Marge was referring to nothing less than the Presidential Daily Brief.

But this—how could this go so far so fast? Further up the ladder, maybe they knew something Nabila didn’t. Even the mention of getting near the briefer excited her. Getting in the briefer—in her world, that was game, set,

and match.

She thought for a moment. How could she advance this? “Let me take a look around,” she said. “I’ll see if I can get anything more.”

She could put in a request to the National Geospatial-Intelligence Agency to do a backward lookdown for identifiables on the ground at the Finnish university, but that would be futile. Such requests had to be vetted on both sides of the fence. The CIA might not let it go out. The NGIA might not let it come in. In any case, it would take the request hours to move between stovepipes, if it ever did.

No, the only way to get anything done was to jump the fence—that is to say, call somebody over there directly. That meant dealing with her brother, which was not a pleasant thought. They shared the house, at this point, in silence. Still, she dialed his number.

Day by day, his disapproval of her was growing. She’d seen by the way he prayed, the extra hand movements, that he was becoming Salafi. At home, she wore the veil. Increasingly, though, he spoke of *purdah*. *Hijab* for him, okay. Draping herself in a damned shroud, no way.

The phone rang. She did not want to despise her brother, but she did despise the strictures on women—the rejection of half the human species—that had grown up in Islam over the years, spreading like some sort of soul cancer.

It rang again. Her heart began beating harder. It was almost sickening to ask him for help—but she loved him; she did. He was her little brother, who had clung to her in fear when they went to the seaside and he saw the waves.

The female members of Mohammed’s family had never been in *purdah*. If Mohammed and Jesus were to return and see what had become of their faiths, she thought—no, knew—that they would be sickened.

Rashid picked up.

“Rashid,” she said, “good afternoon.”

“Hello,” he answered, sounding as if he had forced the word out through a sphincter.

“Brother, I need a lookdown-backed-up twenty-four hours of all the physicals at a Finnish university. I need it, specifically, around a coffee bar called Origo, which is on the top floor of the library. You’ll see the building on your map. Entries and exits.”

People in intelligence knew not to ask why. But that was not what mattered. “Who wants this?”

“It’s for the briefer,” she said smoothly.

Now the silence became as sharp as a blade. But facts were facts: he was male but not as senior, largely because his language skills weren’t as important in the technical post he held. So his advancement was even more constrained than hers. He did not report to somebody who could propose for the briefer. Rashid’s work might end up there on occasion, but it would be background.

“I am looking at the location,” he said. “I’ll do a run now.”

“I’ll find comparables.” She then went into the university’s database, which proved to be a relatively easy process, and found three names that matched the CIA’s internal watchlists. She e-mailed him the photos off their dossiers.

“One,” he said.

She was so stunned she could hardly speak.

“Which?”

“The Indonesian.”

“Thank you, Rashid.”

“Your husband also telephoned.”

“I thought he was in Afghanistan.”

“Where he called from is not known to me. But I provided him, also.”

“With related information? Why are you telling me?”

“Because he is your husband. I am telling you to let you know he is alive.”

She could think of nothing more than to thank him and hang up. Jim was not her husband; Rashid had to face that. They had divorced in American law. But Jim had not divorced her in Šari’ah, because, as he put it, “I’m not Muslim.” Anyway, she didn’t want it, either.

She looked at this Indonesian. He had entered the coffee bar six days ago, at three in the afternoon, local time. The site had gone up six minutes later. With only the single page, that would have been easy even for a complete amateur. Because it was so small, it had taken the ’bots all this time to find it. It had not been pushed to her, after all.

She telephoned Marge. “I have an Indonesian male, Wijaya, means ‘victorious.’ Patronymic is Setiawan. Thus, Sumatran. And matronymic Padang. Thus, also, a Minangkabau. This group is a center of Islamist reaction. He has been at university for two years. His police record is clean. Driving violation, wrong side of road, forgiven due to recent arrival. Bank account in order, no strange activity. He has traveled a lot. His results at the

university in civil engineering are average.”

“So, why is he on our list?”

“There is an access level on the file. You’ll need to run it by Counter-terrorism.”

“Thank you, Nabila.”

Nabila hung up. For a moment, she rested her head against the edge of the desk. This man was a known terrorist; she was certain of it. That would be what was behind the “no access” part of the file.

She had gone deep, and found gold . . . perhaps.

INSHALLA

On the day that the Americans found the message, the wind boomed in the long tunnels of the old base in Pamir, but down here in the long-abandoned command center the air was always still and cool, smelling of tobacco and people and the cook fires of the women.

Aziz had been designated the receptacle of the hidden Imam, the Mahdi, two years ago. Although Sunni, he had accepted the ancient title, and with it the belief that the Imam had actually entered his body and become him. The brotherhood of Inshalla intended that both Sunni and Shia would accept the Mahdi as savior. They were relying on the Arab love of legend to overcome the antipathy between the sects, and the idea that he had at last come out of his long ages of hiding by entering the body of a believer would inspire them.

Before this, Aziz had been a very Westernized Arab, had shaved himself and kept a closet full of fine English suits in his villa in Peshawar. All this he had given up to follow the law to the letter. The villa was behind him now, to be used only in case of emergency. He'd lived too many places to have a home anymore. The world was his home.

"Oko is up," his assistant said softly.

"Ah." He glanced up from the writing he was doing, a poem to commemorate the coming day, which would be first day of the new world.

October 10 had been chosen because it was the anniversary of the Battle of Tours, which had driven the Children of God from Europe and condemned the poor Europeans to live now for more than a thousand years in misery, separated from God.

Tomorrow, there would be a little moment of suffering among the worst sinners, but then Islam and happiness would come at last.

Emir Abdul Rahman al-Ghafiqi, chosen of God, blessed of name, had seen defeat on October 10, in the year 117 Hirja, the Christian year of 732. Charles Martel—the Hammer—had shattered the emir's faithful soldiers on that day, God have mercy on their souls.

So tomorrow, all these years later, came another October 10, and this time

the victory would go to God.

Inshalla, God's Will, was the name of the organization that was doing this work, of which he was now, as Mahdi, the head. Before Al Qaeda, there had been Inshalla. Al Qaeda had been born out of rage, after the Saudi king brutally murdered people of faith who had entered the Grand Mosque. Their holy mission had been to correct the apostasy of the king's stooge of an imam.

Inshalla had been created in an apartment in Brooklyn in 1981, long before the present troubles had begun. It had been created not in reaction to a crime but out of the simple joy that comes from being close to God and the desire that this joy creates in the heart to bring it to others.

Even though Inshalla was a small group, for further security it was divided into cells of no more than four. Although it was unknown to most intelligence services, it was one of the most powerful entities on earth, behind only the Western nuclear powers, in terms of its weaponry. It also had two gigantic advantages over them, which Aziz believed would enable it to rule the world. First, it was invisible. Second, its nuclear weapons were already sited in their target countries and could be detonated quickly.

Even as the fires of Islam resurgent rose all over the world, Inshalla had remained hidden, doing its patient work. They moved small things—a bolt here, a casing there, a bit of radioactive material to another place. It was all in the good cause of freeing mankind to taste the joy of Šarī'ah and indulge in the sweetness of Islam.

Now all preparations were done. When it had been founded, Aziz had been twenty years old. Now, at forty, he had been named Mahdi, not because he was of the Ahul al-Bayt, the House of Mohammed, in blood, but because, he had been assured, he was of the house in piety. However, everyone knew perfectly well that this was not true. God forgive him, he was a worldly man. He wanted to believe that he had been chosen by Allah's mysterious hand, but Aziz thought there were other reasons. First, he was rich and could afford to keep everybody in this place supplied. Also, he was not important to the brotherhood. He was not a member of the council. In all truth, his death would be no loss. The title of Mahdi would then be passed to some other equally expendable man.

Eshan reminded him, "Oko is up." Eshan, faithful clerk, Inshalla's eyes and ears.

Aziz sighed. He was watched, always. He turned on the shortwave radio,

tuned to the correct frequency, and listened to the numbers. Oko was a Russian number station broadcasting to the Kremlin's spies in China, Afghanistan, and Japan.

From Inshalla's contacts in Russia they had acquired the one-time letter pads necessary to decode the Oko ciphers. Because each cipher was used only once, breaking the code was essentially impossible. But the use of the system was difficult, especially because the same set of numbers meant different things on different pads, and the Russians were not aware that anybody was piggybacking messages onto their system.

The result of this was that decoded messages were often ambiguous and subject to interpretation. As he was the only person outside of the council who knew the whole structure of the plan, he was generally also the only one who could resolve these ambiguities.

As he worked, Eshan copied the numbers coming from the station, handing another tissue to him whenever he was ready for a new page.

A fly came and went, buzzing into his luncheon dish. He let it feast on his *palaw*.

Here in the Pamir Panhandle, the Russians had dug deep enough to defeat the American missiles of the day, and they had built to last. They had never expected that they would lose this base. How could they lose? They were the Soviet Union. The mujahideen were the mujahideen, ragged, reeking, and armed with little more than Chinese-made Kalashnikovs that would melt after a few rounds. Nobody with weapons you could bend across your knee was going to beat the Red Army. Unless, of course, they were also armed by the United States, which provided weapons that did not break, most certainly not. Terrible weapons, the Americans made. They were a clever people.

The Russian intention in Pamir had been to construct missile installations that could threaten China and, potentially, other Asian states and deepen Russia's relations with India by giving the Indians some tangible support . . . and also something to think about, should they become too interested in turning toward America.

There was space for fifty large missiles in the tunnels, as well as control facilities and personnel housing. Immediately after 9/11, Osama bin Laden had used them—to hide not from the Americans but from the far more dangerous Afghans, both the Taliban, who wanted more money to leave him alone than he could raise, and the Northern Alliance, who wanted to collect the American reward that was on his head.

Aziz said to his clerk, "It is done," and Eshan withdrew. Aziz put the thin tissue of the one-time pad into his rice and ate it, then burned his thicker worksheet in the little brazier that kept his food warm.

He listened to the number station droning on, moving agents, he supposed, issuing requests for information, whatever else the nursemaids of spies did. His part of it had come today for four minutes between 1306 and 1310. Tomorrow, there would be a general call at 0600, which would tell him when later to listen for his messages.

Now tea was being served by the Persian boy who had been left here to be Aziz's student. The boy's father was a powerful Iranian politician, a man of the holiest aspirations. Aziz, in his new role as Mahdi, had said on first seeing the boy's deep, soft eyes and the glow of his smooth skin, "His name is Wasim, the handsome." And so it was.

This place was ten meters below the surface, under steel-reinforced concrete. There were no telephones allowed here, no radio transmitters of any kind. Al Qaeda had learned an almost fatal lesson in the months after God's glorious gift on September 11, 2001, when it was discovered that even the briefest transmission would immediately be detected and tracked by the Americans. Lives had been squandered, because it had been so hard to believe that they could do this. But it was true: after a call or even a burst transmission on the radio, the cruise missiles would come, or the planes, the monstrous planes full of Crusader lackeys and carrying bombs that could dig deep and tear men to pieces.

But Inshalla had endured, and had never been identified. Al Qaeda had been forced into the backs of caves and mountain fastness. Eight out of ten of them had died. That many. But Inshalla had not been so much as scratched. Always, they had been able to continue the great work, assembling, gram by radioactive gram, the triumph of God.

Aziz had read the report of the Crusaders: "It is now believed with confidence that Al Qaeda has been reduced to a small headquarters and a few scattered sympathizers who have no contact with central command. This command unit is in North Africa, and is itself dispersed. The individuals involved, bin Laden and four associates, rarely meet, and move each night from one house to the next."

Only the Russians knew of the existence of Inshalla, and then only a bit, and not the true name. They were a mercenary people, the Russians, always willing to trade what they did not want for what they did not deserve. So they

were willing to sell bits and pieces, no single one of which revealed the truth of what was actually being acquired. The plutonium had gone out from so many different places and in such small quantities that it looked like loss, not theft. The same with the parts.

Finally, the complex sequence that would lead, at last, to the imposition of true happiness across the world was in place. This small, invisible nation, this joyousness, this God's Will, like the United States, like Britain and India and Russia and Israel and the apostate country Pakistan, was an atomic power. It had the weapons, and it had the means of delivery.

This made Aziz, as Mahdi, a great world leader . . . and yet his existence, let alone his name, was known only to perhaps a hundred people.

Sometimes he had the urge to tell others who he was, that the most pious men on earth, the truest friends of God, had declared him Mahdi. But as he now was hidden by the cleverness of Allah himself, the temptation of the old Aziz to indulge in his braggart ways had always to be overcome.

Mohammed had said, "During the end of days, my beloveds will suffer great calamities and torment from their kings. Persecution will engulf them. The people of God will be tortured and suffer injustice. God will raise from my progeny a man who will establish his peace on earth and justice for the faithful."

This headquarters had both radio receivers and a reliable means of sending messages, if an old one. Aziz's messages out went by camel or mule, not by electronic means. Only idiots would use mules, the Crusaders would think, even in this place, where they had been used since before the time of Iskander. So their animals were laughed at. And as far as his men were concerned, what proud NATO officer would think a rag-head could accomplish anything, one of the stupid rag-heads who carried orders all the way from this place down to Peshawar, orders that were not written but woven into the hems of the *chapans* that the rag-heads wore on their foolish backs?

The Crusaders wore steel helmets and were encased in armor. These arrogant ones treasured life more than they treasured God. Their white faces were burned by the sun, their voices quick in the way of Western languages, chopping out their brute words.

Aziz spoke Arabic and Dari and Persian, all ancient languages full of history and nuance, languages of the deep mind. He and the men and women who were here read only the song of God, the Holy Quran. None of them

ever ventured to the surface of the old installation. Nothing crossed there but dust, not by night or day.

The other benefactor of this place, the Persian Sayyad, whose son now served Aziz under his new name of Wasim, purchased their stores for them in a hundred villages in Khyber, in Malakand, in Kohat. From here came gourds, from there potatoes, from another place rutabagas. Water came from the wells within the fortress, dug by Russian engineers to provide for a force of a thousand men.

Only after the Crusaders came here in 2006 and mined the place and blew down the entrances with artillery shells had Inshalla ventured to occupy it. The Crusaders would not carry their own mines into the deep tunnels. Too dangerous for these precious sons of Europe and America. But rag-heads were another matter, so rag-heads had done the dangerous work. Rag-heads could lose their limbs or be killed. That was delightful to the Crusaders.

However, these workers, in the pay of the Crusaders but loyal only to Allah, had kept careful records. So each mine they had laid was now marked by a small fence, to keep the beloved of God from being injured.

Aziz preferred his tea sweet, and there was sugar enough for it today, for which he was glad.

He still indulged himself, but only a little—a bit of sugar here, some music there. He had no need to use the gadgets of the West, the GPS devices and iPods, the glittering cell phones, the CD players and televisions. None of them had need of these things. What they did need was the food of Islam, the food of prayer. They could live forever on prayer, he thought. They were that far from the material world. Although, of course, he did miss his iPod.

Now, though, he only listened to the radio station Burak Mardan, FM 104. And, at the moment, there was a song of Abu Shaar Thayir. Then came Hadiqua, singing of lost love.

“You enjoy Hadiqua,” he said to the young Wasim, who lingered nearby, waiting to take away the tea things.

“I thought I was here as a student. But you are not a teacher.”

“I am the Mahdi. Watch my life. My life is your teacher.”

“You don’t really know the Quran.”

“I love the Quran.”

“You teach me nothing.”

“Do you fear me?”

“I fear only God, *the* God, the one God.”

The Mahdi nodded. “See, you have been taught. That is a lesson important to learn.” He would not ask of the boy whether he was Sunni or Shia? Aziz knew that Wasim was Sunni. This eternal war between the Sunni and the Shia was certain to become history in a few weeks.

Aziz did keep one Western bangle, a watch, and he glanced at it now. Just after eleven, the Duhur Salat. In the Pacific time zone, just after 2100. The time was not far, now. Not far.

He motioned to Wasim, who at once brought him pitcher and towel. He performed *wadu*. “O you who believe, when you rise for prayer, wash your faces and your hands up to the elbows and lightly rub your heads and your feet up to the ankles.”

The boy also.

Then they turned to Mecca and performed the *salat* in the silence demanded of the noon prayer. How Aziz’s heart filled with love now as he began Al-Fatiha: *In the name of God the merciful and compassionate, praise to God the Lord of the Universe, master of the day of judgment. Thee alone we so worship; thee alone we turn to for help.* And then he drew himself deep into his heart, for he was a leader of men, hiding here in the kind earth, and needed God’s help always, could do nothing without it. *Show us the straight path,* he said in his mind, in his soul. *Show us the path of those whom you have guided to Islam, not the path of those who earn your anger or go astray.*

Over a thousand years since Charles the Hammer had led the children of Europe—God’s beloved children also—astray, Aziz was going to bring them at last into Islam. Now they held drunken sway, protected by their tanks and their knights. They were eating the world, gobbling its gold and its oil and its precious water, spitting out bangles and baubles and sweets, and suffering meaningless desires and fornicating, then drowning it all in a soul-rotting slurry of alcohol and drugs. He’d had a blue Mercedes CLS in Peshawar, and the women who had come to him—what a life!

No, to be forgotten. He turned his mind back to the Crusaders. Filthy! Curse that CLS and the temptations it brought!

He felt something on his neck, and knew, then, that it was the boy’s hand. Wasim had laid a kindly hand on Aziz’s neck. He felt the light child’s touch, and the heart of the child also.

Wasim held him, then looked at his face. Solemnly Wasim lifted a corner of his thin coat and wiped Aziz’s cheeks, drying the tears that he had known would be there, that were always there after prayer.

Aziz smiled. "May Allah be with you, Wasim," he said.

The boy muttered something.

"What is it you say, Wasim?"

"That's not my name!"

The boy went away then, to the far side of the room. He worked a moment, then returned with a pomegranate sliced on a little tray.

Aziz took the food, and ate. "I have a message," he said. He had thought long on this message. It must be one of two randomly chosen words, "purple" or "green."

He would try now to find God in his mind. Would he see a horseman, a wandering beggar, an eagle rising in dawn light? There were many images of God in his mind, secret, impious things that had been there since he was a small boy and first praying and then wondering how this God who so dominated their lives must appear.

When he had said, "God is an eagle in dawn light," his father had given him a shaking. When he had asked his father, "Is God like a horseman on a fine mare?" his father had slapped him and said, "God would not ride a mare." He had asked his father later if God was like a beggar on the road, and his father had gone to the kitchen and returned to their schoolroom with a broom, and beaten his back with its long wooden handle.

He had not asked again what God looked like, but the images still danced in his mind when he prayed.

Then he saw God the eagle with his dark wings, God crying rage into the dawn.

"The word is 'purple,' boy. The English word 'purple.' Tell Eshan now."

Wasim hurried from the room.

Aziz felt the Mahdi within him, and the Mahdi's heart seemed to swell with joy. All would be well, now. Happiness was at hand.

ESCALATION

Jim Deutsch's world had ended. He'd been in plenty of trouble in his life, but not like this. No matter how bad it had gotten—running from one bunch of semi-official thugs into the arms of another, you name it—somebody had always had his back.

No more, not after the fantastic escalation that had taken place at the motel in Carrizo Springs. In that dingy room, his world had collapsed around him. The Brewster Jennings problem was one issue that he was aware of but was obviously not the end of the compromise of American counterproliferation. The system was deeply penetrated, and at high levels. It had to be.

What had happened had placed him in the worst position an agent could find himself. He dared not expose what he had discovered to the very system that was designed to support him in his work, because he would be revealing it to the enemy.

So he had continued on his own, and now an exhausted, scared man moved through the Colorado Springs Greyhound station listening to his Geiger counter tick over and trying desperately to guess where they would have taken the plutonium from here.

He needed the WMD interdiction infrastructure; he needed satellite lookdowns and the support of CIA analysts; he needed the FBI's investigatory skills and powers; he needed the local and state police and the entire national enforcement and detection apparatus.

He'd assumed that the assassination attempt had been a local thing—Kenneally and his buddies trying to protect themselves.

This was why when an FBI arrest team had appeared at the door of Jim's room at the little motel he had known instantly that he was facing a far larger problem than he had imagined—than he could have imagined. Local guys on the take couldn't cut orders that would send the FBI after somebody. That would have to be done from above.

It had been eleven thirty at night when he'd entered the lobby of the little motel and called out, "Excuse me," in the gentled voice of a tired salesman.

The clerk had appeared. Jim had shown his driver's license—a driver's license, not his own—paid his forty dollars in cash, and left the lobby. The whole transaction had taken under five minutes.

Always careful, always overdoing it, he'd parked the old truck some distance from his room and gone through the interior of the motel to reach it. He hadn't used the radio or the television, or even turned on the lights.

He had been in the process of making his emergency call when he had noticed a change in the pattern of light under his door. He'd looked at it. Only one possibility—somebody was out there. He'd thought it might be the clerk, suspicious of so late an arrival. Then Jim had seen the knob move. He'd gone into the bathroom but found it to be windowless. There was a double door that communicated with the next room down the line, and he'd used that. He had no bag with him, no luggage. But he did have some skill with locks.

The mechanism had clicked, but it had not disturbed the snoring, scrofulous drunk in the cigar-choked room Jim had entered. He'd stepped quickly to the exit door, cracked it, and seen a sight that had, quite simply, stunned him almost to paralysis.

There were FBI agents there, four of them, an arrest team.

As he had ducked back out of sight, they had broken down his door. They hadn't been wearing assault gear, just those inevitable business suits of theirs, muscle-packed worsteds, a cut below the sharkskins the Russian FSB cats wore.

He'd stepped into his neighbor's bathroom and stood there for half an hour. Aside from that first crack of the breaking door, there had not been another sound. Given the absence of luggage and the fact that Jim had been in the room no more than five minutes, he allowed himself to hope that they would conclude that they had been misdirected.

High-end tracking was the only way he could have been found. To gain access to the kind of satellite data needed to track somebody, you needed high clearances. You needed power.

The FBI team might have been following orders, just executing a warrant. But who could generate that warrant? Certainly not Arthur Kenneally. Jim had to assume that he was facing an organization of unknown dimensions that was embedded in the American enforcement and intelligence communities.

He'd faced it, he thought, in 2002, when he had first suspected that the U.S. system in the Middle East was compromised. It was big, powerful, and

damned effective. It had not taken them long to get on his tail.

It was the most dangerous penetration of American security in the history of the country, and he couldn't even begin to think how extensive it was, or who was behind it, or where it went. He couldn't afford to worry about it, not now, not yet, not with work like this to do.

Arthur Kenneally's attack had made it clear that the bridges were a problem, but the appearance of the FBI at Jim's door told him that he was right about this bomb. It was real, it was here, and somebody very far up the ladder was protecting it, and God help the American people.

He had waited in what turned out to be the bathroom of a guest called Charles E. Madison, and fortunately the agents had made no effort to extend their search into Mr. Madison's room.

An hour later, Jim had taken Madison's driver's license and a couple of his credit cards, then opened the door and observed a clear hallway.

In the parking lot, Jim had spotted a stakeout car. So he was being advertised internally as a pretty big fish. He wondered what the FBI officers' arrest warrant said. Above all, where it had originated.

He had left the motel by a rear exit. Even though following a man on foot in a city by satellite was damn hard, he did not choose to underestimate the skills of his enemy again, and he walked under trees and along the very nicely turned-out local riverfront, keeping hidden from above as much as possible.

As there was no way for him to tell what was wrong, his professional responsibility was to assume that everything was wrong—which was not far from the truth, given that whoever was pulling the strings could control FBI arrest teams.

Experience had taught him that the only chance of survival under official pressure of any kind was to be very fast indeed, so he had stolen a car he'd found parked in a driveway and driven north on 83 until it hit Interstate 10. Then he'd headed west.

He was now thrust into a situation that was totally new to him. His information was crucial, but how could he communicate it when he no longer trusted the system? Obviously, orders no longer applied. Not only that, he feared that it was only a question of time before they found him again. His car had been almost the only vehicle on 83, and still virtually alone traveling into the dawn on I-10. Someone like Nabby's brother, Rashid, would make quick work of locating Jim.

He had one objective now: stop that bomb. He must take no risks except those that related directly to gaining control over the weapon.

He'd driven hard, ditched the car in Fort Stockton, and taken a bus to El Paso—from which he'd gone from stop to stop along the Greyhound route westward, finally picking up the trail of the bomb in Roswell, New Mexico, in the form of an increase in the clicking of a Geiger counter he'd bought from a hardware store that stocked mining supplies. From Roswell he'd followed it to Colorado Springs, and here the trail had stopped.

He decided that the only person he could now safely inform of his activities would be the president of the United States, but the president was far away and unreachable, hidden behind a wall of officials and guards. Jim's CIA creds—the real ones—might get him as far as the chief of staff, Thomas Logan. Might. But could he get past Logan, a lowly contract employee like him, working outside the chain of command?

He even wondered about the Office of the President. The Plame affair had led back to Lewis Libby, who was just one tier below Tom Logan's level. Jim knew little beyond the press reports, but he had to wonder, now, just how high up this thing went.

A lot of individuals and countries had motive to harm America's ability to track illicit nuclear materials abroad—arms dealers, smugglers, nations, and groups hoping to acquire nuclear weapons.

But this—it was way larger than any of that. The conclusion was hard to escape: somebody was trying to suppress interdiction of an actual bomb in this country, and, incredibly, they could call on the power of the FBI to do their dirty work.

There seemed to be only one choice open to him—move fast and interdict the weapon himself, then find somebody he could trust with his discovery.

The bomb had been removed from a bus's cargo bay here, he was sure, and probably within the last day or so. So, was it still in Colorado Springs? No, they would keep it running toward its target, and now that they knew he was on their trail, they would be doing that as quickly as they could.

They would want to get the bomb in the air, and maybe that's what was happening right now . . . or had already happened. They wouldn't take it near Colorado Springs Muni, too much danger of detection. So they'd fly out of a smaller field. If they were going to hit Denver, he could be seeing a flash on the northern horizon at any second. But there were bigger prizes farther west.

The bus station phone book revealed a general aviation airport outside of

town and a couple of air cargo operations with the same address. Would he find the bomb there? If so, he was liable to end up in one hell of a firefight over its possession—which would be interesting, given that he had no gun.

A lone cab stood on the rank outside the bus station. At this hour, the driver was asleep. Jim approached the vehicle, looking first at the tires. Mismatched, worn. That worked. And the paint was old, the cab scraped and dented. No question this was a real cab, but was that a real driver? He was Mexican, looked about sixty. Peering down, Jim could see that a small billy club protruded from the door bucket. Was that the driver's only weapon?

Jim tapped on the window until the driver opened his eyes.

"Kreist Air Charter," Jim said as he got in. "2121 Burlywood."

The driver started up. As they moved through the empty late-night streets, Jim watched the man's reflection in the rearview mirror. The guy kept to his business, driving efficiently. Jim let his eyes stray to an ad for *Fiddler on the Roof* playing at the Paramount Theater. He didn't do amusement. When he was a kid, he'd enjoyed things like daring onrushing trains to smash him to bits. Down behind the family farm, there was a quarter-mile trestle. When he heard the first blare of the Amtrak diesel's horn, he'd start running ties. It was a near thing, always, and if you didn't make it, you had to climb down the pilings and hold on for dear life as the train highballed past a few feet over your head. It beat everything except sex.

"Know anything about this place?" he asked the driver.

"Don't get much custom. Looks like a dump, far as I can tell."

Their kind of place, then.

As the field was open twenty-four hours, there would likely be somebody on duty in the FBO.

The cabbie pulled up to the front, stopped.

"I'll be a few minutes," Jim said. He didn't want to lose the cab.

"How many minutes?"

"Give it fifteen."

He pushed the worn glass door of the FBO open and went into the lobby. There were a couple of black sofas, some old magazines, and one of those vending machines that sold dead sandwiches. A guy with a white ghost of a beard and deep, vague eyes sat behind a counter fingering his way along the lines of a Bible.

"Excuse me."

He almost threw the Bible into the ceiling. Then he unfolded himself. Six

feet two of angles and elbows, a laugh like an engine dying. “Well, hell, I thought you were a ghost.” He looked Jim up and down, his face registering curiosity, then confusion. Then the eyes glanced away. He’d grown suspicious of this past-midnight stranger. “Got nothin’ due in, mister,” he said, “and nobody’s goin’ out until tomorrow. No plans on file, and it’s too late to put in a new one.”

“Nobody’s ready to fly?”

“Not a soul. And nobody’s prepping. It’s just me and the cat. We got a airport cat.”

Three possibilities: He was early. He was late. The bomb was not being moved through this airport. “Any traffic out of here earlier?”

“Tonight? We had a couple of landings. No takeoffs.”

“I’d like to take a look around, if you don’t mind.”

“Well, you can sure look around here in the lobby, but not out on the apron or in the hangar. Them new regs. What’re you lookin’ for?”

Jim drew out his DEA identity card. Silently he showed it to the guy.

“Oh, for the love’a—we got nothin’ like that here. No suspicious traffic.”

“I’d like to just walk through the hangar, if you don’t mind.”

“Hell no, I don’t mind. We’re clean as a whistle.” He became confidential: “Lemme tell you, but I guess you guys already know this. Them Mex cartel boys’re goin’ direct in DIA now. Private jets, don’tcha know. Nobody touches them boys.”

“You have many of ’em come through here?”

“Private jets? Sure. Every day. Hunters, you name it, goin’ back in the mountains.” He stepped over to an elderly computer. “You want me to bring up the log? Whatever you want, I’ll do.”

“Well then, I just need two things. First, don’t log my visit.”

“Oh, nossir, I understand. I understand that.”

“Then I’ll need to go out to the hangar on my own.”

“The door’s rolled down, but it’s not locked. Plus, we got twelve tie-downs on the apron. There are two working charters, both of ’em hangared. Resson Air Service has a Cheyenne, shit plane, always givin’ him problems, gonna look at the fuel system in the morning. Kreist has his Baron in for cleanup; he had a passenger do a toss.”

Jim walked out onto the tarmac, in the sharp air of night. The stars always made him think of the truly dark places he had been. Siberia, the taiga, where the forest echoed with the cries of animals and the stars were so bright you

could believe that it was the first night of the world. He looked east across the faint glow of the apron and the runway with its green guide lights. Beyond it was the glow of a back porch light, maybe a house, maybe a convenience store along the road.

He remembered seeing that porch light down in the *brasada*, and knew that he would take the memory of it with him forever, adding it to the moment he'd found the car—strangely, a Buick—that had gotten him out of Russia, and the first time he had known that Nabila was naked in the dark, from the way her breathing became shallow and sharp.

He went into the hangar. Under the dim, high lights were three planes—the Baron, the Cheyenne, and a trim Citation with an opened-wing access. Hydraulics.

He removed his Geiger counter from its small carrying case and turned it on, then waved the paddle around the hangar. *Tick. Ticktick . . . tick.* Nothing. He looked toward the equipment bays, went closer. If the thing had been repackaged, maybe it wouldn't be emitting much radiation anymore. Previously, it had been dropping dust, which was what had enabled him to track it. Now, maybe not.

So maybe they'd show up later. Or maybe they weren't going to Denver at all but moving the bomb farther west. There was one hell of a plum out there, after all. If they hit LA, the radioactive dust clouds would be contained by the mountains and turn into the most poisonous damn smog in history. Nearly half of U.S. import-export went through the LA Long Beach port complex. Plus, people couldn't get out of the LA basin, not when they were all going at once. No, a nuke, even a small one, would turn Los Angeles into hell on earth.

**THE SUN RISES
AT MIDNIGHT**

Jim paused to examine the planes. One of these charter guys could've unwittingly flown the bomb west a couple hundred miles, then come back here, no problem. Could've done it last night.

Jim approached the old Cheyenne. It was one tired airplane, with cracked paint and slick tires and what could be metal fatigue crazing one of the landing gear. This plane was going to take somebody to heaven, and soon.

Again, the faint, empty ticking from the Geiger counter.

Jim did a walk around the Baron, with the same result.

He was so tired now that he was worrying about his ability to notice details and make judgments. He had caught not so much as a catnap since his predawn escape in Texas, and it was past eleven now. He was beyond exhaustion, and it looked like he was coming up against another blank wall here, and it was just so damn dangerous to do this alone.

The Citation and the Baron were both passenger carriers. The Citation could probably lift the bomb as well as a pilot, but the Baron couldn't, so it was out. Unless, of course, this was one of those legendary suitcase nukes. But such things were science fiction. Nuclear materials don't work like that. You might be looking at only a few pounds of plutonium, but the rest of the bomb was going to be a good three or four hundred pounds, possibly more.

The Cheyenne could take a decent payload and it was configured for cargo. It would belong to some air tramp, probably. Guy who might do a fair amount for money.

Jim got up on the wing and unlatched the door. He leaned down into the warmer air in the plane, scented with leather and machine oil.

Tick. Tick.

Shit.

He pulled his head out of the confined space and returned to the FBO. To help him keep his eyes open, the old man had turned on the radio. "Oil prices are going through the roof, the dollar is in free fall, and gold is predicted to

be at fifteen hundred dollars an ounce by year end. . . .”

“Could I see the filed manifest and logs on the cargo guy?”

The old man unfolded himself, got a large logbook, and brought it over to the counter. Jim turned to the section tabbed “Ressman” and looked through it. One flight earlier today, up to DIA to pick up a load of antibiotics and move them to Telluride. Guys like this did a lot of medical supplies, no doubt.

Jim turned the page. Last night, it had been machine tools and chicken to Pahrump, Nevada. “Chicken to the Chicken Ranch,” he muttered.

The old man chuckled. “Ressman didn’t get a lick of it, I don’t think.”

Jim copied down the recipient’s phone number. But where was the 707 area code? In fact, was 707-747-7727 even a phone number? Maybe Boeing?

“I need to make a call.”

The old man pushed a telephone across on a long cord. He dialed. “The number you have called is not a working number. . . .”

The phone number was handwritten, the rest of the manifest typed. This number had been jotted down by a pilot in a hurry, and the numbers of Boeing jets had just slipped into his head.

Jim made a second call, this one to Mr. Ressman’s emergency number, noted on his particulars form.

A ring. Another. “Hey, Barker, whassa matter?”

“This is not Mr. Barker. I am Agent Edward Ford, Mr. Ressman. I need to talk to you about a load you moved last night.”

“I knew it! Damn it, I *knew* it!”

“You knew what?”

“It was drugs; damn it, I shoulda cracked that damn crate!”

“You had evidence to suggest you weren’t carrying a properly manifested load?”

“Officer, I had no such evidence. Which is why I carried it. Goddamn it, stay right there. I’m just across the highway, I’ll be right over.”

In a normal situation, Jim would have had Ressman controlled immediately. Because this was a national security emergency, he would have been taken to a safe house for interrogation, and no lawyers need apply. Not tonight, though. Jim needed help immediately, and this man, he felt sure, was able to provide it.

He went outside and watched, and soon lights were coming along the road, then turning into the airport’s drive. He paid off his cabbie and let him go.

Jim would be a while with Ressman; he knew that.

A man in a soiled mechanics coverall got out of a tiny rental car and strode up to Jim. “Todd Ressman,” he said, putting out a big hand.

Jim took his hand, shook it. “Mr. Ressman, tell me about the load with the manifest error.”

“I’m fucked. Goddamn it, I am fucked! Look, I’m not into any illegal activity, and there was no reason to doubt the load. It was—”

Jim still wasn’t sure what he was dealing with here. The plane had shown no evidence of a radiation signature. Maybe it had indeed been a load of chickens, or, more likely, coke. “What made you think you might be carrying drugs?”

“Nothing. Nothing at all. It all seemed completely normal. Just a guy left a phone number off the manifest, and I was looking at weather on the way and —”

“Where did you take the load?”

“I left it in the cargo cage in a little airport in Nevada.”

“Mr. Ressman, you are going to take me to this airport.”

“I—”

“Let’s go; we need to be in the air right now.”

“Uh . . . I—”

“I’ll pay for your fuel used at the end of the trip. If you don’t cooperate, you’re going to go down right here, right now.”

How far down, Mr. Ressman could not begin to imagine, but it looked bad for him. This man was facing life in a supermax if the bomb didn’t detonate. If it did, he was headed for the needle.

“Going down?”

“You filed a counterfeit cargo manifest, Mr. Ressman. If the cargo was illegal, then you are going to need a lawyer. As it is, you’re facing a significant fine. So I expect your full cooperation.”

Ressman strode into the FBO. “I’m taking a passenger to Pahrump, Nevada,” he told the operator. “File it for us, please. I’m gonna go over at ten on heavy mixture, full cruise. Got that?”

“Got it.”

As they entered the hangar, the operator pushed the big doors open.

Jim settled into his seat, watching the plane come to life as Ressman threw switches. In minutes the engines were roaring and the plane was rolling out toward the night. “How long?”

“At full power, a couple of hours.”

“Fast as you can.”

The old plane clattered down the runway, then seemed to leap off and just slide into the air. She didn't look like much, but she wanted to fly. At least, as long as the engines kept running and the tail didn't fall off, or a wing.

“We've got seven hundred miles to cover, and I'm good for three hundred and eight miles an hour,” Ressman said. “There's a headwind, so I think we're looking at about two-seventy. That's gonna get us in just past midnight, Pacific time.”

“Just don't blow the damn thing up.”

“Oh, she'll make it. She's too mean an old cuss to quit.”

Which is what they all said before they went in. Jim closed his eyes. Pahrump. The airport had to be tiny, without a doubt completely unguarded, probably totally abandoned after dark. You could fly out of there and stay under FAA radars all the way into the LA basin. Then you just pulled up to about three thousand feet, and the rest was going to be history.

“You want to set that radio on the NOAA emergency channel for me, please?”

Ressman set the radio. Jim saw Ressman's eye shift in his direction, then return to his work. Ressman's mind was probably a hive of questions right about now. What would NOAA Emergency have to do with a drug bust? Why was it so urgent they chase down the cargo right this instant, instead of, for example, bringing in the feds in Las Vegas?

Well, let him be suspicious. He'd learn nothing, not from Jim Deutsch.

The plane bounded along as it crossed the silent Rockies, invisible in the darkness below. They were probably far too close to the peaks for comfort, so Jim was just as glad that the instrument lights, dim as they were, still made it almost impossible to see out. He'd flown one too many missions over trackless mountains in dog-tired planes. His number had to have been up a long time ago.

For what seemed like hours, the plane bucked and pitched.

“Lotta turbulence,” Jim commented.

“Mountains make the air restless at night.”

On and on it went, the pitching, the wallowing—until, suddenly, everything changed. Now, a sense of stillness settled in, as if the plane weren't moving at all. So they were over the desert at last. Here and there below, Jim could make out a faint light. He'd always wondered what kind of

lives unfolded in places that lonely, in a country like this. In Iran or Afghanistan, he knew, the lives were terrible. But here you probably had satellite television, some kind of ranching to do, farming, maybe, if there was water. A peaceful life.

He squirmed in his seat. The bomb had now been at large for at least three days, maybe four. He watched his own reflection in the window. Tired man, eyes shadowed with fear.

As a child, he'd always protected the younger kids. He'd been good to his little sister, to Mary the angel, as he now thought of her. Mary. How strange the world was; how odd that death even existed. He forced the thought away, of what it must have been like on the night she died, the party, all the kids, the lights of Cancún. She'd gone swimming drunk at four in the morning. His last relative, Mary. He'd gone halfway across the world to bury her.

Only when the drumming tempo of the engines rose an octave did he realize that he had been napping.

The plane hummed; the night flowed past outside. "How far out are we?"

"Ninety-six miles. Twenty minutes, we're on the ground, assuming I can find the damn ground."

"No lights?"

"You can turn 'em on as you come in. Assuming you've guessed right and you're in range."

He stared into the darkness ahead. Vegas would be at about two o'clock, still below the horizon. LA would be at eleven o'clock, and well below it.

Out the windshield, he could see the cowling of the plane, ahead of it a faint glow, rising steadily as they came closer. "Vegas is out there," he said.

"Yeah. Gonna be pretty, when we pass south."

Then he saw the cowling as if it were lit by the midday sun, a black, nonreflective surface covered with chipped paint. Then the glare faded and winked out.

"Jesus," Resson said, shaking his head. "What in hell was *that*?"

As Jim's eyes recovered, the instrument lights flickered and turned off.

"Shit! Battery!"

Red running lights soon illuminated a cockpit full of dead electronics.

"What the fuck? What was that?" Resson's voice was high.

As Jim's vision returned, it brought with it a depth of anguish that was unlike anything he had ever felt before. This was not grief or shock. It was anger—rage. At whoever had done this stupid, stupid thing, but more at

himself. He should have found a way to make his report. Maybe if he'd just flown to Washington—but no, he didn't see how he could have done it differently, not without compromising security.

The pilot was struggling, the plane wallowing and pitching, barely under control.

Jim had failed as profoundly as a professional in his position could fail. The system had failed, too, but he didn't count that. He was ninety miles from the bomb and the bomb had gone off. That close!

It was deep failure, profound, in-the-bones failure, of the kind that weaves the darkest strands of history and leads to the ruin of nations. He said, "Are you in control of this thing?"

"I've got no instruments and it's dark out there! What happened to my instruments?"

"Can you get me to the closest airport?"

"Las Vegas?"

"There is no Las Vegas."

THE SONG IN THE DESERT

One could say that a man in a certain hotel room picked up a stub pencil and marked the number 2 beside the word “croissant” on a narrow yellow menu, then saw silver light. Or one could say that a girl called Sally Glass feigned a moan of pleasure in the bed of a man whose soul was tired and found that the man’s face splattered her like hot grease. Or one could say that the light that came like a hammer set everything from one end of the Strip to the other on fire and scraped the surfaces off all the buildings and smashed them like crushed hats.

In that moment there were chips being exchanged and sports books in action and Ethel Rhodes in the buffet at the Flamingo walking among the diners saying, “Keno, keno,” with her cards and her entire history from birth to this instant, she who had once caught a twinkling glance from Frankie Laine, and who had a daughter, Crystal, making a good dollar in Nye County.

In that moment, the temperature rose from seventy-three degrees Fahrenheit in the Baccarat Room at the Bellagio to thirty-eight hundred degrees. To those who happened to look up at the instant of death, it appeared as a smooth, glaring surface, silver-white. To those who heard something, it was a sound like a lonely whistle on a late-night street, as gamma rays destroyed their auditory nerves. In the split paroxysm of death, they felt not pain but a perverse euphoria as the atomic particles shot electricity into their pleasure centers.

All became steam, then fire, then vapor, the transformation in under a millisecond.

Did they ascend, or was Jim Deutsch’s view the truth, that we have this life alone?

Still, death in that place was in the details, the sewage that was set afire in the drains, a deck of cards, fused into a brick, that would be found the next morning in the garden of a house in a suburb twelve miles from ground zero, and the head of Linda Petrie from Grand Coteau, Louisiana, the eyes wide, a little sad.

Body parts, whole bodies, shoes, clothing, furniture, sheets, forks and knives, cars, trucks, beds, window frames, groceries, roofing, rugs, dogs and cats, within two miles of ground zero, were swept up and hurled three more miles, dropping—many of them in flames—over the more distant suburbs.

In the desert night, ten minutes ago: Jim Deutsch is ninety-three miles away at an altitude of eight thousand feet. Delta 424 is on final at McCarran, Northwest 908 behind it just rolling into approach. Claire Nester on 424 is waiting for her baby to wake up and howl from the pain in his ears, and she remembers a time just a few weeks ago when there was no Georgie. Her eyes of love regard the man sleeping beside her, her Tom, in amazement and gratitude. *He loves me. He wants me. He loves the baby. Our baby. My son from my belly.*

And then the red light streaming in the windows like sunrise, and the tremendous jerk, and her last thought, *hurts—*

To go from being to nonbeing in a millisecond—is that death?

Is not death details, the laying down of hands, the sliding away of breaths, the light going from the eyes?

There are prayers being said at St. James's Catholic Church. After a long struggle, twenty-four-hour adoration of the Blessed Sacrament is now a reality here, and Mrs. Alfonso DeLaGarza kneels in the chapel. In her left hand, she has a missal open to next Sunday's liturgy. She glances down, and the little book disappears from between her fingers and that is the last thing she knows.

The gray bricks of the building turn to vapor as hot as the surface of the sun.

In Hari Sushi, Joe Manila pretends to be a Japanese sushi master, but he is not like the sushi chefs of Tokyo, who might spend years learning. He has a good knife and a lot of jokes and sees the fish turn black before his eyes, the chunk of tuna, then sees no more.

Fire in splendor.

In Chippendales at the Rio, the France, Texas, Red Hat Club is clapping in unison as "Derek"—actually Harry—Fisher dances and plays with his G-string.

Then there is air there, white air.

The stage on which he stood will be found by an urban archaeologist. It will be part of a larger chunk of fused black glass. In it will be the shadow of a male torso, and some sequins. This discovery will be made in seventy-three

years.

Within half a second of the detonation, the ceiling of Nine Fine Fishermen in New York–New York implodes, and everybody looks up toward the popping sound, and sees it coming at them, a forest of tiny cracks squirting fire.

The plane that brought the fire had bounced along the desert floor, and its pilot had thought that it would not rise. The name of the man who flew it isn't important. He had been born in Indonesia in 1988 and had little experience of life. He had flown to Mexico from Finland under one name, then crossed to California under another, a careful, narrow young man who looked Asian, not Arab, but whose abiding passion was his faith, and who found it fantastic that others, on hearing of Islam, were not inspired to accept this truth.

Outside the Hilton, Eddie Timmons was raising a match to Jenny Hilly's cigarette, wishing she did not smoke, fascinated with her fingers and her lips, and thinking, *She will see me naked; she will know my passion.*

Mort Carmody lost eight thousand dollars on a single throw of the dice, and cursed craps patterning, and the first syllable of the word "bullshit" became his eternity.

As it took off, the little plane had wallowed from the weight that it carried, had fallen back, had struck its landing gear against a fence and caused the pilot to jam the throttle. There had been a moment when the ground raced up. Then had come the rattling sound of brush striking the fuselage, and the desperate kid had closed his eyes and pulled his stick into his gut.

He did not know that he had missed crashing by the width of a child's finger.

So it is that the vastness of history rests in the details. A crewman fails to tighten a screw, the antenna of a reconnaissance plane blows loose, a signal revealing the position of Bull Halsey's carriers fails to reach Admiral Yamamoto, the Japanese lose the Battle of Midway and therefore World War II. On the turn of a single screw. And why? Because the cry of a seagull made a homesick boy dream, for just a moment, of his childhood.

So it is here, on this night. Had another boy drawn the stick into his gut just an eighth of a second more slowly, a city would not have died.

History trembled with the shuddering of that airframe, sighed as the plane rose free and sailed off into the night.

Its course had been carefully calculated. It would approach Las Vegas from north-northwest at an altitude of five hundred feet, not running any lights.

Until the pilot popped the nimble little craft up to nine hundred feet, it would not be detected by FAA radars at McCarran.

Military radars at Nellis did detect it, though, and Airman First Class John William Carr said into a microphone, “Bogey incoming altitude zero four hundred, speed one-thirty knots, proceeding west-southwest toward LV Strip.”

Ahead, the pilot could see his target, which was the Bellagio Hotel.

As he flew over the houses, the roofs, the pools, some lit and some not, he thought not at all of the lives within, not of the children with their toys and night-lights and unlived lives, nor of the happiness that was general in the place, like a song in the desert. He thought of the harlots in the evil towers and the alcoholic drinks that stupefied a man’s moral sense, and of the cruelty of the lies in the gaudy gambling halls, and saw steeples here and there. But his mind clung to his own home, to the sweet tropical evenings, when he had swung in the tamarind tree, and smelled the toasty smoke of his father’s water pipe coming up from below. He thought of the madrassa where he had been taught the Five Pillars and had memorized enough of the Quran to receive an honors. But he did not think of the moonglow that had illuminated Damascus a thousand years ago, in the innocence of Islam, nor of the softness of his mother’s hands. He did not think of Chrissie Powell, who stood now at her sleepless window, and heard the small plane come and pass, and thought it was some high roller coming into McCarran, and envied him the plane and the night.

He leaned out his mixture and increased throttle, then drew the stick back and began to gain altitude.

At Nellis, J. W. Carr instantly recognized this as what it was: this pilot was about to execute an attack in the form of an airburst at altitude. Carr hit the scramble horn, and Captain Michael Waldron leaped to his feet in the ready room, shouted, “Shee-ut,” and ran for the flight line.

The pilot in the small plane watched the Bellagio, tan in its lights, disappear as his nose went up. Dirty people were inside the hotel; he had walked through it and seen the strutting whores, listened to their filthy songs, watched the gamblers in the ringing dens.

All Las Vegas was dirty people in filthy dens. He stared through the windscreen now at the stars. Heaven above, dirty people below. A sacred moment.

Among the dirty people were Bruce and Caitlin Moore, who lived on West

Katie Avenue—and her nickname was Katie; that was funny—who at this moment were making love. Their infant, Tara, slept in the co-sleeper beside them, the immeasurable sleep of the very young. Tara with her dusting of red hair and the infinity of love in her eyes had inspired them to make another child, and pleasure wracked them as a single wriggling spark of Bruce and all that he was found its way into Caitlin's wet folds.

There was laughter, then, and the unnoticed hum of a plane passing low overhead, then disappearing.

Mike Waldron leaped into the cockpit of his F-15. Jimmy and Tuck were already running it up.

In among the folded limbs and warmth of the Moores, the new electricity stopped. Death came to the new person three seconds after life began.

From Nellis Boulevard to Rainbow Boulevard, Las Vegas was now burning. The Bellagio, at ground zero, had been transformed into a heap of lava gushing smoke. The rest of the Strip was an inferno—and, in fact, a firestorm like this had not been seen on earth. Not even Hiroshima and Nagasaki had known such destruction.

This was the most malicious single act in human history. One instant, life. The next, fire.

Most who died from the blast had no awareness. They were alive, then not. Many would remain entirely unrecorded. Some would be left as shadows in the ruins, on walls here and there that remained. Shadows raising their arms, shadows not.

All who had awareness saw the same thing: a sheet of white fire, like a gigantic lightning bolt slamming directly into your face. There was sometimes pain, but mostly not. Death came in the form of details: “my dinner is on fire”; “the slot has a short”; “the curtains are burning”; “my skin is gone”; “my throat, face, eyes, tongue hurts.” Only the first hundredth of a second of death would be recorded. Across the second hundredth of a second, the temperature of the body would rise from ninety-eight degrees to more than two thousand degrees. Destruction that violent carries with it no sensation at all.

Las Vegas is a busy city, busy at night, and there was traffic on all the highways, some leaving, some entering. Vehicles within the blast area were thrown like toys, some of them to altitudes of a hundred feet, their occupants screaming, confused, mostly blinded by the furious light, their eardrums shattered, feeling extreme, incomprehensible lurches, hearing nothing, their

feet jamming their brakes.

From afar, the front wave of the blast appeared to be filled with sparks, each of which was a dying, confused person.

Beyond the blast zone, on all the highways coming into Las Vegas, on Interstate 15, on 95, on 595, there were long lines of stopped cars, and in the roads and on the roadsides, wandering in the fields, stumbling, falling, were the occupants. All who had been facing toward the city had been permanently flash-blinded. Many of them were on fire. Around them and onto them there fell more fire, in the form of burning ceilings, bodies, clothes, carpets, vehicles, sheets and mattresses, chairs, slot machines, tables, telephones, fans, bricks, roller-coaster rails and a train like a great smoking centipede full of strange, insectoid figures: the skeletons of the riders.

Hearing the tremendous noise of the disintegrating city, the blind uttered high, singing wails such as one hears when a forest in Java or Borneo is set alight and the apes catch fire.

They were not human now, not in the intricate depths of this much terror. The blind did not understand why they were blind. They did not understand their pain, did not know why they had been driving one moment and now were wandering in a field or along a roadside, some of them crawling now, feeling along, crying names: “Jenna! Jenna!” “Bill, where are you, Bill?” “God help me! God help me!” Their voices joined to the great roar of the collapsing buildings, the only sound that remained after the cracking blast had died away.

Half the city still lived, the half that had not been vaporized.

Wind blew toward the fire from all directions, setting up a banging of shutters, a hiss of trees, and the wail of eaves. A terrier called Mr. Pip was the first creature to be lifted by this new wind and carried toward the red center. Mr. Pip writhed and yapped, hit a roof and bounced in gravel, then went rolling on, limp and sleek and silent.

The blast-effect cloud rose into the sky, lazy, flickering with internal disruptions, supported by a roiling column of deep red. The flash that had blinded eighteen thousand and the gigantic *crack* that had deafened a hundred thousand more had left the city in darkness. Toward downtown, all that was visible was blackness—a huge, starless darkness shot through with suggestions of flame. All was chaos and surprise. There had been not the slightest warning. One second, one life, the next—this.

Captain Mike Waldron’s neck and left arm and shoulder tumbled through

clear air. His plane, just sixty-three feet into its roll down the runway at Nellis, was burning and exploding, the rest of Mike Waldron stewing in the cockpit.

From out beyond Buffalo Drive and from the direction of Nellis, when you looked toward downtown you would see the shape of the blast-effect cloud, and you might understand that this was an atomic aftermath, that a nuclear bomb, and a substantial one, had been detonated here.

Farther away, fifteen or twenty miles, it was entirely obvious. From here, the cloud was clearly defined, a weltering horror in the light of the moon.

At Nellis, the flight line was on fire. The USAF Warfare Center struggled to get its communications back on track, but the building was burning and would need to be abandoned if fire crews did not come within minutes. They would not come, though, not within minutes or even hours, or at all. They would never come.

Just two emergency vehicles were operating, one with a full crew of six, the other with two. They worked the flight line, foaming burning airplanes. Inside Nellis's hangars, most planes remained intact. The four training missions that had been under way when the detonation took place had all crashed in the desert, victims of failure due to the bomb's electromagnetic pulse, which had destroyed even hardened electronic circuits over a 180-square-mile area centered on the blast, and damaged many more, much farther out, especially those of planes at higher altitudes.

At this hour, there had only been the two commercials incoming to McCarran, and none of the distant fliers were fatally damaged.

Aboard United 221 out of Seattle for Denver, the copilot was slowly recovering his vision. He did not know what he had seen—it had not appeared to be on the ground, though. He had perceived it as a flashbulb going off in his face. It had seemed as if it was inside the cockpit, and his initial reaction had been to declare an emergency.

Seven minutes later, there had been significant buffeting. The plane's radios now crackled with pilot chatter, as everybody tried to figure out what it had been. There was amusement in some voices: "Looks like they've landed," "I'm not reporting any UFO. . . ."

But then, on 221 and American 806 and Alaska 43, silence fell. There was too much light down there. Captain Baker of 221, who had been looking down when the flash took place and had not been affected by it, said into his radio, "Las Vegas is burning."

In the parts of the Las Vegas metropolitan area that had not been destroyed, there were 73,000 private homes on fire and 2,613 businesses. There were 381,000 people with third-degree burns outside of the blast area itself. At that moment, sixteen thousand more of them were actively on fire, frantic beyond words, screaming, staggering down streets or running, torches all.

Inside the blast area, the outright death rate was 87 percent. The unfortunate few who remained alive were for the most part maintenance personnel in basement areas. They were either trapped in absolute darkness, screaming, feeling along the floors of rooms now tangled with broken machinery, or struggling to find their way using flashlights or emergency lighting. Many had received fatal radiation doses. Many were bleeding from cuts, had broken bones, burns, bruises, or were injured in other ways. None would survive.

Not even specialists who had thought carefully about the consequences of an atomic explosion in a modern city had understood what the vast amount of combustible material in such a place would mean.

The Dresden fire in 1945 had dragged people into it from five hundred yards away. But here, even fifteen minutes after the blast, the wind was rising to a howl in the eaves of houses outside of the blast zone, picking up larger and larger objects. Along streets and roads, struggling people, most of them already weak from shock and injuries, began tumbling toward the flames, in the dust, in the chaos.

All communications with the city had ended in an instant. Four thousand, three hundred, and eight telephone calls of various kinds were disconnected. All local radio and TV stations were instantly killed.

However, ham operators in outlying areas—such as Pahrump—were not thrown off the air. A ham, Gene Lerma, was operating his powerful station sixty miles from ground zero when the detonation occurred.

His wife and child were asleep, but Lerma's wife leaped out of bed when she heard the great roar that filled the house, shattering windows and causing curtains and blinds to whip into the rooms. He, in his windowless studio, had been talking to a ham operator at McMurdo Station in the Antarctic when there was a voltage surge that popped Lerma's circuit breakers and the whole building was shaken to its foundations.

"I think we just had an earthquake," he said into the lifeless microphone. Then he was plunged into darkness. A moment later, his generator cut in and

the emergency lights came back. His next thought was for his wife and baby, and Lerma jumped up and ran out of the studio.

His wife said, “What is happening?” She had their still-sleeping little girl in her arms.

“Stay here.” He moved out onto the front porch and down into the stony garden. There were great booms echoing from somewhere and he thought it was the sound of the earthquake spreading through the land. As he turned to go inside, though, he happened to glance in the direction of Las Vegas.

For a moment, he was confused. What was that thing, that great, glowing *thing* just rising above the flat line of the eastern horizon? He stared, trying to understand. Was it smoke? No, it was glowing internally. There were periodic flashes of lightning, too, forks of it dancing across the face of the monster. But it wasn’t a thunderstorm, not so close to the ground.

Then it rose up still higher. It took form. A jolt as if of electricity shot through him from head to toe, because he had just recognized that he was seeing the mushroom cloud of an atomic explosion in the process of forming.

For a moment, he thought, *Dirty bomb*, but as the gigantic cloud billowed into the sky, towering, huge, and so horribly fast, he knew that there was only one thing that could do this. An atomic weapon had been detonated over Vegas.

His baby, his wife—he thought to get them into the RV and head west. But no, that was a mistake; if Vegas had been hit, LA might be a mess, too. Angie came out onto the porch, still with the baby in her arms.

“Go back,” he said, then hurried up to her and put his arm around her waist, and drew her back into the house.

They’d lost windows in the living room and the bedroom. They would need to shelter in the studio. But he didn’t think that fallout would be a problem, because the prevailing winds would carry the cloud east. And any cloud from LA would be funneled out across the desert well south of here.

Their problem was not going to be fallout. It was going to be food and water and security. An atomic war had started, he thought, unless this was a terrorist incident.

He went into the bedroom and dragged the mattress off the bed and into the studio.

“What are you doing?”

He had to tell her. He sat her down and said gently, “There’s been a very large explosion in Vegas—”

“Atomic bomb?”

“I think so.”

“Radiation?”

“Not here, not yet. But we’re going to stay in the studio. The generators have gas for thirty days, so we’re safe enough.”

It was then that he returned to his radio station. He’d lost a number of his electronic systems but not his tough old radios. He powered up and was soon looking at 150 watts output. A few adjustments enabled him to crank it up to the max the station allowed, 300 watts.

He began broadcasting in the 40 meter band and was soon talking to a ham operating out of Salt Lake City. He worked for news station KSL, and when they’d lost all contact with the West Coast he had gone to his nearby apartment and powered up.

Thus it was that an amateur operator made the broadcast that rocked the world: “I am talking to you from a town sixty miles west of Las Vegas. We are looking directly at what can only be described as a mushroom cloud. I cannot prove it, but it is my belief that Las Vegas has sustained a nuclear attack. I repeat, Las Vegas, Nevada, has been hit by an atomic or possibly hydrogen bomb. A large bomb. As I speak, I can see the cloud literally covering the whole western horizon.”

Then he wept.

RETREAT

Seventy-five miles east of Las Vegas, Ressman still struggled with his control problem. He called out over the blare of his engines, “I have to land this thing wherever it happens to be!”

Jim Deutsch said nothing. His misery was so great that he halfway hoped that the bastard would crash and kill them both. All Jim cared about now was getting to a phone. Any damn phone!

Then Ressman made a turn. “I see a light,” he shouted. “I see a light!”

Ahead, Jim saw it, too, the faint but unmistakable outline of a runway.

They came rocking and bouncing in on the strip of the Grand Canyon National Park Airport. Ressman laughed with relief; he threw his head back; he sucked great gulps of air. He said, “What happened to my plane?”

Jim heard him but didn’t bother to explain what the electromagnetic pulse that emanates from an atomic explosion does to electronic circuits. The hell with Ressman and his plane.

The Grand Canyon airport was quiet and dark, with a strong night wind coming in across the desert from the west.

“Is that the moon?” Ressman asked.

Deep in the western sky there was a curious light, a crescent. It was dim purple. “It must be,” Jim said.

“What happened out there?”

Too many years doing what he did had made Jim react automatically to questions with silence. Nabila had hated that about him, because habit had extended it far beyond the necessities of the job.

He could have told Ressman that his greedy stupidity had killed a great American city. He could have slugged the bastard, but he knew that would drop Ressman, and if he dropped this man, he was going to go further; he was going to kill him. His hands itched with the death in them. To be sure he wouldn’t use them, he jammed them into his pockets.

He could not yet see the cloud from here, but the color of that crescent moon told him that it was just below the horizon. They had about four hours

before the prevailing winds brought its deadly radiation over this airport, not to mention all the people living in the region.

He had no iodine pills. He had nothing to save himself or anybody, nothing except his mind and what was in it: the knowledge of what had just happened, of the fact that it had been accomplished because crucial security forces were penetrated.

But the top level didn't know this. The White House would call on every asset the country possessed, and some of those assets were going to be doing the wrong damn job. How deep was the penetration? How much more damage could it do? And worse, the biggest question of all: were there more bombs?

"Get a plane ready," Jim told Ressman.

"Excuse me?"

Jim gestured toward the three light aircraft that were visible on the hangar apron. "Those guys are ready to roll, and they won't have damaged electronics because they were below the horizon."

"What?"

"Find the one with the best range. We're going to take it."

"But—they're locked! I don't have keys."

Jim went to him, took him by the throat. "Be ready to fly in ten minutes."

"It's theft."

"I'm commandeering the aircraft due to the fact that this is a national emergency." He released Ressman. "Do it now."

Jim went to the small, locked waiting area. He sprang the lock with a credit card. Inside, he found a phone. He lifted the receiver. If it didn't work . . . but it did. He dialed CIA Operations in Washington, waited for the computer, and input his personal code. A moment later, a young man's voice said, "May I help you?"

"I have observed an atomic weapon detonate over Las Vegas, Nevada. The time was twenty-four zero one. That is midnight plus one minute local time."

There was a silence. When the voice returned, it belonged to a scared boy. "We don't have that."

One of the many problems the intelligence community had was that its members were now younger than they had ever been. Due to cannibalization from outside employers, and the fast-growing contractor business, the median age of CIA officers had been dropping for years. Thus the young man's crisis experience would be limited.

“I want you to tell me the procedures you will now carry out.”

“This is a drill?”

Jim remained silent. He didn't care how agitated the kid became or what he thought he was involved in, as long as he did his duty correctly.

Jim was not surprised that the CIA didn't have the information yet. One of the things that characterizes extraordinary destruction like this is that it conceals itself inside a circle of ruined communications systems. McCarran Airport would be off-line, probably permanently, Nellis AFB would be in chaos, and the local Homeland Security office would obviously be down. Probably there were no radio transmissions, no phones or cell phones, nothing at all getting out. Hams in outlying areas, maybe.

“A ten- to thirty-megaton atomic explosion has taken place above Las Vegas, Nevada. The probable agent is a plutonium bomb detonated at an altitude of five to seven hundred meters. It has caused extreme damage. The city is nonviable at this time. It is burning.”

“Please confirm your identity.”

Jim went through the classified identity routine. Then he added, “This needs to go upstairs right now, do you understand that, with my identity tagged intact all the way to the White House and the NSC. Do you know how to write up those tags?”

“Sir, I do not.”

Since the 1990s and the various failures that had resulted in the CIA blowing three capture and two assassination opportunities on Osama bin Laden, it had been possible for certain officers in sensitive situations that might require extremely fast response to move information on an expedited basis—that is, if the lines of communication weren't compromised, which this one certainly could be. Jim had to assume that whoever had been able to use the FBI to try to arrest him would also have made sure they had access to communications like this one. What he had to say, though, was beyond the need for secrecy.

“I want you to patch me in to the White House. Can you do that?”

“Yes, Sir. But, Sir, excuse me, shouldn't you be reporting in the chain?”

Now it was time to play his ace, the new card that the disaster had put in his hand. “It could be that the president has only minutes to live unless he takes shelter, so do as you are told and do it now!”

A silence followed. Then clicking, a ring, and a voice: “Security.”

“I need to speak to Tom Logan. It's a matter of critical national urgency.

There is a time problem. I need immediate access.”

“Who’s speaking, please?”

Unbelievable. He contained himself. “I am a CIA officer. My name must be on your monitor.”

“I need to confirm your credentials, Sir.”

He had the chilling thought that he might be talking to a conspirator. They would want to get as close to the president as they could. Nevertheless, he repeated his identifiers. He waited. There was another click.

“Hello?” God, had they hung up? *Don’t do this, for the love of all that’s holy!*

“Logan.”

The chief of staff, and thank you, God. “Mr. Logan, my name is James Deutsch. I am a Clandestine Operations contract officer operating under extreme deep cover within CONUS.”

“Excuse me?”

“Sir, this is the greatest national emergency in U.S. history. Within minutes, you will receive word that Las Vegas, Nevada, has taken a nuclear hit.”

There was a choked sound.

“You need to get POTUS in motion at once, but know this: there has been betrayal, probably for years, probably since Brewster Jennings in 2001. You are aware of that?”

“Of course I’m aware of it! But that’s—it’s solved. That was Ahmad Khan. State was ordered to leak Brewster Jennings to Pakistani intelligence, and Khan used the information so that he could smuggle nukes around Brewster’s operatives. It’s old news. Contained. Done with.”

“Okay, leave it. I know that our problem is in Customs and Borders at least, and I can identify one person of interest. There is also FBI involvement, but they may be acting on information with all good intentions. There must also be traitors, further up the chain of command, close to you guys. Understand that. *Must be.*”

“What are you saying here? Las Vegas—”

“Listen to me, God damn you!”

“All right! All right! It’s three in the morning; I had—I had an embassy staffer . . . uh, here. I have to get POTUS moving?”

“Las Vegas has sustained a gigantic nuclear strike. Largest bomb ever detonated over a city. You must move the president to safety, but you must

know—*are you registering this now?*”

“I am!”

“All right. The bomb was transported in country due to sabotage of the border detection system and a penetration of our security apparatus.”

“How bad? How bad?”

“I have no way of knowing, but they were able to generate an arrest warrant that nearly got me taken out of the picture. It’s up to you guys to figure out who could have done that. Find the warrant and work from there.”

“My God. And you’re saying—what? How serious is this explosion again?”

“Las Vegas is on fire from one end to the other. And, Mr. Logan, *there are probably other bombs.*”

“You have knowledge of this detonation?”

“I’m here, on the scene! I saw the blast!”

“What I need to know is why this happened. Where was our interdiction program?”

Jim could only hope that the man was not actually this stupid. He was in shock and half-asleep and maybe on pills or drunk or whatever. It must take a lot to enable a man in his position to sleep. Jim tried to inject more control into his voice. Sound calm, authoritative. Seconds counted. “Get POTUS in motion. Activate the Emergency Response System. Federalize the National Guard and put it under the Continental Army Command.”

“Who are you, again?”

“My name is James Deutsch, and I am on my way to D.C. because I cannot communicate everything I know over phone lines. Not *any* lines anywhere in the federal system, especially yours.”

“This is the White House!”

“When I get there, I will contact you again and you will conduct me to the president. Do you understand?”

“No.”

“If we are penetrated, there could be hostiles anywhere along the chain of command. I know the DCIA will back me on this. So will the DD. The deputy director knows me by name. Jim Deutsch. Tell the CIA to isolate information flow—oh, shit, I’m overcontrolling. I’m scared, buddy. Obviously, you need to communicate with the director level across the whole security system. Warn them. Tell them that this could have grown out of the Brewster Jennings problem. That’ll get their attention.”

Jim hung up. He leaned his head against the wall of the old-fashioned telephone booth for a moment, and breathed deeply.

He returned to the flight line to find Ressler sitting in an ancient V-tailed Beechcraft Bonanza.

“Let’s fly.”

“I’ve got the guy’s info right here,” Ressler said, “but you need to give him a call. I don’t know where they keep the keys.”

Jim took the pilot’s logbook from Ressler and returned to the little lobby. He dialed the number in the logbook but got an answering machine. “You have reached the home of—” Then a click. A concerned, older voice: “Hello?”

“Mr. Timothy Whitehead?”

“Yes?”

“My name is Agent James Deutsch. I’m calling on a matter of national importance. I am at the Grand Canyon airport with a pilot. I need to use your airplane.”

“What the hell?”

“It’s a national emergency, Mr. Whitehead. An atomic weapon has been detonated over Las Vegas and—”

“*What?*”

“Sir, please listen to me. I am at the airport. I need your plane.” He thought of the old man in Texas, now without a truck, struggling to survive. At least the owner of a plane wasn’t going to be hurting that bad. “I need to know which keys are yours.” There would be a set at the airport, of course.

“They’re on hook twenty-two in the safe. What’s happening? Are we in any danger?”

“Sir, are you in the Grand Canyon area?”

“We’re in Flagstaff.”

Jim made a mental calculation. That was far enough away to survive the worst of the radiation. “Keep your doors and windows closed. Turn on the radio and follow the alerts. You’ll start to hear them in about ten minutes.”

He hung up the phone. The “safe” was not a safe at all but a lockbox. He’d sprung many heavier-duty setups, and doing this one was no more difficult than rolling down a widow.

Perhaps Nabila could help. She was need-to-know on a thing like this. In fact, his guess was that she’d be getting a call-in within fifteen minutes.

He phoned. It rang. Rang again. “Nabila?”

“Jimmy!”

“The news is bad. Las Vegas was just nuked.”

She did not gasp; she did not cry out. In the background, he heard a male voice.

“Get Rashid on, too.”

“Jim?” His voice was tightly controlled.

“Rashid. Hi. Listen. I’m in Nevada. Las Vegas just took a multikiloton nuke. Plutonium, I think about thirty k’s. Three times the size of the Hiroshima bomb.”

Nabila choked out a cry.

“Nabila?”

“I have a warning! I have a warning that Maggie wouldn’t put in the briefer because we couldn’t confirm!”

“What warning?”

“Women in the West must put on the *hijab* or there will be a serious consequence. It was deployed out of Finland a few days ago.”

“Deployed out of Finland but originating in Russia?”

She was silent. They were violating the law, talking like this to each other and on a clear line and with another party with yet a different set of clearances on the call as well.

“Nabila, I have a need to know.”

“But I have no authority.”

“Where in Russia, Nabila?”

Rashid’s voice interrupted. “She asked me for lookdowns in Helsinki, then St. Pete, then—”

“Jim, is there a Russian connection?” Nabila asked.

“Listen to what I’m going to tell you. There is a penetration of U.S. security forces involved and it is extremely serious. Very high level. Obviously, a Russian connection is possible.”

“The Muslims are surrogates, then?” Rashid asked.

“They were, but they’re in control now, because nobody running them would have a motive to actually detonate a nuke like this, least of all Putin. But the internal system that’s protecting them—it’s still in place and it’s active, because they’re trying to kill me. Probably, whoever’s involved inside is doing it to save their own skin, at this point.”

“These terrorists are insane,” Rashid said. “Not all of us are like this. It’s heresy and it’s madness.”

“I know how painful it is for you guys. All the more motive to do what you can to help, am I right?”

“We will do anything!”

“Okay, here’s what I need. I am under threat pressure and I am moving east in a small plane with about a five-hundred-mile range. I’m going to take it down to Phoenix and I need you to wrangle me a jet out of Deer Valley Airport. I need clearances in order by the time I get there.”

“Consider it done!”

“Rashid, *how?*” Nabila asked.

“Nabby, I don’t know, but we will do this!”

“Travel me as someone too important to divert. The deputy director, say. And this is important—make sure the plane moves, even if nobody’s on it.”

“But . . . why?”

“Just do it. Make certain.”

“How can we even get a plane, let alone convince them to fly it with no passenger?” Nabila asked. “It’s all crazy.”

“We will! Now stop; this is enough. Jim, it will be as you say.”

“Thanks, both of you.”

“Rashid—”

“Enough, sister! Jim, it is done.”

He could imagine Nabby’s eyes, the widening at the edges that came when she felt insecure, or when she was being taken to bed. He could almost feel her body against him. When he was under fire or running hard, she would float into his mind like this, what guys called a battlefield angel. He wanted to say that he still loved her, but he feared that he might insult her, and he would certainly offend Rashid.

Rashid said, “Assalmu Alaykum.”

Jim replied, “Ma’a Salama.”

“Ma’a Salama,” Nabila said. Good-bye, in their formal Arab way, a convention full of the fatalism desert life induces.

Jim went to the little Beechcraft. He gazed into the pure air of the late night, staring for a moment back toward the huge flickers, red and orange and pink, that swept the western horizon. He climbed into the seat. “We good to go?”

“Checks out.”

He pulled down his door, made sure it was latched. The field around them was dark and silent. Or was it? Now, he had to assume the worst. Always.

When he spoke, he made sure it was loud enough to be heard from the edge of the apron: “Take me to Deer Valley Airport near Phoenix. Do you know it?”

“I’ve flown in there.”

Ressman started the tiny plane’s engine. It darted down the runway, and rose into the night. For a few moments, Jim let its running lights remain visible; then he told Ressman to cut them. The plane was lost to view.

Jim sat listening to the drumming of the old engine, scanning the meager instruments, watching the altimeter rise. When it reached nine hundred feet he said, “That’s enough.”

Ressman trimmed, throttled back, and dropped the nose. “We got mountains ahead,” he said.

“Not really. I want you to reset the course. We’re not going to Phoenix at all. I’m going down to Piedras Negras. So what I think we need to do here is refuel in Nogales, then take me to P.N. and we’re done.”

His call had been a diversion. He didn’t know who might be listening and he didn’t even know for certain if Nabby and Rashid could be trusted. If by some miracle they actually got an empty plane to fly to Anderson, he might achieve a major misdirection. If not, his pursuers would at least be a little confused for a while.

“I don’t know if I can find Nogales.”

“Out in that desert, it’ll be the only lights.”

“You’re running. Staying below radars.”

“I am running, Mr. Ressman. You got that right.”

When Ressman didn’t respond, Jim allowed himself to close his eyes. If Nabila had understood the silences between his words, a specially cleared jet would take off from Deer Valley in about two hours and head for Washington. It would be empty, except for the pilots, but hopefully nobody would realize that until it landed. He would be far away by then, on a different route and mission entirely.

12

EMERGENCY RESPONSE SYSTEM

Among the first things a president learns is that when his bedside telephone rings after midnight, the news is never good. He threw back the quilt and sat up. He picked up the receiver. “Yes?”

“Sir?”

“Hit me, Logan.”

“We need to get you in motion; a nuke’s gone off in Vegas.”

The world shuddered; the room swayed. He sucked breath, sucked more. His heart started in, bad. His mouth went so dry he could hardly form words. He grabbed the glass of water on the bedside table and drank it down.

“Sir?”

The president of the United States sat on his bed, a phone clutched in his hand, dying and dying, a million deaths. “Oh, God, God, God.”

He was no kid; he had his share of health problems; his heart wasn’t invulnerable. He took deep breaths until the sensation passed. Then another sensation came—that same heart almost broke with sorrow. His administration was ruined. This was the worst disaster in the history of the United States and it was his watch. He had a place in history and it was a hell of a bad one and—“Those poor people! Are we doing what we should? Where’s FEMA? Where’s the Guard? Where’s the National Emergency Response System?”

“We need to move you, Sir.”

“Where’s my wife?”

“She’s in Newfoundland, Sir,” Logan said. “They landed as soon as they got the emergency signal.”

He forced himself to think. This place could go up any second. He could be about to die—God, in seconds! “Okay. Okay. I’m calm. Is the government disbursing?”

“Across the board. The Emergency Response System is active; the whole country’s being warned—”

The president grabbed the remote off the bedside table and jabbed at it. The television turned on. He tuned to CNN.

At first, the screen appeared black. Then there were stars on it. “We’re eight miles west-southwest of the Strip, Charlie,” a voice said. Then more silence. “I don’t know if I can be heard. We’re eight miles west-southwest of the Strip, Charlie. Are we on the air?”

The stars bulged into blurs, then resolved.

Tom Logan came into the room.

“Oh my God,” President William Johnson Fitzgerald said. “God help us all.”

Hundreds and hundreds of fires turned the screen into a weltering orange glow. Buildings, homes, whole neighborhoods, all were burning. There were dark figures visible here and there in nearby streets. And in the center of it, like some sort of monstrous autumn bonfire, the Strip was sending a tower of fire into the sky.

“Sir, we need to get rolling.”

“I hear you. Get me the governor of Nevada.”

“Sir, we’re under imminent threat!”

“Do it!”

Logan made a call. “Governor Searles, please, this is the president calling.” He gave the phone to the president.

“Mike? . . . Look, I want to know what you need. I’m federalizing the Guard, but not there. You keep them. And if you need any military. Any military. Or planes. Nellis—excuse me? . . . Oh, God. Of course Nellis is gone. All right. Look, I’m going to give you my direct line, but I’ve got to get in motion. They’re afraid we could be about to take a hit. Washington.” He gave Logan the phone.

“Sir, I need to tell you something—”

“Talk to him!”

“Oh yes, Governor, it goes without saying. It’s a disaster area. We’ll make certain that all possible fire equipment, Phoenix, Salt Lake, LA—everything that can be deployed—”

The president grabbed Logan’s arm. “Go slow on that. This could be one of many. They might need their own services.”

“We’ll make sure everything’s moving toward you as soon as possible.”

Two Secret Service men had come in with the coat and shoes that were kept ready for a sudden move in the night. The president put the coat on over

his pajamas and put the shoes on and followed them.

Logan said, “Sir, Mr. President—”

From outside, the president heard the helicopter landing. “I don’t want that,” he said. “We’re too vulnerable in that.”

“It’s the protocol we’re using—”

“No. No. We’re going down.” Few people realized just how extensive the tunnel system under Washington actually was. There was not a single embassy without an FBI listening post under it. In fact, the first tunnel had been constructed by L’Enfant during the building of the city. It led from the White House to the Potomac, and was intended as an escape route for the president. During World War II, it had been widened and an electric railroad installed for the use of FDR. Until the advent of presidential helicopter travel in the sixties, it had been the primary escape route. It was why presidential yachts had been so important for so long, and why they had been anchored where they had. Every president from Washington to Kennedy had kept a yacht at the ready.

With the advent of missiles that could reach the city from Siberia in twenty minutes, though, other means had to be found. Thus the current system of moving the president to the National Redoubt by helicopter.

As they hurried down from the residence, the president could see one of the young men speaking into his radio.

At the bottom of the stairs, they were met by an ashen Milton Dean, head of the president’s security detail. “Sir, excuse me, but the tunnels are not safe in this circumstance; you have to understand—”

Among the agreements that a president made was to abide by the orders of his security personnel during times of danger. Was the chopper really safer? Certainly it was fast. They would be in the bunker in twenty minutes.

But that wasn’t enough, and he knew it. “Where’s the Continuity of Government Act?” he asked Logan. The president had introduced it earlier in the year, but it wasn’t a legislative priority.

“Stuck in committee, Sir.”

“Goddamn it.” The act would provide a structure for the governors to reconstruct the federal government, in the event that Washington was destroyed before the federal emergency dispersal program could be enacted. He took a deep breath. *Okay, fella, this is why they elected you. Good in a pinch.* “Where’s Matt?”

“The vice president is moving.”

The president headed out toward the Rose Garden and the waiting helicopter. He stepped into its plush, nearly silent interior, followed by a running Logan. But the Marines closed the door and took off. Their orders were clear: during an imminent peril emergency, move the moment POTUS is aboard.

Because there was only the dispersal program and no continuity act, if a nuclear weapon was detonated in Washington without warning the U.S. government would collapse. Why such an act had not been passed years ago was beyond President Fitzgerald's comprehension. And yet he'd let it get stuck in committee, hadn't he? You didn't like to think about things like that. You didn't want to believe it could really happen—which was your weakness, the enemy's strength. As things stood, the government had to survive or the country was ruined.

"Get this thing moving," he shouted into the intercom. "Flat out, boys!"

He closed his eyes. At least Linda and Polly and Dan were all right, for the moment. But God help the American people. And . . . oh, God, Las Vegas. "Damn those bastards; *damn them!*" Fitzgerald would not stoop to hating all Muslims. No, not this president. But he was tempted, because there was an incredible weapon being constructed that he could potentially use to entirely change the face of human society. Dream Angel offered him that much power. To order it activated, though . . . it would be the most monstrous, most terrible thing ever undertaken by any human power. What was worse, it was still unfinished. Parts of it were just theoretical. More terrifyingly, nobody really knew what it would do—except for the fact that it would kill millions.

He was going to be asked to make the decision about whether or not to attempt Dream Angel. If he lived. "Where are we?"

"Eight miles out."

"Put on the goddamn gas!"

A WORLD AT BAY

It was now one ten in the morning in Las Vegas, four ten in Washington, and eleven ten in England. A benign sun shone on the spires of London and the new skyscrapers that increasingly defined the skyline, and flashed against the wings of the pigeons wheeling above Trafalgar Square. In Regent's Park, the roses were lingering in the long, warm autumn, and Queen Mary's Garden was filled with noonish strollers. One by one, they took out their cell phones and one and then another stopped and concentrated on what their friends were telling them. Then they noticed bells beginning to ring, everywhere, bells.

In seventeen languages around the world, the BBC's announcers read the same main story: "Bulletin from America: The U.S. city of Las Vegas, Nevada, has sustained a large explosion and has fallen out of communication. There are reports of extensive damage and fires in outlying areas. Area witnesses report a blinding flash followed by a series of severe explosive shocks. A fiery cloud hangs over the city at this time. Many are believed dead, and there has been much property damage. Owing to the darkness there, a full assessment of the damage, and an official announcement about the nature of the explosion, will not be forthcoming until the predawn light in approximately an hour and a half."

Radio 4 went back to the reading of the letters of Sir Arthur Conan Doyle to his mother, Mary Doyle, and the prime minister, who was watching a live video feed from Las Vegas being provided him by MI6, became sick in the toilet of his office at 10 Downing Street. Then his security personnel came and soon he, also, was in motion. Like the United States and every other Western country at risk of nuclear terrorism, the United Kingdom lacked a definite continuity-of-government process. If London was destroyed this moment, the British people would not only be without a government; they would also be without the slightest means to reconstruct one.

In Dharmasala, India, Tenzin Gyatso, the Fourteenth Dalai Lama, considered the dark event. He made an unprecedented decision to telephone

His Holiness the Pope, who came to the instrument from his luncheon. The Dalai Lama stepped into his small garden, where the sun was setting over the wide-leafed trees. The pope listened with shock and concern to the old man. He did not consider that there was any doctrinal validity to the Dalai Lama's beliefs, but the pope certainly respected the man's sincerity. As the pope listened to the description of the catastrophe, he knew precisely why this other religious leader had called him. This was the beginning of an attack on religion; that was clear. And, more specifically, an attack on Christianity.

The pope next telephoned the prime minister of Italy and asked that he send troops to seal off the Vatican immediately. Then the pope ordered the Swiss Guards into action, and they began moving through St. Peter's and the Sistine, quietly but persistently directing the tourists to leave. In the crypt beneath the great church, other men moved among the tombs with powerful flashlights, finding here and there lovers, and once a priest on some nameless mission, who hurried away. Along with the interlopers, the tourists at the tomb of Saint Peter were returned to the surface.

In Paris, police surrounded important public buildings and the Louvre, the Eiffel Tower, and the Musée d'Orsay were closed, as were the Uffizi in Florence and the Prado in Madrid. All European governments made similarly frantic efforts to escape their capitals, and all faced the same danger—total lack of continuity in the event of sudden catastrophe.

The United States, Canada, the European Union, Mexico, Japan, India, Saudi Arabia, China, Russia, and many other countries grounded all flights immediately. Most countries issued grounding directives, but many did not have sufficient control over their own airspace for this to be effective. Flights over most of Africa and various Asian countries continued, at least until planes made scheduled landings. All flights incoming to the United States, the European Union, and Canada were either turned back or landed under fighter escort.

The news reached the Middle East at approximately ten thirty in the morning local time, when Al Jazeera carried a grim bulletin: "The U.S. city of Las Vegas is in flames after the detonation of a nuclear bomb. There is no communication with the city, but news helicopters just arriving on the scene report that the entire metropolis is burning. The famous gambling strip is no more."

For a few moments, the channel went back to its regularly scheduled program, *The Fabulous Picture Show*, featuring an interview with Sudanese

film director Lina Makboul about her latest project, called *Water*. A moment later, the channel returned to the news and the same feed of the city burning, now in the pink light of the predawn, that was being broadcast worldwide.

Cairo, Baghdad, New Delhi, Rawalpindi, Kabul, Tehran, Tel Aviv, Jerusalem—all the great cities of the Middle East—simply stopped. Cars stopped in the streets; people stopped on the sidewalks.

As soon as it had received the alert from Mossad, the Israeli government had put its military on immediate alert. Across Jerusalem, across Tel Aviv, in the streets of London, of Paris, of Berlin, of New York, of Houston, of Mexico City, a great silence descended. But that was not true in Cairo, it was not true in Tehran, in Riyadh, in Damascus, in Gaza, where people rushed cheering into the streets, leaping, dancing, and soon the news crews were there, too, taping the sweating men, the dark rush of women.

After ten minutes of this in Cairo, the Egyptian government, desperate not to offend the Americans, sounded the air-raid sirens, with the result being panic and confusion, then a stampede to evacuate the city. In Iran, a frantic military went into defensive posture but was careful not to put more than a few aircraft in the air. President Ahmadinejad issued an announcement on state television that any attempt to attack Iran would be met with “fierce resistance.” Immediately thereafter, along with the rest of the government, he left for a mountain retreat north of Tehran. Privately, he was furious. Who had done this? He sent a message of condolence to the U.S. president, assuring the Americans that Tehran was not responsible. But would they believe it?

Similar messages were sent by Syria, Pakistan, Sudan, North Korea, and every other country that worried that it might be held responsible.

In the Pamir Panhandle in Afghanistan, a clear, quiet noontime arrived and people took their lunches of olives and cheese, of lamb and tomatoes, eating quietly in the profound silence of the place, while the grasses bowed in the noon wind and a truck passed on the road, its gears grinding as it began working its way up a hill.

In London and Paris, New York and Los Angeles, and most especially in Washington, it crossed many a mind that they might be in trouble, too, and quietly, in twos and threes, in family groups, among friends, they got in their cars or on trains, or on planes or busses, and left, and the roads at first whispered with their passage, then hummed, then roared, and finally the highways thundered and the terminals howled with terrified hordes, and the

employees left and the security officers, and riots spread through shattered streets, and children fell first.

As the sun rose over Las Vegas, a sight never seen before presented itself, for Hiroshima and Nagasaki had been lightly constructed, while Las Vegas was huge and complicated and packed with the complex wealth of material objects that defined the modern world—and people, of course, such a vastness of human detail.

The great cloud that was moving east with the prevailing winds turned rose red on its western flank, black in the east, for no light could pass through its density. Its leading edge was filled with glittering dots that appeared from afar like sequins or snowflakes. Some of them probably were sequins from Cirque du Soleil or one of the more traditional floor shows, but the cloud had lifted brassieres, glasses, seat cushions, chair legs, legs, hands, heads with dead eyes, bits of cars, sheet music, CDs, DVDs, watches, some on arms and some not, toilet paper in grand streamers, jewels driven to an altitude of thirty thousand feet and dropped in the endless sky, and all of this came with the fallout, dropping in gardens, on roofs, on speeding cars, on the runners and the dead alike, festooning trees with plastic toys and skirts and diapers and meat, diaries, stuffed animals in bits, wallets, money, chips like rain, some of them covered with ice and become hail.

So it is: when a giant place is exploded the center of it is vaporized, but then the blast sweeps out, snatching all and tearing all from its moorings, spreading tornadic, unexpected chaos far and wide. For the first time humankind knew the truth that had occupied the sweated nights of two generations of statesmen and generals: what a modern atomic bomb does, even one of moderate size, is even more unimaginably ghastly than the public has been allowed to know.

Terror rode on the shoulders of the world.

THE FIVE PILLARS OF ISLAM

Nabila was at her home workstation trying to find anything, anything at all that might help, all the while imagining Jim out there in the night, imagining his peril, when the phone rang. She snatched it up. It was Operations, telling her that the deputy director had not appeared at Deer Valley Airport.

She forced her heart down out of her throat. “Move the plane anyway,” she said, obedient to Jim’s instructions.

Had she just lost the husband whose love she had so unexpectedly rediscovered on this terrible night? She might never know.

She wanted coffee and, even more, a cigarette, but no more of that. But the fragrance was so comforting, the tobacco scent of memory.

She found Rashid standing silently in the kitchen, staring at the television that stood on the counter. She could not offer him the comfort she had given him when he was little and afraid. She held her own tears in, her anguish—no, despair—for her husband, her life, her poor, misconstrued faith, and the people who were suffering and dying now in Nevada.

“I feel so responsible,” she whispered. “If only we’d been better!”

He turned to face her. “We must respect God’s will.”

“This isn’t God’s will. Evil is *never* God’s will!”

“All is God’s will.”

She stopped her angry reply in her throat. This was no time for a religious argument. Like him, she’d read every word of the Quran. But she had approached it with a Western eye to the text, and had come to believe that Mohammed alone had not written the whole book. The reason was that the writing style changed so much. She saw that there were three Qurans. One of them soared above the mind of man, another was practical and wise in the way God must be wise, and a third, very different document was about brutality and power and the ruin of all who did not embrace the faith. She thought that the Muslims needed to reform their approach to the Book. As the

Christians had gradually abandoned Deuteronomy 13, with its admonition to kill all nonbelievers, the Muslims must accept that the violent suras were a corruption inserted by human beings and not the word of God.

The clock on the stove ticked its frantic ticking. Outside the open window, the lower branches of the oak stirred with a predawn breeze. How was it, when she looked back across her life in the Company, that it always seemed to be night? The sky was deep blue, dawn just visible now at the top of the window.

She and Rashid were both waiting for their pagers. All across the planet, military and intelligence operations were going into action, as the vast, immensely complex protective infrastructure of the world raced to crisis mode.

Certain countries, she knew, would be preparing for the worst: Iran would fear attack, and Syria. North Korea would not, because they had dismantled their nuclear program in 2007. But, of course, everyone in the community suspected that they had actually sold the highly enriched uranium that they had produced, probably to Hezbollah. In fact, the nuclear material that the Israelis had destroyed in Syria in 2007 was believed to have come from North Korea. Damascus hadn't protested the incursion because the central government had not known that the shipment of highly enriched uranium was even present in the country. It did, know, however, that the detonation of a nuclear weapon in Israel would not only decimate the Jewish population, it would kill millions of Palestinians, too, and lead to the immediate destruction of Damascus.

Had the North Koreans been somehow responsible for what had just happened to Las Vegas? Her mind flashed with an image of Pyongyang in the springtime, the streets empty, flower boxes everywhere blooming with pink Kimjongilias, the begonia variant cultivated to honor Kim Jong Il's birthday in 1988. She had never been there physically, but she had traveled those streets in real time, when she'd worked on a photomapping program that was designed to map every important place in the world.

"I'm not getting a call yet," Rashid said.

"Me, neither."

"Suppose they don't call us because we're Muslim."

"We're cleared. They have to call us. Especially—"

Her pager beeped—screamed, it seemed to her.

"—especially you."

It was not a call to go on dispersal. It was her emergency code requiring immediate action. “I have to go on the secure network here, right now,” she said.

His beeper warbled. He looked at it. “I’m on dispersal.”

The reality of what the two messages meant was immediately clear to both of them.

She looked into his eyes. Saw the shock there, in their wideness, their liquid glassiness. His tongue touched suddenly dry lips.

What had just happened was that he had been ordered to go to dispersal and live, she to stay in Washington and probably die.

They embraced. If his unit was on dispersal and she wasn’t even being given time to drive to Langley, it could mean only one thing: her services were needed immediately because Washington itself was under threat and the Internet might help them deal with it in some way right now. His work did not require him to be in harm’s way. He would therefore come under provisions of National Security Presidential Directive 51, which required him to go immediately to a secondary location outside of the metro area.

Without speaking, he turned and went into his bedroom. She heard him pulling out his emergency case and then went back to her own office, closed and locked the door, and drew the curtains. She turned on the green gooseneck lamp on her desk, then pulled the radio-frequency shield out of its hiding place in her bottom drawer. It was designed to absorb any radio frequencies emanating from her laptop—frequencies that could be picked up by ultrasensitive satellites. Her every keystroke could potentially be logged and transmitted to any location in the world.

The shield was green plastic embedded with copper screen. She fitted the laptop into it, then opened it and turned the computer on. This was not a home computer. It was a highly sophisticated instrument in a smallish box. It flashed on at once. She saw the seal of the secure network, and waited as a link was established. Saw Marge come up. She was in her home office also. They could communicate verbally, but it was less secure. Marge’s message box said: “We’ve got orders to do a selective shutdown of the Internet. Isolate the U.S. west of the Rockies, no I/O. Thoughts?”

“BI.” Meant “bad idea,” which it was.

“?”

“They need information. Take it from them, you spread panic.”

“WTU.” Meant: Will Transmit your opinion Upstairs.

One of Nabila's 'bots began flashing. She double-clicked it.

And there was the most stunning, the most monstrous thing she had ever seen in her life.

It was a Web site coming out of Japan. In an instant she saw that it had originated at the Toyama Campus of Waseda University in Tokyo. She grabbed the site, just glancing at the first few words.

The site wasn't intended just for her, not this time. It was in the open.

She saw that it must not be allowed to reach the media, not in this form, not at any cost. Her fingers flew as she plunged into the Japanese Internet backbone, racing after Waseda's server farm.

She found it, shot Marge an instant message: "Doing a DSA Waseda University. MTC."

She set a million calls a second on Waseda's servers. That would freeze them. She could only hope that nobody else had seen this, because it was the most incendiary single document ever written by the hand of man, and it almost made her literally scream aloud, howling her terror into the dawn light that was beginning to stream in the windows.

She ported her copy of the website over to Marge, then watched her 'bots. They weren't finding anything else like it. No, this had been done the same way as the *hijab* document—a single website, probably put up for just a short time. But she couldn't risk that. As far as she was concerned, Waseda would remain off-grid forever.

They could have posted the site in a million different places, public as all hell, but they had not done that, and she now realized why. It was the humiliation factor. World leaders—the president first—were going to have to tell their people about this.

COMMUNICATION FROM THE MAHDI OF THE EARTH OF MUSLIM
PEOPLE
GLORY TO GOD, THE CALIPHATE OF ETERNAL PEACE IS COME.
THE END OF TIME IS HERE.

Because the Crusader harlots, fallen daughters of God all, did not bow

their heads beneath the veil, there was a serious consequence.

Now, bowing before God, all must pray. The Five Pillars of Islam are established for all, and all must now join themselves to the joy of prayer as established in the Law.

All law, and the only law, is now the law of Šarī'ah. Immediately, all must perform *sadaha* in accordance with the Law.

The Crusader King, William Johnson Fitzgerald, must perform *sadaha* before all mankind at once. He must say before all the world, “Ašhadu 'al-lā ilāha illā-llāhu wa 'ašhadu 'anna muḥammadan rasūlu-llāh,” in a clear voice. He must then say in his uncivilized tongue, that the ignorant may understand, “I testify that there is no God but Allah, and Mohammed is his prophet,” and must say, then, that he is humble to the Faith. He must open the vaults of his weapons and cause his soldiers to lay down their guns in all the world. The minions and viziers and soldiers of the Crusader King must all perform *sadaha* at once and be seen to face Mecca in prayer, in accordance with the Law. They must remain in the dirty city of Washington. They may not leave.

All lairs of apostasy are closed and may not be entered. Anyone entering a Christian church is apostate and subject to the Law. Anyone entering a Jewish synagogue is apostate and subject to the Law. All worship in the names of false gods and statues now ends, and the Hindu, the Christian, the Jew, and all others proclaim *sadaha* in accordance with Law.

From the high places all around, henceforth this is ordered: that the prayers be proclaimed in loud voice at the appointed times, in performance of the *salah*, the five prayers of each day.

This must be done at once, or there will be a serious consequence. Your savior loves you, and will be pleased to communicate further with God's people, when God wills.

A LOST WORLD

The president was still in his helicopter when news of the latest Mahdi communication came in the form of an urgent bulletin from the Director of National Intelligence. The president took one look at it and picked up the phone. “Logan?”

“Yes, Sir.”

“Is Matt safe?”

“They’re in their bunker.”

“Thank God.” So the vice president could reconstruct the government if he had to. Or rather, when. “I’m coming back.”

“Sir, you can’t—”

He hung up, then communicated with the flight deck. “Take us back,” he said.

Immediately the chopper banked and began its churning return to the White House. A headwind made it bounce. Outside, dawn burst forth in shades of pink and red. They flew low over the glowing trees of Bethesda, so low that he could see autumn leaves running along the streets.

His secure phone rang. Webb Morgath, Director of National Intelligence. The president snatched it up. “Webb?”

“This document *requires* the entire U.S. government to remain undispersed.”

“Make sure that no media says anything about the Fifty-one activation. And nobody—I repeat, *nobody*—is to know that I left the White House at all. If there’s any media awareness, invoke national security and suppress it. It can’t look like we came back with our tail between our legs.”

The chopper circled and came in for a landing on the lawn. He saw that the entire damn press corps was swarming outside the closed gates, waiting to be let in.

As he stepped out, Tom Logan met him. “Sir, we have evidence of deep penetration of the FBI and probably the operational infrastructure of the CIA. There is an agent coming in with more detail.”

“Reliable?”

“You’re never sure, are you?”

“What’s his résumé?”

“He’s a counterproliferation expert. The deputy director says he’s the best there is.”

“Is he reliable or not? Come on, goddamn it, evaluate the man!”

“Reliable!”

“Okay, hit me.”

“He won’t disclose anything over the phone.”

“Crap!”

“What else can he do?”

“Yeah, if they’re out there, they’re gonna be after White House communications, for sure.”

The president’s thoughts went to Leandro Aragoncillo, living proof of White House vulnerability. He’d been in the Office of the Vice President for years. Because of that case, an effort was being made to establish an effective internal security program that would cover all sensitive services.

Two months ago, in response to Fitz’s request, the inspector general of the Justice Department had reported that their efforts were “progressing,” which he knew was bureaucratese for “nothing doing.”

Aragoncillo, a Secret Service agent, had worked in the offices of Al Gore and Dick Cheney, and had been reporting to the Philippines, for the love of God. And who the hell had those bastards been selling the information to?

That, plus Brewster Jennings and other situations—who knew how deep the problem might be? One thing was very clear: Fitz was master of a ship with a broken rudder, and they were in shoal waters.

As he walked toward the White House, breathing the cool, tart air of a smoggy morning, Tom continued, “The pope and the prime minister are both holding. France is scheduled in twenty minutes, then Germany, Japan, and Italy. Russia—”

“No Russia.”

“Israel?”

“I want Webb Morgath, Wally Benton, and the generals on a conference call in my office in fifteen minutes.” That would be the Director of National Intelligence, the CIA director, and the Joint Chiefs. “I want the statutories on call.” That was the National Security Council and its statutory advisers. “I want *no* support personnel on the line whatsoever. I want a Marine guard

around the White House and around my person. The Secret Service is going to have to withdraw.”

“Sir?”

“You heard me. Do it, Tommy.”

“Sir, the Secret Service?”

“If we are looking at a penetration, we have to assume that they would try hard to compromise my personal detail.” He stopped, looked at Tommy’s ashen face. “Your eye is twitching.”

“I know it.”

“This, too, shall pass. Maybe. Now get things in motion for me, please.”

“Sir, everybody’s here.”

“*Here?* My God, they belong on dispersal!”

“Sir, when you came back, so did they.”

“But not Matt?”

“No, he’s still secured.”

Had he returned, Fitz would have had him arrested, returned to his bunker, and imprisoned there.

Still striding, Fitz shook his head. The others were still fools to come back. Without them, rebuilding the government would just be that much more difficult. So he’d do this as fast as possible and get them the hell out. He reached the Rose Garden and went inside. And there stood Dan, his son. Gone was the nose piercing. His hair was cut—roughly, but in a conventional cut. The media’s beloved Goth had disappeared, transformed into the kind of kid this president had hoped to show the world.

“What in hell, Danny, get out of here!”

“Dad—no.”

Sudden anger flared in him. How could Dan be so dense? “This is a death trap, for God’s sake! We’re in our grave, all of us who are in this place.”

“Dad—”

“You’re young; you have no business taking a risk like this. Look, your mom’s in Newfoundland, and I’m ordering you to join her. You go out to Andrews. There’ll be a plane. You and your sister be on it.”

“Mom is here.”

“That can’t be true.”

“She landed at Andrews twenty minutes ago. And Polly’s on her way.”

“This place could go, Son. Any minute. You need to leave.”

“Dad, your family is here, and we’re *gonna* be here.”

Then it would be all of them, all of the Fitzgeralds, vaporized together in this lethal place. He didn't want it, but he accepted it because he had no time to argue. He embraced his son and felt his arms around him, felt his hand patting his back, a gesture of gentle support, simple, telling of the bond between them.

He took a deep breath, then gave his son's elbow a squeeze and went past him into the Oval. He'd do it all from the ceremonial office, because today was history—probably the last day of history as the world knew it—and he was damned if he would do it anywhere except in the center of power and authority. The Oval.

EXCELLENT PLANS

Fitz supposed he was nothing but a sentimental fool, but he never entered the Oval without feeling the presence of all the great men who had worked here before him. He thought of decisions that had been made here, and what might have gone through the minds of the men making them. From here, Truman had dropped the bomb on Japan. From here, Kennedy had sent men to the moon. From here, Johnson had ended segregation. And from here—in here—Fitz would do what he could to repair the most horrendous breach of American security in history.

On his desk, the classified briefer lay open and ready to read. Fitz glanced down at it. A probability study analyzing who might be responsible, based on that idiotic concept of “chatter.” Why would chatter be so important, for the love of God? It was chatter, wasn’t it?

The Iranians were chattering the most, it seemed. Of course they were; they probably expected a bomb down their throat at any moment. The Syrians were chattering, the Israelis, the Egyptians, the Afghans, Pakistanis, Indians, Chinese, Kazakhstanis, Ukrainians, Russians—along with, he supposed, the rest of the world. Who wouldn’t be chattering right now? Even the Vatican was on the list.

There was, in short, nothing of value in the briefer.

Billions of dollars a year, a decade of reorganization, thousands of brilliant and courageous people, superb equipment—and *Las damn VEGAS was murdered!*

Shame. Shame on them. Shame, above all, on William Fitzgerald, who had believed in a system that was rotten, broken, shattered—*penetrated*.

The thing was, and he could not deny this, he had known. Why else had he been after the Justice Department to plug the holes? *Face it, Mr. President, you knew damn well*. Not specifically, of course. But he had known that somewhere in a system this large and this porous there had to be water gushing in, bulkheads collapsing, watertight doors that should be closed being left wide open.

You knew, Fitz. Their souls are on your conscience. You're the president and the buck just stopped. Their blood is your responsibility.

He hit the intercom. "Millie, is it still burning?"

"Sir, you can see. It's morning there now. It's all smoke."

They seemed to come to the door of his soul, the ocean of the dead, holding out their children's smoking bodies, calling to him, asking him why he hadn't protected them.

He wanted to cry, but he was too mad to cry.

He looked down not at the briefer but at the hands that held it. His hands. Mottled, a bit thick, a broken nail, his gold wedding band the only decoration. They were the hands of a man who, before this day was out, might order retaliation for this terrible, evil act.

Dream Angel would take hundreds of millions of lives. What was worse, Dream Angel was one of those absurdly theoretical plans that never worked the way they were supposed to work. All he knew about it for certain was that it was going to cause untold human suffering.

He pressed the intercom again. "When the Joint Chiefs arrive, I'll expect to discuss Dream Angel."

"Yes, Sir," Millie replied.

Quickly he considered the protocol of his telephone calls. The PM first, then the pope. The United States was a secular state, after all, and in any case, what could the pope offer but prayers?

Fitz picked up the phone. "Good morning, Cameron, sorry for the delay. I'm in my pajamas and an overcoat."

"Fitz, first, of course, there are no words—"

"Can you help me?" Four simple words, from one man to another and from his American people to their ancient British source.

"I've asked MI6 to review everything. Literally, everything, for any shred, any scrap—"

"What about London?"

"We're on crisis dispersal now. And coping with the civilian traffic moderately badly, I'm afraid. I think every hotel in the countryside has been booked by Londoners."

"You need a continuity-of-government plan."

"We're behind on that."

"You're not alone. I just hope it's not too late. Where are the French, the Italians, the Germans?"

“Nobody has a continuity plan, not that contemplates decapitation.”

“We’ve been fools, all of us.”

There was a pause, as if to absorb the enormity of that statement. “I’m not at Number Ten, in any event,” Cameron finally said.

“I’m in the White House.”

“Fitz, I just wish to God that there was something I could do!”

“You have this so-called Mahdi’s little missive?”

“Oh yes.”

“It came from Japan. The one before that—so innocuous they didn’t tell me about it—from Finland.”

“It was designed to create discord, that first one.”

“In what sense?”

“Too small to matter. Therefore, the people who didn’t recognize its seriousness will be blamed.”

“No witch hunts. No time.”

“They will be demoralized.”

“Cameron, we have a security problem on this end. Is there any knowledge of it over there?”

No response. The silence extended. Then, “Truthfully, how can I know? Certainly I haven’t been told.”

“Ask MI6, if you don’t mind. If they know anything, any hint, let me know. Or Matt, if I’m no longer involved.”

“Fitz, you’re a great man.”

“Too scared for that, Cameron.”

“We’ll raise a glass together, in victory.”

That sounded about as hollow as anything Fitz had ever heard in his life. “We will,” he said, trying to force something like optimism into his voice.

He hung up and said to Millie, “I’m going to do the press conference at nine sharp. Let them know.”

“You have an urgent from Mr. Hanlon.”

The director of the Secret Service. Fitz picked up the phone. “Charlie, don’t talk; just listen. I have credible evidence that there is a penetration of our security services, which made this whole catastrophe possible. I cannot know who we can trust.”

“Sir, we are absolutely clean. You know how carefully we vet our people.”

Except for spies from the Philippines, of course. “Thank you, Charlie.”

“Sir, we’re clean!”

He just could not take the risk. "I'm using War Powers to remove you. Stand the presidential party down now." He glanced toward the door. "Where are my Marines, Millie?"

Logan had come in. "Company A is deploying now."

"Okay." Fitz went back to the phone. "Charlie, I don't want war to break out between the Secret Service and the Marines. You stand down."

Charlie did not reply.

"Charlie, that's a direct presidential order issued during a national emergency." He fought to recall the exact terms of the act. What did he need to say to get this to happen?

"Yes," Charlie said at last. "Yes, Sir."

Fitz hung up. Logan said, "The pope is waiting."

"The pope, Millie." A click. "Your Holiness."

"I speak on most urgent matter," the old man said, his English lightly accented. "I have received a threat from an Islamic fanatic that calls himself the Mahdi. He says we must close all churches or there will be a serious consequence. Mr. President, I must know if this threat is with substance."

He considered, then threw the question back: "Do you have any indication from your own sources?" Contrary to popular belief, the Vatican didn't have an official intelligence service, but it was the world's best listener.

"We believe that the threat in this document has substance. If we do not close our churches, there will be a further bomb. What I want to know is if this is what you call a credible threat?"

The president did what presidents must do, but only good ones do well. He made an educated guess. "Holiness, I can confirm that the document you have is authentic, and is almost certainly linked to the group that has detonated this weapon."

When the pope's voice returned, it was low, and now so thickly accented that Fitz could hardly understand. "We cannot close all churches."

"It's not in your power, anyway."

"No, only the Catholic." He paused. "Is there anything to be done?"

The president considered his answer. He had to communicate force and caution both. "We're evaluating the situation. World leaders will be notified first, including Your Holiness."

"God be with you, then."

He hung up the phone. Millie came in and laid a color printout of the Mahdi's Web page on Fitz's desk. He fingered it, read it, read it again.

He went to the window, and watched the shafts of morning sun, gold and soft, spreading across the lawn. He wondered if he would be alive in fifteen minutes, or in ten . . . or one?

“Fitzie!”

Joy possessed him, followed immediately by as cold a dread as he had ever known, because his wife should not be here. Then the sound of her voice shot a bolt of memory straight into the depths of his mind. He saw her in girlhood, when they had been kids together, saw her in the tree house with little boxes of cereal and milk she had brought for a picnic, holding them while he kissed her and she turned away from him, her eyes as sharp as crystal, her cheeks red. She had a dusting of freckles then.

Tall, proud, her blond hair swinging, she strode to him. But her eyes did not have that crystal sharpness in them now. Her eyes were terrible. She had been crying, and doing it a lot.

He opened his arms and she flew in, and he said, with all the determination he could force into his voice, “Get out of here.”

She looked up at him. Briefly there was the old twinkle there. Then it was gone. “Not gonna happen, buddy.”

He kissed her.

Logan hovered. “Sir?”

Fitz drew back, taking her taste with him.

“Sir, your meeting’s here.”

“Let’s roll.”

The Joint Chiefs came trooping in, and the intelligence chiefs, the secretary of defense, the secretary of state, and the military secretaries.

“Gentlemen,” Fitz asked, “can we carry out Dream Angel?”

Air Force Secretary Hobbes said, “The planes are already in the air, Sir.”

Fitz looked at the faces of the assembled men, and of his wife and now also, he saw, his son and daughter, who stood in the back of the crowded room.

Dream Angel was the most fearsome military operation ever conceived. Over a thirty-hour period, it would deliver 1,750 W101 neutron bombs across all areas on the planet controlled by Muslim fundamentalists. At least, this was the theory. But Fitz knew military planning and its accuracy. He’d been a young congressman when a U.S. smart bomb had blown up the Chinese embassy in Belgrade. One thing was certain—wherever the bombs actually exploded, they would certainly kill an almost inconceivable number of

human beings.

“Very well,” he said.

Planes and cruise missiles would deliver the ordnance. From Saudi Arabia to Indonesia, the affected areas of the world would literally be depopulated. The expected death rate was so high that there was an environmental impact assessment that discussed the climatic effects of the huge amount of methane that would be released by the decaying corpses.

“Do we go?”

The question, raised by Air Force General Alfred Mandell, hung in the silence.

Fitz wished that he could raise the question of the penetration. But how could he? Once he reaches office, a president learns very quickly why such a massive intelligence organization is needed. Presidential power extends only as far as presidential knowledge. For example, they were helpless right now because they didn’t know anything about this so-called Mahdi, and even more helpless because of this catastrophic security issue.

“What fools we mortals be,” Fitz said. He looked at Webb Morgath, who literally twisted in his seat on the uneasy end of a couch. “Webb, can we narrow this thing down? Who’s the Mahdi?”

“Sir, I don’t have that information.”

“Do you know why?”

“We have the website—we know that it was set up on a server at a Japanese university, but that’s all we know.”

“Japan,” Fitz said softly, tasting the history in the word: Tojo ruining the country, then people bowing to MacArthur’s car as it passed, now Toyota and Honda standing astride the industrial economy of the planet.

The world, as it existed now, was an outcome of American victories in World War II and over the Soviet Union, and American foreign policy since.

But all policy is based on knowledge, and Fitz’s knowledge right now was compromised. He knew that Las Vegas had been nuked. He knew that this had happened, almost certainly, because U.S. security assets were being used or neutralized by the enemy. He knew that somebody who called himself the Mahdi had taken responsibility for the bombing. But he did not know if Dream Angel would work, and for a very specific reason. “So what happens if this attack isn’t coordinated from within the target areas? We execute Dream Angel and it doesn’t help?”

“Sir,” Secretary of Defense Mike Ryland said, “with all due respect, that

isn't the issue. The issue is spreading terror a thousandfold greater among the Muslims than they can deliver to us. Break their will."

Fitz's phone rang. Every eye turned toward it. All knew the same thing—Millie would never put through a call at a time like this unless it was terribly, terribly urgent.

He picked it up. "Yes?" He listened, then put it down. "Mosques are being set fire to all over the world. The UK, Germany, France, Italy, Japan, India—a huge backlash." Then he added, "It's working both ways. In Cairo and Beirut, they're driving through the streets of Christian neighborhoods, machine-gunning people at random. In St. Louis and Atlanta and Mobile, mosques are burning. A man walked down a street in Seattle, shooting men with moustaches. A Sikh was strangled with his turban in a Dallas shopping mall while a crowd applauded and cheered."

"We need to deploy the Guard," Ryland said.

"Let it run," Webb countered. "Let the energy dissipate now or it'll be worse later."

"No." A voice from the back, tiny with unease. Polly. Fitz sought his daughter with his eyes. She looked back at him from as if from another dimension, her gaze resplendent with the unquenchable hope of youth, her mother's proud lips, determined, supremely confident that her dad was the great man she believed him to be.

"Here are my decisions," he said. "I am federalizing the National Guard in every state except Nevada, under provisions of the National Defense Authorization Act of 2007. I am declaring that a state of martial law exists in the United States, and I am ordering the armed forces to DEFCON 1, with the specification that nuclear weapons must be mounted and armed at once. I am further commanding that any aircraft without specific military authorization found in flight in the United States, day or night, are to be shot down without warning. I am closing the borders, and please inform the Mexican and Canadian embassies that anyone crossing will be shot on sight until further notice, with regrets; I'm sure they'll understand." He stopped.

There was silence. He knew why. All of the above was expected. It was another order that they were waiting to hear.

He looked again from face to face. Briefly his wife's eyes touched his. He went on. His daughter's pleaded. Brave girl—until a month ago she'd been working at an AIDS mission in Botswana. She knew all too well the suffering of the third world and therefore the agony that Dream Angel would cause.

“Very well,” he said. “Now listen. I am going to communicate to the vice president that it is my recommendation that Dream Angel be enacted if Washington, D.C., is destroyed. Is that understood?”

Polly shook her head back and forth, back and forth, so hard that the only sound in the room was that of her hair swishing. Her face had gone bright red. He could see tears flying.

Then they all erupted. “Mr. President!” “Fitz!” “Sir!” All of them, their voices furious.

“What do you want me to do?”

“Not be a damn coward!” General Mandell blurted.

“That’s out of line, General.” Fitz knew that there could be a coup. He knew that the entire government could fly apart on this morning like an overwound spring.

Mandell saluted him. “Sorry, Sir.”

“What I am looking at is threats that originated in Finland and Japan. Not in Iran, not in Saudi Arabia, not in Pakistan.” He took a deep breath. “And I am looking at something else.” He glanced toward Logan. “That I cannot discuss, even in this room.

“What I can say is this. Power—world power—is gone from our hands. While we’ve been listening in on the pillow talk of the princes, the little guy has come up from the kitchen and stolen the damn silverware.”

“Mr. President, that’s defeatism.”

“Shut your mouth, Ryland. You’re a damn fool! Fifty years ago, we had divisions to fight against. Waves of Chinese soldiers to cut down in Korea, columns of tanks to blow up. Then came Vietnam, and that was a little different. A sort of army that came and went in the shadows. Then 9/11 and Iraq, and we were fighting ragtag Bedouins, disorganized and sparse on the ground, but far more effective than the Vietcong. But now where are we? Warfare has gone from divisions to individuals to . . . nobody. The virtual state. So you expect me to kill ten percent of the world’s population—just to be sure we *don’t miss?*”

Now the chorus of complaints rose to a roar, and there was menace in it. He saw bulging eyes. He saw spit in the shouting throats.

“*Hear me out!*”

They fell silent.

“If we carry out Dream Angel, and afterward we are still under nuclear threat, as I am sure we will be, we might have to surrender—”

There was an explosion of voices. He held up his hands. Sought them with his eyes. He regained control of the room . . . barely.

“Face this. It’s reality. What if they do another city, and then tell us they have more, and will do worse? What we do then is surrender. And that can happen *after* we execute Dream Angel.”

“You’re talking about Western civilization,” Polly said, the youth in her voice almost taking Fitz’s breath away. “We can’t surrender.”

But they could, if they were beaten, and he knew it. They would have to. “If we execute Dream Angel and we destroy all those countries, and we miss the leaders of this thing, then they could end up in control anyway. They will punish our people terribly for our actions. We’ll be marked as a nation of war criminals, cursed for a thousand years.”

Fitz had seen many men break, and they broke all in the same way. There was a stillness; then the shoulders dropped, then the head. He saw his secretary of defense break. “Trust my decision, Mike.”

Ryland looked at him. Looked him up and down. Fitz had brought him in because he was hard. A tough, brilliant man with a history in the military, in business.

“You are saying that we’ve lost.”

“Is that what you think?”

“Fitz, we need to retaliate.”

Fitz put his hand on Ryland’s shoulder. “I want you to say to me, ‘We need to kill two hundred million people.’ You say that.”

“We need to kill these terrorists!”

“*Who?* Who in hell do you mean?” He glared toward the intelligence chiefs, who stood together near the door, as if they wanted to escape. “With all your equipment, all those damned listening devices, all those brilliant agents, you can’t tell me a thing. You know when Assad jacks off or Putin blows his nose, *so who is this Mahdi? Where is he?*”

“Sir—”

“We’ve thrown away billions watching the embassies and the palaces. And what do we have? Not one damn thing!”

Millie gestured from the doorway to her office. The media was ready.

“We’re done here,” he said.

Logan said, “Your speechwriters—”

Fitz turned to his loyal chief of staff. Tried a smile. Didn’t work. “They can’t help me,” he said. “I’m alone now.”

As he left the room, he felt as if he carried a weight of stones. Polly came to him. “Daddy, we’re so proud of you.”

Anger suddenly came up in him, deep, raw, helpless. “Get out of Washington,” he rasped.

She stepped back, her face flushing, her dry lips opening with surprise.

He turned, took her in his arms. “You’re so young,” he said. “So very young.”

As he passed along the corridor, flanked by Marines in full battle dress, preceded by two and followed by three, he gave the order to release the communication that had been received from the so-called Mahdi. In five minutes, Fitz would speak. Now, however, on TV screens, on websites, read over the radio, slapped into newspaper extras, the words of the only man who had ever come close to conquering the world were seen for the first time.

And not one intelligence service anywhere on the planet knew his true identity.

Or no, that wasn’t quite true. One knew. It knew him well.

BLUE SKIES OF HELL

Ressman had successfully landed Jim in Piedras Negras. Jim had done what he had to do there, then crossed the Rio Grande in some shallows and made his way to Kenneally's little love nest. Jim had been watching the mobile home for an hour. From inside he could hear the president's voice on the television, could catch a few words. It was seven twenty in the morning now, full light. He hung back in a grove of twisted mesquite trees, moving as little as possible in order to take advantage of the dark trunks as camouflage.

He knew the contents of the terrorist website. He'd heard it read on the car radio. Everybody on the planet, he assumed, was aware of it by now. Whether the president embraced Islam or not, Jim thought that Washington would be destroyed, probably at midnight tonight. He knew all too well how hard it was to prevent such an attack once the bomb was in place.

They would try to interdict this, of course—even now, Homeland Security operatives were doubtless moving through the city with radiation detectors, filling its streets and skies with surveillance mechanisms, watching every detail of desperate life as the place unraveled. God help Nabby. He could only hope she had made it to her dispersal point.

He moved closer to the double-wide. Thankfully, there were no children. He didn't know if he could do this with children present. It was now seven thirty. His target was moving about inside, so he was probably on an eight-to-four. He would leave in about ten minutes.

Carefully Jim pressed his ear against the wall of the trailer. A female voice, high, quick, full of sobs. Him then, lower, quieter, an edge of tension that suggested a possible vulnerability to Jim.

He went along the gray wall, staying below the line of the windows. He reached the screened back door, grasped the handle. He saw that the door was spring-loaded and would make a distinctive creaking sound as it was opened. There was no way to surprise them; they were going to know that he was coming in.

He took a breath, deep. He was going to have to face a gun. He was going

to have to terrorize people and hurt them, maybe kill them. He thought of the towering cloud and the dead, and pulled the door open.

The moment the springs creaked, there came a challenging male voice: “Hey!”

Jim stepped in, finding himself in a kitchen—green linoleum, a countertop range crowded with four small burners, a narrow fridge. The window above the sink looked out on a black Tahoe. The room, the whole trailer, was thick with cigarette smoke. From the living room a parrot chattered above the droning, mournful voice of Anderson Cooper on CNN.

“Who are you?”

Jim smiled at Kenneally. “A ghost. That’s why you couldn’t kill me. Who’s your contact?”

“Get out.”

“No can do. Who paid you?”

The wife called out, “Arthur, who is that?”

Arthur Kenneally was big, hulking even. Like some big men, he could move quickly—too quickly. But Jim was also quick. He stepped past Arthur and into the living room, where a handsome woman of perhaps twenty-eight sat in the dark watching the television. She had a large cross in her hands.

He reached down and closed his fist around the lace collar of her nightgown and dragged her to her feet.

Her eyes widened; her body flopped, a fish dragged to the surface. She would scream, but not just yet. He swung her around and slammed her against the fake wood wall beside the door. The whole trailer shook; the wall snapped; she cried out.

“Who paid you, Arthur?”

“Freeze!” He pointed a pistol at Jim.

Foolish move. Jim needed a gun. He wheeled, putting Mrs. Arthur between himself and his adversary. “She can die; it’s okay by me.”

“Arthur!”

“Who paid him, love?” Jim threw her against Arthur, who stumbled back into the kitchen, his gun flailing.

It was a Colt .45, U.S. Army issue, heavy and hard to handle. Probably Arthur’s daddy’s gun. Customs and Borders weren’t issued weapons like this. Jim saw the two pounds of pistol shaking, its muzzle wobbly. Using a quick, accurate step, he raised his foot and connected with the man’s wrist. The pistol hopped, then flew from the man’s flopping hand.

With a crash, it slammed into the ceiling. Jim hurled Arthur's woman into his face and caught the weapon as it fell. "New rules," Jim said.

They lay in a heap, both now in shock, Arthur still believing that he was going to be able to control a situation that was far from his ability to handle.

Jim grabbed a fistful of collar and dragged Arthur to his feet. "Who paid you?"

"What?"

Carefully restraining himself, Jim pistol-whipped him.

Arthur slammed into the wall. In the living room, the parrot began screaming.

Now Jim got the woman to her knees. So pretty, the face tiny and delicate, the skin almost translucent.

He jammed the gun into her mouth, shoving hard enough to make her gag, jerking it so that there would be blood for Arthur to see. Then Jim pulled it out and threw her on top of Arthur. "Who paid you, Art?"

"Get out," the woman shrieked, blood flying from her mouth. "Get out!"

Jim took her by the hair and dragged her into the living room. As Arthur came to his feet, Jim waved the gun at him. "I excite easily," Jim said. "It's a fault." He pressed her face against the television. "Arthur did this. Las Vegas is burning and Arthur is personally responsible. Arthur will be executed, and if you don't tell me everything you know right now, you'll take a needle, too."

Jim drew her away from the television and threw her onto the couch. When she hit, she cried out.

"I had nothing to do with this!"

"Don't even try, Arthur."

"But—what? What did I do?"

"Removed the ASPs from Bridge One. Who was out there in the *brasada* with you, Arthur? Who was in command?"

"Arthur, what is this? What is this man saying?"

"What I am saying is that your husband took out a major U.S. city, goddamn it! He killed a million people!"

"Arthur?"

"Shut up!"

Jim felt a fiery pain in his back, and realized that she had pulled a knob off a cabinet and gouged him with the screw in its base.

Roaring, Arthur pushed toward Jim. His aggression told Jim that he

understood that something was wanted from him and therefore that the gun was only a prop.

Jim stepped aside with a dancer's ease, and Arthur crashed into the kitchen table, bending its aluminum legs and causing it to slide to the floor.

Now the woman leaped on Jim's back. He ducked forward, twisted his arms behind him until he could find purchase in her clothing, then hurled her forward and out into the living room, where she fell hard against the birdcage, releasing the terrified parrot, which flew out screaming, his green plumage gay in the clutter of the wrecked space. As he fluttered around and around the swaying ceiling light, his shadow made the walls dance and the woman screamed and screamed, cringing on the floor.

Arthur came back and found out that the gun was not quite a prop when it slammed into the side of his head, knocking him into the stove.

Jim leaped on Arthur and pinned him. "You tell me or I will turn on this burner in three seconds." An otherworldly calm had descended on Jim, as it always did in these situations. Afterward, he knew, he would turn into a knotted mass of agony, his throat burning with acid, his guts sour with bile. But now, he was moving in his zone of balance.

He turned on the burner, which was under the back of Arthur's neck. As Jim expected, the whole body lurched, the face turned purple, the eyes bulged, and spitting, orange flames came out around Arthur's head, making him look for a moment like a crazed saint.

In Arthur's howl Jim heard the tone of assent, and he turned off the burner. As Arthur chewed, his face bright with grimace, Jim drew well back. Arthur's vomit was white froth. "Egg Beaters for breakfast," Jim said. "Good idea. You oughtta stop smoking, too."

Jim yanked Arthur up off the range. His burnt hair added a nauseating stench to the fetor that already filled the house. Now a new smell—piss. Arthur's sphincter was releasing. "Now, Arthur, tell me."

"It was an order!"

"From?"

"Channels. An ordinary order. And we'd gotten them before, when that system was first being deployed, and it turned out not to work."

"The order is filed?"

His wife began screaming again. Jim turned toward her. "Shut up," he said. She didn't. "What's her name, Arthur?"

"Gloria!"

“Gloria, if you don’t settle down, I have to kill Arthur.”

As Jim dragged Arthur back into the living room, she gobbled the next scream. Jim tossed the big man onto the couch, then picked Gloria up and threw her down beside him.

“Now, let’s all understand each other. I am here for two reasons. First, Arthur destroyed or disabled the advanced spectroscopic portal radiation monitors on Bridge One, which enabled Mr. Emilio Vasquez to smuggle at least one atomic bomb into this country, which was detonated at midnight over Las Vegas. And Arthur tried to kill me when I found out.” He smiled at Arthur. “So let’s see if we can get past that bullshit about you following orders. Unless somebody ordered you to come after me. Who might that have been?”

Gloria’s face contorted so much she took on the appearance, almost, of something not human. Jim was reminded of ancient busts of Medusa. It was terror so great it appeared as rage. He knew it, he’d seen it before, and it shamed him to know that he was responsible for such suffering—but not enough to make him stop.

“Tell him,” Gloria said.

“Shut up!”

“You tell me if you know, Gloria, and you’ll be spared the needle.”

Her eyes were furtive now, stopping at the door, stopping at the window. The parrot flew round and round, his cries as precise as a metronome.

She lifted a hand, as if to capture the bird. “He’ll fly into the window!”

Jim braced the pistol in her face. “Last night, Arthur burned sixty thousand or so children to death.” He had made up the number. “So you can understand why I don’t give a shit about the damn bird.”

“Don’t tell him anything,” Arthur snarled.

Jim put the muzzle of the gun against Arthur’s knee. “This will blow your leg in two.”

“I’ll go into shock.”

“She knows, Arthur. And I know she knows. So your life no longer matters.”

Arthur closed his eyes. “We had an ONI officer come down here. He met with me and we went over to Piedras Negras together and had dinner with Vasquez. That night, I was ordered to stand the bridge detail down for twenty-five minutes between four and five in the morning, which I did. I saw men in the river; then I heard noises under the structure. That was it.”

“The ONI officer showed a badge?”

“He sure did, and it checked out.”

“You did a GSA secure database run? You personally compared the officer to the photograph?”

“It was the same guy.”

“Name?”

“His name is Franklin Isbard Matthews. He’s in ONI security, works out of Washington.”

Probably a real person who had no idea that he was following orders generated by the enemy. In other words, a dead end, not even worth following.

The parrot flew past screaming and Jim reached up and caught the little green guy, and carefully returned him to its cage.

“God, you’re fast.”

“Fast,” Jim responded without interest. He pushed the gun into his belt. “Thanks for the piece.” He would not leave them bound. They were useless now, and nothing they could do would change anything.

As he left, though, he went along the side of the building until he found their phone line. He ripped it out and shattered the switch box with his heel. Then he stepped into the yard, backed up until he could see their satellite dish. He drew the gun from his waist, aimed it, and fired. This produced a deafening roar and the predictable hard kick. But he was practiced with many pistols, and he loved a .45 automatic, and one of the reasons was what happened on the roof, as the dish and its box of electronics shattered into dozens of pieces, accompanied by another scream from Gloria and the cries of grackles that rose from the mesquite trees surrounding the house.

He went to the Kenneallys’ car, opened the hood, and pulled off the distributor cap. Taking it with him, he faded back into the brush, moving as if he was angling toward the road their property fronted on. He passed mesquites and cacti, inhaling the dry air, faintly sweet with autumn rot, the smell of the ripe mesquite beans the grackles were eating.

When he was invisible from the house, he shifted direction, and headed for the actual location of his car, a little-used fence road two miles back on a neighboring ranch. On the way, he tossed the distributor cap aside.

When he got to his car, he opened the bottle of water he’d left on the seat and drank it down, then ate the power bar he’d bought after he’d crossed the river. His first stop had been Piedras Negras, where Mr. Vasquez and his

entire family now lay dead in their house. Unpleasant task. Horrible, even. But Jim was past caring about small deaths.

He pushed away the memory of their struggles, the plump wife, the twenty-year-old son with the eyes of a rodent, and Vasquez himself, flapping his hands as if Jim were an annoying fly.

He went onto the roof of the car and looked across the low, brushy land. He'd chosen his position carefully, because from here he could see Arthur's little homestead. The trailer was a white gleam in the sea of yellow-green mesquite. Nothing moving. The truck was still there. Arthur would be wanting medical attention, so he'd probably already be on the hoof. If he got lucky and a car stopped, he might be in Eagle Pass in an hour.

Just to check, Jim opened his cell phone, put the battery back in, and watched as it powered up. A moment passed. Another. Nothing. He didn't want the phone's carrier signal to be available for more than a few seconds, so he removed the battery as soon as he was certain that there was no incoming service. Then he got back into the car, started it, and pulled out onto the fence road. The Global Positioning System came up, but the screen was simply white. No detail. He zoomed out all the way to fifty miles, but still nothing. It didn't matter, he knew where he was going, but still, it was impressive that the 50th Space Wing had shut down NAVSTAR. Made sense, though. A lot of it.

He had one objective, now: Get what he had learned to the president. To Logan. Jim had no intention of giving any names to security at any level, not FBI, CIA, ONI, none of them. If he could get hold of Logan, that would be it.

How far the country had slid, that ordinary civil service types like Arthur Kenneally and Franklin Matthews would do what they had done, probably for a couple of grand.

Jim arrived at the ranch compound he'd passed, lights out, at four thirty this morning. The ranch had just been getting up, and nobody had noticed the silent, dark car that had moved along the fence line.

They noticed now, though. The rancher, a short, portly man in a weathered straw Stetson, came marching over, waving at Jim to stop. "Yessir," the rancher said as he hurried along, "yessir." As he got closer, he added, "I ain't gonna see none'a my game in your trunk, I hope."

Jim waited for him with his creds in hand. He showed the best he could, which was his real credential. It was not a wallet he often opened, but this was getting actionable on a whole lot of different levels, and if the country

survived this crisis, there was going to be an inquiry into every move he made from the moment he discovered the missing detectors on that bridge.

“Well, Sir,” the rancher said. “I’m Tom Folbre; you’re on the Cut Four Ranch.”

“I need the use of a phone and I need it to be private.”

“Sir, I can’t do that—”

“This is—”

“Sir, they shut down all the phone lines along the whole border. All we have is the TV and radio. No way to call out until further notice. Plus, it’s martial law, on-site curfew from Brownsville to El Paso. Nobody leaves home except in an emergency. They got the Army on its way down from San Antonio.”

Jim left the man standing there, whipping with the Stetson at the dust Jim’s car kicked up. At least the rancher hadn’t been as ornery as that old and pitiful guy with the dogs.

Now, what could Jim do? There was another bomb. In fact, there were probably many other bombs.

He wished that he could throw himself on them, become a human shield. He could not have felt more alone.

THE FIELDS OF HOME

Jim turned west on Highway 277 and headed for Laughlin Air Force Base near Del Rio. It was a training facility, but a major one, and if there was no C-37 on station, Colonel Adams was going to be able to get Jim to Lackland in San Antonio, where he could pick one up, this time to fly to Washington for real. His call to Nabila had told whoever must certainly be watching him that he was on his way from Deer Valley. That little misdirection was over, though, because that plane had landed empty. He could assume that locating and killing him was once again a number one priority of the people who were enabling this horror to happen.

He turned on the radio. All the stations were broadcasting news. He listened to a border blaster rebroadcasting WFED, Federal News Radio, out of Mexico City. The Hipódromo de las Américas had been closed. The Federal Security Police Service was claiming that the bomb had not entered the United States through Mexico, and the president was protesting the militarization of the border. All flights of any kind had been grounded. Citizens of the Federal District were urged not to buy gasoline unless needed, and a general traffic curfew was in effect.

The chaos and suffering that must be behind these reports infuriated Jim. This was what the bastards had done—not only murdered a great city but also sent all the rest of them, worldwide, into turmoil. How many would be trampled in frightened mobs, how many fail to receive essential drugs, how many go without water or food? And the economic costs were incalculable. Even as things stood now, it would take the world years to recover and there would be blood and sorrow.

His jaw clenched so hard it cracked. He fought back a surge of self-hate that was itself a kind of black internal tidal wave, a rage against his own failure so great that he would have jumped out of this car if he weren't needed to repair the damage.

“Don't,” he said aloud. His work depended on self-confidence. He had to push his despair back down into the pit for now.

With an angry stab of his finger, he hit the radio's scan button. Here was WOAI in San Antonio, the voice grimly announcing that all military reserves must report to their units. CONUS was no doubt scrambling for bodies. Jim's guess was that there were under a hundred thousand military personnel available for deployment in the United States.

World stock markets were closed, but the price of gold had gone up eight hundred dollars and oil was pushing through three hundred dollars a barrel. Ships at sea had been ordered to stop, all of them, and the U.S., British, Japanese, and European navies would sink any vessel that entered their territorial waters. Europe had also stopped any nonessential road traffic.

The litany went on and on and on. Jim saw a picture of a world that had been frozen in place as it fell into chaos. How long would it last, though? What of the massive traffic jams, the people fleeing the great cities? Where were they in this? Who was enforcing the various curfews? The answer was clear: nobody.

He moved on along the dial, this time picking up something called KGOD-FM. A Reverend James Haggerty was telling his congregation that God had used the heathens to destroy a place of sin and evil and good Christians must rejoice and fill the churches and prepare to meet God, for the rapture was at hand.

The clash between Muslim fundamentalism and Christian fundamentalism was a battle between two grotesque distortions of religion. The mad battling the mad over, in Jim's opinion, nothing. God's silence was God's truth, and that was what they could not bear to face. Somewhere, there had to be a heaven, justice, and a better life.

Life may or may not be preparation for heaven; Jim didn't know. What he did know was that a hungry kid or a ruined businessman or a worker on a breadline was real, now. And all those burnt bodies, and all this suffering, this was what was real. *And it was his.*

The car's tires whined. He was doing an eighty-eight, and this vehicle, older than the one he'd had on his way to Eagle Pass, had no more in her. He really didn't care to be out here when Army regulars started their deployment. They would be scared, confused, and armed to the teeth. Getting past them was going to be real hard.

He passed Laughlin's auxiliary base and radar station, then shot through the tiny towns of Normandy and Quenado, glimpses of rural poverty and rural peace. He saw chickens in a yard, a little stone house. The lights you

saw from the sky at night, in the lonely places—these little towns were such places. He wished he could stop, go into one of those houses, and that would be it.

But his mind returned to Washington. Even if the president and the world did all that the document demanded, Jim thought that the terrorists would destroy Washington if they could, and other American cities. The gauntlet was down. They had to break America now, or they would gain nothing.

He pressed the gas pedal until his foot tingled, but the car would not pass ninety.

He began to watch on his right, waiting for the big, friendly sign that generally announced a U.S. Air Force base. The car seemed to be drifting, the highway gliding past like a slow, old river.

Whereupon he saw the sign and also a dark blue Air Force bus and what looked like a squad of APs in full battle dress. As he dropped his speed, he surveyed the men—kids, actually. They were armed, for sure, but did they have a laptop? If so, they would run whatever ID he gave them, and he didn't trust anything to pass at a time like this except his real cred. If they got a bad answer, he had no idea what they might do. Problem was, his real cred was going to be flagged by the folks who were after him.

No choice, though. As he slowed, they turned toward him, stirring nervously, their hands clutching their weapons. Pulling off the side of the road under the eyes of kids this scared and this well armed was not a pleasant experience. Their lieutenant's lips were dry, his eyes staring. Jim knew how dangerous the stillness of these young men was. If they so much as glimpsed his pistol, they would kill him.

"Sir, get out of the car."

He moved to conceal the gun.

"Get out of the car!"

"Coming out! Coming out slow!" He pulled the door handle. "I want to warn you, there is a weapon on my person."

One of the squaddies rushed the car like a charging lion. *"Get out of the car; get on the ground!"* He threw the door open.

"Okay! Take it easy!" Jim hit the deck, digging into the hot tarmac and the dusty hardscrabble beside it. He could hear insects buzzing, smell dry autumn grass and the sweet, hot odor of his engine, could hear the overstrained block tinkling as it cooled. "I'm a CIA officer. My name is James Deutsch."

"No CIA around here," a piping young voice screeched.

“I am going to move. I am going to get my credential.”

A gun barrel thrust into his back. “Where is it?”

“Left side.” He hesitated. “When you get it, you will feel the pistol in my belt.”

They backed away, then consulted together in hurried voices. Arguing. Then the lieutenant got on his radio.

“No!”

The kid froze. Stared at him.

“Do not put this on a radio. If you’ve got a gate phone, fine, but if you broadcast this, you are murdering me.”

Now they argued again, and this time it was furious. The lieutenant sounded outnumbered. These kids were certainly not prepared to face a situation like this. Their experience probably ran to extracting drunk pilots from beer joints and manning guard stations where they knew everybody who came and went by name.

While they were busy, he pulled out the .45 and slid it toward them.

All the weapons came up. “*Stay on the ground.*”

Next, he pushed out his cred. “That’s my credential. You read it now, Lieutenant, and then take me to Colonel Adams.” Nobody moved. “*Do it now!*”

The lieutenant kicked the pistol away and picked up the cred. Looked at it. “I don’t know what one of these things is supposed to look like.”

Those words told Jim that this boy knew he needed help. Jim was good at projecting authority. “The credential is fine,” he said.

The kid looked down at him. “Where are you from? Why are you here?”

Jim took a calculated risk and got up. Nobody threatened him. “I could tell you, but then I’d have to shoot you.”

“You don’t have a weapon.”

“Okay, let’s go,” Jim replied, “and leave that radio turned off.”

He walked over and got into the car, passenger side. “You need to post a guard on me. That’s what your colonel’s gonna expect—what’s your name?”

“Rawson, Sir.”

“Okay, Lieutenant Rawson, you drive and post your guard in the backseat.”

With one of the airman sitting behind them, they drove onto the base—which, on first viewing, appeared to be abandoned. Jim knew that this was because it was in its highest alert state, which meant that personnel did not

move unless ordered and all aircraft were under cover. The sky would normally have been full of trainers and the streets full of vehicles and airmen. But the only things flying there now were buzzards, wheeling with dark grace.

As they entered the base proper, they passed a golf links. “Decent course, Lieutenant?”

“It’s okay.”

“Where am I going, son?” As long as it wasn’t the guardhouse, these two boys were going to be able to keep their weapons and preserve the fiction that they were in control of this vehicle, which they were not. If he had to, Jim could disarm both of them in five seconds. In another five, their necks would be broken . . . if he had to.

“You’re going to HQ. We called it in on the guardhouse phone.”

That was acceptable. “Can you tell me if there’s a thirty-seven on base?”

“Nothing’s flying, sir.”

Jim did not reply. When they pulled up to the curb in front of base HQ, an AP in fatigues opened the door. “Come with me, please, Sir.”

As Jim walked with him, the rest of the escort fell in behind. They went down a long, polished hallway and entered Colonel Adams’s office suite.

The colonel’s compact, powerful build told Jim that he’d flown fighters. He stood up without smiling and took Jim’s credential. Examined it. “How can I help you, Mr. Deutsch?”

“I need a ride to Andrews. Now.”

“That is hard.”

“Is there a thirty-seven available? Anything that can get me there?”

“Oh yeah. It’s just clearances.”

Jim took a chance here. He said, “The White House will take care of that. I need to make a call. I need the most secure line you possess. And I’m also going to need a uniform and the name I’m flying under.”

“Uh, wait—”

“You have AFOSI staff here, I’m sure. I’ll fly under the credentials of the senior officer.”

“That would be Major Carstairs.”

“Very well, Colonel. Major Carstairs is going to Washington to an OSI emergency meeting involving border-related issues too sensitive to transmit. He is leaving as soon as clearances are in place.” Now came the big one. “Let me make that call.”

The colonel took him down the hall to the AFOSI station, where he was able to use an encrypted line. He called the number Logan had given him. It rang. Again. A third time. “Logan.”

“Secure on your end?”

“Go ahead.”

“Deutsch. I need clearance to fly Laughlin AFB, Texas, to Andrews immediate.”

“Done.”

“I’ll come to you direct from Andrews.”

“Is there anything you can say now that will help us?”

Jim glanced at the colonel, nodded toward the door. The colonel stepped out, closed it.

“I would take the ONI and FBI out of the loop immediately.”

“I can’t do that!”

“This is isolated. Small, but we have to assume that it’s perfectly positioned. Normally, I’d say that it wasn’t at the director level and that the overall organizations were secure. But under the circumstances—”

“He won’t shut them down, not on information like this.”

In other words, not on the recommendation of a field operative whom they’d never heard of before. “I can understand that. If he does nothing else, he needs to shut down their communications capabilities.”

“Thank you.”

Jim hung up. If it happened, it might buy some time. Then he thought, *Maybe it wouldn’t do that. Maybe it would do the opposite and make them move faster.* He said to the colonel, “You got any Tums?”

“No, Sir.”

“Send ’em to the plane. If they don’t get there before we take off, I’ll let my goddamn guts eat themselves. And minimize the number of people who see me, and see this plane take off.”

“Sir, I—”

“Best effort.”

“Yes, Sir.”

While the plane was being made ready, Jim was taken to the quarters of a lieutenant who was allegedly his size. The kid was not all that big, though, and Jim had to cram into the uniform.

A silent AP drove him to the jet. The colonel was as good as his word. Aside from the plane’s ground crew, there was not a soul to be seen.

“Sir,” the AP asked as Jim got out of the car, “what do we do with your car?”

“It’s not my car.”

“Is it rented?”

“Stolen. There’ll be a police report on it in Eagle Pass, be my guess. Tell them your lieutenant went joyriding.”

“I’ll be sure to do that, Sir.”

Jim climbed the steps and pulled the door closed, then secured it. He called up to the flight deck that he was ready to go.

Exhaustion overcame him, and he closed his eyes. He didn’t want to; he wanted to watch the route. What happened was not sleep, but it wasn’t consciousness, either. The plane became a boat; the morning, night; the air, an ocean. Wind screamed in the rigging; phosphorescent spray flew across the tops of the waves.

The storm was so hellish that he opened his eyes. He looked out across the cold military luxury of the cabin. Outside, white, clean clouds, blue sky, green, sweet land far below. His beautiful homeland, concealing now behind the smiling face that it presented to the sky the darkness of hell.

THE NECK MAN

Nabila's familiar office felt unreal to her, as if her desk were a landscape from somebody else's life or the distant past. The leaves still clung to the trees outside her window and the morning garden was dappled with sunlight, all very pretty and peaceful, and for that reason the scene seemed more like a painting on a wall in hell than something real.

She looked at her personal cell phone. This was the number Jim used. If he could call her, it would come in on this line. And how strange that was also, the flush of longing she had felt when she'd heard that careful voice, low and precise and so maddeningly arid, telling of this terrible event, and drawing her into his needs. Later, they would investigate that call. They'd want to know what he had been doing ordering the plane and why she had violated so many rules to help him. There were lying phone calls to explain, forged orders.

She realized that she had not started loving Jim again. She had never stopped. Her heart was tortured with love for him and fear for him—above all, that. To bear her fear, she had suppressed her love. She had not been able to live with the endless worry, the long, dark nights, the cold bed, nor with that sense of being shut out of so much of his life and his thoughts. She recognized that he could share nothing with her of his life. She could share little of her own. But her heart—it recognized only the loneliness.

To stop caring about him, she had divorced him.

She looked at the cell phone, all but willing it to ring again.

Wives of lost intelligence officers waited in sweated anguish, often for years, often forever.

"Jimmy, where are you?" she whispered to the sun of midmorning.

Somehow, she would do her work, continuing to search the ugly backside of the web, the deadly electronic landscape of religious sociopaths and their ugly blogs, spitting hate and, sometimes, clues.

The television spoke of Muslims being killed in London, in Berlin, in Amsterdam, in Paris, even in Mexico City, being shot by truckloads of

marauders ranging the streets, the sodden, ruined neighborhoods where the Libyans and Syrians and Iraqis and Palestinians and Algerians fried their little food and muttered over their sweet tea, the Egyptians with their careful, disrespected ways.

They were killing Muslims in their private ghettos, she thought, the lands of the sad.

The heretics—for that's what the fundamentalists were—would not win this. Of course not. Nature and destiny did not work that way. The Arab world had made itself into a dead end. They were like a nation of men somehow washed through time from the distant past, muttering by their fires while the West soared overhead in gleaming planes.

They would not win, but Washington also would not win. Today, Washington would die. She knew this. She had read it certainly in the Mahdi's message. The Mahdi, king of the end-times. What arrogant, stupid nonsense. There was no Mahdi, no more than there was a Wizard of Oz. And that idea of this being the end-times—she refused to consider it. Every woman had a right to experience being the wife of a good man and mother of children.

Washington would not win, because it had already lost. The mere fact that this could happen had ruined it. Now, the breathtaking vulnerability of the West was known.

Suddenly she wanted Rashid to hold her. She wanted to be the dutiful sister she had not been. She wanted not to loathe his effort to restore Šarī'ah in their lives.

She laughed a little. How self-serving was that thought? *Now that Šarī'ah might become the law of the world, you're already seeking to surrender to its bondage. Fear corrodes.*

She closed out her work, isolated herself from the network, then turned the computer off. She went to the door and confronted the large regulation security lock that was required to protect any computer as classified as hers. This room was well sealed, even its windows and the door. When she opened it, she could hear the church bells that had started in the midnight still ringing—she'd never known that there were so many bells in Washington, D.C.—and also sirens, wailing police cars, and the busy, frantic fire horns. There were other sounds, perhaps shots; she couldn't be sure.

Then she heard clattering. She realized that Rashid was still here. She was astonished to find him working on his laptop.

To avoid seeing his screen, she stood in the doorway. “Rashid?”

“What?”

“Shouldn’t you be on dispersal?”

“I’m selling that rug.”

She almost cried out, she was so astonished. He’d received an emergency call, the country was at war with an enemy he was uniquely positioned to find, and here he was, selling the Sarouk he’d put on craigslist. “You are selling the rug? Now?”

“I have a bite.”

“There are people on craigslist today?”

“The offer came in last night.”

He was in denial. There could be no other explanation. You did not sell rugs in a city that probably had only hours to live. Or maybe you did. There had been that famous tobacco auction going on in Krakow when the Germans marched in, and in Baghdad the shops had stayed open as the Americans took the city. And wasn’t it Boethius who had commented on the barbarians traipsing through his garden while he wrote *The Consolation of Philosophy*?

She heard herself say, idiotically, “I wouldn’t have minded if it was the green.” The purple Sarouk had been in their mother’s bedroom.

“The dyes are bad.”

“The dyes are fine. The rug is precious.”

She could see his back stiffen. In Šarī’ah law, he was the one with authority to do this. “Would you beat me, then, if I disagree?”

He turned off his computer, got up, and came toward her, two steps. His face, the eyes so large, looked as it had when he was a child, so unsure. “You have a gun,” he said, laughing a little.

“I do have.” They’d issued it to her and made her learn its secrets. She could fire her AMT Backup with proficiency, difficult as it was to aim the little pistol. “It’s in my drawer.”

“Right now, it should be with you.”

She bowed her head. “You’re right, of course.” She did not add that he was in violation of Directive 51, still being here. Even craigslist didn’t explain it. It was two hours since he’d gotten his orders.

He slid his laptop into his backpack.

She wanted to say something about what was happening to them. “If we —” She stopped. She could not utter the truth. Her blood seemed to moan in her veins.

He looked her up and down.

“Cape May,” she said. “Do you remember?”

He nodded. “Blue sky, hot sand, running after the sandpipers.”

“Are you afraid, Rashid?”

“I am afraid.”

“Me, too. More than I thought I would be. Why didn’t they disperse me? If I were you, I’d have gone the second I got my order!”

“It’s all God’s will. If we live or die. It’s just—surrender. Surrender.”

“We are responsible for our lives.”

“That isn’t the story we’ve been told, Nabby. It isn’t faith, to put our own will in front of Allah’s.”

“Faith is deeper than doctrine. There is only one faith, beneath all the stories.”

He gave her a sidelong look. “If I tell you why am I selling rugs, will you tell me why you are spouting philosophy?”

“I’m trying to reach the brother I once had. I believe you’re still there, Rashid. I believe in you.”

He threw his arms around her. “Come with me, Nabila! Forget your orders and come!”

She shook her head, she fought her tears, but they came anyway, great, wracking sobs that brought with them a thousand memories, so many happy days. She and Rashid had been happy, before Mom and Dad died, and actually for a long time after. So happy!

She held him back away from her. “You go now.”

“Nabby—”

“Now, Rashid. God go with you!”

He held her to him, kissed her hair. “God go with you, Sister.”

Then Rashid drew back, stepped to one side, and went off toward the garage. She heard the kitchen door slam. Then came the silence of the house.

She went along the worn runner that Daddy had put down in this hall when she’d been ten. It was a lovely Kerman, only now, twenty years on, looking as if it had just discovered it was being trod upon. She jabbed her combination in the lock and went back into her own office, still with the angels on the walls from when it was their childhood playroom, the angels that Rashid was planning to have removed in favor of a geometric pattern.

The bells outside made the familiar space seem desperately silent, and she turned the radio on. “God will not allow these evil monsters to destroy

America! I tell you, crowd the churches, jam them, let this monster know what we're made of! Don't tread on me, you Islamofascist bastards! *Don't tread on me!*"

As she listened, she came to realize that this shrieking voice was old Rush Limbaugh, the right-wing talk-show host. For a moment, she was transfixed by the fear in his desperate howl. Then she twisted the dial to the local National Public Radio station and, in the excessive calm of the voice there, heard a different version of the same terror: "Authorities worldwide are canvassing for more bombs, and federal officials now admit what has been an open secret for some time, that in January of 2006 nuclear materials were located in Las Vegas and destroyed. Why the public was not informed at that time will be the subject of a question to be posed to Homeland Security Chief Random Wilkes."

Random Wilkes, another empty suit, as far as she could tell. The expansion of the director level in the intelligence community had done nothing but increase the amount of bureaucracy. Information had to get through so many levels nowadays, it was a miracle that the president ever found anything out. Had the old system still been in place, she had no doubt that he would have seen the threat in the first website. Probably it would have made no difference. But what if it had?

She tuned to the all-news station, where she learned that violence against Muslims was worsening throughout the United States, that Muslims were rioting in Paris, and that the Russian air force was bombing Chechnya.

So far, nothing about U.S. retaliation. Over the course of her career, she'd heard whispers that there was a scorched-earth scenario available to the United States that involved the destruction of half the population of the Muslim world. It was a hateful, horrible notion, and when Rashid had first thrown it in her face she had agreed with him that it was monstrous . . . and reminded him that it was, also, a rumor.

She hoped that, if it was real, using it would indeed save the West. She had serious doubts, though. Where would the leaders of a program like this be? Not in Karachi or Riyadh, certainly. Far more likely their headquarters would be in some out-of-the-way location too sparsely populated for a program like that to cover, or, more likely, in some middle-level Western city like Barcelona or Columbus that would not be on the nuclear list.

Feeling a congealing, twisted hatred for her own kind—for herself—she forced herself to concentrate on her work. She should never have left this

desk, let alone gone off-line. But regs required her to shut down when she left the office.

The ceiling seemed to be getting lower. When the bomb went off, the ceiling would slam into her, she thought, crush her before she could perceive a thing. One instant, she would be this richly alive human being. The next, nothing.

She gave her thumbprint to her laptop, then input her latest password sequence. Her personal seal appeared, confirming that she was back on the secure network. How secure, though, given what Jimmy had said?

The CIA's networks were supposedly secure, but not if there were spies inside the system. Because of her particularly sensitive work, she'd be a very specific target. They would be watching her right now. So here she was, forced to trust something that she did not trust. She opened the small program that told her if anybody was on this node with her. The space remained white, so she continued on, opening her browser and lining up her 'bots.

They were finding hundreds of new sites. Of course, every lunatic on the Internet had something to say, every terrorist group something to claim. Stupid people. Worthless.

She knew she shouldn't do it, but she found herself navigating to craigslist. What was Rashid really doing, anyway, worrying about such a thing as a time like this, to the point of violating orders?

She went to the D.C. section, then to collectibles. She searched on "rug," and there it was, the only one. She opened the page. Stared, confused. How could you sell anything with this sparse offering? There was no picture. There were only four words of description: "Antique Sarouk carpet, purple." Not even the size. And yet he said he had a bite? Impossible, he was a complete idiot.

She knew that she shouldn't use her skills for this, but nevertheless she hacked into their civilian Internet service provider, Washington Cable, and was soon looking at the server space allocated to Rashid's account. She opened his e-mail.

Nothing there except spam, some from as long as six days ago. So if he had read his e-mail as he said he had done last night, why was his spam still on the server? It would have been downloaded with the rest of the e-mail.

She looked in the record of items he had recently sent. There was an e-mail there, its subject heading "Sarouk Carpet." She opened it. There was only one word in the body of the text: "Purple."

Odd and odder. She saw the address of the recipient, a Gmail account. If she wanted to go any further, she would need to contact Google Security. It wasn't difficult. Her program automatically secured the legal permissions necessary.

She wouldn't be alone, though. Every keystroke would be recorded, and Legal might have questions later. If she couldn't answer them, she'd end up under investigation.

She couldn't honestly check the box that said it was a national security matter, not quite. It was just—well, it was odd, that was all.

But this was Rashid, her brother, perhaps too intense about his religion, but certainly a patriot! She was going paranoid. Because this was an insane thing to do, an abuse of power, probably a criminal act.

Instead of checking the box, she did something that was far less illegal, and replied to the buyer as Rashid. She could see that the buyer wasn't in his e-mail account—probably still in his car, in fact—so she spoofed him: “This is Rashid. I am sorry, I have decided not to sell my rug. The offer is withdrawn.” She hit send—and immediately the message returned. She checked the network, the servers. The backbone was intact. The route was clear. The problem was quite simple: the address no longer existed in Gmail.

In other words, the recipient had closed the account as soon as Rashid had sent his strange, single-word e-mail.

She sat, staring at her screen, thinking. Her heart was blasting; sweat was running along her underarms.

Now she returned to Google's security sign-in area. She certainly had justifiable suspicion this time. “Rashid,” she whispered, her voice miserable.

She checked the boxes, checked that this was a national security matter, and that she had probable cause.

From behind a veil of tears, she sent her request to Google. Sometimes there was a delay. They had their legal issues, too, their oversight protocols. But not today. Today, the reply came back in just seconds. The Gmail account had been opened this morning from a T-Mobile HotSpot in Alexandria. It had been open for just six minutes. Of course, the account's information still remained, but all it did was direct her to that particular Starbucks. She noted the address, though, because she knew now that this was important. Her heart was breaking, but her mind was clear.

“Purple” was a coded message, and therefore her brother was involved in something. What if it had to do with the nuclear attack? Oh, but God, no, that

was impossible. Rashid might be tangled up in some silly extremism, but not that. Or there might even be some innocent explanation—a secret society, perhaps. Wahabis in the United States were secretive, and for a member of this community to be flirting with them—he would be very careful.

Still, he had violated the most important order he had probably ever received in order to transmit a code word on a morning when he should have been racing to his dispersal point.

She threw her head back; she clenched her jaw; the tears rushed from her eyes; her nails dug into her palms. Then she drew breath, and a choked cry came out of her, instantly silenced.

Again, she heaved, fighting herself, clapping her hands over her own mouth. She forced herself to stop shaking, to swallow the next scream.

Their father would weep with rage to know that the effort he'd made to get his kids around the prohibition against Muslims in intelligence work had led to this: "Senator, you know Rashid and Nabila from their babyhoods! You know what kind of kids they are!"

She told herself that it wasn't just them, not just the Muslims. After all, had divisions between families like this not happened here before, in the Civil War? But this was her brother's betrayal of her and of their country, not the betrayal of some other brother from long ago.

Jim had warned of a penetration and a serious security problem. She had known at once that her work would be of intense interest to anybody wanting to follow the CIA's efforts to contain this problem. She was an important link in that chain.

So they were almost certainly watching her online activities. Of course they were. But this also meant that they had seen what she had just discovered about her brother.

They would have to act, and at once.

She picked up her cell phone—and then turned it off. She took the battery out and laid it on her desk. She closed her laptop, unplugged it, then removed the battery. She dropped the computer and the battery into her backpack.

How long might she have? Not long. They might be on station somewhere in the neighborhood. Probably were.

Rashid had left her here not to die but to be killed.

She left her office. She knew she had no time to waste, but the weight of the lost past, as she went through the house, slowed her movements. Leaving here was pushing against the strength of a river that was made up of the

pictures on the walls, the carpet that had pleased Daddy so much, the couch Mother had loved. Nabila could hear the happy voices still, her mother calling her from the kitchen, her dad—well, she had felt herself a royal child once, simply to be his daughter.

Feeling now like a refugee from some sort of hurricane, she bowed her head and left the house. Rather than taking her car, she walked down to the coffee shop on the corner. She had no intention of using the WiFi node there—or of using the computer again, not until it had been completely examined by digital security, in the unlikely event that she managed to reach Langley.

She walked past the silent houses and the houses where people were leaving, filling their cars, calling to their children, throwing their luggage in, their clothes in piles. An SUV raced away, followed by a dog running hard. The vehicle rounded a corner, the dog still behind it, his big ears flapping as he ran with all his might.

She found the old pay phone in the cul-de-sac beside the coffee bar and dug into her purse, praying that she had change.

She put in two quarters. Dialed. She scrambled for more money. Paid more. And heard ringing. Again. Again. “Please, Jim, oh, *please!*”

“Please leave a message.” His voice, at least.

“Jim, it’s Nabby. I think Rashid is in it! Oh, God, Jim, help me! There is a word, I think a signal. ‘Purple.’ That is, the word ‘purple.’ Jim, where are you? Am I talking to a dead man?”

Unwilling to hold the line open longer, Nabila hung up and walked quickly away. She wasn’t sure where to go. The Metro? That might help. Take a few stops, then phone Marge, see if she could be picked up.

But how could she know that whoever showed up could be trusted? She could not know.

She turned a corner, and saw coming this way a car that was too careful to be anything but a spotter. She stepped back into an alley. The car went past.

Her heart hammered. The car was looking for her and therefore the car was proof. Somebody had indeed been watching her every online move, and had seen her make her discovery about the carpet sale.

She watched the car stop at the far end of the alley. There was no time now; whoever was surrounding her would have her in their gun sights in minutes.

They were probably a detail from some agency or other that had been ordered to bring her in or kill her or whatever. They themselves wouldn’t

even know why—or, ultimately, where—the order had originated.

She went down the alley and into the tangle of bushes behind a row of houses, and used the crackling shrubs for what cover they offered.

Then she saw a man watching her from the tall back window of one of the houses. He wore a T-shirt and had a rifle ported across his chest. She had never felt so acutely aware of her black hair and enormous brown eyes. All she lacked to make her identity certain was a burka. He stared with the steadiness of a practiced hunter. She smiled at him and went on along the alley. Ahead was 9th Street, and just down the block Eastern Market and its Metro stop. But was the Metro still running?

Just as she exited the alley, another suspicious vehicle, this one a white Jeep Cherokee with tinted windows, came around the corner and passed her going north on 9th Street. She tried to duck back, but it stopped. It sat, motionless, engine running. Coming through the alley from the other direction were two men, moving fast. They had pistols in their hands.

She looked again toward the man in the house. Was he a civilian, or another pursuer? No way to know, and no way to know if he would help her or hand her over.

She opened the gate to his back garden and went in. Motionless, he watched her come. Behind her, the men moved more quickly. She reached the house. He opened the door.

“I need your help.”

He drew her in.

YOU HAVE NEVER MATTERED

Alexei offered Vladimir a Sobrainie. Vladimir looked hungrily at the black tube. “Not smoking,” he said. “It is your last lung,” Dr. Abramov had told him. “Respect it.”

The two men watched the valley, waiting for the last pink echoes of sunlight to disappear. Birds, screaming faintly, sailed in the high light.

“You do it,” Alexei said.

All the way from Tashkent, they had carried on a desultory argument, drinking and watching the bleak landscape pass by. “It’s for you to do.”

“It’s loathsome.”

Vladimir made scrambling motions with his fingers. “They’re going to run all about screeching, ‘Don’t, mister, don’t.’ ” He chuckled. “You will do it because you are an exceptional man.”

When Alexei started with his knife, he couldn’t stop. He terrified even himself, the way he killed.

Far below, a truck wound its way along the road. From the installation there was not the slightest sign of activity. “Such peace,” Alexei said.

“You’re a superman, Alexei.”

“Let’s go, then.”

They were in Afghan dress. Vladimir wore a *pakol*, the favored hat of the mujahideen who had destroyed the Soviet armies. Alexei was in a dark *lungee*, clumsily arranged, which the meddlesome desert wind threatened at all times to unwind. He felt the wind, cooling quickly now, as it insinuated itself under the folds of his *chapan*. He would have preferred the sand-mottled uniform of Russian desert forces, but the American, British, and French satellites could all see two people moving in terrain this sparse, and would immediately notice them. Soon, the drones would arrive, and then God knew what might happen.

Alexei stopped. “Now, what is that spit of land? Is that it?”

Vladimir unfolded the oilcloth map, which whipped in the rising wind. “God, I hate deserts,” he muttered. The damned Americans had turned off

their Global Positioning System, so the Garmin that Mother Russia had bought for them was now nothing more than baggage. But it had an MP3 player in it, so they could listen to music, anyway. “This is it,” he said. “Down there, we find the air shaft.”

“Why not just let the Americans complete their fez-boil? We could go back to Tashkent now and drink.”

“I have plenty yet.” He produced a flask.

“How many of those did you bring?”

“You’ve stolen everything else of value in my pack. You should know.”

“I only steal what others don’t need.” Alexei took a swallow from the flask. “Jubilee, no less.”

“Don’t be ridiculous. That’s Hennessy X.O.”

“I only drink patriotically.”

“Then I will be drunk while you kill the children.” He pointed. “That’s the right ground formation; the entry is there.” As he moved ahead, he heard Alexei scrambling along behind him.

“Do we know why we’re doing this?” the young man asked.

“Do we care? Without Las Vegas, my hopes for a better future are lost.”

“Your sense of humor is too French, dear Vladimir. There was a time when a statement like that would have sent you to the gulag.”

“True enough, under Stalin you would be Beria and I would be dead. Now, it’s the time of the thinking men, so I lead and you do the bloodletting. It suits you, anyway. Your butcher’s hands.”

“I have the hands of a pianist.”

“Same difference. Did you ever see Denis Naumov perform? His hands look like roasts, but his Debussy—amazing.”

“Naumov. Debussy. When I hear the word ‘intellectual,’ I go for my gun.”

They came to the entry port. It was a kilometer from where the fezzes were living, and nobody but a Russian with a proper schematic could possibly get through to the personnel deck. Vladimir had never been inside the installation. They’d been shown photographs, though, so they would be able to comb through it until they reached the flesh. Then their orders were to kill everybody, no exceptions, no mercy, no bribes. If they did not do this correctly, they would, themselves, probably be killed.

Often Vladimir wondered if he actually cared for his own life. He had when he was young, certainly. Had loved it, loved just to breathe. They don’t say it in the movies, but when you kill for a living, gradually you also die.

Then you are like he was now—dead and alive at the same time.

He had a condo in the South of France, in the development of La Californie. He was happy there, happy to watch the French with their snails for luncheon and their wonderful legs. He would get drunk there, good and drunk, and recite Lermontov, who had been his father's favorite and was therefore also his favorite. "I love you, my friendly dagger, dear friend forged of Damascus steel."

"You're mad as a Chechen, Vladimir."

"Mad and sad, which is to say, Russian. Come now, roast-paws, let's do this work that is ours to do."

"You call it work?"

"What else is it?"

They entered the air shaft, bending low and moving fast, their way lit by their powerful German-made flashlights. The deeper they went, the louder the intake fans became. Soon they were churning and wind was whipping past the men's heads. "Don't let that idiotic turban get into that thing," Vladimir said. "I don't need your head torn off."

"I was issued this turban."

"I was issued a turban also. Do you see me wearing one?"

"I see you wearing the uniform of the bastards who wrecked our army."

"Let me ask you this, Alexei. What is one mujahid with a cigarette lighter responsible for?"

"I have no idea."

"Six Soviet tanks."

"Traitor."

"Just getting your blood up. Here's the hatch." He opened his general-purpose tool and loosened the old bolts, probably last tightened thirty and more years ago, by some sweating Soviet technician who was now an old man with a nicotine-stained moustache—or, more likely, dead.

They had to heave the heavy hatch back together. "The USSR built to last."

"But not my flat."

"Worthless roast-hands, what are you doing in our glorious FSB? Ah, the quarry is heard. Listen."

Wailing Arab music echoed from beyond the end of the tunnel.

"Do they have happiness? Humor? All of that wailing . . ."

"A love song. Her man is a shit."

“All fezzes are shits, in my experience.”

“You fuck their sisters in Tashkent.”

“I have to. They demand it. Anyway, they’re not Arabs. Just with the mullah shit.”

They went out into the broad personnel tunnel, carefully closing the inner access hatch behind them. Silent now, each intent on his work, the two men moved off to their respective areas of responsibility.

Vladimir had to kill his old friend Aziz, who used to masturbate in his bedroom, leaping like a great frog while he did it, no idea he was on video in ten different departments of the FSB, let alone the iPods of many of the department heads’ teenagers.

Vladimir went into the old communications shack, with its walls lined with ancient, useless radio equipment. To evade American detection, Aziz’s operation used manually delivered messages now. The mules were their shortwave radios, and piggybacked number stations. The fezzes actually believed that the Russian operators knew nothing of the fact that they were using the number stations. Absurd, of course.

“Hello, Vladimir.”

The prick against the back of his neck told him everything he needed to know. “I hope it’s sharp,” he said to Aziz.

“It’s dull as stone, Vladi. Your sort of a knife.”

“I was afraid of that.”

Then there came a sharp, echoing cry. The surprise—no, astonishment—in Alexei’s voice was unmistakable.

There was movement behind Vladimir, and then he was shoved into the small communications room by two figures in full purdah. Women? No way to tell. One of them had what looked like an antique Arab dagger, curved to tear out guts. The other had Alexei’s pistol. They were followed by a boy with a meat cleaver. Aziz stood in the concrete hallway behind them.

“We’ve been waiting for you,” a familiar voice said.

“A double agent, then, Eshan?”

“You always underestimate us, you Russians. You cannot accept our abilities.”

Aziz came in. He nodded toward Alexei. “That man was here to cut your head off, boy. Kneel down, Alexei; young Wasim here is going to cut your head off instead.”

Alexei cried out, then stifled it.

“What? You were going to cut his head off? But he can’t do the same? Why, because he’s only a stupid fez?” Aziz took a step toward Alexei. “You helped us. Useful Russians. But it’s finished, the bombs are there, so you don’t matter anymore.”

Alexei grinned—a thin, pitiful attempt. “I can pay.” He shook like a palsy victim, and Vladimir was embarrassed for him, and for Russia.

“Alexei, face it. We’ve been betrayed and we’re dead,” Vladimir said. “You might as well do as he says.” Himself, he felt only a dull, empty hopelessness. He’d been at this most of his career, assembling and transmitting the thousands of tiny packages that had been sent to the hidden stations around the world. It had taken eleven years of work to get the bombs in place, moving them bit by bit, then getting the Islamist fools to assemble them correctly, these men who did not know a motor from an engine.

“Wait,” Alexei yammered. “Eshan, Wasim, and you women—listen to this! Yes, listen! There’s a reward—many rewards—for him! Yes, for Aziz! The Americans, ten million, the Syrians, two million—dollars, yes, listen! The Pakis, two million—oh, a long list! You can betray him and be rich. Rich!”

One of the women knocked Alexei in the shoulder with an empty butane tank she had been carrying as a weapon. Squalling, he lurched away from the figure, whereupon Eshan tripped him, and he went down groveling like a whipped cur.

Vladimir simply waited to die. He didn’t care anymore. This operation had gone out of control. It would not be recovered. The group grabbed Alexei’s arms. They pushed him to his knees.

Aziz said to the boy, “Chop at it, at the back of it. Let him scream; they’re holding him.”

While Alexei screamed and twisted his head, the little fellow took a gingerly chop at his neck. The touch of the blade caused Alexei to bob his head almost comically. Vladimir was reminded of a chicken. How banal, for this to be among his last thoughts, Alexei the pecking hen. Shouldn’t he contemplate Pushkin or “O God, our help and aid in distress . . .”? But it was a long prayer; he’d best come up with a shorter one. The Dinner Prayer, perhaps. Could he recall the damned thing?

Again the boy hacked and Alexei squalled. How afraid he was, old roast-hands, who would have strangled this pretty boy slowly, just to watch his eyes fade.

Aziz shouted, "This is a Crusader devil; do it!"

The boy, weeping, muttered something in Persian. Aziz snapped at him, and the boy hacked at Alexei harder, the cleaver now making a sound like a butcher's off-center chop. Blood spurted and Alexei stomped and babbled some sort of slurred plea. He was losing blood fast. Consciousness was going.

But that poor child, dear heaven, what a thing to make an innocent kid do! "The boy will not forget this," Vladimir shouted. "Never! Aziz, it's wrong to do this to him!"

"To the Muslims, execution is not extraordinary."

"There soon will be no Muslims."

"The Muslims have won the world."

"Have you any knowledge of Dream Angel?"

"They will not execute Dream Angel, Vladimir. They will choose to live as slaves."

The boy stood trembling.

"Do it, boy! Do it!"

The kid's big eyes bulged, his face shone with sweat, and he chopped and chopped. Like great, swaying birds, the women in their black burkas hovered nearby, their arms sweeping in their distress like impotent wings.

Alexei's screams became sucking hisses, and then the boy lifted his head by the hair. "It's heavy," the boy cried.

"Then put it down," Aziz replied mildly.

"This is not a lesson I was sent to learn!"

" 'As for those who disbelieve, we enter them into the fire and often, so that their skins are terrible with fire. Then we will change them for other skins, that they may taste the pain of it again.' " He took the boy by his collar and raised him eye to eye. "Which sura, boy?"

The boy stared right back at him. "Four. Fifty-six."

He threw the boy to the floor. "Now, Vladimir, you have some work to do for me. There must be a signal, to be sent when you succeed. I want you to send that signal."

"Fine. I don't care." He gave no sign to Aziz that he was mistaken. No signal was to be sent. The least flicker of radio transmission out of this place and the Americans would be here within the hour. So, let them come.

"What is it, then? Not a radio signal, surely."

"Of course it is."

There was a flash in Vladimir's face, and a terrific blast of pain. For a moment, he was confused, his mind questing for some understanding. Then he realized that he'd been slapped with a gun butt. He had not the slightest intention of being tortured. "Here's the truth: If I don't return to the forward base at the appointed time, then a radio signal is sent. It will appear to be from you. It is intended to draw the Americans. There are rangers waiting on top of this structure. They have a transmitter."

Aziz had known Vladimir for eleven years. He had first met with Vladimir when he was a spy in Chechnya, had lived with him in Moscow, had slept with him on drunken nights when they were hunting bear in Siberia and the two of them were in a tent in the depths of the taiga, and—it had simply happened. It was nothing, a matter between men. Nothing sinful.

Well, never mind. Vladimir must now die.

It was also necessary to abandon this place, given that the Americans might indeed be somehow alerted. Very well, they would return to Peshawar. It was past time, for there was political work necessary. Hezbollah had condemned him. Syria, Iran, even the Taliban were uniform in rejecting this messiah of whom they knew nothing. Hamas, of course, those running dogs of the Jewish state.

"Do you know, Vladimir, that we have a weapon in Moscow?"

"You do not."

"Do you want to find out?"

"What code are you using?"

"Purple."

"You're lying!"

"Why should I be lying when the president, in his very office not three hours ago, said to launch Dream Angel. But wait, he said."

"Dream Angel is going to its fail-safe points?"

"So I have been told by a simple man with a very bad truck, who drove along your terrible Soviet road with a certain message. Here, I have a photo." He showed Vladimir a picture of the Kama 3 of old Hassan, with the names of certain djinn written on the door. It was the order of the names that revealed the information.

"I can't read that. Is it Pashto?"

"Dari, Pashto? What does it matter, some stupid writing of us fezzes?"

"You've conquered the world, haven't you?"

"Allah has." Then he took the knife from Wasim, and raised it to

Vladimir's throat.

Vladimir looked into Aziz's eyes. "Old times," Vladimir said.

Around them, the women, Eshan, Wasim, all became still. "There is no God but Allah, and Mohammed is his prophet," said Aziz. "You know, the Americans are on their way to this place already, aren't they?" He smiled a little. "They have followed him. He has let them."

"Aziz, no, I despise the Americans! Despise them!"

"You were in the pay of the CIA."

"As were you!"

Aziz laughed at him. "But I ate the money."

"Please, I can be of use. Yes, I'm a whore. But of course! Yours, now, Aziz."

"Putin's, the CIA's, mine. Who knows who would be next? Nasrallah, perhaps? With Hezbollah singing the song of the Crusaders, why not?"

"The world hates you. The Muslims are all against you. Al-Zawahiri has condemned you!"

"Certainly. Al-Zawahiri is like Nasrallah. His whereabouts are known to the Crusaders. So he is nothing but their slave."

"I can be of use!"

Aziz gave the knife to Eshan and turned away. "The Americans will be here soon," Aziz told him. "This man works for them. We must go at once." He hurried off down the low concrete corridor.

Behind him, there was the sound of the throat being expertly slit, a noise like water spattering. Aziz hesitated for a moment but did not turn back. He heard the thud of Vladimir's collapse, and the drumming of his feet. When the bubbling of the breath faded, Aziz walked on. He had work to do, and very quickly.

His first wife, Zaaria, threw the gas cylinder she had carried off to one side. "Why are the Muslims against you?"

"No Muslims are against me. Only apostates."

"And all these millions on your head, Aziz? What is this?"

"A Russian lie."

She looked at him, her eyes dark in her concealing *hijab*.

"We leave at first light! Prepare everybody!"

"We go to Peshawar?"

"We go where God sends us."

She hurried off toward the women's chamber.

ONLY A DREAM

In Alexandria, Virginia, “Ronald Alfred Mullins” and his younger brother worked in their garage. Ronald, whose real name was Bilal Aboud, had the plan in his hands. “The circular valve is to be turned twice,” he said to Hani.

“And then does it explode?”

“It does not explode. Turn the valve, Hani.” During the night, Bilal had heard Hani weeping. He had seen Hani go to the kitchen and eat peanut butter from the jar, and had heard his smacking. He must not weigh more than 128 pounds or the plane could not fly, and for that he had needed to starve himself for nearly a month. His Ramadan fast had never ended.

Of the two of them, only Bilal knew what the word “purple” that had appeared in the craigslist advert meant. When he had been counseled by the psychiatrist about how to ensure that Hani would indeed carry out his mission, it had been explained to Bilal that anticipation was the worst thing. So he had not told Hani when the flight would take place. However, they had to be in readiness, and so had to install the bomb into the airframe.

Hani had also been carefully trained. He knew not to ask, knew that he did not want to know: “The only thing that matters, Hani, is what you are doing right now.” So Hani had trained like that, concentrating only on the momentary activity. He would think of getting the plane off the ground, then of the four-minute flight to his ascension point, then of pulling back the stick. He would not think of his death, never that, never at all. He was not a simple creature; he had his own ideas of heaven and afterlife. In truth, he did not think he had an afterlife. Hoped he didn’t, because what he was going to do was so extremely evil. But he had his brothers’ and sisters’ lives to consider, and the honor of his family. Their father, he believed, had been shot dead by Blackwaters in Baghdad. He had been an electrical engineer driving to his work. He was not a fighter of any kind at all. He had been shot, Hani had been told, for sport. People said that he had pleaded, but the Blackwaters had shot him, then shared cigarettes among themselves. Perhaps he had been

killed by American mercenaries . . . or perhaps by somebody seeking to radicalize the two English-speaking brothers. In any case, Hani fought for honor, not for access to a heaven he did not believe was even there. For him, America was Blackwater.

“Now, this is the bomb?”

“This is the bomb.”

“There’s a lot of wiring. It looks delicate.”

“It only needs to work once.”

“Will the radiation kill us?”

“Not as long as the plutonium is properly contained.”

Hani laid a hand on it. “Cold,” he said.

“You can’t feel the power of it.”

The two of them lifted the black melon by its handles, moving it into the flimsy aircraft.

“It’s not easy! Careful!”

It was not supposed to exist, this bomb weighing only two hundred pounds. But it did, did it not, and there were many more of them, Bilal hoped. The new land mines was how Bilal thought of them.

It dropped down into the compartment they had welded together with such effort, struggling with modifications to the kit. But this was satisfying. It was stable in its position now.

“Now, the wings,” Hani said.

They had to fix the wings to the body of the aircraft, which must be done in the street. It could not be done here; there wasn’t enough space. “It is not time,” Bilal said.

Hani smiled. “Time is only a dream. As is this life, also nothing but a dream.”

Bilal laid a hand on his brother’s shoulder. “Allah has no need of time. In heaven eternal, there is no time.”

“Do you believe it, Bilal?”

Bilal did not like this question. He himself couldn’t fly the plane; he was too heavy. In the training camp in Texas, he had been taught that when a pilot asked when he must fly that was a danger sign. “I believe that the world the Crusaders have made is evil,” Bilal said. “The nation that murdered Dad for sport is evil.”

Hani nodded. “We’ve never been able to train with the wings. Do you think we’ll get them to work?”

“If God wills.” The wings had been modified to fold back, and would need to be carefully opened and locked, once the plane was out in the street. That would be the most dangerous moment.

“Bilal, I’m—”

“We are all afraid. It’s natural.”

Hani smiled again. In it Bilal saw a new fragility, and he thought that Hani was failing in his resolve.

“I was going to say I’m hungry. I want some lunch.”

Bilal put his hand on his brother’s narrow shoulder. They went to the kitchen together.

A ROOM OF ONE'S OWN

Rashid's space was tiny and stuffy and deep, so crammed with equipment that it was almost impossible for him to move from his chair. Rashid hated the claustrophobic hole. He had not even wanted to come in during drills. But now he must live here, in a tiny two-man bunk with another controller. He was the only Muslim among them, of course. The token.

He did not dislike his coworkers. In fact, very much the opposite. Their dedication to the service was admirable. They were not Muslim because they did not understand, not because they had rejected the faith. They were not like his sister, foolish creature, with her apostasies. Why not bow before the word of God, proud woman?

Even though she had accepted the faith and prayed—actually prayed—she had her demonic justifications for not even so much as wearing the veil, except when she pleased. Immodest creature, self-willed sinner!

Her arrogance was why he had suggested that the first demand be the veil. She had ignored it. Had she not, perhaps he would have also suggested that the bomb be detonated in the wilderness, not over Las Vegas. He would have accepted the danger of making such a suggestion to the powers. So it was her, Nabila. She had killed Las Vegas, and before he was through with her he would make certain she understood that the bombing there was on her head. Once this was over and power properly consolidated, it would be his faithful pleasure to execute her with his own hands.

Before him was an array of screens, each one providing a different view of his surveillance sector. It was normally a high-interest area, but at present management was concentrating on the continental United States, not on Afghanistan and Pakistan.

His mission was to co-analyze production from the new Rugby Altair class Synthetic Aperture Radar satellites, and the Echo 12 systems in higher Molniya, invaluable for his current effort, because of their dwell capability. It was a piece of luck that the Echo 12s were at a high fuel level, having been refueled by Shuttle Mission STS-201 last month.

He had all manner of software assistance and his computers were essential to his work, but he had intentionally developed a reputation for liking to look at his imagery at once, rather than waiting for it to process. He was extremely careful and, he thought, extremely good. Never, at any time, did he do anything that might suggest that he had another agenda. Of course, they watched the Muslim with a special eye. Of course, they secretly despised him. It wasn't their fault; it was the evil in them. Evil comes to us all. We must actively go to the good, and Crusader lies made it hard for these poor people to do that. Greed, the dark master of the West, had locked their hearts, and a good Muslim addressed their tragic state with compassion. This was what Nabila didn't understand. When they were unpleasant to her in the shops or whatever, she cursed and spat and stomped out her rage. She should thank God for the blessing they gave her, which was a chance to give her suffering to Allah.

Rashid's teacher at the mosque, who had brought him out of the folly of moderation and into the light of the truth, had said to him, "Evil exploits human weakness. The men of the West are not to blame any more than locusts are to blame. But we must still kill the locusts, or the field will be ruined."

That was true, and look why—even now, there was blue water at the north pole in the summertime, the glaciers of Greenland were sliding into the sea, the oil of his homeland was being devoured by the Great Satan and his minions, and God's beautiful earth was dying beneath an avalanche of plastic bags, discarded buttons, bottles, toys, and who knew what else—a mess being made by humankind, in defiance of the will of God.

Rashid never did anything to compromise his mission, but he also served his real master, and as he watched his screens he saw that this service was going to once again be needed.

His protocols dictated which sectors he was to observe most carefully, and the Pamir Panhandle was not one of them. This was why, when the clear outline of a Fennek reconnaissance vehicle appeared during a lookdown, he had to fight his rising heartbeat. This was important, because everybody knew that inappropriate indications of stress could bring on an incident-targeted lie detector test—and not with a polygraph, not anymore. The much more effective No Lie fMRI was now in use, and like all of his colleagues, he'd had a baseline exam that made it essentially impossible for him to conceal a falsehood. He must never forget, not now: all they had to do was

ask the right question and he was finished.

He queried ISAF HQ, Afghanistan, for their deployments in or near 37°19'43"N, 70°44'35"E. What a Fennek might be doing in an area he secretly knew to be enormously sensitive he did not know, but it was very worrisome, and he had no choice but to take the risk of asking.

ISAF came back: "No deployment coordinates req." So it wasn't a Fennek but rather a vehicle disguised to appear to be a Fennek. This meant only one thing: Russians. Russians were within a few kilometers of their old installation. From its size and shape, he thought they must be in an old BRDM reconnaissance vehicle, fitted with plywood panels to make it appear from above to be modern NATO equipment.

Of course, they would have blueprints of the Pamir installation. They would know all the old trip wires, all the mantraps, and, above all, the secret ways in through the ventilation system, pathways that NATO would not have mined. They would be able to penetrate right to the heart of the place without detection. Would Russians understand what was being done there?

He could not even ask that question. The fact was that they were penetrating the place, so of course they knew something, possibly everything.

They must have come in through Tajikistan, a team of specialists. Putin must have realized his mistake in letting Inshalla have this base in the first place, and the Russians were there to clean house. They would kill Aziz and his entourage, and clean up the entire base to a forensic level of thoroughness. Inshalla had done Russia's secret work in throwing America into chaos, and now it was time for it to stop.

It must not stop.

Perhaps he could suggest an attack on the Russian target. There were SiMiCon Rotor Craft available in Afghanistan, armed with Hellfire missiles. But no, that would look like he was reaching above his level of authority, perhaps attempting to bypass his superiors, and that would cause suspicion.

He composed an instant message: "Poss. Russian BRDM-2U camoed as German-marking Fennek observed scout mode coordinates near 37°19'43"N, 70°44'35"E. Unknown mission. Lookback shows route out of Tajikistan. Recommend immediate site investigation Sov era installations region."

He could not warn anybody in Pamir. He knew this: if the martyrdom of Aziz as Mahdi was meant to be, it would be. God forgot nothing, knew everything. However, it was hard for Rashid as a technician in command of these powerful resources not to try to help Allah decide what his will was

going to be.

“Allahu akbar, Allahu akbar. . . .”

The words had come as if from the interior of his own soul. They shocked him so badly that he almost lost his balance in his seat. Instinct caused him to pull down the cover that concealed his controls. And then he saw a face peering at him over the cubicle partition. His neighbor, Carol Wilkie.

“Hello, Carol.”

“God is a woman.”

“He will be surprised to hear that.”

“Saint Teresa of Avila went bald. Would she still have to wear a veil?”

“Why wouldn’t she want to?”

“It’s time for Asr,” Carol said, “by my reckoning.”

“Ah, thank you, my *adan*. I was far away.”

“Your keys told me that. Anything up?”

“It’s nothing. . . .” She was not need-to-know for his area, and compartmentalization here was extremely strict, especially now. “Actually, even this peering over the divider is illegal.”

She gave him a questioning frown.

“To look in here. You’re not cleared to see what I am doing.”

She sighed. “They should’ve put the walls all the way to the ceiling. Damn congressional cheapskates.” She laughed a little, and it was very pleasant to see and hear. She wore a black veil, out of respect for her coworker’s sense of modesty. It was a fine thing, and he was very appreciative of her for this act of respect for him—and, for that matter, for herself.

He was tempted by Carol of the long, soft hands and the wide eyes that so deliciously pretended innocence. But not now; she was not part of his mission and she had to go away.

“Want to meet for tea?” she asked.

“No tea today. Just work.”

“Understood.” She snapped him a salute and disappeared.

He unrolled his carpet and used a moist towelette to make quick *wadu*, then went down to his prayers, imagining his soul flowing across the world to Mecca, and coming as a supplicant to the feet of God. How he longed to be with God! How he loved God!

During the prayer, though, Rashid’s computer beeped the alarm of an incoming urgent message. One of the satellites had detected movement on the ground. He had consulted his mullah about moments like this, and it had been

decided that Rashid could compress the prayer. Pilots did it, surgeons, soldiers in the heat of battle. You wrapped the whole prayer up into a single word, and sent it off to Allah with praise and thanks. Allah understood these things. Rashid had been instructed, “You must obey Allah and follow Allah’s laws to the letter, but you must also love Allah and enjoy Allah. Allah is the vengeful lion, but Allah is also the pomegranate in the summer garden, ripe for plucking.”

It smacked of Sufism, but Rashid had accepted it, for this man who instructed him had himself an excellent reputation among Saudis in America, and had been the choice of Rashid’s father. He had known little of Salafism. He had not understood the beauty of its purity, or the power of its message of reform. He had not understood how it felt to belong to the deep truth of the faith, which was only available through total acceptance of the precepts of the Kita at-Tawib, and a return to the ways of the first and best generation, the generation of Mohammed.

Another beep came, and Rashid sent his prayer off on its voyage, and returned to his console, where he saw that a passing Rugby had detected movement along the river, seven figures moving south and west. They had sheep. Rugby satellites had almost no dwell time—a little more than the Lacrosse series they had replaced—but it had been enough to project the probable route the figures were taking.

He knew that this was the Mahdi Aziz and his entourage, escaping into Pakistan. Nobody would drive sheep in that hostile region, a freezing desert without sufficient grass to sustain them, let alone fatten them for market. So this meant only one thing: the Mahdi and his followers had escaped from the Russians in the BRDM.

Rashid saw a chance to end this threat. His supervisors would not know that there were no shepherds in that region. He could safely peg the alarm: “Shepherds seeking lowland pasture due to seasonal weather changes.” It was October, so of course they would be going to lower pastures, and nobody would ever know that he had saved the Mahdi, the very man who was delivering the human species from its long age of darkness into the light of Islam.

Rashid looked at the perfect image, the little band struggling along in what appeared to be a nasty wind. A glance at weather conditions told him that it was minus 8 degrees Celsius there, wind at twenty-two klicks out of the north. Winter was coming to the Kush, even though the Crusader billions

were doing the work of Satan and destroying Allah's beautiful world. They had no respect for the Tawid, the unity of God with his creation: "And it is He who spread the earth, and set the firm mountains upon it, and the rivers; and all manner of fruit." So it was law that man respect the world, and not eat it with the jaws of a hungry caterpillar.

Then a hand came down on Rashid's shoulder. His cubicle was locked; only his supervisor could enter. "Hello, Mark," he said without looking.

"What is it?"

"Shepherds, I think. Have a look."

"Running from whoever was in that BRDM?"

"With their sheep? I doubt it. Unless the Russkis are out for mutton."

"Could be, could be. I see you called for a closer look from ISAF."

"Something seems off. Why are the Russians there?"

"Those old installations are listed as destroyed, not useable."

"So they say, Mark. But what's on the books and what's real—" He shrugged.

"Well, we'll soon find out. They've got a chopper going in. Live bait." That was the term around here for manned reconnaissance aircraft. The best possible information, but—well, there were many people in that area who might shoot at a NATO helicopter. Even children, just for a little excitement.

Rashid thought of the men in the chopper, churning through the cold dawn, being buffeted by the winds, watching for the wink of rifle fire, or the swift white arrow that marked a speeding rocket.

Mark shook his shoulder. "Good work, Rashid. If anything comes of it, I'll buy you supper."

"If anything comes of it, I'll eat my hat."

They laughed together. It was a close comradeship, here in this office. So very close.

SNIPER COUNTRY

As Jim's plane landed at Andrews, he watched two dark blue jeeps loaded with air police pace it, then maneuver onto the apron that stood in front of the VIP receiving area. Of course they would assume that anybody flying in under current circumstances would be important. It went against Jim's instincts, this. He preferred to be the same color as the walls he passed.

In the plane, he'd slept, but badly. Every time he began to go under, he'd see that terrible light blooming across the cowling of that bastard Ressman's plane.

When they banked on their way to their landing approach, Jim had seen Washington in the distance, white structures afloat in the colors of autumn. He had come here to track backward through ONI records, trying to determine if Franklin Isbard Matthews, who had supposedly duped Arthur Kenneally into pulling the detector off Bridge 1 in Eagle Pass, was a real person. If he was, Jim was going to force information out of him.

That was the way it worked in this business. You swung on vines of information through a jungle of lies. Eventually, either you reached a dead end or you didn't.

It was seven hours and forty-five minutes from now that frightened Jim. Given that they hadn't already detonated the bomb that was certainly hidden here, they were going to do it at the most dramatic moment, which he thought would be the same as at Las Vegas: midnight. This would show their power, their absolute control of the situation. They could blow up cities on schedule, no matter how hard anyone tried to stop them.

As the plane's engines wound down, he stepped to the rear and cracked the door. "Thanks, gentlemen," he called up to the cockpit. "You got the fuel, I'd turn this lady around pronto."

The pilot came into the cabin. "Yessir, we're ready to roll."

"Then go. Right now. Don't even stop for a drink of water."

The young man nodded and disappeared into the cockpit.

As Jim went quickly down the worn aluminum steps, the engines began

gaining power. He heard the faint thump of the door closing but did not look back toward the departing plane.

He hardly saw the APs, either. He couldn't bear looking at their young faces flickering with hope that this might be the man who *does* something. The weight of history oppressed Jim acutely. He crossed the tarmac, his worn sneakers whispering on the asphalt, a strange contrast with the uniform. As he moved toward the glass doors, the details of the moment crowded him, the faint rustling of his trousers, the slight movement of an awning, the smell of burning jet fuel lingering in the air, and the sweet, infinitely sad scent of—of all things—some sort of late-season flower. Where was it growing, he wondered, in this ocean of concrete?

A Sufi he had known and had sat with in a stifling tiny room in—God, was it Kabul, was it Herat?—had said to him, “The world is memory.” He had reacted in the way a young man does when facing the profound, with nervous, uncomprehending affection. He remembered that old, weathered man now, with his water pipe and his tea and the laugh lines around his eyes.

Jim pushed through the glass doors into the freezing, over-air-conditioned lobby. It was empty, utterly silent, a wide expanse of Air Force blue carpet, rows of plush leather seats, a large color photo of Secretary Robertson on the wall, beside him the smiling face of President Fitzgerald. Jim knew that Fitz was canny, but was he smart? There was a difference, and it could be huge. Jim needed Fitz to grasp things fast, above all to understand why an out-of-place operative was bucking the chain of command and agree to see him.

When he'd been in training, they had been given a lecture by old Gus McCall, a legendary guy, a very bright man, who had done hard things for his country. He had said something Jim had never been able to forget: “Presidents are scared. Not sometimes. All the time. And scared men can be dangerous. You are the messenger, remember, and the news you bring is always bad. If you do your job right or if you don't, in the end he will want your head.”

How a man dealt with this fear was the measure of his success in that monstrously difficult office. Jimmy Carter had been frozen by it, Richard Nixon driven mad. Eisenhower had overcome it, Lincoln been made great by it, Johnson victimized by it. Fear—relentless, open-ended, cruelly distorting of everybody and everything—drove all presidents. So the question was, what was it doing to Fitz right now?

Out the far side of the building, Jim found a courtesy car waiting, a sedan

that he knew at once would not survive a chase. But he wouldn't be in it long. He knew that every intelligence service in the world had been interested in who was on the plane that flew from Texas to Washington during the tightest lockdown in history. He knew that AFOSI, the Air Force Office of Special Investigations, had this car bugged and fitted with tracking devices.

He drove quickly off the base, heading along the Capital Beltway into the city. His plan was to ditch the car as soon as possible and take the Metro to the Mt. Vernon Square stop and from there walk to the ONI offices. There he hoped to talk his way onto a secure line to the White House and an invitation to meet with Fitzgerald.

As he drove up the entrance to the Beltway, however, he found that the outbound lanes were in gridlock. He could see people out of their cars, some fighting, others trying to push stalled and wrecked cars off the roadway. It was hell, he thought, with children peering out the windows.

Then he realized that he was looking at an SUV coming straight at him. He swerved—only to see another big grill as the cab of an eighteen-wheeler bore down on him, horns screaming. In the windshield, he could see a girl driving. The cab was full of kids.

He ripped the ungainly car's steering wheel and missed the truck cab by inches. The entire road was crowded with traffic leaving. The only way he could make progress was to drive next to the inner barrier, flashing his lights and hitting his horn continuously.

As a car with cardboard boxes badly lashed to its top passed him, a guy in the passenger seat showed a silver Magnum. His grimacing, teeth-bared face said, *Try me, Uniform.*

No, thank you.

Then there came a fight across the anarchy of lanes. Jim slid between two cars, then went around a pickup that was on its side and burning. When he slowed, people on foot began beating on his windows, one woman making spiderwebs on the windshield with a spike heel. There was a sickening crunch when he sped up to get past them, and the kind of lurch that meant only one thing: he'd driven over a body. "God," he whispered, "God help him."

There was no way to stay up here, so Jim pulled off on the D Street exit and went down into the streets. Despite the alleged twenty-four-hour curfew, he had not so far seen a single police vehicle. No doubt, the cops had stopped reporting to work or even had been themselves dispersed. One thing was

clear: public order was nonexistent.

There was a man lying on the sidewalk, his face so flat against it that Jim knew that he was dead. Jim also knew how he'd been killed—he had been clubbed in the face, then, as he pitched back, pulled to his feet and clubbed again, then knocked over with a body blow from behind. You saw bodies like this in alleys, in the world's hard places.

A hurrying crowd moved around the dead man, their feet grinding his blood into the sidewalk in long, red smears. There were people with backpacks, pulling children's wagons full of clothes, cases of bottled water, boxes of cornflakes, you name it. Down the street, a gutted convenience store burned.

Once again, the car attracted attention. Here came a woman festooned with kids, her face soaked with tears and blood, her clothes torn. From another direction, a man with a deer rifle at port arms approached, trotting as if he'd spent time in the military. He probably knew how to use that weapon, too. It was clear that if Jim was going to keep this vehicle, he was going to need to kill to do it, but doing that was going to slow down his progress toward his objective, so it wasn't a necessary option for him to take, thank God.

The moment he stepped away from the car, a crowd leaped on it.

Walking to the ONI offices from here was too dangerous, but he was only a few blocks from Nabila's place. Given that his mobility was so limited, he would risk using her secure equipment to connect with the White House. She'd be on dispersal, of course, but he might be able to get to it.

By the time he had reached the end of the block, he saw that there were probably a hundred people fighting over the car. Ahead, a man sat on the curb laughing and firing a shotgun into the air, the booms creating a permanent swooping riot of pigeons, some of which lay in the street, ruined puffs of feathers. The detonations snapped off the buildings, the explosions coming as regularly as metronome ticks. Two women passed, leading six children linked together with a clothesline. Another body, this one burnt and smoking, was curled up under the stoop of a brownstone.

The beauty of Nabila's neighborhood was wildly out-of-focus with the mayhem unfolding in it. Percy's, a restaurant they had loved, stood open. For an instant, it seemed to be untouched; then he saw a cardboard barrel of sugar burst just inside the doorway and a tattered Irish setter frantically gobbling the spilled contents, its russet dewlaps touched as if with snow.

He would not see Nabby, of course, but he wanted to as badly as he had

ever wanted anything. Not only was she beautiful, but she also had a gorgeous, supple mind, which had made their love affair also an ongoing conversation, at least at first, when they were both stationed here and their marriage had flourished. True, they had lost that when he'd moved to Operations and become involved in counterproliferation and ended up halfway around the world and in situations where he couldn't communicate with her.

Then even the trips home had stopped working. They'd slipped into being strangers, and he knew from her dutiful tension that even lovemaking had come to seem to her like an affair with a stranger.

Until Las Vegas, he had not wanted to see her, not because he didn't love her but because he did. In the field, he'd become a sort of addict. He needed the tension of lonely places now, the sense of being a player in a dangerous game. He was able to kill, and although it was a huge issue, it was also a source of pride. The warrior's way. In a job where a second's hesitation could mean your life, you had to be able to do violence with ease, and he could do that, and it excited him and made him feel fantastically capable.

He was a form of wildlife that had thought itself domesticated—like those dogs of the old rancher down in Texas, being transformed into killers by the taste of blood.

She had said, before they were married, that she wanted a quiet life. Deep inside this fiercely independent woman, he had come to understand, were expectations born out of her upbringing and her culture. Home was sacred to her in a way that could feel confining to a Westerner. He loved her so damn much, and knew now that she still loved him—and knew that she was probably suffering agonies right now, wondering about his safety.

But they were back to the old problem—no communication. As things were now, calling her and telling her he was all right might be the exact thing that destroyed him. From the moment he did it, he would no longer know whether or not his presence in Washington had been detected.

God, he had never thought to see this city like this. Washington had warts, for sure, but this scramble—it was grotesque. Ancient Rome must have been like this when it was being sacked. Except for one huge difference—technology had enabled the barbarians to become invisible men. They were here, all right, just as they had been in Rome . . . but here, in the magical modern world, you couldn't see them but only feel the effects of their savagery.

As he approached Pennsy Avenue, though, he was surprised to find that the atmosphere was beginning to change. Now, closer to Eastern Market, people were walking, not running. There were fewer guns, and he hadn't seen a body in a block.

Ahead, to his amazement, he heard singing. He knew the music. It was "Amazing Grace," and the voices were ragged at first, then richer and bigger, and when he turned the corner and had the whole Eastern Market plaza before him, he saw that it was an assembly point for some sort of rally or perhaps even a march. Children held their parents' hands; there were baby strollers everywhere, people in turbans and djellabas, people in Western street clothes.

Few of the Muslim women wore the *hijab*, but the Westerners were getting blue veils out of cardboard boxes. He saw Muslim women dropping their head scarves as they joined the group.

Dogs jumped and capered, and the song rose, grew stronger, then tailed away. Somebody spoke through an electronic bullhorn in a Middle Eastern accent, a portly man with a dark moustache. From his demeanor and his accent Jim thought he was Lebanese. He stood in a sea of video cameras, some of them professional, most amateur.

The man had an iPhone and a BlackBerry and was reading text messages. Then he looked up. "We are with more cities! Six in this country, and London joins us and Cairo. Cairo joins us! Mexico, we are in Mexico; we are in Peshawar. We are in Peshawar, too, it's true!" He held up his BlackBerry. "It is here; I see the video; it's true! Peace, peace is coming!"

So the Mahdi wasn't the only one who could use the Internet.

"We start to move, start to move! Everybody join us, chant it, let's go, hey, TV—" He waved at the cameras. "We do it! Here we go!" He turned and strode off up the broad avenue, bellowing "Amazing Grace" through the bullhorn in his dense Middle Eastern accent. Then, "We are all together, all together!" The crowd shouted back, "All together." Various hymns came and went, ragged, brief. Snatches of "Nearer, My God, to Thee," "Happy Land," and others.

People raised placards, "Sura 2:125/Genesis 17:9," "God is God," "Islam is Holy is Christianity is Holy." A tiny, gray-haired Asian woman threw back her head and shouted at the sky, "All we are asking is give peace a chance." The voice, though small, brought a silence. This was a woman these people wanted to hear. Then the leader was standing, waving the crowd past him.

Jim recognized senators, congressmen, and a cardinal. He saw familiar faces—was that Meryl Streep, and the little, intense woman beside her Ellen Page? Was the tiny old lady actually Yoko Ono? In a wheelchair, a man who looked like Jimmy Carter was being pushed by a woman Jim thought might be Shirley MacLaine. All of these people must have been in Washington making movies or doing benefits or for other reasons. Certainly they had not arrived after Las Vegas. Or had they? It was always a mistake, he thought, to underestimate the power of the people. Somehow, they would find a way.

Then the leader had connected with the small gray-haired lady, who took the bullhorn and shouted again, “All we are asking is give peace a chance!”

Jim had to fight back tears, just to see this enormous crowd, every one of them certainly aware that they could be vaporized at any moment, but still here, still trying.

The voices rose, the chant spread, and blue veils became a sea, and turbaned men and hatless men, a smattering of black fedoras, even. The voice of the crowd deepened. The milling mass swirled, took form, and the march magically organized itself, heading off toward the center of the city.

A girl carrying a newborn in a sling came trotting up to him. Her eyes were as blue as her scarf, her face so pure that it seemed as if it had been brushed by a shaft of light. She reached out and before he could stop her took his hand. “Come on,” she said. “Don’t be scared.” Then he saw her baby sleeping in her innocence, and a great, choked sound gushed out of him. She squeezed his hand. “I know it’s hard, but you can do it.” She met his eyes with her own, and the courage seared him.

He said, “I’m on a mission.”

“There’s only one mission now,” she said. “Come on. Come with us. This is Madison. I’m Senna.” Her smile, it seemed to him, contained within its glow some sort of proof of what he had always denied, that there was such a thing as the human soul. He thought he was being touched not just by this young woman but also by the God who had willed her—and him, and all—to be.

Only sentiment, no doubt, but there was certainly something here that the barbarians did not have. They owned only the shadows. These people owned the light.

He went with her, and she smiled up at him but then was off, trotting to a group who had come out of a house. “Come join us,” she shouted as she ran to them. She would carry her baby for all the miles. She would go to

everybody she saw with her message. She would not stop.

He saw skeletons, hers wrapped around her baby's, skeletons and flies. *If only he'd been a little faster, a little less rule bound.* Had she known that she was talking to the man whose failure had let this happen, what would she have said then?

He reached the far side of the march and suddenly was on a street sacred to his heart, the short block of D Street, SW, where Nabila had her house. Every inch of this sidewalk had meaning. Here she had taught him "In Doha Ya Doha," when they had been planning to have children. She had sung it on a raw winter night, when they walked on crunching snow and the moon glared through the naked trees. "In doha ya doha, wa al-ka'aba banooha . . ." for a child who now never would be born.

That was the truth of Jim Deutsch, right here in this street, his barren truth.

He faced the house itself, looked up to the bedroom where they had made their happiness. He climbed the short steps to the front door and started to ring the bell. He stopped, though, because his instincts told him instantly that the house was empty. Buildings do not lie, and this one was saying two things. First, there were no living creatures within. Second, something was wrong.

He pulled out his picklock, worked it for a moment, and was in. He closed the door behind him, being careful to reset the lock. Here was the familiar coatrack, Rashid's blue pea jacket hanging there . . . and his own old corduroy with the weathered leather elbows and the pocket she had mended for him in another life, long ago.

He threw off the uniform tunic and went deeper into the house. "Rashid? Nabby?"

Jim knew that silence would be the only answer, but he called them anyway. He went upstairs and turned down the hallway that led to her office and the bedroom he had once shared with her.

When he saw that the office door was open, he knew instantly that she was in terrible trouble. There was no way she would leave this house on her own initiative without locking and alarming that door. Just no way. The office had been secured by the Company. Its door moved on quiet hinges, the steel of the thing concealed by veneer that matched the other mahogany doors of the old house. Inside the wall there was a copper grid to keep prying electronics at bay and on the desk another to further secure her computer.

Had it been locked, this door would not have been passable, not even by a

well-equipped professional. Because Jim had seen her coming and going, he was aware of the combination. He'd memorized it; he hadn't been able to help himself.

He stepped into the office and had another shock: her computer was on. Incredibly, the secure network was wide open from this terminal. Anyone could come in here, sit down, and enter a deep tier of classification.

So he wouldn't be risking the use of this terminal; that was crystal clear.

He looked around for some clue as to what had happened. Taking the steps four at a time, he went down to the kitchen and yanked open the garage door. Both cars were gone.

Back up he went, back to their bedroom. What he saw there stopped him, but not because of danger. It was because nothing had changed. She had told him she had redecorated, had said it with a sneer of anger in her voice, but it wasn't true. He was everywhere in the room, his books, his Bose radio, his bedside CD collection—even the novel he had been reading on the last night, when their battle had stirred the neighbors and he had left and hadn't come back, even that lay undisturbed on the bedside table where he had left it.

He stood silent, bowing his head to the sacredness of the love he saw here. He sucked air through his teeth—*he had to fix this*. Fix it all. Find the murderous bastards who had wrecked Vegas and put the noose around Washington's neck, find Nabila, find what he had lost of himself and his marriage.

A glance at his watch revealed what he most did not want to face: if he was right about the way the enemy thought, he and his world and the woman he loved—if she was still in Washington—had just five hours to live.

Forcing himself, he went methodically through the rooms, looking for some clue, some indication of what had happened to her.

There was nothing. Again, forcing himself, he went back upstairs, and took advantage of the presence of his clothes to shed the uniform.

As he was leaving, he noticed that the back door was not completely shut. Without going too close, he looked out into the garden. To find out more, he needed to go out there.

That could be death.

THE CARD OF THE LOVERS

He stepped out quickly, moving toward the nearest shrubs as fast as possible. Every visible window—and there was an entire row of brownstones across the alley, all of them looking straight into this garden—potentially concealed a sniper. He looked for slightly open windows, because he'd never encountered a sniper who would shoot through glass and risk deflection of the bullet.

As Jim approached the end of the garden, he saw breaks in the shrubbery, twigs that had been snapped. He'd tracked in places a lot more challenging than a Washington back alley, so he knew at once that she had pushed through the shrubs to the alley gate. There were a couple of partial prints on the ground—sneakers, woman's size. Nobody following, so whatever had happened to drive her from the house, it had not been somebody behind her.

She had been using her computer when she left—so quickly that she'd violated every regulation in the book.

He went through the overgrowth to the back fence, and opened the gate. A quick glance told him that she'd taken a left. He followed, and soon saw that she'd turned and moved into the yard of a nearby house, one that fronted on South Carolina, the street opposite hers.

He entered its back garden. A hundred and fifty feet away stood the brownstone, with black wrought-iron steps leading up to its rear door. There was a tiny patio with an expensive-looking barbecue grill to one side, and a table and chairs, also wrought iron.

He could see from the way the dry grass was bent here that Nabby had headed directly for the steps. As she'd entered the yard, she'd been moving fast. Running from somebody who her computer had told her was coming after her.

He opened the gate, following the dry, bent grass. A glance at the house revealed only locked windows. No sign of movement along the roofline, either, so no sniper taking aim at him.

Looking down, he followed the track a few more feet. Here she had

stopped, and suddenly. When he raised his eyes, he saw why—there was a figure in there, first visible from this point. It was a male, wearing a white shirt, standing back from the window. He carried a rifle across his chest. Jim remained motionless, evaluating the gun by its outline. There was a thick barrel, a gas canister below it. It was only an air rifle, but the guy probably felt protected by it. This was useful, because when people felt protected they were vulnerable.

Jim waved, to indicate to the man that he was seen, then mounted the steps and twisted the ancient spring bell that was affixed to the doorjamb. Almost at once, the inner door opened. The screen was still locked.

“May I help you?”

“Actually, I’m from over there—” He pointed toward Nabila’s own back garden. “I’m trying to find my wife.”

He did not respond.

“Dark hair, five three. She’s an Arab and I’m worried . . . you know, given the situation.”

“Not here.”

“Has she been here, then?”

He shook his head. So Jim grasped the handle of the screen and gave it a couple of the quick, twisting shakes that would spring the lock, and barged right into the guy’s face.

The man fell back against his kitchen table, then recovered himself. Jim stepped up to him, turning to one side to deflect the aim of the air rifle. Then he grasped it with both hands and plunged the stock into the man’s stomach.

The power of the blow made him cry out as he flew backward across the table and crashed into the swinging door on the far side of the kitchen. He hit the floor with a thud, and the door banged back against him. He lay between the kitchen and the dining room, making little gasping sounds, “oh . . . oh.”

“Nice kitchen,” Jim said, “love your granite.” He went over to the prone figure. “You’re looking pretty peaked, fella.” He put his foot down on the man’s face. “Crush a guy’s jaw, it kills him if he can’t get treatment. Windpipe swells closed, but it’s slow as hell. Tell me where my wife is.”

“F-f-f-f—”

“Fuck me? Wrong answer.” He pressed down until he felt the nose bend. Now the hands came up and grappled with Jim’s ankle. “You don’t tell me the truth, it gets worse right now. Where is she?”

“I am Undersecretary of Defense Charles Walters, and I don’t know where

in hell your wife is!”

“DoD Comptroller Walters. I thought all of you guys were Georgetown clowns. What’re you doing over here on Capitol Hill?”

“Get off me!”

Jim pressed down harder. “Nonessential personnel, so no dispersal. They left you behind without even a Secret Service party. Shame on them.”

Walters growled—or perhaps groaned—through his shoe-stifled mouth.

“Now, I know she was here because I tracked her here. So you’re lying and if you lie again, right now, you will be demolished, Sir. Understand this clearly: as far as your god-for-damned title is concerned, *I do not care*. So, let’s start again.”

The shoe-stifled voice became complex enough to convince Jim to remove his foot.

Walters leaped to his feet. “How dare you!”

“Your face has a footprint on it. Where’s my wife?”

“Let me see your cred!”

“You got *cojones*, I’ll give you that. Sure, I’ll let you see my cred.” Jim pulled out his real credential.

Walters opened it, read it. Then looked up at Jim. Then down again. “You really are Jim Deutsch.”

“I really am.”

Walters went into the dining room and sat down at the gleaming mahogany table. It was a splendid big room, with gorgeously detailed moldings and a fine, glittering chandelier. *What would blast effect do to it?* Jim wondered.

“She was here. She established her bona fides and I confirmed her clearance with ONI.”

“That was stupid.”

“I know the whole story and I know that now, too! But they were already on to her. A whole capture and suppression team, with shoot-to-kill orders.”

“You’re certain of this?”

He nodded. “Five minutes after she left, they appeared. Wanting to know if I’d seen her. It was a full-bore security detail. I contacted ONI again, and they couldn’t confirm anything. The office was in chaos by then, so who knows? By the time I’d returned to the door, the team was gone.”

“The front door, since she’s the only person who came in the back. Did she also leave by the front?”

“You’re good. I bet you earn your money.”

“So, what you’re saying is, she had a five-minute lead on them.”

“The Metro was still running then, so she might have done a little better.”

“You know it was running? How do you know?”

“You feel it. The line’s under this street and you feel it.”

“She mentioned me. Did she have any message for me?”

“The cred looks real. I wish I could confirm that.”

“So, she had a message. What was the message?”

Walters slumped, a man filled with defeat. “The phones are dead. The computer is off-line.”

“You aren’t on a secure network?”

“DoD shut down everything except intelligence traffic. I’m out in the cold.”

“I’d hate to be an accountant.”

Walters sniffed a laugh out of his swelling nose.

“You’ve gotta trust my cred,” Jim added.

From his office in the Pentagon this man must see a lot of craziness, disappointment, and culpability. The money men always know the skeletons personally.

“Mr. Walters, I need any information you have *now*.”

“She said, ‘Rashid knows. Tell Jim that Rashid knows.’ ”

The cold of absolute zero. The explosion of an electric shock. Then heat rushing into his face, his hands going tight, needing to kill.

No wonder the divorce had made Rashid so furious. No more production to be derived from Jim’s comings and goings. However infrequent, they must have been incredibly useful.

He told Walters, who was rubbing his face, “You treat that with ice.”

“I know how to treat it!”

He had to control Rashid, but that involved determining his dispersal location, then getting there. Only the White House might be able to help. “Do you have a car?”

Then it hit him. So obvious. “Never mind.” He went out the back again, thundered down the steps, and ran across the yard. He threw open the gate and in moments he was in Nabila’s back garden. Then he was in the house. He went upstairs, went to her office—and found the door closed.

He stood there, for a moment too stunned to move. But—when he’d seen that her network was live, he must have instinctively pulled the door closed. Not a problem, though. He never forgot a number. He input the combination.

Waited. Nothing happened. He did it again. “Shit!” She’d changed the damn thing.

He gave the door a kick so ferocious that he heard things falling off shelves downstairs, but he didn’t even leave a dent. Of course not. It would take a shoulder-launched rocket to knock this thing down. He ran his fingers across the lock. There was no way around it, not without the combination or explosives.

Even so, he shouldered the door and got a sharp, cracking pain for his trouble. “Goddamn it!”

He’d seen the room being installed. He knew there was no point in trying the attic or coming in through the wall or the windows.

Despair settled into him at last. Resourceful though he was, he now felt sure that midnight was going to arrive and Washington was going to find its fatal end. He would not be able to communicate with the White House in time for there to be any chance at all of locating the bomb.

His jaw clenched, his teeth bared. What a useless gesture, keeping the White House open. Noble today, but what about the leaderless country tomorrow? “Sure, there’s the veep,” he muttered. “But it’s the symbol, you moron! The civilization rides on the *symbol!*”

A three-thousand-year journey toward human freedom was ending. He had no illusions: when Washington went, and Fitz with it, the Western world would bow to its new conqueror. Then, gradually and over time, Russia would emerge as the new superpower, as the one source of relief from the Mahdi’s awful rule. Oh, that was the plan. He knew it. He knew those old KGB types, understood the way they thought. *We play poker with foreign policy; they play chess.* For them, the end of the Cold War was only a setback, strictly temporary.

Then he was aware that the movement of air around him had just changed. Something was moving in the house, he thought, and at the same instant was aware that the quality of light around him had altered as well. Without looking, he knew that her office door had been opened from inside, and very quietly.

The next moment, he smelled a woman—woman’s sweat, edged with soap and scent.

“Come into the doorway where I can see you, please. I have a gun.”

“Nabila!”

“Jim?”

Then she was there. Before him. So small; he had remembered her as formidable, but she was only this little slip. She raised eyes that were red from crying but shimmering with joy.

In that instant, he recognized that the power of love becomes overwhelming when it touches souls together and that this had never happened between them before, but it was happening now, and he threw open his arms and she rushed into them, and they covered each other with kisses and whispered names, and he felt himself stirring—no, exploding—and she threw back her head and laughed but also pushed away from him.

They stood like two duelists now, suddenly wary, expecting anything. “Rashid,” she said, “my brother—”

“Walters told me.”

“I tried to get out there, to get to him.” She showed Jim her AMT Backup. “I would have killed him.”

Jim took her face and kissed her. “You don’t want to go down that road, Nabby.”

Here came that delicious small smile of hers, touching the edges of her full lips, the sides of her dark eyes. And he thought, *O Arabia*, and cared nothing but for the beauties and magic. A strange, forbidding, and gorgeous place, a fragile, artful civilization . . . and the darkness invested there, its parasitic talons sunken into the same holy book that gave the Arabs the poetry in their souls and, he was beginning to admit to himself, their connection to the God whose silent reality defines us all.

What people did not understand was that his reality makes true every name he has ever been given. God is Allah, Yahweh, Ahura Mazda, Athene, Zeus, Ra, on and on, each name representing another human convergence with the mystery.

All of this passed in just an instant, in the compression of a man’s intimate, inner shorthand, and in the next instant Jim said, “He’s on dispersal. Where?”

“Maryland 28. Westmond. In a building there. But I had problems—there’s a shooter team after me. I nearly got killed!”

“I know.”

“I saw I had to do this at any cost, shooters or no shooters. But I didn’t even get to the Beltway. The car was attacked, Jim! Time and again! And my face—I look too Arab; I just about got shot! I was lucky to get back here at all. Did you get my message?”

He shook his head.

“On your cell.”

“I haven’t had it on. Danger of detection.”

“I found a code Rashid sent. The word ‘purple.’ ”

“To whom?”

“Somebody in Alexandria. It went to the cable company’s servers there. Then I lost it.”

“Purple” would be a case identifier. When they got that word, they would know which case was being activated. “Alexandria,” he said. You thought of it as a D.C. suburb, but it was a big city. You could easily hide a nuke in Alexandria, and if you could somehow get it on a plane, you’d be not five minutes from an airburst over the White House. Even if you didn’t have a plane, a nuclear detonation there that was the size of the Vegas one would devastate the whole region.

“I’ve got all the ASP readouts from there, but nothing shows up,” Nabby said.

He considered that piece of information. It would be easy to conclude that the bomb wasn’t there, but his sense of it was that this would be wrong. The location was too perfect. “It’s there,” he said.

“I concur. But it’s a big place.”

“Nabila, we have one card left to play.”

“But—what? How?”

“Call it the Card of the Lovers. Low card, odds always against it. But if you trust it, it’s a powerful card.”

“In Islam, trust is surrender.”

He wanted to kiss her, to somehow melt away the scars. But there was no time.

She followed him downstairs and outside, into the dangerous streets.

SOME SORT OF LIFE

As midnight swept westward, city after city rose from cringing desperation, and knew that life—some sort of life—would continue there at least for a little more time. Because Las Vegas had been destroyed at midnight, the world had become focused on that as the hour of lightning. But why must it be midnight? The truth was far more bleak, and was reflected in the offices of intelligence chiefs and their screaming prime ministers, presidents, dictators, and kings across the whole planet. With the exception of a few professionals like Jim Deutsch, who understood something of the mind they were dealing with, nobody knew if midnight actually mattered. The inner circles of the world feared that another bomb could go off at any moment, and that made them panicky, and their panic played right into the hands of the Mahdi. The more chaos, the better. Chaos, for Inshalla, was safety.

In the Muslim world, the stunned jubilation—the joy riots of Cairo and Tehran, Karachi and Baghdad and Gaza, and a thousand other places—faded as the images from Las Vegas began to march across TV screens. Initially, the scenes had been of burning buildings and lines of cars on highways, all taken from helicopters miles away. Now, though, video shot on the streets was appearing, and the horror was beyond imagination, even to people who lived in a world of street-corner bombings and public executions. One image, of a little girl being sucked toward the firestorm, followed by her shrieking parents, broke hearts across the planet. All three had died. The man with the camera had died. A reporter had found the camera. Thousands of burnt bodies littered the streets in gutted neighborhoods, and now great clouds of buzzards and gulls descended on the city, circling in swarms, spreading their wings over the corpses like feathery shrouds.

Nobody could see images like this and not be affected, and Muslims, inside themselves, found themselves saying, *This was done by people who pray as I do, who worship in the same mosques, who believe as I do.*

The reality of the crime, there for everybody to see, was, across the

Muslim world, transforming jubilation into shame.

Women went about silently if at all, heads covered, eyes down. Men sat in tea and coffee shops, smoking and staring. If anybody played music, somebody would stop it with a curse. Men were angry and argued, but never about the pictures from Las Vegas. The images evoked a shame similar to that which attaches to pornography, because of the intimate connection between pleasure and violence, and they came to taste obscene.

The princes of Riyadh quietly dispersed, aware that their city was at once the capital of extremism and of moderation and that none knew where that left it, as an enemy of this mythical Mahdi or as his ally. Who knew, maybe he was even harbored here.

Certain Muslim leaders knew of Dream Angel, and there were anguished meetings taking place in various capitals. Some years ago, the Fitzgerald administration had intentionally leaked an outline of the plan to Tehran, and the government was well aware that while substantial areas of the city would be spared, an intricate pattern of bombing would so decimate the believers that the faith might collapse here and the country be given over to the powerful Western leanings that were its suppressed truth.

Riyadh did not know of Dream Angel but would have been appalled at the extent of the targeting in Saudi Arabia, where individual towns and specific neighborhoods in every city were marked for death. In all, Dream Angel would cut the population of the Kingdom by a third, and destroy the religious police utterly.

Even though elements within certain Muslim national intelligence agencies were aware that the Pentagon was creating an ultradetailed map of the Muslim world, and that it had military significance, they had been unable to obtain details.

So they inquired of the social sciences community, and found that something called a social-associative network could be involved.

Some of these states had constructed their own versions of the American map, using their own social scientists, so they knew roughly where the targets were.

They also knew that innocent people would die, and in staggering millions, something the West once would never have contemplated doing. It was genocide on a scale that made Hitler look like an amateur.

But these people were not innocent, not according to the new definition of guilt that the West, under increasing pressure and without consciously

realizing what it was doing, had adopted. Guilt no longer attached only to action. Guilty wishes, guilty dreams, the inability to expel terrorists from your community—these were the new crimes.

But what was the sentence for committing them?

The Syrian and Iranian intelligence services both hit on the same answer: the target areas would be annihilated by small nuclear weapons delivered to their targets with great precision.

There could be only one type of bomb that would do this—a neutron weapon. It would deal death in the form of sheets of high-energy particles that would slaughter microscopically, instantaneously boiling the victims to death, cell by cell.

The mathematics of such bombs could be made as exact as the map of the targets, and only if they got very lucky indeed would any national air defense manage to shoot down a plane or two. None of the cruise missiles would be destroyed. Except for the West and Israel, there were no powers on earth that could intercept a cruise missile.

So, in conference rooms and offices across the whole of the Muslim world, the same question was asked: will they now kill us all?

What a few of the leaders knew, the whole population of the Muslim world suspected: there would be retribution, and it would be terrible. So the cities of the Muslim world were soon just as convulsed as the cities of the West, and even more so, because they were more densely populated and less well organized.

The old part of Jakarta was soon burning, the streets so packed with vehicles that dogs were jumping from car roof to car roof amid running crowds. Rumors were everywhere, and whenever a plane was heard overhead, thousands died, trampled.

Despite all this chaos, Washington was not the only place where people were struggling to find reconciliation, and the vast majority of Christians and Muslims saw themselves as being joined together on the same side in a desperate struggle against an evil so great that they had not been able to imagine that it could exist—until it emerged in the form of the fiery sun that had murdered Las Vegas.

At the moment of the explosion, it had been eight in the morning in Rome and the pope was in the dental chair in the small medical facility in his Vatican apartments. Guillermo Cardinal Mosconi, his secretary of state, approached. It was quite a surprise to the pope, because the formal nature of

Vatican life meant that an unannounced visit like this was extremely unusual.

Mosconi, a short, quick man currently dressed in a business suit, made a sharp motion at the dentist as he approached the pontiff. “Holiness,” Mosconi said, “I am bringing news of the most critical nature.”

The pope got out of the chair and went straight into his private office, clearing his mouth of cotton as he walked, dropping it behind him. Mosconi was not given to outbursts. Whatever this was, it was extremely serious.

They sat across from each other. Behind Mosconi were many of the pope’s collection of twenty thousand books, which had been provided for when the apartments were remodeled after his election to the Throne of Saint Peter. Pope John Paul II had lived like a monk, but that discipline had died with him, and the apartments, therefore, were pleasant, this room decorated in deep, dignified reds and excellent woods. The desk was an antique that had been with the pope since he had been elevated to archbishop, a gift from the faithful of his home diocese.

Pulling off the dental apron, he sat heavily. The papacy was, in truth, a wearisome trial for him. He did it for love of the church, for love of Jesus and the great power of the sacraments. In his privacy, he longed for the rambles of his boyhood and the solitary evenings of his childhood summers.

He raised his eyebrows to Mosconi. “Cardinal?”

“There has been an atomic explosion in the United States.”

“God preserve them.”

“It has destroyed the city of Las Vegas. One million are dead. The churches all are burning. All.”

The pope had closed his eyes and turned his inner being toward the Lord. Surrendered himself, mind and heart. He had asked the question he dreaded to hear answered: “An accident?”

“Deliberate.”

Then he knew. It was the Muslims.

“Yes,” Mosconi said, reading the very familiar face of this man he had known for forty years. “An unknown Muslim organization. Unknown to the Americans, they say. It has demanded, also, that you order all churches to be closed. They are using the atomic threat to force the entire world to embrace Islam.”

The pope gave Mosconi a careful look. “So,” he said, “you are saying that we know more?”

“We have, as you know, a connection within the Belorussian exarchate—”

“Yes, Mosconi!” Of course he knew. “Go on.”

“There is indication that a plutonium bomb of Russian manufacture was used.”

If Mosconi said it, there was no question of any indication. It was certain. “And do the Americans know this?”

“I have no belief that they do.”

The pope realized immediately that he held the fate of nations in his hands. If he directed this information to the American president, the third world war that the church had fought so hard for so long to prevent would then unfold. Both the Americans and the Russians would fire their missiles at each other. Each side would be afraid not to, lest the other side fire first and destroy their ability to retaliate.

The key would be to reveal those directly responsible, the Muslim group that, the pope had immediately concluded, was the out-of-control tool of the Russians. They wanted the West on the defensive, not destroyed.

The people directly responsible could be punished, and nobody ever need know where the bomb had come from. “Are we aware of directly responsible parties?”

“There is this ‘Mahdi,’ so he calls himself.”

“Then he’s the one to drag into the light.”

“We don’t have the reach to do this.”

Inside himself, the pope begged the Lord for guidance. Perhaps the answer came in the cardinal’s next suggestion, which was to call the president.

The pope did this, offering his condolences. Then he asked if the Americans had any specific expectation that there was another bomb. Fitzgerald said little, but the grave tone of his voice caused the pope to end the call in a mood of deepest foreboding.

“We have here a possible Antichrist,” he told Mosconi.

Both of them knew, of course, of the prophecy of Saint Malachy, and the fact that it had been written not by that twelfth-century holy man but by the odd and dangerous Michel de Nostredame, popularly known as Nostradamus, in the sixteenth century. There was something horrible about it, something profoundly unholy, that made the pope almost queasy when he so much as thought of it.

He thought of it now, though, in particular of the prophecy of the next pope, Peter the Roman, who was to be the last. He quoted, “ ‘In persecutione extrema sedebit Petrus Romanus.’ ”

As if to shield himself from the words, Mosconi raised his hands, brushed them across his face as if warding off an insect. “During the final persecution, the seat will be occupied by Peter of Rome. Yes, Holiness.”

The pope reached across the desk, and took Guillermo’s hand. “ ‘Qui pascet oves in multis tribulationibus: quibus transactis civitas septicollis diruetur, et Iudex tremêndus iudicabit populum suum.’ ”

“He will feed his sheep amid many trials, and when these things are finished, the city of the seven hills will be destroyed, and the great Judge will judge his people.”

The pope and the cardinal looked into each other’s eyes. “ ‘Finis,’ ” the pope said. The last word of the prophecy. “Is it happening, Willy?”

“This you must give to God.”

In the silence that followed, they heard voices coming from the square.

The pope stood up. “Dress me,” he called, and his dresser came quickly with the cassock and mantilla. The pope dressed, then went to the window in which popes customarily appeared.

Below, in the light of a gray morning, there had been perhaps a thousand souls, looking in the great square almost like none at all. But when they saw him, the cheer was so robust that it raised the pigeons, who flew in graceful arcs, their wings flashing when they swept into the sky.

By noon of that day, St. Peter’s Square was half-full. The pope was making preparations to speak to them from the balcony of the basilica. He would come at just before six in the evening, the hour of midnight in Washington, when it was expected by all the world that the American capital would be destroyed.

He had telephoned President Fitzgerald again, urging him to leave the city. The president would not leave. “Continuity of government has been assured,” the president had said.

Was the man committing suicide? The pope was not sure that he understood the president’s motive. A sort of desperate defiance, he thought. In his most private mind, the part of it he shared with no living man, he was coming to the conclusion that America was finished. For a long time now, they had been caught in a situation where their power was decompressing. Their inability to find an effective way to control Muslim guerillas and their failure to understand that what seemed like Muslim terror was often a projection of state power had brought them, inevitably, to this execution ground. The tool of Islamic terrorism was used by many hands.

“Holiness, Signore Manconi has arrived.”

He had asked earlier that Hilario Manconi, the president of the Vatican Bank, brief him on the world financial situation. “Very well.”

Manconi, whose dreary, equine face made his first name seem like a sardonic joke, proceeded into the presence. At a gesture from the pope, Manconi sat beside the desk and, with an officious snapping of latches, opened his briefcase and drew out a sheaf of papers. “It’s a catastrophe,” he said.

The pope was so tired, so emotionally stripped, that he almost blurted out a bark of laughter at the sight of the woebegone Hilario announcing disaster. “Go on,” he said.

“The dollar has collapsed. It is at this moment fifty-three dollars in the euro, and none can know where it will end. The U.S. central bank has exhausted its foreign currency reserve and nobody will buy treasury notes at this time. Gold is to four thousand, one hundred euros, tripling from the open. Bourses are closed, but not commodity exchanges, and everything—” He stopped. His throat worked.

“Continue.”

“I am continuing! Oh—sorry. Holiness!” He drew out another sheaf of papers. “The bank’s position is very sound. We have not much in dollar holdings. And our gold—” He shrugged. “The wealth we command is almost beyond calculation, Holiness.”

“My concern is the welfare of the people of the world. Are they starving, signore?”

“It’s chaos. Transport disrupted. All shipping lanes shut down. No flights. In Europe, not even road traffic, nor in America, but the U.S. authority is collapsing. There are all sorts of presidential orders going out. Nobody obeys. They all run from the cities.”

“And here?”

“In Roma? Some, certainly.” He blinked, looked up sharply.

“Not here,” the pope said. “God willing.”

“No, Holiness!”

The pope waved him to silence. “If it is God’s will that this test be given us, then we are grateful for his faith, for God does not give unfair tests. So if the Mahdi succeeds, I have no doubt that St. Peter’s will become a great mosque, in the same manner as Holy Wisdom.” He referred to the Hagia Sophia in Istanbul, which had been the greatest center of worship in

Christendom for a thousand years, before being converted by the force of Islamic arms into a mosque.

“But, Holiness—”

“You know, a few years ago the Royal Aal al-Bayt Institute for Islamic Thought—do you know of this?”

“No, Holiness.”

“A Muslim institute published a letter of peace between the faiths that also contained an admonition against Christians’ waging war against Muslims on account of religion. And yet, there is no place on earth that has ever been forcibly converted from Islam to Christianity. Have you ever been to the Hagia Sophia?”

“Of course.”

“The Quran says they should conquer.” He thought back across his life, his mind touching a memory of the long-ago afternoon he had spent wandering the halls of the Alhambra in Granada, among the most beautiful buildings in the world—a Muslim building. “The conqueror of Spain was also called the Mahdi. His prophecies are in a work called the Hadith, and it is their fervor for conquest that has always animated the Muslim spirit. These terrorists are part of a deep tradition of Islam. They are not separate from it. I will tell you this: after the conquest is finished, this time, I will be knocked dead with stones.”

He knew that his feelings should be more balanced, his mind concerned only with being shepherd to the faithful. But he was so very, very angry. He thought of those poor people of Las Vegas, all burned and their homes ruined, and the gigantic suffering that this economic collapse would visit on mankind.

The knowledge came to him—perhaps, he thought, from God—that this invisible Mahdi was not a creature suffused with spiritual power, an Antichrist. Rather, he was like Hitler, an ordinary but ambitious man whose arrogance, aggression, and refusal to humble himself in prayer had opened the door of his soul to evil. “So,” the pope said, his voice low, “he is only a man.”

“Holiness?”

“Thank you, Hilario.”

The banker stood and stepped back, then turned and hurried away. Looking after him, the pope reflected that he was probably in the middle of the most frantic day of his life, poor man.

Alone now, the pope went across the apartment and entered his chapel. As always, he knelt in the back of the ornate little room. He heard an increasing great roar from the square. The faithful were gathering in the arms of the church. Closing his eyes, he prayed. Had he publicly called this foolish little creature the Antichrist, he might have set the whole world on fire. “Jesus, I hear your voice within,” he said. “Thank you, my beloved master, for this guidance. I give you my weakness, my anger, my senseless hatred. I give it to your compassion, oh my friend.” He followed this with a fervent Pater Noster, then raised his eyes to the blue-veiled virgin John Paul had installed here. “Thank you, Mother, for your intercession for me. I will not speak my anger, Mother.” Quickly he prayed a decade of his rosary.

When he turned from the chapel, he was not surprised to see that Mosconi was back.

“The Grand Mufti has come.”

“What is this?”

“The Grand Mufti of Saudi Arabia is here.”

But how could this be? “There was no such meeting arranged.”

“There was nothing. He has come on the king’s plane.” Mosconi shrugged. “He simply arrived.”

After the pope had publicly told the truth about Islam, that it was a religion of violence, there had been that letter signed by a number of high Muslim authorities saying that they had no argument with Christians, as long as these Christians did not seek to invade Islam. Then the Saudi king had come to Rome and said essentially the same thing. The pope had refrained from speaking of the Islamic invasion of Christian Spain and the Christian Middle East. But, in his mind, he had not forgotten the truth of history, and he did not forget it now. Islam had invaded the Christian world then and was doing it again now.

So this—a meeting between the church and Islam, at this moment? “Mosconi, I’m at a loss.”

Mosconi bowed his head in assent. “In the private audience chamber?” He offered the pope no choice as to whether or not he would receive the Mufti. But the private audience chamber was a state room, private or not.

“No, no, it’s not a state visit. It can’t be official. Bring him here.”

“Will you take the throne, then?”

The pope considered this. If he sat in the symbolic chair that stood in this room, gilded and red, before the wall bearing his portrait, the meeting would

take on a symbolic meaning that neither man wanted to cope with. But at his desk perhaps the Mufti would feel an unpleasant sense of being a supplicant.

“Mosconi, I have no private places! I cannot take him back to the dentist with me.”

Mosconi smiled slightly. The pope’s sense of humor was well known behind these walls. “Where, then, Holiness?”

“Let’s go to my books.”

He crossed the room, his feet whispering on the carpet—an Arabian design, he recalled, a gift from the king of Jordan—and went to the little nook of chairs that was his private lair, where he indulged himself in history, poetry, and thought. He sat beneath the tall shelves of volumes, every one of which had been read. It was like an extension of his mind, his library. The treasure of his life. “I will receive him now.”

Mosconi turned toward the desk, reaching to press the intercom button.

“Wait. What do I call him? A name? What is his name?”

“You call him Sheikh. He will call you Pastor.” Mosconi picked up the telephone, and in a moment the outer door opened.

The Mufti was tall and very straight, and came striding forward, his spotless white robe whipping behind him. The pope could see a hint of a dark cuff under its hem, and a gleaming shoe peeking out as the Mufti walked. Beneath his robe of ancient design, there was a business suit, no doubt from Savile Row.

As he came closer, the pope rose. This was something the outside world would never see, but he realized that this man could possibly know a great deal about what was happening. He could be a key.

“Pastor, I bring you greetings from the king, as custodian of the Holy Sites of Islam and leader of the Islamic Kingdom, and I greet you from my sad heart and the hearts of all good Muslim people.” He spoke a densely accented but understandable English, and his face—the expression—caused the pope to at once cease to be wary of him. The man was exhausted. His eyes were desperate. Many tears had been there. The pope could imagine this man on the king’s palatial plane, sitting alone, weeping in the privacy of the sky.

Suddenly, as if it was entirely natural, as if it had been meant from the beginning of the world, the two men embraced. The pope felt the trembling bones, then stepped back, holding the Mufti at arm’s length. How fragile was this old man, beneath his robes.

They were silent, and the pope suddenly knew why. He knew that it was

because God was there, directly there, speaking to both of them in the eternal language, the pope believed, of truth.

He told the Mufti, “We say that our God is not your God, but it isn’t so. It isn’t so.”

“We have it, ‘there is no God but God.’ ” Then his eyes pleaded. “These people are monsters. Heretics in our faith.”

In English, also, the pope responded, but carefully, “Sheikh, it is a tragedy when holy faith is used as justification for violence.”

“You and I have both been to the Alhambra,” the sheikh said softly. “I know that you have.”

“You and I have both been to the Hagia Sophia,” the pope replied. “I know that you have.”

Their eyes said the rest of this history, and their silence.

“The king has conveyed our sorrow to the president and the American people. I am here because I wish to appear with you before the multitude in the square and before the world.”

The pope was affronted. This lost soul could not appear here, in God’s church. The pope started to speak his refusal—but, again, he felt that presence. This time, there seemed to be a little girl here, she was all burnt, standing behind the Mufti, and with her was an angel of God. They were silent, watching the pope. Even so, he shook his head. A thing this great could not be done in a moment, no, not even for the angels.

Such an event would normally be years in the planning, perhaps decades. There were three congregations that should be involved, and many cardinals who would expect to be consulted, and rightly expect this. There were many orders, also, that would anticipate offering their opinions, not to mention Opus Dei and other powerful lay organizations.

But the child was still there, still watching him. He could hardly bear to look at her blackened flesh, but it would not leave his mind’s eye. “Be as little children.” He recalled his mother saying it to him, recalled her telling him that if he forgot this, he forgot Christ.

He knew what a child would do. He forced himself to smile. “Mufti,” he said, “I sense that God is with us.”

From outside, the roar of the crowd was now enormous, louder than he had ever known it. He thought of each of them, each an astonishing microcosm of the whole. “The Kingdom of God is within you.” The Lord had said that not to kings but to simple folk just like the multitude whose hopeful faces were

turned now toward that window over there.

His heart bowed, and he knew that when he and the Mufti went to the window Jesus would be with them.

“We will go before the world, then, you and I.”

The Mufti closed his eyes for a moment. In the tightness of the lines around them, the sunken cheeks, the pope saw that he also was in deepest inner conflict. “There is only one God,” he said. “I will say it.”

“I also.” It was now five fifteen. Less than an hour. He wanted to telephone the president again, to beg him to leave Washington. But the president, he knew, had ascended already into another state. He had observed it in John Paul, the sudden sense of distance that comes as death steals closer.

No, President Fitzgerald was beyond telephone calls now. He was busy, that poor man, with the waiting that comes before dying.

TWENTY MILLION DOLLARS

As the president danced on the end of his rope in Washington, in Peshawar birds were making riot in the high morning and it was pleasant in the gardens of the town. Later, it would grow warm, but the heat of summer was gone, and even here there was that sense of echo that haunts autumn days.

Aziz took his tea with careful design, for he knew that history would record his actions in every detail. There would be poetry and song and texts, and each gesture of his that Eshan and the Persian boy Wasim were observing now would become part of the eternal history of human freedom.

He must be seen as the confident servant of Allah, not the man he felt himself to be, full of flutters and fears.

It must be, this thing, for this was be the world's last chance to join itself to the love of God. In a very few moments now, the Great Satan would be finished.

Aziz wanted to look at his watch, but he would not show anything that might later be taken to mean that he was not entirely surrendered to Allah. He nodded to the Persian, who came forward, his enormous eyes, as always, full of wonder. Again, he nodded.

The tea gurgled into Aziz's glass. "Thank you, Wasim," he said, bringing the whisper of a smile to the face of a boy who was just beginning to understand his own role, that not only was he here as a student but also his duty was to serve the Mahdi and give him relaxation when his heart was heavy with cares.

There were sounds coming from outside, voices shouting. The Mahdi allowed himself to wonder if word had come to Peshawar that the Great Satan had been brought down.

"I am not here to give tea," Wasim said. "I want to return to Tehran. I don't want to wear this—" He gestured to his *djellaba*. He shook his head.

"Children are beaten for impertinence."

"I want my Xbox back! This is all crazy! You live like it was the Stone

Age!” The beautiful eyes bored into him; the voice dropped, the lips barely moving. “You’re ignorant and you care about nobody but yourself. You’re a monster.”

Aziz sucked breath. Every cell in his body wanted to strike this insolent boy. Even so, in Aziz’s deepest heart he felt an abiding sorrow for the terrible thing that had been done, and the fact that it could never now be changed.

He shook it off. There could be no faltering now, no weakness.

Outside, more voices were rising.

The boy smiled at him. “When can I go? All Tehran is against you. All Muslims are against you. Even Hezbollah says you’re evil!”

“They are cursed of God. Our Brotherhood is not evil!”

“The Muslim Brotherhood has also condemned you, whoever you are. Nobody knows! Are you some madman’s stooges? Osama’s? He’s stupid enough to try this. Who are you?”

He would say nothing of Inshalla to this boy. He would not say the name to this rebellious child. “I will ignore your insults now, but later I will beat you.”

The boy looked straight at him, his eyes glinting with accusation. “I hate you,” he spoke with a mildness that was chilling to Aziz. He reflected that this boy had killed, and so become a man. A man could kill again.

“Your father paid a great deal to put you with me.”

“My father is a fool.”

The voices outside had become a roar, and Aziz was beginning to be curious about what might be happening. Surely if the bomb had detonated, Eshan would come and tell him.

Then the boy spoke again. “You lied; you’re not a teacher. You teach nothing. I want to call my father! Why is there no telephone?”

Eshan appeared. His face was impassive. “It is three minutes past the hour now,” Eshan said.

Perhaps Eshan had not heard what the crowd had heard. “History is three minutes long now,” Aziz said to Eshan. “In the first minute Mohammed is born; in the second the Quran is finished. In the third all the world rejoices at the death of the Great Satan.”

Eshan did not respond but only lowered his eyes. Aziz wanted to savor this event, as the people of Peshawar, so used to the oppressive faithlessness of the apostate government and its Crusader-financed police, realized that the Crusader king had been killed.

Aziz got up from the chair where he had been taking his tea, and moved across to the heavy door that sealed the garden off from the outside world.

“Mahdi, perhaps, have a care.”

“Why is that? Do they suddenly know me in Peshawar? Am I not hidden by God himself?” The Twelfth Imam had been rendered occult by Allah. He would not be discovered, could not be, until the time was right.

“I don’t know, Mahdi.”

“I do know, and I tell you that I’m in no danger here.”

“Yes, Mahdi.”

He enjoyed Eshan calling him by his title. Glorious title. Eshan had seen the way his hell-raising boss had changed once the great office was conferred on him, had seen him literally transform into a new man, as the Mahdi’s ancient spirit filled his own young and brash one.

The door in the thick garden wall was kept locked. Aziz approached it, took down the big key, and fitted into the lock. “Are you afraid, Eshan?”

“Yes, Mahdi.”

When he opened the garden gate, he saw a woman rush past with her hair flying, then another in Western dress, who was wearing a blue veil. There were men, too, and he saw a great column of smoke behind the roofs of the houses.

Eshan came behind him. “Master, don’t go far.”

“What is this, Eshan? What’s burning over there?”

“Sethi Mohalla.”

“A mosque is burning?”

“The mosques of the truly faithful are all burning.”

“But—”

“You should look at the news!”

Eshan’s tone astonished Aziz. “Where is your respect? Don’t forget who I am.”

“Then stop sitting around drinking tea and pretending you’re the Prophet’s left foot. We’re having a catastrophe! Anyway, we’ve known each other a long time, Aziz.”

Aziz held in his surprise. First the boy goes mad, and now this. “We must trust in God. God does all.” Some girls passed, again without veils. He gestured at them. “What is this? What is this business?”

“Our women are removing the *hijab* in protest against the bomb, and Christian women are wearing the blue veil to announce respect for Islam, the

Veil of Mary, Mother of Jesus. Christians and Muslims are worshipping together, all over the world. They are praying together everywhere, hand in hand.”

This could not be true. His clerk was overwrought. But the matter of the *hijab*, this Aziz could see with his own eyes. “This is illegal, to remove the *hijab*.”

“Not in Pakistan.”

“They must be stoned, Eshan.”

“Mahdi, there are not enough stones. Millions of Muslim women are doing it. The whole Muslim world is united as never before—against you, Mahdi.”

Eshan quoted the great words of the Muslim Brotherhood. “ ‘Allah is our objective. The Prophet is our leader. Quran is our law. Jihad is our way. Dying in the way of Allah is our highest hope.’ ” He continued, “Conversion is violent, often. It has always been thus. But afterward—what happiness!”

“The Muslim Brotherhood denounces us.”

“We are masters. Above the Brotherhood.”

“We are denounced.”

Anger raced the Mahdi’s heart, but he strove to appear serene. He let the breath of rage slip from his body. “Very well,” he said. He wanted to curse the arrogant devils, especially these females, but he turned, instead, and went back to his garden. He gave the outer door a good, hard slam. They would learn of the power of Islam, these women, all of them! Devils!

From deeper within the house, he heard the voice of Al Jazeera—another female, and she also was speaking of the “universal protest of the Muslims against the monsters who dropped this bomb.”

“Zaaria and the others are watching television?”

“Yes, Mahdi.”

Not even his three wives knew for certain who he was. This was a man’s secret, this secret and sacred life of his. “Go and turn it off! Devils!”

There was movement from behind the black curtain that concealed the women’s rooms. A small hand darted out; then the curtain parted. Slowly, his daughter Jamila came into the garden. At thirteen, she had a roselike purity about her, with flawless skin, her olive cheeks brushed pink, her lips just becoming sensual. It would not be long before she went into *pardah*, but not just yet. Every father longed to delay that moment, especially when he had such a beautiful child as Jamila.

Jamila wore a blue *hijab*, not a black one. Black for the heart of the female,

black to prevent disturbance among men.

“What is this blue?”

“Oh, I don’t know.” She twirled around. “What if I take it off?”

“You will be stoned, Daughter.”

“Oh, *stoned!* With little stones or big stones?”

Absently he gestured toward some cinder blocks that were stacked against the garden wall.

“Do only women get stoned, Father, dear Father?”

“Whoever disobeys a law that requires stoning is stoned. Now let’s leave this subject.”

“My mommas say you’re the Dajjal. Are you the Dajjal, truly?”

“This is monstrous! A monstrous lie!” The Dajjal was the antithesis of the Mahdi, an evil being such as the Christians called the Antichrist.

Jamila twirled, and as she did, the blue scarf floated off her head. “Do you like me,” she trilled in the music that was her voice, “or perhaps I’m not pretty to the eyes of a demon.”

“This is madness.” He took her wrist. “Stop this!”

“No! Don’t you touch me!”

“Be silent! I am your father! Get that *hijab*.”

“Stone me; you’d love to even though it’s not the law! I’m not in *purdah* yet, and I’ll never go into *purdah*, not for you. You’re a bloody, evil *monster!*”

It took all the strength he had in him not to slap her senseless. They had been infected by that accursed Al Jazeera with its rubbish nonsense!

“Wasim! Come stone me; my father commands it!”

Wasim came from inside the house, followed by a scent of cooking spices. “What is this?”

“I’m disobeying the law! I must be stoned!”

Wasim looked toward Aziz. “Mahdi?”

“She will not be stoned.”

“What? But Wasim, you cut off heads! Surely you can stone, too!” She took his wrist. “Here, come to these blocks. Pick one up. I’ll be a good girl; I’ll kneel. You can crush me easily!”

“Mahdi?”

“Wasim, go back to your cooking.”

But Jamila blocked his way. And then she did more; she did the unthinkable. “Ba-ba-bang,” she chanted as she tore off her blouse. “Ba-ba-

biddy-*bang!*” She bent, then came up again. She stood naked. “Now, Father, I am obscene. The filthy female.” She danced in front of Wasim. “Getting excited? How about you, Father? Is not your filthy daughter pretty? Will you not want me among your virgins in your heaven?”

“No! No, oh, God, what is this? This is madness!”

She went to the blocks and hefted one. The big, gray thing almost caused her to fall back, it was so heavy against her frail nakedness.

Certainly a woman going naked would be severely punished. But a child?

“Daughter, there is nothing in the law to require the punishment of a foolish girl.” He went to her and lifted the great block out of her hands, and returned it to the stack.

Then Zaaria, who was Jamila’s mother, came out of the curtained room. She came to the center of the garden. He knew her by her eyes. His wives obeyed the sura, and thus she was in full purdah.

“Zaaria, your child is misbehaving. Please take her away.”

She reached up and unbuttoned her robe, her dexterous fingers working quickly.

“What are you doing?”

“You are not of the Ahul al-Bayt. You did not become known in Medina.”

The robe opened, and in her hand he saw the knife used for the dressing of chickens.

“You are no Mahdi, but I will tell you who you are, because I know.”

“I am Aziz, of course, only Aziz, son of the carpenter. The Mahdi is concealed within me. Only when the Caliphate is restored will you see my transfigured form.”

“ ‘The Dajjal will bring hell to paradise, and what he will call paradise will be actually hell; so I warn you against him as Noah warned his nation against him.’ ”

“How dare you quote scripture to me! And stop this immodesty. Get the naked child and go away.”

Then his other wives came into the garden, one of them wearing a Western bathing suit, little more than a gaudy yellow string. The other was in jeans and a sweater, and, like Jamila, wore the blue veil.

“Dajjal,” Maya, his second wife, hissed. “You murdered a whole city!”

“I saved the whole world!”

Maya carried a big butcher’s cleaver and Salwa an iron bar. Salwa hefted it and came forward. “You’re the monster of the whole world!”

He knew what these weapons meant. He knew that he was being betrayed. Only one thing mattered now. "Eshan, is it completed?"

Zaaria said, "Tell him nothing."

"Tell me!"

Eshan saw what was happening. The Mahdi was leaving this man. "I must go, now, Aziz." Eshan had been told exactly what to do in this event. Should Aziz become too dangerous a receptacle, Allah would simply move the Mahdi to another.

"Help me! Get the gun, the gun, Eshan!"

Eshan left the garden and went into the house. Aziz shouted after him, "Is it completed, Eshan?" There was no response. "*ESHAN!*" But Eshan did not answer. He must go now to a certain madrassa.

The women came closer to Aziz.

"What are you doing?" He tried to smile. Their faces were awful.

"Do you know that Salwa lost toes?" Zaaria asked him.

"I don't understand."

"While you were warm on your djinn of a horse, do you remember the figures walking behind you? The *shadows!*"

"Of course I remember!"

"And no hospital, then. No hospital for her! She has gangrene, you *scum.*"

He backed away, toward the outer door.

"Don't let him," Maya snarled.

Wasim took a few steps, until he was between Aziz and the door. He turned around and threw Wasim against the wall. "You're all apostate! I am the Mahdi!"

"Dajjal," Jamila sang, twirling with her hands over her head. She danced on her mother's discarded burka.

Outside, there were shots; there were screams. The sick-sharp odor of cordite sifted through the air.

"They are purging Pakistan of the ones like you, the followers of the Dajjal." Salwa raised her arms high. He watched the beautiful arms, watched the black bar in them. Above it, he saw the fading green of the trees that overhung the gardens and, higher, white clouds in the blue.

There was a pain, and then ringing silence. He knew, then, that he was on the ground. Salwa stood over him, the iron bar in her two hands.

As he was raising his arms, she hit him again, this time a blow that glanced off his shoulder, making him cry out as the bones separated. A rush of nausea

swept him. He pushed himself away, and the third blow slammed into the ground with a sickening *thunk*.

“No! Please, I’m young; I deserve to live! I was forced. Yes! They told me if I did not obey, you would all die! Yes! They told me this!”

Maya came down to him, pressed her soft face into his. “You deserve hell! What of the children you burned? Have you seen that? The fields full of charred bodies? *What of them, Dajjal?*”

Then he felt a coldness on his neck, then searing heat, then an agonizing choking sensation. He reached up; he felt, his hands trembling, losing control—an effort now—he felt the handle of the cleaver. *It was in his neck!* He fought the growing weight of his own hands, fought to close his fingers—and then it was out; it was in his lap. There was a sound. Rain. No, his blood—*blood*—gushing out of his neck.

He managed to raise his head, and they were all there, Maya, Zaaria, Salwa, Jamila, and Wasim.

Aziz’s throat had a torch in it. “Please, I can’t breathe,” he said.

Wasim barked out a laugh. “Kiss the feet of the dead, Mahdi.”

“Don’t call him that; it’s impious,” Zaaria said. She took out a pack of Marlboros and passed them to Salwa and Maya, and as his struggle turned slowly from agony to a sort of floating warmth, they stood smoking and watching him die.

“It . . .” He wanted to tell them that it changed nothing. But there was no strength.

Then it was dark; there was a child singing in perfect voice, like a distant lark.

They watched his head loll, his eyes roll back. Then his breath stopped.

“Well, it’s done,” Zaaria said.

“Are we rich, now?” Wasim asked. “I want to go to live in Paris!”

Zaaria went to Aziz’s office. There was little here, just his mysterious codebooks and Eshan’s laptop. She picked up the laptop and hid it under her burka.

“Let’s go,” she said. “To get this money, we need to start with the police.”

They opened the garden door onto a street that was quiet again. A police truck stood at the nearby turning. Beyond it, fire equipment rumbled; and white steam rose where the firemen directed their streams into the ruins of the mosque.

It had come time for prayer, and muezzins raised their calls across the city

—most of them, to be sure, electronically, but the age-old call of Islam nevertheless spread far and wide, echoing off the old stalls in the markets, off the walls of houses, floating through the gardens, the call to prayer.

Zaaria walked up to the police truck. From the back, uniformed men watched her, lazy with disinterest. “Nobody prays?” she asked.

One of them smiled a little; that was all.

She went around to the front of the vehicle where their officer was facing Mecca.

“The peace of God be with you,” she said as he finished.

“And with you.” He came to his feet. He was a prim man with a neatly trimmed moustache and an aroma of ginger and roses. His uniform was so bright and clean, it appeared to have been just made. “Have you trouble for me?”

“I have news that the man who is behind all these plots is dead.”

“You can prove this? That it’s him?”

“We have his codebooks, his radio equipment, a laptop, many things.”

“So, you will have done Islam a great service.”

“And the twenty million dollars the Americans are offering?” Salwa asked.

“Is it so much now?”

“I saw it on Al Jazeera. Last hour, they doubled.”

“If this is true, you will have it.”

“We can lead whoever you want into Pamir, and show them his hideaway. And his clerk is here in Peshawar. We can identify him.”

So ended the life of the Mahdi Aziz, the son of a carpenter. His life ended, yes. But nothing else did.

THE LOST PLANE

At ten minutes to midnight, Bilal had embraced Hani. “Soon, you will know the joy of heaven! What happiness!”

Hani had not smiled, but Bilal had not seen the danger of this, fool that he was. Now he hurried through the streets, looking for his brother.

Bilal had thought that surely Hani was ready. He had prayed so earnestly, had worked so hard on the preparations. He would fly; it would be over in a minute; all would be well.

Didn't Hani realize that they were both dead anyway? The bomb had been removed from its shielded container. Nothing protected them from its radiation. They would both sicken and die in days. In any case, it didn't matter, because this house in Alexandria was only ten miles from the White House. This house would burn—and, in any case, Bilal planned to be on the roof, so that he would be killed immediately. Why wait and suffer?

The plane was stationed too near the point of detonation for it to be stopped in time. F-16s circled constantly, and an E-4B flew higher. It was officially a flying command post, but Bilal thought that this one must be modified to work like a very sophisticated AWACS, with the kind of downward-looking radar that would immediately guide the F-16s to a target.

Hani needed under four minutes in the air, but still it would be a near thing. At the first sign of a missile launch against him, he would detonate, no matter where he was.

It had all been so well planned. Their training had been so excellent, the aliases given, everything! And now look at this Hani; in the end he values his own life more highly than Allah's will!

Bilal thought of all the men and women who had so willingly given their lives in Palestine, in Iraq, all over the world, for love of God, and now this little fool, the most important of them all—here he was—he ran away.

The promise of heaven was true. How could he, a good Muslim, not know that? Bilal had to find him. But where? Aleph Street was empty and silent.

Bilal had kept Hani far from the Islamic Community of Northern Virginia,

lest he be tainted by their apostate ways. They were worse than Shia.

Bilal wished that the Mahdi with all his knowledge of the universe, of the souls of the living and the dead, of heaven and hell, were here to offer the advice that Bilal needed, but that could not be, because the Mahdi was still hidden by Allah himself, and would remain so until the final triumph. Must be, or he would certainly be killed. The Americans had always in the past paid their great rewards to those devils who gave up holy warriors, and now the reward for the Mahdi was up to \$20 million. Even with the dollar falling like a stone into a bottomless well, that was still much money. If the Mahdi was indeed proved to be dead, the Crusaders' wealth would rise again, along with their steel armies and their deadly, godless ways.

"Hani," Bilal called. His voice echoed. "Hani, I am weeping! Hani!" It was already twelve fifteen. "*Hani!*"

Most of the shops were dark, the Flair Cleaners, of course, but also the 7-Eleven on the corner—dark and the door chained closed. But then, at the far end of the street, Bilal saw a glow. That could be that little café, the place of the badly seared hamburgers. Those men in there were Muslim. They would do their business and trust to Allah's will. Or the Starbucks on Kingdom Street, perhaps, but the blacks in there, they were like all Americans; they would certainly run.

Bilal raced down Aleph, his legs pumping, hating to get away from the plane and the bomb. Crusader trucks bristling with antennae were ranging the streets, helicopters passing overhead. There was a reason that he and Hani had rented an apartment on a street directly behind a medical-imaging center, full of radioactive elements to throw off just such a search. And so far, it had worked, but it would not work much longer. With the bomb no longer shielded, it was only a matter of time before the searchers would see that the imaging center was emitting too much radiation, and would investigate.

There was no hiding an unshielded plutonium bomb, not for long. "*Hani!*"

"Can I help you?"

Bilal stopped, breathing hard. He tried to smile at the Crusader policeman, knew he had failed. "I am sorry. My brother, he is—" Bilal touched his head. "Beloved of God, we say, do you know?"

The cop nodded. "A little slow?"

"Yes, that's right. And he's afraid. He's wandered off."

A big hand came down on Bilal's shoulder. "He'll be all right." The policeman smiled, then, and his smile was strong, firm. "Look at your watch;

what do you see?”

“Twelve twenty-two,” Bilal said, trying to keep the despair out of his voice.

“So, they missed! Your brother’s probably celebrating!”

Bilal raised his hands. “Oh, thank God,” he intoned.

“Him and all the angels, buddy,” the cop said. “We got a curfew, now, so you need to get back home. Has your brother got a cell? I might be able to reach it through the police net.”

“No cell. Oh, look—the Starbucks—is that open?”

“Cops only.”

Bilal hurried past him, but a moment later there was the squawk of a siren, then the flashing of the police car’s lights. Bilal stopped, raised his hands. The cops, two of them, now both in their squad car, gave him genial looks. “Hop in. If he’s not in the Starbucks, we’ll cruise you for a while. We’ll find him.”

So Bilal got into the police car, sitting in the cage in the back. Had the devils captured him? They were clever, the Crusaders. He sat forward on the seat, trying to appear calm.

“Rough one, today,” one of the cops said.

“Yes, Sir. Very definitely.”

“You guys staying under cover?” asked the other cop. “Because there’s a lotta folks—you know—well, it’s a tough time for you now. You Arab?”

“We are Iraqi. I’m a procurement specialist. My brother—well, he keeps our house, God willing.”

“What agency you with?”

“No. Iraqi government.”

“Yeah. That must be interesting work.”

“Very interesting!”

Then he saw Hani. He was sitting in the Starbucks, but what was worse, he was there among a dozen police and other helmets, sitting working on a laptop! What was he doing there with that computer? Was he giving them all away?

“Oh,” Bilal said, “he’s there. Stop. Stop now.”

“Hey, we found ’im!”

Bilal pulled the handle, and found that the door had not been secretly locked, after all. These Crusader fools had helped their enemy.

He went into the Starbucks. There was music playing; was it Joni

Mitchell? Sweet voice, anyway, some Crusader harlot or other, “Give Peace a Chance.” Idiots. “Hello, Hani.”

“Hello.”

“Is this betrayal?”

“No. I’m only playing King Kong.”

“King Kong?”

“That game. It was in the house when we rented it. It’s good fun!”

“Hani, it’s half past twelve.”

“I know it.”

“Are you not going?”

Hani played the game.

Bilal sat down across from him. “My brother, this is defamation for our family. Even in the eyes of God.”

“It’s fun, but hard to get the gorilla to leap. I think perhaps it’s a little defective.”

The first of the two policemen came in. A few of the others greeted him.

“Here we are in the den of the Crusaders! Hani, please come home.”

“Hey there, guys, we gotta roll. You comin’ or not?”

“We will come.”

“He can use a computer?”

“All the time, he plays a gorilla game. We will walk home later.”

“You better come with us. It just ain’t safe for you folks.”

Bilal looked up sharply.

The policeman smiled. “I’m embarrassed, but I think you understand that it’s not safe for somebody who looks like you. Not safe tonight.”

Bilal took Hani’s arm, and gently brought him to his feet. “Come, my brother. You need never do that chore I asked of you. Come home with me.”

Hani touched Bilal with his eyes. “There is no other way.”

“Brother, there is. When we are home, I will show you this.”

They were taken home by the police, back to the plane and the bomb, and as they went into the house an F-16 thundered low overhead, its fuselage glowing in the city lights.

Inside the house, Bilal said, “I have another way. I am too heavy now, but perhaps that can change.”

Hani’s eyes grew as quick as those of an uneasy sparrow. Flick, flick, they went, looking to the living room, to the kitchen, resting on the door into the garage.

“You must help me, Hani.” Bilal tugged at his brother’s shoulder. “Here, come to the garage; we have the saw.”

Hani pulled away. He looked at the floor. Shook his head. “I will go,” he said.

As midnight had approached, President Fitzgerald had ranged the White House like Banquo’s ghost, followed and guarded at every turn by Marines.

At ten minutes to twelve, he had taken a call from the Pakistani leader: “Mr. President, I know that Dream Angel is off the deck. I am calling to beg you for our lives.”

“I don’t know what you’re talking about,” Fitz had said, and immediately felt weak for saying it. He sensed his power—American power—ebbing away, dying with the dollar and the terrible passage of this night. He’d hung up, not listening to the man’s further protests.

There had been two calls from the pope, who was apparently with the Saudi Grand Mufti. The Saudi king had telephoned twice. More pleas, no doubt. There had been other calls from Syria, from Iran, from Indonesia, everybody knowing that Dream Angel had moved to its fail-safe points, everybody knowing that the moment Washington was destroyed, hundreds of millions of Muslims would also be destroyed.

At five minutes to the hour, the vice president had called. “Fitz, I want you to know that the Document of Transfer arrived safely. I have it here.”

“Thanks for letting me know, Matt.” The world was distant from Fitz now, full of details—the singing of the crowd out on Pennsylvania Avenue, the distant roar of a passing F-16, the tap of heels along a corridor he could not see.

“That’s not why I called.”

“I’m not leaving.”

“Come on; I’ve got the chopper on the lawn!”

“America does not run.”

“The death of the president will be looked on as proof of our weakness. It will be seen as a defeat!”

“The courage of the president will be seen as strength. Then the world will see a smooth transition of power. That’s what history has to remember, not that I turned turtle and saved my own damn ass. There’s a lot of movers and shakers out there, for God’s sake.”

“Who?”

“That crowd. Senator Martin is there, Cardinal O’Halloran, for God’s sake. They’ve been singing for hours. Standing their ground because I am standing mine. This is the best way, bro. Take it from me.”

“It’s a waste of life! The kids, Fitz, Linda. Think of them!” Matt paused. When his voice came back, it was darker, and there was a lot there, Fitz knew, that was not being said. “You could have evacuated a lot of people from that city.”

“And risk an immediate detonation? No. Listen to me: Dream Angel is approaching fail-safe. They can remain on station for four hours; then there’s a refueling cycle.”

“The moment Washington is destroyed, they’re goin’ in. Should’ve gone in hours ago.”

“You don’t think my decision was the right one, either.”

“Fitz, there are no right decisions in this thing. I would have sent Dream Angel and gotten the hell out of D.C. You look at things differently.”

One minute to twelve had come. “You wouldn’t have. No way. Not if you were in this chair.” The trouble with Dream Angel was that it was too big to use. You have an ant on a plate, you can’t use a sledgehammer without smashing the plate you’re trying to keep clean. But there was no use explaining any of this. One thing a president learns early—don’t explain yourself, because you can’t.

“Fitz?”

“Yeah?”

“It’s twelve two.”

“Well, hell, they’re late, aren’t they? Go with God, bro.”

“You, too. My love to all.”

“I have a cussed tough family.”

They were both silent, then. Hanging up this phone, Fitz thought, was like an act at the end of the world. But he did it. He looked at the phone, on the old Roosevelt Desk. He was in the Oval again. He didn’t give a damn who heard what. At last, the president of the United States had no secrets.

“Logan, we got anything from upstairs?”

“Nothing. There is not one bogey in the sky anywhere in the area. And every high point from Atlanta to Bangor has been searched at least twice. Plus the radiation detection teams are out in force. Fitz, there just isn’t anything.”

“I wish the damn detectors were better.”

“The best technology in the world—”

“—just isn’t good enough!”

He went to the window, looked out across the shadow-filled Rose Garden. Officially, he was a praying man. They liked that, the American people. Guy like them, grateful to his God. Fine.

He’d go to the National Cathedral on occasion, but it was more a time to turn over problems. He wasn’t like those crazies who’d been around here before, with the gall to believe they were on some kind of special mission from God. He just hoped for the best. He knew what he was—as, he suspected, did most people—a little bit of nothing on a tiny dot of a planet in the middle of who knew where? Lost in the stars.

He bowed his head, and he prayed hard, not to some God who might be looking down on a president but to the God of his childhood, whose presence he had felt when, as an innocent boy, he had knelt and been grateful for his little days.

TWO STORIES

Twelve thirty came, and Rashid's stomach was in his throat, his heart racing, his blood boiling. He jumped up and went to the cooler and got a Coke, popped it, and chugged. Immediately, Mark was there.

"Are we looking at a coronary?"

They could see his medicals, of course. He was way off the charts; there was nothing for it. "I'm sorry. My sister wasn't dispersed. And the waiting—oh, God!"

Mark put his hand on Rashid's shoulder. "That's very understandable. If you're not mission capable, you just let me know, we'll have Horace add your con to his for a while."

"I'm not seeing anything. Bombers at their fail-safes. Pakistani military convoys heading out of target areas."

"They know the Dream Angel target areas?"

"The entire Pakistani establishment will be packed into Karachi. Wherever there are concentrations of moderates. You can be sure of that."

"What about those Russians?"

"They never reappeared. Only the shepherds, that's all that ever moved in the area."

"And low-level reconnaissance showed nothing. Dead, no activity."

"The vehicle remains parked where it was."

"Then the two Russians are still in there?"

He was going mad; he couldn't talk more about this; he was no actor! He had to get out of here somehow and get to Alexandria and find out what had gone wrong, and he had to fix it, God willing.

"They are in there. Perhaps it's some sort of—I don't know—bounty hunt. They thought perhaps this Mahdi nut was hiding there. They went in and now they're trapped in a cave-in or blown up by a mine. There is absolutely no sign of activity. Nothing. So that's what I think happened."

"Well, it bears watching. Why not send in some Dragonflies?"

These were small drones disguised to look like insects, which fooled

nobody. “They haven’t got the range. I can put in for conventional drones again, but it’s going to mean diversion from targeting-related missions. I don’t think we’ll get them.”

“Yeah, we don’t want to rock that boat.”

“Listen, Mark, do you think I could go outside and get some air? It’s like hell in here for me. This place is so damn small!”

“That’s totally against regs.”

“Mark, I’m getting sick! My sister—it’s driving me up a wall!”

“Yeah, your meds are spiking every alarm in the book. Look, I can’t do a compassionate pass, not at this alert level. What I can offer is a tranquilizer and cot time.”

“No tranquilizers. But I wouldn’t mind if Horace took my con for half an hour. That would help. But if Washington . . . when—for God’s sake, don’t hold it back from me.”

Mark went back to work, moving off through the door of the tiny canteen and down the narrow corridor, his bald head shining in the fluorescent glare. Rashid went to the rest area, closed the door, and looked around for some other means of escape. A grill in the wall, but he wasn’t going to be able to make it through the ductwork. That was movie fantasy. The grill was small; you’d need to be a child to get through there. In any case, there were barriers back in the ductwork, he felt sure. This was a secure facility.

He lay on the cot considering his options.

His only means of departure was right through the front door, into the car park, down the twisting access road in his car, and out to the highway. This would mean breaking regs. It would mean a disciplinary hearing, maybe arrest, maybe even getting shot thanks to some trigger-happy cop with a rod up his ass over the curfew.

Given moderate traffic, Rashid was only twenty minutes from Alexandria. The traffic was almost gone, he knew, because he’d done lookdowns when he could. If he could get to the bomb, he was convinced that he could fix whatever had gone wrong.

As soon as he made his move, they were going to be after him. His car was loaded with tracking devices, of course, so they could afford to stand well off. They would be able to tail him from the very satellites that he himself used all the time. Even if he left the car, his implant would still be trackable. They all had them, in case they were kidnapped. So nobody would need to come near him, not until he made contact with whomever he was going to

see.

If it was anyone other than Nabby, they would be all over him in minutes.

God, make the plane fly! Make it fly! Where was it? The stupid, evil betrayers, why weren't they doing their part? Did they despise God? What was wrong with them?

There were shouts. At first, he wasn't fully aware of them, so lost was he in his desperate thoughts. Then they turned to cheering and his throat closed; his head began to pound. He got up from the cot and went back to the work area, twisting through the maze of carrels. People were coming out, congregating, violating regs as if they no longer existed. They were pouring into Horace's cubicle, everybody.

"Hey, infidel," Carol Wilkie cried. She came up to him and embraced him. "Don't be modest!" She took her veil and drew it across her mouth. "The Paki cops got the Mahdi and a hard drive is on its way to the CIA station in Peshawar. They'll upload its contents to Langley in a few minutes."

"Oh! Oh, my God, how . . . wonderful! Wonderful! We are saved. Saved!"

"Not just yet," Mark said. "But we're going in a good direction."

Rashid forced his face into a smile. "But we still have our cons," he said. "This may make them act precipitately."

"It's being kept under a lid," Carol responded.

Suddenly Rashid saw what to do. "In Pakistan?" he said. "Don't make me laugh. Folks, listen up." He was proud of himself. This was hard, but he was doing it for Allah, this wonderful act. How had he come by it? God, only God, could have transformed him like this. They were all watching him now. He continued, "We need to go back to our cons. Let nothing past! Because, mark me, this will be known from Jakarta to Riyadh within the hour. Is already known. And it is going to make our enemies act."

Silence. Staring faces. "And I thought you were losing your gourd," Mark said.

"I was. Now I'm not." He went back to his own con. Washington had to wait, now. His work was here; God had just made that very clear. He had to do whatever he could to expand his operational area, to cover some more important regions.

He knew the cities that Case Purple covered. It was his job, now, to get his mission revised, so that he could do what he could to conceal suspicious activities in them. All one of these pigs needed would be to see airplane wings being unfolded on a street in Queens or Hammersmith or the

Tiergarten and another nail would be driven into the coffin of mankind's future. Humanity could not survive much longer, if the Crusader world was allowed to continue to gobble resources. No, they needed balance. They needed the help of Allah, and so Rashid's job remained the same as always. He went to work.

From a window in the darkened residence President Fitzgerald stared down at the crowd. His lips moved to the rising chorus. Beside him, Linda stood resolute. Dan and Polly also.

"No indications, Sir," Logan said, his voice soft and admirably firm.

The second hand of Fitz's watch swept on. Overhead, the jets screamed back and forth, round and round. Higher, AWACS and the E-4B circled. "No joy, no joy," came the reports. The Air Defense Command was convinced that they could shoot down anything that entered Washington airspace within thirty seconds of its being observed.

"You can depend on us," the generals had told Fitz.

"Well overdue now," Logan said.

Linda's arm gripped Fitz's. "I love you," she said, then kept repeating it, a mantra, "I love you, I love you. . . ."

Freedom had to win, and death here was the greatest contribution that Fitz could now make to that cause. His anguish was that his family would not leave him . . . and his abiding joy. He was so angry at them and so proud of them.

Dan gasped, sobbed, choked it back.

"One thing I know I have. I have the bravest family in the world, and the most loyal damn chief of staff in the history of this office, and Logan, could you please get us that bottle that's in the drawer beside my bed?"

Logan disappeared.

"What bottle?" Linda asked.

"The one you don't know is there. You can't be president without hootch. It's never been done."

"Dad—"

“Dan, boy, we’re not safe. They’re just late. Could mean anything.”

“It might still happen?”

“At any moment. But the longer we go past the hour, the more the odds drop.”

Maxwell, the butler, appeared with the bottle of Blue Label. He brought it on a silver tray, with shot glasses.

“Max! I thought I told you to go back to Wheeling!”

“I lost my bus ticket, Sir.”

“Well, I only see five shooters there, Max. You better get a sixth for yourself.”

There, in the darkness, with the voices of the people singing and the autumn wind rattling the old eaves, the presidential party solemnly drank smooth whiskey. “History forgets moments like this,” Fitz said. “But we must never forget.”

Dan said, “You’re a great president, Dad, and I didn’t think you would be.”

Now, that was a rock-back-on-your-heels stunner, coming from his hero-worshiping son. Who was Dan, really? He would have a hell of a time forging a life of his own. To its children, a presidency was a cursed shadow.

The crowd had stopped singing. All those faces were looking at something, some sort of movement close to the main gate. But what?

“What is it?” Linda asked.

“Somebody attempting entry,” Logan said.

There was dripping, and a smell of urine, hot, intimate. Fitz did not ask who had let go. It wasn’t him; he knew that. He wished he could spread his arms around his whole people, the whole world. “ ‘Yea, though we walk through the valley of the shadow of death,’ ” he said, and then, very suddenly, could speak no more without his voice revealing the terror that rode his soul like a mad horseman.

“We need to see the president,” Jim shouted through the great iron gate. A Marine stared at him from fifty feet away, well into the White House grounds. Farther back, a Humvee stood, its engine grumbling, dim light

within revealing more young faces. “Look, I know perimeter safety, too. I know you can’t approach.”

“Hurry, Jim!”

“I know—listen—I’m going to toss in my credential.”

The Marine reacted immediately, snapping to a defensive posture, pointing his weapon at Jim.

“No!” Nabila cried.

“It’s just a credential,” Jim said. He dangled the small leather wallet. “Nothing else. You need to take it to your officer now.”

The guard snapped his bolt. Other Marines came trotting closer. Around Jim and Nabby the crowd sighed and surged.

One of the officers in the Humvee said something into a microphone, and the guard pointed his gun into the air. Jim saw his finger close around the trigger. He had just been ordered to deliver warning shots.

“You’re gonna have a bloodbath, you panic these people!”

“Jim, let’s go! It’s too dangerous!”

He turned on her, suddenly hot with rage. “Nabby, I don’t think you understand. If I don’t get in, then I have to die here. This is my mission, Nabby. I will carry it out *at any cost*.”

“Jim, you’re more valuable alive! Jim, *think!*”

He tossed in the credential. The guard took a step back. Another. He lowered his weapon.

“It’s a quarter past,” somebody shouted.

The old woman began crying out the words again: “Give peace a chance. . . .” She had come out of nowhere to this place; all of them had. Why had they thought to come here? What had moved them to risk their lives?

Jim found these thoughts moving him deeply. They were here to lend their memories to the same martyrdom old Fitz had accepted, in that solemn, silent mansion.

“You have to listen! I have essential information—”

Somebody grabbed his shoulder and roughly turned him around. He found himself looking into the face of a man in a suit, a hard, cold man with an earpiece. Secret Service, FBI, CIA—who knew? He was a man following orders, and it was clear from his eyes what he had been ordered to do.

Then Nabila cried out, and Jim saw that two other of these men were pulling her away. They would be fast, but he also was fast. He chopped the Adam’s apple of the one confronting him, with a stiff, driving finger, then, as

his head snapped downward, spun around him and got an arm around Nabby's waist.

Jim saw the black glint of a gun in one of the men's hands. "No," he cried, but it was too late. A woman saw it, too, then two other people, and they shrank away as she screamed, her voice rising to a trembling, penetrating wail, "*He has a gun!*"

The crowd seemed to sigh, an oddly soft, oddly gentle sound. Then the fool raised the gun, bringing it into the view of hundreds of people.

The entire crowd recoiled. The man struggling with his throat went down in the spreading rampage, followed by the one attempting to pull Nabila from Jim's grasp.

Jim hugged her to him. A shot rang out, followed by a roar of terrified voices. People ran, their eyes glazed, their faces twisted to animal forms. It was too much for them, all the hours of waiting, and despite the noble struggle and the ideals when they finally lost it, they lost it all, and in an instant the band of heroes became a mob of animals.

Then the gates swung open, and the Humvee came slowly forward. And, incredibly, Fitz was there. Fitz was standing in the damned thing and so was his wife and so was Logan.

Its horn blasting again and again, it moved out into the crowd, with Fitz standing there in his shirtsleeves, his arms raised in the air. Beside him, the First Lady was impassive, as motionless as a statue—and, somehow, the dignity of her pose combined with the passion in her husband's stance brought the couple so vividly to life that the energy of the riot was literally absorbed and people turned and they became silent.

Trotting along beside the Hummer, Nabila still cradled in his arm, Jim called up to Logan, "I'm the guy on the phone! I need to talk! We've got a target!"

The roaring of the Hummer, the clapping, chanting crowd—Logan couldn't hear him.

Then a Marine started working his way toward them. In the now-clear space before the gate, Jim saw the crumpled form of the man he had struck. The face was black. Jim had collapsed the poor guy's windpipe.

Then the Marine was on Jim, his big hand coming down, grasping his shoulder. He could waste the Marine—pop an eye or crush his windpipe, too. The kid could not survive a man so lethal as Jim Deutsch. But look at him; he probably hadn't been shaving for more than a year.

“Sir, the president wants to see you.”

Jim looked into the tight young eyes, silent diamonds. “Let’s go,” he said.

Nabby climbed into the Hummer, too, and in another moment President Fitzgerald and Tom Logan had descended into the cramped crew compartment with them.

Nabby said, “A principal in the organization here in Washington is Rashid al-Rahbi. He knows crucial codes. He is an analyst with the National Geospatial-Intelligence Agency. I am ashamed to say that he is my brother.”

“We’ve known that he was a traitor for about four hours,” Jim added. “We’ve been trying to come in, but there’s a lot of resistance. Whoever is working for the other side has the ability to order arrests and lethal actions. Attempts have been made on both of us.”

The Hummer arrived at the side entrance to the White House, and Marines opened the doors as the presidential party emerged. They entered the White House reception area. Jim was surprised at how weathered it all looked, the tired glass doors, the steel desk where some of the world’s most prominent people must stop to present their identification, the elaborate—but, he knew, quite ineffective—X-ray entry system. He could easily get a weapon through one of those things. It was like so much security hardware—great on paper.

As they walked down a dim corridor, Jim said, “This thing goes—”

The president turned on him, grabbed his shoulders. The great, leathery face—that Rushmore visage of his—glared, eyes dense with exhaustion, lips slack and dry. The president shook his head. “Not here,” he said in a voice that seemed to rise from the tomb.

They went up a small elevator to the private suite. Here was a small foyer, on the far side a closed door. When Logan opened it for the First Family, Jim had enough of a shock to make him gasp audibly, and he was not a man who shocked easily.

The entire room had been stripped of its carpets, its furniture, even its flooring, even its plaster. He found himself looking at bare studs and framing, and walking across big hewn beams on a plywood path.

“They’re everywhere,” the president muttered.

“The bugs,” his wife said in a chipper voice. Jim could hear something like despair there.

“I’m not wrong,” the president said.

“No,” Jim agreed.

“Are you implanted?” Logan asked.

“I am,” Nabila said. “My brother may still be.”

“Not folks in my line of work,” Jim said. “We don’t want the other side finding Uncle Sam under our skin. We go naked.”

“You people are implanted?” the president asked. “With what?”

She held out her arm. “To track us if we’re kidnapped,” she said. There was a neat red scar an inch below her elbow, on her cloud-soft inner skin. “This is why I have had so much danger today,” she said, her voice tight. “If the wrong people have your code, you cannot get away.”

“Your brother has one of these, too?”

“Yes.”

“Let’s reach out for this guy,” the president said to Logan.

“Consider it done,” Logan replied. He opened a cell phone.

“Wait,” Jim said.

Logan looked up sharply. The president half-turned. They weren’t used to this sort of intervention. This was the president of the United States who had just given an order.

“We don’t want to go through channels, Sir.”

Logan looked to the president.

“We need to go directly to this man’s personal supervisor,” Jim added. “Bypass the entire system.”

“Just how extensive is this conspiracy?” Logan asked.

“That’s what we don’t know,” Jim said.

“You’re right, Mr. . . . Deutsch,” the president said. “But this presents a problem. I’ve got—God, how many levels between me and him? I have no idea.” He shook his head. “Nothing this big works right,” he muttered. “It just cannot work.”

Jim could not agree more. Streamlining was what the federal services needed, not the additional layers of authority that had been imposed over the last few administrations.

“I can call him,” Nabila said. “On his, um—well, there’s back channels that we all use.”

“His cell phone will be out,” Logan said. “We’ve shut the entire system down.”

“Call his supervisor.” Jim said. “Not him. His direct, personal supervisor.”

“And if he’s part of it, too, Jim?”

“Nabila, would he be?”

“I have no way to know that!”

“Call him,” the president said.

She took the military phone and dialed. Mark answered immediately.

“Mark, it’s Nabby.”

“Rashid is—”

“No, Mark, listen to me. Mark, are you near him?”

“I’m in my office.”

“Good. Now, listen. This is life or death. Life-or-death telephone call.”

“Yes.”

She looked desperately at the president, who motioned to her to keep on.

“Mark, there has been a major security breach in your sector.”

“How would you know?”

“I am going to put somebody on the line. This is going to be unusual.”

She handed the phone to the president.

“This is President Fitzgerald. Do you recognize my voice? . . . Good. You are to get this man—”

“Sir,” Jim said, “don’t have him arrested. Get him to—uh, may I do this?”

“Mr. Chambers, this man speaks for me.” He handed Jim the phone.

“Hello, Mark. Listen carefully. What I want you to do are two things. First, I want you to read back Rashid’s entire con for the past hour. I want you to tell me every satellite he’s used, everything he’s flown, all of it. And I want you to send him a signal. Shut down his con. Close him down. Almost certainly he’s already looking for some excuse to leave. Let him go.”

“Yes, sir.”

“Get back to us with every scrap of information you pull off his station.” He hung up.

Rashid was surprised when he was messaged for an emergency conference. He stuck his head over the partition. “Hey, Carol, what’s this conference?”

“What conference?”

When he turned back, he saw that his monitors all were plated. He knew instantly what those blank screens meant. Somebody had identified him.

As always, God had made his plans for him. In truth, he had been trained

for this contingency by experts, Russian mercenaries working for the private army BlackWatch. They'd gotten twelve thousand dollars cash to put him through four days on the BlackWatch avoidance course in Georgia. He'd been CrackBerrying Nabila and Mark and whoever else he could think of from Bermuda that week when his real location had been Burge Island, where the accursed mosquitoes were the size of the ever-present and disgusting shrimp.

There was nothing for it now. He'd just been flushed, no question.

He hurried down the corridor to the front desk, passed the desk officer without a word, ignoring the, "Excuse me," that was called out behind him.

He got past the perimeter guards also, and he knew why. The NIO was watching him run, of course. They would want him to leave.

He reached his car, got in, and drove quickly away.

Mark Chambers was soon back on the line. "He's bolted all right."

"Okay, you keep on him," Jim said.

"He knows everything about this type of surveillance."

"And he will eventually evade us. But we will still learn something before that happens, and let's hope it's what we need."

For the first time, Linda Fitzgerald spoke. "Does this mean that Washington is out of danger?" In that trembling lilt Jim recognized hysteria. This woman was about to explode in their faces, and he did not blame her.

He answered carefully. "This man may lead us to the bomb. That's all I can say."

"But it could go off—"

"Linda, it could go off at any time," her husband said, his voice betraying a level of anger. "It hasn't happened yet, that's all."

For a moment, she was silent. Then she pitched forward as if struck a blow in the stomach. Fitz touched her, distantly, as he might a wounded soldier during a tour of Walter Reed. "Come on, gal," he said softly. "Let's pull together."

"Excuse me," Logan said. "How do we get a secure lockdown on this

man? Where do we go for that? Not to his boss, for God's sake."

Given the need for speed, Rashid's own unit was the only place they could turn to. "We have no choice."

"What if they're all in it? Come on, man, think!"

"I've done that, obviously! And *we have no choice.*"

"This is a big government. There's always a choice."

"Okay, first, how do you know we'll be secure someplace else? Second, it'll take time and we don't have that, do we?"

"We could engage the National Reconnaissance Office."

"The man is actually physically running right now, so can you manage that in twenty seconds?"

"Tom, goddamn it, will you stop this arguing?" the president said.

"Sir—"

"Mr. Deutsch, get on the horn and get us this man's location! Do it!"

Rashid stopped his car near some woods. On the other side was the Columbia Pike and, just north of here, a small neighborhood. He got out and moved in among the trees. A Rugby would be passing over now, and there were drones, he felt sure, running high and silent. Moving from trunk to trunk, he made his way beneath the thickest foliage he could find. If they were able to locate his implant without NAVSTAR online—and he assumed that they were—they probably didn't need a Rugby to find him now. But you never knew; he might get lucky.

He had to get to Alexandria and get that bomb detonated. Even if he needed to do it in the garage, that was fine. Just get the thing to go off, that was the key. If they'd turned coward or been killed—whatever—he would do it himself, never mind, and regard the task as what it was—a privilege. Death excited him, and the prospect of the wonderful heaven Allah had prepared was delicious. He'd wanted a boy first, then a girl. He'd wanted his own house, and the love of a wife. But those things were not to be, because Allah, it seemed, wanted him.

Walking out of the woods and into the little neighborhood, he wondered if

he would have to kill now, which person, innocently living? It didn't matter. He would kill if he had to, but stealth was better.

The first house he came to was empty. Shortly he would need a car, but right now this was exactly right. He went to the garage, broke a pane in the door, and went in. As he did so, a small dog began barking frantically. It hopped up his leg, groveling and panting, absurdly grateful that he had come.

Of course, there was nothing absurd about its gratitude. The animal had been left in this garage with nothing but a bowl of water.

Well, good, in a moment he could make use of the dog.

How American this garage was, so tidy and yet so cluttered with possessions. Why would a man with a tiny property like this one require a chain saw? Or a collection of model ships, gathering dust on the workbench? It was all stupid, all this obsession they had with material. The Crusaders fed their hunger for God with rubbish like this. Television instead of prayer. That was no way to live.

He went into a splendidly appointed kitchen, where he found a good knife, small but with a blade of excellent quality. For some little time he sharpened it in the electric sharpener that stood on the gleaming granite counter. Then he went through the dining room with its silver-laden sideboard and glowing mahogany table, and into the bedroom wing. He found a bathroom, where he searched the cabinets for alcohol.

Because he had no choice but to do it this way, he took the knife in his clumsy left hand and sawed away at his right arm. Gritting his teeth, sucking back his screams, he cut deep, dissecting away fluffy folds of fat and lean strips of muscle, until he found the dull silver capsule he was seeking. Pushing at it, working the wound until it frothed and bubbled, he gradually got the thing between his fingers.

He looked at it. Featureless, dull silver. Inside, he knew, there was an intricate array of circuitry, a masterpiece of subminiaturization. The telemetry the thing generated could even be used to determine his state of consciousness, whether or not his eyes were open and functioning, his speed of movement, and, if he was wounded, how long he had to live.

All of that, and the only thing it would do now was feed a hopping, snorting little dog. Not much of a watchdog, this little thing. He opened the fridge and found a plastic container of turkey salami. Taking out a slice, he folded it around his implant, then gave it to the animal, which ate with the frantic gusto of the starving.

Taking it by the scruff of the neck, he put it out into the garden. It ran yapping to the back fence and began jumping at the gate. He followed it, remaining close to the few trees, then using a garden shed as cover.

When he opened the gate, the animal raced out, dashing off along the alley. So now they had a dog to catch.

Rashid had no idea which Mahdi sympathizers in the FBI or the CIA cut orders to arrest or kill people like Jim Deutsch—or even if they were Mahdi sympathizers. Maybe they had other agendas. That was the nature of intelligence, now. There were too many players, too many agendas. The entire process was out of control. Unbeknownst even to most world leaders, the whole vast planetary community of spies had long since descended into anarchy.

Rashid reached the house, went through it onto the front porch, and walked quickly down its covered expanse. There was a little rail, a porch swing, some drying flowers on a white stand. This had once been somebody's refuge, their little nook where they had, perhaps, sat and read books. Filth. Western nonsense. He hated it all. The only book was the Quran. The rest was worthy only of the fire, all of it from Genesis to *The Great Gatsby* and beyond, without exception. He even favored burning the Islamic texts, the endless interpretations and such. Why did you need this when you had the original word of God?

Read the word, pray, do your work—this was the world that was being created, a happy world at last, freed of the vast burdens of the soul that the Crusaders had imposed, as part of their service to darkness.

He passed down off the porch, into the yellowing grass beside the house, and went into the next yard, where a red Dodge stood in the driveway. He looked in the window and saw no Global Positioning System in the dash. Good, the car could be used. But he needed a key. Perhaps it was in the owner's pocket, of course, but it could be in the house. He could get lucky. God could help him.

He went up the driveway, and stepped onto a porch similar to the one next door. There were shadings of difference, though—different plants, no swing. Also, the front door was solid, no windowpanes. So he kicked in one of the windows. Why not? What did the property of these faithless creatures matter? He reached in, opened the door, and entered.

“Excuse me!”

Rashid froze. A man stood back in the shadows of the room, a plump man

of perhaps thirty-five, wearing shorts and a T-shirt. For a moment, he seemed like some sort of hallucination, his presence was so unexpected. But then he came forward, and in his hand Rashid saw a small vase. Then the man reached down and lifted a side chair by its leg and threw it.

As Rashid stepped aside to avoid the chair, he pulled out the knife he had used to cut the implant from his arm. He advanced on the man, who was fat and confused but still quick enough to slam the vase into the side of Rashid's head.

Just in time, Rashid turned, causing the blow to glance off behind his left ear. It hurt, but it did not stun him, and he slashed backward with the knife.

It connected; the man drew in breath; then Rashid thrust as hard as he could, digging and cutting, pistoning his fist as he had been taught.

The man gasped; his foot stomped so hard the whole house shook; then he drew back away from the knife, as Rashid had been trained that he would do. Rashid followed him, still cutting, feeling the resistance of cartilage and organs, feeling blood, hot, fast, gushing out around his plunging fist.

The man hit him with the flat of his hand, hit him hard enough to make his ear ring. Then the man came off the knife and fell against the wall. He made a noise, low, like he was gargling, as black blood gushed from his mouth. He slid down the wall, his eyes fixing on Rashid. "Hey, man," he said, then another word, a garbled mutter. His head slumped onto his chest.

Rashid found himself kicking the man, and when he did, there was an almost musical sigh, a poetic little sound.

He looked down at the figure. Was he only pretending? Or was this, truly, death? Rashid watched the chest. No breathing. The eyes were still open, also fixed, slightly misted over. Dead, then.

Gingerly Rashid pushed a hand into one pocket, then the other. He took the wallet, the keys. He went quickly through the house and out the side door that led to the driveway. There was a pot boiling on the stove, which he shut off. No reason to attract attention with a fire.

Then he saw, sitting in the sun in a tiny breakfast nook, an ancient woman. She was silent, staring, her face so deeply wrinkled that it looked false, like a caricature of great age. In front of her was an empty soup bowl. In her hand, in among knuckles like great stones, was a silver spoon.

He went back to the stove, got the pot, and went to her. He poured her some soup. Her mouth began to work—and then she turned with all the sudden intensity of a striking snake and said, "You're crazy; you killed my

son. You're crazy."

He slammed the pot down on the top of her head with a huge clang. Soup splashed everywhere as her head snapped forward into the bowl.

He left, got in the car, grabbing the steering wheel as if it would somehow preserve his life.

At least the traffic was less daunting now, since the dispersal of the government was complete and most of the evacuees had left the area. He had no idea how long it would take him to get to Alexandria, but he had no doubt, now, that he was going to make it. His arm hurt. His heart was still pounding. The time for prayers had come, and he twisted his body so that it was indicating the east, Mecca, the true home of the human soul.

THE ITALIAN LESSON

For the pope, the day had been long and oppressively difficult, with numerous appearances, the reading of speeches, and the constant, vaguely disturbing presence of the Mufti. He had gone at last to the Domus Sanctae Marthae for the night. The pope could not house him in the Apostolic Palace itself, of course; that was not appropriate. Fortunately, he had not objected to the Domus. In fact, all day he had been faultlessly polite, even kneeling with the pope before the great altar in St. Peter's to pray through the six o'clock hour, as a terrified world waited for Washington to be destroyed.

He looked at the clock on the table beside his favorite chair. It was just going midnight now, so the danger was perhaps past in America, at least for the moment. He had telephoned two hours ago to offer his support to the president, whom he had met and found to be a man deserving of respect. Instead, the call had gone to the vice president, a clipped individual with a difficult name, who had thanked him politely and rung off.

For a moment, his eyes closed. When they opened again, they swam across the prayer he had been reading in his Breviary. The midnight nocturne, so familiar to a man who often did not sleep. Cares dragged at him late. He saw the ruin of the world coming, in the form of melting ice, storms, drought, starvation, and the end of oil. He saw it also in the strangeness of the violence that seemed these days to be everywhere. He felt his prayers as a drop of pure water in the dirty torrent of the demon. But here, now, in this silent room, with his beloved Breviary open in his hands, he felt close not only to God but also to the caressing arms of the Shepherd and his holy mother.

"Holiness!"

He looked up, startled at the sudden voice. Who would enter here without a knock?

A Swiss Guard was before him, and the expression on the man's face caused a horror of coldness to sweep the pope's whole body. "They have struck again?"

"Holiness, there is an airplane. An airplane in the night."

He did not understand, and his face must have communicated his confusion, because the man spoke again.

“Holiness, there is an airplane, a small airplane. From the cupola, we have a call to alarm. Holiness, please come.”

He got up and followed the man. As they entered the corridor, other Swiss Guards came running, surrounding the pope.

“What is this airplane? Is the air force there?”

“The airplane is buzzing—we hear it. We can see nothing. And there are no jets.”

“Has anyone called the Aeronautica?”

“There is alarm. There is alarm.”

They went down the great staircase, now a whole phalanx of guards. “Where do we go?”

“Holiness, to the crypt.”

And with those words, the great tide of history that was sweeping the world entered the Vatican, for they would be the last words spoken in that place for thirty-one years.

The next instant, the tall windows that the pope was passing belched fire like the maws of a row of monster blast furnaces. The pope and his guards instantly became blackened ash, their bodies flying with the molten glass into the grandeur of the hall they had been passing through, imprinting their shadows on the opposite wall, which, a fraction of a second later, became dust.

The first millisecond after the detonation slammed St. Peter’s with an overpressure of 51 psi, the roof of the great church split with a massive crack. In the plaza, where many people were still praying, a sheet of light came that left them all reduced to ash. There was no attempt to escape; it happened too fast. Their prayers had prevented them from hearing the buzzing of the airplane.

On the plane, a young Albanian mother had struggled with the controls, shifting the tiny airframe clumsily around the sky, trying to position the aircraft directly above St. Peter’s.

She had taken off from the Ippodromo delle Capannelle south of Rome. The plane had been hidden in a garage nearby, and brought there by her brother and her husband after dark. The Arabs had taken her children, Agim, Teuta, and tiny, dear Gezime, still nursing, poor little thing.

They would call on the cell phone and Gezime’s wailing would be heard,

only her wailing. But now she would never again get mother's milk! It was life, though, life for the children, if the woman did this. Otherwise, she was to be taken to them and watch as they were baked to death one by one in an oven. The Arabs has promised this, and she knew that they would keep their promise.

She had been taught to fly, but on the ground. This was her first experience actually in the air.

An hour ago, they had sent a video of Teuta with her hair burning, screaming, poor baby, her hair with smoke! So the woman and her husband and his brother had done as they had been told to do, had pulled the black plane onto the racetrack, and there a man had come, and instructed her. He had showed her how to make the plane rise only, not how to make it land.

Her body had grown sick very soon in the plane. The night was big, the city full of confusing lights. She had kept the thing straight, keeping the bubble in the right place on the faintly glowing dashboard. The thing belonged to the devil. It was a machine of the devil.

She had not seen her husband and her brother solemnly taking the money, the stack of euros, after she had flown into the night. She had not known that her children had been abandoned in the cellar where they had been taken, simply left there locked away to die on their own, and their father, who would soon be in Beirut with ten thousand euros, would never think of them again.

The two Arabs were now on a train that was sweeping down the coast to Naples, its windows lighting the dry farmland through which it passed. They sipped coffees.

Her brother and her husband, having been exposed to the naked bomb, were being sick in the dirt of the racecourse, their vomit black in the sand, euros blowing about on an easy little breeze.

Ahead, she saw the great church, the largest thing in the city, although she had for a moment been confused by the Vittorio Emmanuel monument. She knew nothing of any of these places. Her family worked in the fields. She and her husband sometimes made a baby of cardboard and cotton cloth for her to thrust at tourists, so that they would grab at it while her husband and her brother picked their pockets.

The men were not good pickpockets. They seldom succeeded.

The family was crushed together in a shack outside the A90 in Ciampino. Somehow, the Arabs had come into their lives. She did not know how. When

the Arabs had taken the children, her husband had rolled on the ground and torn at his hair. How could so many misfortunes befall him? How could this be?

She could not fly this machine long. It swooped, it was buffeted by wind, it roared, and as she became more afraid, the instruments became harder to understand. Where was the bubble? Was she going right, left? Where was the compass?

Lights were rising to the north. She had been warned of this. Air fighters to shoot her down. Her mind fixed on her screaming daughter, on the smoking hair, the frantically bobbing head.

The machine hummed and vibrated. It reeked of petrol, and then something flew past outside—a roof! She had dropped almost to the ground: she pushed the rudder pedals, causing the whole contraption to shudder, and some sort of horn to start blating in her ears.

There was pain all over her body. To the left, a great red wave that was not racing toward her but was the last electrical effect of an exploding brain.

Absolute fire in the sky. She, a vapor, not even that. Shattered atoms.

Rome was not expecting this at all. There had been no indication that the city was in any way a target. All eyes had been on places such as Washington, New York, and London. The theory was that Muslims would know, or would have strong suspicions, and would leave threatened cities.

They had not left Rome, nor Paris, nor Berlin, but the Muslims of Bay Ridge in Brooklyn and Finsbury Park in London had departed in large numbers, ignoring curfews, ignoring everything—which had, in turn, sparked mass evacuations from both cities.

In truth, these people had no special knowledge, but they also were well aware of the extremists among them, and the fact that America and England were considered the Crusader capitals of the world.

Not even these people, however, knew enough of history to make the obvious prediction, that after the great sin pot of Las Vegas the Crusaders' religious capital would certainly be the next target.

From Urban II in 1095 through Boniface VIII in 1271, all the popes had called for crusades. This had happened in response to Muslim invasion of various parts of the Eastern Roman Empire, which had, by 1095, been Christian for over seven hundred years, part of the Roman evolution from paganism to Christianity that had accompanied the slow decline of the old Western empire.

The fact that the only religious invaders in the area had been Muslim and they had taken Christian people by force did not matter to the Mahdi and his followers, for the Quran told them to “fight against those who have been given the scripture but do not believe in Allah.” And again, “wage war on the idolaters, as they wage war on you.”

So ancient prophecy came true on that night, when the Whore of Babylon at last was brought low, Rome, the treasure-house of the Western spirit.

The fire swept down, charging the roof of the Sistine Chapel with far more pressure than it could bear. Unseen by any man, a fissure appeared between the finger of Adam and the finger of God, snapped, and spread, and in the next instant the greatest artistic expression ever created by the human hand was atomized dust speeding and vaporizing in the searing heat.

The doors of the Vatican Library smashed inward, comets blazing fire, and librarians looked up and were made hollow, and papyrus and parchment began burning with a fury never known before. The Codex Vaticanus, with its careful script, leaped into flame and was gone in an instant. When this early Bible was transcribed, ancient Rome still ruled the world and the hand, neat and Greek, that had done the work had belonged to a human being who had looked upon the soaring marbles of the Temple of Jupiter, and heard the roar of the crowd in the Coliseum, and the thunder of horses in the Circus Maximus, and shopped in the ink-sour bookstores along the Argiletum in the jammed quarter called the Subura, to which the Roman poet Juvenal attributed “the thousand dangers of a savage city.”

The library then imploded, and the Vatican Museum, and the great church itself, the skylights in its dome briefly spitting columns of fire into the interior, making it look as if the spokes of a great wheel of fire had invaded the space. In grand silence, as a young priest twisted toward the Blessed Sacrament that lay in the golden Tabernacle on the altar, the dome came down in great blocks, shattering the altar, the priest, the floor, and crashing with such force that parts of the nave collapsed into the crypt below, and in the tomb of Saint Peter there resounded a noise never heard there or anywhere else, the shrieking, weeping thunder of thousands of tons of concrete and art pulverizing.

The tombs of the popes were smashed, broken open, cracked, remains strewn and then set ablaze, ancient vestments and bones coming to lazy fire in the wrecked marble, fitful red pools flickering in the thick dark.

The great glass wall before the crypt of Saint Peter smashed into dust, and

the lights there fluttered out. An instant later, debris from the floor of the church above smashed down, filling the space with stone that would not be removed again, not even in vast time.

The glare of the explosion lit the south side of the Piazza Navona, causing it to burst into flames. People thronging the north side were astonished by what they saw—awnings, cars, diners at their meals in the mild night—suddenly all was fire. Before the blast struck, two seconds passed, during which a woman started to raise her hands to the flaming skin of her face, a waiter threw a glass of Cinzano he was carrying, cats scurried in the alley, a Chinese woman, achingly lonely, realized that she would die in the kitchen that was bursting into raging, inexplicable fire around her. She had been dreaming, as she shook a skillet of mushrooms over the belching stove, of rain in May in the hills of home.

The ancient treasure-house that was Rome trembled as if being shaken by the fist of God. The Senate House of Diocletian in the Forum sank into itself, the oldest parliamentary structure in the world. The Pantheon, perhaps the finest piece of architecture on the planet, finally, after over two thousand years testifying to the orderly dignity of the human spirit, collapsed in on itself with a dusty sigh.

Dust and smoke rushed everywhere, gushing through narrow streets, howling in eaves, crashing through windows. By the millions, roof tiles swept into the air, shattered, and became a kind of red snow by which the disaster would long be remembered, after the helicopters came in the morning and the glittering camera eyes returned images of the ruined city dyed red.

The bomb was not as large as the one that had shattered Las Vegas. This one had been meant to destroy a symbol, not kill a community. But however carefully this evil act had been conceived, nuclear destruction remained something that was really beyond imagination, and its effects were far more terrible than its planners had anticipated.

They had probably imagined a neat decapitation of the Vatican, not what actually occurred. Of course, Vatican City was destroyed, with virtually all of its treasures, the accumulation of so many years and so much human genius that it was like killing a part of an eternal soul.

Not since the Arabs had attempted conquest of Italy in 846 had Muslim violence been directly enacted against Rome. In that year, the Saracens had robbed the Basilica of St. Peter, which was then outside the city walls.

But this was not robbery, it was devastation, and moments after the

explosion the Vatican appeared as a sort of mountain wreathed in smoke. The great, welcoming arms of the basilica, designed by Bernini in the seventeenth century, were splayed outward, their colonnades tossed like matchsticks, the statues of the saints rendered into dust. The piazza itself was crushed down into its own foundations, becoming a blackened pit.

The Egyptian obelisk in the center had shattered. It had been moved there in 1586 from the nearby ruins of the Circus of Caligula, where it had been brought around the year 40. The absence of hieroglyphics on the obelisk had made its origin a mystery, but in any case, like so much that was destroyed on this night, it belonged to the depths of time and human consciousness. Its disappearance, although never remarked anywhere, left each human being less, as the loss of St. Peter's, the libraries, the Sistine Chapel, the museums, and also the people of the Vatican themselves, consecrated as they were to carrying on their shoulders one of the deepest of Western institutions, left all people immeasurably less.

In that instant of breathtaking cruelty and evil, the soul of man was made smaller, and a dark, brutal future seemed ready to spread in the hidden space within us all where the emblems that construct our civilizations are inscribed. Again, as in Las Vegas, it was the details—always the details—that were the places where the catastrophe was actually defined.

For example, the area around the obelisk was completely shattered but not completely lost, as some of the emblems of the winds—Ponente, the West Wind; Tramontana, the North Wind—that were embedded in the piazza there, were flung in the debris for kilometers and landed in the gardens of the Villa Borghese across the Tiber. These gardens, which were swept as if by a howling storm as the debris from the Vatican came pouring from the sky, had first been planted by old Roman republicans such as the populist ally of Julius Caesar, Sallust, and the libertine Lucullus, who used to organize torch races among the ancestors of some of the trees that were now burning down to the root, never to grow again. On this night, the trees themselves became the torches.

The baldachin that overhung the great altar of St. Peter's smashed down into it, followed by most of the dome above, which led to the collapse of the crypt and drove the fires deep, where they would burn on for nearly a year.

All the colleges, the abbeys, the institutes of the Vatican burst into flames. People who were not killed outright were set alight, and dashed burning against collapsing walls. In the end, nine out of every ten people in Vatican

City were killed outright. The others, their bodies broken and burned, ruined by radiation, died within hours or days. Of the city's 820 permanent residents, only 11 were still alive twenty-four hours after the blast. Another 216 employees who were in the city at the time of the explosion were all killed.

Thus the entire central government of the Roman Catholic Church ceased in a moment to exist. But the damage did not end at the borders of Vatican City, which was, after all, a 108-acre enclave in the center of a dense metropolis.

The Mufti was an old man and sleeping heavily when he burst into flames. He awoke to red haze and pain and then was dead. So, ironically, perhaps, the second great sack of Rome by Muslims also took the life of one of the most radical of Muslim leaders, but not one so radical as to countenance open and frank evil.

At midnight, Rome was a sparkling, vividly alive city. Clubs were open, restaurants, theaters, bars, and coffee shops. People thronged the piazzas, the streets. On the sheltered side of the Navona, there was an eruption of complete panic, with people leaping sidewalk chairs and tables, dashing into the cover afforded by restaurant interiors, as the patrons inside rushed out.

As the enormous, killing flash struck, there were uncountable moments of horror and confusion. Nobody within two kilometers of the blast actually heard it. Instead, they lost their hearing, being left with ringing or silence or hammering sounds in their heads, their ears bleeding, some of them blinded, but fewer than in Las Vegas, where more open space had led to wider sight lines.

The whole center of Rome became a gigantic trap. Pushed down by the same overpressure that had crushed St. Peter's, buildings across the city collapsed into the streets, blocking all escape. People on lower floors mostly survived, rushing out to avoid the choking fire that gushed down from the upper levels of structures, poured along stairways, smashed ceilings, and brought with it a dense cloud of smoke and dust.

Four minutes after the blast, the power failed. That it had lasted so long was due only to the heroic efforts of station engineers in surrounding areas, none of whom knew exactly what had happened, but who flipped switches and turned knobs, moving loads in a flash around the country. But it was no use, the system had taken extraordinary damage, and no sooner had Rome gone down than the whole grid faltered and the entire southern half of the

country was plunged into darkness.

For all of their years of training and preparation for even the worst catastrophe, across the entire center of the city the fire brigade was rendered helpless. This was not because of the power failure. They could operate without power, and even deliver substantial water using only their own generating equipment. They were prepared to draw huge quantities of water from the Tiber, but they could not reach the Tiber, not with so many streets hopelessly blocked. Indeed, the spectacle that Rome presented after the explosion was of a complicated mass of destroyed towers and roofs floating in a sea of burning rubble. Few streets were even visible.

Some of the Tiber bridges had been smashed, but not all, and one that remained was the Ponte Milvio, which was originally built over twenty-two hundred years ago by the Roman consul Gaius Claudius Nero. In 2006, Roman lovers had taken to commemorating the eternity of their vows by putting padlocks on one of the bridge's lampposts. When the lamppost had become so choked with locks that it had nearly collapsed, lovers had moved their vows instead to a website.

Now, both the lamppost and the servers containing the website were destroyed, and with them so many young lives, which had with hopeful fingers locked those locks.

As had happened in Las Vegas, communications initially failed completely. At the U.S. Air Force base at Aviano, there was an immediate alert. As was true the world over, there were patrols flying, here under overall command of NATO.

"We have a fireball—" came a transmission from an F-15 on patrol over the Tyrrhenian Sea.

"Say again?"

The plane was still on radar, but there were no further transmissions. Immediately a signal was sent to NATO Headquarters in Brussels: "Possible major explosion, Rome area."

The Aeronautica Militare, which had numerous bases in the area and was flying active patrols over the city, also experienced a regional communications failure due to the pulse of electromagnetic energy emitted by the bomb. But NATO's land-based communications infrastructure was left intact, and controllers who could not reach patrolling aircraft certainly could see, from bases around the city, that a mushroom cloud was rising over Rome. Second Air Region Command was instantly informed, but all attempts

to reach the prime minister failed—as, indeed, all such efforts would continue to fail.

Parliament was in session, and most of the government was present in Rome. Prime Minister D’Agostini had made an appearance at six with the pope and the Mufti, praying with them as the hour passed and all the world waited for Washington to be destroyed.

When it was not, the mass in commemoration planned at seven became a mass in celebration. D’Agostini was one of hundreds of world leaders who had telephoned the president after it appeared that the danger had passed. He was one of many whom Fitzgerald, in the darkness where he dwelled, did not bother to answer.

D’Agostini awoke to a flash so terrific he leaped from the bed, crying out, “It’s us, it’s us.” When his wife heard this, the perpetual fear that lives in the hearts of all world leaders and all who love them, instantly sped to the forefront of her mind. “A rocket,” she screamed.

The prime minister did not know why the room was burning, but he thought perhaps the Islamists had indeed launched an attack against the residence. He had no chance to think more, though, as the blast followed almost instantly and the burning curtains, the window frame, the glass, and most of the wall around it exploded inward, tearing him and Mirania to pieces, burying the smoking chunks of their bodies in the fiery debris.

So each soul started with a question, entered a moment of horror, then knew death.

As in Las Vegas, the lucky died first. Because the bomb that had been detonated over Vegas was large, that had included most of the people exposed to its power. Not so here. Only the residents of the Vatican and those in taller structures or, like the prime minister, residing in a residence luxurious enough to be open to the sky were killed at once.

Like other world governments, the Italian government had no decapitation plan in place, and this instant was therefore the beginning of what would stretch into two generations of costly, sometimes violent and disappointing conflict over the reconstruction of the state.

Most Romans were trapped in what became a hell even more terrible than the hell of Las Vegas, as over a million separate fires commenced in ninety thousand structures and people with shattered limbs in apartments, in houses, in restaurants, busses, cars, everywhere they happened to be, soon saw flames and smoke, and began to burn in such numbers that the smoke drifting

eastward with the prevailing wind smelled of cooking meat.

This was how Rome died, in a conflagration greater by far than the one that had consumed it in the year 64, and that fire had reached a heat so intense that it melted brick.

The true shock of what had happened almost at once began to be felt in the world. With the death of the Eternal City, a part of every decent human heart died, no matter if they were in Scotland or Syria, in China or Kansas.

In Beijing, the Central Committee called another emergency meeting. Previously, Chinese intelligence had viewed this as a problem involving only the Americans. Nevertheless, a report from the “Autumn Orchid” group that watched political activities in Hong Kong had indicated that an American retaliatory strike against targets in both Malaysia and Indonesia was possible, judging from rumors being traded among politicians there.

The primary concern of the Central Committee was not, however, the nuclear damage being done. It was the way that the upheaval would affect trade. Already, every cargo ship headed for the United States was stopped, on orders from the American authorities. The People’s Bank of China had frozen all dollar-related monetary activities, but the breathtaking collapse of the American currency had rendered China startlingly illiquid, and forced movement of value to the euro, the only other currency with enough liquidity to provide a useful basis for trade.

Now, in a paroxysm of panic, the euro was also being sold in every bourse on the planet. In point of fact, value was being transferred by others to the yen and China’s own yuan. The movement was of historic enormity, and could only lead to one conclusion: the collapse of value in the Western currencies and the subsequent inability of the West to continue trade.

Not since the fall of the Roman Empire had Western currency been so damaged, and the Chinese leadership, steeped in history in ways that Western leadership was not, remembered how profound the effects of that last unwinding of civil life in the West had been.

Marxist theory taught that capitalist systems were highly susceptible to destabilization, and the discussion touched on this. The West was falling. How far would it fall? Would governments and corporate entities embrace Šarī’ah law? If so, what of debt? Specifically, what of the gigantic debt that the West owed China, which was the world’s true banker? China had poured out the sweat of its people and the wealth of its lands, in return for IOUs from the West, and now they were becoming worthless.

Outside of the theoretical value of currency and debt, there was not enough symbolic wealth to continue the functioning of the world economy. Not even with gold trading at present in London at six thousand euros an ounce was there enough of it to back a new world reserve currency. The only thing that could conceivably back such a currency might be the combined central banks of China, Taiwan, and Japan.

So China began discussions with both countries, and never mind the difficulties with the illegal government in Taiwan. While Rome burned, Asia struggled to save whatever shreds of economic civilization that it could.

And there were still bombs, more bombs, and waiting pilots, some eager, some too afraid to say no.

In the Kremlin, there was increasingly frantic activity, as the reality of the conspiracy involving former KGB officers became more and more evident. Terror literally gripped the Putin government. If these bombs were determined to be of Russian origin, there would almost certainly be another revolution, followed by massive, crippling reparations to the West, if not a nuclear attack.

Vladimir Putin had made a choice to isolate Russia and its client states from the West, so that he could manipulate world affairs in such a way that oil prices would stay high, but this was far more than he had bargained for, and he was, behind the scenes, a shattered, terrified man.

Without his direct knowledge, the old KGB had been working outside governmental authority to break the superpower of the United States in the same way that the Russian superpower had been broken by the Cold War. In the KGB's madness, they believed that this would leave Russia free to restore its ancient empire, because it was not thought that Europe, in the absence of organized American support, would stand against any Russian reoccupation of lost territories, such as Estonia, Latvia, Lithuania, and, the greatest prize, Poland.

In history, the independence of these states had never lasted long, and the secretive former KGB officers did not intend that it would last much longer now. Russia needed a territorial buffer to its west. Who knew when another Napoléon or Hitler would arise? Given the ferment in the ramshackle democracies that England and the United States had imposed on Europe after World War II, anything could happen.

Vladimir Putin paced his office. When FSB chief Alexandrov appeared, Putin looked at him, Alexandrov thought, with the same infamous beady-

eyed fury that Stalin had, in legend, regarded his staff with.

“We’re going to be held responsible,” Putin said. “But we are not responsible.”

“Now the Americans will release Dream Angel,” Alexandrov said.

“That may happen,” Putin replied.

“Do we open our silos? What do we do?”

“Do you think it matters?” Putin asked.

“Our missiles are the only real deterrent to theirs on the planet!”

Putin scoffed at him. How could the man be so naïve? “What the military conceals from us cannot be *capability*,” he said, trying to force a mildness into his voice that was at odds with the anger and panic he was trying to control. “The generals conceal only their inabilities. When have you received a readiness report that you could believe?”

“I . . . I’m—well, certainly there is a level of readiness.” Both men knew that launch facilities that had been listed as fully operational had been found by the Kremlin’s inspectors to be abandoned and in ruins.

“A level of readiness. I’m sure. God only knows what would happen if they tried to launch. The whole country would probably be blown up. Our country!”

The missiles were old and liquid fueled, and many of them were so unstable that they could not even be removed from their silos, let alone fired.

“Perhaps the Ameris don’t know our situation,” Alexandrov said.

“No? All the Kremlin is a stage.” Putin chuckled. “We should dance and sing, provide some entertainment.”

This had once been Lenin’s office, bugged with radios disguised as filing cabinets. Now it was nanotechnology. Dust that communicated with satellites. You fight your way to the summit only to find that it is not power but the illusion of power that defines you.

“What is to be done?” Alexandrov asked.

Knowing all he knew, Putin could do nothing more than shrug.

“We can’t have Dream Angel,” Alexandrov said.

“Oh? Perhaps we want them to launch, but let’s not speak further here, not on that.”

“We must execute Case Forty,” Alexandrov said. “Our friends must.”

“It’s finished,” Putin said. Case Forty was the assassination of Aziz, the idiot who called himself Mahdi.

Alexandrov met his eyes.

“Yes, finished—as in, failed,” Putin said bitterly. Then he shrugged, looked up at the ceiling. For all he knew, there could even be video cameras recording his every gesture for the Ameris right here in this room. The Kremlin was a theater. “Case Forty has failed and we will not be heroes to the world. Aziz is in Pakistan now.”

“But how could he escape? Your man—”

“Dear Vladimir. Indeed, how could my man fail? Such a man? Aziz must have known that he was coming.”

“So we have a traitor?”

“You know what Stalin used to say—everybody is a traitor. So, yes, we have a traitor. We need a general purge.”

“Dare we do that?”

“To survive? Certainly. Kill them all. That way you can’t miss. Another of Stalin’s famous techniques.”

“I don’t have the apparatus to conduct a purge. I don’t have the informants, the trained teams of officers. That’s all gone now.”

Putin shrugged. “Perhaps the Bible has it right. Perhaps we’ve come to the end of time.”

“I can’t believe that.”

“Well then, you can believe this. Our intent was to unleash a nasty little cat to torment the Ameris. But that isn’t what we have done. We opened the cage of the nasty little cat, but there was a lion in the damned thing, and now the lion is running free, my friend, and anything can happen. Even here. They could come to Moscow.”

Alexandrov looked out the window, where the domes of St. Basil’s glowed in the artificial light that flooded the old cathedral. “Here? It’s unthinkable!”

Putin gazed also at the cathedral. “ ‘And he cried mightily with a strong voice, saying, Babylon the great is fallen, is fallen, and is become the habitation of devils, and the hold of every foul spirit, and a cage of every unclean and hateful bird.’ ” He smiled his small and careful smile.

“What is that from?”

“The Revelation of John. From the Roman Bible.”

“Ah, yes. But still, it’s about Rome, not Moscow.”

“The world is Rome, you fool!” He laughed now, as cold a sound as Alexandrov had ever heard. “I don’t know that Aziz will win. The Mahdi! And the Muslims believe him. They’re rejoicing!”

“Carpet-bomb Chechnya.”

“We’ve done enough suppression there. Anyway, we’d need our own version of Dream Angel.” He considered for a moment. “I will tell you this, Alexandrov: we have lost a war nobody knew we were fighting.” He raised his eyebrows, a smile touching his lips. “Including us.”

Alexandrov knew when to leave him alone, and quietly withdrew.

COMMUNICATION FROM THE MAHDI OF THE EARTH OF MUSLIM
PEOPLE
GLORY TO GOD, THE CALIPHATE OF ETERNAL PEACE IS COME.
THE END OF TIME IS HERE.

Because the Crusader King, William Johnson Fitzgerald, did not perform *sadaha*, and the Christian churches were not closed, and an apostate decadent and fallen Muslim danced on the balconies of the greatest of these palaces of sin and evildoing, there has been a serious consequence.

An attempt has been made, also, upon the life of your guide, but as he is held hidden yet in the folds of Allah’s robe, he remains with you, and no amount of Crusader treachery can ever kill him or capture him.

Now, in view of the continuing Crusader apostasy, hear your Mahdi.

The law of Šarī’ah is enacted throughout the world, and replaces all other law.

You who suffer under the burden of debt, rejoice, for God has said it: your debt is canceled, and any trading in debt or with debt is liable under the Law. Further payment of debt will be punished under the Law. Extension of credit will be punished under the Law.

The existing authorities are ordered to arrest the money changers of the world, and the masters of debt, to wit, the chairmen of the leading banks, a list of whom will be sent to the kings and emperors of the world. And any citizen may also arrest them and bring them to prison, or imprison them himself, for the Glory of God and the Sanctity of His Word.

The use of intoxicants is forbidden now.

The apostate laws of marriage are ended, and now the only legal marriage is between professing Muslims. Divorced people may only marry other

divorced people. The giving of proper bride wealth is obligatory for any wedding from today.

Women must strive to cease working at jobs outside of the home, driving automobiles, and going about uncovered. Gradually, the Law will be enforced, as women learn the happiness that it brings them. Adultery by man or woman, properly confessed or witnessed according to law, is punished by stoning until dead.

Sanctions against slavery are ended, and the holders of slaves may now go openly with their slaves.

All executions are now public. Crime is punished according to the Law. The thief must lose his hand, the murderer his head, and so on.

Criticism of Mohammed is no longer allowed, and to those who have the Crusader taste for satire and derogation, your Mahdi urges you: reflect carefully, for you are no longer free to curse God or his prophet.

We repeat, for the last time, that the Crusader King William Fitzgerald must at once perform *sadaha* before all mankind.

The Crusader King has an evil plan called the Dream Angel, which even at this moment is poised to visit death upon hundreds of millions of Muslim people. If the jets leave the fail-safe points where they are now cruising, fifty Crusader cities will be at once put to the atomic torch.

We have spared the Crusader capital, because the flagrant apostasy of the pope could not go unpunished. But unless *all* of the requirements listed here are met, the Crusader capital will be destroyed at midnight tonight, and it will then be known that the pure and noble forces of Allah cannot be stopped.

The glorious Day of Standing is upon us, and your Mahdi rejoices with you, in the name of Allah the Most Holy, and Mohammed who is his prophet.

LITTLE MARY SUNSHINE

The destruction of the Vatican and the burning of Rome brought silence to the world. The streets, which in some places had been full of protestors and in others revelers, now became empty. Most TV and Internet outlets simply posted a copy of the Mahdi's latest statement and left it there without comment. Radio stations recorded a reading of it, and repeated the recording over and over again, afraid to say anything else.

President Fitzgerald huddled with his family in the stripped wreck of the residence. He had not gone into the West Wing in days. When he spoke, it was in a whisper, to avoid being overheard by any listening devices that his attempt to sterilize the place had missed. He'd had the windows boarded up and covered with carpeting, to thwart laser-based listening, and with tinfoil, in a layman's attempt to scramble radar and microwave systems.

He feared that the penetration of the government might have turned the surveillance capabilities of the U.S. intelligence community against its master. Not because it was probable, but because he could no longer be sure.

Thus the place looked like the lair of a madman, Howard Hughes or some such. To an extent, it was probably useful if those who came here went away whispering about Fitzgerald's sanity. Let the new Mahdi hear rumors that he was unstable. Perhaps he would become overconfident, and be drawn into some sort of mistake.

Fitz stared at the latest pronouncement, delivered to him by his own son on a sheet of paper. Dan lingered near. Linda and Polly were in the president's bedroom, which he and Linda shared. That one room he had left untouched. They were under strict orders to speak of nothing important there. For his part, he stayed out. When he slept, in uneasy fits and starts that were more like falling than falling asleep, he did it on a cot brought in by his Marines. "Rome," he muttered.

"Dad?"

All the terror, all the rage, boiled up in him, blasting up from his deepest heart like bloodred lava. "*Rome! Rome Rome Rome!*"

Dan drew back. An uneasy Marine pushed open the door.

“I’m going to do it,” Fitz said. Four words, softly uttered by a man who wished to the great God that he had never heard of politics.

“You mean . . . release Dream Angel?” Dan asked.

Fitz laughed in his son’s face—barked it out, the bitter snap of it made harder by the flat echo off the stripped walls.

“I’m going to go out there”—he pointed vaguely toward the Rose Garden—“and I’m going to do *sadaha*.” He felt himself crumpling, his heart echoing like an empty cave, and then Dan was trying to hold him, his good son, strong son. Fitz added, “We can’t win. Not against this—this monstrosity. We need God and we ain’t got God, have we?”

“Of course we do,” Dan said.

Fitz advanced on the two young Marines in the room. “Out!”

They looked to Dan, young eyes darting under their helmets. Dan gave them a curt nod, and suddenly Fitz saw him as a sort of savior. Dan had the answers. Dan could retrieve this situation.

“What do you think I should do?”

“Dad, if we don’t release Dream Angel, Polly and I are going to live under Šarī’ah law. That’s going to be your legacy.”

“They’ll burn our heart out! Burn it out! Fifty cities!”

“Unless it’s a bluff.”

A rush of tingling raced up his arms, followed by swaying nausea. He moved quickly to a chair, immediately sank down in it. “Yeah,” he said. “Kennedy played chicken. I guess I can.” And then he saw it, saw it clear. “I will go down there and I will shout that *ula ula* shit for our little fucking unkillable Mahdi; then I will wait one hour.” He went close to Dan, embraced him in a hug that made him stiffen. They were not a touchy-feely family. Fitz tried to stifle the loopy mirth that was coming up but couldn’t. Looming like a great, mad golem over his son, he giggled. “Then,” he managed to say, “I will release Dream Angel.”

“Dad . . . it’s a plan.”

“A good plan!”

“Why wait, though?”

“Throw him off.”

“The second those planes lock onto their courses and the cruise missiles are launched, he’ll know.”

“These are primitive people. They’ll be celebrating. Rattling goddamn

bones.”

“They are not primitive. They’re smart and effective. You can do *sadaha*. Who knows, maybe it will throw them off. But you better sure as hell move Dream Angel out at the same time.” He seemed to swell before his father, and Fitz saw in him all the power, the pile-driver instinct, of their clan. “Break ’em, Dad. Break ’em! Because I don’t want to live like that, and I’m telling you, nobody does, not even the Muslims—the normal ones, that is.”

The moment Fitz had considered releasing Dream Angel, his next thought had been of the fire in the cities, London, Paris, Berlin, Madrid—who knew, perhaps Moscow and Beijing, too, and why not Tokyo, LA, Chicago, and, certainly, old New York? “ ‘What candles may be held to speed them all?’ ” he said. “ ‘Not in the hands of boys but in their eyes / Shall shine the holy glimmers of goodbyes.’ ”

“ ‘Anthem for Doomed Youth,’ ” Dan said. “Wilfred Owen. Verboten, now, under Šarī’ah.”

Dan suddenly seemed like a comic figure, somebody from the Sunday funnies, a capering, grinning goon. Fitz had to literally fight the urge to slap him down, it was so strong. He compelled his fists to open, compelled his mind to push away the savagery that was a hair’s breadth away from possessing him. “Okay,” he said, “time to chop-chop. *Logan!*”

The outer door opened immediately, and his chief of staff came in.

“You sound like you’re walking in socks even when you’re not,” Fitz commented. “That’s a joke, Son.” He turned to Logan. “Okay, my dear—” He went close to him, gazed into the eyes. Sad, *sad!* “We are going to do this so-called—what’s it called, Son?”

“*Sadaha.*”

Logan took a deep breath. “Sir, the entire cabinet is downstairs, and I think you owe it to the system to at least enter the Cabinet Room.”

“Ah, yes, of course I do. I owe them! I owe everybody! And hell, it’s real convenient, because now that slavery’s coming back, I can literally belong to everybody! Snap your fingers, here comes Fitz. The ultimate in public service. Cabinet Room, sure. Boots to lick, here I come!”

He saw Logan’s eyes flicker toward Dan, then come back again, not reassured. Fitz continued, “You know, you two fellas know me by the moles on my damn butt. But lemme tell you. I am light-years away. I look like I’m here. Yeah. But I am not here. I am way out on the far edge, and the wind is blowing from behind and I am looking down, and sliding closer, and while

you guys are in the White House, the truth is, I'm looking down from this terrible precipice. And I know what I am seeing. It is the abyss." He clapped his hands. "Dresser! Suit me!"

The bedroom door clicked. Cracked a little. Opened. Linda and Polly came out. "We released the staff," Linda said. "But I can straighten your tie."

Polly stood to one side, shoulders hunched. He knew her when she was like this, his pouty willow of a girl, her fifteen-year-old face capable of so easily breaking his heart or mending it, or sending it with her slightest smile into high orbit. "Hey, girl kid, you don't look so hot."

An eye rolled on the visible side of her face, rested on him for a moment, then looked away.

"You need makeup, too," Linda told him. "You look dead."

That made him smile, proving, he thought, that corpses can. "Just a little tired," he said.

"Daddy!" Polly's face was hard now, gray and gleaming, a wax effigy, or something left behind by a vampire.

"Honey?"

"You're going to surrender."

"I am going to try to buy us some time."

"If you surrender, and we have to go into purdah, Daddy, I am going to commit suicide, and I'm not the only one."

"Polly!" Linda said. "Don't pressure him like this!"

"Mother, he has to know that I won't be the only one! I am not going to go into this slavery that these crazy people have for women! What's wrong with being a woman? A woman is a beautiful thing, a woman is a gift from God, a woman is equal. *Equal*, Daddy!"

"I know it! And I am not going to surrender. Perhaps, create that appearance. But, darling, I swear this to you on my heart and on the blood of my mother, I will not let this nightmare come here. No matter what it takes, they will not succeed." Whereupon he heard, as distinctly as if he had been a comedian dying on a stage, a ripple of sinister laughter, and thought, immediately—no, knew—that this was a symptom. His first definite symptom of psychosis. He'd been expecting it, because his reading of history told him that one of the primary things that drove leaders mad was being trapped between two unbearable alternatives. Leaders who had infinite power but were imprisoned by profound vulnerability—Nero came to mind, who had been excellent, then gone mad—lost their hearts, their minds, their souls.

Such leaders could kill a quarter of a billion people without a qualm. It was a road Fitz was going down, and he knew it, and every step he took he went a little faster.

Out there in the dark, across the whole world, the ships waited, the planes.

“Okay, Linda, tie’s straight, suit’s looking sharp. So, now, my lady, let’s get the Nixon trenches out from under these old eyes.” He followed her into the bedroom suite, crossed to her makeup table, and sat down. “Maybe some mortician’s wax would be the ticket.”

“It melts,” Linda said, “on skin that’s still warm.”

“Oh, mine’s not.”

“Well, I have some concealer,” she said.

When she began to brush it under his eyes, it felt as if the life were sifting out of him, sifting out into her fingers, drawn away by the tickle of the brush.

“Where’s that paladin of yours?” Linda asked as they went downstairs.

“Yeah, Dad, that guy with the Muslim wife. Mr. and Mrs. Reliable.”

“She’s got a lot to prove. And he’s effective.”

“Which doesn’t answer my question,” Linda replied.

“I’m not going to answer it.”

The familiar sharpness in his voice stopped their inquiry. They’d strayed into classified territory.

The doors opened. As they moved toward the Cabinet Room, he could see the press assembling in the Rose Garden, a huge throng of people and equipment. The demonstrators who had been on the front gate for so many hours had dwindled to a few. They had helped and inspired him more than they could know.

He stood before the door to the Cabinet Room. “Are the spiders in the web?” he asked Logan.

“The cabinet is waiting for you.”

“Clear out the staffers.”

“Sir?”

“We have no way of knowing who’s loyal and who isn’t. Lay on guards. Weapons at the ready.”

Logan nodded. Fitz saw that he’d turned his retainer the color of wet chalk. Well, let him worry. Fitz wanted them to think he was crazy. Crazy was weak, and he felt reasonably sure that something said by somebody on the other side of that door would reach the enemy. Not that there was a traitor in his cabinet, of course not, but somewhere among their staffs, yes, and more

than one.

And what of Linda's question? Should he trust Deutsch and that wife of his, Nabila of the endlessly twisting hands?

"These terrible hours," Fitz muttered.

Linda heard, put a hand on his shoulder.

He entered the Cabinet Room. "Good morning, ladies and gentlemen," he said. They all rose. He noticed that both Lucinda Goodavage and Marion Murphy wore discreet blue head scarves. "Courage," he said, looking into Lucinda's stricken face. "I want to thank you all for coming here. It took guts, and I know that."

Absolute silence. Time to deliver the bombshell. He took a deep breath. The curtains, he noticed, were green. First time he'd ever looked at the curtains. "I'm going to go out to the Rose in a moment, and I want to tell you why." He looked around at all their faces. Did they all think him insane? No? Well, they would. "I'm going to do *sahada*."

"You can't," Homeland Security Chief Wilkes blurted.

"Since when do you give the orders around here?"

Wilkes's face went gray. Lucinda Moore's lips tightened. She would have a traitor on her staff, he thought, almost certainly. Her old-fashioned politics of openness made her an easy target.

Henry Kerry stared down at the notepad before him. Here was another candidate, not because he was in any way weak—he wasn't—but because the State Department was just too damn big not to be vulnerable. So Fitz had traitors close to him, of that he felt sure, some kid carrying coffee and listening to every word, some secretary, affable and trusted, who left her reports in a back alley somewhere.

"Anybody wants to cry, do it outside." He chuckled a little. Lay it on. They needed to leave here thinking he'd lost it. Tell their staffers, make him seem weak, a little mad. If he was lucky, the enemy would hear and become overconfident, and make some sort of mistake.

"It's surrender," Secretary of Defense Ryland said. He was loud, his voice challenging. There were murmurs around the table, heads nodding.

Now it was time for the president to lie. This was his prerogative. The greater interests of the country always came first. "We have firm intelligence that the threat in the latest document is damned close to being real. There are at least thirty-five bombs planted around the world, and probably the fifty he claims is a true number. And mark my words, if I don't go out there and get

on my knees, we will see them all detonated within a week.”

“Like Washington? We’ve survived.”

“Like Rome, man! Rome!”

“Are you sure of this?” Ryland asked.

Coming from a man who should certainly have been in the loop on this, it was a fair question. Fitz’s answer, however, was not fair. “We have acquired a hard disk from Pakistan. It’s being decoded, but slowly.”

“What hard disk?”

“Need-to-know, Mike,” he told Ryland smoothly.

“I have a need to know!”

Fitz would never say, in this room, that the hard disk had belonged to the Mahdi, and that the Mahdi had been killed. Because that would become news. They would leak it. And it was both true and false. The Mahdi was dead. Long live the Mahdi. Plus, the disk was proving a tough nut.

“Mike, I’m sorry. You’re out of the loop and I can’t say why.”

Ryland came slowly to his feet. He leaned over, got his briefcase, and slid the pad into it. “You have my resignation,” he said.

“No! No, I won’t hear of it! Not now!”

“You have my resignation!”

“You sit down. When this is over, you can do what you want, but I can’t have cabinet officers quitting now. How would it look, for God’s sake!”

“It’s gonna be over as soon as you say that damn prayer out there. So fine, I’ll resign after that. One minute after, I’m done.”

Kerry stood, then Ryland, then the rest of them. Total rebellion.

Fitz laughed; he walked to an arched window, gazed out toward the gathering press. “I’ve got quite a crowd,” he said. “Maybe I’ll do a little soft-shoe.” He danced a bit. “Yes, Sir, that’s my baby. . . .” He flashed his professional grin, purposely did it too bright. He laughed a little harder. “You’re like kids who threaten to run away, but you’re scared to leave Poppa. Well, hell, Poppa’s got thirty-five cities full of people and treasure and the life of a goddamn civilization to worry about, so either *get out or sit down!*”

As he shouted at them, he kept the grin going. It must look wild. Absolutely bonkers. He’d done drama at Yale, but only a little. Too bad he hadn’t tackled Lear. Always wanted to, but he’d been a satisfactory Chance Wayne in *Sweet Bird of Youth*, also a well-reviewed Captain Warrington in *Little Mary Sunshine*. He laid his hand on his heart and sang, “In Izzenschnooken on the lovely Essenzook Zee . . .” Chuckled again. “I’m

gonna become Muslim in English,” he said. “If I mispronounce the Arabic, we’re liable to lose another city.”

“Mr. President,” Mike Ryland barked, “I’m not sure you’re well.”

“You know, you’ve got a point. I’ve got a headache, and I’ve had a little gas. Actually, I could be coming down with something. Nothing very serious, though. Death, maybe?” He barked laughter, then cut it off by wiping the air in front of his face. “Never laugh at your own jokes, son. Wise advice.” He glanced at his watch. “Time to go and fuck the world to the wall.” He started out of the room.

Ryland followed him, strutting along like a mechanical man, his bald pate as red as an apple. “Fitz, they can’t hit Washington! We know they’re not hidden in a building and they’re not in one of the tunnels, so they have to fly like they did in Vegas and Rome. They have to fly, Fitz! From Boston to Houston, any unauthorized aircraft has thirty seconds of airtime, Fitz! They cannot take us!”

“Whoop-de-do,” Fitz replied. “So, we’ve given them Rome; let’s give them Paris and Venice and Berlin and Tokyo.”

“Fitz, don’t do this!”

Fitz stopped. “Do you know what they’re smelling right now in Athens? Roast. They’re smelling the Romans literally cooking to death. In *Athens!*”

He could not say more. He could not face his cabinet any longer. He blamed himself for all this. He’d known how vulnerable the security services were to penetration. He’d known how few it would take on the inside to do this damage. But he had not pressed the inspector general, had he? He should have been shouting down telephone lines, forcing the bureaucracy out of its massive inertia.

They had restricted Muslims in the intelligence services. So how hard was it to simply abandon your religious affiliation, especially if you had family and friends to help you? It was like the Cold War, when it had been so difficult to keep the communists out. But worse, there was the matter of money. A lot of cash, just to glance away for a few minutes, what did it matter? It was probably just a marijuana shipment, anyway.

Oh, God. He was the accursed president. This was the worst.

He went out into the Rose Garden. Approached the podium. Faces, camera lenses, microphones. “Good morning, Hugh. Selena. Hi there, Cokie. Okay, folks, we have a very brief time here.” He swallowed. Wanted water. There was no water. “All right.” As never before, he was aware of the silent

presence behind the machines, of the billions who were watching this. The thirty or forty feet between him and the cameras, he imagined, was filled with angels. He allowed himself a little smile, a private moment in what was certainly the most public place in the history of the human species. He wouldn't have been surprised to find that every man, woman, and child on the planet was watching or listening.

“First, I would like to express my belief that there is no God but Allah, and Mohammed is his prophet.”

Even the clicking of still cameras came to a halt. From deep within the crowd there was a sudden sound, a cry, instantly stifled. There it was—the end of this age, not a bang, not even a whimper, just that little sigh.

Fitz thought, *What a species we are, that a few words could mean so much.* Then further, but deeper and more insubstantially, he reflected that the great curse of religion was that it tempted people into believing that the story of their deity was more important than the lives of human beings. It came to seem morally right to kill on behalf of the story.

“Now, before Allah and our blessed Mahdi, our guide given to us by a loving God, I say this. Allah in his infinite mercy has allowed the Mahdi to see into our dark hearts, here in the West, and has revealed to him that we were indeed planning a maneuver—an attack—that would have killed the faithful. That's right; we would have killed the faithful. I know you are wondering what that means. It means that we were ready to cause the death of hundreds of millions of people. Their lives were dangling at the end of our great and terrible Crusader sword. But no more. I have this day ordered the American Air Force and all the American military all through the world to stand down. Even as I speak, the planes are returning to their bases, and the missiles are being stowed in the holds of the ships that were about to launch them. And now, I call upon the Mahdi to bring forth new officers to help us enact the holy law of Allah in our land.”

There were tears on faces, other faces disappearing into hands. How ironic that, of all that Fitz had learned and seen in life, the thing that had most truly defined his largest moment, in the end, was his experience as Chance Wayne. The truth was not the word of God. There was no word of God. It was the silence.

Fitz turned and went quickly back into the White House, ignoring the voices wailing out their questions. The Roman emperors might have had problems with assassination, but they hadn't had to worry about the press.

Still, turning his back on the questions shamed him.

But then again, there comes a time in every big hand when a player with good cards feels a tinge of conscience. As Fitz crossed toward the elevator, people rushed forward. “I know that every world leader, every major CEO, every big banker, is on hold. Tell them this. The president says that Šarī’ah law is clear. Follow it.”

Linda and Dan and Logan tried to enter the elevator with him. He held up his hand. They stood, staring out of red, devastated eyes, as he closed them out of his world. They could not follow him, not now.

He did not return to the residence. Instead, he went down to the old Cold War–era White House shelter.

The moment the doors slid open, he heard voices and the clatter of keyboards. An enormous job had been done here in just a matter of hours.

The two Marines on guard duty confronted him. “Sir, the sequence.”

If he got it wrong, they would shoot him immediately, and by his own order. But he would not get it wrong. He had created the sequence himself. “Dulcinea,” he said.

“Sancho Panza,” the master sergeant replied.

“Mahdi.”

They stood aside, and Fitz stepped out into the transformed space. Gone were the elaborate electronic maps that had made this secret chamber one of the wonders of the Cold War world. What was left was raw concrete walls and people working at plastic tables brought in just hours ago. Power lines and fiber-optic cables ran out and down the long tunnel to the Potomac, where four more Marines manned a guard station that bristled with makeshift antennae.

What he had here was a highly sophisticated signals acquisition and communications center that completely bypassed the whole intelligence-gathering infrastructure. It had limitations, of course, but surprisingly few. Jim Deutsch and Nabila al-Rahbi, and Nabila’s group leader, Margaret Pearson, had handpicked the minimum number of people essential for the work. They were from the National Reconnaissance Office, the CIA, the National Security Agency, and the National Geospatial-Intelligence Agency. Even so, there were just eleven people present and two Marines.

Fitz went straight to Deutsch, who huddled with a group of technicians, staring at a laptop.

“Where are we?”

Nobody answered. Nobody stopped working. Fitz could smell the sweat of desperation, the stink of it mingling with the sour damp of the concrete.

Jim Deutsch glanced up. "They have the disk contents uploaded from Pakistan pretty well decoded," he said.

Fitz's heart literally bounded in his chest. A rush of blood made the world sway. "That's wonderful!"

"It doesn't look good."

Elation, then the cliff. "Oh?"

Marge Pearson said, "We're looking at sixteen target cities."

"It's not fifty, at least."

"We have no idea where the bombs are or how big they are, or even if there's really a bomb present in all the cities."

"Which cities?"

"Think world tour. Us, of course. Then New York, London, Paris, Brussels, Berlin, Moscow, Beijing, Tokyo, Riyadh, Los Angeles, Seattle, San Francisco, Dallas, Chicago, and, of course, Jerusalem."

"They got a bomb into Israeli territory?"

"This one is going to be delivered from outside. From Syria, we think. A small plane or missile. In general, delivery is by small planes that are capable of using city streets as runways. In Rome, it was a racecourse."

"Okay, so my next step is to warn the Syrians."

"I wouldn't do that," Deutsch snapped.

A paladin, for sure. Nobody talked to the president of the United States like that. Still, he forged on. "Why not, Mr. Deutsch?"

Deutsch just shook his head, went back to whatever he was doing on that laptop. But Fitz didn't care, because this tiny operation down here represented, however faint, the only chance of winning this war. It was Deutsch who had suggested that he bring in people who had been close to the known traitor, on the theory that they would be most angry and thus the most highly motivated. It was as counterintuitive as all hell, but Fitz had to hope that Deutsch was right and traitors didn't run in packs.

Nabila al-Rahbi, also, was almost certainly loyal. She had the credibility of her religion to save, and Fitz had seen that she was a faithful Muslim of the deepest, truest kind. In fact, her Islam reminded him of his mother's Christianity. Her faith, also, had not been simple, and her intelligence had also tested it constantly, and driven it deep. "Trust grace," Mother had said. "Just trust grace. Faith is nothing but that."

Deutsch had suggested that he bring in Mark Chambers, Rashid's supervisor, and Carol Wilkie, his closest coworker. They had been working hour after hour, without sleep, running drones, pulling data from satellites, all the time cloaking their activities so that other elements in the intelligence community would not be able to detect their mission.

The more information the disk from Pakistan gave up, the more they could zero in on specific target cities, and perhaps isolate the location of the damned bombs.

"What about the specialist teams?"

"Operating in every known target city," Nabila said.

"What're you working on, Deutsch?"

"Our backyard."

"Do you not want me here?"

"No."

The president felt anger flush his face, but Deutsch was too valuable to fire, or even snarl at. Fitz told himself that this wasn't like being slighted by some senator or prime minister. The man was just some professional killer, after all, a guy from the depths one preferred would remain hidden. After this was over, he'd slip back into the shadows. Fitz knew the type.

"If I don't communicate with the Syrians, we risk the loss of Jerusalem, Mr. Deutsch."

Deutsch didn't even look up from his work. "Think," he said absently. "Sir."

"You don't like me, do you?"

Now Deutsch did stop. "That's a typically American question, you know that? We're obsessed with being liked. Most people in most cultures don't give a rat's ass. So forget that and consider this: if the new Mahdi discovers he's being drawn into a bluff, the world blows up."

"If he finds out. And I might save Jerusalem, for God's sake."

"You take that risk, you're a fool."

"You don't care if you're liked by me? That could matter."

"Look, what's happening in here is war fighting, okay, so I don't have time to stroke you. Thank you. Sir."

"Do you have anything for me?"

Deutsch seemed to freeze. "Sir, when we do, you will be called. Obviously. Thank you!"

"In other words, get out."

“Go upstairs and do your crazy-man routine. Lay it on. The weaker you look, the more lives get saved.”

“I’ll do Lear. I’ve always wanted to do Lear.”

“Fine. Good-bye.”

Fitz nodded to Deutsch. Stepped back. “Thank you. Everybody.” He might as well have been in an empty room, for all the reaction he got.

He left, off to do his duty and range the halls of the White House, smiling and muttering for the listening devices that might be there, and hoping to God that the plan that had been evolved mattered.

THE OCCULTATION OF THE MAHDI

No man might know how Allah, in the infinity of his wisdom and the limitlessness of his power, hid his guided one, only those who received the ancient spirit of the Mahdi into their unworthy bodies. The great secret of Inshalla was that for hundreds of years the Mahdi had moved in spiritual form from one human receptacle to another, each chosen by heaven for Allah's own reasons. Aziz had been Mahdi, but now Aziz was dead, killed by women who had been invaded by demons, and who had themselves been killed by corrupt policemen greedy for Crusader gold.

So Eshan had come to this old madrassa, to this old man, Syed Ahmad, following a prearranged instruction.

There were vines here, which Eshan thought were more ancient than this city but not more ancient than its founders, who had come down from the Kush carrying the vines of the blue flowers. They had called this the City of Flowers, and he could imagine them, in their silks and their furs, the fragile, cloudlike clothing of the ancients, tending their blossoms.

Syed Ahmad was not a sophisticate, as Aziz had been. He was not a lover of luxury. He knew the Book, though, far better than Aziz had. When Syed Ahmad spoke, there was music in it, the secret music that only the greatest scholars could ever express, and here he was in this little school, the master of a few boys, who would sit about only half-listening to his genius, their eyes flickering like all eyes to the glitter of life and the lure of the West.

Eshan watched him chew his food and wag his head, his dirty clothes reeking of tobacco and unwashed years. Eshan did not want to serve him, but he could see that the Mahdi was indeed in Syed Ahmad. So he was, literally, the embodiment of the Mahdi now. None knew how the choice was made. Somehow, Inshalla did it . . . and perhaps, Eshan thought, the Russians had a hand in it. He was not blind to political reality. He understood that Allah worked through men, and therefore also through their politics.

The Russians were more clever than the Americans, certainly, but they

could not begin to understand the workings of Allah in the world, could they? This was why the assassins they had sent after Aziz had been, themselves, assassinated. It was because God had needed Aziz to come here to the City of Flowers—thick today, though, with smog, and clattering and roaring with vehicles leaving, with demonstrators and police speeding around in trucks. Shots echoed up and down the streets, disturbing the quiet of this ancient place, too.

“Now,” Syed Ahmad said, standing up from his table in his dining room with its dangling bulb and dirty carpet, and its blue mosaic ceiling a memory—faint—of the dome of the sky. “Here we are when the great event comes to pass.” He went across to a sideboard made of black, fragrant wood, and pulled a small banana from a bunch that lay there in a brass bowl. “And banana trees, with fruit—do you know it? Ah, Eshan, you shake your head. The Book must be in your blood, in your body. People of the Book, my son, that’s what it means. Your discourse must be filled with the Book; thus you only speak from your true heart, which is Allah’s house in you.”

“I have not memorized the Quran.”

The new Mahdi wagged his head from side to side, reminding Eshan of a great ship swaying on the sea, his white beard its sail. But sails were not stained with tobacco, were they? “Then you’re illiterate,” he said.

“Oh yes, in the Book. But I can read. I speak and write in English, too.”

The Mahdi shook a blunt finger. “Useful, useful. Were you, then, schooled by the English?”

Eshan smiled. “They were before my time, Master. Actually, I’m an American. I went to school in New York. Brooklyn, New York.”

“Your faith has been well tested. Have you done hajj?”

“I have. Master, may I now ask you a question?”

Syed took off his glasses and rubbed them with a small blue cloth. For such a dirty man, this new Mahdi was surprisingly fastidious. An orderly nature, as befitted a scholar. He smiled, then, his beard bobbing beneath his long nose. “What is your question?”

“Did you feel it, when you became Mahdi?”

He laughed. He laughed loud. So loud, it began to make Eshan angry, causing him to feel as if he was being mocked. “You do not become Mahdi. The guided one simply opens his eyes. Within me, within you. It doesn’t matter. Look at Aziz. He had business suits and hair pomade, I hear.”

“Until we went to Pamir, he had a Mercedes convertible. He was the toast

of Tehran.” Eshan paused for a moment. “He drank. He smoked hashish.”

“Allah is merciful.”

“But . . . how are you chosen? Why did I have your address? Why did you expect me?”

“What do you think? That this would all happen by virtue of the breeze? But speak no more of it.”

When they came down to Peshawar, a boy had brought Eshan this name and address, so he had done as he had been instructed, and come to this place as soon as he saw that Aziz was being killed. But . . . had the women been ordered to kill Aziz? Perhaps that Persian catamite was involved, that wretched child, sent as a spy from who knew who? He was no student, apprenticed to Aziz by a loving father, that shadow-slipping boy with his seductive hands.

The women and the catamite had, in their turns, been killed. Somebody cleaning up after themselves, Eshan assumed, in this world where nothing was as it seemed.

On the way to Syed, Eshan had passed through the street of the shoemakers, as the note had instructed. He’d felt nothing but had afterward discovered something in his pocket. An Olympus recorder with a full tape in it.

“I have the recording, Master.”

“Oh, that’s good. And is the trap lying open? Have they stepped in?”

Eshan had no idea how to answer this, so he turned on the recorder to let the Mahdi listen. There was the usual creaking and popping. Syed Ahmad raised his eyebrows.

“He puts on the suit jacket. The transmitters are located in the jackets. Woven into the cloth by—”

The master held up his hand. “I do not need to know this.”

President Fitzgerald’s voice came through. “Better,” it said. “Now I look like a corpse that’s pretending to be alive.”

“What is this?” the master asked.

“How is your English, Mahdi?”

“My English is from school, but I still don’t understand this sentence. How is he pretending? He is alive.”

“It’s not important. He talks only to his wife.”

Then, more faintly, Linda Fitzgerald’s voice: “Where’s that paladin of yours?” Then the daughter’s voice came, speaking of the “guy with the

Muslim wife.”

“And all of this means?”

“ ‘Paladin’ means a hero or champion. He must have an operative that he trusts who has a Muslim wife.”

“But not himself Muslim? How strange, to be so close to the faith and not desire it.”

“Americans are strange.”

“This faithless husband needs stoning.”

Then the president’s voice came again: “Are the spiders in the web?”

“What does he say?”

“He refers to his viziers. He does not trust them.”

There was a clunk, then the sound of shuffling. “He enters the Cabinet Room. They come to their feet. Now, listen.”

The president spoke for a moment, saying that he would do the “Allah two-step.”

“The Allah two-step? That is a term of respect?”

“It is not a term of respect.”

“Then his acceptance of the faith was not sincere?”

The entire world had seen his acceptance of Islam. “That I cannot say. Certainly he is angry. But that’s to be expected. Islam becomes very quickly a habit of soul. This is why, once converted, so few fall away from the faith. But it’s hard for them at first. You know.”

“Yes, Eshan, very well. What is next?”

“The acceptance, which you saw.”

“Yes, and then what did he say in his privacy?”

“For twenty minutes, nothing. The signal was lost for a time.”

“Ah. Why is that?”

“You hear him walking, then a whirring sound, then static. Ten minutes later, the whirring again, then he walks, speaking . . . some sort of declamation.”

“May I listen?”

Eshan sped the tape forward until he heard the peeping of speech again. When he slowed the machine, the president’s voice returned: “ ‘Come, let’s away to prison: We two alone will sing like birds i’ the cage: When thou dost ask me blessing, I’ll kneel down, and ask of thee forgiveness: so we’ll live, and pray, and sing, and tell old tales, and laugh at gilded butterflies, and hear poor rogues talk of court news . . . ’ ” Then he laughed, muttered, and went

on declaiming.

“This means what?”

“Master, this is unknown to me. It’s in a old form of English. Perhaps a poem.”

The master looked at him, then stood and went across the broad room, his stockinged feet whispering on the weathered blue mosaic. “It is said that the devil is a mule, Eshan. Do you know of that saying?”

“No, Master.”

He chuckled. “This American devil is indeed such a creature—stubborn without cause, mean out of his deepest nature, habitually cruel.” He pointed a finger at Eshan, a long finger, the nail pale sculpted ivory. “Mind me, he knows very well that we are listening, and I tell you this—what we want to hear is what he said when the static was on. This is when he spoke the truth.” He waved the hand, opening it as if freeing a bird to the air. “All we have heard is a lie.”

“He has not embraced the faith?”

“He has not.”

Eshan tried to understand. “Then, Master . . . is he mad?”

“But of course, mad not to take the hand of Allah when it is extended to him. In his madness, I am afraid he leads the world further down the Crusader path, and all else is lies.”

“What is to be done?”

“All things come to him who waits.”

“That is a saying of the Jews.”

“Who respects the Jews has their measure. We will now punish Washington.”

“We cannot accomplish this at present.”

“Ah, no? You think not? I think that Allah has fixed that which was broken, my son, because Allah knew that the time to punish the Crusader capital was not two nights ago. It is now.”

His dark eyes twinkled, and Eshan knew that the Mahdi truly had entered Syed, for how otherwise could he possibly have such insight?

Syed laughed. “You wear your puzzlement so clearly, Eshan, you of the hopping eyebrows!” The laughter extended, then faded to a gentle sadness. “A carpet, Eshan, is woven of many threads. You are but one thread.”

“Then we are proceeding against Washington, Master?”

“It saddens my heart, that so many must suffer for the obstinacy of so

few.”

Eshan tried to contain the explosion of joy that came up within him, but the sheer intensity of it caused a ripple of delighted laughter—whereupon the master gave him a slap with a hand as soft as a woman’s. There was no real pain, but he turned his head aside, bowing to the shame. “Forgive me, Master.”

“Tell me, do you miss Aziz?”

This question frightened Eshan, because there could be no right answer.

The Mahdi gave him that charming smile, then touched his cheek. “Sometimes he worked for Mr. Deutsch, you know. Sometimes for the Russians. Did you know?”

Eshan struggled to quell his hammering heart. If there was the slightest suspicion of him, his life was over. “I killed the Russian contact with my own hands,” he said. “I slit his throat.”

Syed Ahmad smiled brightly. “Now come and help me pack and move, for it is certain that the Americans will unleash Dream Angel the moment that our beloved bomb detonates. We must hide among their running dogs, or we will be burned with the faithful.”

“Do we not desire martyrdom?”

“Of course we do, but we have work to do for Allah; we cannot yet allow ourselves to inhale the sweet scent of heaven.”

Eshan remembered the death of Aziz, and for the first time the thought touched his mind that this man might have been behind it, somehow. When the eyes twinkled again, Eshan saw something behind the merry glitter, a stillness of a sort he had seen just once before, but unforgettably. It had been in India. He had been walking along a path by a stream. It was twilight. In a field nearby, children were playing soccer, their voices echoing. He’d seen, beyond the path, something so still that he thought at first that it was a statue. Another instant, though, and he realized that the gold he was seeing belonged to the eyes of a tiger. It was watching the children. They were only Hindus, so he had hurried on.

Syed Ahmad of the tiger’s eyes stood. “Nowadays there is never enough time for tea!” He swept off into the deeper parts of the house, Eshan going quickly behind.

A LEG UP

As Rashid entered Alexandria, he became careful, and then very careful. There were few people about, most of them either gone or respecting the curfew. He did not doubt that there was a bulletin out for him by now. Once they lost him, they would be beside themselves, putting all of their resources to work. Would his own supporters keep him safe? They were salted here and there, two in the FBI that he was aware of, certainly a few more in the CIA, in Homeland Security, in the National Intelligence Office, cutting false orders, diverting real ones.

He'd spent the day sitting in his car listening to the radio news and watching to see how the local police patrols were organized. When he'd heard Fitzgerald sniveling about his conversion, Rashid had instantly known that Allah had granted Washington these additional hours precisely so that the cowardice of the Crusader king could be revealed to the whole world. Allah, beloved father, was always a step ahead of the devil.

Rashid drove until he found an indoor parking garage, then went in deep. He parked the car and climbed the stairs to street level, where he watched the sparse traffic for a time without stepping out. When he did so, he kept his head down. It was a long chance, but a skilled analyst could come close to identifying a specific individual, if the target was looking up at just the right moment. He had personally made Osama bin Laden four times. Nothing had happened, though.

Rashid had never met Bilal and Hani Aboud, the Moroccans who were responsible for this most important of all the bombs. How it was that Inshalla had chosen them, Rashid did not know. Obviously, though, something was not right.

He walked out into a ghostly quiet. Stores were closed, some of them with steel shutters. This was actually helpful. Although he was the only person on the street, which obviously made him a target of the police, it was also true that it would be easy for him to spot the opposition.

He walked steadily and quickly, keeping as close to buildings as he could,

taking advantage of any overhead cover that presented itself. In tracking, he knew what he was capable of, and Mark was even better, and he would be highly motivated, for sure, Mark who was facing weeks of interrogation about the mole who had worked for him, and probably would see his career go into terminal decline. So Mark was up there in the sky looking right now, as were they all.

In addition to worrying about what might be happening overhead, Rashid had to think about the police. There were few squad cars, thankfully, and the National Guard was not deployed in this death trap, so his chances of encountering anybody were not great. Still, he stayed off of short streets as much as possible. He didn't want some damned cop to come swooping around the corner before he had a chance to conceal himself.

He had been walking for three blocks when he heard a faint sound, perhaps a car engine. For a moment, he saw no place of concealment, but then he noticed that one of the stoops of the row houses he was passing had a small space under it. He slipped in, forcing himself down among the garbage cans that were kept there, making as little noise as possible.

The sound became more distinct, an engine nearly on idle, coming closer. Automobile, he thought. No lights, though. The police, then, being very stealthy.

This did not seem like a routine patrol. This seemed like what might happen if they had been sent here to look for somebody. Rashid forced himself not to look, not to even think about moving.

Something tickled his ankle. Then he felt a pinch. Of all things, a damned rat was biting him. He loathed filthy creatures like snakes and rats. When he moved, though, the garbage cans immediately rattled, and the guttering of the engine was now distinct, so he had to simply hold his breath and bear it, an awful sensation, stinging, then tickling as the creature licked at the blood it was drawing. He was sickened; his skin crawled.

Then he heard voices, soft, intent, and a shaft of light appeared, shining along the wall. He watched it play carefully around the stoop. A glow filled the cul-de-sac. He pressed himself hard against the back wall . . . and the light moved slowly away.

He begged God to make them leave, because the rat was tearing at the skin now, sending excruciating waves of pain up Rashid's leg. He tried to move the garbage cans, but again there was sound—a scraping. And again the light returned.

Click. The car door had been opened. There were steps on the sidewalk, and the scuff of feet on the two steps down. Rashid could hear the cop breathing, in and out, in and out, a slight wheeze to it. Crashing, then.

“Shit!”

“What?”

“They got every garbage can in town down here.”

The pain in his leg stopped and the flashlight beam wavered as the rat sped into the pool of light that ended just an inch from Rashid’s crouching body.

“It’s a rat,” the cop said, his voice now uninterested. A moment later he was back in the car and the danger had ended. Still Rashid crouched, trying to get his heart to slow down. Allah, he knew, had done this. What rat bites through a man’s trouser leg and chews at living flesh? No, it had been a miracle, God making sure that the rat would be present when needed. “Thanks be to God,” he breathed. He waited, though, until the guttering of the engine had entirely faded and been gone for a time. Then he came out, allowing the cans to clatter a little. At first, he stood in the shadow beneath the stoop. Then he stepped back up onto the sidewalk. With the streetlights out—and they had been turned off earlier all over the Washington area, presumably to make it more difficult for any pilot to locate his target—the street was now far darker than it had been. But even so, just before this Rashid had been able to see. Then he realized, of course, the moon had set.

It had been over a year since he had gone online to find this house on a map. He had done it from a computer at a public library in Bethesda, and mapped a nearby location, not the actual house. He had also concealed his search in a series of other searches for local Wal-Marts and Target stores. This made him fairly sure that his tracks were covered, but again, he knew the skills of the analysts in Nabila’s department. Somehow, they might be able to uncover his search, although he could not imagine how.

He moved through the silence and blackness, no longer bothering to keep close to walls. There was no point. That sort of maneuver made it harder to get visuals, but a single man walking the streets on a cool night had an unconcealable infrared signature. If the cops were being directed from above, they would be back very shortly, and this time he would not escape.

He walked quickly, moving down one block and another, past houses, then bleak-fronted apartment buildings, their lobbies dark. A dog followed him for a time, a gray, panting shadow. “Come,” he murmured, “come along,” but the dog went off. Too bad; it would have appeared less suspicious.

Here and there, he saw a parked car, but never one that looked as if it could be easily used. And then it hit him like thunder from the hollows of his soul: You are here to die. If you are successful, you will not see another dawn.

He stopped, held his hands before him, two pale claws. His tongue felt his teeth, his skin the cool air. His mind was filled with images, memories, thoughts—and suddenly he saw inside himself a truth that he had been denying for years or, rather, covering with an increasing elaboration of prayer. This was that the Muslim promise of a heaven stocked with virgins seemed boring to him. More than that, he did not, he had to admit, believe in heaven at all, or hell, or anything, really, except the night air that surrounded him now, and the fact of death. So, why did he do this? He had no answer. He was face-to-face with the mystery of the soul.

Then he came to the critical block. The house was just around the corner. He could not assess the situation by walking to one end, then doubling back, or going around the block, or anything like that. Anything except going directly to the house and quickly letting himself in would be immediately suspect. So he walked down the sidewalk, crossed in the middle of the street, and approached the door of the red-brick row house. The street was so quiet that the only sound was the whisper of his sneakers on the pavement. Although the Air Force planes cruising above showed no lights, he knew that they were there, too high to be heard, knife-edge planes piloted by magically skillful men who would swoop after him the moment he became airborne. He had no illusions about this. The flying of the plane would be his responsibility. The only question was, what had happened to the Aboud brothers? They had not been captured, of that he was certain, because his unit at the NGIA would have been among the first to know and he had not been discovered until after they had failed to detonate their bomb.

He reached the front of the house and went up the steps. In his training, he'd learned the particular locks that were installed on all of the buildings that were in use for this project. Simple locks had been chosen intentionally, and the tongues had been filed to allow easy entry to anybody who knew the secret. Their security did not rest in things like locks. A lock couldn't keep out the authorities, and they were the only threat that mattered.

He drew his American Express card out of his wallet and pressed it into the doorjamb, an act that he had practiced many times in camp but never again, certainly not at home, where he had left the locks alone. Nabila's department had installed the locks, the alarm system, and her safe room, and he did

nothing but use what he was cleared to use.

He slid the card but encountered no resistance. Odd. As he was sliding it again, he heard a distinct sound, very faint. He froze, listening. Was this a jet engine, perhaps, very high? A fighter, perhaps an E-4B . . . or no, a drone.

But it was none of these things, and he knew instantly that a car was drawing near, was not a block away, was moving slowly along the street. Had he been spotted by an infrared system?

Again, he slid the card. Again, no resistance.

The engine noise became distinct. He slid the card—same result. Then he had a thought—perhaps the door was unlocked. He pushed at it . . . and it opened. Not a good sign.

The blackness inside was so absolute that he could see only the faint sparks generated behind his eyes by his own nervous system. With this blindness came the unsettling feeling that somebody might be standing in front of him. He stepped forward, feeling with his hands. How might the house be laid out? The garage, he had seen as he came in, was to his right. That would be where the plane would be kept, presumably also the bomb. He felt in that direction but kept swiping air. Finally, he turned that way. There was no wall; therefore there must be a large room.

He stepped once, twice—and his foot hit the leg of something. Glass shattered, and there were blue sparks. He had knocked over a floor lamp. From somewhere there came a sighing sound, as if somebody who had been holding their breath had tried to cover a sharp inhalation under the noise and not quite succeeded. For some time, Rashid stood motionless, listening to the house. Faintly, water ran in a toilet, the steady gurgle of a bad valve. There was an odor of cumin-seasoned food, old and stale. He took a step into what he knew now was the living room. Behind it would be the dining room and, somewhere on the far wall, a door into the kitchen. There, he hoped, he would be able to find a flashlight, which he would use to enter the garage. He knew how the plane would work, and he thought he might be able to extend the wings on his own. If not, he would detonate the bomb right here. Despite the fact that it would not be an airburst and it was ten miles from Washington, the destruction would be gigantic. Certainly the Pentagon would be completely destroyed. The Capitol's dome would be smashed, the Washington Monument knocked down, the White House set ablaze. Alexandria and Arlington would be devastated and Georgetown set alight. Radiation would be everywhere, and the American government—what of it

remained intact—would be forced to permanently relocate. The shame of it would haunt America for generations to come. The ruins of Washington would become a permanent symbol of America the powerless.

Forcing himself to move slowly, to use his hands like eyes rather than flailing them, he found the far wall, which was bare. In fact, except for the one lamp he'd had the bad luck to hit, the room itself was almost empty. This was a mistake. A safe house should look in every respect like a home; that was what they had been taught, and it was good teaching.

He found that he could see the outlines of windows faintly, and was soon able to guide himself into the kitchen. Then the door was under his hands. He took the knob and opened it.

At once, there was a smell, and he knew that it was blood, raw blood, and not yet decayed. What was here? What was he finding? He fumbled down into the garage itself, into a complicated mass of protruding obstacles. Tools clattered on a workbench as he drifted his hands along it. And then he felt something else, a softness, wet and dense, like a soaked sponge, but large. Gingerly he felt its rough edges, its damper center, then along the smoothness of it, feeling farther and faster, the cold, elastic quality under his fingers.

Frantic now, afraid of what this was, he felt for some sort of light, found a string, and pulled it, but uselessly. All the power in the region must be turned off.

But then he had something in his hand—a metal tube. Yes—he found the button; he pressed it, and found himself shining the flashlight beam on a man's severed leg.

Gasping, forcing back his cries, he stumbled away from the workbench. Flashing the light around, he saw that there was blood everywhere, most especially on a green chain saw that had obviously been used to do this horrific thing.

But why? Who?

And then he understood. To be certain, he swung the light toward the bulky shape of the plane. It stood complete, the wings folded back. They had only to be drawn straight, he saw, and hooked down.

In the cockpit was exactly what he expected to find, the slumped body of Balil Aboud. He had cut off his own leg to make himself light enough to get the plane off the ground. His brother, therefore, had either run away or died. Balil's hands clutched the stick, his fingers skeletal claws. His face was twisted with concentration, his teeth bared in a grimace of rawest agony.

Somehow, this man had sawed his own leg off, had dragged himself to the plane, had gotten in. But how? And why bother, given that he couldn't hope to get it out onto the street, let alone open the wings? Then Rashid saw the prints of shoes in the blood on the floor, and they made what had happened here quite clear. Hani had faltered in his courage, and Balil had tried to replace him. The plan had been for Hani to push the plane out and lock the wings open. But it had not happened that way, obviously.

Had Balil died here and then Hani run away? Or had Hani been a traitor from the beginning, in the pay of the Americans, perhaps, or the Saudi king, who paid bribes to jihadists all the time, the filthy dog? In any case, what Rashid saw here was the reason that Washington still stood.

"I have a gun."

He turned, shining the light in the direction of the voice. In the doorway stood what was almost a human skeleton, a hollow-eyed, sunken shadow of a human being. Held in both clenched fists, his arms shaking so much it seemed as if he would drop it at any moment, was a .38-caliber revolver, a Police Special. The man was so weak that he could barely lift the small weapon. With its short barrel, it was not particularly accurate, but Rashid would not take that chance.

"Hani, Allah forgives. Allah is merciful."

"There is no Allah! Allah is a lie!"

"Now, you know that isn't true. You know that Allah is in your heart."

The pistol began to shake more. He was trying to fire it, to pull back the trigger, but he was very weak. To make him light enough to fly, his brother must have starved him.

Rashid leaped at him, throwing him back into the kitchen. He hit hard, his head thudding against the floor. Rashid straddled him, no longer knowing where the gun was. He lifted Hani's shoulders and slammed his head against the floor. There was a grunt, and he lay still. When Rashid shone the flashlight on him, he cringed away from it.

Rashid smiled at Hani. "It's nothing. I understand. There's no shame in this."

"There is shame."

"You still have a chance."

"I cannot fly the plane."

"But I can, Hani. I'm within the weight range."

Hani gave him a careful look. "I thought you would kill me."

Rashid wished dearly that he could. But never mind, Hani would get his justice along with the rest of the devils in this evil place. “No, no, there’s no shame. There’s no blame, Hani. You must do for me what your brother was going to do for you, and help me run the plane out.”

“Who are you? How did you come here?”

“I’m nobody from nowhere. Now come.”

As he returned to the garage, Hani followed. Shining the light into the plane, Rashid saw, for the first time in his life, one of the legendary bombs. It was stowed in a carrier just behind Balil’s ruined body, a steel darkness. Rashid couldn’t make out the exact shape, except that it was a rough ball covered with what looked like blasting caps. There were many wires, which appeared disturbingly delicate.

He followed the wire harness around beside the pilot’s seat to where it ended in a covered switch. He opened the switch cover. In tiny Arabic script were written below the silver toggle the words “Courage for the heart” and above “God is great.”

He touched the switch. That was all that was necessary, simply to flip that toggle a quarter of an inch. That would forever change the world. Forever. “How great you are, O God,” he whispered, fingering it.

“I thought of triggering it here. Right here.”

“But you couldn’t even do that?”

“I’ve never seen anything. I have never made love. I have no children.”

“Help me now,” Rashid said.

Balil’s body had stiffened, and as they forced it out of the plane, the garage was filled with the sound of cracking bones.

“At midnight,” Rashid said, “I will fly.”

“And will it . . . wreck this house?”

For an instant, Rashid was going to tell him the truth. Just in time, though, he caught himself. “Oh no. The house will shake. Be damaged. But the explosion will not carry this far.” He gave Hani what he hoped was a believably reassuring smile. “It’s safe here for you. Safe enough.”

As Rashid embraced Hani, he continued smiling, but to himself. *May this devil burn in the firestorm that will be triggered by the bomb. May he burn slow.*

**A NIGHT-BLOOMING
FLOWER**

“You’ve never done operational work, Nabby,” Jim Deutsch said to his wife. “Stay cool. Things can happen fast. Just rely on me; this is my office.”

“Jim, I’m cool.”

“No, you aren’t.”

They were sitting together in the tightly confined space of an FBI surveillance van, which had been modified for radiation detection. The space was packed with technology, maybe useful, maybe not.

“We could see action and I want you to *not* get involved. You cannot handle a gun.”

“I can, and I’ve got one.”

She showed him her little Backup.

“That’s for close-in work. It feels like protection in a firefight, but it’s not protection. Too inaccurate.”

“Should I not use it?”

“Keep it close to hand, but don’t get ambitious.”

They had now been working Alexandria for four extraordinarily tense hours, moving slowly down each street, watching their screens and drinking endless cups of coffee. So far, they had detected eleven medical X-ray facilities and one dental office with what turned out to be a damaged X-ray machine. Now they were methodically covering every residence that was close to a medical X-ray facility, on the theory that the bomb had been hidden inside the radiation signature of such a facility.

It was now eleven forty. Fitz had capitulated in order to buy time, but the Mahdi’s latest message had been quite clear: all of his demands had to be met or Washington would die tonight.

Few of his demands had actually been met, though. Certainly, no bankers were being rounded up, and the worldwide *hijab* rebellion continued.

At least there had been a certain mercy, in that the time gained so far had

enabled more orderly evacuation of the region. The president had personally asked the demonstrators to leave, and many of them had, including all of those with children. Still, though, a certain number remained around the White House, singing and praying, their voices echoing through the darkness that had descended with sunset. There was not a single light, not a cigarette, not a penlight, in all that crowd.

The White House, the Capitol, all of the monuments were darkened as well. Only deep inside the most secret places was there light and activity, such as the White House bunker where Marge and Mark and the others were making progress only by agonizing inches.

Despite the security issues, the original disk had now been flown to the United States. It was at a classified NSA facility, with another team working on it there.

As they passed down a long street, an indicator spiked. “Stop, please,” Nabila said. The driver braked. “What have you got?”

“Go, now,” she murmured.

The van moved off, bouncing a little as it accelerated, the equipment bays rattling.

“We have it,” she said simply. “Back there, the third house. The bomb is there.”

“You’re certain?”

“Oh yes. Western X-ray is across the alley, right behind the house, but their signature would not extend this far. And yet we have a good signal. It’s there.”

“Invisible from above, though.”

“Completely hidden, yes, thanks to Western X-ray. The only place to find it is from the street. But we have found it.”

He got on the horn. “We have a hit. It is a full positive. Please set the deployment well back, and deliver a blueprint of the property pronto.”

As Nabby listened, her eyes grew moist. Jim understood that he could not know her emotions. Her family had been extremely close. Rashid was like an extension of her own soul. She loved him that deeply.

“Nabby, when it’s somebody you love, it does things to your judgment. Be careful.”

She shook away her tears. “I can do this.”

“It might come to him dying.”

“Jim, Rashid is not my brother. My brother has died already. The man in

there is the Dajjal, as are they all, all the ones who do this. It has stolen their bodies and killed their souls.”

The Dajjal was the Muslim equivalent of the Antichrist. Ideas like that didn't resonate with Jim, but if they gave her the courage she needed, then fine. If Rashid was here, she was going to face some terrible moments. To Jim, people who could kill for ideas were always the same—narcissists unable to empathize with others, their hearts killed by their ideas. As far as he was concerned, a person who was willing to murder another because they disbelieved some story was not a fully developed human being, and that included all religious fundamentalists, all political ideologues, all fanatics.

“You sigh,” Nabby said.

“Remember this: even if this bomb is detonated right here, inside that house, it's going to cause incredible damage. We have only one mission: prevent that bomb from detonating, no matter who dies.” He reached out to her, drinking in her wide, soul-rich eyes in the amber glow that filled the tiny space. Both of her small hands took one of his great paws. “I'll go in first,” he said. “If he's there and I need you, I'll call you.”

“The house plans are downloaded.”

He turned in his seat and viewed them. He noted the date, August 13, 2002. No legal alterations had been recorded since then. But if there was a plane in there—and he was certain that there was—there were going to be major internal changes. He concentrated on the basic outlines, the street-facing rooms. What was it like deeper inside? Too bad he couldn't know.

“I'm as ready as I'll ever be,” he said into his radio.

There was a brief silence while the coordinator checked the many levels of response. There were four SWAT teams on the ground, which would now all move to drop-off points just out of sight of the target location. Overhead, the entire airborne response force was targeting this immediate area. Bomb neutralization teams from Homeland Security and three police forces were deploying.

And, as Jim knew perfectly well, it was all pretty much useless, because no matter who was in there, all they had to do would be flip some switch or push some button and the entire region would go up in flames, centered on the crater that would be all that was left of Alexandria.

The radio beeped. “This is the president,” came Fitz's familiar voice. “I wish all of you the very greatest success in this endeavor. May God be with us all.”

Then, a young man's voice: "Radio silence now, please."

The frequencies they were using wouldn't be picked up by even the most sophisticated retail scanning equipment, but who knew what these people might possess? Fitz should have kept off the damn horn.

An image flickered onto one of the screens that lined the packed walls of the van. It was a bright shot of the house in full color, looking like day.

Jim busted radio silence. "Pull that damn Global Hawk out *now!*" he snapped.

"Global Hawks are invisible from the ground," Nabby said.

They were indeed equipped with transference technology camouflage, which displayed a continuous picture of the sky above the plane off its lower surfaces, but at low altitude a small amount of engine noise would reach the street. Normally, not enough to matter. "The city's too quiet," Jim said.

The image flickered off. The Hawk was gone.

Jim took a deep breath, let it out. He did not want to take Nabby with him, but he saw no choice. If Rashid was in there and he had his finger on the button, she was the only hope—and a faint one—of getting him to change his mind. "Eleven forty-six," Jim said. "Are we in place?"

The FBI explosives team was there. These men had suppression equipment that could prevent blasting caps from detonating. Wonderful technology, but they would need to get close to the bomb, and they would need time.

Jim opened the door of the van onto what had become a cold, windy night. There was a suggestion of rain in the air. Low overhead, clouds had begun racing down from the north. Jim would have liked night-vision equipment, but there was no use in calling further attention to the operation.

He'd hoped for alternate entry to the house, but there were only the two doors. Nabila came out beside him.

"I'm going to need to go in through the back," Jim said.

"I can distract him. Knock on the door."

"No! The least sign of activity, that bomb is going off."

As he began to move away, Nabila grabbed his arm. "Don't just leave me here!"

"Nabby—"

"I can help you. I have to, Jim." Her fingers tightened around his wrist.

"Your job is here. You control these people. You do it right."

Her eyes bored into his. "It's not going to work. Any of it. And you know it, don't you?"

Drawing away from her, he stepped out into the alley.

SISTER AND BROTHER

The SWAT teams that surrounded this place had already confirmed that there were no spotters or snipers posted anywhere. The house was meant to seem totally innocuous, and so was unguarded.

The house was a different story, though. The house would be bristling with guns.

He moved down the alley, staying close to the walls of buildings, careful to never expose himself to a sight line from one of the back windows. In his life, he'd done hundreds of entries like this, but never with stakes this high, of course. Not only did an entire city depend on this working, but that city was Washington, D.C.

He came to the back door, which was approached by two concrete steps. As he mounted them, he kept below the line of the window in the door. He crouched, listening against the wooden door. The urge to just smash the damn thing to kindling and get in there and try to kill the guy was almost more than he could suppress.

The lock was simple enough, but it would need a lock pick, not a credit card, which meant that there was going to be a slight click. He listened harder, pressing his ear against the wooden door. There was dripping, that was all. Of course, there could be a guard in there, somebody with the skill to remain silent. Could be Rashid, even. He wasn't a man easy to anger, but he found himself eager to kill Rashid.

He inserted the lock pick, felt for the slight resistance of the tumblers, was momentarily stopped by a shield in the cylinder, then got past it. The lock dropped open with a noise so loud it actually echoed. The damn thing sounded like a bullet!

Or rather, this was one very quiet place—of course, it would be, a safe house in an evacuated city that was waiting to die.

Nothing happened, so he pushed the door open. In the stuffy fetor that emerged, he smelled the unmistakable odor of blood. It was not brand-new but not old, either. So violence had been done here. He thought he was about

to find out why the bomb had not been detonated.

He penetrated deeper into the kitchen. The clock on the microwave oven offered the only illumination. He watched it change to 11:47. Vegas at midnight. Rome at midnight . . .

Jim closed his eyes, inhaled deeply. Blood, the dressing of salad eaten sometime this evening, still full of the volatile scents of seasonings . . . more faintly, oh yes, that would be aviation fuel, and the fuel can would have been opened within the hour or the fumes would be gone.

The blood was older, so whoever had cracked the fuel can was probably still very much alive. They would be with the plane, and he did not think it likely that he could reach them in time to prevent their flipping their switch. In fact, the moment they detected the least sign of his presence, this city would be destroyed.

The door to the garage, he recalled, would be on his left. It was so dark, though, that he couldn't be sure of his bearings. He moved ahead with extreme care, sliding his hands along the floor as he proceeded. All he could do here was get as close to them as humanly possible. To try.

Explosives suppression was a difficult business. There were no ray guns; that was for damn sure. To prevent a cap from detonating, it needed to be surrounded by a group of devices with highly specialized properties. This was slow, careful work for experts. If they were looking at a plutonium implosion bomb, it would be a sphere arrayed with many such caps, all timed to explode at precisely the same instant and compress the plutonium core so that it would go critical—and the rest would be history.

He found the door and slid his hand along it until he grasped the handle. The knob was cool beneath his fingers. Very carefully, he moved it slightly. The door was unlocked.

He closed his eyes, took a deep breath, and let it out slowly, preparing himself for what was beyond question the most important moment he had ever known or would probably ever know. It was a warrior's moment, and he forced his attention to leave his screaming, jabbering mind and focus on the beating of his heart, the sensation of his muscles, on his hearing and his eyes.

He turned the knob until the tongue was fully retracted.

His life was punctuated by moments like this, which involved sudden, violent movements into dangerous places. He did not allow himself to consider death. That was for peaceful nights under the stars. He was aware, instead, of every muscle wound tight. You needed to be ready to act faster

than thought, like an animal.

To minimize any squeal of hinges, he drew the door open fast, causing a gust of fuel-soaked air to hit him in the face.

He found the place lit thin blue by a fluorescent lantern, and also found that there was nobody immediately visible. Quickly he scanned the space. The wall of the family room behind the garage had been knocked down to create a makeshift hangar.

Before him stood a small airplane, its broad wings folded back against its fragile fuselage. He thought it was kit built, perhaps even specially designed. From its configuration, he could see immediately that it was able to take off in a very short distance.

The evacuation had played into their hands, because on a normal night pulling this thing out into the middle of traffic, setting the wings, and taking off would have been all but impossible.

They must have counted on a curfew, even an evacuation. This was a symbolic strike, after all. They weren't after people here; they were after a way of life, and the city that organized it and enabled it to unfold.

Wreck Washington, break the will of America . . . and, icing on the cake, throw the country into political and economic chaos from which it would never recover, not in its current form.

What the evacuation had done was give them their runway. Poor old Fitz had been so proud of it, too. "All those lives being saved," he had said. For what? To people who had lived in freedom, death would appear better than the life the Mahdi was going to force on them.

Jim was beside the tail of the plane, standing in the doorway from the kitchen. The room was entirely silent, or so it seemed at first. But rooms were never silent. No place was silent. He looked from the bloodstained workbench and the meat-encrusted chain saw lying on it to the garage door. He listened for breathing, heard none.

There was what seemed to be an earsplitting click and the garage door began to open. For the first time in his professional life, Jim was so surprised that he almost cried out.

An instant later, the plane's engine screamed into shattering life. He hadn't heard anybody because the pilot was already inside the plane, invisible behind its folded wings. Jim stepped down into the garage proper, went to the plane, and grasped the tail.

Then he felt weight—somebody on his back. The weight didn't stop him; it

felt like a child. Jim shifted, intending to scrape the kid off him. In that moment, the plane bounded forward—and the kid was gone. Jim started after the plane, which had gone down the short driveway of the row house and was now in the street.

He jerked to one side and ripped at a thin shoulder, tossing the skeletal child off his back. The kid hit the wall hard and slid down it. He was a human skeleton. Horrible. Had he been a prisoner? Or no—the bomb probably ate up all the lift the plane had to offer. He had starved himself so that he could fly it.

Had he gotten cold feet? Was he somehow incapacitated? And who was the pilot?

None of it mattered. What mattered was preventing that plane from taking off and at the same time not allowing the pilot to see him.

But how could it take off? The wings were still folded. There was a two-man job ahead, but now there was only one man.

The plane idled. The pilot was waiting for his accomplice. A glance at the kid told Jim that the accomplice was done.

The only problem now was the surrounding mass of personnel. If anybody made a mistake and showed themselves, that pilot was going to detonate his bomb immediately. The only chance they had was to disable the plane just as it was taking off, to crash the thing before he could push the button.

The plane's engine continued to idle. The pilot wouldn't wait long, and indeed the fuselage began to rock, as he twisted and turned in the cockpit, trying to see behind.

Jim stepped back into the shadows, dropping down beside the tool bench.

The pilot came out, bending low under one of the folded wings. He looked back toward the garage. "Hani!"

Jim saw that it was Rashid. Nabby would see this, too, on about four different monitors in the van. Moving with the greatest care, Jim drew the M9 he'd been issued at the White House. But Rashid was at least two hundred feet away, standing just behind the folded wing. If Jim missed and hit the bomb, Rashid would earn his heavenly virgins and so would everybody for twenty miles around. Normally, Jim would have no problem, even though the pistol's rated effective range was about 150 feet. But he had never fired this particular weapon, and if you were going to stretch range like that, and at night, you needed to know your pistol very, very well.

Rashid turned to the plane and quickly unfolded and locked the wing. Then

he walked around the fuselage.

Taking advantage of fact that the bulk of the plane hid him, Jim moved quickly across the garage. Now he was perhaps eighty feet from Rashid. Close enough, no question. As soon as the head appeared in the cockpit, Jim could squeeze off a shot that would not miss.

He knelt and braced the pistol.

Rashid appeared in the cockpit.

“Rashid!”

The voice blasted in Jim’s ear. Instinct swung him fast. Before he could stop himself, before he could think, he squeezed off four fast shots, sending Hani crashing against the back wall of the garage in a haze of blood and smoke.

The plane was on its way down the street, its wingtips just clearing obstacles such as light poles and a public mailbox.

Jim ran, his legs hammering. There was no longer any chance of preventing Rashid from pushing his button. He was going to detonate the bomb, no question. Now all that mattered was that he do it here on the ground and not achieve a far more damaging airburst.

The plane gathered speed slowly, and Jim gained on it. Closer. Closer still. He aimed the pistol. It didn’t matter anymore what he hit. Keep the damn thing on the ground; that was what mattered.

He’d done four rounds. He had eleven left. Properly placed, they could tear the little aircraft apart.

Then he saw, coming from ahead of it, another running figure. He saw white clothing; he saw black hair.

“Nabila! Nabila, get down!”

He had to shoot. There was no choice. And what did it matter if he hit her or not? They were all dead, anyway.

Incredibly, the plane rotated. Just like that, its nose turned skyward and it seemed to dance off the pavement and into the sky, and Nabby was hanging in the landing gear, her feet kicking as she struggled for purchase.

He stood there, his pistol raised, as the plane’s engine screamed and the aircraft wallowed, then heeled badly. He saw the rudder snap far to the right, saw the flaps work—and then the plane’s left wing struck a streetlight, and the fuselage wheeled, smashing into a house. The rudder hit Jim hard, causing him to lose his footing and topple forward, arms wind-milling.

He regained his balance, then froze.

The plane was still now, the engine silent. The reek of aviation fuel mixed with the smell of smoldering wires from the tangle behind the ruined dashboard.

When Jim tried to step closer, a searing blast of pain made him fall forward instead. From the lack of control and the waves of fiery agony, he thought he'd burst a tendon, or smashed his ankle altogether.

Grabbing an edge of the wing to support his weight, he peered into the twisted cockpit. Rashid was not only conscious; his hand was fumbling for something, undoubtedly the critical switch. Jim's gun was gone, though, lost as the rudder hit him.

Then everything was black. The world was upside-down, turning slowly, slipping into the distance. He was losing consciousness; he must have taken a head injury as well. He fought it as hard as he could, but his hands would not work. He couldn't get to Rashid. He had no strength. He felt as if his muscles were turning to water.

He was used to controlling his body. He could absorb a lot of punishment, handle a lot of pain. He was concussed though, maybe losing blood. Forcing himself, concentrating all his energy, he raised his right arm, and suddenly somebody else was there, a flash of white—he realized that it was Nabby and she had dived into the cockpit with her brother.

The reek of fuel filled Jim's nostrils as the whole scene was flooded with light. Low overhead, a helicopter was lighting up the entire street. There were voices then, and the sound of big engines—fire equipment coming closer.

An F-16 howled overhead at low altitude, waiting to pounce if the plane somehow managed to take flight. But this airplane was dead.

A single dot of consciousness remained, and it was telling him that Rashid could still detonate the bomb.

Rashid smashed his feet against the windscreen, which popped out of its housing with a loud, cracking protest.

He was out, just like that, supple as a panther. He staggered, stood—and suddenly, in the blazing floodlight, held up a remote control. Round and round he turned, holding it high. He was grinning, his teeth flashing.

Nabila, her clothes ripped, her body covered with blood, leaped through the broken windscreen and flew at him. She embraced him, also embracing the remote, and for a moment they were dancers, graceful in the steel-white light from above, dancing to the rough beat of the helicopter's rotors.

Nabila had Rashid's wrist in her right hand, bending his fingers back and

tearing at it with her teeth, trying to get the remote from him. Her left arm was twisted in a way that could only mean it was broken. At any moment, Rashid was going to press the crucial button.

Breathing deep, Jim opened himself to his pain, accepted that it was now part of him, and began moving toward them.

Nabby cried out, “Why are you doing this?”

“Islam converts by the sword! Face it, Nabby!”

“Daddy sees you from heaven! Think of that! Daddy sees this; he sees you killing the world!”

They went down together, Nabby throwing her head back and screaming with agony when she rolled across the broken arm. Jim saw the white of bone protruding from her elbow.

As he forced himself forward, his eyes were on that remote. The light from above was too blinding for him to see much beyond the pool of it where Rashid and Nabby struggled, but all around them Jim could hear the clatter of deployment.

Then Nabby was on top. She grabbed Rashid’s shirt and slammed his head against the pavement, growling through bared teeth. His eyes registered surprise, but the remote did not leave his hand. She did it again, the growling louder now, and this time Jim saw that Rashid was stunned.

Jim came to Nabby, and found himself beside a savage being, somebody he did not know, and he understood for the first time what it means to say that somebody has blood in their eye. She glared at him, teeth bared, cheeks sucking, and the growls turned into tears, bitter, agonized. She raised her head and stared up into the light of the churning helicopter, into the blasting wind of its rotors, and the sound that came out of her was the pain of love denied, a sister’s tortured heart, and the agony—even deeper—of women across the world. He heard the vast history of frustration that was in that cry, the despair of women denied the only things they want, which are an equal embrace and equal partnership on the human journey.

She had killed her own brother, and this was how it sounded when a woman’s heart tears itself apart.

But the remote, *the remote*—

Jim threw himself across the pavement, grabbed it, blood covered but intact. So why were they all still here? Why hadn’t Rashid used it?

Then Jim saw why. This remote wasn’t going to trigger a bomb. It was just an infrared TV remote with a range of maybe twenty feet, assuming no

obstacles. A remote trigger for a bomb would emit radio frequencies that could broadcast farther than infrared.

So this was a decoy. His eyes snapped to the wreckage of the plane.

Screaming to make his pain easier to bear, he dragged himself to his feet and headed toward the wreck. “Timer,” he said, but his voice was not loud enough, would not carry over the crashing echoes of the rotors above. “Timer . . .”

He beckoned the darkness until he saw men come into the light at last, men in blast gear and reflective face guards. Had there been time, he would have laughed.

He crawled into the blood-soaked cockpit through the shattered windscreen. The dashboard was ripped open, wires pulled out. Rashid had been trying to repair the manual firing mechanism, and when he couldn’t do it he’d produced this TV remote and used it to gain time.

He’d thought to bring it with him. Rashid was a careful man. Chess, not poker. He didn’t trust luck. He was always many moves ahead.

The bomb was a darkness behind the seat. Jim pulled its bent frame aside and saw it, black, about the size of a beach ball, hidden in a mass of wires that led to the detonators, each one a black plate plastered against the blue steel of the bomb’s housing. The plutonium core would be positioned in the center, surrounded by the triggers that would almost instantaneously compress it. But you would never see that. That would happen in well under a second . . . and it could happen any second.

Where was the countdown timer? It had to be running or Rashid wouldn’t have bothered to decoy it.

Then Jim saw it, a tiny plastic square no larger than a watch face. Its wiring was concealed under the black tape that held to the body of the bomb. The counter was reading down. He saw it go through 58, on its way to the end of its final minute.

There was no time to disarm this. That sort of thing could only be done in the movies. Actually running down the wiring of a timer like this and safely neutralizing it took hours.

He backed out, turned, and grabbed one of the explosives experts who were now crowding in behind him. “It’s on a timer,” Jim shouted above the din of the rotors. “Get explosives suppression on this thing! *Now! Now! Now!*”

They tried to pull him out, but there was no time, and he slid over the

bomb and into the tiny space behind it. Here he could be of help. He could place charge suppressors. If they did enough of them in the right pattern and they worked, the plutonium wouldn't be compressed correctly and the bomb would never go critical.

They knew what they were doing; they had probably simulated this a thousand times. One after another, the suppressors went onto the firing mechanisms, covering them like gray beetles.

A hand thrust three at him. "Where?"

Twenty-two seconds.

No time. He simply placed them at random, forcing them down over the explosive caps, hoping for the best.

Darkness.

A QUESTION OF TIME

Ahead, the light. This was death, then. So quiet! The light . . . beautiful. Calling him, a silent, sacred song. Then an angel looking down at him. God's good angel.

"Jim!"

Pain, then, sweeping dreams of heaven away. It surged up and down his chest, running in his guts like a pack of starving rats.

This was not heaven and the light was just the damn chopper and the angel had a busted arm because it was Nabila. "Oh," he said, and heard his own voice displace the ringing in his blast-shocked ears.

"Medic," she shouted. Then she stood up, sweeping out of Jim's field of view. "*Medic!*"

Vans came, and a larger truck, a SWAT vehicle.

He felt himself being moved, heard voices speaking quickly, saw an IV appear, and a needle, and knew that the needle was going to shut him down.

Nabila would not let them give her any pain medicine, not with Jim in such grave condition. His chest and stomach had been laid open when the detonators fired. He'd literally been cradling the bomb.

A colonel came into the meat wagon as the doors closed. "Is he gonna make it?"

Only a miracle would keep him alive, even this very powerful man. All bodies have their limits. She put her hand on his gray forehead. It was cold, dry. It felt as her father's had felt when he lay in his coffin.

She looked at Jim. Closed her eyes.

The colonel came up beside her. "He pulled this thing out," he said. "Those suppressors he placed were the key."

Ignoring the pain that her every movement sent surging through her own broken arm, she bent close to Jim. "Jimmy, you hear that?"

The vitals monitor's faint, slow beeping was his only answer.

From in front, she heard: "Hey, lights!"

She turned, looked between the drivers, out the front windshield of the

windowless ambulance.

The lights of the city were coming on, flickering at first, then erupting in long, glorious streams of street lamps, in dancing signage, in traffic lights, store windows, and houses. And in the light, cars began to appear honking their horns in joy, people who had been hiding came out from their houses, police cars whooped the delight that the young men and women inside felt.

Then, a high-pitched sound. Instantly both medics leaped into action in the careening ambulance, and Nabila knew that Jim's heart had stopped. She threw herself onto the floor beside the stretcher on which he lay, and gave to Allah the greatest, the strongest, the most heartfelt prayer of her life, that her life be one with God's will, and vowed to always be faithful, and to raise her and Jim's children in faith, if only she could have this chance.

On and on, the screaming, empty whine continued. One of the medics did CPR, his breath interrupting the deadly wail. Then they had paddles, and they got her to go back to the bench in the crowded space, and they shocked Jim. His body hopped, and there was a stench of burning hair, and they shocked him again.

He's gone, she thought. Just when she had finally found a way to love him, to accept what he had to offer, which was the toughness and compassion of a true soldier, his soul had departed.

But then the beeping started. Not slowly, not dramatically, but all at once.

"Oh, wow," one of the medics said. He looked toward her. "This guy's hard to kill."

"He's alive?"

"Lady, right now, the answer is yes."

EPILOGUE

Six months later, Nabila's arm was long since out of its cast, but Jim was just getting up on a cane, and would be on one for a while. His internal injuries were healing well, but the ankle hadn't been broken. He had somehow walked with a severed Achilles tendon, and healing that was going to take time.

Nabila drove them to the White House for the presentation.

There was still a great deal to be done, but an enormous danger had passed in these months. Beyond the bombs in Washington, Rome, and Las Vegas, there had been five other actual devices. The owners of this particular hard disk had also been in control of bombs in Paris, Madrid, Moscow, London, and Los Angeles.

Of course, there could be more still out there, and the penetration of the U.S. intelligence system was far from resolved.

Inshalla was harmed, though to an unknown degree, as the hard disk had given away few secrets about its personnel.

But for now, the full catastrophe was averted.

Italy remained in political chaos, and the European Union was striving to assist it in reconstructing some sort of functional central authority. Virtually every organized country in the world now had a continuity-of-government plan that addressed the danger of sudden decapitation.

Helped out of the car by a Marine in formal uniform, Jim was still getting used to the idea of being alive. Waking to find Nabby with him had surprised him, and he was still not absolutely sure that this new life that they were sharing was not, after all, some outpost of heaven.

He sucked in the sweet air of spring. "Smell the roses."

"Yes, Sir," the Marine said.

"I didn't mean you."

"No, Sir."

As they moved toward the entrance, Jim saw that a Marine honor guard was saluting them. He snapped one back. They did not lower their hands.

Jim and Nabila entered, and as they crossed the lower hall, Marines in their

dress uniforms and Secret Service in their black suits came to attention. “I thought it was supposed to be classified,” Nabila whispered, her shoulders hunched.

“Better keep our traps shut, then.”

They were conducted down to the West Wing Lobby, then immediately into the Roosevelt Room.

The long table had been removed, and the president, the vice president, and the secretaries of defense and state and their wives stood before the fireplace and the dramatic Tade Styka painting of Teddy Roosevelt as a Rough Rider.

When they began applauding, Jim at first thought somebody was behind them, and caused a ripple of laughter when he instinctively began to turn to see who it was. The two of them walked to the small podium, and the president stepped up to it.

He looked from one to the other. “I didn’t think we’d make it,” he said.

“Have we?” Nabila asked.

He cleared his throat and turned to the audience. “Not often in the history of mankind has there been so much owed to people who must remain hidden. I know that these medals are only a small token, but they are, nevertheless, the little we can offer you for a job well done.”

Traditionally, there was little said at the presentation of the Intelligence Medal. Some of the people in this room were not even cleared to know exactly why they were receiving it.

The president pinned Jim’s medal to his suit, and presented Nabila with hers. A few moments later, the ceremony was concluded and the medals were placed in their black felt boxes, to remain there until they would be buried with the recipients.

Afterward, the president, Jim, and Nabila went into the Oval. “Jim,” the president said, “I’ll get right to the point. You know that we’ve been making some changes in intelligence operations.”

“I noticed.” It wasn’t just change, though, not this time. There was a revolution under way. The whole system of classification was being revised, and stovepiping of information now carried with it serious penalties. Whole agencies and departments were being disbanded and reconstructed along new lines. The gigantic outsourcing process, so fraught with danger to the nation, was being ended, and the two private mercenary armies, as well as the various private intelligence operations, were being dissolved. Jim himself was no longer a contractor but once again a direct employee of a currently

leaderless CIA.

“Jim, I’d be grateful if you’d accept the Directorship of National Intelligence. Could you do that for me?”

“No, Sir, I could not.”

Nabila sucked breath. She knew that no such offer would be made to her. Muslims had work to do in the West, a lot of it. Repairing the damage would take generations. She was lucky her clearance hadn’t been pulled.

“There oughtta be a law against that—declining your president.”

“Sir, I’m needed in the field. It’s going to take years to identify and roll up this group that calls itself Inshalla. They’ve been hurt, but they’re still out there, and at last count, we’re looking at nearly a ton of plutonium still missing. Plus, we’re penetrated. I don’t think I’m competent to deal with that. I’m a frontline guy.”

“You underestimate yourself, Jim.” He turned to Nabila. “I hope you don’t.”

“I know my skills, Sir.”

“Good, because what I want you to do is build something for me. We’re starting a new directorate. Secret. We’re going to repair the damage done to the interdiction infrastructure. We’re going to find the people we can’t trust, once and for all, and get rid of them.”

She was silent. “It will be a secret directorate, so it’s politically safe to appoint me, is that it?”

The president smiled a little. “I can’t get you through a public advise and consent, obviously, Nabila. But if you’ll let me, I can help you serve in a capacity that’s worthy of your abilities.”

“I will accept the directorship.”

They left then, and while they were returning to their house, Nabila’s phone rang. It was the White House. A meeting was scheduled at seven tomorrow morning. Orientation and a discussion of policy.

“You’ve never had any operational training, have you?” Jim asked her.

“No Camp Swampy for me. Guns in the hands of Islamists—bad idea.”

“Then you should have some. Defensive driving. Neck breaking, perhaps.”

“Is this funny? Should I be laughing?”

“It’s funny. You should be laughing.”

“It’s not Arab humor.” Then she did laugh. “First Arabs blow everything up and the CIA director is fired. Then the new CIA director comes along and it’s an Arab. That’s funny.”

“You’re not getting that directorship.”

“Not officially, but you know that’s what it is. What it amounts to. Actually, it’ll have higher priority than CIA. Which is funny. Arab funny.”

“Why so?”

“Don’t you see? It’s purdah for me when I am rejecting purdah. My face is naked; my legs can be seen. But in my work, I remain in purdah. The woman is hidden!”

“It’s not American humor.”

“I was born here, remember! I am an American, Jimmy. Never forget it.”

“You’re an Arab-American.” He kissed her cheek.

“Careful, I will forget I am driving.”

That night, they lay discreetly together. Very late, she whispered to him that he must wait for her to bear him his children. She wanted this work. She wanted it very badly.

He held her, felt her strong heart beating against his, and loved her more deeply than he had thought it was possible for him to love, and went with her in the ship of the night, always now with her.

Syed Ahmad sucked his water pipe and watched the television. For the first time in history, Muslim leaders were in attendance at the investiture of a new pope. All eight Grand Muftis were there, part of what was said to be the greatest procession of religious leaders ever assembled, moving through the streets of Florence to the huge Basilica di Santa Maria del Fiore. Ahmad smoked and watched with the others in the small coffee bar. Soon enough, there would be a new Mufti in Saudi Arabia, also, and it was already being said that the pope would attend his accession.

Blasphemy. Apostasy. God would curse them all.

But when there was applause, Syed also applauded and smiled. Secretly, though, he sent constant prayer to Allah, begging that the fire be put to their skin, and again, and again.

As God made all, God also made this. Inshalla had failed God, so God was repaying them by allowing this obscene blasphemy to be spat in the faces of

the faithful.

Or perhaps there was another way to look at it. Perhaps this was purification. After all, Aziz had been corrupt, had he not, with his fast cars and his liquor? Who knew if he had truly given up his sins? Perhaps others besides Aziz had angered God also.

Syed was careful in his prayer and full of love and devotion. He could not be the reason that there had been this failure, and he did not think he was blamed. No, he was not blamed; otherwise he would never have been allowed to escape from Pakistan.

His journey had been harrowing, but at least its possibility had been contemplated and there had been planning.

He had initiated it by sending Eshan on a certain errand into the center of the city, one from which it was not intended that he would return. His identification, however, had come back, but now it had Syed's picture where Eshan's had been.

That easily, Syed had gone from being an Arab of fifty-three years to an American of forty-one years. A little dye had turned back some years, and he had left Pakistan using the American passport of his own clerk. So Syed was here in the United States as a proud citizen—or rather, Eshan was.

He had come a long way, flying first to Karachi, then to Paris, now here. There was nothing against Eshan. This was his homeland. There would be no questions here.

The customs officer had asked him, "What were you doing in Pakistan for two years?"

He had replied, "My mother was ill. I was helping her until she died."

"For two years?"

"She died at once. I was settling the estate."

"You have an accent." He was looking at a computer screen, seeing that Eshan had been born in this country.

"I do?" He had laughed. "I've been gone too long!"

"Two years just to settle an estate? Must have been a big one."

"Not big. Arab."

He'd laughed then, the hard young customs man. "Welcome home," he had said.

And so it was. The new Eshan would start his old life over. He had no living relatives here, his father having met with a tragic accident just before they were to be reunited at last. Indeed tragic.

Even under this new name and in this unholy place, he still bore the idea of the Mahdi in his soul. He would start everything again, yes . . . but slowly and carefully. Go back to putting a grain beside a grain, the way it had been with them always.

Perhaps there would be no further attempt in his generation. But there was the future, and God had all the time that existed.

God had all the time, but Ahmad was tired. His body and his bones felt stripped of life, exhausted, and he thought that death was not so far in his future. The truth was, the failure had broken him.

Perhaps he shouldn't even be watching this. Perhaps his rage and disgust would weaken him even more.

Another round of applause. Was there not a single faithful man in here? Not one sitting off, keeping to himself?

Not one.

It was early yet here, but the sun was shining in Florence, on all the great men of the world, kings, presidents, prime ministers, and all those apostate and faithless religious leaders, strutting their lies.

Even so, Ahmad was at one with God's will. Not at peace inside himself, far from it, but certain, still, of heaven.

In fact, as the smoke relaxed him, he put on a smiling face for those around him. Agents, he assumed, were everywhere among the Arabs, noting everything. *Why is that one not smiling? Give us his name. . . .*

On the far wall there was a faded portrait of the old Saudi king Faisal, may God forgive him. In the back, a mural of the Arabian desert. But Ahmad was not really Arab; he was Baluchi, a man used to seeing his wealth stolen by others.

He listened to the fawning voice of the Al Jazeera reporter, a slick-looking Kuwaiti, grinning in his ridiculous Western suit of clothes. Why wear such things, the clothing of barbarians?

"The new pope has taken a name out of a famous prophecy. Cardinal Arinze, the first African pope, is to be Peter the Roman, Petrus Romanus. In the prophecy of Saint Malachy, Petrus Romanus is the last pope, but Peter the Roman has a message to add from the words of the Christian Book of the Revelation of John 'I am Alpha and Omega, the First and the Last.' He says, 'The last is also first, and the last Roman pope shall also be the first pope of a new church, in a new era of peace, that will be everlasting in the world.' This is the message he gave upon his triumphant restoration of the ancient

Catholic papacy.”

That was enough. Ahmad left. He could bear no more. You break their city, you leave it burning—and here they are!

Ahmad had no television in the small room he had taken above the shop of a leather-goods seller, but he certainly didn't want to see more of this. When he needed news, he looked in the papers or listened to the radio.

He had some dates and cheese from yesterday, and would take this for breakfast, with an orange soda.

He went slowly up 3rd Street, in a whipping morning wind, and saw that the trees were touched by buds and there were petunias lifting their heads in the small flower boxes that so many people kept in their windows, here in Bay Ridge. He thought that he would like Brooklyn, despite the cold. He had crossed many borders, and passed through many lands, and dark. This one, though, smiled its innocent American smile, and hoped only that the traveler would accept the welcome that was offered at every turn.

Yes, Brooklyn was a good place for him to be. He would be safe here.

—message in a crop formation found on a farm in the United
Kingdom, August 2002

CHAPTER ONE

2002

Flynn reached for her and she wasn't there. Her side of the bed was cold and he was a detective, so he came immediately awake.

"Abby?"

He rolled out of bed, slid his feet into his slippers, and set off into the midnight house. It was November 16, 2002, the time was twelve-forty, the house was cool but not cold, there was no obvious sign of foul play.

"Abby?"

Hurrying now, he went downstairs, turning on lights as he passed the switches. By the time he reached the kitchen, he knew that she wasn't in the house and that there was no point of entry that would suggest a forcible kidnapping. In any case, he couldn't imagine why she would be kidnapped or by whom. But he'd been a cop for six years, a detective for two. In that time, he'd made a couple of hundred very bad people very mad, and some of them were people who might do just about anything.

Going back over his cases in his mind, though, he couldn't see a revenge kidnapper, at least, not one that was presently at large.

Just to be thorough, he checked the basement. They were in the process of finishing it, and it was full of boxes of ceiling tiles and Pergo flooring.

She wasn't there.

All doors were locked, all windows were locked. The alarm system was armed. So nobody could've come in here, not without all hell breaking loose.

She'd gone out. Had to have.

He called her cell—and heard it ringing upstairs. He went up. It was on the dresser but not in its usual place in her purse. Her purse was gone.

The first cold tremble of fear passed through him. Something was obviously very wrong here. Abby didn't get up in the middle of the night and go out. Never, not without telling him.

Following the rules, he dialed 911. "This is Detective Errol Carroll. I'd like to report my wife, Abigail Carroll, missing. Probable foul play."

The 911 operator responded, "We have a car moving, Flynn."

Next he called his boss, Captain Edward Parker. "Eddie, it's me, I'm sorry about the time. Abby's gone missing."

As the reality set in, a terrible, frantic urgency swept him.

"Okay," Eddie said. "Okay. Any evidence of an entry?"

"The alarm system is still on. Nobody broke in."

Silence. Flynn could practically hear Eddie thinking. They'd known each other since they were kids and they'd both known Abby almost as long. Both had dated her. Flynn had won.

"You guys doin' okay?" Eddie asked. It was his way of broaching the question that was going to be on everybody's mind.

"Eddie, this isn't a marital thing. Somebody got Abby." He knew that every word had to be measured tonight, because if he wasn't careful, this would get knocked down to an adult missing person real fast. "Look, I can't stay in here. I gotta roll."

"Wait for the uniforms. I'm sending a detective right now. Mullins. Tom Mullins, he's duty."

He didn't much like Tom and Tom didn't much like him. But Tom did his job. Sort of. "Okay, I'm gonna back him up, though. He's not gonna drop this down to an MPA because it's not an MPA, Eddie."

"You got it."

There came a knock at the front door. Decisive, loud, the way cops knock.

Where are you, baby?

He disarmed the alarm system and let the uniforms in. It was Willy Ford and a deputy sheriff he didn't know, name of Menchaca. "Hey guys, thanks for doing it so fast. I got a missing wife. Almost certainly a kidnap."

"Jeez, Flynn, Abby's been kidnapped?" Willy had flirted with Abby at the Memorial Day barbecue last year. Lots of laughs.

"Looks like it."

"Is there a point of entry?" Menchaca asked.

"Not that I can see."

A car pulled up and Eddie got out. He hurried up the walk, his belly bouncing, his gray hair fluttering in the night wind. His fly was down. You could see pajamas in there. Flynn had a damn good friend in Eddie.

"Anything?" he asked as he came in.

"We need prints out here," Flynn said. He shuddered. He was freezing cold on a hot night. "Look, I can't stay here. I'm gonna drive."

"No you aren't. I got the troops moving. Every car's on, everybody's looking."

Eddie was right. Flynn's going off into the night wasn't going to help anything.

"Who comes in through an alarm system?" Eddie asked.

"A professional."

"You drop time on any professionals? Time that they may have served?"

Cops were routinely informed when their collars were released from prison. "Nobody."

"What about ever?"

“You know my collar history.”

“Yeah, you got a fair number, buddy. Some bad’uns.”

“Nobody special, Eddie. Nobody—” He gestured toward the emptiness of the house. Another wave of fear was hitting him. He imagined Abby being tortured, buried alive, raped.

He wanted to run through the streets calling her name. He wanted to drive and drive, searching every crack house, every flop, every crib he knew. She was out there right now. Abby was out there and suffering *right now*.

Detective Charlie Mullin came in. “Where are we?”

“Doing an APB,” Eddie replied. “Get me a picture.”

Flynn strode across the living room and grabbed the photograph that stood on the mantel. It was a studio portrait taken two years ago, for her father while he was dying in St. Vincent de Sales, choking out his lungs, poor damn guy with his cigarettes and his unfortunate opinion that the dangers were overblown.

Eddie put the picture down under a lamp and took a few shots of it with his cell phone. He then took a verbal description from Flynn and inside of three minutes the all-points bulletin was appearing on police computer networks all across the state.

Flynn knew the statistics. Every hour that passed, it was less likely that she would be found.

“You have any idea when this happened?”

“I might.” He went to the side table in the hall and dug out the alarm system’s instruction book. “The system might tell us the last time it was disarmed and rearmed.” He glanced at Eddie and Mullen. “He had the code. Had to have.”

“Who had it?” Mullin asked.

Flynn shook his head. “Me and her, far as I know.”

“Parents? Brothers and sisters?”

“No brothers and sisters. My mom and her folks have passed. My dad doesn’t have it.”

“You’re certain?”

“Unless she gave it to somebody, which I very much doubt.”

“She didn’t,” Eddie said. “She was way too smart and too careful.”

Flynn input his code, then followed the instructions. In a moment, the answer appeared on the system’s LED screen. “Three thirty-two,” he said. Then the next figure flashed, the time it had been re-armed. One minute later. “This can’t be right,” he said.

“What time?” Mullen asked.

“Within the minute. Three thirty-three.”

There was a silence. Then Mullin said, “We need an inventory, Flynn.”

“She was kidnapped!”

“Somebody came in here and took her in under a minute? Who would that be?”

“Hell if I know!” He turned to Eddie. “For God’s sake, don’t cancel that APB, don’t cancel anything!”

Eddie held out his hands, palms up. “Hey, I got the county choppers up. I’m goin’ all out, Flynn.”

This was a small police force in a small city, with a compliment of just thirty personnel. They liked to think that they were good, but at the same time, there were a limited number of challenges. A murder every six weeks or so, a meth lab or crack house a week on the south side, a thin but steady stream of family disturbances, assaults, burglaries and robberies.

“I gotta admit, I can’t remember the last time we had a kidnapping,” Eddie said.

“Nineteen ninety-six. Kid named Angela Dugan, fifteen years old. Turned out to be her boyfriend. They were brought back from Tijuana—married.”

“So, you got any ideas yet?”

He didn’t. “Let’s canvas,” he said. “Before people take off for work.”

“It’s five.”

“Let’s canvas.”

It was cool and still outside, the silence broken only by the busy clatter of lightbars left running. The morning star hung low in a blood-red eastern sky. Up and down the street, lights were coming on. Across the street, Sarah Robinson stood on her front porch in her robe, her arms crossed on her chest.

Flynn gazed across at her. “She and Abby are planning to have their babies together.”

“Abby’s pregnant?”

He started across the street. “She hadn’t said anything.”

In times of extreme stress, details come crowding in, the crisp scent of the air, the soft crunch of grass under your sneakers, the distant pumping clatter of one of the county choppers patrolling above the silent streets.

“Are you guys okay?” Sarah asked, her voice constricted, her smile choked back into her face.

“Abby’s missing.”

“Oh, Flynn, oh my God.”

“Did you see or hear anything?”

She shook her head. “The cars woke me up. Let me get Kev.”

“I’m here,” Kevin said, coming out from behind her. “Same story from me. Nothing.”

They did the Monteleones, got nothing but sadness from this gentle, elderly couple.

“The next house is Al Dennis,” Flynn said. “He’s often up at this hour. I’ve seen his lights on when I come in off night duty.”

“Good.”

This time, though, Al had been sound asleep, and he came to the door bleary and blinking, pulling a terry-cloth robe on over his pajama bottoms.

“Flynn?”

“Al, Abby’s missing. She’s been kidnapped. We’re trying to find out if anybody noticed anything unusual during the night.”

“Unusual?”

“Lights, voices, a vehicle passing the house more than once, anything like that.”

Flynn saw him look into himself, a sign that detectives come to know, that somebody is genuinely searching their memory.

“Lights about three. A car out there.” He gazed at Flynn. “I thought it was you, Flynn.”

“Why was that?”

“I just assumed it was you coming off duty. I guess it was like, you know, the car stopped there. At your place. I didn’t hear your garage opening, though. I do remember that.”

“Did you see the car?” Eddie asked.

Dennis shook his head. “Sorry. I just—a car came up and stopped.”

“Did you hear it pull away?”

Again, he shook his head. “I got the impression the lights had gone out. Like I said, you coming home. That’s what I thought.”

“A time, Dennis?”

“After three. In there.”

He’d heard the car but hadn’t seen it. “Do you remember anything about the engine noise? A large car, maybe? A truck? Could you tell?”

“God, Flynn, I am so sorry. I wish I could help.”

As he thanked Dennis, he realized that he was beginning the rest of his life, and it would be a time of wondering and suffering and the pain of love that has been stolen, but not lost.

As he expected, the rest of the canvas turned up nothing.

Late in the morning an FBI agent came up from Austin to Menard, a kid named Chapman Shifley. Agent Shifley wore a suit, cheap but carefully pressed. He had a burr haircut and the fast eyes of someone

who might have a special forces background. He introduced himself, jamming his hand out and pumping Flynn's arm, the gesture an unconvincing parody of manly sympathy.

Only one assignment mattered to the FBI in Texas, and it wasn't this. Either you were on drugs and gangs or you were essentially nowhere. This assignment was nowhere.

The first thing he asked for was an inventory.

"I haven't done that. Except that her purse is missing."

"Could we just do a little looking around," Shifley said, not unkindly. He wasn't insensitive.

"Please be my guest."

The house was filling up with forensics personnel, "Lady" Christopher with her careful hands, her supervisor Jamie Landry, who hailed from the Evangeline Country over in Louisiana and made remarkable crawfish bisque.

It would take hours, but the two of them would methodically work over the entire house, looking for fingerprints and subtle evidence of some kind of skilled break-in.

As he climbed the stairs, followed by Eddie and Shifley, Flynn found that he didn't want to go back into their bedroom. He never wanted to go back in, not until Abby was safely home.

The cheerful curtains, the soft blue wallpaper, the sleigh bed—it was all as familiar as ever, but it now seemed miraculously beautiful, like a room from some past world found in a museum.

Landry came up and handed out latex gloves. "Don't move things more than you absolutely have to," he said.

Nobody replied.

Flynn rolled on his gloves and opened Abby's top drawer.

Immediately, he saw that clothes were gone, two or three bras, socks, underpants.

"Everything in place?" Shifley asked.

“I’m not sure.”

“Because that looks like somebody took stuff outa there.”

“It sure does.”

In the closet, he found her backpack missing. Also, her white sneakers were gone, and some shirts and jeans.

If he’d been working this case on a stranger, he would have said that they’d left voluntarily.

“Flynn,” Shifley said, “were you guys doing okay? I mean, the marriage?”

“She didn’t run out on me.”

“I have to ask.”

“Yes, okay! Yes. We’re happy.”

“Because that’s not what this looks like.”

“Then it’s a setup! She’d never walk out on me. She—we—we’re in love. It’s a happy marriage.”

He knew the Bureau. He knew that they were going to back this down to an adult missing person, probable walkout. That would give the case maybe two more days of search time.

Eddie said, “They’re happy.”

“Yeah, I get it.”

His tone said that Flynn was right, and in that terrible moment, he could almost feel her soul flying away from him.

Of course, the locals didn’t quit. Eddie didn’t quit. But police forces live in a strange sort of a straitjacket. A local Texas police force has access to information from other Texas authorities, but not other states, not other countries. To really pull down a sophisticated kidnapper, you need the reach of the FBI with its connections around the world, and the co-operation of Interpol. The motive for stealing beautiful young women, if it was not perverted, was often nowadays for sale into slavery abroad. A twenty-two-year-old blond like Abby could bring big money in hidden slave markets.

By the time Landry and company had finished, Flynn had been awake for more than fifty hours. He was not in grief, but desperation. It wasn't as if Abby was dead, it was as if she was waiting for him. Abby trusted him. She would believe that he would do anything to find her. She would have faith that he would come.

By sunset on the third day, the house was empty and quiet. Not a single trace of useful evidence had been found. Abby, her backpack, her purse with her ID and a little money in it were all gone, along with three changes of clothes.

His wife had not walked out on him. His wife was out there somewhere, in the hands of a monster. He chose not to consider the possibility that she might be dead, and in so doing joined many thousands of people waiting every day of their lives for closure that never comes.

He had nightmares that she had been buried alive.

He had nightmares that she was being starved.

He had nightmares that she had been sold to some Arab prince.

On and on and on it went.

Every morning at five, he ran. He ran through the quiet streets of his neighborhood and down into the Railroad District where the great grain elevators stood, past their ghostly immensity, past the long lines of hopper cars dark in the early dawn, past the heaving engines with their great, staring lights, past the café with its warm windows and steaming coffee. He ran like a man under threat. Over time, he became narrow and hard, his body steel cable.

He became a master of the handgun, he learned fast shooting and target shooting and he became known among the shooters of West Texas as a competitor to be aware of. He learned tae kwan do and karate, and learned them well. He went beyond the normal investigative skills of a police detective, venturing into areas as diverse as wilderness tracking and the use of sophisticated bugging devices.

His colleagues admired his skills and feared his obsessive

dedication to his cases. When he was on a kidnap, he routinely worked twenty-four hours at a stretch and slept three. He could have risen in the department to a captaincy, but he prevailed on Eddie to leave him a lieutenant so that he wouldn't get sucked up into administration.

As the years wore on, he gradually turned his den into what became known on the force as the Abby Room.

Even though the FBI had abandoned the investigation before it was three days old, Eddie did not abandon it. Far from it, he hid Flynn's case time for him, allowing him to continue looking for his wife for two more years.

Finally, he quietly and sadly eased it into the cold case file. This meant that nobody could be assigned to it without his personal approval.

Still, though, Flynn's investigation continued. He became the most knowledgeable expert on kidnap in the State of Texas. Every force in Texas consulted him. The Texas Rangers consulted him. He solved case after case after case. But the Abby Room only grew more full of clippings, of clues, of false leads. He slid his unending search for her ever deeper into his caseload, accepting Eddie's silent compliance with equally silent gratitude.

Their bond of friendship deepened. Eddie had loved Abby, too. He had sat on the summer porches of youth with her, also. He had never married. Instead, his love affair with her had continued down its own lonely path, and he had watched with pain and joy as she and Flynn made their life together. When he went to their house for cop nights, he'd watch her out of hooded eyes. She'd had a dancing heart, had Abby Carroll, and looks and ways that no man could ever forget.

Not often—maybe once or twice a year—Flynn ran into a case similar to Abby's, an apparent walkout that seemed to him to be something else. Time and again, the FBI abandoned these cases after a few days.

Flynn did not abandon them.

Somebody was out there taking people, he knew it, somebody very clever and very skilled.

Somebody was out there.

CHAPTER TWO

The Night had come and gone, November 16, as always, the worst night of Flynn's year.

As he always did on the anniversary of Abby's disappearance, he had spent it in the Abby Room, pouring over files, seeking some new lead hidden in some record he hadn't considered before.

As always, he'd found nothing. Her case was dead cold. Still, though, she lived on within him. His side of the conversation of life continued.

Sarah Robinson's little girl Taylor was in grade school now. He had never asked her if Abby, also, had been pregnant, but every time he saw Taylor, a question came into the edge of his mind: were there bones somewhere of the woman he had loved, and tiny bones tangled within them?

He'd never remarried, never even considered it. After seven years it would have been legal, but he would never do it, not until he knew for certain that she was no more.

Eddie came out of his office and headed his way. His gut was rolling, his dark glasses bouncing in his breast pocket. He was coming fast, his scowl as deep as a grave.

Flynn was hoping that he was headed anywhere else, but he did just what it looked like he was going to do, and dropped down into the old chair beside his desk.

He said, "Special Agent Diana Glass wants to talk to you regarding an investigation you've been pursuing."

"The Mercedes case? The meth lab on Fourteenth Street?"

"The Carroll Case. Abby."

Flynn said nothing.

“She even knows about the Abby Room,” Eddie continued. “She knows you were interviewing Charlie Boyne again yesterday.”

The Boyne case was one of the other disappearances that were mirror images of Abby’s. “I wasn’t.”

“ ’Course you were.”

“Dallas PD and the FBI closed the Boyne case years ago. So I wasn’t interviewing him, as there is no case on the books.”

“Then let’s say you were pursuing your hobby of refusing to drop closed cases.”

“Who the hell told her?”

“Not me. I just sit in my office and wait for the parade to go by. Which it never does.”

“There was a parade. When the Tomcats won the semi-finals.”

Eddie looked blank.

“The Tomcats. Menard High’s football team on which you once served as a wide receiver. Last year they reached the semi-finals and the school decided on a parade. You were there. You rode in the lead pickup. In a uniform with a big cap. Very impressive.”

“Is that sardonic or sarcastic?”

“Both. Anyway, where is Agent Glass from, Dallas or San Antonio?”

“She emailed me for permission to talk to you about disappearance cases in general. Pick your brain, be my guess.”

“Okay.”

“Could be a break, Flynn, if the Bureau’s gonna finally do something.” He paused. “Thing is, she’s got a Gmail account.”

That was odd. “So she’s not the Bureau? Did she name an agency?”

“She did not.”

But who else would it be? ATF? No, no interest in missing persons there. Border Patrol? Possibly. “I’ve looked for evidence of border transport for years. So maybe she’s Borders.”

Eddie Parker said, "You're gonna find out. Right now."

A woman in a suit stood in the doorway of the squad room.

"My God," Flynn muttered.

Her hair was so dark it made her skin look as pale as marble. She wore a black, featureless suit that shimmered like silk. Her eyes moved to Flynn, then to Eddie, then to back to him again. Then the most beautiful woman Flynn had ever seen in his life strode through the dead-silent squad room. She stopped at his desk.

Eddie had taken off. His office door was already closing.

"Lieutenant Errol Carroll?"

He stood up and shook an unexpectedly powerful hand. Her eyes, emerald green, drilled into him. She was all job, this woman. Beauty, yes, but in service to a cause, which was very clear.

"Lieutenant, we need to talk."

He gestured toward his chair.

"Privately."

Silently, he led her toward the conference room. He could see Eddie lurking way back in his office, watching through the blinds, not wanting to get anywhere near this. He didn't want a single thing to do with this ice sculpture, either. She might as well have "Bad News" tattooed on her forehead in big red letters. Expensive clothes like hers did not go with garden variety FBI personnel, or any ordinary personnel at all. No, this lady came from way up high where the dangerous people lived.

After they were in the conference room, she shut the door. She turned the lock with a decisive click. He hadn't ever seen that lock used before.

"Sit down, please."

"What's this about?"

She reinforced her statement with a sharp gesture, and he found himself dropping into one of the old wooden chairs that were scattered around the scarred conference table.

She went into her briefcase and pulled out a tablet computer. She tapped a couple of times and he could see a file appear. Like many a detective, he was good at reading upside down. He saw his own name on it, and his picture.

She began flipping through the file, touching the screen with a long finger every time she turned a page.

“Do I need a lawyer?”

She stopped reading and looked up. “You have investigated twelve of them, starting with your wife. Each time, you’ve put in a request for more investigative support. May I ask you why?”

“May I see a cred?”

“You’re suspicious of me?”

He did not reply.

She held out an FBI credential that identified her as Special Agent Diana Glass.

“Satisfied?”

Not in the least, but that was beside the point. First off, the credential could be rigged. Second, he would never know the truth—at least, not until it was too late to save himself from whatever dire fate she had in mind for him.

“What do you want from me, Agent Glass?”

“First off, you’re not in any trouble. And I’m Diana, Errol.”

“Flynn. People call me Flynn.”

“Flynn? That isn’t in your file.”

“Errol Carroll? My folks had a tin ear. Flynn is a joke, as in Errol Flynn.”

She gave him as blank a look as he had seen in some time. His guess was that she’d never heard of Errol Flynn.

“Just call me Flynn without the joke.”

“We want you to help us nail the bastard whose been doing this, and we want you to start right now.”

“Sure,” he said carefully. “I’m ready to start any damn time. But why the change of heart?”

She got up and went to the door. “Tomorrow morning at eight. Be prepared to travel.”

“Travel? Where? For how long?”

She froze. She turned. “This is going to happen again, Lieutenant, and soon. With all the effort you’ve put into your investigations, the expertise you have developed, we believe you can help us prevent the next crime. So to answer your question, we’ll be going wherever we need to go, and it’s going to take however long it takes.”

She left.

He stood staring at the door. What the hell had just happened? As he walked out into the squad room, he saw her striding toward the front lobby.

Guys were being careful, pretending not to be absolutely fascinated with whatever had just gone down.

“I don’t know,” he said into the silence. “I have no idea.”

Eddie burst out of his office. His neck was pulsing, his face was crimson. This was not a man with a temper, but he was on full burn right now.

“What in goddamn hell’s the matter with you,” he snarled.

“Nothing.”

He held up a fax. “They’re telling me you’ve requested an indefinite leave. Thanks for this, ole buddy, ole pal. Next time just damn well tell me. Discuss it with me. Because we’ve been friends for years, jerkoff that you are.” As he talked, he waved the fax.

Flynn snatched it from him. And his jaw nearly sank out of sight.

“I didn’t know about this.”

“You didn’t ask for a leave?”

“ ’Course not. Why would I? I like to put creeps in jail. It’s my damn vocation.”

“So if I tear this up, you’re back here in the morning?”

At that moment, his phone vibrated with an incoming text. He read it. “You have a chance to catch the man who kidnapped Abby.”

Her timing was excellent, he had to say that.

“No, Eddie, actually the request is good.” He could hardly believe what he was saying, but he was doing it and as he did so, his conviction was growing. “The request is good.”

“I can’t pay you. I’d like to but I can’t.”

He didn’t spend much money, hadn’t since Abby. So he could handle the absence of a salary. “I’m sorry, Eddie. I have to do this.”

“Yeah, I get it. But clean out your locker. If the janitor has to scrape any rotted doughnuts outa there, you’re gettin’ a bill.”

Their eyes met. His friend was there for him and nothing more needed to be said. Eddie turned away and Flynn did the only thing left for him to do. He gathered up his few personal items and left the way cops always left on their last day, with a cardboard box in their arms and a few good-byes. A police force is like a lake. When you get out, you don’t leave a hole.

By the time he was unlocking his car, another guy would already have his current cases. But not the Abby Carroll case, of course. Not the Boyne case, and not any of the other missing persons cases that had gone cold.

He drove home in the quiet of the midday. This was all insane, of course. He never should have done this.

“Abby,” he said into the rattling of his old Malibu, “I’m coming, babes, I’m coming.”

CHAPTER THREE

As soon as he got home, Flynn texted Diana Glass that he was ready to go, but received no reply. He did an Internet search on her and found nothing. No Facebook page for a Diana Glass that looked like her. No Twitter account. A check of the National Law Enforcement Roster also turned up no Diana Glass, meaning that she'd never been in a local or state police force. His access to FBI records was limited, of course, but he'd emailed their personnel department a verification check on her from the office. Usually, you got an answer in a few minutes, and usually it was "verified." FBI creds were not easy to come by and not easy to forge. If hers had been false, he would have gotten an urgent call, he felt sure. They would investigate an imposter immediately.

So she was for real, but for whatever reason, they weren't going to be releasing any information about her.

He went into the Abby Room. He'd spend the rest of the day looking over his cases. Of course, there had been many thousands of adult missing persons in the years since he'd lost her, but only twelve fit the precise criteria that interested him: an apparent walkout without any sign of forced entry, and a spouse or loved one who insisted that there had been no motive for the person to leave, and had credible support for the assertion.

It was a surprisingly rare situation, so rare that to Flynn it was an M.O.

On the walls were pictures of Abby, of the house as it was then, photographed in methodical detail, of the neighborhood, all the cars, all the houses.

There were maps of the other cases, blueprints of each house from

which a victim had been abducted, with all the information from every crime scene intricately cross-referenced.

Abby smiled down at him, her hand shielding her eyes. The shot had been taken at Kitty Hawk in 1999, the summer of their courtship. She had been wearing her blue shorts and tank top. She'd been laughing and you could see it in her face. Later, back at their rental, he would unsnap that tank top and slip it off and stand on the tan carpet in the bedroom. She would seem, when she came close to him, to move with the lightness of a woman made of air, and the moment he had looked down into her eyes on that warm afternoon would remain engraved in his memory forever.

Sitting in meditation, he closed his eyes. "To study the self is to forget the self," he whispered into the silence. That was where he always started. Then he took his attention out of his mind and placed it on his body.

He felt his heart rate slowing until the beating seemed almost to stop. The cool of the room touched him so closely that it felt as if fingers were caressing him, fingers that were both intimately alive and as stiff as death.

He had understood the deep message of martial arts training: you cannot gain the freedom to fight at your best until you make friends with your death.

Beyond fear lies the balance that enables the blow to be perfectly struck, or deflected with perfect grace.

You never quite reach that spot, but you never quite fail.

He sat among his records, a naked man in a cold room.

He sat for a long time, letting go of his thoughts, his concerns, his questions.

As the stars made their nightly journey, he traveled deep within himself, sitting and flying at the same time. His heartbeat was now little more than a memory.

Other names and other faces came back to him: Claire Marlow, Hank Feather, Lucinda Walters, Gail Unterwager, George Nathan

Chambers, Kimberly Torgelson—the list that haunted his dreams.

All had disappeared at night. All had taken a small number of personal belongings. Gail Unterwager left three young children and a devastated, uncomprehending husband. So had Lucinda Walters. George Chambers had two sons and a seven-figure bank account, a wife that loved him and a flawless life. Kimberly Torgelson's little boy had been two and her husband had been completely shattered.

Yeah, buddy, I get it. Welcome to hell.

Three o'clock came. Outside the wind whipped the big old trees that surrounded the house, causing skeletal shadows to dance on the lawn. In the distance, an owl hooted, its voice flying in the gale.

When the hour grew late and still sleep did not come, he did what he always did at times like this, and walked through the house thinking and remembering, trying to understand how somebody could have come in and taken her out of bed like that and then carried her off, and all without her police officer husband noticing a thing.

Flynn was not a heavy sleeper now and he hadn't been then. So how had it been accomplished? To this day, he didn't even have a theory, not for any of them and especially not in Abby's case.

Once or twice, he had dreamed of her so vividly it was as if she was back. Once, the kitchen door had opened and he'd heard her voice calling up, "I'm home," her tone bright. He'd run downstairs, run like the wind, to find her standing in the dining room. "I'm all right," she said, and there had been a mixture of sadness and love in her face that had made him ache.

He had woken up, then, still in his bed.

Just before dawn his cell rang, startling him so thoroughly that he almost dropped it and lost the call.

It was Diana Glass.

"Can you come to a meeting?"

"Now?"

She gave him an address in the warehouse district near the grain

elevators. He agreed to go and ended the call.

He called Eddie. It rang. Again. Again.

“Whassa matter?”

“It’s me. Glass just called. She wants me to meet her on Avenue Twenty.”

Silence.

“A warehouse, Eddie, at four in the morning.”

“So you called to wake me up?”

“I did.”

“You want a squad car? Protection?”

“I want you to know where I went and when.” He gave him the address.

“Okay, got it.”

“In other words, if I disappear, it is not voluntary. You got that? *Not* voluntary.”

“If you have reason to be suspicious of this woman, don’t go alone.”

“I ran a verification check on her and I’m not sure what to think. The Bureau never came back to me.”

“That is odd.”

“Yeah, and she said eight in the morning. It’s four in the morning.”

“I noticed.”

“So don’t send anybody, but watch my back for me.”

“You’re gonna carry, I assume.”

“Oh, yes.” He headed upstairs, pulled on some jeans and a sweatshirt, then strapped on his gun and threw a jacket over it. He splashed his face, but didn’t take the time to shave. Then he took an equipment pack off its shelf in the closet and took it with him. It was all stuff he’d put together himself, a manhunter’s kit.

It was still deep night, and colder than he’d thought it would be, with wind coming steadily down from the north. As he opened the

garage, the rattling of the door echoed through the silent neighborhood. No lights came on, though. Everybody knew that he kept irregular hours.

The predawn air was icy silver, and the tires crunched on frost as he backed down his driveway. The Malibu's heater screamed.

Cold, hot, his body could absorb whatever came its way.

He had worked himself into a new man, as hard as stone, as quick as the air, a man too silent inside to feel fear. He'd practiced with his pistol until it seemed an extension of his body. He did not push, he did not heel, and hours of exercise ensured that his wrist would never break in anticipation of recoil. He was comfortable with the standard issue Glock, but also with the .357 Magnum, and, of course, with the old Colt Positive, known as the Police Special.

He did not go straight to the warehouse—never that—but rather made his way through the streets of Menard, the pretty, average city that had been his born home and would always be his home.

He passed Abby's girlhood house, now owned by the Dickson family. Along with Eddie and half the other guys in town, he'd courted her on that porch. He'd come to it at midnight, his adolescent body filled with desire, and swung alone on the old porch swing until her dad had come out and swung with him. Bill Baumgartner had understood a lot of things. When he gave Abby away, tears had touched his eyes as a smile had wreathed his face.

Good people, Abigail and her folks.

Bill and Amy were in Menard Memorial now, and when he went to see them on Sundays, he always told them the same thing, "I am searching."

For the kidnapper and killer.

For Abby's soul.

For the un-lived life of the child she might have been carrying.

For the truth, cold and clean.

The warehouse was one of the tin-siding jobs that looked like a

gigantic barn. On its side was a faded sign, unreadable.

He pulled his car up and got out. There were no other vehicles around.

This was looking more and more wrong. Very wrong. But if she wasn't law enforcement, who could she be? Surely the kidnapper wasn't a woman—this woman.

He been a detective long enough to know that the unexpected is usually the thing most to be expected.

He walked up to the door, which was unchained, the locks thrown back.

There was danger here, no question.

He went in.

CHAPTER FOUR

The air was cold and thick, smelling of mold and wet cardboard. His eyes were good in darkness, but not this good, so he put on the infrared glasses he had designed himself, cutting the lenses from a couple of Hoya RM9s. Then he pulled out his infrared illuminator and methodically swept his surroundings. A sodden mass of cardboard boxes appeared like a distant mountain range. Closer, he saw a jumble of ruined bicycles. Behind them were rows of dead Christmas poinsettias in plastic pots, also dry aquariums.

There used to be light manufacturing here in Menard, little factories that used wetback labor to make cheap goods that would be sent out to California on the railroad. No more.

Debris was what he had expected. It was what he did not see that was troubling him. The sense of abandonment had changed. Now, he felt the presence of watchers. So far, he hadn't spotted them, but he knew that this was only because he hadn't looked in the right place.

With a movement as smooth and natural as taking a breath, he slipped his gun into his hand. Out of habit, he'd brought his Glock. Should have taken the Magnum instead. He was off duty and officially on leave, so it had been his choice.

"Hello," he said. "My name is Flynn Carroll. You asked me to come here."

Then he knew that somebody was behind him. It wasn't a hunch this time, or an instinct. He'd heard the whisper that jeans make when they rub against each other.

Sucking in breath, then slowly releasing it, he went deep into himself, blanking his chattering mind by concentrating his attention on the sound. In another moment, he was going to need to move very,

very fast. He would have one chance only.

Another sound came, this time off to his right. So there were at least two of them, and they were maneuvering to place him in crossfire.

“Let’s stop this right now,” he said aloud. His words were followed by a silence. Were they surprised? He thought not. He thought they were very far from surprised, because he could see a third one off to his left, a figure that was more slight than the other two. Could be Diana. “Look, I’m gonna end up using this thing if somebody doesn’t show themselves real soon.”

Outside, the wind shook the thousand windowpanes and made the tin roof jump and rattle. The massive late season blizzard that was bringing the arctic to Montana was now also plunging southward into Texas.

“Flynn, listen carefully.”

Diana’s voice filled the room, a whisper from everywhere.

“Everything is good, Flynn. We’re all friends here. We just need to be very, very careful. This is all routine safe practice in this unit.”

“You’ll get used to it,” a male voice drawled.

A hand came down on his shoulder—and he took the guy down with a standing grapple, a simple jujitsu maneuver for which his assailant was, to Flynn’s surprise, entirely unprepared.

“Keep back,” Diana snapped. “Don’t challenge him.”

The guy he’d taken down got up. His face was hard to see in the darkness, but Flynn sensed a scowl of rage.

“Sorry,” he said.

All he could see of the eyes were shadowy sockets, but he could feel the anger.

“Flynn,” Diana said, “please give Captain Larsen your pistol.”

“No.”

“Flynn, you’ve come in here heavily geared and with a drawn

weapon. Of course we're being careful. Now, calm down. Give him the gun."

Flynn thought about it. He didn't move.

"We need to fly before dawn. We have a long way to go and time is of the essence. If you want to help prevent another disappearance and maybe stop this perp, now's your chance."

"I don't like total strangers coming up on me in dark rooms."

"This is a special unit, Flynn. We're operating under our own set of protocols. We've set up an orientation for you downstairs." She turned on the lights.

He lost his night vision equipment. Nobody else was showing a pistol, so he put his away. But he did not give it up.

"Thank you," she said.

At the far end of the space there was an old iron spiral staircase that had probably been ordered from the Sears Catalog a hundred years ago. He followed the rest of them down, and found himself in a basement that was just as dark as the floor above had been, but felt smaller. Not for long, though. A match flickered as Diana Glass lit a gasoline lantern—and hung it on the barrel of some kind of old tank. The thing wasn't in US livery and it was dusty, but it looked like it had never been driven.

"The Korean War," she said, waving a dismissive hand toward it. "They were on their way to San Diego when the conflict ended. Great shielding if you worry about listening devices."

"Which you do?"

"That would be correct. Flynn, first off, I want you to understand that there are many things that make this unit special. The first of these is that we're all just the same as you. We all have a missing loved one."

"None of 'em walked out," a male voice said. "My Cindy did not walk out."

"Louie Lander, LAPD," Diana said. "Just like you, just like the rest

of us, he's done a hell of a job on a lot of missing persons cases."

Louie Lander had a tight-to-the-skull faces and a hard, sad smile. "Just like me," Flynn thought, "I smile like that."

"Can you explain this security, because this is the most unusual damn unit I've ever come across."

"Flynn," Diana replied, "we're dealing with the most unusual damn thing that's ever happened. Mike, why don't you tell him your story?"

The second of the three guys standing in the light said, "Sure, Diana." He regarded Flynn with eyes full of pain. "We were having a cookout. It was just after dark. My wife and my little boy were out in the backyard playing hide-and-seek. I was cooking on the grill. I noticed it was kinda quiet." He paused. "That was in 2008. I never saw them again."

Flynn thought about this. "You were there? Right there?"

"I was standing twenty-three feet from my wife when it happened. My boy was playing near the back fence. Forty feet. I heard nothing, saw nothing. Finally I ran out into the alley. Up and down. Went to the neighbors." He stopped. "Called the precinct." He looked toward Diana Glass. His voice dropped. "A missing roller bag did the investigation in. Plus, the way they disappeared. No sign of an intruder. The local Bureau decided it was a walkout."

"Your son—his case wouldn't have been abandoned."

"He's on goddamn milk cartons," Mike muttered. "Nothing."

The same thought came into Flynn's mind that must have come into the mind of every investigator on the case: she left and took the boy with her, open and shut. No way could they have been abducted right out from under the nose of the father.

Mike's grin was eloquently bitter. "I can see what you're thinking," he said. "We were very much in love." He sighed heavily. "We still are. At least, inside me. Inside me, my family goes on."

"I hear that loud and clear," Flynn said. He looked to the third guy. "What about you?"

“First, my wife’s sister, six years ago. She was a talented woman, a violinist with the St. Louis Symphony. We all thought she walked out on her life, all except her boyfriend. The locals did a good workup. Went nowhere. Then, two years ago last month, I got hit. My Lynn. She comes out of the Costco near our place at ten at night—she worked there nights—gets in her car. *And it just sits there.* Eleven, I can’t get her on her cell so I drive over. There’s the damn Altima, empty. I call in the troops but nobody can find her. We get the security video. Two cameras. She crosses the parking lot, gets in the car, and it just sits there. Except.”

“Yeah?”

“There was a power failure at the store. One minute after she got in. Lasted twelve minutes.” The locals—my buddies—figured that’s when the kidnap took place. But when the Bureau found that a couple of changes of clothes and six hundred dollars in cash were gone with her, they got a different idea.”

“So we’re all in the same situation. Cases abandoned as walkouts. The operative word here is ‘abandoned.’ These are dead cases. So why are we here?”

“Last year, the Bureau finally upgraded its relational databases,” Diana said. “The first thing I did was to look for cases similar to my husband’s.” In the hard light of the gasoline lantern, her face had taken on a startling brightness, as if her skin was on fire inside. “What I discovered is that he wasn’t alone. Real walkouts are common, but almost always associated with domestic disturbance. Some of them are genuine, some of them are murders. There are a number of them like our cases, with no domestic trouble, and the spouse insisting that he or she would never, ever do this.”

“How many?”

“Flynn, over the past ten years, I’ve found eight thousand unsolved disappearances, two hundred thirty-six of which involve people who continue to claim that their loved one was kidnapped, despite all evidence to the contrary.”

“Anything linking them?”

“Nobody was a criminal, nobody was sick, nobody was disabled. Everybody had some sort of notable talent—musician, artist, electronics expert, you name it. It’s a highly functional group of people.”

“Abby was a musician.” He sighed. “So the FBI finally realized that something was up. A serial kidnapper. But why organize the unit now? Just because they got a new database?”

She glanced at her watch. “We need to move. The reason we pulled you in now is we’ve got the best case we’ve ever had, and we want the best team that can be deployed.”

“Where are we going?”

“There’s always an element of risk in this work, Flynn. We don’t want to talk about it until we’re off the ground.”

“You’re saying we’re not secure?” He looked around. “You’re not sure of these guys?”

“There could be extremely sophisticated surveillance,” Mike said.

“We’ve set a trap for the perp,” Diana added. “He’s taken two sisters. The third sister has moved in to live with her father. It’s an easy stakeout, and we intend to be waiting, starting tonight.”

“How long? Do you know when he’s gonna show up?”

“We think he’ll use the blizzard to cover his tracks.”

“So it’s in Montana. And we’re sure he’ll show?”

“Nothing is certain, obviously. But this is the most talented of the three sisters. She plays the piano and the violin, she’s a novelist, she’s a dancer. We have a target profile, and she’s way up at the top. Her sisters were good, but she’s outstanding.” She strode to the rickety spiral stair and went pounding up, oblivious to its creaking and swaying.

What the hell was going on here? What kind of a perp were they dealing with, who could steal this many people and do it so well?

They had an ancient minivan, white and caked with dirt, its side

panels scratched deep from a lot of overland work. The interior had once been luxurious, but the leather was now full of scuffs and tears, and the windshield was intricately cracked.

He sat behind Mike, who drove, consulting a handheld GPS as he maneuvered through the empty predawn streets. If they didn't want to ask the local guy for directions, that was their business.

It was six, shift change, and he saw a cruiser heading toward headquarters, the uniforms inside sipping coffee. Quiet time, six o'clock. The druggies have crashed, the citizens are just waking up, the whores are in the diners or in their motels. Quiet, good time, the eastern sky glowing with promise, dew gleaming in the summer, frost in the winter, here and there a jogger. Your city's most intimate moment.

"You aren't gonna get a flight at this hour," he finally said. "You're gonna need to take the Southwest at eight to Denver, then there's probably a United up to Billings. Assuming anything's flying." The late news had mentioned that the blizzard was setting records for snowfall and wind speeds. They'd called it a snow hurricane.

She drove toward the low buildings of the Menard Airport, now called Menard International since the Mexico City flight had been added. As a teenager, he'd come here to watch the planes taking off. In those days, there'd been a United 737 that headed for San Francisco at seven in the evening, and he and Abby had watched it and dreamed of what it would be to live there in a house in the Marina District or Nob Hill, and listen to the mourning of the buoys and watch the rolling fog. One night she'd said, her voice soft and shy, "What do you want first, a girl or a boy," and he had slipped his hand into hers and replied with silence, and known that she was to be his wife, and it would be good.

They passed the main terminal, which was unchanged from the way it had been all of his life, two low wings and a central tower. Inside were the six gates, now crushed behind a wall of security, but the Airflight Restaurant was exactly the same, and still served the chicken fried steak dinner on Thursdays, and you could watch the

planes while you ate.

Down at the end of this road was the hangar where Donald Douglas had once repaired an early Cloudster, and which now sheltered the ten or twenty private aircraft that called this place home.

“You have your own plane?”

“Yes.”

“So somebody’s a pilot?”

“I’m a pilot,” Charlie said. His tone reminded Flynn more of a funeral director.

They pulled around to the small parking area beside the hangar and got out. They moved as a team, he had to give them that. There was a practiced smoothness that he liked to see in a team.

As Diana entered the hangar through the weathered side door, she turned on the interior lights. Mike trotted over to the main door and rolled it open, revealing the empty concrete apron and equally empty runway.

There were two planes in the hangar, one a gleaming turboprop, the other a twin engine thing that was just that—a thing. Old. Grease on its landing gear. Bald tires.

Charlie hopped up onto the wing and opened a door.

“We can’t fly into a blizzard in that,” Flynn said.

“Charlie can,” Diana said.

Flynn was normally an unconcerned flyer, but this situation was not reassuring. “You’re looking at seventy-mile-an-hour winds in that storm,” he said.

Charlie, who was standing on the wing, said, “It’s got new engines compliments of the US Air Force, plus a classified antifriction coating and the most advanced avionics in the world.”

“It’s too light. No way. I thought you guys had Gulfstreams and things like that. Real planes.”

“This is the real world, not TV. I had to fight like hell for this.

We're travel-rated for commercial only.”

Flynn was the last to climb in.

He saw cracked insulation along the doorframe. He smelled gasoline. Mike and Louie had pulled the hangar door back and the morning sky was red with menace, the north wind already brisk. Billings was a thousand miles away, deep in the vastness of the storm.

CHAPTER FIVE

The more he saw, the less he liked. The little curtains on the windows were threadbare. Under his feet, the carpeting was worn through to bare metal. “I have to say, I don’t think this thing is airworthy on a good day. And this is not a good day.”

“If Charlie says he can take it into the storm, he can. Now, I want to brief you in procedures, because they’re not Bureau standard.”

That mattered little to Flynn. He was only vaguely aware of standard Bureau procedures anyway.

Charlie began turning on the electrics. His doubts seething, Flynn strapped himself into his seat, the rearmost in the plane.

Beside him, Diana sat paging through a file on her iPad.

When he realized that the plane was moving, he was shocked. He hadn’t heard the engines start or felt the slightest vibration, and yet they were heading out onto the apron.

“Boy, this thing is quiet,” he said.

“New engines,” Charlie said.

They moved swiftly across the apron. Charlie spoke into his mike, and after a moment the tower’s clearance crackled through the confined cabin. The controller’s voice, sharp with surprise and concern, made it clear that he’d been taken by surprise.

“Have you filed a flight plan?” came his voice, sharp in the silent cabin.

“We’re not required to.”

“Sir, if you’re heading north, I’d advise filing.”

Charlie’s reaction was to click off the radio.

“You oughta file a flight plan,” Flynn shouted over the engine noise, which was rising as they taxied onto the runway.

“Flynn, we can’t afford to leave tracks. Please understand that.”

“*Tracks?* It’s a flight plan, for God’s sake! The perp doesn’t have access to FAA records, surely.”

She dropped her iPad down on his lap. “You need to do a little studying on the way up. See what you make of the cases. Try to form in your mind an idea of the kind of capabilities the perp possesses. I guarantee you, they are awesome.”

The takeoff pressed Flynn back into his seat. In under five minutes, they were leaving ten thousand feet behind.

“This is the damndest thing,” Flynn said. “What is this? Because it sure as hell ain’t no fifty-year-old Piper Apache.”

“The friction-free coating makes it a different airplane. And the turbos. The airframe’s been strengthened. And the avionics, like I said—you can’t find better. Plus, it’s pressurized. Convenient in a storm. We can do forty thousand feet.”

“It’s not a Piper Apache, is it? It’s camouflaged as a Piper Apache.”

She smiled. “I could answer that question for you. But if I did, I’d have to kill you.”

There had been humor there—a little. It was clear, though, that Diana Glass really would kill to keep her secrets. It was understandable, though. This was a crack unit. These people were dedicated. Maybe people like this could actually win, even against a genius psychopath ... assuming they lived through the damn flight.

He watched home slip away beneath the speeding plane. Ahead, the sky was big and dark and mean, and the distant purr of the engines meant that he could hear the wind screaming around the airframe, like a voice from another world, mad and wild.

As the land slid past far below, it became more and more snow-choked. The silence that had settled over the cabin spoke to him in a clear voice. These people were all doing the same thing most people

in police work do when they're heading toward danger. Each one considers his life and wonders what will come, and grows silent, seeking within himself for his deepest strength.

Half an hour passed in this silence. Flynn read case files, one after another, more than he'd ever had access to before.

"I notice a pattern," he said. "The same articles of clothing every time. Three changes of underwear, three shirts or blouses, two pairs of pants."

"Interesting," Mike commented.

"Damn interesting," Diana said.

"I wish we could access Behavioral Science resources, Diana."

"Louie, no."

"I know—'until we know what we're dealing with, no leaks.' "

Flynn said to Charlie, "You came out of Behavioral, so what can you add?"

The engines drummed. The plane, now enveloped in grayness, was being steadily buffeted.

"Charlie?"

"I gotta fly an airplane," he said at last.

Soon the snowy fields below disappeared into a gray gloom. Flynn could hardly see the strobes on the wingtips. He craned his neck, looking up at the instrument cluster and seeing gleaming flat panel displays. An autopilot was operating, the plane banking and changing altitude on its own. Charlie didn't even have his hands on the stick. The plane, on its own, was navigating its way through the storm.

These avionics were ten years ahead of the airlines, maybe more.

Flynn thought he should feel safer, but he really wished that Charlie had his hands on the controls instead of reading files on his own iPad. And what about "I gotta fly this plane?" Apparently what it really meant was, "I decline to answer your question."

He watched the wing strobes disappear into the muck. Then the

wings.

He leaned forward. "Shouldn't you descend into visual?"

Charlie didn't react.

"Hey, Charlie, I can fly a damn airplane well enough to know we need visual."

Again no answer. Flynn turned to Diana. "Look, this is dangerous. No general aviation aircraft is up to this kind of flying, no matter what kind of avionics it has. What about deicing equipment? It has to be minimal."

"I just did a statistical analysis on the cases," Charlie called back, "and he's right. There's a very fixed pattern to the things that are taken."

"We know our perp has a team. He has to," Diana said. Then, to Flynn, "Just relax, let him do his thing. We wouldn't be up here if the plane couldn't do its job."

"What the hell is it, a drone with seats?"

She laughed a little. "The military's got some very good autopilots, obviously. Look, the computer's a lot better pilot than he is, right, Charlie?"

"Right. I'm looking at the site on the looksee. Snow's really building up around the house."

"What's a looksee?"

"We have surveillance cameras deployed around the target's home," Diana said.

As he paged through case after case, Flynn wasn't seeing a single indication that any witness had ever identified any person, vehicle, sound, or light that seemed to them to be unusual during the times the kidnappings had taken place. "My case is the only one with any sort of witness at all?"

"It is."

Flynn tried to relax. He hadn't slept much and he was tired. Looking at a rough day ahead, probably a stakeout tonight. Stakeout

in a blizzard. Lovely. He closed his eyes—and immediately felt a sensation of falling. Then the stall horn howled.

“Jesus!”

“No big deal,” Charlie yelled. “I’m on it.”

The horn warbled a last time, then stopped.

Flight became steady again, the engines now droning, the wingtip strobes faintly visible. Flynn had not realized until this moment how tired he actually was. Still, though, he clung to the arms of his seat.

More time passed. Finally, he found himself once again closing his eyes.

What seemed just a few moments later, he heard Diana saying, “Good morning.”

“I’ve been asleep?”

“Deep. Three hours.”

It felt like three minutes. “I can’t believe that.”

“Big changes, lotta stress, it’s natural. Healthy.”

The plane was still deep in the storm system, but flying smoothly, banking gently from time to time.

He saw that Diana had a readout of the plane’s position on her iPad. “What’s our ETA?”

“About twenty minutes,” she said.

“We’ve made good time, then.”

“The autopilot has an intelligent seek function. It finds the smooth air, so we don’t have to cut back our speed.”

When he was younger, he’d flown his dad’s plane between ranches, taking the old man from one of his properties to another. He still had his license and kept up with the field. “A hell of a nice toy.”

“That it is.” She raised her voice. “ETA upcoming, gentlemen. Just to be on the safe side, let’s do a weapons check.”

Flynn knew the law, and the law said that he wasn’t a police officer in Montana or anywhere except Texas unless in hot pursuit, and

flying in to a town and looking for a bad guy was hardly that.

“If you’re asking me to check my weapon, that means you’re expecting that I might need to use it. So I need to know where we are in the chain of command. Am I legal here?”

“We’re not in the Bureau’s chain of command at all. Me and Charlie are FBI, but this unit is seconded to the National Security Council.”

“*Seconded?* And since when did the NSC have any enforcement powers?”

“Okay, now I’m gonna tell you something that’s classified. You need to sign, though.” She took her iPad back from him, turned a few pages, then handed it back. “Electronic signature. Use the keypad.”

He read the letter, which was under the logo of the National Security Council and signed by the chairman. It granted him a Sensitive Compartmented Clearance under the code name Aurora. It was listed as a Human Intelligence Control System clearance and seemed to have something to do with the National Reconnaissance Office.

“I don’t understand this.”

“It’s an above top secret designation. Officially, we’re part of the National Reconnaissance Office, but that’s not where our actual chain of command runs.”

“Okay, so when you send a memo, who do you send it to?”

“My boss.”

“Not good enough.”

“All I can tell you.”

“And if I sign?”

“A little more.”

“Not a hell of a lot,” Louie said over his shoulder.

“Look, people, this does not look like a police unit to me. National Security Council? I was looking for a serial kidnapper and probable killer. Where’s the national security issue?”

“And the answer is the same, sign and find out.”

“Do it, buddy,” Mike said. “You need this. Heart and soul, man.”

“First I want to know if I discharge my weapon in Montana, what happens?”

Diana explained, “We’re operating under a National Security Letter. You fill out a discharge report and forget it.”

“A National Security Letter? For a serial killer? How? Why?”

She pointed at the iPad. “It will make sense, Flynn. It really will.”

He brought up the keyboard and signed his full name, then added his police ID number and his social security number in the blanks provided.

“Okay, so what have I done to myself?”

The airframe creaked loudly as the plane banked. The wing roots crackled. He could practically feel the tail torsioning, sense the metal weakening, the whole assembly getting ready to come to pieces. No matter how juiced up a small plane was, weather conditions like these were dangerous.

Snow seemed to gush at them. Charlie continued his maneuvers. He hadn’t even turned on the wipers, so he was still relying on full IFR. That was absolute confidence, or absolute stupidity.

The ground suddenly appeared below them, a spreading, featureless vastness of snow. When they banked again, Flynn could see roofs buried in the white desert, smoke whipping away from their chimneys. Nearby was a single dark line that looked like runways look when you should definitely not land there.

They banked yet again, and as they did, Flynn saw that there was a sign on the roof of the larger of the two hangars that marked the airport. It said, “Ridge, Montana.”

As they lined up on the runway and began to descend, he stopped asking questions. No time for that now.

In the end, he’d discover every secret thing about this damned operation, he was confident of that, but not just now. Just now, it was

time to let this thing unfold and hope that the blood that would fall in the snow on this day would not be his own. There would be blood, he felt, most certainly.

CHAPTER SIX

They taxied to the smaller hangar. There wasn't anybody around, of course. Why would there be on a visual flight rules airport during IFR weather?

Moving with lubricated precision, the team got out and pulled the plane into the shelter of the hangar.

"Diana, I need to talk to you."

"We're behind schedule."

"Look, I want to know what we're dealing with and I want to know right now."

"No problem," Diana said, "when the time is right."

The others began unpacking weather gear, warm jackets, hats, boots.

"You didn't get airsick, Texas," Charlie said. "I'm impressed."

"Flight was smooth. Anyway, I slept."

"And yelled."

"A little."

"We need to move," Diana said.

"When do we meet the local cops?" Flynn asked.

Silence fell.

"Five personnel can't run a stakeout in a blizzard!"

Diana continued as if he had not spoken. "What we're looking at is a relatively isolated house. About a mile from the nearest neighbor."

"Hey. You don't go past the locals."

"Lieutenant Carroll, I'll tell you what you need to know. That's all I

can legally do. Read your secrecy agreement.”

“I thought there was going to be a big reveal when I signed it.”

“As soon as possible.”

Impasse. He had no choice but to accept the situation.

“They’re in a house about four miles outside of town. Armed to the teeth. Scared shitless.”

“In weather like this, that’s total isolation,” Flynn said. “Do we have a read on the local power grid? Because if they don’t have power, that’s going to look like a real vulnerability to the perp.”

“Exactly,” she said. “Which is why we’re going to cut their power at some point if he doesn’t show up. Use their helplessness as a lure. We hope it’ll prove irresistible.”

“Why is he going after sisters, anyway? Explain that.”

“He got the first two, so we’re thinking he could try the third. What his motive is, we don’t know. There is a selection process, though. High-functioning people, that’s clear. Not too old, not too young.”

They began putting on the warm jackets, gloves, and boots that they’d pulled out of the plane’s rear cargo bay.

“I need gear.”

“There’s an Army-Navy outlet,” Diana said.

“Good stuff, I hope.” In weather this cold a stakeout would get dangerous fast.

“Far as I know. Let’s pull out the electronics, guys.”

Mike and Louie opened the plane’s nose cargo bay and Mike drew out a black, hard sided briefcase. Mike carried it to a workbench and released the elaborate lock that sealed it.

Flynn recognized night vision equipment and in-ear radios. But there were five blunt black wands, devices he could not place.

“Ranger equipment,” Diana told him. “Mike will check you out on one.”

Mike said, “First, you gotta know that it has a self-destruct system

built in. And a fingerprint reader. Once you're printed to it, if it gets more than ten meters from your body, acid's going to spray all over its interior. So you don't want to forget your little friend, and Uncle Sam really does not want you to do that. You're holding a million dollars worth of his computing power in the palm of your hand."

He pressed a button on the side, then pointed the narrow end of the device at Diana. A moment later, a reading appeared on a tiny screen.

"First, any reading at all tells you that a human being is out there somewhere, whether you can see him or not. Now, let's evaluate the state of the *commandante's* beautiful mind."

"Careful," Diana said.

"She's reading eighty-four," Mike said. "Anything over fifty is telling you the target's awake. Over seventy, the target's alert. Over ninety, the target has an elevated heart rate and high-level brain activity. In other words, your target is probably aware of your presence and your day is shortly going to be ruined."

He thrust it into Flynn's hand. Flynn looked down at it.

"It's a sensitive radio receiver and a computer that can read and interpret what it picks up. The thing draws a couple of milliamps and has the computing power of maybe a hundred thousand laptops. The receiver is tuned to pick up brain wave frequencies. It works the same as a garden variety electroencephalograph, only without leads. It has an effective range of ninety meters line of sight."

Flynn said, "Police departments could really use this."

"And it's also why we're not going to be calling in the locals. It's as classified a piece of equipment as the United States of America possesses. MindRay saves lives but it's easily defeated. Word gets out, no more trick pony."

"Defeated how?"

"Headgear that suppresses radio frequencies kills it. Embed a copper grid in a cap, and this device cannot read you."

So cops couldn't have it. Word would get out. He saw that. But he

also had a question that he didn't ask: did this thing make them more effective than the addition of some local bodies would?

"What's to say the perp won't be wearing a hat like that?"

"The classification of this item is very, very strict," Mike said.

"Okay," Diana came back, "we need to move right now."

Flynn thought that they would have been better off leaving these things behind and going in with local support. If he was in command of this operation, the MindRays would be headed straight back to the Pentagon.

Outside, the wind was now howling down the runway, blowing a sheer white torrent of snow. They'd gotten in just under what was exactly what the weatherman was predicting: a snow hurricane.

Transport was a weathered Cherokee with chains, a tight fit for five people, especially when one of them was as big as Flynn Carroll.

There was no visible road. The only sign of any activity was a light, faint in the distance, appearing and disappearing as the snow gusted.

Charlie drove, Flynn navigated with the handheld GPS that was part of each equipment pack.

"He has a team," Flynn said to Diana. "You indicated that."

"Has to. At least one accomplice, probably more."

They came out onto a plowed road. Now there were more lights, a snow-clad Motel 6 sign, beyond it a place called The Swashbuckler, a bar of the kind that grew like mushrooms in little places like Ridge, one mushroom per town. Inside, there'd be a bartender and a waitress snapping gum, in the back a cook. Along with the customers, they would have grown up here. In small towns, everybody had everything on everybody. Bitter places. Could also be murderous, especially on hard winter nights when you couldn't escape from those you loved and despised.

They pulled up at a big tin structure lit by a barely visible sign: "Rosen Surplus."

He got out and pushed his way into the store, which turned out to

be cave-like. There was an elderly woman with a tight gray bun sitting in a chair in front of rows of surplus fatigues. Hunter stuff.

“I need some warm clothes,” Flynn said.

The old woman looked up at him. “You sure do,” she said. Her face blossomed into a big, open smile. “Where’d you come from in that stuff, anyway?”

“Nowhere close by.”

She didn’t inquire further. She was too old to be curious about strangers anymore. She wanted his money, not his story.

“We got parkas on sale, thirty-six bucks. US Army mountain gear. Good stuff.”

He bought a parka, found a pair of boots that almost fit, some lined gloves, a hat, and an olive drab scarf that knew the services of moths. She showed him a dressing room behind a curtain where he put on two pairs of long johns and the rest of the clothes.

“Now you might live a while,” she said when he came out.

“Let’s hope.” He paid her a hundred and sixty bucks in cash and got a receipt for his expenses.

It was warm in the Jeep. Nobody spoke. Charlie backed out into the snow-swept street.

Flynn could feel the mission closing in. The absolute silence in the truck told him that these people sensed a whole lot of danger. Not sensed, knew. They *knew* that they were in great danger.

They drove off into a rampage of snow.

CHAPTER SEVEN

Louie was stationed a hundred yards away from Flynn, but he might as well have been in another state for all the good it did in this hell. The others were on the far side of the Hoffman house. The storm had come on even stronger than the Billings weatherman had said it would, and the snow rushed in the sky, pelting Flynn's parka and hood and working its way in under his scarf.

They'd been watching the house now since seven fifteen, and it was pushing nine o'clock. It was an excellent night for a perp who suspected he was under observation to make a move.

He had proven, however, that he could take them any time of year, from any kind of a dwelling, and never leave a trace of himself behind.

Off to his right, Flynn heard a distinct sound. A throaty growl.

It came again, and this time he thought maybe it was a tree scraping. Or could it be a car on the road, its engine straining?

The wind roared around him and the cold invaded his sleeves, the seam of the hood, anywhere it could get in, and that was pretty much everywhere. The scarf was a joke, the socks were a joke. The boots were waterproof, but no boots could keep out cold like this. It made him worry that he wasn't feeling enough pain from his feet, it numbed his hands and made his face burn.

When it comes to cold, after the pain ends is when death begins, and it is a line you can cross without ever knowing it.

The Hoffman place was a prairie Victorian with lighted windows downstairs, looking as warm and inviting as it could be. From time to time, he caught a whiff of oil smoke from what had to be a blazing

furnace. In the living room, he could see a fire flickering in the fireplace, and that smoke would drift this way, too. Professor Hoffman, Gail's father, sat in a wing chair before the fire, from time to time sipping at a mug that stood on a small table beside him.

Gail was cleaning up in the kitchen, moving elegantly about, her long arms putting away dishes. Girl-perfect, she reminded him powerfully of Abby.

Flynn was a snow-covered bulge in the earth and that was good. He was well concealed from the road, and the snow would insulate him a little. From time to time, he raised a stealthy, gloved hand and blew into it to warm his nose and face. He rocked from side to side, dipped his knees a little, keeping moving just enough to avoid becoming stiff.

If they weren't properly cleaned and oiled, guns could freeze solid in weather like this, even in your pocket. So he gripped his pistol. He also tried the MindRay. Once, he might have picked up a signal from the direction of the house. Another time he might have detected Louis. Out here, though, the display that had been clear and steady in the hangar flickered and changed so quickly that it meant, essentially, nothing. He was sure now that the thing was high-tech junk. Maybe the Rangers trusted it and maybe they didn't. He didn't.

He also tried the beautifully compact night vision equipment, only to find that the snow made it crazy. All he saw were flashes. He would've been better off bringing his own homemade scope.

He kept old-fashioned naked eye watch and nursed his Glock.

About fifteen minutes later, the living room went dark, then a front bedroom lit up. Professor Hoffman was heading up to bed at nine twenty-five.

Flynn had about decided to make an approach. As far as he knew, the Hoffmans didn't even know they were being staked out, and that was ridiculous. Also, the decision not to involve the local police was wrong, especially when the reason given was to protect the secret status of a piece of equipment that belonged in the garbage. The whole plan was borderline incompetent.

Flynn's worry was that the perp was already in the Hoffman's lives, someone they had come to trust. Was that how he worked—he was the grocery clerk, the night man at the convenience store, getting under the skin of the vic so skillfully that there was never a flicker of suspicion?

He shook the snow off and started toward the house, but there was motion to his right, at about one o'clock. Something low and big. A car? No, impossible off the road in this snow. Anyway, it was living movement, stealthy and low to the ground.

Almost on its own, his gun came out. He stayed where he was, though. Don't move until you understand.

A minute passed, then another.

This perp had once taken a forty-year-old woman who'd weighed two hundred pounds out of a farmhouse in Oregon on a rain-soaked night and left not even a footprint. He had taken mothers from shopping mall parking lots, fathers from backyard barbecues, nurses from their rounds, priests from their rectories.

He had killed them all, Flynn believed. Of course he had, killed them without remorse, lost as he was in whatever fantasy drove him.

Now there was another sound. What the hell was that? Something tinkling.

No, it was music. It floated like a spirit on the storm. There were windows downstairs with drawn curtains, and he thought that was where the music was coming from. It stopped, then started again. Soaring out above the roar of the storm, the hiss of the snow. Dear God, she could play that piano. What was it? Beethoven, maybe? Beautiful, anyway.

Rocking from side to side, checking his feet, blowing into his hands, Flynn began pressing forward again.

Another sound came, this time to his left. This was a very strange sound, a muffled sort of whistling. It went on and on, this sound, a kind of noiseless screaming.

Finally, it ended and did not repeat. The music swelled and the

wind moaned in the eaves of the old house. Low clouds plunged out of the north. The only light was from the house and the glowing snow.

He was going down to that house and he was going to announce himself to those people. He was well under way, slogging through drifts as deep as six feet, when he observed the moving shape again. It came from the right this time, and therefore had crossed his field of vision without him seeing it. So there must be a low area between him and the house, probably the snow-covered road. But it wouldn't offer more than a couple of feet of protection, so whatever that was out there, it wasn't a man.

He called on the reserves of inner silence that twenty years of intensive martial arts training had given him. "All things come to him who waits." The defender has the advantage, always.

He watched as the wind picked up a long stream of snow and blew it off into the darkness. The eaves of the house wailed, the music swelled, and bright scars of moonlight whipped across the desert of snow. Behind the storm would come brutal cold and behind that, they said, another storm.

The moonlight revealed a low form with a long back and tail—an animal. The instant the light hit it, it became so still that many people wouldn't have noticed it. A moment later, though, darkness engulfed the shaft of moonlight, and the animal with it. He fought to control his breathing, fought to stay where he was and not follow the flight-or-fight instinct, which was telling him to get the hell out of here.

He tried the night vision goggles. They hadn't been adjusted to work in snow.

Activate the radio, then? No. The others were all armed professionals, too, and a single spatter of communication could cause the perp to pull out—assuming, of course, that he was here.

The house was still dark. When the moon broke out of the clouds, it stood still and silent. Were they asleep? Could they sleep? He could see an LED in there, glowing red in the downstairs hall. They had an

alarm system. Certainly guns, too. So they probably felt safe.

The snow was now coming down in long, howling flurries punctuated by periods of driving wind. He waited, his hands clutching his gun. He'd stuffed the MindRay into his backpack. The equally useless night vision binoculars hung around his neck.

He was peering into the dark and thinking about trying them again when the moon appeared and he found himself looking into the face of a goddamn puma, which was not ten feet in front of him.

He gasped, choking back a shout of alarm.

How in the world had it gotten this close this fast? A certainty: it was the master of conditions like this. A possibility: it saw him as prey.

The eyes were steady. They were careful. To his amazement, they followed his stealthy movement to his pistol. Since when did pumas understand pistols? But this one sure did.

He wished that he had an Anaconda or a Model 29, because it was going to take some accurate shooting with the Glock to stop this creature if it charged from this close. Worse, it was a Glock Nineteen and not an Eighteen with its greater capacity and automatic fire option. He needed a perfect head shot or the animal would still be very much alive when it connected with him.

Carefully, he tightened his hand around the pistol and began to pull it up into firing position. If the animal leaped before the gun was aimed, he was going to be torn to pieces.

Its eyes shifted to his face, then back to the rising pistol, which was uncanny. How smart could it be?

It pulled its shoulders forward. It was about to leap. But then there was a slight hesitancy.

The eyes—so steady, so alien—returned to his face. In the stare Flynn could see a raw lust to kill. But then they flickered again, and in the next instant the animal was gone. He had gotten the gun into position just in time, and it had clearly understood that it had been outmaneuvered.

Amazing. He'd never seen anything like it. No animal was that smart.

The puma's tracks faded into the snow.

CHAPTER EIGHT

Louie was approximately two hundred yards to his right, covering the house from an angle that gave him a different view. Flynn wanted to warn him on the radio, but he didn't want to be the one to blow this mission, misconceived though it was. He had to warn the guy, though, so he'd go over there. This would leave the house uncovered from this angle for a few minutes, but it had to be done. It was one damn smart cat, and the guy needed to know this.

The piano had started again, the music slipping and sliding in the wind. Abby, also, had played. His dad had played. He'd tried to learn, but he hadn't inherited that gene. What he could do well with his hands was shoot. He could turn even an old snub-nosed Police Special into a useful weapon. A good pistol felt like an extension of his hand. Any pistol, for that matter.

Pushing through the snow, he was tempted to call Louie's name, but even that might destroy the stakeout. Many a cop had wrecked a good collar with an ill-timed whisper.

He was sweating under his layers of clothing when he began to ask himself if he'd gone in the right direction. But he had, no question. So where was Louie?

The snow seemed less, so he tried the night vision goggles again. He could see a little better, but they didn't reveal Louie ahead. Instead, what Flynn saw was a strange, formless shape in the snow.

Was that a rock? A gnarled bush?

He tried working with the goggles, increasing the magnification.

The material was jagged, gleaming darkly. He still couldn't tell what it was.

Another patch of moon glow sped by. In it, he could make out a pale ripped edge protruding from the shape. Bone, maybe? If so, then that was a chunk of something the lion had just killed—a deer, hopefully.

As a precaution, he got his pistol back out and held it alongside his parka. If that was a kill, then the lion was protecting it, and that's why it was hanging around.

As he crunched along, he stepped on something just beneath the frozen surface. It was hard and irregular and it shifted under his foot.

He bent down and pushed away the snow.

What first appeared was a pallid slickness. He kept brushing. Something just below it, hard tufts of material. Frozen hair, he thought. So this was a kill and that was why the puma had menaced him. It had been worried about having its food stolen.

It took all of his training not to cry out when he found the staring eyes and gaping mouth of Louis Hancock looking back at him. The eyes flashed with moonlight when there were rips in the clouds.

The guy had been taken down by the mountain lion, which was about the damndest thing Flynn could imagine happening. As he pushed more snow away, he discovered that Louie had been hit from behind and thrown forward, then—incredibly—ripped in half.

The legs and abdomen were nearby, a knee and booted foot jutting up from the snow. So the lion must be big. Huge.

This stakeout was over. He reached up and pressed the call button on his radio. "There's been an accident. Detective Hancock is dead. Come in, please."

Silence.

"I repeat, Louis Hancock has been killed, apparently by a mountain lion. We need to close this thing down, we have a dead officer here."

Silence.

He was coming to really not like these people. "You can't continue the stakeout, you have a dead officer! I repeat, *dead officer!*"

The hell with it, he'd go in himself. He'd been on his way anyway, interrupted by this horror show. He went plunging toward the house.

The going was extremely hard, and he had to fight his way through some flurries so high that he was forced to lie forward and push himself ahead.

Every time he was forced to do this, he was very, very aware that he was entirely helpless.

He moved slowly, guided by the music. There were no lights showing in the house. When he finally stumbled out into the road, the going was a little easier, but not much. The house loomed ahead of him, tall and completely dark except for a single strip of light leaking from around the curtains of the room where Gail Hoffman was playing.

He was going up the snow-choked front walk when he saw the lion again. It was standing on the porch, back around the far edge, where it curved around under the living room windows. It was absolutely still, and it was watching him.

Once again, it had maneuvered brilliantly. He thought to back off, but any movement whatsoever was going to be a major risk. The animal could react a whole lot faster than he could. Certainly, trying to turn around and run would get it on him in an instant.

The puma was not protecting its kill. It was still hunting, and he was its quarry.

He calculated its distance from him at fifteen feet.

Its eyes were as still as glass. If the nostrils hadn't dilated slightly as it breathed, it would have appeared frozen. The jaw hung slightly open, the enormous incisors visible.

Was that the face of a mountain lion? He didn't know enough about big cats to tell, but it seemed somewhat longer and narrower. He decided that his best move was to edge in close enough to guarantee a fatal head shot. With luck, it wouldn't react in time.

Another step, then another, as he slowly came up out of the snow and into the compact front garden. Gail played on. The lion watched

him.

He saw its eyes close for a moment, then come open again. The message conveyed was clear and it was shocking: the animal was so sure of itself that it was *bored*.

Again he stopped, because he had understood why. The game was already over. It had been since before he'd started his maneuver. The animal was waiting for him to realize that he was caught. No matter what he did, it was going to make its move while he was still too far away for a reliable shot.

Bored did not mean careless. The face remained a picture of attentive patience.

He noticed a flickering light in the sky. Lightning, he thought, which would mean that the blizzard was about to intensify. Could that help him? Would a really powerful flurry give him a chance to return to the road, perhaps to make his escape?

Then he heard a noise even more inexplicable than the earlier one, which had obviously been Louie's death whistle. This was a whispering sound overhead, a big, rhythmic whisper of wind, too regular to be part of the storm. As he listened, it slowed and then settled, dropping down behind the house.

The rhythm was that of a helicopter blade, but it was too quiet. Way too quiet.

A moment later, the light in the front yard changed, and he saw why. The curtained room had just gone dark. The piano had fallen silent.

The lion, also, was gone, slipping away in absolute silence.

He stood still, listening, watching. Could it have jumped up on the roof? Carefully, moving slowly and as little as possible, he raised his head. There was no telltale shadow along the roofline. So it had retreated, backing down the porch until it was out of sight.

Was it trying to escape him or was it still hunting him? Since he couldn't know, he had no intention of going around the corner of that porch. He needed some spot where he could still see the house, but

which would give him protection for his back.

Fifty feet to his left was a tree, its trunk thick enough to enable him to lean against it, making attack from behind much more difficult. The lion would have to charge him from some point that he could see, and it would need to start far enough away to make the pistol useful.

The snow in the yard looked deep, and the slower he had to move, the greater the risk. But if he stayed here, the lion could get behind him.

He raised his gun up beside his shoulder where it could be aimed and fired in just over a second, then plunged off the snow-covered sidewalk and into the deeper drifts of the yard itself. He was at his most vulnerable now.

An enormous splash of snow hit him in the face, temporarily blinding him. He pulled a gloved hand across his face to clear his eyes.

The lion was beside the tree and it was already crouched, ready to leap at him.

Once again, it had outmaneuvered him. Yet again, he was too far away to risk a pistol shot. It, however, was close enough to take him.

Years ago, Menard had recorded a case of a mountain lion stealing a three-year-old out of the bed of a pickup, but he'd never heard of anything like this.

He'd probably been damn lucky to have seen it when he had, or he would have suffered the same fate as Louie.

He took deep, careful breaths, centering his attention on his body, letting his emotions race off down their own frightened path. "You're here, you've survived so far," he told himself. "You can win this."

How had the lion ever gotten over to the tree? How had it concealed itself in the snow? He was having a hard time believing that an ordinary puma could function like this.

Once again, he had to fight the impulse to turn and run.

The lion moved off past the tree, carefully keeping the trunk between itself and Flynn, and once again he had the uncanny sense that it understood guns.

He asked himself, “Do I have any chance at all of getting to the house?”

From where he now stood, the tree was thirty feet away, the porch and front door twenty.

The door had a glass window in it backed by a curtain. Breaking in would take ten seconds.

When a path looked easy, that was usually because it wasn't.

The moment he started back up onto the front walk, he had to assume that the lion would know his intentions.

He made a quick survey of the scene. The house was now completely quiet and completely dark.

Could it be that the lion was trained? Because another way of looking at this situation was that it was not only trying to kill him, it was also trying to keep him from getting to the house.

No, don't even go down that road. The perp didn't have a damn pet lion with a genius level IQ. The creature was bad luck, nothing more. Had to be.

Nevertheless, his cop's intuition screamed at him: secure your position. You don't know where that animal is and you don't know *what* it is, not really.

Once again, he tried the radio. Once again, there was no response, which was completely unacceptable. When this stakeout was concluded he was going to file a red hot report with whoever was in charge of this outfit, about its leadership and its shitty procedures and its worthless equipment.

Six feet to the left of the front door, the porch ended. Beyond it were lumps along the side of the house that indicated the presence of a flower bed. Behind the house, just visible, he could see the dark bulk of what must be the garage.

Somewhere back there Diana and Charlie and Mike were deployed—unless, of course, their radio silence was unintentional.

He would need to find them, but not right now. There was another thing that had to be done, which was that the Hoffmans needed to be warned and they had to be offered the close protection they should have been given in the first place.

Angrily jabbing the transmit button on his radio, sending out call after unanswered call, he approached the house.

He pushed his fist through one of the small panes of glass midway up the front door. Working fast because he had lost track of the puma, he pulled the remaining shards of glass out of the bottom of the frame, then leaned in, twisted the deadbolt, and opened the door.

The alarm sounded its warning buzz, but he didn't even try to cut it off. He wanted it to trigger. Surely that would bring Diana and Mike and Charlie in on the run—assuming, of course, that they were still alive. But surely—*surely*—they were. No matter how clever, a mountain lion simply could not slaughter four police officers. Someone was going to get to his gun in time.

The buzz of the alarm rose to a warble. Thirty seconds to go. “Miss Hoffman, Doctor Hoffman, police! Please disarm your system! Police!”

No reaction. They could have retreated to a safe room. They could be waiting there, guns at the ready. Hopefully, they were calling the locals.

His first order of business was to find such any safe room they might be in. It would most likely be in the basement, so where was that door?

He went into the living room. In the big stone fireplace, the fire that had blazed up earlier still sparked and muttered. Beyond this was the music room. With its drapes still closed, it was pitch black. Inside, he could see the darkly gleaming surface of a grand piano, its keyboard a pale grimace.

The alarm triggered, its horn blaring up from under the stairs.

Returning to the front hall, he opened the door of the understairs storage, then waited another full minute before disconnecting it. If it was set to make a distress call, he wanted to make sure that happened before he disabled anything. Finally, he pulled out its power line. Silence followed.

“Is anybody here?”

He detected not the slightest sense of movement, not the whisper of a footstep or a breath or the faintest creak of shifting weight from upstairs.

The wind rose in the eaves and snow swept past the windows.

He examined the alarm system’s control box and was horrified to see that the jack socket was empty. It had no phone connection.

Stepping into the hall, he tried his cell phone, but there wasn’t even the hint of a bar. In the kitchen he snatched up the receiver of a wall phone, but there was no dial tone. Lines were down, of course, in weather like this.

If that flash of light had been the perpetrator in some sort of helicopter, no matter how incredible it seemed, the brilliant puma had been part of it, deployed as an assassin and a decoy.

He looked out the kitchen window, across the bleak pale desert of the backyard.

He shifted frequencies on the radio, emergency calling again and again, but nobody came back. Field communicators like these were adjusted to a range of just a couple miles. You didn’t want them being picked up on bad-guy scanners.

To be certain that he was right about the Hoffmans, he went through the house checking bedrooms, closets, bathrooms, even under the beds.

He pulled down the attic door. As soon as the stairs unfolded, though, he knew they weren’t up there. Nobody had trod on these dusty steps in a long while. Still, he shone his light up. “Doctor Hoffman, police! Miss Hoffman!”

No reply.

He climbed the old steps, feeling the slanted ladder give under his weight. "Doctor Hoffman, I'm a police officer. I'm here to help you."

If he was wrong and they were up there, he might be about to get his head blown off. "Doctor Hoffman!"

Shining his light ahead of him, he went up two more rungs. He spotted a couple of cardboard boxes, but mostly the space was filled with loose insulation. Turning, he shone his light to the far end. The house had two wings, but there was no point in crawling any deeper. Anybody coming up here would have disturbed this insulation.

He backed down and closed the stairs, then spent some time in the master suite. The bed had been slept in, but it was cold now. The master bath revealed that this had been Doctor Hoffman's room. It also revealed missing items. There was no toothbrush in the holder and a shelf of the medicine cabinet was empty.

There were too many clothes in the closet to tell if any were missing, but the way that the hangars had been pushed back, it looked possible. He observed no luggage, so that was another question.

He went down the hall to Gail's room and found a similar situation. The bed was undisturbed, but there was evidence that cosmetics had been removed from the bathroom.

In the hallway, he found a closet that held luggage, but it was unclear if any had been taken.

Still, the evidence was sufficient to at least suggest that these people had left of their own accord. Nobody was going to believe that, though, because their cars were still going to be in the garage and there were no tracks around the house.

He knew damn well what had happened here. The Hoffmans had been taken. No question, it was exactly the same as all the other cases. So the kidnapper had managed to take the third sister right out from under the noses of a stakeout team, which was damn well amazing.

That most criminals were stupid was part of the shorthand of police work. The vast majority of them were going to be too dumb to get away, but also too dumb not to shoot. Catching the average crook was like herding a bull—dangerous, but not exactly what you'd call an intellectual challenge.

What they had here was a lurid genius with a bizarre imagination. To even think of training a big cat the way he had was extraordinary. To succeed was phenomenal.

He went downstairs and looked out the back door. He needed to locate the remaining members of the team. He observed the snow-packed back garden carefully, but saw no sign of any human presence. But he wouldn't, not from here. They'd be back in the tree line.

That damn cat was probably still out there, but he had to do this. He unlocked the kitchen door and drew it open.

The wind-driven snow slammed him so hard that he lurched off balance and had to grab the doorframe to keep from being swept backward.

There were major gusts in this thing, fifty, sixty miles an hour. Lowering his head, he pushed his way out into the storm.

CHAPTER NINE

The brief shafts of moonlight that had helped him earlier were now gone, replaced by scudding clouds and a literal wall of snow being driven directly in his face by the brutal wind. Out much more than five feet, he was blind. So what about the cat? Was it blind, too?

Despite this, the perp had come in here and taken his victims. Flynn knew when, too. It had happened just after Gail had stopped playing the piano and just before he'd entered the house—when Flynn had been dealing with the puma. It had disappeared because the kidnap had been accomplished and the perp had called it back.

The whole thing had taken roughly ten minutes and had been accomplished without a sound, without a trace of anything being left behind and without a hitch. *In this.*

He reached the garage and shone his light through one of the small windows that lined the two doors—and felt a shock with the power of a fist in the face. There was blood everywhere, blood and ripped clothing. He saw a hand, a leg—pieces of two people, maybe three.

The Hoffmans? The team? All of them?

He raised one of the doors, which came up with a massive creaking and a tinkle of shattering ice.

This door hadn't been opened in at least an hour, and the other one was caked with ice. So who were these people?

Stepping in, gun in one hand and flashlight in the other, he went to where a bloody jacket lay against the door of an old pickup.

North Face, black. High-intensity penlight in the right pocket.

Mike had worn a black North Face. The light was the same one all the team members carried.

Against the back wall, there was an old-fashioned pitchfork. On it was a rounded mass of bloody hair. It was Charlie, his distorted face just barely recognizable in the mess.

The perp may have originally intended to take the Hoffmans in the usual way, leaving behind evidence that they'd departed on their own. Flynn's best guess was that these two men had somehow succeeded in surprising him—whereupon they had paid the same price as Louie.

So this was now a major crime scene. There could be forensic studies done here. Maybe there would be prints, bits of hair, even blood. DNA, even.

Looked at one way, this was a scene of extraordinary violence and tragedy. Looked at another way, it could be a treasure-trove of evidence, the first one in the history of this case.

A quick survey of the remains turned up evidence of only the two men. Diana was not here. He made a quick decision to report this crime first and worry about her later. His guess was that she was beyond saving anyway, probably back there in those woods right now, in the form of frozen remains.

His duty was very clear. He had to get out of here alive and give the state criminal investigators all the help he could.

But how to accomplish that? The perp was going to definitely want him dead. He had effective weapons, including the lion, and probably skills and capabilities that Flynn knew nothing about. Given that he was able to train a wild animal to near-human hunting skills, it had to be assumed that he was well provided with extraordinary assets.

Could Flynn manage to walk out of here? No, the perp would not let that happen. At some point, the lion would reach him or something else would reach him.

Even if he did reach the Cherokee, which was half a mile back along the road, he didn't have keys. So he would need to wire it. Not difficult, but it would take a few minutes that he was unlikely to have.

He was trapped here, that was clear. But he wasn't going to give up. That was also clear. The odds were against him though, seriously against him. In fact, he didn't really think he had any measurable odds. So what he had to do was to leave a record behind, giving all the details of the crime as he had observed them.

A moment's thought brought him an idea. He set about searching the ruins of the two men for a phone. He could use it to record a detailed account of the crime as he had seen it unfold. He'd return it to the pocket it had come from. At some point, forensics would find the recording and listen to it.

Handling the corpse of a person who has just died is as intimate an experience as there is. Not many people do it—nurses, policemen, emergency medical service personnel—and those who do never get used to it. It's as if a living person has surrendered himself to you so completely that he is lost to your touch.

Largely because Charlie's corpse was the least maimed, Flynn approached it first. He'd taken a shattering blow to the head and sustained deep gouges. A man had delivered the blow, but the rest of it had been done by the lion.

The body lay at a twisted angle, its face turned away as if in some eerie excess of modesty. One arm lay across the chest, the other angled backward, obviously broken. Long gouges had reduced his heavy parka to rags that bulged with tufts of white wool insulation. Mike felt in the pockets, soon coming across the familiar shape of an iPhone. Grasping it, he withdrew it and turned it on.

It took a long time, but finally the opening screen appeared. Charlie didn't use a password, which was useful but not smart for a man who obviously dealt with a lot of classified material.

As Flynn pressed the logo of the recorder app, he found himself watching the battery indicator with increasing amazement. The phone got hot, quickly becoming almost painful to hold. He tried to turn it off but it was no use. He watched helplessly as the battery indicator moved across the face of the thing, reducing it in a matter of seconds to a dead, useless brick. Immediately, he pulled out his

own cell phone and found it to be hot, also, its battery drained.

He went to Mike's shattered remains, dug his fingers into a blood-soaked pants pocket, but did not find his phone. He patted the other pocket. Same result. Had it been lost in the battle that had taken place in here? He shone his light around the room.

Mike's jacket was so badly ripped apart that the contents of the pockets had been strewn all over the room. After a few more moments of searching, he found his MindRay under the truck. On the far side of the vehicle was a small black object, which proved to be not his cell phone, but an old Police Special. Flynn pocketed it.

At that moment, he heard a sound, a fluttering in the rafters.

He braced his pistol, but saw nothing. He used his flashlight. Still nothing. Could have been a possum or a coon. Not a lion, though, thank God, not up there.

Continuing his search, he soon located another pistol, this one a Magnum. At least one of these guys had been decently armed. The pistol had been fired until it was empty.

Charlie and Mike had fought for their lives in here. He hadn't heard the shots, so the battle must have taken place while he was still on the rise overlooking the house. That would have been at least half an hour ago.

He thought the situation over. Louie had been done by a big cat that had been expertly trained. Best trained animal in the world, no question. It hunted like a master tracker of the human kind, not like an animal. What had happened in here was that the lion and its human minder had worked together.

The shadow dropping down from above was almost on him by the time he saw it. There were eyes—huge, glaring—and he was firing his pistol again and again, aware that he was emptying it just like Mike had.

Then silence. Nothing was there but a wreath of smoke.

He took a long step toward the truck—and saw something moving on the far side. Reflex made him brace the empty pistol.

No more movement. No sound.

He went closer, then around to the front of the truck. Shining his light into the darkness between the vehicle and the wall, he saw a mass of something on the floor. A closer look revealed that it was feathers.

“Shit,” he said quietly. He’d shot at a poor damn barn owl. Fortunately for the owl, all he’d done was to separate it from part of its tail.

It was time to get out of here. He had one hell of a dangerous journey ahead. Reluctantly, he approached Mike’s body again and felt for a reload for the Magnum. He didn’t find one. He’d never know if the guy failed to bring extra bullets, or used more than one cylinder. Not that it was that important. Dead is dead, and they certainly hadn’t been killed by any barn owl.

It was time to do this, maybe lose his life and maybe not, but the longer he waited the more certain he felt that whoever had done three experts to death would find a way to kill a fourth—or was that a fifth? Diana had yet to be accounted for.

He turned out his light, went to the door, twisted the handle, and raised it onto the storm.

The wind was roaring steadily now, the snow gushing out of the sky in a horizontal cataract. He took his compass out of his pocket and oriented himself, then turned and closed the door.

He started off, pushing his way through snow that was two feet deep at a minimum. When he reached the road, he consulted his compass again, then turned and headed toward the town.

He’d find the Cherokee. He’d survive. He’d get this perp and see him take the needle.

The wind howled around him, clutching him, shaking him with the full power of nature at its most wild.

He struggled off toward the town, his compass his only guide.

CHAPTER TEN

Flynn's struggled to stay on the road, to see any possible attacker, to somehow make progress against a storm that was like a living creature. He timed himself, hoping that he could get at least a rough idea of when he might be approaching the jeep. He also watched as best he could for the puma or for any other sign of danger.

When a flicker lit the snow, his first thought was that it was lightning. There was no thunder, though. Then, for the briefest moment, a neat pool of light crossed a drift to his right.

He reacted by dropping and rolling off the road. He let himself sink into the snow. Face up, he lay absolutely still, breathing as lightly as possible. Heat sensing equipment worked particularly well in conditions like this and he did not want his breath to reveal him to infrared detectors.

He reached for the Glock with his right hand, Mike's Special with the left. He'd worked for years to shoot effectively with his left hand, and was able to hit targets firing from it at eighty percent of his right-handed proficiency.

If anything came at him, he was going to do his best to shoot it and the hell with the police self-identification mandate, this was kill or die. As always in moments like this, he took his attention away from his mind and even his problem, and concentrated it on his body. You'd think that paying attention to the problem was what you needed. But what you needed was a hunter's form, and that was a physical discipline. As he emptied his mind, cocked silence filled him. His breathing became deep, his heartbeat slowed.

After a moment, a more intense light appeared, growing at first brighter, then slowly dimming. It was moving up the road, and it

seemed to be coming from above, like a searchlight shining down from a helicopter.

As had been the case at the Hoffmans', there wasn't the slightest sound of an engine. A helicopter produces noise in two ways. There's the engine sound, but the distinctive chopping is caused by the rotor, or wing, breaking the sound barrier for a moment each time the engine drives it forward.

There was no engine noise. There was no chop. So could this be one of the rumored silent wing choppers the air force had been working on? *Was* it the air force, then? Could it therefore mean safety?

No, this same type of aircraft had been used to kidnap the Hoffmans.

So the perp had a trained lion and a helicopter with a silent wing.

He waited, breathing evenly, letting the snow settle around him. He was freezing cold but must not allow himself to shiver. His face burned from cold, but he would not move to push the snow away.

The light flashed down again and again, continuing on past him, growing slowly fainter until it was finally absorbed by the darkness.

Did the possession of an advanced helicopter mean a defense connection of some sort?

If he got out of this alive, that would be another line of inquiry worth pursuing. Right now, though, it was all he could do not to let his mind frantically game survival options. From long experience and study, he knew that in conflict the body is a better master than the mind. He concentrated his attention on his senses, mostly his hearing.

From yoga, he'd learned a practice of containing his body heat, and he regulated his breathing carefully. He needed to remain here for an unknown amount of time, but without intense physical discipline he was going to have to move in a few minutes or be frozen.

He took in breath, held it deep, then expelled it slowly, retaining as much heat as he could.

The light returned, brighter this time. It was definitely coming from

above, no question about that. If he had a helicopter with a silent wing, then maybe he also had a MindRay, maybe even a better one. Certainly heat sensors and night vision equipment. But would any of it register the presence of a mind in deep trance?

He concentrated his attention on his inner silence. His mind became totally quiet. He waited. They might get him, but there would be death among them.

Slowly, the light faded once again. Whatever equipment they had, they hadn't found him. Unless, of course, they were waiting for him to stand up into an ambush. If they were certain that he was here, they might realize that the snow was concealing him from their detectors. Therefore, he had to remain hidden until they concluded that he was dead.

He couldn't see his watch and dared not bend his arm, so he began to count. He needed to stay here at least half an hour, but how was he going to do that without freezing to death?

The cold penetrated deeper and faster than he'd thought possible, coming in through his double ply of long johns, making his bones ache and his skin go numb.

Time passed. He remained still. Methodically, he moved his fingers and toes.

When he'd heard nothing for what he hoped was at least fifteen minutes, he moved slightly.

No light flickered, no sound came but the wind.

He moved more, lifting his head until he could hear the intimate whisper of snow as it slid out of the sky.

As he came to his feet, he did an immediate reconnaissance up and down the road. It appeared that he was alone. To the east, the sky was slightly brighter, but darkness still dominated. He glanced at his watch. Five fifteen. He had not been under the snow for ten or twelve minutes. He had remained here for more than two hours.

He struggled back up onto the road and turned south, then resumed plodding.

Walking was hard work and extremely slow and even without his pursuers to capture him, it was clear to him that he might not make it out of this. If he didn't find the jeep and then also missed the crossroads and therefore didn't find the town, he would die within the hour. In fact, unless everything went perfectly and he had luck, one way or another, he was going to die in this place.

Ahead, a frozen road sign danced in the wind. It was caked with ice and unreadable, but he could see that it contained an arrow pointing to the right.

It was the way to the town. Even better, sometime in the past two or three hours, it had been plowed. Snow was blowing again, but when he put his feet down they hit tarmac, not crunching ice. He was able to safely increase his speed, which he did, forcing more and more out of himself, but at the same time getting his body into the same kind of rhythm that enables animals to lope for hours, checking his breathing, his heart rate, going for the long pull.

He began to allow himself to think that he might have escaped.

The road, though, seemed to go on forever. How long had they driven to get from the town to the Hoffman's turn off? He recalled ten minutes at most. The snow had kept them to twenty miles an hour, perhaps a little faster. So his best guess was that he had about five miles to go. He set his walking speed at four miles an hour, very fast for these conditions, but possible. He knew how each speed felt, from two to six miles an hour. The fact that the road had been plowed was a major plus. If he'd had to slog through the same depth of snow that had choked the side road, he wouldn't have made more than two miles an hour at best.

By the time he could finally see the town's streetlight, putting one foot in front of the other had become a struggle. Beyond it was the Motel 6, a strip of twelve rooms, two cars in front, most likely salesmen sheltering from the storm. He needed to inform the local authorities about the disaster at the Hoffmans', but he had no idea where the police station was located. He headed for the motel. They'd have a phone.

The office was lit by a single storm candle guttering in a saucer on the counter. The room was empty and it was cold. So they'd lost power.

"Hello?"

Nothing.

There was an area map glued under plastic, beside it a stand with brochures promising hunting, fishing, and hot-air balloon rides. They touched him with a strange nostalgia, and he found that he understood the look he'd seen in the eyes of cops who had seen carnage. They longed for the time before, and now so did he.

"Excuse me? Hello?"

Still nobody.

He went around the counter and leaned into the office. An ancient woman sat slumped behind a weathered old desk.

"Excuse me, ma'am?"

When she still didn't respond, he went around the desk and touched her shoulder. Her blouse was dank, the bones beneath dry and light.

Finally, there was a sort of subsurface shudder and she slowly unfolded. She looked up at him out of eyes that had once been tiny with cunning, but were now tired old beads of suspicion. She blinked. Blinked again. Then her face lifted itself from its wrinkled depths, the eyes suddenly full of flicker, and he saw ancient loves reflected there.

"Well, what do I have but a fine-looking young man in here," she said, then she smiled and the whole room lit up. "My God, where'd you come from?"

"Broke down 'bout a mile out."

"Lucky it wasn't more. Lucky we got room, night like this." She unfolded from the desk, her face briefly rigid with pain. Then the smile came back and she glided into the front like the dancer she must once have been.

He followed.

“Can’t run a card till we get the juice back. You good for forty bucks?”

He pulled out his wallet. “I’ve got the cash.”

“Well, that’s fine then.”

“Where’s the local police station?”

“You in trouble?”

“I’m a policeman from Texas. I need some information.”

“You lookin’ for the rustlers, aint’cha? It’s Mexicans, I’m tellin’ you. Them illegals. They got trucks, Texas. Big trucks. And guns, too. Big’uns. You’re carryin’ two pistols, Texas. Ain’t enough.”

The eyes were sharp, no question there. “Where’s the station?”

“There’s no police here in Ridge, we got about fifty people living around here is all. You’ll have to go on down to the town of River City. There’s a state police barracks there. Four fellas. This is Montana. We ain’t got a lotta police.”

“Is there a bus through here?”

“Eight in the morning, if it’s on time. Stops at the café. But you’re gonna sleep like an old dog, you lie down on a bed, boy. Want a call?”

“Yeah, that would be good.”

With no computer, she didn’t record the registration, which was just as well. The more he thought about it, the less sure he was that he would stop at that barracks. He really did not want to explain the Hoffman place to the state cops, how he had gotten there, what he had been doing, any of it. What he wanted to do was to get to an FBI office, and that would mean going all the way to Billings on that bus.

Somebody had to have a record of the men who had died on this operation, who they reported to, who they were, for that matter. Because he didn’t think he’d been told a straight story, not any of it. But somebody would know in Washington or wherever, and the FBI office in Billings would be the place to start locating that person. He didn’t want to try to involve the locals anymore, not when he was the

only survivor. God only knew where things might go, when some smart detective realized that he was the only witness and the only person who had come out of there alive.

“Look,” the old lady said, “I can’t get the keycard machine to print a key, so here’s a maid’s key. It works on all the rooms but please don’t take advantage of that.”

“No ma’am.”

“All we got here is a meat broker, some kinda pesticide salesman, and a couple of them gay cowboys keep comin’ around here since that damn movie. Ten years and they’re still comin’. Gay cowboys, my God, how could there be so many?”

“It’s a solitary life,” Flynn said.

He left her shaking her head as she negotiated the snow-swept walk that fronted the line of rooms. It was ungodly cold. If his cell phone had been working, he would have pulled up the weather app, but he made a guess that it was no more than zero, and probably below.

There was no heat in Room Seven, but also no wind and no snow. He did not undress, but wrapped himself in the thin blanket and stretched out on a mattress that wasn’t long enough for him.

He lay there, his mind turning over what had happened. But what *had* happened? A lion, a helicopter in a raging windstorm?

“Oh, Abby,” he said in the privacy of the inner dialogue that he carried on with her, “what secrets do you know?”

CHAPTER ELEVEN

He slept like an animal sleeps, with just enough awareness left behind to rouse him if there was trouble. Sometime toward dawn, he heard the snarl and clank of a gang of plows passing outside. Later, a woman sang to herself on the other side of one of the cardboard walls. Or was that Abby come to him?

A little after seven, thin light woke him. He was washing his face in a chilly memory of hot water when the old lady called. He thanked her and headed out.

The sky was ribbed steel, cold and low, and the wind was blowing what felt like a pretty steady forty miles an hour out of the northwest. There was no snow falling, but streams of it rose from the drifts and pummeled his parka and face. His two-day growth of beard provided welcome insulation.
