AND A DARKNESS OVER THE EARTH

*The Soul that rises with us, our life's Star,
Hath had elsewhere its setting
And cometh from afar;
Not in entire forgetfulness,
And not in utter nakedness,
But trailing clouds of glory do we come
From God, who is our home.*

-WILLIAM WORDSWORTH

"Ode on Intimations of Immortality from Recollections of Early Childhood"

There is no supernatural. There is only the natural world, and you have access to all of it. Souls are part of nature.

-The Master of the Key

PROLOGUE

NOVEMBER 21
DARK LENS

MARTIN WINTERS HAD BEEN IN the Pyramid of Khufu a number of times, and he'd always felt the same wonder and the same claustrophobia. The work he was doing here was revolutionizing archaeology, and that was exciting, but this particular journey into the tiny pit beneath the structure was one he had been dreading.

His mission was to collect stone facing from the interior of joins, so that the new technique of mass-average decay dating could be applied and a final mystery solved. Over the past three years, his lab at Kansas State University at Uria had dated a dozen sites in South America using the technique. For the past nine months, they had been working on the Great Pyramid, and the results were so inconsistent that archaeologists worldwide, eager to dismiss findings that had devastated their theories about the past, were howling that the technique was defective.

What they had found was that the pyramid had not been built in just a few years, but that the work had been done in at least four stages over thousands of years, beginning at least six thousand years ago. The Fourth Dynasty pharaoh Khufu had indeed built the section where his glyph had been found, but the pyramid rested on a base that had been laid three thousand years before Khufu's reign.

Now it was time to address the pit beneath the pyramid, believed to be an earlier burial chamber. It was here that he expected to finalize his study of the Giza plateau, because this was thought to be the first human work that had appeared on it.

He had also worked on another site, a very ancient building called the Osirion, where rituals involving the Egyptian resurrection deity Osiris had been practiced.

His findings were so explosive that he had not yet published them. He wasn't willing to expose his technique to the howls of criticism that would

come when his proof that it had been constructed between 18,000 and 20,000 years ago was revealed. He'd also explored dating the Sphinx, but it was carved out of a solid block of limestone, which left him without anything to sample. He needed tiny fragments of stone that had been struck by quarrymen's tools, then soon after pressed against other stone and not moved since.

Before him, the descending passage awaited. The government did not allow the public to go into the pit, and for good reason. More than one visitor had been carried out in a state of panic, and the air was so bad that suffocation was a definite issue. Legends about the place suggested that it had been used by some of the Egyptian priesthods as an initiatory chamber, presumably where people were taught to overcome whatever fears it caused.

"Okay," he said, testing his flashlight. Then again, "Okay."

Ahmad Mahfouz chuckled. "Okay."

"You bastard, you go down."

Ahmad laughed aloud. "It's not my machine that's driving everybody crazy."

Ahmad was not only one of the finest archaeologists in Egypt, he had an excellent mind for technology, so he understood why it was most unlikely that mass-average decay dating was wrong. It was, in fact, the holy grail of dating techniques: it could tell when stone was last worked, as long as the stone had not been exposed to air, thus the need to go deep into structures like this and drill into joined stones in order to get samples.

In Peru, where the Incas had fitted their stones with a jeweler's precision, this had been easy. In the pyramid and the Osirion, it had entailed careful drilling using sonar guidance. Here, also, so he was loaded with equipment.

The descending passage was narrow, it was pitch black, and madness stalked the people who went down.

"Radio check," he said as soon as he was ten steps in.

"We don't need it yet, Martin. I'm right here."

"I'm sorry, Ahmad. Look, if I get out of here alive, you're buying."

"It's been there for thousands of years-far longer than anybody thought, according to you. So why would it pick today to collapse?"

Feeling like an idiot, Martin headed deeper. Soon, a silence enveloped him that was unlike anything he had ever known, and he had been in some very quiet holes in the ground.

What was different about this silence was that it felt, he thought,

aggressive. Like it knew you were there and had been waiting, and now it wanted you. Like it knew.

But, of course, that was all in his mind. There was no malign presence here-or anywhere else, for that matter. No ghosts, no gods. This was simply what happens when you descend a narrow tunnel beneath six million tons of stone.

One thing the ancient Egyptians had not been were fools. They had understood this effect, which might be why the pit was here. The conventional wisdom was that it was an old tomb, but that wasn't at all clear. Half of it was an odd, roughly constructed platform with rocky knobs on it. Certainly no place for a sarcophagus, and the rest of the room was just as strange, being dominated by a diagonal cut in the floor about six feet deep. It was, in fact, in the walls of this pit that Martin hoped to find the fitted masonry that was crucial to his success.

He reached the chamber itself. He was now eighty feet beneath the pyramid's foundation. The air was thick and cool, clammy, even. His multi-gas detector was telling him that although carbon dioxide levels were high, he was basically safe. He carried an emergency respirator with an hour's supply of oxygen, more than enough to enable him to withdraw if he used up all the air in the confined space. Or, if the worst were to happen, to suffocate more slowly.

"I've arrived," he said into his radio.

There was a silence. A long silence.

"Mahmoud!"

"Oh, sorry, effendi. I was taking my lazy tea."

"I'm scared down here, man!"

"And I know it, and I'm trying to make some fun for you."

He was a great guy and a fabulous scientist, but there was a cultural gulf between a Moslem who had grown up when this was still Turkish territory, and now had to deal with the Brits. "Remember, I'm an American," he said. This was not the time for practical jokes with the radio.

He took a deep breath, then another. Then he opened his equipment bag and pulled out the radar. It could penetrate limestone to a depth of ten feet, and return detailed imagery of what was there. It could, in other words, locate the joins in masonry construction.

His plan was to send his tiny drill in about an eighth of an inch behind a join, then collect stone right off the join itself.

He did not shine his light around. He knew what was there, and he didn't want to see just how close the walls were. The ceiling was ten feet, though, so he was no longer being forced to hunch as he had when he was in the passage itself.

Back problems were the archaeologist's curse. You couldn't work without hunching and bending, often for hours, often in confined spaces, and the older you got, the more you became aware of this. At thirty-four, he wasn't feeling it much, not with swimming, squash, tennis and-well, Lindy. No, he worked his back plenty, and had two children to show for it at home. He also had a wife who was working to get one of the most extraordinary jobs in the world. Since 2010, when NASA had announced that some UFOs were indeed intelligently guided craft, perhaps extraterrestrial or perhaps from a parallel universe, the International Advanced Propulsion Physics Seminar had been working overtime to understand how they worked.

She was deeply involved in the politics of science, because she wanted to be on that seminar.

How that might be done by a professor from a college so low on the U.S. News list that it was at the bottom of a fold-down page he couldn't imagine. She was driven, though, obsessed with getting us off the planet in a very major way.

For his part, Martin worked deep within the archaeological establishment, which was why the revolution he was, in his own small way, creating was so fiercely opposed. But, in fact, the numbers were clear: human history had to be revised, for the simple reason that all of the most mysterious ancient structures so far tested were far older than had been assumed.

He watched as the radar's computer finally found itself and the tiny screen began to return a sensible image. "I've got picture," he said into the radio.

"Right. You're good on time."

The Imperial Department of Antiquities had given them an hour, from four to five in the morning, when the Pyramids at Dawn tours started. They did not want activity in this area of the pyramid during the time it was open to tourists. Inevitably, somebody would buy their way down, and that would mean big trouble for the poor archaeologist in here trying to work, not to say danger for the rubes with the bakshish coming down here to chant or whatever.

He glanced at his watch. It was exactly four-thirty. It would take a little more time to penetrate the drill, secure the sample and withdraw it. He was

not good on time, he was okay on time.

Only a practiced eye could understand the readout that presented itself on the tiny screen of the scanner. He was pressed up against the confined second stage of the pit, attempting to avoid the twenty-foot-deep hole that had been dug in the nineteenth century by Caviglia and after him the English explorer-or was that plunderer?-Howard-Vyse. The green readout shimmered, growing lighter where the stone was more dense, darker where the density was less.

Then he found what he was looking for-a dark, straight line. This was undoubtedly a join of some kind. He couldn't tell, looking at the surface of the wall. For years, it had been assumed that it was carved out of the virgin limestone. Not until radar imagery from above had revealed that there were structured walls down here had it been realized that this particular pit facing was made of quarried stone.

"Commencing drilling."

"Roger that."

He took out the long, thin bit and fixed it into the drill itself. The bit was worth thirty thousand dollars, being diamond tipped and made of the hardest tool steel there was, with a Knoop hardness rating of 920. It was only about the diameter of three pins, so it had to be hard in order to penetrate.

As he worked with it, he wondered how in the world the Egyptians had hollowed out diorite jars with drills that must have been not much thicker than this. This drill would not stand up against diorite. In fact, it was being challenged by this granite, and he stopped to let it cool. Although he carried three of the bits, he certainly didn't want to chew budget by using them up. He had plans for digs all over the world. Lindy might be taking us to the stars, but he was revising history, and that was important, too.

It was then that he noticed the vibration. The sensation was coming up through his shoes.

"Ahmad?"

"Go ahead."

"There's something...happening. I feel a vibration."

"The drill set up a harmonic?"

"Possibly, but it's off now."

As he stood there, the vibration became a pulsation. It was quick, regular, machinelike. If he did not know it to be an impossibility, he would have said that a compressor of some sort had turned on somewhere beneath this chamber.

What he must be feeling was some factory in Cairo starting its motors for the day. The entire limestone plateau might be set to vibrating by something like that. "I got it, it's a city sound. Some factory."

"A new machine tool plant is a kilometer from here."

"That would be it." Vibration, a new variety of pollution. He predicted that it was going to be playing hell with the archaeological district. He returned to his work.

Now, with the bit cooled down, he made better progress by just touching it to the surface, rather than pressing. Farther in, also, the stone was softer. He had been working for some time before he realized that there was dust coming down from above. Once again, he stopped the drill. He shone his light around, following the dust to its source, which proved to be the ceiling.

He was astonished to see that the finished ceiling of the chamber was spitting little geysers of dust, as if it was being compressed, or pressed from above.

"Ahmad?"

"Yes."

"Anything going on topside?"

"Interestingly enough, I saw a jackal. I thought Cairo had run them all out by now."

He returned to his work. He was bare millimeters away from getting his sample-and the drill was moving-and there! Now to withdraw and go in with the collecting tool, a tiny claw made of the same hardened steel.

He took the silver tool out of his case and plugged it into the zinc-air generator he was using for power, then inserted it into the narrow hole made by the drill. Or rather, tried. The pulsations made it harder than threading a needle.

"Do we know if that machine shop ever shuts down?"

"Come out, Martin."

"Why?"

"Because I'm starting to feel it up here, and that should not be."

Bits of stone were now dropping from the ceiling, and he knew that this was no ordinary event. The reason he knew was that the floor was clean and the room intact. Therefore, this was something new and Ahmad was right, he needed to get out of here right now.

He was millimeters from finishing, though. He watched the now vibrating screen, manipulated the instrument.

"Martin, are you coming up?"

"Hold on."

"Are you pulling out? What are you doing?"

He didn't answer. The pulsations got bigger, whoomp...whoomp...whoomp and he struggled, trying to catch just the tiny bit of stone he needed.

There was a crash and a piece of ceiling that must have weighed a quarter ton plunged past him into the Caviglia pit.

"The police are here, they are saying come out."

"On my way."

But still the instrument wasn't set. Watching the screen, he maneuvered it frantically now. The weight of what was above pressed down on him like a great, suffocating hand.

He thought of Lindy and Trevor and Winnie, and drew the instrument out. Another block fell, and he knew that it was over. He started to gather his equipment.

Whoomp! Whoomp! Whoomp!

This wasn't an earthquake, no earthquake felt like this. There was a machine down there, there had to be.

A series of sounds like shots being fired came echoing down the passage. In the dust, his light revealed cracks appearing along the walls.

He dashed for the passage, hunched, half running, half crawling, tearing his knees and hands to ribbons, racing along as the whole tunnel twisted and swayed like a rubber tube in the hands of a mad giant.

Screaming now, he burst upward. The floor crumbled beneath his feet, showers of stone fell around him, his progress slowed. The pulsations were huge now, great, shuddering seizures of the ground itself.

And then there were arms, people dragging at him, and he was coming out, he was free-and they were outside the pyramid. Coughing, his eyes closed by a thick layer of dust, he staggered and tried to collect himself.

What in the name of all that was holy was going on here?

"Run, Martin!"

He felt somebody tug at him, managed to wipe his eyes enough to see, turned and observed the strangest thing he had ever seen in his life.

Looking up the north face of the gigantic structure, he found himself watching huge ripples. It was as if the stone blocks themselves were liquefying and threatening to pour down on them like some kind of bizarre

flood.

He mouthed the words, too astounded to speak them: The pyramid's collapsing.

Sirens started wailing, one and then more, until the sound filled the air. In the distance, a line of tour buses on their way to a Pyramids at Dawn experience began making clumsy attempts to turn around in the roadway.

Martin followed Ahmad and the three policemen, running toward the wall that controlled access to the archaeological zone. Behind them there was a noise. It was a howl from the very throat of the world, screaming like a jet going down, like a million madmen burning alive.

Martin turned and saw that the pyramid was now bulging, as if it was becoming a huge block, its pyramidal shape disappearing as the stones that had been there for thousands of years burst from their rest and flew out into the sweet of dawn.

All across Cairo and up and down the Nile, people looked toward the sound, toward Giza. What they saw was unrecognizable to them and completely incomprehensible, a great, black column gushing into the sky, its walls flickering with tan dots.

Each of these dots was a stone weighing between one and three tons. Each was the size of a large automobile. And all were about to fall on the helpless millions of people who jammed the city of Cairo.

Martin understood this quite clearly. His belief, at this point, was that terrorists had detonated an atomic weapon under the pyramid. It had been his extraordinary misfortune to be inside it during the moment when the ages-old structure, the most important construction on earth, met its end.

As the great fountain of stones reached its apogee at an altitude of over two miles, Martin lay down beside the wall. He was not a religious man, and was surprised by the deep feeling of peace that had come over him. Death had come to him. This was quite certain.

But then a paroxysm of fear made him grab his head, made him scream into the continuing, expanding roar of the vast unfolding explosion.

Then he stopped. He brought before him an image of Lindy, the most beautiful woman he had ever seen, one of the wisest human beings he had ever known. He decided that he would die like this, with her filling his mind.

And then he heard Trevor's voice as clearly as if he had been standing there say, "When's Dad coming home?" And Winnie replied with prim care, "Trevor, you're so impatient. He'll be home when he's finished."

It seemed the most natural thing in the world to be able to hear them, and then the big clock in the hall was ringing the hour, eight deep bongs.

A whistling sound turned to a scream turned to a hoarse roar, and a stone crashed down into the desert thirty feet from where he lay. The ground leaped and knocked the breath out of him. He saw Ahmad, his eyes glazed with shock, his lips pulled back from his teeth, staring straight at him.

Another block hit, then another, then it was raining stones and there were screams and above them the clanging crunch of stones as they struck buses and cars, and the distant roar of the ones hitting the Nile, and explosions as they bombed Cairo. A row of houses a quarter of a mile away disappeared in dust, the road was smashed, cars ran into the desert weaving crazily, a bus, careening away from the scene, was struck in the rear and lifted up as if begging for deliverance, and then exploded in flames and desolate, shattering screams.

It went on and on and on, for what seemed like hours, then days, then it was as if it entered a sort of eternity, an endless explosion. Always, there would be another stone from the sky. Always, another chorus of screams, always another bone-shattering jolt.

Until that was no longer true. What he heard now was a silence even deeper than the one that had oppressed him in the pit. In part, it was because of his stunned left eardrum and the ringing in his right ear that would not go away for days. In part it was the shock of seeing what looked like a cliff where Ahmad had been, just feet from his face. Beside it, one of the policemen lay sprawled on his back, sightless eyes staring at the sky, dead from shock. A German tourist wandered about calling out, "Morgen hat gebrochen, Morgen hat gebrochen."

Morning has broken. And, like thunder out of the east, the sun rose behind the storied plateau of Giza, wreathed now in smoke, choked by rubble.

Martin got to his feet. He was staying at the Mena House just across from the pyramids, and he began walking toward it now. He realized that he was staggering, but it didn't matter, the other ghosts on the ruined plateau were just the same.

In contrast to the plateau, the gardens of the Mena were still verdant. Half a dozen huge blocks were embedded in the golf course, looking as if they had been there forever.

The hotel itself was undamaged, the staff and guests outside, looking up

at the great, black column that hung in the sky, blowing slowly south with the prevailing winds of the season. The British and Egyptian Royal flags flew in stately splendor, as unaffected as the hotel itself.

November in Egypt could be so lovely, with even Cairo enjoying a few crystal days.

Martin went through the upper lobby and into the Khan el Khalili. There was a waiter there, standing at a window. "I would like a cup of coffee," Martin said. The waiter did not move. Then he did, he turned. His eyes streamed with tears. Martin realized that he was crying, too. They embraced, and the two men wept together like children. "I lost my friend," Martin said.

"I lost my Egypt, our heart is broken now, sir."

Later that day, Martin went onto the roof of the hotel, to see for himself what everyone was talking about, everyone who was not fighting fires or cleaning up the bombed city, or looking helplessly at the great stones that had shattered her.

Before him stood the plateau, and where the pyramid had been there was a new object, a gigantic black lens. It was afternoon now, with light made delicate by the dust.

He stared out across the space that separated the hotel from the pyramid complex. Here and there, figures could be seen moving around it, for the most part Royal Egyptian Police in their green uniforms, and British soldiers in khaki. A resplendent Rolls Royce stood in the road in front of the Mena, and the Governor General could be seen striding amid the huge blocks, followed by a crowd of officers.

Martin gazed long at that lens. It appeared to be perfectly round and convex, perhaps twenty feet high at its center. He cast across his memories of the past, trying to find in the encyclopedia of his mind some point of reference.

There was nothing. The past had not portrayed this. But he did not think it an accident that it had emerged immediately beneath the Great Pyramid. Of course it wasn't an accident.

Had the pyramid, then, been built to block it, or perhaps to conceal it?

These were mysteries, but the even greater mystery was, what was it for? Clearly, it was the product of an advanced technology-and not only that, a very old one. The Giza Plateau had not been disturbed in thousands of years. Certainly, nothing this large had been buried here after the pyramids were built.

It was old, it had to be, but its construction must have presented more than just a structural challenge. The energy needed to blast all of those stones into the sky would have to be enormous. And yet, in all the years that the ground beneath the pyramid complex had been probed with tunnels and shafts, and examined with sonar and radar, no sign of the lens or of any sort of explosive device had been observed.

In fact, very little had been found. In the 1950s, the two so-called "solar boats" had been found buried in the boat-pits along the southern side of the Great Pyramid. But nothing else had ever been located-a few shadowy areas that suggested caves, but that was all.

God, but look at it! Gleaming in the light. Ominous as it could be.

The air was filled with the mourning of sirens. He thought of the British Empire as being ramshackle and overextended, but the Cairo Emergency Service was certainly well supplied with vehicles. He wondered about the hospitals, though. Had they as yet extended the National Health System to the protectorates, as well as the outright colonies? He didn't know, but if not, then the hospitals here were liable to be primitive and he was damned lucky not to have been hurt.

Even his ears had stopped ringing.

He turned away, unwilling-or unable-to stare any longer at the gaping dark eye that had replaced that great wonder. Eternal pyramid, built for the ages.

How long had it taken to destroy it? No more than five minutes.

He'd started back downstairs when he hesitated. This was a nightmare of some kind. He wasn't awake.

But he was.

He turned back, and there it was again. Nothing to call it but a lens. Huge, glaring darkly upward at sky into which it had spit the pyramid.

As old as it must be, it seemed perfect, fresh and new, come up out of the earth like some demon's eye that had opened after a sleep that had crossed the ages.

Which was exactly what had happened.

ONE

NOVEMBER 22
DANCING IN THE DARK

GENERAL ALFRED WILLIAM NORTH ENTERED his superior officer's luxurious suite in the Pentagon. General Samson had been appointed Chairman of the Joint Chiefs of Staff last year, and had taken Al with him into the stratospheric world of high-level military politics.

General Samson's orderly had not been present to announce him. Given the present state of chaos within the military, that wasn't too surprising. He was probably on some detail or other within the vast building, and there hadn't been anybody available to spell him.

They were due at the White House in ten minutes, so Al didn't stand on ceremony. Knocking once, he entered the office. Al had met Tom Samson when he'd been promoted to Air Force Chief of Staff. He'd been a very efficient officer, and personable.

That, however, turned out to apply only to superior officers. Now that he was Chairman of the Joint Chiefs and Al was still vice chairman, things had changed. Tom was a cold, charmless yeller, he was intolerant of failure, he was extremely demanding. Al still believed him to be a good officer, but his approach to the job was often too rigid. Truth to tell, Al had expected this promotion to be his. Counted on it, actually. What had happened had been a serious humiliation and a sad end to a great career. He had known the president for years, and he could not understand why he'd chosen Tom over him, frankly. He'd carried out his responsibilities with excellence.

The difference between the two of them was that Tom had served in fighters and Al had trained in them but served his entire career as a staff officer. Tom had a Purple Heart and an Air Medal. Did Al, who had never heard a shot fired in anger, envy Tom his participation in the Cuban Troubles?

Short answer: damn right. If it had been him, his career would not have stopped just short of the pinnacle.

"Tom, I'm here," he said. Tentatively.

Silence.

The bathroom door was ajar, so Al walked toward it. "Tom?" he repeated. There came a shuffle of sound from inside the bathroom.

"Excuse me," Tom replied, an angry challenge in his rumble.

"Tom, I'm sorry, Lenny's not out front-"

"Get out of here!"

"Sorry!"

As Al headed for the door, he noticed, open on Tom's desk, a silver box about the size of an old-fashioned cigarette case. Inside were six narrow golden cylinders. Lying beside them was a hypodermic, silver, that tapered seamlessly from a wide back with a socket in it that would obviously fit one of the cylinders, to a needle with a point so fine it almost appeared hairlike.

Al hurried out, his mind racing. That outfit-was he an addict of some sort? A cancer victim? And what strange looking equipment.

A moment later, Tom slammed his office door with such force that the entire room shook.

Al hardly heard. If Tom was an addict, very frankly, that could be good. Worth knowing.

At that point, Lenny reappeared.

"General, let me announce you," he said.

"He knows I'm here."

Lenny went white. "He does?"

Al nodded. Nothing more was said, and a moment later Tom strode out, resplendent in his uniform, his gray eyes staring straight ahead, his face expressionless.

Lenny snapped to attention.

"We need to talk," Tom snarled at him as he passed his desk.

"Yessir!"

"You bet, yes sir, young fella." He went stomping off into the outer part of the suite.

Al followed him, and together they descended in his private elevator to the basement garage, where his staff car awaited them, rear door open. All of this was done in silence. In point of fact, you just plain did not talk to Tom unless he spoke first. He wasn't responsive to social chatter, jokes, gossip-anything like that. In fact, the most amazing thing about him was that he held this most political of all military appointments. How the bastard had managed it, every single general on his staff would have loved to know-if only to help

find a way to hurt him.

Historically, the Joint Chiefs was a solid, smooth-running organization. Not under Tom. Tom had made it into a rat's nest full of spider webs. Men who had worked together for years now fought like what they were-creatures in a trap.

In the year since Tom had come, there had been five "resignations." All, in fact, firings, brutal, mean spirited, often mysterious. Worse, they had been followed by vindictive little appointments to posts designed to humiliate the victims. General Halff had been Army Chief of Staff. He was now serving out his time as commander of Fort Silker in Mississippi. Fort Silker was being decommissioned, so Harry's basic job was to arrange for environmental cleanup and the sale of assets.

Al settled into the car. He knew that this meeting was important, but he wasn't quite sure what it was about. He supposed that Tom knew, but Tom wasn't saying. Perhaps Al was on the chopping block. Perhaps Al was due to be caught unprepared in front of the president, a certain prelude to destruction.

Except for one thing: Al had known James Hannah Wade since they were roomies at the Academy. In recent years, the friendship had necessarily become arm's-length, but the two men were still close enough that Jimmy would on occasion invite Al to hammer squash balls with him. This usually happened when the going in this very difficult presidency got really rough. But Jimmy was flying high right now, so no squash with his old friend. And, as both of them knew, betrayed friend.

The car turned onto Fourteenth Street, headed past the familiar emerald arches of a McDonald's, then entered the White House grounds.

"We're listening today," Tom said. "An intelligence report."

"What's the general area, sir?"

Tom turned toward him, then turned back again. A moment later, the car stopped, and they were walking through the White House to the Cabinet Room-but then they passed the Cabinet Room and the Oval and headed through Deputy Chief of Staff Morrissey's office into the Presidential Study.

It was an improbable place for a large meeting-except that it wasn't a large meeting.

"Hi, Al," the president said. Al could feel Tom stiffen. Good sign, maybe the president had finally realized that the appointment had been the mistake that Al had told him it was-practically the only political thought he'd ever

shared with him. He turned to Tom. "Good morning, General."

"Good morning, Mr. President."

A moment later, National Intelligence Chief Bo Waldo came in, followed by two aides, who proceeded to hover over the TV.

Waldo spoke. "Yesterday, there was a massive explosion in Cairo that resulted in at least a hundred thousand deaths and property damage on an extraordinary scale. The explosion destroyed the Pyramid of Cheops."

"And?" Tom snapped.

The president gave him a sharp look.

But his impatience was understandable. The Cairo disaster was on every news channel in the world. You couldn't find anything else on TV, radio, the Internet-you name it. Al thought, they know the terrorist group responsible, and they're about to inform us that the Brits are going in with a hit. We were being asked to provide some sort of support, no doubt, and the problem with this kind of thing was always the same: how did you do what one empire wanted without angering another?

Waldo cleared his throat. "We haven't had another one in half an hour, Mr. President," he said.

Al's mind whirled. Another one? What was he saying, here?

"How many are there, at this point?"

"Including the one that just came up in Cambodia, that would be fourteen."

Al wanted to ask what in the world they were talking about, but he couldn't without revealing his ignorance. Tom's glare showed that he was thinking along exactly the same lines. The Joint Chiefs controlled no fewer than five uniformed intelligence services, in addition to the Philippines Colonial Agency and the Cuban Intelligence Corps, so how was it that they hadn't been briefed by their own people? Tom would want that looked at, and for once Al would be in total agreement with him. It was an inexcusable lapse.

The president said, "And they're all-it's the same? Distance, all that?"

"Each one is exactly six thousand two hundred twenty miles from an axis point eleven hundred miles from the north pole. They've all appeared in the middle of ancient ruins. The Institut Indo-Chinois de Culture has already started testing the one in Preah Vihear. Thus far, it has a hardness number of at least three thousand, just like Cairo. Clearly, the same substance, and by far the hardest thing on earth. The only weapon that might affect these objects

would be a hydrogen bomb."

"Do we have any of those?"

"We do, Sir," Tom said. "Well hidden from Royal Air Force mandatory inspections, but we do."

The Brits were rigorous enforcers of the Non-Nuclear Pact between the five empires, of which the U.S. was the smallest and the most lightly armed—and therefore the only one that actually needed to obey the damned pact. Certainly, the French didn't. And as far as the Czar was concerned or the secretive Japanese Emperor, who knew what they might be doing in their hidden lairs? There might even be a Chinese warlord with a nuke of some sort.

The president went to the window. "I've worried about one coming up here in Washington. Should I?"

"Unless there's another phase," Waldo responded, "this thing has the look of being completed. But you know, of course, what's odd—every single location was an ancient sacred site."

"So they knew," the president said, turning suddenly, staring first at one of them and then another.

Al saw a plea in his eye, as if the American people were there, pleading through him for knowledge.

"Lenses," Al said. Tom gave him a sharp look, but he continued. "Lenses reflect and they refract. Do we have any idea which it is that these are supposed to do?"

Waldo shook his head. "So far, they're simply there. According to MI-3, the one in Cairo isn't emitting or absorbing any known energy. The Institut says the same about the one in Cambodia."

"Any idea if they're natural, then?"

"We don't think they're natural, Mr. President." Waldo replied.

"But it's a good question," Al said. "If they're manmade, who constructed them and why?"

"That is an urgent question," President Wade snapped. "Possibly the most urgent question in the history of the world." He looked from one of them to the other. "You seem unimpressed, Tom."

"Sir, if we don't know anything about them, how can we make that assessment?"

The president stiffened. "It's instinct, goddamn it!"

"There's something else you need to see," Waldo said hurriedly. "Roll the

imagery, please."

The TV screen flickered, came to life. Al saw people walking through a rather pretty countryside. They were dressed oddly, some in night-clothes, others in underwear, one or two in coats, one completely naked. There were men, women, and children.

The group was being followed by green and white checked police cars, with their blue light bars flickering.

"What are we looking at, here?" President Wade asked.

"This is in Gloucestershire," Waldo said.

"Shot when?"

"It's live," Waldo replied. "During the night, these people were struck by a bright light that emanated from objects overhead that were disk-shaped in structure. They've been walking due north ever since. They've come fourteen miles in eleven hours."

"Are these things related to the disks we've been seeing for years? The ones NASA claims are intelligently controlled?"

"We don't know. We really don't know much of anything."

"Bottom line, though, these people can't be stopped, am I right?" Tom asked, his voice full of sarcasm.

"They cannot be stopped, General Samson," Waldo snapped back. "They can be demobilized only by being drugged. An examination of one of them completed at a hospital in the area showed a normal physical specimen. But a brain scan revealed a different picture. The brain function was about a third normal."

"They've lost something, then," Tom responded. "Their intelligence?"

"We don't know," Waldo replied.

"Do we have any imagery of the attack?" the president asked.

"Witnesses report disks glowing dull orange."

Al had a thought. "Where is the nearest lens, in relation to Gloucestershire?"

"What relevance does that have?" Tom asked. "If I may be so bold, General?"

"No, it's a good question," Waldo replied, "and the answer is, the nearest lens in the Tassili Desert in Algeria. And what I was about to add is that there's a Foreign Legion report that a burst of orange fireballs was emitted from the lens there. But the event took place just four minutes before the Gloucestershire attack, so-

"They're related," Al said. Instantly, he regretted it. He'd spoken in haste.

"General, I fail to see-" Tom began.

The president interrupted him. "I agree. Whether the things that struck in Gloucestershire came out of the lens in Algeria, God only knows. But there is obviously a relationship of some kind between all of these things-the disks we've been seeing for fifty years, the ones that attacked those people, and the lenses, and I might add that I think we need to assume the worst, here."

"All I see are British and French problems," Samson said. "Unless some of these things are in the Japanese Empire. Are they?"

"No, so far only British and French imperial territory is involved, and some South American countries."

"Then I say we wait," Tom announced, his voice taking on the tone of the pulpit. "Maybe it's some kind of a secret weapon. Nothing to do with us. The Czar's supposed to have some doozies, and he wants African possessions. He'd like Egypt, in fact, to annoy the Turks, if nothing else."

The president turned on him. "Why are you here, Tom? Why in hell do you think you're here? Something is wrong. Goddamn wrong." He gestured at the screen. "This will spread, you know."

Tom held his ground. "We have no evidence of that, Sir."

"It will spread!"

"It's not an attack on the United States. And there's no evidence that such an attack is imminent."

"Tom," the president responded, "as soon as you get back to your office, you are to go to DEFCON 1 and issue a War Warning to all commands, worldwide."

"Sir, I-"

"We're under attack, you damn fool," the president said. "The blue, white, and red, damn you! Not just a couple of the empires and a few banana kingdoms. Us!"

Tom went stiff. His eyes seemed literally to glitter with murderous rage.

But the president wasn't finished. "Gentlemen, I've got a military background, and I know when my enemy is probing my defenses. That's what happened in that little town in the very heart of the most powerful empire on earth. Bo, I want you to liaise with the Brits, the French, all the empires on this, and I want CIA to watch the streets worldwide for other, similar incidents."

Al could smell the fear in the room, and found himself hoping that

President Wade was not acting in the haste of panic.

"Al, you're to organize a task force. You are ordered to find a way to destroy those lenses, all of them. I want it fast, and I want a one hundred percent certainty of success."

"Sir," Tom asked, "is an attack on them wise? We're in the region of the unknown here."

"The man with the medals suggests retreat," the president said. "Okay, I hear you. Al, when you're ready to attack these things, inform me at once. Directly." He pointed to a telephone. "Directly," he repeated.

"Yes, Sir. We only have four bombs, Sir. We'll need British and French support."

The president sighed. "Waldo, how many nuclear bombs do I have?"

"Twenty-three, Sir. Four in the hands of the military, the rest underground at-"

"Tom, Al, you understand that you had no need to know on this."

"Sir, I beg to differ," Tom said. Al could see that his neck was red, his veins pulsing. "We had a need to know. Strategic planning, war games-of course we had a need to know!"

"And I have a need not to find myself face to face with a quartet of outraged imperial ambassadors all demanding that I hand over my nukes. You leak, Tom. Nobody on your staff likes you, and that makes for security issues, doesn't it?"

Al fought his face. The least trace of the smile that his enjoyment of this was urging to his lips would get him fired before sunset.

One of Waldo's aides listened to his earpiece. He nodded to the intelligence chief.

Waldo said, "Mr. President, we have a party present at this time who might be able to help us. There was an archaeologist inside the pyramid as the explosion developed. His working party was killed, but he got out. He's here."

"Excellent work, Bo," the president said. "Now, you listen and learn, Tom. Bo here wants to impress his president. This is what I like to see. You might take that under advisement."

Tom bristled, then plastered a rigid grin on his face. A dusty young man, handsome but looking profoundly exhausted, came wide-eyed into the room.

MARTIN HAD BEEN GIVEN EGGS and a whole lot of coffee on the plane. It was quite incredible-Air Force private jets all the way from Cairo to

Le Bourget, then here. He had been able to talk to Lindy and the kids via videophone from the plane. In normal times, incredibly fun. Now, not so fun. He was heartsick about what had happened, still trying to accept it as reality. The Great Pyramid, gone, replaced by that...thing. Lens, they called it-he'd called it that, in fact, for the BBC, which had interviewed him just before he left Cairo. In fact, he'd probably started the use of the word.

Now here he was in the White House, in the West Wing, no less. He was a reeking mess, he supposed. Nobody had bothered him with such niceties as a change of clothes or a shower. He still had Giza dust in his hair, as a matter of fact.

A man in a black suit took him to a book-lined study. He'd hoped to see the Oval Office, but this was apparently the inner sanctum of the Great American Fool, President Jimmy Wade. He'd gutted National Academy of Science budgets, he'd pulled grant money out of dozens of universities, Uriah included. He was a man willing to spend billions supporting American trade associations in their perpetual war with the larger imperial economic systems, but his education program was a sham, his entitlement system was a mess, and his interest in the sciences appeared to be, if anything, negative.

Under Wade, even NASA's exobiology and alien culture programs were languishing, and now that it was known that UFOs were intelligently guided, these two programs seemed to be doing some of the most important science in the world. Not to mention the Advanced Propulsion Physics Seminar.

Still, he was the president, the leader of the American people and one of the more powerful world leaders, and seeing him here, all human and vulnerable, was an odd experience. He came to his feet and put out his hand. Martin shook it, and looked into the strange, empty eyes of the professional leader.

Another man, bald, big-dominating the room, in fact, despite the presence of two resplendent generals-pumped his hand, drew him past the president, and sat him down. "We know you've had a shock," he murmured. His hands were soft, his eyes were not full of fear like the president's. They sparkled. They watched. Martin recognized Bo Waldo, of course, he was all over the news all the time.

"Doctor Winters-may I call you Marty-"

"Martin."

"Okay, Martin is a distinguished member of our country's archaeological community. He's managed to cause a small revolution of his own."

It wasn't small, it was huge, but Martin couldn't say that.

"You lived through the pyramid?" the president asked. "Where were you, because I've been in that thing, and it's not easy to get around."

"I was in the burial chamber a hundred feet beneath the surface."

"How could you have been there and survived?" one of the generals asked. This was a man with a narrow, almost cruel face, and small, ugly eyes, gleaming as black as obsidian.

Martin decided not to even address the question, it was so impertinent and, frankly, so stupid.

"What General Samson means is-"

"I meant what I asked, Al!"

The other general went instantly silent. Obviously, the tall man with the mane of white hair was the lesser of the two. He had a better face, aquiline, aristocratic, and, Martin thought, sad.

"I survived because I was so deep. We picked up unusual pulsations about three minutes before the structure blew, so I had time to withdraw."

"Doctor Winters, if I tell you that these same lenses have appeared around the world at fourteen different sites, all the exact same distance from an axis point near the north pole-"

The room became distant, the voices like memories.

"Doctor Winters?"

He fought to pull himself together. The first one of them he saw was the beady-eyed general, gazing at him like a guard might at a dangerous prisoner. He swallowed, looked around for water, saw none. "All right," he said, "I know what that would be. That's the Sacred Circle. You'd have Ollantaytambo, Easter Island, Preah Vihear-are you telling me that all of these sites have been destroyed?"

"All," the president said. "Our interest is this. Are these lenses a matter for concern, as I certainly think they are. If so, would you be willing to speculate on defense implications?"

Wade was portrayed by the media as an idiot, but that was an impressive question. "Sir, we know that there was some sort of advanced civilization on earth fifteen thousand years ago, that abruptly disappeared in a catastrophe. All of those sites except the pyramid are later structures built at specific geodesic points. The why of that, we have never known."

The snake-like General Samson almost spat his words. "I think this is largely speculation."

"General Samson," the president retorted, "you're here to gather information that'll help you execute your orders. Thank you, General."

"This man's work is highly controversial," Samson snapped.

"Actually, um, it's not," Martin said.

"Well, I read my share of science journals and I say it is!"

Martin didn't know how to react to a yelling general. It made him mad, though, the rudeness of it.

The president asked, "Doctor Winters, tell us what you think these lenses might be?"

"From strictly an archaeological point of view, I don't know. But if you read old chronicles, a lens like this could have been the mechanism of destruction."

"Of what?"

"The civilization. It ended in a day, you know. In a matter of minutes. It happened on an afternoon in June, actually. Over five minutes, perhaps a little less."

That silenced even the blustering general.

"What is our risk now?"

Martin recognized his responsibility here. "I've been, frankly, a little thrown, here. I-you know-the shock, and now this..."

"Let me rephrase," the president said. "Do you see a possible risk now, and, if so, on what do you base your speculation? Is that a little easier to handle?"

"There is a calendar-the Mayan-that marks the end of this age as being this coming December 21. The winter solstice occurs on the day earth crosses both the galactic equator and the solar ecliptic. A highly unusual conjunction."

"What's so absurd about this," Samson said, "is that it assumes that the ancient Maya knew about galaxies. A bunch of blood-soaked head-hunters. The very idea is ridiculous."

Martin decided that he loathed this man, a rare intensity of emotion for him. He reserved his intensity for love of wife and kids. He did not indulge hate. But General Samson invited it. "The date is there," he said. "And no matter what the Maya knew or didn't know, the position of the earth is there, too."

"What does it mean," the president asked. "You're telling me a whole human civilization was killed in a day, Doctor. What should that be saying to

me in the here and now?"

An aide finally produced water and Martin drank all of it at once. "I've still got the desert in my throat," he said.

"All right," the good general said. "You can do this, you can say it."

"Yes. This prophecy-the 2012 thing-it's always been a mystery that it was so exact. And it required tremendous calculational ability-the whole Mayan long-count calendar-and apparently a knowledge of the position of the earth in relation to the rest of the galaxy-and I'm sorry if that gives offense-

"Which astrophysicists are still arguing about," Samson said.

"Tom, will you stop interrupting him?"

"I'm trying to help, here, Mr. President!"

"Doctor Winters, please continue," the president said.

Martin swallowed. His throat was dry again. He was not used to intensity like this. There was terror in every eye, and the stink of sweat rising in the room. "Yes. I'm looking at these things coming up out of the ground, and thinking about the fact that so many ancient cultures speak of beings that came through gateways-

"Aliens, as per NASA?"

"Not aliens, as from another planet. Given the distances involved, present thought leans more in the direction of UFOs being projections of some sort from parallel universe or universes. All right here, right around us. Now."

"Aw, come on! Mr. President, we don't need this kind of speculation," Samson said.

The president exploded. "General, for God's sakes, will you shut up!"

Samson would not be silenced. "I think this man needs to be removed, he's obstructing-

"You listen to him, Tom, god damn you!" The president roared.

Samson's mouth snapped shut.

"Go on, Doctor," Bo Waldo said softly.

"Uh, the, uh-the Sumerians called them Annunaki, the Babylonians Akpallus, the Hebrews Nephilim-the list is long. Always, they were powerful, dominating people-somewhat human looking, but with a reptilian cast of eye-who came from another reality. Some were hostile, others more benevolent. Almost as if there were two warring factions, with different agendas for us. They fought among themselves, at one point, and then were no longer present here."

"And this relates to our situation?"

"Maybe the reason that the end-of-world predictions in the old calendars are so exact is that there is something in the astrophysical situation that opens these gateways. Maybe that's what the lenses are. If so, then we can expect that they're the worst things it is possible to imagine."

Silence.

He didn't say it, but as he spoke the words, they just tasted right. He paused, then decided to take the plunge. "Um, I would therefore say that a machine has been turned on. I think, between now and December the twenty-first, we can expect them to become increasingly active, and on that day, to destroy human civilization. Attempt to."

The president stood up, went to the window. "Bo?"

"Sir, we don't have any information like that."

"Tom?"

"This is-I can't call it a fantasy, obviously. The things are there. But I think we need to wait a little longer. If we have to fight, we also need to know what to fight, and how."

"Al, I want to revise your orders. I want you to do the following. You execute a nuclear strike against the most isolated of these things-"

Tom Samson leaped to his feet. "That's out of the question!"

"Tom, you already have your orders."

"Sir, not if I'm seeing this dangerous, impetuous tack you're taking-no, sir, I will not!"

"Al, will you execute?"

"Sir, I'm a notch down in the chain."

"I want you people to understand something here. I am not hearing what I need to hear. And I'm not just going to be asking for resignations. In just another minute, I'm going to be carrying out arrests. Here. My Secret Service, your ass!" He glared straight at Tom, and Martin thought that he would not like to be in that man's shoes.

Al came to his feet. "Sir, I'll get the strike going at once."

"And you'll continue to fulfill your oath, Tom?"

"As I understand it."

"'I will faithfully execute lawful orders...' That's the part that's relevant here."

"Sir, I will issue the alerts and the War Warning. But I urge you to address this other matter to the National Security Council and to Robbie. Don't leave your Secretary of Defense in the dark. And for God's sake, let the

British and the French know-all the empires. Don't surprise them, Sir."

"Nobody's gonna be in the dark," the president muttered. "Now, let me tell you something incredible. You know what I have to do right now? I have to go out into the Rose Garden and slap a smile on my kisser and pardon a goddamn turkey! Happy Thanksgiving."

He left the room, and Martin thought he would follow that man anywhere. He had completely revised his opinion of the president. He was smart, decisive, and a master of the art of managing powerful men like the ones in this room.

They followed him out. Martin was left behind, completely forgotten. His role in this meeting would probably be lost to history, but he understood what he had done. If they were going to stop what was about to happen, immediate, decisive action was essential.

It had been a year since NASA had made its announcement about UFOs, and he wondered, now, if that had been a good idea. If they were aliens from another planet, it appeared a harmless enough thing to say. But if parallel universes were involved, whether or not we believed they were real might have a lot to do with their ability to enter our world. The mind might play a part here, a very unsuspected part. Our belief might be essential to their ability to use their gateway, meaning that NASA could have unwittingly opened a door that had been closed by the wisdom of the past, then sealed with the sacred sites that had just been destroyed.

He pulled out his cell phone. Would there be a signal in this place? Yes, good. He called Lindy. "I'm coming home, baby."

"I thought you were on a plane!"

"I took a detour. A quite incredible detour." He looked around, saw a man in the doorway, a Secret Service agent, apparently his minder. "Excuse me, I need to get to Kansas City," he said.

"National Airport. TAT and Braniff both go to K.C."

"Actually, I was brought here on an Air Force jet, and I thought-"

The agent smiled. "Our job was to get you here. You're here."

"And that's it?"

"That's it."

"Martin, what's going on?" Lindy asked. "Who are you talking to?"

"I'll call you from the airport, let you know when I'm getting in."

He swallowed the terror that had been building in him. He just hoped to God he could make it home, that there was still time.

TWO

DECEMBER 6

THE LAST GOOD NIGHT OF WYLIE DALE

WYLIE DALE TRIED TO STOP shaking, could not. He thought he might be more scared right now than he ever had been in his life. He was exhausted, his story had been running through his mind like some kind of out-of-control hallucination and he thought that it was not a story, it was real.

This was because of the fact that he'd been unable to stop his hands from hitting the keys. He'd watched them like an outsider. No control.

At least they were no longer moving. He glanced over at the clock. "Holy shit!"

"What?" came Brooke's sleepy voice from the bedroom.

"I'll be there in a sec."

Wiley had been in front of his laptop writing for an incredible sixteen hours. He knew what had been written, but not as if he had been the author. It wasn't creation, it was transcription. He wasn't creating a novel, he was writing a history and it was a very scary history and he was afraid it was real, and it wasn't just a history, it was a warning.

He turned on the little TV set that sat on the corner of his desk. He watched Fox News for a while, then went up to MSNBC, then back down to CNN.

Just more of the usual bullshit, an actor gunned down by a posse of outraged fans, a combination hailstorm, tornado, and flood that seemed to have flattened every trailer park in Arkansas. The European empires were gone, and there was nothing about any weird lenses coming up out of the ground anywhere at all, and certainly not under the Great Pyramid.

He flipped through what he'd written-and found over fifty pages.

What the hell, you don't write like this, nobody does.

What in God's name had happened to him? It's hard to create fiction, it takes hours, sometimes, to get a single sentence out.

His damn knuckles hurt from the pounding.

He read more. If this wasn't fiction, then what was it? There was no

President Wade, there was only one moon in the sky, and there was certainly no czar.

This was reality from a parallel universe, somehow bleeding over into a susceptible mind-his.

The creatures he'd seen in his woods five years ago-the subject of his notorious book *Alien Days*-had been scaly, and Martin had described the ancient biblical Nephilim as having a reptilian appearance. There was nothing like that in our Bible, but he'd certainly seen scaly faces, right here in these woods, not a quarter of a mile from here.

Brooke slipped into the room and put her hand on his cheek. "Wiley, it's time to come to bed."

The spell broke, and his body took over. It had been in this chair for a damn long time, and there was a bladder involved and the bladder had just come to its senses.

He ran like hell.

"Wiley?"

He hit the john just in time and opened up. "Thank you, God."

She followed him in. "What's the matter with you?"

"Nothing, now!"

"You've been in there since breakfast, do you realize that?"

He finished his business, opened the medicine cabinet, and drank a couple of slugs of Mylanta. Chased it with Pepto Bismol. "Nectar of the gods," he said.

"It's late, it's time to go to bed." She caressed him from behind.

"I need a breath of air. I'm gonna take a walk."

"The book is making you crazy."

"No."

"Yeah, it is, and I'm not ready to go through that again, Wiley. That alien book, that was enough for one lifetime."

She referred, of course, to the hated *Alien Days*. He hated it, too, for that matter. It wasn't fun, being a laughingstock. "The book I'm writing is not about aliens."

"I know you, Wylie Dale, it's about something weird or you wouldn't be so crazed. No more saucer crap, that's bedrock, boy!"

"It isn't about aliens, and neither was the other book. I only thought it was."

"*Alien Days* was about a writer being very crazy in public.

Embarrassment, that's what it was about."

"There are no aliens."

"At last, he faces the truth."

"What's happening is much stranger than the arrival of aliens from another planet. And this book, it's-wow-it's possessing me."

"You write fiction that you come to believe is real and in the process you drive this entire family crazy, and I'm sorry, no more."

"Brooke--"

"No more! End of story! Books that possess you, that drive you nuts-no, I'm finished, I've had it!"

"Mom? Dad?"

Nicholas appeared, looking bleary and pissed off.

"Wonderful," Wiley said.

Brooke said to their son, "Dad has a sour stomach."

"You're fighting."

"I love your mom too much to fight with her. I just obey." He made a steeple of his hands and bowed toward her.

"Except you don't, Daddy." Now Kelsey had arrived, his gorgeous little girl. "He has cigars hidden in the woods."

"That is not true!"

Brooke folded her arms. So did Kelsey. Brooke glared. "The aliens you go looking for in the woods, Wiley Dale? Would they be from Cuba?"

"The cigars are Matt's," he said.

"And he's out there right now, isn't he, smoking a Monte and sucking on a bottle of Beam, and that's the real reason you want to take a walk-to make yourself sick on cigars and hootch."

"Cubans are the best cigars in the world."

"You're coming to bed with me. And scoot, you two, the sandman's gonna be furious."

"I'm past the sandman," Nick said.

"I'm not," Kelsey told him. "I'm just a little girl, and I still believe."

"Meaning, don't rain on your sister's parade."

"No, Sir."

Wiley went into the bedroom and fished his flashlight out from under the bed where he kept it alongside his shotgun. "I need some space, hon. This thing I'm writing, it's getting to me, for sure, and I agree with you, we need that not to happen. It's about us and about people who live in another version

of this house in a parallel universe. I think that's what it's about, anyway. I'm sort of more of a reader than a writer, here. Reading as my fingers write, as it were."

"About us in what sense?"

"Well, like this conversation. This will be in the book. Because we're part of the story, somehow. I'm not sure how, yet, but we're part of it."

"Not our names again!"

Uh-oh. He had to tread carefully here. "Well, uh...hm. The people in the parallel universe aren't us. They have different names. They live in their version of this house and the town is called Harrow, too, but the people are not the same."

"I am so tired of this."

"Whoa, slow down. The parallel universe is obviously different. Their McDonald's has emerald arches. Their Target target is blue. The president's named James Hannah Wade and the family's named Winters. We're the Dales, if you hadn't noticed. And here, McDonald's has golden arches, obviously. Plus there is no British Empire, among numerous other things. They have two small moons rather than one large one."

"In the part of it that's set in our universe, what are the characters' names?"

She knew him well and she was not dumb. Far from dumb. "Well, of course, I'm using ours-"

"NO!"

"Well, uh, it's us. They're us."

"My kids' names will not be in another one of your books. You know what Nicholas said? He said you really are the most embarrassing father in the world, and he was right! Saying you were taken aboard a UFO was bad enough, but you included him! When he was all of seven years old. Wiley, where do you get off?"

"The names are-are-like, they're just place markers. After I'm done, I'll change them."

"Because it's an act of vanity to write novels about yourself!"

"Brooke, goddamnit, that's a betrayal. You know it happened."

"It hurt this family so much, honey. I just can't go through it again. The kids can't. Especially not your son. He is so brave but he suffers."

"What do you mean?"

"The kids eat him alive! His dad got a rectal probe. You try living that

down at the age of twelve."

"The laughter is the failure, not the book. It happened." He paused. "It just wasn't what I thought." There came to him, then, a feeling—a sort of pull, really. To go back to the office, to sit down...

But not after sixteen straight hours, he'd be in heart attack country. Stroke country.

"Thing is, this book—I'm not its author, babes, I'm its prisoner."

"You will be responsible, Wylie Dale. You will be!"

"All right, that's it! I'm going walking. You'll be asleep when I get back, God willing."

"If I smell the least trace of cigar smoke—"

"Kelsey's gotta have Indian blood, the way she follows me and I never see her. But neither one of us is an Indian, my dear, so how do you explain that?"

"By the fact that you're two hundred percent hot air and half baked." She came to him. "Which are two of the many reasons that I'm so damn crazy about you."

She kissed him. He was furious at her, but he kissed her back, and she felt so vulnerable and so-so Brooke. He held her tight.

Noisy though it was, this marriage was a good fit for Wiley Dale. He needed someone willing to come up the side of his head on occasion, and Brooke had no compunction about that. But he was not going to change any names in any part of the book, this one included. "You're so nice," he said.

Little feet went scurrying away. Kelsey could be heard whispering, "We have a kiss. Gawd!"

Wylie and Brooke managed to swallow their laughter.

When he went downstairs, she sort of tried to stop him, but he promised to come back soon. He really did need that air. If he didn't get away from that keyboard and let this thing die down, he'd be up all night.

He left the house, glad to enter his familiar woods beneath the familiar starry sky—and that good old moon up there, good old friend. It couldn't be very romantic to have two moons.

He sucked the air deep to rid his head of the fog that the writing had invoked. He shuddered. It was a mild night, but he felt cold in his blood.

He had lived Martin's sense of suffocation down under the pyramid, had cringed in anguish of terror with him as the blocks smashed down around him, had actually not known whether or not he was going to be annihilated.

Creepy enough, but even creepier was the fact that he could still feel

Martin's presence. See him, sort of. He was down in Harrow, and things had gone very bad since his visit to the White House just-what was it-eleven or twelve days ago?

He was down in Harrow and he was living in absolutely amazing terror, and Wylie knew that, as soon as he returned to his office, he was going to live that terror, too.

Thing was, he could sort of see into the lenses, and what he saw there was another parallel earth, a third one, and it was bad news. Real bad.

He couldn't see it clearly, but he could feel that it was a fallen world, a real, living hell, and it was seeking to escape itself. He could sense its ravaging hunger to escape the ruin it had made of itself.

Amazingly enough, they'd done even worse than we had. "They're old," he muttered to himself, returning to one of the lines of thought that he'd been worrying for years. He thought he might now know the secret of the bizarre creatures he had encountered in these woods a few years back, that were the subject of Alien Days. They weren't aliens at all. They were from here. But in their version of earth, the dinosaurs had never gone extinct. Instead, that dark reptilian brain had grown and evolved and changed until these sleek creatures had come about-tough, brilliant, and utterly heartless.

Oh, God. God help the human beings.

With our compassion and our softness of spirit, we were not going to be a match for brilliant reptiles, not in Martin's universe or in this one.

They were going to take it all. They really, really were.

The woods were dead quiet, the early December night touched by just an edge of crispness. As always, he found himself moving along the old foresters path that crossed the top of the little draw where, five years ago almost to the day, he'd noticed that odd light.

He stopped, looked down the draw. He had encountered them just there, just fifty feet down. It had looked like an old witch's cottage that he'd never seen before. Glowing, infinitely sinister.

Curious, thinking maybe he had squatters in his woods, he'd walked up to it, and the next thing he knew, he was grabbed by scaly hands, he was being glared at by the most terrible eyes he had ever seen, he was being manhandled-and yes, the infamous rectal probe had taken place-and then he was on the ground, the little cottage was gone, and there was a crackling electricity in the air.

At least, that's what he remembered in his conscious mind. His dreams

were a different story. In his dreams, there were towering emotions of loss and longing, and Brooke was involved, but she had sworn that she'd seen nothing that night, heard nothing.

He moved up the dark path, shining his light ahead, looking for the cigar cave. A smoke was what he needed. He had a gargle station in the garage, which he'd use before he got in bed with Brooke. Cigar breath and he'd be on the couch, and he was way too tired for that.

He shone his light on the trees that loomed around him, the oaks with their golden leaves, the red maples, the gnarled pitch pines that began to appear as he climbed farther up the ridge.

He was maybe fifty yards from the cave when he became aware of a more solid shape up ahead.

He stopped, peered into the dark. Matt was on duty tonight, so maybe it was a deer. And yet, the form-it looked like a man standing real close to the trunk of that oak.

Oh, shit, what if the reptilians knew that he was writing about their invasion, and they didn't like it?

Hardly daring to do it, his hands shaking so much he could barely manage it, he got the flashlight pointed in the direction of the figure.

-which did not move.

Was it a branch? What was that?

He stepped closer. "Hello?"

It leaped out at him.

He fell back, he lost the light, and then the figure was on him, glaring down at him-and laughing.

"Godddamn it!"

"Oh, man, Wiley, Wiley, oh Christ, this is rich! It's rich!"

Wiley got to his feet. "You call yourself a cop? Out here wasting taxpayer money like this-what if there's a lost kitten or something down in the town? What will you do?"

"That flashlight! How many batteries in that thing?"

"A few."

"Beka says to me, who's got a searchlight up on the ridge behind the Dale's house? That's what it looks like. I mean, they were concerned over in Holcomb, they thought we had a fire goin' up this way."

"Holcomb is fifteen miles from here."

"I rest my case."

"You saw my flashlight from your house?"

"Absolutely."

"And you got out here in what-five minutes? I don't think so. You've been out here for a while, because you're raiding the Cubans, you shit."

"You're raiding 'em, too, you shit. Otherwise, why would you be out here yourself?"

"Bastard."

"You're the bastard, because you can afford the damn things and they're a precious luxury to a poor cop."

"I'm hardly rich."

"Your kids are in an exclusive private school in K.C. Not to mention the Jeepazine with which you convey them to said school daily."

"It's moderately customized."

"TV in a Jeep is very froufrou for rural Kansas, buddy. Look, let's go down to my wife's roadhouse and get hammered. We can take cigars with us, the place is closed, nobody's gonna know."

"Brooke's gonna get suspicious if I stay out here too long. And as for coming home drunk, that's been done one too many times."

"Man, I have to admit I'd like to be pussy-whipped by your ball and chain."

"You think?"

They began to wander back, both of them planning future cigar raids, hopefully more successful ones. The point was to smoke more than half of the cigars. The guy who did that was the winner.

As they reached the ridge that overlooked Wiley's house, he noticed, in his office, a light. It came, glowed bright, then went.

He stopped. "You see that?"

"Actually, yeah."

"Given that my family's asleep, I'm concerned."

The light came again, flickered, and was gone.

"Looks like you got a short workin' in there."

As he scrambled down the ridge to the house, Matt stayed right with him. He was a reprobate, but he was also a dutiful cop.

They arrived at the edge of Wiley's yard. His pool stood still and silent. The light flashed bright, and there was a sputtering sound from the open window.

They went in through the screen door. Matt dug the fire extinguisher out

of the closet while Wiley dashed up to his office.

He looked at the desk, at the cords running down behind it. Nothing was sparking.

"So what is it?" Matt asked, coming in.

Could it have been the reptilians, maybe here to wreck the book? They'd broken through before, for sure. Sort of broken through.

Matt bent down and brought up a frayed cord. He shook it and it sparked. "Sadie do this?"

Their Burmese cat was a notorious cord chewer. "I forgot to close the door."

"She could've burned down your family, buddy."

"Thanks for helping me, Matt."

They said their good-byes, and Matt went clomping off down the stairs.

Wiley started to leave the office, but was stopped by sounds that should not be there. Footsteps. Somebody pacing in the bedroom. But Brooke was asleep.

He realized that he was hearing Lindy Winters.

Their world was not an inch away, not a millimeter. If the physicists were right, they were infinitely close, and yet it would take more energy than existed in both universes together to enable them to make contact.

Except...the physicists appeared to be wrong, didn't they?

Wiley sat down in his chair. He leaned back and closed his eyes, and when he did, Martin's universe seemed to settle around him, caressing him like a living, complex fog.

The lenses were hooks, and they had hooked into Martin's world, and it would not be long before they hooked into this one, too.

When he opened his eyes, nearly two hours had passed. It was nearly one. He needed to sleep, but he felt kind of sick inside, like somebody in a crashing plane would feel, waiting for the impact.

They were coming. That's what this was all about.

In the other human world, NASA had announced that UFOs were real. Apparently, that had changed the balance, enabling the reptilians to enter on a tide of belief.

So far, that did not seem like anything our NASA was likely to do.

Now he understood why the government denied the obvious UFO reality. Somebody down deep in its secret corridors must know that belief counts, that it is the oil in the hinges of the doors between the worlds.

He heard another sound, coming in from outside. Metallic. Very faint, though. What was that?

It came again, faded again. He went to the window, leaned against the screen, trying to hear more clearly.

And there it was again, more distinct this time, and this time he could tell what it was—the unmistakable ringing of church bells. On a good day, you could hear them from out here in the hills, but who would be ringing them at this hour?

Matt lived closer to town, maybe he could hear better.

He picked up the phone, then hesitated. It was late and he was going to make Matt mad. But how could he not? Matt was the police chief and, at the moment, the town's only cop. If somebody was ringing the bell of one of the churches, maybe it was because he couldn't make a call.

He dialed, listened.

"Yeah?"

"Hey, I wake you up?"

"I sit by the phone all night waitin' for you, you stupid fuck. So what in hell do you want?"

"Would you do me the favor of going to your window and tell me what you hear?"

" 'Course not."

"You're a cop, aren't you at least curious?"

"Not at all. Good night."

"Matt! MATT!" And suddenly it wasn't funny. He had to know.

"Yeah?"

"Just do it."

There was a silence. It extended. Eventually, Matt came back. "Nothing."

"You must have heard something."

"The faint plink of leaves falling. Possibly, the snuffling of a possum, or it could've been a coon."

"No church bells?"

"No, but I did hear something connected with church bells, actually. With belfries. Bats. In your belfry, squeaking like sonembitches."

"Somebody is ringing bells down there, my friend."

"You wake me up again, I'm gonna come out there and cuff your ass and put you in the tank."

"The drunk tank's rusted closed. You told me so yourself."

"For you, I will apply Liquid Wrench."

Wiley hung up. He flipped on his police scanner and watched the red LED race across the little screen. The scanner emitted a slight burp of static each time it crossed the county sheriff's carrier wave.

Lonely sound. Lonely out here.

He'd damn well heard those bells.

Not in this version of Harrow, Kansas, though. If Matt had heard them, he would have gone down into town to check things out. He was too conscientious to dismiss something as odd as that. At best, it was going to be vandals, but at worst-well, maybe a fire, who knew?

If he could sit down at the laptop-if he dared to do that-he might find out. He turned it on. His hands stirred, moved. His fingers fluttered above the keys. Then they touched them. It was like watching a machine turn on. The hands were not his.

His fingers pounded keys. Stopped.

Then he looked down at what he'd written. "The masters of the sky were on the earth in those days-and also afterward-when the sons of God went to the daughters of men and had children by them."

Was that a quote from the Bible? Or an ancient Hebrew text, maybe?

He googled the passage, came up empty.

But the masters of the sky had been the Nephilim, creatures who had come out of the air to rape and pillage, who had caused the devastating war portrayed in the ancient Indian Vedas, with their stories of sound-guided missiles, flying saucers, and nuclear bombs.

In legend, the coming of the Nephilim had marked the end of the last age.

As, indeed, according to the ancient Maya, December 21, 2012, marked the end of this one. The Mayan date 13.0.0.0.0.

All the new-age gurus were howling that it was going to completely blow the mind of man. Wiley figured it was another Y2K, when the coming of the year 2000 had been expected to cause an outbreak of chaos, but which had actually been a lot of overhyped nonsense.

When he closed his eyes, it seemed as if the office did not have his desk in it. Instead, there were two recliners with reading lights beside them. Where he kept his little TV, they had a bookcase full of science tomes, archaeology and physics. He saw the books so clearly that he could almost read the titles.

The bells were now joined by the long wail of a warning siren.

He found himself uttering a prayer for the other Harrow, and all whom

she was losing on this night, right here, right now, December 1, 2012.

Near him, he could sense movement.

He tried to open his eyes, couldn't. Really tried. Could not. He called Brooke, but nothing came out.

The room in Martin and Lindy's house became more clear.

He could see a woman-Lindy. Kind of pretty. Scientific looking. Not gorgeous like Brooke.

She, also, had heard the bells ringing, and had come in to listen at the window. She was haggard and had a shotgun in her hands-not a good one like his, but rather an old ten-gauge that had seen better days-much better ones.

Then he noticed that he was typing. The damndest thing, he hadn't even realized it. His eyes were closed, but he could hear it. Feel it in his fingers.

He tried to draw his hands away from the keyboard, couldn't.

"Lindy," he said. Sweet name. She drew her head back from the window and started out of the room.

The phone in her version of the room rang. Wiley couldn't see it, but he heard it so clearly that he froze, his fingers stopping just above the keys. He could hear her breathing, gasping almost, between the insistent rings.

From down the hall, he heard a murmured sigh as his Brooke tossed and turned. Was she aware, at least dimly, of the sound of Lindy's phone?

Lindy put her hand on it. She tightened her grip. Her face reflected a torment that was horrible to see. She picked it up.

THREE

DECEMBER 1
THE NIGHT WATCH

ON NOVEMBER 29, 2012, WHAT had started so strangely in Gloucestershire on the 21st had become a great terror that had, on that night, struck millions of cities, towns, and villages across the world, and expanded from there. Now, on December 1, the White House that Martin had visited was long since evacuated, Washington was in chaos, the world was in chaos. The stories from the great cities were beyond horror. Rather than face what was happening people by tens of thousands had gone out of windows in New York and Chicago, leaving heaps of untended bodies in the streets. The country's communications had broken down, fuel and food had ceased to move along highways choked with refugees, and worse had happened, much, much worse.

Harrow, Kansas, however, had not been struck. All the towns in the area had organized themselves and were as prepared as they could be, but so far the problems had not affected Kansas—at least, not this part of it. However, with communications down, they really had very little idea what was happening past thirty miles away.

Martin was on watch in the steeple of Third Street Methodist when, just before one in the morning, he saw light flicker in the clouds that choked the dark west. As he looked more carefully, the clouds lit up briefly. But there were thunderstorms out there, so there would be lightning, of course.

Another flash slowly dwindled and was gone. He knew archaeology, not meteorology, but he had never seen lightning that lingered like that.

He turned on the little radio that he'd brought up with him, just in case there would be some signal from somewhere, but the world remained as silent as it had been these past three days. No radio, no TV, no Internet, GPS mostly not working. Landline telephones were sporadic, cell phones were local only, and then only occasionally. There was no TV, and even the shortwave radio consisted of static, and in the higher frequencies, endless streams of what sounded like some sort of singsong code, a machine

language.

Another flash, this one going close to the ground, then expanding and getting brighter.

He became aware that his heart had begun to thutter. He faced the fantastic reality: They had come to Lautner County. That light was over Holcomb, not twenty miles away.

Nobody had ever seen them. The only thing known was that the fourteen lenses, when night fell on them, disgorged thousands of dully glowing bloodred disks, which fanned out spreading the most appalling and bizarre form of death ever known to man.

He picked up his cell phone and called the town's police officer, his friend Bobby Chalmers. "Got some bad-looking flashes in those clouds, Bobby."

"I'm lookin' at 'em."

Next, he phoned Lindy. Attempting not to alarm her, he kept his voice casual. "Hey, Doctor Winters."

"Hey, Doctor Winters."

"Sorry to rouse you from your beauty sleep, but, uh, why don't you go ahead and get the kids ready? I think you need to come over here. Looks like we could have some activity coming in from the west."

She didn't get a chance to react before his phone started beeping in another call. He clicked over. "Hi, Bobby. Where are you, BTW?"

"On my way to you. Ron Turpin over in Parker-"

Parker was between here and Holcomb, a scattering of trailers and a tumbledown convenience store at a crossroads. "I know Ron."

"Yeah. He's sayin' there's a formation he can see in the flashes, moving with the clouds. And nobody's answering the phone over in Holcomb."

"But they're working? The phones are working?"

"They're ringing. No cops, no sheriff, no paramedics picking up, nothin'."

"Dear God."

"You better get down outta there, now, Martin."

Immediately, he clambered down the four flights to the choir loft, glanced out across the dark church, and then went down the stairs to the entrance. Bobby had arrived and was going into the electrical closet as Martin reached the foot of the stairs. Bobby hit the power switches, lighting up the nave, then all the external lights.

Martin flipped open his cell phone and called the minister. "Reg, we could be getting hit tonight, looks like."

"That can't be true."

"It looked like Holcomb was getting it a few minutes ago and now Bobby can't raise them on the phone. Disks passed over Parker coming this way. We're the only town in this direction for eighty miles, Reg."

"I'm on my way."

Martin stepped outside. "I called Dennis Farm," Bobby said. "We-" His phone buzzed. He flipped it open, listened a moment, then closed it. "That was Larry Dennis screaming for help, they got Sally, the light's coming down like rain-then the line-" He held out the silent cell phone.

In both of their minds was the same thought: it couldn't be happening here, it was something you heard about, a big city thing, a European thing, a Chinese disaster.

"Wake 'em up," Bobby said, "we're under attack."

Martin went back into the church and started the bell. There was a whirring sound as it began ringing, its stately tones trembling off into the night. His finger hesitated over the siren. It hadn't been sounded since September, when it had been turned on for the tornado that had taken out the Conagra silo and the Kan-San Trailer Park.

He flipped the switch, and the siren began as a low growl, quickly increased its volume, then filled the air with its wailing. Across the street, Sam Gossett came to the door in his pajama bottoms and yelled, "Is it for real?"

"Holcomb and Dennis Farm just got it," Bobby said. "It's for real, all right."

The Wilsons and a family Martin didn't know except to nod to arrived in SUVs and went hurrying into the church. They must have been sleeping in their clothes. As he passed, Timmy Wilson said, "They're coming up Six Mile, slow and low."

His words made Martin feel literally sick. He telephoned Lindy. "Hi, hon, what's your situation?"

"We're leaving the house."

"You need to hurry, Lindy, they're over Six Mile Road."

"Oh, God, Martin."

According to Homeland Security, people alone did not survive, none of them, not ever. Groups supposedly had a better chance. They still got flyers dropped from time to time. He speculated that Bo Waldo might have something to do with that. There was a man who was not going to be beaten,

unlike those two generals, who'd been edgy, bitchy thoroughbreds.

"Lindy, cut across the Walker place to the highway."

"I'll wreck their garden."

"Do it now!"

She closed the phone-unless something else just happened. A wave of nausea almost made Martin gag.

"You okay?" Bobby asked.

"Lindy's out there with the kids. Where's Rose?"

"Same thing, coming in fast as she can."

"But not down Six Mile Road."

"Goddamn, buddy, that's right."

Bobby, who had been his friend since their boyhood in this community, met his eyes. Bobby had stayed, Martin had gone on to university. But he'd returned in the end, discovering after Berkeley and Stanford that one did not leave Kansas so easily.

"I never thought this would come," Bobby said as the two of them watched the sky and the people now hurrying into the church.

"We're not in Kansas anymore, Bobby. Kansas is gone with the wind, I'm afraid."

"You think it's gonna be all of us, Martin?"

A wave of what could only be described as woe swept over Martin. He said, "The pamphlet says that more survive if we congregate." It had been dropped by Homeland Security last week.

"What I feel like doing is hiding. That's what feels right."

"I would assume that we can't hide."

The pamphlet, which had been dropped from a Goodyear blimp, of all things, was the only defense the government had offered. In fact, the most terrifying thing about the whole business was the silence from Washington and Topeka.

George and Moira Fielding came huffing up, she in a slip and bra, he in baggy boxer shorts and flip-flops. "There's screaming coming from down the end of Constitution," he gasped.

Serenity Lodge. Forty old folks. Martin looked at Bobby. "You want to go over there?" He thought to himself that Lindy and the kids must pass right in front of the place on their way in.

"I'm needed here."

It wasn't cowardice, it was simple truth.

Across town, Martin could see the steeple of the First Church of Christ light up, and heard its bell join theirs. Saint Peter's was invisible behind the huge oaks that stood along Evans behind Main, but he knew they'd be lit up, too. They didn't have a working bell.

Emma Heard got out of her car. "There was that light just like they say, it was horrible, horrible!"

"You were at the home?"

"I was in my office when-oh, Jesus, I tried to help them, they were all in their rooms-" She broke down in sobs and Martin looked off down Third, looking for some sign of Lindy's blue Dodge truck.

"Did you see any actual attacks?" Bobby asked.

"When I ran out, I saw the light coming down on the building, out of one of those things, the disks. It looked like some kind of goop, a glowing membrane-really bright-like on Nightline that time, that video of it. I got the hell out of there, lemme tell you." She lowered her eyes. "I saw it slide down in the windows, and I heard-I heard-oh, Bobby, the screaming." She paused, then added in a tiny voice, "They're all headed north now, every single one of them that can walk, and in their pajamas, poor things."

Then she noticed Martin. She came close to him. At forty, she was still beautiful. She'd been his older woman when he was fourteen and she twenty. They had cuddled and touched, and he'd learned mysteries from her that still inspired the deep, deep joy he took in women. In Lindy, now, only her.

She clutched at his shirt. He took her by the shoulders and turned her toward the church. "Go inside, do it now." She walked away with a curious, gliding motion. Martin watched her. "You sure she's not...affected?"

"Nah, that's just shock," Bobby said. "Right outta the book."

"Jesus will help us," Mrs. Oates said as she came up the walk. "Never you mind, Jesus will help us." She went past them, unseeing, glassy-eyed with terror.

"The Lord sure hasn't been helping us much lately," Bobby said, but softly, as if it was a kind of dirty secret-or, what he was more likely to think, a blasphemy.

As a scientist, Martin had grown past his childhood piety. Nowadays, while he wasn't against religion, he just didn't see the mechanism of the spiritual.

Bobby and Rose brought their kids here to Methodist every week. Martin and Lindy had chosen not to visit the burden of organized religion on Winnie

and Trevor. Trevor had been delighted at not having to join the acolytes of the Anglican Communion in America. He'd dreaded Latin.

People everywhere were taking the horrific business that was unfolding in the world to mean that the soul was real. No less a luminary than the physicist Sir Roger Penfold had called it "the profound organ" because of the way it appeared to control memory and emotion. Given that it consisted exclusively of electrons, the belief that it was immortal had turned out to be entirely correct. Energy is indeed immortal. But could it be conscious in its own right outside of the body, or remain a coherent structure after death? Martin didn't understand how that could be, and he doubted that anybody else did, either.

He did understand the extraordinary irony that the attack on the soul was what had led to its discovery. The scientific community's soul blindness had only been lifted when the human soul began to be taken, and we could see, hear, and feel the consequences.

To Martin, as a scientist, this did not mean that the gods were therefore real. But the average person had taken proof of the soul to mean that his particular gods, also, existed. So churches and temples across the world were jammed day and night with people pleading for help from their deities.

Martin viewed things differently. He was fascinated that this plasma could be drawn out of a human body, as shocked as everybody else at the changes that resulted. But as far as it being the ka of the Egyptians, the jiva of the Hindus, the hun of the Chinese-any of those concepts-the folkloric soul-well, that remained unproven. It was simply an organ of a type they had not previously recognized, with a profound function, most certainly-in fact, a function that explained why we were different from animals, because of the way it preserved memories and delivered them to the brain for processing. But it had not confirmed the reality of the gods, at least not for this intellectual, nor was it clear that it survived in any coherent way after death.

Clearly, though, the removal of the soul was hell on the organism, and it was hell here in Kansas tonight, and maybe across the entire country, but before communications had failed, the real hell had been unfolding in the jam-packed, exposed third world, with swarms of the disks gushing each night like vast formations of locusts out of the fourteen great, black lenses that ringed the world, and people by the millions being torn apart in this strange new way night after hellish night.

He pulled his worn copy of the Homeland Security pamphlet from his

pocket. "Approach damaged individuals with extreme caution. Their state is unknown and, while generally passive, they can be unexpectedly violent."

Martin had seen some of the people who'd been disensouled, as the media had called it when the media still existed, a cluster of six of them ragged on the roadside, stragglers up all this way from the Garland, Texas attack that, for America, had signaled the beginning of the nightmare. They'd been walking in a rough line. They were filthy and stinking, sewer drinkers, carrion eaters, muttering and growling to each other as they shuffled aimlessly along, aware, perhaps, of some loss, but no longer understanding what it was.

He had stopped his car because he hadn't been able to resist at least observing them from a little closer, despite the Homeland Security warnings. They hadn't seemed dangerous at all. Far from it. Up close, they were more like migrating elk or something.

He'd spoken to them. Nothing. There had been two men, three women, some children, one on the back of one of the men, the others hand in hand with their mothers. He'd walked beside them, touched a woman's shoulder, and asked her, "Could you tell me your name?"

She had turned to him, and what had happened was the most dreadful thing-she had smiled at him. But such a strange, strange smile. All wrong-so bright that it was empty. Not cruel at all, but relentlessly innocent, like the smiles of poor Jim Tom Stevens had been when they were kids. Jim Tom was retarded, though, and he had not had the feeling that these people had been made stupid.

No, it was much stranger than that. They had not lost their intelligence, but rather their information, and not how to count or how to read-oh, no, the information they had lost was much deeper. What they had lost was what distinguishes us from animals-the arrow of consciousness that points inward. They still knew and saw the world. The information that they had lost was that they were, and for this reason had ceased to be human. They had become brilliant animals.

For all of Jim Tom's intellectual poverty, he was not this lost. He knew that he was. When you called his name, he did not simply come to a familiar sound as an animal might. He turned to you with an expression in his face-the fundamental human expression that says, This is me.

Martin had been reminded of a line of poetry, "With its whole gaze a creature looks out at the open..." and sees nothing of himself at all. Has no

self.

They'd hurried off, moving in the general direction that all wanderers moved, at least around here, which was north-northwest.

He had sat on the terrace all afternoon watching the leaves run in the yard, and trying to make sense of what he had seen.

He had told Lindy that they had reminded him of Jim Tom, who had been so innocent that he would eat raw roadkill if he happened upon it hungry.

"If you taught them," she had asked, "do you think they could learn?"

"How to drive a truck or something, sure. But not concepts. No."

"Then they've been made stupid."

"I didn't get that impression."

"What impression did you get, then?"

He'd considered his reply for some time. Finally, he said, "The difference between us and a brilliant animal is that the animal understands what is, but not what it means. I think they'd been returned to what we were before the discovery of our being made us human. They weren't human, Lindy. They were just sort of...there."

As a scientist specializing in the past, he was well aware that the human body and brain had evolved a hundred thousand years before civilization had appeared. We'd been brilliant animals for a long, long time, and in the dark back of his mind, he feared that whoever was here was not really destroying or capturing souls like people believed, not at all-it was much simpler: they were manufacturing slaves, and the reason the wanderers all went off in the same direction was that they weren't wandering at all, they were moving to a collection point.

As far as the souls were concerned, pulling them out of the body was like letting the air out of a balloon. They became part of the general electromagnetic flux. In effect, they disintegrated.

People swarmed into the church now, in pajamas, in underwear, in whatever, coats thrown over shoulders, hats jammed onto heads. The one thing they all carried was a gun, many of them more than one. Pistols, rifles, shotguns, a few assault weapons. A formidable arsenal.

May Whitt got the organ started. It burred for a moment, then blasted into a brave rendition of "What a Friend We Have in Jesus."

A moment later a scream pealed in the street, the sound rising above the wail of the siren, the tolling of the bell, and the hymn. Ten-year-old Chrissie Palen pointed at the sky. At first Martin saw only first moon, pale and serene,

speeding in ragged clouds. Then Tom Palen raised his 30-06 and fired, and Martin's eyes followed the muzzle flash to a simple ovoid, dull orange against the sky, as motionless as if it was fixed to the ground.

Martin scoured the street for Lindy's Dodge. He put in a call to her, but could not get a signal.

"We need to get out of the street," Bobby cried. "Everybody, run, run NOW!"

Despite his lack of religious belief, Martin found himself begging God in his heart to bring his family to him safely. He breathed the words in and out, in and out: God, please, God, please, and tried to send some sort of protection to his beloved and their kids, his striving preteen boy and his darling little girl.

The object slid over Rite Way Drugs, then backed off to the Target end of town.

Then Lindy was there, getting out of the car with Winnie and Trevor-and the disk was there, too, sliding back across the sky as if it was on a tabletop.

"For God's sake, RUN," Martin screamed at them. "Shoot at the goddamn thing, Tom, shoot at it!"

The rifle cracked, cracked again-and the thing slid away into the darkness. Bullets were rumored to slow them down, but not for long.

Lindy and the kids came toward Martin as if in a slow motion nightmare, like ballet dancers executing a pas de deux, like a little boat drifting in a calm.

The thing reappeared, speeding into view at rooftop level. Electric fire crackled along its edge, spitting sparks into the air. The Palens raced into the church, and Martin realized that his family was not going to make it. He ran toward them, his blood pumping, his legs going fast but not fast enough, as the thing dipped low over Main Street not a hundred yards behind them, and began moving forward. It was about to hit them with the light, he knew it.

"Run, Lindy!"

Whereupon Lindy, God love her, turned and shouldered her bird gun and let go four blasts of buckshot.

The thing seemed unaffected-bullets delayed them slightly, but buckshot apparently not at all.

The kids reached him. "Get in the church!" he shouted to them, pushing them toward the lighted door. Lindy, he saw, had returned to the car for a backpack of provisions.

The bell tolled, the siren moaned, and the congregation sang in ragged chorus, "...he'll take and shield thee; thou wilt find a solace there."

Bobby yelled, "MOVE! MOVE! MOVE!"

Lindy came out of the car. She seemed to be under water, she was moving so slow. And then Martin saw why: she was falling, she'd tripped. He ran toward her.

Reg Todd called, "We're closing the doors!" Winnie and Trevor realized what was happening and began to shout, "Mom! Dad!"

"Martin, it's right over you, it's starting to glow!" Bobby pulled out his service revolver and fired at it. The street around Martin began to turn red. Still he ran toward Lindy, he could not conceive of abandoning her.

Her skin was red in the red light from above. He threw an arm around her and began pulling her forward. As they got to the church steps, she gained her footing and began to help him. As she fell into the foyer, Maggie Hastert came to her rescue, and the two women staggered into the last pew as Bobby and Martin slammed the doors.

"Mom," Trevor shouted.

"Mommy!" Winnie shrilled, the littlest finally realizing that something was not right in her world.

"Momma is all right," Lindy managed to gasp.

"You're crying," Trevor said.

"We're all crying, Trevor," Martin said.

"Are we supposed to be crying?" Winnie asked.

Martin moved into the pew with Lindy, with their kids clinging to them, and the Hasterts made room for them. Given that Rose had arrived with their kids, Bobby and his family were okay, too-for the moment.

Reg Todd went into the pulpit. Martin liked him, had hunted with him when they were boys. "Everybody's praying now, all over the world, calling on the power of God to defend the soul. There is wisdom for us in the Bible, the book of the soul written by God, written for this time when we are discovering our souls because we are losing them. So you listen now. If the light comes--"

There was a scream. Everybody looked around, but it had come from outside, from above the building. It was repeated, and children all over the small nave began screaming, too, and Peg Tarr cried out, and Bobby tried to calm her down and she shook him off. "It's my husband," she screamed, "I know it's him, I can feel it!" She backed away from her neighbor, pushing

into Doctor Willerson. "Where's the Air Force? Where are the planes?" she bellowed. He shrank away from her, fumbling as his glasses flew from his face. "The planes," she screamed, "the planes!" She grabbed his shoulders and yanked at him so hard she ripped his coat, and he reached back and slugged her, which snapped her head to the side and made spit fly, and made a sound like an exploding lightbulb.

Then the scream outside repeated. It was a human sound, and involved such extraordinary anguish that everyone in the church screamed with it, a roaring agony that, in embracing it, only made it more terrible. Children collapsed, their mothers going down with them. Ron Biggs of Biggs John Deere, fourth generation in tractors, emptied his twelve-gauge into the ceiling, a Remington notched with the lives of forty-one bucks and happy days.

As bits of plaster and angels and clouds rained down, a hideous scraping sound slid along the shingles, ending with a thud in the side yard.

Silence, then, followed by little Kimberly Wilson singing: "A-hunting we will go, a-hunting we will go, heigh-ho the derry-o..." until her mother hushed her.

Total silence. This was not what they had been expecting. Now, a murmur among the congregation. Bobby looked to Martin. "Any idea?" Martin shook his head. This wasn't supposed to involve people being dropped onto roofs, but that's what it had sounded like. "Doctor," Bobby said, "let's you and I go out and take a look around."

Rose said, "No!"

"Rose, I-"

"Bobby, no! You stay in here."

There was a silent look between them. She knew Bobby's duty, and finally turned away, her eyes swimming.

Bobby and Doctor Willerson crossed the room, went out the vestry door. The body-if that's what it was-had fallen down that side of the church.

The congregation stood in silence, waiting, some bowed in prayer, other people simply staring.

When they returned a moment later, the doctor said into the silent, watching faces, "I believe it is Mayor Tarr. He's dead from a fall. He had a rifle. I believe he was on the roof trying to defend us, and lost his footing."

Peg fainted.

As Ginger Forester and her boyfriend, Lyndon Lynch, who had been

sitting with her, moved to help, there came more screaming, fainter, but from many more throats.

One of the other groups was under attack. Bobby went to the main door, opened it for a moment, then returned. "It's Saint Peter's," he announced.

Mal Holmes said, "This is insane! What are we doing just waiting like this. Tarr had a point, let's go outside, let's put up a fight. For God's sake, let's fight!"

"Our fight is in our prayers," Reg shouted.

Mrs. James cried out loudly, then, and shook her fist, a gesture that must have been repeated billions upon billions of times on earth over these past terrible weeks.

"I want to read now," Reg called out. "I have a text. And then we will pray. We will pray all night and the children can sleep in the pews."

"No way am I going to sleep," Trevor said.

"Me neither!" Winnie added.

"Okay, kids, hush," Lindy whispered.

Winnie pulled on Martin's pant leg. "I'm real thirsty," she whispered.

"I've, uh-oh, it's in the street," Lindy said. "When that thing-"

"We have plenty," Jim said, producing a bottle of Ayers water.

"This is from the Book of Isaiah," Reg announced. "Listen to this. Isaiah fifty-five, you can turn to it in the pew Bibles, it's page four hundred and thirty-five." He read, "'So shall you summon a nation you knew not, and nations that knew you not shall run to you, because of the Lord, your God, the Holy One of Israel, who has glorified you. Seek the Lord while he may be found, call him while he is near. Let the scoundrel forsake his way, and the wicked man his thoughts; let him turn to the Lord for mercy; to our God, who is generous in forgiving.'"

At that moment, the lights went out. There was a roar from the whole congregation, ringing loud, shrill with terror.

"Let us pray," Reg called into the din. "LET US PRAY!" Voices dropped, flashlights came on.

But there also came another light, crawling along the tops of the stained glass windows of the birth, youth, and ministry of Jesus that lined the west wall.

Martin watched, unable to turn away, transfixed with horrified fascination.

As the congregation realized that it was there, silence slowly fell. Became

absolute. They watched it coming down, this most terrible weapon that had ever been in the world, and yet so strange, so unexpected.

As a scientist, Martin tried to use what skills of observation he could muster. It moved like a thick liquid, this light. We had slowed light down, stopped it, reversed it, but had never created anything like this.

When it began to come in, there was a sigh in the room, just the softest of sighs, no more, and a little girl's voice piping, "Look at the pretty, Mommy, the pretty is on Jesus!"

The painted glass with the bearded figure on the cross, the rough rocks, and the praying virgin in her chipped blue glittered with new life as the light ran along them, seemed to pause as if it was looking out across the congregation, evaluating them, scanning them, tasting of them...and then it came on, glaring on their upturned faces.

"Dad, is this an alien being?" Trevor asked.

"It's Lucifer," Winnie said. "Be quiet or he'll come after us."

Some children began to cry, and a ripple of panic spread. Parents held them.

Martin saw immediately that the thing moved like something alive-and something that felt no need to be careful, not the way it came surging in the windows, filling the room with its slicing glare. He was fascinated by its motion, he couldn't help himself. It was a little like the spread of a membrane, he thought. But then it came forward so quickly that there were shrieks of literal agony, the terror was so extreme.

Old Man Michaels dropped to the floor with a thud. He went gray, and Martin thought he'd probably died. A stench of urine and feces filled the air. Children broke away from their parents and began running toward the doors, in their terror imagining that they could escape. Mamie Leonard dashed after Kevin, but the boy reached the vestry door and threw it open.

Glare literally gushed in. The boy cried out and jumped back, but the light swept around him. Martin observed only a flicker, and the child went still, standing in the body of it, surrounded by it, his jaw agape. His mother raced to the far side of the nave, and stood there shrieking again and again, sorrowing cries that dominated the room.

Reg cried out, "'For my thoughts are not your thoughts, nor are your ways my ways,' says the Lord. 'As high as the heavens are above the earth, so high are my ways above your ways and my thoughts above your thoughts.'"

The light moved and expanded, crossing the sanctuary and flowing down

into the nave. People got up on the pews to keep their feet out of it, but Martin knew it was useless, it would do its infamous bloom any second, and then, well he could not imagine it. He just could not.

There was no sign of any biological material. It was definitely a plasma, he could see that. But it had the stability of a highly organized membrane. He tried to think of any bas-relief, any wall painting, any sculpture anywhere in the world that reminded him of this, and could not.

This was new, he was pretty sure, to the experience of mankind.

"Pray now," Reg said, "pray and hold the children and be ready with the guns."

Martin put his arm around Trevor and Lindy picked up Winnie, and Martin felt the pistol in his pocket. He'd loaded it with hollow points. A shot to the head would destroy a child instantly, but Martin did not frankly know if he could do it. God willing, Homeland Security was right about the value of congregating and they would survive.

"Shoot it," a voice said. "God help us, shoot it!"

"Don't do that!" Bobby shouted. "That spreads it, we all know. That-"

They were suddenly surrounded by the strangest thing any of them had ever experienced, a flickering mass of colors that hurt and felt good against the skin at the same time...and felt like somebody was watching you, not with malice, but with a sort of evaluative skill that seemed almost...professional.

Martin thought, we are destroyed, a destroyed species. This is how we end, killed in a way we do not understand by something beyond our knowledge. And then also thought, But it's the way cattle die every day, or used to.

He glimpsed a man, lean, dark hat over his eyes, face of a snake, sliding toward him. He shook the hallucination off. They'd all heard stories about this phenomenon, it was the mind trying to force the impossible into some form that it might be able to understand and thus to fight.

Now Trevor closed his eyes. "Dad, I'm seeing a sort of snake." He opened them. "In my mind. Watching me in my mind."

Children's voices were raised, "There's a cobra, Mommy, a dragon, Daddy, a python..." and he knew where the ancient tale of the snake originated. It was how the mind of man gave form to disincarnate evil.

There came a dull sound, like one of those deep thuds that never seem to find an explanation, that one sometimes hears back in the woods. But something had changed. Reg had changed. Where he had been in his pulpit

with his Bible in his hand, wearing an old gray suit with no tie, now stood a man who appeared to be wearing the most intricately beautiful colored coat ever devised. But it was not cloth, the colors came from tiny, exquisitely detailed memories, each one full of life and motion, swarming around him like living jewels. He threw back his head and roared like a maddened gorilla.

A passage from the Bible occurred to Martin, the one about the coat of many colors. He understood the message: Joseph's coat had been his soul. The old biblical authors, therefore, had known what souls looked like. They were seeing Reg's soul being sucked from his body the way a monkey might suck the pulp from an orange.

Nobody made a sound now, nobody dared. But every single one of them hoped in his heart that this would be enough for it, this would be an end of it, after Reg it would go.

Reg began to physically distort, his face growing long, his eye sockets stretching into bizarre vertical ovals, his lips opening, mouth gaping-and then all over the room others did the same, their faces twisting, colors oozing like gorgeous pus out of their bodies. They pissed and shat and howled and writhed, sinking down, tearing at their throats.

There was a deafening wham as Milly Fisher blew her boy Tim's head apart.

"Mother," Winnie shouted into Lindy's face, "what is this, what is this?"

Crackling became screeching became sucking, deep, the sucking of a chest wound, of a woman of the night, and the congregation became a blur of light and struggling, writhing people, some of them clawing at themselves and howling, others with guns in their shaking hands, trying to kill the ones who were being destroyed-as if it mattered, as if it would help.

It remained like that, people crawling, leaping over one another and running for the light-choked doors, wading in it, pushing against the warmth of its ghastly fleshiness.

Then came darkness, then silence, broken by a single wracking sob.

The chandeliers flickered, and with their return came the sense of a storm having passed.

The minister still stood in his pulpit. From a middle pew somebody asked, "Reg? Reg are you okay?"

The Bible dropped from Reg's hand, hitting the floor beside the pulpit with a crack like a shot. In the pews, some people shook others, calling into blank faces, shaking them until the spittle flew.

"Angie, honey, Angie, you're okay! She's okay, it didn't do her-"

Martin saw Angie Bright, Carl Bright's wife of thirty years, looking at him with the blank innocence of a newborn.

Others began to growl, to laugh, to back away toward the walls. As the minister did this, he laughed softly. His face was still his own, but it was empty, the eyes glassy, staring.

Bobby came to the center aisle, then trotted up to the pulpit. "Okay, we have the law on our side, we need to do this, people."

"My baby, my baby is fine. Lucy, you're fine. She's fine!" Becky Lindner shook her twelve-year-old. "Lucy! Lucy, don't you playact!"

The girl, who had been plastic like a catatonic, lunged at her mother, biting as a dog bites when it is cornered and cannot get away. Becky cried out, falling back into the Baker family, and young Timothy Baker caught her in his arms.

Then Carl Bright screamed as he realized that his teenage son Robert, also, was among the wanderers. Martin's heart was torn by all he was seeing, but the families like this one were the hardest. The Brights lived back in the hills in a comfortable house. In fact, it was only a few miles from their own place. He was a technical writer, she ran an online crafts business.

Without so much as a murmured warning, Mrs. Haggerty leaped on Lindy's back like a lioness leaping on a wildebeest, and she lurched forward into Martin, and the three of them went down with Mrs. Haggerty ripping Lindy's hair out in handfuls while her husband, crying out, dragged her off and took her into the aisle.

"Kids, don't look," Martin shouted as young Haggerty shot his mother dead.

Lindy and Winnie and Trevor turned and moved to the back of the church. Martin was confused by this. "Lindy? Hey."

Another shot from the back of the sanctuary, and one of the Desmond boys stood over his father's body, looking down out of tear-flooded young eyes. "Momma, I did it, I did it," he cried, and his mother took him to her, and buried him in her embrace.

Phil Knippa, whose wife was gathering at the back of the church with the others who had been ruined, asked Martin, "What happens?"

Martin ran to his family. "Hey, this-"

His Lindy had reached the door. She stood with the others. "Lindy? Oh, no!"

Bobby came up to him. "Hey, come on, guy."

"But they didn't-nothing happened to them!" He laughed. "She's in shock. Hey, Lindy!" He went down to his kids. "See, they're fine, Bobby, they're just following their mother. Winnie! Trevor! Stop this! Stop this!"

Phil said, "In that day the Lord with his sore and great and strong sword shall punish leviathan the piercing serpent, even leviathan that crooked serpent; and he shall slay the dragon that is in the sea."

The new wanderers crowded the entrance, pressing against the doors, slapping them and Lindy and Trevor and Winnie were doing it, too, and then Bobby put his hand on Martin's shoulder. Martin turned, and when he saw the gun that his dear old friend was offering him, the anguish that ripped his heart caused him to throw his head back and cry out, and in that quiet part of him that is in us all and sees and knows all, a voice said, "This has happened. This is what you have, now."

Lovers, wives, husbands, children-all circulated among them, trying to communicate with them, and the church was filled with their tears.

Bobby got the door open for them, and they went out into the street...and joined many others, a shocking number, all walking away into the night. Martin thought that it was more than half the town. Three quarters.

They shuffled silently off toward the low water crossing and the back roads that led up into the Smokey Hills, hardly hills at all, but wilder than they looked from a distance.

A few people ran after them, two husbands, a wife, some others who had exchanged death promises. "If it happens to me, don't let me be like that." Pacts made in blood and love.

Martin ran, too, touching his love, calling to her, calling to his babies, "Kids, come back here, this is Dad, this is an order!" And to his wife, "Oh, Lindy, wake up, love, wake up, love."

But they did not wake up, none of them woke up. An arm came around Martin's shoulder, the arm of somebody he knew vaguely but who now seemed like a savior, and he leaned against this man and wept, and in the street the little clusters of those left behind wept, and the wanderers went on down the street, disappearing into the dark.

Martin ran after them again, and then he stopped, and he went to his knees and he howled her name, "LINDY!" He cried in rage and in anguish as she went off without even a backward glance, taking his babies and his love and all that meant anything to him with her into the night.

The shattered town sank away into the horrible small hours, with weeping in the churches, and the bodies of the destroyed dead lined up with what little dignity could be managed on the lawns. Most of the ruined, though, were not killed, because people did not have it in their hearts to rip the life out of the familiar and the beloved, no matter their state. So they went away, absorbed by the night. When daylight came, people would seek them out, taking water and food to the empty shells of their loved ones, trying to feed them, to talk to them. And they would smile, the wanderers, or sometimes lash out like scared animals, but the followers would stay with them, begging, pleading, praying, trying anything to bring them back. It is an extraordinary anguish to say good-bye to your dead while they are still alive, and many, many people could not do it.

Martin went to his feet. He would not be a follower. He vowed that. He would be a fighter. Somehow, he was going to rescue his love and his children, he was going to go out there into that darkness, and whatever it took, whatever was needed, if he give his blood or his life or his own soul, it mattered not a bit, he would rescue his family.

Toward dawn there was a fall of dew, and morning came pearled with it, on the leaves of autumn and the yellowing late grasses, on the neat houses, the empty streets, and on the wanderers, too, far out in the rustling fields, shining on their pale skin, pearl upon pearl.

FOUR

DECEMBER 2
THE POISONER

WILEY LEAPED UP FROM THE computer, threw open the bottom drawer of the desk, grabbed the booze he kept in there, and just plain poured it down. "Christ, you dummies, can't you see it's a damn trick?"

But they had not seen, not even Martin and Lindy. They'd gone to the church, too, they'd made themselves sitting damn ducks and they'd-oh, God, the poor Winters family, and poor Harrow. All those good, decent people.

Wanderers. It was worse than dying. But why was this being done to them and where were they going? He thought that Martin was right about one thing-they were certainly on their way to designated locations. Collection points, though-he was just guessing about that. Maybe they were going to gas chambers or something, God forbid that such a fate would befall Lindy and Winnie. He was crazy about them, that sweet, bright little girl, her mother so full of love and brilliance.

"This is not real," he said, "I refuse to let this be real."

Maybe he wasn't recording events in the other human universe, but creating them. Maybe he was an instrument of the reptilians, and maybe that was why they had come into his life five years ago. They had done something to him. Prepared him. But how?.

He knew that supple movement between parallel universes was involved with belief and the lack thereof. By continuing to deny that UFOs were something real, our own version of NASA had saved us-at least, so far. But not him. Maybe not him.

Thing was, the closer we got to December 21, the easier it became to get through the gateways. And on that day, all hell was going to break loose in the other human universe. That had to be what this was all about. Preparing for the invasion...and maybe here, too, no matter what our version of NASA denied or did not deny.

He clicked through the pages he had written. He knew both more and less than was in the laptop. For example, he knew what was happening in the Far

East in Martin's world, which was a catastrophe so vast that it was, quite simply, unimaginable. He knew, but he couldn't access any detail. Couldn't see much. Could feel it though, the terror being experienced by billions.

What would happen if everybody became a wanderer?

He took a deep breath, let it out slowly. Damn Brooke and her rules. A cigar would go very, very well right now.

Maybe Martin was right and it was a harvest of slaves. Might not six billion slaves be worth something in the parallel earth of the reptilians? But if the souls were being taken out, then what was happening to them? Martin thought they were just disintegrating, but Wiley wasn't so sure of that. He had no idea what to think. He'd never really believed in the soul or God or any of that stuff. Like Martin, he'd been to Stanford, and had come away, also, with a strong rationalism and fundamental disrespect for unprovable assertions.

Those monstrous creatures wanted the bodies, he was convinced of it.

Unless...how many parallel universes might there be? If the Many Worlds interpretation of Hugh Everett was correct, then this oppression could be coming from any one of literally uncountable numbers of parallel universes.

He thought not, though. He thought that the reptilian forms that the people in the church had glimpsed were the final telltale. He was right about the creatures and he was right about their world. He could feel their need, could see their glaring, relentless eyes the same way he had on that night five years ago when they'd tried to-what had they tried to do? Had they really somehow captured him?

No, something was wrong with that picture. He'd written a whole book about it, but he was increasingly aware of a missing element. Because what had happened to him on that night had been hard, but-there was just something missing. Tip of the tongue. Couldn't quite remember.

Maybe it had something to do with the fact that there were three earths involved. A triad.

Buckminster Fuller had called the triangle the building block of the universe because of its structural integrity. There was a reason in conscious life, also, that notions of trinity made structural sense. A triad had a positive side, a negative side, and a balancing side. If the two-moon earth was the positive side, then the negative side was the reptilians with their evil hungers.

Oh, Christ, he was not the balancing factor. I mean, well, let's face it, a middling writer with a burr up his ass about aliens is not the right guy to bring things into balance.

In other words, not up to the job of-what? So far, he wasn't really doing a whole lot beyond writing a history that his world would take to be fiction. He wasn't helping anybody.

He closed his eyes. If there was a god anywhere out there, may he now deliver his servant Wylie Dale from the curse of this writing.

But even as he tried to push away the other human world, his mind slipped back toward its suffering. There, this house was now cold and dark, not nicely heated and cozy with a lovely family inside.

As dawn broke here, the phoebes started their sweet calling, the very essence of peace in the country. Over there, though, the people left alive were crying together, their sorrow unspeakable. Wylie was crying, too-in silence, though. Brooke and the kids mustn't hear.

Then Brooke was there. She had come quietly and he had not heard her, but she was there, standing in the door of his office, and he thought she was an angel come down, and he turned to her in his creaky old chair, and slid out of it and to his knees, and embraced her waist, and buried his face in the sweet and sour scent of her.

Her hands came around his head, and he felt cradled. She said, "You need to come to bed, love."

"What time is it?"

"The phoebes are starting."

He'd been in here for close to twenty-four hours. "Oh, man."

"Wiley?"

He looked up at her in her nightgown, so pale in the thin light that she might have been a ghost or a memory. "We're travelers on the long water," he muttered, "you and me, sweets, you and me." Her hand came into his and it was warm, and he kissed it and it smelled like sweat and remembrance.

He went to his feet and took her into his arms, and she settled there. He closed his eyes and sailed in the comfort of her closeness.

"You were crying," she said.

"Mm. My story."

"It's really getting to you, Wiley."

He nodded against her shoulder.

"Your imagination is supposed to be a tool, not a weapon, especially not against yourself."

"Oh, honey," he said.

"Wiley, it's not real, remember that this time. Don't get yourself

confused."

He nodded again. Her hands swept his thighs, then her long fingers probed at his pants, but playfully, quickly. He felt himself stir. She was his home, Brooke was, the home of his soul.

She'd been there that night five years ago. It had been the two of them. And it was it-not what it seemed?

"Let me show you a little reality," she whispered in his ear. "Let's do dawn patrol."

That's what they called it when they made love in the early hours, which they often did. This is the time when children's sleep is deepest and parents are least likely to be disturbed, and, for Wiley, when his body called him to the ocean of his wife.

But as they walked arm in arm to the bedroom, he heard a door open and close downstairs, and then the voice, low and full of sorrow, of an invisible man. The man went into the living room and became silent there. "Did you hear that?"

"The warbler? He just started in."

"Not the warbler."

She guided his hands to the familiar pink ribbon that was tied behind her neck, and he untied it, and the nightgown floated down. Her matchless curves shone in the rising light, her nipples blushed pink and coming tight, and she was the loveliest thing that he knew, a beauty that, when it surrendered itself to his big hands and arms, seemed as if it must bear some sort of strength in it that was connected to eternity, or it would have melted into shadow at his touch.

As she unbuckled his belt, she made a familiar tune in her throat, "Never grow old, never grow old," a line from the old hymn that was a theme in the music of her life. And they would not, not in a love like the one that had possessed the two of them. And had possessed Martin and Lindy, too, and been destroyed, just freshly, along with the children that had been woven out of its flesh.

They lay with the windows open, their bodies close in the cool morning breeze, and came together while the birds called softly, the phoebes and the tanagers and the doves, and the first sun spread across the floor.

When he should have been completely absorbed in her, when his body was radiant with pleasure, his eyes drinking her face, his powerful hips pumping and making her cry out softly, then, at that grand private moment,

he heard another voice cry out, and knew that it was his own and not his own, a broken, bereft voice from downstairs and a universe so close and so very far away.

He went plunging on, but then heard the back door slam and the voice screaming, but faintly, faintly...and yet so terribly that it shattered everything and caused him to go twisting off her.

He flopped onto his back, gasping.

"Honey," she said, "oh, honey," and came to him. But he leaped out of the bed.

"It's him," he said.

"Who?"

Out in the back yard, he was screaming. Wiley ran downstairs. "Martin," he yelled, "Martin!"

He went through the living room and out the back door into the dewy grass.

"Wiley, for God's sake!"

Then he heard them, their shuffling walk, the wanderers coming up from Harrow. He stood in a shaft of hazy light as they came closer, and saw the branches shake, and then heard their voices murmuring, and heard Martin screaming and screaming.

The murmuring came closer, got louder. "Hear it, Brooke?"

"What?"

They were right in front of him now, murmuring, breathing, their feet shuffling. "Brooke, look at the grass!"

"Honey, oh, for God's sake!"

The footprints came closer and closer.

Then he reached out, and he touched the air where one of them must be. He felt a shoulder, part of an arm.

And then he saw them. Where he touched them, he could see a knit shirt, part of a neck, then a muscular forearm. "My God, look, look!" He reached, he touched the face-and saw glazed, empty eyes, a slack mouth-male-but the man went on, the man did not seem to be aware of him at all. "Winnie," he cried, "Lindy! Trevor!"

Then he heard Martin, heard him close, heard him whispering "baby, baby please, please wake up baby-"

He reached out-and there, under his hand was a khaki jacket, then a face-Martin, richly alive, totally there! "Martin! Martin, you can't help them, you

were all tricked, you should hide, you need to hide! Oh, Christ, somebody in the government is on the dark side, Martin, can't you see that, they want this to happen!"

But Martin was gone. All around him, the wanderers continued passing, and he kept reaching out to them. He touched Mrs. Sweet from the drugstore, her gaping face, and the old pastor Reginald Todd, and then Doctor Willerson-the town doctor, reduced to this. "Oh, Jesus, Jesus-"

Then Brooke was there, and she slapped him so hard there was a flash and pain.

He grabbed her wrist. "What the hell's the matter with you?"

"With me? You're naked in the back yard, for God's sake, and look, you have an audience-"

There, face pale in his bedroom window, stood Nick, staring down on the scene. His expression was grave, like a judge at a sentencing. Martin took the robe she'd brought and covered himself, and went in through the shuffling sounds of the wanderers, and Martin's cries, and the pleading, praying voices of the followers, and the last thing he heard was a child's voice calling for his mother and his father to stop, in the choked tones of a twelve-year-old trying to be brave.

"Get in here, Wiley, you're scaring me!" She tugged at him and he went with her. As they returned to the house, he waved up at his son. Inside, she threw her arms around him. "Wiley, what is it? What's happening to you?"

"The story's got me. It's drowning me."

"Wiley, you were warned."

"I can't stop it!"

"I want you to see Doctor Crutchfield. I want you to see him today."

"He's a wanderer."

"A what? What does that mean?"

"No, of course not, that's Doctor Willerson in the two moon world, I'm sorry. I'll call him."

"What in hell is a two-moon world?"

"A place of great beauty, my wife, that is being raped by creatures without mercy." He grabbed her shoulders. "And they are coming. They are coming here."

She stepped back. She went pale.

"In your heart," he said, "you know."

"I do not know!"

Then Nick came downstairs. He looked up at them. "I dreamed awful things," he said, "then I woke up and it was worse."

"What was your dream, son?"

"I dreamed we left, Dad. You tried, but you couldn't go where we were going, and we couldn't stop, and then I woke up and you were in the yard, and what's wrong, Dad?"

Brooke gave Wiley a hard, hard look, and coming from his gentle Brooke, that meant a lot. It meant she thought he had hurt her boy.

Then Kelsey came down, flitting along in her pink nightie, her curls bobbing. She looked just as darling as the most wonderful little girl picture ever taken, and he opened his arms and lifted her to him. "I had a bad dream," she said, "I dreamed me and Mommy got leashes put on us and we had to walk all night and forever and I got so tired but I couldn't stop, and you ran along behind us praying and he had a bottle of Ayers water. I thought we didn't get bottled water. I thought it was too expensive."

"Now, see," Brooke said, "that proves it was just a dream, because there's Evian and Perrier and Ozark and lots of other kinds of water, but there is no Ayers water."

"There isn't?"

"Not in this universe," Wiley told her, and kissed her button nose. As best he could, he concealed what was almost a sickness of fear. In the other universe they had Ayers water, he'd seen bottles among peoples' provisions in the church.

But how had Kelsey known about it? How indeed, unless the wall that separated the two human universes was also breaking down, just as he had feared it would, and hell was getting closer fast.

They all went into the kitchen, and he turned on the radio and he and Brooke made breakfast. His mind was completely focused on one thing-how had Kelsey known? What might be about to happen?

"You're staring," she said.

He shook his head. "Don't be mad at me."

"No."

"It's not even a big deal in physics. Parallel universes are real."

"I'm sure they are. I'm also sure that they don't cause people-just generally speaking, I mean-to leap around naked in their backyards. Your appointment with Crutchfield is at eight-thirty, so you'd better get rolling."

"Eight-thirty? You're kidding."

She looked at him, and the fire in her eyes actually reassured him. He wanted to feel like somebody was in control, because he was not in control.

He gobbled down the last of his eggs and went up to dress. Maybe this would be actually be good, maybe all that was happening here was that he was losing his grip-which, frankly, would be a hell of a lot better than what he feared.

Moving fast, he managed get to town just in time.

As he drove along the familiar streets, he kept expecting to see little knots of tragic people, but all he did see was a small Kansas community in its mild prosperity, a gentle bustle in the streets, even a recent addition, the Starbucks. Nobody seemed strange, nobody had a vacant look.

He drove past Third Street Methodist. The church was closed, but it looked perfectly normal. Sylvester was on the walkway with a trowel, turning soil in a flower bed. Wiley slowed down and waved. "Hey there, Syl."

Syl waved back. Nothing unusual.

Of course not, you fool. Things are fine in this universe-for now.

When he arrived at Crutchfield's office, which was a walk-up above the Danforth Meat Market, one of the few small businesses hanging on in downtown, it was twenty to nine. "Sorry I'm late, Marla."

"Brooke says you've gone around the bend."

"That would be true."

"Then I'll remind you that I've got Mace."

He'd come on to the girl with the porcelain skin and the bright green eyes. But all in fun, of course. He would never cheat on Brooke. But with that black hair and that creamy skin, Marla did inspire.

Crutchfield looked normal, also. White hair, tiny glasses, a sense of therapeutic fog clinging to him.

"So you were capering around in the back yard naked. What say we start there?"

"Look, I've got-oh, Christ. I've got something happening that I can't even begin to understand."

"I think Brooke is having exactly the same problem."

"It feels to me as if something enormous is happening that has to do with what I am writing, and it is not good, this huge thing, but I cannot stop writing about it even if I want to. I'm a sort of infernal machine."

"You're a machine?"

"Not in control of my own body. Not channeling, it's not like that. I sit

there and I type. Automatic typing. I've abandoned my Corona and I'm just working on the computer. But the book isn't mine. I can write without thinking. Read, watch TV, close my eyes, it doesn't matter. My fingers just type away on their own."

"If your work isn't yours, whose would it be?"

"That's a hell of a good question. The answer is, I have no idea."

"But you're not involved in the writing?"

"Well, I am, of course, sort of. In the sense that I can see their world, hear their voices. Shit! You moron. Moron!"

"I'm a moron?"

"I'm a moron! You don't tell a shrink you hear voices."

"The voices don't want you to tell me about them?"

"Aw, shit. Sheee-ut! Goddamn it, the voices don't care."

"So what do they say?"

"They cry. They're suffering. Some of them came up through the yard, and when I touched them I could see them-see the hands, the faces that I touched. Does that sound plain crazy, or spectacularly crazy?"

"Sounds like I might as well get that new Lexus I've had my eye on."

"Do you know what a parallel universe is?"

"Something that exists deep inside the CERN supercollider for a few billionths of a second?"

"I'm not paying you to bait me, Henry. We're deducting three minutes of money for that little flippancy."

"You're afraid I'm laughing at you, but that isn't what's going on."

"What is?"

"I'm trying to make sense of what you're saying."

"Would it disturb you to know that in a parallel universe a doctor very much like you called Frank Willerson is currently walking off toward the northwest with most of the other people in this community, and he has no soul?"

"We're probably all better off without that soul mythology, anyway. Let's you and me deal with who and what we know we are, which is us in this room together. Or are you here? Are you a projection from a parallel universe, Wiley? Is schizophrenia the problem, here?"

"Look, I had a close encounter with creatures from a third parallel universe a few years ago, and because that happened-well, I'm doing what I'm doing."

"Which is?"

"I'd say I have no fucking idea, but I'm beginning to have an idea. I'm the balancing force between the positive and negative earths."

"Ah, of course, that makes complete sense. Would you be God, then, or just Jesus?"

"I'm Napoleon, you fuck."

"Not interested, Wylie. Every psychiatrist reaches a point in his career where he has to draw a line. No more Napoleons. I reached that point a while back."

"Am I insane?"

"Of course you're insane."

"What can I do about it?"

"Come here a lot. Keep paying your bill."

"You are a cynical man."

"Yes I am."

"Look, I'll apologize to my wife for going out in the back yard naked. If that's a compromise, here."

"Is it a compromise?"

"When you're bored, you turn the patient's statements into questions. You're doing that now."

Henry lifted his arm, drew back his sleeve, and looked at his watch. "I'm relieved to say that we've come to the end of our time, Wiley. You can reschedule with Marla."

"Can I fuck her, too?"

"If you want to continue treatment with me, no."

"You don't like me very much, do you?"

"Do you want me to like you?"

He left the office without making another appointment. What was the point? The good doctor didn't believe a word he said. Hell, he didn't believe a word he said.

Driving back in the Jeepazine, he made a decision. He would change it. He'd simply go back and alter the text. Because if he changed it, maybe he would also change events. No more ruined Winters family, no more ruined world.

He drove faster, and faster still, thinking only of his computer, of the urgent need return to his writing-which was returning to him and fast, roaring into his head like some kind of a dam-break flood blasting down the stream

behind his house, a flood of words-

-and then there were lights, bright, back windshield.

Damn, he did not need another ticket, he was gonna need to take a damn compulsory driving course, which would take hours and piss him off in a mighty way.

"Hey, there, Matt, I'm sorry, I guess I was a little fast, there."

"Wiley, you were doing a hundred and eleven."

"Oh, that is bad."

"Well, you know, I don't usually stop town people. But-"

"How's Beka?"

"Aw, shut up."

"Uh, I could buy you a box of Partagas? Or just hand over the fifteen hundred bucks they cost? Cash, now?"

"I'll take money and smokes. But I'm still gonna have to write this up."

"Aw, fuck, Matt. Damn it, fuck."

"Why were you going so fast? I mean, damn."

"What can I tell you? I'm crazy."

Matt wrote the ticket and handed it in for Wiley to sign. "This is gonna four-point you, but this is town, you're in town, and we just-a hundred and eleven is not good, Wiley, I'm sorry."

Four points added to the eight he already had would mean not only compulsory driver's ed, but also a court appearance.

"I'm gonna call George Piccolo and tell him you harassed me."

"You do that and I'll beat your ass, boy."

When they were kids, Matt had always won. He was heavier, he was faster, but Wiley was capable of getting more pissed off, as he did now. "Gimme the goddamn ticket, and for the love of God don't tell Brooke or I'll get my ass whupped, serious."

"Well, you might like that."

"Tell you what, I'm gonna drive home at thirty miles an hour and then I'm goin' back to the cave for a smoke. I'll call you on your cell to share my enjoyment with you."

"Smoke my cigars, you're gonna eat the butts. Remember that, because I get off duty in an hour and I will check."

Hiding the ticket carefully, he drove on. He'd find a way to hide the fat check to the county in Quicken. Somehow or other.

Once back in his office, he pulled out the bottle of Woodford Reserve he

kept in his bottom-drawer liquor stash and sipped at it.

What seemed like the next moment, voices caused him to come awake. Had he been sleeping? What had just happened? For a disoriented moment, he had the horrifying sense that he'd crossed into the parallel universe. But then the voices resolved into familiar ones. Brooke was coming in from the garage with the kids. She'd brought them home from school.

He looked at his watch in stunned amazement. It was four-thirty and the sun was on its way down. He'd been sitting here all day. Writing? He had no idea.

He listened to Brooke, to Kelsey's high voice full of excitement about a snake in show and tell, to Nick's thumping tread on the back stairs.

Then silence fell, and what he listened to now was the silence. Soon, the words came again, the words-whispering, shouting, demanding, from the other universe.

It was Martin, and he was talking to himself, and Wiley knew why. The poor guy had stayed here at the house, and was trying to force himself not to follow his family, and was agonized about that.

Martin was crying out, Martin was more desperate than any human being Wylie had ever known.

FIVE

DECEMBER 3
THE BUNKER

AND NOW, SUDDENLY, WYLIE WAS looking at trees. At grass. He knew that he was far from Harrow, Kansas.

He wanted to return to Martin. He could feel the poor guy's mind just racing for solutions, could feel his hunger to give up and blow his poor damn brains out, and his agony that he could not because those he loved could not.

He took a deep breath, closed his eyes, and saw that he was in a dark meadow in a pine woods. There were vents low to the ground, humming softly. Two deer, their ears turning this way and that, ventured out from the shadows.

Then he thought maybe he knew what this was. Martin had followed his family after all. He would have loaded his car up with food and water and set out through the woods and across the fields of his beloved Kansas, and that's where this was.

But no, it was too quiet and too-well, the word was creepy. It had an evil feel to it. Nasty. The deer were uneasy, flipping their tails, their great eyes wary.

Night was falling here, the west was dense with clouds...and there was flickering in the clouds. A sign, he feared, of the disks.

Then he wasn't in a meadow anymore, he was in a gray place that was softly rumbling. There were walls here, a long corridor lit by bulbs in wire cages.

Footsteps came, somebody moving fast, and a man in uniform wheeled around a corner. General Al North moved along the hallway in what appeared to be a military bunker of some sort. As the general came closer, Wylie could see that his fatigues were dirty, his face was sheened with sweat, his eyes, which had been gray and full of resolve in Washington, were now the flitting eyes of a rat.

So, he had survived the attack. Wiley had wondered about what had happened to these people. This was a huge thing, involving the whole world,

and Washington had taken one of the early hits.

Al burst into Tom Samson's office. "Does the president know about this?" he shouted, throwing a crumpled sheet of paper down on his superior officer's desk.

"How dare you!"

"You're telling them to congregate? To gather in groups? Are you insane?"

"God damn you."

"Oh, shut up with your bluster, Tom. You're in way over your head and you never should've been appointed and we both know it. But this-this isn't just executive ineptitude. This is treason and I want an explanation that satisfies me, or I'm gonna arrest you, General."

"You? You don't have the authority."

"This is war. We're out of touch with higher authority."

"The president of the United States is two offices away."

"And I'm carryin' and you're not, and I'll shoot you as soon as look at you unless you explain this goddamn thing. How many people have received this?"

"Pitifully few, given that I'm forced to deliver it with blimps, trucks, Cessnas, and word of mouth."

"Let me go in another direction with this. We got a communication from Fort Riley about three hours ago, to the effect that a group of small towns northwest of Topeka took a terrific hit last night. They had your pamphlet. They congregated in their churches. And eight out of ten of these people are now wanderers. Thank you, Tom. I thank you for them, for their families, for the country. And what's this Kansas deal? Why did you even leaflet these people? Did you somehow know that Lautner County was gonna take a hit?"

"Of course not."

"Oh, no, you did. Because you singled it out. Two days ago, you directed a blimp run over the whole area."

"Routine."

"Really? Why not hit Topeka? Why not hit K.C.? But instead, you just go to this one little county. So I have to ask you, Tom, who's side are you on?"

"Don't be ridiculous!"

"Our chains of command are busted all to hell, Tom. We're going down in damn flames, worldwide. Bases raided by the disks time and again, desertions by the tens of thousands-we're done, man."

"We have a weapon."

"What? Stealth bombers? Nukes like the one that failed to do jack shit to the lens on Easter Island? Now, there was a good move. We nuke 'em and as a result they pick up their pace a hundredfold. So I'm not so sure I even want to hear about this damn weapon."

"You want to hear about it."

He picked up the crumpled pamphlet. "I want to hear about this, Tom."

"Aw, Christ. Has anybody ever actually told you what an extreme asshole you are?"

"Please," Al said.

"You talk about failure of discipline-speaking of Kansas, you belong in Leavenworth."

Should Al just draw the gun and shoot? How would the president react to that? "Tom, you should've told them to hide, seal themselves in spaces where no light can reach. Force the attack to be executed in detail. Takes more time that way, and we already know that they withdraw at dawn."

"Fish school because mathematically the survival rate among large populations being attacked by predators is greater than that for isolated individuals. Same goes for herding animals. And under these circumstances, my friend, the same exact principle applies to us."

"Let's put it to the president."

"The pamphlets are being distributed as fast as we can manage it, and that's going to continue. Do you know why we were concerned about Lautner County?"

"No."

"Your friend, the little man, the archaeologist-he's there. And they want him dead, I can assure you."

"They? I'm dealing with lenses that emit these bursts of disks every night that go out and wreak havoc. There is no 'they.'"

"Somebody's behind the lenses and behind the disks, never doubt it, and your man is a danger because he has the smarts and the knowledge of the deep past to maybe figure this out, and maybe-just maybe-to figure out a vulnerability. And they know it, and they are after that man."

"Did they get him?"

"Don't know. The place is in chaos, communications are down."

"Why doesn't that surprise me?"

"You still ready to shoot me?"

Al was silent.

"Then you start respecting my command. You salute me, and you call me sir."

Al shook his head, laughing to himself.

"Do it now, goddamn you!"

The two men glared at each other. Al did not salute.

"I'm doing my job, Al. Best I can. Under the worst conditions any American general has ever experienced."

Slowly, as if his arm itself was unwilling, Al raised his hand and saluted. "Yes, Sir," he said.

"Okay, I have an appointment with the president. I want you in attendance, Al."

That surprised him so much he almost gagged. He'd seen himself as being on the way to Diego Garcia for a tour managing the fuel dump. As if there still was a Diego Garcia, let alone a base, let alone fuel.

Face time with the president was a gift. Normally, he couldn't go on his own unless called, and Wade was not in the mood for squash, although there was a good court down here, he'd looked it over when they first came in and this was all exciting and interesting, and they were gonna nuke those suckers to glowing dust balls and go back home in triumph.

As they went along the hall together, Tom put a hand on Al's shoulder. "We're not friends."

"No."

"But we need to put our personal battle on hold. We've got warfighting to do, and we are in trouble. You're about to hear a report that is going to disturb you. Maybe also give you a ray of hope. But I want you to maintain strict military discipline in there. He will ask for your opinion. It will mirror mine."

"Yes, Sir." He realized that this was how it had to be. He just hoped to God that Tom was right. That business about congregating still sounded wrong. It sounded like intentional sabotage.

They went through the outer office. No pretty furniture here, this place was constructed for work and work only. If the president was here, a catastrophe was unfolding. Communications equipment dominated. Secret Service agents with machine guns lined the halls, young men with stricken eyes, all watching the generals pass. Angry, bitter eyes. Mostly, the families of these people lived in places like Arlington and Bethesda, and those communities had been worked for a full week, all of them, and the fleeing

lines of cars had been worked out on the interstates.

Whoever was doing this knew exactly how to proceed. If you break the enemy's organization, you neutralize his warfighting capacity even before he's aimed a weapon. Of course, down here there was no question of the light being a threat, but this was obviously a special place.

There were numerous corporate and private bunkers as well, he knew, not to mention government facilities all over the planet, but with all satellites fried and most land-based switching stations so loaded with atmosphericics that they'd shut down, there was little communication except by messenger-and they could only run during daylight hours.

They entered the presidential office, and Al was horrified at what he saw. The president looked like he'd lost fifty pounds. His eyes were dark, brooding shadows. Trapped, animal eyes.

He looked mean, in the same way a struggling cur looks mean when you're trying to stuff it into a cage and be done with it.

He raised his head, and at once the misery in the face was replaced by a beggar's grin. Now he was a used car salesman who'd spun his last lie. "Sorry," he said, gesturing at papers on his desk. "Signing death warrants. Line of duty desertions, hundreds of them."

"You're ordering executions, sir?"

"Do me a favor, Al. Call me Jimmy. You guys. Should I, you think? Yeah, it's total bullshit, isn't it. They came from CIA, not DoD. There is no DoD, of course. And Bo Waldo's gone. This shit's from staffers." He crumpled one up. "Kids like to kill."

"They're operating out of a unit in Maryland," Tom said. "Above-ground, so it won't matter much longer, be my guess-Jesus, what was that?"

The president looked up, they all looked up. There had been a sound coming out of the ceiling, a low noise, loud enough, though, to drown conversation.

"Call the contractor," the president said, acid in his voice. "Try flushing my toilet sometime, you want a hell of a damned surprise." He sighed. "I wish I knew where my wife and kids were. Do you fellas know where your families are?"

"I've been divorced, Jimmy-oh, long time," Al said. Sissy had packed it in when they were still base bums, shuffling around the world. He'd never bothered to remarry. The air force was his wife, his kids, his mistress, all that and more. As far as his rocks were concerned, he got them off the way monks

did.

"My wife is whereabouts unknown," Tom said.

They'd worked together a long time for Al not to know that Tom was married. But it had never come up. Come to think of it, they'd never even shared a round of golf together, or a game of squash, or had a drink. Then again, maybe Tom didn't drink. Addicts don't, do they?

The sound came again, and this time it was in the wall-moving down from above.

The president stood up. "Is that normal?"

"It's the plumbing," Tom said. "What we need to talk about is I want to reach out to this man, Martin Winters. I want to reach out to other people with knowledge of the deep past. I have a list, Graham Hancock, William Henry, Laurence Gardner, John Jenkins-all leading experts who used to be considered wrong. I want them all located."

The president went to the wall, felt it. "There's heat," he said. "That should not be."

"Call security," Al said.

Tom gave him a look that said he had just overstepped his bounds. Don't speak unless spoken to.

"I have come to believe that what's happening has to do with the deep past," Tom continued.

"That's not news," the president snapped. "Tell me something I can use, please! And don't ask me for permission to convene meetings. I don't care who the hell you talk to, just save our asses, here, Tom! For God's sake, Homeland Security-what's left of it-tells me we're losing a half a million people a night just in this country. Wanderers-well, they aren't wandering. They're all heading to three points: northern Nevada, central Nebraska, and northern Indiana. Now, why? You might ask, right, Al?"

"Yes, sir."

"Yes, sir...The FBI is in total meltdown, so that leaves military intelligence. So, here's my question to you fellas, do you have any assets working?"

"We've got assets," Al said.

"Oh, good. Then reach out and get me reports." He laughed a little. The beaten-dog look returned-beaten dog turned mean. "Or just tell them to fucking nuke themselves. I mean, why wait around? Wandering's hard on the tootsies, I hear." He took a fabulous silver-clad forty-five automatic out of a

desk drawer. Laid it on the desk. "Can you guys imagine what it is like to be a pregnant woman now? Out there?" He sucked air through bared teeth. His color had deepened so much that Al thought he might be having a coronary. "My God, but it was all so very, very beautiful. And how odd that we didn't know it. All that yelling, all that scheming, the money, my dear heaven, the money-and what was it, in the end? I have come to this: a single child seeing one single leaf that has turned in the fine autumn air means more than all of that. A child clapping because the leaf is red and it was green."

"Mr. President-"

"Of course I've gone mad, Tom. For God's sakes, in this situation, madness is sanity. Millie, where are you, baby, are you out there walking the dark path with all the others? Oh, Millie. Forty-four years she walked beside me, fellas. Forty-four years. She gave it all. Everything she had to give. And I can't even think about Mark. Somewhere, I trust. My poor boy." He picked up the gun. "Gentlemen, would you like to join me in a bite of bullet?"

"Mr. President!"

"Al, you know what? You are the nicest man I have ever known." He laughed. "That's why I gave shitheel here your job. He can do it, he's a real bastard. I'm sorry, Al, but you came along at the burnt-out end of the age. No more room for good men." He sighed. "'What rough beast slouches toward Bethlehem...!' I had a great-uncle who knew Yeats. Met him by simply going up to his door in Dublin and knocking. Oh, my God, the voice of the man! The voice of Yeats!" He wept, and Al almost wept with him.

There came, then, a sort of chuckling sound. It was really a very strange sound, so strange that Al knew at once that it was no noise ever heard on this earth before-at least, not in this cycle of history.

The president's head snapped to the left. He stared at the wall. Then he turned back, his eyes liquid with pleading. "Why?"

He was pleading with Tom. But Tom didn't need to be pleaded with, he was an underling.

Something then happened that must have looked to Al like the arrival of the Spaniards on their horses must have looked to the Aztecs. Something was in the room that could not be there, that had come from nowhere-not out of the wall, but out of the sound in the wall. He could not say exactly what it looked like-a shell so black that it absorbed light, or a machine propelled on enormous legs, or a gigantic spider, even. The sort of thing that comes out of the closet when you are four, and eventually recedes on the expiring tide of

childhood.

He heard a voice, "Agnus dei," Lamb of God, sounding so pure that it was as if sounded from the highest, the farthest of all voices—a voice beyond telling. Wade ascending.

"Qui tollis peccata mundi," the president whispered, "who takes away the sins of the world."

The roar of the gun was like a blast of Satan's breath, so ferocious that it made Al cry out, so enormous that it seemed to gather the whole bunker in its strength and crush it to rubble.

Al had him in his arms before his body, which had slapped into the wall, had even begun to slide to the floor. He stank of raw blood, his left eye was shuddering like the wing of a wounded fly, then green and bloody vomit pumped out of him with a furious, questing seizure that parodied sexual passion.

Secret Service poured into the room. One of them lifted his machine gun, braced it at Tom, who stood quite calmly, the very least of smiles on his face. He did not even glance at the young man with the gun, or any of the young men frozen in the doorway.

"I have a mission for you, Al," he said. "Put him down, you'll need to leave at once."

Al laid the president-Jimmy—on the thinly carpeted floor. He went to attention. "Yes, sir," he said. He saluted his superior officer, now the leader of the free world.

SIX

DECEMBER 3
WANTED

MARTIN DROVE HARD, IGNORING THE thudding of his tires and the screech of harvest stubble scraping the sides of his truck. In the east, dawn burned orange, so he didn't have much time before the lights of followers would become invisible and he'd lose his chance to catch up, maybe forever.

Last night, he'd driven out to his house to be in their path, but hadn't been able to find his family. Wanderers had gone past, but there had been so many of them, far more than he'd realized, and his family had escaped him.

He consulted his compass. He was no navigator, but was trying to drive as straight in a north-northwesterly direction as he could. Wanderers went in straight lines, so people said.

At first, he'd tried to reason with Lindy. He had picked up Winnie and carried her to the car-and been bitten for his trouble. He had not been able to find Trevor at all, which had only added to his sorrow.

All around him, there had been screaming people, begging their loved ones not to go, trying to wake them up.

They'd gone off down Third Street and between two boarded-up stores. Behind those stores was Oak Street, then behind it Linnert Lane, then the plains, and ten miles out, the Smokes, and beyond them the high plains, then Canada. And somewhere, he felt sure, whatever fate was in store for them.

Martin had trotted over to his jeep and got in-and then Bobby was there. "Hey, guy, we need to do this another way."

Martin had looked at him, and it was like looking across a great, black river to a man whose life was unfolding on a better shore. He fought the tears down, but when his friend reached in and put a hand on his shoulder, he broke down. Bobby stayed with him until there were screams, then shots, off in the direction of Oak Street. A follower was killing a wanderer, probably based on an agreement. It was a common thing, these days, not considered murder. "Gotta go," Bobby said. "You stay right here, you're comin' home with us."

Martin had waited for a couple of minutes, but then he had turned on his car and moved off toward Linnert Lane. He had seen, out in the fallow fields, a slowly moving cluster of lights, disappearing into the night. There were voices, too, cries and pleas echoing in the silence, and then a voice, high and full of something Martin guessed must be faith, "Yea, though we walk through the valley of the shadow of death..." then lost to an errant wind and long thunder out of the west.

Martin had not returned to Third Street Methodist. He had not been able to face going home with the Chalmers family.

Instead, he had driven out into the night, going up 1540 into the Smokes. He knew every inch of the hills where he lived. As a boy, he'd hunted the Smokes with his dad, taking whitetail deer and turkey. He'd hunted across the very land where he'd built his house. Nowadays, he didn't hunt, largely because Trevor wasn't interested. He preferred the intricacies of fishing, and just Saturday before last they'd driven over to the Kaw River and fished for cats with cut shad and done well...except, of course, Lindy and Winnie had thought them insane to use shad as bait in order to eat catfish, but they were women and-oh, hell, he'd had to pull over, he was just plain overcome.

By the time he'd gotten home, he'd known that he was in serious shock. He needed medical attention. But Willerson was the only doctor in town and hadn't he gone out with the wanderers? Martin had taken a couple of the Xanax he used to mainline during bill-paying time.

He'd wandered his own home like a ghost, pacing from room to room, hugging Winnie's beloved stuffed elephant she had named Bearish and burying his face in Trevor's pillow. He had ended up in his own bed clutching one of Lindy's nightgowns to his face, and had stayed there until the sun was well up.

There had come a buzz from the front door. It was Rosie with food, the sort of casserole you brought to the bereaved.

"Harrow's formed a committee," she had said. "Followers. You're welcome to join. They're going to be taking food and water. Some plan on going all the way."

"Do we still know where they are?"

"Helen's out there with a walkie-talkie. They're about twelve miles out, moving at three miles an hour. North-northwest, just like all the rest. They're about a mile from Holcomb's wanderers, and it looks like the two groups're gonna meet up about noon. That'll put it up to about two thousand people."

"Two thousand!"

"Hon, there's just eighteen intact families in Harrow. None in Holcomb. In fact, Bobby drove over there and he's telling us the place is entirely empty."

Then she added, "We also lost some kids. Children of folks who got hit. The little ones stayed around, but a lot of the older kids-fifteen to twenty or so-we can't find them. They aren't wandering and they aren't here anymore."

Another unknown was a cold, frightening thought.

Rosie had helped him pile the jeep with every bit of everything edible and drinkable in the house-a six-pack of Dr Pepper, two bunches of celery, beer, milk, half-and-half, orange and cranapple juice, Winnie's soy milk, all the cereal, the Lean Cuisines, everything he could find, even unbaked refrigerator cookies, and seeing the Pillsbury Doughboy on a half-used tube of cookies had brought more tears, angry tears.

He had driven out just after noon, going down 205 to the Holcomb crossroads and then out into the fields. He'd crisscrossed the countryside for hours, finding not a sign of anybody. Increasingly afraid and frustrated, he'd driven harder and harder, bounding through fields, screaming around bends, and in all that time not come upon a single human being, wanderer, follower, or free.

Now he was here, sitting on a bare quarter of a tank of gas with the sun going down. He realized that he was at Dennis Farm, one of the places that had been hit before the strike on Harrow. Well, he knew the Dennises, and he decided that he could go ahead and borrow some of their tractor gas. He drove the jeep over to the pump and tried to turn it on. No good. He went around the side of the barn and fired up the generator, then returned and filled his tank. He looked across at the dark house, and after he'd cut off the pump and the generator, got in the jeep to continue his quest.

He thought he heard something, though, and went over to the house. He approached it warily, not sure what to expect. The Dennises had raised about ten kids, but they were all gone, doctors and lawyers and corporate executives and other things that were not farmers.

He heard it again, a sort of mechanical chuckling sound. Was it coming from inside? He couldn't be sure. Could be around the side of the house. "Hello? Anybody there?"

No response. Then the sound returned, more distinct this time, and he realized that it was coming from two directions, out behind the low hill that

separated the house from their north fields, and then again from down near the pretty little stream that was one of the reasons they'd put the house here.

For all the world, it sounded like two dirty old men chuckling at him over his plight. "Hello?"

Then he heard something in the sky, whoosh...whoosh. He looked up, but clouds were coming in and it had turned inky black.

His mouth went dry, his heart began the peculiar, twisting beat that came when his fear increased. He ran to his car and jumped in and locked the doors. Who knew what might be out there? Aliens, even, the concealed architects. What was it some old scientist had said, "Aliens when they come will be stranger than anything we have ever imagined, or can possibly imagine." Words to that effect. Beings from a parallel universe might be even stranger...or strangely similar.

He got out of there fast, driving as close to northwest as he could, blasting his way through the stubble-choked, furrowed fields. How very ordinary it had all seemed just a month ago. Driving out this way to pick out a Thanksgiving turkey at Smeal's, he had seen Old Man Dennis working his harvest, thought how sad it was that, out of all those kids, he couldn't find a single one willing to continue the tradition. Word was they were going to sell out and move to Florida, but he'd thought at the time, No, the Dennises are gonna die on that land.

The sun slid behind the clouds, and with night came an increase of loneliness that was so deep it amounted to a new kind of emotion for him.

He drove on, searching blindly, trying his best to stay on course.

It was some moments after he'd seen the glow on the horizon that he realized that it meant headlights in the distance. He stopped the jeep, got out, and clambered up on the roof. About two miles ahead, there was a slowly moving cluster of lights-the cars and trucks of followers. Couldn't be from Holcomb, they had all been disensouled. So that had to be the Harrow contingent.

Lindy was out there somewhere, his Lindy and his Winnie and maybe Trevor. He looked up into the black sky and wondered if those were dead bodies out there, and if his family's souls had gone somewhere better. Oh God, please help them. Help me help them, God. If only you're there, we need you. We need you.

He got down and drove ahead, keeping his own lights off so he could see the caravan. He closed quickly. They weren't going fast, obviously. Soon, he

was in among them, about five vehicles. It had been more. The wanderers had lost many followers.

"Hey, bone collector," a woman's voice yelled.

"Helen!"

She leaned out the back of the Turpins' mangled Buick. "Got supplies?"

"I got 'em!"

"My Reg likes Oreos, you got Oreos?"

"I've got some Pillsbury chocolate chip cookie mix."

"Well, hell, I'll try it on 'im. I think he sorta recognized John Twenty-four by the way, so I'm lookin' for a comeback."

"You folks seen Lindy?"

Another voice called, "Sure thing, Martin. We fed your family twice. Your girl's happy when she gets soy milk." That was right, oh God, that was Winnie's favorite.

He scoured the backs that were visible in the car lights, but there were so many of them, it wasn't a small crowd, it was enormous, it stretched on and on.

He stopped and got out. He grabbed soy milk and orange juice, they would need strength and fluids, they would be in shock and they'd been walking continuously now for close to twenty hours.

"Be careful, there," a voice said as he sprinted among the vehicles, then out into the darker crowd of wanderers. "Winnie," he called, "Soy milk, soy milk! Trevor Winters, Dad's here, Dad's got cranapple."

Then he saw a back, familiar hair. He doubled his speed, pushing past people who were breathing hard, who were staggering. What was going to happen, would they be walked to death? Why not kill them outright and save everybody this terrible, terrible suffering?

"Lindy! LINDY!"

A head turned, and he found himself looking into the empty grin of Beryl Walsh, the local bank manager. He went on. "Lindy! Trevor! Winnie!"

There was her hair again, and this time he was sure. "Oh, Lindy, hey, hey, it's me, babes, I'm gonna take you home, I've got the truck, I'm gonna take you guys home!"

He came up beside her, and it was definitely Lindy of the green eyes and the straight, proud nose, Lindy of the bobbing blond hair. "Oh baby, I got you. Thank the Lord." He looked around. "Where are the kids? Winnie? Where's Winnie?"

Not a glance, not a word. He sprinted in front of her, walked backward as he talked. "The kids, Lindy, where are the kids?"

She came straight on, her face expressionless. Unlike some of them, she didn't even have a smile left in her. She strode like a Valkyrie, though, a powerful, healthy woman...whom, he thought, was going to make an excellent slave.

Would they be taken to another world, like the slavers took people from Africa? How similar that must have felt to this, to the people who watched the ships sail away. It had been history to him before, but those millions of lost families were now part of his heart.

And he thought, the Nephilim, those strange rapists mentioned in Genesis, called the fallen ones, they had enslaved us before biblical times, had they not? Enslaved us, and then gone. Mysteriously.

In recent years, as his data piled up, he had become more and more willing to entertain the notion that there might have been some sort of human-alien interaction in the distant past, which had led to the catastrophe of 12,000 B.C., when the makers of the great stone monuments had abruptly vanished.

Had it been a war? Had it been, perhaps, something like this? And therefore were these people going to some far place destined to suffer a fate that maybe not even God could know?

Then, a miracle. He saw Winnie. She was trundling along, she had a bit of a limp. He ran to her, swept her up in his arms, cried out, buried his face in her little-girl sweetness-and then realized that her legs were still moving. She was still walking, in fact, she hadn't stopped walking even when she was picked up.

Pointing her back toward the car, he put her down. She took a few steps, then, as if she was controlled by some sort of inner gyroscope, she turned abruptly and continued on with the others. He hurried along beside her. "I've got some soy milk for you, honey," he said. He fumbled in his pocket for a box of it and held it out to her. She took it and drank it down. "Thank you, baby," he found himself saying, "thank you." Then he cried out, "Trevor! Trevor Winters! Dad's here, I've got cranapple. Dad has cranapple." His throat constricted and he had to stop. He controlled his emotions, fought them back, and kept on. "Trevor Winters, Trevor Winters."

He moved back and forth in the crowd, and suddenly there was a light in his eyes. "Martin! Hey, buddy!"

"Uh-you're-"

"George Matthews, I'm that damn plumber."

"Oh, George, for the love a-yeah!"

"You're looking for Trevor?"

"Yeah, actually. I got Winnie to drink some soy milk."

"That ain't Winnie anymore, and Trevor's not here."

"Not here?"

"Nah, Trevor's not wandering."

He grabbed the man's shoulder. "George! George, are you sure!"

"There's something else going on. There's kids gone."

"Are they-are they okay, George?"

He could feel George's eyes on him. "Dunno. But my girl's one of 'em. Wife's out here."

"And you're sure they're not-Trevor is definitely not here? You're certain of it?"

"Not certain of anything in this world, bro, but I've been out here all day with my Molly, and I've seen Winnie and Lindy plenty, but not him, and I did see him-you know, after the church-and he was going out toward the Smokes with my daughter and some of the middle-schoolers. He wasn't wandering, Martin."

Martin turned around with the intention of going back to the house immediately-and it was then that he saw the thick column of light drop down like some kind of bright shroud on the cars of the followers.

"Oh my God," he said.

George turned, too, and saw it. "God almighty." He began to run, loping ahead to the wanderers, who continued on at their steady and oblivious pace. Martin's first impulse was to follow him, but a golden shaft came down, razor-thin and quick, and George sparkled for a moment, and then dropped back, joining his pace to that of the other wanderers.

It had been that quick. Martin forced himself not to run, he forced himself to fall in with the wanderers, to pretend to be one of them. As he had on many a hike, he walked beside his wife. The screaming behind him told him that the light was doing all the followers. Their compassion and their love had been used to trap them.

Then he saw little Winnie fall and cry out, and his whole heart and soul longed to help his child, but he kept on walking.

The wanderers never slowed their pace, but every so often, he saw one or

another of them fall down. The others simply walked over them.

It was a brutal-and brutally efficient-selection process, he thought. Only the strong would make it, and only the strong, obviously, would be wanted. Overhead, he once again heard the whoosh, whoosh of...something. Could it be that a big old barn owl was shadowing them? But the owl's wing is silent.

Ahead and to his left there was leaping movement. A voice rose in a frantic salad of words, babbling and shrieking, then going silent. He looked neither left nor right, but kept on, leaving the struggle behind him. Soon the voice was silent, replaced by that odd, mechanical chuckling he'd heard in the woods around his house. Eventually, the sounds faded.

He was aware that Lindy was just beyond his touch, and that Winnie maybe had fallen aside. He forgot all his careful intellectualizations about God and prayed the Jesus Prayer over and over again, the prayer out of J. D. Salinger's Franny and Zooey, which had been a favorite of Lindy's. It was the repetitive prayer from The Way of the Pilgrim, "Lord Jesus Christ, have mercy on me, a sinner."

As the stars wheeled in their generous majesty, Martin walked to the rhythm set by repetitions. From time to time the light dropped down on another follower it had discovered in the mass of wanderers, and ripped out a soul.

The rhythm made it easier for him, but by the time two hours had passed, he knew that he could not keep up with the pace of the wanderers much longer. He was contemplating this danger, letting the prayer drop into the back of his mind, when he heard a distant voice. It had an echoing, mechanical quality to it. He listened-and then, incredibly, saw its source. A police car stood on a roadside ahead, its light bar flashing. Beside it stood a state policeman with an electronic bullhorn. He raised it to his lips and blared, "You are trespassing on a wildlife preservation zone. You are required to leave this area immediately. Please come up to the roadway, ladies and gentlemen. You are trespassing-"

A tongue of light snicked down out of the clouds and there appeared around him the loveliest spreading glitter of little stars that Martin had ever seen. From this distance, you could see exactly how the light made the soul literally burst out of the body. He thought that a human soul was truly a universe all its own, as the stars that had been that man's memories, dreams, and hopes fluttered into oblivion. The trooper dropped his bullhorn and turned northwest.

Martin had reached a point of crisis. He had to stop. No choice. Already, he was visibly dropping back, he couldn't help it. "Good-bye, Lindy," he said in his heart, "good-bye my love, and good-bye Lindy's soul, wherever you are, and god rest you, my baby Winnie, my poor little girl never even had a life." Then he let himself fall forward like an exhausted wanderer. He did not close his eyes, but rather continued staring straight down at the ground.

Soon, the last of the wanderers had passed him by. He heard the intimate whistle of a night bird. Then something else-that chuckling again. It was close, and there was a lot of it. Now he thought it was like a flock of geese in flight, honking back and forth to one another as they ploughed the sky.

The aliens. That must be it. This sound represented the elusive aliens, coming along behind their human herd. Drovers. Cowboys.

Then something stepped on his back. It was heavy, and it had a sharpness that penetrated his jeans and entered his thigh. He had to force himself not to move as this sharpness very painfully twisted inside his flaring muscle.

Then it was gone, and he could just glimpse what looked like the leg of an insect touching the ground beside his face, then another, and then the chuckling had gone on ahead, and with it the faint whooshing and whistling in the sky.

Then he knew that there was light all around him. He felt the most incredible rage at his defeat, and then waited to feel the light, to know what it was like to lose your soul. Did you go with it, or stay in your body-or, as he thought-just disappear?

But then there was something in his ear. Snuffling. And an odor, a familiar one. He opened his eyes, turned his head, and found himself face to face with a very large skunk.

As the tail rose, he rolled, then jumped up and ran like hell, and the skunk ran, too, wobbling off into the light, which was not the light of death, but that of dawn.

He stood up in the sunlight. It was golden, low still on the horizon, but so pure that it must be as sacred as the old Egyptians had thought, and he turned toward it and knelt as he might to God.

Then he went back along the long series of low folds in the land, heading toward his truck, hoping to find Winnie's body somewhere, a little snatch of clothes somewhere in the prairie.

But he found an adult instead, blood-soaked, dead. This was no fallen wanderer, this person had been done violence. He looked down. The school

jacket, the smoothness of the backs of the hands-this was just a kid. He turned him over, and leaped back when he realized what he was seeing, and when he fully realized it, screamed.

Instantly, he stifled it. The light did not come during the day, apparently being rendered ineffective by the sun, but there had been other things out there and he wasn't so sure that they were particularly nocturnal.

He thought that this pitiful ruin must have been a boy. He was, at most, fifteen or sixteen, and he had been horrifically mutilated. His lips were gone, his mouth open and his tongue removed. His eyes had been gouged out, and his lower body was bloody. Martin didn't examine him too closely, but it looked as if he had been castrated, too.

He forced himself to open the shirt, to look for the familiar mole that would mean he had found his son.

The cool gray skin was unblemished.

Martin stood up and ran a short distance, then came back and picked the poor kid up, and carried him in his arms. He carried him across a field and into an empty farmyard, and put him down in a porch swing.

"Hey! Anybody home? Hey!"

Not a sound. He went inside and found eggs in the fridge, and cracked six of them raw into his mouth. He also ate cheese and crunched into a head of lettuce. He drank warm grapefruit juice that nearly made him puke.

Then he went on, walking until the sun was high and warm, and the gladness that it brings even to the most oppressed human heart made him close his eyes and lift his face to it. "Lucky old sun," he said.

Whereupon he found his truck...which he had left running. He jumped in and pulled the key out.

He'd damn well burned out all his gas, damned fool that he was. Fool!

Well, not quite all. There was a hairline between the edge of the gauge and the red line, so there was still a mile or so in it.

He walked back to the farm, but this was a hobby place, there was no gas tank here. Returning to the jeep, he got in and started it. He headed back toward Harrow, and had the town in sight when he ran out of gas.

He never passed Dennis Farm, but he'd been looking for it. Never saw a trace of it, must have been too far east of it, he figured.

He walked for half an hour, finally crossing the last field and climbing a final fence. Then he was in a backyard. He went down the driveway beside the house and into the dead-empty streets. A flicker of curtain in this house or

that was the only indication of life here.

He was passing the bank when a familiar car pulled alongside him.

"Bobby!"

Bobby just looked up at him. His eyes were strange, and for a moment Martin had a horrible thought. "Bobby?"

"Yeah?"

"Your family okay?"

He stopped his car.

Jesus, his family had gotten it in the night. "Oh, buddy, did you lose 'em?"

He shook his head.

"Bobby, what's the matter?"

He held out a flyer. Martin took it. He was astonished to find himself staring at his own face. "This man is wanted dead. Name: Martin Trevor Winters. Last seen in the area of Lautner County, Kansas. This man is extremely dangerous, and carries a bounty of ten million dollars, upon satisfactory proof of death being provided."

Martin looked at Bobby, met his eyes, saw them flicker away. His face said it clearly: this was not a joke. "Homeland Security dropped them about half an hour ago."

"But I-there must be some mistake!"

"Buddy, you know I love you. But I got this job, here, and half the town, they are looking for your blood."

"But what did I do? Why has this happened?"

"It doesn't say what you did, but we all know you were over there in Egypt when the pyramid went, and it must have something to do with that, which is why I'm arresting you, buddy."

"Bobby?"

"I'm not gonna read you your rights. Because it's a patriot arrest, you don't have any rights."

"Bobby, hey!"

But Bobby cuffed him and took him off to the sheriff's substation, and put him in the one cell, which had been cleaned of file boxes for the occasion. He drove through town telling them that Martin had been caught, and they had to meet at First Christ to vote on what to do with him.

SEVEN

DECEMBER 4
THE TRAP

WILEY STARED AT THE WORDS on his computer screen. This damn nightmare was way out of control.

He'd come back from the shrink determined to just erase the whole thing, but he hadn't done it, and now look what had happened, it had gotten so much worse so fast. Winnie was probably dead and Trevor-God knew what had happened to him, and look at poor Martin. He was going to be killed by his friends.

But it wasn't only what was happening to this one little family, it was the whole vast scope of the thing, an entire world being destroyed.

That bastard Samson was part of it. Al North was right, he was a traitor. But the fool hadn't shot him. Stupid fool. Nice guys sure as hell finish last, General North.

Wylie had CNN on continuously now, waiting for any sign of anything odd happening at any sacred site in his own world.

So far, this dear old place was quiet. But would it be forever? They knew we were here, or we wouldn't see UFOs. They just needed one more little push, he suspected, and they'd be in. Let NASA announce that UFOs were real. Let the Air Force admit that it couldn't explain some sighting or other—and bang, here come the lenses, dark goddamn things blowing the same fourteen sacred sites to hell here as they did in the two-moon world.

When he wasn't writing, he did research and he thought. He thought about the number fourteen. It was the Osiris number, the Jesus number, the resurrection number. Seven was a complete octave and a complete life. Fourteen was a life and a life beyond. It was the number of the goal of man, which was the projection of human consciousness into eternity. Osiris had been cut into fourteen pieces. The passion of Christ had fourteen stations.

Destroy the man, build the man.

Might that be true, also, of whole worlds?

He sighed, blew air out. Was he tired? He was beyond tired. More

exhausted than he'd thought it was possible to be.

He did not think he could imagine what the suffering going on Martin's world was like. By now, every single human being on the planet who was not himself a wanderer had lost at least one loved one. The sheer scale of it was beyond imagination. Appalling.

What could he write about it? That it brought tears to his eyes, made his mouth dry, made his stomach fill with fire?

Describing this was beyond even a great novelist's skill, and certainly beyond his.

Fourteen. He kept going back to it. The fourteen sacred places were there to enable us to recover the knowledge that made man immortal. Giza, Tassili, Ollantaytambo, all the way around to Easter Island, Sukothai, Persepolis and Petra-to enable us to recover the knowledge, and also to protect us from our ignorance.

In Martin's world, they had failed. Too late-just. He had been close, but not close enough, not in time. That was why Samson was after him. The knowledge he possessed was still dangerous.

It was evening now, on this earth, on Martin's earth, presumably on all the earths in all the universes that filled the unimaginable firmament-including the world of the reptilians.

He'd never seen it. Glimpsed it, perhaps, down in the draw that night-felt the delicate hands of the monsters, felt them raping him.

He thought he knew why it had been done. They needed a communicator to spread belief in them. Problem was, they chose the wrong guy. They needed a Nobel prize winner or a great political leader, not a horror novelist.

Too bad, suckas!

Voices shrill with excitement reassured him that all was still well, at least in his neck of the woods. Nick and Kelsey were playing normally outside. Brooke was downstairs making one of her stunning pot roasts.

The kids sounded very happy together, and that was not always the case. Even though she was eight and he thirteen, there was still plenty of sibling rivalry to cut through.

In another year, Nick probably wouldn't be willing to run around like that with his little sister, but he was having old-fashioned childhood fun now, oblivious for once to the fact that he would soon, at thirteen, no longer be a child.

It was a dark afternoon, with some heavy fall weather on its way in from

the northwest. Typical Kansas, a little late for the season was all. He glanced at his weather radio. The light glowed green, meaning that it was on and hadn't picked up any alerts.

Still, blue flickering came from the sky, and thunder rolled in from far away. The storms were still the other side of Holcomb, maybe fifty miles out. Probably they'd arrive during the night.

He didn't like storms. He feared that the disks might come, might be hiding in them.

But no, the lenses were the anchors. Hooks in the gills of the fish, as it were. And there were no lenses here. He kept telling himself that.

Then he would think, what if there were just one or two? Tassili was in the middle of the desert. Nazca was isolated; so were a number of the other sites. Most of them. They had been created so long ago that they were all centered on a north pole from God only knew how far back in the past.

He wanted a drink so badly that he dared not open the liquor drawer. No way.

He stared at his words on the screen. Lindy and Winnie destroyed, Trevor gone, Martin about to be locked up...which he could still see taking place. Even though he had stopped writing, the story still unfolded in the bright hell of his mind. In it, Martin was watching his old friend lock the cell door, and Bobby had tears in his eyes as he did it.

No, this was too much, this had to go, and now was the time.

He selected the chapter and erased it-and wow, there were some blood, sweat, and tears down the drain. So okay, that was done and it should be done. He'd rewrite it with a more bearable scenario.

The blank page confronted him, and he told himself that he actually preferred blank pages.

Bullshit, this was awful, killing his work like this. But he had to, he could not see his people suffer this much.

So he started a new chapter. Then he stopped. He didn't feel like just plunging into it like this, and he was sick of using the laptop, which he closed. Writing on the computer was an addiction, and he already had too damn many of those, drinking the way he did and sneaking cigars, and wanting to do a lot more than that.

He put his beloved old Corona back in her place of honor. Now, this was a writer's tool. She clattered like an old freight train, churning out the words, engraving every mistake in stone. Everything he had done-everything real-

had been done on this fine old typewriter. Early days, he would lie in bed writing through the night on yellow pads, then transcribe them onto her in the morning. Civilized way to work.

As he rolled in a sheet of paper, he noticed that the laptop hadn't gone off as he closed it. A defect due to the short, no doubt.

Intending to shut it down manually, he opened the clamshell.

There were words. He scrolled down. It was all there, right up to-her. He typed. These words appeared on the page. He erased them. As he did so, they reappeared. He did it faster, but the faster he worked, the faster they came back.

Okay, this appeared to be insanity at work here. This could not be. He erased the chapter again.

The process sort of made the words bounce, then they were back. He erased it again, then yet again and again, until erasure did nothing at all. Not even a flicker.

All right, this was crazy. This was not a possible thing.

He closed 2012. Time to go nuclear. On his computer, he had a program called Zztz, which would destroy any file completely. It used the same sophisticated techniques approved by the Defense Department for the destruction of classified files.

He opened Zztz and dragged the entire 2012 file into it.

"Neutron bomb," he muttered, setting Zztz to Defcon 12, its ultimate destruction level.

So, he'd write another novel, big deal. Late or not, he'd come up with something.

Even as he watched Zztz work, the file came back. He destroyed it again. It came back again.

There was no level in the program higher than Defcon 12. But there was one other way to go about this. He went into the DOS prompt and typed "erase *.*"

By the time he was back in Windows, it had all returned.

He stared at the screen. This was proof of something, because if you can't make the erase function on your computer work, things are crazy.

"Brooke," he called.

From their kitchen, "Yeah!"

"Could you come up to my office for a second. It's important."

"Wiley, I've got a million balls in the air."

"Brooke, please!"

"In a minute!"

He found himself shaking, feeling the clammy coldness of fever or fear. Because this was proof, right here staring at him, that all these nightmares and all this craziness had something real about it. It was exactly as real as he had feared.

He jumped up and got out of the office like the place was on fire. He ran downstairs and threw his arms around Brooke. He kissed her forehead, her lips, her neck.

"Hey! I'm cuttin' up a stew, here, fella."

"Never leave me, for the love of God, never leave me!"

He took her in his arms, and this time he kissed her hard, pushing her head back, pulling her body to his until she was collapsed against him, her breasts compressed against his chest, their genitals pressing through their clothes.

When he let her go, her eyes were soft with pleasure. "We're gonna have a long night, I hope."

"I'm gonna break you in half, you gorgeous thing." Then all of his fear surfaced, and he held onto her as he might to a life preserver in the wild ocean. "I love you with all my soul," he whispered, his voice hushed in his truth.

Probably she didn't quite understand what had inspired this, but she didn't need to, the intensity and the honesty were there. She stroked his head, and her hand against his advancing baldness felt as soft as the wings of a butterfly. He remembered the yellow porch lights of his boyhood, and the moths there, their fluttering the only sound in the quiet of a summer night.

Thunder rumbled, long and low. It was accompanied by a distant flicker of lightning-and he reacted with a surge of terror so great that he all but pissed himself. He raced into the living room, cutting off lights as he went. The sky was alive with flickering.

He went out onto the porch, looked up into roiling high canyons of madly flickering clouds. And then at his kids running around in the eerie light.

"Kids, come inside, please."

"Aw, Dad."

"It's lightning, it's dangerous."

They continued to play.

"What's going on?" Brooke asked.

"Look at the sky!"

"Yeah, so what?"

"You don't understand!"

"Honey, it's miles away, you can hardly even hear it. Let them play."

"No, please, for me. Because I'm so scared for them, Brooke. I am scared for my kids and you need to help me."

"I think Crutchfield needs to help you."

"Okay, look, if you would deign to come upstairs for just a few minutes, I can prove to you that something is wrong around here. Very wrong."

She followed him.

"Okay, now. I erased Chapter 7 of my book just now. And it reappeared. Then I erased the entire book. And it reappeared."

"You erased your book?"

"Absolutely. From the DOS prompt. Absolute erasure."

"Goddamn it, we need that money."

"We need-I don't know what we need, here, exactly, but I do know that these people on the other side, they're having a hell of a bad time, and if I can erase this and rewrite it, maybe things will get better for them, and maybe for us, too, because there is a nightmare over there, and it is about to invade us, too."

She sat down at his desk. "Oh, this is nonsense. Here's your book right here."

"Erase it."

"I will not!"

"Okay, then, watch this-" He moved in front of her-and she grabbed his wrist. Her grip was strong, shockingly so.

"You will not, Wiley Dale. You will finish this and turn it in or you will lose me and your children."

"Excuse me?"

"How much self-indulgent bull crap can one woman take? Answer me that? Because I am personally at the end of my tether with you. I can't handle this anymore. How dare you bring me up here and terrorize me playing games like this. We could lose everything! End up on the street! I'm sick of being the wife of the rich writer who is actually a poor bastard."

"Never tell anybody I'm broke."

"Then write a book that sells and you won't be. Put food on the table, God damn you!"

She got up and stalked out. "Dinner in ten minutes," she called over her shoulder.

"There's obviously food on the table," he muttered-but very softly. Then he went back to his desk, put the Corona aside, and opened the laptop. He began to type.

Outside, the electric sky flashed.

He worked steadily. Thunder began rolling, as the source of the lightning swept closer, rumbling across the gathering night. Outside, the kids, now wearing sheets, swooped in the dark.

It was as if death echoed in the thunder, for he knew that this same storm, across the divide between the worlds, brought with it the body thieves.

Downstairs, Brooke began singing, as she usually did after they'd fought, "Listen to the mockingbird sweetly singing, singing over her grave..."

She knew, that was why she was singing a death song like that. That was also why the kids were playing ghost, they knew in their secret hearts that their counterparts in the other universe had lost their souls.

"Supper's ready," Brooke yelled, "and you might think about coming down in a reasonable time for once, Wylie."

He thought of Martin in his prison cell. Looked, in his mind's eye, and saw him standing there, just standing in the steel and concrete chamber.

He knew that Martin could hear his friends, most of whom he had known all his life, in the next room-what was left of the town crowded into that small space-arguing about whether or not to kill him.

They didn't care about the ten million bucks. What was that, anyway, at this point? But they had this warning from the authorities, and they still trusted their authorities.

"You idiots," he yelled, "he knows something, that's why General Samson wants him dead. The man knows!"

"Shut up and get down here, your supper's getting cold!"

"Yessum!"

Texas Max, the local contrabandista, had gotten in some fine absinthe recently, which Wiley had bought, of course, and put in the back of his desk drawer after giving it a taste. Hideous stuff, but it did pack a pop. He got it out now, unscrewed the bottle, and chug-a-lugged.

Fuckaroo.

He went down to his dinner, and ate in silence.

"What's that smell, daddy?"

"What smell?"

"Ew, Daddy's been eating licorice."

Brooke eyed him, but said nothing. In hope of disguising the smell, he gobbled pearl onions. He'd left the damn absinthe on his desk, too. He needed to get that back out of sight. In the past, there had been serious fights over his various excursions into the world of drugs. After discovering that there was not a single official opium den left on earth, he'd set one up in the garage. He'd needed to see what opium was actually like for a book. When she'd found him and Matt out there stupefied, and Matt still in his cop getup, she'd hit the ceiling. And as far as his crack pipe was concerned, even he wasn't crazy enough to try the stuff, but he had the pipe. Again, research. Like the dominatrix. It had taken some real fast talking when that damn Amazon had burst in on them one night demanding cash for pictures. But it hadn't looked like him in the contraption, thank God.

Lila hadn't fazed Brooke. "If you want to get into leather, I'm your girl," she'd said. "But be careful, because once I start, I ain't stoppin'."

She was back in the kitchen starting in on his job, which was the washing up. Kelsey joined her, still in her ghost robe, and their voices as they worked together created in him a joy so gorgeous that he thought he might levitate. He loved this family of his so very, very much.

"Let me do that," he said, getting up. He took the stew pot from her and set about scouring it. She was not a Teflon user, she preferred iron and copper-anything, in his opinion, that increased the workload of the cleanup crew.

So be it, though, she was one master cook, she could turn twelve carrots and a few pounds of beef into manna, as she just had.

As he worked, he did not see the face that appeared at the window so briefly, the dark mirrors of eyes, the terrible eyes. None of them saw it.

EIGHT

DECEMBER 6
IN THE DEEP OF A MAN

GENERAL AL NORTH WOKE UP to find that his head had been forced back and something was being shoved down his throat. It was a struggle just to draw breath.

Instinct made him try to scream, but he gagged against what tasted sour and cold, and must be metal. His eyes focused on the only thing he could see, which was a white film of some sort. He looked at it, trying to understand what it might be. It undulated slightly, perhaps being moved by a draft. And then he realized that it was a white sheet-that his own bedsheet was drawn over his face.

Every muscle in his body twisted and tightened, until he thought they were going to knot and pop like rubber bands. His lungs bubbled, he began to feel air hunger, and then was lost in a hell of gagging, as the thing in his throat was twisted round and round.

It got dark. There was no warning, no flicker of lights. It simply got dark. Al couldn't tell if he'd been blinded or the lights had been turned out.

Then he saw a small red glow. He smelled tobacco smoke.

"Who are you?" he tried to ask around the thing in his throat. His voice was a pitiful, choked gabble.

Something brushed against his naked body, first on his face and neck and chest, then his shoulders, his arms, legs, genitals. A soft tickling, like the fingers of a mischievous woman. Then came the most exquisite sensation, an extraordinary, profound relief: the hard, pulsing thing was drawn out of his throat. He felt air roar in, heard gargling, then there came a sound, high, shattered-which stopped when he snapped his mouth closed, determined not to shriek like that, not a general in the United States Air Force.

In the thousand places on his body that the tickling was present, there began a stinging. This sensation deepened fast, and as it did, subtle fire seemed to race through his skin. He groaned, willing the raping fingers to quit, but they would not quit.

Voices murmured in an unknown language, a strangely soft tongue with a twanging music in it, full of lisps and peculiar whistling sounds mixed with ugly gutturals. It was complex with nuance, trembling with emotion, not human.

A face came into view, peering at him, waxy with makeup. The face was female, but the eyes-gold, oddly metallic-stared with a reptile's empty fury. Implacable. He thought it must be a mask. Yes, plastic. Or no, it was pliant, it was alive, but once again there was a reptilian effect-a shimmering smoothness that suggested that it was composed not of skin, but scales, very delicate ones. The eyes began snapping back and forth like the weak eyes of an albino. They looked like actual metal, like gold teeth might look. They were sickening.

As the figure moved in and out of view, black, curly hair bobbed prettily. It was a woman, he was sure, and she'd just had her hair done.

He did not want to die like this, in ignorant agony, like some lab animal being dissected alive on behalf of an experiment that it could never hope to understand.

He tried to speak, but nothing came out but puffs of air. Then he felt something against his head-spikes. They seemed to drive into his skull. The golden eyes fluttered and darted, the voices pattered on, rapid-fire. He felt, then, something entering his rectum, more as if it was crawling into him than being thrust in.

She said something-"Waluthota." Said it again, louder. Speaking to him.

"I can't-"

The thing was pushed back into his mouth, down his throat, he could feel it in his stomach, could feel it meeting the thing that had been sent up his colon, and now there was a sizzling sound and a taste like burnt bacon, and smoke came out of the sides of his mouth. It didn't hurt, but he thought they must be killing him and he struggled, thrusting himself up, trying to somehow expel either of the things that were doing their work inside him.

Laughter came, high, quick, unmistakable for what it was.

And then there was something-yes, plans. He saw plans. Now they came into clearer focus: pages and pages of reports, of e-mails, of orders. I'm downloading, he thought. He was seeing every report he'd read over the years, every plan he'd examined, every specification he'd approved.

He thought they were looking for something in his mind, but he could not follow the pattern of the search. He'd overseen a lot of construction in his

career, most of it innocuous, but not all, and they were soon in his memories of work done at the Cheyenne Mountain facility, and that was very secret.

Stifling heat was what woke him, a great wave of sweating misery drawing him out of what felt like death itself, a sleep so deep that it had no door.

What had just happened?

He crouched in the humming silence, feeling the pressure of the air-conditioning against his back. Then he stood up, went into the head, and stared at himself in the mirror. Hollow-eyed, haunted man.

His mouth tasted of something toasted and sour. Burnt vomit.

He opened the medicine cabinet and found some mouthwash, swilled it, and spit it-and watched in loathing as hundreds of writhing black threads went swarming down the drain. He spit again, a mass of them, ferociously alive, squirming and struggling, making a sound like spaghetti being poured from a pot.

He cried out-and then saw that the sink was clean and the mouthwash still in the cabinet. He was dreaming, that was what was going on here. He started to feel relief-but then noticed that his billet was thick with tobacco smoke, and he did not smoke, he loathed smoking.

He sat down on the side of his bed. The smoke seemed real, but maybe it wasn't, maybe he was still in the nightmare. Or maybe somebody nearby was smoking, and the odor was being carried into his room. It was possible, of course. In just the short time they'd been in occupation, it had become obvious that the place had been constructed out of cut corners.

The smell was fading and he was beginning to feel a little better. He tried to think back on what just happened, and see if there had been some pattern in what had been looked at in his mind.

When he tried to inventory the flashes of memory, though, he found something odd. They really were not very important, just the debris of his years as a military executive. Of course, some of them were secret, such as the floor plan of the Cheyenne Mountain facility, but they were easily obtainable without revealing to a senior officer like him that they were of interest.

What was odd was the curious feeling that it was something other than the information that was important. He looked down at his own hands-craggy now, once as soft as a surgeon's. He'd never flown in combat, but he'd read that great aces like Albert Ball and Bubi Hartmann had such hands.

Hands reveal people, he'd always thought that, and he wondered now why this thought was even passing through his mind. But as soon as he did ask himself the question, he knew.

He almost cried out, then he felt a gnarled agony in his gut and understood that his soul had not been stolen from him, but rather that it had been raped.

And he knew that his loves and his secrets had been turned inside out, that his most private places had been seen, that what he was had been violated.

It wasn't a nightmare. They'd been here, and they hadn't been looking at floor plans. They'd made a map of his naked soul. His lips twisted, he sucked breath, forced back the screams. This was violation at its deepest, its most profound, violation of the secrets of the sandbox and the playground and the blushing first love, of the sweaty experiments, the discovery of girls and the long descent of his wife, and his losses, so precious to him, mocked and tossed aside by snake-faced monsters.

He had been evaluated and measured by somebody so darkly evil that their most neutral touch was a corrosive horror.

He thought, It's a negative civilization, a whole world ancient in its days, that has become corruption.

And it had work for him to do.

NINE

DECEMBER 8
HUNTER'S NIGHT

WHEN MARTIN HEARD BELLS, HE leaped off the cot in horror, thinking that the disks had come again. It took another moment for him to become aware that sunlight was slanting in the barred window of the little cell. Despite everything, he had been asleep.

The bells were being rung over at Third Street Methodist, bells that Martin had been responsible for ringing just a few nights ago. And now here he was in this hideous situation, and with no idea why this had happened to him. Somebody in the government had done this, but who? And why ever would anybody consider an archaeologist dangerous?

He had thought all night about it, reviewing his published work, his experiences in the pyramid and in the White House, and he had reached the tentative conclusion that there must be something in his knowledge of the past that made him potentially dangerous. So dangerous that, even when their world was collapsing around their ears, they would still reach out for him.

It wouldn't be supposition. They would know.

His thought was that the lenses and the disks represented some sort of machine. He knew that a great human civilization had fallen in about 12,000 B.C. It had not been a technological civilization like ours, but it had possessed profound scientific knowledge, including-and especially-a science of the soul. It had also left a very precise prediction, that the present age would end on December 21, 2012. The Maya, possessing fragmentary knowledge from this far more ancient culture, had integrated this date into their system of calendars. In fact, they had started with that date and worked backward, that's how important they believed-or knew-that it was.

They had gotten the date, he felt sure, from a city that was now deep underwater off the coast of Cuba. This immense metropolis was probably the capital of what legend called Atlantis, and there was something quite strange about it. What was strange was that the British Navy had been guarding the site, and the Canadian archaeological group who had made the discovery ten

years ago had been prevented from returning.

It should have been a scandal, but the profession was just as happy that the discovery was being suppressed. Its revelation would overturn a hundred years of theory and wreck dozens of important careers.

Martin had lobbied various institutes to open research in the area. He'd even published a letter condemning the military action in the *Archaeological Record*. He'd demanded explanations.

They weren't trying to kill him because they thought he was to blame for the disaster. They were trying to kill him because he was one of the few people in the world who had any chance of understanding it.

The bell stopped with a suddenness that seemed almost to shudder the dew that clung to the three yellow leaves he could see through his bars. He saw cars go past, heading for the church. They were gathering there, then they would come for him.

He felt like a rat, exactly like a rat, except that a rat only wanted to escape, and he was tormented by thoughts of his family. All night, he'd suffered over Lindy and his poor little Winnie who had been limping, and his lost son.

The things that had appeared behind the wanderers after dark—he thought that they must be a sort of cleanup crew, destroying the stragglers. That mangled boy had been their work.

Was Trevor, also, a mangled boy?

Sounds came from the office, a voice raised, then dropping. Bobby's voice. Sounded angry. Then he blustered in. "Fifty-six to fifteen," he said, not looking at Martin.

"Hey," Martin said.

"I have no idea how to hang anybody."

"Use your pistol."

"Martin—" He had to stop. He swallowed, pulled himself together. "We gotta go now. We're gonna do it over by the bank. There's that tree there."

"Christ, you're not serious about this?"

"They're getting rope. I'm sorry. So damn sorry."

This was actually going to happen. "Bobby, I haven't done anything."

"I know it." He raised his eyes. "But what if you have?"

"Oh, for God's sake!"

"Martin, please don't make me—you know, drag you."

As Martin came out, Bobby took his cuffs off his belt.

"Bobby, come on."

"Martin, it's regs."

"Okay, if you put the cuffs on me, I am going to need to be dragged every inch of the way, and I am going to scream, goddamn it, because I have lost everything, and now even my life. My life, Bobby, and for nothing. Not a thing. Zip."

Bobby put a hand on Martin's shoulder. "Come on, let's deal with this."

They would not know how to hang anybody, and so would tie the rope around his neck and drag him up, where he would die in a slow fugue of suffocation.

Bobby had been a friend not to cuff him, and he noticed, also, that he wasn't exactly holding onto him as they crossed the square where, in happier days, the Lautner Super-Regional High School band had performed in the bandstand.

Those afternoons had been so damned good, with kids and dogs running around underfoot, and women from the churches selling brownies in the shady park. World without end, amen.

They approached a sullen, miserable little crowd. Nobody wanted this to happen, Martin could see that. They were looking away from him. "Bobby, you gotta shoot me, don't try this hanging thing, nobody knows what they're doing."

"Martin, I can't."

A car door slammed, and Rosie got out. She strode over to them. "Come on, Bobby, we're going home right now."

"Rosie, this is law, here," Bobbie said.

"It's murder!"

"I have a wanted notice. It's official. So this is law."

"Then something's wrong, because Martin's probably the one person in the world who can help 'em get this thing straightened out, so why do they want him dead? It doesn't make sense." She turned to the others. "Go on home now. Go on, all of you!"

Malcolm Freer and his wife and two boys went over to their old station wagon and got in. They drove off without a word.

"See, at least somebody around here has some sense." Then, in a lower voice, "Bobby, this is wrong, this is just dead wrong."

His hand dropped away from Martin's shoulder. Bill West stood waiting, wearing his butcher's apron, with a big coil of rope in his hands. Nobody

spoke.

Martin realized what Bobby had done. He knew that he had a few seconds, but only a few.

He had also understood something back in that cell. He was indeed unique in the world. Something he knew, or could potentially do, was so dangerous to the enemy that they wanted him dead. That's why this little corner of Kansas had been scraped the way it had, and why the leaflet had been dropped.

He was not a runner. He'd never even been in the army, or run a marathon or-well, he didn't even jog.

Bill and Mary West both jogged, he saw them all the time. Will Simpson was a black belt.

Nevertheless, Martin took his chance. He turned and ran wildly toward the far side of the square.

A shot, shockingly loud, whinged off into the trees.

Rosie's voice rang out. "Bobby, don't you dare!"

Bobby was too good with a pistol to have missed at this range, and Martin reached the corner of the bank still intact. Behind him, though, he heard engines start up and feet slam on pavement. They all had guns, too, and most of them were skilled hunters.

He sprinted across to Harper's Café where he'd eaten a thousand hamburgers, then went out the back and into the alley. He was completely at a loss. Then he saw a pickup sitting next to the wall, its bed full of sodden boxes of what he thought had once been vegetables, and he realized that there must be dozens of abandoned vehicles around town. He went up to the truck, but there were no keys. He heard an engine snarl nearby. A car was turning into the alley.

He jumped into the cab of the truck and crouched down. The car came slipping quietly along. In it were Bill West and his son Coleman, both with deer rifles.

How could Bill set a boy of thirteen to hunting a man? But they were so scared now, they weren't themselves, none of them, that's why they were willing to engage in this insanity. The savage was never far from the surface, not in anybody, and frankly, he needed a gun, too. And a damn car.

The best place to find a car with keys left in it would be around one of the churches. People arriving late would have been in a panic, and might well have left their keys, and might well have ended up wandering.

The nearest was First Christ, and that was where he would try to go. He didn't think he was capable of eluding them long enough to get farther away, over to Saint Pete's, for example.

He was just getting out of the truck when another vehicle appeared, nosing along even more quietly than the Wests' Lincoln. It was Mrs. Tarnauer's Prius. He thought that he might get her out of it, he even thought that he could snap the old woman's neck, but he stayed below the edge of the window as she passed. She wanted to kill him, too, did Jesse Tarnauer. She'd been a teacher, then a librarian.

As soon as she'd gone, he crossed the alley and went into the back of the Darling Dixie children's store, long since driven out of business by big chains. Nobody bought lacy dresses for their girls anymore, and boys wore T-shirts six sizes too big, not little gabardine suits with fake handkerchiefs in the breast pockets.

Carefully, he approached the display window. Across the street was the First Christ parking lot, which was indeed full of cars. There were a number parked askew, doors opened, as if the occupants had been very late and had jumped out and run in.

He heard a sound, then, the snarl of a really big engine. He listened. What could that be? Nobody would be chasing him on a tractor, surely.

He trotted across the street and got into one of the badly parked cars, a Buick Lucerne that smelled of cigarettes and the floral perfume that Louise C. Wright wore. Her daughter Pam worked as a manager at the Target. Louise was a lush, professional grade.

The car started normally, thank God. He drove out of the parking lot and headed north up Elko. He turned down the Makepeaces' driveway and went through their backyard, then across the Morgans' east field, with the car slipping and sliding in the dusty furrows. He broke through a barbed-wire fence and drove onto the same dirt road where he and Lindy had come to neck when they were kids.

As he went down the road, he floored the gas, then hit the brakes to make a turn onto 215. Anybody who saw him would assume that he was heading toward the interstate. Two-fifteen ran straight for about five miles to a long bend, and he forced the car to give all it had. It accelerated to ninety, then a hundred, then 106.

As soon as he reached the bend and was out of sight of anybody behind him, he braked, then took Farm Road 2141, which headed toward the Smokes

and home.

Yet again, he made a turn, this time onto Six Mile Road. He followed it up into the Western Division where Louise lived. Her little place was familiar enough to him. She tutored French, of all the improbable sidelines, and Trevor had been among her pupils. Like his father, he was not good at languages.

And suddenly Martin was screaming and hammering the steering wheel and kicking like a lion in a net. He was stunned, he had no idea that this rage was in him. For a moment, it seemed as if it was happening to somebody else, but when the car began swerving across the highway, it didn't, and he had to fight to regain control.

He caught his breath, choked back another roar, and thought, There are deep things inside us that we aren't even aware of. Deep, deep things. He was extremely sad, but it was a dullness in the pit of his stomach, not the savagery that had come boiling up just now. He thought, Not only can I kill, I want to kill.

His people had turned against him so easily, just on the strength of a piece of paper dropped either by the enemy himself or by traitors in his employ.

Unfortunately, he was fairly sure that the enemy was overreacting. He had no idea what he might do to defeat them. In fact, the modern world was about as prepared to deal with all this as the Aztecs and Incas had been prepared to deal with the Spaniards. It had taken the Aztecs weeks just to figure out that the horses and the men riding them were two different creatures, and they had not understood how guns worked at all. Of course they had considered their adversaries gods. They had observed them working magic.

The Aztec was overwhelmed by the gun, we by the light. We did not understand what we were seeing, either, any more than the Aztecs had understood the actual way the horse and man worked together.

The Aztec-also using a version of the Mayan calendar-had first encountered the Spaniards on the day that their revered god Quetzalcoatl had been prophesied to return. So they were even more certain that they were gods. They fit right in to the Aztecs' cosmology.

Somebody, working thousands of years in advance, had known when that would happen. But who? How?

Did the answer lie a mile beneath the sea off the coast of Cuba, and had the Brits been obstructing exploration to make sure it was not found?

This, he thought, was true. Had to be. Coupled with the attempt to take him out, there was now no question in his mind but that the enemy had subverted world government, and had done so years ago.

What had been that general's name? Samson. General Samson, Chairman of the Joint Chiefs of Staff. That man had been evil.

But there was another, deeper truth, wasn't there? It was that the Spaniards were far more vulnerable than they had seemed. They hadn't defeated anybody. The Aztecs had been defeated not by the Spaniard's strength, but by their own ignorance. In fact, Spanish technology had not been that far in advance of Aztec technology, and in many ways behind that of the Incas. Perhaps far behind. Perhaps we were still behind.

He pulled into Louise's driveway and was careful to park the car in its usual place. Then he got out and went around the house and back into the stand of trees behind it. He needed to get out of sight and stay out of sight, but this was Kansas and these hills were low, their woods were sparse, and they were full of meadows and grassy glades. If anybody realized he'd come this way, they would be likely at some point to spot him.

He moved through the trees and up toward the ridge line that would lead him, after about half a mile, to the old road where he used to bring his archaeology students to search for remains of the stagecoach that had crashed there in the nineteenth century.

He'd also searched the area for fossils and arrowheads, which he'd found by the dozens, even some Folsom points ten thousand years old. He'd searched these hills with Trevor, teaching him the skills that he knew, of finding things that normally would not be found.

He clambered up the ridge, and from here had a long view across to town. He could pick out the white steeples of the churches, the roof of the bank, the roofs of houses, and the top of the Burnside Building above the tree line. He knew this spot well, he'd been coming to it since he was a boy and out hiking alone, come and wondered here about time and chance, and what life might bring.

He thought, Whoever is here is stripping away the people but leaving everything else intact. What the enemy was going to have was an empty but intact world, and millions upon millions of slaves.

Thus he knew that the enemy might be more technologically advanced than we were, but he had a more primitive culture. No modern human society used slaves, or even needed them.

He wondered what manner of creature might come to this same spot in the future, and contemplate those steeples.

Then, incredibly, he heard a familiar but unexpected sound. Somewhere nearby, a helicopter was moving slowly from east to west, paralleling the ridgeline but out of sight, therefore below it in the draw where the Saunders River flowed.

Who would have a helicopter? Certainly not Lautner County. Could it be the state police? That had been a state cop who'd showed up last night, completely oblivious to the danger, so maybe they were still functioning.

The sound faded. He waited a moment more, then moved along the ridge. If Trevor had survived, Martin thought there was a good possibility that he would have gone home. No question. If he had been able to make it, he'd be there right now waiting for the family to reassemble.

The helicopter came roaring up as if out of the ground, not five hundred feet away. He dove off the ridge, down into the tumble of rocks that bordered the path. He hit heavily, felt pain clutch his left hip and leg.

The thing thundered overhead. Sweat broke out all over him, and his muscles literally twisted against themselves, so strong was the urge to run. He told himself that fear, above all things, kills. Fear makes you a fool. And so he did not do what he so desperately wanted to do, which was to roll another few feet down and run crouching along to see if he might find one of the shallow caves that honeycombed the ridge.

No, they would have motion sensors. In among these sun-warmed rocks, infrared spotting devices would not work. So he stayed still, and the helicopter went slowly off along the ridge.

It was black, and the windows were black. He'd hardly dared look, but what he had seen was nothing but reflective glass.

For twenty minutes, he waited. Finally, he could bear it no longer. The chopper had been gone for a long time, and he was so eager to find Trevor that he almost couldn't bear it.

His worry now was dogs. If they were indeed looking for him, they might have understood that he'd parked Louise's car in her drive and come on foot. If so, dogs would follow soon.

Warily, he got to his feet. His thigh ached, but he hadn't broken anything, thank God.

He knew that he would not be able to stay at his house. He thought he might not even be able to approach it. But he had to know if Trevor was

there, he could not leave the area without knowing that.

As he trotted steadily on, his thirst increased fast, and his fatigue exploded into a crippling weight. He thought that his only chance was speed. There was too much power arrayed against him. The people of Harrow were more than enough to defeat him, but there was yet more strength here, and he thought that it wasn't the state police or the U.S. military, and he thought that they might have a lot more dangerous things than highly sophisticated helicopters.

Then his house was there, his and Lindy's beautiful home which they'd built when he got tenure. He was proud of it, the lovely new house, Craftsman style, that blended so well with the older houses in the area.

The windows were dark, but the house was not silent. No, there were vehicles there—two pickups. He didn't recognize them.

So people were waiting for him. Well, he could wait, too. He'd wait until the locals left. He'd wait until the military left. And they would leave. In time, they would all leave.

As he moved closer to the house, he heard the sound of breaking glass. Then he saw a window shatter and his reading chair come through and smash into one of Lindy's flower beds.

They were looting, of course. Oh, God, please don't hurt Trevor if he's in there. He stared across at the storm cellar. Could Trevor have gone down there? It was certainly possible. But there was fifty feet of yard between here and there, and he didn't dare cross. He thought that the people in that house would shoot him on sight, no question.

Then the helicopter came back. It hovered over the house. The people inside did not appear. It came lower, and when it did, he thought for a moment that it was not a helicopter at all, that it had another configuration entirely. It also made a strange sound, he noticed, hissing like escaping gas rather than chuffing like helicopters usually do.

He watched the helicopter circle the house, then fly off fast in the direction of Harrow.

They hadn't even landed. But surely they weren't in radio contact with the people in the house, not with townspeople. So what were they really doing?

The destruction inside his house went on and on. At least he was fairly sure they wouldn't set it on fire. It was the dry season, and a fire would spread up and down the ridge. The volunteer fire department would be in a shambles, if it even still existed, so no, they wouldn't do that.

He saw books coming out of Winnie's bedroom window, her old treasures, The Winter Noisy Book and Cat in the Hat and Jennifer and Josephine. He heard clanging as Trevor's Yamaha keyboard was smashed.

The day wore on, the sun crossed the sky, and still Martin lingered, unable to leave the sacking of his home, in despair, in sorrow, and wondering-hoping-all the while that Trevor was hiding in the crawl space or the attic or the storm cellar.

Finally, at a quarter past three, the two trucks departed.

He waited. He scanned the sky methodically, all of it he could see. He was practiced at spotting tiny objects in sand, and the sky was not so different from a featureless wasteland in Tunisia or Libya.

He was just starting toward the house when he heard, from very far off, a sort of sighing sound. Immediately, he faded back into the stand of trees.

High in the afternoon sky, there was a black dot.

They were still up there.

He waited, listening to the faint sound of the thing, never moving from behind the tree where he hid.

By the time the sound had gone, the sun was setting. He stepped out to the edge of the yard he'd mowed a thousand times.

Maybe they had left somebody hiding in the house. He hadn't really seen them, after all, just the trucks.

He moved across the grass, aware of its whisper beneath his feet. Dear God, but an abandoned home is a lonely place.

Martin searched the storm cellar. He pulled open the door and peered down inside. Then he climbed in. Things appeared unchanged-there was the lantern, there were the candles in their box, the two gallons of water, the box of PowerBars, all untouched.

Martin was surprised at how much sadness weighed on him to know that his son had not been here.

He crossed the yard to the front porch. The door stood open. He entered, careful to look first for wires across the entryway, and not to move the door at all.

He looked, amazed at what confronted him. "Trevor," he whispered. Then shouted, "Trevor, it's Dad! Are you here? Trevor!"

He bent down to the ruins of the dining room table. How could this be, wood destroyed like this? He ran his hand over the lumpy, twisted mess.

The wood had been melted, there was no other explanation.

This hadn't been done by townspeople, or any people. People couldn't do this, we couldn't melt wood. And look at the books, all turned to powder, and the knives in the knife rack, drooping like melted candles.

"Trevor!" He opened the crawl space, looked inside. "Trevor?"

No sign of his boy.

He went upstairs and opened the hatch to the attic. "Trevor, are you up here? It's Dad." He pulled down the steps and went up. It was a complicated attic, and he was careful to look in every nook and cranny. A twelve-year-old could make himself very small if he wanted to, and Trev was expert at hiding.

When he understood for sure that he wasn't there, Martin felt himself just run out of steam. He sat down on the floor. He was suffering now more deeply than he would have thought a human being could suffer. This was what they called anguish, this searing, agonized sense of helplessness. Every time he thought of Lindy walking and walking like that, and his precious little Winnie toddling and limping, his insides twisted against themselves. And Trevor-the sense of him being somewhere in the wind, scared and alone, made him feel more helpless than he'd felt in the jail.

He suppressed an urge to go up on the roof and scream his name, even though that might actually work.

Trevor knew these woods well. He could be hiding back in there somewhere close enough to hear.

Martin headed downstairs, and as he passed their little office, he stopped. He stared in confusion. What was this? Increasingly confused and amazed, he went inside. His papers hadn't been taken, they'd been methodically shredded, and not simply ripped up, but turned into masses of what looked like thread. Books turned to dust were strange enough, but this was just bizarre.

His laptop lay on his desk. He touched it-and snatched his hand back when the edge of the screen collapsed under his fingers. He touched the keyboard, and the whole laptop simply disintegrated. He was left with more dust.

He understood that he was seeing firsthand the work of the enemy. Whoever had been in those two pickups had not been human.

He raced downstairs, threw open the gun closet-but Lindy had taken their only gun, her little shotgun. It was still at Third Street Methodist.

He cursed bitterly, and as he did so heard something. At first, it sounded like that strange chuckling he'd heard when he was among the followers, and

it came from the woods behind the house. But then that sound was covered by another, the rumble of a huge engine, the same sound he'd heard briefly in the streets of the town.

He ran into the hall and down to his and Lindy's bedroom where he could look out into the driveway.

As he watched, three huge, black Humvees came trundling up to the house, and black-clad soldiers jumped out, their faces covered by dark plastic. It looked like a Ranger team right out of some military movie, but he knew that these were not Rangers.

He was face to face with his enemy.

TEN

DECEMBER 11
INNOCENT

WILEY CAME HOME TO A very subdued household. "What gives?" he asked Kelsey as he carried his new laptop into the kitchen.

She called out, "Mommy, he's back."

Nick appeared, his eyes scared. "Why did you chop up your computer, Dad?" There were tears in his voice.

"It had to die. Its life was over."

"Children, go upstairs."

As they hurried off, Kelsey said, "Daddy is insane."

Brooke lifted a box onto the kitchen table. In it were the remains of his old laptop.

"What's the big deal?" he asked.

"The big deal is, you went after this thing with a hatchet, and I want an explanation for that behavior, because it's too far from the norm and I'm considering getting my children out of here. That is the big deal."

He tried to sound reasonable. He even smiled. "The hard disk was fried. Nothing would erase."

"So you went after it with a hatchet?"

"I did that to make sure the files could never be recovered. You can't put a computer loaded with files you can't erase in the landfill. Next thing you know, your life is gonna be on the Internet. So, my love, I have acted rationally, and I do not think I've given you reason to take my kids away from me."

She shook her head. "Oh, Wiley, it's so hard. It is so hard, honey, and I'm getting tired in my soul."

"Now, hey, this is us! Me and my girl!"

"Goddamnit, go upstairs and set up your computer!"

He went to her instead, and took her in his arms. She felt pliant and indifferent, but did not try to pull away. "Please, Brooke, bear me. You're all I have. Bear me."

She shuddered all over, then buried her face in his shoulder and sobbed bitterly.

"Don't start yelling," he whispered, "remember the kids...remember the kids."

And slowly, there in his arms, she composed herself. She drew back from him. They met each other's eyes. They kissed.

From halfway up the back stairs came Kelsey's excited whisper, "We have a kiss!"

So the troubled ship of the Dale family sailed on, tossed on a dark ocean, lost to navigation, but still afloat.

He'd bought a top-of-the-line laptop, fast processor, huge memory, massive hard disk, every bell and whistle known to man.

"It's nice," Brooke said as he put it on his desk and plugged it in.

"It was actually somewhat inexpensive. Ish. But it has room to grow."

She sat down at the desk as he crawled around hooking it up to their home network. He had an Ethernet. Out here, wireless was unstable because of all the electrical storms.

"What's this?"

"What?" He came up from behind the desk.

"2012," she said.

"Died under the hatchet, I'm afraid."

She stood up, gestured. He looked at the screen and saw words there, neatly typed: 2012, The War for Souls. It was his title page.

He reached out, ran his fingers down the screen.

"But you-you-oh, Wiley, this is weird, this is scaring me!"

"It's scaring you? I went at that hard disk with a hatchet, and this computer has never been near this house before. It's brand new, look at it, I just took it out of the box."

"Now listen, because I am going to believe you. I am about to believe you. And if you are lying, and you did this to impress me or make me crazy or for whatever convoluted Wylie reason, then we are over, no matter how much we love each other, because I can't-I can't-I don't like things that are weird like this, Wylie, I do not handle this stuff well. As you know."

"Brooke, on my honor, on my soul, on all that I hold sacred, I brought this machine in here clean and clear and empty. I made no effort whatsoever to put those words on it, and I really and literally cannot imagine how they got there."

She nodded. Then she kissed his cheek. "Wylie, I choose to believe you. Because I saw you hack that computer up and the hard disk is still in it, and you are telling me-assuring me-that you didn't first put 2012 on an external drive-"

"Absolutely not. What external drive? I don't even own one."

"I know that. So I think we have to now escalate this whole thing. This is genuinely strange, it isn't just Wylie weirdness. And my instinct is this. It is to protect my kids. Very, very carefully."

"I can't argue with that."

She sighed. "I want to show you something that I wasn't planning to let you see. But I think you need to see it and I'm sorry I hid it from you."

She passed him the second section of the Lautner County Recorder, and there, on the first local news page was a fantastic and disturbing story. A man who lived about thirty miles south of there had disappeared while riding a four-wheeler near Coombes Lake. "Local residents who wish to remain anonymous claim that he was seen ascending in a shaft of extremely bright light. A search thus far has turned up no sign of William Nunnally. Dogs have been unable to gain a scent except from the abandoned vehicle itself."

He read it. Read it a second time. Then he grabbed his phone. "I gotta make a call."

Matt was off his cell, so he called him on the official line.

"Police emergency."

"It's me."

"Not on this damn line!"

"Then turn on your cell, damnit!"

"I don't want to turn on my cell, you'll call me and call me and bother me with trivia while I'm trying to work."

"This isn't trivia."

"I'm out there gettin' that drunken shit Joe Wright to stop going after his sainted wife with a cheese grater of all the damn things, and you call. Happens every time. Or I'm trying to eat. Then, for certain, it's gonna be you."

"Speech over?"

"I'm hanging up."

"I have a police report."

"If this is about a skunk, possum, or coon, please call the FBI."

"It's about a possible UFO attack down in Melrose County."

"I'm hanging up."

"Call down there and then call me back, can you do that?"

" 'Course not. It's not police business."

"A man has disappeared. That's police business."

"The fact that this tragedy is of interest to you is what isn't police business. Now, I've gotta go, seriously. I've got a call out on Mr. Leonard's god-for-damned-big fuckin' snake got away again."

"Don't hang up, damnit, do this! Hello? Shit!" He slammed down the phone. "He has to go catch a snake."

"That thing. Who in the world would want a fifteen-foot python for a pet?"

"I thought about a python at one point."

"And then I had children."

The phone rang. Brooke picked up. She listened, handed it to Wiley. "Look, the truth is I got an assignment down there, and I'm leaving in a few minutes and I guess you can tag."

"You're kidding."

"No, and I'm not waiting, either. They want me to look over the dogs, the dogs are acting up and I've run a fair number of 'em. So I'll pick you up in fifteen."

"What about the snake?"

"Screw the snake. A man's life is at stake here. I'll pick you up in fifteen."

He hung up the phone. Brooke looked at him. "And?"

"I'm going down there with Matt."

For a moment, she returned to the paper. Then she looked up. "You know that I love you very much," she said. "Never forget that."

He reached out to her and took her hand. "I've thought-lately, you know...it's been hard. I know I've been tough to live with."

"You have yet another book that's making you crazy and I'm a writer's wife. My skill is to keep you from going around the bend until it's finished and we've got our money. Then you can go around the bend until I miss my guy, then you have to come back."

"Do I come back?"

She squeezed his hand. "You come back."

He looked up, looked at Brooke. "Where are the kids?"

"The kids are in their rooms cowering."

"Oh, yeah."

She put her hand on his forehead. "You're not going anywhere, you're on fire."

Matt honked.

"I'll take a couple of aspirin, I'll be fine."

"You've been up working almost continuously for days, and a couple of aspirin aren't gonna do it."

Matt came in. "Hey, Wiley, I haven't got all day!"

Brooke went between them. "He's sick as a dog, he's not coming."

"Jeez, musta come on all of a sudden."

"He's exhausted, he won't sleep!" She took him under the arm. "You're taking a pill and going to bed, and that's final."

"Sorry, Wiley, feel better."

He shook her off.

"Wiley, you can't do this!"

"I have to! HAVE TO!"

"You don't belong getting mixed up in this."

He gestured toward the computer. "I need to look into it. It could be related."

"YOU LEAVE IT THE FUCK ALONE!"

Silence. The faint sound of plaster falling from the ceiling. And a decision of stunning intensity. "I have to do this," he said quietly, "or it will be my soul."

She wept, shook away the tears, and nodded. "Good-bye," she said in a whisper.

"Brooke-"

She shook her head, stepped back, then suddenly turned to the sink and started in on the dishes.

As they rolled out, he heard them clanking, and saw her in the window and thought to himself that something, indeed, was being lost between them. It was like a quicksand pit had appeared in the middle of the marriage. Everything you did to save yourself made you sink a little deeper.

He rode in silence beside Matt, who also said nothing. They'd been friends a long time, and there are times when friends just don't talk.

They drove through Harrow, then into the cropland to the south. "Storm's comin'," Wiley said, "look at that mutha."

The western sky was choked with great towers of clouds, and Wiley knew that, if there was a storm in this universe, then in the other universe there

would be one ten times worse, and he felt for them, he worried about the wanderers out there in the rain and the wind, he wondered about Martin on his desperate quest, a brilliant archaeologist who sensed that he could save his dying world if only he could connect a few more dots, who now wanted only to reconnect with his son, and somehow save them both.

The worst of it was that he couldn't help them. He could know of their suffering, but could not lift a finger.

He could not warn Al North about Samson. He could not help Martin find Trevor. He could not give a single wanderer back his soul.

So why in the name of all that was holy was this happening to him?

They drove in silence. Matt followed the GPS onto more and more isolated back roads.

"Where is this place?"

"Middle of nowhere. I've got them figured for trailer trash."

"Trailer people."

"Still trash in my business, buddy, till I've actually pulled the knives outta the gizzards. Then they're perps and vics."

Wiley heard the voice, but only vaguely. He wasn't interested in banter anymore. He was beyond banter. "The guy went up in a column of light?"

"And the dogs can't catch a scent off anywhere except the seat of the four-by-four."

"Which means it did happen."

"Which means the dogs need checking out, which is what I am doing."

They turned into a driveway.

"Here we are," Matt said.

They pulled up in front of, not a trailer, but an exquisite, ultramodern house, an architectural gem. There were half a dozen police vehicles of various kinds parked in the yard, a couple with their light bars still flashing. Other than the clicking of their switches, the silence was profound.

"Nice place," Wiley said.

"I'll say."

As they came to a stop, a woman appeared. She was as stark as her ultramodern home, reminding Wiley of one Andrew Wyeth's immeasurably sad paintings of the model Helga Testorf.

Closer, Wiley saw that her face was a tear-stained shambles. A teenage boy appeared in the doorway behind her. He wore baggy jeans and a black T-shirt.

She came up to Wiley. She stood silently, so close to him that he could smell sweat and the sourness of her breath. She leaned into his chest and clutched him.

"I'm sorry for you," Wiley said, "I'm so sorry for you."

She looked into his eyes. "I know you."

Holy Christ, this was not what he needed. "I'm from Harrow. You've probably seen me around."

"No, from your book. You said they were good. In your book, you said they were."

"I said they were very strange."

"They are not good. No, Mr. Dale, they are not good. He had all your books, you know. He was trying to come into contact. He went up the ridge to meet them. And this is what happened."

"Mrs. Nunnally, we have to understand that we have very little idea about what's going on with the aliens-even if they are aliens. That's why my book doesn't give answers, it asks questions. Because we do not understand."

She put her hands on his shoulders. Her eyes were like fire burning into his soul. "There was light," she whispered. "Two nights ago, the whole house was surrounded by it."

Oh, Jesus. "And this light," he asked, "what did it do?"

"Lit up everything. Then suddenly it's gone and there's this clap of thunder but no clouds, see. When it went away he says, 'It's them,' and the next afternoon he went up the ridge, and it came again, and he went up in it."

This wasn't the killing light, then, it was something else. But what? "And that's what the farmers saw?"

She nodded. "You're in touch with the aliens, it says so on your Web site. I want you to call them!"

Nick and his friends had created a Wylie Dale website. It was very slick, but he hadn't seen anything on it about him still being in touch with aliens, and there had been many books since the one about the close encounter.

The boy came out. "Please, Mr. Dale, tell them to bring my dad back home." He was perhaps seventeen, a gangling kid with anguish in his face. He looked like he was in physical pain-as, Wiley felt sure, he was.

Wiley realized that he'd been a damned fool to come here.

"Call them," the boy hissed.

"I don't think I can."

"Don't say that!"

At that moment, a state policeman appeared around the side of the house. He came up, his face grim. "Mrs. Nunnally-

"No! NO!"

"Ma'am-

"Oh, God...God..." She twisted as if at the end of a rope, and then turned and clutched her boy.

They came out then, from a wetland a thousand feet behind the house. Wiley watched the play of sunlight along the silver bars of the gurney, and the blackness of the body bag in the sun.

"Mrs. Nunnally, we need to get an identification."

She heaved with grief, but made no sound, which made it more awful, somehow, this silent, gagging, shuddering woe.

A man in soaking jeans unzipped the bag, and Wiley then saw something so unexpected that he cried out. He saw the head of a man, but with black sockets where the eyes should be, and teeth grinning from a lipless mouth. "Can you recognize him?" one of the troopers asked.

"Dad," the boy shouted. "What happened to my dad?"

"It's rapid deterioration...because of the wetland he was in."

"Don't be ridiculous," Mrs. Nunnally shrieked, "it's a mute, Mr. Dale, a mute! They mutilated my husband just like they do the cattle!"

Wiley was well aware of the mysterious cattle mutilations that had been going on for fifty years. Cattle would be found by farmers and ranchers with their lips, eyes, tongues, and genitals removed and their rectums cored out. Often, they looked as if they'd been dropped from above, and huge lights were seen in the fields the night before they were found. Between 1970 and 2010, over fifty thousand cases had been reported, all blown off by the government as coyote attacks, which was clearly a lie, and now here was this human being, killed in exactly the same way.

A hideous thought came tickling into his mind, I have a beautiful home in an isolated area. What if they were looking for me?

One of the state cops said, "Ma'am, you need to say if this is Mr. Nunnally."

She nodded. Nodded harder. "I think so. I think so. Ohh God, God-" She clutched at Wiley. "Help me! Help me!" It was horrible to be near her, he could smell her sour sweat. He feared that he would throw up on her.

The boy, his face streaming with tears, said, "What if they come back, what happens to us then, Mr. Dale?"

What, indeed?

He could not be silent, but he had no idea what to say or do. He remembered the creatures he had seen, and the figure Al North had seen in his room, that delicate, hard face, and he knew what this was, what it must be: they were trying to cross the barrier into a universe that had not accepted them as real, and this was a side-effect of their struggle.

The boy leaped at him and suddenly he was on the ground being hammered by powerful fists. He tried to protect himself, but the kid got through his flailing, incompetent arms.

Matt and one of the state cops pulled him off.

"My dad wanted to meet them! Well, he sure did, he sure did, you bastard. Liar! Liar! BLOODY LIAR!"

"Get him out of here," one of the cops said to Matt. "For God's sake, get that freak out of here!"

"I thought it would help. He knows about this stuff."

"Come on, Matt, please," the state cop said. Then he confronted Wiley. "There's no law against the kind of crap you dish out, Mister, but I have to tell you, there has to be a special place in hell for scum like you, lying scum! This man died we don't know how, but it wasn't little green men, God damn you!"

"No," Wylie said, and the quietness in his voice drew the attention of all of them. "I am not a liar. And the real shame is, maybe if I had understood this better, or taken it all more seriously, this man would not have died."

He went to the car, got in, and closed his door. For good measure, he locked it.

Matt drove them away. Wiley looked back at the fabulous house in the middle of nowhere.

"I saw somebody," Matt said, "at your house."

"You're kidding."

"Last night, buddy."

"I didn't see anybody."

"You were downstairs."

"But-where were you?"

"On the ridge. I was goin' out to see if you were fuckin' with the cigars, and I just happened to see this guy come across your yard. Came right up to the house, looked in the window at you, then went around the back, and a few seconds later your computer comes on."

"When was this?" Wylie asked.

"About eight."

"Eight! The whole family was up!"

"Nobody did a thing. He was quiet, man, and fast."

"Was it an alien? Could you tell?"

"It was a person."

He turned onto the highway. The storm was closer now. He punched a couple of buttons on his police radio, and a mechanical voice began to deliver National Weather Service warnings. High winds in Hale Center, roofs off houses in Holcomb, tornado sighted in Midwood County, fast moving, dangerous storm.

He increased speed.

"You think we're gonna take a hit, Wylie?"

"That's a big mutha out there, you got that right."

The storm towered, its base black and flashing with lightning. "Matt, I'm so scared it's beyond scared."

"I hear ya."

"You say he was a person? Like us kinda person?"

"He looked like a kid. Nick's age, twelve, thirteen."

"So it was a townie? Or someone looking for Nick? Some friend of his, maybe."

"No. This kid, he steps back, he looks at the house, he peers in windows."

None of the town kids would do that. There were only maybe a hundred twelve-year-olds in the whole community, and Wylie knew them all. "No kid from around here, then," he said.

"Absolutely not. He looked-I don't know, Wylie, but the word is confused. Looking and looking at that house. Like he was trying to figure something out and couldn't."

"He couldn't've been trying to get in. The place is unlocked until late. He could've just walked in."

"He went in and went into your office and came out. Then he went down toward the Saunders. So I followed him. I'm right behind him. I thought he was some kid from town, was my impression. But when he walks up to the river bank, he did not cross the stream. He disappeared."

"Disappeared?"

"Swear to God."

"Why didn't you come into the house?"

"You guys were doin' a screamer."

"But he disappeared? I mean, in what sense?"

"He took three or four steps into those little rapids. The shallow place where it's easy to cross. Right in the middle of it, he just simply was gone. Gone, Wylie."

Dear heaven, it had been Trevor. He'd crossed the boundary between the worlds and he probably didn't realize it. He'd been going home, but come here instead.

For a long time, Wylie had entertained the notion that the weir-cats people saw around here-the black panthers you saw back in the woods every once in a while-were from a parallel universe. They were animals that had evolved an ability to pass between the worlds as a defense mechanism.

There'd been a book called *The Hunt for the Skinwalker*, written about a ranch in Utah where scientists had documented the movement of such animals-not between this earth and Martin's world, but yet another parallel universe, one in which creatures from our ice age still roamed freely.

Wylie's mind wanted to race, but he didn't know where it should go.

Silence fell between them. Wylie's thoughts turned to the poor mutilated guy. What was that about? Something they were doing in their effort to enter this world. No question, but what was it?

They'd cut the guy up-therefore, had taken parts of him.

He shuddered. He had a feeling, if he waited, he was going to find all this out, and it wasn't going to be good, not at all.

The storm, when it came, brought long, heavy gusts of wind, and the police radio began to burp trailer calls, as they were known. As everybody in Tornado Alley knows, trailers actually attract twisters, which was why the Kan-Sas Trailer Park had been the only thing destroyed by that tornado back in September.

"I know something's wrong," Matt said at last. "I just don't want it to be this-oh, crap, Wiley, this weirdness that seems to follow you everywhere you go. I never told you this, but when we were kids-eleven, twelve, about-I was out on my bike late. I used to like to ride past Sue Wolff's house and hope I'd see her on the porch and we'd get to talking or I'd get up the courage to ring the bell or whatever, and I turned onto Winkler, and there is this goddamn huge light over your house."

"Jesus."

"I thought the place was on fire. But then I felt the thing, Wiley. I felt it

looking back at me. And, you know, it did not want me there."

"When was this?"

"Summer of, uh, eighty-eight, I guess."

"No, what time?"

"Oh, late. Coulda been after midnight, even. 'Cause I couldn't risk her actually seeing me, of course. Not fat me, mooning after a cheerleader and all."

They arrived at Wylie's place. As he got out of the car, he saw that Matt had tears on his face. He said nothing about them, only thanked him for the ride and watched him leave.

Storm or no storm, he clambered down to the Saunders, moving among the heaving trees.

The little stream flowed normally. Some rain along its path somewhere had sped it up a bit, but that was the only thing in the slightest out of the ordinary.

"Hi, Dad."

"Nick!"

"I saw you coming down here."

"Yeah, I-"

"The kid is from the other world."

He was absolutely so stunned that he couldn't talk.

"I've read your book, Dad, and I know it's real."

Nick was a private sort of a kid. Smart, as his grades revealed, but not by nature very social. Wylie and he had a good relationship, though.

"You've been reading my book?"

"I read all your stuff."

"And this kid? You've seen him?"

"Come over here, Dad."

Nick led him a short distance away. They were right before the little rapids. Thunder rolled and wind gusted. Leaves raced past, yellow and red. It was quite amazingly beautiful, Wylie thought, but also completely normal.

"Watch," Nick said. He picked up a river stone and sailed it out over the water, as if he was trying to skip it but coming in too high.

In its flight, the stone did a very strange thing. It sort of jumped. Not a lot, but it jumped in the air.

Nick tossed another one, and this time his aim must have been better, because the stone completely disappeared. Never hit the water. Was gone.

"My God, Son, when did you discover this?"

"He did it this afternoon."

"He was here?"

"In your office, Dad. Dad, he's all dirty and he looks really scared, and I think he's Trevor. He started reading your book."

The world heaved, and it wasn't the storm. "Oh, my God," Wylie said.

He turned and ran back to the house, Nick following.

"What's going on," Brooke yelled as they burst in, "don't you two know it's raining?"

"They can use it!" Wylie shouted as he dashed upstairs. "They can use the book!"

"Who? Nick, what's going on?"

Nick hesitated on the stairs. "The closer we get to the twenty-first, the wider the gateways are opening, and there's one down on the Saunders, right at the rapids. It's between our world and Martin's, and they're using it. We think his son is. We think it's Trevor. He tried to come home last night, and came through the gateway instead."

Wylie said, "If they can read the book, honey, think how it can help them! We can let them know that Samson's evil-"

"Dad-"

"-we can help them find the wanderers, maybe they can turn this thing around!"

"Dad, I think Trevor came here by accident. That's why he was so confused and afraid. He thought he was going home. He couldn't understand why all the furniture had changed, why there were strange people in the house, any of it. Then he stumbled on the book."

"But he'll be back. Of course."

"We can't know that, Dad."

Wylie went into the office. Sat before the laptop. "There's something larger at work, here. Whatever created that gateway. Whatever prevented me from destroying this incredibly precious book."

"Um, Dad, that would be me and mom."

"Excuse me?"

Nick nodded. "She has a USB drive she keeps in her pocket. She saves it on that." He paused for a moment. "Don't be mad at me, but I wrote the code that prevented you from erasing it."

"You can program? I didn't know that."

"It's a few lines of code."

"We need to find Trevor. I need to write about him. Tell him where his dad is, give them a plan of action."

"It's better not to talk about this." Brooke stood in the doorway. She had the drive in her hand.

"But you-we-"

She put her finger to her lips. "Don't talk about it, either of you. Just let it lie."

Kelsey came in. She came to her daddy, crawled into his lap.

Silence fell among them. Wylie understood that all was not as it seemed. In fact, nothing was as it seemed. "What's going on?"

"Wylie..."

Kelsey stuck her face in his. She held him by the ears. "That's what we don't ever, never talk about, Daddy." She shook her head. "Ever, never." Then she gave him a wet kiss and ran off laughing down the hall.

Nick and Brooke gazed steadily at him. He thought again of poor Nunnally, and how very close to this house that attack had been.

The reptilians had reached Nunnally, and they could come here, too. Five years ago, they'd opened a gateway not far from this house. What would prevent them from following Trevor through the gateway on the river? "We could be in trouble, here," Wylie said.

"You've got that right," Brooke said.

"But I don't know what to write about. I don't know where to take it."

Brooke said softly, "Trevor. Just think about Trevor."

Wylie closed his eyes.

"Let yourself happen," Nick said. "Just let it flow."

He saw a face. White hair, gray eyes, all crag and grandeur. "Christ, I don't need Al North!"

Then it came, a flood that blanked his mind, that broke his thought and his will and took him over completely.

Throwing back his head as if he had been slugged hard, he started to type. He watched his fingers fly across the keys. He stared, finally, at the words that were pouring out of him. "Al," he whispered, "it's you, it's gonna be you."

Outside, the thunder rumbled and sheets of hail came bouncing down, and the trees moaned. Inside, Wiley's helpless shouts at a man who could not hear him echoed through the house, in the dark of the storm.

Brooke got water for him, and tended him as she always did, while he worked.

Nick went downstairs and saw to the guns.

ELEVEN

DECEMBER 11
MOUNTAIN OF LIES

THE DEEPER INTO CHEYENNE MOUNTAIN Al went, the better he felt. This mission mattered, it was progress, and it might yet bring them a win. He'd had a hell of a time getting out here, but he'd made it at last. The problem hadn't been finding a jet that worked or even a crew. It had been gathering enough fuel.

But this place, this was the Air Force as it ought to be. These people didn't feel a constant sense of threat, and you could hear the difference in the firmness of a step, or an easy ripple of laughter in the canteen. Morale here was very far from the redoubt in West Virginia, where the whole dismal picture was on everybody's mind all the time. These people were winners. They were used to victory. They had no idea they were on the damn Titanic, and he tried to project confidence he did not feel. Nothing must disturb morale like this.

A young captain led him down into the test area. She looked maybe thirty, she was clean and well groomed, she smiled and she moved along ahead of him, her static-free shoes whispering against the pavement.

It was in this test bed that human beings would, today for the first time, remove a living soul from the body that contained it. Once the soul was extracted, they would find its frequency and destroy it. This would be the first such execution. The prisoner was a monster, presumably from the Federal ADX in Florence, Colorado, and after this death, not even what of him that had been eternal would remain.

This might have extended benefits, because if reincarnation was real, it would mean that this horrible soul would never return to life. Maybe the reason that crime was always with us was that the souls of criminals returned just like everybody else, and were criminals again. Maybe, if the war was won, we could learn to pick and choose who would survive in eternity and who would not.

But this was only one aspect of the experiment. Of greater importance

was understanding just how souls and bodies connected, so that some defense against the light could be devised. The disks were methodically following the night around the world, striking the entire planet all the time, and so far no attack, not with hydrogen bombs, not with neutron bombs, not with any form of conventional weapon, had affected them.

The British and French had concentrated on the most isolated lenses, exploding nuclear ordnance over them, in the ground near them, pulsing them with electromagnetic waves, even firing artillery shells into them.

The U.S. had concentrated on the one on Easter Island, going back again and again and with full imperial approval, but with equally dismal results.

A unit of Marines had deployed around the lens and opened fire when the disks came out, but they were themselves made of light and ordnance simply passed through them.

Now, however, all that was ended. Communications had been jammed, planetwide. Satellites were dark, broadcast transmitters had been disrupted by artificially induced changes in the earth's ionosphere, and landlines by powerful electromagnetic pulses being continuously emitted from deep space. The objects responsible ringed the planet, fourteen of them, each one twenty-two thousand miles above one of the lenses. Even though they weren't in precise geostationary orbit, astronomers using old-fashioned backyard telescopes, which were the only ones that still worked, said that they showed no sign of moving off course. Military communications had been reduced to single sideband radio-sometimes-and a couple of fiber-optic networks that had pulse-hardened switching stations that so far were impervious to the electromagnetic energy being beamed from above.

The beautiful young captain paused before a steel door, input a number code. The door slid open.

Beyond it was a tunnel with a pronounced downward slope. At the head stood a small stainless steel car. It was mounted on a black strip that descended, it seemed, into oblivion.

"This is the railhead," she said as she got into the car.

It looked like an amusement park ride, he thought, but when she closed the door, the seal seemed very tight. He found himself looking out a small windshield at a concrete tunnel with conduit running along its ceiling.

She pressed a button, and the car began moving with startling silence and smoothness.

"What propulsion?"

"Maglev."

He'd never seen any of this before, but just the scope of it all, riding this silent, efficient little train deeper and deeper, made him dare to consider again the possibility of victory.

"We've reached cruising speed, Sir."

"Which is?"

"Two hundred and eighty clicks, Sir."

"You're kidding!"

"Sir, you're gonna see a lot of wonderful machinery today. I mean, some of the stuff down here-Sir, this is a new world."

He glanced at his watch, calculating in his head. Two hundred and eighty clicks an hour was a little over four and a half kilometers a minute, so they'd gone almost three miles. He made a note of the time.

"What's your first name, Captain?"

"Jennifer, Sir. General Burt Mazle's my old man. I'm third-generation Air Force, Sir."

He'd never heard of Burt Mazle, but all generals were supposed to know each other. The mythical first name club. "Old Burt," he said. "Sure."

Whoever he was, old Burt had surely produced a handsome specimen of a daughter. Bright, too, or she wouldn't be in the Mountain. Al had not thought about sex in a long time. He'd been attracted to many women, but every time he tried to start a relationship, he just lost direction.

He still kept his picture of his Sissy in his wallet, with her brightness and her smile, looking up from their table in the Wright Pat Officer's Club where they used to go dancing. Her expression held surprise at being photographed, her eyes joy. Her skin shone with sweat, because they'd just come back from a vigorous rumba. A year later she had said, "Al, I need you," and fallen over in the middle of the bedroom, dead before she hit the floor. It had been a massive aortal aneurysm. She was thirty-eight years old.

"You doing okay, General?"

"I'm fine."

"You weren't need-to-know on this part of the project, were you?"

"Apparently not. I thought I was need-to-know on everything."

She smiled at him. "Then look at this as the adventure of a lifetime, because that's what it's going to be."

"What about our prisoner?"

"Gonna die die, that's what we call it."

"What's his crime?"

"Dunno, sir. Bad boy, though. Not a friend of ours."

"No, I suppose not. Do we know for sure that the soul persists outside the body?"

"For sure, Sir. We've taken them out and put them back in."

"Really!"

"We're making strides, Sir. Catching up fast. We know for certain that when the body is killed, the soul does not die or lose its integrity. It can be destroyed, though."

"How?"

"Certain frequencies make it fly apart. Trillions of electrons. All organization gone, tiny bits of consciousness flying off into space forever."

He had to think that this progress was brilliant. They were racing against time down here, but at this rate they might just learn enough to actually win this thing. "Could we give the wanderers back their souls?"

"It's conceivable."

"That would be a hell of a victory, right there."

"It'd ruin somebody's day, for sure."

"The God-for-damned enemy's day."

"That would be true."

Another glance at his watch: they'd traveled seven miles, meaning that they weren't under Cheyenne Mountain anymore.

He put his foot against the footrest and leaned back. The little transporter, about the size of a jeep, was now passing under the thickest conduit he'd ever seen, a black, endless river affixed to the cut stone of the wall with heavy steel wrapping that flashed past hypnotically as they sped along. On either wall were light fixtures about every fifty feet, but glowing so softly that they did not completely penetrate the darkness. Looking ahead through the windshield, it was as if an endless stream of lit portholes were coming up on either side, then speeding past the side windows as a continuous streak.

"That conduit carry power?"

"A lot of power. You need it to change the patterns of the electrons. Disrupt the frequency of a soul, it becomes confused. Then you just keep ratcheting up the power until-bang, it flies apart. Humpty Dumpty."

"You've killed some down here before?"

"Couple dozen."

"But just the bodies? Not the souls?"

"Taken them out. Soul surgery. Today's our first try at a kill."

"But the ones you took out-where did they go?"

Her face clouded, and she fell into what he could only interpret as a sullen silence. It was as if he'd insulted her, but how? What was the big deal if there was some part of the thing they didn't understand yet?

They were now eighteen miles in. Eighteen goddamn miles! Where was this place? Who had built it and when? He recalled that on September 12, 2001, the Secretary of Defense had announced that the Defense Department had "lost" a trillion dollars, and he thought that projects like this might be an explanation.

They'd been working on this a long time, then, because facilities like this take years to construct. Hell, generations. And trillions of dollars, for sure.

Twenty-two miles.

"We're also descending, aren't we?"

"Yes, sir."

"And?"

"We're at six thousand meters at this time, sir."

Holy God, that was twenty thousand feet! Eighteen miles in and four down. "Why so deep?"

"You don't want the souls getting away. And they are slippery, sir. Very slippery."

"They know what's happening to them, then?"

"They're alive. Never forget that. If you start messing with a soul, it wants to get away from you. And it's smart. If one escaped, the enemy would see it immediately and know what we were up to. So we're deep. Best place for us to be."

"What kind of lookdown do you have?"

"Sir?"

"Satellite lookdown. Guardianship."

"None since last week. But we're guarded by a unit of Air Police and fully sensor protected."

In other words, the facility was totally exposed. If the enemy got so much as an inkling of what was happening down here, they were coming around, and right now.

The car slowed to a stop.

"We've reached stage two, sir. Time to move to the lift for the rest of the trip. Stay seated, there's gonna be an equalization."

The door sighed, and there was a jarring pop, and Al's ears rang. "What in hell is this?"

"We're at four atmospheres down here, Sir."

When they stepped out, the ceiling was so low that Al had almost to crouch. The chamber was hewn out of solid basalt-gleaming black walls scarred by drill trenches. It was also very, very confined. He was aware of the miles of stone overhead and all around him. It was like being in a coffin.

How could anything have been drilled this deep in a military facility without the Joint Chiefs being told?

"How long have you been down here?"

She glanced at him, but said nothing. She ushered him into an elevator that looked like some kind of meat locker. It was heavily insulated, with a very small cab. It contained bench seating for four people around its steel walls. There were seat belts.

He asked her, "Are these needed?"

She buckled herself in. "Advisable."

There was a clank and a whirring sound, then a sucking whine and Al was practically lifted against the ceiling. Scrabbling hard, he got the ends of his belt and managed to strap himself in.

"We're going down a further three miles," she said.

Three miles straight down, after another thirty-five laterally and nine down-it was inconceivable. There was no technology he knew of that could accomplish this. But, obviously, somebody did know, and they had been experimenting on souls down here for a long time.

"It's a Manhattan Project for the soul instead of the A-bomb," he said.

"That's right on the money, sir. Need-to-know's spread very thin."

"Samson?"

"Project director."

The man was a shit, but he surely knew how to keep a secret. "Impressive. I never guessed."

The elevator hummed and jostled slightly as it descended. Confinement disturbed him. And, truth to tell, the closer they got to actually doing it, the more uneasy the idea of killing a soul was making him. He was not really seeing how even the worst criminal deserved destruction like this. It felt like they were intruding into God's business.

Actually, he wished he could call Samson and request that this be at least postponed. Even if he'd somehow managed the call, though, Tom would

never allow it. He'd consider the request treason, and he wouldn't be wrong. We had to learn everything we needed to learn to defeat that light, and if some criminals were denied eternal life in our quest for answers, then that was too damn bad.

The elevator stopped. "Gonna be another pop," she said. "Open your mouth."

She pressed a button and the door slid back. This time there was a loud thud and a sensation of being hit in the chest with a medicine ball.

"Wow!"

"Seven atmospheres," she said.

They walked out into a tiny chamber with black, sweating walls. It was maybe five feet wide, seven high. Not much bigger than the interior of a coffin. On the far side was a door, equally black. "What is this, the entrance to hell?"

She laughed. "It is."

He followed her down a steep corridor, then deeper still, down a winding metal staircase so narrow that he could hardly manage to negotiate it. They descended for easily twenty minutes, and he thought that coming back up was going to be a battle.

Now the two of them were in a chamber that really was the size of a biggish coffin. Embedded in one wall was another black door, this one with a round window in it like the bulging eye of an insect.

"You'll need to disrobe, please."

"Excuse me?"

"Take off your clothes, General. You'll be provided with a special suit. So it won't kill your soul, too, General."

"What about you?"

"I stay out here, sir."

He took off his tunic, his tie, his shirt, while she watched impassively. He waited, but she did not turn around. Finally, he removed his shoes and trousers. He waited again. "Ma'am, could you give me some privacy?"

She turned, then, and faced the wall. He could understand her reluctance—she now had a face full of basalt.

When he was naked he faced the door. It was eerie, the way the dark porthole seemed almost like something alive.

"The prisoner is ready," she said. And the door began slowly to open.

Before him there appeared the most astonishing thing he had ever seen.

The room was painted vividly, with images right out of the interior of a fabulous Egyptian tomb, lines of men, a god in a golden head-dress, prisoners standing stiffly, strange objects that looked like giant vacuum tubes.

"What the hell is going on here?"

Then he saw a stack of what looked like the same vacuum tubes in real life. There were men in the room, too, dressed in black uniforms without insignia.

"Excuse me, gentlemen, but I need something to wear."

Nobody took any notice of him. They were clustered around the vacuum tubes, which were attached to thick cables that came out of the walls. He saw only backs.

Some of the rigid figures in the relief painting had cables thrust down their throats, and the tubes attached to the other ends of these were brightly lit. Others still were being intubated, their heads thrown back, their guts distended as black-painted soldiers just like these men pushed the cabling down their throats. Others waited, their faces turned away.

"Look, I need that coverall now, please, gentlemen."

Behind him, he heard a loud thunk. He turned toward the sound, which proved to be the door closing.

The young captain had come in after all. Ready to explode in her face, he turned around-and just plain stopped dead.

Her eyes regarded him with a doll-like emptiness that did not look alive. Immediately, he remembered his dream of two nights ago-that face, geisha-like, staring at him.

It was her.

She smiled a little. "Hello again."

He threw himself past her. She didn't try to stop him. On the contrary, she stepped aside with the grace of a matador.

He sought some way of opening the door, sweeping his hands across its smoothness. There was no handle, there was no lock. She watched, completely impassive.

He stopped. His heart was hammering so hard that he thought he might simply drop dead from the shock. He tried to talk, but his mouth was too dry. He hesitated to think who these people must be-but he did think it, they were the enemy, that was why the blackness of the uniforms was so bizarre, as if they were literally dressed in night.

A powerful realization came to him, of the sort that will come to a dying

man. It told him that it was sin that generated that blackness, that they were not in uniforms at all, but were as naked as he was.

"Your soul isn't going to be killed," she said from behind him. Her voice was-well, it was musical. And yet, there was something else in it, something that he could only think of as rage, and maybe deeper rage than he had ever heard before.

Or no. He had heard that rough, bitter tone before. "Samson is one of you."

"Indeed."

She put her hand on his shoulder. "Come on," she said. "You can make this easy or you can make it hard."

She was wary. She knew that he was dangerous. "I don't want you to imagine you have any chance to get out of this," she said.

And then she shuddered for all the world like a dog shaking its hide.

The uniform fell away, and he saw that it wasn't actually a uniform at all, but something thin and now dry. It looked like skin shed by a snake.

Her real skin shimmered, and her face changed. She blinked her eyes, and the sockets were round, blinked them again and they were long. Now a nictitating membrane came across the eyeballs, and when it retracted he found himself face-to-face with the most beautiful and awful thing he had ever seen.

The face was that of a snake or a lizard, but flattened and extended so that it covered the front of a human-sized head. It was softly angled, sleek, with a snake's fixed lips. There was a smile, though, sparkling in the golden eyes, which were an incredible contrast to the human eyes she'd been exhibiting a few moments ago. These eyes were sparkling with life and humor and, he could see it so clearly-glee.

There was an earthly equivalent to these creatures. They were chameleons. But these-they were far, far more evolved than any earthly shape-shifter. And he suspected, also, now, why Samson carried his syringe. He wasn't an addict. To live on the surface, they must need some kind of support. Allergies, diseases-he'd probably never know what endangered them there.

"Now, I want you to try to stay calm, Al. The less you fight, the less this will hurt. You need to understand that we have no mercy, Al. We have no mercy." The eyes twinkled. "So it's up to you. This can be a terrible agony for you, or it can go smoothly. Up to you, Al, up to you."

The others were working with their equipment. Al watched the nearest one turn toward him. He was as black as night, his skin had the polish of a jewel. It shimmered as he moved, sleek muscles rippling within. He drew a black tube out of the wall and approached Al. As he moved forward, the tube made a faint hissing sound. The end, which appeared to be made of copper, glowed with a curious green light.

"We've already tested you on this," 'Jennifer' said. "We know it's going to work."

A huge emotion filled him. This wasn't just death, it was worse, it was the absolute end of his being. Soul murder.

He hadn't practiced his martial arts in years, but he called his old skills up from the very depths of his being, moved to a back stance and tried a side kick.

The creature caught his foot and slammed him to the floor.

He took the hit, tried to shake it off, failed. The female made a string of sounds. And then, unmistakably, they all laughed. It was quiet, easy laughter, the laughter of men running a slaughter line, joking about something else as they slit the throats of the pigs.

The one who had taken him down turned away and continued his work, which involved screwing a copper fitting onto one of the strange glass tubes.

Al got to his feet. He was feeling a dull, hopeless sort of determination. His own greed had brought him here. He'd taken the assignment from Samson despite the fact that he knew damn well that something was very wrong. He had done this out of eagerness for promotion, and that even though the entire system was hopelessly broken and none of it made a bit of difference.

They had seen his ambition, and used it against him to lure him very neatly into this trap.

He had been more than willing to come down here and kill another human being's soul, so why was he now being so careful of his own?

But he was. He had a touch of eternity in him, he could feel it clearly, and he did not want it to die, he did not want it so much that this time he really lashed out at the female, who had come close to him. His blow connected, and her head bounced to one side as he gave her the hardest knuckle slap he could manage. Then he waded in, fists pounding. But each time he struck a blow, less seemed to happen. It was like fighting wet cotton, and she watched him impassively as he slowly became unable to move at all. Just like the

victims in the relief, he was soon standing frozen, arms at his sides.

One of the males now strolled over to him.

The female pointed at a particular painting and spoke a few words. The painting showed a prisoner having his eyes gouged out.

One of his captors went to it, looked at it for some moments, then opened a black case like a thick pocketknife. There was a pop, followed by hissing. The thing became like a tiny star in his hand, fiercely bright.

He approached Al. His eyes were emptier than hers, narrow and yellow-green, not gold. As Al watched, the nictitating membranes slid quickly over the pupils, then disappeared back into the orbits.

The star was brought close to his face. It was hot, and he tried to turn away but could not move a millimeter. Now it began to burn around his lips. Then there was a sizzling sound and he tried to cry out, but instead found himself gagging on his own blood.

When the light was withdrawn, blood poured down, spattering on the floor, washing his feet and the fleshy remains of his lips in thick, red sheets.

His mind blanked. He knew that he was being slaughtered. Was aware of it but distantly. Shock does that, even to a soldier.

An instant later, what appeared to be a red serpent's tongue darted out of the object, striking his left eye, causing a bright red flash in his brain. He heard muscles pop and felt torment in his neck as his body literally tore itself to pieces in its effort to move against the invisible restraints that bound it. He did not understand that he had been placed on an electrically charged plate that neutralized his nervous system, stopping all communication between brain and body. He also did not understand that all this equipment was not only old but simple-simpler by far than most man-made circuitry. He did not understand that these creatures were not advanced beyond man in most science, but only in one science, the science of the soul, which made these exhausted, half-starved and poverty-stricken beings appear like dark gods to him, as the Spaniards-sick, starving, and far from home-had once appeared to the Aztecs.

He never dreamed that the operators were tired and bored and longing to be home with their own wives and lovers, and did not, themselves, fully understand why they were here or what they were doing. He did not know that the young female's happiness came from the fact that she would get a great deal of credit and power if the monster she was creating was successful. He didn't even begin to understand what it was-that it would be used to

penetrate into another universe and end a threat that had appeared there.

It was a human universe, and one that they had known about for thousands of years. They could even enter it, to some extent, but not so completely that they could actually do something there as complex as finding a computer file and destroying it.

They could enter that universe only with clumsy thrusts, not with the kind of precision they now needed.

The world went black and he wanted to howl out his rage and his absolute terror, but those abilities were not available to him. Nothing was available to him. He was a bright spark called Al, that was all-that, and pain, waves of it, gushers of it, boiling oceans of it.

Then he felt fingers moving his genitals, and then yet more pain, this time radiating up from there, and he knew that he had been castrated.

Through the agony, Al began to get the odd feeling that he was rocking, as if he was in a boat or on a swing. He had no way to know that the surgery he had just undergone had shattered the specialized nerve-endings that bound the electromagnetic organ that was the soul to the physical one that was the body. This was one way to do it. The shearing light was another.

The moment the coring and cutting was complete, the rocking became a bizarre, sensationless lurching and the room seemed to race past him, the figures in it whizzing and spinning as his vision, freed from the limitations of his eyes, saw everything around him at once. He was manipulated as casually as if he had been a moth captured between the fingers of a cruel child.

And yet, the connections between body and soul remained strong, and when one of the creatures thrust his thumbs into the base of Al's jaws, he felt it pop as his blood-gushing mouth gaped.

The next sensation Al felt was very like what he'd experienced during his nightmare the other night-the same choking, gagging sense of being invaded down his gullet. One of the thick cables with its frayed, cracking insulation was being brought up and pushed down his throat. It hurt a thousand times more than what had been done the other night, and what happened to his mind was similar but a thousand, thousand times more powerful. He gagged, his body tried to choke the thing out of him, but strong hands pushed it deep.

The other night, they'd been sifting his thoughts to see if he would come to understand who they really were and what they were doing, and therefore if he might betray their plans on his way into their trap.

He gagged furiously, he tried to make sounds, he tried to scream out

warning to the world, that the United States was actually under the leadership of the invaders.

That traitor Samson's flyers were indeed intended to deceive people into congregating, and Samson had used some sort of mind control to induce the president to commit suicide, and now Al was down here being destroyed, the one person who might have been able to get in Samson's way.

He was here because he'd been about to figure out that Samson was one of them.

Like pages from a book, the living pages of his soul swept from his body and into a new state. Around him, he saw blue glass, and beyond it, the lithe and gleaming figures moving in the extraction chamber where his body now lay in a bleeding heap. He saw them take the parts they had cut off and push them into a hole. He was stuck to the filament inside one of the huge glass tubes. The filament was inside him, and his whole soul was on fire, his soul was burning.

"Nice," the female said in English. "We're done, General."

The tube was now filled with him: a plasma of electrons that shimmered with a million different colors, sparking and recoiling when it hurled itself against the glass wall again and again.

The captain made a series of statements, speaking in her soft, swift voice. Two of her helpers lifted the tube as the third pulled the cable out of its worn bronze socket. They placed the tube into a larger socket in the floor. Al could see them, but he could not speak, he could not scream out, above all, he could not get out of the tube.

He watched them slide his body into an ordinary military issue body bag. Then two of them lifted it onto their shoulders and carried it out. As the door slid closed behind them, Al saw them taking it off into the depths of the facility.

When the door closed, darkness came, absolute. Then, not quite. There was a glow, fitful, that he realized came from this tube. What light was left in this dark chamber of hell, was the light of his soul.

PART TWO

THE RUIN OF SOULS

Saint Michael, the archangel, defend us in battle, be our defense against the wickedness and snares of the devil. May God rebuke him, we humbly pray, and do thou, O Prince of the heavenly host, by the power of God, cast into hell Satan and all the evil spirits, prowling throughout the world, seeking the ruin of souls.

-POPE LEO XIII

Prayer to St. Michael the Archangel

This is the Hour of Lead-Remembered, if outlived, As Freezing persons, recollect the Snow-First-Chill-then-Stupor-then the letting go.

-EMILY DICKINSON "After Great Pain, A Formal Feeling Comes"

TWELVE

DECEMBER 18, EVENING
CHILDREN OF MYSTERY

MARTIN HAD BEEN LYING SO still for so long that he had lost sensation from the waist down. His legs were not there at all, his torso was as cold as a corpse. He was famished and freezing. He'd been on the move for days, going from house to house, sleeping in attics and storm cellars, anywhere that offered a decent seal against the return of the light.

He was home now, hiding in his own crawl space.

All of this time, he'd been looking for Trevor. He'd given up on Winnie and Lindy. They were beyond his help now, given that following was a trap.

As an American, he had not felt vulnerable in the same way that so many people did in this world, perpetually frightened that their loved ones might simply disappear some night.

That didn't happen here, and he had not anticipated the extraordinary emotional wear and tear that losing your loved ones brought. It was so emasculating that he had to fight just becoming passive.

He did this by creating a goal for himself. His goal was Trevor. He'd searched half the houses in the Smokes by now. He was planning a night raid into the town, soon, too. Night after night, the light had scoured Harrow, Kansas, and he doubted that many people were left by now. The same was true of the Smokes. It came here every night, seeking and probing, and those other things came, too, the shadowy things that he'd encountered when he was a follower.

Thunder bellowed. Another storm was coming. Soon, there would be more rain. Methane releases from permafrost, the collapse of the Greenland and Antarctic glaciers, the flooding of polar oceans with fresh water from the melt, the wild state of the sun—all of these things were combining to make the weather turn dangerous just when this horrific attack occurred.

For years, the U.S. had pleaded with the empires to curtail pollution, but they would not touch their development zones. Industrializing regions of Africa and South Asia had completely overwhelmed the planet's ability to

maintain balance.

More planning on the part of these invaders? He feared so. He feared that they might have infiltrated every colonial administration on earth. No doubt they would turn out to be comfortable in an atmosphere choked with what we thought of as pollution.

Despite the sodden cold of the crawlspace, he sweated.

The silence was deep, now. His watch told him that sunset was not far away. He had a mission tonight-aside from avoiding the light and the other menaces. He intended to track down a sound he'd heard off and on, that came from down toward the Saunders. Drumming, he thought. Somebody down there, perhaps.

Of course, in this world it was impossible to tell. Could be anything. Some creature from hell, or an alien machine. Or it could be people, and if so, there were more than one or two of them.

He stirred a little, just moving his body slightly. Then he waited. There was no sound from above. He raised his left hand and pressed it against the trapdoor.

After a moment, he pressed harder, causing the door to move just slightly. When there was no reaction, he pushed the door all the way open.

He made his way through the dining room, then the living room where he had spent so much time in his chair reading, where he had read to his kids, where he had listened to the music he loved.

The front door gaped. As he went through, he tried to push it closed, but it was no use, they'd torn it off its hinges. He stepped into the grass, in the long shadows of evening. He listened, heard nothing.

No, it was a night sound, that drumming, and finding its source was about the only thing he could conceive of that would draw him outside after the sun went down.

Then he heard another sound, a great whooshing overhead that was familiar to him from his night as a follower. He glimpsed, turning hard against the clouds that raged above, what looked like a gigantic bat.

He could feel it watching him. Knew that it was. And then he heard from the woods behind the house that familiar mechanical clatter.

The sun was not yet down, but the alien animals were already stalking him. The bird was the spotter, and whatever was in those woods, he suspected, was there to tear him apart.

He scrambled down the hill toward the stream, and then moved along its

bank, rattling the dry autumn brush as he went through it. Tears swarmed his eyes, he was that afraid, as above him the wheeling bird wailed, and the woods behind him and around him echoed with the noise of whatever monstrosities were there.

He came to the little lake, really just a widening of the Saunders, where he sometimes swam in the summer, and ran out onto its pier. Forcing himself not to dive, he slipped into the frigid water and moved under the pier, clinging to one of its slippery pilings, concealed by the three rowboats that were there, old Mrs. Lane's little white dingy that she used to fish for crappies, and his boat that could be fitted with a small sail and go racing across the thirty-acre lake, and the third boat, a duck hunter's craft, camouflaged, that had not been used by anybody in years.

Then he heard his pursuers, their feet splashing softly, and heard their sounds, mutterings, clatterings, small whistles that he realized were a language and a complex one, and he wondered, then, if these might be the real aliens, or if they were creatures that had been trained like dogs or were smarter than dogs, and then if they might be constructed things, machines brought to life.

There came tapping, a claw tip on the wooden dock above his head. He heard the eager whisper of their breath, and the more intimate clattering of what he thought now must be mouth parts. There was a whisper in that clattering that suggested knife blades, steel against steel. From high overhead there came the long wail again, and he could hear in it quite clearly a tone of angry question.

Had they lost him?

Something slid into the water. It was clear and deep, the little lake, with tall water weeds that rose up from its darkness, and he saw, sailing below him, a huge shadow, blacker than black, with eight great legs outstretched around it.

He watched it sailing above the gently waving fronds, coming toward him, and felt as it came closer, more frozen, more helpless.

This was his death, then, his ugly destiny, and he'd done nothing to deserve it.

The thing in the water made a graceful turn and then came back toward the dock. He watched the shadow glide closer.

He'd lost, he'd been captured, and now, he thought, his lot must be to share the fate of the mangled boy he'd seen in the field. Perhaps he should

fight more, but he didn't know how. If he swam, the thing would be on him in a second. If he got out, he'd have to confront the ones crowding the dock.

Something brushed his leg, feeling like a whipping frond of water weed, and he saw the shadow darting there. It was closing in, it was about to strike.

He shut his eyes. Waited. Heard a sloshing sound, very light. Sick with fear but unable to bear the feeling that he was about to sustain an attack he opened them again.

There was a girl in the water beside him.

She cocked her head and raised her eyebrows, then held a long finger across her lips. She looked sketched by a Dutch master, she was so flawless, so full of glow. And also, she looked familiar, very much so, but he couldn't place her.

He was trembling with the cold of the water. She reached a hand like a sparrow to his shoulder, and warmth came from it, soothing him and bringing him a startling sense of protection.

She raised a finger beside her ear and shook her head. Don't listen, the gesture said. Then she held her hand out before her, palm toward him. The message was clear, don't listen and don't move a muscle.

But how could he not listen to that hideous wailing in the sky? It was the most terrifying sound he'd ever heard. And the mechanical chuckling of what appeared to be gigantic spiders gnashing their mouth parts-it caused sickening dread, visceral terror as it conjured thoughts of agonizing mutilation.

She frowned at him. What was she getting at, and who was she? So familiar, the face.

She smiled softly, and he thought that certain female looks define the very essence of beauty for the male, and she reached out as if she had heard that thought, and touched his cheek so very kindly, and his mind went to Lindy, and his heart almost broke in half.

This all happened in an instant, during which time she touched her temple and nodded and smiled, and that gesture, one he had seen her make before, caused him to realize who she was. This was Louise Wright's daughter Pammy, manager of the Target...and he thought she could read his mind.

He noticed, also, that as he had become distracted by her, the things in the water seemed to have lost track of him.

There was a crackle, a huge noise. Electronic crackle.

Pammy Wright frowned.

A voice echoed, electronically amplified. "Martin Winters, I am Captain Jennifer Mazle of the United States Air Force. Please come up on the dock."

Pammy shook her head. Then she pointed downward, and disappeared.

"Doctor Winters, I am Captain Jennifer Mazle of the United States Air Force. The situation has been stabilized and it's safe to come out. Please come up on the dock."

He saw Pammy's pale body disappearing down among the water weeds. She swam right through a line of black shapes, which simply hung there, not moving.

He followed her, going deep, swimming as hard as he could, struggling and, he was sure, drawing attention to himself. He swam toward the creatures, which all spread their legs and began closing in on him. He dropped down into the water weeds, into the dark and the pressure among their roots, glimpsing a great fish, then Pammy again, far ahead, deeper yet in the lake.

How could she do it? How could she possibly manage? Waves of frantic air hunger were already coursing through his body and he was going to have to surface, he had no choice, it was essential to life, he could not manage another second-

-and then she was there, coming up from below, and she had with her a blue cylinder. She offered him a rubber tube and turned it on when it was in his mouth. As he gulped oxygen, tingling, exquisite relief filled his lungs, his blood, his crashing heart.

She flitted away as a great, rough something whipped his back. He didn't turn to look, he just followed her. He couldn't suppress his fear now, not when he was swimming for his life.

But what had that voice been? Was the Air Force really out there? Maybe he would've been safe if only-

Pammy stopped, turned, and yelled in bubbles: NO!

He went deeper, following the disappearing form. The water was dark here, the pressure was making his ears ring, and his lungs were bursting again.

Somebody else was beside him, a young man as naked as Pammy had been, swimming hard, his eyes behind goggles also. He had the oxygen, which Martin took in huge gulps.

He was being rescued by the town kids who had disappeared, and Oh, God, maybe that meant Trev.

He swam hard, and soon found himself in a narrowing, dark space, a tunnel. Where he was he didn't know, but they were ahead of him and he swam for all he was worth.

Then something like steel springs grabbed both of his legs, and he began to be dragged back out of the tunnel, and he knew that it was one of the things and he kicked and kicked but the harder he tried, the tighter its grip became. Also, air was getting short again and he was in too confined a space, nobody could reach him here. As he began to be dragged back, he clawed at the walls, he kicked with every ounce of his strength, but still the grip on him tightened and he knew that he had lost this struggle.

He began to be pulled backward out of the tunnel. Going faster by the second, he could soon see again. As he was pulled back into the body of the lake, light grew around him.

The walls of the tunnel were stone, he could see them now, and he had a last chance, here. He understood spaces like this, tunnels, tombs, and such. With all the strength that was in him, he thrust out his arms and the leg that wasn't in the grip of the thing that was dragging him. As the thing met sudden and unexpected resistance, he felt a flash of pain in the ankle it had been gripping. Immediately, he kicked. Kicked again. Kicked a third time, and felt himself come free, then kicked harder as the legs or grippers or whatever they were scrabbled around his feet.

He pulled himself back into the blackness and narrowness of the tunnel, until he could barely move and had to breathe and knew that it would be water.

And he did breathe and it was water, it came sluicing down his throat and gagged him, causing him to cough and involuntarily draw in more.

It hurt to drown, it was not magic, he saw nothing of his life before his eyes as he died, only agony, only a frantic need that could not be fulfilled and then dark.

Dark. Dark.

Air, sweet in him, filling him, air but maybe only the air of wishes, the air of dreams.

"Come ON!"

"CPR him, hurry!"

Pressure on his back, a cough, water coming out, flowing out, then another breath, deep and good and he was fully conscious again, wet, aware of how miserably cold he was.

Dappled autumn woods, larks singing in the last, high light, Little Moon racing in the clouds, beloved star wanderer. And her-Pammy-standing over him and the young man, the boy-also familiar but no name, not yet.

They dragged him to his feet. "Hurry!"

High overhead, a long, chilling wail shattered the noise of the larks.

"Don't listen!"

"Why not?"

"They home in on fear. If you're not afraid, they can't find you. Come on." As she spoke, the young man sprinted away.

She tugged at his arm. "We've gotta go. They're realizing they made a mistake." She smiled shyly, her cheeks and neck turning pink. "Somebody just said, 'Who's back at the lake?' and now they're all looking at each other." She lowered her eyes.

"You understand their language?"

She hauled at his hands, then slipped away as easily as if she had been born to the forest, her pale face glowing in a dark that was being brought by clouds that were speeding out of the north like hungry panthers, flashing and bellowing.

She had already disappeared, and he ran to follow her-and was stopped by a devastating blow from behind. And then he saw the ground, felt cold leaves in his face.

"I want you to be calm." It was the Air Force officer, Jennifer Mazle.

He cried out in the direction the girl had gone. "Help! Help me!"

"I'm a scientist, too, Doctor Winters, I'm not going to hurt you."

"Then let me up."

The weight lifted, and Martin pulled out from under her. She wore a camouflage vest, a rumpled hat, and heavy glasses with a split lens. Her eyes were big with sadness. "This mission isn't going right," she said. "I need you to come back and help us."

"What are those things? My God-"

"You need to help us understand, Doctor Martin."

"They were trying to kill me. The government was, too."

She touched his hand, then gripped it. "There's a lot of fear out there."

He glimpsed movement behind her. She started to turn, but was struck, and hard, by a piece of wood. She turned quickly back.

Her face was distorted, the skin on the cheek where she'd been hit imprinted by the wood.

She moved to one side, her skin rippling, turning cream-colored, red where the board had hit.

What in the world was wrong with her?

She snarled, came quickly toward him. Seen full on like this, her face was-oh, holy Christ, it was-the skin was ripping like a crazy jello, the eyes were weird in the eerie cloud light, weird and gold.

He turned and ran. He didn't think, he was beyond that. He just ran because what he had seen was so terrible that his mind had been completely stripped away, replaced by a terror so raw and so deep that this educated, civilized man was thrown back in an instant to the days when men were hunted things.

A thunder of slashing jaws rose up all around him, as overhead the wails came again and again, exultant now, joyous now, the sky, the very air vibrant with their triumph.

His fear was the beacon, but he couldn't help it, she'd turned into a monster when that kid had hit her, and that had been the single most shocking thing Martin had ever seen, more shocking even than the explosion of the pyramid, which involved an inanimate thing, not the face of a living creature like that.

And then Pammy was there, looking down at him from a ledge. She motioned to him and he clambered up beside her.

She lay flat and he did the same.

"Blank your mind," she said calmly. "Concentrate your attention on your body. Don't think."

Lying on the sun-warmed stone, he concentrated on his aching lungs, his crashing heart. Below them, he heard movement, then quiet voices. Above, the wailing came and went as the great birds began to patrol.

"Come on," she whispered, "fast!"

The instant she spoke, there was a rustling sound, and a black-gloved hand gripped the ledge from below. He turned and ran, following her, putting all the strength he had left into his effort.

The trees shuddered and the thunder echoed, and great gusts of wind swam down from the north. Martin ran behind the fleeing girl, deeper and deeper into the woods, and rain came in sheets, a yellow deluge. Behind him he heard the cries of the strange birds and the crackle of alien voices.

"Come on," Pammy urged.

He could remember this part of the woods. They were past the Saunders

and about a mile down from his house. This was state land, part of the Prairie Heritage program. The forest here was as thick as it got in Kansas, and when you dropped down into the hollows, dense with brush. The hunting back in here had been excellent when he was a boy. Wild pheasant, plenty of turkey.

Times gone by. He'd discovered here that Trevor was not going to be a hunter, that he felt too bad for the animals. He and Lindy had come back in here when they were first married, and walked naked here, hand in hand, in some sort of sacred contact with the land that they could not articulate.

It was miserable here now, though, soaking, the rain pounding down, wind roaring. A storm like this could easily bring a tornado, too.

Then she seemed to drop down, as if into a hole. When he followed her, he discovered a tiny glade, and in it a camouflaged tent. He recognized it. They'd been on sale at Hiram's Sporting Goods. She darted in. He approached more warily. Close to it, he could hear drums in the sound of the rain. Then the flap opened and she gestured frantically. He went in.

The first thing he noticed was that the drumming was much louder, the second that the air was stifling. As his eyes adjusted, he saw that the space was filled with children and young people, perhaps twenty in all. He knew at once that these were the kids who had disappeared when their parents and siblings had become wanderers.

He looked from face to face, seeking recognition, not willing to taste again of his hope.

When he did not see Trevor, he swayed, staring, helpless to either stand or sit. He had reached the end of his tether, he was going to collapse.

Unable to defend himself from his own tears, he dropped to his knees and covered his face, and fought to keep his tears silent.

A hand came onto his shoulder.

"I'm sorry," he said. "I'm sorry." And the tears became a helpless, humiliating flood.

"Dad?"

He'd heard the word, but-

"Dad?"

He raised his face and saw standing before him somebody he did not recognize.

"Dad, I'm Trevor."

Then he did-behind the dirt, behind the dark cast of his eyes, behind the wild hair and the muddy camouflage suit, he knew that it was his son.

Trevor had changed fantastically. He was not a boy, not at all. His expression contained an adult's knowledge of the world-that and more-and the change had been so abrupt and so total that in just these few days he had become unrecognizable to his own father.

The heart, though, the heart sees, and Martin's heart saw his son before him. He opened his arms and Trevor came to him, and he closed them around his son's narrow body. His heart and mind may have grown, but this was still the same boy, fragile, almost, but with the long legs and big shoulders that said that he would soon grow much taller.

"Trevor," he managed to rasp. "Trevor."

Trevor pushed gently at him but he clung more tightly. He could never let him go, not ever, he could not do that again. "Dad-um-" He managed to look up into his father's eyes. "Dad, nobody else here has any parents left."

For a moment, Martin didn't understand. Then he did. He was the only parent who was not wandering. He looked out across the expectant faces, the eyes that he was realizing all had the same strange shadow in them, some of them touched now by tears, others wide with sorrow, others resigned.

"I'm sorry," he said.

"I'm George," one of the older boys replied. "Glad to meet you." George held out his hand, shook formally. Others followed, most of them teens, some as young as ten. There were twenty-two of them, two more boys than girls. Each in turn introduced himself. It was so formal. Oddly formal. But there was no precedent for such a meeting, was there?

Through all of this, the drumming did not stop.

Trevor glanced away from him, then murmured, "It drowns out the sound of the night riders, so the little ones won't get scared."

Just hearing his son's voice, Martin felt another wave of joy.

"Dad!"

"He can't help it," a little girl said.

"Can you hear me thinking, kids? Is that it?"

"We sort of pick up thoughts, but it's not like you'd imagine, Dad. People don't think alike and thought patterns are even more different than faces. You can't figure out what somebody else is thinking unless they know how to organize their thoughts to communicate, and we're still learning. But they can all feel your feelings, and you're...it's embarrassing me, Dad."

"I can read thought," George said. "I'm getting kind of okay." He looked quickly at Martin. "Not you, sir! I'd never do that."

"I better not catch you in my mind," a girl warned him.

"Oh, I'm not, Sylvie! I'm not!"

"Of course you are. Anyway, we have no trouble reading you morons, any girl can do it, you don't need to have gotten zapped. You're transparent from birth, gentlemen." She leaned her head against George's shoulder. George crossed his legs.

"What's this getting zapped?" Martin asked.

Silence fell. "Dad, we want you to try."

"Try what?"

"Don't ask him, Trev, he has to!"

"Shut up!"

"What's going on here?"

"Dad, you remember the night when it happened?"

"How could I ever forget it?"

"Mom was holding Winnie and I was standing beside them. You had your hand on my shoulder, you were squeezing so hard you nearly broke it."

"I'm sorry."

"No, no, it was good. The light missed you. It hit Mom and sort of splashed on me. I went out of my body and up in the air. I saw you down there, I saw us all. Then I was out in the sky, up above the church. I saw Mom and Winnie, they were gold in the light-gold masses of sparks-and they were rising fast. But my shoulder hurt so much, I went back down.

"At first, I was in shock. I went to the back of the church with Mom. I saw you but you seemed far away. You were hollering at us. You-I never saw you like that, Dad. I felt so sorry for you. So sorry!"

"I want your mom back. I want my girl."

Another boy shook his shoulder. "We're gonna win, Doctor Winters."

Martin recognized him as Joey Fielding, son of George and Moira, who ran Octagon Feed. "That doesn't seem possible," he replied, trying to keep his bitterness and his resignation out of his voice.

"Every one of us had the same thing happen. We were in pain when the light hit us, and it didn't take all the layers. Who we were stayed with our bodies. What we lost were the lies, the hopes, most of our education, what we wanted, what we thought of ourselves, our hopes. We lost all the baggage."

One of the little ones said, "We're like, fresh. We're new again, like we were-"

"Look at him, you're scaring him," a girl hissed.

"I'm not scared," Martin said.

"Yes, you are. We're weird and you're scared!"

"He doesn't scare easy," Trevor snapped. "My dad has courage."

"He's gonna need it if we do this."

Martin was aware that this conversation was happening on two levels, one he could hear and another that he couldn't. "I think I need to know what's going on."

"What's going on is we need you to try to become like us."

How would he do that? It seemed like some sort of side effect of a failed attempt by the aliens to strip away a soul.

"That's it," Trevor said.

"I thought you couldn't read minds."

He looked down at the smashed grass that made up the floor of the tiny chamber. "Um, you're easy, Dad. 'Cause I know you..."

George said, "It's getting dark."

Trevor looked at him sharply, shook his head.

"Trevor, no. NO!"

"What is this?"

Trevor threw his arms around him. "Dad, they want you to leave!"

"Leave? I can't leave!"

A boy of perhaps ten or eleven produced a pistol. He handed it to one of the older kids. Martin saw that it was a .45 automatic. He didn't exactly point it at Martin, so much as leave it visible.

Martin stared at it. He looked from the barrel to the young face. Those eyes again, all shadowy. These kids had changed. He gentled his voice. "Look, I need a break here."

The boy thrust the gun toward him.

"Trevor! Trevor, tell them, I'm a good father, I'm-I'm-kids, listen. I'm needed. You need me. Yes. Oh, yes. I can be-can replace-replace..."

The boy racked the slide.

"You helped me, Pammy! Hey, you just helped me escape, now you want to do this? This is crazy!"

"Dad, if you don't go-" Trevor pulled in his words. He was choking with tears, Martin could see it.

"Trevor, tell them, I can't survive out there. Nobody can!"

The boy got to his feet. He had a dusting of beard, barely visible in the gathering dark. He held the gun in Martin's face. "Doctor Winters," he said

quietly, "you get out of here."

"Oh, God, listen, please-I've been running and running, I can't run anymore. Trevor, please help me! Help your dad!"

Trevor looked at him out of his strange new eyes, and Martin saw the truth of it: the horror they had seen had made them monsters, all of them, and Trevor was a monster, too.

But then Trevor reached out a hand and touched his father's cheek. It was not the gesture of a boy, but of a man of maturity. "Dad, it's survival of the fittest. The reptilians are going to find you. You can't hide from them, not anywhere, not like we can. If you stay here, you'll lead them right to us."

Martin backed away from the gun. "Get that thing out of my face!"

"Dad, you have to do this." Trevor threw his arms around his father. Martin held him, felt his body shaking.

He looked to Pammy. "Why did you save me? How could you be so cruel?"

"She's a damn asshole," the boy with the gun spat.

"Ride the storm," a voice said from the back. "Same as we did."

"Doctor Winters-"

"Pammy, call me Martin, please."

"Doctor Winters-"

She pulled back the flap of the tent. Outside, Martin saw rain sweeping in almost continuous lightning, and shadows in the nearby clearing that did not look like any shadows he cared to see. "This is crazy. I can't."

"Dad, do it!"

"Trev, no, absolutely not!"

His son was standing before him, looking up at him, his face stained with tears. "Get out," he said. He turned to the boy with the gun. "Give it to me," he said.

"Why?" the boy asked, raising his eyebrows.

"Because I'm the only one who can handle this!" He took the gun and held it to his father's face. "Decide," he said.

Martin looked straight down the barrel. He could see muscles working in Trevor's hand, could see his finger tightening. "Trevor?"

Trevor screwed his eyes shut. "Now, Daddy!"

Martin tried to think-some argument, some appeal, but there were no more arguments, there were no more appeals. That weapon was going to go off in another second, and Trevor was going to have to spend the rest of his

life an orphan like all these other orphans, but knowing, unlike them, that he had taken the life of his own father.

Martin raised his hand. "I'm going," he said softly. "I'm going, son, and I want you to know that I don't understand, but I don't blame you."

"Just go."

"I know you have to look out for each other, that you can't risk the group-
"

"Damn you, GO!"

Trevor's voice was not the same now. He'd been so gentle a boy that he couldn't shoot a pheasant. Now here he was ready to kill his father, and his voice was low and hard, scorched with the pain of somebody who could.

Martin went out into the lightning.

THIRTEEN

DECEMBER 18, MIDNIGHT
A FAMILY AFFAIR

WYLIE STOOD BY THE QUIET waters of the Saunders, trying to get the courage up to try and cross into the other world. If Trevor could come here, then surely he could go in the other direction, and that was urgently necessary, obviously.

He paced, he looked for some sign of the gateway. Martin was out there right now in those deadly woods, and somebody had to save the guy, and Wylie thought it might as well be him.

He could bring Martin across. If nobody over there wanted him, he could live here. Impractical though he was, professorial in a way that Wylie found infuriating, nevertheless the guy didn't deserve this to happen. His own son, doing that to him? Good God.

Why would they save him, then just discard him? And how could Trevor—too gentle to hunt birds, for the love of Pete—ever be that hard on his dad?

Over there, it was storming. Over here, the sky was clear. The moon near the half rode high. It was close on to midnight, and from the house he could hear Brooke singing. She'd once had vocal ambitions, but life and children and a certain lack of volume had kept her away from an operatic career. Her voice was too delicate for the stage, but on a quiet night like this one, it was an angelic wonder.

He knew that she was sitting in a window looking at the moon, waiting for her man to return. She never protested his midnight walks, but they made her uneasy. It was as if her voice was meant as a kind of lifeline, reaching out to him in case he strayed too far from home.

She sang an old lullaby, one that she had sung to Nick and still sang to Kelsey, a song from her deep past, his woman of the tribe of the Celts. It was called "Dereen Day," the little song, and it floated across the softly muttering water like a breeze.

He tossed a stone into the moonlight, listened to it splash in the deeper river. Where was the gateway now? Did it open and close? According to

some of the more outre stuff he'd been reading about 2012, there were gateways all over the world, especially at the points where what were called ley lines met. He was not sure what these lines were. Planet Energy Lines would probably be the simplest definition. New Age Bullshit Lines was another contender.

He stood just where he and Nick had been, and tossed another stone. It gleamed in the moonlight, then splashed gently down.

"Damn."

He heard something, though. He listened. It was on the other side of the river. He'd never heard anything quite like it before.

He listened again.

What was that?

Then he knew, and his blood all but froze in his veins.

That slashing noise could only be an outrider, and it was actually in the gateway, hanging between the worlds.

He hadn't brought a gun, he'd been afraid that shooting it in the other universe would bring on some sort of catastrophe. He'd read all he could about parallel worlds, but little was actually known, except that experiments showed that they were actual, physical places. There was no scientific speculation about what might be in them. He thought that he was the only person who had ever speculated that certain animals must be able to cross this divide, that they had evolved the ability as a threat avoidance mechanism.

Had to be true. He'd seen a weir cat himself, and not far from here, when he was a kid. Damn big, damn black, and damn scary. Then gone-pooof-right before his eyes.

The slashing sound grew louder. Came toward him.

Brooke stopped singing. Her voice floated across the night. "Wylie?"

Jesus, he needed to get back to the house, he needed to get his hands on a gun. Nick had been right to get them ready. That was a smart kid there. He had foresight.

The slashing was now right in front of him-but he couldn't see it. It was loud, it was deafening-and then he could feel tickling, then pricking against his face, his neck. Crying out, he lurched back.

He fell against what felt like iron bars. Where he touched them, they became visible, and he saw that they were not bars, but the legs of what the kids called an outrider. And now the slashing sound was overhead. He was under the damn thing!

He rolled. The slashing came down toward him. He lashed out at it, kicking furiously toward the sound. Where his foot struck, he saw a section of the creature—a gleaming abdomen striped yellow, then a complicated eye, then a hooked claw on the joint of a leg.

Screaming now, he rolled.

There was a pneumatic, liquid hissing and boiling yellow sludge sprayed the ground around him. A stinger the size of his arm slashed his jacket and was gone.

But it was coming back, he could hear the mechanical slashing of the jaws, but more he could feel the thing probing with its legs, and he knew that the next time it attacked, that stinger would impale him.

A roar, huge, echoing off into the woods.

Silence.

Nothing there. Nothing at all.

"Dad?"

"Nick!"

His son scrambled down the hill that dropped to the riverbank. He carried his 10-gauge. He wore pajama bottoms and one house shoe. Behind him came Brooke. "Wylie! Nick! What's happening?"

The moon sailed in splendor, the night birds called, the sacred peace of the Kansas night enclosed them, and the sweet little river rolled on.

Nick threw his arms around his father as Brooke came running up, seeking with her hands, almost hitting him, enraged with fear, then choking back sobs, then holding both of her men.

"An outrider," Nick said. "I heard it and I saw it attacking Dad. Sort of."

Brooke nodded.

"Martin's in trouble," Wylie said.

"We know," Brooke responded.

"We just read it, Dad."

"I was trying to get to him. To cross over."

Faintly, from the house, they all heard Kelsey's voice call out, "Is anybody home?"

"We're coming, Baby," Wylie called, and they all trooped back to the house, where she waited at the kitchen door, her hands on her hips.

She hugged her brother. "Thank you for saving our daddy." Then she went into her mother's arms.

Wylie was not too surprised at what his family knew. Kelsey was eight

and an excellent reader. She was probably reading the book in everybody else's downtime.

Brooke put on water for coffee. "I think we need to tell Matt," she said. "We need some support out here."

"Fighting them is acknowledging them. Believing in them. And the more we do that, the stronger the link to their reality becomes. So getting a posse out here might not be such a good idea."

Brooke poured water into the coffee maker. "Then we need to not try to use that gateway at all."

"She's right, Dad," Nick said.

"But Martin-he's dying out there. Right now."

Nick gave him a long, searching look.

"What?"

"Dad, just let it happen. You're fighting and we can't fight. We have to just write and hope they find it, and hope that it helps them. If one of us takes so much as a single step into that world-"

Kelsey's eyes were wide, and Nick dropped it.

Brooke poured three mugs of coffee and sat down. Kelsey came into her lap.

"Nick, should you-this late?"

Nick gave him another of those searching looks. "You don't remember?"

"He doesn't," Kelsey said. "He can't."

"Remember what? What am I missing?"

So softly that it was almost inaudible, Nick said, "I'm the guardian, Mom is the facilitator, you're the scribe." He glanced toward Kelsey, whose eyes were heavy. "She's the sentinel." He raised his eyebrows. "Remember?"

It didn't make a bit of sense, any of it.

Nick stared into his coffee. "Our sentinel woke me up when she heard the outrider. If she hadn't, you'd be dead now."

He owed them his life. The bond that he felt with his family at this moment was the strongest thing he had ever known, the biggest emotion he had ever had. "Thank you," he said.

Then he heard from upstairs, low voices.

Kelsey had closed her eyes now, and Brooke began singing "Dereen Day" again, her own voice as soft as a breeze, too soft to drown out the conversation Wylie was hearing.

He looked toward the dark stairs, then toward Nick-who jumped up and

ran upstairs.

"Nick!" Wylie followed. Brooke only glanced at them, then continued singing.

Nick stood in front of Wylie's office, his shotgun ported in his arms.

Wylie had known that there wouldn't be anybody there. He went into the office. The voices were louder here, more distinct.

But nothing was breaking through, not here, not this far from a gateway.

"It's my story," he said to Nick. "My story's calling me."

FOURTEEN

DECEMBER 18, LATE
THE MONSTER

WYLIE SAW REPTILIANS, GORGEOUS LIKE snakes are gorgeous, their scales shimmering in a bright room with white tile walls, fluorescent tubes lining the ceiling, a metal autopsy table.

Where was it?

Then he knew, and he wrote: The entrance to their lair is in Cheyenne Mountain, but the place itself is right here, right beneath us. It has to do with the mass of the planet and the power coursing through its veins, which are the ley lines, and the great confluence of lines in this place.

Twelve miles from this house lay the geographical center of the continental United States. In the other human world, their base was beneath it. And in this world, if there was anywhere that they could break through, it would be in this area, where the veil between universes was thinnest.

Wylie's hands flew. He hardly noticed that Nick and Brooke stood behind him, with Kelsey asleep in her mother's arms.

The little team rode thus deep into the night, on the tide of Wylie's words.

He watched his own hands, then watched the screen as the words appeared:

General Samson injected himself, sucked air through his teeth as the familiar agony spread up his arm, then burned through his chest, then invaded his face and head, his whole body. It was a hateful, miserable thing to have to do every day.

Today, he did not expect to expose himself to the human earth's atmosphere, but he was doing it under an order that he could quote precisely: "You will maintain a physical state that allows you free movement in existing planetary conditions at all times." There was nothing about not being prepared for a day because he didn't expect to be in their raw damn air.

"Time?" he barked as he entered the abattoir. His feet squished in blood. The place stank of raw human meat.

"01044," Captain Mazle replied.

Lying before them on a steel table was a body. Samson looked down at it dispassionately. General Al North, big deal. He'd despised the eager creature with its idealism and its pathetically uninformed mind.

He looked at the mouth, noted the drying along the raw line where the lips had been removed and the clotted blood in both eye sockets.

"Mazle!"

"Yessir!"

He gestured. "If you fail-"

"We won't fail."

"It's you, Captain. You. You will fail or you won't."

"Don't threaten me, General."

She came from a powerful family. He didn't like it, but he must not forget it. "I'm doing nothing of the kind."

"You'd like to, though. Anyway, I've already told my father what a complete piece of shit you are."

He tried not to take her threat to heart. Her father could order death to a man in Samson's position. "Captain, I'm sorry if you don't like my style."

"Your style? You have all the charm of a skerix, and you smell a lot worse."

"It's the anitallergens, as I'm sure you are aware. Please be reminded that my responsibilities leave me no choice." He gestured toward General North's ravaged body. "If we're going to get this thing through that gateway, we have no time, so let's get started, Captain, if you don't mind."

"You'd be delighted if I failed, General, of course. But I'm not going to fail."

"This whole operation is in danger of failing, and if it does, not even your father will be able to save you. We still don't have enough slaves and we can't get the personnel in to control the ones we do have because the lenses are old and barely functional. We're losing 20,000 humans a minute and we need another billion in four days."

"Well, that's not my issue, General. My issue is this little writer sitting in the other human earth-you know, the one you people haven't been able to enter usefully for the past fifty goddamn years!" She strode over and slapped the chest of the inert human. "If we don't succeed in this, we will both stand before Echidna herself. You and me, General Samson, and not all the power of Abaddon will save us."

She crossed the room, moving toward a male who stood in silence,

waiting. "Doctor," she said to him, "it's time for you to do your duty. Assuming that you can."

The doctor gleamed in the light, his scales tiny and creamy. She didn't know his name, but his appearance confirmed his class. She would be polite to him. He'd no doubt paid a lot for this job, in hope of sharing in the spoils of earth.

However, the doctor didn't do anything.

"Let's get moving, okay?"

Samson chuckled. "The loyal retainer. Your personnel are as promising as your plans."

"I need more power," the doctor said. "Forty thousand volts at least."

"Do it with twenty."

"Captain-"

"You do it, all you have to do is use care instead of brute force to cover your incompetence. So do it with twenty or you're going on punishment report. I'm sick of your excuses."

"Captain, for this to last-"

"We don't need it to last, we need it to work for a few hours."

The doctor threw a look of desperation toward General Samson, who did not react.

"Okay," Captain Mazle said into her phone, "how much can you give him?" She looked at the doctor. "Compromise: you can get your forty, but only for one minute."

"I applied for two, Captain."

"Do it! Now!"

The doctor drew a narrow silver case from his pocket, opened it, and took out an instrument with a black, tapering handle and a long blade so thin that it was no more than a shimmer in the air. "This specimen has mild arterial damage from cholesterol," he said, "typically associated with advance of age in this species. Do we want to invest-"

"This species," Jennifer snarled. "Where do you get off? It's the only other intelligent species we've found across a billion parallel universes and throughout our own." She gestured toward the remains of Al North. "This creature, if it can successfully do what it's being designed to do, could save us all."

"I hardly think-"

"Because, Doctor, have you heard the news from home? Have you heard

what's happening there?"

"It's an aged specimen."

Samson broke in. "I don't want you two sniping at each other, not when we're working against time and there's so much at stake. We are behind schedule so MOVE."

"I won't be responsible if I'm rushed!"

"Doctor, I'll hand you over to the soultechs."

The doctor's scales shuddered and flushed yellow. Everybody feared the soultechs and their skills to capture the soul and to destroy the soul.

"Under what regulation? You have no right."

"Maybe and maybe not, but I will do it, of that you can be sure."

"You ought to do it anyway," Mazle added.

"Shut up, bitch," Samson said, his voice deceptively mild.

"How dare you!"

"Gonna tell on me again? Daddy's getting old. Daddy's not who he used to be. So maybe Daddy loses his power soon, and I get to kill your fucking little prune of a soul."

"Talk about a hollow threat."

"Are you willing to take the risk?"

"All you do is talk, but the clock doesn't stop, does it, General? You're easily distracted. You're failure prone. Daddy says." She curtsied.

"This thing of yours probably won't even work."

"A mix of biological material from both earths. It's bound to."

"Well, great, because if it doesn't we can all kiss our asses good-bye. We fail here and we die here-in this facility, fifteen hundred cubits beneath gorgeous Kansas."

The doctor began to set out his instruments. "Get support services in here," he said, "if you want this done."

"I'll be your support services. This is extremely classified."

"Nothing like a military idiot for a nurse-assistant," the doctor muttered.

"Maybe I'm better than you think. Maybe I've even been trained."

"I bought my job and your Daddy sure as hell bought yours. If I'm lucky, I might be able to flush a child's craw. Very lucky."

Jennifer opened the small box she had brought in with her, in which there was red liquid. "Look at it, Doctor. This is living material from the one-moon earth."

"You're kidding."

"There are humans crossing between the two worlds," Samson said miserably.

"That's ridiculous," the doctor replied.

"We believe it was a lucky accident. But that might not be the case. The union's hand might be in the matter somewhere."

Mazle, suddenly interested, strode up to him. "You didn't tell me this."

"You didn't need to know," he replied.

"This casts everything in a very different light."

"In what sense?" the doctor asked. He had a stake in the matter, too. They all did.

"If we're defeated by enemy action, Echidna might not be so-well, so hard."

"Harder, never doubt it," Samson said. "I've had experience in the palace."

"I grew up with her last crop of children," Mazle said. "My egg was honored with a place in her basket."

"I've seen them running eggs through that exalted basket. A new clutch every ten seconds."

Mazle turned on her hireling doctor. "Get to it," she shouted at him. "Get to it now!"

He lifted the lid of the black lacquer box, looked at the blood-covered material within. "Won't this explode, if it touches this air?"

"It's not going to happen."

He drew out a long, wet object. A lip. "This is dead."

"So is the cadaver, but we've got its soul."

General Samson thought of the millions of them collected deep under this room. The harvest of bodies had a certain value when terraforming began, but the harvest of souls was truly valuable plunder. It wasn't the doctor's business, though, or the Captain's. For Samson, it was a guarantee of wealth beyond imagination, the kind of wealth that bought an endless supply of perfectly cloned bodies, and with them the sort of eternal life that only the highest nobility enjoyed.

The doctor unrolled his instruments, taking a fleam in his long, narrow fingers, and drawing it along the line of one of General North's eye sockets, removing the dried flesh from the edges of the wound.

Then, using instruments like two golden chopsticks with splayed ends, he drew out a bloody ball. "This eye is not in acceptable condition."

"Acceptable for what, Doctor?" Mazle asked.

"For use!"

"It won't see?"

"Oh, it'll see. For a while. Somewhat. But-look at it, look how it's deteriorating."

"Why is that?" General Samson asked.

"General, I know you go topside because I prepare your allergy kit. Think if you entered their world without your serums. You'd disintegrate, and this eye is disintegrating."

"But if we get it back to its home world, then the rot will stop, won't it?" Mazle asked.

"This is all ridiculous. This can't work."

She persisted. "Can you attach it to the cadaver?"

"Um, sure."

"THEN DO IT NOW GOD DAMN YOU!"

He began using his instrument to touch the left eye socket, gingerly, experimentally. As the doctor touched the socket just with the tip of his probe, his fingers working with a pianist's virtuosity, immense generators that drew their energy directly from the planet's core started up deep beneath the facility.

Tiny sparks appeared around the eye, until the whole rim of the socket was shimmering as if with millions of little stars, each one of which was actually an enormously complicated object in itself, a whole miniature universe consisting of billions upon billions of stars no bigger than dust motes on a gnat's toe.

"Is the tissue going to explode?" Samson asked.

"No," Jennifer said.

"I can't be sure," the doctor responded. "We'll have to see."

"We'll have to see? We could all be killed!" Samson shouted, backing away from the table where the operation was taking place.

"Good," the doctor said. He then rested the instrument in its case and took the eyeball between the gloved fingers of his left hand.

"How dare you say that!" Samson hissed.

"Look, I'm here because I have to be. This whole thing-taking this planet like this-it's wrong. These creatures don't deserve this kind of treatment because of the avarice of a bunch of developers, and to be drafted by the military to do the work of a greedy few, it's sick and it's evil, General, and I

don't give a rat's ass who knows what I think." He inserted the eyeball, which settled into the socket with a sucking plunk. "Well, whaddaya know, it didn't explode. Too bad, we live on."

"I ought to have you disensouled," Samson muttered.

"Ah, the hollow threat again. You two are certainly expert at tossing those around. Problem is, you can't do without a doctor, therefore I'm not in any danger, am I?"

He inserted the second eyeball, then attached the lips. The doctor stared for some time at a photograph.

"Hurry!"

"The lips are too fat."

"Thin them, then!" Samson glared at Mazle. "Time?"

"01048."

Still staring at a photograph of Al North, the doctor pressed a glittering cloth against the lips, the contours of which gradually grew more and more to resemble those of the general.

He then addressed his attention to the genitals and rectum, which were taken out of the box and attached to the body. In the end, it appeared fresh and undamaged.

Finally, he stood back. "It's completed," he said.

"Bring up the soul," Samson said.

Jennifer Mazle spoke into a fist-sized walkie-talkie, and in a few moments two of her soultechs appeared carrying between them the enormous glass tube that contained the living soul of Al North. The light inside the tube no longer flashed and twisted, but clung close to the copper filament, which glowed deep red. "You think this will actually work?"

"Postoperative reensoulment isn't exactly gravitic science," the doctor said. "If you could stuff him for me, Captain."

Jennifer drew Al's body up, and hung the head back over the end of the table until his mouth lolled open. She sprayed into it from an aerosol can gaily painted with hieroglyphics, in colors familiar to anybody in any of the three parallel worlds, because all three of them had evolved Lysol spray. Then she lifted a thick, black cable that was coiled on the floor at the head of the operating table, and pushed it deep down Al's disinfected gullet.

"This soul's been cut the way you want it cut, right, General Samson?" the doctor asked.

"I approved your pattern."

"Because with all these shittily completed new connections, once the soul goes in, the only way you're gonna get it out again is by tearing this body to pieces."

"Am I going to want to do that, Mazle?"

"It's been debrided of every thread suggesting independence."

"And the brain?" Samson asked.

"Its memories have been erased back to two days before it entered Cheyenne Mountain," Mazle replied.

One of the soultechs held the tube, which was about four feet across at its top, tapering to a diameter of perhaps nine inches at its base. Another inserted the cable into the socket.

"How old is that equipment, Mazle?"

"My dad's company buried it in the Egyptian desert, at a place called Dendera."

"When?"

"Eight thousand years ago."

"What cheap bastards you people are. What if the humans had found it?"

"Not too likely."

"Still, eight thousand years, and we have to rely on it. That's criminal irresponsibility, in my opinion."

"The objective is to create wealth for garbage like you to enjoy, General, not spend it on extravagant equipment we can do without. And I can't help it if my family has been running a successful enterprise for twenty generations and you're a propertyless consumer."

The body began heaving. "Don't lose this, Mazle."

She raised her eyebrows. "Doctor?"

"Normal," he snapped.

"Fill it," she said to her soultechs.

One of them began raising the impedance in the tube until the soul was a purple spark dancing on the end of the filament.

The body heaved again, then again.

"You're sure these seizures aren't a problem?" Mazle asked the doctor.

"You can't expect this to work like modern equipment."

Samson snorted derisively, but made no comment.

Slowly, the color of the filament went from purple to violet, then to white. The body's eyes flickered open, the chest gave a great, oily heave. The muscles rippled, the skin flushed, and there came from the gaping mouth a

noise, earsplitting, like a hiss of gas escaping a broken pipe. A scream, Samson realized. That had been a scream.

And then Mazle said, "Look."

The tube that had contained the soul was as black as a shroud. Al North's eyes were open, though, wide open.

General North was crying.

FIFTEEN

DECEMBER 19, PREDAWN
THE STALKER

THEY'D MADE A SORT OF evil Golem, a monster that would be incapable of disobeying its orders. But it was more than that. Wylie saw the idea behind it. They had used the eyes and lips and tongue and the other parts they had managed to cut out of poor John Nunnally from down the road, and grafted them into the body of Al North. Because the result was mixed of flesh from the two earths, they probably hoped that it could move more freely in our world, and get around the fact that, because we ignored them, they could not enter freely here.

Unlike the outrider and the wanderers from the other earth, it would be able to enter this world fully.

So far, the only person who had managed that, seemingly without any restriction, was Trevor. But now there would be another, and this one would come with blood in his eye, a monster in the truest definition of the word.

Wylie wanted to stop writing, he wanted to warn his family, but his fingers moved relentlessly on, taking him where they chose to take him, on a journey he could not stop and could not control.

He was aware that dawn was coming, but he could not stop, he could not speak. He couldn't even turn away from the keyboard. Nick slept in the easy chair that stood in the corner. Brooke, he thought, was in their bedroom.

The problem was that this monster was intended to cross the gateway and come up that hill and come to this house and kill them all, and now they were asleep and they were not reading and so they could not see this warning, and as hard as he tried, he could not call out to them, and he knew that time was of the essence.

Then he was swept away, far away, to the last place he cared to go, almost as if some larger force was at work, a silent wizard controlling the whole horrible catastrophe.

Here, he saw dark, complicated heaps up and down sidewalks, bits and tatters of paper and clothing and all manner of debris blowing in a north

wind, and there was a smell, thick, sweet, that he recognized as the odor of many dead.

He was in New York, the New York of the two-moon earth, and these were people who had leaped from their apartments up and down Fifth Avenue, and there were more of them, Wylie was sure, on every single street everywhere in the city.

Detail struck him-an Armani purse lying open on the sidewalk, a doorman who had shot himself at his post, his brains hardened on the wall behind him, his kind old face crossed by a path of busy ants, a bicycle lying neatly against a lamppost.

He moved with a dreamer's gliding ease but the horrible precision of reality, into a side street. Here was a little restaurant called Henri's, all of its sidewalk tables bare, a full bottle of Cliquot champagne standing on a waiter's station beside a copy of the Times for the day New York got hit, December 6. Headline: BIZARRE TRAGEDIES SHOCK WORLD.

There was a flag snapping before a brownstone, and he could see that it was an art gallery, but he didn't go in, not in this storm-tossed, broken morning.

He fought to stop his hands, to pull away from the laptop. He could feel Al North standing, moving on wobbling legs, coughing, gasping, staggering, see him held up by sleek, creamy Mazle and black, gleaming Samson with their lithe bodies and long claws and their cruel reptile faces.

New York gave way to the ocean, big green waves involved with complicated little waves, and off through the bounding whitecaps the heeling dark shape of a great liner. She wallowed in the storm, and as he drew closer he saw that her bows were well down, and every time a wave struck her streaming flank, a great spray of water shot up, pushed across her by the driving wind like her own private rainstorm.

The people had disappeared from the deck like so much sea foam, but he was not long there, he was inside in the great sweep of a restaurant with chairs waltzing to the roll of the ship. But there were also others there, men in tuxedos, women in long dresses standing at the tall windows of what he supposed was the main restaurant. What was so appalling was that they had been made wanderers here, and had simply starved to death. He could see trenches in the carpeting under their feet. They had continued to walk after hitting the wall. He could see their sunken, gray faces.

I have to get home! Somebody help me!

And then he was on a twisting street, there were pushcarts everywhere, little motor bikes, signs in an unknown language and dogs barking and monkeys chattering in the blaze of day. But the streets were empty, and not only that, water was coming, and the buildings were heaving like women beneath the plunging weight of the night. And small, intricate waves came farther each time the place shook, the careful water licking the motorbikes and the paper signs and the cold sidewalk bakeries where naan had been sold for a few rupees.

India, some great city, and it was dead and it was sinking.

He was alive in it completely. Standing at an intersection. Down the street a luxury building in the chaos-a Four Seasons hotel with curtains blowing out the windows. He looked down at the sloshing water, how very carefully it licked his bare feet, how clear it was despite being floated with cigarette ends and Fanta bottles and plastic bags and sodden, gray disks of naan from the dead bakery.

Then he was in woods. His woods. And he saw a man.

Nick! Brooke! Kelsey! For the love of heaven, wake up!

Al North was walking and his movements were strange, purposeful but odd. He was flickering as he walked, like he wasn't entirely there. When he blundered into brush, he would mutter and groan, and there would be blue flashes all around him. Where his feet touched grassy places, there was flickering blue fire.

"Mommydaddy! Mommydaddy!" Kelsey flew in, throwing her arms around Wylie-who still could not stop typing. And Nick slept on.

"Daddy, Papa Bear is in the woods."

At last Nick woke up. He shook his head. "Hey, Baby," he said to his sister. "Daddy's busy."

Look at the book, Nick! Look this way!

Kelsey went into her brother's lap. "Yeah, Kelsey, it's Papa Bear," Nick said. He reached over and shook Wylie's shoulder. "Dad, you want to stop for a second? A little girl wants to say good morning."

"There's a papa bear in the woods, Daddy."

With every ounce of strength in him, Wylie tried to react. But his hands swept the keys and his voice remained as paralyzed as it always was when this seizure-like state was upon him.

Look at what I'm writing, for the love of all that's holy. He tried all caps, LOOK AT THIS! HELLO, NICK, IT'S AL NORTH IN THE WOODS!!!!

"Why don't we pull out the guns today, Dad," Nick said, the sleepy calm of his voice revealing that he had NOT looked.

"Oh, no, Nick, it was just Papa Bear!"

"We need the guns to be ready, Kelsey."

"Mommy, Nick is scaring me!"

"Nick!" Brooke came in. She glanced at Wylie. He could feel her looking at the screen-but then Kelsey ran to her and she was distracted.

DANGER DANGER DANGER!!!!

There was a change, he thought, in the way they moved.

"Dad, we're gonna go downstairs now."

The three of them left. A moment later, the clattering of the keyboard stopped. He tried to move his hands-and they pulled away.

At last!

He leaped up and dashed down the stairs. "Get the guns out," he shouted, "Al North is in our woods!"

They were in the family room, the three of them. The gun cabinet was open. The Magnum lay on the coffee table. Kelsey sat on the couch with her thumb in her mouth and her knees pulled up under her chin. She had saved them all, Wylie thought. He went to her. "What did Papa Bear look like, honey?"

"He'd been eating strawberries!"

"And how do you know that?"

"His mouth was all red."

The crude surgery.

"Dad," Nick said, "He was just here. He came right up to the house. I thought he was going to come in but something either went wrong or he changed his mind or something."

"Because he didn't come in? You're sure?"

"Of course I'm not sure! Maybe he's in the crawlspace, maybe he's in the attic, maybe he's invisible or something. I have no idea."

"But you didn't hear him come in?" Wylie went to the window.

Nick came beside him. "There," he said after a moment.

"I don't see him."

Then he did-a splash of red in the shadowy woods. His crude surgical wounds. Then he saw also a flash of metal.

There was a figure back among those trees, most certainly, and in its hand was a very big, very ugly gun.

SIXTEEN

DECEMBER 19, MORNING
SOUL HUNT

MARTIN HAD CIRCLED AROUND AWAY from the clearing where he'd seen the moving shapes of the monstrous spiders the kids called outriders. He'd gone up along the ridge line that led eventually to his house. But not in that direction, no way. The idea of going anywhere near that misshapen ruin sickened him.

It had been raining hard, but now that had stopped and second moon was low on the horizon, casting its glare over the tumble of rocks and twisted little trees that he could see below him.

He was trying very hard not to think about the future, of which he obviously had none, and above all not to feel angry at Trevor.

Of course, the son he'd loved, little Trevor, was no more. The strange being who had taken his place knew the world in a whole new way. "But I love you," Martin whispered to the silence. He always would, the little boy whom he had held tight in the scary nights, who had looked at him with joyous, dependent eyes, who had so admired his dad.

No matter how far beyond the edge of the known world Trevor went, Martin would follow in his heart, trying to understand, trying still to give what he could of love and support.

Then it hit him again: He threw me out. He did it. And he asked himself, what could set a son to do such deep evil?

He had never believed in the devil myth. He'd seen that the Christian devil was the horned god of the old witch cult of Northern Europe, nothing more than that, and the horned god was the old Roman god of festivals, Pan. In other words, a pagan deity had been made into the enemy of the new god. Similar things had been done throughout the history of religion, the gods of yesterday becoming today's demons.

Still, it did seem as if something had tipped the balance against the good of the world, and that was why Trevor had done what he had done, and why his own soul was about to be captured or, more likely, to die, and his body to

become somebody else's property.

Thunder clapped and the rain came again, and in the lightning Martin saw deer. Then he heard, high above, the cry of a nighthawk. Dawn was coming, but these new clouds were so thick that it was, in effect, still night.

He clapped his hands over his ears, then turned and pressed his face against the rock. The cleft he was in wasn't even two feet deep and hardly longer than he was tall. Rain splashed against his back, and the wind, now wintry cold, now storm heavy, came in under his torn windbreaker.

He was as miserable, he thought, as it was possible for him to be. And maybe, he thought also, with an upwelling of sorrow, maybe it was, quite simply, time for him to go.

Lindy and little Winnie were gone, something that he was beginning to think of as an always. It had been hard to accept, and Trevor's rejection on top of it was rawest agony.

But how do you manage to commit suicide when you dare not move a muscle? Perhaps if he tried to force his way back into the tent, the kids would shoot him. But how could he make Trevor participate in such a thing?

Another cry came, full of eagerness now, trembling above the rumble of the thunder. Martin shifted, and looked out across the clearing. Somewhere out there was the Saunders, and the Saunders might be running high. When it flooded it was as dangerous as hell, and with this rain it was going to be doing just that.

If he dove in, the rocks would knock him senseless before they broke him to pieces. Hard, but better than gnawing his wrists open.

In relation to the stream, then, where was he? Directions were guesswork, but if he moved down the long slope of the land and stayed in the folds and meadows rather than crossing the ridges, eventually he had to reach the Saunders. Unless, of course, he was taken first.

He looked out across the dark land, and it was an alien place, the surface of another planet, it seemed-this little woodland where he had hiked and hunted all his life, where he lived.

These same trees, these rocks, this speeding storm-all would continue after he ceased to exist. Beetles, hungry in the grass now, would soon find a feast.

He stood up into a sheet of rain, then set off running into the roaring dark. The wind made him stagger and the thunder made him cringe as he plunged along. He would have been blinded because of the rain and the dark, but there

was so much lightning that it enabled him to find his way. He heard another sound, then, that he could not quite make out. It was deeper than thunder, an enormous sound but with hiss in it, and booming, faint but strong enough to shake the lungs.

Lightning flashes revealed a wall of haze. He stopped running, because he was going toward it. Then he glimpsed its shape-it was a thick funnel cloud, immense, and probably not more than a few miles away, whipping toward him across the broken prairie.

He threw back his head and screamed and laughed at the same time, and saw in the storm a black shape sailing easily, a nighthawk. It seemed to be circling him, and he ran toward a stand of trees, to get in where a thing like that couldn't go.

"Oh, God, Lindy, I'm so sorry. I am so damn sorry." He should never have taken them to that damned church, he should have followed his own instincts and hidden his whole family in the storm cellar.

Another flash revealed shapes around him. It was only the briefest vision, but it made him howl like a frantic dog. He whirled round, but they were behind him, too, and closer there. But also, rising into the sky now like a great wall, was the tornado, a looming pillar of death, with darker objects speeding in its funnel. He saw cars, roofing, trees, bodies like akimbo swimmers. He ran toward the storm-then saw just ahead what appeared in the inky rain to be tall bars, and slung among them, a black thickness striped with yellow. A claw of lightning flailed in the clouds, revealing by its silver flicker that he was looking at the raised forelegs of a spider the size of a small horse.

Then he was down, his breath gone, his head smashed against the ground so hard the crack of his jaw sounded like a shot and he saw flaring stars in his stunned eyes.

What breath he had left was sucked out of him as the ground shook, and in another flash of lightning he saw the thing that had been menacing him shoot off into the sky like a demon flying, or rather, sucked away by the advancing tornado.

Light slipped down from the darkness with the shuddering grace of an aurora. Lying on his back, the rain swarming in his eyes, he nevertheless saw his death coming in the great detail with which legend tells us we see our ends, the way the light quested downward like syrup dropping quickly, white and alive, and raindrops when they touched it making hurrying patters of smoke.

But no peace came, not with this strange numbness-and then the seeing, the seeing-a great alteration of vision, and he felt a kind of ecstasy in his skin, and saw a forest of tapered furniture legs, and knew that he was seeing out of his own infant eyes, his mother's room where he had taken his first steps, and it was like flying, this wonderful new state of walking on two legs, and the happiness, oh dear Lord in heaven, childhood is the kingdom, it is the kingdom.

And he saw how very valuable this commodity called memory was, all the gold of his life capable of being tasted, touched, and smelled, feeling just as if it was happening again and always, and he knew that the human being is a device that records perfectly the rustle of every leaf and every sweated passage, the happy flying days and the gray ones, and his last thought was how grand, how incredible, what a miracle and no wonder it took the old earth five billion years to create us.

And then: I am to be boxed, cataloged, and sold like dope to somebody who has lost all happiness, all joy, all decency, and is more hollow inside than death and the zero cold of space. I-my eternal being-is to be sold.

Red. Voices-a voice, a voice of gold, an angelic, perfect voice.

The red became noise, rushing, slapping. Became fire. Fire on his hip. Somebody sanding his skin, no, worse, cutting. They were cutting and they were sliding the knife between the muscle and the skin.

He was being butchered in the field.

Trevor's face beaded with rain, swimming with tears. Trevor, ancient being, journeyer.

Like me.

Journeyers together, father and son.

The wind screamed, rain and hail struck like bullets, and Trevor screamed, "Dig in, Dad, dig in!"

He clutched the ground. All grew silent. It seemed as if the last possible bit of air was pulled from his lungs. He felt his legs rising, heard the deepest rumble he had ever known, and saw the ground just ahead suffused by electric green light.

Whereupon there was an earsplitting roar and a truck crashed down from the sky, its lights as they flashed drilling into the rain. It was huge, an articulated thirty-two-wheel poultry mover.

Then chickens were everywhere.

The clucking, squawking, crowing clumps of feathers and terror flounced

like great, fluffy snowballs in the rain.

The weight left his back. He turned, and a figure was helping him up, a strong male figure. He could not see the face.

"They'll be back any second, they won't stop!"

Trevor ran off into the dark and Martin did not stop to think or even try to understand what had just happened. He followed, running with all his might, and he found that he could see in the dark of the storm just by wanting to, and could run like an angel with the wind at his back, and he could go and go, his heart ticking like a slow engine.

Trevor stopped, grabbed a couple of chickens, and ran on. Martin did the same.

They went into deep and deeper woods. The storm passed, bringing with it first moon, tiny and bright and with it stars, but also, to the north and west, another massive tower of clouds. They never seemed to end, the storms, as if the unbalanced universe itself must expend energy at every level until equilibrium once again prevailed.

Martin heard drumming, and it was soon clear that they were moving toward the tent.

"Trevor, they'll shoot-"

"No, they won't." He snapped the necks of his chickens and laid them next to the tent wall. Martin did the same, then put them beside the others.

At that instant, there was a soul-freezing scream, then another and another and another, and a dozen great shadows dove at them. One of them swooped right into Trevor's face. It screamed, its red eyes burned-and it flew around him, wheeling tight, as another made the same maneuver.

Then Martin was enclosed in cold skin that reeked like garlic and embalming fluid, and claws came against his chest, slicing his jacket and his shirt and slipping into his skin as a knife does into hot wax.

It was fear, they had said, fear that the things used as their beacon. Very well, he would take his fear and put it in a box inside him, and close it.

The thing glared at him, its eyes so close he could see the fire inside, its mouth open, the white tongue shuddering as a maggot does in the sun.

He found, somehow, Franny Glass's Jesus prayer and breathed it again and again, and it took him away from his fear, no matter that he was not a believer, it still bore its power to distract a terrified heart.

The thing leaped back, giving him a look out of the side of its eyes that was mixed of regret and rage, and a touch, even, of humor that this miserable

little man had bested it.

Pam held the tent flap for them as they went into the candlelight and the drumming. There was not a lot of light, but Martin could make out Len Ward and Claire James beating the drums. He noticed Harrow Cougars emblems on the skins.

He saw so clearly, every detail, the eyes of the others gleaming in the candlelight, and he recognized their youth in their scent, the young, powerful smell of his son, the blooming scent of the girls, and he saw them, really saw them-and he knew that only at a few moments in his life had he ever seen people with this clarity, this love, and the abiding compassion that he felt now.

Michael Ryan, the Cougars' star tackle said, "Hey," and looked up at him with those strange, shadowed eyes they all had.

Then Pammy began to clap. Trevor threw his arms around his dad. Except for the drummers, they all clapped.

"What's going on?" he asked.

"Dad," Trevor said, "please try to understand" Tears streamed down his face. Martin embraced him. Then a girl he thought was called Crystal something came over. She had a mirror in one hand and a candle in the other.

A face looked back at him. It was dirty, wet, thin and covered by a day's old growth of beard. It was the face of a street person, a hobo, somebody from the lower depths, a miner in the dark of the earth.

The eyes looking back at him gleamed darkly, very darkly, in the yellow candlelight. In fact, they were as black as coals, his eyes, just like those of the kids around him, and his son.

His soul seemed to fill the air of the tent, to mingle with their souls, and it was like picking up a song you'd known always, and singing again.

Martin understood, now, what had been done to him-the same thing that had happened to these kids when the light tried and failed to take him.

Something was gone, though. It had certainly taken something. Not his essence. He was still Martin Winters. He felt lighter, though, and far more in touch with the world-not the world of streets and companies and archaeological digs, however. Rather this world of the here and now. The rain, the trees, the kids in the tent.

He was alive, Martin was, more alive than he had ever been before.

They hadn't discarded him, not at all. Rather, they had done to him what natural human societies had always done to their shamen and their priests,

their healers. They had made him face death, and so come free.

That was the difference. The kids in this tent had not been captured by the light, but rather made free by its failure to capture them.

Martin was free, too. Trevor was smiling at him. His son's face was soaked with tears. It had been a near thing out there. It had been real. He might not have made it.

"Thank you," he said to them all, and to his son. Trevor came to him, and leaned against him, and instantly the exhausted boy was asleep in his father's arms. Martin slept, too, and the lives of the kids swept on, racing toward the destiny that awaited them, now, in just a matter of hours, that would bring them new life, or extinguish forever these last few sparks of the human soul.

PART THREE

ABADDON

And they had tails like unto scorpions, and there were stings in their tails: and their power was to hurt men five months. And they had a king over them, which is the angel of the bottomless pit, whose name in the Hebrew tongue is Abaddon, but in the Greek tongue hath his name Apollyon. One woe is past; and, behold, there come two woes more hereafter.

-Revelation 9: 10-12

*With an host of furious fancies
Whereof I am commander,
With a burning spear, and a horse of air
To the wilderness I wander.
By a knight of ghosts and shadows
I summoned am to Tourney,
Ten leagues beyond the wide world's end-
Methinks it is no journey.*

-ANONYMOUS "Tom O'Bedlam's Song"

SEVENTEEN

DECEMBER 20
TERROR

GENERAL SAMSON HAD GOTTEN THE summons back in the daily packet from Abaddon. As usual, it had been choked with demands and threats. But this time, on top of the bundle that had been thrown through the small, highly stable gateway that was here beneath the geographic center of the Northern Hemisphere on all three worlds, was a sheet of thick yellow paper.

He had known instantly what it was: a summons from Echidna.

He now sat miserably on a packed bus, on his way to the sort of meeting from which one should not expect to return.

He had come back not only to his own beloved form, the marvelous darkness of his scales, the proud flash of his bright red eyes, but also to a world where he did not need to dose himself with antiallergen, then remained rigidly shifted for hours, all the while itching like mad in every stifled scale on his body.

He didn't want to die. But more, he was afraid of torture. And they would torture him, of course, as a lesson and warning to others. It would happen in some auditorium full of laughing, cheering underclass, delighted to witness the abnegation of an overlord.

They would rip off his still-living skin and make him dance in the cold, and kids would come up and rub salt into his white, exposed musculature. They would roast his haunches and force him to attend the banquet dressed, no doubt, as a clown.

It was she, that damned high-born Captain Mazle, she and her accursed father who had engineered this.

He had hoped that a victory over the humans would bring him real wealth at last, and the power that went with it.

Instead, the starving billions who were marked to go swarming through the fourteen huge gateways when they opened tomorrow would instead have to be kept here, and their rage and their rebellion would only become worse.

And he, of course, would have no souls to sell.

But he wasn't defeated, not just yet. He might be able to talk his way back to earth, because even if he couldn't open the gateways to the people of Abaddon, he could bring back all those millions of souls, full of memories of love and joy, treasures that were not available to anybody here.

But not right now. Right now, he was just another miserable, frightened man riding a rickety bus down the Avenue of the Marches to Government House, one among fifty in the old vehicle. He listened to the gas hissing uneasily out of the tank on the roof-coal gas, supposedly less polluting than the powerful fuels available to the elite. Actually, nobody cared about the brown sky. What they cared about was the fact that coal gas was cheap and, like sails at sea, therefore the best way to transport underworlders.

On both sides of the broad street stood government buildings, and ahead the grandest of them all, where he was supposedly to receive new orders.

There was a lot of traffic in the jammed bus lanes. Occasionally, also, an authority vehicle raced past in the restricted lanes. From time to time, an aircar whistled past overhead. He didn't even look up. He deserved that life. He deserved a place among the elite, even on the Board of Directors itself.

They finally came to the Street of Joy, marking the center of the long government esplanade. The wailing cry of a siren caused the bus to stop with a jerk. Children in white-suited rows sang an anthem praising the achievements of some committee or other. The tune was always the same, but the committees changed with the political climate.

The Standing Space was crammed with as many as five thousand naked underworlders, all bound, some screaming their innocence, others in tears, others stoic. Lawyers in the bloodred hoods that signified their profession moved about among the committeemen and their friends trying to get various orders signed, buying and selling the condemned. Every so often, one of them sent a runner into the rows of prisoners, generally coming back with a young woman to be raped to death at a party later.

The stench of prisoners' vomit was sour on the air. A platoon of Young Leaders in their sky-brown uniforms and black caps marched up to the first row, swinging their arms and singing with the choir, then began slitting throats, causing one and then the next prisoner to spray blood and writhe, then slump. The boys were getting kill badges.

There'd been a battle with the Unionists last night, a ferocious encounter at the wall, which we appeared to have won. Of course, it was always

impossible to be certain, but such a cheerful Execution Morning did suggest that the news was true.

The Union was nearly finished, reduced to a few hills, nothing more than a park, really. It was surrounded by the vast planetary city that was the Corporation in all its might, its wealth beyond imagination, its poverty beyond belief.

That was why they had to expand into two-moon earth. That population pressure had to be relieved, or there was going to be an explosion here and Echidna and her class were going to have their own throats slit.

Having each done ten or fifteen victims before their parents' cameras, the boys withdrew. One, who had been urinated on, remained kicking his victim to death. After he went strutting back to the grandstand, a soldier like Samson himself, also a general, squeezed the bulb that activated a Multi Projectile Delivery System that stood on a rickety army wagon. Instantly and without a sound, the five thousand condemned were turned to meat. Then he snapped his whip, and his great orange syrinx warbled and hooted angrily, but trundled off happily enough when it realized they were headed back to the Central Vehicle Pool.

In the bus, total silence. These were all blue-pass people, all from the underworld neighborhoods just like the people who were now being harvested by the bone spiders that had come lumbering up out of their warrens at the first scent of blood. The animals would strip off the meat and leave it behind, and carry the bones into their lairs.

Every underworlder alive was afraid he would end up in the next collection. After all, the executed had been tortured, most of them by having capsicum injected under their skin and into their anuses, or pellets of plutonium pressed into their eyeballs. He'd seen the globular orange messes that had replaced many of their eyes, had watched the steam curling up from their bobbing heads.

You'd say anything, given that kind of pain. And "anything" would invariably include implicating anybody you were asked to implicate in whatever plot might be imagined.

He might have been implicated. Maybe it wasn't political at all. Maybe that was why he was here.

The bus started with a jerk and a loud mechanical whine. The roadside was littered with the remains of exploded buses, inside some of which could be seen the pale green bones of the dead. Behind them, shrill screaming

began. The elite had flitted away in their aircars, and now people rushed out of side streets, their scavenging permits flapping on their backs, meat bags in their arms. There would be soup tonight.

The bus shuddered and popped. Would it explode?

He found himself wondering what he wanted more, an end to this misery of a life, or a chance to talk his way out of whatever trouble he was in.

Now came the four tones that preceded Morale Service announcements. Sick though everybody was of Morale Service and its lies, they all clapped and cheered.

The bus's speakers crackled. There was a brief hiss, then a moment of earsplitting feedback. "Are you on your way to your designated earth station?" a woman's recorded voice shrieked, crazed with delight. "Attention please, earth stations are now receiving colonists. You must be at your earth station by midnight tonight."

All the screens on the bus came to life with children singing and dancing in some green fantasy of a world. "Yes, more and more people every day are buying their tickets. Earth is huge and it's rich and there's room for all. Room for all in the new lands. Room to dream."

Samson knew the reality, of course. Much of the existing landmass was being sunk into the sea, exposing vast ocean flats that would be where these poor fools would have to build. The reason was simple-the sea floor was full of methane and sulfur hydrates, which would melt in the air and change the atmosphere to the same richly sulfurous mix enjoyed here on Abaddon.

Cheap terraforming, in other words.

Each family that went would receive a gaggle of human slaves, which would die in a few weeks or months.

At least human meat was edible, if you could manage to get used to that creamy texture.

"Building One."

Samson got to his feet, then stepped out. He hurried across the wide, black tarmac. Somewhere in the depths of the city, there was the roar of an explosion, followed by wailing sirens and the appearance of hundreds of bright red police aircars hovering like great wasps, their grapples dangling ominously. Do anything that appeared menacing, and they were liable to snatch you up and drop you a hundred leagues out at sea. They'd go in low so that you'd drown instead of die of impact, and the press would show up to tape the spectacle. Or they'd drop you amid pleasure craft, and people would

use you for target practice.

The reason for all the brutality was simple: fear works. Ten thousand years ago the Corporation had been a loose confederation of free companies, even some tribes and even more ancient political units. But with growth had come mergers, and then the disastrous battle over the two human earths that had been lost, in the end, by all the combatants. This had been followed by long years of population growth coupled with a gradual consolidation of power, until now, when an elite million ruled a land jammed with three billion underclass.

Attempting to seem confident, he strode up the steps, brushing at his uniform, trying to remind himself that it meant something in a government context. Here, a general's service stripes were important. After all, they'd put him in charge of what was arguably the most important project in corporate history.

So why was his craw filling with vomit?

"Samson, General," he managed to mutter when he reached the desk. He handed over his orders, his passport, his clearances. The young clerk was a pureblood, dressed in the blue silk uniform of the intelligence service. He had fine, white scales, and eyes that had been surgically altered from piercing gold to a much more genteel eggshell blue.

He read the documents, then pressed a button on his desk. Two guards appeared, one an underworlder like him in a black uniform, the other upper class and dressed in the lovely green that the fashionistas called Memory of the Sky. In a military uniform, it indicated serious power.

The only place you could still see a green sky on Abaddon was in the very heart of the Union, amid the fields and the streams.

The clerk handed them Samson's papers. He followed them back through the lift area to a private elevator that had an ominous, even legendary, reputation. Many a soldier had ascended to these highest floors and never returned. As he stepped into the pink marble interior, he entered another world, where every detail was sumptuous and perfect. The lift had no controls. It was controlled from elsewhere, and he stood to attention as it rose.

He thought to review his life, but could not stop his mind from imagining torture and how he would fail in its rigors, and they would all see and know the cowardice that, in his most secret being, he felt defined him. He thought about death constantly, wondered at what it would mean no longer to be, and

feared above all things the destruction of his soul.

This was why he had risen so extraordinarily high. It was his willingness-which he detested in himself-to do anything he needed to do to prove his loyalty to his betters, even if it involved lies, cruelty, and pointless killing. His journey upward was a desperate flight to safety.

The doors opened and bright light glared into his face. He tried to control his hearts, but could not. The rhythms synchronized into panic mode, and he knew that his state of fear would be flaring alarms in some nearby monitoring center.

What he thought might be a board member came and stood before the light, so that he was a black shadow to Samson, his face unrecognizable. "You have twenty hours before the gateways open. You're not even close to being ready."

Samson took a breath. He thought he knew that voice. He thought it was Beleth himself, the master of all the males, Echidna's husband. In effect, the king of the world. "We're right on schedule, Sir."

"You're a liar, of course."

He thought as quickly and carefully as he could, considering that his mind was racing with fear. "They can't defeat us, they're only human."

"That's your mistake and I'm surprised at you. We knew you were arrogant and venial, but who isn't? I had not taken you to be stupid."

"No, Sir."

"And neither are the earth people. The full-blooded earth human is smarter than we are, as you know. They lack only experience, this new species, to make themselves masters of the three worlds. Remember that they already have two, which we do not."

He seemed to want to engage in conversation. Samson was compelled to respond. He cast around for something positive to say. "They are a more advanced form than us, it's true, Sir. But they have no idea how easy it is for them to pass through gateways. They're ignorant."

"Thanks to the work of our forebears. Can you imagine what a human army would do here? Bringing hope, happiness even, to people who cannot be controlled except by fear?"

"That would be an extraordinary misfortune. But I don't think it's one we need to worry about. They are far from realizing that they can use gateways at will, at any time."

"How about the Union intelligence agent in the one-moon universe?"

"That's going well, Sir."

"In what sense, General? Have you killed him?"

"I expect that to be confirmed on my return," Samson replied.

"But it's not confirmed now?"

"No, it's confirmed, in the sense that we got an assassin through. So, yes, I can confirm that."

"How did you get an assassin into a place that we can't penetrate, General?"

"Well, we are able to, in a limited way. And remember, the closer to the moment of passage we come, the easier it is."

"So the agent is definitely no longer a problem? You can guarantee this?"

Samson forced acid back out of his craw and into his churning stomach. This agent had been placed only a few leagues from the center of the whole operation, and not only that, had somehow been penetrated into the inaccessible one-moon universe where he lived in direct parallel to the single most dangerous human being on the two-moon earth, Martin Winters.

It was quite an achievement. And the problem was, he had no idea at all whether or not the agent was dead. But North was a brilliant achievement, too, and he had to believe that the attack had worked.

"Can you guarantee it, General Samson?"

The only acceptable answer was "yes." Anything less could bring torture and death. "The agent is dead."

"Then let me report the good news to my wife. She's been very concerned about this aspect of the situation."

Samson fought for air. He needed to sit down, but there were no chairs here. As it was supposed to, the piercing light was making him feel naked and exposed. It was forcing him to shiver his scales, lest his body temperature rise and make him slow.

There came, from behind the horrible shadow, piercing female laughter.

It could only be her.

Then the light went out. As Samson's eyes got used to the dimness, he had a great surprise: he saw that the entire Board of Directors was present. All of them, even Mazle's father, he noted.

Behind the assembled Board, an enormous window overlooked the Sea of Anubis, and a great longing entered Samson when he saw a ship, a pearl-white jewel tiny in the sun, its red sails rotating slowly in what must be a light breeze. How lovely their lives must be, those simple sailors, even the

ones whose jobs would make their time short, the pitch makers and the rope weavers and the scrapers. At least they did not risk their souls, not like a politician or a general.

"Come," Echidna said. She actually took his hand. Up close, she was dazzling, a shimmering complex of the smallest imaginable scales, blushed pink under her high cheekbones, delicate blue around her smiling, sparkling, delightfully pale pink eyes. Her body, easily visible beneath a floating gown of gossamer gold thread, was superbly curved, breathtakingly desirable. She was so vastly, incredibly different from the humble women on the bus with their dull scales, sagging with untended molt, that she might as well have been an entirely different species, not a seraph at all, but something from some grander and more extraordinary world than Abaddon.

He followed her past the boardroom and into the private apartments, feeling her strong, cold hand in his. He forced his neck scales as tight as he could, but the musty scent of his desire still oozed from his pulsing glands. It made her throw back her head and laugh, and made Beleth nudge him from behind, and hiss.

Children's toys littered the legendary floor of pure gold, and kids playing darted between the feet of their elders. In the family shrine at the far end of the great room, the mistress's women attended their business, some sewing quietly while warming her latest clutch of black eggs, others listening discreetly to the proceedings.

"He will sit," Echidna called as they approached her ladies.

Chairs were brought by two young fashionistas, so highly bred that their scales were like white cream, almost as pale as hers.

He found himself surrounded by gorgeous women. These really high aristocrats made even a highly bred noble like Mazle seem dreary.

He strove not to appear as he felt, thunderstruck.

Some of the children gathered, interested, no doubt, to watch whatever was about to befall him. Because he had only won the first round.

He looked across the impassive faces of the board members. Nobody was readable. All eyes stared straight ahead. The ultimate power rarely acted, and when it did, all were silent. Whatever she did, there would be absolute approval. Debate would end.

She glared down at him, then leaned forward slightly and stroked his neck. "Such interesting scales," she murmured, and he saw something in her eyes other than the contempt he had expected. It crossed his mind that the old

Echidna might have died and been replaced by another clone, and perhaps also another soul, one that might use the memories stored in the brain quite differently. With the high born, there was no way to tell who actually possessed a given identity at a given time, so this might not even be the person who had favored him and promoted him in the first place. She might consider that her memories of doing those things represented a mistake on the part of a predecessor.

She looked into his face. "I've seen no lying from you, but I have seen impetuosity and arrogance. I see that you despise us of good blood. You do, don't you?"

What should he say? The light was low, so any nervous fluttering of his scales would not be seen.

"Of course I hate you. But I am loyal to you and to us all. I am loyal to our beloved Abaddon."

She tightened her grip on his neck. He began to feel his throat closing. She knew just what she was doing, the way she dug her thumbs down into the sack of his craw, pressing it up so that it would be sucked down into his windpipe and make the throttling require less force. Easier on the hands.

He could no longer breathe. He waited. His penis stirred. Sex and death were so close. He felt his sheath draw back. Two of the girls giggled. One of them stretched herself. Children gathered closer.

Time passed. She wasn't allowing even a trickle of air. Flashes came into his eyes, and air hunger now caused his body to torsion, throwing his abdomen forward and his head back. Amid peals of childish laughter, his bladder evacuated.

Air rushed in, sputtering as the sac of his craw fluttered in his windpipe, then snapped back where it belonged. He coughed, tried to gain control of himself, then flounced back, helplessly kicking the air.

As he gagged and spat mucus, everybody laughed. Kids ran up and spat on him and slapped him as he crawled to his feet.

"He pissed on us, Momma," one of them yelled. Then another, older one, "Kill him, damn you, you old hag!"

"Nobody kills him," she muttered.

A boy, his face flushing with eagerness, came toward him with a throating knife. "Let me! Let me get blooded, Mom!"

"Stay away from him, you little shit."

"Dad, listen to her!"

"Obey your mother," Beleth said.

"You people are such assholes."

"Watch your mouth, boy," Beleth said. "I'd just love to beat the shit out of you."

"You don't have the right."

"Shut up, both of you," Echidna snarled. She spat. "I'll let your sisters whip you senseless, Marol."

Little girls swarmed her, dancing around her, pulling at her skirts. "Oh, mommy, mommy please! Yes, he deserves it, please!"

"Later, we'll talk it over." She clapped her hands once, and all the children withdrew. "Now listen to me, Samson. We need you to go back there and win this thing."

"I will, ma'am."

"How dare you lie to me!"

His blood literally dropped to his feet.

"Look at him," one of the fashionistas hissed, "he's scared to die."

He thought he'd passed this hurdle. But the agent was small stuff compared to the larger problem, which was that nothing close to a billion people were going to make it through the gateways, because two-moon earth was not ready, not even close, and that was the real reason he'd been called back. "I will not get a billion people onto earth, it's true. But I have something else that I am going to bring out. Echidna, I have the greatest treasure in history, and I lay it at your feet."

"This had better be good, Samson. Hyperbole annoys me."

"I have human souls in captivity. Beautiful, healthy ones."

Her eyes widened. The only ones Abaddon ever captured were ugly, and had to be sifted for the good bits, a sweet memory here, a compassionate act there—the things that smelled and tasted so good, that could be relived endlessly, like a delicious food that would never be finished.

"A few souls changes nothing." She sighed. "Let's get him stripped. Get the skin off, I haven't got all night."

Somebody grabbed him from behind. The boy who had wanted to kill him came forward, a silver molting hook in his hand. He smiled up at Samson. "This is not gonna be fast, you shit."

"Ma'am! Wait, ma'am. I have more than a few. More, ma'am!"

She gestured toward the eager boy, dismissing him.

"Mom!"

"How many do you have, Samson?"

"Ma'am, I have ten million of them."

The silence that fell was absolute. This was, indeed, the greatest treasure in the history of the world.

"Ten million good souls?"

"Ma'am, any one of them is better, more fulfilling, more delicious than the best you have ever eaten in all your memory. Fabulous, rich emotions. Delight, love, sweetness, all the best stuff, ma'am."

He saw the calculation in her eyes. "Where are they?"

He could feel the boy getting ready, could see his scales shimmer with eagerness. He had to be careful, here, or she would kill him for insolence. "Ma'am, they are under the stable gateway, ready to be brought through. I have them connected to two-moon earth's core. They cannot escape. I can bring them through."

She gestured toward the boy, who swiped the air in front of Samson's torso, then hurled the molting hook at one of the board members, who dodged it, hissing and spitting.

The boy glared at him as he adjusted his uniform. "You'll be back, bitch," he said. "And when you get back you an' me, we got a date, do." He ran his fingers across Samson's throat.

Samson backed away, bowing until he was off the gold floor and onto the marble. When he saw its blackness, he almost wept with relief.

On the way down in the lift, fear became rage. How dare they, those grunting, greedy oru. He'd like to tear their living skin off their bodies with a molting hook, even her, yes, especially her. Tear it right off!

The elevator opened and he stepped out into the lobby. As he crossed it toward the great steel doors, he gloried in the fact that the guards were now indifferent to him. Delightfully indifferent.

The doors slid open to the wide esplanade of freedom, and he went through. So beautiful, life, despite the pain, the losses, the struggle, all of it. Life itself unfolding, so sweet.

How dare they throw away his life for the amusement of a mere child! His life! As he descended the steps, part of him wanted to cry out to the brown sky, "I lived, I went to the top on a black ticket and I lived!" He did not cry out, though. As befitted a general, he strode.

He was walking toward the bus stop when a wonderful Shu, the best aircar in the world, came swooping down so close that he had to duck, lest he

be clipped by it.

It stopped, though, and hung there, its yellow surface gleaming, its black windows revealing nothing of the interior. Then the passenger door went up and a pureblood leaned out. "Hey, you Marshal Samson?"

"I'm General Samson."

"I've got orders to deliver this to a Marshal Samson. You got your number ID?"

Samson produced it.

The salesman thrust the ID card into the slot. Samson heard the car's confirming bell. The salesman hopped out. "She's yours, Marshal. Ever driven before?"

He forced himself not to gape. It was stunning: instead of killing him, she'd given him a gift of one of the finest sports vehicles in the world, a wonderful, beautifully made creation that belonged only to the highest of the upper classes. Merely possessing such a thing raised you into the aristocracy.

He entered the car. The fine interior gleamed with exotic metals, greens and silvers and golds. The leather was pale and as supple as cream. Human, without a doubt, and young.

He glanced across the dashboard, a forest of gleaming gold buttons, none of which he understood. Apparently, the car had every option you could imagine. "I have no idea how to run this."

"You don't need to know. It's ensouled."

He was momentarily too amazed to speak. Shu ensouled perhaps a thousand vehicles a year. Such a car would cost a man like him ten lifetimes of income. Driving it identified him as one of the world's most powerful, most elite people.

"Is the soul...human?"

The salesman laughed. "Maybe next time, mister. It's a good one, though. Very smart, very compliant. You need to ride a human ensouled vehicle very carefully, you know. They're fast and really, really clever, but they can be tricky."

Indeed, they'd been known to smash themselves to bits in the hope of getting release. It didn't work, of course. They couldn't release themselves.

But they ran a vehicle superbly.

Experimentally, tentatively, he asked the car, "Are you there?"

There was a pause, then, "Who are you?"

"The new owner. Take me home."

It hesitated a moment as it read his ID. "Yes," it said. He did not ask it why it had been put into a machine. He didn't really care, as long as it did its work. It was his now, that was all that mattered.

As he soared upward, his engines singing, he called Echidna.

"You're welcome," she said into his ear.

"How can I ever thank you?"

"I can think of two ways."

"Which are?"

"Open both human worlds, and I will grant you an entire city. I will break the law of blood, and let you wear Sky."

The car swooped low into the dark streets of the back city, the real city. People looked up, some knelt, all bowed, pulled off hats, raised their open hands to sign loyalty to the Corporation, for nobody but an owner could be driving such a vehicle, a car glowing with the violet light of a soul.

The door opened. He got out. Wide, amazed eyes. Smiles everywhere, then cheering as his neighbors came to their windows, looked down, and saw his triumph. Success honored all.

He climbed the narrow stair, thick with the smell of boiling soup, and went into his apartment. There were meat parties everywhere in the street. The day's executions had favored his neighborhood, and they all thought he was the reason, and he was cheered from every door.

Who knew, maybe Echidna had given such an order.

The gateway was open, waiting. He walked up to it. The stress waves shimmered evenly. It was as clear as he had ever seen. The approaching date was really having an effect now.

Then he realized what he was looking at. Mazle stood in their cramped headquarters space beneath two-moon earth. She was looking down at the autopsy table. On it lay the body of Al North.

He felt sick. That should not be.

He stepped through. "Is the agent dead?"

"You lived!"

"Is the agent dead?"

She gestured toward North. "This needs fixing."

"I told her-" His mind returned to the sick, vicious boy, waiting for him with his molting hook. He shuddered. "Never mind what I told her."

"We're going to try replacing the brain entirely," she said. "This almost has to get rid of the residual will. Then it's going to work."

"It had better work."

"Yeah, because if it doesn't Daddy's gonna take away all your toys. And if you ever lie to my aunt again, I'll help my unpleasant little cousin take off your skin, and I'll eat it before your eyes." She smiled. "You're nothing, Samson, you and your ugly little car."

He bowed to her.

EIGHTEEN

DECEMBER 19
ORIGINS UNKNOWN

NICK SAT READING THE PAGES his father had just finished. Over the past two weeks, Dad had slept maybe six hours, but he was asleep now, sprawled like a corpse across his keyboard. Of course, corpses don't snore.

It was four in the morning and two weeks ago he wouldn't have dared to get out of bed and venture into the dark, but things had changed, hadn't they?

"What's going on?"

"Hi, Mom."

"What're you doing up?"

"Dad's written about being an intelligence agent."

"Anything more than what we've already remembered?"

"Not really. When I came in here he was sound asleep and snoring, and he was writing." He gestured toward the laptop. "This. It's a description of Samson going to the demon earth. It's horrible, Mom, really horrible."

"Wylie, wake up."

"Mom, leave him."

"I don't want him like that, he needs a bed."

"Look, if you disturb him, he's just gonna start writing again. He's gonna have a heart attack. Let him sleep."

She leaned over and read a few pages. "God, what a place. Abaddon."

"I googled it, it means 'the abyss.' At least, it does in our language. In seraph, it probably means 'Home,' or 'Nice Place' or something. They're cannibals, and even the children torture and kill. It's, like, play for them. Like a video game to them, to skin a real person alive. They're loathsome, Mom, and we do not want them here."

She looked down at her husband. "I'm gonna get him a blanket at least." She went to the linen closet and pulled one down. They covered him together, mother and son, and Nick slid the cushion from his chair under his head.

"I'm sober, I swear," he murmured.

"It's okay honey, it's good."

"Let's fuck, baby."

"Sh!"

He gave a long snore and smacked his lips.

"I grew up with him, remember, Mom."

She tried to laugh, almost succeeded.

"Mom, the thing we have to ask ourselves is, not only who Dad is and who we are, but what we're supposed to be doing, because I have to tell you, I am starting to realize that I feel this incredible kinship with somebody in his book, and I want to understand what's going on. Trevor is, like, my soul brother or something. And another thing-this is dangerous. What happened with Al North trying to come in here, and that thing that came after Dad-it's very, very dangerous."

At that moment, there came a thin sound, almost like the wail of a smoke alarm, and for a split instant that's what they all thought it was. Then Nick was running, they were all running. Kelsey stood in the hall outside her bedroom clutching Bearish and making this terrible sound, a noise Wylie had never heard his little girl make before, and which he had not known she could make.

Brooke leaped to her and enclosed her in her arms, and Kelsey sobbed the ragged sob of a child so terrified that not even her mother could comfort her. "There's hands in my room and they were touching me and touching me, and when I threw Bearish at them, I saw a face and it was awful."

"Oh, honey, honey, there's nothing in your room, look, it's empty in there, the light is on and it's empty."

"You saw just hands, Kelsey?"

"Yes, Daddy. They tried to grab me, and when they touched me I saw them. Then they were gone."

"And the face, you saw it-"

"When Bearish hit it. It was bloody and awful, Daddy, it was horrible."

He looked at Nick. Nick looked back, his eyes steady with understanding. But he said nothing.

No, and that was right. They had to be careful here, extremely so, because there was a person in the house that they could not see, who had one goal, and that was to kill.

"Let's go downstairs and make cocoa," Nick said. "We need some cocoa."

"Nicholas, it's late and Kelsey's tired."

Kelsey threw her arms around her mother's waist. "Mommy, yes!"

"Just one cup, then, and we have to make it quick. Because my girl needs her beauty sleep." She picked Kelsey up, and her little girl snuggled into her arms.

As they trooped downstairs, Nick asked Wylie, "Are we going hunting in the morning?"

"Hunting," his mother said, "on a school day?"

"Not for middle school," Nick replied smoothly. "Teacher's Day."

Wylie understood exactly what his son was doing. He could not communicate openly, not if somebody was in here and they couldn't see him and they were listening. "We could go for pheasant," he said quickly. "Maybe we'll put a bird on the table. The guns are ready, so we can get an early start."

"Let's pull 'em out, then," Nick said.

Wylie could feel the presence in the house just as clearly as Nick apparently could. An invisible something, and it was close, it was right on top of them.

He unlocked the gun cabinet and pulled out one of their birders and tossed it to Nick, then got himself a 12-gauge. "Get behind us," he said to Brooke.

"Excuse me?"

"Mom, get behind us!"

Wylie saw movement, very clear, not ten inches from his face. An eye, part of a face. And he knew something about who was here: it was a man, and he was horribly scarred. Al North was back for a second try.

Then there was a hand around his wrist. He looked down at it, felt the steel of the grip. "It's on Daddy," Kelsey screamed, and this time Brooke saw it and she screamed, too, and not just screamed, she howled.

Nick fired into the seemingly empty space where the figure had to be, and there were a series of purple flashes in the general shape of a man, but the buckshot passed through him and smacked the far wall of the family room, shattering the big front window and leaving a trench in the top of the couch.

The hand had gone.

Nick grunted and he was up against the wall, he was being throttled, and where the body of the intruder touched his, you could see edges of a black, tattered uniform. Wylie was not a huge man, not as big as Al North, but he waded in. From behind, he put his arms around North's neck and pulled his head back, gouging into his face, and as he did that, the face and head appeared, the stretched neck, arteries pulsing hard, and the eyes, surrounded

by scar tissue and dripping blood.

Seeing this, Brooke went into the gun cabinet and brought out the big silver magnum she'd fussed and fretted for years about him even having. She waved it, not having any idea how to use it.

WHAM! WHAM! WHAM!

Amid a showering mass of sparks, the figure flew across the room, slamming against the TV with a huge crash. It lay there, the left half of the head and face visible down to the left shoulder. Both hands and most of the left arm could be seen, also, until the hand moved across where the stomach would be, slipping into an envelope of invisibility, then coming out again with blood on the fingers.

The one visible eye was gray, glaring ferociously out of a blood-ringed socket. The surgery was crude and cruel. Until now Wylie had not realized just how poor their doctor had been.

The hand shot toward him again, like the head of a snake, and there was a knife in it, and the knife sailed at him, spinning, flashing metal, and clanged against the wall. There was a spitting, sparking sound and a burst of blue electric fire, and where it hit, reality seemed to peel back.

Where there had been a blank wall, there was now a door with a blue-shimmering frame, and beyond it a kitchen with a twisted, melted countertop, a toaster that looked like melted wax, a Sub-Zero fridge that had been clawed and melted and was hanging open.

There were people there, and one of them looked in this direction. Wylie knew what he was seeing, and it was even more terrible than he had imagined when he was writing about these humanoid reptiles, because it was so sleek, so beautiful with its shimmering pale skin, and so terrible with its empty, hard eyes, quick eyes that focused fast on this room, then came alive with a glitter that could only reflect eager delight.

Seraph, they called themselves, but we had names for them, from every culture in the world, from every time in history, but all these names amounted to the same thing, the one word that described something so exquisite and yet so ugly: he was looking straight into the eyes of what mankind in both human universes had identified as a demon.

Kelsey ran-toward it. She ran with a child's blindness and raw, instinctive hunger to find safety. No doubt, she didn't realize what she was seeing. Maybe she saw a policeman-black uniform, silver buttons, red collar patches-or maybe some other form of deliverance, but she ran to the thing, right

through the opening and into the other universe. The dying universe. The place where they tore souls out of bodies and made wanderers of little girls.

Wylie tossed Nick the twelve-gauge. "Blast it," he yelled, "it's getting up."

"KELSEY," Brooke screamed, running after her, leaping, trying and failing to grab her flying nightgown before she went through the door-which made a faint, wet sound, a sort of gulping, as she passed through. She stood shimmering with bright violet light, as if she'd been trapped in some kind of laser show.

The creature waiting for her went down and opened its arms, but the smile revealed rows of teeth like narrow spikes, and the golden eyes were not eyes of joy, they had in them the look of a famished wolf.

Wylie dove in behind his daughter, feeling a hammering electrical pulsation over his whole body, followed by gagging nausea as he landed beside her. She was icy cold, her skin gray, and he had the horrifying thought that her soul was already gone.

The demon had white hair, thin and soft, waving around its head like a halo. "Hi," it said, "I'm Jennifer Mazle. It's good to meet you, Wylie."

The words were like blows delivered with a silk-clad hammer, so soft were they, so vicious the tone.

He turned-and faced a blank wall. The door was no longer visible.

"You'll need to come with me," the demon snapped, "you're here to stay."

But Wylie remembered the wisdom that has come down from one human age to the next, the whispered knowledge, and knew that she could only lie, and therefore threw himself and his daughter at the wall anyway.

Behind him he heard a cry, "Shit!" and then he was home again, Nick was blasting the shotgun into the assassin, and Brooke was rushing to them, now grabbing her baby, now throwing both of them down behind the couch.

"Stay behind me, Dad," Nick said.

"Use the magnum for Chrissakes!"

"No bullets!"

Another blast of the 12-gauge rocked the world. Behind them there was a crackle and a hiss of rage, and the demon stepped through into the room. As it did so, it became human. "You're under arrest, Wylie," Jennifer Mazle said softly.

What the hell universe did she think she was in? "Not here, sweetheart," Wylie snarled. He'd picked up the empty magnum, and now hurled it at her

head. There was a flash of white-purple energy when it struck her. She turned away, her skin spurting red smoke. She gasped, gasped again, put a long hand up to her jaw, then straightened up and produced a weapon of her own. It was blacker than night, this thing that was in her hand, with an ugly, blunt snout.

Somehow he knew that he mustn't allow her to fire it, that it wouldn't tear them apart, not physically, that what it would do would be to splash out that light of theirs, and rip the souls out of the whole family, and hurl them into the control of the soul catchers, and make this little family of his the first wanderers in this universe.

He threw himself at her, and as Nick kept Al North back with blasts from the 12-gauge, he waded into her, his fists hammering, delivering blow after blow to what turned out to be a body hard with some sort of armor. Somewhere in there, he knew there would be something soft and vulnerable, a lizard's delicate meat, and he hit where seams might be, at the waist where she had to bend, and then the face, he hit the face, and it was just as hard, like steel, this structure of scales.

She was like a thing made of garnet or steel, not a living creature at all.

He went for an eye. Grabbing the skull with his fingers, he gouged his thumb into it and found there a softness that made him snarl with pleasure. Beat the devil, Wylie, why do you think you've got that name?

Behind him, WHAMWHAM, WHAMWHAM. Nick had had the presence of mind to reload the magnum, and he knew how to use it, too, holding it in both hands to compensate for his size and its power.

Wylie routinely cleared him on all the guns. If they were going to be in the house, the kids were going to know their proper use and safety. Kelsey, too, when the time came.

Whatever he was doing, though, it wasn't helping, because something had just jumped on Wylie's back. Shot up though he might be, Al had one hell of a lot of staying power.

Then Wylie had an eye under his thumb. He damn well had an eye! Jennifer Mazle reeled back, hissing like the most enraged possible cobra, HRRSSTT! SSTT! Her mouth opened wide, the teeth glittering, the interior as white as a snake's. The tongue gleamed black, was as thick as a finger and as long as a rope, and it came up slowly out of the throat.

He'd never seen anything so menacing. Never imagined menace like this being possible.

Then the thing on his back let go, and he turned and saw Nick and Brooke

standing over it. Nick had one of Wylie's superb Abba Teq hunting knives, and was thrusting and pulling expertly, and deep purple guts were spilling, and North's mouth gaped wide.

The general's whole body shimmered, then began flickering like a light turning on and off, and there came great thunder, and outside and inside blue flashing light, and then they were both gone, him and Jennifer Mazle.

"They're here," Wylie shouted, "still here!"

Nick thrust his knife at the air. Wylie picked up the 12-gauge and delivered a random blast into the ceiling, which rained down like the ceiling of Third Street Methodist had when Ron Biggs had emptied his 12-gauge into it, in the two-moon world.

Outside, there was long thunder. Then he heard shouts, voices crying out in an unknown tongue, voices and the clatter of machinery.

"What is it?" Brooke hissed.

"Sh!"

They could see shadows cast on the floor, on the walls, big shadows, but not the people and machines making them. The physical people were in the version of the house that belonged to the Winters family, but as the twenty-first approached, the fabric that separated the universes, in this very unusual corner of the world, was becoming thin indeed.

Wylie listened, he watched the shadows-one in particular as it crossed the wall, something low being moved by two hunched figures. Then the figures bent over even further, and lifted something that looked like a long sack and merged its shadow with the shadow of the object, then moved off.

"What is it, Dad?" Nick asked. "What's going on?"

"I believe that seraph medics are carrying them out on gurneys."

"Oh, Christ, you're right," Brooke said. "That's what that is, all right. My God, what we're seeing here-I mean...just, my God."

The shadows were gone now. The house was quiet. The family came together, the children and the parents, struggling each in his own way with a trauma almost too intense to be borne.

"Mommy, can Bearish have a drink? Because Bearish would like an absinthe."

"Absinthe?" She gave Wylie a careful look.

"Be it far from me."

"Daddy has a bottle of it in his liquor drawer in his office."

"Wylie?"

"There is no liquor drawer. There is no absinthe. I mean, it's illegal."

"Come on, baby, show Momma the absinthe."

"Excuse me, we just nearly got killed here!"

As if this return to their old life was the most welcome thing she could know-which it probably was-Brooke marched off to his office, followed by her little girl.

"Oh, come on," Wylie muttered, hurrying after them.

"Dad, don't lose focus now. This is not over."

"Brooke, there is no absinthe!"

"Dad, come back!"

"Watch our backs," he yelled to Nick.

He entered his office behind Brooke, who was opening the desk drawers.

"It's behind the fake back in the file drawer," Kelsey said.

Wylie saw the empty desk. Saw that there was no laptop there. Saw that his old typewriter was melted like the Winters' toaster had been melted, his beloved old Corona oozing down the side of the desk like molten plastic.

"The computer is gone," Brooke said. She looked at him. Her eyes were practically bulging out of her head, tears were flowing.

"Dad, get down here, please," Nick called.

"What do you mean, gone?" Wylie said. "It can't be gone."

But it was, and with it their window into the other world.

He felt suddenly numb. As if lobotomized. As if soul-robbed. "Do you have that copy?" he asked.

She thrust her hand into the pocket of her jeans. She shook her head. "They got it."

"They have blinded me..."

Brooke said, "Which is what they probably came here to do."

"Dad, you better get to the front window right now."

Coming from outside, from the front, he heard it, a deep rumbling sound, regular, the unmistakable noise of a big engine.

He went to the window, looked down. Initially, he saw only blackness. Then he understood.

What stood at their doorway was the most ominous thing he had ever seen.

"It's just sitting there, Dad," Nick said.

The huge Humvee gleamed black. Its windows were as dark as a cave, its engine growled on idle.

They had gotten one of their vehicles through the gateway.

The engine stopped. There was movement behind the black windows. The doors began to open, and what they saw coming out was not human, not even remotely.

NINETEEN

DECEMBER 20
GATEWAYS

ALL NIGHT THE LIGHT HAD worked the town and the outriders had patrolled the woods and the rain had come in endless sheets, and the drums had muttered on. The kids were in a trance, Martin thought at first, then later that they were beyond trance, they were in a space that despite all that had happened to him he could never reach. From time to time, though, Trevor's hand would come through the dimness and touch his own, and he would know that there are things that never will change no matter how much we change, that a child needs his parents, that there is love in families that is beyond understanding.

In the late hours he found himself under a pile of little ones, all of whom were trying to be close to the largest male in the place. Mike and George and the other older kids tried to control them, but eventually everybody gave up and he contented himself with holding the little beings in his arms as best he could.

The beauty of mankind touched him as they did, softly with their little hands, and looked at him with their great, admiring eyes. One of them, a little girl called Tillie, who reminded him so much of Winnie that it made his blood ache, said to him, "You have to be our soldier. We need one and we ain't got one." Her eyes had studied his, and he had felt her mind enter his mind, and it felt like smelling flowers feels, or lying in grass. She'd tossed her head, this tiny, perfect girl, then raised her hand to his cheek and tapped it. "Soldier," she had said.

Morning brought new necessities. There were twenty-two human beings here, they needed food and water, they needed decent sanitation and children are not good at sanitation. They were growing up fast, but as nobody could leave the tent at night, they used things like an old plastic bucket they'd brought with them and plastic bags which they seemed to have in abundance, and these tended to get spilled. They were not modest, the little ones, but the poor teens were desperate for privacy, the boys trying to control their vital

young bodies, the girls trying to put them at their ease.

It was altogether the kindest, most forgiving, and smelliest group of people Martin had ever known. The roughest dig he'd ever been on did not even begin to compare to this.

There were two kids called flap guards who remained at the door of the tent, making certain nobody opened it after dark and, above all, nobody went outside. The drumming was loud enough to drown the sounds generated by the outriders and the nighthawks, so the little ones might cry for their parents, but they did not experience the kind of fear that would have brought the things leaping down on the tent.

As the hours slid past, Martin felt more and more trapped in the damned thing. The kids absolutely refused to stop their drumming or go outside even for a few seconds, not until dawn. They wouldn't let him leave either, not that he wanted to. Trevor clung to him. His bevy of little ones did, too, and he would never deprive them of that comfort, no matter how illusory he feared that it was.

After they had forced Martin into initiation, and to some extent to be transformed himself, he had found Trevor with strange, pink sweat on his face and staining his filthy shirt. Martin thought he knew what it was—from the stress of sending his father to face that test, capillaries on the surface of his son's skin had burst. His boy had sweated blood.

Over the long night, Martin had tested his new mind and found true changes. He still thought as he always had, but there was new information and there were new things he could do with his thought.

Trevor had spoken of another world he had seen, a world a lot like this one but with other people, and no evidence that it was under attack. He had gone through a gateway, he said, and there had read a book, and it was the book of their suffering and the secrets of their days.

Martin was familiar with the multiverse concept, of course, and he was aware of the recent discoveries at the Four Empires Supercollider in Switzerland that had suggested that parallel universes were real. But that there would be gateways that you could just walk through—well, this was going to be interesting to see.

There was a stirring in the tent as the sun rose. The drumming became haggard, then stopped. Then it got very quiet.

"What's up?" Martin asked Trevor.

"I think something's wrong with Wylie. I think the seraph have broken

through to his world," he replied.

Martin realized that he could see, in his mind's eye, a shimmer hanging over the Saunders river. It could as easily be a spiderweb gleaming with dew as an entrance into another universe. He saw, also, that outriders were pacing there, looking for all the world like enormous tarantulas. They had been designed by the seraph to strike terror into the human heart, and even seeing them in this way touched him with fear, and made them lift their forelegs and eagerly test the air.

He withdrew.

"Any thoughts, Dad?"

"It's a gateway. If it wasn't it wouldn't be so heavily guarded."

"Okay," Pam said, "we're gonna take the opportunity to move the tent off this sludge factory, then I'm taking a supplies detail into town." She glanced at Martin. "You stay here."

He couldn't disagree with that.

Martin followed the others into the kind of morning that comes after great storms, when sunlight washed pure seems to cleanse the world. Golden columns of light marched among the pines, and when they walked out and it fell on Martin, he had a shock, because it was just the sun but it felt as if somebody was there.

A couple of the kids, aware of his thoughts, glanced at him. He was going to have to somehow get used to this lack of inner privacy-and the deep sense of belonging that came with it.

Gentle, probing fingers seemed to be touching him, the fingers of a being that was deeply accepting of him, of life, of everything.

Who was this? Was the sun alive?

"It's all alive," Trevor said. "Everything is alive and everything is conscious. All the stars, all the grass, the trees, every little animal there is. And some of them have high consciousness. The bees do, Dad. When you're in a glade with them, you'll see."

"The brain of the bee is microscopic, son, so they couldn't really be all that conscious."

Trevor smiled a little. "Just let yourself happen, Dad. You'll be fine."

Watching the chaos of kids moving here and there with stakes, with boxes and ropes, singing, laughing, you would never think that they were working together, and carefully organized at that. But they were, and exactly at the moment the tent shuddered and collapsed, four of them came out carrying all

the bags and buckets of refuse that had accumulated inside.

Not a word was said as it was rolled and folded and carried off, followed, improbably, by a little boy who was completely overshadowed by the huge Cougars bass drum balanced on his head.

Their efforts looked a lot like those of worker bees, Martin thought, and then that a shared mind would naturally be far larger than any single component.

It hit him then—all mind is shared. That's the way things work. Just surrender to it. Let yourself happen, like Trevor said.

"Okay, Dad, let's go."

Of course, Trevor could read his thoughts.

"Don't let it bother you."

"But I can't read you."

"Sure you can." He headed off into the caressing sunlight.

Following him, Martin did see into his son's thoughts, which were of that gateway, and going through it. But that wasn't possible, look at the river!

"It's possible, Dad. But you have to not think about it and not worry about it. Concentrate your thinking on your body, the way your feet feel as you walk, your hands, every physical sensation."

-Why?

-This is why, what you're doing right now.

Martin was stunned. The exchange had been so perfect. Of course, he understood the recent advances in mind-to-mind communication that were being achieved at Princeton, but that was with the help of implanted microchips.

-No implants here, Dad.

Trevor headed up the sharpening rise that separated them from the Saunders and the gateway. Martin looked ahead in his mind, and saw the outriders still guarding the gateway, and the water just a literal torrent. As soon as his mind touched them, though, every outrider turned this way and raised its forelegs. Some of them began to march.

"Blank your mind, go to your body!"

He forced his awareness into his flexing muscles, his feet, his heart and lungs. Although he could no longer see the outriders in his mind's eye, he could still have clear awareness of them, and he knew that their alarm had subsided.

To do this successfully, you had to be like animals were, looking out at

the world without looking in at your thoughts. Not easy for a professor.

-If you start to hear that rattling noise, stay in your body. Do not let your mind go out to it or they'll be on you.

Why was nobody else coming? This was obviously extremely dangerous and more would be safer.

Trevor glanced over at him. His eyes said it all: this is my job. Our job.

At that moment, they came up the rise, and Martin saw that the Saunders, even in just the past few minutes, had risen more. It had been bad before, but now it was a great, surging mass of gray-black water full of trees, roofs, walls, floating staircases, even a car's wheels appearing and disappearing as it went tumbling downstream.

Across the stream, he could see their house, the windows dark, empty, and forlorn. The water extended almost to the front door. And water wasn't the only problem, five outriders lay curled up on themselves halfway down the ridge, ready to spring into action if anybody came into their range. And the ones on this bank still patrolled.

"This is impossible," he said aloud.

He was confused to see the water getting closer, looming up toward him. Then he realized that he was seeing it through Trevor's eyes. His son was scrambling down the bluff right toward the patrolling outriders and the thundering river.

Martin raced down behind the last of his children, throwing himself forward, trying to reach him, to at least get his attention-whereupon one of the outriders on this bank turned from its patrolling and came straight toward him...but past Trevor, whom it did not seem to see.

And indeed, Martin felt a surge of fear, he couldn't help it. The thing's metal fangs moved so fast that they sparked.

"Run downstream, son," Martin bellowed. He picked up a rock and threw it at the thing. It bounced off the head, causing it to rear back and hiss, and making two more of them come prancing toward him.

To his utter horror, Trevor walked right into the flood. "Son! SON!"

He could not escape the outriders and Trevor was about to be killed. But he could escape, all he had to do was to leave his fear, leave his mind, let himself happen. He paused in his headlong dash, closed his eyes, and emptied his mind. He put his thought on his roaring blood and the roaring water. His prayer came to him then, Franny's prayer, and joined itself to the whisper of his blood.

When he opened his eyes, he found himself face to face with an out-rider. Its eyes stared straight at him, its jaws moved slowly. Carefully, he stepped around it, then past another, so close that he could see that there was venom caked to its abdomen, and a stinger tucked in the size of a butcher's meat hook.

Trevor was now well out into the flood. Martin threw himself in and began swimming.

The water grabbed him as a giant would, and he saw a great oak, stately, from somebody's yard over in Harrow, no doubt, come sweeping toward him and with it death in the tangle of branches, drowning as he was swept away.

Trevor still waded forward, though-and then seemed not to be wading but walking. He was visible inside the water-but not affected by it. Walking inside it. "Trevor!" Martin forced himself to dive to avoid the oncoming tree, forced himself to swim, felt the water ripping at him-and then saw Trevor beside him walking easily as water and limbs and pieces of cars and houses and bodies and drowned cattle went not only around him, but through him. In the other world, of course, the stream wasn't in flood, so crossing this way would be easy.

He looked down at his own body, and saw that a great limb of the tree was moving through him, and a human arm, white and bloated, and a spatula and dozens of poker chips, all passing right through him and leaving not the slightest sensation. A lawnmower went through him, then theater seats, a TV, a tangle of shrubs.

He took another step forward and the flood was gone. Instead, he was on the far side of the Saunders. Behind him, the little river flowed quite normally, tinkling faintly where it hurried across some stones.

"Be very, very careful, Dad. I don't know what's going on up there."

"I can't hear your thoughts."

"Not over here, it doesn't work."

Martin looked back toward the Saunders. The bluff was there, but everything was quiet, washed with golden early sun. It was a view he'd looked at a thousand times, and on summer Sundays heard from here the faint bells of the town.

They had gone through the gateway, and on this side, in this universe, the Saunders wasn't in flood.

"Come on, we've gotta see what gives with that Hummer."

"It looks like typical army issue."

"Their military's Hummers are all camouflaged. This is something the seraph brought here."

"They're here?"

"Apparently."

Trevor started off, moving quickly up the familiar hill toward the familiar house. As he walked behind his son, Martin experienced a sense of déjà vu so powerful that it was actually disorienting, even painful. This looked like home and it felt like home but it was not home. It was not home.

Trevor stopped. "They're noisy," he said.

"It's dead quiet."

"That's the problem. His car is in the garage, but it's just really quiet."

He saw what looked like a Saab in the open garage. "It's blue."

"Their cars have all sorts of different colors. Blue, red, white."

Martin had never heard of anything so outlandish. Who would be willing to drive around in a colored car? Cars were black. This Wylie must be an eccentric, which fit the literary pretensions, he supposed.

Trevor approached the place cautiously, moving up the steep hill, his eyes always on that Hummer.

Martin whispered as loudly as he dared, "Trevor!"

His son motioned at him furiously. The message was unmistakable: Shut up!

Trevor dropped down on all fours, then onto his stomach. The Hummer was between him and the house, but he could almost certainly be seen if anybody looked closely enough. From the Hummer, definitely.

Then he motioned again, this time indicating that Martin should come forward.

Eagerness flashed through him. He jumped to his feet. Trevor's eyes widened and his mouth dropped open-and then there was a terrific crash and something went whanging off into the woods. "Get your ass outta here," a voice crackled. "We got you in crossfire, shitheel!" A shot whipped past him so close that he felt a hot blast of wind.

He threw himself to the ground. "No," he called, "we're friends!"

Another shot kicked up gravel beside his head. He tried his best to back away, attempting to reach the brow of the hill so that he could slide back down.

But then a shot rang out behind him, and this one was closer, much closer. There was only one thing to do. He stood up and raised his hands.

"Okay," he said, "okay."

From the woods came a boy's voice, "It's a guy, Dad. A guy and a kid hiding by the Hummer. Back wheel."

Silence.

"We mean no harm," Trevor called. "Please, we need to talk."

The boy appeared coming up the far side of the driveway. He carried a big rifle, hefting it expertly. Martin realized what was happening here, that this was an historic meeting, the first contact between human beings from two different universes.

"Hello," Trevor said as he stood up. He walked out from behind the Hummer, into full view of the house. "Mr. Dale, I'm Trevor."

"You got the laptop?" Wylie Dale asked.

"No."

"This is my dad, Martin," Trevor said. "We need to look at the book again."

"The laptop was stolen. Plus, it's been rough around here. Real rough. I haven't even thought about writing."

Martin realized that the smell he had been noticing was meat, and it was coming from the Hummer. As he walked closer, he could see blackened ruins in it, the shattered bodies of seraph. And then, around the side of the house, one of the outriders. For a moment, he froze, but then he understood that they had destroyed it, too.

"So you're Trevor," Wylie said. "Hey, Brooke, here's the people from my goddamn book, come to life!"

The boy had walked up to Trevor. "Hiya, Nick," Trevor said.

"Hey." Nick put his hand out.

Trevor looked at it. "Can we?"

"Dunno."

Martin watched. Wylie watched. His wife Brooke watched. A little girl's voice said from behind the very lovely mother, "Bearish thinks it's okay."

Bearish! Winnie had called her stuffed toy Bearish, too. As the mother and daughter came closer, Martin saw that her Bearish wasn't a zebra but an elephant.

"He's cryin', Mommy."

"They've lost Winnie and Lindy," Brooke said, "you know that, honey, you know what they've lost."

"What happened here?" Trevor asked.

"You better get inside with us," Wylie said.

The house showed signs of a terrific fight. Martin was quietly astonished. These people were unhurt, obviously, but there had been a lot of killing around here, a lot of it. The rugs had blood on them, and he thought he saw a bloody body wrapped in a sheet behind the couch.

"There's been a spot of bother around here, boys," Wylie said. "But me an' mine, we did 'em." He drew a long brown object out of a pocket of his heavy leather jacket. "Cigar?"

Martin watched in silence, unsure of what, exactly, was meant. The intonation of the unfamiliar word had suggested a question. Was it some sort of offering? There must be differences between the universes, obviously there would be-look at the colored cars-but this was perplexing. Surely it wasn't a sacrificial offering, they must be past that.

"I think I've earned house rights," Wylie said.

"Wylie." Brooke strode to him, threw her arms around him. "You are the most amazing damn man," she said, "smoke your lungs out, lover."

"Ew, Mommy!"

He inserted the thing in his mouth, produced a book of matches, and lit the free end of it. He gave Martin another glance. "It's a Partagas straight out of Fidel's humidor."

"It's tobacco," Trevor explained. "They burn it and eat the smoke."

"But...it's powder. Snuff is powder."

Nick said, "Dad, I don't think they have cigars." Nick regarded Martin. "You, do you know what he's doing?" Then he frowned. "Jesus, look at their eyes."

"You haven't read my book as well as you imagine, son," Wylie said as he ate smoke. Or rather, breathed it. Martin enjoyed snuff, but he didn't care to join the hordes with cancer of the sinuses, so he'd sworn off. No doubt this method eliminated that problem. They could smoke the tobacco, he guessed, without fear of health problems.

"Your friend Fidel makes those things?"

"Well, he's dead, but yeah, they're genuine Cubans, imported all the way to Kansas City."

"Tobacco is legal in our world, but it's dangerous. It's sold in a powder called snuff."

"Dangerous here, too. These suckers are really cancer sticks. But I do love 'em."

"Ask him about Fidel Castro," Brooke said.

"I have no idea who that would be," Martin replied. "Do you know, Trev?"

"No."

Nick said, "Cuban dictator, died a few years back. Communist."

"Communist, as in, uh-Trev, can you help me, here?"

"A nineteenth-century philosopher called Karl Lenin invented a system of labor management that became a huge movement in this universe. Dad, they've had total chaos here for over a century. That's why they're so tough. It's why there are dead seraph and outriders all around this house and these people put fire in their mouths. In this universe, human beings have been at war so long they've become incredibly strong."

"No wars in your universe?" Wylie asked.

"No, Wylie, not really. The British and the French bicker over their African holdings, of course. And the Boer Contingent is an irritant for the British in South Africa. The Russians had a war with the Japanese."

"Wait a minute." He puffed on the cigar. "Sarajevo. Mean anything?"

Martin couldn't think what it might be. He shook his head.

"World War One?" Wylie asked. "World War Two?"

Martin was mystified.

"Dad," Trevor said, "they have huge wars here." He pointed to a blood-spattered bookcase. "War books," he said. "I've read some of them."

"Look, we've been at war on this little earth of ours ever since the Archduke Franz Ferdinand was assassinated in 1914."

"An archduke? Assassinated? That's hard to credit."

"You still have them, don't you?"

"Of course. And Cuba is an American colony and there is no Fidel in the colonial leadership, and this business of an obscure historical figure's gimcrack philosophy meaning anything--"

"Communism was the scourge of our world for seventy years," Wylie said. "It took half a billion lives, and the world wars three hundred million more. It's been carnage."

Martin looked at the wall of the family room, dominated by its gun case. "We have too few of these."

"You're not wrong there," Brooke said. "Violence attracts violence."

Nick picked up what looked like a hand cannon that was lying on a table. He blew on the barrel. "Doesn't it, though, Mom?" he said.

No child would ever address an adult like that at home, least of all one of his parents. "Wylie," Martin said, "I'm wondering if you have any specific ideas about what we might do? Given your own toughness."

"The shitheels are tough, too, and we're likely to take a beating from 'em, big time. And soon."

"But you'll-you'll shoot."

"Buddy, I seem to recall that your president tried a hydrogen bomb on Easter Island and it didn't do jack shit. That isn't exactly a lack of aggression, there, not by my definition. But the fact that it didn't work-when I wrote those words, I have to tell you that I felt sick. Real, real sick. Because a hydrogen bomb is the best we've got, too."

"However, if your world is at war all the time, you won't have a British Battle Group demanding an explanation, will you? Not like us. By the time we got the superpowers to take an interest, it was all over."

"The first wanderers were in England."

"It takes a big empire like that a long time to act. In this case, too long, even if there was anything they could've done."

"Wylie," Trevor asked, "do you know why we're here?"

"You had a conference last night and decided that you wanted to open up direct communications. Problem is, I have no more idea than you do what's gonna help. I mean, you are already looking at one hell of a megadisaster. I don't see how you can do anything. I have to tell you, I think you folks are done."

Trevor asked, "Without the computer, can you still write?"

"No kid, I cannot. I tried using Nick's laptop and Brooke's laptop and Kelsey's pink Mac, and nothing came. Nothing at all. Whatever magic there was, there ain't."

"Which we sensed," Trevor said, "and why we came. Because we knew that things were going wrong for you."

"You people are so-I don't know, precise. The way you go about things, moving slowly from A to B to C-do you think you might be a little slower than we are? Mentally. Not quite as smart?"

"We're not as aggressive," Martin said. "Obviously, given all your wars, the communists, the smoke breathing, which I interpret as domination-symbolic-"

"Speak Greek. Your English is for shit."

"Actually, I do have a little Greek. I've done some dig dating there, you

see. Dating the Acropolis, which turned out to be noncontroversial, unlike some of my other work."

"Which I know all about, of course. We have strange ruins here, too. Same ones. Plus very similar legends. A war in the sky, a great flood, all of that."

"Meaning that they were here, too."

"Momma," Kelsey asked, "when are we gonna kill the man in the crawl space?"

"What man?" Trevor asked quickly.

"Dad's got this really fucked-up guy from your universe trapped in our crawl space. He's human, so we have this cop we know, he's on his way to take a look."

"It's Al North, isn't it? General North?"

"He's in rather iffy shape," Wylie said. "But I'm not gonna go killin' people without the cops say it's okay. If you get my drift."

"Could we question him?" Trevor asked.

"Sure, waterboard the fucker, for all I care." He sucked on the cigar, pulled it out of his mouth. "Use this on his eyes. Make 'im chatty as hell, be my guest."

Trevor took the thing from him, held it. "How would we?"

Nick laughed.

Wylie said, "Waterboarding is a form of torture, makes the chappie you're curious about think he's drowning. And as far as that cigar you're holding is concerned, boy, you stick the business end of that thing in the sore eyesocket General Al is nursing, my guess is he'll tell you more than his address."

Trevor thrust the thing away from himself.

Wylie caught it before it could touch the floor. "Cuban, remember?" He sucked it, made a great cloud of smoke. "A thing of beauty." He got up and strode across the room and into the kitchen.

Martin reflected that he might be a writer by trade, but he had the speed and power of a soldier about him. The boy did, too, and with her hard-set lips, the woman looked as if she could kill a man as soon as look at him. Only the little girl seemed vulnerable, or perhaps that was just because her cuddle toy was also called Bearish, and Winnie had been such a gentle child.

Wylie opened a trapdoor. "Howya doin' down there, General? We're gonna torture you in a min', just wanted to let you know." He closed the trap. "It's called softening 'em up."

"He's not playing with a full deck, Dad," Nick said.

"Always remember this son, if they're just playing with a half a deck it don't matter as long as it's your half, or even one card, if it's the card you need."

"We have no idea how to deal with Al North," Nick said. "And neither do they."

Silence followed. It was true enough.

Wylie opened his cell phone, dialed. "Where in fuck's name are you, Matthew? I just finished your last Partagas, incidentally." He listened. "Well, I'm telling you, the weirdness index up here has just shot through the roof. You need to put the fricking donut back in the fricking box and get your ass moving." He hung up. "You know, I'm not saying a whole lot on the phone, so he thinks I'm bullshitting him some way, but I gotta tell you-" He stopped. Suddenly the bravado blew away like so much sea foam. He closed his eyes. Shook his head. "I saved my family," he said softly, "me and my boy did." Then he sat down. He took a long drag on the cigar.

A truck came bounding up to the house, its gears grinding as it negotiated the steep driveway. It came to a stop. "Ah, wait until the gentleman of the law does his body count."

A tall man in a police uniform opened the front door and came in, using the same striding, aggressive walk that, it seemed to Martin, characterized them all.

"What in hell kind of a Hummer is that," he said as he entered. Then he sniffed the air. He looked toward Brooke. "He dope you up or something?"

"He's getting a reward for saving our lives."

"From what? Some drug dealer's fancy Hummer? Man, that's a U.S. Army vehicle, full scale. You don't see many of those puppies around. And in limo paint, no less." He looked at Wylie. "Don't tell me you purchased that thing? Buddy, that is gonna piss me off."

"Matt, I want you to turn around and look at that man standing in front of the fireplace trying not to wet his pants. I want you to look into his eyes and tell me what you see there."

The lean, narrow-faced man turned, and as he did, Martin saw that he did not carry a small firearm like Bobby, but a gun almost as big as the family's hand cannon. Martin looked to the pistol and the great ham of a hand dangling beside it, then, reluctantly, up to the face. He let Matt look into his eyes.

"What happened to you?"

"I-it's-"

"It's a rapid evolutionary change induced by extreme species stress," Wylie said. "That would be correct, wouldn't it, Martin?"

"I would say so."

"But, uh, excuse me, I don't think we've been introduced." He thrust out his hand. "I'm Matt. Uh, hi."

"Hi."

"You-" He motioned with his chin, an expressive gesture.

"That's right, we're from over there. This is my son, Trevor."

"So you're the one lost Lindy and Winnie. Oh, Jesus, you poor guy."

"Matt, I would recommend a very stiff scotch, but we don't have time. What we do have is one of his compadres tied up in our crawl space. A very weird, very altered piece of work that used to be a general over there in their version of the U.S. Air Force, but is now a sort of monster designed to be able to function freely in both universes, apparently by being made into a cut-up mess. You wouldn't believe it. I mean-you remember the guy downstate with the mutilated face?"

"Nunnally. Sure do."

"The missing pieces have been sewn onto this man."

"What?"

"Sewn onto him to provide a physical connection with our universe. Give him greater freedom of action. The theory. In fact, bullshit. It's the seraph who have trouble moving around in our universe, not people. And he's people. Was."

"Okay, I'm getting an occasional word. There is a man in your crawl space that has-Nunnally-Nunnally's body parts-"

"In a misbegotten attempt to enable him to function more freely in our universe."

"And this is Martin and his kid."

"Yessir."

Matt looked at them again. He held out his hand. Martin shook it. "Wow," Matt said. "You sure this is for real, Wylie?"

"Oh, yes, and what we need is for Frankenstein down in the cellar to tell these people something-what, Martin? What might he know that would help you?"

"If we could stop the seraph coming through, that would help us. If we

could understand how to close their gateways, that would help us. Anything at all."

"You've read the part about Samson's journey to Abaddon?" Wylie asked. "Do you see a vulnerability there anywhere?"

"They're in a hurry. So we need to slow them down," Martin replied.

"Thing is, I also keep seeing an ending to my book, and in it I see these filthy huge cities full of starving seraph, and they are in your world. I do not see New York and Washington and London. Sorry, fellas, but I just don't. What I see there is open ocean. Right now, looks like you lose."

"Can this man extract information? Does he know these techniques?" Martin asked.

"He knows 'em, Martin," Wylie said. "He's served in the Mideast in his time."

"So you'll torture General North for us?" Martin asked.

"I can't do that!" Matt burst out.

"You gotta, buddy," Wylie said. "Because once the seraph finish with these guys, we're next."

"We'll cut their hearts out," Matt muttered.

"What we've been through here, believe me, it will be mutual. No, we don't wanna have them show up here, believe me. And this North cat is the key. So you are gonna help us. You are gonna devote five minutes to this effort."

"It's totally illegal!"

"He doesn't exist in this universe, therefore has no legal standing. Therefore, Nick, go get your skateboard. I think we can do this with a skateboard and a towel."

"I am not going to waterboard a goddamn general in any goddamn air force!"

"Yeah, you are." Wylie pulled the trapdoor open. A stench of urine and blood rose from the crawl space. He looked inside. "Good morning, again, General. Visitors!"

General North's eyes stared. His chest did not move. Wylie knew it at once: Al North was dead.

TWENTY

DECEMBER 20
THE GOOD SOLDIER

GENERAL AL NORTH HAD NEVER experienced pain like this. Although he had seen torture in Lebanon-men getting phosphorus splinters jammed under their fingernails and lit-he did not think for a moment that their pain, as awful as it was, approached this.

He was screaming, he knew that objectively, as if from a distance, but he also knew that no sound was coming out. He'd come into this strange place-a parallel universe, he had come eventually to realize-faithful to his orders, to carry out an assassination. He'd never expected to be asked to do such a thing, but this was war and we were desperate and the military and intelligence communities were in chaos, so, yes, he got why he had been called upon, and he resolved to do his duty.

Something is wrong!

He lay listening to the voices overhead. The man he had been sent to kill had proved to be a tiger, and his son was just as ferocious. Very frankly, they had overpowered Al, who was not a small man, and had excellent personal combat skills. He had not expected an adversary ready, willing, and able to gouge out eyes with his bare hands, or a child who would pick up a damn handgun the size of an anvil and just literally blow a grown man's guts out. A child!

They're not the enemy!

What was that? It was like part of his mind was yelling at him from behind a closed door. He had to get the hell up and get back out there, because those folks needed killing and they were still walking around. He was going to do them all. Massacre them, the women, too. Kill them all.

Don't!

Yeah, that's great, disobey a lawful order transmitted to you in person by your commanding officer, who also happened to be the acting commander in chief. He did not like Tom Samson, never had. The president had made a grave mistake giving him his appointment. But this was wartime and they'd

just about had it, and under such circumstances you have no choice but to trust your superior officer.

You trust your own soul!

That voice-it was saying something. "Soldier," perhaps. "Soldier, you're dying," that's what it was saying.

He had not completed his mission and he had to get out of this hole and do the damn deed!

He fought to rise, could not. He closed his working eye, took a breath, then pressed downward with both hands. Rivers of agony swept up and down his arms and through his bubbling chest. His head went light. He fell back. His heart was thundering. Below the waist, no sensation at all.

He'd seen others in the house, he'd seen a Hummer come up.

It was them. THEM!

It had been some kind of an enemy unit, he could see that, but even they had taken a hell of a beating from these people. The mother cut up some of their exotic weaponry with a damned axe, and the little girl-what, seven, eight-stood there watching and laughing. "Mommy's killin' a big spider." Tough sonembitches.

That was an outrider and outriders belong to the enemy, soldier, and you are working for them, and you need to FACE THIS!

The trapdoor was opened again. Light swamped his eye for a moment. Then he saw a silhouette.

"This man isn't dead! This man is breathing!"

Another head appeared, disappeared. "Fuckaroo, he's right."

The woman's voice: "Kill him!"

"You can't do that, Brooke! I gotta call EMS, I gotta try to save his life. And-Kee-rist, you got a man all shot to hell in your crawl space, so nobody leaves. Got that? Nobody leaves!"

"It was self-defense, he attacked us."

"I know that, but I got procedures, buddy. This is serious."

"He's from our universe," another voice said.

General North listened to them up there, murmuring together. Those bastards had figured out how to get through a gateway, and they were gonna mess this whole operation up.

You're not sad about that! You're glad! It's good, it's a triumph, for God's sakes, listen to your soul!

His mind cast about, trying to find a way to carry out his orders. There

had to be one, there always was.

There were guns upstairs, plenty of them. But down here there was nothing, only dirt. His own gun was long gone. So, did he have anything else that might cause damage? Belt-sure, but he wasn't going to be able to garrote anybody. Pins on his medals, big deal. Teeth. He could bite, maybe damn hard. So there was that. He could bite through one of their cheeks. And clutch with his left hand. He tested it. Yes.

So he needed them to pull him out. He'd take it from there.

He waited. Nothing. No more voices that he could hear. Stomping that faded, then faint shouts. They were looking at whatever the intelligence unit had done.

So they'd called EMS and now that was done, they were showing the cop the rest of the damage around the house. Not good. He needed them to pull him up before some EMS bunch showed up to spirit him away.

He took a breath, deep as he could, and let his pain possess him. He knew how to manage pain, and he'd been doing that, but now it was time to change his approach. As he let out the breath, he made himself scream.

It worked amazingly well. Damned well. He took another breath, did it again. The sound was odd, a lost, bansheelike howl, and it caused the river of pain to start flowing again.

It also caused the trap door to open. "EMS'll be along directly," the new voice said.

Then that other voice again, somehow gentler, thinner, "He's from our world and he's evil, you have to let us-"

"I don't have to let you do one damn thing, Doctor Winters! This man is shot, he is here, and what you have to do is let me do my job."

"He's a criminal in our world. Wearing a military uniform but working for the enemy. He belongs to us."

"Don't you push me," Matt said.

"Hey, guys, knock it off," Wylie responded. "Martin, you've got gumption, after all."

"We need to take that man back with us," Martin insisted.

"Sounds like you need to take the whole damn Marine Corps."

"We had a Marine Corps, too, did you know that? And they are gone. Gone! The military was done in the first wave. Worldwide. Done. So unless we can stop the seraph, they are coming here tout de suite."

"Matt-"

"Fellas, I'm gonna show my piece here in a second, and I do hate to do that."

"Did you know that you have an equivalent in our universe? Who is also a lifelong friend of mine, just like you are of Wylie's? His name is Bobby. He's disappeared and we think he's wandering-alive but without a soul."

"And you will be, too," Trevor added, "if they come here. Wandering with your soul locked up just like Wylie has seen-or worse, you'll be like that man down there, so twisted and turned around that he works for the enemy and thinks he's working for his own kind. You'll be just like that, and possibly within days."

"Look, this shooting is the most serious thing to happen in this town in my entire career."

"You should see the one my mommy shot. It looked like a big spider and when she blasted it, it sent out hot stuff that smelled like when you burn bacon."

Listen to them! They're your friends.

He sucked another breath, howled another howl.

"Let us take him back," Trevor pleaded. "Let us find out what we need to know."

"You can question him in the hospital," Matt offered.

Wylie laughed scornfully. "Oh, for shit's sake, Matthew, this cat needs to be waterboarded at the very least. He needs a live rat stuffed in that eye socket. At the very fricking least. Hospital. Do you put a goddamn cobra in a hospital?"

"If you're me, you sure as hell do. In an animal hospital. Departmental requirement, all injured animals are provided treatment."

"That is not what I meant."

The ambulance was coming soon, so Al had to make a maximum effort here, a supereffort, or this was not going to come out right. He had more than one job to do, he knew that now, because he had to kill every one of these damn people, especially the ones from the his own universe.

How had things gone so wrong? He had to kill them and get back and warn General Samson that things were out of control, they were way out of control.

Then the cop came down into the crawl space. Just like that, he was standing over him. This was his chance, his only chance.

As the fool bent down, he reached up and pushed the pistol out of the

holster with the heel of his hand.

It hit his thigh with a thud that shook him but which he didn't feel.

"Excuse me," the cop said, reaching down.

Al was faster. Al got the butt of the weapon between thumb and forefinger. He felt along the side of it, and got his finger around the trigger.

He raised the weapon.

"Shit, he's got my gun! He's got my fucking-"

He shot upward wildly, through the floor. There were cries from above. He had no way to know if he'd hit anybody, so he shot again and again, until there was only one bullet left.

By now, the cop had skittered back up there, too, and they were all yelling.

He knew what he had to do because he knew the stakes. They needed information that he did indeed possess and it sounded as if they were going to drag it out of him with pliers. They would succeed, too. Our expertise at torture was child's play compared to what these bastards sounded capable of.

Give it to them! Tell them everything!

There was one gateway they knew nothing about. But he knew about it, because he'd been taken through it, and they were not going to find that out.

They couldn't destroy the seraph, not even close, but they might slow things down, and that was the issue, wasn't it, because every day after the twenty-first, things were going to get harder, and around the twenty fifth, the gateways would once again close, and Abaddon would be denied all but minor access for another thirteen thousand years. They'd have to go back to sending through agents provocateurs to derange human civilization, cause wars, spread starvation and greed and confusion, and keep the bastards weak.

Keep YOUR people weak, you mean. Listen to yourself, General, you're thinking with the enemy.

He got the barrel of the gun nestled under his chin, prayed to the good lord above that he had killed the man he'd been sent to kill, and pulled the trigger.

Then he climbed up out of the crawl space and into the kitchen. Wylie, whom Al had been sent to kill, was unhurt. They were all unhurt.

And Al was elated.

The next second, he understood that the person still lying down there in that crawl space with a splayed head was him. And, all at once, he realized what he had done. "Uh, hey! Oh, Jesus, I'm sorry. Sorry!"

He remembered the Mountain, going down into the rock with that woman, Captain Mazle. He realized that she had been seraph. Samson was one of them, too. They were heavily disguised and they used drugs to enable them to live in our air, and they had stolen his will.

Needles, sharp scissors, clipped flesh wobbling in silver trays-brain being removed, brain being installed.

They had stolen his memory. They had subverted his honor.

This soldier owes his duty to his country, NOT TO THEM!

He'd been working for the enemy.

As he watched, EMS technicians came running in. He watched them jump down into the crawl space.

"I can tell you what you need to know," he said.

The cop hurried out behind the EMS doctors. Wylie and his family came together, holding each other. Martin and Trevor left, and began to move off down the hill.

Al ran outside. "Wait! Listen to me! I made a mistake, but I can help you!" He went up to them. He shouted into Martin's face, "Listen to me! I can help you!"

Nothing. He grabbed Martin-and his hands went through him. Martin shuddered and said, "I feel like a goose just walked over my grave."

"Dad, we have a problem here, because when we go back, we're gonna hit really fast water. Remember, in our world, the Saunders is in flood."

Al could hear every word. "Can you hear me?" he bellowed.

"Yeah, that's right, we can't cross, not with the flooding on the other side."

"What about the Hummer?"

"Yeah!"

No! NO! You fools, it'll float right down the river!

They started back up the hill. "It's full of dead seraph."

"Take 'em with us, save Wylie and Matt a lotta trouble."

"Plus, the back's caked with venom. They must've brought that busted up outrider with them in it."

Al had followed them. He was right with them, just inches away.

LISTEN TO ME! LISTEN NOW!

They set about pushing reptile bodies into the back of the Humvee.

Al inventoried his situation. You still exist, you can think, you can see and hear, you can move effortlessly wherever you want to go. But how in hell

do you communicate? A quick review of his knowledge of ghosts and such, and the answer was immediately clear: you don't.

He was a damn ghost, was what he was.

But no, this ghost was no cute little Casper and-he hoped-no raging banshee. He had a much larger vision of his life than before. His conscience was very, very powerful now. He saw deep into the arrogance that had made him who he was, the entire falsity of it, and how profound feelings of worthlessness were the foundation of the ego that had led him across all his life, all the way to this final predicament.

He knew now who he was, he knew the mistakes he had made, and he knew just exactly how to help the people of his world turn everything around. They could completely defeat Abaddon-these people, this man and this boy, if only they knew what he did. He had to tell them-but he couldn't make them hear him or see him.

Martin and Trevor opened the doors of the Hummer and shoved two gray, lifeless seraph bodies into the back, then, as an afterthought, Trevor pocketed one of their hand weapons. Al knew those weapons, electrical-centrifugal handguns that could propel thousands of light-weight plastic rounds at five thousand clicks an hour. The only sound they made was the crackle of the rounds breaking the sound barrier, but they could slice a man in half a mile away. Or a dozen men...or a thousand.

"How do these work?" Martin asked.

"Let's test 'em."

Holy shit, be careful!

"It doesn't look very lethal," Trevor commented.

Martin held one of the black disks away from his body, pointing its three short barrels in the direction of some trees. He pressed the two triggers, top and bottom. There was a brief snarl, and three of the trees literally flew apart, a foot-wide chunk of their trunks turned instantly to sawdust.

"What is this thing?"

The U.S. military has the same thing. Bigger, vehicle mounted.

"It's a seraph weapon," Trevor said, producing a dark blue box with seraph hieroglyphics on it. "Here's some ammo."

"Wylie and Nick would love this."

"You like them. Their macho and their guns and all."

"They're winners, Dad. This whole universe-it works better than ours, it's more dynamic."

"It's been at war with itself for a hundred years."

"And we live in a world of kingdoms and empires where nobody's really free."

"We're free."

"We are and the French are and the English are, at least at home. But look at the rest of it, Dad, it's a vast system of slavery-orderly, easy to live in, but"

The Hummer roared to life. Al watched, no longer trying to stop them. He knew that he couldn't. The dead did not communicate with the living. Just didn't.

So when you finally understand and you can tell them everything they need to know, this happens.

They closed the doors and drove the Hummer down toward the bank of the Saunders-here, flowing gently. There were places where you could jump across it, even, but certainly not into another universe.

They needed to know about the seraph headquarters, deep underground and just a few miles from here, had to be told what he had remembered about being in there.

If they could enter it, they could free millions of trapped souls, they could wreck the power systems, maybe even stop the lenses from functioning. They could cause core damage to Abaddon's plans, maybe kill Mazle and Samson, even.

He raced down to the Hummer, shot into it right through one of the windows. "Hear me! HEAR ME!"

"There's the gateway," Martin told Trevor.

"Is it big enough for this thing?"

"They got it through."

Maybe this was good, maybe the gateway was too small, maybe the Hummer wouldn't fit and they wouldn't kill themselves, the damn fools.

"Do we just aim at it or what? I'm not sure I know how to go about this."

"I'm not sure, either, Dad."

Don't try, please.

"We have to try."

Please.

As Martin backed the Hummer up, Al did everything he could think of, attempting to project his thoughts into Martin's mind, actually going inside his body where his organs were sloshing and his blood was surging. He went directly into the brain, but even that didn't help. He could perceive the gray

matter like a pulsating, sparking fog all around him, but he couldn't do anything to affect thought from in here, either.

The Hummer went roaring toward the gateway. Al saw the diamond-shaped crystalline object much more clearly than he'd been able to in life, and saw it expand smoothly, almost obediently, to accommodate the Hummer. So it was going to go through, they were going to be in it, and they were going to be drowned.

He saw black water, roiling, churning, and in it what looked like people, swimming hard. Then the Hummer hit with a huge splash, and the gateway closed and was gone.

He was moving fast, and sailed right across the stream and into the woods beyond. But he was still in this universe.

He rushed back across the river, looked for the gateway, could not find it. But he didn't belong here, this wasn't right.

He rushed up and down the river bank, trying to find a flicker of the gateway.

Even when he'd seen the president die and known-known-that Samson had somehow done it, he had not acted. Instead, he'd gone to Cheyenne Mountain to take a new job, because he'd wanted the promotion.

What had he been thinking? How could he have so blinded himself?

In this state, he was finding that he was becoming naked to himself, seeing past the self-deception that had defined his life.

He was seeing how loveless, how empty it had been. A useless, silly journey, his wife dead early and no further attempt to find love, and love all that mattered.

In this state, he was revealed to himself, and he saw clearly that his willful blindness had led to a great catastrophe, and there was no way for him to justify himself.

He found himself back a very long time ago, sitting on the side porch at home on a night in July, with music drifting across the evening air. He saw a girl he had known then, a girl called Nellie, who had been full of love for him.

Had he let himself accept her, had he chosen the humble life that being with her offered, he would be soaring now, flying above all these cares instead of sinking into this pit of regret.

He wasn't just sinking into despair, either, he was becoming involved with the actual ground. He was sinking into the earth itself. Above him, he

could sense realms past imagining, where things like the walls between universes had no meaning and time itself was only a memory.

He was falling, but he wanted to rise.

He had to rise, it was heaven, he was seeing heaven and he had to rise!

Then he thought of the souls Samson had trapped. They belonged there, they were part of heaven, but they had literally been stolen from God to be bought and sold, their memories and emotions stripped from them like ripe fruit and consumed into the darkness of demon hearts.

It was the greatest of all evils, to kidnap the good into hell, but that's what they were doing-or rather, trying.

He would fight. He would do battle with Samson.

But he was already lower, sinking into the grass, and below him he could see black halls and hear desolate cries.

He strove, he struggled, he fought. Above him, love and forgiveness shimmered, above him freedom beckoned. He tasted the greatest agony there is, that of being unable to rise to heaven.

But then, he thought, perhaps he could save himself. There was something he could do, perhaps. One thing. Wouldn't work, probably. But he could try.

TWENTY-ONE

DECEMBER 21, DAWN
THE DEPTHS

AS SOON AS MARTIN AND Trevor had left, Wylie had found himself able to write again. He and Brooke read over what he had just completed.

"Did they drown?" she asked.

"God forbid. The key thing here is that Al North knows something that can help them but his soul is here, still on this side, so if he thinks about it clearly enough, I'm going to pick up on it, I think."

She sat reading the screen, scrolling, then reading more. "Is he...what's happening to him? What's he sinking into?"

"My best guess is the core of the planet. Maybe the way you live makes your soul weigh more or less. If you weigh too much-have too little love and too much greed, essentially-you sink. And then I guess you just stay there, trapped. Cooking, given that the core is hot."

"But the universe has an end. What then?"

"I think the evil are forgotten."

"But we need him. We need him now!"

Outside, dawn was breaking. The last phoebes were calling, the last tanagers chirping. Winter, such as it was, would drive them south any day now. They were very late to leave this year. But there was not much winter now, so they would return by February.

She came closer to him. He closed the laptop.

"Nick?" she called softly.

No answer.

"Kelsey?"

Silence.

But then she moved away. "I can feel him. He's not going down. He's here."

"The world is full of watchers. We're all on stage all the time."

"I want privacy."

These past days had isolated them from each other. But he had learned

something from what he was seeing of Al North's miserable afterlife. Love is the great treasure, it is what we come here to feel, and every bit of it that can be taken must be taken, because it isn't like the other acts of life. Most everything is forgotten in death. The names, the facts, the achievements, the failures, all are left behind. But love is not left behind. Jacob's Ladder has another name in heaven. It is Love.

She folded her arms, their signal that it wasn't the right moment. "I feel too exposed," she said.

"We are but players," he said.

"I can't do it onstage! Anyway, I'm-oh, my mind is blown. Martin and Trevor, my dear God, what's happening to them now?"

He took her in his arms. She lay against him, and it was good for a time, in the quiet.

Soon, though, he felt something other than the beat of her heart. He raised his head. "What is that?"

"Trembling. I think, uh...the fridge?"

But it got stronger. Things began to rattle.

"Dad!"

"All right, everybody stay calm," he shouted.

In her room, Kelsey began crying.

"Hold on, Honey!"

He wasn't going anywhere, the house was now shaking and shuddering so hard that he couldn't take a step. There was a tremendous crash from downstairs. He thought that the chandelier in the dining room must have collapsed, or the gun cabinet gone over in the family room. "Try to get out," he shouted. Behind him, Brooke vomited. He grabbed her and forced one foot in front of the other, dragging her toward the bedroom door and the stairs.

Nick appeared-incredibly, with Kelsey in his arms. The sight of them galvanized Brooke, who took her little girl, and they went lurching down the back stairs. The family room was in chaos. It had indeed been the guns.

Now windows began shattering, their glass exploding into the house. Nick got the back door open, and they struggled out onto the deck, which was soaked because the pool had heaved most of its water out and the rest was splashing crazily. The woods presented a chilling spectacle, with all the limbs swaying, and a continuous thunder of cracking trunks and the sighing rumble of falling trees.

They got to the middle of the backyard, well away from the house, well

away from the woods. The quake had been going now for at least two minutes, maybe three, but it felt like years, it felt like forever. There was another crash from inside the house, and the lights in Nick's room flickered. Wylie put his arm across his son's shoulders. His bunk bed had just collapsed.

Just one sound, then-choking, astonished sobs. Brooke. Staring at her house in horrified amazement.

The quake had ended.

"This is Kansas," she said, her voice an awed whisper.

"Bearish had a heart attack," Kelsey announced. Then, her voice careful, "I'm quite concerned about him."

Wylie was looking back into the woods, where he was seeing flickering. "I think we have a fire going back in there," he said.

"Call the fire department," Brooke responded as she headed toward the house.

He watched his family go in, heard Brooke scream her rage when she saw the mess, heard Kelsey start to cry, then Nick's calmer voice giving instructions.

The flickering was along the draw that drifted south down from the ridge they were on. For their view, they had paid a price, because if there was ever a fire in that draw, it would be here in minutes. Knowing this, he had prepared himself with a portable water tank, which he kept in the garage. He'd tested it and it worked well, but it was not huge, so the key was to reach the fire early.

The tank was behind his car, wedged against the wall. Worse, the garage door was jammed. Fine, he was ready for that, too. He strode across the garage and got his axe, which was lying in a heap of other tools. When he'd bought this, he'd imagined that he would take out a few trees himself, thin his woods by the sweat of his brow.

Not.

He hefted it and smashed it into one of the doors. The mechanism shook, and Nick appeared. "What're you doing?"

"I gotta get down to that fire."

"Here-" He reached up and pulled a lever Wylie hadn't even known was there. Then he lifted the door. The mechanism had been locked up because the power was out.

Nick began pulling the fire pump out.

"Look, you stay with the girls. I'll go down."

"Dad-"

"Nick, please. You have to. They need one of us."

"What just happened, Dad? We don't have earthquakes here."

"I know it. Whatever it was, it's got to do with that fire down there."

Nick went in the house, reappeared immediately with the magnum. "Take this, Dad. I've got everything loaded up and we're gonna be in the family room."

Wylie took the magnum, stuffed it in his belt, and headed out to fight the fire. He loped down the rough little draw, the pumper bouncing along behind him on its two bicycle wheels. As he got closer, the glow became more distinct. Would fifty gallons of water be enough? And in any case, what was burning? The electrics came up the road on the other side of the ridge.

He pushed his way along a jumbled path, slowing down as he got closer to the glow. When he broke through into the clearing, he didn't even bother to unhook the hose, let alone pump up the tank.

For a good half minute, he had to struggle to make sense of what he was seeing. It looked like a doorway into a little room. He walked closer, his feet crunching in the dry autumn grass.

It was a little room, he could see it clearly. But what the hell was it doing out here? It was like an opening into a tiny cottage, and he thought maybe he knew where the stories of the witch house in the forest came from.

It had come with the earthquake, this strange opening. Perhaps because of the quake. Or maybe its coming had caused the quake.

It was about six feet high and three wide. From inside, there glowed hard light that came from a single bulb hanging down from the room's ceiling. He went closer yet. He was now standing directly before the room. Another step, and he would be inside. On the right, he saw a rough table with a bowl on it. The bowl was filled with hot soup, he could see it steaming. To his left was a narrow bed covered by a gray, damp looking sheet. On the opposite wall there was a window, which was blocked by a thin drape. Beyond it, he detected movement, but could see no detail through the frayed cloth.

It seemed very sad, the little room. Somebody's little hutch. But...where was it, exactly?

Experimentally, he pushed his hand in the doorway. There was a faint pop, nothing more. Immediately, though, his hand felt warm. It felt damp. Slowly, he moved it back and forth, and observed what was without question one of the most bizarre things he had ever seen. His hand moved more slowly

than his wrist, meaning that, when his moving arm reached the center of the doorway, his hand was a good two feet behind it. There was no pain and there was no sense of detachment, but the hand simply did not appear to keep up with the arm.

He snatched his hand back.

Was he, perhaps, looking into a room in Abaddon?

If so, then this might be a major opportunity. There were controls in Abaddon that kept the fourteen huge lenses that were the main gateways open into the other human world. Tonight, the seraph would pour through them in their billions.

Disrupt those controls, and you would set the seraph back. The gateways, which would be wide open tonight, would begin to close. By the twenty-fifth they would be closed entirely, not to re-open again for all those thousands of years.

The secret of Christmas was that the birth of goodness came on the day that the door to evil was closed.

This was a gateway and that little room was in Abaddon. He knew where, of course. It was General Samson's apartment.

The "earthquake" had been local. It had involved the opening of this gateway.

Should he go through? Dare he?

It must be a trap. A temptation.

Then he noticed that the glow was less. This very unusual gateway was closing.

It could be an opportunity.

It was here that the seraph had originally attacked him.

Except, no, there was something wrong with that picture. As soon as his memories flitted back to that night, he saw Brooke and Nick and Kelsey coming up from the draw with him. And everybody was happy. They were thrilled. He was thrilled.

What?

He'd been raped by seraph marauders in this draw, trying to claw their way into a human universe that had rejected them.

The glow was dropping fast.

He stepped up to the gateway. The room on the other side looked now more like a photograph than an actual opening.

He stepped forward-and found that the surface was now thick, that it felt

like stepping into a molten wall. He pushed against it, pushed harder. It was like squeezing through a mass of rubber.

And then he was stumbling forward. He tried to check himself, but windmilled across and hit the far wall hard. He sank down, feeling as if all his blood had been drained right out of him.

Then the noise hit him. Coming from outside was the most ungodly screeching and roaring he had ever heard in his life. Machinery howled, voices squalled and screamed, high and rasping and utterly alien-but not the voices of animals, no. They were shouting back and forth in a complex language, oddly peppered with any number of human words, English included. Worse, they were close by. This was a ground floor apartment.

A greasy stink of sewage and boiled meat came from the bloodred soup. The fact that it was still steaming worried him, of course, because whoever's dinner it was would be back for it at any moment. It must be Samson's food, meaning that he was here.

Recalling the story of the Three Bears, and the little girl who had entered their woodland cabin and found their meal ready to eat, he thought that others had passed through gateways like this before. In fact, if you read it right, you could reconstruct the entire fairy-faith of northern Europe as a chronicle of contacts with Abaddon.

He could either leave here now and try to make his way to Government House, or he could lie in wait for that monster.

Maybe he should try to steal Samson's car. But it had a soul, didn't it, so maybe it wouldn't be so willing to let itself be stolen.

The safest thing would be to lie in wait.

There weren't many places to hide in the room-just a curtain that concealed a still toilet full of puke-yellow goop that was being swarmed by flies as fat as ticks and as red as a baboon's ass. Or no, look at the things, they weren't flies at all, they were tiny damn bats.

He could not hide in there. He could not be near that toilet, which had, among other things, part of a rotting seraph hand in it. He knew that they were cannibals, of course, he'd seen this place before, had heard Samson think to himself that the execution fiesta he'd witnessed from the bus would mean lots of soup.

So this was some of that soup. But where was Samson? It had to be getting cold, even in the jungle heat they had here. Maybe he'd been arrested. Could've happened in a heartbeat. Maybe he was being tortured to death right

now by that sociopathic kid of Echidna's.

The shrieking rose, and with it came thudding from above. There were crunching noises, more cries, then a sound outside the door of somebody running downstairs. The sobs were unmistakable. A short silence followed. Then, more slowly, a heavier tread. It moved past the door.

This was not good. If somebody came in here, they'd raise the alarm and well, he dared not allow his imagination to go there.

He decided this had been a fool's errand. The soup was a trick. Samson was actually on the other side, and he was going to be menacing Brooke and Nick and Kelsey.

It was obvious, and what a damn fool he'd been.

He turned to go back through the gateway.

Except there was no gateway. For a moment, he simply stared at the blank wall.

The door clicked. He watched the crude wooden handle rise slowly. There was a flicker and a sputter, and he realized that the sharp light wasn't even electric. It was carbide, a type of gas that had been used at home a hundred and fifty years ago.

They didn't even have electricity.

The door swung open.

A gleaming creature stood there, shimmering purple-black. The vertical pupils in its eyes were bright red, the irises gold. It had in its hand a small disk with two barrels on the business end. Wylie knew what that was, and he decided not to show the magnum just now.

Slowly, carefully, he raised his hands.

The creature smiled a little, a tired smile. "I've been waiting for you," it said in a rasping voice. Its English was good enough, but spoken with a curious singsong lilt that made Wylie think of the voice of a car.

Wylie had been outmaneuvered.

"Where's Samson?"

"He is with your loved ones, Mr. Dale."

Wylie knew what the phrase to die a thousand deaths really meant. In a situation like this, it was no cliché, but a dark expression of truth.

The creature made a very curious sound, a sort of smacking. It watched him with ghastly eagerness. He thought that they might be allergic to human dander, but they could eat human flesh, and this thing was hungry.

"At this time, come with me."

What else was there to do? Wylie followed the creature down a steep, narrow staircase that reeked of something that had rotted dry. The walls were covered with graffiti-squiggles and lines that looked at first meaningless...and then didn't.

They were drawings, all at child level, but done with the light and dark backward, like photographic negatives. For the most part, they were scenes of torture and murder and orgy. Some drawings showed male seraph with sticklike penises, others females with bared teeth guarding black eggs.

And as they came to the street, he saw some of them. One that looked up was the same color as Jennifer Mazle, creamy and pale, her scales glittering. Her eyes were the same as those of his captor. She gave Wylie a long, melting look as she slowly ran her tongue out and touched it with her fingers.

"A whore," his guard said. Then some boys appeared, wearing hugely oversized T-shirts painted with images of crocodile-like creatures so perfectly rendered that they seemed about to leap off the cloth and into his face. Some of them. One had a New Sex Pistols T-shirt obviously from home, another a shirt with a big green fruit on it in the shape of a bitten apple, and in the bite, an image of a squeezed human face. This one carried a brutal weapon, an Aztec sword made of steel with obsidian blades jutting out of it. The squeezed face was instantly familiar. It was Adolf Hitler.

They watched him with their brilliant, dead eyes, their heads moving with the clipped jerks of lizards. As he walked, he saw that the street was made of wood-in fact, of cut tree trunks fitted together with an Inca's skill. Before them was a vehicle looking something like a horse-drawn hearse, but with a tiny barred window in the back instead of glass to reveal the coffin.

Standing in its equipage was a brown animal with fearsome, glaring eyes and purple drool dripping from its long, complex jaw. The jaw itself was metal, and appeared to be partially sprung, the way it dangled. The animal was smaller than a horse by half, but seemed made entirely of brown, wiry muscle, with the narrow, ever-twisting neck of a snake. When it saw them, it began to burp and stomp pointed, spikelike feet, which made it look as if it was dancing. Others just like it, pulling various wagons and carriages, moved up and down the street.

The door at the back of the wagon was open, and his captor made a brisk little gesture toward it and bowed. A twisted smile played on his almost lipless mouth, and his spiked teeth glittered in the brown light.

There was a hissing sound overhead, and he saw soaring past, a gorgeous

green machine shaped like a horizontal teardrop with a gleaming windshield at the front of its perfectly streamlined shape. It was so different from the miserable mess in the street that it was hard to believe that it even belonged to the same world.

Then he got a terrific push, which caused him to bark his shins painfully against the edge of the wagon's floor. He tried to turn toward his assailant, but a powerful blow brought whizzing confusion.

The door shut behind him with a dry clunk. For a moment, he could see nothing. As his eyes got used to the dimness, he examined the space he was in. It was like nothing so much as the interior of an old, zinc-lined ice chest. It was at most three feet high and five long. There were claw marks gouged in the roof and walls, and in the wooden floor, places-many of them-that had been gnawed.

He drew out the magnum, cradling it in his hand as he would the rarest diamond. This was hope.

He twisted himself around until he could see out one of the tiny, barred windows. They were not going up the great esplanade he had seen through Samson's eyes, but along the city's back streets. There were neon hieroglyphics everywhere, and flags overhead with more unreadable slogans on them. The place was ancient Egypt on steroids. Martin would have loved it, but he wasn't the sucker on the spot, was he?

No, indeed, and the fear had a funny quality to it. The fear had to do with more of the knowledge he had gained. He had a soul. These people could take out your soul and put it in a damn glass tube. They could remove your memories and graft them into their own souls-eat them, as it were. They could use you for crap like running a car, and God only knew what else. In this place, the phrase the soul in the machine had a ghastly new meaning.

They went around the corner-the animal was not fast-and began to pass what appeared to be a restaurant. Behind the lighted windows, he could see gleaming red walls and a gold ceiling. Balls of light floating in midair provided illumination. Sitting in large chairs were seraphs in beautiful, shimmering suits, tight against their bodies.

Then he got what could probably and with accuracy be called the surprise of his life: there were human beings in there, too. As they trundled slowly past, he strained to see more. There was a man in a fur jacket and a white ermine fedora, not recognizable to him but obviously some kind of entertainer, maybe a rapper or rock star, there were women in silks and furs.

Other men wore tuxedos, some business suits, others caftans and gallabias. Then he saw a cardinal, distinguished by the red zucchetto on his head and the red-trimmed black cassock.

On the tables before them were golden dishes beautifully decorated with garlands of greenery and white flowers. Heaped on them were roasted body parts, both seraph and human. The diners were eating busily.

Then it was gone, replaced by more of the endless gray city and its hurrying, oblivious hordes of seraph.

A stunned Wylie Dale sank down to the floor. For a time he lay there listening to the creak of the axles, feeling the steady swaying of the wagon. His blank mind held an image of that cardinal. Of the men in tuxedos, the women in evening gowns.

Who in the name of all that was holy WERE THEY?

Rich, to be sure, compared to the starved horde that crowded these streets. Human beings, movers and shakers all, living large in hell.

Or was that the whole answer? The seraph were chameleons. So maybe these weren't human beings at all, but seraph spending time at home. Two-moon earth must have been plagued by them. It had totally ignored air pollution, and global warming was running wild there, even worse than at home.

Shape-shifted seraph had probably been running the place for centuries. They were the cardinals, the big personalities, the ministers and the kings. Like Samson. He'd ended up in control of the United States itself, and he was a shape-shifted reptilian seraph maintaining himself on drugs.

He wondered, Who in his own world might be a seraph in disguise? Who sought the ruin of souls? Who encouraged greed? Who lived by the lie that pollution didn't matter?

Who, indeed?

He realized that he was not far from insanity, here. His mind just wanted to go inside itself. Walk in the green fields of dream, smell the flowers, above all shut this horrible world out, scrub his brain free of all knowledge of it and memory of it.

Every trembling cell of his body, every instinct that he had, every drop of his blood said the same thing: You are not supposed to know this, you are not supposed to be here, and you cannot get away, and to keep their secret, they are going to kill not just your body but your immortal soul.

But now that he had fallen into the trap, he must not freeze, he had to do

everything possible to turn their trick back on them. He had to try.

Oh God, he prayed, what is the universe? How does it really work? Above all, how can I save this situation? A memory came to him of Martin and his ceaseless prayer, and he began to pray that way, also. He prayed to the healing hand that had raised Osiris after his brother had cut him to pieces, and Jesus after his passion had ended. The unseen one who bound the good by the cords of love.

They were arriving somewhere, the wagon turning, stopping. He looked out first one window and then the other, but saw only skeletal trees, huge once, no doubt rich with leaves and life, now gray and dead, clawing at the brown sky. "Mr. Dale, if you don't mind?"

As Wylie came down, the creature added, "I was wondering if you'd autograph Alien Days for me?"

For the love of Pete, it had a paperback of the damn book and a pen in its clawed hand. Too stunned to do anything else, he took the book. Opened it to the title page. "Do you want me to personalize it?"

"Oh, hey, yeah. Make that out to me."

Confused, he looked up, to find himself staring into a very human, and very familiar face-Senator Louis Bowles, chairman of the Senate Intelligence Committee, senior senator from Utah.

Senator Bowles smiled, then shuddered and shifted back into a long-faced vampiric horror, its scales glistening, its eyes glaring with evil energy.

He finished the inscription-to Senator Bowles...and as he did so, saw the hand that was doing the writing, and then also the hand that was holding the book. He saw long, thin fingers of the palest tan, ending in black claws, neatly manicured.

He saw the wrists where they were visible outside the sleeves of his jacket. Narrow, scaled, shimmering with the gemstone sheen of snake-skin. He looked at the hand that held his Mont Blanc, turned it over, watching the light play on the scales. Then he raised his fingers to his cheek, and felt beneath their tips the delicate shudder of more scales.

He hadn't come to an alien earth at all.

He was a shape-shifter himself.

He had come home.

PART FOUR

THE BLUE LIGHT

He found the blue light, and made her a signal to draw him up again. She did draw him up, but when he came near the edge, she stretched down her hand and wanted to take the blue light away from him. "No," said he, perceiving her evil intention, "I will not give you the light until I am standing with both feet upon the ground." The witch fell into a passion, let him fall again into the well, and went away.

-THE BROTHERS GRIMM, "The Blue Light"

How long, Yahweh?

Will you forget me forever?

How long will you hide your face from me? How long shall I take counsel in my soul, Having sorrow in my heart every day? How long shall my enemy triumph over me?

-Psalm 13: 1-2

TWENTY-TWO

DECEMBER 21, EVENING
THE CHAPEL PERILOUS

OUTSIDE THE TENT, THE NIGHT bellowed. Earthquakes had started right after they had come back from Wylie's universe and were continuous now, a low shuddering that never stopped. On other parts of the planet, Martin and Trevor knew from reading Wylie's book, this meant that hell was unfolding. The seraph were racing to sink the great human cities and most of the human lands, and raise the ocean floors that would be their new continents. They had only hours left until the fourteen artificial gateways they had constructed around the world opened wide and a billion hungry seraph came swarming through.

Three times now, the little band had heard the unearthly scream of tornadoes in the sky, then the bone-shaking thudding that followed when they hit and went marching off across the prairie.

Pam and George had had the presence of mind to locate the tent close to the foot of a small hill, meaning that they were unlikely to take a direct hit from a tornado. But if a big one should sweep this clearing-well, then it was over for them.

Thunder snapped, the wind screamed, and Ward and Claire James drummed on their drums. Outriders chuckled and rasped nearby. Martin believed that they probably didn't even want to attack the tent at this point. They wanted this little band of evolved humans right where they were, because as long as they were here, what problems could they cause?

He and Trevor had almost been drowned when the Hummer passed through the gateway and hit the flood on this side. But the other kids had anticipated what might happen, and were waiting with ropes in the slow water near shore. It had been a near thing, but the both of them had managed to ford the swollen, raging river.

Trevor slept with his head on his dad's shoulder. Another kid had the other shoulder. Two little ones shared his lap.

And he thought, working in his mind with Pam and George and Mike.

The kids were getting expert at this, their minds racing much, much faster than his. The change had affected children and adolescents because their minds were more supple and less informed with the weight of civilized knowledge.

There was a name for the state they were in-many names, in fact. It was called bhodi, satori, many things. But it was not as if the soul was lit from a higher power-enlightened. They weren't enlightened, they simply were.

Man had left the forests of Eden an animal, but these kids had found their way back, bringing none of the debris of civilization, but all of its compassion, its consciousness of the value of the individual, its ability to balance personal and collective need. They had returned to Eden as true human beings. They understood how to be as lilies of the field. For them, it wasn't impossible to live in the rain. They had each other. They had love.

But they were still just this tiny, little band in a great and frightened world.

It had been this way, before, he thought, in the lands of southern France and northern Spain thirty thousand years ago, when the spirit had been on the children, and adolescents had begun to paint the walls of caves with the magic animals of the mind.

Pam shook him. She frowned at him.

He'd allowed his mind to drift while they were reading his memories of Wylie's book.

"See them?" Trevor asked suddenly. His voice was curiously flat, as if he was dreaming.

"Are you asleep, Son?"

"I'm out of my body, and if I keep having to talk, I'm going to be back in, so come out, I need to show you something."

Pam nodded. They could read the information stored in his brain in peace if he wasn't there, so he took a deep breath, let it out and with it let his soul out of his body. When he moved out of the tent, he found Trevor and some of the other kids together. The rain whipped through them, the outriders did not react to them. He saw them as their ordinary selves, but knew that this was only his mind filtering their essences into familiar forms. Their bodies were still inside the tent.

Trevor pointed, and he followed the direction. Moving slowly, he tried to clear himself of all expectation, to so empty his mind that the actual appearance of the world over which he was flying would come through.

It was hard, though, in this state, to see anything except what you expected to see, or wanted to. He saw cities brightly lit in the night, Wichita and Kansas City, and the smiling prairie farther on dotted here and there with the lights of smaller communities.

He saw, in other words, a safe world, and so one that was not real. So he told himself, You will close yourself to this. You will blank your mind. And when you look again, you will not see your memories or your hopes, you will see only what is part of the actual, physical world.

He saw Lindy. He was right in front of her and she was still walking, but she was so thin and tired, she looked like she had only a few more steps left in her. Her eyes were glazed as if dead, but still she walked, and not far ahead were lines of fourteen wheelers, Continental Van Lines, Murphy's Stores, Gap Leaders, an ad-hoc assembly of vehicles. Other wanderers were getting into them and she was eager, he could see it, because it would mean no more walking on her blistered clumps of feet.

Soldiers, some of them in standard issue G.I. uniforms, others thin and sleek, seraph in gleaming black, their hands gloved in white, their heads hidden by visored helmets, were separating the arriving wanderers into two groups. Seraph and human soldiers worked together, and he knew that the human soldiers were themselves wanderers.

There was a crackle, and a group of wanderers who had just been moved into a small field blew apart, their legs, arms, and heads flying in every direction.

Sitting in the back of a nearby pickup was a soldier manning a peculiar, disk-shaped weapon, and he knew what that was, too, because back in the tent Trevor had the smaller one he'd taken from Wylie's house.

As he watched, more wanderers approached the ruined bodies with knives and saws and began harvesting the meat. The ever-thrifty seraph must be feeding their captives to themselves. It made ugly sense. How could you find a cheaper way to keep them going than that?

He tried to scream at Lindy, but his voice could not be heard by her or anybody else. And look at her poor feet, surely she wouldn't be set to work, surely they would select her. And his poor Winnie, God only knew what had become of her.

The sorrow was so great, the helplessness almost enough to drive him mad.

A warmth came over him, then, so kind, so surpassing in protective

compassion that he allowed himself to hope that at last the deity he had been praying to constantly for all these days had come. But it was not God, it was another soul. He had a sense of a soldier's heart, determined, disciplined, and a soldier's face, tight with effort.

When he tried to open himself to this soul, though, the way you do when you are practiced in out-of-body travel-and he was getting somewhat okay at it-the other soul threw up a memory from its childhood, a boy riding a bicycle up a driveway on a summer's night, a yellow porch light with moths flying around it, an elderly dog standing up on the porch, then coming down to greet the boy, his tail twirling.

Martin recognized it as an attempt to say, in the multilayered language in which soul speaks to soul, that this visitor who was trying to contact him now had been a boy beloved of an old dog. And with the high-speed insight that characterizes thought unencumbered by the electrochemical filters built into the brain, Martin saw that this meant that he had once been good and gentle, but it was a long time ago. But he had seen his error and now longed to return to his boyhood state.

He had done evil, this interloper, but he was trying to say that he was not, himself, evil.

Then Martin saw hieroglyphics. They were extremely vivid, but were they coming from the soul or were they in the physical world? Telling the difference took an expert, and he was no expert.

Trevor's mental voice said, This is what I wanted you to see. Let General North continue to guide you.

Martin saw the face of their guide again, just the eyes. The eyes were pleading.

Martin could, of course, read hieroglyphics. But there were over two thousand hieroglyphic symbols, and translation could be an extraordinary challenge, and the farther back in time from the date of the creation of the Rosetta Stone, which was the basis of all hieroglyphic translation, the less accurate translation became. He saw immediately that these were Old Kingdom if not even older, and that they were a mix of words and numbers, with bits of quickly scribbled hieratic notes here and there along the edges.

These were the most complex hieroglyphics he had ever seen, but as with all complex texts, there were simpler words, and he thought to start with these. They were lovely glyphs, really well executed. He read ur, the swallow glyph, then udjat, the Eye of Horus that has become the familiar © of modern

prescriptions. He read on, recognizing the name Narmur, the first pharaoh of the Old Kingdom. Then a bit of the hieratic text became clear: the connection. This was followed by an unknown number that had been scribbled beside the hieroglyphic for copper.

Incredibly, this appeared to be a set of instructions about making electrical connections.

The souls of the kids were filling the chamber now. Pam had come, and was signaling an image of a long tunnel with some kind of a car in it. Then George showed a picture of the Rockies, then the entrance to the Cheyenne Mountain facility, easily recognizable by its huge steel doors.

This image agitated Al North. Martin could feel his sorrow. But why? They knew that somewhere the human souls were stored, and maybe what they were learning here was that it was under the Rockies.

A map was thrust into his mind as if into his hand, accompanied by a red flush of anger. It was a Google map centered just west of Holcomb.

A shock went through him. "Zoom," he said. "Again." The map now pointed to a particular crossroads.

And he at once understood why the seraph had scoured this part of Kansas the way they had. It wasn't only because he was there and the gateway to the other human world was there, it was because the repository where the souls were hidden was there, at the geographic center of the continental United States, which was a few miles from the town of Lebanon, just over the county line from Holcomb, just at the crossroads he was looking down at right now.

This spot must be of enormous geomagnetic significance. But the men who had made the casual measurements that had located it, had been innocently playing around with a cardboard map.

But they hadn't. They had been under seraph mind control and doing the work of seraph engineers.

He could feel Al North's delight as a sense of dancing. Music came out of him, joyous chords. He had been working and working to communicate this. He had been struggling to be seen, to be heard, but until now nobody had noticed him.

Martin had not noticed that they'd gone down into the earth to find this place, but they had, they'd gone deep, and as they returned, traveling through so much stone was eerie, to feel yourself in the pull of it, to feel your sensitive electromagnetic body negotiating the smaller spaces in the dense

matter-it was claustrophobic and they were deep, very deep.

Without warning, he burst up into the storms of the night and went rocketing into the sky. For an instant he saw the wide plains of Kansas whirling beneath him, then the clouds, then he was above the clouds and the second moon was high, its soft light making castles of the cloud tops from horizon to horizon.

He felt a pull upward, strong, and he saw laughing, singing children looking down from a tower above him, pleading with him to come. But he looked only for one face in the tower of song, and he did not see that face, he did not see his Winnie.

Above the tower were spreading mansions and roads in the high sky, great, flowing blue spaces, and the clouds were gone and the moons were gone and waves of pure pleasure were pouring through his body with such intensity that he could not believe that he had anything even approaching such a capacity for delight.

It was the pleasure of great love, mature and rich and filled with the resonance of long companionship, an exalted version of the love he had known with Lindy, but also there was somebody there who wanted him and to enter him and become him, too, and there was the laughter of children, and the perfect voice of a great choir.

Then something stung him. Hard. On the cheek.

"Dad! Dad!"

What was that? Well, it wasn't heaven, so he wasn't interested.

Another sting, harder. No, go away.

Another one, harder still. "Damn you!"

"Dad!"

Trevor was there. Physically there, because souls don't have beads of sweat running along their upper lips. Trevor shut his eyes tight and whap, Martin saw stars.

"What the hell, you hit me!"

His son fell on him sobbing and laughing, hugging him. "Finally! Dad, you almost didn't come back!"

He had never in his life felt as heavy as he did now. Returning to your body was putting on a lead overcoat.

"How long have I been..." He bowed his head. He could not bear to say it. He had been in heaven.

His son's hand touched his shoulder. "I went there, too, Dad."

Martin shook his head. He didn't want to think, to talk, to listen to those damn drums anymore, to be here in this awful place, he wanted to be there, where flowers that bloomed forever never stopped surprising you. Eternity was not living in the same old world forever, it was discovering the world anew forever.

"Where's the monument," Trevor asked. "Who knows where it is?"

A few hands went up. "It's off the roadside, near Smith Center," Tim Grant said. "There's a chapel there that can seat, like, twenty people. It's all sort of nothing, actually."

"Except for the millions of souls that are trapped under there."

"According to Wylie's book, it's where General Al North was taken," Trevor said. "It might be under Kansas, but the entrance is in Colorado, at that base."

Martin felt that Cheyenne Mountain didn't matter. It was just another seraph trick, a diversion.

No, the chapel would be the key. If they went there, they would find the vulnerability that the seraph were trying to hide. "Thing is, the way they've scoured this part of Kansas, how interested they are in us-and we're just a quiet little corner of the world, after all-I'd say that if the monument is right above the center of their repository, then that's where we need to go to reach it. That's got to be their weak point."

The atmosphere in the tent became electric. "It's not very far," a voice said.

"We have to go in the physical," George added, "or we won't be able to do anything in the physical."

From outside came the chuckling clatter of the jaws of outriders. The drummers started drumming.

"I'm going with you," Trevor said softly.

Martin did not reply, not verbally. There would be no way to keep Trevor here. He stood up, and so did Trevor and so did Pam. But the others did not stand. He could sense something among them, a kind of mutual agreement, but it wasn't clear exactly what was in their minds.

Mike stood. His girl cried out, but stifled her cry. She came to her feet and threw her arms around him. They stood like this, the young couple, and Martin saw that their hearts were married.

She stayed behind, though, surrounded by the little ones.

The woods were quiet now, the outriders having gone off when they

failed to smell fear here. To the west, lightning flickered. Would the storms never end? No, not as long as the seraph tortured this poor earth, Martin knew. All of that seafloor that had risen would be gushing with methane from hydrates and billions of tons of dead marine life, and hydrogen sul-fide and other gasses he couldn't even name. In a matter of days, it would change the atmosphere, and the seraph would be able to breathe easily here, and all the humans and most of the animals and insects would die.

First moon now rode in the high sky, its light bright and bitter, and the night was so still that you could hear the whisper of grass when breezes touched it. It was a sound familiar in Kansas when the crops were high and the night wind ran in them, sighing and whispering.

"Stop," Mike said softly.

Sensing trouble, Martin drew his prayer back into his mind.

Trevor pointed upward. For a moment, Martin saw only the sky. Then, against the moon, a flash of darkness, ugly and ribbed like the wing of a bat. Then he saw another and another, and as his eyes began to track the movement in the sky he understood that there was not one nighthawk circling up there, but dozens, no, hundreds, in a soaring column that seemed to go up forever.

Thousands in the moonlight.

Something slid into Trevor's hand, and Martin knew what it was, that seraph gun, even more fearsome than Wylie and Nick's arsenal.

"All right," Mike said, "right now, you're thinking away as usual, Doctor Winters, and the rest of us are absolutely not afraid. And the reason is, we're doing what you keep thinking about doing. You have to use the prayer, Doctor Winters, you have to keep it in your head all the time-and now you're about to think about the Valley of Death and comfort yourself with the psalm but please don't even do that."

He recalled Franny's prayer, took it to his mind, and began repeating it. Of course, he was not even a believer. If anything, he was a Jeffersonian Christian, an admirer of the man but not a believer in the resurrection. And, in any case, Zooney had been right, had he not, that the prayer was itself a form of egotism?

He realized that Mike was looking at him. They were all looking at him.

-The fourteen parts of Osiris.

-The fourteen Stations of the Cross.

-The fourteen sacred sites.

-The fourteen black lenses.

"Do you understand now, Doctor Winters?"

He nodded, but he did not understand. The great magic number of the past was seven, the number of a completed octave and a completed life. So what was fourteen?

"The number of resurrection, the key to heaven," Trevor said, "and it's the resurrection energy that the seraph hate, because it's what they can't have. That's why they steal souls, to find in their goodness a taste of heaven. That's why they're really here. It's not for bodies and land, it's for souls."

They walked through the wrecked forest, past uprooted trees, through the yards of ruined houses, and he could see the white steeple of Third Street Methodist still standing. Also, they walked out from under the great column of nighthawks, which could not see them because they could not see any fear.

They reached Pam's yard, and he saw that her house had been torn apart just as theirs had, by seraph who had not anticipated that some of their victims would gain power from the attack, and sought any crumb of information they might find about these dangerous little viral particles.

Pam broke into a run, and disappeared into the house. Martin saw in his mind's eye a flashing image of a car key, but knew that her heart was taking her to her old room, and the rooms of those she loved, and he saw her looking at the melted, deranged ruin of her home and knew that she was feeling the same horror that he had, the same anguish at seeing something so much a part of herself made so ugly.

Nobody spoke, nobody needed to, they could hear her rage in their minds, even Martin could hear it, and a moment later could also hear the increasing roar of wings, and the forlorn, eager cries that grew louder as the nighthawks, seeing her terror like a bright star in a void, found them again.

From the house, then, silence. She'd become aware of what her emotions were doing.

Nobody moved. Not a hundred feet overhead, the creatures swarmed. And from the dark woods all around now came the chuckling of outriders. They had begun marching this way, working their steel fangs.

The truck stood in the drive, but when they drew near it, they found that it was peppered with tiny craters. Farther down the driveway were heaps of something-the remains of people, there was no way to tell.

As they got into the double cab, Pam tried the key. "We need a miracle, thanks," she muttered.

The truck's engine growled.

There was a huge crash and the ceiling was crushed enough to knock Martin's head forward-which was fortunate, because enormous claws came ripping through the metal, ripping and clutching.

"Keep down, Dad!"

The engine ground again. "Come on," Pam said.

It was a double cab, and Trevor and Mike had gotten in the back. Trevor came forward between the seats as more of the huge nighthawks landed around them, their great heads thrusting, their beaks, lined with narrow teeth, opening wide when they bellowed, then snapping closed with a lethal crack.

More landed, and more, until Martin could smell their breath, a mixture of hydrogen sulfide and rotting meat that made your throat burn.

Then one of the heads thrust forward and crashed through the windshield, and the teeth slashed toward Martin. From between the seats, Trevor fired the disk-shaped weapon.

There was no report. The head simply flew apart, the upper and lower halves of the beak whirling against the opposite doors, the eyes exploding into a dust of glass and gelatin, and the tongue fluttering in the ruined face as the creature shot backward and ended up squalling on its back in the driveway, its fifty-foot wings flapping furiously, hammering the ground so hard that the truck rocked with every great convulsion.

With a thunder of howls, the rest of them took off, rising as mayflies do from a spring brook, but monstrous.

"Thank you, God," Pam said as the truck finally started. She put it into drive and accelerated toward the street, driving over the creature, which snapped and crackled and squalled beneath the bouncing vehicle.

"Sorry about that," she said.

They went down to Harrow in the ravaged truck, and changed there to another one-Bobby's police car, which stood open on Main and School. The keys were still in the ignition, and it had a quarter tank of gas. Also, between the front seats, a sawed-off shotgun. They got in, Martin behind the wheel.

They rode in silence down an empty Highway 36, passing an occasional motionless car, but otherwise meeting not the slightest sign of life. "That's a terrible weapon," Martin said to Trevor.

"It's nearly empty," Trevor replied.

"The light is coming," Mike said. "We need to hurry."

Martin scanned the sky, looking for some sign of an orange disk. He saw

nothing, but he stepped on the gas, driving the police interceptor up to a hundred and twenty, then a hundred and thirty. Bobby kept the thing in good shape.

"Take a right," Mike said.

"I thought it was in Smith Center."

"The monument's on 191."

Martin turned north on 281. The fields were fallow, the country totally empty.

"Left," Mike said.

Another mile and Martin saw the little monument just off the road. A short distance from it was a small building.

"Okay," Mike said, "you got it. Now what?"

They got out. Martin carried the shotgun.

Mike took it. "That's an eight-shot semi," he said, "not seven."

"It's loaded?"

"I know that."

Martin went to the chapel, a white portable building, its siding weathered. The door was unlocked. He pushed it open. Inside were a few pews, a table, and a cross on the wall behind it. He noticed that this was not an ordinary Christian cross. Christ lay upon it, but the four limbs of the cross were of equal length. He wondered who might have done that in rural Kansas, made it into such a very ancient symbol, for the solar cross marked the solstices and the equinoxes, and related to the greatest depths of human memory and knowledge, from the time when we did not think like we do now, but made wonders in the world because we were surrendered to God, and thus acting on exquisite instinct, not plodding thought.

"Who is she?" Pam asked.

For a moment, Martin was confused. Then he saw her, too, a shadow standing in the corner of the chapel, so still that she at first appeared to be little more than a thickening of the dark. But he could see her eyes there in the corner of the room, her gleaming eyes, and her slimness.

Jennifer Mazle sprang at him. One second, he was wondering if the figure was even alive, the next he had been slammed to the floor.

Her hands came around his throat, closed. His head felt as if it was going to explode. At that same moment thick light surged in the windows and the door with the force of a tidal wave, causing the glass to shatter and the door to slam all the way across the chapel, where it hit the wall and dropped the

cross to the floor.

Martin looked directly into Mazle's face, into eyes that bulged until the contact lenses popped out, revealing the reptile eyes of the seraph. In the light that was all around them, he could see the kids moving with method and direction, and could hear the whispering of their minds.

Mike pulled Mazle's head back. Her mouth opened and her long, black tongue came out as she screamed. Trevor thrust the shotgun into her mouth and pulled the trigger, and her lithe body shot backward in a shower of green blood. The head burst.

"But the light!"

"Don't think, Martin!" Pam yelled.

"Just let yourself happen, Dad!"

As he took his attention away from his mind and into his body, he felt his soul return also, and knew that the light had been taking him so stealthily that he hadn't even realized it.

Then Pam marched into the corner where Mazle had been standing and simply disappeared.

For a moment, Martin thought she'd gone through a concealed gateway, but when he heard echoing footsteps, he understood. Cunning doors like this were seen in some Egyptian temples he'd worked on, but especially in Peru, where there were many of them in old Cuzco, doors that to this day only the Inca knew. But to find one here in Kansas-well, he would have been surprised once.

Concentrating on his breath, on the way his body felt as he moved, leaving his thoughts and his fears behind, he found that he could move through the light easily and without danger. The kids weren't even concerned by it.

He crossed the ruined chapel with the others, walking straight into the corner, feeling it give way, seeing the darkness, then finding his footing on steep black steps.

They had defeated the light, and if only mankind had recognized his own soul before it was too late, the whole world would have been able to do the same thing. But the seraph had infiltrated us with the lie that we were a body only, that there was no soul that was admissible to understanding and to science, and that science itself was a strange exploration having nothing to do with the kingdom of God, when, in fact, there was no real science that did not address heaven and satori.

As they went down, the air changed, growing thicker and warmer, beginning to smell stifling. This was the air of Abaddon, air as it would be everywhere in this world of theirs very soon. It was heavier, their air, and would be filling low places first.

He was last in line, going down the iron steps. Faint light came from below. From above, now only darkness.

They went down for a long time, and Martin remembered the part of Wylie's book about Al's descent. He had been taken miles into the earth.

As the light from below got brighter, it took on a blue cast, and the narrow shaft they were descending became more distinct. "It's our guide," Mike said.

Martin knew that the blue light of souls was also the color of good worlds, and that Abaddon was brown, but the human earths were palest blue, the color of their waters and their skies, and the glow of their dead.

"Are we sure?" Martin asked. They were a good two hundred steps down, and he was beginning to feel a distinct sense of claustrophobia in the narrow space. He forced himself not to think of the depth or the closeness. He'd found reading Wylie's description of Al's descent beneath Cheyenne Mountain to be almost unendurable, so vivid was the sense of being enclosed in rock, and he could never forget the feeling he'd had here earlier.

"Oh, my God."

It was Pam, calling up from below. "What?"

He reached the bottom of the steps. At first, he was only aware of color—gold, green, red, tan. He couldn't understand what he was seeing. Then he could. "This is the most extraordinary room in the world." He'd seen it before, of course, but not in the body, not with all the vividness of his living eyes.

"Back down, Dad. Try to put your mind away."

"I can't put my mind away! Don't you see what this is? It's where we saw the hieroglyphics. But now we're here in the flesh, and it's all so-so vivid and so real. This is the most superb example of Old Kingdom bas-relief on the planet. And it's in the middle of the United States!"

"Dad, listen to me. If you don't just let it take you over, we're in trouble. Because we're not in the United States, dad. This is Abaddon, and the second they realize that we're here, we are done."

"We've come through a gateway?"

"We're still on earth, but in the physics of Abaddon."

"Come on," Mike said. "We've got work to do. Stuff to figure out."

Martin followed him across the room where Al North had been deprived of his life and his soul. He followed them through a low doorway, which was the source of the light, which was a living light that penetrated the flesh and made you weep to feel it upon your body.

Then he saw why. He was in a cavern, blue-lit like a submarine cave just touched by sun from the surface. Before them stretched a sea of glass tubes, each three feet long, all plugged into huge black sockets, all living, exact replicas of the images on the wall of the temple of Dendera. Except these tubes were sparking with life, and you could see the lights inside them leaping and jumping and struggling, causing the whole room to flicker continuously.

Slowly, Trevor, then Pam and Mike went to their knees. Martin followed them, because the light shining on them was not just alive, but richly alive, and they could see millions of summer mornings, dew on the flowers of the world, signs of struggle and happiness, and hear, also, a roar of voices that was vast.

The flower of mankind was here.

"What do we do now, Dad?"

"I have no idea."

TWENTY-THREE

DECEMBER 21,
THE FINAL HOURS ON ABADDON: THE UNION

WYLIE HAD REALIZED THAT HE was being die-seled when he saw that they were crossing the same sodden shopping street again. There were piles of yarn, there were farm implements, there were baskets and paint-brushes, and hatchets polished to a high shine.

He might be a shape-shifter like the rest of them, but he was not on their side. No, he was a Union man, he had remembered that. They were right about him being an intelligence agent. He was, but not a very good one, given that he'd gotten his sweet ass caught just when that was the worst possible thing that could have happened.

Wylie had examined every inch of the wagon, but it was made like a fucking safe. The goddamn driver would open a little hatch from time to time and shit and piss into it. Wylie stayed well back, but the place stank. He wondered if his own shit was yellow now, too?

The wagon had been stopped for some time before he understood that it wasn't going to be moving again. There was a series of clicks, and the door went hissing open. Even in this place, with its dirty brown sky, coming out hurt his eyes.

He was coming to the crisis of his failure now, he knew.

"Ready for lunch," his captor said. "Your hands are comin' to me and mine, I hear."

His hands. What a place. Trapped in the wagon with nothing to do but think, he had remembered more of his real life. If you looked-really looked-you wouldn't find a trace of Wylie Dale before December 26, 1995, the day he'd made his transition into a human life that had been painstakingly constructed for him to enter. "Wylie Dale" had already been established as a novelist by the organization that had sent him to the human earth, but the first book he'd written himself was *Alien Days*, his story of his abduction, which had actually been a looking-glass memory of his arrival on one-moon earth.

As Wylie's eyes adjusted to the light, he found himself standing before a

gigantic version of a building familiar to him. It was the model for the Tomb of Skull and Bones on the campus of Yale University. But the Tomb was not large. This building was two hundred feet tall, a great, ugly monolith.

Compared to the rest of the city, which echoed with roars, screeches, discharges of steam, the rumbling of wagons, and various unidentifiable hoots, laughs, and howls, the silence here was total.

Bones had been founded by William Huntington Russell, whose step-brother Sam had carried opium into China for the British when they were trying to get back the gold they'd spent on Chinese tea. British captains hadn't been willing to do it. It might have been the 1850s, but drug running was still drug running. Russell had no problem with addicting the Chinese.

"Are you happy?" he asked his grinning captor.

"Yeah, I'm happy."

"Then fuck you."

"Could I season your fingers?"

"You going to two-moon earth?"

"I should be so lucky. No can afford."

Wylie thought of the shithole the seraph hordes were being sent to. "What does it cost?"

"Whatever you have. Which assumes you have something. They don't consider an artificial syrinx with a busted jaw and this old wagon worth a ticket. I live in it, you know. When it's not otherwise occupied."

"So you're poor?"

"Poor as shit, which is why-" He stopped. He listened, so Wylie listened, too. Keening came, heart-freezing, getting louder fast. "Knees!"

Wylie didn't argue. As he went down to the hard earth and little knots of mushrooms like small, exposed brains, a line of flying motorcycles with silver fenders, ridden by figures in gold metallic uniforms and gleaming gold helmets and face masks, came speeding out of the sky and hung dead still a foot or so above the ground, their motors revving as the riders worked to keep them stable.

This was followed by a smooth whoosh of sound, and a jewel of an aircar appeared.

He knew who it belonged to, of course: Marshal Samson. His escort bowed, and he bowed, too. There was a click and he could sense somebody getting down, coming over.

"Hello, Wylie." The voice positively bubbled. "I knew it from the first. It

had to be this. Actually, I'm impressed. I'll never tell her that, of course, but it was a brilliant operation."

"Thank you."

"I just came from raping your wife, incidentally. Bring him."

He was kicked from behind, and ended up scuttling through the huge doors, which had opened soundlessly and now presented the appearance of a gaping cave.

As Wylie walked through the darkness of the anteroom and Samson opened the inner door for them both, the enormous golden floor struck him with a powerful sense of remembrance. That floor had been a source of scandal at home, a symbol to the Union of the greed of the autocrats who ran this side of the planet.

A tall woman loaded with jewels, her hair sleek and white, dressed in the richest clothing Wylie had ever seen, came striding forward. Her face was so white that it glowed, the scales attractively tiny, the features delicate. He knew that this was the infamous leader of this world, Echidna, whose family had held controlling ownership of the Corporation for uncountable millennia.

All the females in the line were called Echidna. When one wore out, a new clone replaced it seamlessly, without any public awareness. There was never an issue of succession, unlike the Union, which was a simple democracy and in turmoil all the time.

"Come, Spy," she said, "I want to gloat before dinner."

As they crossed the great room, he saw Lee Raymond, Robert Mugabe, and Ann Coulter playing a game involving dice on what appeared to be a table made of emeralds, rubies, and a great, gleaming expanse of pure diamond. He recognized the game. It was senet, the Egyptian pre-decessor to backgammon. In the human worlds, the rules of senet had been hidden away by the seraph, but here, where they had not, players at senet gambled for souls.

He was not sure if they were human, or simply proud of their achievements as human, and showing off their forms.

"I had no idea your penetration of human society was so extensive."

"But not of both human worlds, not as much as I hoped. This time around, we're only getting the one, I fear." She shot him a twinkling glance. "But we are getting it, you Union shit!"

Coulter now shifted into a sallow reptilian form with big, beady scales. Her black tongue darted behind spiked teeth made yellow from too much

tobacco. Wylie realized that she was lusting after him. Mugabe, who was apparently her seraph husband, scurried behind her, trying to keep a cloak around her.

"Ann wants to bed you before we eat," Echidna said. "It's a particular pleasure of hers, to fuck her food."

They arrived at a tall window, curtained. "Open it," Echidna snapped at Samson. "I just want you to see this, Union man."

Wylie realized that she had brought him close to a great, black wall with huge levers on it. Scalar controls, he knew, that worked the gigantic lenses that were deployed on two-moon earth. But then the curtains swept open, and he saw a lawn so bright green it must have been painted, awash in splendid people, some of them reptilian, others human, or seemingly so. There were politicians, of course, great, grinning hordes of them, military officers in the uniforms of a dozen countries, representatives of various royal families, rock stars, CEOs, television personalities, preachers, mullahs, gurus-in fact, every sort of human leader and person of power. Among them strolled naked seraph girls and boys, their scales bleached so white they looked new-minted, carrying trays loaded with barbecued fingers, ears and toes, and flutes of hissy champagne.

To one side was a line of elaborate gas grills, all black and chrome. He recognized that they were Strathmores from home, the brand he had on his own deck, except that these were limousine models, with twelve burners instead of the usual four. Most of them were rolling spits, and on them some of the victims still twisted and squirmed. Behind each grill hung a complete body molt on a tall spike, a pale skin attesting to the youth and therefore tenderness of the person under preparation.

Echidna pointed to an empty grill. "That'll be you," she said.

He wanted to try to run, anything to avoid what seemed inevitable. But there was more, because he saw that this party was not to celebrate his capture, or not only that, it was also to celebrate an enormous event that was unfolding in a valley behind the building.

In the center of this valley was a gigantic circular lens of purest black, its surface reflecting the wan midday sun. And around it, stretching to every horizon, were what must be millions and millions of seraph, ready to pour through the moment the signal was given. He saw men, women, children, heard the booming of syringes, the chatter and whoops of other animals, and above it all the excited, argumentative shrieking of the seraph themselves as

they jostled for position and accused one another of trying to break the baskets of black, oblong eggs the women all carried.

He assumed that he would die here today. He'd been living for years in an extremely dangerous situation with a wiped memory, and that made you vulnerable—so vulnerable, in fact, that it was probably just a matter of time before you ended up going through the funny little door in the woods. He loved his poor family, though, his striving, brilliant, lovely family. What would happen to them? Could they shift, he wondered? Did they, perhaps in secret, the children under their covers at night, Brooke in the privacy of her early mornings?

Ann had sidled closer, and he thought maybe he could cause a little confusion. In this class-ridden society, she was bound to have some prerogatives. Time wasn't on his side, obviously, but distraction might be.

He turned to her. "Must I?"

She squared her shoulders. "Of course you must."

He went toward her, and thus also toward the wall behind her.

"Guards," Echidna said mildly. "Stay with him."

Samson came, and with him his heavily armed escort.

Wylie was still bound, of course, but he came to Ann Coulter and looked down at her. Her scales fluttered and surged, and a black substance that smelled of sulfur began to ooze from under her eyelids.

"Ann," her husband hissed, "you're compromising yourself."

She was really steaming. She loved a man in bondage, that was clear.

Wylie saw that he had a moment, and only one, and it was this moment. He opened his mouth and drew his tongue along the backs of his teeth in the best imitation of a whore that he could imagine.

She tittered. Her breath had in it the flat muskiness of death.

"Will somebody please remove these children?" Mugabe shouted. A number of them had foregathered to watch the fun.

"Part of their education," Echidna said. Her husband now joined her. Wylie had forgotten the name of this huge being, but he was peerlessly imposing in his sleek black suit, with his shimmering skin and brilliant, watchful eyes. Another ancient ruler riding the ages on a foam of clones.

He tilted his head and felt Coulter's kiss invading his mouth like a soaked chaw of somebody else's tobacco.

With all the power in him, his every muscle singing, his whole heart and soul and mind devoted only to this one movement, he sprang upward. These

lizard forms were not as earthbound as human bodies. They didn't feel as much, either, not pain, not love, not pleasure. But they were ferociously strong, and he was strong, he had kept himself well, understanding now the obsessive hammering away he had done at Gold's in Wichita. He'd scared people, the way he would swim laps like a machine. He hadn't known why his body was like this, just that he needed the swimming, the running, the boxing, the karate, all of it, needed it and devoured it.

The guard had made one mistake, early on. He'd seen him as human and bound him as human, careful of the delicate skin of a much more fragile creature than a seraph. He ripped his arms free with ease.

Unfortunately, the gun had gone. They'd left it with him only to amuse themselves with his disappointment when it was taken. "These sell for a nice price," the guard had said as he removed it.

For a moment, there was nobody between him and the great control panel. He grabbed a lever, pulled it. Grabbed another, did the same. The action was so damn satisfying that he growled, he screamed, as he pulled another and another.

Echidna roared, her husband-Beleth, that was the name-leaped toward him-and came crashing into Mugabe, who threw himself into his path. Samson turned, and Ann Coulter slashed him with a molting hook, drawing his skin open and revealing the muscles beneath. He shrieked in agony. It felt good to draw off dry molt, of course, but raw like this, it was torment.

Coulter Union! Her human disguise was brilliant-a spokesman for the aims of the Corporation so extreme that she made them look ridiculous.

Wylie leaped, giving Beleth a head kick that he could feel smash the skull. Gabbling, his brains flying, he pitched back into his own onrushing guards.

"Samson's aircar," Ann shouted. "Go!"

"It's ensouled!"

"Of course it is, you damn fool, go!"

There was a whispering crackle and Ann flew into a thousand red chunks. One of the guards now turned his weapon toward Wylie, who hit the floor as he pushed Echidna into the line of fire.

Her legs and bottom half, spurting fountains of blood, ran a few steps and collapsed at the feet of the surprised guard, while the top half, which had hit the floor smack on its bloody, waist-level base, uttered whistling gasps, waved its arms, and tore at its hair as shrieking, laughing children, who had

mistaken the whole thing for a game, surrounded it, running in and pinching and squealing and then running away.

As Wylie crossed the floor, he heard the snicker of more guns. Then a dozen outriders came swinging down from above on webs like thick ropes dripping with glue. But he was outside now, and the aircar was waiting there, its now unattended motorcycle escort lined up neatly on the ground.

He kicked them over and dove into the interior. Expecting the car to resist the entry of what would be a known enemy, he yanked the door down with all his might.

"Hello, Brother," the car said, and the voice hit Wylie with a shock like freezing water and the joy of the first morning of the world.

He hadn't heard his brother speak aloud in over thirty years, but he recognized his voice instantly.

When Wylie was just a tiny boy, his beloved older brother had been killed by Corporation marauders and his soul kidnapped. His brother had been a great soldier. They'd kept his Medal of Valor and his various orders in a glass case in the family room, proud mementos. Wylie had gone to the human world because it took courage, and he wanted to show that he, also, had the ability to fight well for the Union.

They swept into the air. "Brother," he said, "did they steal your soul?"

The car did not answer, and a flash of unease went through him. Abaddon was a place of deceptions, so maybe-

But then he looked down at what they were circling, and saw that the lens below him was now surrounded by as vast a crowd as he had ever seen. But things were not going well. The blackness of it had turned angry red, and it was boiling like a lava pool, and the surging crowd, in trying to escape, was instead falling in from all sides. Smoke and steam rose from the massive pyre.

"Are they dying?" Wylie asked.

"I think they're going through. But it's not right. It's very not right."

"Brother, has your soul been trapped in this car all this time?"

"Hell no, I stole the car yesterday. I've got a lot of bodies. I use them like scuba gear, to dig into the physical whenever I need to. And-uh-oh!"

There was an angry rattle against the vehicle, which proceeded to shoot upward so fast that Wylie blacked out momentarily. When he came to, flashes were speeding past the windows. "Pulse/Strider," his brother said.

This was a weapon that delivered pulses of discrete superexcited electron

plasmas that could instantaneously incinerate a car like this.

"Fly me, Brother."

"Me? I don't know how!"

"You were a hell of a pilot as a boy."

"How could you know? You were...dead."

"I'm an operative just like everybody else in the family. They were tricked into believing they'd captured my soul."

Mean red light filled the car, and it tumbled wildly through the air.

"Brother, I need you to remember your piloting skills! Do it now!"

The words cause memory to flood Wylie's mind, of being at the controls of a machine like this, of handling the twin sticks, of firing its weapons at sky targets, of having a glorious time in mock dogfights and evasion training.

He'd expected to be a pilot, but his aptitude tests were what had gotten him dragooned into intelligence. That, and he now also realized, the fact that his brother was already an agent. He remembered it all now, his whole life as a Union kid, his training...and something so poignant that he could almost not bear the recollection. He'd had a girl. He'd married her. He had a wife here on Abaddon, in the Union, the one good place that remained.

The car rattled, there was a flash, and this time the cabin filled with smoke and the fire alarm started.

"Fly me!"

Wylie gripped the controls. He swung the car from side to side, spotted the telltale sparkle of the Pulse/Strider installation on the ground. He turned hard, thrust the nose down, opened the throttle and slammed both sticks hard over.

The car shot like a diving eagle straight toward the installation. Pulses poured out. They would be forced to go on continuous triangulation, and his random jiggling of the controls meant that not even he was sure of the trajectory.

He was nearly on top of them when they began to try patterns. Now, this was bad, this might work for them. "Are you unarmed?" he asked his brother.

"Of course I'm unarmed, I'm a sports car!"

"Just asking. Hold on!"

"My keel hurts, I can feel my keel going!" If an ensoulable machine's nervous system was properly designed, the soul inhabiting it would sense it the same way it did a body.

Wylie leveled out. He was now speeding across open land, directly

toward some aristo's hunting estate. It was fashionable, he could see the house like something out of the English countryside. His brother said, "I see twelve bogies coming down on us."

Wylie went into the forest, among the trees.

"You'll wreck me!"

He took some advice from Martin's son, Trevor. Just let yourself happen. His hands moved as they shot down a forest path, then up a stream. This far from the city, it wasn't so polluted, not even on the Corporation side where mentioning global warming drew a death sentence. But then again, practically everything drew a death sentence. Executions were not only a form of population control, they kept the masses both entertained and fed.

Then he saw a wall. The wall, the one the Corporation had built around the Union. It was gray, immense, and dead ahead. He pulled back on the sticks and hopped it, and suddenly everything changed.

Here were fields of swabe and borogrove and orchards full of trees heavy with lascos and spurls and nape. Everything was green, the sky was dusty blue rather than dirty brown, and he knew that there would be stars at night, a few stars. Here, it was illegal not to mention global warming.

"I'll take me back," his brother said.

"Yeah, since I don't know where I'm going."

"I'm pulsing our code but we could get a look-see from the Air Force, so if we do don't take evasive action. We are home, Brother."

Wylie's heart ached as he watched the rich green Union land speed below them. Home. And look at the houses, he could even see pretty shutters. Most unionists farmed. He had farmed, and he could see that the harvest was still coming in here and there. "Harvest is late."

"Winter's late, it's too warm. If only an eighth of the planet fights the good fight, we can't win, we can only lose slowly. The Gulf Stream stopped for four months this year. Avalon nearly froze while here in Aztlan, most of the maize crop burned."

"What about the Corporation? They must be feeling it, too."

"Farming's illegal there now." He paused for a long time. "I suppose you noticed what they're eating."

"I noticed."

They came down on a pebble driveway before a modest old sandstone, its worn carved serpents of luck and joy barely visible in its ancient walls. But this was home, all right, a place he now realized that he had felt as an absence

in his spirit for his whole time away.

He got out. "I wish you could come in, Brother."

"When this tour's over, I go back to my natural body forever, and I am looking forward to that, Wylie."

"I don't want to rattle around in the house alone!"

The arched wooden door opened. A figure stood back in the shadows, one lovely, tapering claw on the doorjamb.

Oh, it was impossible.

"Talía?"

"Aktriel?"

"Yes." His response was so automatic that it required no thought. Aktriel was his real name, and he was a Department of Defense information officer. After pilot training, his work had been involved in the issuance of directives and proclamations, and he'd been sent to the human world because of his writing ability and his communications skills.

As she came out into the light, the car's horn beeped twice and it took off into the sky, turned, then raced back toward Corporation territory. For a moment, Aktriel watched it go, watched sadly, wishing that his brother would come out, understanding why he could not bear to live in the freedom of his real body even for a short time, only to have to return to that miserable thing and go back to his hellish work.

She came to him, her eyes lowered, tears flowing. He took her in his arms, and truly he was home again, and from such a far, far place. "I'd forgotten everything," he said.

She nodded against his shoulder.

"But where's your husband, Talía? Your family? Surely you have one. It's been years."

Arm in arm, they went into the dim, comfortable interior of the house. Memory flooded him as he walked into the broad central room with its white walls and sky blue ceiling, and the climbing flowers painted everywhere. His mother's hearth was here, his father's tall harvest boots still by the closet where he'd always kept them. Beside them, smaller, shorter boots. When he'd waded for the tender swabe, he'd worn them.

"Do you still farm?"

"It will always be a farm."

"Of course." The Union's goal of environmental balance meant that changing land use patterns was not done without major reason.

She took his hand. "Do you want me?"

He threw his arms around her, felt her heart beating against his. This love-how had he ever managed to leave it? She was his dear, dear one, the alpha and omega of his soul. When he could have farmed here forever and never left her side, why had he ever gone?

Then he remembered his little Kelsey and proud, strong Nick, children of two worlds. His kids, and they were out there on the front line with their mom, and if he stayed here they would be abandoned.

It was as hard a moment as he had ever known. The beauty of his wife was stunning, her scales so tiny and so pale that she looked like a doll, her hair a wisp of delicate white smoke around her head, her eyes bluer than a fine earth sky, and deeper than the deepest ocean.

How he loved this woman, his friend of his youth and childhood, his dear companion.

But there were vows of the lips and vows of the blood, and his vow to those children on one-moon earth was a vow of the blood.

"I'm so glad it's over," she said. She gazed into his eyes. The Corporation seraph were remembered by man as nephilim, as archons, as demons. Mankind called Union folk angels or daikini, sky dancers.

"I'm glad it's over, too."

"But you sigh, husband."

He drew her close to him. These were simple houses, a central great room, with kitchen, dining, and storage in one wing and sleeping quarters in the other. They had been living in these houses forever, almost literally. They had no age, nothing here did. The Union was with God. There was nothing to count.

But he had forgotten how good a woman's hair could smell, sprinkled as hers was with the dust of flowers. It fell, sometimes, on that brilliant, glowing brow, that was almost as soft as human skin. She was almost as beautiful as Brooke, really, but the truth was that even to seraph, the humans were incredibly beautiful. It was why Corporation types had gone to rape them in the first place. It was why Unionists cherished and protected them as best they could. There was something about the humans that was close to God, very close, and you felt toward them both a desire to protect and a desire to worship.

Kelsey, Nick, Brooke. His buddy Matt. Cigars and absinthe. The fun of it all, of being in the human form, of looking like them and being able to kiss

human lips and walk their pretty streets, to look up into the sacred blue of their skies, to lift his face to clean rain and listen to wind in the night, to watch TV, to go to the movies and eat popcorn, to feel warm human hands on his human skin, to sink into the dark of her.

"You're far away," Talia said.

"I'm just in shock. Seeing you again. Remembering you. Realizing-oh, my Talia, all that I've forgotten." He took her again, held her close. "All that I've missed."

She saw the truth, though. She knew him so well. They had been children together, born in the same basket, their eggs warmed by the same egg ladies. Their families had entwined their destinies long before they were born.

Trying to hide his tears, he turned away from her. "I belong to you," he said, feeling the twin pulls of his fiercely divided loyalties. Again, he hugged her, and again felt Brooke's absence in his arms.

Her eyes met his. The question that flickered in them now was a dark one. Then she held up her hand.

Her Electrum ring glowed softly. His ring. He took her hand and kissed it. She laughed a little, deep in her throat, and he wanted her. He wanted her so badly that he began to exude from under every scale on his neck. She brought a towel and wiped it gently. Her hands touching him evoked desire so great that it seemed beyond his trembling flesh, beyond belief, beyond body itself, a longing that was literally fantastic.

But if he did this then he could not leave her, not a second time, it was too cruel. And yet he had the children, the vow, and the other dear wife. And he knew, as soon as he was with Brooke again, he would lose himself in the wonders of human life and human love.

"It's only a few minutes," she said softly. She drew up the wooden blinds, and he saw in the evening light a diamond hanging in midair. In its facets, he could see another house, lights just coming on in the windows, and a small form at one of those windows looking out.

Kelsey was waiting for her daddy to come back.

"I have the permanent salve," she said. "Choose."

He took her hands. "We always knew the danger of the mission. I have a life there, now. I have children who need their father." And he wished-he just wished.

"You won't remember me."

"You'll find somebody else," he said.

"Don't mock my love, please."

He would leave her forever wanting him. If only he had known it would be this hard.

He had known. She had known.

She began to apply the salve, and he let her. It sank deep into him, into the most secret corners of his deepest cells, and as it did, this old homestead began to look stranger and stranger. He noticed that blinds closed up here, that there were no chairs but only these strange, three-legged stools. He saw the spinning wheel and the loom, ancient and obviously heavily used, but who used looms nowadays? And the grate and the big iron cook pot, so strange and archaic, and candles instead of electric lights, all so just plain weird.

But then she did an odd thing. She applied salve to herself.

"But no, you mustn't."

"Look, the sun is setting and Kelsey's gotta be getting scared. And Nick's liable to blow our heads off if we come up in the dark."

"Brooke?"

"Yes? Hello?"

Talia had been with him all along. Now, as they changed from seraph to human, fixed by the DNA salve, he threw his arms around her. "It's you, it's always been you! Did you know?"

"Not until I followed you through Samson's little gateway. Then I knew."

"But you escaped from the Corporation, you came home, you came to meet me even though you could've stayed back."

"To protect you. Remember what I am."

"The Guardian Clan." He laughed a little. "You really are a guardian angel."

"Who you need, Mr. Drinker and Smoker and hell-raising daredevil-the idea that any sane person would volunteer for an assignment like this!"

"It had to be done."

"Which is why I love you so." She smiled up at him, and as she did, her face shimmered, the scales smoothing in blurry waves, the brow widening, the cheeks growing less narrow, the eyes deeper, less wide, more human, the nostrils opening more, the lips softening and becoming red, the teeth thickening into human teeth. And he could feel by his own internal shivering that he was doing the same.

This was not shape-shifting. This was fundamental DNA transformation.

When his brother ended his tour of duty, this would be his house. He would reenter his old body here, he would find his wife and bring her here, and there would be eggs here, and the egg ladies would brighten the house with their laughter again, in the coming years, in the ages.

But Talia and Aktriel were dying into the human form.

She took his hand more firmly. "Ready?"

"How do I look?"

"Perfect. Or no, you're missing that mole under your left ear."

"Whose gonna notice?"

"You know your daughter. She's inherited your following and watching instincts."

"Do we need to take salve for them?"

"Born of earth as they were? They have the DNA to shift, but not the skill. They'll stay as they are, with their good seraphim hearts in those lovely human forms."

"Are you gonna be on my case again?"

"Always."

Then they were in their familiar woods, and for a fleeting moment his soul was in both worlds. Brooke said, "I've got something on the tip of my tongue."

He shook his head. "I feel like I just woke up from a dream I thought I'd never forget."

"Which was?"

"I forget."

She came to him and kissed him. "We've all been through too much. And it has to end. It ends here." She looked toward the house. "It's time to return to normal life."

"Can we?"

"I think we can. I mean, have you noticed that it's six and nothing's happened yet? No 2012 shift here."

The moon was yellow in the eastern sky, coming toward full now, rising in splendor.

They both fell silent, and both for the same reason. "Why are we out in the woods, Wylie?"

"We're-" He stopped. Why were they out here? "I came looking for you," he said at last. "That's it."

"And I came to find you."

"I was in the cave?"

"Well, you're here."

"I feel like I was on Mars or something. A million miles away."

Suddenly she threw herself on him. In the gathering dark, he felt very alone. Odd. Homesick even, but for where? His house was a quarter of a mile away. His only house.

"I think our kids are gonna be missing us," she said.

They headed up the hill.

The love that is so great that it cannot be seen, that seems not even to exist, but is in fact the silent binding that confirms the world, followed them, lingering close as if to enjoy the warmth of what they had found together.

"Where have you guys been?" Nick yelled as they came up out of the woods. "It's getting darker and darker around here!"

"I got lost," Wylie said.

"And he got found."

"You got lost? How? I thought you'd been killed." Nick threw his arms around his father, and Wylie felt his surging youth and his love for his dad and then Kelsey's, also, from farther down by his knee, holding Bearish up like an offering to her household god.

As he entered with his children into the calm light, he heard the calling of another father whose desperation began pouring into his mind the moment he was inside the house.

He remembered the book and Martin and Trevor, and their quest to recapture their invaded world. "I've got work to do," he said.

Nick followed him upstairs. "They're in terrible trouble," he said. Then he added, "I've written some."

Wylie stopped. He turned to his son. "Oh?"

"Do you imagine that I don't know what I am, Dad? After what I've been through? What I've done for you?"

He looked at his son, he thought, as if for the first time. "What you are?"

"What we are, as a family. We're not the same, Dad, we're in communication with other worlds, we have powers and I know it and you can't say otherwise. That's why they tried to kill us, and why they failed. I defended us, too, dad, and I'm owed."

"Owed what?"

"You have to take me into your confidence, and you will never go into a gateway again like that without me to help you!"

A memory flashed, of a cottage in the woods. Funny memory, like a dream. Less than a dream, just a daytime imagining, the stuff of a story, no more.

"I, uh-"

"The solstice is coming and Martin and Trevor need us, Dad. But you're, like, lost in your own mind all of a sudden, and right now is the worst possible time for you to lose the thread." He paused. "Actually, I've written a lot. I've written the entire story of what you and Mom just did on Abaddon and who you are, and you can read that later, because right now we have a huge emergency and Dad, there is no time!"

He went into the office.

From downstairs, Brooke called, "What's going on?"

"Nick just wrote his first short story." He sat down at the laptop. "Talia," he said, "it's a beautiful name. But who's this Aktriel? You've got to find a better name than that."

"Dad, you'll read that later. Right now, it's time to write, because when you do write, something new is gonna happen."

"Nothing's there. I can't write."

Nick grabbed his hands, thrust them onto the keyboard. "Do it!"

After a moment, there was a whisper in his mind. He typed a few words.

"Trevor, Dad, you need to write about Trevor."

It was as if lightning had blasted him and shattered him, and he had a vivid image of a vast room lit by a curiously affecting, even disturbing, glow, a light that was blue and very alive, and communicated more clearly than any scream that it was in terrible trouble.

His fingers moved on the keys, then sped.

"At last," Nick said. "Trevor, buddy, listen up."

Wylie was at his desk, but at the same time in another place deep underground, and there was heard as another voice. "And the seventh angel poured out his vial into the air; and there came a great voice out of the temple of heaven, from the throne, saying, 'It is done.'"

But it was not done, not for the seven people who were struggling in that dark underground hell for their lives and the life of an entire world.

"There's a gateway down there and they don't see it, Dad."

"I know."

"Then write it! Say where it is if you know!"

"But they can't come here, they can't read this!"

"Just do it!"

Silently, in the dark of the great cavern where Martin and his little band struggled to break the soul traps, the hidden gateway to Abaddon slid slowly into focus, and began to open.

TWENTY-FOUR

SOLSTICE 2012 ON THE TWO EARTHS A TALE OF SEVEN SOLDIERS

AS MIDNIGHT APPROACHED, THE FOURTEEN great lenses ranged around two-moon earth shimmered darkly. There was nobody to see, though, but for a scattering of seraph soldiers, and gangs of wanderers lined up, waiting to conduct their new masters into the cities that still stood, and out into the flats of the new lands, where enormous shantytowns were still under feverish construction, amid heaps of dead sea creatures and dead wanderers.

"Dad!"

He stopped. Came back to the world of his office. Turned to Nick, tried not to shout at him, which was what he wanted to do, to tell him to just shut up!

"Dad, you need to focus on Martin and Trevor."

"Sorry."

"Don't be sorry, just do it!"

His fingers shot back to the keys, began flying.

Downstairs, little Kelsey also ranged across the night of the other world, looking for Winnie. Lindy, Brooke had found. She was on a truck that was running down to Denver, which was intended to become a major resettlement area for the Corporation's starving billions. There her destiny would be simple: like all wanderers, she was to be worked to death.

On the sunlit side of the earth, the gigantic flats that had replaced much of the mid-Pacific were covered by an impenetrable fog, as trillions of tons of gasses boiled up out of the drying soil. Where India and China had been was a new ocean, stormy and unsettled, floating with what appeared to be islands that were actually made of furniture and ice chests and logs and carpeting and toys and siding and plastic doors, flowerpots, Styrofoam cups, shipping beads, any container that was closed and would float, and on these islands were rolling hills of the corpses of cattle and dogs and monkeys and all manner of beast, and human corpses with pale-glazed eyes, and swarming masses of gulls and crows, and hordes of pelicans flying from place to place,

their craws bulging.

They all saw this, the Dale family, in their new free minds, and as she watched, Kelsey sang softly to Bearish, whom she cradled as if he was the whole world. She sang the ancient lullaby her mother had taught her, "Dereen Day," that had come up from the quiet hearths of the Union and into the quiet hearths of Ireland a very long time ago, a song shared between angels and men. Her voice came up the stairs from the lonely pool of light where she sat carrying in her arms not only Bearish but all the dead of a whole world. She hummed to them and sang in her little voice. "Dereen Day, the nightjar calls upon the heath..."

Outside, night swept on and the evening star shone on the peaceful horizon.

She had been sending her mind down the roads of the other earth for a long time, had this very private child called Kelsey, for she shared with Winnie the same bond that her brother did with Trevor. So she sang not only to her Bearish but to Winnie's, whom she had found in a cradle of snow, the night flakes whispering along his fur, as they whispered across all the little corner of Nebraska where Winnie had given everything she had to give, and laid down.

Now, as Kelsey sang to Bearish and Winnie's Bearish, she sang also to Winnie, to the silver of the ice that crusted her cheeks, and her red car coat that was being worried by the winter wind, and to all the little lumps in the ocean of little lumps that were left everywhere on earth that wanderers had passed, each one somebody whose strength had not been enough to meet the Corporation's cruel test. Survival of the fittest-the Corporation's way-was not the way of the true of heart, human or not.

In the office, Nick and now Brooke along with him, struggled to get Wylie to concentrate on the place that counted, the soul prison where Martin and Trevor and their few struggled for the life of their world.

"The souls," Brooke whispered, "can you see?"

Wylie sighed like a weaver does working on a difficult knot. The only sound in the house was Kelsey's singing coming up from below.

"Okay," he said. He began to type again.

But he saw the lens that stood in the ruin of the Giza plateau. It glowed angry red now, and red light leaped out of it, a huge column that reflected off the shattered city and the desert, making it appear as if the whole landscape was on Mars.

With it came a sound, at first a crackling like the rattling of a great curtain, and then another sound, a snap, then another louder one, and the lens seemed to shimmer, to shudder within itself, and seraph were suddenly walking away from it, each carrying a little bundle or a suitcase, some carrying briefcases or rolling bags, some in black, some like hurrying officials in hats and coats, some carrying their babies or baskets of eggs, or with their childrens' hands in theirs. They came clutching receipts for the tickets they had bought, and began to stream out past the Mena hotel toward Cairo, and up and down the banks of the Nile.

Another sound came, then, the gigantic spitting noise, a volcano makes when it vomits lava. Some of the colonists turned, others kept on, intent on getting to whatever corner of the new lands they had bought. Already, some were boarding buses that had been smashed in the explosion of the pyramid and trying to get them started, while others threw out the skeletons of the tourists who had died there, and marveled over their delicate, colorful clothes.

With a roar so huge that it would over the next few hours echo around the entire world, a massive red column of material shot out of the hole where the lens had been. The lens itself arced into the stratosphere, turning over and over, and as it turned changing shape, twisting and melting and then falling and becoming black, then blacker still, and landing in the Arabian desert not far from Mecca, a city of corpses of those who had died praying, surrounded by a desert coated with wanderers who had fallen beneath the sun.

None saw it strike, but Wylie and Brooke did, and Nick and so also Trevor and Martin. Deep in their traps, the souls of Lindy and Winnie sensed some signal from the outside, and for the first time since she had been pulled from her body, Lindy realized that she was not buried alive in a coffin, hideously and inexplicably unable to die. She began to call the name of the strongest and most trusted person she knew.

"I hear my wife," Martin said. "Lindy is calling me!"

At the same time, though, diamonds began to appear in the air, shimmering black, as Samson prepared to move the souls that would make him rich in Abaddon.

Winnie, who had been alone and cold and feeling drawn to some great joy she could not reach, now felt herself in the arms of her friend Kelsey, and heard a lullaby her mom had sung her every night of her life, "the nightjars calling upon the heath..." and rested in the knowledge that somebody was at last saving her from the monsters who had bound her here.

In Mecca, a new black stone now lay not far from the Alhajar Al-Aswad, and of the same material and the same shape and color, for the last one that fell here had started from exactly the same place thirteen thousand years ago, as Abaddon failed in its last attempt to steal the human worlds, and the raw hole it had left had been filled, and the pyramid built to close the wound, and remain as a warning-one that Abaddon had spent thirteen millennia tricking and deceiving mankind into forgetting.

The rest of the material that had blasted like lava from the huge gateway came to the top of its trajectory and began sailing back down. Far below, the seraph began to see arms and legs of their own kind, torsos, heads, shoes, falling around them, striking one and then another of them and causing their yellow brains to splash out. Heads bounded along like great hailstones, or rocks catapulted down by a siege army. As they bent to protect children or possessions or eggs, they were smashed, they were all smashed in a maelstrom of destruction from above that seemed never to end, a storm made of body parts.

A roar of terror and woe rose up from their throats, but was quickly buried in the wet thudding, as the living seraph disappeared beneath the mountains of their own dead.

Brooke lay her hand over Wylie's for a moment. He glanced up at her, and in that glance they shared exultation, perhaps also sorrow at the suffering that was being experienced, but it was nothing compared to the rage of battle that was breaking out in the lands of the Corporation, gnashing so intense that it was shaking even the pearly walls that enclosed the Union, and rustling the leaves in the peaceful lands they protected.

They were being torn apart, the minions of Echidna, who had ruled for so long. Wylie looked for Samson, but did not see him. He wanted to identify him, because Samson, who knew human customs and understood gateways, was not defeated until he was destroyed.

"They need us," Nick said from behind closed eyes. "They need us now, Dad."

"I can't help where the story goes."

Nick pushed his father away from the laptop.

"Hey."

"Dad, it's another deception! They're fascinating you with their own destruction, so you won't go where you're needed."

He began to type, and when Wylie tried to stop him, Brooke intervened

with a sharp shake of her head.

Nick's eyes closed. His fingers flew.

Before him was a huge room. It was lit by faint blue light that dwindled in the massive space to a blue haze on the distance. The haze flickered slightly, and then he saw why. It was coming from millions upon millions of lozenge-shaped tubes, each emplaced in a socket that was connected to thick, black cables that ran between the hundreds and hundreds of rows.

Martin was quite familiar with the large cartouches that were depicted on the walls of the Temple of Hathor in the Dendera complex. He had not dated this temple, but he had known since he'd read of Al North's ordeal, that the accepted explanation for the oblong cartouches, that they were simply borders meant to enclose hieroglyphics, was not correct.

In each one, a multicolored light flickered along a copper filament. It twisted and turned, flying now against the glass of the tube, now twisting itself around the filament, now flashing in a million colors.

The light was souls, and he understood now what Abaddon's ages-long propaganda had done to us. It had made us forget the science of the soul so that we would be helpless when the three earths again crossed the plane of the galaxy and they would have their chance-this chance-to return. It had made us forget what these tubes were, which were soul prisons. It had given us generations of scientists who considered the soul a "supernatural" idea and so stayed away from any study of it. But there was no supernatural, there were only phenomena that had been understood, quantified, and measured, and phenomena that had not. That the patterns induced in fields of electrons by changing conditions in a body would persist after death and become a sort of plasma, conscious and richly aware of its memories, had never been imagined. It had been assumed, if it was thought about at all, that any electromagnetic activity in the nervous system simply ceased when the body died.

And so Martin's earth had been defenseless when the seraph returned-as ours will be, also, on the inevitable day when in their greedy, starved fury, they come bursting in on us in whatever cunning new way they may devise.

Above the ocean of Samson's soul traps, the long lines of gateways were sparking and shimmering. It would only be moments before it was too late. The souls, seeming to sense this, flickered frantically in their prisons.

There came from along the narrow path between two rows of soul traps, a clanging. It was young Mike in the gloom, hammering at one of the tubes

with a rock he had found on the way in.

The sound echoed up and down the great space, rising in intensity until it was the ringing of a great bell, then falling again as he grew tired, finally stopping.

Trevor said, "I think there's a seam here." He was down between two rows, where the tubes were connected to the sockets that held them.

"What's next, Dad?" Nick asked his father.

"You're the writer now, son."

"They're running out of time!"

"And you're frozen. It happens."

"Dad, pick it up."

"I can't pick it up, it's yours now!"

Nick sat. Nothing happened. Wylie waited. His mind remained blank.

Brooke said, "What about Al North?"

That did it. Nick's fingers began to type.

Al North had done wrong and been wrong, but he had never wavered from his duty as he understood it. He knew where his fault lay and what it would inevitably do to him, but also as long as he had consciousness in him, he would strive to right the wrongs he had created.

Even so, those wrongs had led to a horrible catastrophe and billions of deaths, and no small act of heroism could rectify such a tremendous mistake. He could no longer reach the surface of the earth, but this desperate place was far beneath it, and here he could still maneuver.

"Look!" Martin pointed to what appeared to be a star in the vault of the space. At that same instant something rushed past beneath his feet. He looked down in time to see scales, iridescent purple in the blue light, but then the thing was gone.

An instant later Mike screamed as coils surged up around him.

Al North saw all this with the clarity-and, indeed, the peace-of somebody who had accepted his life in full, and was prepared to pay the debt he had incurred. He understood the secret of hell, that souls who go there forfeit their right to be. They no longer have a place in this universe or any universe, not until time ends, and a new idea comes to replace the one that is the present creation.

And then, maybe.

He who had done evil accepted the rightness of this.

Still, he wanted to repair what he could, and there was something he

could do here. They had all forgotten, in their terror, to just let themselves happen, to trust the grace that was immediately and always ready to support them. He forgave them. He hoped for them.

Which was a very great thing, that he could surmount his anger and his disappointment and his arrogance long enough to do that one tiny thing, to feel hope.

It seemed small, but the energy of such an act on the part of a lost soul is huge, and the tiny spark of goodness that was still within him was easily enough to open ten million soul traps in one flashing, electric instant.

A roar of voices burst out, the faint blue light became a million times brighter. Memories, thoughts, pleas, cries of relief—a huge, gushing roar of human surprise and joy—flew at Martin and his little band in the form of pictures of happy moments, loving in the covers, running by the sea, leaves whirling in autumn, Christmas tree lights, girls dancing, men in blue water, hamburgers, the faces of happy dogs, and song in a million verses of hallelujah.

In this mass, a thousand great serpents came screaming up from the depths of the place and down from the shuddering gateways, their bodies burning from the goodness around them that they could not bear, and they flew into the air like great pillars of fire, writhing and screaming in the sea of song.

They were another design like the outriders and the nighthawks, especially fashioned to terrify human beings, but they had been unleashed too late to save Samson's wealth. No doubt, the huge snakes were a rental, and he hadn't wanted to spend the money unless he had to.

The song ended. The hot bones of the serpents tumbled down through the ruined masses of shattered tubes. The gateways shimmered and went out.

Samson's enormous cry of rage echoed, faded, and died away. He dropped to a stool in his simple room, his narrow head bowed. Outside, the city roared. Another revolution, another aristocracy burned, and now this, his fortune lost.

So it went, in the unsettled misery of this age.

Unnoticed by the raging crowds, the hour of midnight had passed. The weak had won the day.

With a quick swipe of his hand across his face, Samson shifted into his human form. Outside, torches flared. Feet pounded on the stairs, fists pounded on his door.

He stepped through his quickly closing gateway, but not into his old world, not into Martin's world. He had a plan. If there was vengeance to be tasted, he intended to drink deep.

"Dad, he's in our woods!"

They got their shotguns and took off after him, both of them, and Brooke and Kelsey agreed that they'd gone mad.

The woods, though, were empty. From along the ridge above the house, they could see the lights of Harrow. Faintly, one of the church bells sounded. Snow was falling, whispering in the woods, drawing pale lines along the dark branches of the winter trees. The peace here was so deep that it seemed impossible that Samson could have passed this way.

They went back to the house, the two of them. They lingered on the deck.

"The Belt of Orion," Wylie said, gazing up as the snow clouds made a window for the stars.

"And his bow," Nick said, pointing.

"You did good, Nick."

"Thanks, Dad. Dad?"

"Yes?"

"Is it real? The book?"

"I thought Samson was in our woods. But he wasn't."

They went inside, then, and made a fire for the girls. Popcorn was popped, and hot chocolate produced, and Wylie even managed to slip a goodly shot of whiskey into his.

They spent the remainder of this quiet night speaking of the things of ordinary life. "Past midnight," Nick said. "I think we won."

Nothing more was said, and after a time, Nick played cards with Kelsey and Wylie, and Brooke broke out the celebration cognac, a hundred-year-old bottle that was sipped at moments of victory.

Tomorrow, Christmas vacation began for the kids, and in the very late hours, Wylie went into his wife's arms for what felt like the first time in an age.

At breakfast, the radio said, "The world ended last night, but it seems that nobody noticed. New Age gurus from China to Scotland stood on mountaintops and chanted, but guess what, Chicken Little stayed home. We are now living on the first day beyond the end of the ancient Mayan calendar, a date that has no number in their measurement. But then again, they went extinct a long time ago."

Later in the morning, Nick found boot prints back in the woods, where Samson's gateway had been.

"Could've been left by us," Wylie told him.

"I was wearing sneakers when we came out here. You had on a sock. One sock."

"I went out in the woods without shoes? In the dead of winter?"

Nick nodded. "We did not make these tracks, Dad."

They'd put a throw rug over the bullet holes in the floor above the crawl space, and they both looked at it at the same time, and for the same reason. It was now gone and the floor was unmarked.

"Brooke, what about that little rug in the kitchen?"

"I put that horror back in the mudroom where it belongs and leave it there please. In the future, if you want to rearrange my house, submit your request in writing."

"Dad, it was all real! It happened! And we're-" He stopped. Frowned a little, shook his head. "I lost it," he said. "It was right on the tip of my tongue."

Wylie called Matt, but nobody had reported anybody strange wandering around in Harrow, or anywhere in Lautner County, for that matter.

"What about the body in my crawl space? Is that resolved?"

"You want me to come out there with a net?"

"I thought you were gonna arrest me."

There was a silence. Then, "Oh, yeah, you've got that absinthe, not to mention the cigar theft issue."

He had no memory whatsoever of Al North, then.

They talked, then, about the state of the pheasant population, which was excellent. "Matt wants to hunt tomorrow," Wylie called to Nick, "you game?"

Nick looked at him. "He doesn't remember a thing, does he?"

"You want to go or not?"

" 'Course I do."

Wylie made plans to meet with Matt before dawn, and go to some of the walk-in land over in Smith County. "You sure there's been nothing odd, Matt? No cars stolen around here, say?"

"In your neck of the woods? There hasn't been any crime of any kind over there at all, ever. What the hell's the matter with you today, anyway? Is this some new insanity? I don't hunt with crazy people."

"Read me the blotter for last night."

"The blotter?"

"Look, it's not gonna kill you, now read the damn thing!"

"Okay! 16:32, Miss Wicks's chickens are in Elm Street again. Ticketed. 18:05, car fire, put out by occupant. 20:22, kids smoking and playing loud music behind Wilson's Feed and Seed, sent home."

"That was it? That was what we paid you for last night?"

"We got a possible stolen truck. Jim Riggs can't find his farm banger. But it's probably gonna be that Willie of his, hid it for a joke. That kid's got an unfortunate sense of humor."

So nothing strange had happened in this quiet little corner of Kansas for a long time, unless it was Samson who had gotten that truck, of course.

Or no, there was one thing: the miserable accident that had befallen poor William Nunnally.

"So, what's new in the Nunnally case?"

"Nothin.' Coroner's report says it was exposure. He was high, it seems. Got a lotta meth heads down that way. Damndest thing. The family's not gonna sue you, for some strange reason, going down there and terrorizing them like you did."

"So it was just one of those things?"

"That would be true, crazy man."

The night passed uneventfully, Wylie and Nick got up at four-thirty, and as the sun rose, they were hunting. True to form, Wylie over-or undershot every rise he got, and all his pheasants lived to see another day.

Nick, however, bagged Christmas dinner.

EPILOGUE

THE INHERITORS

NEW WORLDS ARE MADE IN two places: the ruins of the old and the minds of the survivors.

The captured souls had instantaneously returned to their wandering bodies-all but those of the dead, who had begun another kind of journey.

Those who returned to life found themselves waking like sleepwalkers are known to do, in unaccustomed and impossible places. Lindy discovered herself riding in a jammed truck that was being driven by people who were equally mystified by where they were going and why.

At the first town they came to, they stopped the truck. Everybody was thirsty and hungry, and many of them were hurt, mostly with injured feet, which Lindy certainly had. They pulled over in Lora, Colorado, which they found empty. There was no power. All phone lines were dead.

Lindy remembered up until they had entered Third Street Methodist. The rest-she just had no idea. None at all. But she knew who she was and where she was from, and she also knew that she was going home. No matter what, she was returning to Harrow and to Martin and Trevor and her dear little Winnie.

This was far from impossible, as there were abandoned cars and trucks everywhere. She found a serviceable-looking hybrid that was full of gas. Her idea was that she was about three hundred miles west of home, so the hybrid would get her there with gas to spare.

She and some of the others from the Truck Gang, as they called themselves, broke into a place called the Lora Cafe. The milk was rotted, the eggs were higher than a kite, and there was no gas to cook with, so she contented herself with Cheerios washed down by water. They shared out the breakfast cereals, the cans of beans and soup, and took off in their various directions, all of them obsessed with the same thing: home.

Lindy did not care to travel with anybody else. She wasn't sure what might happen. The world had collapsed. Then, for whatever unknown reason, her coffin nightmares had ended and here she was. She had obviously been

walking for miles and miles, but she had no memory of it at all.

The car had a GPS but it didn't manage to pick up any satellites, so she simply drove east on 70. Frequently, she had to go around abandoned vehicles, some of them in lines miles long, and travel cross country in the bounding car. It held together, though, well enough, and soon she was heading into familiar little Harrow.

There were people here and there, looking for the most part like they'd just come up after a tornado had passed, to see what was left.

Winnie said, "I can come back."

The voice was so clear that for a moment she thought that her daughter was sitting in the backseat. She shook her head. Seeing Third Street Methodist, she experienced a surge of terror so great that she had to stop the car right there in the middle of the street.

"Mom?"

She did not open her eyes. She'd lost her kids, her husband, everything. There was no more Winnie and that voice had not been Trevor.

Then the car door opened.

She looked up into the smiling face of the most beautiful, most wonderful man in the world. She could not get out of the car. She tried, but she was shaking too hard, her hands just went out and went clutching toward her Martin, and then his arms were coming, they were strong around her, they were taking her and lifting her, and she felt his lips upon her lips and heaven came and lifted her.

There were a thousand whispered words, but no words could express the meaning of this meeting. Her husband's and her son's eyes were strangely dark, and hers were, too, they told her, and they told her that this was good, it was a miracle, it was the future of mankind in their eyes, dark still, but there would be light.

"What happened to us?" she asked as they drove out toward the Smoke Hills and home.

"There was an earthquake," Martin said at last. "That affected the entire planet. And we're not out of the woods yet. But we're learning how to work in new ways. How to fix things."

"A lot is wrong," Trevor said.

Home was one of them, she soon discovered, and it was very wrong, so wrong that when she saw it, she burst into tears. "We can't clean this up," she wailed. She looked in disbelief at the melted, crazy furniture, at the twisted

ruins of her kitchen. "What did this? This was no earthquake."

"2012 came and went," Martin said at last. "It turns out that the old Maya knew a lot. They calculated the return of-well, of-"

"Evil," Trevor said simply. "Evil was here, but it failed." He paused. "And it had a good effect, because fighting it transformed us. I guess that's why you're supposed to love your enemy."

He fell silent, then, and in his silence and with it, she could hear something that was a voice and yet not a voice. It was more than a voice. She could hear engineers and physicists like herself and architects and workmen all gathered in a great chorus of plans and work and effort. "We're going to put the world back together again," she said.

Martin said, "We've changed. The human mind is not the same, and a lot of people-the bad ones, I guess-are they gone? Could they be gone?"

They knew, then, that this terrible attack had also been a cleansing, because they could feel by its absence that the weight of wicked souls had been lifted.

Lindy was the first to utter the words that had been on all of their lips unspoken, from the moment they had found each other. "What about Winnie?"

Martin shook his head. "We believe that she didn't make it."

"What do you mean?"

"Mom, you just need to let yourself happen. Don't think. Just-be with us. Part of us."

"My daughter is missing! Where's Bobby? Where are the state police, the FBI? The FBI gets involved in child disappearances. And what about our Jenny Alert? Where's our Jenny Alert!"

He came to her and she didn't want to do it, but she let him hold her because she had spent what seemed like an eon trapped in that strange somewhere-or-other trying to find him and to feel him where he ought to be and wasn't. "My baby's not bad, there's nothing wrong with her, she's hardly had a chance to live!"

She had to accept. But it wasn't going to be easy, because it was unfair that her dear little girl suffer the same fate as the wicked, it was just really, really unfair!

Night fell, and Trevor made a place for himself on the floor of their little office, because his room was destroyed, and they did not want to disturb Winnie's room.

It was cold and without electricity it got dark early on the twenty-second of December, and as it got dark, Lindy agonized over her lost child. But under their quilt that she had made when she was first married, it was wonderfully warm. They were dirty, though, and the warmth was ripening them. There was no water to wash but that, also, did not prevent her from being Martin's wife again, and their bodies in the night were glad.

Mommy?

Lindy's eyes flew open. She cried out. Martin's hand caressed her cheek. "Sleep, my love." He came close and kissed her. "From hell to heaven," he murmured. Her whole heart, her blood, her soul took deepest joy in those words.

Mommy?

She leaped from the bed, ran to the window. "It's her!"

Martin came to her, put his arms around her waist from behind. She pulled away from him. "Honey-"

"Shut up!"

Hi, Mommy.

"Oh, baby, my baby, I hear you! Where are you?"

Silence.

"She's out there somewhere! Martin, she's out there and we have to find her. Martin, the nighthawks-"

"Sh! Sh! There are no nighthawks, they're gone."

"How in hell do you know?"

Martin tried again to hold her, but she pulled away. "Listen!"

"Lindy, love..." She was hurt. Everybody was hurt. So hurt.

Then Trevor was there. Listen to her, Dad.

He turned around. Trevor came to them, nodded toward the window.

Then Martin heard it, the ticking of an engine out in the dark. An electric surge of fear went through him. They had no gun. They still had no gun!

Then he saw it, moving slowly closer to the house, a rattling old car with only the single light.

"That's Bobby," he said.

Then she was running, Lindy was running, and Martin, and behind them Trevor.

The car stood in the driveway, its engine guttering. Then the driver's door opened, and Martin saw in the light from within a tiny form prim in the passenger's seat.

Lindy leaped at Bobby's car, threw the door open and there was her little girl, who came out into her arms, and Lindy danced, whirling round and round with her child silent in her arms, her child smiling a soft smile.

"Baby, baby, baby," Lindy cried, then cradled her and covered her with kisses.

Hi, Winnie said, and it echoed like a song in them all.

"Buddy, she came in half an hour ago."

Martin looked at him. Embraced his old friend. "I thought you were a goner for sure."

"I thought you were." He looked at Lindy and Winnie. "I don't know how to tell you this, or even exactly what I am telling you."

"I know she's dead," Martin said. "I saw her body."

Daddy, it's all changed. Winnie and Trevor's thoughts echoed as one.

He had a son who could read minds, now a daughter returned from the dead. They took her inside, loving her, touching her, and she was full and normal flesh in every way.

Bobby lingered. "Boy, they did a number around here."

"Oh, yes."

"I don't know quite what happened, but I know you were a big part of it. I can hear people thinking. Thinking about what happened, and a lot of them are thinking about you, Martin."

We can all hear each other, Trevor said in their minds.

Gonna be interesting times for cops, Bobby thought. He glanced around, then laughed a little. He took Martin aside. "She isn't the same," he whispered.

I'm all different, Winnie added. Then, This house is a mess!

They-Lindy threw a picture of the glaring reptilian features of Mazle into their minds-did it.

Winnie reached into the air, and her old friend Bearish came flopping into her hands. He was soaked and crusted with ice and mud. You got lost.

As she moved through the house, everything she touched came back to its previous condition. She opened the fridge. We still have to go to the store. Then, in words, "Except for these apples. I din steal 'em. They were grounded."

She brought out five small apples. They were cold, a little old, obviously falls. Martin was famished, they all were, and they ate silently. He wondered where they'd come from, and saw in his mind a picture of the Wright's apple

tree, it's fruit all fallen.

She came and hugged his legs. He lifted her and thought that she was not quite as heavy as she had been, not quite as solid. He knew that he held a great miracle in his arms, and that there must be millions of such miracles over all the earth right now. He kissed his miracle and she laughed, and he thought he was holding the promise of the whole future in his arms.

You are, Trevor said as he crunched into his apple.

The little family was taking a journey into a new world, and this journey was being repeated all across the planet, as a new mankind rose up from the ruins of the old, and the risen and the living joined together in a new chorus, and the long ages of illusion that there is a curtain between the living and the dead were ended.

The undiscovered country had been discovered, and the explorers were returning.

Winnie settled into the deep comfort of her father's arms. Bobby reached out and touched her, and she felt the energy in him that was a little sharp in places, and smoothed it out. Tears came to his eyes. He stared at her, drank her in. She let him clutch her, she laughed, she had been on such a long journey. "You smell like roses," he whispered.

She ate her apple, thinking of what life is-what it really is. She thought of her old body still lying where it had fallen, giving itself back to dust and memory. Life is the mystery of the world, she told them.

The minds around her fell silent.

Death had ended, they just didn't know it yet. She understood what had really been done here, and who had done it, and the real reason, that only the good remained, because only the good could find the next secret, the true meaning of life without death.

Over time, she would tell them everything, that there was a new humanity born and a whole new way of living to be discovered, but now she laid her very tired head against her daddy's shoulder.

She would sleep on this night the sweetest of all sleeps, deep in her home, surrounded by her family, at one with their love and all love, in a world that had been saved.

*A little while, and the wicked will be no more;
though you look for them, they will not be found.
But the meek will inherit the earth and enjoy great peace.*

-Psalm 37: 10-11

Beware the bearers of false gifts and their broken promises. Much pain but still time. There is good out there. We oppose deception.

—message in a crop formation found on a farm in the United Kingdom, August 2002

CHAPTER ONE

2002

Flynn reached for her and she wasn't there. Her side of the bed was cold and he was a detective, so he came immediately awake.

“Abby?”

He rolled out of bed, slid his feet into his slippers, and set off into the midnight house. It was November 16, 2002, the time was twelve-forty, the house was cool but not cold, there was no obvious sign of foul play.

“Abby?”

Hurrying now, he went downstairs, turning on lights as he passed the switches. By the time he reached the kitchen, he knew that she wasn't in the house and that there was no point of entry that would suggest a forcible kidnapping. In any case, he couldn't imagine why she would be kidnapped or by whom. But he'd been a cop for six years, a detective for two. In that time, he'd made a couple of hundred very bad people very mad, and some of them were people who might do just about anything.

Going back over his cases in his mind, though, he couldn't see a revenge kidnapper, at least, not one that was presently at large.

Just to be thorough, he checked the basement. They were in the process of finishing it, and it was full of boxes of ceiling tiles and Pergo flooring.

She wasn't there.

All doors were locked, all windows were locked. The alarm system was

armed. So nobody could've come in here, not without all hell breaking loose.

She'd gone out. Had to have.

He called her cell—and heard it ringing upstairs. He went up. It was on the dresser but not in its usual place in her purse. Her purse was gone.

The first cold tremble of fear passed through him. Something was obviously very wrong here. Abby didn't get up in the middle of the night and go out. Never, not without telling him.

Following the rules, he dialed 911. "This is Detective Errol Carroll. I'd like to report my wife, Abigail Carroll, missing. Probable foul play."

The 911 operator responded, "We have a car moving, Flynn."

Next he called his boss, Captain Edward Parker. "Eddie, it's me, I'm sorry about the time. Abby's gone missing."

As the reality set in, a terrible, frantic urgency swept him.

"Okay," Eddie said. "Okay. Any evidence of an entry?"

"The alarm system is still on. Nobody broke in."

Silence. Flynn could practically hear Eddie thinking. They'd known each other since they were kids and they'd both known Abby almost as long. Both had dated her. Flynn had won.

"You guys doin' okay?" Eddie asked. It was his way of broaching the question that was going to be on everybody's mind.

"Eddie, this isn't a marital thing. Somebody got Abby." He knew that every word had to be measured tonight, because if he wasn't careful, this would get knocked down to an adult missing person real fast. "Look, I can't stay in here. I gotta roll."

"Wait for the uniforms. I'm sending a detective right now. Mullins. Tom Mullins, he's duty."

He didn't much like Tom and Tom didn't much like him. But Tom did his job. Sort of. "Okay, I'm gonna back him up, though. He's not gonna drop this down to an MPA because it's not an MPA, Eddie."

"You got it."

There came a knock at the front door. Decisive, loud, the way cops knock.
Where are you, baby?

He disarmed the alarm system and let the uniforms in. It was Willy Ford and a deputy sheriff he didn't know, name of Menchaca. "Hey guys, thanks for doing it so fast. I got a missing wife. Almost certainly a kidnap."

"Jeez, Flynn, Abby's been kidnapped?" Willy had flirted with Abby at the Memorial Day barbecue last year. Lots of laughs.

"Looks like it."

"Is there a point of entry?" Menchaca asked.

"Not that I can see."

A car pulled up and Eddie got out. He hurried up the walk, his belly bouncing, his gray hair fluttering in the night wind. His fly was down. You could see pajamas in there. Flynn had a damn good friend in Eddie.

"Anything?" he asked as he came in.

"We need prints out here," Flynn said. He shuddered. He was freezing cold on a hot night. "Look, I can't stay here. I'm gonna drive."

"No you aren't. I got the troops moving. Every car's on, everybody's looking."

Eddie was right. Flynn's going off into the night wasn't going to help anything.

"Who comes in through an alarm system?" Eddie asked.

"A professional."

"You drop time on any professionals? Time that they may have served?"

Cops were routinely informed when their collars were released from prison. "Nobody."

"What about ever?"

"You know my collar history."

"Yeah, you got a fair number, buddy. Some bad'uns."

"Nobody special, Eddie. Nobody—" He gestured toward the emptiness of the house. Another wave of fear was hitting him. He imagined Abby being

tortured, buried alive, raped.

He wanted to run through the streets calling her name. He wanted to drive and drive, searching every crack house, every flop, every crib he knew. She was out there right now. Abby was out there and suffering *right now*.

Detective Charlie Mullin came in. "Where are we?"

"Doing an APB," Eddie replied. "Get me a picture."

Flynn strode across the living room and grabbed the photograph that stood on the mantel. It was a studio portrait taken two years ago, for her father while he was dying in St. Vincent de Sales, choking out his lungs, poor damn guy with his cigarettes and his unfortunate opinion that the dangers were overblown.

Eddie put the picture down under a lamp and took a few shots of it with his cell phone. He then took a verbal description from Flynn and inside of three minutes the all-points bulletin was appearing on police computer networks all across the state.

Flynn knew the statistics. Every hour that passed, it was less likely that she would be found.

"You have any idea when this happened?"

"I might." He went to the side table in the hall and dug out the alarm system's instruction book. "The system might tell us the last time it was disarmed and rearmed." He glanced at Eddie and Mullen. "He had the code. Had to have."

"Who had it?" Mullin asked.

Flynn shook his head. "Me and her, far as I know."

"Parents? Brothers and sisters?"

"No brothers and sisters. My mom and her folks have passed. My dad doesn't have it."

"You're certain?"

"Unless she gave it to somebody, which I very much doubt."

"She didn't," Eddie said. "She was way too smart and too careful."

Flynn input his code, then followed the instructions. In a moment, the answer appeared on the system's LED screen. "Three thirty-two," he said. Then the next figure flashed, the time it had been re-armed. One minute later. "This can't be right," he said.

"What time?" Mullen asked.

"Within the minute. Three thirty-three."

There was a silence. Then Mullen said, "We need an inventory, Flynn."

"She was kidnapped!"

"Somebody came in here and took her in under a minute? Who would that be?"

"Hell if I know!" He turned to Eddie. "For God's sake, don't cancel that APB, don't cancel anything!"

Eddie held out his hands, palms up. "Hey, I got the county choppers up. I'm goin' all out, Flynn."

This was a small police force in a small city, with a compliment of just thirty personnel. They liked to think that they were good, but at the same time, there were a limited number of challenges. A murder every six weeks or so, a meth lab or crack house a week on the south side, a thin but steady stream of family disturbances, assaults, burglaries and robberies.

"I gotta admit, I can't remember the last time we had a kidnapping," Eddie said.

"Nineteen ninety-six. Kid named Angela Dugan, fifteen years old. Turned out to be her boyfriend. They were brought back from Tijuana—married."

"So, you got any ideas yet?"

He didn't. "Let's canvas," he said. "Before people take off for work."

"It's five."

"Let's canvas."

It was cool and still outside, the silence broken only by the busy clatter of lightbars left running. The morning star hung low in a blood-red eastern sky. Up and down the street, lights were coming on. Across the street, Sarah

Robinson stood on her front porch in her robe, her arms crossed on her chest.

Flynn gazed across at her. “She and Abby are planning to have their babies together.”

“Abby’s pregnant?”

He started across the street. “She hadn’t said anything.”

In times of extreme stress, details come crowding in, the crisp scent of the air, the soft crunch of grass under your sneakers, the distant pumping clatter of one of the county choppers patrolling above the silent streets.

“Are you guys okay?” Sarah asked, her voice constricted, her smile choked back into her face.

“Abby’s missing.”

“Oh, Flynn, oh my God.”

“Did you see or hear anything?”

She shook her head. “The cars woke me up. Let me get Kev.”

“I’m here,” Kevin said, coming out from behind her. “Same story from me. Nothing.”

They did the Monteleones, got nothing but sadness from this gentle, elderly couple.

“The next house is Al Dennis,” Flynn said. “He’s often up at this hour. I’ve seen his lights on when I come in off night duty.”

“Good.”

This time, though, Al had been sound asleep, and he came to the door bleary and blinking, pulling a terry-cloth robe on over his pajama bottoms.

“Flynn?”

“Al, Abby’s missing. She’s been kidnapped. We’re trying to find out if anybody noticed anything unusual during the night.”

“Unusual?”

“Lights, voices, a vehicle passing the house more than once, anything like that.”

Flynn saw him look into himself, a sign that detectives come to know, that

somebody is genuinely searching their memory.

“Lights about three. A car out there.” He gazed at Flynn. “I thought it was you, Flynn.”

“Why was that?”

“I just assumed it was you coming off duty. I guess it was like, you know, the car stopped there. At your place. I didn’t hear your garage opening, though. I do remember that.”

“Did you see the car?” Eddie asked.

Dennis shook his head. “Sorry. I just—a car came up and stopped.”

“Did you hear it pull away?”

Again, he shook his head. “I got the impression the lights had gone out. Like I said, you coming home. That’s what I thought.”

“A time, Dennis?”

“After three. In there.”

He’d heard the car but hadn’t seen it. “Do you remember anything about the engine noise? A large car, maybe? A truck? Could you tell?”

“God, Flynn, I am so sorry. I wish I could help.”

As he thanked Dennis, he realized that he was beginning the rest of his life, and it would be a time of wondering and suffering and the pain of love that has been stolen, but not lost.

As he expected, the rest of the canvas turned up nothing.

Late in the morning an FBI agent came up from Austin to Menard, a kid named Chapman Shifley. Agent Shifley wore a suit, cheap but carefully pressed. He had a burr haircut and the fast eyes of someone who might have a special forces background. He introduced himself, jamming his hand out and pumping Flynn’s arm, the gesture an unconvincing parody of manly sympathy.

Only one assignment mattered to the FBI in Texas, and it wasn’t this. Either you were on drugs and gangs or you were essentially nowhere. This assignment was nowhere.

The first thing he asked for was an inventory.

“I haven’t done that. Except that her purse is missing.”

“Could we just do a little looking around,” Shifley said, not unkindly. He wasn’t insensitive.

“Please be my guest.”

The house was filling up with forensics personnel, “Lady” Christopher with her careful hands, her supervisor Jamie Landry, who hailed from the Evangeline Country over in Louisiana and made remarkable crawfish bisque.

It would take hours, but the two of them would methodically work over the entire house, looking for fingerprints and subtle evidence of some kind of skilled break-in.

As he climbed the stairs, followed by Eddie and Shifley, Flynn found that he didn’t want to go back into their bedroom. He never wanted to go back in, not until Abby was safely home.

The cheerful curtains, the soft blue wallpaper, the sleigh bed—it was all as familiar as ever, but it now seemed miraculously beautiful, like a room from some past world found in a museum.

Landry came up and handed out latex gloves. “Don’t move things more than you absolutely have to,” he said.

Nobody replied.

Flynn rolled on his gloves and opened Abby’s top drawer.

Immediately, he saw that clothes were gone, two or three bras, socks, underpants.

“Everything in place?” Shifley asked.

“I’m not sure.”

“Because that looks like somebody took stuff outa there.”

“It sure does.”

In the closet, he found her backpack missing. Also, her white sneakers were gone, and some shirts and jeans.

If he’d been working this case on a stranger, he would have said that

they'd left voluntarily.

"Flynn," Shifley said, "were you guys doing okay? I mean, the marriage?"

"She didn't run out on me."

"I have to ask."

"Yes, okay! Yes. We're happy."

"Because that's not what this looks like."

"Then it's a setup! She'd never walk out on me. She—we—we're in love. It's a happy marriage."

He knew the Bureau. He knew that they were going to back this down to an adult missing person, probable walkout. That would give the case maybe two more days of search time.

Eddie said, "They're happy."

"Yeah, I get it."

His tone said that Flynn was right, and in that terrible moment, he could almost feel her soul flying away from him.

Of course, the locals didn't quit. Eddie didn't quit. But police forces live in a strange sort of a straitjacket. A local Texas police force has access to information from other Texas authorities, but not other states, not other countries. To really pull down a sophisticated kidnapper, you need the reach of the FBI with its connections around the world, and the co-operation of Interpol. The motive for stealing beautiful young women, if it was not perverted, was often nowadays for sale into slavery abroad. A twenty-two-year-old blond like Abby could bring big money in hidden slave markets.

By the time Landry and company had finished, Flynn had been awake for more than fifty hours. He was not in grief, but desperation. It wasn't as if Abby was dead, it was as if she was waiting for him. Abby trusted him. She would believe that he would do anything to find her. She would have faith that he would come.

By sunset on the third day, the house was empty and quiet. Not a single trace of useful evidence had been found. Abby, her backpack, her purse with

her ID and a little money in it were all gone, along with three changes of clothes.

His wife had not walked out on him. His wife was out there somewhere, in the hands of a monster. He chose not to consider the possibility that she might be dead, and in so doing joined many thousands of people waiting every day of their lives for closure that never comes.

He had nightmares that she had been buried alive.

He had nightmares that she was being starved.

He had nightmares that she had been sold to some Arab prince.

On and on and on it went.

Every morning at five, he ran. He ran through the quiet streets of his neighborhood and down into the Railroad District where the great grain elevators stood, past their ghostly immensity, past the long lines of hopper cars dark in the early dawn, past the heaving engines with their great, staring lights, past the café with its warm windows and steaming coffee. He ran like a man under threat. Over time, he became narrow and hard, his body steel cable.

He became a master of the handgun, he learned fast shooting and target shooting and he became known among the shooters of West Texas as a competitor to be aware of. He learned tae kwan do and karate, and learned them well. He went beyond the normal investigative skills of a police detective, venturing into areas as diverse as wilderness tracking and the use of sophisticated bugging devices.

His colleagues admired his skills and feared his obsessive dedication to his cases. When he was on a kidnap, he routinely worked twenty-four hours at a stretch and slept three. He could have risen in the department to a captaincy, but he prevailed on Eddie to leave him a lieutenant so that he wouldn't get sucked up into administration.

As the years wore on, he gradually turned his den into what became known on the force as the Abby Room.

Even though the FBI had abandoned the investigation before it was three days old, Eddie did not abandon it. Far from it, he hid Flynn's case time for him, allowing him to continue looking for his wife for two more years.

Finally, he quietly and sadly eased it into the cold case file. This meant that nobody could be assigned to it without his personal approval.

Still, though, Flynn's investigation continued. He became the most knowledgeable expert on kidnap in the State of Texas. Every force in Texas consulted him. The Texas Rangers consulted him. He solved case after case after case. But the Abby Room only grew more full of clippings, of clues, of false leads. He slid his unending search for her ever deeper into his caseload, accepting Eddie's silent compliance with equally silent gratitude.

Their bond of friendship deepened. Eddie had loved Abby, too. He had sat on the summer porches of youth with her, also. He had never married. Instead, his love affair with her had continued down its own lonely path, and he had watched with pain and joy as she and Flynn made their life together. When he went to their house for cop nights, he'd watch her out of hooded eyes. She'd had a dancing heart, had Abby Carroll, and looks and ways that no man could ever forget.

Not often—maybe once or twice a year—Flynn ran into a case similar to Abby's, an apparent walkout that seemed to him to be something else. Time and again, the FBI abandoned these cases after a few days.

Flynn did not abandon them.

Somebody was out there taking people, he knew it, somebody very clever and very skilled.

Somebody was out there.

CHAPTER TWO

The Night had come and gone, November 16, as always, the worst night of Flynn's year.

As he always did on the anniversary of Abby's disappearance, he had spent it in the Abby Room, pouring over files, seeking some new lead hidden in some record he hadn't considered before.

As always, he'd found nothing. Her case was dead cold. Still, though, she lived on within him. His side of the conversation of life continued.

Sarah Robinson's little girl Taylor was in grade school now. He had never asked her if Abby, also, had been pregnant, but every time he saw Taylor, a question came into the edge of his mind: were there bones somewhere of the woman he had loved, and tiny bones tangled within them?

He'd never remarried, never even considered it. After seven years it would have been legal, but he would never do it, not until he knew for certain that she was no more.

Eddie came out of his office and headed his way. His gut was rolling, his dark glasses bouncing in his breast pocket. He was coming fast, his scowl as deep as a grave.

Flynn was hoping that he was headed anywhere else, but he did just what it looked like he was going to do, and dropped down into the old chair beside his desk.

He said, "Special Agent Diana Glass wants to talk to you regarding an investigation you've been pursuing."

"The Mercedes case? The meth lab on Fourteenth Street?"

"The Carroll Case. Abby."

Flynn said nothing.

"She even knows about the Abby Room," Eddie continued. "She knows you were interviewing Charlie Boyne again yesterday."

The Boyne case was one of the other disappearances that were mirror images of Abby's. "I wasn't."

"Course you were."

"Dallas PD and the FBI closed the Boyne case years ago. So I wasn't interviewing him, as there is no case on the books."

"Then let's say you were pursuing your hobby of refusing to drop closed cases."

"Who the hell told her?"

"Not me. I just sit in my office and wait for the parade to go by. Which it never does."

"There was a parade. When the Tomcats won the semi-finals."

Eddie looked blank.

"The Tomcats. Menard High's football team on which you once served as a wide receiver. Last year they reached the semi-finals and the school decided on a parade. You were there. You rode in the lead pickup. In a uniform with a big cap. Very impressive."

"Is that sardonic or sarcastic?"

"Both. Anyway, where is Agent Glass from, Dallas or San Antonio?"

"She emailed me for permission to talk to you about disappearance cases in general. Pick your brain, be my guess."

"Okay."

"Could be a break, Flynn, if the Bureau's gonna finally do something." He paused. "Thing is, she's got a Gmail account."

That was odd. “So she’s not the Bureau? Did she name an agency?”

“She did not.”

But who else would it be? ATF? No, no interest in missing persons there. Border Patrol? Possibly. “I’ve looked for evidence of border transport for years. So maybe she’s Borders.”

Eddie Parker said, “You’re gonna find out. Right now.”

A woman in a suit stood in the doorway of the squad room.

“My God,” Flynn muttered.

Her hair was so dark it made her skin look as pale as marble. She wore a black, featureless suit that shimmered like silk. Her eyes moved to Flynn, then to Eddie, then to back to him again. Then the most beautiful woman Flynn had ever seen in his life strode through the dead-silent squad room. She stopped at his desk.

Eddie had taken off. His office door was already closing.

“Lieutenant Errol Carroll?”

He stood up and shook an unexpectedly powerful hand. Her eyes, emerald green, drilled into him. She was all job, this woman. Beauty, yes, but in service to a cause, which was very clear.

“Lieutenant, we need to talk.”

He gestured toward his chair.

“Privately.”

Silently, he led her toward the conference room. He could see Eddie lurking way back in his office, watching through the blinds, not wanting to get anywhere near this. He didn’t want a single thing to do with this ice sculpture, either. She might as well have “Bad News” tattooed on her forehead in big red letters. Expensive clothes like hers did not go with garden variety FBI personnel, or any ordinary personnel at all. No, this lady came from way up high where the dangerous people lived.

After they were in the conference room, she shut the door. She turned the lock with a decisive click. He hadn’t ever seen that lock used before.

“Sit down, please.”

“What’s this about?”

She reinforced her statement with a sharp gesture, and he found himself dropping into one of the old wooden chairs that were scattered around the scarred conference table.

She went into her briefcase and pulled out a tablet computer. She tapped a couple of times and he could see a file appear. Like many a detective, he was good at reading upside down. He saw his own name on it, and his picture.

She began flipping through the file, touching the screen with a long finger every time she turned a page.

“Do I need a lawyer?”

She stopped reading and looked up. “You have investigated twelve of them, starting with your wife. Each time, you’ve put in a request for more investigative support. May I ask you why?”

“May I see a cred?”

“You’re suspicious of me?”

He did not reply.

She held out an FBI credential that identified her as Special Agent Diana Glass.

“Satisfied?”

Not in the least, but that was beside the point. First off, the credential could be rigged. Second, he would never know the truth—at least, not until it was too late to save himself from whatever dire fate she had in mind for him.

“What do you want from me, Agent Glass?”

“First off, you’re not in any trouble. And I’m Diana, Errol.”

“Flynn. People call me Flynn.”

“Flynn? That isn’t in your file.”

“Errol Carroll? My folks had a tin ear. Flynn is a joke, as in Errol Flynn.”

She gave him as blank a look as he had seen in some time. His guess was that she’d never heard of Errol Flynn.

“Just call me Flynn without the joke.”

“We want you to help us nail the bastard whose been doing this, and we want you to start right now.”

“Sure,” he said carefully. “I’m ready to start any damn time. But why the change of heart?”

She got up and went to the door. “Tomorrow morning at eight. Be prepared to travel.”

“Travel? Where? For how long?”

She froze. She turned. “This is going to happen again, Lieutenant, and soon. With all the effort you’ve put into your investigations, the expertise you have developed, we believe you can help us prevent the next crime. So to answer your question, we’ll be going wherever we need to go, and it’s going to take however long it takes.”

She left.

He stood staring at the door. What the hell had just happened? As he walked out into the squad room, he saw her striding toward the front lobby.

Guys were being careful, pretending not to be absolutely fascinated with whatever had just gone down.

“I don’t know,” he said into the silence. “I have no idea.”

Eddie burst out of his office. His neck was pulsing, his face was crimson. This was not a man with a temper, but he was on full burn right now.

“What in goddamn hell’s the matter with you,” he snarled.

“Nothing.”

He held up a fax. “They’re telling me you’ve requested an indefinite leave. Thanks for this, ole buddy, ole pal. Next time just damn well tell me. Discuss it with me. Because we’ve been friends for years, jerkoff that you are.” As he talked, he waved the fax.

Flynn snatched it from him. And his jaw nearly sank out of sight.

“I didn’t know about this.”

“You didn’t ask for a leave?”

“Course not. Why would I? I like to put creeps in jail. It’s my damn vocation.”

“So if I tear this up, you’re back here in the morning?”

At that moment, his phone vibrated with an incoming text. He read it. “You have a chance to catch the man who kidnapped Abby.”

Her timing was excellent, he had to say that.

“No, Eddie, actually the request is good.” He could hardly believe what he was saying, but he was doing it and as he did so, his conviction was growing. “The request is good.”

“I can’t pay you. I’d like to but I can’t.”

He didn’t spend much money, hadn’t since Abby. So he could handle the absence of a salary. “I’m sorry, Eddie. I have to do this.”

“Yeah, I get it. But clean out your locker. If the janitor has to scrape any rotted doughnuts outa there, you’re gettin’ a bill.”

Their eyes met. His friend was there for him and nothing more needed to be said. Eddie turned away and Flynn did the only thing left for him to do. He gathered up his few personal items and left the way cops always left on their last day, with a cardboard box in their arms and a few good-byes. A police force is like a lake. When you get out, you don’t leave a hole.

By the time he was unlocking his car, another guy would already have his current cases. But not the Abby Carroll case, of course. Not the Boyne case, and not any of the other missing persons cases that had gone cold.

He drove home in the quiet of the midday. This was all insane, of course. He never should have done this.

“Abby,” he said into the rattling of his old Malibu, “I’m coming, babes, I’m coming.”

CHAPTER THREE

As soon as he got home, Flynn texted Diana Glass that he was ready to go, but received no reply. He did an Internet search on her and found nothing. No Facebook page for a Diana Glass that looked like her. No Twitter account. A check of the National Law Enforcement Roster also turned up no Diana Glass, meaning that she'd never been in a local or state police force. His access to FBI records was limited, of course, but he'd emailed their personnel department a verification check on her from the office. Usually, you got an answer in a few minutes, and usually it was "verified." FBI creds were not easy to come by and not easy to forge. If hers had been false, he would have gotten an urgent call, he felt sure. They would investigate an imposter immediately.

So she was for real, but for whatever reason, they weren't going to be releasing any information about her.

He went into the Abby Room. He'd spend the rest of the day looking over his cases. Of course, there had been many thousands of adult missing persons in the years since he'd lost her, but only twelve fit the precise criteria that interested him: an apparent walkout without any sign of forced entry, and a spouse or loved one who insisted that there had been no motive for the person to leave, and had credible support for the assertion.

It was a surprisingly rare situation, so rare that to Flynn it was an M.O.

On the walls were pictures of Abby, of the house as it was then, photographed in methodical detail, of the neighborhood, all the cars, all the houses.

There were maps of the other cases, blueprints of each house from which a victim had been abducted, with all the information from every crime scene intricately cross-referenced.

Abby smiled down at him, her hand shielding her eyes. The shot had been taken at Kitty Hawk in 1999, the summer of their courtship. She had been wearing her blue shorts and tank top. She'd been laughing and you could see it in her face. Later, back at their rental, he would unsnap that tank top and slip it off and stand on the tan carpet in the bedroom. She would seem, when she came close to him, to move with the lightness of a woman made of air, and the moment he had looked down into her eyes on that warm afternoon would remain engraved in his memory forever.

Sitting in meditation, he closed his eyes. "To study the self is to forget the self," he whispered into the silence. That was where he always started. Then he took his attention out of his mind and placed it on his body.

He felt his heart rate slowing until the beating seemed almost to stop. The cool of the room touched him so closely that it felt as if fingers were caressing him, fingers that were both intimately alive and as stiff as death.

He had understood the deep message of martial arts training: you cannot gain the freedom to fight at your best until you make friends with your death.

Beyond fear lies the balance that enables the blow to be perfectly struck, or deflected with perfect grace.

You never quite reach that spot, but you never quite fail.

He sat among his records, a naked man in a cold room.

He sat for a long time, letting go of his thoughts, his concerns, his questions.

As the stars made their nightly journey, he traveled deep within himself, sitting and flying at the same time. His heartbeat was now little more than a

memory.

Other names and other faces came back to him: Claire Marlow, Hank Feather, Lucinda Walters, Gail Unterwager, George Nathan Chambers, Kimberly Torgelson—the list that haunted his dreams.

All had disappeared at night. All had taken a small number of personal belongings. Gail Unterwager left three young children and a devastated, uncomprehending husband. So had Lucinda Walters. George Chambers had two sons and a seven-figure bank account, a wife that loved him and a flawless life. Kimberly Torgelson's little boy had been two and her husband had been completely shattered.

Yeah, buddy, I get it. Welcome to hell.

Three o'clock came. Outside the wind whipped the big old trees that surrounded the house, causing skeletal shadows to dance on the lawn. In the distance, an owl hooted, its voice flying in the gale.

When the hour grew late and still sleep did not come, he did what he always did at times like this, and walked through the house thinking and remembering, trying to understand how somebody could have come in and taken her out of bed like that and then carried her off, and all without her police officer husband noticing a thing.

Flynn was not a heavy sleeper now and he hadn't been then. So how had it been accomplished? To this day, he didn't even have a theory, not for any of them and especially not in Abby's case.

Once or twice, he had dreamed of her so vividly it was as if she was back. Once, the kitchen door had opened and he'd heard her voice calling up, "I'm home," her tone bright. He'd run downstairs, run like the wind, to find her standing in the dining room. "I'm all right," she said, and there had been a mixture of sadness and love in her face that had made him ache.

He had woken up, then, still in his bed.

Just before dawn his cell rang, startling him so thoroughly that he almost dropped it and lost the call.

It was Diana Glass.

“Can you come to a meeting?”

“Now?”

She gave him an address in the warehouse district near the grain elevators. He agreed to go and ended the call.

He called Eddie. It rang. Again. Again.

“Whassa matter?”

“It’s me. Glass just called. She wants me to meet her on Avenue Twenty.”

Silence.

“A warehouse, Eddie, at four in the morning.”

“So you called to wake me up?”

“I did.”

“You want a squad car? Protection?”

“I want you to know where I went and when.” He gave him the address.

“Okay, got it.”

“In other words, if I disappear, it is not voluntary. You got that? *Not* voluntary.”

“If you have reason to be suspicious of this woman, don’t go alone.”

“I ran a verification check on her and I’m not sure what to think. The Bureau never came back to me.”

“That is odd.”

“Yeah, and she said eight in the morning. It’s four in the morning.”

“I noticed.”

“So don’t send anybody, but watch my back for me.”

“You’re gonna carry, I assume.”

“Oh, yes.” He headed upstairs, pulled on some jeans and a sweatshirt, then strapped on his gun and threw a jacket over it. He splashed his face, but didn’t take the time to shave. Then he took an equipment pack off its shelf in the closet and took it with him. It was all stuff he’d put together himself, a manhunter’s kit.

It was still deep night, and colder than he'd thought it would be, with wind coming steadily down from the north. As he opened the garage, the rattling of the door echoed through the silent neighborhood. No lights came on, though. Everybody knew that he kept irregular hours.

The predawn air was icy silver, and the tires crunched on frost as he backed down his driveway. The Malibu's heater screamed.

Cold, hot, his body could absorb whatever came its way.

He had worked himself into a new man, as hard as stone, as quick as the air, a man too silent inside to feel fear. He'd practiced with his pistol until it seemed an extension of his body. He did not push, he did not heel, and hours of exercise ensured that his wrist would never break in anticipation of recoil. He was comfortable with the standard issue Glock, but also with the .357 Magnum, and, of course, with the old Colt Positive, known as the Police Special.

He did not go straight to the warehouse—never that—but rather made his way through the streets of Menard, the pretty, average city that had been his born home and would always be his home.

He passed Abby's girlhood house, now owned by the Dickson family. Along with Eddie and half the other guys in town, he'd courted her on that porch. He'd come to it at midnight, his adolescent body filled with desire, and swung alone on the old porch swing until her dad had come out and swung with him. Bill Baumgartner had understood a lot of things. When he gave Abby away, tears had touched his eyes as a smile had wreathed his face.

Good people, Abigail and her folks.

Bill and Amy were in Menard Memorial now, and when he went to see them on Sundays, he always told them the same thing, "I am searching."

For the kidnapper and killer.

For Abby's soul.

For the unlived life of the child she might have been carrying.

For the truth, cold and clean.

The warehouse was one of the tin-siding jobs that looked like a gigantic barn. On its side was a faded sign, unreadable.

He pulled his car up and got out. There were no other vehicles around.

This was looking more and more wrong. Very wrong. But if she wasn't law enforcement, who could she be? Surely the kidnapper wasn't a woman—this woman.

He been a detective long enough to know that the unexpected is usually the thing most to be expected.

He walked up to the door, which was unchained, the locks thrown back.

There was danger here, no question.

He went in.

CHAPTER FOUR

The air was cold and thick, smelling of mold and wet cardboard. His eyes were good in darkness, but not this good, so he put on the infrared glasses he had designed himself, cutting the lenses from a couple of Hoya RM9s. Then he pulled out his infrared illuminator and methodically swept his surroundings. A sodden mass of cardboard boxes appeared like a distant mountain range. Closer, he saw a jumble of ruined bicycles. Behind them were rows of dead Christmas poinsettias in plastic pots, also dry aquariums.

There used to be light manufacturing here in Menard, little factories that used wetback labor to make cheap goods that would be sent out to California on the railroad. No more.

Debris was what he had expected. It was what he did not see that was troubling him. The sense of abandonment had changed. Now, he felt the presence of watchers. So far, he hadn't spotted them, but he knew that this was only because he hadn't looked in the right place.

With a movement as smooth and natural as taking a breath, he slipped his gun into his hand. Out of habit, he'd brought his Glock. Should have taken the Magnum instead. He was off duty and officially on leave, so it had been his choice.

"Hello," he said. "My name is Flynn Carroll. You asked me to come here."

Then he knew that somebody was behind him. It wasn't a hunch this time, or an instinct. He'd heard the whisper that jeans make when they rub against each other.

Sucking in breath, then slowly releasing it, he went deep into himself, blanking his chattering mind by concentrating his attention on the sound. In another moment, he was going to need to move very, very fast. He would have one chance only.

Another sound came, this time off to his right. So there were at least two of them, and they were maneuvering to place him in crossfire.

"Let's stop this right now," he said aloud. His words were followed by a silence. Were they surprised? He thought not. He thought they were very far from surprised, because he could see a third one off to his left, a figure that was more slight than the other two. Could be Diana. "Look, I'm gonna end up using this thing if somebody doesn't show themselves real soon."

Outside, the wind shook the thousand windowpanes and made the tin roof jump and rattle. The massive late season blizzard that was bringing the arctic to Montana was now also plunging southward into Texas.

"Flynn, listen carefully."

Diana's voice filled the room, a whisper from everywhere.

"Everything is good, Flynn. We're all friends here. We just need to be very, very careful. This is all routine safe practice in this unit."

"You'll get used to it," a male voice drawled.

A hand came down on his shoulder—and he took the guy down with a standing grapple, a simple jujitsu maneuver for which his assailant was, to Flynn's surprise, entirely unprepared.

"Keep back," Diana snapped. "Don't challenge him."

The guy he'd taken down got up. His face was hard to see in the darkness, but Flynn sensed a scowl of rage.

"Sorry," he said.

All he could see of the eyes were shadowy sockets, but he could feel the

anger.

“Flynn,” Diana said, “please give Captain Larsen your pistol.”

“No.”

“Flynn, you’ve come in here heavily geared and with a drawn weapon. Of course we’re being careful. Now, calm down. Give him the gun.”

Flynn thought about it. He didn’t move.

“We need to fly before dawn. We have a long way to go and time is of the essence. If you want to help prevent another disappearance and maybe stop this perp, now’s your chance.”

“I don’t like total strangers coming up on me in dark rooms.”

“This is a special unit, Flynn. We’re operating under our own set of protocols. We’ve set up an orientation for you downstairs.” She turned on the lights.

He lost his night vision equipment. Nobody else was showing a pistol, so he put his away. But he did not give it up.

“Thank you,” she said.

At the far end of the space there was an old iron spiral staircase that had probably been ordered from the Sears Catalog a hundred years ago. He followed the rest of them down, and found himself in a basement that was just as dark as the floor above had been, but felt smaller. Not for long, though. A match flickered as Diana Glass lit a gasoline lantern—and hung it on the barrel of some kind of old tank. The thing wasn’t in US livery and it was dusty, but it looked like it had never been driven.

“The Korean War,” she said, waving a dismissive hand toward it. “They were on their way to San Diego when the conflict ended. Great shielding if you worry about listening devices.”

“Which you do?”

“That would be correct. Flynn, first off, I want you to understand that there are many things that make this unit special. The first of these is that we’re all just the same as you. We all have a missing loved one.”

“None of ’em walked out,” a male voice said. “My Cindy did not walk out.”

“Louie Lander, LAPD,” Diana said. “Just like you, just like the rest of us, he’s done a hell of a job on a lot of missing persons cases.”

Louie Lander had a tight-to-the-skull faces and a hard, sad smile. “Just like me,” Flynn thought, “I smile like that.”

“Can you explain this security, because this is the most unusual damn unit I’ve ever come across.”

“Flynn,” Diana replied, “we’re dealing with the most unusual damn thing that’s ever happened. Mike, why don’t you tell him your story?”

The second of the three guys standing in the light said, “Sure, Diana.” He regarded Flynn with eyes full of pain. “We were having a cookout. It was just after dark. My wife and my little boy were out in the backyard playing hide-and-seek. I was cooking on the grill. I noticed it was kinda quiet.” He paused. “That was in 2008. I never saw them again.”

Flynn thought about this. “You were there? Right there?”

“I was standing twenty-three feet from my wife when it happened. My boy was playing near the back fence. Forty feet. I heard nothing, saw nothing. Finally I ran out into the alley. Up and down. Went to the neighbors.” He stopped. “Called the precinct.” He looked toward Diana Glass. His voice dropped. “A missing roller bag did the investigation in. Plus, the way they disappeared. No sign of an intruder. The local Bureau decided it was a walkout.”

“Your son—his case wouldn’t have been abandoned.”

“He’s on goddamn milk cartons,” Mike muttered. “Nothing.”

The same thought came into Flynn’s mind that must have come into the mind of every investigator on the case: she left and took the boy with her, open and shut. No way could they have been abducted right out from under the nose of the father.

Mike’s grin was eloquently bitter. “I can see what you’re thinking,” he

said. “We were very much in love.” He sighed heavily. “We still are. At least, inside me. Inside me, my family goes on.”

“I hear that loud and clear,” Flynn said. He looked to the third guy. “What about you?”

“First, my wife’s sister, six years ago. She was a talented woman, a violinist with the St. Louis Symphony. We all thought she walked out on her life, all except her boyfriend. The locals did a good workup. Went nowhere. Then, two years ago last month, I got hit. My Lynn. She comes out of the Costco near our place at ten at night—she worked there nights—gets in her car. *And it just sits there.* Eleven, I can’t get her on her cell so I drive over. There’s the damn Altima, empty. I call in the troops but nobody can find her. We get the security video. Two cameras. She crosses the parking lot, gets in the car, and it just sits there. Except.”

“Yeah?”

“There was a power failure at the store. One minute after she got in. Lasted twelve minutes.” The locals—my buddies—figured that’s when the kidnap took place. But when the Bureau found that a couple of changes of clothes and six hundred dollars in cash were gone with her, they got a different idea.”

“So we’re all in the same situation. Cases abandoned as walkouts. The operative word here is ‘abandoned.’ These are dead cases. So why are we here?”

“Last year, the Bureau finally upgraded its relational databases,” Diana said. “The first thing I did was to look for cases similar to my husband’s.” In the hard light of the gasoline lantern, her face had taken on a startling brightness, as if her skin was on fire inside. “What I discovered is that he wasn’t alone. Real walkouts are common, but almost always associated with domestic disturbance. Some of them are genuine, some of them are murders. There are a number of them like our cases, with no domestic trouble, and the spouse insisting that he or she would never, ever do this.”

“How many?”

“Flynn, over the past ten years, I’ve found eight thousand unsolved disappearances, two hundred thirty-six of which involve people who continue to claim that their loved one was kidnapped, despite all evidence to the contrary.”

“Anything linking them?”

“Nobody was a criminal, nobody was sick, nobody was disabled. Everybody had some sort of notable talent—musician, artist, electronics expert, you name it. It’s a highly functional group of people.”

“Abby was a musician.” He sighed. “So the FBI finally realized that something was up. A serial kidnapper. But why organize the unit now? Just because they got a new database?”

She glanced at her watch. “We need to move. The reason we pulled you in now is we’ve got the best case we’ve ever had, and we want the best team that can be deployed.”

“Where are we going?”

“There’s always an element of risk in this work, Flynn. We don’t want to talk about it until we’re off the ground.”

“You’re saying we’re not secure?” He looked around. “You’re not sure of these guys?”

“There could be extremely sophisticated surveillance,” Mike said.

“We’ve set a trap for the perp,” Diana added. “He’s taken two sisters. The third sister has moved in to live with her father. It’s an easy stakeout, and we intend to be waiting, starting tonight.”

“How long? Do you know when he’s gonna show up?”

“We think he’ll use the blizzard to cover his tracks.”

“So it’s in Montana. And we’re sure he’ll show?”

“Nothing is certain, obviously. But this is the most talented of the three sisters. She plays the piano and the violin, she’s a novelist, she’s a dancer. We have a target profile, and she’s way up at the top. Her sisters were good,

but she's outstanding." She strode to the rickety spiral stair and went pounding up, oblivious to its creaking and swaying.

What the hell was going on here? What kind of a perp were they dealing with, who could steal this many people and do it so well?

They had an ancient minivan, white and caked with dirt, its side panels scratched deep from a lot of overland work. The interior had once been luxurious, but the leather was now full of scuffs and tears, and the windshield was intricately cracked.

He sat behind Mike, who drove, consulting a handheld GPS as he maneuvered through the empty predawn streets. If they didn't want to ask the local guy for directions, that was their business.

It was six, shift change, and he saw a cruiser heading toward headquarters, the uniforms inside sipping coffee. Quiet time, six o'clock. The druggies have crashed, the citizens are just waking up, the whores are in the diners or in their motels. Quiet, good time, the eastern sky glowing with promise, dew gleaming in the summer, frost in the winter, here and there a jogger. Your city's most intimate moment.

"You aren't gonna get a flight at this hour," he finally said. "You're gonna need to take the Southwest at eight to Denver, then there's probably a United up to Billings. Assuming anything's flying." The late news had mentioned that the blizzard was setting records for snowfall and wind speeds. They'd called it a snow hurricane.

She drove toward the low buildings of the Menard Airport, now called Menard International since the Mexico City flight had been added. As a teenager, he'd come here to watch the planes taking off. In those days, there'd been a United 737 that headed for San Francisco at seven in the evening, and he and Abby had watched it and dreamed of what it would be to live there in a house in the Marina District or Nob Hill, and listen to the mourning of the buoys and watch the rolling fog. One night she'd said, her voice soft and shy, "What do you want first, a girl or a boy," and he had

slipped his hand into hers and replied with silence, and known that she was to be his wife, and it would be good.

They passed the main terminal, which was unchanged from the way it had been all of his life, two low wings and a central tower. Inside were the six gates, now crushed behind a wall of security, but the Airflight Restaurant was exactly the same, and still served the chicken fried steak dinner on Thursdays, and you could watch the planes while you ate.

Down at the end of this road was the hangar where Donald Douglas had once repaired an early Cloudster, and which now sheltered the ten or twenty private aircraft that called this place home.

“You have your own plane?”

“Yes.”

“So somebody’s a pilot?”

“I’m a pilot,” Charlie said. His tone reminded Flynn more of a funeral director.

They pulled around to the small parking area beside the hangar and got out. They moved as a team, he had to give them that. There was a practiced smoothness that he liked to see in a team.

As Diana entered the hangar through the weathered side door, she turned on the interior lights. Mike trotted over to the main door and rolled it open, revealing the empty concrete apron and equally empty runway.

There were two planes in the hangar, one a gleaming turboprop, the other a twin engine thing that was just that—a thing. Old. Grease on its landing gear. Bald tires.

Charlie hopped up onto the wing and opened a door.

“We can’t fly into a blizzard in that,” Flynn said.

“Charlie can,” Diana said.

Flynn was normally an unconcerned flyer, but this situation was not reassuring. “You’re looking at seventy-mile-an-hour winds in that storm,” he said.

Charlie, who was standing on the wing, said, “It’s got new engines compliments of the US Air Force, plus a classified antifriction coating and the most advanced avionics in the world.”

“It’s too light. No way. I thought you guys had Gulfstreams and things like that. Real planes.”

“This is the real world, not TV. I had to fight like hell for this. We’re travel-rated for commercial only.”

Flynn was the last to climb in.

He saw cracked insulation along the doorframe. He smelled gasoline. Mike and Louie had pulled the hangar door back and the morning sky was red with menace, the north wind already brisk. Billings was a thousand miles away, deep in the vastness of the storm.

CHAPTER FIVE

The more he saw, the less he liked. The little curtains on the windows were threadbare. Under his feet, the carpeting was worn through to bare metal. “I have to say, I don’t think this thing is airworthy on a good day. And this is not a good day.”

“If Charlie says he can take it into the storm, he can. Now, I want to brief you in procedures, because they’re not Bureau standard.”

That mattered little to Flynn. He was only vaguely aware of standard Bureau procedures anyway.

Charlie began turning on the electrics. His doubts seething, Flynn strapped himself into his seat, the rearmost in the plane.

Beside him, Diana sat paging through a file on her iPad.

When he realized that the plane was moving, he was shocked. He hadn’t heard the engines start or felt the slightest vibration, and yet they were heading out onto the apron.

“Boy, this thing is quiet,” he said.

“New engines,” Charlie said.

They moved swiftly across the apron. Charlie spoke into his mike, and after a moment the tower’s clearance crackled through the confined cabin. The controller’s voice, sharp with surprise and concern, made it clear that he’d been taken by surprise.

“Have you filed a flight plan?” came his voice, sharp in the silent cabin.

“We’re not required to.”

“Sir, if you’re heading north, I’d advise filing.”

Charlie’s reaction was to click off the radio.

“You oughta file a flight plan,” Flynn shouted over the engine noise, which was rising as they taxied onto the runway.

“Flynn, we can’t afford to leave tracks. Please understand that.”

“*Tracks?* It’s a flight plan, for God’s sake! The perp doesn’t have access to FAA records, surely.”

She dropped her iPad down on his lap. “You need to do a little studying on the way up. See what you make of the cases. Try to form in your mind an idea of the kind of capabilities the perp possesses. I guarantee you, they are awesome.”

The takeoff pressed Flynn back into his seat. In under five minutes, they were leaving ten thousand feet behind.

“This is the damnedest thing,” Flynn said. “What is this? Because it sure as hell ain’t no fifty-year-old Piper Apache.”

“The friction-free coating makes it a different airplane. And the turbos. The airframe’s been strengthened. And the avionics, like I said—you can’t find better. Plus, it’s pressurized. Convenient in a storm. We can do forty thousand feet.”

“It’s not a Piper Apache, is it? It’s camouflaged as a Piper Apache.”

She smiled. “I could answer that question for you. But if I did, I’d have to kill you.”

There had been humor there—a little. It was clear, though, that Diana Glass really would kill to keep her secrets. It was understandable, though. This was a crack unit. These people were dedicated. Maybe people like this could actually win, even against a genius psychopath ... assuming they lived through the damn flight.

He watched home slip away beneath the speeding plane. Ahead, the sky

was big and dark and mean, and the distant purr of the engines meant that he could hear the wind screaming around the airframe, like a voice from another world, mad and wild.

As the land slid past far below, it became more and more snow-choked. The silence that had settled over the cabin spoke to him in a clear voice. These people were all doing the same thing most people in police work do when they're heading toward danger. Each one considers his life and wonders what will come, and grows silent, seeking within himself for his deepest strength.

Half an hour passed in this silence. Flynn read case files, one after another, more than he'd ever had access to before.

"I notice a pattern," he said. "The same articles of clothing every time. Three changes of underwear, three shirts or blouses, two pairs of pants."

"Interesting," Mike commented.

"Damn interesting," Diana said.

"I wish we could access Behavioral Science resources, Diana."

"Louie, no."

"I know—'until we know what we're dealing with, no leaks.'"

Flynn said to Charlie, "You came out of Behavioral, so what can you add?"

The engines drummed. The plane, now enveloped in grayness, was being steadily buffeted.

"Charlie?"

"I gotta fly an airplane," he said at last.

Soon the snowy fields below disappeared into a gray gloom. Flynn could hardly see the strobes on the wingtips. He craned his neck, looking up at the instrument cluster and seeing gleaming flat panel displays. An autopilot was operating, the plane banking and changing altitude on its own. Charlie didn't even have his hands on the stick. The plane, on its own, was navigating its way through the storm.

These avionics were ten years ahead of the airlines, maybe more.

Flynn thought he should feel safer, but he really wished that Charlie had his hands on the controls instead of reading files on his own iPad. And what about “I gotta fly this plane?” Apparently what it really meant was, “I decline to answer your question.”

He watched the wing strobes disappear into the muck. Then the wings.

He leaned forward. “Shouldn’t you descend into visual?”

Charlie didn’t react.

“Hey, Charlie, I can fly a damn airplane well enough to know we need visual.”

Again no answer. Flynn turned to Diana. “Look, this is dangerous. No general aviation aircraft is up to this kind of flying, no matter what kind of avionics it has. What about deicing equipment? It has to be minimal.”

“I just did a statistical analysis on the cases,” Charlie called back, “and he’s right. There’s a very fixed pattern to the things that are taken.”

“We know our perp has a team. He has to,” Diana said. Then, to Flynn, “Just relax, let him do his thing. We wouldn’t be up here if the plane couldn’t do its job.”

“What the hell is it, a drone with seats?”

She laughed a little. “The military’s got some very good autopilots, obviously. Look, the computer’s a lot better pilot than he is, right, Charlie?”

“Right. I’m looking at the site on the looksee. Snow’s really building up around the house.”

“What’s a looksee?”

“We have surveillance cameras deployed around the target’s home,” Diana said.

As he paged through case after case, Flynn wasn’t seeing a single indication that any witness had ever identified any person, vehicle, sound, or light that seemed to them to be unusual during the times the kidnappings had taken place. “My case is the only one with any sort of witness at all?”

“It is.”

Flynn tried to relax. He hadn't slept much and he was tired. Looking at a rough day ahead, probably a stakeout tonight. Stakeout in a blizzard. Lovely. He closed his eyes—and immediately felt a sensation of falling. Then the stall horn howled.

“Jesus!”

“No big deal,” Charlie yelled. “I'm on it.”

The horn warbled a last time, then stopped.

Flight became steady again, the engines now droning, the wingtip strobes faintly visible. Flynn had not realized until this moment how tired he actually was. Still, though, he clung to the arms of his seat.

More time passed. Finally, he found himself once again closing his eyes.

What seemed just a few moments later, he heard Diana saying, “Good morning.”

“I've been asleep?”

“Deep. Three hours.”

It felt like three minutes. “I can't believe that.”

“Big changes, lotta stress, it's natural. Healthy.”

The plane was still deep in the storm system, but flying smoothly, banking gently from time to time.

He saw that Diana had a readout of the plane's position on her iPad.

“What's our ETA?”

“About twenty minutes,” she said.

“We've made good time, then.”

“The autopilot has an intelligent seek function. It finds the smooth air, so we don't have to cut back our speed.”

When he was younger, he'd flown his dad's plane between ranches, taking the old man from one of his properties to another. He still had his license and kept up with the field. “A hell of a nice toy.”

“That it is.” She raised her voice. “ETA upcoming, gentlemen. Just to be

on the safe side, let's do a weapons check."

Flynn knew the law, and the law said that he wasn't a police officer in Montana or anywhere except Texas unless in hot pursuit, and flying in to a town and looking for a bad guy was hardly that.

"If you're asking me to check my weapon, that means you're expecting that I might need to use it. So I need to know where we are in the chain of command. Am I legal here?"

"We're not in the Bureau's chain of command at all. Me and Charlie are FBI, but this unit is seconded to the National Security Council."

"*Seconded?* And since when did the NSC have any enforcement powers?"

"Okay, now I'm gonna tell you something that's classified. You need to sign, though." She took her iPad back from him, turned a few pages, then handed it back. "Electronic signature. Use the keypad."

He read the letter, which was under the logo of the National Security Council and signed by the chairman. It granted him a Sensitive Compartmented Clearance under the code name Aurora. It was listed as a Human Intelligence Control System clearance and seemed to have something to do with the National Reconnaissance Office.

"I don't understand this."

"It's an above top secret designation. Officially, we're part of the National Reconnaissance Office, but that's not where our actual chain of command runs."

"Okay, so when you send a memo, who do you send it to?"

"My boss."

"Not good enough."

"All I can tell you."

"And if I sign?"

"A little more."

"Not a hell of a lot," Louie said over his shoulder.

"Look, people, this does not look like a police unit to me. National

Security Council? I was looking for a serial kidnapper and probable killer. Where's the national security issue?"

"And the answer is the same, sign and find out."

"Do it, buddy," Mike said. "You need this. Heart and soul, man."

"First I want to know if I discharge my weapon in Montana, what happens?"

Diana explained, "We're operating under a National Security Letter. You fill out a discharge report and forget it."

"A National Security Letter? For a serial killer? How? Why?"

She pointed at the iPad. "It will make sense, Flynn. It really will."

He brought up the keyboard and signed his full name, then added his police ID number and his social security number in the blanks provided.

"Okay, so what have I done to myself?"

The airframe creaked loudly as the plane banked. The wing roots crackled. He could practically feel the tail torsioning, sense the metal weakening, the whole assembly getting ready to come to pieces. No matter how juiced up a small plane was, weather conditions like these were dangerous.

Snow seemed to gush at them. Charlie continued his maneuvers. He hadn't even turned on the wipers, so he was still relying on full IFR. That was absolute confidence, or absolute stupidity.

The ground suddenly appeared below them, a spreading, featureless vastness of snow. When they banked again, Flynn could see roofs buried in the white desert, smoke whipping away from their chimneys. Nearby was a single dark line that looked like runways look when you should definitely not land there.

They banked yet again, and as they did, Flynn saw that there was a sign on the roof of the larger of the two hangars that marked the airport. It said, "Ridge, Montana."

As they lined up on the runway and began to descend, he stopped asking questions. No time for that now.

In the end, he'd discover every secret thing about this damned operation, he was confident of that, but not just now. Just now, it was time to let this thing unfold and hope that the blood that would fall in the snow on this day would not be his own. There would be blood, he felt, most certainly.

CHAPTER SIX

They taxied to the smaller hangar. There wasn't anybody around, of course. Why would there be on a visual flight rules airport during IFR weather?

Moving with lubricated precision, the team got out and pulled the plane into the shelter of the hangar.

"Diana, I need to talk to you."

"We're behind schedule."

"Look, I want to know what we're dealing with and I want to know right now."

"No problem," Diana said, "when the time is right."

The others began unpacking weather gear, warm jackets, hats, boots.

"You didn't get airsick, Texas," Charlie said. "I'm impressed."

"Flight was smooth. Anyway, I slept."

"And yelled."

"A little."

"We need to move," Diana said.

"When do we meet the local cops?" Flynn asked.

Silence fell.

"Five personnel can't run a stakeout in a blizzard!"

Diana continued as if he had not spoken. "What we're looking at is a relatively isolated house. About a mile from the nearest neighbor."

“Hey. You don’t go past the locals.”

“Lieutenant Carroll, I’ll tell you what you need to know. That’s all I can legally do. Read your secrecy agreement.”

“I thought there was going to be a big reveal when I signed it.”

“As soon as possible.”

Impasse. He had no choice but to accept the situation.

“They’re in a house about four miles outside of town. Armed to the teeth. Scared shitless.”

“In weather like this, that’s total isolation,” Flynn said. “Do we have a read on the local power grid? Because if they don’t have power, that’s going to look like a real vulnerability to the perp.”

“Exactly,” she said. “Which is why we’re going to cut their power at some point if he doesn’t show up. Use their helplessness as a lure. We hope it’ll prove irresistible.”

“Why is he going after sisters, anyway? Explain that.”

“He got the first two, so we’re thinking he could try the third. What his motive is, we don’t know. There is a selection process, though. High-functioning people, that’s clear. Not too old, not too young.”

They began putting on the warm jackets, gloves, and boots that they’d pulled out of the plane’s rear cargo bay.

“I need gear.”

“There’s an Army-Navy outlet,” Diana said.

“Good stuff, I hope.” In weather this cold a stakeout would get dangerous fast.

“Far as I know. Let’s pull out the electronics, guys.”

Mike and Louie opened the plane’s nose cargo bay and Mike drew out a black, hard sided briefcase. Mike carried it to a workbench and released the elaborate lock that sealed it.

Flynn recognized night vision equipment and in-ear radios. But there were five blunt black wands, devices he could not place.

“Ranger equipment,” Diana told him. “Mike will check you out on one.”

Mike said, “First, you gotta know that it has a self-destruct system built in. And a fingerprint reader. Once you’re printed to it, if it gets more than ten meters from your body, acid’s going to spray all over its interior. So you don’t want to forget your little friend, and Uncle Sam really does not want you to do that. You’re holding a million dollars worth of his computing power in the palm of your hand.”

He pressed a button on the side, then pointed the narrow end of the device at Diana. A moment later, a reading appeared on a tiny screen.

“First, any reading at all tells you that a human being is out there somewhere, whether you can see him or not. Now, let’s evaluate the state of the *commandante*’s beautiful mind.”

“Careful,” Diana said.

“She’s reading eighty-four,” Mike said. “Anything over fifty is telling you the target’s awake. Over seventy, the target’s alert. Over ninety, the target has an elevated heart rate and high-level brain activity. In other words, your target is probably aware of your presence and your day is shortly going to be ruined.”

He thrust it into Flynn’s hand. Flynn looked down at it.

“It’s a sensitive radio receiver and a computer that can read and interpret what it picks up. The thing draws a couple of milliamps and has the computing power of maybe a hundred thousand laptops. The receiver is tuned to pick up brain wave frequencies. It works the same as a garden variety electroencephalograph, only without leads. It has an effective range of ninety meters line of sight.”

Flynn said, “Police departments could really use this.”

“And it’s also why we’re not going to be calling in the locals. It’s as classified a piece of equipment as the United States of America possesses. MindRay saves lives but it’s easily defeated. Word gets out, no more trick pony.”

“Defeated how?”

“Headgear that suppresses radio frequencies kills it. Embed a copper grid in a cap, and this device cannot read you.”

So cops couldn’t have it. Word would get out. He saw that. But he also had a question that he didn’t ask: did this thing make them more effective than the addition of some local bodies would?

“What’s to say the perp won’t be wearing a hat like that?”

“The classification of this item is very, very strict,” Mike said.

“Okay,” Diana came back, “we need to move right now.”

Flynn thought that they would have been better off leaving these things behind and going in with local support. If he was in command of this operation, the MindRays would be headed straight back to the Pentagon.

Outside, the wind was now howling down the runway, blowing a sheer white torrent of snow. They’d gotten in just under what was exactly what the weatherman was predicting: a snow hurricane.

Transport was a weathered Cherokee with chains, a tight fit for five people, especially when one of them was as big as Flynn Carroll.

There was no visible road. The only sign of any activity was a light, faint in the distance, appearing and disappearing as the snow gusted.

Charlie drove, Flynn navigated with the handheld GPS that was part of each equipment pack.

“He has a team,” Flynn said to Diana. “You indicated that.”

“Has to. At least one accomplice, probably more.”

They came out onto a plowed road. Now there were more lights, a snow-clad Motel 6 sign, beyond it a place called The Swashbuckler, a bar of the kind that grew like mushrooms in little places like Ridge, one mushroom per town. Inside, there’d be a bartender and a waitress snapping gum, in the back a cook. Along with the customers, they would have grown up here. In small towns, everybody had everything on everybody. Bitter places. Could also be murderous, especially on hard winter nights when you couldn’t escape from

those you loved and despised.

They pulled up at a big tin structure lit by a barely visible sign: “Rosen Surplus.”

He got out and pushed his way into the store, which turned out to be cave-like. There was an elderly woman with a tight gray bun sitting in a chair in front of rows of surplus fatigues. Hunter stuff.

“I need some warm clothes,” Flynn said.

The old woman looked up at him. “You sure do,” she said. Her face blossomed into a big, open smile. “Where’d you come from in that stuff, anyway?”

“Nowhere close by.”

She didn’t inquire further. She was too old to be curious about strangers anymore. She wanted his money, not his story.

“We got parkas on sale, thirty-six bucks. US Army mountain gear. Good stuff.”

He bought a parka, found a pair of boots that almost fit, some lined gloves, a hat, and an olive drab scarf that knew the services of moths. She showed him a dressing room behind a curtain where he put on two pairs of long johns and the rest of the clothes.

“Now you might live a while,” she said when he came out.

“Let’s hope.” He paid her a hundred and sixty bucks in cash and got a receipt for his expenses.

It was warm in the Jeep. Nobody spoke. Charlie backed out into the snow-swept street.

Flynn could feel the mission closing in. The absolute silence in the truck told him that these people sensed a whole lot of danger. Not sensed, knew. They *knew* that they were in great danger.

They drove off into a rampage of snow.

CHAPTER SEVEN

Louie was stationed a hundred yards away from Flynn, but he might as well have been in another state for all the good it did in this hell. The others were on the far side of the Hoffman house. The storm had come on even stronger than the Billings weatherman had said it would, and the snow rushed in the sky, pelting Flynn's parka and hood and working its way in under his scarf.

They'd been watching the house now since seven fifteen, and it was pushing nine o'clock. It was an excellent night for a perp who suspected he was under observation to make a move.

He had proven, however, that he could take them any time of year, from any kind of a dwelling, and never leave a trace of himself behind.

Off to his right, Flynn heard a distinct sound. A throaty growl.

It came again, and this time he thought maybe it was a tree scraping. Or could it be a car on the road, its engine straining?

The wind roared around him and the cold invaded his sleeves, the seam of the hood, anywhere it could get in, and that was pretty much everywhere. The scarf was a joke, the socks were a joke. The boots were waterproof, but no boots could keep out cold like this. It made him worry that he wasn't feeling enough pain from his feet, it numbed his hands and made his face burn.

When it comes to cold, after the pain ends is when death begins, and it is a line you can cross without ever knowing it.

The Hoffman place was a prairie Victorian with lighted windows downstairs, looking as warm and inviting as it could be. From time to time, he caught a whiff of oil smoke from what had to be a blazing furnace. In the living room, he could see a fire flickering in the fireplace, and that smoke would drift this way, too. Professor Hoffman, Gail's father, sat in a wing chair before the fire, from time to time sipping at a mug that stood on a small table beside him.

Gail was cleaning up in the kitchen, moving elegantly about, her long arms putting away dishes. Girl-perfect, she reminded him powerfully of Abby.

Flynn was a snow-covered bulge in the earth and that was good. He was well concealed from the road, and the snow would insulate him a little. From time to time, he raised a stealthy, gloved hand and blew into it to warm his nose and face. He rocked from side to side, dipped his knees a little, keeping moving just enough to avoid becoming stiff.

If they weren't properly cleaned and oiled, guns could freeze solid in weather like this, even in your pocket. So he gripped his pistol. He also tried the MindRay. Once, he might have picked up a signal from the direction of the house. Another time he might have detected Louis. Out here, though, the display that had been clear and steady in the hangar flickered and changed so quickly that it meant, essentially, nothing. He was sure now that the thing was high-tech junk. Maybe the Rangers trusted it and maybe they didn't. He didn't.

He also tried the beautifully compact night vision equipment, only to find that the snow made it crazy. All he saw were flashes. He would've been better off bringing his own homemade scope.

He kept old-fashioned naked eye watch and nursed his Glock.

About fifteen minutes later, the living room went dark, then a front bedroom lit up. Professor Hoffman was heading up to bed at nine twenty-five.

Flynn had about decided to make an approach. As far as he knew, the Hoffmans didn't even know they were being staked out, and that was ridiculous. Also, the decision not to involve the local police was wrong, especially when the reason given was to protect the secret status of a piece of equipment that belonged in the garbage. The whole plan was borderline incompetent.

Flynn's worry was that the perp was already in the Hoffman's lives, someone they had come to trust. Was that how he worked—he was the grocery clerk, the night man at the convenience store, getting under the skin of the vic so skillfully that there was never a flicker of suspicion?

He shook the snow off and started toward the house, but there was motion to his right, at about one o'clock. Something low and big. A car? No, impossible off the road in this snow. Anyway, it was living movement, stealthy and low to the ground.

Almost on its own, his gun came out. He stayed where he was, though. Don't move until you understand.

A minute passed, then another.

This perp had once taken a forty-year-old woman who'd weighed two hundred pounds out of a farmhouse in Oregon on a rain-soaked night and left not even a footprint. He had taken mothers from shopping mall parking lots, fathers from backyard barbecues, nurses from their rounds, priests from their rectories.

He had killed them all, Flynn believed. Of course he had, killed them without remorse, lost as he was in whatever fantasy drove him.

Now there was another sound. What the hell was that? Something tinkling.

No, it was music. It floated like a spirit on the storm. There were windows downstairs with drawn curtains, and he thought that was where the music was coming from. It stopped, then started again. Soaring out above the roar of the storm, the hiss of the snow. Dear God, she could play that piano. What was it? Beethoven, maybe? Beautiful, anyway.

Rocking from side to side, checking his feet, blowing into his hands, Flynn began pressing forward again.

Another sound came, this time to his left. This was a very strange sound, a muffled sort of whistling. It went on and on, this sound, a kind of noiseless screaming.

Finally, it ended and did not repeat. The music swelled and the wind moaned in the eaves of the old house. Low clouds plunged out of the north. The only light was from the house and the glowing snow.

He was going down to that house and he was going to announce himself to those people. He was well under way, slogging through drifts as deep as six feet, when he observed the moving shape again. It came from the right this time, and therefore had crossed his field of vision without him seeing it. So there must be a low area between him and the house, probably the snow-covered road. But it wouldn't offer more than a couple of feet of protection, so whatever that was out there, it wasn't a man.

He called on the reserves of inner silence that twenty years of intensive martial arts training had given him. "All things come to him who waits." The defender has the advantage, always.

He watched as the wind picked up a long stream of snow and blew it off into the darkness. The eaves of the house wailed, the music swelled, and bright scars of moonlight whipped across the desert of snow. Behind the storm would come brutal cold and behind that, they said, another storm.

The moonlight revealed a low form with a long back and tail—an animal. The instant the light hit it, it became so still that many people wouldn't have noticed it. A moment later, though, darkness engulfed the shaft of moonlight, and the animal with it. He fought to control his breathing, fought to stay where he was and not follow the flight-or-fight instinct, which was telling him to get the hell out of here.

He tried the night vision goggles. They hadn't been adjusted to work in snow.

Activate the radio, then? No. The others were all armed professionals, too, and a single spatter of communication could cause the perp to pull out—assuming, of course, that he was here.

The house was still dark. When the moon broke out of the clouds, it stood still and silent. Were they asleep? Could they sleep? He could see an LED in there, glowing red in the downstairs hall. They had an alarm system. Certainly guns, too. So they probably felt safe.

The snow was now coming down in long, howling flurries punctuated by periods of driving wind. He waited, his hands clutching his gun. He'd stuffed the MindRay into his backpack. The equally useless night vision binoculars hung around his neck.

He was peering into the dark and thinking about trying them again when the moon appeared and he found himself looking into the face of a goddamn puma, which was not ten feet in front of him.

He gasped, choking back a shout of alarm.

How in the world had it gotten this close this fast? A certainty: it was the master of conditions like this. A possibility: it saw him as prey.

The eyes were steady. They were careful. To his amazement, they followed his stealthy movement to his pistol. Since when did pumas understand pistols? But this one sure did.

He wished that he had an Anaconda or a Model 29, because it was going to take some accurate shooting with the Glock to stop this creature if it charged from this close. Worse, it was a Glock Nineteen and not an Eighteen with its greater capacity and automatic fire option. He needed a perfect head shot or the animal would still be very much alive when it connected with him.

Carefully, he tightened his hand around the pistol and began to pull it up into firing position. If the animal leaped before the gun was aimed, he was going to be torn to pieces.

Its eyes shifted to his face, then back to the rising pistol, which was uncanny. How smart could it be?

It pulled its shoulders forward. It was about to leap. But then there was a slight hesitancy.

The eyes—so steady, so alien—returned to his face. In the stare Flynn could see a raw lust to kill. But then they flickered again, and in the next instant the animal was gone. He had gotten the gun into position just in time, and it had clearly understood that it had been outmaneuvered.

Amazing. He'd never seen anything like it. No animal was that smart.

The puma's tracks faded into the snow.

CHAPTER EIGHT

Louie was approximately two hundred yards to his right, covering the house from an angle that gave him a different view. Flynn wanted to warn him on the radio, but he didn't want to be the one to blow this mission, misconceived though it was. He had to warn the guy, though, so he'd go over there. This would leave the house uncovered from this angle for a few minutes, but it had to be done. It was one damn smart cat, and the guy needed to know this.

The piano had started again, the music slipping and sliding in the wind. Abby, also, had played. His dad had played. He'd tried to learn, but he hadn't inherited that gene. What he could do well with his hands was shoot. He could turn even an old snub-nosed Police Special into a useful weapon. A good pistol felt like an extension of his hand. Any pistol, for that matter.

Pushing through the snow, he was tempted to call Louie's name, but even that might destroy the stakeout. Many a cop had wrecked a good collar with an ill-timed whisper.

He was sweating under his layers of clothing when he began to ask himself if he'd gone in the right direction. But he had, no question. So where was Louie?

The snow seemed less, so he tried the night vision goggles again. He could see a little better, but they didn't reveal Louie ahead. Instead, what Flynn saw was a strange, formless shape in the snow.

Was that a rock? A gnarled bush?

He tried working with the goggles, increasing the magnification.

The material was jagged, gleaming darkly. He still couldn't tell what it was.

Another patch of moon glow sped by. In it, he could make out a pale ripped edge protruding from the shape. Bone, maybe? If so, then that was a chunk of something the lion had just killed—a deer, hopefully.

As a precaution, he got his pistol back out and held it alongside his parka. If that was a kill, then the lion was protecting it, and that's why it was hanging around.

As he crunched along, he stepped on something just beneath the frozen surface. It was hard and irregular and it shifted under his foot.

He bent down and pushed away the snow.

What first appeared was a pallid slickness. He kept brushing. Something just below it, hard tufts of material. Frozen hair, he thought. So this was a kill and that was why the puma had menaced him. It had been worried about having its food stolen.

It took all of his training not to cry out when he found the staring eyes and gaping mouth of Louis Hancock looking back at him. The eyes flashed with moonlight when there were rips in the clouds.

The guy had been taken down by the mountain lion, which was about the damndest thing Flynn could imagine happening. As he pushed more snow away, he discovered that Louie had been hit from behind and thrown forward, then—incredibly—ripped in half.

The legs and abdomen were nearby, a knee and booted foot jutting up from the snow. So the lion must be big. Huge.

This stakeout was over. He reached up and pressed the call button on his radio. "There's been an accident. Detective Hancock is dead. Come in, please."

Silence.

“I repeat, Louis Hancock has been killed, apparently by a mountain lion. We need to close this thing down, we have a dead officer here.”

Silence.

He was coming to really not like these people. “You can’t continue the stakeout, you have a dead officer! I repeat, *dead officer!*”

The hell with it, he’d go in himself. He’d been on his way anyway, interrupted by this horror show. He went plunging toward the house.

The going was extremely hard, and he had to fight his way through some flurries so high that he was forced to lie forward and push himself ahead.

Every time he was forced to do this, he was very, very aware that he was entirely helpless.

He moved slowly, guided by the music. There were no lights showing in the house. When he finally stumbled out into the road, the going was a little easier, but not much. The house loomed ahead of him, tall and completely dark except for a single strip of light leaking from around the curtains of the room where Gail Hoffman was playing.

He was going up the snow-choked front walk when he saw the lion again. It was standing on the porch, back around the far edge, where it curved around under the living room windows. It was absolutely still, and it was watching him.

Once again, it had maneuvered brilliantly. He thought to back off, but any movement whatsoever was going to be a major risk. The animal could react a whole lot faster than he could. Certainly, trying to turn around and run would get it on him in an instant.

The puma was not protecting its kill. It was still hunting, and he was its quarry.

He calculated its distance from him at fifteen feet.

Its eyes were as still as glass. If the nostrils hadn’t dilated slightly as it breathed, it would have appeared frozen. The jaw hung slightly open, the enormous incisors visible.

Was that the face of a mountain lion? He didn't know enough about big cats to tell, but it seemed somewhat longer and narrower. He decided that his best move was to edge in close enough to guarantee a fatal head shot. With luck, it wouldn't react in time.

Another step, then another, as he slowly came up out of the snow and into the compact front garden. Gail played on. The lion watched him.

He saw its eyes close for a moment, then come open again. The message conveyed was clear and it was shocking: the animal was so sure of itself that it was *bored*.

Again he stopped, because he had understood why. The game was already over. It had been since before he'd started his maneuver. The animal was waiting for him to realize that he was caught. No matter what he did, it was going to make its move while he was still too far away for a reliable shot.

Bored did not mean careless. The face remained a picture of attentive patience.

He noticed a flickering light in the sky. Lightning, he thought, which would mean that the blizzard was about to intensify. Could that help him? Would a really powerful flurry give him a chance to return to the road, perhaps to make his escape?

Then he heard a noise even more inexplicable than the earlier one, which had obviously been Louie's death whistle. This was a whispering sound overhead, a big, rhythmic whisper of wind, too regular to be part of the storm. As he listened, it slowed and then settled, dropping down behind the house.

The rhythm was that of a helicopter blade, but it was too quiet. Way too quiet.

A moment later, the light in the front yard changed, and he saw why. The curtained room had just gone dark. The piano had fallen silent.

The lion, also, was gone, slipping away in absolute silence.

He stood still, listening, watching. Could it have jumped up on the roof?

Carefully, moving slowly and as little as possible, he raised his head. There was no telltale shadow along the roofline. So it had retreated, backing down the porch until it was out of sight.

Was it trying to escape him or was it still hunting him? Since he couldn't know, he had no intention of going around the corner of that porch. He needed some spot where he could still see the house, but which would give him protection for his back.

Fifty feet to his left was a tree, its trunk thick enough to enable him to lean against it, making attack from behind much more difficult. The lion would have to charge him from some point that he could see, and it would need to start far enough away to make the pistol useful.

The snow in the yard looked deep, and the slower he had to move, the greater the risk. But if he stayed here, the lion could get behind him.

He raised his gun up beside his shoulder where it could be aimed and fired in just over a second, then plunged off the snow-covered sidewalk and into the deeper drifts of the yard itself. He was at his most vulnerable now.

An enormous splash of snow hit him in the face, temporarily blinding him. He pulled a gloved hand across his face to clear his eyes.

The lion was beside the tree and it was already crouched, ready to leap at him.

Once again, it had outmaneuvered him. Yet again, he was too far away to risk a pistol shot. It, however, was close enough to take him.

Years ago, Menard had recorded a case of a mountain lion stealing a three-year-old out of the bed of a pickup, but he'd never heard of anything like this.

He'd probably been damn lucky to have seen it when he had, or he would have suffered the same fate as Louie.

He took deep, careful breaths, centering his attention on his body, letting his emotions race off down their own frightened path. "You're here, you've survived so far," he told himself. "You can win this."

How had the lion ever gotten over to the tree? How had it concealed itself

in the snow? He was having a hard time believing that an ordinary puma could function like this.

Once again, he had to fight the impulse to turn and run.

The lion moved off past the tree, carefully keeping the trunk between itself and Flynn, and once again he had the uncanny sense that it understood guns.

He asked himself, “Do I have any chance at all of getting to the house?”

From where he now stood, the tree was thirty feet away, the porch and front door twenty.

The door had a glass window in it backed by a curtain. Breaking in would take ten seconds.

When a path looked easy, that was usually because it wasn't.

The moment he started back up onto the front walk, he had to assume that the lion would know his intentions.

He made a quick survey of the scene. The house was now completely quiet and completely dark.

Could it be that the lion was trained? Because another way of looking at this situation was that it was not only trying to kill him, it was also trying to keep him from getting to the house.

No, don't even go down that road. The perp didn't have a damn pet lion with a genius level IQ. The creature was bad luck, nothing more. Had to be.

Nevertheless, his cop's intuition screamed at him: secure your position. You don't know where that animal is and you don't know *what* it is, not really.

Once again, he tried the radio. Once again, there was no response, which was completely unacceptable. When this stakeout was concluded he was going to file a red hot report with whoever was in charge of this outfit, about its leadership and its shitty procedures and its worthless equipment.

Six feet to the left of the front door, the porch ended. Beyond it were lumps along the side of the house that indicated the presence of a flower bed. Behind the house, just visible, he could see the dark bulk of what must be the

garage.

Somewhere back there Diana and Charlie and Mike were deployed—unless, of course, their radio silence was unintentional.

He would need to find them, but not right now. There was another thing that had to be done, which was that the Hoffmans needed to be warned and they had to be offered the close protection they should have been given in the first place.

Angrily jabbing the transmit button on his radio, sending out call after unanswered call, he approached the house.

He pushed his fist through one of the small panes of glass midway up the front door. Working fast because he had lost track of the puma, he pulled the remaining shards of glass out of the bottom of the frame, then leaned in, twisted the deadbolt, and opened the door.

The alarm sounded its warning buzz, but he didn't even try to cut it off. He wanted it to trigger. Surely that would bring Diana and Mike and Charlie in on the run—assuming, of course, that they were still alive. But surely—*surely*—they were. No matter how clever, a mountain lion simply could not slaughter four police officers. Someone was going to get to his gun in time.

The buzz of the alarm rose to a warble. Thirty seconds to go. “Miss Hoffman, Doctor Hoffman, police! Please disarm your system! Police!”

No reaction. They could have retreated to a safe room. They could be waiting there, guns at the ready. Hopefully, they were calling the locals.

His first order of business was to find such any safe room they might be in. It would most likely be in the basement, so where was that door?

He went into the living room. In the big stone fireplace, the fire that had blazed up earlier still sparked and muttered. Beyond this was the music room. With its drapes still closed, it was pitch black. Inside, he could see the darkly gleaming surface of a grand piano, its keyboard a pale grimace.

The alarm triggered, its horn blaring up from under the stairs. Returning to the front hall, he opened the door of the understairs storage, then waited

another full minute before disconnecting it. If it was set to make a distress call, he wanted to make sure that happened before he disabled anything. Finally, he pulled out its power line. Silence followed.

“Is anybody here?”

He detected not the slightest sense of movement, not the whisper of a footstep or a breath or the faintest creak of shifting weight from upstairs.

The wind rose in the eaves and snow swept past the windows.

He examined the alarm system’s control box and was horrified to see that the jack socket was empty. It had no phone connection.

Stepping into the hall, he tried his cell phone, but there wasn’t even the hint of a bar. In the kitchen he snatched up the receiver of a wall phone, but there was no dial tone. Lines were down, of course, in weather like this.

If that flash of light had been the perpetrator in some sort of helicopter, no matter how incredible it seemed, the brilliant puma had been part of it, deployed as an assassin and a decoy.

He looked out the kitchen window, across the bleak pale desert of the backyard.

He shifted frequencies on the radio, emergency calling again and again, but nobody came back. Field communicators like these were adjusted to a range of just a couple miles. You didn’t want them being picked up on bad-guy scanners.

To be certain that he was right about the Hoffmans, he went through the house checking bedrooms, closets, bathrooms, even under the beds.

He pulled down the attic door. As soon as the stairs unfolded, though, he knew they weren’t up there. Nobody had trod on these dusty steps in a long while. Still, he shone his light up. “Doctor Hoffman, police! Miss Hoffman!”

No reply.

He climbed the old steps, feeling the slanted ladder give under his weight. “Doctor Hoffman, I’m a police officer. I’m here to help you.”

If he was wrong and they were up there, he might be about to get his head

blown off. “Doctor Hoffman!”

Shining his light ahead of him, he went up two more rungs. He spotted a couple of cardboard boxes, but mostly the space was filled with loose insulation. Turning, he shone his light to the far end. The house had two wings, but there was no point in crawling any deeper. Anybody coming up here would have disturbed this insulation.

He backed down and closed the stairs, then spent some time in the master suite. The bed had been slept in, but it was cold now. The master bath revealed that this had been Doctor Hoffman’s room. It also revealed missing items. There was no toothbrush in the holder and a shelf of the medicine cabinet was empty.

There were too many clothes in the closet to tell if any were missing, but the way that the hangars had been pushed back, it looked possible. He observed no luggage, so that was another question.

He went down the hall to Gail’s room and found a similar situation. The bed was undisturbed, but there was evidence that cosmetics had been removed from the bathroom.

In the hallway, he found a closet that held luggage, but it was unclear if any had been taken.

Still, the evidence was sufficient to at least suggest that these people had left of their own accord. Nobody was going to believe that, though, because their cars were still going to be in the garage and there were no tracks around the house.

He knew damn well what had happened here. The Hoffmans had been taken. No question, it was exactly the same as all the other cases. So the kidnapper had managed to take the third sister right out from under the noses of a stakeout team, which was damn well amazing.

That most criminals were stupid was part of the shorthand of police work. The vast majority of them were going to be too dumb to get away, but also too dumb not to shoot. Catching the average crook was like herding a bull—

dangerous, but not exactly what you'd call an intellectual challenge.

What they had here was a lurid genius with a bizarre imagination. To even think of training a big cat the way he had was extraordinary. To succeed was phenomenal.

He went downstairs and looked out the back door. He needed to locate the remaining members of the team. He observed the snow-packed back garden carefully, but saw no sign of any human presence. But he wouldn't, not from here. They'd be back in the tree line.

That damn cat was probably still out there, but he had to do this. He unlocked the kitchen door and drew it open.

The wind-driven snow slammed him so hard that he lurched off balance and had to grab the doorframe to keep from being swept backward.

There were major gusts in this thing, fifty, sixty miles an hour.

Lowering his head, he pushed his way out into the storm.

CHAPTER NINE

The brief shafts of moonlight that had helped him earlier were now gone, replaced by scudding clouds and a literal wall of snow being driven directly in his face by the brutal wind. Out much more than five feet, he was blind. So what about the cat? Was it blind, too?

Despite this, the perp had come in here and taken his victims. Flynn knew when, too. It had happened just after Gail had stopped playing the piano and just before he'd entered the house—when Flynn had been dealing with the puma. It had disappeared because the kidnap had been accomplished and the perp had called it back.

The whole thing had taken roughly ten minutes and had been accomplished without a sound, without a trace of anything being left behind and without a hitch. *In this.*

He reached the garage and shone his light through one of the small windows that lined the two doors—and felt a shock with the power of a fist in the face. There was blood everywhere, blood and ripped clothing. He saw a hand, a leg—pieces of two people, maybe three.

The Hoffmans? The team? All of them?

He raised one of the doors, which came up with a massive creaking and a tinkle of shattering ice.

This door hadn't been opened in at least an hour, and the other one was

caked with ice. So who were these people?

Stepping in, gun in one hand and flashlight in the other, he went to where a bloody jacket lay against the door of an old pickup.

North Face, black. High-intensity penlight in the right pocket.

Mike had worn a black North Face. The light was the same one all the team members carried.

Against the back wall, there was an old-fashioned pitchfork. On it was a rounded mass of bloody hair. It was Charlie, his distorted face just barely recognizable in the mess.

The perp may have originally intended to take the Hoffmans in the usual way, leaving behind evidence that they'd departed on their own. Flynn's best guess was that these two men had somehow succeeded in surprising him—whereupon they had paid the same price as Louie.

So this was now a major crime scene. There could be forensic studies done here. Maybe there would be prints, bits of hair, even blood. DNA, even.

Looked at one way, this was a scene of extraordinary violence and tragedy. Looked at another way, it could be a treasure-trove of evidence, the first one in the history of this case.

A quick survey of the remains turned up evidence of only the two men. Diana was not here. He made a quick decision to report this crime first and worry about her later. His guess was that she was beyond saving anyway, probably back there in those woods right now, in the form of frozen remains.

His duty was very clear. He had to get out of here alive and give the state criminal investigators all the help he could.

But how to accomplish that? The perp was going to definitely want him dead. He had effective weapons, including the lion, and probably skills and capabilities that Flynn knew nothing about. Given that he was able to train a wild animal to near-human hunting skills, it had to be assumed that he was well provided with extraordinary assets.

Could Flynn manage to walk out of here? No, the perp would not let that

happen. At some point, the lion would reach him or something else would reach him.

Even if he did reach the Cherokee, which was half a mile back along the road, he didn't have keys. So he would need to wire it. Not difficult, but it would take a few minutes that he was unlikely to have.

He was trapped here, that was clear. But he wasn't going to give up. That was also clear. The odds were against him though, seriously against him. In fact, he didn't really think he had any measurable odds. So what he had to do was to leave a record behind, giving all the details of the crime as he had observed them.

A moment's thought brought him an idea. He set about searching the ruins of the two men for a phone. He could use it to record a detailed account of the crime as he had seen it unfold. He'd return it to the pocket it had come from. At some point, forensics would find the recording and listen to it.

Handling the corpse of a person who has just died is as intimate an experience as there is. Not many people do it—nurses, policemen, emergency medical service personnel—and those who do never get used to it. It's as if a living person has surrendered himself to you so completely that he is lost to your touch.

Largely because Charlie's corpse was the least maimed, Flynn approached it first. He'd taken a shattering blow to the head and sustained deep gouges. A man had delivered the blow, but the rest of it had been done by the lion.

The body lay at a twisted angle, its face turned away as if in some eerie excess of modesty. One arm lay across the chest, the other angled backward, obviously broken. Long gouges had reduced his heavy parka to rags that bulged with tufts of white wool insulation. Mike felt in the pockets, soon coming across the familiar shape of an iPhone. Grasping it, he withdrew it and turned it on.

It took a long time, but finally the opening screen appeared. Charlie didn't use a password, which was useful but not smart for a man who obviously

dealt with a lot of classified material.

As Flynn pressed the logo of the recorder app, he found himself watching the battery indicator with increasing amazement. The phone got hot, quickly becoming almost painful to hold. He tried to turn it off but it was no use. He watched helplessly as the battery indicator moved across the face of the thing, reducing it in a matter of seconds to a dead, useless brick. Immediately, he pulled out his own cell phone and found it to be hot, also, its battery drained.

He went to Mike's shattered remains, dug his fingers into a blood-soaked pants pocket, but did not find his phone. He patted the other pocket. Same result. Had it been lost in the battle that had taken place in here? He shone his light around the room.

Mike's jacket was so badly ripped apart that the contents of the pockets had been strewn all over the room. After a few more moments of searching, he found his MindRay under the truck. On the far side of the vehicle was a small black object, which proved to be not his cell phone, but an old Police Special. Flynn pocketed it.

At that moment, he heard a sound, a fluttering in the rafters.

He braced his pistol, but saw nothing. He used his flashlight. Still nothing. Could have been a possum or a coon. Not a lion, though, thank God, not up there.

Continuing his search, he soon located another pistol, this one a Magnum. At least one of these guys had been decently armed. The pistol had been fired until it was empty.

Charlie and Mike had fought for their lives in here. He hadn't heard the shots, so the battle must have taken place while he was still on the rise overlooking the house. That would have been at least half an hour ago.

He thought the situation over. Louie had been done by a big cat that had been expertly trained. Best trained animal in the world, no question. It hunted like a master tracker of the human kind, not like an animal. What had happened in here was that the lion and its human minder had worked

together.

The shadow dropping down from above was almost on him by the time he saw it. There were eyes—huge, glaring—and he was firing his pistol again and again, aware that he was emptying it just like Mike had.

Then silence. Nothing was there but a wreath of smoke.

He took a long step toward the truck—and saw something moving on the far side. Reflex made him brace the empty pistol.

No more movement. No sound.

He went closer, then around to the front of the truck. Shining his light into the darkness between the vehicle and the wall, he saw a mass of something on the floor. A closer look revealed that it was feathers.

“Shit,” he said quietly. He’d shot at a poor damn barn owl. Fortunately for the owl, all he’d done was to separate it from part of its tail.

It was time to get out of here. He had one hell of a dangerous journey ahead. Reluctantly, he approached Mike’s body again and felt for a reload for the Magnum. He didn’t find one. He’d never know if the guy failed to bring extra bullets, or used more than one cylinder. Not that it was that important. Dead is dead, and they certainly hadn’t been killed by any barn owl.

It was time to do this, maybe lose his life and maybe not, but the longer he waited the more certain he felt that whoever had done three experts to death would find a way to kill a fourth—or was that a fifth? Diana had yet to be accounted for.

He turned out his light, went to the door, twisted the handle, and raised it onto the storm.

The wind was roaring steadily now, the snow gushing out of the sky in a horizontal cataract. He took his compass out of his pocket and oriented himself, then turned and closed the door.

He started off, pushing his way through snow that was two feet deep at a minimum. When he reached the road, he consulted his compass again, then turned and headed toward the town.

He'd find the Cherokee. He'd survive. He'd get this perp and see him take the needle.

The wind howled around him, clutching him, shaking him with the full power of nature at its most wild.

He struggled off toward the town, his compass his only guide.

CHAPTER TEN

Flynn's struggled to stay on the road, to see any possible attacker, to somehow make progress against a storm that was like a living creature. He timed himself, hoping that he could get at least a rough idea of when he might be approaching the jeep. He also watched as best he could for the puma or for any other sign of danger.

When a flicker lit the snow, his first thought was that it was lightning. There was no thunder, though. Then, for the briefest moment, a neat pool of light crossed a drift to his right.

He reacted by dropping and rolling off the road. He let himself sink into the snow. Face up, he lay absolutely still, breathing as lightly as possible. Heat sensing equipment worked particularly well in conditions like this and he did not want his breath to reveal him to infrared detectors.

He reached for the Glock with his right hand, Mike's Special with the left. He'd worked for years to shoot effectively with his left hand, and was able to hit targets firing from it at eighty percent of his right-handed proficiency.

If anything came at him, he was going to do his best to shoot it and the hell with the police self-identification mandate, this was kill or die. As always in moments like this, he took his attention away from his mind and even his problem, and concentrated it on his body. You'd think that paying attention to the problem was what you needed. But what you needed was a hunter's

form, and that was a physical discipline. As he emptied his mind, cocked silence filled him. His breathing became deep, his heartbeat slowed.

After a moment, a more intense light appeared, growing at first brighter, then slowly dimming. It was moving up the road, and it seemed to be coming from above, like a searchlight shining down from a helicopter.

As had been the case at the Hoffmans', there wasn't the slightest sound of an engine. A helicopter produces noise in two ways. There's the engine sound, but the distinctive chopping is caused by the rotor, or wing, breaking the sound barrier for a moment each time the engine drives it forward.

There was no engine noise. There was no chop. So could this be one of the rumored silent wing choppers the air force had been working on? *Was it the air force, then? Could it therefore mean safety?*

No, this same type of aircraft had been used to kidnap the Hoffmans.

So the perp had a trained lion and a helicopter with a silent wing.

He waited, breathing evenly, letting the snow settle around him. He was freezing cold but must not allow himself to shiver. His face burned from cold, but he would not move to push the snow away.

The light flashed down again and again, continuing on past him, growing slowly fainter until it was finally absorbed by the darkness.

Did the possession of an advanced helicopter mean a defense connection of some sort?

If he got out of this alive, that would be another line of inquiry worth pursuing. Right now, though, it was all he could do not to let his mind frantically game survival options. From long experience and study, he knew that in conflict the body is a better master than the mind. He concentrated his attention on his senses, mostly his hearing.

From yoga, he'd learned a practice of containing his body heat, and he regulated his breathing carefully. He needed to remain here for an unknown amount of time, but without intense physical discipline he was going to have to move in a few minutes or be frozen.

He took in breath, held it deep, then expelled it slowly, retaining as much heat as he could.

The light returned, brighter this time. It was definitely coming from above, no question about that. If he had a helicopter with a silent wing, then maybe he also had a MindRay, maybe even a better one. Certainly heat sensors and night vision equipment. But would any of it register the presence of a mind in deep trance?

He concentrated his attention on his inner silence. His mind became totally quiet. He waited. They might get him, but there would be death among them.

Slowly, the light faded once again. Whatever equipment they had, they hadn't found him. Unless, of course, they were waiting for him to stand up into an ambush. If they were certain that he was here, they might realize that the snow was concealing him from their detectors. Therefore, he had to remain hidden until they concluded that he was dead.

He couldn't see his watch and dared not bend his arm, so he began to count. He needed to stay here at least half an hour, but how was he going to do that without freezing to death?

The cold penetrated deeper and faster than he'd thought possible, coming in through his double ply of long johns, making his bones ache and his skin go numb.

Time passed. He remained still. Methodically, he moved his fingers and toes.

When he'd heard nothing for what he hoped was at least fifteen minutes, he moved slightly.

No light flickered, no sound came but the wind.

He moved more, lifting his head until he could hear the intimate whisper of snow as it slid out of the sky.

As he came to his feet, he did an immediate reconnaissance up and down the road. It appeared that he was alone. To the east, the sky was slightly brighter, but darkness still dominated. He glanced at his watch. Five fifteen.

He had not been under the snow for ten or twelve minutes. He had remained here for more than two hours.

He struggled back up onto the road and turned south, then resumed plodding.

Walking was hard work and extremely slow and even without his pursuers to capture him, it was clear to him that he might not make it out of this. If he didn't find the jeep and then also missed the crossroads and therefore didn't find the town, he would die within the hour. In fact, unless everything went perfectly and he had luck, one way or another, he was going to die in this place.

Ahead, a frozen road sign danced in the wind. It was caked with ice and unreadable, but he could see that it contained an arrow pointing to the right.

It was the way to the town. Even better, sometime in the past two or three hours, it had been plowed. Snow was blowing again, but when he put his feet down they hit tarmac, not crunching ice. He was able to safely increase his speed, which he did, forcing more and more out of himself, but at the same time getting his body into the same kind of rhythm that enables animals to lope for hours, checking his breathing, his heart rate, going for the long pull.

He began to allow himself to think that he might have escaped.

The road, though, seemed to go on forever. How long had they driven to get from the town to the Hoffman's turn off? He recalled ten minutes at most. The snow had kept them to twenty miles an hour, perhaps a little faster. So his best guess was that he had about five miles to go. He set his walking speed at four miles an hour, very fast for these conditions, but possible. He knew how each speed felt, from two to six miles an hour. The fact that the road had been plowed was a major plus. If he'd had to slog through the same depth of snow that had choked the side road, he wouldn't have made more than two miles an hour at best.

By the time he could finally see the town's streetlight, putting one foot in front of the other had become a struggle. Beyond it was the Motel 6, a strip of

twelve rooms, two cars in front, most likely salesmen sheltering from the storm. He needed to inform the local authorities about the disaster at the Hoffmans', but he had no idea where the police station was located. He headed for the motel. They'd have a phone.

The office was lit by a single storm candle guttering in a saucer on the counter. The room was empty and it was cold. So they'd lost power.

"Hello?"

Nothing.

There was an area map glued under plastic, beside it a stand with brochures promising hunting, fishing, and hot-air balloon rides. They touched him with a strange nostalgia, and he found that he understood the look he'd seen in the eyes of cops who had seen carnage. They longed for the time before, and now so did he.

"Excuse me? Hello?"

Still nobody.

He went around the counter and leaned into the office. An ancient woman sat slumped behind a weathered old desk.

"Excuse me, ma'am?"

When she still didn't respond, he went around the desk and touched her shoulder. Her blouse was dank, the bones beneath dry and light.

Finally, there was a sort of subsurface shudder and she slowly unfolded. She looked up at him out of eyes that had once been tiny with cunning, but were now tired old beads of suspicion. She blinked. Blinked again. Then her face lifted itself from its wrinkled depths, the eyes suddenly full of flicker, and he saw ancient loves reflected there.

"Well, what do I have but a fine-looking young man in here," she said, then she smiled and the whole room lit up. "My God, where'd you come from?"

"Broke down 'bout a mile out."

"Lucky it wasn't more. Lucky we got room, night like this." She unfolded

from the desk, her face briefly rigid with pain. Then the smile came back and she glided into the front like the dancer she must once have been.

He followed.

“Can’t run a card till we get the juice back. You good for forty bucks?”

He pulled out his wallet. “I’ve got the cash.”

“Well, that’s fine then.”

“Where’s the local police station?”

“You in trouble?”

“I’m a policeman from Texas. I need some information.”

“You lookin’ for the rustlers, aint’cha? It’s Mexicans, I’m tellin’ you. Them illegals. They got trucks, Texas. Big trucks. And guns, too. Big’uns. You’re carryin’ two pistols, Texas. Ain’t enough.”

The eyes were sharp, no question there. “Where’s the station?”

“There’s no police here in Ridge, we got about fifty people living around here is all. You’ll have to go on down to the town of River City. There’s a state police barracks there. Four fellas. This is Montana. We ain’t got a lotta police.”

“Is there a bus through here?”

“Eight in the morning, if it’s on time. Stops at the café. But you’re gonna sleep like an old dog, you lie down on a bed, boy. Want a call?”

“Yeah, that would be good.”

With no computer, she didn’t record the registration, which was just as well. The more he thought about it, the less sure he was that he would stop at that barracks. He really did not want to explain the Hoffman place to the state cops, how he had gotten there, what he had been doing, any of it. What he wanted to do was to get to an FBI office, and that would mean going all the way to Billings on that bus.

Somebody had to have a record of the men who had died on this operation, who they reported to, who they were, for that matter. Because he didn’t think he’d been told a straight story, not any of it. But somebody

would know in Washington or wherever, and the FBI office in Billings would be the place to start locating that person. He didn't want to try to involve the locals anymore, not when he was the only survivor. God only knew where things might go, when some smart detective realized that he was the only witness and the only person who had come out of there alive.

"Look," the old lady said, "I can't get the keycard machine to print a key, so here's a maid's key. It works on all the rooms but please don't take advantage of that."

"No ma'am."

"All we got here is a meat broker, some kinda pesticide salesman, and a couple of them gay cowboys keep comin' around here since that damn movie. Ten years and they're still comin'. Gay cowboys, my God, how could there be so many?"

"It's a solitary life," Flynn said.

He left her shaking her head as she negotiated the snow-swept walk that fronted the line of rooms. It was ungodly cold. If his cell phone had been working, he would have pulled up the weather app, but he made a guess that it was no more than zero, and probably below.

There was no heat in Room Seven, but also no wind and no snow. He did not undress, but wrapped himself in the thin blanket and stretched out on a mattress that wasn't long enough for him.

He lay there, his mind turning over what had happened. But what *had* happened? A lion, a helicopter in a raging windstorm?

"Oh, Abby," he said in the privacy of the inner dialogue that he carried on with her, "what secrets do you know?"

CHAPTER ELEVEN

He slept like an animal sleeps, with just enough awareness left behind to rouse him if there was trouble. Sometime toward dawn, he heard the snarl and clank of a gang of plows passing outside. Later, a woman sang to herself on the other side of one of the cardboard walls. Or was that Abby come to him?

A little after seven, thin light woke him. He was washing his face in a chilly memory of hot water when the old lady called. He thanked her and headed out.

The sky was ribbed steel, cold and low, and the wind was blowing what felt like a pretty steady forty miles an hour out of the northwest. There was no snow falling, but streams of it rose from the drifts and pummeled his parka and face. His two-day growth of beard provided welcome insulation.

The café was closed. “No Juice,” said a sign scrawled on the door. He needed to eat. There were pies in a case on the counter, bags of Fritos on a stand. He could drink raw eggs without a problem. Plus, the lock was simple. The problem was, if he got caught, there’d be a ridiculous hassle to deal with, and more trouble for him if those bodies had already been found.

He stood on the stoop of the café, looking for the bus. He didn’t know where it was coming from or where it was going. It didn’t really matter, though. Away from here, that was all that mattered.

He was stomping and blowing on his hands when it finally showed up at nine twenty. It was like an angelic apparition, the big, muddy, slab-sided Greyhound. It had been in a war with the elements, but it was here, rumbling and clattering and shaking, brown ice dripping along its windows, shadowy travelers within.

When he got on, he found it packed. Probably a lot of people were cold. Probably they were looking for shelter in Billings. Well, so was he.

He went to the back where there were still a few seats, and took one beside a huddled red parka.

With a hiss of air brakes and a rumble from the engine, the bus started off. A few minutes passed, and the red parka stirred. “How long to Montana?” its occupant asked as she raised her head.

“We’re in Montana,” he replied. He turned to her.

It was Diana, and he was too surprised to speak.

“Help me,” she said.

“Of course. I thought—”

“I don’t know how I escaped.” Her hand came toward his. He looked down at it. She withdrew it, entwining it with the other, twisting them together.

“What happened?”

She glanced toward the seat in front of them. “Not now.”

“I understand. Where are you going?”

“Billings. I’ve got to make a report and I want a secure line, not a cell phone.” She took a long breath. “This is unprecedented.” She returned to her previous hunched posture. “How did they do it?”

“That’s not my question to answer.” She’d sent three men to their deaths. How they had been killed or by whom were not the issue. The fact that they’d been exposed to the danger, that was the issue. Her issue.

She turned to him. “You don’t want to talk about it?”

“No.”

“But you would have handled things differently?”

“Yes.”

“You need to know more. Then you’ll understand more.”

“Who’s going to tell me?”

He felt her cold fingers brush his wrist. He did not react, but he also found that he did not move away. “I don’t have that authority,” she said.

“Then there’s something wrong in your chain of command, lady. I’m what you got left on the front line, and you can’t tell me my mission? That’s poor.”

“You’re furious.”

“Too goddamn much secrecy. Lives wasted. So, yeah.”

“And I wasted them?”

“If I get to submit a report, that’s part of what I’ll say. You shouldn’t be doing this work. Sorry.”

She sucked in breath. There was anger in her eyes, a flush in her cheeks. Not used to criticism, that was clear. “I didn’t know he had a tiger,” she said. “Nobody could know that.”

“It was a lion.”

She whirled in her seat, eyes now flashing. “That was a Siberian tiger.”

“Oh?”

“Gray with darker gray stripes. It was a Siberian tiger in its winter coat.”

He thought about that. He hadn’t seen the flanks. The face had been strange. She could be right. “If that’s true, we might be able to use it to track him down.”

“How?”

“A Siberian tiger is an endangered species. A zoo had to get a license to import it. If it was sold, that had to be approved. A rare animal like that, there’s gonna be a paper trail, and it’s gonna lead to our target, or damn close.”

“What if it was born here?”

“Whatever, the animal has papers. This could be a break.”

The bus wheezed along. Tough buggies, these Greyhounds. He leaned his head back and closed his eyes. Not tired anymore. Ready for action, but sitting in a damn bus.

Once again, he went over in his mind the details of what had happened, the tiger, the helicopter, the carnage in the garage.

“After they entered the garage, what happened?”

“Mike went in. Then we heard him firing his pistol. Charlie was nearest, so he ran after him.” Her voice dropped to a near-whisper. “When nobody came out, I went in. The smell of blood was so strong that I knew they were dead before I saw them.” She fell silent.

He felt for her. This was a conscientious officer and she was suffering. You lose a man, you’re changed forever. You lose three, and you are left in an agony of self-doubt and self-blame. If you’re good, that is. Still, though, he couldn’t change his opinion, not only of her but also of whatever organization she belonged to. Bad planning, bullshit electronics, excessive secrecy—it was not a workable system.

The bus crossed the great American distance, crawling through the endless, featureless snowscape with its big engine roaring and its windshield wipers creating a hypnotic rhythm.

Diana sat in silence. From time to time she turned to the window. He assumed that she was crying. He said nothing.

“What about the Hoffmans?” she asked. “Do you know?”

“They’re gone. I checked the house. A helicopter took them. I saw its lights.”

“More traceable than an animal.”

“You’d be surprised. Radar coverage out here isn’t gonna go much below six thousand feet. Stay under it, then the FAA isn’t gonna find out jack about you.”

“Homeland Security, surely.”

“You come up off of one of these ranches, you stay low, you’re free and

clear.”

“You heard it?”

“Yep. It did not sound like a helicopter. But that’s what it had to be.”

The bus pulled into another small town. Nameless place. Flynn watched the comings and goings of the passengers. Two left, three got on. He wasn’t expecting a problem, but the last of them seemed to check folks out a little more carefully than would be normal.

“You see that?”

“No.”

“The guy in the camouflage. He’s got busy eyes.”

She lowered her head.

He pressed her. “What do you think?”

“I don’t know. How would they know we were here?”

“That’s not the right question. The right question is, ‘Do they want us dead?’ I think we both know the answer.”

The bus started off. From back here, Flynn couldn’t see much of the other passengers. He flagged the guy in the camouflage, though. He was wearing a khaki cap with fur earflaps. When he took it off, his burr haircut was sprinkled with gray. Forty-five years old, maybe. Flynn watched the back of the head, which never moved. “That’s a professional up there,” he said.

“What kind of a professional?”

“Don’t know. But whatever he’s doing, he’s on duty.” Flynn took a breath and released it slowly. Contemplating. He needed to evaluate the situation, so he got up and went to back of the bus. As he stood, he got a chance to take a better look at the man, who was sitting two rows ahead of them. He could just see his profile. The man’s eyes were closed but his body language said he was nowhere near asleep.

Flynn stepped into the toilet, waited a short time, then emerged. Returning to his seat, he nudged Diana, then pointed with his chin. Her only response was another slight touch to his wrist.

“We have to assume that he’s a threat,” Flynn said.

“I agree.”

The bus rumbled on, the snowscape outside so total that Flynn could have easily believed they were on another planet.

The guy could be anybody, an insurance salesman, who knew? Except that was not what he was. Flynn had known such men, quiet like that, contained. You couldn’t see him watching you, but you could feel it.

“He’s here to kill,” Flynn said.

“I know it.”

You talk about a high-grade hit, what had gone down back at the Hoffmans’ was that and more. It was certainly the most exotic hit he’d ever seen, and one of the most effective.

The bus pulled into a town called Waco like the town in Texas except this was in Montana. Waco was basically a cluster of hills of snow with an occasional neon sign sticking out. There was a grain elevator and a gas station. The gas station was the bus stop. There wasn’t even a place to get a hamburger. Or no, there was. You could buy a microwave burger in the gas station.

The bus hung there for a minute. Nobody got off or on. Another minute. Still no action. The driver’s hand went for the door lever. The air brakes hissed.

Flynn grabbed Diana by the wrist and pulled her down the aisle. “Sorry,” he called out to the driver, “didn’t recognize it.”

They got off and the bus pulled out, and Flynn saw the face of the guy staring out at them, a face as blank as a tombstone.

“What are we doing,” Diana said, “we can’t stay here!”

“What we’re doing is surviving. Buying time. We’re clean now, for a while.”

They went into the gas station. “When’s the next bus through?” he asked the guy behind the counter, a lanky kid with the swift, unsure eyes of a dog

that can't figure out why it gets kicked.

“Two hours, but it's going the other way. Next one through to Billings is gonna be tomorrow.”

“We're going the other way. Our car broke down. We flagged him and had him drop us here.”

“I got coffee. The meatball hero over there's not gonna kill you, you're hungry. Avoid the burger.”

“What about the Philly?”

“I wouldn't eat it.”

The kid's eyes flickered away, and Flynn turned, following them toward Diana.

Snapshot: Diana's eyes, staring straight at him.

Snapshot: the guy from the bus coming in behind her. Camouflage. Professional movements. He'd gotten the driver to stop a second time. Flynn dropped his hand into his pocket, closed on the Glock. Behind Diana, the assassin's hands came up toward his chest. He was going for a gun, going into action.

Flynn threw himself at Diana, hurling her to the floor with so little room to spare that he felt the heat of the bullet sear the back of his head as it passed. Maybe an eighth of an inch, maybe less.

He rolled, pushing over a shelf of candy, sending Snickers bars and Kit Kats and PayDays flying.

The killer was bracing his weapon, a big long-range pistol with a laser sight. A red dot appeared in Diana's hair. Flynn pulled her into the heap of candy and shelving as the second round smashed into the floor where she'd been lying. Cement shrapnel ripped at them.

He got the Glock out, felt for the trigger, found it, and fired through the parka.

Then he had the guy. And the guy had him. Gun to gun, the guy with the Glock was going to have to be good. Real good.

Gun fighting is speed and math, but mostly math. Flynn was good at math. Instead of dropping his pistol, he changed his angle of attack. An iffy head shot became an easy heart shot.

The guy had done the same. Heart to heart. Impasse.

But then the guy backed off a step.

Flynn couldn't see Diana, but she had to be the reason. The clerk was hiding behind the counter hammering at the keypad of his cell phone. Not gonna work today, Flynn thought. Cell towers need power, too.

The assassin turned and ran. Flynn followed immediately.

“Stay together,” Diana cried. “That’s an order!”

The hell. He took off across the pump island and out into the highway. The guy was running hard, about fifty yards ahead. Flynn continued after him, letting the long hours of endurance training he'd done propel him forward despite the wind and the blowing snow. Ahead, the guy's back was visible as a dark smudge in the sea of snow.

“Stop! Police!” Except he wasn't the police, was he, not in Montana, and maybe not even in Texas if he'd pissed Eddie off enough to get himself fired.

The guy did not stop, of course, so he quit wasting breath. He could get off a shot, but there was no chance it was going to connect. He ran harder but did not gain. In fact, the smudge became more and more indistinct. Finally, it was gone. Flynn ran on for another minute, but in the end he did the only logical thing he could and stopped. He stood staring out into the gloom of the storm. He had maybe two hundred yards of visibility. Even as fast as he'd been running, the guy had continued to outstrip him.

Diana came up, her breath surging out of her nose in blasts of fog. “We gotta get out of here.”

“How could he run like that? How could anybody?”

“I don't know.”

He turned to her. He took her collars. He pulled her close to his face. “Yeah, you do. You've killed three men with this bullshit secrecy, so why

don't you give me some kind of goddamn chance and come clean. Tell me what you know."

"What I know? That we're up against a team. That they have excellent equipment and skills."

"They have a helicopter with a silent rotor."

"A silent rotor exists. It can be retrofitted to a number of different helicopters, including some general aviation models."

"So they've been able to steal classified equipment. What about their victims? What's the point of all this?"

"We don't know where they take people. We don't know why. The third sister was the closest we've ever gotten to one of their operations." She gestured. "Obviously, we weren't ready."

They began walking back toward the gas station. "How many of them are there? What's their maximum area of activity? US? Other countries as well?"

"Primarily US as far as we can tell. Concentrated in rural areas near urban population centers where there's lots of turnover and lots of young, well-educated, healthy people. They favor low-density suburbs like you live in. Like we did, me and Steven."

"Your husband?"

"Yes. But let's not go there right now."

"No."

The cold was so intense that the sweat he'd generated running was now flaking off him like an icy powder.

"Okay, one useful face. We've got the Siberian tiger involved. That's traceable."

They had reached the gas station. The clerk had closed it down and gone home, so they stayed close to the front window, using the station to shelter them from the wind and the pumps to interrupt the sightlines of possible snipers. Flynn didn't like it, but it was what they had.

"We're way too vulnerable here," he said, "so keep low and keep watch."

Then he asked her a question that had been troubling him. He already knew the answer, but he asked it anyway. “You’re not a field officer, are you?”

After a moment, she shook her head. “I come from the world of probability theory. I’m an analyst.”

“You couldn’t find a pattern, but then the third sister came along and you grabbed a few pros and off you went.”

“Don’t, please. No more.”

“He could’ve taken her any damn time, but he wanted to teach you a lesson. So he chose the night you were there.”

A cold silence fell between them. An analyst. An ad-hoc team. Equipment that didn’t work as advertised. Who the hell did the thinking?

The wind kept the snow blowing, reducing visibility. Flynn wondered what would come first, the bullet or the bus? Or maybe it would be the tiger.

He didn’t like it when his choices were limited to just one, especially when it was bad. Worse, all this flurrying was going to play hell out on the highway. Buses were going to stop in towns and stay there until they could follow plows.

“We need to find shelter. We need to either break into this place or we need to find somebody to help us. We can’t stay here.”

“The bus is due in forty minutes.”

He stood up. “Too long,” he said. He gestured toward the highway. “Outside of town, flurries are sweeping that road. So any traffic is stopped wherever it happens to be, and that’s where it’s gonna stay until it gets plowed out.”

“If we miss the bus—”

“You let the sun set on us, we do not survive the night. Period. If the cold doesn’t take us, he will. He will not miss again.”

She looked up at him. “It’s my decision,” she said.

He set off, intending to knock on doors until somebody let him in. Who knew, maybe they’d have a truck, maybe with chains.

She caught up with him. Good. He didn't want to see her killed. Whatever she did, though, he intended to survive and he intended to win. This bastard had done enough.

"He's gonna die or I'm gonna die," Flynn shouted into the wind. "But not here, not now. I want my shot at him and I haven't got it. But I will, lady. I will get my shot, and I'm not stopping until I do."

They moved slowly along, huddled shapes in a blowing, frozen haze. They couldn't go far, so Flynn intended to get to the first inhabited house they could find.

Slowly, they passed a bank, its tan brick front encased in ice, its interior dark. Next came a bar, its neon out, its door padlocked.

"Hold on," she said, "don't leave me behind."

He put an arm around her and drew her forward.

"You're strong," she said.

He said nothing. They might be moving slow, but the reality of their situation could not be more clear. They were running for their lives with death by cold close behind them, and closer yet an even more dangerous enemy, who they could not see, let alone fight.

Flynn might not be able to see him, but he was out there, no question, and he intended to end this, and soon.

CHAPTER TWELVE

The house was small and trim, with green shutters and gray siding. It had started life as a double-wide trailer and had been added to over the years. It was set north to south on its lot, so the wind surged down the porch, which was buried so deep in a rippling snowdrift that Flynn had to dig through it to reach the front door. He knocked.

Silence.

“It’s empty,” Diana said.

“Nope.” He pounded.

From inside there came a cry, “Clara! What’re you doin’ out there?”

The inner door swept open to reveal a man of about sixty in a wheelchair.

“We need shelter,” Flynn said. “We need a phone.”

“Where’s Clara? Where’s my wife?”

Flynn felt Diana tense. He said, “We need to get in out of this.”

The man rolled his chair back away from the entrance as they struggled in.

“Who the hell are you? You ain’t from around here.”

“We were waiting for the bus.”

“No, that’s not the answer. You DEA lookin’ for meth labs. Every other house has a meth lab out here. State don’t care. They let it go. They have to.” He whipped the chair around and rolled toward the back of the house. “Clara! Where in hell is she?”

Briefly, Diana's hand squeezed Flynn's. He was thinking the same thing: maybe the whole town had been raided. Maybe the old and infirm were the only ones left.

"She went out?"

"To the barn, see to the horses. The intercom's down, the cell phones don't work, the landline is down and she's been out there more'n a hour."

"We're cops," Flynn said, "but we're not looking for your meth lab."

"I told you, I ain't got any damn meth lab! None! Natha! Find my girl, you two, you're a damn gift from God."

There was no time to get warm, they went directly out the back. Flynn pointed to the faint trench in the snow that led to the barn. Diana nodded.

"Guns," he said.

"Guns."

"Are you proficient, Diana?"

"I score okay."

They pushed the door open together. "Clara," Flynn called into the dark interior. "Clara!"

A horse whickered, that was all.

The barn was unheated, but the two horses in their stalls had been expertly blanketed. A couple of big electric heaters stood in the center of an area of the concrete slab that had been carefully swept of anything that might catch fire. Their cords led to an orange cable that hung from an overhead socket attached to a rafter. No power, though.

"Clara!" he said again, then, "Oh, shit."

"What?"

"Smell that? That's blood." He looked into the darkness. "Over there." He moved deeper.

A third horse was up against the back wall, deep in the shadows. It lay on its side.

He went to it. Looking down at the maimed animal, he wasn't sure what to

make of its condition.

“You ever see anything like this?” he asked Diana as she came up.

“Oh, no.”

The lips had been sheared off, the eyes cut out, the genitals removed. A large section of the exposed flank had been flayed down to the bone. Where the rectum had been, there was a neat round wound.

“So you have.”

“Only in pictures. Animals mutilated like this have been found for years. None in the context of the kind of disappearances we’re investigating, though, not as far as I am aware.”

“You know more about this whole damn mess than you’re telling me, and I’m getting to really not appreciate that.”

“I can’t—”

“Yeah, you can, and you will, and you’ll do it soon.”

Flynn had seen something like this before, too. Some case file. Then he remembered. It was a rural crime down near Alice, Texas. “I saw some of these. Cattle, not horses. A rancher got the hell knocked out of his herd. Two prize bulls and three breeder cows. Fifteen thousand dollars worth of prime beeves. Sheriff thought it was coyotes. We wrote it up as vandalism so the poor guy could collect on his insurance.”

He remembered that place. Alvis something-or-other had been leasing that property. He’d run it with Aussie cattle dogs. Good beasts, but not good enough to prevent the loss.

“I have a feeling that the help does most of the heavy work. The kidnappings. But this is him,” Flynn said. “Him personally. His help isn’t going to be cutting animals like this.” He looked toward the rafters, then reached back and pulled his night vision goggles from his backpack.

The upper reaches of the barn were empty. He took off the goggles. “Let’s go out the back,” he said.

“Three guys are down, remember that.”

He said nothing.

This door also slid on rollers, but wasn't as large as the one in the front. Similarly, it wasn't kept up, and it took Flynn an effort to get it to grind open. As he did so, ice showered down on him.

Behind the barn was a mostly bald hill, topped by a few twisted trees. Close in, he could see a faint indentation in the snow. Further out, it was deeper. "That's a buried track," he said, moving forward. He drew his gun.

The further up the hill they went, the deeper and clearer the track became.

"Why would she come out here?"

"She was running. She saw that horse, and when she did, she ran."

As they approached the trees, Flynn felt the same indefinable sense of menace that had saved him in deceptive situations before. "Let's take our time. We want to watch those trees pretty closely."

They were taller than they had appeared from the barn. The snow made distances seem longer, but the trees were under a hundred yards from this end of the barn, and he was soon among them. He was careful, though, never to lose sight of her. He didn't want to lose her, God no, but she wasn't only important as a human being and a fellow officer. Without her, he had no idea who he was working for because she was too secretive to tell him. Probably didn't even have the authority.

In among the trees there was less snow, but every movement brought a fall of the stuff off overhanging branches. It got in around his hood and dripped through his clothes in the form of freezing cold water.

Just beyond the stand of trees they found an area about thirty feet in diameter where the snow had been blown away right down to the grassy hillside.

"Something landed here," Diana said.

He estimated the grade of the hill at a good thirty degrees. "Wasn't a chopper," he said, "not on a slope this steep."

"It must have hovered."

“The pilot is a real expert, then,” Flynn said. “Very well trained.”

“You think she was taken from this spot?”

“Maybe. Thing is, the snow was blown back from here well after these tracks were made. Hours. If they took her, they took her frozen solid.”

“We’ll need to tell him she’s lost in the snow.”

He had his doubts about that. “Maybe.”

Flynn turned and headed back through the trees. Diana stayed close.

As they walked, he said, “I don’t think we’re forming an accurate picture of what’s going on here. If you think about it, it just doesn’t make sense. Not a damn bit of sense. Some kind of cult group in possession of highly classified equipment, including an exotic aircraft? Hardly seems likely.”

“That’s what it looks like, though.”

They reached the back door. “It’s what you’ve been telling your team. It’s not what you know. Question is now, what do we tell this old guy?”

“His wife is lost in the snow. Won’t be found till the melt. If then.”

He entered the house. The old man sat in his wheelchair. He looked up with the dead eyes of a man who already knows that he’s defeated.

“We didn’t find her,” Flynn said.

“She’s dead. Froze by now.”

“We don’t know that. Could she have gone to a friend’s house?”

“She’s not in that barn, she’s froze.”

“There’s been predator action in the barn, sir,” Diana said.

“Oh, Lord.”

“One of the horses has been killed. Looks like coyotes.”

“The hell, it’s them damn wolves! The Fish and Wildlife owes me for that horse.” His face suddenly screwed up. Flynn knew the way tragedy can roll past you at first, then come back and hit you like a boulder dropping from the sky.

“She’s still breathing, mister,” he said. “Count on it.”

Diana glared at him.

“What’s she shaking her head for? Don’t hold out on me!”

Flynn heard noises on the front porch, the crunch of boots in snow. “She’s back,” he said.

Diana’s eyes widened.

A voice called through the door, “Hey, Lar, I got your thermos refilled, the Katz’s’re running their genny.” Then, “Get this door unlocked, you damn nut!”

Lar wheeled himself off into the front room. A moment later, a tall woman, Montana lean, came striding in on a blast of cold air, snow falling off her boots.

“Hi, where’d you folks stray in from on a day like this?”

“We’re police officers,” Diana began.

“Well, I got me a horse up in my barn got cut up by space aliens, so you better go up there.”

“We’ve been up there.”

“It was them wolves,” Lar said.

“Ha! That’s what you people told him? Why do cops lie? It’s space aliens. We all know it. Been goin’ on for years.”

“That damn yearling,” Lar said. “Too young and foolish to stay away from wolves. Probably didn’t even know what they were.”

“They took my Bill, you senile old fool. Left the two yearlings just fine. They ain’t even spooked.”

“What about Jenny?”

“*Your* horse? Nobody’s gonna take that ole bag a bones. You couldn’t even sell that thing to a glue factory. What’s ’is name down the road, that weird beard, offered fifteen dollars. He wanted to make pillows outa the hair.” She swung away from her perch looming over her husband, and trained tight eyes on Flynn and Diana. “So what in hell are you doin’ invadin’ my home, officers? If I may be so bold?”

“Our vehicle failed,” Diana said, the very picture of smoothness. “We’re

looking for a ride into Billings. We can pay.”

“You will pay. No question there. You must be feds.”

“DEAs lookin’ to bust up some meth labs,” her husband said.

“That ain’t hard to do around here. ’Cept the state police, you talked to them lately? ’Cause they don’t share their turf, not to put too fine a point on it.” She spread her hands. “I mean, this is not a threat. Far be it from me.”

“We’re not in drug enforcement.”

“Oh. Well, do you do something useful, then? ’Cause maybe then nobody’s gonna gut you and throw you out in the snow for your wolves to drag away.”

The threat was delivered with the kind of smile that said it had meaning. So this little ole couple were indeed involved in drug operations. He wondered where she had her lab. Probably one of the sheds he’d seen out there. Normally, he would’ve been interested, just automatically. No more.

“Look, how much is it gonna take to get us to FBI Headquarters in Billings?” he asked.

“Well, let’s see. If you tell me why you’re here, that’s one price. If you don’t, then it’s another. Which you ain’t gonna be able to afford. And, lady, will you please stop thinking about that ridiculous little pistol you got in the right pocket of your parka? In fact—” An impressively quick hand reached in and withdrew Diana’s pistol. “Man, who do you work for, you get crap like this as your issue gun? What shit.”

She was right about that. An officer carrying a Beretta without a tracking light was not well equipped.

Flynn said, “We’re working on a kidnapping. We were overtaken by the storm.”

“Who’d kidnap trailer trash? What’re they gonna get for ransom around here, twenty bucks and a pair of used boots? This whole town ain’t got enough cash to ransom a donkey.” She chuckled.

“We tracked the person of interest to Black Canyon City,” Diana said.

“Then the storm hit, we lost contact with our vehicle and took the bus.”

“The wrong way. You’re toward Bozeman.”

“We were too cold to wait. We had to get on it.”

She was quiet for a good minute. She looked down at Diana’s gun. “First off, I know you’re not a cop, lady. This ain’t a cop pistol and here I am holding it and you ain’t pissing your pants, which means you ain’t gotta file a missing weapon report.” She looked at Diana. “Three hundred bucks and I’ll take you to Billings. Cash now.” She turned her head toward Flynn. “That’s apiece.”

Flynn could have taken the gun out of her hand and made her eat his own. But he said, “Pay the lady, Ossifer.”

A silently furious Diana produced a checkbook.

Clara barked out a mirthless laugh.

Diana put away the checkbook and counted out six one-hundred-dollar bills from what looked to be a narrow stash.

Clara was good at driving in snow, and so the truck clanked along at a steady thirty miles an hour. “Animals get cored out like that around here. Nobody but the poor rancher gives a shit. The cops lie. Insurance company probably pays ’em off, ’cause if it’s predator action or act of God, they don’t gotta pay, see.”

“Space aliens would be what?” Flynn asked.

“God only knows. Whatever, they ain’t gonna pay anyway. Bastards.”

There was a world of hurt in the way she spat that word. He didn’t want to hear the story of her life, though, so he remained silent.

The truck moved steadily along. Flynn watched the road, what he could see of it. He kept an eye on the sky, which was darkening again.

Time crawled. Flynn could almost feel the perp’s frustration that they were getting away. Feel his bitter rage. With his trained animal and his fabulous chopper, he had to feel that a couple of dumb cops had no damn business escaping from him.

They arrived in the snow-choked city, finally reaching a recently plowed street where the going was a little better.

After a couple of turns, Clara pulled up in front of an office building, small, on the same scale as all the buildings around here. A small, trim city, the kind of place Flynn favored. Menard with snow.

When they got out, Clara sped off immediately.

“She’s glad to be gone,” Diana said.

“Probably with good reason.”

They entered the building.

CHAPTER THIRTEEN

“Nobody will have heard of us,” Diana said as they went down the hall toward the FBI office.

“What’s that supposed to mean?”

She opened the door and went in, Flynn behind her. Two agents and a clerk were on duty, sitting at desks in a single, large room. Along a side wall there were three offices, all closed.

Diana walked up to the clerk and spoke quietly. She produced a small leather folio and laid it on the desk. Inside, Flynn could see a badge and an unfamiliar identification card with a pink sash across its surface.

The secretary stared down at them. “Bill,” she called, turning in her chair, “what is this?”

One of the two agents got up from his desk, a tall man in his fifties. He had a tightly neutral expression on his face, the habitual mask that many field officers wore.

Flynn had never gotten much support out of the FBI. Down in Menard, their office was such a revolving door that nobody ever really got to know the community. Menard was just a way station in the drug wars. The agents who were going somewhere in the organization were all further south along the border.

The first agent took Diana’s credential to the second.

“They never know what it is,” she said.

“So how does this help us?”

“Just wait.”

He watched as the agents, their faces sharp with suspicion, huddled over a phone.

“Who’re they calling?”

“It’s a nonstandard ID. They’ve never seen one like it before.”

“Because of the secrecy bullshit?”

She nodded. “It’s not bullshit, Flynn.”

The second agent came striding over. “You can use office two,” he said. He handed Diana back her ID.

“That worked, at least,” Flynn said as they crossed the room.

“I’m sorry, Flynn, I’m going to need to do this alone.”

There were chairs along the wall, and Flynn took one of them. The plaster was thin enough to enable him to hear that she was talking to somebody, but he was unable to make out the words. Once or twice, she raised her voice. He still couldn’t discern specific words, but he could hear the emotion in them. She was reporting the deaths of her men.

Her voice stopped. He waited. The silence extended.

She came out. Her face was rigid, her lips compressed.

“You reported,” he said. “They were not happy.”

“They were not.”

“So what happens next?”

“Flynn, you’re still going to be with me, but very honestly I asked to have you relieved and was turned down on the theory that you’re all I have left. So my problem now is that you’re clueless and I don’t have the authority to bring you up to speed.” She glanced across the room at the agents. “We need transport,” she snapped.

One of the agents got up and sauntered over. “Yeah? Can I help you?”

“Get us out to Logan.”

“Call a cab.”

“There’s no time for a cab, Delta’s about to leave. We need to move right now.”

“We have motels. Not up to your standards, I’m sure, but you’ll live.”

“If you don’t want a complaint in your file, I’d advise you to stuff your ego up your ass and do what you’re told.”

Flynn was as surprised as the agent, who glared at her.

“Right now, Agent.”

He jerked his head toward a side door. They followed him down a couple of flights of interior stairs and out to a well-plowed parking lot.

There were two sedans parked in it and three black SUVs, immediately recognizable as federal cars.

“I wanta take my Subaru,” the agent said. “Better in the snow.”

Once they were in the car, a dense silence settled. Nevertheless, Flynn thought he would try asking the agent some questions that could be useful.

“What kind of crimes do you guys cover out here?”

“Us guys cover the waterfront.”

“I mean, specifically?”

“I know I don’t have any hotshot National Security clearance, but that’d be privileged information.”

An asshole for sure. He kept going anyway. “Any kidnapping cases?”

“Kidnapping? No. Is that what this is about?”

“I can’t answer that. My hotshot National Security clearance prevents me.”

This brought a slight chuckle. “We had a disappearance four months ago. Not a kidnapping case. The vic packed a bag.”

Diana glanced at Flynn, who said nothing.

They pulled up to the departure gates and the agent let them off and sped away.

“Are federal officials always so helpful to each other?” Flynn couldn’t

resist asking, but he knew the answer.

“Yes.”

“So where are we going?”

“Just stay with me.”

The airport was small and intimate, a reminder to Flynn of another America, one that still clung to life, just barely, in little places like this and Menard. Steady, settled, and safe—assuming, of course, if you ignored things like the meth industry that drove lots of local economies in poor areas.

Security was no problem, just a single TSA agent with an old-fashioned X-ray device and nobody ahead in line. Not surprising, since Delta to Salt Lake was the last flight out to anywhere, and they had just a couple of minutes to go before the doors were closed. They showed their creds and got their guns passed for hold stowage without trouble. Unlike the FBI agents, the TSA worker accepted Diana’s credential without question. He passed his Menard Police Department ID card with equal disinterest.

As they walked down the aisle, Flynn took careful note of the other passengers. He didn’t want a repeat of what had happened on the bus, and he thought they should assume that this perpetrator was capable of almost anything.

He was surprised to identify a Federal Air Marshal three rows behind him. Normally, you found these guys on long-haul flights in big planes. So why was he here? He slid into his seat between a businessman and a kid sealed up in an iPod. The FAM was carrying, which is what had identified him. There was a pistol, small, probably a .38, under the left arm of his thick jacket.

The flight was hot and cramped and seemed longer than it had any right to be. Twice, Flynn went back to the john so that he could pass the FAM. Nothing out of the ordinary, except for the fact that he was there.

Toward the end of the flight, Flynn closed his eyes for a few minutes, waking up when the aircraft shuddered as it began to land.

On the way to the next flight, he commented, “There was a FAM a couple

of rows behind me.”

“Really?”

“No, I made it up.”

“Well, don’t.”

“Odd that he was there.”

“A coincidence, as far as I’m concerned.”

“You’re sure?”

She stopped. She turned to him. “We are alone, you and I. I know one other person, the individual I report to.”

He continued walking easily. Inside though, he was dealing with a major shock. *Only her immediate superior officer?* What in holy hell was going on here?

Their next flight turned out to be to Chicago. They were seated in first class.

“I could get used to this,” he said to her. The seat actually had room for him.

“Don’t. These were the only seats left. The storm’s headed east, and folks want to get in before it closes O’Hare. The flights are packed.”

“Why are we going to Chicago? If I may be so bold.”

She opened her mouth, seemed about to speak. Remained silent.

“We’ve got a choice of prime rib or mahi-mahi,” the steward said after they took off.

As Flynn ate, he saw that silent tears were running down Diana’s face. He said nothing. What was there to say, that it would be all right? It would not be all right, it would never be all right.

Maybe she was going to be relieved or disciplined. Maybe she already knew that. But what was most likely was that she was remembering the men she had lost, and feeling a torment of regret.

“You need to eat,” he said.

Listlessly, she took a bite of her fish and chewed.

“Flynn,” she said. Then she stopped. He’d seen grief many times, the way it takes a while to hit. Hers had hit. “Flynn,” she said again, “you’re a good cop and you have some outstanding skills and a lot of investigative experience in our area of concern, but things have changed, Flynn. We’re going to need to take a different approach now.”

“I’m not leaving voluntarily, if that’s what you’re driving at.”

She closed her eyes and he saw the tears well again, and realized to his astonishment that she was crying not for her lost men, but for him. She leaned toward him. “It’s a trap,” she whispered. “It’s always been a trap and I’ve gotten you tangled up in it, too.”

He added this to the long list of things about this case that he did not understand.

“They feel that you’ve gotten too deep. You can’t be released.”

He waited, but she said no more. “Well that’s certainly damn mysterious.”

“Security is very, very tight and for good reason, Flynn, as you will find. The thing is, there’s no going back from this. It’s marriage with no divorce allowed. You didn’t get a chance to make a decision and that’s not fair.”

“I made my decision when I walked out on the Menard Police.”

She turned to the window. But not for long. Very suddenly she turned back and said to him, “You’re going to meet people different from any you’ve ever encountered.”

“And you can’t tell me one more thing.”

“I want you to prepare yourself for the unexpected. I don’t need you gaping like a hick and asking little boy questions.”

“Do I do that?”

“When you’re in there, you may. This is going to be the strangest experience you’ve ever had. Beyond imagination.”

“I have to admit, I’m curious.”

She said no more, and the flight continued uneventfully, a plane swimming in featureless darkness.

Once they'd landed and collected their weapons and equipment, Flynn found that they had a rental car waiting. She drove, and he noticed that she didn't use a GPS. She'd been here before. A lot.

He watched the gray sky and the gray of Lake Michigan, and wondered if there was any way to prepare to face a total unknown.

They'd been on Lake Shore Drive for some time before he understood from reading road signs that their destination was Evanston, just north of Chicago itself.

"I think you need to talk more, Diana. I'm a pro but I'm not a psychic. Narrate this a little bit."

"We'll be there in ten minutes."

"Excessive secrecy and compartmentalization just killed three men. And yet you keep it up."

"I have orders, I follow my orders."

"Following orders is good. But what that means is making them work. Your orders were to stop a dangerous criminal. You didn't make those orders work, so whatever it was you thought you were doing, it wasn't following them."

After a few turns in Evanston, she drove down a street lined with big old houses that looked like they were worth a lot ... and Flynn became concerned. There were no official buildings around here.

They passed those houses and drove into a less grand neighborhood. Here, there were stark oaks lining the street, and the tall row houses were as dreary as the sky.

They pulled up in front of one of the houses. In the driveway there stood a Chrysler 300. Other than that, the place was silent, the windows dark.

"So where are we? Not your ancestral home, surely?"

"Police headquarters."

"Not a good answer."

He got out of the car when she did, and followed her up the front walk.

The air was bitterly cold, tanged with the sharpness of chimney smoke, a gusty breeze coming off the lake.

When she pressed the doorbell button on the jamb, there issued from deep inside the house the faint bonging of an old-fashioned bell.

This was not a police headquarters of any kind, but there was certainly something unusual involved here, because as Flynn had stepped out of the car, he'd seen a flicker of movement from a window in the house across the street.

“Does it bother you that we're in gun sights?”

“You're very observant.”

“Always been my problem.”

She rang the bell again.

“What're they doing, sending our faces to Washington?”

She glance at him, frowning.

He continued, “There's a camera in the door. Another one between the bricks to the right. Whoever's in there has been able to watch us since we turned onto the block.”

“I did not know that.”

“Yet you've been here before.”

“As I said, this is our headquarters.”

He thought, “you look, but you don't see,” but didn't comment further. No point. Noted, though, was the fact that her lack of practice as an observer was a liability that must never be overlooked.

The door swung open on a woman of perhaps thirty. She wore an orange jumpsuit and had a plastic net on her hair. Her skin gleamed and Flynn realized that her face was covered with a film like petroleum jelly. On her hands she wore latex gloves.

He was still trying to make sense of this when she stepped back and let them in. She ushered them into a living room with an old couch, a coffee table, and a couple of easy chairs. A gas log burned in the fireplace.

“Sorry,” she said, “we’ve been working on him.”

“Anything?”

Whoever they were interrogating, her expression said it all: they were getting nowhere.

“Flynn, just try to be open. I can’t tell you anything about what’s going to happen because no explanation would do it justice. I can’t even answer any questions, because any question you would have would be unanswerable.”

“I know what it is.”

“I don’t believe that. Tell me what you think.”

Flynn said nothing.

CHAPTER FOURTEEN

Two more of the jumpsuits lay folded on the couch. On the coffee table was a silver canister about a foot tall.

“We need to put these suits on over our clothes,” Diana said. “And do this.” She dipped her hand in the canister and scooped out clear gel. “Put this on your face and neck. Make sure you’re well covered. Don’t forget your ears.”

“What is it?”

“Something that’s necessary.”

He wasn’t objecting. He was here to learn. He slathered the stuff on himself.

“First, you’re going to meet the person our agency has managing this case.” She paused. “This is a unique person.”

He pulled on the jumpsuit, which was supple and light and felt like paper. But it was a lot stronger than paper. Sort of like silk with a paper-like finish, he decided.

Diana slathered herself with the salve and put on an elastic cap of the silken material.

Flynn finished by putting on his own cap.

The woman reappeared. Flynn said, “Hi, we didn’t get introduced. I’m Flynn Carroll, Menard City Police, Menard, Texas.” He put out his gloved

hand.

She looked down at it, then back up at him. Usually, people's faces told him something. Not this time.

"Follow her," Diana snapped.

Shuffling along in his baggy jumpsuit, his face covered with Vaseline that smelled like cinnamon, he followed the woman down the central corridor of the old house, past an umbrella stand and a photograph of a family from about fifty years ago.

"Whose house is this, anyway?"

"A sublet," Diana said. "We found it on Craigslist."

"*Craigslist?*"

"We move a lot."

The woman opened a big oak door at the end of the hall. He followed her into a large room that Flynn guessed must have once been a solarium. It was on the back of the house and full of tall windows, but as dark as a cave. The expansive windows were covered by curtains.

In the middle of the room there stood a man of significant height, six three at least. As they came in, he glared down at them out of eyes sunken so deep in his head that they were like craters. His hair was completely white.

"Sorry to be meeting under these tragic circumstances," he said. "And I apologize for the—" He gestured, indicating the costumes. "I'm allergic to everything." He sighed. "I can't even leave the house."

Slowly, then, he turned to Diana. Some kind of electricity passed between them, and Flynn thought that this was the person she had reported to from Montana. He also thought that they were more than coworkers.

"My name is Oltisis," he said, and at that moment he walked into a shaft of light, and Flynn saw that he had compound eyes, many-lensed like the eyes of a fly.

He sucked breath, but instantly controlled it. Let it out slow. As he did, the face turned toward him. Unhurried. The eyes seemed blank. But they also

told Flynn that this was an alien. Okay, that explained all the secrecy.

“I don’t surprise you?”

“You do.”

“You’re very contained, then.”

“As are you.”

“I’m a cop, Lieutenant Flynn.” Oltisis crossed the room in two sleek strides. Flynn saw more than cop in the way he moved, he saw military. Lethal military. This alien might or might not be a cop, but he was certainly a professional killer.

As he sat on a broad leather couch that almost fit him, he gestured toward two wing chairs.

Flynn could hardly tear his own eyes away from that face. The lips were narrow and precise, the skin was as slick and featureless as plastic, and the deep-set eyes gleamed in the thin yellow light that filled the room.

No question, this was not a disguise. He was face to face with a real alien. But he also had a case to deal with. Men were dead. He said, “We need more people, and we need them now. We need help.”

Oltisis looked toward Diana. “I put together a cleanup crew to go back to the Hoffman place. Air Police. They’re totally out of the loop.” His English was perfect. Not the slightest accent.

“Did they find any trace of Hoffman and the daughter?” Flynn asked.

“Doctor Hoffman was in a snowdrift two hundred yards from the house. Frozen to death. Looked exactly like he’d wandered away and gotten lost. Nice touch, he had a bag of garbage with him.” He made a gravelly sound that Flynn realized was laughter, but it was bitter, that was very clear. In fact, it sounded like defeat.

“We need to break this case,” Flynn said.

“Ah?”

“You look beaten. Sorry.”

“And you don’t, Flynn.”

“Am I a fool, then?”

Oltis met his eyes with his own glittering jewels. “No,” he said carefully, “you are not. Flynn—may I call you Flynn—this is a new kind of police operation. We’ve got a criminal element operating here and we can’t move freely among you. Thus the liaison effort.”

“You could surely devise some sort of disguise.”

“The allergic response is too deep. We’d need to create human bodies for ourselves.”

“So do it. You must be loaded with high tech.”

“If one of us is to acquire a human body, one of you has to die.”

“I see.”

“Criminals steal bodies.” He lowered his head. “That’s what happened to your wife.”

Flynn went silent inside. For the first time, he knew that she was dead. Believed it. Images of her raced through his mind, too fast to track, but of her in her happiness. He swallowed his thrashing sorrow. “Did she suffer?”

Oltis stared into Flynn’s pain, his eyes as blank as a shark’s. Flynn thought, “This alien has seen a lot of violence, a lot of death.” He continued to question him. “How many other field units do you have? How many officers on your side of the fence?”

“We need more, I agree.”

What the hell? Could this be true? “Don’t tell me it’s just the three of us.”

Diana said, “If it gets out that this is happening and not even the aliens can put a stop to it—”

“Jesus Christ, you need a whole damn division on this! The FBI and Interpol, at the least!”

“This gets out, mankind panics and contact gets set back fifty years. No, Flynn, secrecy is essential.”

Cops sure as hell couldn’t keep secrets, that was true enough, and the public would sure as hell panic, no question there, either. “People need to be

warned. Otherwise they have no chance.”

“Help us get this cleaned up.”

“My wife was kidnapped eight years ago! So how long is it going to take? There are hundreds of people dead. You’re wired into the government, you just moved around a unit of Air Police, so put some resources on this or I’m going public.” But even as he said it, he knew that it was hopeless. Nobody would believe him, not without this creature in tow, and that was obviously not going to happen.

“You signed a secrecy agreement, Flynn. Don’t forget that.”

“He’s fine,” Oltisis said. “He just figured it out.”

“But he said—”

“You’re on board, aren’t you, Flynn? You’ve seen the problem.”

Flynn nodded. Oltisis was so sharp, it was almost like having your mind read. “I understand the need for secrecy. But there have to be more resources.”

“Rebuild your team. I can do that.”

“Bigger. And top people. Delta Force operators. CIA field officers. The best of the best. And better equipment. Jesus, you people must have some incredible equipment, not crap like that MindRay.”

“That’s one of ours.”

“Is it a toy, because if that’s the best you can do, I have a real problem with your technology.”

Again, Oltisis laughed, and this time Flynn got it loud and clear, the cynical laughter of the cop who knows only one truth: every single piece of equipment he possesses is inferior to what the crooks have.

“What’re you, fifty years ahead of us? I expected aliens to be, like, a million years ahead of us. But you’ve got powerful crooks and shitty equipment just like we do.”

“Budgets are budgets, Flynn. And we’re about a thousand years ahead of you, if you want to know. Among other things, we can manipulate gravity

and you can't. But you will. We're helping you speed up your development, because there needs to be an alliance between our species. We're similar and that's rare and valuable. It's strange out there and it's dangerous. We need a friend, and so do you."

Flynn said, "You use your connections to get us the best cops and the best operatives you can find, and I am with you."

Oltisis said, "We've been doing that."

"So you came up with a small-town police officer like me. I think I'm a good cop, but let's face it, my skill set is limited because my department's needs are limited. We don't train up supercops in Menard, Texas."

"You have an IQ of two twenty. Did you know that?"

"I did not."

"And you're also highly motivated. We are doing our job, Lieutenant."

"So let's get on with it."

"We have someone in custody."

He was stunned. Then he wasn't. "But he's not the perp we're looking for?"

"No," Diana interjected. "This is one of his customers. My unit got him." She paused for a long moment. "My old unit."

Oltisis said, "He was a thrill seeker. Among us, life is all too predictable. It's one of the major reasons we explore as we do. In any case, he came here, bought a human body and just basically went wild, indulging his every fantasy, and he doesn't have pretty fantasies."

"I thought aliens would be—well, different."

"There's greed and self-indulgence everywhere."

"And the crime committed?"

Oltisis looked steadily at Flynn. "He raped fifty-six of your women, killing forty of them in the process."

"Jesus."

"If he's sent home with the evidence we have, he's going to walk. We

have a real problem on Earth gathering forensics to a level our courts accept. In our system, a case cannot be presented until guilt is certain. The only judicial issue is the sentence. We need a confession out of him, Flynn.”

“Now, are you saying that this thing—being, excuse me—has *two* bodies, one human and one like you?”

“Let me explain a little further.”

“That would help.”

“Every living body contains an incredibly dense plasma that bears all its memories, even every detail of its physical form. It’s the template, and it’s effectively eternal. In our world, doctors can move this plasma from an aged body to a young one. It’s also possible to cross species, but it’s highly illegal. I could enter a human body. I could live among you. At home, I’m just another person. But here, with my knowledge and my power, I’d be a god.”

“So what about death? Do you die?”

“If you wish.”

“If you *wish*?”

“When a human dies, your soul will linger on Earth if you have unfinished business here. Eventually, a new body will come along—an infant—that fits it, and you’ll enter the new body and return to life. With us, the process is no longer natural. I have a stem cell packet that can be grown into a new body.” He gestured toward himself. “If this dies, I can simply move to a new version of myself.”

“Will you?”

The face—horrible and strange and yet somehow deeply human—took on an eerie, concealing expression. “You can’t have known this, but that’s as rude a question as one of us can be asked.”

“Rude? I don’t get it. Why rude?”

“Let’s move on, shall we? Body theft is a major crime, as you may imagine. And when it involves interfering with an alien species, especially a less advanced one like yours, it’s actually our most serious crime.”

“But the exterior identity—what we can track—that remains the same, am I right? So this guy has a human ID. A human past.”

“The process works like this. A person is kidnapped. Then the heart is stopped and the whole body transformed into stem cells, which are grown on a new template. The new body fits the purchaser’s soul, and he enters it. The new ‘person’ won’t look the same as the one who was used to construct him. He won’t have the same DNA signature, either.”

“You can do all that?”

“At home, by law your new body would need to be an exact replica of your old one. But here, well, you don’t have body switching yet. So no law and no local enforcement infrastructure. Which is why there’s a ring operating, selling my species human bodies so they can live on Earth.”

“That’s a motive?”

“For marginal types like would-be criminals, it is. They’re free here. The local authorities aren’t going to catch them on their own, and our police force is hamstrung, obviously.”

“So what can they do that’s so special?”

“As I said, live like gods. The last one we caught busted the bank at a casino in Vegas, then used predictive techniques you won’t discover for five generations to game your markets. Inside of a year, he was vastly rich.” He paused. His voice dropped an octave. “This guy wasn’t so interested in money, obviously.”

“When they’re finished, they can go home?”

“If they’re ever finished. The one in custody would probably have stayed here for a very long time, maybe across the span of more than one life. You can help us with him, Flynn.”

“And what do you want me to do?”

“If the body he’s in now were to die here on Earth without access to his dealer, he’d be in trouble. No new body, so his soul would be left to wander until it got drawn into a human fetus. He’d lose his memory of himself

entirely. Become, in effect, human. Trapped forever in a primitive species.”

“Turn him over to our courts. Let us threaten him with the needle.”

“He was careful not to commit any of his crimes in death penalty states.”

“Drop him in a supermax.”

“He’ll escape. But he wouldn’t want to be tried in Texas.”

Flynn thought about that. Understood what Oltisis was driving at. “Okay,” he said, “let me spend some time with him. What’s his name?”

“Roger Ormond is what it says on his driver’s license.”

Diana said, “The identity’s perfect. It’s been built from deep within the system.”

“Take me to Roger Ormond. We’ll need to chat for a couple of minutes.”

They left Oltisis to his dark office and whatever thoughts a creature like that must have, and have to live with.

“We can disrobe,” the assistant said. “Roger isn’t allergic.”

“What’re you going to do?” Diana asked as she pulled off her jumpsuit.

“What Oltisis asked me to do.”

“He didn’t ask you anything.”

Flynn looked at her. “Oh, yeah, he did.”

They descended into a cellar that smelled of dust and heating oil. There was an ancient black velvet painting of JFK against one wall, beside it a rusting bicycle. There was also an old portable record player, and in one corner a dust-covered electric wheelchair, its seat well worn. Whoever had lived in that thing was probably damn glad to leave this life.

Across the room, a man sat in a cage made not of bars, but of a sort of shadowy haze that, as Flynn went closer, proved to be a mesh of fine wires. He was under a flood of glaring white light. His eyes were closed, his skin was flushed red, and he was covered with a sheen of sweat.

Flynn went into action immediately. “Mr. Ormond, I’m your attorney. We’re going to be getting you moving within the hour.”

“Excuse me.”

“You’ve been extradited to Texas.”

The face, which had been open and questioning, shut down tight. So he was scared. Good.

“I didn’t commit any crimes in Texas.”

Flynn remained affable. “Tell them that. I’ll stay with you as far as the airport, but after that you’re on your own. You’ll be assigned legal aid counsel at Huntsville.”

“A prison?”

“Guarded by cops like us. Who know the truth. You won’t escape. You’re gonna die in Texas, Mr. Ormond.”

He started to stand up. The cage around him glowed and sparked. He fell back into his seat. “I didn’t commit any crimes in Texas!”

“So, Michigan, Illinois, New York.”

“I avoided death penalty states.”

Bingo. There was the confession. He revealed nothing of the small triumph that he felt. “Well, take it up with your lawyer there. You’re moving in an hour.”

As he left, the man in the cage erupted, screaming and thrashing. The cage sparked and sizzled.

Oltis was waiting, his face filling the screen of an iPad.

“Will that do it in your legal system?”

“Oh yes, he’s confessed. We’ll start processing him off planet immediately. He’ll take the full hit.”

“Which is?”

Oltis broke the connection.

Diana said, “They take them out of the body and put them in a sort of trap, is the way I understand it. They don’t like to talk about it.”

“A trap?”

“It’s prison. In this one’s case, permanent prison. They’ll never let him out.”

Flynn thought about that. This plasma they were talking about was the soul. “Soul prison. That’s the worst thing I’ve ever heard of. To be dead, but still in jail.”

“I think their name for it says it all. They call their permanent prison ‘Dead Forever.’”

They left then, and Flynn could not remember ever feeling so happy to leave a place in his life. The world of Oltisis might be full of wonders, but it also sounded like a kind of hell. No mystery of life. No mystery of death. Imprisonment that could last for eternity. “What do you think of them, Diana?”

She was silent. “Let’s do our job, okay. Better to just put the whole thing out of your mind. Concentrate on the work.”

They got into the car. “I’ll tell you what I think.”

“No! I don’t want to hear it.”

“They’ve made themselves into monsters.”

She started the car and pulled away from the curb.

“Where are we going?”

“I got us a hotel. We’ll want to get cleaned up.”

“Then what?”

“Once they break it to Ormond that he’s been nailed, they’re expecting to get some more information for us about the perp. He’ll want to bargain, it’ll be his last hope. So we’ll get a call from Oltisis. There’ll be a second meet.”

“That’s good and bad. We need the information.”

“But you don’t want to go back there?”

“Nope.”

“Neither do I, Flynn. Neither do I.”

CHAPTER FIFTEEN

She'd gotten them a room at a hotel in the loop. They were traveling as man and wife, James and Diana Exeter. Flynn came out of the five minutes he'd actually allowed himself to wash off the oil and the itching that had come from being near the alien. He'd put on some fresh clothes in the bathroom. They were coworkers, not lovers.

He lay back on one of the beds, looking at the new identity pack he'd been given as they left the HQ. "This is well done."

"We're piggybacking on the Witness Protection Program."

He gazed up at her long neck, her full lips, her sad, dark eyes.

"Don't assume they're from another planet," she said. "Don't assume anything about them at all."

"Where would they be from, then?"

She was silent for a long time.

"Hello?"

"Yeah, well, it's damn mysterious, all of it."

"How much does the government know? What about UFOs? Is any of that real? And alien abductions—I mean, the kind where the people get brought back? There's websites, books, claims of millions of abductions."

"We just don't know."

At that moment, he saw something on the ceiling. A light. It moved down

the wall ... toward Diana.

It trembled red on her forehead.

Leaping up, he threw her to the floor. As she screamed, recoiling from what she obviously assumed was an outburst of rage, he hauled the curtains closed. “We’re leaving.”

“What? Why?”

“You just got painted with a laser.”

She started to stuff her backpack.

“No time for that. We’re outa here.” He confirmed that the hallway was empty, and left the room. After a moment, she was with him.

“Hey,” she said as he passed the elevator bank. When he didn’t respond, she kept on behind him.

He entered the stairwell and started up.

She stood watching him.

He pointed downward. “Death.” He pointed upward. “Life. You choose.”

Seconds counted now, so he took the stairs three at a time. After a brief pause, he heard her behind him once again.

He pushed his way onto the roof through a stiffly hinged door, then stepped behind its enclosure, keeping close to the wall as he did so.

“As much as possible, keep something between you and the view. If you have to expose yourself, stay below the level of the parapet. One flicker of infrared return from up here, and our evening is over.”

Somewhere there was going to be access to the elevator bank, there had to be. He could see the elevator’s roof structure, but no outline of a door.

By moving directly toward the back of the building he could keep the door enclosure between himself and the view, and still get a look at the hidden wall of the elevator bank’s roof structure.

Crouching, he ran to it—and soon found the opening he needed. He turned to motion to her to follow.

Once again, there was a laser on her. “Drop!”

She stared. He pulled her down. "I need somebody with field skills!" For an instant, the laser touched the wall of the building behind the hotel, and then was gone.

"Sorry!"

"Always do what I tell you. Always!"

"Okay!"

He got the hatch open. "We're going to wait for an elevator to come up, then ride it down. They're on their way to the roof but they won't find us here, so it'll be a near thing."

"I screw everything up!"

"Everybody screws everything up. It's the nature of cop work."

An elevator came up, stopped three floors down, then continued its cycle. "That'll be them," he said. "When the car stops, get on it."

"Jesus!"

"Don't look down."

With a loud click from above, the car halted. Flynn hopped on. Leaping carefully, Diana followed him.

"Now we're going to wait until it passes below fourteen, then drop down into the cab. When we're there, don't touch any buttons."

From this side, the roof hatch was easy to pull up, and they were soon inside the car. He didn't bother to try to replace the hatch. Their pursuers would know what they'd done. Probably already did. This wasn't about deceiving them, it was about getting just far enough ahead of them to escape.

She leaned against the wall of the descending car. "Thank God."

"If we don't encounter them in the lobby, we need to grab a cab to the nearest El station. We've put them maybe three minutes behind us. If we're lucky."

"And if we're not?"

"We'll need to try another casino."

"Who are they? How did they find us?"

“It’s the perp. He undoubtedly followed his client when he was captured. He’s probably been watching that house for a while, waiting to see who was going to turn up.”

“We have to warn them.”

“If we live.”

The doors opened onto the ornate lobby.

He could see a second car just passing twelve, on its way down. “Here they come,” he said. He wished that he could get a look at them, but there were too many ways to lose control of that situation. He drew her toward the main doors.

He’d tracked people across the plains of north Texas, he’d chased them through the streets and alleys of Menard, and he was reasonable at both things. He could not recall a time, though, when he’d been the runner. The truth was, he had to fall back on spy novel stuff, and he didn’t like spy novels. Hadn’t read one in years.

“Okay, quick—” He grabbed her wrist and jumped into a taxi. “Water Tower Place,” he told the driver. It was the only name that came to mind. He had no idea what it was or where it was. Just something he happened to remember.

“Why Water Tower Place?” she asked.

“Why not?”

“You don’t even know what it is, do you?”

“I do not.”

“You don’t know Chicago at all, then?”

“I don’t.”

“Water Tower place is a shopping center in the Loop. That’s downtown.”

Flynn fell silent. The perp had gone after them first because they were sure to go to ground as soon as Oltis was taken out. “We need to get to a pay phone.”

The mall was enormous and filled with shops. It took a surprising amount

of time, but they finally found a public phone.

She made a call and told whoever answered what had happened.

“Let me talk.”

She handed him the phone. “You’re in immediate danger. You need to get out of there right now.”

Oltisis said, “I can’t move that quickly. Something has to be prepared, and transport is complex.”

“You don’t have a fallback prepared?”

There was a pause. “I do not.”

“I’d get out of there even if you have to be carried in a bag. There’s an immediate threat.”

“I’ll do my best. I assume we won’t be seeing you tonight.”

“Have you questioned your suspect?”

“I’ve just begun. I know that your perpetrator has human helpers. Ormond’s never seen him in person, so he says.”

“And you’re inclined to believe him?”

“He’s ready to open up.”

“Get out of there and take him with you. For God’s sake don’t lose him.” Flynn hung up the phone. “Meeting’s off, obviously.” He looked out along a long, empty corridor. The mall wasn’t closed but it was almost empty, and most of the stores were dark.

“We need to hunt up ATMs. We need all the cash we can get. And I assume you have a cell phone?”

“I do.”

“Throw it away. First, take out the battery.”

They ran the ATM cards until they each had around six thousand dollars in cash.

“Do they ever run out?”

“I don’t know. Not soon.”

“Too bad this is our last chance to use them.”

“Why?”

“The cards will be made.”

“Bank databases are well secured.”

“No they aren’t.”

It was now pushing eleven P.M., so there was no point in going to an airport. Like it or not—and he didn’t like it at all—they’d have to stay in Chicago overnight.

Outside the building, they found long rows of cabs, and more of them at the entrance to the Ritz Carlton that soared above Water Tower Place. Flynn hailed one, and they got in.

“Days Inn,” Flynn said.

“Uh, Lincoln Park?”

“That’s the one.”

“I’ll get a reservation ahead,” Diana said.

“No cell phones.”

“They won’t see me.”

“How do you know?”

“I’m a hacker. It’s what I do.”

“A hacker? You have some useful skills, then.”

“I like to think so.”

As the cab negotiated the sparse traffic, Flynn watched behind them, using what he could see of the rearview mirror. He thought he was dealing with a team of about four individuals with some very good equipment. They had a long-range rifle scope with a state-of-the-art laser sight. The way they had followed their targets, the rifle had to be on a chopper, which had been hovering out over Lake Michigan. Not great marksmanship, though. A good sniper would not have missed.

They also had that animal. Would they be able to make use of it in a city? He didn’t see how. They hadn’t tried yet, at least.

The Days Inn was in an older building in a neighborhood that was active

even at twelve thirty at night. Which was fine. Activity was good.

The cab pulled up and stopped. Diana started to get out, but a gesture from Flynn stopped her. She didn't speak, she didn't turn to him. Good, she was getting the hang of it.

After he'd finished evaluating their surroundings, he said, "Let's go."

They exited into a driving wind. The air had grown noticeably colder. The storm that had paralyzed Montana was getting closer fast.

At the motel, Flynn paid cash. The clerk took the money and directed them to their room. He'd been doing this too long to bother to ask for ID and listen to the bullshit.

The room was stark but clean. Flynn was tired, too. Not a good time for it, though.

The bed was a double, too narrow to avoid the touch of bodies. Silently, she threw off her clothes. She kept nothing on. Her skin shimmered, her curves swept elegantly about as she moved. Steve Glass had been a lucky man.

They lay side by side, as still as two scared birds.

When he closed his eyes, he saw Oltisis, the thin face and deep, dead eyes.

Lights from outside glowed on the ceiling. The distant rumble of a great metropolis in its uneasy sleep lulled them.

Flynn slipped into one of those sleeps that comes so stealthily that they seem more like a state of altered awakening. Diana refocused as Abby, and the dreary hotel room became their old bedroom. The curtains swayed in the summer breeze, the leaves whispered, and Flynn became aware that they were not alone. He thought, oddly, that it was all right that the man was there, that he was slipping his arms under Abby's legs and shoulders, that he was lifting her like a leaf.

He saw the man's face in the moonlight, the intent eyes, the lips slightly parted, the chin a little pointed and yet a little heavy.

And then Abby sighed, and he turned to her but she was gone, and the

breeze swept through the room, and a new kind of silence came with it.

He leaped out of the bed.

“What’s the matter?”

“Abby!” He ran toward the window. “No!”

She shook his shoulder. And he was back in the bed in the motel room. He hadn’t jumped up at all.

“It’s a dream I’ve had before. I see the guy take her.”

“Did you?”

“Probably not. We did an Identi-Kit years ago. Posted the Wanted all over Texas. Nothing.”

They held each other in the dark ocean of the night, in the unknown. Eventually, they slept again, each clutching the other as a lifeline. Flynn woke before dawn and checked the hotel corridor. Empty and silent. He watched the street for a time, standing back from the window. An old woman in a black coat walked a Collie mix. A bus passed.

He looked back at Diana sprawled on the bed. Circumstances had thrown the two of them together, but he still belonged to Abby. He’d always belong to Abby. For the first time, he found himself imagining her death. Had she known what was happening? And what *did* happen? Was it slow, fast, painful? He should have asked Oltisis. Or maybe not. No, best not.

Finally he sat in the room’s threadbare easy chair and turned on CNN, and watched the crawl on silent. A tanker had gone aground in the Azores. A movie star had gone berserk. Ford had a new computer system in its cars.

And *what the hell had just happened?* He was working with a cop from another damn planet, holy God. Secret as hell and the stakes were high. If the criminal elements could be stopped, there would be open contact. Open. Everybody would know. The world would change, and look at that Oltisis, look at the way he was. That had to be the strangest and most wonderful person he’d ever met, and the most sinister. They’d defeated death. What did that mean? Conscious plasmas—is that what we were?

Wonderful. The secret of the ages, and maybe the whole world was going to find out. Maybe we were going to defeat death.

Except for one problem. Small problem. It was that this whole damn thing was going south. Way south. And the worst part of it was, he had no clear idea of a next move. More than anything that had happened so far, that disturbed him.

He closed his eyes, but sleep didn't come, not really. At best, it was the uneasy sleep of the soldier who can see the flicker of artillery on the horizon. Or it was the sleep of the condemned, the mind searching for last dreams that did not come.

In its gradual, stately way, the light changed, dawn rolling in from the east. Diana snored softly. The minutes passed, one by one.

So he was a big genius. Wonderful, he was so glad. Too bad that he had run out of ideas.

CHAPTER SIXTEEN

The glow from the signs outside finally faded into the uniform ray light of a cloud-choked sunrise. When Flynn parted the curtain again, he saw flecks of snow tumbling past.

It was six twenty, meaning that they'd been here for over five hours. They would have to go soon, but she was still sleeping. Her fists were clenched, the blanket pulled tightly around her neck.

When he'd first met Diana, she'd seemed out of her depth and too arrogant to know it, but now she looked small and tragic, lying on the bed all clutched into herself.

"I'm not asleep," she said. She opened her eyes. "Did you sleep?"

"Some. Not a lot."

"Same here. Not a lot."

She got out of bed, indifferent to her nakedness. He was not indifferent to it. She crossed into the bathroom, lithe and perfect, a dancer.

The shower came on. He listened to it, but as he watched her shadow behind the curtain, he thought of Abby in the shower. She'd liked to sing, Abby. Her voice was a peal of bells.

The shower curtain flew back and Diana came out. "Yours," she said.

When he undressed, she took no notice.

He showered in silence. He was mapping out an exit strategy from

Chicago. Keep it simple, make it quick. But where to go?

“I need a laptop,” she told him as he dressed.

“We can do that at a Best Buy or a Staples.”

“That’s numero uno. We also need disposable cell phones. Every time we use one, we need to bust it up and toss the remains. No more than twenty-second calls, and only if absolutely, absolutely necessary. NRO can pull down a cell call in about thirty seconds from anywhere in the world, and we need to assume that our guys are even better.”

“Okay, here’s my part of this. First, if our friend doesn’t get out of that house fast, he’s done. If it hasn’t already happened. The perp is ahead of him and way ahead of us, and the frank truth is, survival is the issue. So I’ve been thinking about transportation. What’s the safest way to run like hell? Planes are out. No way through security without showing some kind of ID. The train is better. They take cash and we can hide out in a compartment. But a compartment is also a trap, so that’s out. Obviously buses are too vulnerable. My bottom line: we buy a car off a lot for cash. There’ll be no record of the transaction until the title hits the state department of transportation. So we’ve got about two days to go as far as we can.”

“Then the car becomes identifiable.”

“If we’re still in Illinois it does. But that’s not where we’re gonna be, not unless the trail of that tiger leads here, which I very much doubt.”

“The trail of the tiger?”

“I think it’s our best shot. That animal has records. Where we’re gonna go is where it was last in the hands of its real owners. That’s our starting point.”

“Let me ask you this. What if we absolutely, completely and totally cannot find the tiger? What then?”

“We go to Plan B.”

“Which is?”

“I have no idea.”

“Jesus.”

“Ninety percent of detective work is having no idea, eight percent is being wrong, two percent is luck. You enter a crime scene, there’s a dead guy. His wife, the usual suspect, is alibied and clueless. It feels like there’s no next step. But you find one. You take it. Usually small, and usually a dead end. So you feel your way along until you locate another step, if there is one, which usually there is not. That’s it. That’s being a detective.”

“But you solve your crimes?”

“We have a good closing rate in Menard. Better than a lot of places. Mostly you solve the crime because the perp is a moron, which is why this case is such a problem. Our guy is not only better equipped than we are, he’s smarter.”

Dressed, they went downstairs. In the elevator he said, “We walk in opposite directions on Diversey. You go north, I go south. Get on the first bus you see. I’ll get on it, too, next stop. Do not sit together. We both get off at the El.”

The doors opened, they entered the compact lobby and checked out. She left while he looked at leaflets. Then he left. He made no effort to case the street. If they were made, there was no point. Escape would not be possible, not a second time.

As he walked, he looked for a bus stop, found one, then waited. In a few minutes a bus pulled up. It was packed, which was all to the good. When he got on, for a moment he didn’t see her. Then he did, standing toward the back, deep in the crowd. He grabbed a bar and stayed in the front. They traveled four stops to the El, then he got off, along with most of the other passengers.

He saw her again on the El platform. They didn’t acknowledge each other. When the El came, they both entered the same car. Three other people did, too, a man in a gray overcoat with a fur cap on his head, a woman with a blanket-covered stroller, and a girl being led by a Seeing Eye dog. Ordinary people or hit squad?

Farther down in the car, Diana sat reading a paper. That was a nice touch, he hadn't thought of that.

Looking up at the route map, he decided to get off in Skokie. No idea why. It was just a random name. No plan was the best plan.

Stops came and went. All of the people who'd gotten on with them were now off, which was good. Hopeful. Unless they'd been cycled out, of course. Who knew what level of resources they were dealing with? Did the perp have ten confederates or fifty? No way to know.

When the train stopped in Skokie, he got off. She followed. Downstairs, there was a coffee shop. He took a seat at the counter. In a situation like this, it was always a mistake not to eat, so he ordered eggs, toast, and sausage. At the far end of the counter, she ate, too.

She'd probably seen the same dealership from the windows of the train that he had, but he left first anyway. If there was another one he hadn't spotted, he didn't want to take the chance that she'd go there instead.

It was a twenty-minute walk, and he didn't like the way it exposed them. Nothing to do about it, though.

As he pushed his way into the warm dealership showroom full of gleaming Chryslers, the only salesman in the place appeared, an Indian man with tired eyes and a cranked-up smile.

"I'm looking for something I can drive off."

The salesman sized him up. "Well, let me show you your car," he said. The plaster smile didn't change. The tiredness in the eyes maybe got a little deeper. This man was far from home with a blizzard on the way, and Flynn could see his wife and kids around him, needy ghosts. Most of the world was like this man, keeping on because what else were you going to do? Flynn knew that there would be no savior for Mr. Asnadi.

Mr. Asnadi tried to get him to look at some recent models.

"I got a budget, man. Two grand."

"We can do that. There's a Dynasty—"

“You can do better. What about that Shelby over there?”

There was a Mitsubishi V-6 in the Dodge Shelby, and it was turbocharged. A fast car if you needed it and he would need it, that he knew.

“This is a fine car. We’ve certified it, you can see. But there’s not much wiggle room.”

The sticker said three thousand one hundred dollars. There was wiggle room. The way the tires were sitting told Flynn that there was massive amounts of it. The car hadn’t rolled in at least six months, and you weren’t even going to get a kid to buy an old gray Shelby.

“I’ll give you two grand cash now. That’s my only offer.”

“For two grand, we have this Avenger—”

“The Shelby. Two grand. Or I walk right now.”

He sighed. “I have to clear it with my manager.”

“No you don’t. You’re the only guy here. You want to try sitting in a back room drinking coffee while I stew, then come out and bullshit me more? Ain’t gonna happen.”

“Let’s do the paperwork.”

Twenty minutes later, Flynn and Diana were driving away. “Beautiful,” she said, looking at the cracked dash.

“It’s fast and we might need that. Plus front-wheel drive and reasonable tires. It’s worth about eight hundred bucks, but I paid two grand to do the deal quickly.”

His instinct was to travel, but they went back into the Loop and spent an hour dipping more ATMs. Under no circumstances could they use plastic once they were outside of Chicago.

When they had sixteen grand between them, they headed out Eighty toward Fifty-Five. He wanted to get far away from here as fast as possible, and also out from under the storm, which was fast approaching.

In Joliet, they found a Best Buy. They picked up laptops. She also purchased a hardware firewall. “We leave the wireless connections turned

off. When we take these online, it can only be with a wired Ethernet with the firewall between us and the connection.” They got a GPS. “We use it only if necessary.”

“It doesn’t emit a signal,” he said.

“Everything emits a signal. Our signals detection units routinely reproduce the images on GPS instruments being used by the Taliban. It’s one of the ways we aim our drones.”

“I’m an old-fashioned cop, don’t forget that. Gumshoeing around asking people questions. So don’t let this electronic crap trip me up.”

“That’s why I’m telling you.”

At a 7-Eleven, they got disposable cell phones.

Back in the car, she explained, “Any time we use any phone, the computers or the GPS, anything that connects us to the world electronically, we immediately move on. So don’t, like, decide to surf the net before bed or whatever.”

“Good enough.” When it came to computers and computer security, she was, thank God, clearly in control. “Now I have a question for you. It’s time to open up. We’re past the bullshit. I know the big secret. So now I want to know if there are any support personnel anywhere who could help us.”

“I don’t think there’s a single soul.”

“What about the stakeout team across the street?”

“Garden-variety FBI surveillance unit. Don’t know a thing.”

“Not very good, either, given that they let a hostile tail pick us up. What about your NSA supervisor? You’re not in the office. He must be aware of that.”

“Neither are you, and what does Captain Parker know?”

“Point taken.” He drove on southward under the deepening sky. Snow blew across the road in writhing ribbons. The car’s heater screamed. As he drove, he watched both the sky and the road behind them. The cloud cover looked to be at about two thousand feet, so any chopper that might be

shadowing them would stay in the cloud. The road was a different story, the road he could see.

In an excess of caution, he pulled the car off suddenly, tires screaming.

“What’s happening?”

He said nothing. Ahead was a crossroad anchored by an Exxon Station, a Jack in the Box, and a Holiday Inn Express.

He pulled into the gas station.

“How about a warning once in a while? You scared the hell out of me.”

“We don’t need gas. I’m watching our back.”

For eleven minutes, nothing else came in off the interstate. Then an eighteen-wheeler appeared, air brakes hissing, and headed for the truck pumps.

“Okay, I think we’re clean and we’re in an isolated area. Now what we need to do is this. First, we’re gonna go online, both of us, and see if we can find any report anywhere of a lost or stolen Siberian tiger. At the same time that we do that, we’re gonna put these people in front of us where we can see them.”

“Put them in front of us?”

“We’re going online flying flags. Wifi. No firewall. Looking for a Siberian tiger.”

“They’ll find us.”

“What they’ll find is the motel. We’ll be backed off, watching. But first there’s another couple of chores.”

“Which are?”

“You’re going to learn some new driving techniques. A few moves, as much as I can get across in an hour. And you are damn well going to become proficient with that little popgun you’ve got.”

“I don’t like guns. But I’ll use it if I have to.”

“You will fall in love with it. Worship it. Because right now, Diana, our guns are our gods.”

CHAPTER SEVENTEEN

He'd taken them down a long country road and pulled off in a tree-choked dip just beyond a small bridge. "Let me explain this vehicle."

"I'm a good driver."

"This is a front-wheel-drive vehicle. Better for winter, but you're not going to be able to do certain maneuvers. Normally, rear-wheel drive is the way to go, but this has an advantage in bad weather. It's fast, but it also has a lightweight steering pump. This means that the fluid is going to foam if we do tight turns at high speed. Expect the steering to become extremely heavy. Also, rubber brake lines. They could expand and so you need to assume that you could lose your brakes, too."

"So it'll be unsteerable and it won't stop. You'd better drive."

"If I'm incapacitated, you'll have to. Or if I'm done."

"What do you mean 'done'?"

"You got a sixty-six percent casualty rate going so far, Diana."

"I'm sorry. I'm just—" She shook her head.

He changed seats with her, then taught her a few basics, such as how to find the apex of a turn and when to start accelerating out of one, and how to execute a reasonable 180.

On a quiet country road she was barely passable. Under pressure, she was going to forget everything. He didn't even mention the bootlegger's turn. If

she needed to execute a maneuver like that, she was already caught, so what was the point?

He gave up on driving and went to handgun skills. They walked a short distance into a frozen field. “You ever fired your pistol? At all?”

“Yes. No. Once. One session.”

“The most important thing in pistol shooting is understanding just how inaccurate your weapon is. People are accurate with pistols from distance only in the movies.”

“How close do you need to be?”

“With the weapons we’re using, a few yards is the outside.”

“That’s *all*?”

“Targets will be in motion and so will we. You need to get in as close as you can, is the bottom line. A couple of feet, or even a contact shot, is best.”

“I did my shooting on a range. There was a trainer.”

“The range is a dream world. If you’re shooting, your mind is going to be too focused on the act to remember much of anything else. That’s what practice is about. When you’re under pressure, you’ll go on automatic pilot, not lose your head.”

“What’s the most important thing I need to know, then?”

“Avoid lifting the barrel as you pull the trigger. But you won’t, not entirely, so you need to aim for the largest part of your target that’s worth hitting. This is the chest just below the neck. The advantage of this shot is that it does anatomical damage that affects the arms. With a heart shot, your opponent can get off one, maybe two trigger pulls before he’s done. Not with this one.”

“What about the head? Just shoot him in the head.”

“You’re going to miss, and once you have missed, you are going to manage the weapon badly. That’s what happened to Mike.”

“He was highly trained.”

“So am I. That’s why I know what happened to him.”

He kept her shooting until she appeared to be comfortable with her PPK.
“Who issued this gun to you?”

“I bought it at Wal Mart.”

“It’s an okay choice. Just remember exactly how many bullets you have. Count as you shoot. Know, always, whether or not you’ve got one in the firing chamber. This is absolutely critical, because it is going to take you more than a second to fire if you don’t. In an exchange of gunfire, close range, that extra half second is a lifetime—yours.”

She looked like she wanted to cry. As they returned to the nameless little cluster of franchises and gas stations, sunset was a dull red streak on the western horizon. Ahead, the black outline of the motel was now dotted with fitful lights. Flynn felt a familiar sadness rolling over him, the great, tragic surge of the human sea, and now, also, the greater sea of intelligent life of which mankind was only a part.

They got takeout at the Jack in the Box, then checked in to the Holiday Inn Express.

He tossed his backpack on the bed, then put the Best Buy bag down more carefully and pulled the computers out. He ate a chicken sandwich while he checked out one of the laptops.

“It works,” he said. He followed the instructions on the desk and was soon online with it. “I’ve got webcams in my house. I’ll just go on my website and click through them all. Then I’m going to surf YouTube looking for video of Siberian tigers.”

“If they know what they’re doing, you’ll get noticed for certain.”

“Let’s hope.”

“I don’t quite get this. We’re giving ourselves away.”

“We want them to come to us in a place of our choosing. We’ll be standing off, watching from a distance. When they show up and don’t find us, they’ll leave. Then we’ll be where we need to be—behind them. We’ll start calling some shots.”

Once online, he stared into his own living room, dark and still. For him, home was the center of his heart, and his loneliness. He did their bedroom, then the kitchen. Finally, steeling himself, he moved to the Abby Room—and just sat there staring, for the moment too astonished to talk. When he found his voice again, he said, “The Abby Room’s been torn apart.”

She came beside him and looked at the image. “My God.”

The walls had great gouges ripped in them, the furniture had been broken apart, the couch torn to pieces, all the photographs scattered. He felt kind of sick, looking at the violence of it.

“Can you rewind?”

He hit the reverse button, and the image began to flicker back. “I’ve got it set on thirty-second intervals, so it’s choppy. It goes back forty-eight hours.”

Twenty-one hours ago, there were blurred frames indicating movement. He clicked forward.

In the center of the room, there was a figure. The body was blurred almost to invisibility, but you could see that it was a man.

“It’s posed, you know. On purpose. You’re intended to see this.”

The man ripped down maps, tore up pictures. His fury was extraordinary.

He killed his browser. He couldn’t bear to see more. “That’s the perp,” he said. He tried to fight down the sick horror, but he could not. He choked back his emotions. “Goddamnit. Sorry.”

“Everybody in this cries.”

“Okay, fine. Siberian tigers. They can’t be imported, so the ones presently in the country are the only ones available.” He reopened his browser, being careful not to bring up his home security system again. “There is no national database of stolen property. The individual police departments each keep their own records.”

“So what do we do?”

“Look for break-ins at zoos and animal shelters that house these animals. The fact of the break-in will be recorded in the National Crime Information

Center Database. Although, I don't have a password."

"Not a problem." Her fingers flew. "We have a master access program. It can basically break into any password protected system there is. One with as many different passwords as this one has is gonna be a piece of cake."

He saw numbers flickering across the database's access point. "Okay— one, two, three—"

The entry was allowed.

"That's impressive."

"Give me something hard. The Federal Reserve's master password. Want a billion dollars? I could wire it into your account within fifteen minutes."

"That might be a tad difficult to explain." As much grief as was in her own heart, he was grateful that she was trying to lighten his mood.

She worked through the data. "Here's an animal shelter in Austin, Texas, that was broken into last month. It's reported as a case of vandalism. Chimpanzees were shot. You gotta ask why people do crap like that. And another one. Santa Barbara, California. A lion was killed with a high-powered rifle."

"Nope, if we're on the right track at all, it's gonna be Austin."

"You're sure?"

"They have one of the worst burglary clearance records in the country. A criminal this smart is going to factor that in."

"They logged the chimps as animal cruelty. There are pictures. Ugly. So nothing stolen."

"Maybe and maybe not. Let me take a look." He read aloud, "'Fencing was breached in a large holding area that contained a Siberian tiger called Snow Mountain.'"

"It doesn't say the tiger is missing."

"Say you're a cop. You investigate a break-in at an animal preserve. Of all the animals that are left unharmed, you mention only one in your report. Why?"

“I don’t know.”

“Neither do I. But I do know that Texas is full of wealthy ranchers who love to stock their places with exotic wildlife. Texas being Texas, maybe you know that the tiger has been illegally taken by such a rancher or sold to one, and you know exactly who did all this—took the tiger and vandalized the facility as a cover—and because of who it is, you have no desire to pursue this individual.”

“Is it worth a trip, then?”

“You follow the leads you have.”

“I thought we were going to wait here. Try to induce a confrontation. I mean, by now they almost certainly know where we are. I mean, if they have the skill to watch for relevant searches.”

“I didn’t expect such a good lead. I think we need to run after it.”

They were close enough to St. Louis to reach the airport in a couple of hours.

They didn’t check out. Why leave behind any more information than you had to? What was the hotel going to do, send a bill?

They were south of the storm now, and the winter sky was vivid with stars. Cars passed now and again, not many though. People were getting their dinner, life was winding down for the night.

He watched the road behind them, but one set of headlights looks much like another, and distances are hard to gauge at night.

“What do you think will happen in Austin?” Diana asked.

“What will happen in Austin is the unexpected.”

“If the tiger is gone?”

“Then we’re close. The case starts giving up some gold.”

“Will they catch us this time?”

He thought about that. “If they don’t, it’ll be a miracle.”

CHAPTER EIGHTEEN

Using one of the throwaway cell phones, Diana had made some calls to airlines and determined that the next flight to Austin wasn't until five forty-five in the morning, so Flynn pulled into a Homewood Suites he happened to see near the St. Louis airport.

Once again, they checked in with cash. There was a stack of *USA Todays* on the counter, and he took one. He planned to look at the weather forecast. Big weather had a tendency to loop down over the country's midsection. If they were going to run into the storm again in Texas, he wanted to know that.

He went into the bedroom, tossed the paper on the bed, and turned on the TV. "Will it bother you?"

"I'm not sleepy."

He could feel a more intense electricity between them. She wanted to take another step, he could feel that. He said, "Outside of Menard, there's an area called the Staked Plain. When I was a boy, I used to ride there, and in the summer of my twelfth year a girl rode with me. Abby." He did not add that they had danced together naked in the grass.

"I'm here," Diana said.

His body went to her and his lips kissed hers, and then his heart kissed her. She was small in his grasp, surprisingly so for someone who occupied so much space in his life. They took their pleasure together then, two people

who were tired and confused and afraid, but for this moment were able to find something like shelter in one another.

Then it was over, a memory flying back into the past. They lay side by side in silence. Flynn felt gratitude. He wanted to thank her, but that seemed like another form of rejection. Abby haunted him.

Diana slipped quickly away into sleep. She was soon snoring softly. Flynn envied her the ability she had to drop off like that. For him, night was a prison. He dreaded the feeling of vulnerability that sleep brought. Since the incident, his doctor had explained to him that he was suffering from something called guarded sleep, which means that at some level, you're always awake.

He turned on the TV. For a while, he surfed, watching the Weather Channel, then CNN, then a Judge Judy rerun. Hitler strutted on the Military Channel. On Nick at Night, crazed cartoon figures cavorted.

His nakedness began to make him feel exposed and he put his clothes back on. Cradling his gun, he returned to the living room of the small suite.

For a time, he meditated. His gun lay in front of him, so he also closed his eyes. A few minutes vacation from it would be okay.

Abby whispered his name.

He gave up meditating and went into the bedroom and got the paper, which was lying on the floor beside the bed.

Back in the living room, he turned the pages, looking for the national weather. As he flipped through it, his eyes rested for a moment on the word "tiger."

He read the brief story, then stopped, too shocked for a moment to move.

He went into the bedroom, shook Diana and said, "Forget Texas, we're going to Vegas."

Diana stirred but didn't wake up.

"Look at this," he said, holding the paper out, then rattling it.

She moaned.

“Wake up, Diana, this is important.”

She sighed, stretched, then started to turn over and go back to sleep.

“No, you need to see this.”

“What?”

“A tiger is on the loose in a casino in Las Vegas.”

For a moment she was absolutely still. Then she sat up. She grabbed the paper and read. “A coincidence?”

“This was yesterday. They’d lost us. My guess is that this is bait.”

“It doesn’t say anything about it being a Siberian.”

“It’s not a coincidence.”

“If you say so.”

“We need to catch the first flight out.”

“Flynn, I can understand investigating the place that lost the tiger. But the casino makes no sense. If it’s a coincidence, we’re wasting our time. If it’s not, they’ll be waiting for us.”

“I see a break in the case. Among other things, casinos are loaded with cameras. Think if we got the perp identified. Think of that.”

“It’s a trap, Flynn.”

“Of course it is, that’s the whole point. But we know that. We understand.”

They left the hotel and went on to Lambert, driving through the post-midnight world, past glowing fast-food restaurants and dark, silent strip malls.

“Once I watched a rat get cheese out of a trap,” he said.

“That’s impossible.”

“If you’re a smart rat it’s not. What he did was push the trap along the floor with his nose until it sprung. Then he ate the cheese. We need to approach this the same way, exploiting the unexpected vulnerability.”

“What is it?”

“It’s unexpected, so I don’t know. Yet.”

The earliest Vegas flight left just after six, so they spent a few more hours in the next hotel, letting the night wear slowly into predawn. There was no trouble with tickets, and the plane wasn't crowded.

After taking off, it turned into the dark western sky. Flynn looked at Diana beside him. Was she capable? No.

Better question: was he?

Same answer.

CHAPTER NINETEEN

They pulled around the gigantic lion that guards the MGM Grand's porte cochere and got into the valet parking line. Nobody cared, of course, not about a couple of dismal little tourists in a rented Camry. Which was good. A noticeable detective is a bad detective.

He hadn't walked into this building in five years. As he approached the gleaming doors, the old itch came back. He fought it off. You don't start, that's how you control an addiction.

"What do we do now?"

"Find the tiger."

"If it's still here."

"It's gonna be a major production for them to get it out of the building. Security is all over the place, not to mention the press. This place is loaded with cameras, believe me. If security hasn't spotted the tiger being taken out, then odds are that it's still here."

"He could've used the helicopter to take it off the roof."

He thought about that. Then he said, "Possibly, but he still has to get it up there. Somewhere, some camera will have seen that."

This was the Grand, where the Skylofts had private butlers. How much would it take to convince his butler to help him get the tiger out? A couple hundred bucks would probably do it. Still, could a butler control the cameras?

They passed the huge golden lion in the lobby, heading for Skyloft check-in. They'd booked one, too, top floor.

He could hear the casino and smell the casino. From here, he couldn't see the blackjack tables, but he could imagine the dealers standing behind them, waiting. He'd known a couple of those guys. They loved to see players burn, but they loved even more to see them win. Big wins meant big tips.

He slid the door back and entered the exclusive Skyloft check-in area.

"Reservation for James Carroll."

"Yes, Mr. Carroll! Just a mo—."

The receptionist's smile turned to plaster.

"Get ready for company," Flynn told Diana as the door behind them slid open and a howitzer shell in a black suit came in.

"Excuse me," the shell said, his steel cranium gleaming.

"We're here on official business," Flynn responded. "No gambling."

"Please come with me, Mr. Carroll. And you, too, Miss Glass."

He looked at her in astonishment. "You're booked, too?"

She did not reply.

As they headed toward security, the officer asked, "Are you two a team now?"

"Not really," Diana said.

He led them into a familiar space, scuffed beige walls, no windows, a steel desk and a couple of wooden chairs. Not the sort of room you expect to see in the Grand. It was even more stark than the service areas and the maze of access tunnels that Flynn knew ran under the huge complex.

He thought he might recognize the security chief, but it was a new, short, stocky bullet-headed bald guy. The new howitzer shell said, "Diana Glass. Welcome back. Leaving, I presume?" He looked at Flynn. "And who're you supposed to be, Mr. Carroll, Hecuba's sidekick?"

"I'm a police officer," Flynn said. He pulled out his badge. "Texas."

"Doesn't make a shit here, Mr. Carroll, this is Nevada. The message

remains the same. Get out.”

“Look—”

“I’m lookin’ at a lot of losses between the two of you, now get off the premises or I’ll have to turn you over to some real cops, which will not amuse you.”

Unless there was a criminal charge, in cases like this the Vegas cops basically just yelled at you. It wasn’t against the law to win money from the casinos. It was just annoying to them.

“You have a tiger in here and I know this, and I know how to find it and get it out of the resort.”

He heard Diana suck in her breath.

“Your help isn’t needed,” the security chief said. “We’ve got eyes on every camera in the structure.”

“Why haven’t you evacuated?”

“Because we don’t think some eccentric high roller is gonna unleash his pet on the guests. We just want him quietly to leave. Like you.”

“What hasn’t been on the news is why you can’t find it, which I know you can’t. Or why we can. That hasn’t been on the news, either.” He flipped his badge wallet closed. “We’re not here to gamble.”

The security chief came closer to him. Flynn noted that he had a complete set of choppers. Not good with his fists, then.

“Wait here,” Choppers said. He left the room.

Flynn looked up at the camera and waved his fingers. “He’s gone to get the general manager.”

“I really didn’t want to come here.”

“Are you booked all over town, or just here?”

“Look, in a previous life I built illegal software, okay?”

“For the casinos?”

“Against the casinos.”

“All I did was count cards.”

“They don’t like that, either.”

“They do not.”

He looked at her with new eyes. From casino hacker to government super spy. “You’ve had an interesting career.”

She smiled a tight smile. “It has been interesting.”

The general manager came in. He was not smiling. “I’m told you won’t leave.”

“We’re not here to gamble. We’re here to help you with your tiger problem.”

“We don’t have a tiger problem.”

“You have a half-empty casino is what you have. Because of the bad publicity regarding said tiger. That’s a tiger problem.”

The guy was young, no more than five years older than Flynn, but he had the dead eyes of somebody who’d worked tables too long. Under the flinty, hostile surface was a deeper level of what Flynn sensed was real nastiness. So he had to be beaten about the head and shoulders a little. Not a problem. He said, “Okay, fine, we’re gonna leave. But we’re also going to let the press know that you refused our help.”

“A cop from the beautiful little town of Dead, Texas, and his hacker girlfriend? Nobody cares.” He turned his glare on Diana. “Why aren’t you in jail? You’re supposed to be serving time. Or dare I ask? ’Cause I can see you’re carrying heat, both of you. But then again”—he gestured toward a uniformed guard who had quietly entered the room—“so is he.”

“I’m not in jail because I cut a deal with Uncle Sam, Willard.”

“Willard?” Flynn asked.

“What kind of a deal would the feds cut with a sleazeball like you, Diana? You went down for four years.”

She pulled out her documentation. “When there’s only one person who can do a job, they’re gonna deal.”

He looked at her ID card. “As if this was real. Please don’t bore me. You

either bribed your way out or fucked your way out or both. Or you did something to their computers. Probably hacked your own release and just walked.”

“Look, Willard, we’ve been sent here by our bosses for reasons that we cannot tell you to do a job that you are not going to be able to do yourself.”

“We’ve got security patrolling every floor. We’ve entered and searched every guest room in the complex.”

“But you haven’t found the tiger or seen it leave the structure. Not on any camera. So what does that tell you?”

“LVPD SWAT are standing by.”

“Hordes of cops in black Darth Vader outfits. International media attention. That would not be good.”

“Whatever, I fail to see what a card shark and a jailbird hacker are gonna bring to the table.”

“Go the SWAT route. Or let us do our thing. Nice and private. You see the tiger, then you don’t.”

“Do we get an ID on the shithead who brought it in?”

“I guarantee the tiger. The shithead if we’re lucky.”

“And what does this cost?”

“Not a penny. We really do work for Uncle Sam.” He looked at Diana. “She’s been scared honest.”

“That would be false. So let me put it this way. If this fucks up in some way—if it turns out to be some sort of bass backwards scam, I’m not bothering with the cops. I’m gonna just go ahead and brass you two until your faces are but a memory.”

“You beat up ladies now?”

Willard focused on Diana. “I saw this ‘lady’ here toss an armed man twice her size-fifteen feet into a glass wall.”

“I’ve only seen her geek side,” Flynn said.

Willard stared at her for a while. “That was her geek side. Don’t even get

me started about her skill at ripping marks.”

Her face was scarlet. She did not reply.

A long sigh from Williard. “What do you need to get started?”

“Smart move,” Flynn said.

“Nope, it’s a case of curiosity killing the cat. Why would a big-time hacker team up with a small-time counter? I’m fascinated.”

“Let’s roll some videotape.”

Willard took them to the security complex, which Flynn saw was fitted with state-of-the-art cameras watching the gaming area. Every corridor on every floor was also covered. “Any penetration into the rooms?”

“Not legal.”

“Detectives, maybe? Police investigation?”

“It happens, but nothing’s going down at present.”

He introduced Scott Morris. Flynn saw a graying former cop, probably a retiree. Sincere, capable, dedicated. “Scott supervises the system. He’ll give you what you need.”

“I have all the incidents edited together,” he said. “This is the first one that was noticed.” He touched a button, which froze an image.

They were looking at a blur stretched along the floor line in one of the access tunnels. Diana said, “You can tell what that is?”

“I can tell that it isn’t supposed to be there.”

“Could be a big cat,” Flynn said.

The security officer returned the camera to real time. The shadow was now gone.

“What was it then?” Flynn asked.

“Nobody could figure it out, so it got kicked up to me. I did a little work on the image, but it’s unresolvable.”

“What’s the refresh rate on these things?”

“Eighteen fps.”

“So whatever it is was moving really fast.”

“Faster than a man can run.”

“Where’s that tunnel?”

“Right under us, actually. Access to the lion habitat is through there.”

The MGM Grand’s lions were a world-famous tourist attraction. When he was here gambling, Flynn had passed by the habitat often enough. Even the floors were glass, so it was going to be a hard place for a tiger to hide.

“Street access? Is that where they bring the lions in from the ranch?”

“Yeah, there’s access out onto Tropicana. A couple of hundred feet.”

“Let’s see the best image of the tiger that you have.”

“This is from the tower. Sixteenth floor. Three twenty this morning.”

The animal came down the hall, stopped, and looked up at the camera.

“My God,” Diana whispered.

Brilliant eyes sparked in a sea of gray-orange fur. The animal’s face seemed almost to smile. Then it slowly turned around and, switching its tail, ambled down the corridor and around a corner.

“Next camera?”

Scott Morris pushed another button. “This is all there is. A blur again.”

“It displayed itself intentionally,” he said. “And it’s still here. And not alone.” He asked Scott, “Do you cover the Mansion? With cameras?” This was an exclusive facility behind the Grand itself, reserved for high rollers and people willing to pony up \$5,000 a night for accommodation.

“We cover the whole facility.”

So there would be no reason for the perp to prefer the Mansion over the Skylofts, and perhaps a good reason to favor the lofts, because he would have arrived the same way he’d arrived at the Hoffman’s, from above, using that high-tech aircraft of his.

In any case, MGM was going to know a lot about the people who stayed in the Mansion. You didn’t just walk in, you had to be invited.

“What about the roof of the tower?”

“There’s time lapse video of all roof areas. We’ve examined every foot of

it.”

“How long is the delay?”

“Sixty seconds.”

Easily time enough for someone to land, drop the animal and its support crew, and leave. Working at night, staying below FAA radars, using that soundless helicopter or whatever it was, it would have been easy.

“What we need to do is concentrate on the top floor of the tower, not the roof, the roof cameras are too slow. But I want to look at every inch of interior footage.”

A few minutes later, Flynn was watching one camera, Diana the other. “You’re looking for a blur,” he said. “They know the frame speed of the cameras, so the animal is moving fast.”

“It’s that well trained? Tigers are hard to train.” Morris said.

Flynn said nothing.

It took three hours, and during that time neither of them saw a single sign of anything unusual. Butlers and room service waiters came and went, guests came and went, but nothing else happened.

“Like I said, it’s still here,” Flynn said.

“Which surprises me,” Diana replied. “If it’s bait. Wouldn’t they have exposed it, then pulled it out as soon as they could?”

“Gotta let the fish swallow the bait, then you can set the hook. That’s what we’re doing now. We’re swallowing the bait. Next step, the hook will be set.”

“How will it be done?”

Flynn thought about that. “We shall see.”

“Look, it’s not in this complex,” Morris repeated. “I’m sorry.”

“If it’s not anywhere you’ve looked, then it has to be somewhere you haven’t. I suggest we start at the point of entry and we move through every space where the animal has been observed.”

“And?”

“We shall see.”

“Flynn,” Diana said, “that’s just blatantly taking the bait.”

“A smart fish wants to get the fisherman to go home. So he plays a game with him. He wants to frustrate him. He takes the bait, but he’s careful. He’s not greedy. He nibbles. So the fisherman up there thinks, ‘have I got a bite or is it just the current?’ Finally, he hauls in his line and finds a clean hook. This happens a few times, and the fish is finally left in peace. Full, too.”

“So he leaves and we get nothing. Stalemate.”

“Oh, no, he’s gonna get something.”

“What?”

Flynn made a gun gesture. “The fish, in this case, is gonna follow the line right back to the fisherman in his little boat.”

“Flynn, you’ll get killed.”

“Somebody will, most likely.”

“Remember Montana. The animal is extremely dangerous, and whoever’s behind it is even more so.”

Flynn said nothing.

CHAPTER TWENTY

The lion habitat was immediately beside the security area, and it took them only a few moments to reach it with their latest minder, a young guy called Josh who apparently thought they were celebrity guests looking for an insider's tour.

He nattered away about the facility's history and its considerable prowess as one of the most popular exhibits in Las Vegas.

The walls and floors were clear glass, so it was easy to see the lions, but not entirely. There was a small area where they could stay out of view.

There was a crowd in front of the habitat, and a line full of kids formed up along the wall. It was a happy situation, calm and orderly. No problems here. There were cubs in the habitat, and the children were eager to have their pictures taken with them. Farther down the corridor, more people were filing into Studio 54. The casino was humming, too, and a show was letting out of the Cirque de Soleil's KÀ Theater.

This was a chess game with no board and more than one expert opponent. Or perhaps it was better to say it another way: a chess game with the perp and some other kind of game with the tiger, played by tiger rules, whatever they were.

He asked Scott, "Did you check the whole habitat?" He knew the answer, but he wanted to hear it from the man who had done the work.

“What’s there to check? Six lions, two cubs, glass floors, end of story.”

Obviously, Scott was not aware of how the habitat was laid out. Flynn went to the door. “I need to enter the space,” he told their minder.

The man blinked. His expression of surprise said that it wasn’t a frequent request. Finally he said, “No.”

“It’s okay, Ricky,” Scott said.

“Don’t we need a release or something?”

“I need to do this right now.”

Scott spoke into his radio, then listened. Willard, no doubt. Flynn waited. At a nod from Scott, Rickie unlocked the heavy door and stepped aside.

“Hey,” the trainer who was handling the animals said, “You know what you’re doing?”

“I need to see into the enclosed area.”

“There’s nobody in there. We’re all out here.”

This guy was tight with his lions, which was good. It meant that he could control them. Flynn was fast enough to deal with one lion, but six would be a definite problem, and lions weren’t like tigers, they worked in packs.

The public was now aware of his presence in the enclosure and was watching him. He moved through the visible space, then took a few steps up into the hidden area.

It was exactly as he expected. He called out to the trainer, “There’s another animal in here.”

The trainer’s head turned. “*What?*”

“Back in here. And I don’t think it’s a lion.”

The man came to Flynn. “That’s empty. It has to be.”

Flynn moved a little deeper into the dimness. “Get security over here.”

“This is impossible!”

“Look for yourself,” Flynn said. “Carefully.”

“Jesus, you’re right. What is that?”

“We need somebody who’s able to work with tigers. And this one is very

damn smart.”

The trainer had taken out a small LED flashlight. The yellow of the tiger’s eyes reflected back. “What the hell ... how did that get in here?”

“We need to get it contained.”

“There’s tigers at the Secret Garden in the Mirage. Is this one of their animals?”

“No. But they have experts, for sure.”

“Yeah, Siegfried and Roy. *The* experts.”

“Aren’t they retired?”

“If they’re in Vegas, they can advise. Plus, the Mirage has a good group of trainers. It’s a top-notch operation.”

One of the lions roared, then another. From outside there was excited babble, kids squealing.

“They’ve been restless as hell, and this is why. How long as that thing been in there?”

“That’s unclear.”

Behind them, Ricky opened the access door. “You guys okay?”

Immediately, there was a stirring from within the enclosure. “Close it,” the trainer shouted.

The lions erupted, roaring and striding, and at the same moment the tiger emerged. It was easily as big as two of the lions put together.

It fixed its stare on Flynn.

“It knows you. Is this your animal?”

Flynn said nothing.

The tiger came into view of the public, causing an immediate round of applause. The next second, it leaped, and Flynn had never seen anything quite like it. The movement was smooth and swift and covered a good fifteen feet.

As the tiger slammed into Ricky, he went down with a surprised grunt.

“Holy God!” the trainer shouted.

From outside there came a confused babble, then an eruption of screams.

Perhaps because of pack instinct, but also due to curiosity, the lions followed the tiger through the door.

“Goddamnit!” the trainer shouted.

“Stay cool, we’ve got work to do,” Flynn said. He grabbed Scott’s radio. “The animals are in the casino,” he said on the emergency channel, “you need crowd control and all the wranglers you can get.”

He followed the trainer out into the broad hallway between Studio 54 and the casino. The lions were close together, moving down the center of the hall toward the casino, and the large crowds still exiting KÀ were parting like the Red Sea. But not all of them. An elderly lady who looked like a pile of bags with a face clapped her hands and confronted them, smiling happily. “Oh, how cute,” she gushed.

Another voice shouted, “It’s an act,” and there was a smattering of uneasy applause.

“Oh, God,” the trainer moaned.

Security was pouring into the corridor from both directions. Then a little boy with a toy ray gun burst through the crowd and took a firing stance. The next thing Flynn knew, he was spraying the lions with a super-soaker.

They remained silent and still, shaking their heads, annoyed by the water, unsure of themselves.

“It’s not gonna last,” the trainer shouted back at Flynn.

“I know it.”

A guard appeared with a gun.

The situation was three seconds from trample panic. “Don’t fire that,” Flynn shouted, “don’t let people see it!” The guard holstered it and stationed himself in front of the lions and spread his legs and arms, attempting to block their progress.

Now other people joined the old lady, attempting to attract the lions to them. One man succeeded in petting one of them.

“Lay off,” the trainer shouted, “don’t confuse them!”

“Folks,” Flynn said in his most commanding voice, “we need you to back out of here. Nobody run, just move out of the corridor, please. Stay away from the animals.”

The old lady was lifting the dewlaps of a lioness and shrilling at her husband to take a picture. Flynn’s warning did not stop her. Then a man with a cigar in his hand burst around the guard, roaring and thrusting it at the lions.

One of the them charged this sudden movement. The old woman was knocked over.

In three strides, Flynn moved among the lions, then past them. Quickly, he confronted the man with the cigar, lifted his arm and shook it out of his hand, and twisted the arm back behind him. Then he took the guy’s legs out from under him, whirled him around and pushed him away. He turned to the old woman and drew her to her feet. “Put her back together,” he said to another security guard who had just come up.

The lions, now afraid, began running. More screams erupted. Flynn’s trained ears counted ten sirens immediately outside the building, just beginning to wind down.

“Call your pros,” he shouted to Scott. “Right now!”

“It’s been done!”

Willard burst onto the scene. “SWAT’s deploying.”

Flynn took off after the lions.

They invaded the casino, moving fast. Their fear was escalating fast. At this point, they were highly likely to lash out at anybody who confronted them.

This was a huge space, and most of the patrons still weren’t aware of what was happening. But then one of the lions jumped up onto a blackjack table and roared. Nobody could mistake that sound, and every head in the casino turned this way. Then the rest of them ran deeper into the room, and were lost to Flynn’s view amid the high-roller slots. Roars and cries of terrified surprise followed immediately.

“Stay with this animal,” Flynn shouted to two guards. “Send SWAT into the slots with nets, not guns. No guns, do you get that?”

“Yessir!”

He also ran toward the slots, vaulting the nearest row of them and landing in the lap of a spectacular young woman. Her chips scattered, mice on the run.

People were jumping up from their machines, shouting, flapping their hands at the lions, trying to leave the area.

Flynn knew about as much about lions as he did about tigers, which was just enough to know that they were efficient killers, but would only attack for food or in self-defense. For them, violence was a tool, and right now what he needed to do was to convince them not to use it.

“Clear the area,” he shouted into the panicking crowd. “The police are on their way. Just take it easy, back out, don’t make sudden movements.” They slowed down, clustering, getting quiet. “That’s it, that’s right. Now just back out. Security will escort you to safety.”

In moments, fully equipped SWATs appeared, and they had animal control nets. There was going to be some roaring and some resistance from the lions, but basically this was over.

Diana came up beside him. “This is what the perp’s been waiting for. His tiger’s going to take us out somehow, and right now.”

“He’s going to try. Listen, I need you out of here.”

“No way.”

“They must not take both of us. So you get out of here, you get in the car, and you drive, Diana. You drive far.”

He spotted the tiger. It was making its way behind the high-roller slots, moving fast, staying low.

“The perp could be leaving the facility about now. You go out to the front and make a note of every vehicle that pulls away.”

“He’ll use his chopper.”

“In broad daylight? He’s gotta have permits, he’s got to get clearance to use the helideck. No, he’ll use a car and this is a chance to see him or see somebody who works with him. Get some basic detective information.” The tiger disappeared from view. The animal was going somewhere. It would be picked up, and Flynn intended to still be alive when that happened, and to be there.

“You come with me,” Diana said.

“The tiger’s going somewhere to be picked up. If I’m there, I can call in support from the local cops. Maybe round up some of these people.”

“You will not survive this, Flynn.”

“Go!”

She turned.

“*Now!*”

She left.

Flynn trotted to where the animal had been, but there was nothing there. He looked ahead and saw an access panel. Loose. It must have gone through, and it must have been helped, otherwise the panel wouldn’t just be loose, it would be open. Smart as the damn thing was, the tiger didn’t have hands. Fortunately.

As he slid the panel aside, he reflected that he’d seen the tiger’s face more clearly this time. He’d had the uncanny sense that a person had been looking back at him through the eyes of an animal.

On the other side of the panel he found an access area that led to a forest of ductwork. It was a ventilation management shaft. The interior was unlit.

This was the moment when he needed to nibble the bait, not swallow it. The smart fish also had the discipline to defeat his own eagerness, and that was not easy, not when you were as hungry as he was.

CHAPTER TWENTY-ONE

He stood waiting for his eyes to get used to the dark. His night vision was decent, and this was always preferable to a flashlight. He could use his night vision equipment, which was still in his backpack, but it projected infrared and that would not be wise. For all he knew, tigers could see into the infrared, or this one could.

Soon, he was able to make out the shapes of ducts. There was light coming from his left. Also, on the floor, smears in the dust that could only be tracks. Instead of hiding, this tiger had gone toward the light, and that was very damn strange, especially because light changes the hormone mix in the human brain but not in the brains of predators. More visual information makes our other senses less acute. Could the tiger sense this, or somehow even know it? Or was it just a coincidence that it was going against its own instincts in such a way that gave it an advantage, but would look to most human pursuers like a mistake?

Flynn made his way under a long series of ducts, skirting the lighted area, moving as swiftly and silently as he could. He listened for any and every sound, and soon began to hear noises coming from the deeper dark. He stopped moving. Stopped breathing. Closed his eyes to concentrate on his hearing. Finally, he cupped his hands over his ears and turned slowly. As he did so, he was gradually able to make out a voice. Then that it was a female

voice. Then that it was the voice of a child.

“Wee Willie Winkie runs through the town, upstairs and downstairs, in his nightgown...”

Incredibly, what he was hearing was a little girl telling a Mother Goose story.

“Rapping at the window, crying through the lock, are the children in their beds ... are *you* in *your* bed, Jerry?”

He got his gun into his hand and went down on his stomach, drawing himself forward slowly enough so that the sliding sound was barely audible. As he moved ahead, the little girl’s voice grew steadily more distinct. Also, he began to see flickering light, very dim. A candle?

The voice continued, “Hush-a-bye, baby, mommy is near, hush-a-bye, daddy is near...”

There came another voice, even smaller, hardly even articulate, whimpering.

“Hush ... hush.” The little girl was comforting an even smaller child.

Using the voices as a guide, he felt his way along, soon discovering an iron hatch that was standing open. As he felt the edge, he could detect neat slices in four heavy lock tongues. This door had been cut open, and not by any tiger, no matter how clever it was.

This was the work of the perpetrator or his people, the first overt sign of their presence he had found. So his instinct had been right. It wasn’t just the tiger under here. Somebody with a powerful tool was here, too, and not a blowtorch. The edge was absolutely smooth to the touch. A torch would have left a much more irregular surface. No, this had been cut by a very good blade—as a matter of fact, no blade Flynn had ever heard of.

Could this be their lair? Was that the real reason they were in Vegas? Maybe he’d overestimated their cunning, and blundered into their most secret place.

He told himself, no, don’t make that mistake, that’s nibbling the bait too

hard. One more like that, and you taste the hook.

From the beginning, he had known that he would come to this point. Maybe the child wasn't even real, and maybe something else was happening entirely. He was in a labyrinth, after all, a real one. Who could tell what the truth of such a place might be?

It was an easy step through the door, whisper quiet sneakers on hard concrete. As he stepped through, he felt the thickness of the wall. It was a good four or five inches of steel reinforced concrete. So this was an access hatch, not intended to be opened often, if at all. But what was it for? What was this space he was now in?

The little girl was now silent, but the candle still flickered. As he moved toward it, he became aware of dampness underfoot, and at once understood. He was in the city's storm drain system, and that hatch was not a hatch at all, it was a gigantic relief valve. An enormous structure like the Grand would be served by massive risers from the city water system. If one of them burst, this and other valves up and down this outer wall could be opened to let the water out into the drainage system.

But what in the world were children doing in a storm drain? Were they runaways?

Flynn had been born helpful. It was part of who he was and a big part of why he'd become a cop. Even as a kid, he'd rendered aid whenever the situation arose. When it came to putting bad people in jail, Flynn's motive was protective, not vindictive. He didn't care so much to punish wrongdoers as to keep innocent people safe.

He was in a tunnel perhaps fifteen feet high and twenty wide. The candle, guttering now, was a hundred yards further on. As he drew closer, he began to make out a bed, then a table against a wall, then what amounted to a small room built entirely inside the drainage tunnel.

People lived down here. They were raising children down here.

He walked into the tiny area. There was a mattress set on a rusty box

spring, with two children sleeping on it. A tattered paperback of Mother Goose lay near the hand of an exquisite little girl, her blond hair a tangled mess, her face in sleep like something one might see through a keyhole into heaven. Cuddled beside her was a snatch of brown hair, all that could be seen of the smaller child she had been reading to.

Standing on the far side of the bed, just at the edge of the light, was the tiger. The eyes bored into him, but not with lust for the kill or even with hate. There was something like a frown there, not much of an expression really, but Flynn thought that it communicated clear meaning. The tiger's face was not angry. It was not murderous. The tiger's face was asking a question: "Who are you?"

Flynn had a shot—not much of one, but he could safely fire across the kids and maybe hit the animal. Moving as slow as oil, he raised the Glock. Quite calmly, the tiger watched it come up.

If he hit his target, the shot would be nothing short of a masterpiece. He breathed deep and set his feet.

The tiger disappeared as the shot blasted out, the noise rocking the tunnel, then echoing away in a series of thunderous slaps. Distantly, there were shouts, "shot fired, shot fired," then the thutter of feet running in the thin water that filmed the floor of the tunnel.

Other people lived down here, obviously a whole community. They were the kind of people who knew the sound of a gun when they heard it.

He had not hit the tiger. The tiger was gone.

The little girl lay with her eyes opened, her lips twisted back away from her teeth as if she was in pain. Her eyes were fixed on him. In the hand that had held the Mother Goose was a flying Taser. It was armed. The LED was glowing. A C2 like that could fire its electrodes twenty feet.

He realized that he had swallowed the bait, taken it deep into his gut. And now, in the form of a Taser in a child's hand, came the hook.

As he shifted and dropped, she fired. He felt one of the electrodes hook

into the sleeve of his jacket, then the floor seemed to turn into the ceiling, and he knew that she'd hit her mark.

In training, he'd taken Taser hits. He knew to expect the confusion and the out-of-control muscle spasms that followed, also the way sounds became tinny and the world distant.

Somebody was there, a dark figure standing over him. "What you doin' down here, topsider, you lookin' fer little girls." A blow hit his back. "That yo sweet, topsider?"

The effect wore off enough for Flynn to pull one of the hooks out of his clothes. He fought to respond to the voice, but could only manage a gobbling sound.

"You done good, Becky," the voice said. "Now we gonna kill us a topsider."

Flynn had been tricked into getting himself killed by a completely unconnected party for a reason that had nothing to do with anything.

"No," he managed to croak, "there's an animal down there." It came out as a series of gobbles.

"Zap him again, Becky." The man pulled a switchblade out of his pocket and snicked it open. "Gonna start with your balls, you piece a shit."

Flynn managed to suck a breath. "Animal in here! Dangerous!" He fought to get an arm up. Even though the little girl was standing on the trigger, there was no second pulse from the Taser.

"You're the goddamn animal."

Flynn pointed. "There's an animal back there in that tunnel!"

"What?"

"I'm a police officer. I was driving an animal away from your kids."

"You're a cop? Down here?"

Flynn had recovered himself enough to raise both hands. The Glock lay before him on the ground. "Swear."

"Shit a friggin brick, what the hell're you doin' down here? Cops don't

come down here.”

“To warn you ... an animal—big cat—escaped from the Grand. In the tunnels.”

“Jesus. Becky, you seen it?”

She shook her head.

“She ain’t seen it.” The blade reappeared.

“She was asleep.”

At that moment, a light shone the tunnel, bright, a professional-quality flashlight. It moved closer, coming down the same shaft that Flynn had used.

“You’re a lucky man,” Diana said. “I thought I was gonna find meat.”

“What in fuck’s name is going on around here?”

“You watch your trap around those kids, buddy,” Diana said to the guy.

“My kids are my business.”

“Well, you better get ’em outa here until the SWATs track down that tiger.”

“You’re kidding.”

“You heard me. This officer probably saved their lives. ’Cause the animal went right through this tunnel.”

“I saw it,” Flynn said. He pointed. “Just there. Which is why I fired my weapon.”

“Come on,” Diana said. “SWAT’s coming down the tunnels and we have work to do.”

Flynn was perplexed. What had just happened here? Instead of the perpetrator’s goons, Diana had shown up. It wasn’t surprising that she’d ignored his request and followed him, but still, something was wrong.

As they made their way back toward the Grand, she said, “We misread this situation totally.”

“It looks like it.”

“This had nothing to do with us. They were on one of their missions.”

“Oh?”

“During the confusion, while the entire staff chased the tiger, which you can be assured will not be seen anywhere near here again, the assistant manager of the resort disappeared from her office without a trace.”

Flynn did not reply. What could he say? What could either of them say?

When they had emerged back into the now-closed casino, she said, “There’s worse.”

“Hit me.”

“Flynn, there’s been a fire in Chicago, a bad one. A gas explosion leveled four row houses. Seventeen people were killed.”

He stopped. Looked at her. It was dark, but not so dark that he couldn’t see the shock in her face, or share her stunned horror.

“Oh my God, they got him.”

She nodded. “Flynn, we’re on our own.”

CHAPTER TWENTY-TWO

The assistant manager's office was neat as a pin, except for the exquisite antique snuff box the Las Vegas detectives had found, which turned out to contain cocaine. They had also discovered that her credit rating was through the floor and she had a long string of dismissed cases that the Grand wouldn't have been able to see on her record before she was hired. The publicly available part of it showed only a traffic conviction.

Flynn breathed the room. Felt it. He noticed a curtain that had been pulled abruptly, but that was all. It looked out onto a distant view, so it was unlikely that somebody had been concerned that the window was under incidental surveillance.

According to the available tapes, she'd left the office when she'd gotten the alarm about the problem with the animals. She had never arrived on the scene.

"What is it?" Diana asked.

"What it is, is nothing."

"You sense something."

"You know, I'm not really thinking about this office. I already know that we're never going to find Elizabeth Starnes or Gail Hoffman or Abby or your Steve or any of them. What I can't get out of my mind is that tiger. I saw its face again."

“And?”

“It was intelligent, Diana. Like a person. It was like seeing a person wearing the face of a tiger.”

“You wondering the same thing I am?”

“A human mind put into the body of an animal. Yes I am. You could see curiosity. Like it was wondering who I was.”

“Feline curiosity?”

“Like it was asking me if we really needed to be enemies.” He shook his head. “I think it’s part human, and I have to wonder if it would change sides.”

“We’ll never get close enough to it to find out. Especially with Chicago gone. We need help.”

“You gotta have contacts above that level. Who does Oltis report to? Did?”

She shook her head.

“*What?*”

“I was seconded to Oltis. Sent to him on an origin-blocked order.”

“What the fuck is that?”

“A legal order that comes from a code-protected source. You can verify the code, but not identify the source. Could’ve been anybody. Most likely some agency that’s so classified even I’ve never heard of it.” She paused. “Or them.”

“Why are they so damn secretive?”

“If the alien presence is revealed and the public goes nuts about the disappearances—”

“Yeah, yeah, but this goes deeper than that.”

She sighed. “I know it. Mirrors reflecting mirrors. No damn end to it.” She paused. “The thought has crossed my mind that the bad guys might be in control at home. It could be that the ones helping us aren’t the police at all. Maybe they’re dissidents or revolutionaries or something.”

For a moment they were both silent, each contemplating the enormous

stakes involved, and the mysteries they faced, and the responsibility they bore.

“We have to just keep pushing,” Flynn said, “and hope whomever Oltis reported to catches up with us.”

“That would be true.”

Flynn continued, “They did Miss Starnes during the day, so no helicopter.”

Willard had become more cooperative. The company very badly wanted to find and prosecute the people who had caused the mayhem. The LVPD already had a blizzard of warrants out for them, not to mention a massive hunt for the tiger. They weren’t looking for Elizabeth Starnes, though not very hard. Given cocaine use and the kind of police record that would belong to a clever junkie, the resort was just as glad to be rid of her. In any case, it looked more and more to the police as if she’d walked out on her job, not been abducted. In other words, the old story.

Flynn and Diana had been given a small office in the security area, and computers with access to the property’s floor plan, its registration records, even the casino information.

They both worked the records, looking for things that didn’t add up, and in the back of both of their minds there remained the same hollow thought: we’re alone.

Flynn traced Elizabeth Starnes’s movements, picking her up in a stairwell, then again in the main lobby. There, she met an elderly man. She greeted him with what looked like professional courtesy, then walked out with him.

“Go into her family history,” he said. “See if she has any older relatives.”

“Her father lives in Crescent Manor. Charles Starnes. He’s a slot machinist.”

“A picture?”

“DMV probably has one.” Her fingers flew across the keyboard. “Got it.”

“That was a couple of seconds.”

“Fast hands.”

“No wonder Oltisis wanted you, you’re a friggin’ genius.”

“Always been my problem,” she said tightly. “Makes you think you can get away with any kind of shit. If that hack I did on the Grand had gone down the right way, I’d be in Tahiti now, not a worry in the world.”

“Tahiti’d get old, be my guess.”

“No older than catching car thieves and pushers.”

“Yeah, as screwed up as this is, it’s better.”

They laid the driver’s license photo side by side with a blowup of the face of the man Elizabeth had met in the lobby.

“It’s close,” she said.

“It’s a maybe. Let’s talk to the father.”

“We lose time.”

“A little.”

“What do we gain?”

“You never know.”

Leaving the Grand, Flynn thought that they were entering a new and far more dangerous world. How had the baddies ever taken out Chicago?

“You did warn them in that call?”

“Absolutely. Oltisis said he was aware of the problem and all over it.”

Flynn said nothing.

As they walked through the port cochere, past the line of parking valets, Vegas was gold with late sun, the neon just gaining definition against the blazing western sky. Looking toward the mountains to the west, blue now, he thought of the tiger on its strange journey, and what it had seen and what it knew.

They were alike, him and the tiger, two hunters. The only difference was in their choice of prey.

Diana sat beside him in the car, her hands folded in her lap, her face as pale as a cloud, her eyes hard and quick and scared. The eyes of the hunted.

“Where were you in prison?”

“Lesbian Island.”

“But you’re not one.”

“I was put there, okay? End of subject. I do not wish to talk about old lives that are dead.”

“After I lost my wife, I left Menard. Couldn’t stop going. I’d dip in here to hit a few casinos for money.”

“You counted good enough to get booked. That’s impressive.”

“I have a trick memory.” His mind was a warehouse full of file cabinets, full of details that he could never escape. “I recall every hand I ever played. And not just cards. I can tell you about the breeze on the night of August 14, 1997. I can tell you about the T-shirt Abby wore on June 11, 2006. You name it, I’ve got the details.”

“Details suit a detective.”

He turned onto Thirtieth. “I guess. At least I don’t need a GPS. Saves a little money.”

“What if you’ve never been there before?”

“I’ve seen a map.”

The father lived in a single-family home on Langdon, a short street that dead-ended into a condo complex. They pulled up in front and got out of the car.

“It’s empty,” Flynn said.

“You’re a mind reader, too? Do you have a cape? Some kind of leotard?”

“Yeah, I have a leotard. Asshole Patrol.”

She knocked on the door. As he expected, there was no answer.

She said, “You’re sure this is going to be productive, because now we’ve got to look for him.”

“If it wasn’t him at the Grand, then we have a picture of a member of this group, so yeah, it’s going to help.”

“He’s not here and we’ll never find him.”

“Let’s go back to the car.”

“And go where?”

“Nowhere. Wait.”

“Wait?”

“What a detective does, mostly.”

They said little, and that was how he preferred it. You chatted during a stakeout, you missed things. It was all about focus.

The sun went down, the sky to the west raged with the light of the strip. Bats darted past the car. The air turned cool, then cold. Diana rolled up her window. “I hate the cold,” she said. Her hand went to her neck. He knew that she was remembering the Hoffman stakeout.

It was nine twenty when a man came walking slowly down the street.

“It’s him and don’t get out of the car until he enters the house and closes the door. If he’s gonna run, you want him to start from a confined space.”

“Why would he run?”

“No idea.”

He was old and stooped and used up. Whatever he’d had, Vegas had taken it. Flynn watched him go up the walk, enter the house, and close the door.

“Okay, now.”

They got out of the car and followed him. Flynn put his hand on his badge wallet. The big star on his badge was a giveaway for Texas, but if he flashed it fast, maybe the guy wouldn’t notice. Diana’s credential would likely work better.

He knocked, then again, then the door was drawn open. Mr. Starnes stood there in a black undershirt.

“Yeah?”

Flynn did his badge. “May we come in?”

“You’re cops so it’s about Lizzie. I’m finished with her. Whatever she’s done, she’s done. Not my problem.”

“When did you last see Elizabeth?”

“Dunno. Three years? Five? Last time she showed up high. Sick of it. Sick of her.”

Flynn thanked him and returned to the car, Diana following.

“You hardly asked him a thing. I think he knew something.”

“He knew nothing and he’s not the man she met in the lobby.”

“Oh. Is that good?”

“It’s good. Now we have a face. A real face, of somebody we know is involved, maybe the perp himself.”

She followed him to the car and they headed back to the Grand.

“With a face,” he added, “we have a shot at finding a name.”

“How would we do that?”

“The old-fashioned way. We get the picture fixed up as clear as the computer genius can make it, then we hand it out to the staff. We show it to maids, bellmen, valets, anybody who might be able to help.”

“What if he doesn’t have an identity?”

“There’ll be something somewhere. There always is.”

“You know that? Despite how careful they are.”

“I know it.”

They returned to their small office. Willard came in. “I’m getting my hotel fixed. Nobody can figure out how that hatch was cut. You guys got anything for us?”

“Not our lookout,” Flynn said.

“But you’re government. You’ve got resources.”

“Report the kidnap to the FBI. Get them involved.”

“No, thank you. I’ve got the LVPD to worry about already.”

“Then don’t ask.”

“Don’t ask? Fine. I got a front office that’s about to wring my neck and your only fucking response is *don’t ask*?”

Flynn sighed. “If we told you, we’d have to kill you.”

“That bullshit line. Is that from a movie?”

“No doubt. Look, tell your front office that it’s classified and it’s all under control and they will never hear from us or the asshole with the tiger again. Or the tiger.”

“I hate the government so much I’m even afraid to vote Republican,” Willard said.

“Get out.”

He left, slamming the door behind him.

“You were nice.”

“Thank you.”

As Diana passed the image through a software photo processor in her laptop, it became clearer and clearer.

“It’s a disguise.”

“How can you be sure?”

“The hairline’s too perfect. The face is too tan. Likely, it’s makeup.”

“One that you can see in a picture, but that Elizabeth Starnes bought from three feet away? I don’t think so.”

“For whatever reason, she wanted to buy it.”

“Well, it doesn’t help us, Flynn.”

“There’s more information out there.”

Parking valets at places like the Grand sometimes remember things, so their first stop was the port cochere.

The encounter in the lobby had taken place just after noon. He’d already looked at a list of the Grand’s shift patterns, and the shift that was on right now would have seen anyone who left at that time.

He said to Diana, “I need you to fade while I do this. Unless these guys think I’m a private dick, they’re going to clam up, and PIs don’t roll with beautiful assistants.”

“And cops do?”

“Question marks do, and that’s what they don’t like.”

She stalked off down the port cochere. Traffic was light, so there were six

valets waiting. He wasted no time, he knew the drill.

“I need some help,” he said, holding up the picture.

Eyes moved toward it. Brains calculated. Flynn knew the question that these guys were asking themselves: could this asshole be stripped of a c-note with a lie? He headed that one off at the pass. “I know the man’s name, that’s not the problem. What we need to know is if he was in a Hertz car.”

Interest dropped a little. Not a divorce case, so less money was going to be involved. But then again, Hertz was a big outfit.

“We don’t like our cars getting boosted,” he continued, “so anything you know.” He rubbed two fingers together.

One of the guys took the picture and looked at it. “This wasn’t a rental car,” he said.

“You closed it out?”

“I worked a double shift today. I opened it, too.”

Flynn watched the other guys. No trace of a suppressed smile anywhere. “So, okay, what’ve you got?”

“Nightlights Limo both directions. Two passengers inbound, three outbound.”

Another of the valets sighed as if he was a tire losing air. The fool had just given up the money.

“That’s one of them in the picture,” the fool added. Then he fell silent.

Not a fool, then. Pretty good at what he did, actually. “Okay, so give.”

Silence. Not a gesture, not a sound. He’d been doing this job for a while. Discreetly, Flynn showed a hundred-dollar bill. The guy rubbed his cheek with three fingers. Was the Grand this strict about this kind of tipping? He hadn’t thought a casino would be. Live and learn.

Flynn played the game, rubbing his own cheek with two fingers.

“See ’em,” the guy said.

He took out two hundred-dollar bills. They changed hands.

“That’s the second passenger in the picture. Obviously not the lead guy.

The boss was wearing about five grand, one of those suits where the guy's name is woven into the pinstripe.”

He fought down his excitement. “And the name was?”

“Morris. In the pinstripes.”

“Morris looked how?”

“He looked rich is how.”

“Give me a description. Hair, eye color, anything you remember.”

“He stayed well back in the car. I'm guessing at five eleven, say. Full head of black hair. Suit and tie, unusual around here. You're looking at a film star, sort of, but old-fashioned. Am I helping you?”

“Names?”

“Morris in the pinstripe. And he might have said ‘Jay.’ Might have said that name.”

“Like he was talking to somebody or about somebody?”

The valet shook his head.

“Anything more you can tell me?”

“Look, we're deep into this and obviously it has nothing to do with Hertz, so I'm gonna need another couple of memory sticks.”

“Anybody else got anything, now's the time.” He put his hand on his breast pocket where he kept his wallet.

Another of the men said, “I put number two back in the vehicle. One of our managers was with him.”

“That we know.”

It took a hundred-dollar bill to get him to go any further. “The guy who went and got her was well dressed.”

“This was Jay?”

“I didn't hear that. He thanked me for opening the door, that was it.”

“And your manager? How did she act?”

“Drunk. High. Couldn't tell. Not walking the walk, that was for sure.”

That was all they knew, so Flynn walked out of the port cochere and back

into the hotel. Diana caught up with him in the corridor.

“I have good descriptions of two persons of interest. And a couple of names. Last name of Morris. And Jay. Somebody named Jay was with him.”

“Can you find them?”

He considered that. He had descriptions. He had the name of the limo company they'd used. “Yeah,” he said, “I can find them.”

CHAPTER TWENTY-THREE

The least impressive vehicle Starlight Limos offered was a stretch Mercedes 300, and that's what Morris and company had used. It didn't take long to identify the driver, a part-timer called Ronald Brewster. The boss gave him up for twenty bucks. He lived in a weekly rate motel off the strip.

"On an approach like this, you need to follow procedures that I'm sure you aren't familiar with."

"What sort of procedures?"

"When a cop knocks on a door, anything can happen. So you stay behind me. Don't try to engage at all. Just stay out of it."

"I'm here to do my work, just like you are."

"Yeah, fine. This isn't your work. You're here because you're safer with me than alone. With me, you might live. Without me, you won't."

They walked around a swimming pool full of brown water that smelled of dead chemicals and drowned rats. A half-inflated Batman toy floated in it. The exotic orange mildew on the chaise lounges could have come from another planet.

It was dark now, and some of the rooms showed lights behind drawn curtains. Most did not.

He'd probably been in motels like this hundreds of times over the course of his career, sometimes to convince some guy not to push some girl through

a wall, sometimes to arrest him for doing it. The Tara in Menard was the same sort of place, where sleazebag lawyers took their nooners and people went to live out their final acts.

He ran his eyes along the roofline, along the balconies, looking for threats. It was possible that they'd finally broken through a significant barrier on the case. For the first time, they were actually investigating real, solid human beings. In all likelihood, they'd never been expected to get this far. So the strikeback, when it came, was going to be sudden and hard.

"Why are we standing here?"

"I'm looking for something."

"May I know what?"

"Danger."

That silenced her.

"You make a move in a place like this, everybody thinks you're coming for them, and they all generally have reason to think that. Knock on the wrong door, you're liable to get blown away for nothing."

"And the right door?"

"You're likely to get blown away for a reason. Let's go."

Brewster was downstairs, in room 103. The lights were on.

"Wouldn't it have been safer to call ahead?"

"Then the lights would be off, because Mr. Brewster would be gone." Here and there, Flynn saw a curtain part. Here and there, lights went out. There was a rasping click from two doors down. "Somebody in 121 racked a pistol," he said. "Be aware of this."

He knocked on Brewster's door.

Silence.

"Mr. Brewster, we're PIs. We need a little information."

Silence.

"I got a c-note for you, you open the door."

Nothing.

“Okay, I’ll push it under the door. You still don’t want to talk, you can keep it.” Then, to Diana, “Gimme a hundred-dollar bill.”

She handed him the cash. “I hope this is worth it,” she said.

He slid the bill under the door. “There’s more where this came from, buddy.”

“No,” she whispered.

“Five minutes, Mr. Brewster.”

The silence extended.

“Nobody there,” Flynn said.

“You’re sure?”

“The place isn’t breathing. Look, I’m gonna pop the lock, so stand away from the door. If there’s gonna be shooting, this is when.”

“But the man with the gun is two doors down.”

“Exactly.” He gave the door a slightly harder knock. “Come on, Mr. Brewster, there’s money out here, but it can’t wait forever.” With his free hand, he slid a credit card into the doorjamb. “They make these easy, so cops can pop them without damaging the premises.”

When Flynn opened the door, a cloud of smoke came out—crack smoke. “Not good,” he said. Then he saw the body. “We have a problem.”

The face was purple, the fists clenched against the throat.

“Is he ill?”

The man had been murdered, but this was no time to get into that. “Back out.”

“But—”

“Do it now!”

She remained rooted, staring. He took her by the shoulders and pulled her out. He pulled the door closed until the tongue of the lock clicked. There would be little evidence of their presence here, unless the next door decided to yap them to the locals. Hopefully it was some paranoid, not a cop-talker.

“Is he asleep?”

“Get to the car.”

They crossed the courtyard. Once they were in the car, he said to her, “The man was dead.”

“My God.”

“They made it look like he popped himself on crack. He didn’t.”

“You know that? How?”

“Trust me.”

Unless they were very lucky, the two of them were made and this time they were going all the way down.

“What does it mean?”

“They were cleaning up a loose end. We’re the other one.”

“Why not just blow us away?”

As he drove, he glanced at her. “I like to think it’s because we’ve been a little too slippery for them. But that guy hadn’t been dead for fifteen minutes, so they’re moving fast and we’re their top priority, you can be sure.

“What do we do next? Do we need to get out of here?”

“Ever been to Phoenix?”

“No.”

“You’re going. Right now. Phoenix, Salt Lake, wherever we can get to fast.”

He drove to shake a tail, but he doubted that it mattered. They’d have a box on the car, no question.

“What are you doing?”

“Driving fast. Hoping to live through the next few minutes.”

“Is somebody following us? What’s happening?”

He saw an underpass and headed for it. His chief concern was overhead surveillance.

“Why weren’t we in this much danger an hour ago?”

“I think that the tiger was meant to kill us. Me, at least. For whatever reason, it didn’t. Doing this guy was cleanup. He’d seen too much and heard

too much. Now they're probably frantic to get us. We've slipped through a few of their traps. No more. And we need to ditch this car right now. We're taking a bus."

"No buses!"

"A city bus like in Skokie. Couple of miles. So don't bark at me."

"I don't bark!"

"We're going to steal a car and find a small private airport and steal a plane."

"Come on."

"Or we're done. Understand, even though we can't see them, they are right on top of us and if we make a single wrong move we are dead. They haven't been baiting us or playing with us. They've been trying hard to get to us, but we've had a lot of luck. That has to run out. Maybe already has."

"We shouldn't have come to Vegas at all, then."

"We have a face. We have two names. It was worth it."

She fell silent, which was just as well, because he had to think.

He saw what he needed, a restaurant. "We're going in," he said. He repeated, "Stay close."

It was a seafood place, Christie's it was called, a low building looking like a mushroom in the middle of a sparsely occupied parking lot. A big neon trout danced in a pan on a tall sign near the building. They got out of the car into a faint scent of hot cooking oil. The sign buzzed and flickered.

"May we help you?" the hostess asked as they crossed the plant-filled entrance hall. It was late, close to closing time. Her plastic smile could no longer conceal the exhaustion in her eyes. How many jobs did she work, he wondered.

She guided them to a table amid a sea of tables. A waitress, Susan by her nametag, came and slid them menus.

"Go toward the ladies' room, the kitchen will be back there. Keep going through it, when you reach the parking lot, stay out of sight. I'll be there in a

couple of minutes in a vehicle.”

Without a word, she got up and headed to the back. In a moment, he followed her. As he exited into the lot, he saw her standing in shadows near the restaurant’s Dumpsters. He wondered how close this thing was actually cut at this point. If he kept her with him, would that slow him down enough to make capture certain? He couldn’t forget the way she’d frozen at Brewster’s place. On the other hand, she’d had the presence of mind and ability to follow him into the tunnel.

He decided that he didn’t care, he needed her. And it wasn’t just to work this case. He needed her for reasons he could not put into words. She had a right to live and be safe. He wanted to make sure that happened.

He spotted a Ford about ten years old. He went to it and quickly popped the door lock, then entered it and worked under the dashboard, feeling along the wiring harness for the right leads.

The car came to life and he drove around to Diana.

“This isn’t a good idea, Flynn, I have to tell you.”

“It’s the only idea. Everything else gets us killed.”

“If we get caught, we’re car thieves. Nobody has our backs. Remember that.”

“Use one of the throwaways to track down a small general aviation airport somewhere in the area, closed at night, big enough to have a few planes parked there.”

“Searchlight Airport,” she said immediately. “Seventy miles south off Ninety-Five.”

“You just happen to know this?”

“It’s in New Vegas. The videogame.”

“You play videogames?”

“I play with videogames. Crack them. Fool around with them.”

“There’ll be planes on this field? Flyable planes?”

“I have no idea, but I know it’s there.”

As they headed down Ninety-Three toward the turn onto Ninety-Five, he saw the Boulder City Municipal Airport. Plenty of planes, but it was also a busy facility, visibly active right now. The only way this was going to work was if they took a plane off an unmanned airport and stayed low and well outside of traffic patterns and radar coverage. Driving a hot car wasn't going to work, because they were too likely to get stopped. If the Menard City Police had onboard computers that automatically ran every plate they saw, which they did, the Nevada State Police certainly did, not to mention the LVPD. A stolen plane, on the other hand, was even better than a stolen boat. It wasn't expected. Homeland Security or not, there was little infrastructure to stop them. Plus, planes sat on general aviation fields for a long time. Until the pilot reported it, there wouldn't even be anything in police files. Add to that the fact that they could manage some serious distance, and it was the best option, no question.

Once they were on Ninety-Five traffic thinned out. Soon, the nearest vehicle was miles behind them. The only lights overhead were stars. Not that this meant much. If you had a silent helicopter and kept it below the radar ceiling, you could turn out the lights and the FAA would never know. But he had gained some confidence in his ability to lose them. Between Chicago and Vegas, he was now convinced that they'd been further behind them than he'd thought.

Still, there were loose ends. There always were, and one of them was bothering him a good deal.

“Let me ask you this, Diana. You're aware of bioactive tracking devices?”

“Sure. We put them in people like Rangers and pilots who're flying into hostile territory. They're injected under the skin. They're the size of a grain of sand.”

“Were you ever given one?”

“Not to my knowledge.”

“But it could have been done without your knowledge?”

“During a physical or something, maybe.”

“How effective are they?”

“The signal has to be picked up by a satellite. You need the codes. If you know what you’re doing, you can basically pick one up from anywhere in the world.”

He did not like to hear that. “I don’t think an unknown cop like me would have one.”

“You’re hardly unknown. First off, you’re part of a classified database that contains every detail on record about every US citizen with an IQ over 190. You’ve been in that database since you took that IQ test in high school. And we watched you for three months before we brought you in.”

“What the hell is a database like that used for?”

“We watch for math skills and logic skills. The intelligence community eats geniuses like candy. We’re addicted to them.”

“So now I know why you got recruited. But why not me? I’m reasonable at math.”

“The Abby Room stopped any recruitment track you might have been on.”

“I wanted to rescue my wife.”

“It was evidence of obsessive behavior, the curse of the very bright.”

“I am obsessive. Damn obsessive. And cursed, of course, or I wouldn’t be here doing this, I’d be in Menard and I’d still have Abby and be living the life I was born to live.”

“If she hadn’t been kidnapped and you hadn’t gone off the deep end, you’d be working at NSA or someplace like that right now, and you’d be very happy and very well paid like I was. Like me and Steve were.” She fell silent.

“You don’t have a Steve Room, but you think it’d be a good idea.”

“I will have a Steve Room. I like the idea of the Abby Room. Comforting.”

He thought about that. “The hell with it,” he said, “sometimes I hate the

world. I hate life.”

“Join the damn club.”

He wished he had some way to definitely tell if either or both of them was trackable. “What frequencies do implants operate on?”

“Ours are FM. High on the band.”

“But addressable?”

“If you know what you’re looking for, sure. An ordinary scanner held close to the body will pick up the signal.”

“We’ll stop at a Radio Shack tomorrow.” He did not add, “if we live.” “Would we be able to remove them?”

“Size of a grain of sand, usually lodged in deep tissue. We’d have to dig them out.”

“Nice.”

When they reached Searchlight, there was not much to see. A single casino, like a ship lost in a black ocean. Worse, they had to drive up and down the highway four times before they finally found the tiny, weathered sign that marked the airport.

He turned onto what proved to be a dirt track.

“I’m sorry,” she said.

“No, it’s good. As long as there’s a plane, we’re good.”

“An airworthy plane.”

“A flyable plane.”

He didn’t bother to tell her that it had been years since he’d flown anything. His license wasn’t even up to date. And he hated landings.

There were no planes visible, but there was a large hangar.

“I wish we had that thing we flew into Oregon. What was that?”

“Provided. No idea except that it worked.”

“It was a damn fine airplane.” He got out of the car and approached the old hangar. A lizard rushed out from under his feet as he shuffled through the sand.

“It’s locked up tight,” she said.

He didn’t bother to respond until he discovered that she was exactly right. The lock on the access door was a good one. Not only that, it was new.

“Drugs are probably moving through here,” he said as he examined the mechanism. “This is going to need brute force.” He returned to the car, opened the trunk, and took out the tire iron.

“What if it’s alarmed?”

“It’ll be a bell or siren so who’s going to hear it?”

“Maybe somebody lives nearby.”

“It’s your airport, Diana, you tell me.”

“Go to hell.”

As he worked the tire iron into the doorjamb, he said, “Sorry, that was uncalled for.”

“It was.”

He gave the tire iron a shove, hard, with his whole body.

He needed to be less harsh with her. She was out here for Steve the same way he was for Abby, and it was just as tough for her and it hurt just as much.

The door sprang back on its hinges. Warm air came out, sweet with the scent of aviation fuel.

“I was right,” he said.

“About?”

“It’s an active airport. There’s planes in here.” He stepped in. “Two of ’em.”

They both shone their flashlights into the cave-like blackness, revealing the fuselage of an elderly single-engine plane, with another standing in the deeper shadows.

“This one’s a Cessna 172,” he said. “No rear window, so it’s probably pushing fifty.”

“Fifty what?”

“Years old.”

“And the other one?”

“You don’t want to know. This is the one that might work. It can take us about seven hundred miles.”

“Is there any gas?”

“Oh, it’s ready to fly. They both are. These are drug planes. They move coke and hash, high-ticket stuff. Lightweight. They’ll have usable avionics. Though I wouldn’t try playing with an iPad while landing in a storm.”

He went over to the plane and shone his light in. “There’s a Garmin GPS in the dash, which is good.”

“It looks awfully run-down.”

“It’s junk. They stick a Garmin in these things and spend nothing else. These planes go in all the time, or get impounded by the DEA. So they’re expendable. So are the pilots. Let’s get the hangar door opened.”

He went over to the old wooden door and popped off the padlock with the tire iron. He handed the iron to her. “Keep this.”

“Sure. Why?”

“In case anybody shows up. Keep watch. Let me know if you see any lights. This is a drug stop, so there could be security. Silent alarm.” He got in the plane and switched on. The avionics lit up immediately and he began to not like this. He didn’t like things that were too easy. Always an angle somewhere, something not seen.

An old plane is even easier to wire than a car, but it has to be done from under the cowling. He didn’t need to, however. He found the key in the glove compartment.

The engine fired up immediately. This thing had been flown recently. It was probably scheduled to do so again, maybe even later tonight.

He called to her, “We’re in good shape, get in.”

She came over and clambered into the co-pilot’s seat. She strapped herself in.

He throttled up until the plane rolled out onto the sand apron. Typical of the region, it was an east-west runway, sited to catch the prevailing winds. Not much of one, though, basically the desert floor denuded of weeds and cactus. He headed the plane into the wind. Once he took off, he'd turn east.

There was a car on the highway, moving fast, maybe heading here. He ran up the engine. The plane began to move forward. There were no lights. He was just guesstimating the position of the runway.

As they began to roll faster, plant life thudded against the wheels. The whole airframe shook. The speed crawled up, but not fast.

“Is it going to take off?” Diana yelled over the squall of the engine.

“I have no idea!”

CHAPTER TWENTY-FOUR

The drag of the sand slowed them down, and they kept trundling along, hitting cacti and slamming into tumbleweeds until it seemed as if they were going to go all the way to the Pacific without leaving the ground.

“Make it take off!”

“I’m trying!”

He watched the speed creep up to fifty-five knots, then sixty, then hang there, remaining maddeningly fifteen knots under rotation speed.

Without warning, the ground was gone, and he realized how this airport worked, which was really, really badly.

“What’s happening?”

“We just taxied over a cliff.”

“Oh God!”

“I agree.”

The stall horn started bleating. His only choice was to drop the nose into absolute darkness and hope that the ground was farther away than he thought.

“What’s going on now?”

“We’re either gonna die or we aren’t.”

The airspeed indicator shot up to sixty-five and he felt the wings begin to bite. At seventy, the stall horn stopped. At seventy-five, he pulled the stick back, rotating nicely into a clear night sky.

“We’ve lived,” he shouted to her over the rising blare of the engine.

“Barely.”

“That would be true.”

He’d taken off into the west and climbed to two thousand feet while getting the feel of the airplane. It had been a long time and he was more than unsure of himself. Worried that he might become disoriented, he kept his eyes on the instruments, not even glancing out the windshield. At least, at this hour and in this place, his chances of colliding with another airplane were too small to calculate.

He kept climbing, heading west. Eastward there were mountains, and he wanted plenty of altitude before he approached them.

At five thousand feet, he commenced a slow turn. Any higher, and he risked running into a monitored airway. He didn’t have any idea of what the established flight paths might be, or where they were. He didn’t want to blunder into approaches to larger airports, maybe at Bullhead City or Lake Havasu City.

“Where are we? Why do we keep turning?”

“We’re heading into mountains. I’m gaining altitude.”

“Dear God.”

“You’re a worse flyer than me.”

He was actually relaxing a little, at least for the moment. Unless their pursuers were able to track them personally, this was going to prove a decisive blow to them. It wasn’t as good as getting behind them, but at least when he landed this airplane, he would know that they had lost him.

The Garmin showed the highest peaks below them at thirty-five hundred feet, so they were safe here, and safe, also, from the DEA, the Border Patrol, and Homeland Security. DEA was interested in night flights by small aircraft, but their primary concerns were movement northward from the Mexican border and low-altitude flight.

“Do we know if we’re dealing with any exotic technology?”

“We know so little, Flynn. Almost nothing. For example, why did they send only one cop, and what are his capabilities? His limitations?”

“One limitation we know.”

“What?”

“He got his ass killed.”

She turned to the window. “I’ve thought that he might be the only good guy. Their Dalai Lama or whatever. And the rest of them are all ... Christ, I don’t even want to think about it.”

He hoped that she wasn’t going to add a morale problem to her difficulties with field skills. Low morale was as lethal as a gun.

The tiny cabin shuddered, the engine howled, blue flames glowed in the exhausts. He kept them at cruise, a steady hundred and forty miles an hour. Two hours out, they were north of Seligman, Arizona, and he was not liking the feel of the air. To maintain his heading, he was having to crab the plane northward more and more. The wind was picking up. Worse, there was continuous lightning on the northern horizon, and it was getting more distinct.

The plane bucked like a frightened horse, the creaking of the airframe audible even above the engine and wind noise.

Diana was now slumped forward. Flynn knew what her problem was, but he didn’t see any airsickness bags.

“If you can, feel in the seat pocket behind you. There might be a bag back there.”

She did it and found one, and none too soon. In seconds, she was heaving into it. He opened the vents and cold air poured in, a mix of the scents of exhaust and desert night.

The heavy weather was bearing down on them fast, but he couldn’t turn south, not and expect to thread through the higher mountains around Flagstaff. He needed to stay between Flagstaff and the Grand Canyon, basically, or he was going to crash this airplane.

“There’s a light,” she said. “Below us.”

“What kind of a light? Is it moving?”

“Steady. Not a strobe. Moving, yes. Getting bigger. I think it’s coming up.”

He doused his running lights, then dimmed the cockpit as deeply as he dared. At a minimum, he needed his artificial horizon and his compass.

“Where is it now?”

“Gone. It went out.”

“Went out? What’s that supposed to mean?”

“That it is *gone*, as in disappeared. Jesus Christ, why do I have to spell everything out?”

He pushed back a flare of anger. They were getting on each other’s nerves. “Let’s not fight,” he said.

“This is a goddamn nightmare!”

He flew on. There was nothing else to do.

When the light didn’t reappear and nothing else happened, he restored his instrument lighting but left the running lights off. They’d been in the air now for two hours, and he had another three hours of fuel left. Like so many of these drug wagons, this plane had been modified to fit larger tanks.

“We can make El Paso,” he said. “We’ll land at Sunrise Airport. I’ve flown in there.”

“We can’t rent a car without identifying ourselves.”

“That’s not the plan.”

“I don’t want to steal another one. It’s too risky.”

“That’s not the plan, either.”

“So we buy?”

“We can’t buy.”

“Then what? I don’t get it.”

He said nothing.

The storm now behind them, they flew into a gradually spreading dawn,

and he was relieved to finally see the horizon. As the plane began to feel like a more solid platform in the sky, the sense of disorientation that had dogged him from the moment he'd taken off faded.

The light that Diana had seen coming up was also gone. What it might have been they would never know. The sky is a big place.

The landing at Sunrise was surprisingly easy. He squawked their approach and got immediate clearance. They hit the runway with a single bounce, then Flynn throttled back.

"That worked well," Diana said. She sounded ready to kiss the ground.

"The Cessna is a forgiving airplane."

He pulled out one of the disposable cell phones and dialed a number.

"Hey, Miguel." He shifted into Spanish. Diana's face immediately reflected the predictable suspicion. "*Compadre*, I'm at Sunrise and I've got an airplane somebody on the West Coast probably wants back. It's on the apron in front of the old Bellanca hangar. The bogus on it is NT273, it's a Skyhawk."

"What're you up to? I thought you quit the cops."

"I did. Private enterprise now."

"Anything there for me?"

"An airplane."

Diana interrupted. "What are you saying? What's going on?"

He closed the phone, pulled out the battery and the chip, and crushed it between his hands. "A friend's going to pick us up," he said.

"That's off the reservation, damnit. *Way* off. And you know it."

"Nothing's off the reservation anymore. He will pick us up, he will take care of the plane, he will get us where we need to go."

"You can't have involved the El Paso police."

"No police."

"Then—oh, Christ, not a gangbanger?"

"He's honest. A good guy."

“You’ve tangled us up with the drug trade. Flynn, this is not a direction for us.” She opened her door. “Come on, we need to get out of here.”

He climbed out, also. They needed to get away from the plane anyway. The way it had been hidden, it could well be on some DEA list.

“Miguel and I went to grade school together. When we were six, he beat me to a pulp. Put me in the hospital. Last year, he did ten years on a case I worked. We’re good friends.”

“He did ten years last year?”

“He blew his way out.”

“Good Christ!”

“Not with explosives.”

“But he’s an escaped convict. You can’t get an escaped convict involved in this.”

They walked into the lobby. Flynn eyed the sandwich machine. He was definitely hungry.

“He got off for good behavior.”

“Who shaves nine years off a ten-year sentence for good behavior?”

“It was very good behavior. I thought you’d be comfortable with an ex-con.”

“Don’t throw that in my face, okay? I wasn’t guilty.”

“Neither was Miguel.” He put some money in the machine and got a ham and cheese sandwich. “Avoid the pimento,” he said.

“No food,” she muttered. “Later.”

“That’s right. Sorry.”

Miguel had gained so much weight that the only reason Flynn recognized him when he finally ambled in was that there was nobody else coming through the doors this early in the morning.

“Hey, buddy.”

“Thanks for the plane, man. That’s gonna be some useful hardware.”

“No problem. You better get a paint job on it, though, I think it’s probably

on the list. Not to mention its former owner.”

“You movin’ stuff? You on the sweet side of the law at last?”

“I’m still honest.”

“The plane tagged?”

“Don’t know. Could be.”

“We’ll find anything like that.”

“I need clean transportation. Car or truck.”

“I got a Range Rover, good VIN, good plates, not a problem.”

“Done, let’s go get it. We’re on a schedule.”

He gave Diana a long look. “Man, I’d like to see her work a pole.”

“You would.”

“The truck’s gonna set you back. Not much.”

“Yeah, it’s gonna set me back one airplane.”

“You come in here with a hot airplane and expect a clean truck in return?

Man, that ain’t right.”

“Neither is dealing in stolen goods.”

“You aren’t a cop anymore. You tell me that, it’s gonna stand up in court. I know the law.”

“Eddie is still a cop, and Eddie still doesn’t care for your ass.”

The negotiation was starting to take too long, but Flynn could not betray his urgency. He just wished he believed that he could get away from their opponent, but he did not believe that. Maybe they were out of his gunsights right now, but he doubted that it would last.

Finally, Miguel said, “The plane is a good trade.”

They headed for his house, where the Rover waited. Diana was silent, furious at Flynn for letting an outsider so close.

Flynn wondered how long it would be before the perp and his friends showed up in Miguel’s life, and extracted from him every tiny bit of information he possessed.

“Where you goin’? Or should I ask?”

“See Mac.”

“Mac? Ain’t nobody shot him yet?”

“Mac dances too fast.”

“Where’s he keepin’ himself these days?”

Flynn laughed. “That I’m not gonna tell you. The plane is worth four times the truck. That’s enough for one day.”

“I wouldn’t sell Mac. Mac’s my friend.”

“Everybody’s your friend, Miguel. That’s why you have no friends.”

Twenty minutes later, they were heading out of El Paso in the Rover. Across the Rio Grande stood the dirty hills of Juarez, a most dangerous city, but bright in the light of dawn.

Flynn thought it would be nice to be in Juarez right now, hiding in a small hotel somewhere, deep in the city’s maze of streets.

Even there, though, it would just be a question of time, wouldn’t it? From now on, it would always just be a question of time.

“Who’s Mac?” Diana asked.

“MacAdoo Terrell. The worst person I know and one of my oldest friends. Maybe the worst person in Texas, which is saying a fair amount.”

“MacAdoo Terrell and Errol Carroll?”

“Mac and Flynn. Our parents died before we were old enough to kill them. At least Eddie got a decent name. He was the third member of our gang.”

“And why are we going to see the worst person in Texas?”

“Because we need a friend.”

CHAPTER TWENTY-FIVE

Where the Rover had come from, Flynn hoped he would never know. It had the feel of death about it. Why he knew that, he couldn't really say, but he knew it. It was his cop sense, he supposed, which had been in overdrive for a while now.

They were a few miles west of the little town of Iraan, pronounced Eerie-Ann in West Texan.

"We'll turn north on Three Forty-Nine," Flynn said. "Mac's got fifteen thousand acres of hell and good hunting up there."

"What's so bad about this guy?"

"What isn't? He won't show himself right away, incidentally. When he does, it'll be a near thing for me. He's got any number of reasons to want me dead, and we don't have enough money on us to do more than get him to think about changing his mind."

"A lot of people don't like you, Flynn. Casinos. Your boss."

"Eddie Parker? We grew up together."

"Well, he seemed pretty sour on you. Why does this guy hate you?"

"First off, Eddie has been pretty sour since we were about five. Second, I put Mac's brother on death row."

"And he can't blow his way out?"

"Not so far."

“It strikes me as foolish to expose ourselves to more danger than we’re already in.”

He turned onto Mac’s road. It went back three miles, and it rode like it hadn’t been spread with gravel in a good long while.

“Shouldn’t we get our guns ready? Mine’s in my backpack.”

“I know where your gun is.” He took his out of its shoulder holster and laid it carefully in a cup holder. “They won’t do us any good.”

“I just do not see why we’d come to some criminal lair or hideout or whatever it is.”

Flynn saw Mac’s shack huddled down in its draw, a ramshackle mess but topped by a very large, very clean American flag.

“See that? That’s why.”

She shook her head. “A crook wrapped in a flag is still a crook.”

He knew that Mac would already have the truck in the sights of one of his superb rifles.

“There are gonna be dogs,” he said. “Don’t get out until Mac calls them off. They’ll tear you to pieces.” He pulled a little closer to the shack and the dogs immediately swarmed out from under it. They were Mac’s own special breed, Weimaraner–Pit Bull mixes. Loyal, fast, lethal. If a bullet was going to stop one—and that was the only thing that could—then it was going to have to be well placed. Their wide heads, huge jaws, and yellow-gold Weimaraner eyes made them look the part of the hell-hounds that they were.

As soon as the truck stopped, they swarmed onto the hood and began clawing at the windshield and leaping against the doors and windows.

“My God, Flynn!”

“Just stay cool. They can’t get in.”

“How do you know that?”

“Armor glass. It’ll take two or three blasts from a ten-gauge shotgun to knock out one of these windows. Dog teeth can’t do it.”

Mac was on the porch, standing back in the shadows, so still he was hard

to see. He had the same ability to remain motionless that his brother did, and his father had in his time.

Slowly, his cupped fist went up to his lips. In it, Flynn could see something silver. “He’s using his dog whistle.”

An instant later, the dogs scurried back under the porch. Flynn rolled down his window.

“Hey, Mac.”

Mac walked toward the truck. “You got a shit of a lotta nerve comin’ out here, Carroll.”

“I need some help.”

“Oh, well, good. Allow me to accommodate you. Who’s my rape victim?” He leaned into the window and said to Diana, “After I blow this shitbag’s head off, we’re gonna party.”

“I didn’t drop the big one on Weezy,” Flynn said. “The jury did that.”

“You put him in the same courtroom with them. Chained to the fucking wall.”

“Your brother is obstreperous.”

“You want a cup of coffee, come on in.”

As they entered the shack, which was all gray boards, split shingles, and tin on the outside, a luxurious bachelor pad unfolded. The ample living room was paneled with exotic woods, a collection of stag, lion, rhino, and elk heads decorated the walls, and a brilliant black and yellow tiger skin lay before the big stone fireplace.

“Well, asshole, you came at the right time,” Mac said. “Cissy!”

Flynn held in his shock as Cissy Greene, Governor Greene’s oldest daughter, came sliding out of the kitchen. Cissy was not underage, not quite, and she was as ripe as a woman ever can get, her curves flrid, her face glowing, her lips beckoning moistly. How in the world this very bad man had hooked up with her he could hardly imagine, but here she was, big as life and a lot prettier than her pictures.

“Cissy, this here is Asshole Flynn and his boyfriend. What’s your name, son?”

It was cruel and it wasn’t true, but Diana went red. “I’m actually a woman,” she muttered. “My name is Diana.”

“Oh, the goddess Diana herself, my goodness, I am honored! No wonder you appear so ferocious. Meet Actaeon up there.” He gestured toward the magnificent stag head.

“I thought I had him torn apart by his own dogs,” Diana snarled.

“Hell no! He lived through that and came to Texas. Where else? I got that sucker from one mile. *One mile*, girl! Not my best shot, but decent.” He smiled. “The reason you-all are lucky is that Cissy here is a terrific coffeemaker. Just drop the grounds in her mouth, pour in boiling water and make her gargle. Personally, I can pack a bullet a lot better than I can make a cup of java.”

He gestured at them to sit, and Flynn and Diana dropped down onto the magnificently soft leather couch. It was light tan, and Flynn thought better of asking him what it was made of. The Nazis had done lampshades and gloves. Mexican drug lords were way past that.

“Is that a tattoo,” Diana asked, fingering a faint shadow in the surface of one of the couch pillows.

“Guy was a bandito. Low-grad South Texas bangers. Assholes.”

Diana jumped to her feet.

Mac directed a frank gaze at her. Flynn could see that he was taking in her beauty. “If I saw you naked, would you have me torn apart by my own dogs?”

“I’d whip your sorry ass myself.”

“Oh! Upon my word, Flynn my love, I see the attraction now. Coffeemaker can’t keep me in line, but I’ll bet goddess here keeps your ass good and red.”

“Mac, we’re not on a social visit. You’re the best gun I’ve ever known,

and the only person I know who's hunted tiger. I have a job for you."

"And if I do it, you'll get Weezy a reprieve?"

"No can do. You'll get a hell of a tiger skin, though. Better than this scrawny tourist rug."

"'No can do?' You worthless sack a shit. Sometimes I really wonder why I bother. I'm too damn affable, that's my problem. So I'm tellin' you right back, 'no can do.' But I am curious. Since we aren't in India or Siberia, what tiger?"

"We'll get to that."

"Not today we won't. 'Cause you just decided to get the fuck out of my house."

"Let me ask you this. Are you a patriot?"

"Shit, I knew that was gonna come up! Goddamnit, every cop who comes out here pulls that same card out of his hip pocket. Dubya has hunted this sliver of mine, my friend. A saint who got his ass handed to him by the negro."

"This will be the most patriotic thing you have ever done, Mac. Because what is at stake here is America. Our land and our people as we are now. So, if that matters to you, now is the time to face the fact that Weezy killed all those nuns because he's a total wacko and is best left to his fate."

"Is that it?"

"That's it. That's my play. Except I know why you've latched onto Cissy Greene. Obviously."

"Your boy has got fine card moves," he said to Diana. "He won a lotta money out here at poker, before civilization set in. Jesus God, you put Mexicans in the sheriff's office and whaddya get. Screwed is what!" He gave Flynn a long, sad look. Flynn knew that he was thinking about his poker game. When a wealthy rube sat down at his hallowed table, he soon discovered that he couldn't get up until he lost. Then he was kicked on the ass and told to go home.

“You want some Blue Label?” he continued. “I got a coupla cases I could let you have. Finest scotch in the world.”

“Why offer me a bribe now?”

“Not a bribe. Sealin’ a deal. I feel good, ’cause I’m gonna do good. Although savin’ America and shootin’ a tiger surely can’t be played outa the same deck of cards.”

“The tiger’s just a first step. We have to get past it to get to what I really want.”

“Okay, mister police, so your idea is I start by killin’ an endangered species. Then what? Weezy leave some nuns behind?”

“You did it, didn’t you? Weezy’s taking a fall for you.”

The convent had been on land wanted by Reich Development. The Sisters of Mercy would not sell, and it was soon being rumored that Reich had put a bounty on them. At the time, Eddie had thought Manny the Torch was going to be coming over from Dallas, so that was who the department was watching for. Then Weezy had showed up and blown them all to kingdom come. He’d imploded the building, and very professionally.

Because he’d come across as a nut case, the suspicion that it was a contract killing had never been followed up. In the State of Texas, though, nobody could be crazy enough not to get the needle for detonating nuns.

As always with Mac, the waters ran deeper than they appeared. To understand him, you had to read the eddies and whirlpools.

His face, previously throwing off smiles like confetti, had grown careful, the lines around the eyes tightening. His physical stillness had also returned, and Flynn knew that this could still go south real fast. Way south. He thought about his gun out in the car. He imagined Diana trapped under this monster while Cissy squealed and hit at him with her curling iron.

“You’re a clever man, Flynn Carroll, I’ll give you that. Now what more do I have to do?”

So he was going to let it pass—for the while, anyway. “We’re gonna have

to go on the hunt of a lifetime, you and me. At some point, we will be tracking the most incredible tiger on the planet. Not a half-starved tourist tiger concerned only about its mange. Eighteen feet of pure Siberian fury, and as smart as we are. At least.”

Mac’s mouth had dropped open. His eyes went kind of glazed. He said, “If you weren’t the straightest shooting cop in Texas, I’d tell you to your face that you’d lost your mind.”

“The tiger is only the front door. Behind that door is hell, Mac. The real thing. Might as well be.”

“We’re gonna be tying a knot in the devil’s tail?”

“In a manner of speaking.”

“So what’s our next step, Detective Carroll?”

“Me and Diana, we’re in danger.”

“I don’t like this, Mackie!” Cissy shriled.

“Send her home, Mac, she doesn’t need to be here.”

“She can’t go home. Her daddy got caught in bed with the damn secretary of state again and the missus has cleared out of the Governor’s Mansion.”

The secretary of state was Charles Forte. A guy. “Well,” Flynn said, “boys will be boys. But at some point, we will have to go places where Cissy cannot follow.”

“She shoots pretty good.”

“I can outshoot you,” she said, her baby fat wobbling prettily.

Flynn would get back to that later. “We need to use your computers now, Mac.”

“My computers are off limits to the po-lice.”

“They’re also unhackable. The most anonymous damn computers I’ve ever encountered. Everything proof.”

“This I gotta see,” Diana muttered.

“You’re not gonna see much, son.”

“Quit calling me that!”

“I can let you open a browser. Nothing else.”

Flynn knew that Mac’s computers were vitally important to a big part of his business. The Texas Rangers had discovered that they were connected to a server farm he owned in Thailand, and were probably responsible for sending out billions of spam emails a day. His hackers in the Philippines used the system to do a brisk trade in government secrets, stealing from one country to sell to another. But never America, not Mac’s beloved America. Or probably not.

His favorite scam, though, was to wait until a big shipment of drugs was moving up through the region, then tip off the DEA for a reward. His going rate was ten percent of street value. It was a perfectly legal business, but risky—which was where the guns came in. As often as not, the DEA guys found all the mules and guards involved with the shipment dead, shot from a distance with a high-powered rifle.

“This is interesting,” Diana said, calling to Flynn from the computer room. She had begun to work, with Mac hanging over her like a morbidly fascinated vulture.

Flynn went in. “Where’s Cissy got to?” He didn’t like these people where he couldn’t see them.

“Coffeemaker’s making coffee,” Diana said.

“I have no secrets from my lover,” Mac said.

“Yeah, you do. Among them that she’s a hostage.”

“She can walk outa here anytime she wants.”

“She’s gonna walk into Iraan? Thirty miles? Cissy’s in your clutches so you can get a pardon for Weezy, am I right? Does she know she’s a hostage?”

“Maybe, but she doesn’t care. In fact, she starts coming as soon as the big bad evildoer just brushes past the subject of sex. She’s your classic con hag, rich, bored, and hot as oatmeal. There was a bunch of Tri-Delts out here from UT trying to outhunt their boyfriends. I cut her outa the herd.”

“There’s a Jay Elder on the board of directors of the Texas Animal Rescue League,” Diana said.

“Could be a hit. This is the place near Austin?”

She was silent, working. “Jay Elder is an attorney, in practice twenty-three years. He’s got property around Lake Travis west of Austin. He’s also got a Louis C. Morris on his client list.” She tapped a few more keys. “Interesting.”

“A Louis Charleton Morris died thirty-seven years ago. An infant. So we know that our guy is wearing an alias, and he’s fortyish. Fits the picture.”

“Man, you are good with those suckers,” Mac said, “whatever the hell you’re doing.”

“I am good, son,” Diana replied. She clicked a couple more keys, and paper came out of the printer. “Jay Elder, Louis Morris, the animal group, and a satellite view of the facility.”

“I’d pay for your services,” Mac said. “A lot.”

“They’d cost more than you have. Whatever you have.” She turned off the laptop, then turned it over and examined the base. In a moment, she had a black oblong object in her hand. She swung it high overhead and smashed it to bits on the desk. Gouges of mahogany flew.

“Hey hey HEY, what the hell? What the hell did you just do?”

“Nonsecured computer used in a classified operation. Hard disk has to be destroyed. Legal thing, son. Sorry.”

“Damn you!” He came at her.

Flynn saw that the rage in his eyes was damn serious, and he stepped between them. “Hold off! Just hold off!”

Mac stopped, but that was going to last maybe five seconds.

“Jesus, Diana!” Flynn said.

“He’s got a backup system.”

“It doesn’t fucking work!” he shouted.

“I fixed it. All of your stuff is on it, none of mine. If I’d left traces, you’d draw federal interest. You don’t want that.”

“Anybody ever gets me, it ain’t gonna be a fed.”

“It’d be a drone strike.” She took out her credential. “Ever seen one of these?”

Mac looked at it. Now he shifted his eyes back to Flynn. “What kinda crowd are you running with, buddy?”

“It’s a long story. Suffice to say, if you help us, there will be credit earned. Significant credit.”

“Flynn, if it don’t involve saving Weezy’s life, it don’t mean a thing to me. That’s my little brother, man!”

“Don’t keep hitting me with that, you’ve got the governor’s daughter strapped into your guillotine and we both know why. Weezy will not take the needle.”

“As long as she stays by my side. But since when does a twenty-year-old do anything for more than a couple of long farts? Soon’s I run outa horse, she’s gone.”

“Mac, don’t reveal a crime to me.”

Mac spread his hands. “So, okay, let’s go tiger hunting.”

CHAPTER TWENTY-SIX

They'd taken a suite at the Four Seasons in Austin on Mac's dime. They were using one of his laptops and any calls were made over one of his cell phones. His security was the best.

Mac and Cissy had ordered up champagne and caviar, fried wontons, Snickers bars, the list was long. She was pleading to invite friends, and Flynn thought it wise to let that happen. With them would come grass and crack and X and coke, and for Cissy a useful oblivion. In anticipation of the fact that they would be separated, a friend of Mac's, Giorgio Budd, had appeared.

Cissy and Giorgio bickered in the living room. He was a masseur, but she didn't want a massage. Flynn could hear them from the bedroom he and Diana had made into an office.

"So come on," Giorgio wheedled. "I can do it through your clothes, it's nice. Daddy no see."

"Yeah, but daddy touch."

"No, no, no boobies, baby. Just let daddy do his thing."

She yelled, "You're too icky, okay! It'd be like being touched by the Pillsbury Dough Boy, get it? You need to meet my dad. He'd love you."

"He's a stinkin' Republican. I don't massage no stinkin' Republican."

"You could bite off his dick. You'll get the chance."

Mac sat in the window of the bedroom they'd made into an office.

Flynn said to him, "That's going well."

"If she bolts, Giorgio has orders to tie her up and stick her in a closet."

"Don't tell me these things, damnit!"

Mac's window overlooked the Colorado River and a sunny view of South Austin beyond. "I got a bad feeling," he said. "I had a good feeling. Now I got a bad one."

"It's gonna be a piece of cake."

"No, Flynn, it isn't."

Mac had good instincts, there was no question about that. Excellent. Flynn had not told him of the casualties so far, and he wondered why not. He should warn the guy, obviously. And yet he didn't.

He liked Mac, who was, as he claimed, an affable man. But he was also an extraordinary engine of human suffering. That's what crime is—the infliction of human suffering for financial or other gain. God only knew how many lives Mac's scams ruined in a week, not to mention his more murderous activities. Of course the DEA and the Rangers let the shooting of drug mules and cartel gunmen happen. Scumbags killing scumbags, nice and convenient.

"I've got the whole area mapped out," Diana said, "from the Animal Rescue to Jay Elder's ranch compound near Lake Travis. There's a house, a barn, a couple of outbuildings, a dog run and kennel. Active."

"What took you so long?" Mac asked. "You coulda gotten that off Google Earth an hour ago. We need to get out there, get a feel for the land."

"Mapped to three feet, in real time," she continued. "Google Earth doesn't do that."

"You guys can recognize faces from space, can't you? Read license plates?"

"Very yesterday, but yes."

"What can you do now? Read minds?"

"Classified."

"Cool word, son. Must make you feel important as hell."

It was already pushing seven, and the sun was starting to set.

“There’s something strange,” Diana said abruptly.

On the screen of the laptop she was using was a wilderness area. Right in the middle of it was what appeared to be a small village, made of logs and expertly camouflaged.

“It’s in the middle of a wildlife preserve. Strange place for a village.”

“Any signs of life?”

“I can’t be sure. There are paths, obviously.”

“What the hell does this have to do with the price of bread?” Mac asked.

Diana said, “It’s two miles from Jay Elder’s ranch house. And look at the buildings—there’s been an effort to camouflage them. Quite skillful. You wouldn’t see this for what it was on a Google satellite map. And as for Google Earth, their trucks stick to roads.”

Mac peered at it. “Boy, I can even see individual branches in that camouflage. From way up there.”

“Mac, we can determine your rate of hair loss by watching your bald spot. Face it, if you weren’t useful, the feds would’ve crushed you like a bug a long time ago.”

“You’d be surprised at how good I am.”

“They’re better. Now, let me see. I can switch to another lens—here we go.”

The image changed to infrared. Nobody had to ask about the change. Both Flynn and Mac knew infrared very well.

“Hm,” Diana said. “No obvious heat signatures. Flock of deer, eleven does and a buck, about half a mile away. That glowing dot is probably a buzzard looking for supper. Nothing dead, though, not big enough to spot, anyway.”

“Corpses are cold,” Mac said.

“Rot is hot, son. This system is sensitive enough to pick up the heat of decay.”

Flynn said, “Maybe it’s an old hippie place. Commune. Austin was a

major stop on the Hippie Highway.”

“Old paths would be more vague. These are sharply drawn. People use this, but I don’t think they’re there now. And they don’t have pets. No sign of any dogs or cats.”

“You wouldn’t happen to be able to spot a tiger with that thing, would you?” Mac asked.

“I would but I haven’t.”

“Shit, then, what am I supposed to hunt?”

“You don’t understand,” Flynn said. “The tiger isn’t where it’s supposed to be, penned at the Animal Rescue League. It’s the only Siberian tiger presently missing in the United States. It’s called Snow Mountain, it’s seven years old and it has had a number of legitimate exhibitor owners, specifically two zoos and a circus. Apparently it was sold along because it ate a hell of a lot. It’s about forty percent larger than what’s normal for the breed. It was collected by the Texas Fish and Wildlife from an abusive situation, so the record says. Of course, records lie.”

“And it’s here in Texas—specifically near Lake Travis? Or not?”

Diana said, “Jay Elders is here because he was at his law firm yesterday. But he’s just back, interestingly enough, from Vegas.”

“How do you find things like that out?”

“Classified, son.”

“Quit that, okay? I’m sorry I insulted you. Son.”

“You are sorry, son, I agree there. Now, take a look at the Elders place. Tell me what you think.” She shifted to another image, this one of a ranch house in a small compound of buildings. There were three trucks parked near the house, two of them Cadillac Escalades, and the third a van with blackened windows. The van’s side door was open, and it was possible—just—to see a bit of the interior.

“There aren’t any rear seats,” Flynn said.

“Nope, and look closely.” She blew the image up to a blur. “Isn’t that a

barrier behind the front seats, like the kind you see in taxis? See that white there, across the top—you can just see the dashboard beyond it, so that's clear. But below, it's a featureless blackness. If you were transporting a large animal, you might use a van like that, especially if it had a touchy disposition."

"He's touchy all right," Flynn said. But then he remembered the expression on the cat's face in the storm drain, almost—was it kindness? A sort of kindness? "Touchy and complicated."

"I have two images here. The van pulled up. Then this one, the van with the rear door opened. About seventy seconds between them. I'm hoping we can find some residual heat in the second image."

Mac said, "Do the DEA boys have access to stuff like this?"

"Classified."

"I think I might retire," Mac said.

"Don't do that, Mac," Flynn said, "you'll kill my dream."

"Which is?"

"Collar of a lifetime."

"Fuck you, Flynn."

"Double back."

They both chuckled, remembering their young days in the streets of Menard, getting up to no good together. "Fuck you" and "double back" was essential dialogue of their youth.

When they were ten, they'd been like three brothers, him and Mac and Eddie.

"Too long, Buddy," he said.

From the living room came a peal of female laughter. "She's discovered that Giorgio's a eunuch," Mac commented.

"Oh, come on," Diana said. "There are no eunuchs."

"He was cut by a sultan so he could be trusted to massage the ladies of the harem."

“Holy shit, who would consent to that?”

“I don’t think that ‘no’ was an available answer. He made some money, though.” Cissy laughed again, wonder in her voice. “When he can’t get what he wants, which is to touch their beautiful bodies, he does show and tell. Works the pity angle. She’ll be on his table shortly.”

“Guys, this has processed up nicely.”

Flynn saw the same image on the screen, except this time there were a few extra blurs. “What are we looking at here?”

She pointed to a ghostly smear. “That’s a man. The computer’s telling me he’s six two and fairly heavy. Likely a real bruiser. Now, here’s the interesting one. Right there by the open door. The computer doesn’t know what that is, but it’s definitely a valid infrared signature. A minute or so before this photo was taken, something warm moved through that space.”

“They just let a damn tiger out to roam the effing night?” Mac asked.

“Looks like it,” Diana said.

“It can’t be smart enough to risk that. What if it eats a kid?”

“It’ll go out and take a deer, be my guess. Stay out of sight, come home at dawn.”

“Damn hard to credit.”

“Mac, this hunt is gonna be the challenge of your life.”

Mac smiled, just a little, deep in his face. “You know, I think I’m gonna take my nice warm girl into the master and get myself prepped.”

“Don’t drink anything more. Don’t get fatigued.”

“First off, I’ve only had three bottles of that flat-assed Dom Perignon they sent up. Plus sex before a hunt helps my concentration.” He went off into the living room. “Girl! Get offa that thing, you’re gonna get your ass laid right now.” A moment’s silence, then, “Come on, little man, you can quarterback.”

Chrissy, Mac, and Giorgio went into the bedroom, and soon what they used to call “sounds of revelry” in Flynn’s frat house at UT were heard. He wished he had Mac’s courage to still live as a boy, but he could never be as

careless with lives—his own and others—as Mac was.

“Would you please go close that door?” Diana asked him.

Fine by him. Envyng Mac’s kind of freedom wasn’t healthy.

“I’ve picked up a couple more traces,” Diana said when he came back. “Here—” She pointed to what looked to Flynn like a slight white discoloration in the image. “And again.” The next discoloration was even fainter. “It was moving south-southeast.” She looked up from her work. “Flynn, I think the damn thing is on patrol around that house.”

“Ideal for Mac. If it’s following a set pattern, he’ll figure that out. The man could track a ghost in a snowstorm.”

“That’s going to work both ways.”

“There’ll be two of us, and neither one’s going to do what Snow Mountain expects, which is to assume he’s dumb.” He paused. “Diana, do you know anything about combining human and animal genes? Would that be the reason the damn thing is so smart?”

“You have to assume so. Or maybe it’s a mix of ours, tiger, and who knows what? Think about it. If they could be from anywhere, they could *bring* anything.”

“I’m wanting to give Mac some idea of what to expect. He understands that this is a real smart tiger, but how smart he doesn’t understand.”

“If he gets eaten, I have to tell you, I don’t personally have a problem with that. But that’s just me, of course.”

“Friend of my youth. Plus, I see a future for him on our new team.”

“How could he possibly survive a security check?”

Flynn said nothing.

The sun was well down now, the lights of the city glowing, the river a black ribbon. Flynn could even see a few stars, but that wouldn’t last. The moon was rising in the east, full and fat, a big Texas moon.

He began methodically assembling his equipment, his own personal night-vision lenses, his new pistol—one of Mac’s .357 Magnums—and his other

essentials, a handheld GPS, a backup compass.

She slid his MindRay into the backpack.

“No.”

“You were using it under pressure in adverse field conditions.”

“All field conditions are adverse.”

“We can’t leave this thing in a hotel room.”

That stopped him. Surely she didn’t expect to come with them. “Diana—”

“I know what you’re about to say, and don’t even think about it. You absolutely need me in the area.”

“No.”

“I can operate a command post in the car. I’ll be looking at satellite data as you work.”

“Do it from here. We both have cell phones.”

“It’s too much of a risk and you know it. You’ll be lucky to have an hour before they detect you. Maybe less. If cell phone calls are popping out there, way less.”

He couldn’t deny the truth of that, nor the fact that the information she could provide would be extremely valuable, even essential.

“We can use the same radios we used in Montana. I’ve got yours, mine, and Mike’s in my backpack. They are low power and the encryption technology makes them sound like backscatter. No scanner in the world will even identify our transmissions as signals.”

“In this world. Maybe we failed in Montana because alien technology was in use against us.”

She was silent for a moment. Then she said, “The value outweighs the risks. If you get detected, I’m going to see them coming. And what if I nail down the location of the tiger? That could happen.”

He looked at her. She glared back at him, the determination and defiance if anything increasing her attraction.

“Good enough,” he said, “let’s get Studley back in his pants and do some

hunting.”

CHAPTER TWENTY-SEVEN

As Flynn and Mac headed off into the thick brush, Flynn looked back at the truck. They'd parked it off the road near a little place called Balcones Springs, where they'd pulled the truck up into a brushy area along a disused road, but one that was high enough to provide the low-power radios a useful platform. Nearby was the Balcones Canyonlands National Wildlife Preserve, as difficult an area to walk as the Texas Hill Country offered. It consisted of nearly forty square miles of steep-sided hills, gnarly ravines, cactus, and cedar. The only nearby water of any significance was in Lake Travis itself.

They were still two miles both from the strange little village and Jay Elder's ranch house, and about equidistant between them.

Flynn touched the "transmit" button on his radio's earpiece. A moment later, there was a brief burst of static, then another. Mac and Diana, acknowledging.

"That satellite stuff has me spooked. How does she gain access?"

"Dunno. It's not a password, that I do know. Something more esoteric."

"What if this guy Elders has access to the same feed?"

"He doesn't."

"You know that?"

"If he did, why would he be doing something as risky as using guard animals—the tiger, for example. Or the dogs."

“I get your drift. It’s just that my bad feeling is getting worse, man.” He looked down at his GPS. “The last place she picked up the tiger was eighteen hundred yards due north.” He put the GPS in his pocket.

“Best turn it off.”

“It goes off by itself.”

“Until it does, it radiates a signal. Not much of one, but it’s there. I know from experience with what we’re dealing with, we need to be real, real careful about signals.”

“What are we dealing with, Flynn?”

The question lay there, unanswered in the dark between them. “How much have you figured out?”

“That this is some kind of classified government deal. That this animal is really weird. What is it, something that escaped from a lab?”

“Something that was created in one, that we know. Whether it escaped or was sold on or exactly what happened isn’t clear.” He did not tell Mac why they were actually going after the tiger, to get at the extraordinary criminal behind it. It wasn’t that he didn’t want to. He didn’t know how.

They moved through the moonlit hills with the swift precision of men whose lives had unfolded in places like this. The land around Menard was much the same: dry, mean, and hard. It was the sort of land that looked inviting from a distance, but would give you maybe two days if you got lost in it—assuming that you didn’t get snakebit or slip and fall down a bluff. By the third day, you’d be too crazy with thirst and weak from struggling in the terrible land to do anything but stagger until you dropped. Observed from a porch on a high bluff on a summer evening, though, the land smiled like a saint.

“Guys, I have a new trace. A thousand yards north northwest of your position.”

Flynn pressed his transmit button to indicate that they’d heard her.

In flat land, it would have been a possible shot, but not in these cruel little

hills, just high enough and steep enough to tax a strong man.

“We need to split up,” Mac said. “Let’s angle in, maybe five hundred yards apart. First one gets a shot, takes it.”

“Absolutely do not get out of sight of me. *Do not.*”

Mac frowned, shook his head. Beneath the rim of his Stetson, his face was in deep moon shadow.

“Come on, let’s move ahead. You see a shot, take it.”

Separated by fifty yards rather than five hundred, they slipped softly through the moonlight, each man concentrating on his own silence. The north wind grew stronger, hissing in the cedars and sighing in the live oaks, making the autumn grasses dance. There was that note of sadness in it that colors so much of nature. Far to the north, the same clouds that he and Diana had seen from the plane were putting on an electrical display as they rolled across the featureless plains of Texas.

They both carried Weatherby Mark V Deluxe rifles chambered for .300 Weatherby Magnum cartridges. The boat tail spire point bullets they were using were forged in Mac’s own shop, by a master bullet maker called Carlos Gons. Gons’s bullets were famous in West Texas for being the finest that money could buy—assuming you were friendly with Mac, of course.

A skilled sniper could use these rifles and these bullets to shoot extraordinary distances. But not in this terrain and not at night. Here, they were looking to get within three hundred yards of the quarry, and to do that they were going to need to surprise it.

Flynn had considered just going in to the ranch house with some serious ordnance, but he now needed to investigate that village, also, and that was not going to happen until the tiger was gone.

Mac stopped. He pressed his transmit button twice, looking for a report from Diana. A single flutter of static came back: “no joy.”

But Mac still didn’t move. He raised his night vision binoculars to his eyes. With this moonlight, you didn’t need night vision goggles, but the

binoculars were useful for looking into shadows and pulling in distant detail.

There was a sound, then, soft but unmistakable. It was the chuffle of a tiger and it could not be more than fifty feet away—but not in the direction Mac was looking.

They were about to take a hit.

“Back to back.”

“What? Why?”

He said to Mac, “Back to back.”

“What’s going on?”

“It’s here.” He touched his radio. “Diana, it’s within fifty feet of us. Do you see it?”

“I don’t—no ... standby—oh God, Flynn it’s in those cedars to your left. Flynn, it’s going to pounce right now!”

Flynn fought down the impulse to run. Unlike the situation when he’d faced it with the Glock, one of these rifles would bring it down immediately.

“You heard?”

“Oh, yes.” Mac examined the cedar thicket with his binoculars. “Where the hell is it? Ask her again.”

He pressed his transmit button. “We need coordinates.”

“It’s in motion away from your position. Flynn, something about the way it moves causes it to just leave traces. I can hardly track it. But it appears to be going south, toward the lake. Moving fast. Now it’s gone. No—stand by.” A pause. “Lost it.”

“Okay, take a breath. It’s trying to lead us, looks like.”

“Into a trap?”

“Away from the village. Away from the ranch.”

“So we ignore it.”

“If we do that, we fall into whatever trap’s been laid for us.”

“So let’s follow it.”

“Then we fall into a different trap. We’ve been outmaneuvered.”

“Man, I’m hunting a tiger, here, not a damn werewolf.”

He thought he now needed to tell Mac the truth. But how? This was a man who had absolutely no idea about aliens, except for the illegals who worked his and every other ranch in swarms. Employers called them grad students.

Diana had said that the government didn’t actually know what they were. And that was after sixty years of watching them. So how the hell did he explain them to Mac?

Maybe he didn’t. Maybe what he needed to do was to just put Mac where he could do some damage and hope for the best.

“Let’s head for that funny little village,” he said.

“Not the ranch?”

“That’s the head of this snake. I’m looking for the heart shot.”

“Flynn, I’m always looking for the heart shot and the high card. But just before we go charging off, *where the fuck is my tiger?*”

Flynn hit his radio. “Anything?”

A burst of static was her only answer.

“Verbal, please.”

She came back, “It’s well south of you now, probably close to the lake.”

“Then nowhere near the village?”

“No. No way.”

He said to Mac, “We’ll find it at the village.”

“But she said—”

“Come on.” Flynn began moving cautiously forward. Mac stayed close. They went down a long draw, then up onto higher ground, skirting one of the weathered limestone hills.

“What’re we expecting?”

“No idea.”

As they moved slowly ahead, the village came into view, in the form of a number of structures that appeared almost Polynesian in design, low buildings open at both ends, with peaked roofs and elaborately carved lentils.

“What the hell?” Mac muttered.

Diana sent a burst of static, then spoke. “It’s come out of no damn where and it’s heading directly toward you. I’ve got a clear view, it’s running fast. According to the computer, you have three minutes.”

“We could take cover in one of these,” Mac said. “Set up an ambush.”

Flynn went closer to the nearest one. The wood was dark, the carvings were hard to make out in the shadowy moonlight. Wind blew through the thing, which was open at both ends.

He thought maybe that it was an alien village, right here on earth. Was it the only one? Did anybody know? They were just so damn uninformed about the whole thing. Hopefully there was somebody somewhere with good information, because a village—Flynn was no expert, but to him this looked like some part of an invasion.

He risked a light, shining it into the interior.

“Empty, looks like,” Mac said.

They took a step in.

“My God, it stinks in here,” Mac said.

It was a milder version of the smell in Oltisis’s office.

Flynn took another step forward, moving deeper.

“Flynn?”

He turned around.

“Is there something behind me?” Mac asked.

Ten feet behind Mac, right in the center of the village, standing absolutely still, was the tiger. It had taken no more than a minute to get here.

Its eyes were on its prey. As in Montana, the animal had outmaneuvered them. Flynn could not get a shot off at it without hitting Mac, and it was so close to him that it could tear him to pieces before he even finished turning around. On the other hand, the moment the animal jumped onto Mac’s back, Flynn would have a kill shot. So this wasn’t a quite a checkmate for the tiger. It was a double check.

“Mac, come to me.”

“Man, that smell—”

“Nice and easy. Do it now.”

Mac’s eyes became tight steel in the moonlight. His face closed down. As his finger slid over his trigger, he came a step closer. Silently, the tiger shifted, keeping Mac between itself and the gun. What an expert it was. It had thought at least five moves ahead.

Mac took another step, and the tiger remained behind him. But it knew that he could bolt at any second. So could it—and it did, just as Mac entered the structure.

“Where was it?”

Flynn did not answer him. He was watching in astonishment and growing horror as the darkness behind Mac continued to deepen. Silently and in some unknown manner, the apparently doorless opening was closing.

He ran past Mac, but it was already much too late. Where the rear opening had been was the blackness of a wall.

The tiger had not thought five moves ahead or eight, but ten, twenty, maybe more.

What it had done was elegantly lethal. It had coaxed them into a man trap.

CHAPTER TWENTY-EIGHT

Flynn reached up and touched his transmit button. “Diana? Come back.”

Silence.

Mac said, “That thing is smarter than me, Buddy.”

“It’s brilliant.”

“What is it, Flynn? It can’t be a tiger. It just looks like one.”

“I don’t know, Mac. I just don’t know.”

“My flashlight’s dead.”

“Mine, too.”

“And the radios. And my GPS.”

Flynn found his in his pocket and pulled it out. It had been off, but when he pressed the toggle, nothing happened. “Same here.”

None of the electronics worked.

“Goddamnit, what have you gotten me into, man?”

“I thought we could handle this.”

“Well we can’t.”

Suddenly Mac was in his face, his breath full of sour fear. “Flynn, for God’s sake, what in fuck is this about?”

There was nowhere to begin. “What I think is that maybe if we can make our way to the wall, we can get out of here.”

“The fuck, we’re trapped, man!” Mac fired his rifle, the report shattering

in the confined space. He fired it again, straight up, and in the flash Flynn saw him, his eyes glassy, his face a glaring mask of fear. Again he fired, and again Flynn saw him. This time his lips were pulled back, his eyes were glaring almost comically, but there was nothing funny about the transformation—the visible disintegration—of this man.

“*Mac!*”

Again he fired, and this time Flynn saw something behind him, a figure standing with its legs spread and its hands on its hips. Its mouth was an oval complication of spiked teeth.

Not an animal. Not like Oltisis. But not human either ... not quite.

“Cool it!”

Again Mac fired, and this time Flynn saw in the flash that there were figures all around him.

“Shit, they got my damn gun!”

Flynn tightened his grip on his own.

“We’re not gettin’ outa here, man!”

“Stay cool, there’s always a way.”

“Fuck, oh, *fuck!*”

“We’re not done,” Flynn said.

Mac began babbling and weeping. Anybody who gets scared enough reveals an inner asshole, was Flynn’s experience. Mac was no exception.

Slowly, Flynn turned around. Behind them, there had been another door, so maybe it was still possible to get over there.

Porting his rifle, he moved forward. There was the softest of flutters against his cheek. Lurching away, he cried out with surprise.

The rifle was gone from his grasp. Incredibly.

His first thought was to draw the Magnum, which was still under his shoulder. He stopped himself, though. Whoever had taken the rifle would surely take it, too.

“Fuck, they got my Mag, man!”

Flynn didn't respond. He kept his arm tight against his shoulder holster.

There was a book of matches in his pocket, kept there for whatever emergency might require them. Would they still work? He had no idea, he'd been transferring them from pocket to pocket for months. Moving as slowly and quietly as he could, he reached in, felt his keys, some change, and then the matches. Crouching over them, he pushed the cover open, tore one out and struck it. There were sparks, but no light. Again he struck it, and this time it flared, sputtered blue, then caught, a tiny yellow flame.

In the light it gave, which was not much, he saw Mac, now lying on the floor. He was surprisingly close by. "Mac, get your ass up."

There was no response.

"Mac!"

His eyes were open but staring blankly. Flynn recognized this as a state of extreme shock, like a man lying on the roadside beside the twisted ruin of his car.

Just at the edge of the flickering pool of match light, there was movement.

The match went out.

Frantically, he fumbled another one between his fingers, struck it and held it up.

Standing over Mac was one of the creatures. It looked up at him with eyes so large that they were like great, plastic buttons, sky blue and swimming with tragedy.

The match went out. Flynn lit another.

Mac groaned. He lifted himself up on his elbows, he saw what was standing over him and started to roll away, and at once the thing began striking him with a nasty little sap, which caused him to throw up his arms in defense of his face, and to scream a gargled, quickly stifled scream.

Now Flynn did draw the Magnum, holding it in both hands, bracing it in front of him.

Another of the things jumped toward him.

The Magnum was gone, taken with such extraordinary quickness that Flynn had no chance to react. One instant, his hands were hard on the gun, then next they were empty.

He backed away, then he turned and blundered across the small interior space, in the process upending what felt like furniture and causing something to screech in anger—more than one something. In fact, the space seemed to be filled with these beings, five, ten, who knew how many?

This was their home.

He came to the back wall. Feeling along it, he attempted to understand what it was made of. From the outside, the building had looked like nothing more than a loose construction of dried branches. In here, though, it was slick and hard, cool like stone.

He kept feeling along the wall, seeking some kind of hinge or latch or some sort of opening.

Across the room, he could hear Mac screaming, and could hear the screams becoming more and more muffled, as if he was being enclosed in something.

Until he was also helpless, Flynn realized that they intended to contain him, not risk attempting to overpower him.

This told him that, while they were faster, he was stronger. Also, they either didn't want to kill him or didn't have effective weapons of their own.

Understanding that they were treating him like a rampaging animal gave him some room for maneuver. Not a lot, because, just as was true of a cop facing a knife-wielding drunk, there would be conditions that would force them to risk attempting to overpower him.

He mustn't try to fight them. He mustn't be destructive. He continued feeling along the wall, until he came to what seemed to be an intricate mass of twigs and branches woven together.

The Russian boar he caught on his place up in Tom Greene County never understood the trap. But he was human, surely he could understand.

Methodically now, he felt among the twigs. The structure had been wide open at both ends.

Twigs. Wood. He had matches. Could he set it on fire? No, they'd put a stop to that the same way he would if a drunk with a knife started trying to use it.

They were close around him now, but why didn't they get more violent? What were they waiting for?

In one of Mac's gun flashes, he had seen a beam about six feet up, and above it what appeared to be loose thatch. Thinking that he might be able to break out that way, he raised his hands upward and felt for purchase. Holding on with the tips of his fingers and pushing with his feet, he went up the wall faster than he had expected—or than they had, because there was an immediate rush of scurrying below him, and rough, guttural whispering. His fingers throbbed, but he kept climbing until he felt the beam.

Long, peeling cries rose, full of complicated, haunting undertones, like the wind on a winter's night, like somebody crying in the dark hills of childhood, like wolves howling.

What was really going on here? How were these people—or things—connected to Oltisis? Could it be that there were two species of alien on Earth?

He swung out onto the beam, and immediately saw before him two of the creatures. In the next instant, the closer of them leaped at him, screaming and clawing.

As he pulled it off, the second one slammed a sap into the side of his head and he fell from the beam, forcing his arms up to protect his head as he fell. When he hit he rolled and bounded to his feet. One of the creatures was crushed and broken beneath him, writhing and screaming with a warbling banshee madness. Lightning-fast hands grabbed at him.

One after another, he pulled them off, but the pummeling saps kept coming until finally what felt like a sack of iron slammed him in the right

temple.

Then the dark.

CHAPTER TWENTY-NINE

Something hit Flynn in the forehead so hard his eyes flashed. Still, though, he didn't wake up completely. He tried to turn over, but something else scraped his shoulder, preventing him

When he opened his eyes, it didn't help. This was absolute dark. Again he tried to sit up and again he slammed his head.

His lay still. His temple throbbed, his forehead ached, his shoulders were compressed and the air was thick.

Twisting, he raised his left hip until he could free his arm. He felt upward—and encountered a ceiling not even a foot above his face.

So this was no floor he was lying on. He'd thought himself in some sort of tight crib, but this was not a crib. The ceiling could only mean one thing: he was in a box.

For a moment, he was out of control. He kicked, he hammered at the lid, screams burst out of him.

No. Keep your head. Right now, your mind is the only weapon you've got.

This was what Abby had experienced. Steve. All of them.

Poor damn people, above all, poor *Abby*.

He pushed at the top of the thing. No give whatsoever. Steel? Thick wood? What did it matter, he wasn't going to break out, it was far too strong.

Panic hit him again, causing him to start gasping, causing his stomach to

twist against itself and his heart to fly.

No, *no!* You *will* go silent inside. You *will* slow that heart rate. You *will* stop that gasping.

Okay, breathe evenly, let the heart rate drop, focus the mind. No matter how hard it is, do it.

He visualized an open space. Dark but open.

The air was thickening fast but still breathable. So far, no frantic waves of suffocation were overwhelming him. Yet.

Keep the breaths even but shallow, don't move unless absolutely necessary.

All right, let's get our bearings. You're in what appears to be a coffin or a box.

First thing you need to know is, have you been buried alive or are you still aboveground?

He had fallen to the floor, fallen on one of the creatures or aliens or whatever they were.

What he had to do now was change his situation or, if that wasn't possible, face it. If he'd been buried alive, he was going to die here. It wasn't pretty, but he'd damn well died in a good cause. On the other hand, if he was aboveground, maybe there was a way out.

The air was getting very bad very fast. He felt along the join between the lid and the sides of the box. Seamless. Might as well be welded closed, and maybe it was.

Long ago, he had reconciled himself to the idea that death might come to him during the course of his work. But not now, not before he had gotten to the man who had killed Abby.

He inventoried himself for tools. He was still fully dressed, so maybe he still had some of his possessions.

The rifle and the pistol were gone, of course, but he could still feel his wallet. Only by raising his shoulders and wriggling his hips could he manage

to push his hands down into his pockets.

Frantic surges of air hunger coursed up and down his body.

He got his right hand into the pocket, and to his surprise it closed around his pocket knife. It had been with him since high school, and contained a blade, a fingernail file, and a small scissors. As he scrabbled at it, attempting to get it out, he tried to think what he might do with it.

It was then that he noticed that the air hunger was getting less. He was beginning to be able to breathe again.

That could mean one of two things—either his twisting and turning was opening a crack somewhere, or somebody on the outside was introducing oxygen into his air supply. He remembered something about the Chinese doing this during some distant war, perhaps Korea. The objective was to so terrorize the victim that he became open to brainwashing.

If this was torture, then they were out there watching and listening. They had a use for him and needed him to be so broken that he would follow their orders.

So what needed to happen in here to get them to open the lid?

The answer was clear: once they were sure that he had completely lost it, they would bring him out.

He began having trouble breathing again. His mouth opened, he gasped, but he also remained totally still.

Finally a surge of need went through his body that was so intense that it made him kick. His chest heaved, he sucked air through his open mouth. Tormenting urgency swept his body.

He cried out, he slapped the lid, he threw himself from side to side, he wailed.

And the anguish receded a little. His head cleared. He was still breathing frantically, he heart hammering, his chest pumping, but it was getting less.

He forced himself to calm down. So it wasn't that he was opening a crack somewhere in the box by pushing against it. Somebody was indeed out there,

and they were intentionally torturing him.

His breathing was labored now, but no longer terminal.

Once he had completely panicked and completely despaired, he was going to be taken out.

Fine, he would deliver the panic they were looking for. It wouldn't be hard, he was nearly there already. He knew that what at first would be an act would quickly become actual terror, because his screaming would flood his body with adrenaline.

He uttered a groan.

Soon, the air was getting stale again.

Another groan, but this one turned into a scream, and that opened the subconscious gate that he'd been holding closed with all of the inner strength he possessed.

There came boiling up from his dark interior a gigantic, roaring explosion of sound. He hammered, he kicked, he raged, he bellowed.

No escape.

Tears came. He found himself sobbing like a child.

His idea that he was being tortured was a fantasy. There was nobody out there and the coffin was underground. He had been buried alive, and everything else was just rationalization and wishful thinking.

Another scream burst out of him, then another and another and another. He smashed his head against the lid until he was reeling with pain, he clawed and screamed until his nails bled and his voice broke. He collapsed into the suffocated, gasping sobs of a dying man.

He lay, spent but still panting and ever more frantically. He began to float away on a lurching, tormented sea.

Again the cries came, so hysterical that they sounded like somebody else, an unknown version of himself, possessed of vast rage and fear and a hunger for life that was stronger by a factor of a million than the strongest love or terror he had ever consciously known.

His lungs churned, his tongue lolled, his hands began to weaken, and the clawing turned to scrabbling and helpless slapping at the unyielding lid.

There came a ripping sound. Then a click. Then light flooded him and air as pure as dew.

He writhed, he uttered choked sounds from a place in his mind so deep it had no words, he saw only the glare of the light and then, within it, a shape.

The shape focused.

A face stared down at him, softly intent, the eyes as pale as snow. “Hello, Flynn.”

Flynn gasped, frantically sucking air, unable to stop himself. As relief washed through him, he realized that he’d been just moments from death in there. Much closer than he thought.

He recognized the face immediately. But the security camera had lied. The oddly plastic skin and the too-perfect hairline were not a disguise. This was not a human face, but something that had been made to look like one.

“You’re Morris.”

An arm like a piston thrust him back down into the box.

“Yeah,” he said, “you can call me that. It’s a name on a suit, put there to confuse the garbage.” His lips lifted away from his teeth, as if in a smile. “I’ve got an offer for you, and I’ll kill you slow if you don’t do my little job for me. Is that understood?”

Flynn said nothing.

“All right, if that’s the way you want it, fine.” He put his hand on the lid.

“What’s the job?”

“Too late, Flynn. You’re done.” He murmured something to somebody out of sight, but Flynn heard it: “Take him out and bury him.”

With an earsplitting crash, the lid came down.

Flynn hammered at it, he couldn’t stop himself. “Don’t do this! Jesus, let’s talk, come on!”

The box scraped and Flynn felt his weight shifting. He was being moved.

“For God’s sake, give me a chance!”

He had thought that he had been broken. But now he discovered that he had not yet understood what that was.

As they maneuvered the box, he could hear grunting. Who was it? Not the creatures from the village, surely. No, there was a murmured word in Spanish. People, then. Henchmen.

He thought that you could not be more deeply a traitor, than to betray mankind itself.

The box lurched so far to one side that he rolled over, then was hurled back as it hit something with a dull, hard thud.

He’d been slid, then dropped into a grave.

“Listen to me! For God’s sake!”

And what will you do, little man, he asked himself? Will you, also, trade your species for your life?

There was a crash. Another. Then more and more. Dirt was being shoveled in. They were doing it for real this time, and the air was getting thick fast, and this time it would not be refreshed.

He bellowed, he kicked, he hammered at the lid, he rocked from side to side trying to break open the coffin.

The sound of dirt being shoveled in ceased to crash against the lid. As it got deeper, the sounds became more muffled.

This was it. He was now underground.

He went to another level of terror, one far beyond where he had been before, deeper yet, more raw than anything he had ever known. It was a savage, blind animal fear that caused him to scream like a desperate infant, slicing away layer after layer of toughness and strength and hard-won inner composure, leaving in its wake a panicked, shrieking rat.

Where had he gone wrong, what had he said or hadn’t? There had been no bargaining, no time.

“Give me a chance,” he screamed. He hammered on the lid, he kicked.

“For God’s sake *what do you want me to do?*”

There was a sound.

He froze. What was that? He listened.

It went in and out, in and out, and he thought it was the whisper of breathing.

“*Please!*”

“I want you to do what’s needed, that’s all.”

The voice was in his ear, *right* in his ear, so close, so intimate that instinct made him attempt to turn toward it.

“Then tell them to dig me out! I’m smothering fast!”

“You will do the work I have for you.”

“They’re still filling the hole, tell them to stop!”

“I have work for you.”

It was a choice. *The* choice. Die here like this or do the monster’s work.

There could not be a traitor more profound. But if he died, there was no chance at all that Abby’s destruction would ever be avenged.

“All right!” he shouted, “I’ll do it!”

Nothing happened. He waited, sweating it out.

His heartbeat grew rapidly more irregular, his mouth lolled open, his tongue hung out, and his breaths came faster and faster, more and more uselessly. He was breathing his own breath.

“You will do this work?”

He tried to answer.

“I can’t hear you.”

A gasped whisper: “Open ... open...”

The digging stopped.

“Open...”

There was light all around him, and air flowing like grace into his very soul. His body flushed with relief and his head swam as his blood reoxygenated.

He hadn't even been underground.

Morris chuckled. He reached down and drew Flynn to a sitting position.

Flynn looked at the box he had been confined in.

"Not a coffin," Morris said. He was a man of about six feet, dressed in jeans and a T-shirt, a weathered Stetson on his head. "Coulda been used as one, though." He lifted Flynn under his arms. "Still shaky?"

"No."

"You lie like a child."

Flynn took quick stock of his surroundings. He was in a barn, its big door open wide to a sunny morning.

"Come on, let's get you something to drink. I got Coors, Lone Star, Shiner."

"Just a cup of coffee."

"Nah, you want a Shiner." Morris snapped a finger at a man standing nearby, who Flynn recognized as Jay Elder. He sauntered over to a dark blue cooler and opened it. As he reached in, ice rattled.

"Sounds good, doesn't it?"

"I have to admit that it does." He estimated that he was forty feet from the door. He couldn't bolt, though, not yet, because Elder was coming back with a frosty longneck.

The animal in him wanted that beer in the worst way.

"Flynn, you gotta understand that you're all mixed up. We're the good guys here! That thing you met in Chicago, that was evil."

"Okay."

Elder arrived with the beer. "It's gonna be a new era for mankind," he said. If he thought that he wasn't evil, he was a fool.

He took the bottle. Shiner is a rich brew, and he could smell the sweetness of it, and practically taste the cold relief it would bring to his throat.

"Go ahead," Morris said. "You've earned it."

He lifted it toward his lips, calculating carefully, moving slowly to buy

time. A quarter-second delay, a wrong half-step, and he was going to end up back in that coffin, this time for good.

Using all the strength in his arm and shoulders, he reached back and swung the bottle into the side of Morris's head.

The bottle exploded with a wet *crack* and foam and glass sprayed across Morris's head and face.

He stood there staring. He didn't even blink.

Flynn cried out in shocked surprise—under the coating of skin there must be steel or something.

Then Morris made a sound of his own, a low growl that reminded Flynn of the voice of the tiger.

He broke and ran. He was thirty feet from the door when Elder, thin and wiry and quick, leaped at him. He was light but fast as hell.

Not fast enough, though, to avoid a punch, a solid blow to the chin, which lifted him two feet and hurled him backward. He landed on the barn's dusty floor.

Morris roared, and Flynn knew that he was hearing rage from another world.

What must it be like, to produce minds as fine as Morris's, but so filled with rage? Or those things in the village—were they part human? Why were they so sad?

The universe is a dark place.

The last thing Flynn heard from Morris as he ran out the door into blazing morning sunlight was a roar—as it changed into laughter.

He had an inkling as to why. It was all part of breaking his will. They'd done it during the Inquisition, done it in Nazi Germany, done it in the Soviet Gulag. The technique was to let a prisoner think he had escaped, then, just as he touched freedom, drag him back.

So his aim was clear: he needed to go farther than they thought possible.

He ran across the barnyard and vaulted its weathered wooden fence.

Without looking back, he knew from the silence that Elder and Morris were not following him. This meant only one thing: somebody else was. He thought it would not be the tiger, not in broad daylight, and not as close as this to the heavily developed shoreline of Lake Travis.

From somewhere nearby, there was a sudden burst of barking. An instant later it was silenced.

His heart seemed to twist against itself, his throat to twist against itself from sheer terror.

One of the outbuildings they'd seen had been a kennel.

Dogs were a problem. Big time.

Too bad he'd lost Mac, Mac knew dogs and knew them well. As he ran, he continued to listen, but the dogs were no longer giving voice.

So, were they also smart, maybe as smart as the tiger?

He had to force himself not to run wildly.

This was going to be hard. It was going to be very, very hard.

CHAPTER THIRTY

As he ran into deeper brush, Flynn inventoried. His only weapon was the pocket knife. He had no compass, no cell phone, and no GPS, only the knowledge that he was running in a generally southerly direction.

He did not hear the dogs, but he also did not believe for a moment that he was beyond the perimeter of the trap Morris and Elder had set for him.

He knew that he was leaving a scent trail. Worse, the harder he tried to get away the more he sweated, and the stronger it was getting. His effort to escape was making him easier to catch.

To break his trail, he needed to get to water. He needed the lake, but how far was it? More than a mile, certainly, and this shore was not developed, so he wasn't going to be stumbling across any roads.

They'd chosen their location with characteristic skill. Being near a large city and a population in constant flux around the lake gave them access to plenty of genetic material—if that was even what they were after—but they were also isolated enough for them to keep themselves well hidden.

He forced himself to move more slowly, to tend his track as best he could, to reduce his visual and scent signatures.

The sun was strong, and he was sweating ever more heavily. He was exhausted from his ordeal and so dehydrated that he was beginning to struggle with muscular control.

Then he heard something—a quick rustling sound to his right. The instinctive reaction was to turn away, but you can't escape a dog like that. He is going to be faster than you are, and you cannot hide from his nose.

Flynn's hands were good enough to give him a chance to stop maybe one of them, but probably not for more than a few moments. So he turned toward the sound, and charged into the cedar thicket that the animal was sliding through.

He screamed, he couldn't help it—a short, sharp cry, instantly stifled. The dog was black except for the face, which was long and lethal-looking, but as pink as human skin. The eyes were green. They were entirely human.

Immediately on seeing Flynn, the dog turned away, careful not to expose its nose to his fists.

His gut frothy with disgust, Flynn broke off the assault, leaped out of the thicket and continued running.

Behind him, he could hear complicated, guttural sounds as the dogs communicated among themselves. They were fanning out, preparing to outrun him and capture him in a pincers movement.

A steep hillside appeared ahead. Forty feet up, the limestone emerged as a cliff, and in that cliff there were a number of low openings. Caves.

Could be good.

But no, no way. They were deathtraps. Even if they were large—huge—the dogs would gain an unbeatable advantage. They didn't need light, he did. Worse, the damp air of a cave was an ideal carrier of scent.

So he continued following the terrain lower and lower, until at last he came to water—or rather, a dry creek bed. Still, though, it led downward toward his only hope.

It began to be possible to discern the voices of individual dogs, as they muttered and growled among themselves.

As he got closer to water, the plant life grew more dense, and the thickening stands of cedar were getting harder and harder to move through.

The voices of the dogs stopped.

He thought, “they’re coming in for the kill.” Maybe he should have gone for the caves. Maybe he should have done a lot of things, chief among them not moving ahead with this until contact with some sort of headquarters had been reestablished. He’d gotten Mac killed. God only knew what had become of Diana.

Now there was silence around him. But why? He turned around and around, wishing he could somehow pierce the glowering stands of cactus and the dark cedar thickets with his eyes. What was the holdup? He must have some advantage, but what could it be?

He looked up the long rise he’d just descended. Then he turned a half turn. Nothing there but cedar. Another half turn—and winking through the choking underbrush there was a metallic gleam.

Metal, hell, that was water. Of course, the dogs had already scented it. And he saw one of them, just for an instant, a black flank gleaming with tight fur. It was moving quickly, staying low behind a stand of cactus on his right.

He saw their problem: he had a better run to the water than they did. They’d stopped here in hope that he wouldn’t see it before they could maneuver in front of him.

No longer concerned with being detected—they knew where he was to the inch—he hurled himself wildly ahead, throwing himself into the foliage between him and whatever water was below him.

There came a chilling sound, the furious rattle of a snake. They were common in the Texas hill country, with its ample supply of small animals and the warm rocks that snakes needed to gather energy.

He knew the risk, but there was no time to stop and deal with it. He threw himself against his side of the stand of cactus, tumbling away from the fat, bristle-encrusted pears, feeling them piercing his shoulder and flank.

He was falling then, dropping through resisting, scraping masses of cedar, dropping further, stopping, clawing himself free and falling again.

Breaking free, he fell ten feet, maybe more, through clear air. Enough to shatter limbs if he hit wrong and he was completely out of control.

He landed on his back in clear, cold water and heard its silence as he sank, and saw above the sun dancing on its surface. He also saw the snake hit the water, a good eight feet of writhing fury.

Stretching himself out, blowing to reduce his buoyancy, he kicked his way deeper. Close by, the silence was profound, but he could hear a distant buzzing of engines. This wasn't a stream, it was the lake itself.

He heard splashes behind him, at least a dozen of them. The dogs had lost a small battle, but that had only sped them up. His one advantage was that he could hold his breath, which was not so easy for a dog. But they were going to be faster.

He'd been winded before he fell, though, so he had to surface right now.

The instant his head broke the water, he both gobbled air and turned and turned, trying to see what he was up against. A quick count revealed the hideous heads of twelve sleek animals speeding toward him from three of four possible directions.

Immediately in front of him, not three feet away, was the snake. Sweeping his arms, he backed himself away from it. It raised itself up, using water tension to force a good three feet of its length above the surface. It couldn't strike, at least. To inject its venom, it would need to be close enough to dig its fangs into his skin.

Sucking breath after breath, he twisted around and used the one ability that he had that none of these animals, not the snake or the dogs, could equal. He could hold his breath long enough to dive deep. And once he was underwater and too far from the dogs for them to see him, they weren't going to have any way of determining his location.

He swam as deep as he could, passing over a drowned tree, characteristic of Texas's many artificial lakes. He'd pulled more than one drowning victim out of such trees on Lake Menard.

Even as he went to the surface for air, he could hear the tireless churning of the dogs getting louder. He didn't bother to turn and look at them when he broke the surface, that would eat a good second that he couldn't afford to lose.

Again he breathed, again and again, saturating his lungs with air even as the dogs got louder. Then he saw, turning out of an inlet about a quarter of a mile away, a power boat. It swung in a graceful arc, remaining up on plane, its wake spraying behind it. Nobody would come out under that much power unless they were on a mission.

Between the dogs and the boat, he had been very neatly trapped.

Again, he dove deep, but this time did not double back toward the dogs. They were smart enough to anticipate that. They would move from line abreast to a deeper formation, and surround him and tear him apart the moment he surfaced.

The sound of the oncoming boat got louder.

He had to surface, and when he did, he saw a figure on the front of the boat. It was Morris, and in his hand was a long-barreled pistol. Some kind of a target weapon, accurate at distance.

The boat was coming fast, its wake foaming white.

He dropped beneath the surface.

The trap was sprung. Here, he ran out of options. Here, they dragged him out of the water and took him back, a thoroughly broken man.

There would be more torture, until he'd been to death and back many more times.

But why? What was it that Morris wanted him to do?

Now the boat was circling above him. As soon as he surfaced, he was going to be within range of both the pistol and the dogs.

Looking up at the hull, he could see that the twin props were on shafts that extended out behind the craft, which appeared to be about forty feet in length.

He swam upward and, as the boat swept over him, he resurfaced in its

prop wash. As he sucked air, though, one of the dogs piled into him.

He went back down, leaving the snapping jaws and churning claws behind.

Then he felt something unexpected—a current of warmer water.

This could mean only one thing, an incoming stream. He swam toward it, keeping as best he could in its warmth. No matter what, he had to remain submerged until he was in the mouth of that stream. If he went up to grab even a single breath, he was caught.

To conserve his oxygen, he forced himself to do the opposite of what instinct was screaming for him to do. He forced himself to slow down.

Moving carefully, he began to be able to see the limestone bottom rising. He was swimming up a small canyon. With just inches to spare, he passed over the skeleton of another drowned tree, this one with the stark remains of what had been a stone house below it.

The bottom rushed up, and then he was swimming in three feet of water and there were flashes in his eyes, and he was going to take another breath, and it was going to be water.

He breathed. Breathed again, deeper. But it wasn't water, he had come up into the bed of a stream no more than ten feet wide and just three feet deep.

He lay flat on his back, letting its water sluice around him, allowing just his face to break the surface. He didn't want a single molecule of odor to reach those dogs, nor a single sound, and he didn't want his body heat to be detectable, much less his image.

He remained as still as possible, just pushing himself along with his heels, doing it inch by inch. Eventually, the stream would have a bend in it. Only when he was around that bend and invisible from the lake could he dare to move more quickly. Even then, he would stay with the water.

He came to a deeper pool, the water crystal, the limestone glowing tan. Around him, birds sang. He slid deeper, waiting there with just his face exposed, minimizing the chances that his scent would reach the dogs.

Finally he moved again, slipping around a turn in the narrow creek.

All was quiet. He hadn't even stopped the birds. He raised his head and listened. Distantly, the boat's engine screamed. Good, they were operating a search pattern.

Finally, carefully, listening to every sound and watching every shadow along the banks of the stream, he eased himself to his feet.

He froze, watching and listening. There was no sound of movement in the thick brush that surrounded the creek. He crossed to the far side, then climbed a bluff until he could see what turned out to be part of Lake Travis, a mirror of the sky dotted with sails. Small white clouds flew overhead. Nearer, the boat was now stopped. He could see the dogs on board, sitting in a group on the fantail. As they worked to gain scent, their heads turned first one way and then another.

Obviously, they weren't picking up his scent, but they did not stop trying. Then one of them went to the rail. It stood, nose to the wind. Another joined it.

His heartbeat increased, he barely breathed. It was time for this reconnaissance to end, so he moved back into the water, and then quickly up the creek, which was as shallow as a few inches on this side.

He went a hundred yards, then climbed the bank and pushed his way through the brush. The ridge he had descended was about five hundred yards ahead and perhaps a hundred and twenty feet high. Somewhere beyond it was the ranch headquarters where he'd started.

A single bark, low and shockingly close, told him that he'd made a fundamental mistake doing that reconnaissance, and the trap he'd entered was already closing.

Only two alternatives were left to him, either to do something that they wouldn't expect, or something that they couldn't counter—or, for that matter, both.

One thing that might throw the dogs off would be if he backtracked along

his own scent trail. He was wet now, leaving less odor behind. They might be tricked. They might lose him.

The only problem was that doing this would return him to the ranch.

Had that been the real plan all along, to induce him to go back to the compound and be captured where he'd started his escape?

He looked carefully along the ridge, then at the cactus and tufted grass below it.

Tracking is a skill that involves not only careful observation but also careful visualization. To keep a trail, you need to not only read sign, you need to be able to discipline your imagination to see the path as the person you are tracking must have seen it.

Doubling back along the lakeside, he returned to the bend. Beyond this point, he knew that it would not be safe to go. To reduce his scent further, he submerged himself completely. Then he left the water and went across toward the bluff, crossing his own trail about sixty steps later.

Turning, he looked back the way he had come. Not surprisingly, he had left a clear track.

He scanned the terrain ahead. Were they hidden somewhere, already aware of him, already waiting in ambush?

Backtracking as carefully as he could, he climbed the ridge. He would risk the dogs noticing the movement.

He could not do the safe thing, which was to keep going out to the road. He had to determine if there was any way to help Mac, assuming he was still alive. Or Diana, for that matter. If it had been him in the Rover, he would have come in to provide support as soon as communication failed. She would have done the same, and since she hadn't, he had to assume that she was in trouble, too.

They might both be trapped in boxes somewhere, or under some other type of torture, or slated to be broken down into component parts or whatever was being done to people.

Doubling back, he made for the ranch compound. If they'd left it unguarded, he might gain some useful intelligence. Who knew, maybe he'd even turn it into a win.

Still, he had to be damn near conservative. If he lost his life, who knew what would happen then? Maybe there wasn't anybody else left. Maybe the whole operation would fail. For sure, it would be a catastrophic setback.

Atop the ridge, his own sign was quite clear, a swathe through the tall grass that looked like it had been put down by an elephant. The dogs, all nine of them, had crossed the clearing line abreast. Their tracks were straight and light. They had worked to minimize their sign.

Moving ahead, but not so fast that he would raise his skin temperature and once again intensify his scent, he worked his way back. Soon he saw, through a thick stand of cedar, the shape of a building. He went closer, slipping deep into the cedar thicket, stopping when he came to its border.

The place was silent. No sign of movement. There was the barn, a new shed nearby, and the small rock ranch house. Under some live oaks fifty yards away was the kennel.

The barn doors were still open, the interior shadowy.

He watched some mourning doves pecking in the small patch of grass near the house. These were flocking birds that fed on the ground. They were sensitive to nearby movement and would fly up at the slightest sign of disturbance. He waited, but they continued to feed in peace.

Morris could not have left this place unguarded, so its empty appearance had to be a lie.

He stepped out of the cedar and strode quickly to the barn. On the floor toward the back stood a long silver box, open, the interior lined with black plastic. His box. There was oxygen equipment nearby, a green canister lying on its side, some tubing disconnected from two nipples on one end.

He forced back the impulse to hammer the thing to bits.

Under the pecan tree by the house, the doves were still pecking at nuts.

Mac and Diana were not in the barn.

He stepped out and moved away from the structure. Turning slowly around, he listened for anything that might help him. His hearing was good and it was very quiet, but the silence was total. By now the dogs would be breathing heavily, but he didn't hear anything that suggested their approach. Fearing the tiger, he looked, also, along the rooflines.

He dared not go close to the house. The dogs would hear the doves rising from a long way off. They would know what it meant, too, no question.

He looked toward the shed. There was a padlock on the door, a new one. His picklocks were gone, of course.

No matter how carefully he listened, only the cooing of the doves disturbed the silence of the place.

Could they have actually left him an opening? Maybe they'd never considered the idea that he'd be so foolish as to return to the compound.

He went to the shed, moving carefully and methodically. The lock was a good one. He could not force it without tools. Behind the shed, though, he found a low roof with a trapdoor in it. A storm cellar. Not surprising, given that one of the most powerful tornadoes ever recorded had touched down a few miles north of here.

He bent down, grasped the rusted iron ring in the center of the trapdoor, and pulled it up.

It was dark and silent and it felt large. Hill Country ranches didn't have big underground chambers, just root cellars, and usually not even that. So this could be something constructed by Morris.

He wanted to call out to Mac and Diana in the darkness below, but to raise his voice was far too dangerous. As he listened, he thought he heard a faint pulsation, like a big pot boiling.

He wanted to go down the ladder, but that was beyond the limit of responsibility. He was here to make best efforts, not throw himself away.

For a long time, he listened to that sound. Boiling, he thought, definitely.

No voices, no sound of movement.

As he left the shed, he heard a sound coming from the direction of the ranch house, high and sharp, that certainly was not doves. But what was it? Not a voice ... or was it? Perhaps not a human voice.

And then he heard another sound, just the slightest edge of a yap, quickly stifled.

He saw movement at the house, a door opening.

Even so, the doves did not move, which meant only one thing: they were not normal doves. They were another deception, and a very clever one indeed.

At the same moment, one of the dogs appeared at the edge of the compound. It came across the field at a trot, its tongue lolling, its eyes intent on the house. It went up to somebody hidden just inside, and as it did the person crouched down to greet it.

It was one of the creatures from the village. In the sunlight, its skin was yellow-gray and its eyes seemed, if anything, more deeply sad than they had in the gloom of the structure. He could see a shadow of humanity there, but also something else. Was it a mix of a creature like Oltisis and a man?

Maybe, but it couldn't walk the streets, not by a long shot, not like Morris could.

The high-pitched sounds became a strange, musical cooing, joined by the dog's voice, a group of vocalizations more complex than any ordinary dog could make.

They were taking pleasure in one another, these two misbegotten creatures, a dog with a man's eyes and this ... thing. The dog licked the creature's hands and it smiled, its teeth jutting out of its mouth like blades.

More dogs appeared, and then the snarl of engines as two four-wheelers burst out of the brush.

Flynn faded back toward the far side of the compound, trying to keep the shed between himself and the danger.

When he was back in the brush and somewhat concealed, he turned and ran toward the road he and Diana and Mac had come in on.

As far as he was concerned, the secrecy was over. Without Diana and Oltis, he had no official recourse. So he needed to bring some level of policing authority into the situation, and damn the secrecy. Let the secret get out. Better that it did.

Problem was, he also knew that the cops wouldn't do anything serious unless they had evidence of a crime, and so far he couldn't offer much. Certainly not enough to enable, say, the Travis County Sheriff's Office to get a warrant to enter onto the ranch property. No judge was going to approve a warrant on the basis of what would sound like the ravings of a lunatic. The fact was that he wasn't going to get any police action out of a claim that there was a village full of aliens on some rancher's property—unless they tossed him into the state hospital over in Austin.

Even if by some miracle they did move, it would not happen overnight, and this needed to get done fast. The only thing that might work against the kind of power and intelligence he was seeing was speed.

There was only one answer: he had to come back here with serious firepower, and fast, and he needed to kill them all.

CHAPTER THIRTY-ONE

He sat hunched over a beer at one of his college haunts, a place called the Scholz Garten in central Austin. He'd come here because it was deep in the inner city, and Morris and Elder might be cautious in a populated area.

He sat at his old table in the far corner of the outdoor beer garden. Across from him was Abby's chair. It was late in the afternoon, the shadows were long, and the memories of her were as raw as blood.

Once he had reached the road, it hadn't taken him long to find the spot where the Rover had been. It was gone, but there was no sign of anything unusual, such as tire marks that might indicate a sudden departure. The truck had remained in place for some time. He had even been able to make out scorch marks left where the catalytic converter had touched some grass.

As he sipped beer, he searched gun classifieds in a local rag. He was looking for a very specific weapon, a Heckler and Koch MP5. If he could find a dealer with a Federal Firearms License and the weapon in his inventory, he was hoping he could obtain it and let the paperwork float along behind the transaction. To own a fully automatic machine gun in Texas, he'd need to get a sign-off from a local honcho of some kind, but he was figuring that could be accomplished with a donation.

He went to the pay phone, dropped in four quarters and phoned a guy called Joe Harris in a little town called Lost Mill, who advertised a selection

of weapons. He had no HK in stock, but he thought he could get his hands on one pretty quickly.

“How fast?”

“Well, I could get it brought in here—let’s see—how about seven?”

He would need to carry it around, so he wanted concealment. “Does it have the CIA case?” This was a briefcase with a trigger in the handle, a nice piece of equipment.

“No CIA case. Those things are hard to come by.”

“Don’t I know it. So I’ll be around at seven to take a look.”

After he’d reached the highway, he had hitched and walked until he got to a place called Four Points, where he’d found a bus and taken it into Austin.

When he’d rented the car he was now driving, the clerks at the Avis station had been concerned about his appearance. He looked like a tramp with an improbable amount of cash, and the cash was mysteriously damp. He’d used his real credential, and the police identification had reassured them, fortunately, just enough to get them to give him a car. The use of cash would keep the rental record at the station until the car was returned and the completed transaction processed.

He didn’t want to show the gun dealer his real pass, for fear of spooking him, and he couldn’t meet him looking like he was headed directly to the nearest 7-Eleven to commit mayhem, so he planned a first stop at a motel to clean up.

Everything was so very normal, the Texas sun starting to set behind tight little clouds, traffic passing on Congress Avenue, up the street the improbably immense state capitol building looming over the city. All was quiet—but Texas streets could be deceptive, as he well knew. There had been some notable crimes committed in this city, some textbook crimes. A classic story of police action against a sniper had unfolded at the summit of the University of Texas tower back years ago, which was still studied as a model of how to respond to such an emergency, and, for that matter, how not to. A cop had

died investigating the sound of gunshots. The lesson: don't expose yourself until you know where the shots are coming from.

He drove south on Congress, then took First Street to Interstate Thirty-Five. Harris was just the other side of the line in Hays County. Between here and there was a Super Target, and not far away, a motel.

As he drove, he automatically kept his rear under surveillance. Once on Thirty-Five, he stayed well below the speed limit and far to the left, letting the traffic pass him like a river. Texans are not slow drivers, and nobody hung with him.

He knew that the gun was going to cost a lot. He would need to bring cash, which meant a visit to a bank. When he'd dipped the special ATM card earlier, though, it was dead. He visualized some bureaucrat deep in some Washington cubbyhole canceling the cards as soon as contact was lost with their holders. Nobody would ever stop to think that this might leave them in the wind. Budgets trumped lives, always.

Fortunately, there were Frost Bank branches here. This was his bank in Menard, an old Texas outfit, and he was going to need to make a substantial withdrawal from his personal savings. He had about thirty grand on deposit and he'd have to get it all. It was already a quarter to six. He watched for a branch.

As he drove south along the highway, he saw a Wells Fargo, and somewhat later a Frost Bank sign. He pulled off the next exit and doubled back.

The branch was small, but when he handed over his withdrawal slip, the clerk didn't react with any surprise. This was agricultural country south of Austin, full of farms and ranches and basic businesses like rock quarries. There were going to be a lot of illegals working, and that would mean cash payrolls.

"Hundreds, please," he said. Bigger bills were faster to count and took up less space. He carried the money out in a brown paper bag, got into the car

and stashed it under the backseat.

His next stop was Target. His clothes were done, and in any case, they'd been touched by those creatures out there—God knows what they had done to him while he was unconscious—and he wanted them off his body. He wanted a long, thorough shower, lots of soap.

In the Target, he headed for men's clothing. He passed a mother with her two girls looking through racks, a clerk stocking a shelf with radios, a couple of guys searching for T-shirts, and he found himself at once loving them as he had never been aware of loving his fellow man before, and also feeling oddly distant from them.

He understood the origin of Diana's inner distance. It was having secret knowledge of a larger world that did it. They were innocent, he was not.

He found the camouflage sweats he needed, and then the black sneakers. A ski cap and mask were harder, but he eventually dug some up in a sale bin. He also got a white shirt and some slacks, and threw in a dark blue windbreaker, the thinnest one he could find. He planned to buy a pistol off Harris as well.

In the checkout line, he waited behind a family who was buying a gas grill and had a lot of questions about it. The wait was hard.

Finally, he left the store and crossed the parking lot to his car. The details of the world were in sharp focus, sounds, movements, the expressions on people's faces, even the feel of the asphalt beneath his feet. It was how he felt just before walking into a domestic dispute, which can so often turn out to be a more dangerous situation than it seems. More cops were injured and killed on domestics than on any other type of run.

Given his plan, he did not expect to survive his return to the compound, and, frankly, he was beyond caring. If there was an afterlife, he'd be with Abby. If not, then not. The only thing that mattered was that everybody at the compound also came out dead.

He reached the motel at six twenty. He checked in and went quickly to his

room. This was a point of vulnerability. He was unarmed, so if they were following him, this was an ideal time to take him.

He threw his bag of clothes on the bed, stripped and showered with the curtain open. He was focusing down very tightly now, concentrating his thoughts on the unfolding mission, preparing his mind and body for action.

Once he was cleaned up, he drove to Joe Harris's operation, which consisted of two double-wides on a bare lot in bleak scrubland south of Austin.

The first thing that came to his mind was that the setup wasn't straight. The double-wides had the barren look of crook places.

Harris had dogs behind a chain-link fence, which frantically announced themselves as Flynn walked up the uneven flagstones leading to the first trailer. This was about the point, when he was in a uniform, that he would've unsnapped his holster.

At least they were just ordinary dogs.

He knocked on the flimsy door.

"Yo."

"I'm Flynn Carroll, I called about the HK."

The door opened onto a man who looked like he'd been inflated and then rubbed with beet juice. Even a mustache that would've caused a sensation in Dodge City failed to hide train-wreck teeth when he smiled.

Flynn recognized it as meth mouth, the dentist's dream.

"Well, come on in," Harris said, his accent deceptively softened by the south. But this was not a soft man.

Flynn stepped into the dim, smoke-choked interior. An air conditioner screamed as if in its death throes, doing little more than jostle the sweaty air. The chrys smoke was almost dense enough to induce a transfer high, and, in fact, Flynn took a slight hit from it. Felt good, which was bad. Drugs and high-intensity action are mortal enemies. When quarter seconds count, as they would tonight, you need to be spotlessly clean.

An HK in pristine condition lay on the Formica table that filled half the kitchen area.

“I assume you can show the cash, ’cause she can’t go outa here on no check or nothin’.”

Flynn noted that there had been no mention of paperwork or identification. He also took note of the Diablos tattoo on Joe’s arm, and of the fact that he was wearing a small pistol on his right ankle, maybe an AMG Backup. Not very accurate, but in a confined space like this, who cared?

“It’s in my car,” Flynn said. “How much’re we lookin’ at?”

“I’m thinkin’ about twenty-two thousand dollars, sir.”

“That’s strong.”

“You look at ’er. She got class, a lotta class. Plus this fella, it turned out he had—lemme get this here—” He brought up a black plastic briefcase. “This is just dead on for the CIA case.”

It was a good briefcase, no question there, the trigger mechanism solidly constructed.

What he had in the car was exactly twenty-two thousand two hundred dollars. He decided to see just how crooked this crook was.

“I need to take the gun with me. Can we let the paperwork float?”

“You plannin’ some kinda score?”

“I have a buyer. Kinda on the warm side.”

“*Cucuracha?*” It was slang for a cartel enforcer.

“Big enough to cook and eat.”

The guy looked into Flynn’s eyes, looking for some kind of sting, no doubt. In Flynn’s experience, guys like this always ended up trusting plainclothes cops more than they did their own damn mothers, they were that stupid.

“I’ll tell you,” Joe finally said, “I don’t know if you noticed, but the governor’s kinda stopped carin’ who does fed paperwork and who don’t. I mean, you ain’t gonna go shoot up the capitol, I hope. ’Cause that would be

embarrassing.” He chuckled. His eyes never left Flynn’s. “I see you in there, you little shit pussy. Your *cucuracha* ain’t around here, is he? You’re gonna sell this thing cros’t the border, ain’tcha? Gonna get some Border Patrol killed, probably. I don’t think I can do that.”

It was an opening gambit. Soon, the price would be thirty grand. Flynn didn’t really care, because he had decided that he wasn’t going to be a buyer today. He was, however, leaving with the weapon.

“I’m not in the business,” he said. “I don’t bargain.”

“What are you, then?”

“I don’t want to lie to you. I’m gonna put you on your ass and take your gun.”

“Wh-a-at?”

“I don’t want to. But this HK is hot and I’m not gonna pay anything close to that kind of money for a hot gun. Anyway, I’m probably pretty hot myself, so I kinda think we were made for each other.”

A hand meaty enough to be a filling meal started for the ankle holster. Flynn reached across the table and bumped Joe’s ulnar nerve against his humerus. The hand flopped and Joe yelled.

Still without getting up, Flynn aimed a blow at the middle of his chin, thrusting upward as he connected. There was a crack and Joe’s head pitched back. He fell over in his chair, crashing against the sink hard enough to bring more than a few filthy dishes down with him.

Flynn stood. One thing he had learned from watching bad guys screw up was never to waste time in a situation like this. Do what you have to do and get out.

He looked down at Joe. He’d be in slumberland for ten minutes, maybe a little less.

He laid the HK in the case and made sure all the magazines were full. There wasn’t time to toss the place for more rounds, so what was in the three thirty-round magazines had to be enough.

As far as a carry weapon was concerned, he didn't see any pistols in view, so he contented himself with taking Joe's AMG. It was chambered for the .380 ACT round, which was good. This round gave it better stopping power than the more common version, which was chambered for a .22 round. There were also a few of these out there that could accept a .45 cartridge, but the accuracy was really poor. The combination of the pistol's fixed barrel and the ACT round's low breech pressure offered an outstanding mix of accuracy and firepower for a compact pistol. Ole Joe did indeed know his guns.

Leaving the trailer, Flynn made it a point not to hurry. There were bound to be eyes on this meet, no question. He couldn't afford to raise suspicion, otherwise every cracker inside of three counties was going to be here in minutes. Forget the cops, these guys were way more dangerous than the law. You messed with Diablos, you dealt with Diablos, no police need apply.

His next step was clear. He would return to the Lake Travis area and await darkness. Then he would move on Morris and his people and his animals, and what would happen would happen.

A machine gun is a good weapon. Used correctly, of course, and he knew how to do that.

As he drove, he considered his chances. On balance, he thought that Morris had not expected him to return to the compound. It hadn't been a trap at all, but a mistake. So he could be outsmarted—once, anyway. Maybe, then, twice.

He had one objective and one objective only: waste Morris and all who were with him.

CHAPTER THIRTY-TWO

He had planned his return to the property as carefully as he could using Google maps and satellite views he examined on a computer at a copy shop. The house and the barn appeared on the satellite view, for example, but not the shed, the village, or the kennel. Diana's images had been real time, of course, but Google satellite photos averaged about two years old.

This meant that the dogs and the creatures in the village were all recent additions. Ominously, then, they were in the process of expanding their operations here. But it also meant that there had to be vulnerabilities. Something wasn't properly guarded. Some plan of defense was flawed. The question was, would he be able to find that flaw?

One thing was certain: the whole operation—compound, village, all of it—would be carefully guarded now, and in depth.

He had waited until nine before setting out. He wanted as much time as he could get prior to moonrise, which tonight was at eleven twenty-six. But he also didn't want to arrive any earlier than he had to. He'd used the time to find stores where he could put together a new rig.

In his backpack was a pair of fairly decent night vision binoculars with an infrared light source. In addition to the AMG backup and the HK, he was now carrying two Tasers and a good combat knife.

He had considered blowing the whole place to kingdom come, but you are

not going to be able to buy the necessary explosive materials without tripping all kinds of alerts. It was one thing to get hold of a machine gun of a type used by the drug cartels and readily available on the black market, another to buy explosives that Homeland Security took an interest in.

Before he left, he'd located on the map a new spot to leave the rental car, and as he drove down the main road, he ran his plan mentally, dwelling for a moment on each phase, making certain that everything was as well thought out as possible.

He'd worked the maps carefully, and took a different approach to the ranch. He didn't want to park anywhere near the place they'd left the Rover. For this reason he drove not past the ranch, but down to the little marina that was in an inlet about a mile away. He had hit upon the idea of playing two cards at once. He could conceal the car and also disable the boat, which was almost certainly kept there.

He parked in the marina's lot. There was a snack shack still open, and he strolled in and bought a Coke, then, as if he owned the place, ambled down to the single floating dock. It was not difficult to recognize Morris's boat, a forty-foot twin built for speed. He stepped aboard, then slipped in under the protective canvas. Wiring a boat with two engines to deal with would be an annoyance, but he didn't need to start it. He pulled up the engine cover of the port Chevy and quickly removed the distributor cap and tossed it overboard. For good measure, he ripped out the gas line. He repeated the performance with the starboard engine.

Bon voyage, bastards.

It would be a long trek up to the ranch compound, and it would take him closer to the village than he'd like, but the steepness also meant that getting back down here fast was going to be a lot easier.

Returning to his car, he opened the rear deck and methodically equipped himself. He wore the knife in a sheath on his left hip. Easier to reach with his right hand. He tucked the AMG into the ankle holster he'd taken off its

owner. The night vision binoculars went around his neck, with the fully loaded magazines in two big fanny packs. He carried the HK naked. If he had occasion to carry the machine gun in population, he'd use the case, but there was no need here. Dressed as he was, any cop was going to see him as a threat anyway, so there was no real point in hiding it.

As long as he could, he kept to the road for ease of movement. Once he left it, though, he rolled on the ski mask. White skin was easy to see even on the darkest night. Of course, with night vision equipment, he would still be easy to spot. Not to mention the animals. The dogs' noses worked all the time, but the tiger's eyes were going to be a lot better in the dark.

He had bought some copper screen at Home Depot, and had fitted it into the crown of the dark blue cap he was wearing, so he wasn't worried about a MindRay. They might have something better, but there was nothing he could do about that, or any equipment of extremely advanced design, for that matter.

His assumption was that, one way or another, he was certain to be detected. The question was, how close could he go and how much destruction could he cause before they dropped him? And they would do that, no question. He was here to kill, and therefore also to die.

He thought he had at least an even chance against the tiger, as long as he could see it in time. With his armory, he could take the dogs, but any use of his guns would obviously end all surprise, so if they came out, he planned to fade back, then return later.

His pace was steady, the road empty. The eastern sky glowed faintly. The moon was on its way.

He reached the point where the road bent slightly to the right, and as he came around the curve, he heard a sound, low, not quite an engine noise, but also not natural. Not the tiger or the dogs, so probably a machine of some sort.

Barely breathing, he slid into a cedar thicket at the roadside. Slowly, the

sound grew louder. It was a motor noise. Carefully, moving just as he would when he was stalking somebody very smart, he raised the binoculars to his eyes. He looked up the road. Nothing. And yet the sound was becoming more detailed. Something very quiet, and therefore probably closer than it seemed.

It was ratcheting now, like nothing so much as large insect wings.

Then he saw it, flying right up the center of the road as methodically as if it was a miniature drone, a four-inch wasp, black with yellow stripes on its abdomen.

No wasp flew like this and no wasp was this big, not even in Texas.

Almost certainly, it was a drone. The Pentagon could make fake insects, he'd read about them being deployed as spy cameras in Afghanistan. But this was beyond that, this was an actual, living creature that was also a machine.

Continuing directly down the center of the road, it flew slowly past.

He remained still, not moving the binoculars, not moving anything.

The creature made a slow circle above the center of the road. It hovered, facing the thicket. Flynn stopped breathing. It was a calculated risk. His stillness would make it harder for the insect's compound eyes to detect him, a fact he remembered from high school biology. Assuming that it even had compound eyes. Who the hell knew, maybe it could see the head of a pin at ten miles.

It came closer, hovering, its yellow legs folded beneath its abdomen. As any country Texan would, he recognized it as a Cicada Killer, a big, normally benign wasp that was common in the region. Big, but not the size of a jumbo shrimp, which this thing was going to top by a good half inch.

As it examined the thicket, the head moved from side to side, but not with the mechanical seeking of an insect. No question, it was under intelligent control.

The thing maneuvered into the thicket, its head now jerking quickly from side to side. So it was indeed using compound eyes, and therefore it must be a genetically modified wasp, not a machine made to look like a wasp. It was, in

effect, a living camera, and whoever was watching through those eyes was trying to overcome their limitations with rapid head motions. The result was a horrifyingly odd and unnatural spectacle, a wasp moving its head as if it was on a spring, all the while flying with bizarre deliberation.

It came closer. If he made the least motion, he was going to be seen. The operator was obviously already suspicious or the thing wouldn't have stopped to examine this particular thicket. In any case, Flynn was soon going to have to move. In another thirty seconds, he'd have to release his breath, and when he did, he would be detected.

Slowly, its wings humming, the wasp drifted among the branches, moving more skillfully than any wasp should. It came closer to him. Its head vibrated. It came closer yet, so close that he could feel the air of its wings on his cheek.

Then it was silent. Where had it gone? He waited. Had it flown away?

A tickling began, first on his cheek, then on his temple, then a scratching on his eyeball. It was on his face, crawling there, and now not only could he not breathe, he could not blink, not once, not while the tiny claws tapped his watering eye and the head vibrated, buzzing more faintly than the wings had, and the mind behind those eyes, perhaps in the village, perhaps at the ranch, tried to understand what they were seeing.

Over his head, then, there came a sudden flutter, loud, then a great, rattling clatter and the Cicada Killer's wings snarled and it buzzed away. For an instant, Flynn was confused. Then he realized that the creature was chasing a cicada that its presence in the thicket had just disturbed.

Living machines had their limitations, it seemed, insofar as they remained true to their instincts.

Breathing again at last, he reached up and rubbed his tear-filled eye.

Then he thought, "Did the thing go off chasing the cicada, or did it make me and fly away for that reason?"

The ranch was another world, where technology had entered animals and changed their deepest natures. Not only the tiger and the dogs, but also that

snake, he felt sure, had been altered. Also, the doves, which was why they hadn't flocked when there was movement in the house. They had been another trap, continuing to feed and express no alarm as the dogs silently approached. All the while, though, someone had been watching through their eyes, and sending information back to the dogs.

He slipped out of the thicket and into the clearing behind it, which was now glowing with the light of the rising moon. He was moving way too slowly, he had to pick up his pace.

He remembered as a boy lying on the plains side by side with Abby, her hand slipping into his as the moon rose, and glowing above them, the cathedral of the Milky Way.

The mystery of the stars. The tragic face of the creatures in the village. Morris smiling like a doll smiles. The eyes of the dogs, green some and brown and blue—full of humanity and the savagery of animals.

The tiger, curious, sorrowful, and brutal.

By dead reckoning now, he moved toward the compound. He remembered telling Diana "Love your gun," and it was truer now for him than it had ever been before. The metal of it vibrated under his hands with a secret life. The trigger longed to be pulled. The gun was a life changer, an engine of evolution. The gun was holy, it was god in metallic form. The gun was freedom.

A flashlight, maybe, flickered on the path ahead.

As he looked, he also listened to the rustlings of the night, seeking for the sighing movement of a new hunter slipping through the tall grass.

When would he see the tiger? When would he see the dogs? Or would another snake seek him out, a big copperhead, perhaps, as swift as a shadow?

Before him was a long rise, and beyond it a glow. The compound, it had to be. There was nothing else out here but the village, and it didn't show lights.

Binoculars or not, the house was just an indistinct shape. But there was more movement between it and the barn, people going back and forth. How

many was he contending with, five or ten? More?

He wondered if the humans involved here were really traitors to their species, or were they themselves in some way under control?

If he thought he had a choice, he would not be here, not with all these unknowns involved, any one of which could destroy him.

In the corner of his left eye, there was the flicker of a swift shadow, but when he turned it was gone.

That was the only evidence he needed. That had been a dog and therefore he had run out of options. His plan had been simple. Rush the place, spraying it with machine-gun fire, all the while seeking to target Morris.

Now, getting to the house was going to require another approach. At some point, any rush was going to be stopped by the animals.

To his left was the long white bone of the caliche road that he had just left. To his right, a clearing full of stands of prickly pear cactus and cedar. Night-blooming flowers filled the air with fragrance.

Something caught his eye—not a movement, but a shape that did not fit the terrain.

In the clearing, standing so still that he almost hadn't seen it, was the tiger. Incredibly, it was not a hundred feet away, close to its ambush range. As always, it had stalked him with almost supernatural skill.

He didn't move. It didn't move.

Three seconds passed. Five.

He couldn't kill it, not without the noise of gunfire reaching the house.

Its long body was low to the ground, but he could see it clearly, almost flowing like a liquid as it edged closer to him.

Unlike at the Hoffman place, there were no trees here to use as a backstop, just these gnarled stands of cedar, and the cat would be at a definite advantage inside one, able to make its way among the branches much more easily than he could.

A nearby sigh drew his eye to the tiger again. Incredibly, it was now less

than ten feet away. It had come on him much faster than he had anticipated, even with his knowledge of its skills. Moving slowly, he slid the little AMG into his hand.

He could not see it anymore, but he could hear its breathing, deep and slow, completely calm, no tension in it at all. Still without moving a muscle, he attempted to determine the direction the breathing was coming from. Behind him? Possibly. Possibly also off to the left. In fact, since he was right-handed, his left rear would be his most vulnerable spot. Probably, it had even factored that in, it was that smart.

A nervous finger kept touching the trigger on the little pistol. Once again, they were at what was becoming a familiar impasse. His only survivable situation was if his first shot was a head shot. At night, with a fast-moving target and a small, short-nosed pistol like this, it would be almost all luck.

There was a faint sound, perhaps an intake of breath—and he realized that the tiger wasn't behind him anymore at all, but now concealed in the cedar directly ahead.

This time, it had outmaneuvered him. The battle of wits that had begun in Montana was over.

The tiger had won.

CHAPTER THIRTY-THREE

He braced the pistol. There was a streak of movement, the sound of big paws skidding in dirt—and then the frantic blowing cry of a deer.

The tiger had run right past Flynn, moving so suddenly and so quickly that he wouldn't have had a chance to get off even a single shot.

Flynn watched it as it busied itself devouring the deer it had just brought down. The creature had died at once, and the tiger now lay on the ground gobbling into its entrails.

There was no question in Flynn's mind but that the tiger had seen him and had definitely known that it had a chance to take him.

He recalled that moment in the storm drain, the curiosity in its face, and the sadness.

The tiger had self-awareness, and the tiger apparently did not like the situation it found itself in. "Slaves are dangerous, Mr. Morris," he thought to himself. Good.

He didn't plan to push his luck, though, so he left it to its kill, fading quickly back through the cedar thicket, then heading due east toward the highway. He was glad that he trained himself in the skills of orienteering and dead reckoning. He didn't need a compass to make sure that he didn't accidentally close the distance between himself and the house instead.

As he walked, the ground rose slowly, until he had a huge view of Lake

Travis, dotted with the lights of boats. Very faintly, he could hear music echoing across the waters.

He had to win this battle this night, that music must never be silenced.

Now he was directly behind the house, and about half a mile out. He understood, though, that he was looking at an unknown world full of unknown creatures—insects that were really observation platforms, snakes infused with extreme aggression, human-dog mixes, the tiger, and who knew what else? What of the creatures from the village? Nothing would prevent them roaming these hills at night. They had overpowered him so easily that if he so much as spotted one from a distance, his only choice was going to be to blow his cover by killing it immediately.

Never standing to full height, slipping quickly from cedar thicket to cedar grove, he moved as quickly as he could.

When he once again reached the caliche road, he paused to see if he could gain any additional information from remaining entirely still for a time. He backed into a stand of cedar. It would somewhat cover his scent, should the dogs come around, or the tiger decide that he was, after all, to be attacked.

Using the binoculars, he reconnoitered up and down the pale strip. No animals in evidence except an armadillo about a hundred yards away, snuffling for grubs along the roadside. Or was it only that?

Armadillos gave dogs a wide berth, so maybe it was an indicator that they weren't nearby. More likely, though, it was like the doves, a subtle deception. So it probably meant that the dogs were indeed nearby.

There was another noise, but this time it was more rhythmic, not the hum of wings.

He stepped out into the road, hesitated, then reached down and felt the ground—and felt a vibration. He pushed the binoculars to his face, and saw, just nosing around a bend in the direction of the highway, the glittering grillwork of a car with its lights off.

It was too late for him to jump back and too late to move carefully enough

to conceal his tracks. He leaped ahead and rolled into the brush. Then he froze. The car had a full view of him now, and movement attracts the human eye, especially in the dark. Even under conditions where a man can't see a boulder ten feet ahead of him, he can pick up movement.

As the car approached, he remained absolutely still. He was looking at a GMC Acadia, black, moving slow enough to avoid kicking up dust in the dry roadway.

Was this another attacker? Some sort of outlying patrol?

A shaft of moonlight rested on the driver's face as the vehicle crept past. Flynn saw a woman's hair, some kind of a sweatshirt, and a face with a distinctive, immediately recognizable profile.

He lay there in the ditch, his mind racing. *Diana?*

But no, it was impossible. She had recruited them all, she had created the team. But it was a very special team, wasn't it, consisting exclusively of the few police officers who had complained to the FBI that the abductions were real.

They had all been slaughtered, all but one.

Had it been another deception, designed to silence the few people who had realized what was happening and were equipped to do something about it?

Still puzzling it out, he rose from the ditch and faded back onto the far side of the road, into the land that belonged to the state wildlife refuge.

From his experience as a detective, he knew not to draw conclusions until the facts came into focus, and they weren't in focus now. In fact, they had just gone out of focus—way out of focus.

He had never known that it was possible to feel this isolated and alone.

He also knew from the bitter anger that he felt that he had begun to love Diana—not that she had replaced Abby, but that, as this ordeal went on, he had been finding a place in his heart for her.

But who did she love? Who was she, really? Cut away all the promises and all the claims, and what was left was an ID that she admitted was false.

He put some distance between himself and the ranch, crossing a limestone hill, stopping only when he reached a bluff. Far below was the lake. This was the bluff where he'd seen the caves. Were they of any use to him now? Maybe, but the chance of getting trapped was too great.

He had definitely been observed by the tiger and possibly in other ways, so he could not risk remaining on this side of the ranch. Also, he needed to regain his pace. The moon was already well risen, the land flooded with its glow. The more he hesitated, the more his danger increased.

Even so, this whole side of the property was now compromised. He had no choice but to descend the bluff, go back across the road near the marina, and climb up to the ranch from the other direction.

If he was fast, this might work.

He clambered down, intending to double back and make his way along the lakeside until he reached the stream, then cut through it and return in his earlier scent trail.

When he was about halfway down, there was a flash from below. It wasn't bright but it was followed by a familiar electric crackle that surprised him so much that he almost lost his grip. Struggling not to fall, he turned to look down—and saw, incredibly, that the entire clearing at the foot of the bluff was filled with the creatures of the village with their great, stricken eyes. Four of them had Tasers, and a fifth had something that from this distance was far more dangerous. This was a rifle, probably one that he or Mac had brought into the village.

Laden with the machine gun, the heavy magazines, and his other equipment, Flynn nevertheless had only one maneuver. He had to climb back the way he had come.

Immediately, a rifle shot rang out. It was wide to the left, perhaps fifteen feet away and low. Knowing as much as he did about shooting, Flynn knew to move toward the impact point, not away from it. And indeed, this caused the shooter to miss again, this time by five feet to the right.

If he was lucky, this would work one more time, maybe two. The shooter was small, therefore clumsy with the rifle. But with unknown capabilities. He increased his speed.

Another shot struck the limestone, this one close enough for him to feel a spray of shattered stone against his cheek. The shooter was either brilliant or very poor, to be trying for a head shot.

Another shot, and this time Flynn felt the heat of it. Limestone fragments from the bluff stung his neck.

The next shot would make it.

He reached the lip of the bluff.

Pulling himself up with all his strength, he rolled onto the top as two shots in quick succession slammed into the limestone just below him.

The shooter had found his target, but an instant too late.

They were racing up the bluff with the ease of creatures made to climb.

He ran, speeding toward the road. He was desperate now and he knew it. His only hope was to make it back to the marina and get to the car. But they could flank him easily, and there were the dogs and there was the tiger, and Diana out there, who could be extremely dangerous, as much as she knew about the way he thought.

The car. Now. His last chance.

CHAPTER THIRTY-FOUR

He stayed off the road itself, leaping stands of cactus, darting around cedar thickets, stumbling when he came upon a concealed draw, then picking himself up and continuing on.

He ran hard and far, passing through the silent countryside with the swiftness of a deer, quick but vulnerable.

He couldn't hear a sound behind him or around him. It was as if he was entirely alone. And now he had to add a new concern, which was the silent helicopter. Now that they were certain he was here but no longer sure of his location, it might well become involved.

He reached the marina, which was closed and dark. He rejected the idea of taking one of the boats. Even if he had time to wire it, they would then know where he would appear next, somewhere along the lake.

His car was the only one left in the hard-dirt parking area. He ran to it and got in. As he inserted the key in and started it, he looked up and down the road, seeing no movement.

An explosion shattered the air, and for an instant he thought the car had been bombed. But it was a rifle bullet. It had shattered the windshield. The shooter was in the brush fifty feet away.

He threw the car into gear and floored it. As he accelerated, the little car fishtailed wildly in the dirt of the parking area. Fighting to regain control, he

pressed the gas pedal and it leaped ahead.

Dust churned up behind him as he sped along the marina road. His plan was now to violate all the rules. Instead of running from this impossible situation, he intended to rush the house and just shoot until they got him.

But the moment he turned into the ranch's road itself, the black GMC that Diana had been driving appeared, blocking his progress.

Hauling on the steering wheel, he turned into the pasture and went slamming through a mass of cactus so large that his tires spun in the pulp.

A second later, the truck was behind him, its grill filling his rear window.

As he maneuvered through the pasture, he fumbled the backpack open and worked the machine gun into his hand. To stop the vehicle chasing him, he needed a perfect burst. He levered the gun to semi-automatic mode.

Was he about to kill Diana?

He put the thought firmly aside. This was work, feelings came later.

The truck kept close, so close that he couldn't see the windshield. The driver wasn't a fool, he probably knew that if Flynn got a shot at it, he was a dead man, and also that Flynn wasn't going to waste bullets firing into the radiator.

A series of cracks, nicely measured, resulted in his own rear window being blown away. A powerful round was in use, sounded like a .308, probably a NATO round. Blow his head right off.

He swerved around some cedar, then skidded into more cactus, then plunged down into a draw. Behind him, the GMC blasted through the brush, pushing dense cedar aside like it was grass.

Again there was gunfire, and this time Flynn felt the whole car tremble as it took the shock of a round penetrating the trunk.

So they were going for the gas tank. Smart enough. He still had no shot.

Something had to be done, or he was going to lose this thing right here and right now. He drove on, unable to determine a productive course of action.

Then he saw water, then again, ahead and to the right, the lake, its surface

far down another bluff.

Okay, here was a maneuver for him. He got the HK into the backpack and opened his door. Now he was driving fast along the bluff's edge, doing forty, fifty, the car shaking itself almost to pieces. Outside his door, the cliff fell away.

This was going to be a very damn close thing. Very close. He didn't often bother God with his crap, but he bothered God now. A lot.

He spun the wheel to the left, causing the Cruze to literally go into tumbling flight. As it did, he dropped out of the open door and onto the cliff's edge.

The car went spinning into the lake.

He let himself fall and keep falling, breaking his plunge as best he could. Finally, he was sliding, then some roots and a loose boulder temporarily stopped him.

Far below, the car struck the water. Nothing left but a red trunk, then the night blue of the lake, the car gone forever.

He looked up, and saw five feet above him another of the caves. Yesterday's deathtrap was today's refuge.

As the truck snarled back and forth on the ledge, Flynn clambered into the cave. How well did they know him? If Diana was involved, they would be certain that he hadn't been in that car when it struck the water.

A moment later, he had his answer. It came in the form of gravel dropping down past the mouth of the cave.

So they knew their man.

The air coming out of the cave was cool—too cool, in fact, for this to be a small place. Back there somewhere was a very large cave indeed. Limestone tends to cave out over time, and this was old country.

He took his binoculars out of his pocket and saw, stretching away behind him, a substantial cavern. Its ceilings were cracked, there was rubble everywhere, and the only access to deeper areas was through a series of

openings that looked like real traps, the kind of places that would never let you find your way out.

No time to lose, though. As somebody dropped down outside the mouth of the cave, he plunged into the opening with the strongest breeze, and found himself squeezed tight as he forced his way along.

Confined spaces were never pleasant, and he had been sensitized by that damn coffin, but he kept pushing, dragging the backpack behind him, one of its straps around his left ankle.

He came out into a larger space—and saw all around him huge, glaring eyes. His heart practically exploded out of his mouth, but he choked back the scream as he realized that these were not living creatures but paintings of the gods of some forgotten tribe of Indians. They were beautiful, tall, staring balefully, their arms pointing toward the ceiling—where, when he raised his head—he saw a magnificent representation of the night sky.

Scraping echoed through the cave as his pursuers started down the shaft he'd just come through.

He headed deeper, walking, stooping, running when he could, not really keeping track of his movements. He could get lost in here, no question. But no matter what kind of twists and turns he took, he always heard behind him the scrape of their footsteps, and their quiet grunting as they negotiated the next narrow passage.

No more than one or two of them, he thought.

He smelled dry grass—just a whiff of it, but it was there. That bit of air had come from the surface. So there was another entrance ahead.

Sucking air, painting the way ahead with infrared, he was soon moving steadily upward.

Behind him, the sound of their scrabbling had grown louder.

A glow ahead, then a faint voice from behind shouting at him to stop. He did not stop. Then there came the crack of a shot. The bullet was wide, but not very. He ran away from the sound and toward the glow—and found

himself clawing his way out through a big stand of cactus, clawing and pulling at it, and forcing his body out to the surface.

Ignoring the torture of a thousand needles, he came up through the cactus—and saw, not fifty yards away, the truck. As he trotted toward it, he could hear that its engine was still running. He didn't wait, he ran toward the vehicle, putting every single bit of strength he still possessed into the sprint.

The truck was empty, so he now had two choices. He could take the truck and head back to the highway and get the hell out of there. Or he could rush the ranch compound with it.

He turned the truck toward the house. His job. His battle.

He did not see the two figures in the road behind him, did not see one of them yank an old Stetson off his head and hurl it to the ground in frustration.

CHAPTER THIRTY-FIVE

He stopped just out of view of the ranch to check his weapons a last time.

The HK was in good shape, and you wouldn't expect a weapon this durable to have any problem with a little fall down a cliff. All the magazines were there.

He stuffed the AMG into the pocket of his jeans and transferred the extra machine-gun magazines to his belt. Not the most secure way to carry them, but it was what he had. His most critical moments would be during exchanges. He'd trained with an HK and knew that he could pull and set two magazines in just under three seconds. Good time, but maybe not good enough.

He pulled the vehicle forward until he could see the compound. The house appeared quiet, the lights out. Beyond it, the barn was also dark. To every appearance, the place had been abandoned.

He took deep breaths, cleared his mind, and concentrated his attention on the world around him. He saw, just for an instant, some camouflage in motion about two hundred yards away. Somebody was in among a stand of mesquite, using the mottled shade as cover against the moonlight.

If he'd seen them, they could see him. He put the truck in gear and began moving toward the house. He drove quickly. There was no way for him to know whether or not they had realized it was him in the truck. He also didn't

know how many people here were capable of putting up a defense, let alone what form their weaponry might take, except that it would be exotic and it would be devastating.

He took the HK in his left hand and steered with his right. He passed the house, heading toward the area beside the shed that covered the entrance to the underground chamber.

Methodically, as he prepared himself, he tried once again to put aside his policeman's confrontation training. He could not announce himself. He had to just do this.

He got out of the truck and held the HK ready.

As he'd driven across the compound, there had been no movement from either the house or the barn.

Something hit him in the right shoulder with such force that it spun him around. A flash of pain shot down his chest and up his neck, but he regained his balance, turning to face the direction the blow had come from.

There was no nearby cover. He looked farther, and there, in the shadows of a cedar thicket, he saw a darker area that a careful observer could see had a human outline. He must be using some sort of stun weapon.

Just briefly, Flynn squeezed the HK's trigger. It blared out a burst and the figure sank. Just that quick. That impersonal.

Four shots, so twelve still in the magazine.

He moved closer to the shed, preparing for a reaction to his burst of machine-gun fire. But nobody moved in from the perimeter and the house and barn remained quiet.

He considered going down the ladder into the storm cellar, but decided to explore the shed first.

The door was unlocked, so he pushed it open.

This was probably an old well house. Before entering, he looked up at the grandeur of the sky. This was probably the last he would see of the world. He hoped that there was some sort of afterlife. That was all, hoped.

He entered the shed. Again, absolute quiet. There was an old stove pushed against one wall and a wooden trapdoor in the floor. Beneath it, there had to be opposition. That was fine by him. Just as long as he got to Morris, he didn't care whether he survived or not.

He lifted the ring, then hefted the door slightly. It wasn't barred from below. No, this was obviously the path they wanted him to take. The guy in the thicket had probably been out there to incapacitate him with the stun gun and carry him down.

When he pulled it up, the door made no sound. Well-oiled hinges, lots of use.

He climbed down the old ladder to what had once been the root cellar, then took a narrow spiral staircase, much newer, that led deep.

The closer he got to the bottom of the narrow space, the stronger the odor became of blood and burned flesh, of burned hair and another stench that cops come to know. It doesn't have a name, but it's the smell of things that have gone horribly wrong, that clings to places where violence has taken place. It's made up of sweat and blood and shattered lives, mixed together as the odor of fear.

The room glowed with soft fleshy light that came from the walls themselves. It was not a normal room, not a human room. Like the village, like all the rest of this place, it was an outpost of another world.

There was also a sheen of blood on the floor, and the stink of the place was so powerful that he had to fight hard not to gag.

Again, he heard the distant pulsation. He began moving toward it.

Machine gun at the ready, he went deeper. The pulsation became more and more distinct. Now it didn't sound so much like a boiling pot as a thumping assembly line.

Ahead there was a figure, short, quick, dressed in black, opening a box of a familiar kind.

A moment later, something that looked like a glowing fireball sizzled into

existence immediately above the body inside the box, which was a young woman, very pregnant. She was motionless but she did not look dead or even asleep.

Certain insects, he recalled, paralyze their prey so it will remain fresh for use later.

Her face was in shadow, but when he saw it clearly, he was confronted by such beauty that he gasped.

Immediately, the creature in attendance turned toward him, its movements snapping fast, like those of a quick snake.

There was a flash and for an instant Flynn saw in black outline the skeleton of the young woman and the skeleton of the baby inside her. The fetus moved its hands toward its face in surprise.

The light filled the room with a brightness like thick, glowing milk.

An instant later, the light was gone and his eyes were dazzled, and someone was standing in front of him. He felt hands on the machine gun and knew that in a moment it would be gone.

He didn't wait for his eyes to recover. He didn't wait for anything. He pulled off a burst and the creature flew backward, its arms flailing, its mouth and eyes wide with surprise.

Four more shots. The magazine was now half empty.

He stepped into the fight, moving quickly to aim the gun at a second creature. Had it been fully human, its face would have been the sort that cops see late at night, a whore's face, worn and tired and profoundly lonely. As it was, the great blue eyes were not only sad, they were tired. Also uncaring. He thought that it didn't care whether it lived or died.

Flynn did two shots, no more needed, and the figure flew backward into the wall, then slid to the floor.

He went to the young woman, whose eyes were now so glazed that he feared the worst for her. Working quickly, he performed CPR, but he couldn't get a pulse.

Light glared from behind him. As he threw himself to the floor, he turned into its glare.

“It’s over,” Jay Elder said.

If you have a gun, best to let it do your talking. Flynn depressed his trigger and the last burst on this magazine brought a brief shout, then Jay Elder disintegrated.

Replacing the magazine as he rolled, Flynn pushed the table over, creating a shelter for himself behind it.

Immediately, a stun weapon smacked the table, causing it to jerk back into his face. Four more of the creatures from the village rushed him. Another burst took them out.

Silence fell. The air was thick with the sickly stink of cordite, the powerful reek of blood, and a strange odor, the same cross between sulfur and cinnamon that had filled Oltisis’s space.

When there was no more fire directed at him, he took out his small, powerful LED flashlight and aimed it around the darkened room.

Elder was on the floor, his chest a mass of blood. Lying against the spiral stairs was one of the creatures from the village, also dead. In front of him there were the remains of at least six more of the creatures.

Flynn pulled out the empty magazine.

There was a whisper of movement in the dark.

A light came on, and suddenly he was face to face with the narrow, gleaming face of Morris. “Don’t reload, Flynn,” he said, “this is finished.”

Flynn said nothing.

“You’ve cost me,” he continued. “I can still make some use of her, but not much. And the infant is already sold along, so that means a refund. I don’t like to do refunds, Flynn.”

“What in hell does that mean, sold along?”

“I’m just a businessman trying to make something work in an out-of-the-way place that happens to contain some nice genetic material. This is a mean

little planet and it's dying. I want to get some of what it has to offer before you're all gone. That's all."

"But it's a crime where you come from, doing this. That's why your cops are after you."

"In some parts of our world, it's a crime. Not in all."

"You've turned yourself into something that can live freely on Earth. And you're struggling making more. That's why your helpers look like that."

"They aren't 'helpers.' That's a work gang, nothing more. When they're used up, they'll be terminated."

They were slaves, as Flynn had suspected. He realized why they'd been made to appear so strange. It was so they couldn't walk the streets and therefore couldn't escape.

The ability to manipulate life had created a whole new type of crime.

"What are you, Morris? You're not like Oltisis, are you? Not the same species?"

"Consider this a living costume. It's not pleasant and, thankfully, it's temporary. But to answer your question, I've been a lot of things in a lot of places." He gestured at the carnage around them. "This is costly. You're going to have to pay."

"What happened to my wife?"

"Your wife?" He looked over toward the dead woman. "That's your wife?"

The realization that he had not the slightest memory of Abby made Flynn's anger flare.

"You will go where she has gone," Morris continued. "Or you will die right here, right now." As he spoke, he slipped a rod into his hand, blunt and black and thick. Its end glowed like a coal. He waved it toward Flynn.

Searing agony. The machine gun flew from his hands as he grabbed at his chest, tearing the cloth away from his burning skin.

But he wasn't on fire.

The HK clattered to the floor.

“If I put a charge in you, you’ll feel that pain for hours, until you die of exhaustion. Or you can come with me.” He sighed, and Flynn knew it as a player’s sound of satisfaction, a sound that comes when the trump is laid down or the queen trapped.

CHAPTER THIRTY-SIX

Inside himself, Flynn fought for balance. He had to restore his mission, so he had to get past this checkmate, and he would. The only checkmate he would accept was death.

Morris said smoothly, “It’s not going to happen your way, Flynn. It’s going to happen my way.”

Flynn eased his foot toward the machine gun on the floor.

Morris kicked it away. “You need to understand that you’ve never come unhooked from my line.” He gestured vaguely. “The life you have known is over.”

Flynn still had the pistol in his shoulder holster.

“The pistol, too. You can’t win, Flynn, I’m sorry. I’m smarter than you are.” He glanced around the room. “I oughta just burn you, you bastard.” The stout little device in his hand hissed and its spark grew brighter. Morris smiled. “Fascinating, isn’t it? Come on, we’re going over to my factory.”

Morris directed him to ascend the stairs. He was caught, no question, but he concentrated on every detail as it unfolded. He needed not only to get an opening, but to see it. He’d watched many a fugitive miss a wide-open path to safety.

Outside, moonlight silvered the world.

“Get in,” Morris said, gesturing with his weapon toward the GMC. “Elder

was a good man. Making off-the-scale money. I can pay at that level, you know. Gold. You join me in this little, insignificant business I have going here, Flynn, and you'll be a billionaire in a year."

Flynn said nothing.

"I'm just sayin', Flynn, the money is serious."

As they entered the vehicle, Morris was careful with his weapon, keeping it constantly ready. "At home," he said as he started the car, "the equipment is better."

"Where is home?"

Morris didn't answer for a moment. He began driving across the grounds, heading out into the brush. "You know, I don't think I can explain that to you. It'd be like explaining this car to a chimpanzee. Can't be done."

Flynn thought, "So the truth is, it's somehow vulnerable." He would not forget Morris's inadvertent admission. If he lived.

They drove along a rough pasture track to the village.

From this perspective, the structures were really amazingly well camouflaged. They appeared to be a few piles of brush, the sort of thing left behind when cedar is cleared. Only from overhead could you see that it was organized around a central path.

Flynn had been watching Morris carefully, looking for an opening. So far, there had been none.

"Now, what's going to happen to you in there is that the contents of your mind—all of your experiences—are going to be taken out for sale to people who don't have the rich opportunities that life on Earth offers."

It probably wasn't bullshit, but he couldn't say that he understood it.

"Your body will be dissolved and reduced to recoverable stem cells, which will be sold on the black market." He laughed a little, and in that laugh Flynn heard a very human sound, the glee of a psychopath. He regarded Flynn with wide, avid eyes.

"Why are you telling me this?"

“You’ve caused me extraordinary trouble. I won’t deny it.” He smiled his soft, haunted smile. “I just want you to know how it’s done. What was done to your wife.”

A searing flash exploded into the car and, absolutely without warning, half the village burst into flames. Instinct caused Morris to whirl away from the blast, in the process dropping his weapon.

Instantly, Flynn reached out and grabbed it, and by the time Morris had looked back, it was pointed at him.

Morris’s face told his story. He was horrified and he had no idea what was going on. Neither did Flynn. Opening the door with his free hand, he backed out of the vehicle—and found himself three feet from the tiger. From inside the truck, there came a sharp burst of laughter. Morris began to get out the other side.

Flynn’s problem was that he had no idea how to use this weapon. It was a featureless black cylinder, and the end was no longer glowing.

In the firelight, the tiger’s eyes flickered. The face was not angry, it was not cruel. Instead, he was seeing that same questioning expression. Very softly, he said, “Help me.”

Morris came around the car. Another of the weapons was in his hand, and the tip of this one was glowing.

Frantically, Flynn shook his, twisted it, squeezed it until his fingers went numb.

Morris held his at arm’s length.

Flynn stared helplessly at the red tip.

He was hurled backward, falling against the tiger.

But the tiger backed away. Then Morris was on top of him, slamming his face with the fury of the mad. He’d seen it before, he’d felt it before. Guys on angel dust fought like this. Crazies.

From above, there came a powerful wind, sweeping up clouds of dust and causing the tiger to crouch, then turn away.

There was a snap and a deafening roar and the other half of the village burst into flames.

Snarling, Morris leaped to his feet. He raised his weapon. The red went to white, then to iridescent blue. But he didn't point it at Flynn, he pointed it overhead.

Flynn looked up to see a shape not fifty feet above them. It didn't make a sound, but it was visible in the firelight. It was the silent helicopter.

The weapon glowed brighter. The base of the helicopter began also to glow. It swerved away. Morris followed it. The helicopter began to smoke.

Flynn was getting to his feet, but then the tiger finally decided to charge, and he was forced to roll aside, throwing up his arms to defend his face.

The tiger went right past him, its immense bulk flying through the air with startling ease.

It hit Morris directly in the chest, causing him to plunge fifty feet across the compound and crash to the ground. His weapon flew off into the night. But he was immediately back on his feet. "Snow Mountain," he said, "do *not!*"

The tiger stared at him.

Overhead, the helicopter began to work its way lower. The remains of the village burned furiously, ringing the scene with dancing flames and casting terrific heat.

Wobbling, the chopper reached eye level. A voice called out, "We can't figure out how to land this damn thing!"

It was Mac. Sitting beside him was Diana.

The chopper went up, disappearing into the night sky.

Flynn saw that Morris was on his feet. Snow Mountain was close to him. He wasn't attacking, but he wasn't doing anything else, either.

Flynn dodged into some shadows, trying to minimize his exposure to Morris.

The wind from above returned. Got stronger. The chopper appeared in

front of him, wobbling uneasily at eye level.

Diana peered out. “Flynn, you’re a pilot, what do we do?”

“Draw the cyclic toward you!”

Mac yanked it into his stomach and they lurched away into the dark, then came rocking back.

Mac yelled, “That didn’t work!”

“Reduce power!”

“Got it!”

“Move the cyclic back, *barely!*”

They were hovering now.

“Reduce power more.”

They dropped to an altitude of about four feet. He could reach out and touch them. The chopper wobbled, began drifting into a slow spin.

In seconds, they would lose it. He saw the truck moving. Morris was getting away.

“Jump,” he shouted, “do it now!”

But the chopper shot up into the sky. The truck was quickly disappearing into the dark. Then the helicopter reappeared, nose down, dropping fast. Not the right attitude for a chopper, not this close to the ground. But Flynn could do nothing. They were going to pile the damn thing in.

At the last moment, it lurched. It spun on its axis. Once again, it hovered at an altitude of ten feet.

“See, the bastard won’t land! It’s got a fuckin’ mind of its own.”

It did, Flynn knew. Somewhere in there, a sophisticated crash avoidance system didn’t like Mac’s piloting.

“Jump or die, damnit, both of you! Do it NOW!”

Something dropped out. Flynn recognized it by its shape: it was a shoulder launched urban assault weapon.

Where in the world had Mac come up with a thing like that?

He’d probably never know.

The chopper was still at about five feet. Shielding his eyes with his forearm from the hurricane of dust it was producing, he ran forward.

“It’ll take off again,” he yelled, “*jump!*”

First, Diana leaped out. She tried to roll off the kinetic energy but did it like she’d seen in movies, not the way that worked.

Mac dropped down, rolled expertly, and danced to his feet.

As he came out, Flynn dove into the cockpit and pushed the collective all the way to the floor, causing the rotor blades to lose lift. The chopper dropped to the ground. He turned off the ignition switch and the engine quit.

“That sucker’s alive,” Mac said. “And it don’t like me.” He was caked with dust.

Flynn could no longer see the truck.

Diana hobbled to her feet. The dirt in her hair made her appear to have gone gray.

“Sprain?”

“I’m fine!”

Mac produced a Magnum. Diana had one, too. Good.

Diana dug another Magnum and an iPhone out of her backpack. “Take these.”

Flynn took them. “Safe to use the phone, I wonder?”

“Right now,” Diana said, “all he has is that truck. His money, my friend, is gone. His life is gone.”

“You hacked him?”

“To the bone. If he has cash in his pocket, that’s what he has.”

At that moment, the ground shook. Soon, more flames could be seen flickering through the trees.

“He just did the compound,” Flynn said.

“Then he’s a total bum with nothing but a busted car. ’Cause he ain’t even got any insurance policies. Somebody canceled ’em. And his deeds. They’re gone from the county record office. Plus the electronic backups. Sometime

later tonight, that truck's gonna run out of gas and he's gonna be walking.
That'll be what he has. Feet.”

The hell with that, he had his life, which was not acceptable.

Flynn ran toward the helicopter.

CHAPTER THIRTY-SEVEN

Gathering up the UAW, he told Diana and Mac, “You two stay here, get away from the village, do back-to-back defense. Shoot at any and all movement and expect that tiger to come around at any time. But don’t drop it unless it charges you. The tiger is conflicted, and that might be valuable down the road.”

He got into the pilot’s seat and restarted the engine. As soon as it ran up, he loaded the rotor with lift and rose into the sky.

The lights of structures that lined the lake shot past as he worked the foot pedals to bring the chopper’s yaw under control. At the same time, he looked toward the ranch, hoping to spot the truck in the glow of the fires burning there.

No joy. The truck wasn’t near the compound, and beyond fire light, the land was dead black.

He took the chopper into an uneasy hover, then leaned out of the open door with the UAW on his shoulder. Its sight was light-sensitive, and he soon spotted the truck bouncing through the brush, heading cross-country toward the main road, rather than going anywhere near the ranch’s driveway or the smaller road that served both it and the marina.

He began working the helicopter closer. He was no expert with its controls, though, and it was a struggle.

The UAW had just one rocket in it, so his first shot would be the one he got. The Magnum wouldn't be useful, just noisy, so the rocket was his chance.

Working the cyclic and the collective, he dropped down and moved closer to the truck at the same time. It was invisible to the naked eye, but easy to see in the sight, and the closer he got, the more the crosshairs converged. But then he would overcontrol the chopper or undercontrol it and the whole process would need to be repeated.

He had just two hours training on helicopters. He hadn't even soloed. Still, this commercial-military hybrid was relatively easy to fly, and he was beginning to be able to close in nicely when the whole airframe started shuddering, the collective came up on its own and the engine went to full throttle.

The chopper went up so fast it was like being in a high-speed elevator. Flynn was normally almost silent, but this caused him to cry out with surprise.

The autopilot had taken over. It was probably controlled by Morris down in the truck.

The altimeter was winding up at breakneck speed. As he watched, he went through two thousand feet.

Okay, think. He was not going to overcome this situation using manual control. At best, the battle that would ensue between him and Morris and the autopilot would crash the chopper. He surveyed the instrument panel. No obvious autopilot override.

There was one thing he could do that had to work. Also, though, it might kill him.

He took the UAW up and sighted in the speeding truck, but the sight didn't even activate. Far out of range.

So this was it. He was down to one choice, and it was a really bad one.

He checked his straps, then reached down and twisted the fuel shutoff

valve, stopping the engine. The warning horn sounded as the wing went into autorotation and the ascent stopped. The autopilot was still controlling it, though, and as soon as Morris realized what he'd done, he would try to crash it, no question.

Working quickly, he flipped circuit breakers, hoping to kill something crucial, like the autopilot's telemetry. Turning off its power supply wouldn't matter. Autopilots have backup batteries.

As he flipped more and more switches, the instrument lights went dark, then the instruments themselves ceased functioning.

He was now on straight visual in a dead black night, with only the distant lights along the shore, and those of the various fires below, to orient him.

Once again, he brought the UAW back to his shoulder. As the chopper lost altitude in uncanny silence, he searched for the truck.

It was moving at breakneck speed, not a hundred yards shy of the main road. Flynn didn't care whether this bastard's bank accounts had been hacked or not, or what had happened to him. He needed killing.

As the chopper continued to descend, the truck grew in the UAW's sight, until finally the crosshairs began flashing yellow.

A few more feet. He dropped the chopper's nose. Maybe they would die together. Fine, he didn't care.

The crosshairs moved closer and closer together. Then, very suddenly, they were red, and in the center of their cross was the truck.

He fired the rocket, which left the tube with a ferocious roar and a kick.

He tossed the tube behind him out of the way and concentrated on piloting the chopper, which was now rapidly losing altitude.

A blinding flash of white fire announced the end of the truck, and Flynn roared, "Abby, baby, Abby baby, I love you!"

He couldn't bring her back, but this was the end for the evil bastard who had destroyed her, and that felt damn wonderful.

Police procedures didn't matter. Morris was not human, therefore the only

law that applied was the law of jungle, and Flynn did that kind of law as well as any of the criminals he so despised.

Using the cyclic, he got the chopper aimed straight toward the dying fires of the village. As he came in, he heard both Magnums being discharged.

Adjusting the collective to decrease lift on the rotor, he dropped down as fast as he dared, hitting the ground approximately a hundred yards from the village.

His jaw snapped, a flash went past his eyes.

The helicopter became still. His ears rang from the shock of the impact.

Before moving, he checked himself: hands okay, arms, feet, legs. If he was going to go into a firefight with impact injuries, he wanted to know where he was impaired, and what it would do to his effectiveness.

He jumped out of the chopper and approached the village. To the west, huge flames still gushed up from the ranch compound. Further south, a smaller glow marked the position of the truck.

Diana and Mac came out of the underbrush.

“I thought you crashed,” she said.

“No. What were you two firing at?”

“The tiger’s out there.”

“Has it charged?”

“You can’t ask us to take a chance like that!”

She was right, but he was also relieved when, very suddenly and in absolute silence, Snow Mountain appeared. His stripes were such perfect camouflage in the flickering firelight that it almost seemed as if he had materialized out of clear air rather than walked out of the shadows.

He came closer. Mac readied himself to shoot again.

“No,” Flynn said.

Broken only by the crackle of flames, the silence the tiger brought with him was as strange as a cry from a distant world.

Flynn reached out and laid his hand on the lion’s head—a small human

hand lost in the fur of the immense animal.

“You could sell that thing for a damn fortune,” Mac said.

“Don’t even think about it.”

The tiger looked off into the dark.

Flynn was relieved that Diana wasn’t the traitor he had thought her to be.

“We’re a good team,” he said.

Snow Mountain turned and slipped into the darkness.

Mac ran after him. “Hey!”

“Leave him be, Mac.”

“I don’t get my skin or to sell him to a zoo or nothin’. Shit!”

“He’s got his own demons to deal with, that one does.”

“He’s part human, isn’t he?” Diana asked.

“Be my guess. And who knows what else?”

“What’ll happen to him?”

“He’ll roam the land, make some kind of a life for himself.” He looked off in the direction he had gone. “That’s the loneliest creature in the world.”

A cathedral silence settled, as they all contemplated together the plight of Snow Mountain. In the distance, a dull explosion echoed from the direction of the compound.

“How did you ever get out?” Flynn asked Mac.

“I had to do a good bit of killin,’ tell the truth. Is that murder, doin’ those little gooks?”

“There’s no law to cover killing aliens, if that’s what they are. There will be, but not now.”

“Well anyways, it was self-defense.”

He thought of what had been happening at the compound, of the fate of the captured. “It sure was. I thought you were a goner.”

“I was acting.”

Flynn recalled that he’d been a terrific Dracula in junior year at Menard High.

But for the crackle of fires, everything was quiet.

Mac looked from one of them to the other. Slowly, a smile came into his face. "Have we won?"

Flynn noticed that Diana's hand had slipped into Mac's. For a moment, he felt shock. Disappointment. Then he forced it back inside. He'd been lonely for a while, so he'd stay that way. Fine. Abby was with him and she had no plans to take up with some damn crook.

He reflected that whole worlds can change in a moment on the battlefield, and that had happened here.

He smiled back at the two of them. "Right now, we've won."

Above the sirens, because it was so close, there was a sound that made Flynn freeze. "Back to back, brace the pistols!"

Dogs came leaping and snarling in at them from every direction at once, their bodies speeding like liquid fire, their teeth flashing, their human eyes filled with human hate.

With the care and expertise of a man, one of them grabbed Flynn's throat with its long claws. Its mouth opened and it was slashing with its teeth when he blew it in half. For a moment, the jaws continued snapping with shark-like fury, then, its blood gone, it dropped away like a stone.

Behind him Diana's shot went wild. As she screamed and another dog leaped on his back, he turned and blew off the head of the one attacking her, then killed two more at her feet.

All the while others piled on him, until their weight staggered him and he fell forward between Mac and Diana, then forced himself to turn into the ravening pack that was on his back, and fired four more times, taking all of them out, leaving them in pieces on the ground around him.

Then they were gone.

Mac hung his head.

Diana sat on the ground covered with blood and sobbing.

Flynn said, "There are eighteen. We did twelve. The others won't try

again.”

Diana dropped her pistol into her backpack.

“Unless we disarm ourselves. You love your gun, remember.”

“It’s too hot to hold.”

“It’ll cool off. Mac, you okay?”

“I’m alive.”

“We’re done here,” he said. He could hear pumpers churning over at the compound, but great masses of smoke were still pouring skyward, lit by the fires in the underground chambers.

“Those guys gotta be wondering what the hell was going on out there,” Mac said.

“Probably think it was some kinda drug factory. Probably figure it belonged to you.”

“Me? I don’t have any penetration into Travis County. I’m way west of here, buddy.”

“It’s time for us to go on down the road,” Flynn said. “Morris and his operation are done.”

As the three of them walked out to the highway, Flynn saw that Mac and Diana were still hand in hand. In silence, Flynn walked on ahead.

Once they were on the road, Mac directed them to the parking lot of a closed strip mall. The Range Rover was there, pulled up behind a dry cleaners.

“Backup transportation,” Mac said. “We stationed it here last night.”

Last night seemed like a thousand years ago.

Moths and bats swarmed around the floods that lit the parking area. In the far shadows, a young couple necked in a convertible. Music echoed in the distance.

“I thought we’d go on over to the Oasis, knock back a few,” Mac said. “Sounds like there’s a band goin’.”

On the far distance, Flynn heard country music, the wail of a violin, the

frantic twitter of a mandolin.

He preferred blues to bluegrass.

They drove to the bar, which overlooked the lake. In the parking lot, though, Flynn hung back. He'd seen a taxi rank, cabbies trolling for kids too drunk to drive, and smart enough not to.

He watched Diana and Mac disappear into the lights and the crowd. He'd thought she was his, and it was going to take him time to get easy with the truth.

This battle had been won, but there was a war going on, and they needed to be prepared for whatever might come. They needed a bigger operation, more and better-trained personnel, more equipment. More of everything, and better.

He got into one of the cabs. "Take me into town. Motel 6 be fine," he said.

The driver worked in silence, which was good. To Flynn, silence was home.

The cell phone buzzed. He looked at the number, did not recognize it.

"Yeah?"

"Flynn, where are you?"

"Kicking back," he replied. "Catch up soon."

"You don't want to celebrate?"

"I'm good."

"Flynn—"

"Diana, you be careful. I know Mac well. He's a professional criminal and he breaks hearts for fun."

"Flynn, I love you."

"I love you."

Silence fell. Extended.

Finally, Flynn added, "But you want him."

"He wants me."

Pretty as she was, she was too hard along the edges to have been wanted

very much in her life. Mac went for powerful women, though. He enjoyed demolishing them.

“I’m here,” he said, “and you’re gonna want a shoulder in the end.”

“Mac is a lovely man, Flynn, that’s what you can’t see.”

“If you say so, Diana.”

He hung up as the driver pulled up in front of the Motel 6’s tiny lobby.

He checked in with his own credit card, a small but sweet satisfaction. In the room, he flipped through the channels. Nazis, cartoons, girls, the usual late-night stuff. Still, he left it on in the background. The mutter of artificial excitement relaxed him.

Toward three, he decided that sleep was not in the cards for him tonight.

He pulled on his jeans and a sweatshirt and went out into the parking area, then up onto the shoulder of the empty highway.

He walked, listening to the rhythmic whisper of his shoes on the tarmac. When an eighteen-wheeler thundered by he didn’t vary his pace or even glance at the drama of its passing, so deep had he gone into his thoughts.

His memories of this extraordinary experience followed him as shadows in the wind. Whatever happened, he was going to stay with this thing. In the end, whatever these creatures were, he would banish the bad ones from Earth, and create conditions that would enable the others to share the richness of their minds openly with mankind.

Flynn Carroll walked as he henceforth always would, with his secrets buried in his silence. He walked his own path, but not alone. Abby was there by his side. He chose to believe in the prevalence of the soul, and that she was, as are all decent people, part of the essential goodness of creation, of which he was soldier, servant, and ally.

In the silence of his heart, he embraced the people he had loved, and those he had lost. The moon had set, and the Milky Way in its majesty spread across the great vault of the sky.

He paused, looking up into the vibrant beauty of it all, and imagined other

eyes and other minds perhaps returning his gaze, and thought on the richness of the weave of good and evil he had touched, and what dark secrets must still be undisclosed. Had Morris been the only criminal of his kind? Were there more, as yet unsuspected, or would there be? And what of the alien police? If there was more crime to fight here, would they be willing, this time, to send enough support? And if not, then how would he proceed on his own?

He walked on down the dark highway, alone and content to be alone. His battle was won, and that was good. A good feeling.

A meteor flashed in the sky, then descended in blazing grandeur.

Or was it a meteor? He stared along the horizon where it had fallen, looking for some new glow or some other hint that it had been, perhaps, a conveyance from the deep beyond.

Nothing glowed, though, and no more meteors appeared.

Fine, then he would go on down the road, and see what might develop. The questions, however, of who these creatures were and where they had come from and what their true motives might be—these questions had not been fully answered, not in his opinion. He had wrecked the enterprise of one of their criminals. But the greater mystery that they represented had not been solved.

But that was tomorrow's problem. Today's had been solved. Whoever they were, their good guys now knew they had a friend here on Earth, and their criminals that Flynn Carroll was somebody to be reckoned with.

ABOUT THE AUTHOR

WHITLEY STRIEBER is the bestselling author of more than twenty-five books, including the legendary *Warday*, *Nature's End*, and *Superstorm*, the basis of the movie *The Day After Tomorrow*. His most recent books, *The Grays* and *2012: The War for Souls*, are both being made into films. His website, Unknowncountry.com, is the largest of its kind in the world, exploring the edge of science and reality.

This is a work of fiction. All of the characters, organizations, and events portrayed in this novel are either products of the author's imagination or are used fictitiously.

CHAPTER ONE

AS HE did every morning, Flynn Carroll was going through police reports on his iPad, reading them quickly. Then he stopped. He flipped back a page. As he reread, his eyes grew careful.

He didn't look the part of a careful man. His appearance—ancient chinos and a threadbare tee—was anything but. Duct tape repaired one of his sneakers. His hair was sort of combed; his beard was sort of shaved. But the stone gray eyes now stared with a hunter's penetrating gaze.

In two respects, the report was right in line with the others that were of interest to Flynn. A man had disappeared—in this case, two days ago. This morning he was discovered murdered in a characteristically brutal and bizarre manner. What was different was that the body had been found very quickly. Usually, corpses were located days or weeks after the murders.

Not only was this a case for him, but it also represented a rare chance. The killers would generally do two or three or more victims over a period of a few days. The first body would rarely be found until at least two or three more killings had been done. There had been no other disappearances or characteristic murders reported anywhere in the area. If this was the first in a new series, it represented both a major change and perhaps a major opportunity.

The change was that this victim wasn't an anonymous homeless person

picked up off the street. This was a citizen with an identity and people and a place in the world. The opportunity was that the killers might still be operating in the area, and Flynn might have a chance to get them.

He unfolded his lean frame and got to his feet, striding off between the rows of consoles and neatly dressed technicians who manned the command center.

As he passed one of the linguists, he asked, “Got any new messages?”

“This week? Two lines.”

He stopped. “And?”

“A complaint, we think. They seem to be saying that you’re too brutal.”

“Me? Me personally?”

He laughed. “All their messages are about you.”

They’d been asking their counterparts on the other side for six months for more information about these killers. All they had been told was that it was a single, rogue band. From the amount of activity Flynn guessed that it consisted of about seven individuals.

Another of the techs sat before a strangely rounded device, beautiful in its darkness, but also somehow threatening, a glassy black orb that seemed to open into infinity.

Flynn went over to him. “Jake? Got a second?”

The man was intent on his work, peering into the blackness. Within this small, very secret working group hidden deep in the basement of CIA headquarters in Virginia, this device was known as “the wire.” It provided communication with their counterpart police force. This other police force was headquartered on a planet our experts had decided was called Aeon, the government of which was eager for open contact with mankind. Supposedly.

The problem was—again, supposedly—that they weren’t entirely in control of their own people. Aeon, our experts had decided, had evolved into a single, gigantic state, but it was free, and so, like any free country, it had its

share of criminals.

Flynn's take: Let's see this place before we decide what it's like. Nobody had ever been to Aeon—except, perhaps, the people who had not been killed, but had instead disappeared without a trace ... like his wife, Abby.

“Let Aeon know we've got another murder.”

“Yes, sir.”

“And if there's any response, anything at all, get it translated on an extreme-priority basis.”

As far as Flynn knew, only one remaining alien—a creature that looked human—was responsible for the original crimes, the disappearances. These new crimes—all killings—were being done by things that looked, frankly, alien. They weren't the “grays” of popular imagination, with their huge eyes and secretive ways. Flynn had never encountered one of those creatures. Apparently, they weren't from Aeon. With such a big universe, so incredibly ancient and complicated, who knew what they really were or where they were from?

The ones he was trying to take off the map were wiry creatures with narrow faces and blank shark eyes. They had four supple fingers and long, straight claws that could also be used as knives or daggers. They were biological but not alive, he didn't think, in the same way that human beings were. Their rigid determination and ritualistic, unvarying murder techniques suggested to him that they must be robotic.

He did not hate them. His objective was to clean up the alien criminal element on Earth so that the public could safely be informed that contact was unfolding. To the depths of his soul, Flynn wanted open contact.

There was one exception to his dislike of killing them. The first alien criminal known to have arrived on Earth had called himself Louis Charleton Morris. He used a highly sophisticated disguise that gave him human features that were regular and spare. His hair was black, his lips narrow but not cruel.

His expression was open, even friendly. If you encountered him in a dark alley, you wouldn't think you had a problem. You'd also be just as wrong as a person could be, because Louis Charleton Morris could do far worse than kill you. He could take you into the unknown and do to you there whatever he had done to Abby and so many others.

There had been a police officer here from Aeon, until he was killed. He had two legs and two arms, and a face with lips that were somewhat human, but the eyes were those of a fly. Oltisis could not expose himself to our atmosphere, and had worked out of a hermetically sealed office in Chicago.

Disguising oneself as Morris did was, it seemed, so illegal that not even a cop could get a clearance to do it. Since Oltisis's murder, though, Aeon had apparently changed that policy. No replacements had showed up, however.

Flynn's theory was that the killers belonged to Morris. They were something he had created and was using to get revenge.

Flynn's previous life as a detective on the police force of the city of Menard, Texas, had hardly prepared him for this work. Get your wife taken right out of your marriage bed in the middle of the night, though, and you'd change, and change a lot. You would go on a quest to find her, or find out what had happened to her. To serve that quest, you would learn whatever you needed to learn, and do whatever you needed to do. You would push yourself hard. You would not stop.

He walked across the room to a door marked only with a plastic slide-in sign: DIRECTOR. On the other side, there were more desks; more computing equipment; more quiet, intense men and women. Saying nothing, moving with the supple energy of a leopard, he went through into the inner office.

"I've got one I want to move on right now."

Operations Director Diana Glass said, "Okay, what are we looking at?"

"Town in Pennsylvania. Guy disappeared yesterday. He's been found. First report from the area."

“They could still be there.”

“That’s what I’m hoping. There’s a strange kicker, though. He’s a neurologist. Dr. Daniel Miller.”

She raised her eyebrows in question.

“It gets more interesting. He worked at Deer Island.”

“On the cadavers?”

“Possibly. There’s a neurobiology unit there.” He paused. “So maybe he hit on something somebody would rather we didn’t know.”

“Official Aeon would never do this.”

“You sure?”

“Maybe it has to do with his work, but I also think a citizen was involved to make sure you’d come. It could be an ambush, Flynn.”

“Probably is.”

“How did it go down?”

“He went out on a mountain bike. When he didn’t return at sundown, his wife called for help. The bike was located at dawn. The cops brought hounds, but his scent was only on the bike.”

“But they found the body anyway?”

“In a wetland a few hundred feet from his house. Same condition as the derelicts. Lips cut off, genitals and eyes dissected out, drowned.” So far, more than twenty homeless people had been taken off the streets, mostly in the northeastern United States, brutally and bizarrely mutilated, then drowned in the Atlantic and returned to locations near where they’d been picked up.

“We need some advice from Aeon,” Diana said.

“And how are we going to get that?”

“The two police forces, working together—”

“Don’t even start. There’s one police force: us. Ever since Oltisis, Aeon’s side has been all smoke and mirrors.”

“For God’s sake, don’t do any more killing.”

He locked eyes with her.

She looked away. “The other side objects more strenuously every time you kill another one, Flynn. They want them back.”

He said nothing.

“They have laws just like we do! They want these creatures back for trial and punishment.”

“No, they don’t. They’re not creatures.”

“That’s a matter for debate.”

“You haven’t fought them. I know when I’m dealing with a machine—believe me. No matter how high-end its brain is.”

“They don’t want them killed. Bottom line.”

“If they want them back, tell them to damn well come and get them.”

“If you’re wrong about what they are, you’re committing murder.”

“We’re disabling machines, not killing people. Anyway, this is our planet. So, our laws.”

“Which don’t include blowing away perps like—” She hesitated, unsure of how to continue.

Flynn knew exactly how. He said, “Like they’re broken machines and cannot be stopped in any other way.”

“Aeon is far in advance of us technologically, Flynn. Far more powerful. When they complain, we need to listen.”

“‘Aeon’ consists of messages translated from a language we barely understand, coming from someplace we can’t even find, that will not send a replacement for the one policeman they did give us, or even explain what they think happened to him.”

“Oltisis was killed in Chicago, not on Aeon.”

“And what about a replacement? Or, God forbid, even two. Or fifty? Why don’t they send us a whole team of detectives and a nice chunk of SWAT? Seems the logical thing to do.”

“They regard this as a small problem. One we can handle ourselves. They haven’t sent support, out of respect for us.”

“Have you ever told them the truth?”

“What truth?”

“That only one person is able to even get near these critters? I need support, Diana. The risk is just incredible.”

“We have messages that specifically forbid you to kill, as you know. You’ve got to promise me you’ll abide by them.”

“So what do I do? Bag them up? Drag them off to a supermax?”

She sighed. She knew perfectly well that they could not be contained.

“Over the past nine months, I’ve done four. If Aeon’s telling the truth and this is a rogue band, maybe I can wrap the problem up on this mission. Finish the thing.”

She leaned far back in her chair, her long dark hair falling behind her, her green eyes, so deceptively soft, filling with uneasy calculation. Her face, an almost perfect oval, took on an expression that Flynn knew all too well. When she was twenty, it must have been a soft face, sweet with invitation. Her journey to thirty had been a hard one, though, during which she’d seen death and done some killing. Her face still said angel, but now it also said soldier. Hidden behind that cloud of Chanel was a woman with a tragic secret: The blood of some of her own cops was on her hands. Flynn knew she was as haunted by the deaths of members of their original team, who had been killed by Morris and his group, as he was by Abby’s disappearance.

“Losing you would be a phenomenal disaster, Flynn. You’re right about that. I’m going to have to order you to stand down on this one.”

For a little while in the dangerous period when they had been tracking Morris, the two of them were together twenty-four hours a day, sleeping in the same room for mutual protection, and they got to be a thing—sort of, anyway. They had wanted each other, but he was not able to dismiss Abby’s

ghost. Four years ago, their affair was an act of desperation, which had faded when the threat became less. With her sitting in the boss's chair and him married to a ghost, he considered it entirely over.

“Time, Diana. I’ve gotta move.”

“You heard me.”

As he walked out, he called Transportation and told the operator, “I want to be in Mountainville, PA, in best time.”

Diana came up behind him.

He walked faster.

“Flynn, at least wear the rig.”

The rig was designed to record his moves, to be used in a training film. “Nope.”

“Unless you wear it, we can’t hope to teach others. You can’t work alone forever, Flynn.”

“Fine. Hire Mac.” MacAdoo Terrell was an old friend from Texas. He’d worked the Morris case with them. He was among the best sniper shots in the world, if not the best, and Flynn could use a sniper in this.

“You know I can’t.”

“No rig. Forget the rig.”

She hurried along, working to keep up as he strode out of the command center.

“Flynn, please!”

He stopped. “The rig contains electronics. As I have previously explained, when I wear it, the electronics will be detected, and therefore, I will fail to engage the perpetrators. Of course, they may well engage me, in which case, I’m done.”

“Do not go out there.”

“I could end this!”

“Flynn, it’s a trap, and you’re completely buying in to it. I don’t get why

you don't see this.”

“If you know you're entering a trap, it's not a trap—it's a mistake on the part of your enemy. So I'm gonna walk into their mistake—and they don't make many—and I will not lose this chance.”

“Flynn, will you grant me one favor? A small one?”

“I'm not gonna wear the rig—but, yeah, something else.”

“Come back alive.”

“Fine. Done. Good-bye.”

This time, she stayed behind. He passed through the two departments that concealed the command center, went to the transport hub, and got in the waiting SUV.

The driver was silent. Flynn was silent. Usual routine. He spent the drive to Dulles looking at satellite views of Mountainville. Frustrated by what he was seeing, he texted Logistics: *Throw me something better than Google Maps.*

That's all we have. Not a strategic location.

He punched in the tech's phone number.

The answer was immediate. “Sir?”

“Get to the Pennsy Department of Geology, or whatever they call it over there. You want a map that details any isolated watercourses within two miles of the house. Mountain streams, that type of thing. Any that are spring fed and absolutely pure. And any caves, crevasses, rocky areas, especially near the good water. You want a map that shows all of that. You got it, you call me. Make it fast—it's as urgent as they come.”

He put down his phone, then returned to the Google map. Steep hills, lots of cliffs, which meant exposed climbing. For them, the best terrain. For him, the worst.

The car dropped him at general aviation, and he strode quickly through to the waiting plane.

As he entered the cabin, he asked the pilot only one question: “How long?”

“An hour and sixteen minutes.”

“Get me there in an hour.” If this had any chance of working, he had to be ready by sunset. Maybe the aliens would be there one more night. Not two, though. Never happen.

“Sir?”

“I know the plane. It can do it.”

“It’ll risk the engines.”

“Do it.”

Once they were airborne, he called the unit’s FBI liaison officer. “Flynn here. Get the body out of the hands of the locals immediate. Standard procedure: autopsy and record, then freeze. Provide the family with stock ashes in an urn. The local cops are to be told that this is a terrorism matter. If they talk, they’re gonna be spending the rest of their lives inside. Obviously, make certain there’s no press.”

“Got it,” the liaison officer said.

The engines howled. The pilot was running them as ordered.

Flynn watched the land slide past far below, the trees tinged with autumn, little towns nestled in among them, America in its quiet majesty, her people in their innocence.

He wanted things to be right for them. He hadn’t been able to protect Abby, but he could protect them, at least a little, at least for a while.

As always at such moments, he wished he had Mac with him. They’d grown up together but gone down opposite paths. Mac was a criminal, more or less, so tangled up in being a DEA informant and massaging the drug cartels, you couldn’t tell at any given time which side of the law he was on.

If Flynn missed anybody besides Abby, it was Mac. He’d helped wreck Morris’s operation just like he lived his generally illegal life—with skill,

ease, and pleasure.

His extensive criminal record made him a security risk. So no clearance, which meant no job, despite the fact that he'd been effective and, unlike most of the others who worked on that case, lived. Morris had been running his operations out of a ranch near Austin, Texas, complete with bizarre intelligence-enhanced animals and human accomplices.

Flynn slid his hand over the butt of his pistol. What success he'd had—the killing of four of the things so far—came from one central fact: He had become very, very fast with his weapons. None of the trainees he'd been given so far were able to come even close.

It wasn't too surprising, given that a man could practice for a lifetime and never learn to shoot a pistol as fast as Flynn could. He'd always been good with a gun, but in the past few months, he'd reached a level of proficiency that was, frankly, difficult even for him to understand.

The engine note changed, dropping. The plane shuddered, headed down. Flynn looked at his watch. Fifty-four minutes.

He hit the intercom. "Thank you."

The reply was a burst of static. The pilot was probably thinking about whom he'd have to deal with if he blew his engines.

From the air, Mountainville appeared to be little more than a few stores and some houses tucked in among a low range of hills. The single-strip airfield wasn't manned. The plane could land, though, and that's all that mattered.

The place looked the picture of peace, but Flynn knew different. Somewhere down there a man had endured what was probably the worst death a human being could know.

Also down there, he had reason to hope, would be his quarry.

The plane bounced onto the runway and trundled to a stop, its engines still roaring. He got out and crossed the tarmac to the car that had been left

for him. As per established procedure, the vehicle was dropped off by the regional FBI office. Nobody was to meet him. What Flynn did, he did alone.

He tossed his duffel bag into the trunk, then got behind the wheel. He sat silently, preparing himself for whatever might come. Then he started the engine.

The hunter was as ready as he could be. He headed off toward Mountainville, and whatever might linger there.

CHAPTER TWO

THE TAIL Flynn had been expecting showed up ten minutes after he left the airport. Now he drove down a quiet country road—two lanes, not in good repair, choked on both sides with pines. Diana’s tail was about a mile behind, staying out of sight, or imagining that he or she was doing so.

As he drove, the forest on his left fell away to reveal an open field. Beyond it was Mountain Ridge, a low rise of land shadowed by the darkness of the pines that covered it. Somewhere along that ridge, Daniel Miller had met his end.

Flynn noticed a flicker of movement in the rearview mirror. He sped up a little, drove until he saw a mailbox ahead, the name MILLER painted on it. He turned quickly into the drive and sped up the unpaved double track.

He began to see flickering light bars winking through the trees ahead. So the locals still hadn’t left, which was not good. The longer the body stayed out there, the more chance for word of its condition to spread. Public knowledge would turn very quickly into public terror if the world realized what was happening.

At that moment, his cell phone vibrated. It was a text—and an odd one: the number three repeated three times. Nothing else. It wasn’t a police code, at least not one familiar to a Texas cop.

He glanced in the rearview, but the apparent tail was gone, so he killed

the phone and pulled over. He looked for the number where the text had originated, but it was blocked. He called Diana.

“Did you just text me a three-code of some sort?”

“No, I did not. What did you get?”

“Three threes from a blocked number.”

“Some sort of phone scam?”

“On a line this secure? I don’t think so.”

“No, I suppose not.”

“By the way, pull off your tail.”

“Flynn, you need somebody on your back.”

“The poor guy is vulnerable as hell, you know that.” Only it wasn’t just any FBI agent pulled in for the duty. It was Diana herself, of course. Soon enough, he’d send her packing.

He hung up and returned to his drive. A moment later, the phone buzzed again.

“Go ahead.”

“You got your maps.”

He killed the phone and pulled over. Drawing his iPad out of his duffel, he examined the maps he’d been sent. They were eleven years old, but far more detailed than what he’d found on Google. He saw the Miller cabin, and another cabin two miles away. Could be others around by now, but from the look of the woods he was in, not too many. Good. The fewer people who were exposed to this, the better.

There was a little stream, called a “kill” in this area, from the original Dutch word *kil*. This part of Pennsylvania had originally been settled by immigrants from Holland. Hecker Kill descended from the mountains, passing no structures until it went under the road and meandered across the flats toward the Delaware River. So the water in the upper reaches would be as pure as Earth could make it, the milk of the planet, just the kind of water

the creatures liked best. There were also deep ravines.

If the aliens were in one of those ravines, that could be useful. The deepest of them also had a pool at the bottom, and caves.

They liked hiding in caves, and the nearby water supply would likely make that their first choice. Somewhere between here and there would be the point of ambush.

He looked long at the map, committing all the elevations to memory. Too bad there were no water depths. He might have to take one hell of a risk involving that pool, and it had been a dry autumn.

Thinking out confrontations with the aliens was like playing chess for your life.

He started the car again. Soon the drive was choked on both sides by dense growths of pine. As he proceeded up the dark, steepening track, he prepared to meet Eve Miller.

He felt his body relax into a scholar's slump, felt his breathing become less measured. He'd be Dr. Robert Winter, an infectious disease specialist from the Centers for Disease Control and Prevention.

He counted the ruts of six vehicles in the drive—one of them large enough to be an ambulance. Or, in this case, a coroner's wagon. The tire marks went in only one direction. So nobody had left yet. He wasn't about to expose himself to the local cops. The FBI guys had better be in control of that body by now, and all evidence confiscated. The tail he'd deal with in due time.

The drive ascended steeply, penetrating into thicker and thicker stands of pines and oaks, ash and maple. Lovely spot.

He reached the row of official vehicles parked at cockeyed angles in the grassy roadside. There were two black FBI Fords, the coroner's wagon, and two sheriff's department cruisers.

Farther on, he could see a log cabin huddled under an overhanging oak.

He pulled his car up past the official vehicles and into the gravel roundabout in front, then sat listening and watching, just letting himself settle into the scene. Then he opened his duffel again and took out his weapons.

He carried two pistols. His main weapon was a Casull Raging Bull loaded with .454 rounds. It was a superbly engineered pistol that could handle high-speed shooting and still provide accuracy, so long as you were practiced with it. Its ported barrel reduced recoil, giving it an accuracy edge. The other weapon was also a Casull, this one a .454 quarter-inch—basically a Police Special with more juice. In the past, he'd carried an AMT Backup, but the Casull offered both more power and accuracy.

He attached the Bull, still in its holster, to his right hip with a clip, then locked the holster into the belt. The little pistol he tucked into a shoulder holster under his left arm. His guns were protected by a biometric array, which made it impossible for anybody else to fire them.

So the aliens couldn't shoot him with his own pistol, but they had a lot of other ways of dealing with him. If they got him, he knew that it would be slow. They made their victims suffer, and they would undoubtedly pay special attention to him.

In the event of capture, he had a way out. He withdrew a black steel box from the duffel and opened it. Inside were two silver capsules, each a quarter of an inch long. He took one out, then looked at its chemically treated seating in the box for any discoloration that would reveal even a microscopic leak. He then fitted the cyanide capsule into the back of his jaw. Crack it, and he would be dead in three seconds.

He went up onto the porch and pressed the doorbell.

Nobody came. So had the widow left? If so, the ambush could be about to go down right here, right now.

He rang the bell a second time.

The door creaked. An eye flickered in the peephole.

“I’m Dr. Winter from the CDC,” he said.

There was a faint scraping sound behind the door. She was sliding her fingernails along the doorframe, unsure about whether to open it.

“I have a few questions, ma’am.”

The lock clicked and the door swung open. Standing before him was a woman of perhaps forty, her considerable beauty wrecked by lack of sleep. No tears, though. He noted that.

“Please come in,” she said.

He found himself in a large living room with a cathedral ceiling. There were checked curtains on the windows, and a couch upholstered to repeat the pattern. An oak coffee table stood before the couch. Two deep recliners faced it. In the open kitchen he could see a Bosch dishwasher and a Sub-Zero fridge. A collection of copper pots, all of them gleaming, hung from a rack above a broad granite countertop.

“Very nice,” he said.

“Thank you. The CDC. Is that why they won’t let me see my husband? Is some sort of a disease involved?”

“I’m sorry for your loss.”

She gave him a defiant look, her eyes full of fire and sadness.

“When you last saw him, he was riding out toward the ridge?”

“On his mountain bike. It’s in the cop report. Why is someone from the CDC here?” She added in a low, ominous voice, “What happened to his eyes, his face?”

“You did see him, then.”

“The sheriff came up here after he found him. He showed me—” She shook her head.

“Pictures?”

She nodded.

He would make certain that the FBI got those pictures, and they ended up

in a shredder. “Did he say what he thinks happened?”

“He fell off his bike and became disoriented. But that doesn’t leave a man all cut up, not like that.” She looked him up and down, blinking once when she noticed the bulge on his right hip. “You’re not from any Centers for Disease Control.”

No point in continuing the lie. “No, I’m not.”

“So it’s not a disease?”

“No.”

“Are you here about Dan’s clearance?”

“Did he talk about his work?”

She considered that, then shook her head.

He pressed her. “What did he tell you?”

“Nothing.”

He went to the couch. “May I sit down?”

“I can’t stop you.”

“If you tell me to leave, I’ll leave.” He wouldn’t, but hopefully she wasn’t going to try that particular path.

“I know what you are.”

“And what would that be?”

“Like I said, you’re worried if his clearance was compromised.”

“I want to help you.”

“How in the world can you help me?”

“By finding who did this and bringing them to justice. May I know your first name?”

“I’m Eve. But shouldn’t you know that?”

“It’s in the file, but I prefer to ask.” He tried a smile. No reaction. He asked her smoothly, “What do you think happened to Dan?”

“What do I think? I don’t know what to think. He fell off his bike. He was maimed. He drowned in two feet of water. It’s not exactly a straight story, is

it?”

“No, it isn’t.”

She fell silent. Grief? No, not quite. When her eyes came back to him, there was a nasty little spark. But why? What was she hiding?

“Is this work-related?” she asked. “Are you trying to tell me he was murdered, is that what this is about?”

“We don’t know what happened.”

“But it could have been murder, or someone like you wouldn’t be here. And the local cops aren’t going to be told, are they?”

“They’re going to close it out as an accident.”

“And the FBI?”

“They’re here because of his clearance. To make sure no classified information slips out in the course of the investigation.” He paused. “Look back to before this happened. Anyone come up to the house who was unexpected?”

“That’s why he was out there in the first place. Three children came to the door. They asked if they could come in. I asked what they wanted, and they just walked off the porch and sort of wandered back into the woods.”

“And you’d never seen them before?”

“They looked like little tramps. They were filthy. They smelled. And no, I don’t know where they came from.” She drew her shoulders together. “They made us worry that drifters were camping in our woods. We have three hundred acres of this mountain.”

The aliens could hypnotize the unwary into seeing them as deer, as owls, even as children. They could put hallucinations in your mind, damned convincing ones. “What do you remember about the kids?”

He watched her eyes flutter closed. She was trying hard. She said, “I was glad they left.” She leaned toward him. Her voice a low whisper, she continued, “I found them loathsome.”

“But no more details?”

“Were they part of this? Because they were not normal children. No way.”

He offered the simplest and safest of all the lies he could have told her: “No, they weren’t part of this.”

“I want to believe you.”

“Let’s think back again. Besides the kids?”

“Nothing important.”

“Everything is important.”

“He was murdered. That’s why you’re here.”

Flynn did not reply.

“Did you work with him? Can you at least tell me that?”

“I did not,” he said.

“You’re like him—you come off as a real gentleman, but inside you’re tough as nails.”

“He was a hard man?”

“Strong. Like you.”

He nodded. “Now, think back. Anything else? Anything last night?”

She looked into the middle distance. Flynn watched the pulse in her throat. He’d interrogated too many people to watch her eyes. Do that, and even a person with nothing to hide would spar with you. Lower your gaze, and they feel an unconscious sense of control, even though they are not in control.

“You know, there is.” She leaned forward. “I couldn’t sleep last night.”

“I understand.”

“Very late, there was an owl at the bedroom window.”

“An owl? Had that ever happened before?”

“Never. It was just looking in at me. I hit the window with a pillow, and it flew away.”

Owls didn't look in windows, so the aliens had been here as recently as last night. They'd still been interested in her twelve hours ago, so maybe their interest was ongoing. Maybe she was also a target, or, as was more likely, they had planned their ambush of him near the house, and wanted to be sure he would be nearby tonight, protecting her.

"Let's talk about Dan and Deer Island. What do you know?"

"His employee number was 333676. I knew very little else. It was all secret."

The first part of the number sent enough of a shock through Flynn that he had to drop his head for an instant, so she wouldn't see his expression.

In that same instant, the blocked number became a central issue. He needed to find out at once who was behind it.

He lifted his lips into the appearance of a smile. "Tell me the very little."

"What you want to know is whether or not he shared his secrets with me. He didn't. I just figured a few things out."

"Run down what he did tell you."

"His project was called Dream Weaver. He did a lot of work with hypnosis, which I figured out from things he said."

The project name didn't ring any bells, but the fact that he worked with hypnosis meant that he almost had to be involved with the bodies. The question of how the aliens could hypnotize people without speaking to or touching them was of major interest to the U.S. government, especially the intelligence community.

"Anything else? Anything at all?"

"Three nights ago, we thought we heard somebody on the porch." She nodded decisively, fixing it in her memory. "We did."

"After the children or before?"

"After. It's what finally decided Dan to investigate up the ridge."

"He was armed with what?"

“Not armed. We’re not gun people.” She glanced again at his hip.

“I’m a police officer,” he said. He lifted his jacket to reveal the butt of the big pistol.

“From where? What department?”

“Can’t answer, I’m sorry.”

Given that Dan Miller worked in an advanced facility that was involved with the mysteries of alien neurology, Flynn was now almost certain that he had been looking for a meeting with them, not a confrontation with squatters. They had granted him a meeting, all right—his last.

“I’m going to spend the night out in your woods. I’d appreciate it if you wouldn’t leave the house.”

“Are you serious?”

“Your husband worked against terrorists. They killed him, and I’m going to see if I can track them.”

“It’s almost dark.”

“They might still be out there. You need to know that.”

“Then I’m going back to the city.” She clutched her shoulders. “I don’t want to be here anymore.”

“Leave in the morning.”

“I want to leave now.”

“Ma’am, I don’t want you out on those roads in the dark. This is a lonely place. Safer in the house with the doors locked. And turn on your alarm system.”

The wall clock hummed in the kitchen. A breeze toyed with the pines outside. He raised his eyebrows, asking for a response.

“I think you’re the saddest man I’ve ever seen. Why is that?”

“Just stay in the house. You can leave in the morning.”

Should he tell her what was really going on, that she was a pawn in a deadly chess game?

The words hung on his lips, ready to be spoken.

She said, “Yes?”

If she thought the “terrorists” were going to come after her tonight, she’d certainly leave, which would change things in unpredictable ways.

He believed that he could protect her. He believed that he could kill aliens here tonight, and save future lives as well.

“Again, please accept my condolences.”

She smiled, sadly and tightly. “Do you want a cup of coffee? I didn’t even offer you coffee.”

He gave her a salute.

She returned a wary smile.

As he went down the pathway from the house, she leaned against the doorjamb watching him. Then he rounded the big old oak, and she was blocked from his view.

When one of the official vehicles down below started up, he stepped off the road, moving swiftly back into the trees. The FBI would have told the locals to leave him alone, but he wasn’t taking any chances.

Now it would start, the first phase of a hard night of hunting.

His tongue went to his cyanide capsule, his hand to his gun. He turned his back on the parade of vehicles lumbering away down the road, and slipped into the forest.

CHAPTER THREE

IT WAS just approaching sunset, so the aliens would still be in the ravine, if he had guessed correctly about their location. He wouldn't be able to kill them there, but he might succeed in running a deception that would make them misread his competence. When they sprang their trap on him at the house, they would hopefully be overconfident.

As he moved through the woods, he heard the rustling of beetles, the hollow echo of birdsong, and somewhere close by, the uneasy mew of a raccoon. Animals would not venture near the aliens, meaning that silence in the woods was a useful warning sign. Birds would take flight, and even insects would stop their shrilling.

When you were within a few hundred feet of them, there would be absolute silence, nothing but the rustle of the breeze.

As he walked, he took deep breaths, pulling in the air, smelling it and tasting it, feeling it in his lungs. He was seeking their scent, the strangest odor that he knew. You could describe it as sulfurous, but it also contained the nasty sweetness of death and the roses of memory. Like everything about them—about Aeon, for that matter, and the whole issue of aliens on Earth—it was full of secrets.

Now, as he climbed the increasingly steep path, he saw signs, not of the aliens but of Miller's mountain bike. Here he had slipped a little, and farther

on, he had sped up. Then, here, along this rocky stretch, he had stopped for a time.

Had he been looking for squatters or seeking out the aliens?

Here, in a flatter part of the trail, the mountain bike had stopped again. It had stood on its tires long enough to make deep indentations in the soft earth of the trail. Beside the wheel marks, there were toe tips. Miller had balanced on his toes, still astride the bicycle. He had been looking up. He would have seen above the trees a glittering emptiness not unlike that of the lens of the wire back in the office, and before he knew it, he would have risen into the air. He would have been dragged into what would have seemed something like a big wasp nest, stinking and claustrophobic. In it, he would have been strapped to a table. Then they would have gone to work on him.

Flynn was pretty sure of all this. He had seen most of the other bodies that were recovered, the wounds, the bruises left by the struggle against the straps.

He moved a little deeper into the woods, a little closer to his target ravine. Along this route, the land got more and more rocky and steeper. He moved silently, relying on his memory of the elevations from the map, and his own terrain sense.

Then, very suddenly, the birds were gone. He stopped. Nothing rustled along the ground; no wildlife scuttled or growled. Far off, a dog was barking frantically, and from the sound of it, had been for a while. He stepped back a few feet, until he once again heard birdsong.

“Flynn—”

At last, she’d made her move. He pretended surprise. “What in hell’s name are you doing here?”

“Saving your life.” She nodded toward the ravine. “They’re down there.”

When he moved toward it, she came with him.

“I won’t let you do this, Flynn.”

“Diana, you need to back off. You don’t belong in the field, and we both

know it and we both know why.”

“Don’t hit me, Flynn, not with that.”

She’d lost her original team because she’d panicked and made command errors. She and Flynn were the only two who had survived a night of merciless carnage.

He put his hands on her shoulders. “Sorry, it was uncalled for.”

“I remember every guy, all the time.”

“I was there, too. I could have done things differently.”

“On your first operation? Green as you were? No.”

He turned back toward the ravine. She threw her arms around him.

Gently, he peeled her off and began moving downward, descending quickly into steeper terrain.

The rocks were painted with orange and tan lichens and gray moss, but they were jagged and sharp. Soon, he was working his way down a cliff. A bad spot to have to draw a gun.

He reached a granite outcropping. Peering over the small ledge that it formed, he saw the pool he’d spotted on the state map.

Somewhere below this ledge and above the pool, there was going to be a cave or a crevasse where the things were hiding, all pressed up against its walls like giant bats.

His ability to use his weapons would be compromised, while their dexterity would be at its most useful.

His left hand went to his neck, lingering on the scar that was there, long and red and still tender after three months. It had been done by one of their claws. Three inches, right down to the vertebrae—so fast, he hadn’t been able to react. Just in time, he got in a shot that had separated the head from the body.

He took a breath and continued down, pausing every few seconds to inhale their odor, testing its strength.

Then he felt the earth beneath his body give way. He steadied himself, then kept sliding carefully down toward the source of the odor.

The next instant, his footing was gone and he was more than sliding, he was out of control. He let it happen, scrabbling now, seeming to struggle.

Rocks and dirt cascaded down into the pool. Just as the slide was becoming a fall, he managed to grab a root outcropping. This caused him to swing out. The root shifted; then he felt it giving way under his weight. Swinging back, he grabbed another outcropping with his free hand. He found footing. Tested it.

The odor of the aliens was now chokingly strong, its sourness greasy, its sweetness so thick, it had become a sickening taste.

Carefully slipping out of one foothold, he found another lower down. Again, he descended.

He was close now, just a few feet.

Without warning, something fell on him from above, wriggling wildly. Before he could rip it off, it had wrapped itself around his neck and was striking at his face, fangs gaping out of its bright red mouth.

An illusion, he knew, but he wanted them to think it had convinced him.

Letting fly what he hoped sounded like a bloodcurdling scream of pure terror, he leaned outward and let himself fall.

As he passed the cave, he let off a couple of shots, intentionally wild.

He spread his legs and arms, exposing as much body surface as possible to the water. Maximum resistance meant maximum deceleration.

He hit the bottom hard, real hard, but didn't feel anything break. He swam painfully to the surface.

He came up gasping, coughing, flailing in the water. He needed to make his struggles look convincing. As he reached the bank, he wallowed, slipped and fell, and finally took off running down the gravelly path that paralleled Hecker Kill. He shambled along until he was well away from the ravine.

Then he dropped the frantic dash of a surprised and defeated man and trotted efficiently away.

Once he thought he was out of their range, he stopped. He listened. Normal sounds only. He used his nose. Pine and the sweet rot of the forest floor. Diana couldn't have seen him fall, but she would have heard the scream. So she was probably heading down to the kill herself, trying to save him. If night settled before he reconnected with her, she'd probably panic and bring up a search party. All to the good. The worse at this he and his people seemed, the better the hunting later tonight.

He sped up, moving among the pines like a ghost, silent, nothing scraping, nothing crunching. He gave the Miller place enough of a miss to ensure that he wouldn't be seen, but he also drew close enough to the house to see it.

It was near dark now, and light flowed from every window. Inside, he could see Eve sitting in one of the recliners. She was reading a book. There was music playing, a piano, its soaring notes drifting like birdsong across the quiet.

He was immediately reminded of another piano, on a blizzard-ridden night in Montana last year, and the woman who had been playing it, beautiful, talented, and innocent. Taken by Morris amid the slaughter of Diana's team.

Eve Miller would not suffer a similar fate, or any fate, at their hands.

Seeing that all the official vehicles were gone, he crossed to the wet area where Dan Miller had been found. He looked out across a clearing marked by bunched tufts of weeds jutting up from black water. It wasn't deep, though, not even shoe deep. Miller had been drowned in the ocean like the rest of them, and brought back here.

He looked up at the sky, empty now of larks, the first stars appearing. What had they traveled in, bringing Miller here? That was one of the great

questions. The one flying disk that had fallen into military hands proved to be a simple assemblage of balsa wood and foil, like a kite, or so he had heard. But the wood could survive the highest temperature that could be generated, and the foil was stronger than a foot thickness of armor.

It was full dark now, and that meant it was time to intercept Diana again. He turned away from the mire and went back to his car. He waited, but she didn't show. So he cleaned his guns, making sure that their carefully oiled mechanics contained not a drop of water from his swim. Then he got out and opened the trunk. He gathered up his work clothes.

"Hi, there," he said to the darkness. "Looks like I lived."

She came out of the forest. He hadn't needed to see her before he spoke. He knew where she was.

"I've decided that a capture attempt is too dangerous, Flynn."

"I wasn't planning one."

"So you agree with me. Good. We'll go back to D.C. and build you a team. The team can attempt a capture."

"No."

"Flynn, I'm your superior officer."

"And I'm the only person we know of who can kill these suckers."

"Because you won't train anybody!"

"Who are you gonna get for me, then, Bob Munden?" Munden was arguably the fastest gun in the world, capable of getting off an accurate shot in under two-hundredths of a second. However, this was a young man's game. Fast as old Munden was, he wouldn't make it.

"Flynn, we have to keep looking until we find who we need. You can't be the only person with your reflexes."

"I sincerely hope not."

"No more killing."

"Go home."

After a moment, she stepped close to him. Her face, wreathed in darkness, was as soft as a leaf. “I know you feel something for me, too.”

It hurt to hear her say that, and it was not the kind of hurt he liked to feel. He knew that he had to leave Abby behind one of these days, but how?

“It’s dangerous for you here,” he said. He took his second pistol from its holster, punched in the release code on the small keypad embedded in the grip, and gave it to her. “Keep it in your lap as you drive out. Don’t stop until you’re in a decent-sized town. Altoona. Go to Altoona. Drive fast.”

She looked at the pistol, handed it back to him. “I’m armed. But, Flynn, I’m not sure I understand what you were doing back there. Did you really fall?”

“I was building up their confidence. Now, go.”

She hugged him. It was unexpected, and he reflexively stiffened. Instantly, she released him. “I’m sorry.” She squared her shoulders.

“I—” The next word hung in his throat, unable to be set free. Until he knew Abby’s fate, his heart would remain frozen. Silently, he laid a hand on her cheek. She put her own on it and closed her eyes.

“God go with you, Flynn.”

He bowed his head to her, then watched as she walked off down the road. His hand was on his gun, his eyes on the sky above her, but no shape came. He would have seen it blotting out the stars as it slid into position above her. Maybe they were playing careful, or maybe they didn’t have their ship operating yet. He’d seen it before. It was old and battered. It clattered rather than hummed.

When he heard her car start, he was relieved. He listened until the mutter of her engine died away. As she left, he felt part of him leaving with her. There were days now when he couldn’t remember Abby’s voice or even her face, but almost every night, her murmur of invitation woke him to his loneliness.

He went back to his own car and got to work. First, he blacked his face with charcoal; then he wrapped himself in a long coat that was blacker than black. When he pulled up the hood, he was hardly more visible than the shadows around him. The dense cloth was treated with light-absorbing micro-optics that rendered the garment completely nonreflective. To an observer, it would create the illusion of an emptiness or a shadow, rather than something solid.

He got into the car and waited, letting his attention sink down into his body, concentrating on the feel of his skin, the pumping of his heart, the steady rhythm of his lungs, letting all thought slip away. He didn't do this only because he feared that the aliens might detect thought somehow, but more because it fed his spirit and made him strong.

Tonight he might experience great terror and great pain, and he might die. He remembered why he was doing it, for all the innocent lives that were his to protect, and also for the great chance that contact represented. If only this would come out right, mankind would receive a blessing from the stars. He needed to clean up this mess first, though, and that was the work of his heart and his soul, and what he was willing to die for.

As the silence of the night surrounded him, he felt himself disappear into his task. You wanted to be fast, you could not be thinking all the time. Your body had to do it; your mind could not.

Animal sounds returned, the scuttling of shrews in the late-season leaves, the snorting of an opossum, the rustling journey of a family of raccoons.

He thought nothing. Felt nothing. Only his breath whispering, only his blood running. He was the perfect hunter now, a big cat at one with the night.

Ten o'clock came, time to move.

What slid from the vehicle was more animal than man, a panther. Stealthy and swift, he slipped off toward the house with a smooth and powerful gait, running as silently as the air.

CHAPTER FOUR

AS FLYNN drew nearer to the house, he heard something unexpected: voices. There was a man speaking, low and warm, a night voice. He could hear the desire in it.

Eve Miller's reply was softly intimate.

He knew instantly that this was what Eve had been concealing when he questioned her, and why she showed so little grief.

He went closer yet, slipping onto the front porch of the cabin, dropping low, then raising his head just enough to see in the picture window.

A man of maybe fifty in worn jeans and an open shirt was sitting beside Eve on the couch, watching her with eager eyes. A leather jacket was thrown over a side chair. Hanging on its back was a shoulder holster. Flynn remembered how she'd said the word "sheriff," tasting it, and knew that this was the man.

His arm was around her, but he wasn't consoling her. She was flushed with pleasure.

Flynn went back to cover, then swung up into the oak that overhung the cabin, climbing with swift ease into its upper branches. From here, he had a view of both the sky and the roof.

He concentrated on what he was smelling and hearing, as an animal would. He noted the scent of rotting oak leaves, the sharper odor of pine, the

tang of chimney smoke. No trace of the eerie stink of aliens, though. Methodically, he looked from place to place, watching for even the slightest change, the thickening of a shadow, the suggestion of movement in the dark.

Below, the lights of the house went out. Soon, laughter rippled faintly, and then the shuffling rhythm of lovemaking.

Eventually, silence fell. An owl passed low over the roof and was gone. A real owl, he hoped, but there was no way to be sure.

Then he felt a change, just the slightest tremble in the tree's core. In response to the shudder, a leaf fell, slipping downward, making whispered sounds as it touched other leaves.

He knew for certain that something else was with him in this tree, something very quiet, very stealthy.

A night wind murmured. On the distance, something cried out. Farther off, a dog began to mourn, its voice caressing the silence.

All the nearby animal sounds had stopped. No owl muttered; no breeze sighed. It was as if the world had entered a zone of silence.

Below him, the house slept.

The tree trembled again. Something was climbing. Coming closer. Very stealthy.

Moving so slightly that the shift of weight could be detected only by the most sensitive creature, he pressed his ear against the tree trunk.

The scratch of claws, then silence.

If the aliens got too close to him, he would either be captured or killed—their call. They could disable the human nervous system with a touch. He'd fall like a corpse and be collected and carried off into their ship. In the stink and filth of it, he would be strapped onto their table. Then, to better enjoy his struggles, they would release his nervous system. Even knowing that he was giving them pleasure by doing it, he knew that he would fight those straps with all his might. He would not be able to stop himself.

Click, scrape. Then silence. Then again, very soft.

His fingers slid to the hilt of his knife. He could throw it a hundred feet with pinpoint accuracy. He could cut with it just in the right way to pop the head from the body. Then you stomped the head. It was brutal and it was messy, but it worked.

The dark grew deeper, the silence more profound.

There was the slightest of sensations along his ankle, a breath of air, the shudder of a leaf against his skin, no more.

His body threw the knife; he didn't. His arm sent it rocketing straight down at a speed of over sixty miles an hour.

There was a liquid sound, like a stone dropping into mud. Then there was something like a gasp, very precise, as if a machine had been surprised.

A scratching sound followed. It got louder, more frantic. A thud followed, against the distant ground.

He dropped down fast. Taking just an instant to glance at the spidery, inert form on the ground, he returned his knife to its scabbard and dashed toward the house.

An enormous creature came toward him, a bear. But it was no Eastern black bear. It wasn't even a grizzly. As it lumbered closer, he recognized it as a North American short-faced bear, twelve feet tall, a monster that had been extinct for thousands of years.

Before he could turn away, it reared up, looming over him, roaring with a voice like thunder.

It drew back a massive paw.

He kept running, straight toward it.

The huge claws slammed into him ... and kept going right through him.

It was more impressive by far than the snake, but it didn't slow him down. Over months of dealing with the aliens, he'd seen many different apparitions, creatures of legend, monsters out of his own mind, you name it.

The front door splintered as he burst through.

Things now moved at blinding speed. One alien leaped at him from the balcony overlooking the great room. It came like a huge bat, its thin arms spread wide, its very lethal claws glowing like blood in the firelight.

He drew the Bull and fired a single shot that lit the room with white light and roared like a demon. The bullet separated head from body, but even as the head tumbled past his shoulder, the body gripped him with steel arms and steel legs and pinned him as surely as if he had been caught in a vise.

The third alien, still in possession of all its powers, touched him with the electric tip of a short wand that it carried. Immediately, incapacitating waves of energy surged through his nervous system. He staggered, frantically trying to close his teeth on the cyanide.

Still completely conscious, but also completely helpless, he fell to the floor.

It stood over him, staring down at him with eyes like cruel windows, dark with infinity. Its tiny mouth was opened in a neat *O*, and it rocked its head from side to side. He had the thought that it was mocking him.

As it continued to watch him, he began to feel his nervous system coming back to life. His heart was thundering, his blood roaring in his ears, his lungs sucking.

Still, it watched him, its head lolling from side to side, its mouth open in that strangely empty and yet ominous *O*.

His arm flashed out and he grabbed its leg, yanking it off the floor.

It swooped backwards, and he found himself holding the leg of the largest spider he had ever seen. Reflex caused him almost to jump away, but he stopped himself. He tightened his grip.

The thing was chest high, its compound eyes glittering with hundreds of reflections of his own face, the features contorted with disgust and fear. Its huge black abdomen was striped with yellow, like a tiger. There was a

burning chemical stench to it, which he thought might be venom.

What the hell had just happened here? Had the creature actually changed form? Because this was no illusion.

Effortlessly, it broke his grip and leaped up to the cathedral ceiling. It hung there, watching him. When he glanced toward his gun, its whole body stiffened. From here, he could see the stinger in the tail, a black dripping scimitar.

It began to crawl across the ceiling, heading for the upstairs bedroom, where Eve and her lover presumably lay in the strange coma the aliens could induce, assuming they were alive, assuming they were still here.

Leaping across the room, getting the gun in his hand, and firing a shot accurate enough to penetrate the abdomen would be a matter of two seconds. It was going to take the creature about the same amount of time to drop on him. Its body would create more wind resistance, though, so maybe there would be a second of play in there.

He touched the cyanide capsule with his tongue. The secret to making a move like this work was to want it and let it happen, not to do it.

The spider dropped as he rolled, grabbed the pistol, and fired into its abdomen just as it enveloped him.

An instant later, he was on his feet, and the crumpled remains of the third alien were on the floor.

He went into the kitchen, got himself a glass of water, and drank it. For a time he stood over the sink, his head down. He did not want to look at the remains, much less touch them. He had to, though. Killing was intimate work, and there was only one thing more naked than a victim's body, and that was the killer's soul.

He went to the remains splayed across the floor and looked down at them. How could such ferocity and such danger be associated with something so insignificant as this little, shriveled mass of flesh and limbs as thin as pipes?

This alien was not going to be doing any more damage. None of them were. He knew the power of his weapons and the efficiency of his delivery. These creatures were dead.

He shifted his gaze to the darkness at the top of the stairs. The door to the bedroom hung open. The room itself was dark. What he might find up there made him uneasy. They'd been in there long enough to kill.

He mounted the stairs one by one, moving silently to the top.

The interior of the bedroom was still dark. He heard no breathing, but neither did he smell any odor of blood.

He drew down the blanket that covered them, and at that moment beheld a sight so appalling that he shrank back from it as if it were poison or a charge of fatal electricity. The man was on top. Eve was on the bottom. But their skin was like candle wax that had cooled and frozen. They were melted together in a grotesque, faceless whole, their two bodies somehow made into one.

He could see blue veins in the areas where they were joined. With a shaking hand, he touched the skin, which was soft and felt as new as a baby's. They looked like a bag made of human flesh. Even the faces were melted together.

Choking back a fear that told him to just run, to get out of there, to give up this quest, he reached out to one arm, thick and misshapen, that ended in two hands with ten fingers, and tried to find a pulse. Two hearts, a complication of signals, but there was no doubt—they were still alive.

He reached out, his own heart breaking. What unearthly, monstrous, mad power could do this? How could such evil even exist?

They lurched, and muffled inside the flesh that now lay as a living curtain that linked their faces, he heard a gagging female cry. Then the lower voice of the man, stifled, "Jesus!"

The body began to writhe, then to shake. The flesh that sealed their faces

together bulged and warped as they fought for breath.

Their confusion changed to panic. Choked screams filled the room and filled Flynn with a dread as terrible as any he had ever known.

Helpless, he watched them roll on the bed, heard their sphincters release, smelled the rise of urine, saw the skin turn red, then purple, and listened as the screams died into suffocated gasps and they died encased in an impossible mutual flesh.

Like a father whose child has died in his arms, he bowed over them, touched them with gentle hands. His face was rigid with loathing, his eyes swimming, his lips set in a line that spoke of the rage within.

In its slow way, the night came back, the hurried burr of the last crickets of summer, the sighing of the wind.

He lifted the purpling corpse and staggered with it across the room, then put it down at the top of the stairs.

When Diana and her friends saw this, maybe they would face the truth that he had known from the moment the presence of the aliens had been revealed to him. This was not a matter of a few alien criminals filtering through to Earth from a planet that was basically good. Something was terribly wrong on Aeon.

So far, everything that came from Aeon had been insane except Oltisis, and maybe the whole damn place was one big madhouse. He shook his head, then got the quilt off the bed and threw it over the poor couple.

He left the house and went and got his car. Carefully, not using lights, he drove it up to the front porch, parking it as close as he could. He could carry 150 pounds, but the two bodies, melted together as they were, had to weigh 300, maybe more.

Maybe this wasn't just an act of insanity. Maybe it was some sort of statement about the sins of the lovers, mad and ugly and vile, but possibly founded in some distorted moral sense. Eve's bedding her lover the night

after her husband died wasn't pretty, but it sure as hell didn't deserve this. It was also a warning, no question, that was directed at Flynn. It was meant to terrify and to say, Yes, you can kill us, but we have powers beyond anything you can imagine.

He returned to the house, registered the stillness of the living room, then went back upstairs.

As his head rose above the level of the second-story floor, he stopped.

What in hell?

It couldn't be.

Cautiously, he mounted another step. No, the thing was gone.

He drew his gun. With two quick strides, he went to the top of the stairs. He turned—and lying there in the bed were the two people. He ran to them, and saw by their darkly open eyes that they were in the profound state of unconsciousness that the aliens used to render their victims helpless.

With a gentle hand, he drew the quilt up over the naked forms.

It was hard to believe that the thing he had seen was never really there. But, like the spider, it had been an illusion on a whole new level, perhaps generated out of desperation.

But they'd all been dead when he found the melted bodies. Or had they? Was there another creature?

He returned to the car and got his forensic pack. The two sleepers would be like that for hours—insensible, impossible to awaken—so he didn't need to worry about them as he returned to his original task, which was to now strip the place of every trace of what had happened.

He opened the kit, drawing out the small, powerful flashlight, the brushes, and the bags. He set to work, moving methodically, meticulously catching every speck of strange flesh here and throughout the house.

Once outside, he gathered the remains of the aliens. They stank of hot plastic and rotten meat, and looked like huge, broken insects.

First, he put on his thick rubber gloves, then carefully lifted the first body, bunching the claws up into a fist so they wouldn't slice into him.

There was a severed head, which he lifted quickly, choking back his disgust, and thrust into one of the bags. Everything in him hated this part, but he was nevertheless extremely careful.

He thrust the last of the remains into one of the reinforced bags, then sealed them with CLASSIFIED MATERIALS tags. He dumped them into the trunk.

A fog was rising, turning the trees into ghosts.

The sky overhead, which had been filled with stars, was now as black as the interior of a cave. Or no, that wasn't quite right, was it? The sky didn't look dark; it looked empty. Could clouds have come in so high that they weren't reflective, or was it that there was too little local ground light?

He considered this, then looked away. Of course it was clouds—what else could it be?

As he got in the tired FBI executive vehicle he'd been given, the sheer exertion of the night overcame him. A headache came on. Closing his eyes, he sat back. The pain radiated down from the top of his head, involving his eye sockets, his temples, and his neck.

Stress fatigue. He pressed his fists into his eyes, and slowly, it passed.

Feeling a little better, he started the car and began driving, lights out, watching the faint line of the road ahead, letting the car creep as silently as possible. As he descended the steep track, the trees on both sides became thicker and the fog more dense. Still, he didn't turn on the lights. On the road, fine, but he didn't want anyone noticing a car leaving the Miller place this late.

There were a couple of sharp turns, which he negotiated slowly, keeping close watch on the nearly invisible line of the road. When he reached a straight stretch about three hundred yards long, he immediately increased his speed.

He reached the end of the Miller's road at last, and drove on, his mind a whirl of confused thoughts. Was this finished? Had he killed the last of them?

He had not killed Morris, and while that monster remained at large, nothing was finished. He would go on, deep into the night, looking, waiting, a spider more dangerous than the one the aliens had tried to frighten him with, patient and lethal.

CHAPTER FIVE

HE TURNED on his cell phone. The moment it went online, it rang.

“You killed them all,” Diana said.

“How would you know that?”

“Flynn, I have to tell you, Aeon is really, really pissed off.”

“Okay.”

“They want you stopped once and for all.”

“Say again?”

“They are *demanding* this, Flynn, and we’re not sure exactly what they mean. They might want you killed in return.”

“You tell them that we lost twenty-eight living human beings to their seven damn robots or whatever they are, and if they want us to capture these creatures, either send us instructions or send us help.”

“Flynn?”

He heard tears in her voice, which concentrated his attention. “Are they coming after me?”

Silence.

“Hey, this is me, Diana. Am I in trouble, here?”

“I don’t know.”

He controlled it. “Look, I’ve got the bodies in the trunk of my car.”

“What happened to the civilian?”

“They’re fine.”

“They?”

“The wife has a lover. The sheriff. Look, there’s a lot going on here. We’re dealing with a whole new level of mind control, for one thing. I’ve seen things—oh, Christ, Diana, I’m telling you—”

“I want you off the roads. They could grab you.”

“What do I do with these bodies? I can’t just leave them in a Dumpster.”

“Okay, get them to Wright-Pat. Get rid of them. Then come back here, Flynn. Stay close to home.”

He wasn’t sure he was going to do that. In fact, he had no idea what he was going to do, but he was certainly going to get rid of these bodies. He considered flying them to the containment, but thought better of it. He had no idea if he was more vulnerable in the air or on the ground, but he had absolutely no hope of escape in a plane, so he decided to stay on the highway.

Even so, he had never felt more exposed in his life. He’d never been scared like this. He was used to feeling invulnerable, and now he felt anything but. Why in hell would Aeon care so much about these damn things? They were machines made of flesh and blood, nothing more, so why be so concerned about them?

Perhaps Aeon’s intentions were being misinterpreted. Maybe they were on the right side of this thing after all. Our knowledge of their language was flawed at best.

He gripped the wheel, pushing the car as fast as he dared to go. He sure as hell didn’t want some state cop looking in that trunk.

As he drove, he found himself compulsively tonguing the cyanide capsule. He’d planned on following his usual routine and returning it to its container, but not now, no way.

He just could not believe that Aeon was angry. If they wanted contact to develop, they should be elated. Not only that, why should he be afraid of

them? They had no major presence here. No ships, no personnel. Or did they?

Diana and her team were panicking. They were confused. Had to be.

He drove on, the lights of his car reflecting back more and more fog, making it so hard to see that he gripped the steering wheel and peered ahead, but he never let the speedometer dip below seventy.

The fog was dangerous, the night was dangerous, being alone on the highway was dangerous. Worse, he was no longer even close to understanding what he was dealing with, and that was very dangerous.

About an hour out of Mountainville, the state highway met the interstate. He had to stop for gas, so he also got coffee. The attendant was an Indian man behind bulletproof plastic. He took Flynn's money and handed out his change, his eyes glazed with sleepy boredom.

The coffee was old but it was strong, and he drank it methodically as he continued on down the highway.

He covered the distance to Dayton in just over five hours. It was pushing ten in the morning when he reached Wright-Pat. He was hungry and close to exhaustion, but there was no stopping until these bodies were safely burned.

He pulled into the first guard post and flashed his badge.

Nothing happened.

The guard leaned into the car. "Sir, are you okay?"

"No, I'm not okay, but I have a legitimate ID, so please let me through."

"Would you like an escort to the base hospital, sir?"

"Open the gate, please."

Flynn took back his secure ID. It didn't appear any different from any other USGS Identification Card. On the surface. As it was run through readers in ever-more-secure areas, though, it would grant deeper and deeper access, into places that not even presidents knew about.

The gate went up and Flynn drove through. Wright-Pat was a big base, the U.S. Air Force's largest repair and refitting facility, among other things.

Among those “other things” was the Air Force Materiel Command, which controlled the warehouse where he was headed.

It was a low building no different from dozens of others on the base. Thousands of people passed it every day without realizing that, two hundred feet beneath the warehouse’s dull exterior, a supercooled morgue held fourteen alien bodies—including two from Roswell, New Mexico—that had been brought here in the fall of 1947 and had remained here ever since. The bodies were kept at near absolute zero, and were tended remotely by technicians who had no idea what they were keeping cold. Their training informed them that this was a storage area for unstable chemicals, and that if they failed in their duty, a massive explosion could result.

The building also contained a furnace designed to burn “special materials” at extremely high temperatures. Contrary to popular opinion, classified papers were not burned, but reduced to pulp and recycled. Still, the presence of the burn facility meant there would be plenty of normal traffic, and lots of ordinary material like classified electronics. This would be mixed with any ash that might contain evidence, such as bits of the alien bodies Flynn was about to consign to the flames.

He pulled the front of the car up to a tall corrugated metal door, then went to the identification pad and punched in his code. A moment later, the door began to clatter up on its chains.

He backed up to the furnace and waited in the car while airmen put up screens around the vehicle. As soon as he had slid his card through the pad, the facility manager was automatically informed of the security level he required.

Finally, hidden behind seven-foot-tall flats covered with gray canvas, he got out and went to the intercom. He picked up the handset and asked, “Is it up to temp?”

The answer was immediate. “Yes, sir.”

Flynn never took chances. "Are all personnel accounted for?"

"Yes, sir."

"The entire floor is clear at this time?"

"Sir, there's a work crew repairing the exhaust fan housing on one of the ventilator systems."

"Pull them."

"Yes, sir. Give me a minute, sir."

While Flynn was waiting, he went to the furnace and tested the mechanism. An interlock prevented direct contact with the interior. Heat like that would incinerate you in an instant.

The intercom buzzed.

"Yes?"

"The facility is clear. No eyes on your position."

He replaced the receiver and pressed the ready button on the furnace housing. A green light appeared on the black surface of the control panel, and the door slid open. Despite the thickness of the interlock, the heat was so intense that the interior shimmered with it.

Flynn opened his jacket, lifted his pistol to a looser position in his holster, then walked to the back of the car. He unlocked the trunk and pulled it open.

The three bags lay just as he had left them. When he put them in, he'd noted their positions carefully. Also carefully, he touched the nearest of them. No responding movement. He touched the one behind it. Nothing. He reached deeper into the trunk and touched the third bag. Again, nothing inside reacted.

He lifted the first bag out of the trunk. The aliens were light, weighing only ten or twelve pounds. Careful not to let any claws cut through and scratch him, he carried the bag to the furnace and laid it in the open receptacle. Immediately, it began to smoke. He pressed the red activation button and the door closed. He repeated the process with the second bag.

As he turned back toward the car, he heard a loud click overhead. Angry, thinking that some airman was still working up there, he looked up. He saw only the shadowy girders. An instant later, though, when he directed his gaze back to the trunk, he saw that the last bag had been torn open and was now empty.

He stepped quickly back to the intercom. “This is on lockdown. I want the entire facility evacuated at once. Is that clear?”

“Yes, sir.” He could hear the question in the voice. He didn’t care.

A red light began circulating overhead and a Klaxon sounded. He drew aside one of the screens and stepped into the center of the large open space.

Methodically, he scanned the floor. Empty. So the thing had jumped into the girders.

Now there came another sound—the echoing creak of hinges.

Flynn turned toward it, and was horrified to see an airman enter through a side door and begin walking toward him.

“Get out of here!”

“Sir?”

“Out! Now!”

The airman stopped. His smile froze.

“Move!”

From overhead, there came a flutter. Flynn looked up. The airman kept smiling.

A figure dropped down, looking for all the world like a dark gigantic demon sliding down an invisible wall.

Then it stood before the young man, five narrow feet of spindly arms and legs to the airman’s solid six-foot bulk.

The next instant, the creature leaped back into the rafters.

The airman had entirely changed. His uniform was gone, nothing left of it but shreds on the floor. Blood gushed out of his eye sockets and from the

hole where his mouth and tongue had been. It went sluicing down his legs, pumping from the crater that was all that was left of his genitals. From overhead, there came a whirring sound, a noise of bees or busy flies.

As Flynn watched, the streams of blood stopped. They hung, frozen like candle wax, then, slowly at first, changed direction. They began to travel upward, racing across the man's body as he crumpled to his knees. An orb of blood, dark red, hung in the air six feet above where he had stood.

As Flynn was drawing his gun, the creature dropped back down.

It connected with the vibrating mass of blood.

There was a blur and a high crackling sound like something being dipped in hot grease. The bubble of blood disappeared into a new form entirely, and what landed with a light step on the room's floor was not an alien. Neither was it a human being, not quite. It was covered with pink gel, like something that had come out of a chrysalis or burst from some malignant egg. The eyes opened. They were sky blue, set in a blurred but unmistakably human face.

As he watched, another version of the airman took shape before him.

The boy's smile returned. As if surprised, he blinked his eyes.

It was astonishing, but Flynn was not deceived. This was not a hallucination, and it was not the airman. It made an impossible leap back into the rafters. Flynn fired at it, but no blood returned.

He began hunting the thing, but the room was complex with shadows, the ceiling fifty feet overhead, and he soon recognized that the thing could hide up there for hours. So he decided to try another strategy.

He walked out into the middle of the space. Holding his pistol, he looked around the room. Then he took out his small LED flashlight and shone it into the rafters. Three girders down, a slight thickening of the shadow along its upper surface.

His target.

"Shit," he said into the room's echo. He holstered his gun and walked

directly under the creature. Hands on hips, he shone his light into a dark area under the stairs that led down from the office level at the far end of the room, the same stairs the airman had come down.

Above him, he heard the slightest sound, a bare whisper.

He drew and fired into the biorobot as it dropped down on him.

The bullets blew its guts out, and it fell at his feet with a nasty splat.

He looked down at it, then at the actual remains of the boy—a husk, his youth destroyed in an instant—his promise and the hopes of those who loved him, all gone. He choked back his heart and his hate, and the anger that gnawed his core—if only he'd been quicker to see him coming, faster to react, this poor kid would still have his life.

Teeth bared, he sucked the blood-reeking air and, with it, sucked deep into himself the sorrow and the shame of his failure. He kicked the hell out of the dead alien, its incredible disguise already fading and melting like the Wicked Witch of the West.

He turned away from the mess and, walking with the excessive care of a man confronting the gallows, crossed the echoing concrete chamber to the black intercom hanging on the wall.

“Yes, sir, do you need assistance?”

He said, “There’s been an accident. You are to seal the building. I repeat, seal it. It is to be guarded. A team will be here tomorrow to restore it.”

“Sir, yes, sir.”

“There is a man down.”

“Sir?”

“I repeat, there is a man down. He is dead. Our team will inform the authorities here of his identity after their inspection is complete.”

“One of my men is in there?”

“There was a man here. I don’t know why and it’s not my issue. He is dead.”

“He got shot?”

“No, sir. He was killed in another manner. He died in the line of duty.”

Flynn replaced the receiver in its cradle. As he walked away, the intercom began ringing and kept ringing. He did not turn back.

How in hell had this happened? Somehow, the thing had survived. What had enabled it to do that was yet another question that could not be answered. The purpose was clear: he had observed the predator in the process of camouflaging itself as its prey, like an Indian covering himself with a buffalo hide in order to get close to a herd.

They had thrown away two of their lives and sent this third being on a suicide mission, because the real ambush was not intended to happen at the Miller house at all, but here, in this room, where Flynn would least expect it.

The place suddenly felt cold, freezing. The stink of the room, blood and cordite, was sickening. Moving fast, he snatched his duffel out of the car and dug out his cell phone.

He punched in the numbers that would take him to a scrambled signal, then called Diana.

“Jesus God, what have you been doing for seven hours?”

“I pulled the battery on my phone.”

“I thought you were a goner. Give me a heads-up next time.”

“I’m at Wright-Pat. There’s been an incident. I’ve ordered our facility here sealed.”

“An incident? What kind of an incident?”

“You need a team out here to clean up some atypical remains. Plus there’s a casualty. An airman.”

“*Shit!*”

“The body’s been mutilated. You’ll need to commandeer it. Our eyes only.”

“What are you telling me?”

“What you need to do! And I need a plane.” He would have preferred to drive to Washington, but there was no time for that now.

He left the facility, closed the access door, and listened as the locks clicked into place on the other side. The cleanup team from their unit were now the only people on the planet with the code needed to open this door.

He wondered whom she would choose. Things had gone wrong before, but this was the only time anything remotely this messy had happened.

An airman pulled up in a big SUV. He got out to open the door, but Flynn let himself in. He sat in silence as he was driven to the flight line. When they arrived, a jet was just being positioned on the apron. It was the full dinner: a general officer’s plane complete with a cabin crew of two.

“You don’t need to stay on board,” he said as he stooped to enter the plane.

“Sir?”

“Leave the aircraft, please. You’re not needed today.” There was no reason to put anybody in harm’s way who didn’t absolutely need to be there.

The two stewards looked at each other.

“Do it!”

Slowly, they went to the rear of the cabin. When the crew were down on the apron, he activated the steps. The steps came up, the door closed, and he locked it down. He signaled the pilots. “Get this thing cleared and get it moving.”

There was some sort of a reply, but he didn’t listen. As always, he had work to do. He’d been away from his unending records search for over thirty hours, and he didn’t like that. He pulled out his iPad and hooked into the secure network, then began once again searching police reports—town by town, and city by city.

He looked at murders, disappearances, accidents, anything that might lead to the dark place that was his beat. He worked for an hour. For two. He

stopped only when he had assured himself that his beat was for the moment quiet.

He wouldn't allow himself to hope, but maybe—just maybe—he had indeed gotten the last of them. Maybe it was just him and Morris now.

He listened to the roar of the wind speeding past the airframe and to the noise of the engines. He let his eyes close and was immediately asleep, or as asleep as he ever got. The doctors called it “guarded sleep,” the sleep of men in combat. He dreamed of Abby on a blue day on the beach, watching the gulls wheel. The sweet smell of her cornsilk hair filled his memory, and he sighed and turned as if toward somebody in the seat beside him.

His eyes opened. He had become aware of a change in the pitch of the engines. He evaluated it. Normal. They were landing.

New rules: Be faster on the scene than ever before. When the aliens are apparently dead, cut the remains to pieces.

It was an air force plane, but it landed him in the general aviation section at Dulles.

He left without a word, not looking back. The mystified pilots watched him cross the tarmac and disappear into the terminal. They had never even seen his face.

CHAPTER SIX

WHILE HE was away, Flynn's personal car had been moved into the general aviation parking lot. He walked over to it, a black Audi R8 GT. To a man with his reflexes, most cars drove like buses. The R8 did not.

There was a bag from Wagshal's on the passenger seat, which, as his standing order with Transportation instructed, contained a pastrami on rye and a Brooklyn Lager. As a Southwest 737 screamed past not a hundred feet overhead, he opened the bag, cracked the can of beer, started the car, and headed out.

He had no idea how long it had been since he ate, but the sandwich did not last until the Beltway. He got an hour of sleep on the flight, so he felt fairly rested. It had been uneasy sleep, though. Things were spinning out of control, and he knew it.

He took the exit off the GW Parkway and stopped in the guard station at CIA headquarters. He drove around the back of the main building and then into the underground facility, over to where cars that couldn't be exposed to passing satellites were parked. He sat in his car with the windows down, just listening to the space. He got out. Nobody else here, the parking spots mostly empty. Even as he was walking through the facility's relative safety, his extreme sense of caution did not change. They might have failed on this day, and they might all be dead, but he still worried about ambush anywhere,

anytime.

In the long, clean corridors of the CIA, people gave him the usual glances. In his patrolman days, his uniforms had always been sharp. As a detective, he'd worn a suit with a string tie and a Stetson, an outfit intended to make him disappear into the north Texas woodwork. No more. Now he was too fixated on his job to worry about appearances. As long as his clothes were street legal, that was all that mattered to him.

As he was approaching their section, another text came in. This time, it was the number 676, once again from a blocked line.

He stopped in his tracks, staring down at the screen.

He was looking at what had been Dan Miller's full employee number at Deer Island.

No way this could be a coincidence, and somebody certainly wanted him to know that.

He got to the numbered door that concealed headquarters. He paused. This time, it could be seriously argued that he'd screwed up on every possible level. He set his jaw, paused for a moment, then went in.

The same kids were at the same consoles, working at the same intractable problems of translation and communication. As he passed silently among them, he could feel their uneasy disapproval like a sour smoke.

"Anybody wants a head for their den, let me know."

It was his standard joke, but this time there was no ripple of laughter.

He pushed through into Diana's sleek lair. She was not sitting at her desk, not exactly. She was poised there.

"Don't hit me," he said, cringing back and raising his hands.

"Flynn, *why?*"

"He got in the line of fire."

"You killed four people!"

Had there been anybody else in there? No. "Wrong body count, and I

didn't kill anybody. A kid got killed. Big difference, Diana."

"If you'd done your job right, nobody would be dead."

"I ordered the facility evacuated. Maybe he was deaf, I don't know. An airman died, and I'm sad about it. But it was one. Not four."

"We consider the aliens you killed people."

"Not legally, they aren't."

"Flynn, that's the last time you throw that in my face, okay? You've gotten yourself into huge trouble, and us along with you. Hell, the whole planet, Flynn! What if they could just push a button and we're history?"

"I've gained a lot of intelligence on this mission."

She raised her eyebrows.

"The exsanguinations are explained. What I saw was one of those monsters—"

"Please."

"What am I supposed to call them? What's the politically correct term? Tell me, because I want to know."

"Try calling them people."

He let it lie. "It used the airman's blood to coat itself in a human form."

She gave him a long, searching look.

"Do you understand what I'm saying? Because it's kind of important."

"We're going out to Area Fifty-One, you and I." The exobiology group was located there, scientists who sat in the desert thinking up reasons that contact with Aeon could be made to work.

"I don't have time."

"You have time."

"I have time to keep searching for cases, and that's all the time I have."

"Let me tell you what those kids out on the floor have been doing ever since you went on your murder mission."

"Excuse me, policing mission."

“They’ve been communicating with Aeon, trying to save your life.”

“Well, thank them for me. Unless I’m headed for a meeting with the needle. Then don’t thank them.”

“A deal has been struck, Flynn.”

“Which involves the scientists at Area Fifty-One how?”

“You will accompany me to Area Fifty-One. Consider that an order.”

He thought about that. Normally, she did everything she could to satisfy her brief from the scientists—short of giving him direct orders like this. That way, he could go on doing his job and she could go on being quietly relieved he was getting kills.

“Diana, we both know that everything coming out of Area Fifty-One is bullshit. In any case, I want to go to Deer Island.”

“Why?”

“I got another one of those calls: 333676. Ring a bell?”

“No.”

“It’s Dan Miller’s employee number.”

She got up and went to her “window.” They were in a basement, so it was actually just a poster of the Grand Tetons she’d bought at Target and tacked to her wall.

“I love it when you stare out at the view. It always means you know I’m right.”

She turned. “We’re on a strict schedule. And frankly, if you want to stay in one piece, you’d better cooperate.”

For a moment, he thought about it, then spread his hands, gesturing surrender. “You can count on me, boss. Down the line.”

“We leave at six. You might think about taking a shower.”

He glanced at his watch. Half an hour wouldn’t give him time to go home. “Can I use your lair?” Her suite had a private sitting room and a full bath, which he often used between cases.

“I’m gonna try to have a meeting in here. We’re cataloging new transmissions. So don’t disturb us, if you can manage that.”

“Yes, ma’am.” He went through into the luxuriously furnished private suite that was a perk of her Senior Executive Service pay grade. The luxuries that interested him weren’t things like her Persian carpets, gleaming antiques, and 3-D TV. His cars were a luxury—the Audi and the Ferrari California that waited for him in Texas. Most of his guns were there as well—his pistols, his sniper rifles, his matched pair of Purdey shotguns handed down in the family for three generations. These were his luxuries, and the wine cellar his family started in the 1920s, when their land in the Permian Basin south of Menard had turned out to be a raft floating on a lake of oil.

For most of his life, he had preferred to live only on what he made, but after Abby’s disappearance, he found himself wanting to embrace his own heritage. A couple of years back, he had started drawing on the family trust. In a strange way, it made him feel less alone.

In keeping with family tradition, he lived modestly. Until he started buying extreme cars a couple of years ago, few people outside his small circle of close friends had any idea that he had money. The way he figured it, though, the work he did now was shortening his life, probably by a lot of years, so whatever he was going to enjoy, he needed to do that right now.

He threw off his clothes, realizing as he dropped them onto her antique Sultanabad carpet, that they were really pretty damn dirty. Stained, too, with greenish purple blood.

Showers bothered him. He didn’t like being in places with only one exit. He wanted two ways out, always. He turned the gold handles in her marble shower stall and let the water flow until it was steaming. Then he stepped in. He left the door open and faced outward into the bathroom as he methodically washed himself.

The hot water felt good on his skin, except where it burned in his latest

wounds. He stepped out of the stall, opened the medicine cabinet, and rummaged until he found some disinfectant. Then he pulled the ugliest cut apart by drawing his shoulder forward, and poured the disinfectant in. There was pain. A lot, in fact.

As he dried himself, he realized that his clothes were too gross to wear. The room stank like some kind of bovine had rolled in it. Wrapping the towel around his waist, he went to the exquisitely carved dresser. He opened the bottom drawer, which was where his things were kept. He often showered and changed here—slept here, too. From here, he could move on cases a lot faster than he could from home.

But what the hell was this shirt? It wasn't one of his.

“Hey,” he called, “what is this thing, a bolero shirt?”

No answer from the office. That's right, her meeting was out there. And, as a matter of fact, he was hearing his name mentioned, was he not? He strolled over to the door. Yep, they were talking about him.

He went out waving the shirt. “I can't wear this.”

“Put some clothes on.”

“I can't wear a blouse.”

“That's an ordinary man's shirt. Unlike your tees, it happens to have a collar. Something you apparently haven't worn in some time. Now, get dressed.”

“Sorry, kids,” he said to the staring young faces, “I didn't mean to frighten you.” He started to put on the shirt.

“Flynn, get out!”

“You said get dressed, boss.” He sat on the edge of her desk. “So, what's the latest findings? Aeon turn out to be big on comedy clubs? Marijuana dispensaries? Too bad they don't have decent cops.”

“Flynn, Aeon knows you're the fastest gun in the West and the toughest hombre in town—and they're not impressed, as I've told you. They also

know that you're richer than God, and therefore a dilettante. And they have been speculating about whether or not you're crazy." She folded her arms. "I think that question is answered."

He turned around so they could see the gash that extended from his neck to the center of his back. "I could use a Band-Aid."

"My God, Flynn, you don't need a bandage, you need medical attention."

"We're off to Bullshit Central, remember. Fifteen minutes."

"I'll have medics on the plane. Now, get out of here."

He drew on the shirt. Nicely tailored, too. She'd spared no expense. As he buttoned it, he said, "So when do we leave?"

"When I say. Now, go away. You're not need-to-know on this conference."

"333676. Track down that blocked number."

He went back into the bedroom, threw himself on the bed, and waited.

The sheets were scented. They smelled like her.

"Flynn!"

It was Abby, calling to him from her porch across the street. The summer wind whispered in the trees; the sweet smell of the Texas prairie filled the air.

"Flynn!"

The movie ended. Blank screen. Then he realized that it wasn't a movie. He opened his eyes.

"Christ, I was about to call for a blowtorch. I thought you were in a coma."

He bolted upright. "Sorry, I didn't realize—"

She sat down on the bed and pulled the shirt away from his back. "That needs ten stitches at least."

"It'll heal."

"We have to go now, so get your ass moving, please." Her voice was harsh, but not her eyes.

He reached out and touched her cheek. She did not turn away, and he knew that he could kiss her if he wanted to. Neither of them moved. In the silence that they shared, there was a lot of life lived together, friends as they were who were also enemies, lovers longing for each other across a gulf of conflicting agendas.

“We’re on a strict schedule,” she said.

They rode to the airport in his car. He drove fast; he took chances. He liked to hear her yell at him, and she obliged him, saying he was going to lose his license, she’d see to it, on and on. Just made him drive faster. With this car and his reflexes, it wasn’t dangerous, and with no strange cargo to hide, things like tickets didn’t matter. Often enough, they got written, but the same hand that protected him from all other official harm made them go away. Her hand.

He said, “As I said, I got three good kills.”

She said nothing.

They’d been given an excellent plane, not one of the cramped puddle jumpers he was used to. There was a private cabin, behind it an office and a small press unit. To the rear was a galley.

“Impressive.”

“You could afford your own jet.”

“Not interested.”

“Your frequent-flier miles, I know.”

“I haven’t been on a vacation in a real long time. I dream about it. First class, all the trimmings, on my way to somewhere sweet. Barbados. Ever been to Barbados?”

“Course not. My salary won’t take me that far.”

“Don’t hand me that. You’re just like me, a rich dilettante. What I’ve become.”

“You’ve accepted your family. That’s not being a dilettante. And I’m not

rich.”

“Senator’s daughter. Senators are rich.”

“The senator is comfortable. That is not rich.”

She called her dad “the senator,” her mother Mrs. Glass. She didn’t talk about it much, but it didn’t sound like a happy home. She had kept that powerful last name, though, even through her marriage.

Once the plane was at altitude and heading into the sunset, the medics took over.

“Sir,” the doctor said uneasily, “I’m afraid I’ve only got some topical anesthetic. I didn’t realize—”

“He doesn’t need anesthetic,” Diana said. “He’s not like us.” He heard pride in her voice. He liked that.

While they stitched away, he smelled steak cooking, and when they finally let him up, he found an exceptional meal waiting in the office, which had been reset as a dining room. A general’s plane was not Air Force One, but it had first class pretty well beat. He gestured toward the meal. “How many taxpayers did it take to pay for all this?”

“None. Or rather, one. I paid for it.”

“The poor senator. Did you leave him to starve?”

“Yes.”

He picked up the wine. “An ’83 Romanée-Conti? That’s worth a trip to Barbados at least. First class.” Then he had another thought. “Is this my last meal?”

“Any meal could be your last. Damn you, Flynn.” Her voice broke. She choked back her emotions. “What if they tell us something like they’ll kill the whole planet unless we kill you?”

“I’d kill me.”

She closed her eyes briefly, then looked away from him.

They ate quietly for a few minutes.

“This spread looks to me like it’s meant for a celebration. Was something good supposed to happen, and you forgot to tell Transportation that it fell through?”

She said, “You miss nothing.”

“Comes with the job.”

“I’ve often wondered why you were hiding in that little job in Texas. A man like you.”

“It was a big job, and I wasn’t hiding.”

“I mean, why weren’t you running an oil company or something? Doing something incredible?”

“Being a cop isn’t incredible?”

She shrugged, then poured them both wine.

“By the way, that blocked number. Can’t be located.”

“How is that possible?”

“It was purged from the carrier’s system.”

“That’s unusual.”

“Also illegal. They’re frantic about it. You have any idea what it was all about?”

Flynn did, but if he was right about why he was being messaged like this, he had no intention of telling anybody. It might be dangerous even to think about it. “Not a clue,” he said.

“I know when you’re lying, but never why.”

They drank in silence. The medical team had retired to the press section, so the two of them were alone. She glanced back to be sure the door was closed.

“You know, Flynn, I’m not being very fair to you.”

“What’s new about that?”

She laughed a little, but said no more. He was curious, of course, but he didn’t press her. If somebody wanted silence, that was fine with him.

He closed his eyes for a couple of seconds, and suddenly the plane was landing. He recognized that he had come to the point where he was desperate for sleep.

“Listen,” he said as they lined up on the runway, “if I’m supposed to talk to these people, you better tell me what I need to say.”

“No talking necessary.”

“It’s a dog and pony show, then. They’re going to try to convince me that there’s something good going on here, which is and always will be utter horseshit. Diana, I could be needed somewhere right now.”

“There’s no dog and pony show. In fact, no scientists at all. It’s past their bedtimes, anyway—you should know that.”

As they touched down, he stared out into the glare of the runway lights. Beyond them was blackness.

Very little of Area 51 was actually devoted to the legendary secret of the aliens. For the most part, the place was exactly what it was claimed to be: a test bed for future aircraft, including new designs that utilized the earth’s magnetic field for propulsion and lift. There were space planes here and, Flynn suspected, some devices that were of alien construction and defied gravity.

“Leave your guns, take your jacket,” Diana said as a steward cracked the door.

“My guns?”

“Leave them.”

“No.”

She sighed. “Flynn, just please cooperate for once.”

“I don’t go out on lonely desert airstrips at night without my guns.”

“Do you think you’re being handed over?”

“Maybe.”

“Trust me.”

“No.”

She glanced at her watch. “Take them, then.” She marched down the steps and into the shadows.

Flynn followed her into the cold of the desert night. As the wind whipped across the tarmac, he zipped his jacket. Yet again, his tongue touched his cyanide capsule. Would it be now? If he was about to be given to some creeps in a flying saucer, then yes, it would.

The plane’s door was pulled closed, and its engines whined as it taxied slowly away.

“Hey, we’re not anywhere!”

“No, this is the right place.”

Once the plane was gone, they were left standing on a strip of concrete surrounded on three sides by desert. Now and again, a tumbleweed went bounding across, a gray shadow in the thin light of a sickle moon. His right hand slid down to the butt of his pistol. She held tight to him, and he couldn’t tell if she was trying to control him or holding on for dear life.

The sound that came then was not something you heard, but rather something you felt. It vibrated your teeth; it made your skin crawl.

“Look,” Diana whispered. Flynn followed her gaze upward and saw the hazy outline of a descending shape, perfectly round. It quickly grew larger, blotting out more and more stars.

Flynn’s finger went to his trigger. He tongued his cyanide capsule until it was between his teeth.

Now the object was hanging in the air before them. It did not move. It was not affected by the wind. Flynn didn’t try to convince himself that he wasn’t afraid. He was very afraid.

In the distant light from the hangar area and the low moon, the object shone like burnished steel. It was nothing like the disks he was used to seeing—not worn, not small, not clattering like an old truck. No matter his loathing

of the aliens and their ways, this thing's sleek form was beautiful to see.

He realized that a tripod landing gear had come out of it, and it was now standing on the runway. There hadn't been a sound nor the slightest suggestion of movement. A narrow line of light appeared in its base. This grew wider and brighter, until he could see part of an interior of featureless bright metal. Very slowly then, something began moving in the light, a form.

"My God," he heard himself whisper. Hardly thinking of it, he drew his gun.

"Put that away."

"Diana—"

"If they see that thing, we might die right here, right now. Both of us."

He holstered the pistol.

A figure glided down in the column of light. He was expecting to see the thin form of an alien, but what he saw instead was a trim human shape, a woman in a blue jumpsuit.

Immediately, he thought of what he'd seen the alien do at Wright-Pat, and of Morris.

The object rose enough to spread the light into a pool a hundred feet across. Flynn and Diana were in that pool, and so was the alien, which now came walking toward them with the easy gait of absolute confidence.

She stood before them, a woman of perhaps twenty-five. If he hadn't seen her come out of a flying saucer, he would have said that she was human.

She looked up at him, her eyes searching his face, and when she did, he saw in her blond arched eyebrows and her subtle, almost sensual smile, an unmistakable shadow of Abby.

"Hello," she said, turning toward Diana. "You are Police Commander Glass?" There was in her lilting voice just the faintest trace of an accent, oddly Asian in so Caucasian-looking an individual.

Diana saluted her.

The woman's gaze returned to him. "And you are Officer Carroll?"

"I'm Flynn."

She wasn't smiling now, far from it. Her eyes were glittering with something he could not mistake. She hated him.

Diana said, "Officer Carroll, meet your new partner. This is Gt'n'aa. We're going to call her Geri."

Geri extended her hand. Flynn stared at it.

"Flynn?"

"Oh—yeah." He took the coldest, strongest hand he had ever felt in his life. As he shook it, he could feel the power there, like living steel.

"Very well," Geri said, glancing off into the dark. "Shall we proceed?"

Flynn's mind was racing with questions, all of them unanswered, all of them urgent. But before he could speak, Diana and Geri moved off toward the edge of the runway. Simultaneously, the light went out and the ship ascended, swiftly disappearing into the night.

A familiar sort of chime sounded. Flynn saw a Jeep Cherokee on the edge of the tarmac, revealed by its interior light. Diana had just unlocked it with its remote key. She went around to the driver's side and got in.

Flynn opened the passenger door.

"Backseat," she snapped.

He got in. The alien got in the front beside Diana. They drove off toward the buildings of the Area 51 complex, through a desert night lit only by the distant stars and the beams of their headlights.

CHAPTER SEVEN

FLYNN SAT silently in the Jeep, fighting back confused feelings of hatred and longing. He was used to living in a reality that he didn't quite understand, but not like this. This was too much.

They came to the familiar Science Building 3, with its glass doors and its lobby lit with glaring neon. In the days of the Lockheed Skunk Works, this had been Lockheed's on-site office building, two stories of cubbyholes now filled with exobiologists, alien ethicists, exopsychologists, and other irrelevant, time-wasting dreamers.

They crowded together, at least thirty of them, their brilliance well hidden behind their slack jaws and childishly wide eyes.

Diana went front and center with Geri in tow. Flynn hung back. He didn't even like these people to see his face, and socializing with them was not going to happen.

"Ladies and gentlemen, a lot of history has happened in this building, but I think that this qualifies as a—"

"Excuse me, I can introduce myself," Geri said. "Please call me Geri or Colonel—either will do. I'm the equivalent of a colonel in your air force, or a senior police commander. I'm from Aeon Central Police Command, and my mission is to get this situation under control, because it's obviously running amok. I'd shake your various hands, but I'm here to work, so if Major Glass

would show me to my office, please.”

Diana, fumbling out words like “of course,” and “thank you,” led her away. The lobby emptied.

There was an old metal desk in one corner and a wooden chair. Flynn took the chair and put his feet up on his desk. He pulled his iPad out of his duffel and turned it on.

When he input his password to reach the secure network, he was denied entry. He read the FAILED LOG-IN ATTEMPT warning. He was attempting to access a secure network, and his identity was known. If he continued, he would be in commission of a felony.

“Here you are, Officer Carroll. Come on, we’ve got work to do.”

Geri stood over him, the shadow of Abby smiling in her face.

He followed her into a spartan office—gray linoleum floor, gray walls, dingy white ceiling tiles. He had to hand it to Uncle Sam; the old fart had a real talent for interior decoration.

She dropped down behind the desk. “Sit,” she said, gesturing to the one steel chair in the room.

“Where’s Diana?”

“Licking her wounds. She got a lecture.”

He raised his eyebrows.

“I told her she was incompetent and her operation was an embarrassment to her and a failure for this planet.”

“How many planets are involved?”

She raised her eyebrows appreciatively. “Nice question. Very quick. You should know that you’re talking to the person who was most strongly in favor of executing you. And I’m still of that opinion.”

“Fine. Let’s head to Dodge. Face off at high noon. Gun to gun.”

“I don’t carry your sorts of weapon. Frankly, mine are better and I am faster.”

“Good, then maybe you can increase the kill rate around here. Because I need to get the last of the murderers.”

“You don’t understand anything. That’s stupid.”

“Stupidity and ignorance are two different things. A person who doesn’t get that is a fool.”

“Remember that English isn’t my native language. If I’m too blunt, just tell me.”

“Inside of five minutes, you’ve told me that my boss is incompetent, our operation sucks, you want me dead, and I’m stupid. That’s too blunt.”

She did not reply as fast as she had earlier. He could see the calculation in her eyes. Despite all her bluster, she was beginning to see that she was on unsure footing.

“You need to slow down,” he said. “If you’re going to be calling the shots, you’d be well advised to at least inspect our operation. Do you even know how it’s organized?”

“In such a way that it isn’t working right.”

“Oh? We save lives. Human lives. So it’s working just fine, thank you.”

“One field operative who destroys every biorobot he encounters, not knowing that his actions are only going to goad them into becoming more aggressive. That’s not our definition of ‘working right.’”

“I can’t capture them. Nobody can. If I’m lucky, I can get an occasional kill. Where’s our choice in that?”

“You’re a police officer. I’m sure you have procedures.”

“My guess is that you know exactly what those are.”

“I do, and you don’t even try to follow them when it comes to our mechanisms.”

“Biorobots? Mechanisms? So I’m right about what they are.”

Diana came into the room. Geri went to her feet. “No, not needed, please leave.”

Diana's eyes met Flynn's. Nothing needed to be said. They both thought exactly the same thing about Commandant Geri. "We have a situation."

"Exactly our concern," Geri said. "That's why I'm here. You stress these entities enough, they amplify the conflict. If you keep destroying them, their numbers will continue to grow. Think of them as cancer. Your planet has cancer, but so far, the tumor is small. I am here to help you keep it that way."

"I think that the conflict has just been amplified. We have a problem in a community called Elmwood, Texas. The entire town has been set on fire."

"Elmwood? So they're trying to lure me again."

"Lure you?" Geri asked.

"Sure, they did Dr. Miller for two reasons. One, because they apparently didn't like the work he was doing. Two, because they wanted to lure me. They got me where they wanted me, but then had a bit of a setback. So they're trying again. Of all the places in the world, they know for certain that I'll go to Elmwood."

"Why would that be?"

"My family founded the town."

"Should you, then?"

"They'll keep causing trouble until I do—you can be sure of that."

"But given what happened in Mountainville," Diana said, "wouldn't they try something else?"

"Destroying the town my family founded qualifies as something else, I think."

"Seems as if we have our first case as a team, then," Geri said.

Diana ordered transportation to Menard, and the three of them headed to the flightline.

On the plane, Flynn asked Geri why they couldn't use her ship, and received a long lecture about how they couldn't introduce technology that was too far ahead of our own without disrupting our society. It made a kind

of sense, but he didn't buy it. He wasn't buying Geri at all, except for one thing, which was that she had something like a ghost of Abby in her, and he was going to find out why that was.

The flight was two and a half hours, twelve hundred miles. Geri sat staring straight ahead the whole time, her hands folded in her lap. It was unnerving.

"What're we going to do about her uniform?" Diana asked. "She can't traipse around Texas in a blue jumpsuit."

He thought about that. Then he made a decision. On the surface, it probably seemed simple. It was not simple, and it might bring some unexpected results. He said, "I've still got all of Abby's stuff. They're just about the same size. We can stop by the house on the way out."

When he was very small, he'd gone to the country school in Elmwood. He closed his eyes, remembering the clapboard building where class had been held. His mind drifted back to his granddad, a stately old Texan who was just as polite as a preacher and as formal as an undertaker until you got him on a quarter horse. He could toss a lariat like the cowboy that he was, and cuss like he was the devil's understudy.

The family had come before oil, when this part of Texas was all about wheat and cattle. Wheat if you were a gambler and crazy, cattle if you were only crazy.

"Flynn," Diana asked, "how tired are you?"

"Not tired."

"False. You ought to get some sleep."

"If I sleep now, I'm liable to wake up and find the whole town dead, in addition to all the cops and rescue workers who are probably trying to save them."

Menard's airport was closed down for the night, but the automatic lights came on during their approach.

The moment they pulled up to the terminal, Geri got out of the plane.

Flynn made a call on his cell phone while he and Diana watched Geri become involved with the tall cyclone fence that separated the apron from the outdoor luggage station and the parking lot. Finally, she returned.

“I’ve called the custodian,” Flynn said. “He’ll be along in ten minutes to let us out. He’ll also drive us to my place, and we can get you changed.”

They waited on the tarmac, with the prairie wind blowing down their necks. Flynn kept his anguish to himself. Whatever was happening over in Elmwood was his fault, no question.

Robert Greaves, the tiny airport’s custodian, finally pulled up, pie-eyed and trying hard not to topple over. “I hear you workin’ in D.C.,” he said.

“Yep.”

“Menard ain’t changed a lick, you’ll find.”

“I know it.”

Greaves drove by aiming the car along the curb. The smell of bourbon filled the car.

When Flynn saw his house, which he had not entered in nearly a year, he felt a real catch in his throat. This was going to be hard as hell, giving this weird woman things that had belonged to Abby. He wanted it all, every ballpoint pen and every blouse, every hair curler and cocktail gown, and all the jeans and all the tees. Geri was stiff and uneasy as she walked up to the front door. Was she sensitive enough to understand the pain this was causing him? He doubted that.

Diana was on her cell in the car, and still on it when they entered the house as Greaves drove away. Finally she closed it and came in. She said, “Nothing’s happened for a couple of hours.”

“How many are dead?”

“So far, three. The locals are still going from house to house.”

“Where is this culturally appropriate clothing?”

He led Geri up to his and Abby's bedroom, which was still as it had been on the day of her disappearance, Abby's top drawer still opened an inch, everything just as their life together had left it.

Silently, he opened her middle drawer and took out a blouse; then he got jeans from the closet, sneakers, socks from her sock drawer, a bra, underwear. He laid it all on the bed.

There was a hissing sound, and her uniform fell away. "Help me with this clothing. It's unfamiliar."

"I'll send Diana up," he said.

"I want you. You help me."

"No." He went downstairs to Diana. "Get her dressed," he muttered. "She can't do it."

"Goddamnit, Flynn, I don't want to be alone with that crocodile."

"Get her dressed!"

She hurried off, stomping up the stairs. He couldn't blame her.

Aeon. Beautiful name. It meant "life." It meant "eternity."

He remembered his mother sitting years ago at the great table in the dining room, throwing out tarot cards. She had been good with things like tarot cards and the *I Ching*. Once, she had thrown him the Tower and said, "How funny, it falls in the place of the future." She had looked up at him, and he could still remember the fear in her eyes, the haunted fear. "The future, Errol," she had said, then turned the destruction card facedown, as if sealing a tomb.

They should have called Aeon that: the Tower of Destruction. It was death riding down the night, pale and quick, in the form of creatures whose cruelty was as much part of their blood as love was part of the blood of man.

He thought these thoughts sitting in the same easy chair that his father had used and his grandfather before him. He wondered where this situation was really going. Having failed, why would they try the same trick of luring him

to another isolated spot just twenty-four hours later?

Only one answer to that question: because it wasn't the same trick.

He listened to the slow movement of the old house. A house has gestures, the sigh of a footfall on a carpet, the creak of a step, the whispering crack of wainscoting as the floor it borders is pressed by a stealthy weight.

"I dislike this clothing."

He got up from the chair. "It's what women here wear." Dressed like this, she could have been Abby's twin, which made him want to rip them off her back. He smiled. "You look entirely American now," he said.

"Well, I'm not." Her tone reflected her arrogance.

He took them outside and opened his garage. The Ferrari stood there in its red grandeur, the Range Rover beside it, looking very stuffy and staid.

He opened the truck and they got in. He thought it might not run, but it did, turning over after a few hesitant grinds of the starter.

As he drove down the familiar streets of Menard, he said, "I don't know what we're going to find out there, but I have to say, I feel way out of my depth."

Geri said, "Just remember procedure. That's the important thing."

"Yeah, procedure," Diana muttered. "Hear that, Flynn?"

He said nothing.

A couple of deer appeared in the road, bounding off into the darkness as the truck approached them. He no longer saw creatures like deer and owls in quite the same way.

"What if we kill some of your people tonight, Geri?"

"If we follow procedure and that happens, then it happens."

"Tell me, what's your procedure?"

"Much the same as yours: Demand compliance. If the perp has a weapon, warn that deadly force will be used."

"In this case, the perp is the weapon. It's their speed and those claws."

They don't need guns."

They drove on in silence.

"Okay, here we go," he said. There was a large police blockade ahead, dozens of light bars flashing, SWAT vehicles, even a riot tank, all spread across the road in a disorganized mass. Beyond the barricade, the remains of Elmwood glowed and flickered on the horizon.

"They expect us," Diana said as one of the state cops peered in the driver's-side window, then waved them through.

As they were passing, Flynn got a surprise. Standing there with the state brass in a pair of worn chinos and a leather jacket was his old boss, Eddie Parker. His face was hidden under the shadow of his Stetson, but Flynn didn't need to see his expression to know how very unhappy he was.

He stopped the truck.

"Excuse me, drive on."

He got out and walked over to Eddie.

Malcolm Dodd, the chief of state police, and Fred Carter, captain of the Texas Rangers, both watched with Eddie as Flynn walked up.

"Eddie."

"Three dead, all old folks who couldn't get out of their houses."

"I am so damn sorry." Flynn didn't say how relieved he was that they hadn't been maimed like Dan Miller.

"Can I tell 'em what you do?"

Eddie couldn't give away any secrets. "Sure."

"This is a Menard guy. Flynn Carroll. He's a fed now. Way up there." He fluttered his fingers.

"Can you help us?"

"We need to have a look."

"What happened?" Dodd asked. "Do you have any idea? I mean, the whole place caught on fire at the same time. Within minutes."

“This will be handled,” Flynn said. He had no idea how, but these frightened, hollow-eyed men needed something that would restore morale.

“He’s the man,” Eddie said. “We’re gonna get past this.”

“It was a secret weapon, wasn’t it?” Fred Carter said. “Some kinda terrorist thing.”

“That’s right. Terrorists. A secret weapon. They chose to test it on Elmwood, probably because it’s out of the way and vulnerable. It would have been done from above. A plane. We’ll get them, fellas, never fear. And anything you find, put it in channels right away.”

He got back in the Range Rover and closed the door, then drove on toward the town his family had founded a hundred and fifty years ago.

Ahead, Elmwood’s low, familiar buildings lay in smoking ruins. One of them was the Carroll General Store, now a Rite Aid pharmacy, where Flynn had played on the porch as a boy, rolling his beloved toy stagecoach back and forth under the hard Texas sun.

As they moved ahead, he kept watch on the night sky. Sooner or later, he knew, their disk would come—small and old, perhaps, by the standards of a place like Aeon, but here on Earth, still immeasurably advanced and breathtakingly dangerous.

CHAPTER EIGHT

FROM THE first moment he saw Geri, Flynn had understood that he had to get away from her, or it. He needed to deal with the present problem, then follow the trail he'd been given, the code, and he didn't want her along for the ride. 333676. Somebody on Deer Island was calling his attention to Miller and to the island.

"Okay," he said, "at this point, we need to enter the community."

"Flynn," Diana said, "the aliens are there—you know it."

"I do."

There was something moving at the end of Plainview, which was Elmwood's main street.

Flynn got out of the truck. They were in front of a ruined storefront that had once been Jack Holt's barbershop. Beside it was another empty store, which had been spared the fire. A Mode O'Day women's shop had been there.

"Stay in the vehicle," he said.

Geri got out. "We need to do this together."

"Do you know what 'this' is?"

"I do not."

"Just checking."

She stepped up onto the raised sidewalk.

“You get any closer to it, you’re gonna get yourself killed.”

“Closer to what?”

“One of your friends is in there. There’s another one down at the end of Plainview, and two more moving into position to prevent us from getting away.”

“This is impossible.”

“Get back in the truck and lock the doors.”

“You must not—”

“Get us all killed. I agree. Now, please give me the cooperation I need to keep you alive.”

There were two more of them in the alley between the barbershop and the hardware store, which had still been in business until tonight. No longer.

He went over to the Range Rover and leaned in the window. “First off, these windows need to be closed. Second, Diana, I want you to get the vehicle turned around and ready to burn rubber.”

“What’s going on?”

“We’re in the process of being surrounded by Geri’s mechanisms. They mean to kill me, and will certainly include you if they can. And maybe her. Obviously, I’m not sure.”

Diana said, “I just don’t see anything.”

“You don’t know how to look. I thought you’d be ready for this.”

He noticed that a black oblong object had slipped into Geri’s left hand. It was small and trim and had no barrel.

Diana opened the car door.

“No.”

She came anyway.

“Nobody obeys orders anymore.”

“You can’t give me orders, Flynn.”

“We’re surrounded right now.”

“You knew this would happen. You’re challenging them.”

“We’d better pull out,” Geri said. “I didn’t come all this way to be killed on the first night.”

“So what’s procedure in a case like this? I assume shooting our way out is a no go.”

Diana laughed a little.

“You led me into this,” Geri said. “You knew I’d end up being forced to do it your way.”

“What I knew, and what I know, is that you have no idea what you’re doing. At all.”

“I’m trained for police work. I’m not a soldier, I don’t kill unless deadly force is my only alternative.”

“What we need to do right now is give these folks who are surrounding us one hell of a bloody nose. So what’s the procedure we need to follow?”

“Of all the planets in all the galaxies in the universe, I’d be sent to this one.”

“That’s a good line.”

He drew and fired three shots, but still the alien that had leaped out of the ruins of the drugstore came on. It launched itself at him, but a fourth shot caused it to drop to the street, where it kicked and flailed wildly, blood spraying out of its exploded chest and face.

Then it stopped.

Silence fell.

“Geri, what choice did I have? What procedure should I have followed?”

She snapped, “No choice.”

“So what are we looking at, here? We haven’t had fires before. So do you know what we can expect next?”

“They’re programmed entities. They don’t invent; they repeat. Anything they do, they’ve been programmed to do.”

“How about you? Are you a programmed entity, too?”

“I don’t know.”

Diana gasped, but Geri’s words surprised Flynn only for a moment. It was the truth, it was the future talking, and it was a warning to mankind that Flynn vowed never to forget. Mix man and machine at peril to man.

Four more of the aliens had come up, and more were crossing the roofs. He could hear the faint rattle of their claws and the whispering breeze of their jumps.

“In a few seconds, we’re gonna have another confrontation. It’ll be a lot harder. If we do enough damage, they might back off. Please use your weapon, Geri.”

Three of them leaped off nearby roofs as four more came out of doors on both sides of the street. Flynn dropped two of the jumpers before they hit the street, but the rest of them kept coming.

A number of cops appeared, moving in from the side streets. He heard Eddie’s shout: “Flynn, what in holy hell?”

“Get out of here! *Now!*”

He took a hit so hard that he staggered, then went down on one knee with the thing on his back. Its arms wrapping his chest felt like steel bars. His left arm was free, but when he reached down for his small pistol, it was gone. It had come out in his fall and lay twenty feet away.

There was a dull thud, and the alien flopped to the ground.

He pulled out his .454 and did three of the others with thunderous shots. Diana, crouching by the truck, screamed as he fired.

The one that Geri had dropped leaped up, rising easily fifty feet in the air. Then, coming down as another three jumped onto the roof of the truck, it went after Diana. Geri pointed her weapon at it, but nothing happened. She shook it and tried again. Nothing.

He took all of them out with shots fired in such quick succession, they

sounded like a single detonation.

Geri stood looking at her weapon in the palm of her hand.

“Does that thing not work?”

“Apparently not. It isn’t properly tuned to Earth’s magnetic field.”

He took it from her.

“Return that, you’re not authorized.”

He threw it as far as he could, watching it arc away onto one of the roofs.

“You’ve given a weapon to the enemy—that’s an actionable offense.”

“Let’s hope they try to use it. Now, get in the truck—we’re done here.”

“You said we’d be killed if we leave.”

“That was then.” He gestured toward the bodies. “This is now. We’ve probably got a minute or so of playtime while they regroup. They’re testing my skills, and they don’t mind using their own lives to do it.”

“Why do they need to test you?”

“They can’t figure out how to defeat me. I’m too fast.”

“Why?”

Something crossed his mind—a suspicion. Small, probably far-fetched, but there. He said, “You tell her, Diana.”

There was the slightest hesitation.

“Diana?”

“You said we need to get out of here, Flynn.”

He started the Range Rover as Geri and Diana tumbled in and locked their doors. He drove to the end of Plainview and out into the flat prairie beyond, bouncing along the same dirt track that he and Mac and Eddie had used going deer hunting together, and later taking dates to look at the stars.

He took out his cell phone and called Eddie.

“Stay the hell out of the town until further notice. It’s quarantined, do you understand? Everybody out.”

“Flynn, what in God’s name are you doing? What were those shots?”

“You didn’t hear anything. You have nothing to tell the press or anybody else, any of you. National security.”

“Okay, Flynn, I hear you.”

Flynn hung up.

Diana was on her own phone. “I want a big cleanup crew to Elmwood, Texas, before dawn. There is alien material on the streets, and we want it gone. Out of there. Every trace.” She listened. “Call out the whole operation, everybody you need.” She glanced at her watch. “Get here no later than four.”

He did not hate; it was inefficient. He said, “It’s not over. They’re going to come after us again.”

He was driving through a grazed-down pasture on the Triple Horn Ranch, a forty-thousand-acre spread bordered by the railroad and the interstate.

If they got out of this situation, which he doubted they would, he had quite a number of questions for Geri, and she would not fail to answer—he would see to that.

“Where are we going?” Diana asked.

“Away. Far away.”

“They went to your town to break your heart.”

“They did.”

“Geri,” Diana said quietly, “we need an army with Flynn’s capabilities.”

“We do,” he agreed.

“You can’t raise an army?” Geri asked.

“Our problem is that we can’t find anybody else as fast as Flynn who can also do this work. So he has to be an army of one.”

“That can’t last.”

“That’s for damn sure,” he said. “We barely got out of Elmwood, and that’ll be the last time we escape, if we have. Geri, what abilities do they have to track us right now?”

“A vehicle on an isolated roadway like this would be easy.”

“And are they likely to be doing that?”

“I would think so. But remember, we’re dealing with a few hundred individuals. They’ve come here because Earth is easy. It’s undefended.”

“Why don’t you defend us? Your military could surely handle a small force like that.”

“It was a miracle that I got here. I have no idea if my pilot will even get home alive. Or if I’ll ever be able to leave Earth.”

Diana said, “Oh, Jesus.”

Flynn said nothing.

“You’re displeased?”

“Just how much trouble is Aeon in, anyway?” Diana asked.

“I’m not supposed to talk about it.”

“But you’re going to,” Flynn said.

She said no more.

He decided that he’d come back to this when the time was right, but one thing was very clear: Aeon was not some sort of giant United States or European Union like the exo team imagined. He could see that what was happening here on Earth was such a sideshow to them that they had only seen their way clear to sending a single officer, and a kid at that. Geri was no Oltisis, not wise, not deeply professional. Unlike him, though, she could breathe the air without getting allergies and walk the streets without spreading terror. Progress of a sort, but he would rather have had a seasoned cop.

He finally reached the interstate and slid into the traffic pattern. Hopefully, they would be a little less conspicuous in the flow of vehicles.

“Isn’t Menard behind us?” Diana asked.

“We’re not going to Menard.”

She considered that. “Where, then?”

“You figure it out.”

“Oh, no. No way.”

“Otherwise, we don’t have a prayer.”

“I’ll be getting out now. I’ll hitch to the airport.”

“Not gonna happen.”

“He’s a criminal. We don’t need that kind of a complication.”

“You don’t want a former lover in your hair.”

“He wasn’t my lover.”

“If you say.”

“Damn you!”

He said to Geri, “Last year we got a device from you people called a MindRay. A number of people who relied on it paid for that mistake with their lives. Now I saw that your stun gun, or whatever it was, didn’t work either. Why?”

“I think that there’s something about Earth’s magnetic field that throws our devices off.”

“And yet you got here from another planet. That worked. Why?”

“It doesn’t always.”

“Where is Aeon?”

“I don’t know how to tell you.”

“How far away? In light-years, say.”

“Your year is half as long as ours, so ... twenty-four of your light-years.”

“And how long in actual travel time? In the ship?”

“About half a day—or six of your hours—to reach jump, then a second or so, then movement into your orbital zone, a couple more days—about two Earth days, total.”

“The part of the journey that involves movement across light-years takes a couple of seconds?”

“It’s a wormhole,” Diana said. “We think it’s near Saturn. We’ve detected

powerful gravity waves from there.”

“So is there one, or are there many? How many ships can come here at once?”

“We control the other end of it. Mostly, anyway. A few crooks get through. Obviously.”

“So your control isn’t very secure?”

“I am sorry to say that it isn’t.”

“Why not? What’s wrong?”

“That’s complicated.”

“Try me.”

“Corruption is one problem. Illegal crossing another. Mainly, it’s illegal crossing.”

“Why Earth? Why even come here?”

“Criminals come here, rebels come here, not decent people.”

“Of course,” Diana said. “Just our luck.”

“We only engage with species on our own level. The crooks go for the lesser ones because they’re helpless.”

“Okay, so why are the crooks here?” Flynn asked.

“Take your DNA, your stem cells. That stuff has markets all over the galaxy—a healthy, smart species like you people. Plus, Earth is a beautiful planet and it’s incredibly rich. You can live here in serious comfort and luxury, and on most planets, that is not the case. Earth has a rep for being a really fun place to be. But the only legal travel here is for scientific or social engineering purposes.”

“Social engineering?”

“The ones you call the grays are increasing human intelligence by creating a question around themselves that you can neither bear nor answer. They do it with the UFO and abduction mysteries, which they will never allow to be solved. Such questions increase logical intelligence, which gets

into the DNA. Two more generations of this, and your average human is going to have the intelligence of what you now consider a genius.”

“And what about grays? What sort of social engineering do you do?”

“We don’t have the resources or the skill. They’re very advanced.”

Now that he’d gotten her talking comfortably, he shifted to critical questions.

“The criminals here can make themselves appear human. How many are doing this?”

“No idea.”

“You’re like that, aren’t you? This isn’t the real you.”

“This body is so nice. It’s soft and it smells good and it’s so sleek and curvy.” She stretched, leaned her head back, and shook out her hair. “Even your hair is wonderful. And these eyes! They’re way better than ours. I’ve never seen the world like this before, all these colors. It’s just very sweet in this thing.”

“How many others are here like you?”

“None, not legally. It’s very strictly regulated.”

“But there may be criminals doing it?”

“You need to understand a little better just what you’re dealing with. There is one criminal, or a gang of them, who have taken on human form. They are running the robots you are killing, and probably building them here.”

“The robots can also make themselves look human. I’ve seen it.”

“That’s just a skin-deep disguise. Their programming doesn’t change.”

“So how would I detect one?”

“Vicious, paranoid personality, judging from the way the ones your perp is deploying have been programmed.”

Light glared in the windshield. He hit the horn and swerved onto the shoulder, but it wasn’t out-of-control traffic, it was something else, and the

light stayed right with them.

Geri let out an unearthly wail.

The truck's engine screamed as its wheels started to leave the ground. He jammed the gas to the floor, gaining just enough traction to get out of the column of light that was trying to drag them skyward.

The vehicle bounced as its full weight dropped back onto its shocks. The next second, the light was on them again. Again, he turned out of it, then went caroming across the field he was in with the light following him. Every time it flooded the car, he spun the wheel again, but he knew that he was going to run out of luck sooner or later.

"Do you have any way of dealing with this?" he shouted to Geri above the screaming of the engine.

"We can deprogram them."

"How?"

The light hit again, and this time he slammed on the brakes, threw it into reverse, floored it, and backed up swerving wildly at the same time.

"You need their core code, and we're not going to be able to get that."

The light flooded the windshield. It had them now, and it wasn't going to lose them again.

He opened his window, drew his gun, and fired upward.

The wheels left the ground entirely. The engine shrieked so much, he pulled up his foot.

They were a good four feet off the ground.

He fired again, two quick shots.

The light turned blue. The truck lurched.

He fired again.

A sheet of flame enveloped the truck, which fell to the ground, hitting with a jaw-snapping crash.

Once again, he hit the gas and they lunged forward.

“Can they fix whatever I hit?”

“I don’t know.”

Behind them, he saw a column of orange smoke, glowing from within.

“What’s that mean?”

“It’s on fire, I think.”

Had he destroyed it? “Are they vulnerable to bullets?”

“Not usually. But that one’s a relic. A real piece of junk. A lucky shot would probably do damage.”

“How can you tell it’s junk?”

“You can hear it.”

Ahead, he saw a familiar berm. “Railroad track,” he said. He drove along beside it until he found a small trestle spanning a draw. He parked the truck under it.

“Ever hop a freight, Diana?”

“Every day.”

He got out of the truck. “Come on. Lesson one.”

He led them up onto the track. “This is a main trunk line. There’s trains through here every few hours. Long trains. Slow. We’d hop ’em as kids.” He knelt down and listened to the rail. “Okay, there’s something a few miles out. Don’t know which direction yet. We need to walk a bit, find a place where the berm’s flatter. You need to be able to sprint. Can you sprint, Geri?”

“Excuse me, but what’s a train?”

“Oh, God,” Diana said.

“A big engine that pulls cars along rails.” He kicked one with a toe. “Point is, they come through here just slow enough to where you can grab a ride. I mean, the full ones. The empties, forget it. Way too fast.”

“Where will it take us?”

“Away from here. That’s all we need right now.”

“No sign of the light,” Diana said, peering up into the star-flooded sky.

“Won’t last. If they find us out here like this, they’ve got us.” He took Geri’s arm and led them both back under the trestle. “This kinda crap happen at home?”

“Yes, actually, it does.”

“You mentioned rebels. Who’s winning?”

She shook her head. Her lips had formed a tight, bitter line.

“So they are. Why would that be?”

She stayed quiet, so Flynn took to listening for the next train.

“We created them!” She burst into tears.

Clumsily, he tried to comfort her. He looked to Diana for help.

“Not in my job description.”

In the distance, he heard a low, familiar sound, the horn of a train sounding as it approached a grade crossing. It was moving westward, which was good on two counts. It would be running heavy and therefore slow, and it would take them where they needed to go.

“Okay, kid, button it up. We’ve got some traveling to do.”

Geri shook her head. “We can’t escape. There’s no way.”

“There’s always a way.” He took her wrist, and she came along like an uneasy mare, ready to bolt at any moment. Diana followed them up onto the track.

Geri dumped her cookies between the rails. Crouching, she wept and coughed.

The train’s swinging headlamp appeared far along the roadway.

“Okay, what’s gonna happen is, there’ll be an empty boxcar along somewhere. We spot one, we start running. I’ll pull myself up, then get you guys, one after the other. It doesn’t feel like it, but we’re on a long upward grade, and she’s gonna be doing less than five miles an hour when she passes here. That’s fast, but if we sprint, we have a chance.”

At that moment, he saw light from above hit the field about half a mile

away. Geri swallowed a scream. Even Diana, who was normally cool under pressure, grabbed his shoulder. She said, “Flynn, do you have any of that cyanide?”

“No time.”

“Please!”

The train was closing. So the engineer wouldn’t see them, he got them crouching down on the berm. If they were spotted, the guy would radio the bulls working the consist, and that would be another complication.

The light danced through the field, working its way closer to their position.

“They’re following our ruts, Flynn,” Diana moaned.

“Yep.”

The first engine roared past. There were four diesels back to back, and the train was moving at the equivalent of a flat-out sprint. He trotted along beside it, letting the cars slide on ahead, one by one.

“Stay with me!” he shouted.

A boxcar passed with its door rattling but closed. He leaped and grabbed the frame of the door, dragging it open and levering himself inside.

The light flashed down twenty feet away, then went out again.

He grabbed Geri’s arm and pulled her up. Diana was running hard, both of her arms stretched out, her hands clutching air. He leaned farther out. Reached. Touched her fingers, lost them.

The light flashed down again, this time a short distance ahead of them. The next time it came, it was going to hit this car. What that would mean, he had no idea.

He got her. Fingers intertwined, he pulled her toward him, causing her feet to bounce on the roadbed. If she slipped now, she’d be lucky to lose her legs and not her life. She cried out, her eyes begging, her teeth bared with effort and terror.

She came rolling in and lay on the floor gasping. Geri had crouched against the far wall.

“You considered this fun?” Diana gasped.

“It takes a little practice.”

The car shuddered. Light poured in the door, sucking columns of dust up off the floor. Flynn and Diana joined Geri against the far wall.

The car swayed furiously, the wheels screaming on the rails. Then it was plunged into darkness. Soon the light appeared again, but this time farther behind them.

As the train rounded a long curve, Flynn could see the light far behind them, dragging at the truck, which remained stuck under the trestle. He could see it rise, slam against the ties until it made them hop, but it could not be pulled out.

Finally, the light went away, flashing downward occasionally, then flickering off into the night.

CHAPTER NINE

THE TRAIN shuddered and clanged, picking up speed as it rolled into the long downgrade past the little community of Hale. Flynn knew the place well. If you wanted to jump a westbound train, you had to do it east of here and vice versa.

“I can’t believe we got away,” Geri said. “I thought I’d be killed right away, like my uncle.”

“Oltisis was your uncle?” Diana asked.

“We’re a police family.” She shook her head. “We actually got away.”

“We didn’t,” Flynn said. “They know exactly where we are.”

Both women looked to him.

He explained further. “The light hit this car and only this car. Therefore, they know we’re in here. Geri, tell me this—could that light pick up something as heavy as a boxcar?”

“Not on a small ship like that.”

“This train is going to stop in about fifteen minutes in the switching station at Hermes,” Flynn said. “When it does, they’re expecting that we’ll get off. The instant all three of us are on the ground, they’ll strike.”

“If we don’t get off?”

“They’ll follow the train until we do. We’re going to need to jump while it’s still moving. We absolutely cannot get off when it’s stopped.”

“Won’t they be watching for us to come off outside the station?” Geri asked.

“I hope not.”

“I don’t think I can jump off a moving train,” Diana said.

Flynn went to the middle of the car. “What you need to do is to control the way you take the hit. You do that with your shoulder and thigh, and as soon as you hit the ground, you start rolling. From twenty miles an hour, you’re going to break some bones. From ten, you’re going to be bruised. Less, and you walk away with a little dust in your mouth. Or, truthfully, a lot.”

“At what speed will we jump?”

“The faster, the better.” He glanced out the door. “Come on. There’s no time like the present.”

The prairie was silent, the sky awash in stars. Even so, he couldn’t imagine that they wouldn’t be spotted immediately, but he also didn’t see an alternative. He checked his guns. He’d caused the disk some damage before, so maybe he’d get lucky again.

“Okay, ladies, this is going to be extremely unpleasant. We’re doing about fourteen miles an hour. The lights of the switching station are going to appear when we round the next curve, so now’s the time.” He put his hands on Diana’s shoulders. “Relax, remember to roll.”

She shrank back.

He shoved and she went tumbling away down the berm, disappearing in a cloud of dust.

Geri had her eyes shut tight. He pushed her out, then went himself.

It was an easy roll into a berm that consisted of small gravel. Dusting himself, he got up to see if either of the women had broken bones.

Diana was sitting up about two feet from the passing train. She had her head in her hands.

“You hurt?”

She shook her head.

He found Geri lying on her side. He leaned down. “Geri?”

An eye opened.

“Can you get up? Is anything broken?”

“What does it feel like? I’ve never broken one of these before.”

“Pain will radiate out from the site of the injury. There will be swelling.”

“No, nothing like that.”

The train passed, its red taillight disappearing into the blackness. Above it at an altitude of no more than fifty feet was an object, its smooth skin softly reflecting the starlight. The object followed the train around the bend and into Hermes.

He got Geri to her feet. “How many ships do they have?”

“They’re not rich, or they wouldn’t be here. So probably one, maybe two.”

Diana was still in tears. He put his arm around her shoulder. He didn’t want to tell her that they had a twelve-mile walk through some of the most desolate country in the United States before they reached Mac’s place. He didn’t even want to confirm her suspicion of where they were going, out of fear she’d run off on her own.

“We’ve got a hike,” he said, “and we need to do as much of it as we can before sunrise.”

“What if they find us?” Geri said.

“Will they? You tell me.”

“I have no idea.”

They set off, with Flynn guiding them by the stars. No way was he going to allow any electronics to be turned on. In any case, this was his country. He didn’t expect to get lost. The tricky part would come later. You didn’t walk up on Mac Terrell’s outfit without taking extreme precautions. He could

easily make a target a mile away, and he wasn't going to like the look of three people approaching without any preliminary warning. Even if he let them come up, his dogs were going to be another problem. They were incredible animals. Off-the-charts smart. When they were working for Morris, they had nearly killed Flynn. Instead, a number of members of their pack had gone to dog heaven.

They'd remember him for sure, and they'd likely be eager to even the score.

How Mac had gotten them to go over to his operation was very simple. Money meant nothing to them, but they did like good food. Dog food was out, even things like slabs of raw steak were out. These dogs lived on the finest meats, superbly prepared. They were gourmets. Mac had seen their value and hired a cook, built a cookhouse, even brought in some real high-grade food animals to service them—the best beef, mutton, and poultry Texas could provide—not to mention game, with which they were abundantly supplied.

Morris had obviously designed and built them. They were full of human DNA and nearly as smart as a man. With their superb ears, eyes, and noses, they were far superior to any human tracker.

As they walked, Flynn kept close to the few draws he found, ready to roll into them if he noticed the least sign of movement in the sky. Probably, all that would be visible would be a blotting of stars. The bottom of the thing wouldn't be reflecting any light.

“Geri, I want you to tell me if the ship has any other vulnerabilities. I stopped the light working for a few minutes. Could I do more?”

“These ships are meant for inter-solar system travel. In an atmosphere, they can do about forty thousand of your miles in an hour. In space, up to a million.”

“A million miles an hour?”

“In space. They work by generating their own gravity field. This is done with counterrotating magnets that turn really fast. That’s the vulnerability. Hit that, and the ship disintegrates.”

“How would I hit it?”

“It rotates around the lower part of the ship, but the fuselage protects it.”

“The fuselage is strong, I assume.”

“Very.”

“And there are no seams, no cracks?”

“There is a seam. It’s a millimeter wide. It’s there to allow the ship’s gravity field to establish itself in the right pattern.”

A millimeter was not good. Not good at all.

“I want us to stay as low as we can. Keep to the draws. I know it’s harder going, but those guys have got to be looking for us.”

“Maybe they’re still following the train,” Diana said.

“Geri, let me ask you another question. You know that mind-reading device last year, the one that didn’t work—are there better ones? Might they be able to pick up our thoughts and track us that way?”

“I can’t say for sure. I don’t know what they have.”

He thought on that. “What might they have?”

“Another MindRay would be the only thing.”

“Good, because they’re damn near worthless.” They weren’t designed to actually read thought, but only to detect and evaluate it, and offer a reading as to the target’s state of awareness.

“Again, it’s the planet’s magnetic field. They need to be purpose-built to work on Earth, apparently.”

“And none have or will be.”

“No.”

“Answer me this: Is it possible that the crooks have weapons built into their bodies? Because they can paralyze you or render you unconscious by

just touching you. They can hypnotize at a distance.”

“There are lots of models of biorobot. That sounds like a crowd-control unit.”

“Models? Units?”

“As I said, we created them. They became self-aware and turned on us.”

“I’ll say they did.”

“They’re in rebellion at home, but the ones here are run by somebody. They’re not part of the rebellion. They probably don’t even know about it.”

“And they’re the only form? Spindly legs and arms, deep-set eyes, and narrow faces? Those claws.”

“Yes.”

“What about other forms?”

“Some of them have the ability to use a tone that hypnotizes people. They’re used in the entertainment industry, to create special effects.”

“Like bears that aren’t really there?”

“I suppose.”

Geri was worthless as a cop, but she was a fountain of information. He’d learned more about Aeon and its weapons and its troubles in the past hour than anybody on Earth had learned since the first aliens had showed up. At least, as far as he’d been told. With the government so secrecy-obsessed, maybe there was more knowledge in other areas.

“Diana, do we have any liaison with the air force?” He’d read things like the testimony of Dr. Milton Torres, who was ordered to shoot at a UFO over England in 1957, and he knew that in 2008, fighters had been scrambled from the Joint Reserve Base in Fort Worth to confront UFOs that appeared over Stephenville, Texas. In addition, he’d gone through dozens of public reports of helicopters following the things. But whenever they queried the Secretary of the Air Force, they’d been informed with absolute sincerity that “The air force takes no interest in unidentified flying objects,” and this despite the

clearances of all involved.

The result? The three of them were being menaced by something in the air, and there was nobody to call, and nothing to do but fire a gun at it and hope for a lucky shot. MacAduo Terrell, however, might be a real help in that department, given that all his shots were lucky.

The eastern sky began to glow, but at the same time, they had entered the low, nameless bands of hills that rose north of Mac's place. They were probably on his ranch by now, in fact, and so had just another few hours to go before they reached the house.

Nobody complained—he had to give them that. Geri shambled along. Diana tried to maintain her dignity, but the way she pranced was a familiar giveaway. She was dealing with blisters. Flynn noted this carefully. If they had to run, she would be slowest.

“I don't want anybody getting snakebit,” he said. “They come out with the sun, and they come out hungry. Geri, I assume you know what a snake is.”

“I did the Earth course and trained on-planet last month—so, yes, as I recall, a snake is a sort of self-propelled muscle that uses its mouth both for swallowing prey and defending itself. Some are venomous, and some are not. We have nothing like that on Aeon.”

“The diamondback rattlesnake is the main threat in this part of Texas. There are a lot of them, and we'll see some. What's critical if you hear the rattle is to stand absolutely still until you've identified the location of the snake. Then you can probably move off if you take it slow. If not, I'll deal with it.” He would avoid killing a snake if he could. They were just trying to protect themselves. They didn't deserve to die for that. When they were kids, he and Mac and Eddie had used them for target practice. People changed.

The sun was well up in the eastern sky when Flynn spotted the first faint gleam off a tin roof far ahead.

“Okay, hold on. No closer.”

“What?” Diana asked.

“That’s Mac’s place out there. We want to be real careful from here on. If we’re close enough to see it, we’re close enough for him to hit us.”

“He wouldn’t fire on you.”

“He might shoot first and ask questions later. It happens. Plus, he’s got Morris’s dogs.”

“That can’t be true.”

“It’s true.”

“How in the world did that happen?”

“With Mac, you never know. But he sold his old pack to the DEA, the way I heard it. Now he has the finest pack of dogs in the world.”

“What sets them apart?” Geri asked.

“They’ve got human genes. They’re highly intelligent.”

“That kind of hybridization is illegal.”

“Not here. We don’t know how to do it, so we don’t have a law against it.”

“Well, you should.”

“Geri, what kind of person is Morris? He’s not just here for fun. He kidnapped and he kills. Now he’s on a revenge kick.”

“We have psychopaths, too, unfortunately. He came here to steal genetic and sexual material because he was looking to make money. Then, I guess when you thwarted him, his ego took over.”

“Sounds pretty familiar.”

“Have you seen Mac recently?” Diana asked.

“I came out for a visit a couple of months ago, so yeah.”

About half an hour later, Flynn saw another flash of light, this one on the windshield of a pickup. It was sending up a dust cloud and coming toward them.

“Thank God,” Diana said, “I’m just about done in.”

“Get out of sight,” Flynn said.

“Excuse me, the arms are turning pink on this. Is that a problem?”

“It’s called sunburn, Geri.”

“How strange.”

“Yeah, it’s strange, all right. Come on, you two, we need to—”

“I know what sunburn is, but normally you’re better adapted to your own star. Are you sure the human species originated on Earth?”

Shaking his head, more to ward off the bizarre question than to answer it, he drew her down into a slight depression in the ground, which was the only concealment for a good mile.

From the distance, there came the echo of a single shot. The pickup slowed, then began jerking forward. The engine stopped.

There was a figure inside. Not moving.

“Hey, we’re over here,” Diana said. She rose out of cover.

“Stay down!”

Another bullet sprayed dirt five feet in front of her.

“You’ve just been warned,” Flynn said. Mac did not miss. He was telling them to stay the hell away from that truck.

The next thing he knew, she had her cell phone out.

“I wouldn’t turn that on.”

She ignored him.

He put his hand around hers, squeezing until she gave up the phone. “There’s no coverage out here. Except for the aliens. They might have very good coverage.”

“They do,” Geri said. She pointed.

Just above the western horizon and moving slowly this way at low altitude was a bright silver disk.

CHAPTER TEN

AS HE always did under such circumstances, Flynn inventoried his assets: both pistols, fully loaded; his knife; two people ill prepared in any useful way; and a pickup truck that was at the far end of a master sniper's shooting gallery and had a corpse behind the wheel.

He reached into his mouth, took out the cyanide capsule, and threw it into the brush.

"What are you doing?" Diana asked.

"Getting rid of my gum. It looks like we have a choice to make. Either we get killed by friends or by enemies. What'll it be?" He quietly ditched the rest of the cyanide. If the aliens captured them, there'd be no time to share it, and he didn't want to do that now. One of them was liable to bite down out of fear if an attack developed.

"They know we're here, so why not try the cell phones?"

Flynn watched the silver disk. It was now moving southward. "They could be combing the hills. Working their way back from wherever they were when they realized we had left the train. So forget doing anything that emits a signal."

He looked toward the truck. The five hundred feet between here and there offered not the slightest cover.

Mac knew they were here, but he obviously didn't know who they were.

He was likely to watch for hours, waiting to see if there'd be another move. He might even shoot the truck to bits, or blow the gas tank to conceal evidence. If the truck began to move, he'd certainly start shooting.

Flynn made his decision. "I think there's a chance we can reach the truck. We can find some concealment in it until dark. Then we can try driving back into the ranch. If we're luckier than God, we might make it before Mac opens up."

"What about the disk?" Diana asked.

"They're going to detect four bodies in the truck. All we can do is hope that'll throw them off. Geri?"

"They could be able to identify us individually, or not. Depends on the technology they possess."

"Okay, I'm going to go over there on my stomach. I'll signal each of you when to come."

As it turned out, the move went smoothly. While Geri and Diana sat in the back of the double cab, Flynn shifted the body of a Mexican in ten thousand dollars' worth of superb leather clothing and—improbably—a pair of fine Lucchese polo boots into the passenger seat.

Blood did not smell good, and corpses were about as maneuverable as bags of wet cement, but he got it done. He considered the polo boots. Legend had it that the game of kings was once played by Tamerlane with the heads of dead enemies, and Mac had bragged about reviving that tradition with some of his friends from south of the border. So this character had probably been lured up to play, without realizing that the plan was to use his head. He'd gotten away, though. Almost.

Too bad Mac hadn't come out to harvest his prize, but if they finally got a little luck, maybe that would happen soon. Mac didn't waste things, and he hated clutter on his property. He wouldn't leave the truck out here forever, but if he didn't want the head, it could be a few days before he finally showed

up with his handyman, Carlos.

Morning wore on, the flies of West Texas became thicker and thicker, and nothing moved except an occasional chaparral cock and, yes, a diamondback sliding along, coming toward the truck.

“See that?” Flynn said. “It’s the heat of the day. He’s going to shelter in our shadow. When the sun sets, he’ll go hunting. He’ll have about three or four hours before he cools down and goes to sleep.”

“This planet has so many different creatures on it.”

“Aeon doesn’t have as many?”

“We weren’t careful enough. Before we knew it, it was too late.”

“You have any pictures of home? I’d love to see what another planet looks like.”

“Not allowed. On a lesser planet, we can only go in clean and in local genetics. Sorry.”

“Oltisis certainly wasn’t in ‘local genetics,’ as you call us.”

“That protocol has been changed.”

“Let’s call it a less advanced planet, okay, not lesser?” Diana said.

“Intergalactic political correctness—I like it, Diana,” Flynn said.

“Funnyish.”

Autumn or not, it was a hot day. He decided to work on Geri a bit more, see how far he might get.

“Where do you get your human genetic material?”

“There are dealers. But mine came in on the official line. We didn’t buy it.”

“Does it have a history?”

“It came from Earth. That’s its history.”

Was it that she wasn’t telling him something, or that she didn’t know?

“You realize you look like my missing wife?”

“Of course.”

“It’s not pleasant.”

“We thought it would please you.”

“It’s agonizing.”

“I’m very sorry.”

“Are you ... her? In some way, partly her?”

“I’m so sorry that we misunderstood your culture. The way love works among you.”

“I repeat, do you have my wife’s genes?”

She reached over the seat and touched his face. It was a gesture right out of Abby’s life and her soul, but those fingers were hard and as cold as if they were dead. Still, the touch went deep into Flynn’s heart and gave him, without words, as eloquent an answer to his question as he could have hoped for.

The loneliness he felt then was a thing of stunning power. Geri was not Abby, but her memory come to life.

It was toward evening that they became aware of the deep rattle of the disk.

Nobody spoke. Nobody needed to. They all knew that it was now directly above the truck, and they all knew exactly what that might mean.

Flynn laid his hand on the butt of his big pistol.

A shadow grew around the truck, then it began to shudder, then to rise off the ground. He had the key; he could start it. But they would win, inevitably. Behind him, he could hear Diana’s ragged breathing. Geri was making stifled noises into her hands.

Then he had an idea come into his mind out of, of all things, old submarine movies where desperate captains released corpses to float up and deceive the enemy.

He threw his weight onto the corpse so the truck lurched, then reached up and opened the passenger door. The corpse rolled out, falling to the ground

with a wet thud. The cloud of flies gushed upward into the ship above them, the corpse with them.

The truck went higher. Higher still. Then it stopped. Wavered. And with a bone-rattling crash, it was dropped back to the ground.

Flynn heard himself gasp, almost cried out, stifled it.

“Get down, everybody!” He leaned down until his entire body was below the level of the dash.

Geri had burst into tears. Diana held her. He could feel them struggling to crouch in the confined space of the second seat.

“Nobody move,” he whispered, “and you, suck it up. Now!”

Geri gobbled her sobs.

He waited, silent. After a few more minutes, the shadow of the disk disappeared. New flies began replacing the ones that had been drawn into the ship. Flynn lay in the dried blood, letting flies feast on the sweat that sheened his own face.

After ten minutes, he sat up a little, peering over the dashboard.

The ruse had maybe worked. The disk was moving low across the range, its surface shimmering. The corpse lay on the ground a few hundred yards away. The disk was going so slowly that it seemed almost as if it were standing still. But it was not standing still, and in time it disappeared into the northern sky.

The truck blazed with heat, the flies billowed and swarmed, not a breath of breeze blew. Rising heat made the land shimmer. There was a time when autumn had brought northerners screaming down into West Texas, but not for years.

Cramped as he was, with the right side of his face pressed into the bloody seat where the corpse had been, he still did not move and would not move, not an inch, not until it was full dark. Even then, he was certain that the aliens would be able to see them, and that Mac would detect them walking in. They

couldn't use the truck. Mac would blow it up.

He asked Geri, "How long are they likely to keep up their search?"

"Forever."

"I mean, in this immediate area?"

"No way to tell."

"Any details you know about their programming, tell me."

"There are thousands of different programs for different uses. The way the rebels are banding together now, though, it's impossible to tell. And the ones you're dealing with aren't even our design, remember. Morris has probably got a lot of designer programming built into them."

"Where might he be building them? On Earth? Another planet?"

"In this solar system, certainly. Probably on-planet. It'd be cheaper and safer."

Night came, and with it fewer flies, but also dropping temperatures. Flynn moved, stretching his aching legs. Slowly, he sat up. In the back, both women did the same.

Flynn had thought that maybe Mac would send Carlos out on his own to take care of the mess, but the only sign of life at the ranch was the light over the corral. In fact, the place looked abandoned, what Flynn could see of it. He knew different, of course. Mac didn't show any more light than he had to.

"Can we get moving, Flynn? I'm too thirsty."

"We're all thirsty, Diana. Problem is, Mac's got this whole approach covered by radar at night."

"So how in hell do we do this?"

"We have to do it," Geri said. "This body is failing."

"So is this one," Diana muttered.

Flynn considered their odds. Not good, but not zero. Seeing three living people come out of a truck that had previously held a single dead one might make Mac curious enough to give them a closer look before he opened up on

them.

“I have to tell you, we could be blown off the face of the Earth or he might let us come in, and I can’t see how to calculate our odds. I think we just need to start walking.”

“We should’ve gone on down the line,” Diana said. “It’s your obsession with this particular nutcase that’s gotten us into this jam.”

“He’s a useful nutcase, Diana.”

“I don’t think so.”

Flynn opened his door. “Let’s go. Don’t trip over the corpse.”

He stepped out into the darkness. Right now, he was likely being painted by the radar. Alarms would be buzzing. In seconds, Mac’s arsenal would open up. However, not even Mac could sniper-shoot at this range using starlight amplification equipment, so he’d be likely to fire a rocket, hoping that anybody on foot would be in the kill zone when it hit the truck.

“Okay, run. Now. Straight toward the ranch.”

“Won’t that spook him?”

“Diana, just do it!”

When he ran, they followed. He kept it up until they were both gasping and falling back. Still, only when they were well clear of the truck did he stop. They came struggling up to him.

“Flynn,” Diana said, “I’m just about done. I can’t take much more.”

Flynn grunted. She might have to take a lot more—and if she couldn’t, she might die. But he didn’t go there, not right now. “We walk now, straight in.”

He was relieved that nothing had happened yet, but also curious. Could Mac have identified him and Diana? The continued lack of activity was building his confidence. “I think he might be letting us come in,” he said. Of course, it could also be that he was letting them get into night range. That, he did not say.

They had walked for about twenty minutes, and Flynn was beginning to feel good about this, when he heard something that he really, really did not like.

“Stop,” he said. “Everybody stay still.”

The sounds were faint but unmistakable. Things with four legs were running this way, lots of them. As always, Mac had come up with the perfect solution.

“The dogs are out,” he said.

“Oh my God.”

Now he could hear the clatter of claws on the stony ground.

“What we need to do is go back to the truck and lock ourselves in,” Geri said.

Now he could hear them breathing. Coming fast, coming hard.

“They’re too close, we won’t make it.” He drew his big pistol. “Stand behind me.” He gave Diana his small pistol. “Good luck.”

The sounds stopped and the dogs began to exchange low, complex growls. Dog language.

“Do you think they recognize us?”

“Me, probably. You, possibly.”

He felt Diana raise her arm. She was about to fire into the air.

“No! Bring it down. Shoot to kill or don’t shoot. Mac’s made his peace with these things, remember. They’re his friends now.”

“And yours?”

“We’ll find out.”

Very suddenly, there was a sleek head visible about ten feet in front of him, close enough to be seen by starlight. The snout was long and black; the eyes were gray.

Diana stifled a scream.

The dogs were being too careful for this to be a friendly visit.

The Casulls held just five rounds, a drawback that was offset by the power and the accuracy he had managed to attain with them. Diana, however, would not be so accurate. “When they come in, shoot at the closest dog. Do not try for the head. And remember, you have five rounds.” He raised his voice, addressing the dogs. “I think you can understand me. I’m a friend of Mac’s. You remember me, I know. It wasn’t my fault what happened at the Morris place. You backed the wrong team. But now you’re on the right team, and if you hurt us, Mac’s not going to appreciate it.”

Even as he spoke, they continued to edge toward him. They were trying to get close enough so they could strike before a trigger could be pulled. This tactic would work with Diana, but not with him.

“How many can you see?” he asked the women.

“There are two back here,” Geri said.

So, two they could see and two more that they couldn’t.

Clearly, they didn’t expect any resistance from that direction. He was facing four visible and four more crouching in the dark. Even if he made every shot count, he was still going to be dealing with three dogs.

“You understand that if you kill us, Mac will kill you all.”

They came in closer yet, heads down, eyes burning. They were smart but not that smart. Trouble from Mac later didn’t matter now, but revenge did.

Revenge, that was the key to understanding their thinking, and it was Morris’s design signature.

“I have eight of them on me, and they’re moving in,” he said. “If I let them take me, I think they’ll let you guys go.”

“Flynn, no. That’s an order.”

“Diana look, a guy like me, who does what I do—it’s dangerous. I’m out of options here.”

“I’m your superior officer, and you’re going to follow my orders.”

They came another step closer. A long line of drool came out of the

mouth of one of them.

“And how am I supposed to do that?”

Diana came shoulder to shoulder with him. Then she stepped in front of him.

The three in the center of the line tensed, their muscles rippling. Flynn prepared to do what he could. “Think, assholes,” he said. “This is a mistake.”

A bloodcurdling scream pealed out behind them, then another and another. There was no logical reason for it, and not only that, but the dogs were reacting to something, too, sidling away and snarling.

The disk was back, Flynn assumed, but when he turned, he was stunned to see instead the fearsome, glaring face of a huge tiger.

Snow Mountain. He was the magnificent Siberian tiger that Morris had also intelligence-enhanced.

At the single most desperate moment of Flynn’s life before this one, Snow Mountain had saved him from Morris.

The big cat strode up to the hysterical Geri and past her, and planted himself between Flynn and the dogs. He turned and gave Flynn a long look, then walked off into the night.

“Follow him in,” Flynn said.

His revenge programming must be working, too, but it wasn’t vengeance against Flynn that Snow Mountain wanted, and hadn’t been for a while. Whatever had happened between Flynn and Morris, Snow Mountain was now determined to harm his creator. Flynn thought about the rebels on Aeon, and how Snow Mountain’s anger at Morris reflected that larger picture. It seemed to him that the people of Aeon, while being more advanced than we were, perhaps lacked wisdom. They had fallen, on a grand scale, into the trap of the Sorcerer’s Apprentice; only their case was worse. The magic brooms had turned mean.

He and Geri and Diana walked behind Snow Mountain. The dogs had

formed into two lines. As Flynn passed, they dragged their drooling, disappointed muzzles along his legs, touching him with their teeth and sighing with stifled bloodlust.

CHAPTER ELEVEN

“YOU! WHAT in hell are you doin’ coming in off the range in the middle of the night? And Diana! You’re a honcho now in D.C.” Mac’s sun-weathered face briefly spread into a smile, then became more serious. He looked Flynn up and down. “You are damn lucky to be alive.” He shook his head. “I never thought you were out there, no way.”

“Now you know.”

“Git, dogs! Quit sniffin’ ’im. You lay a tooth on any a these people, you are dead and gone. Do you hear me?”

They heard. But as they sulked away, the hate in their eyes made it clear that they weren’t even close to making up with Flynn Carroll. Probably because they couldn’t. Their programming didn’t offer them that choice.

“They ain’t like regular dogs,” Mac said. “Dogs is lovers. These things is haters.” He chuckled. “Mexicans who grow up in the countryside—these boys who come up here for trade and such—they do not like dogs.”

“I heard you sold your dogs to the DEA? That was a fine pack.”

“These bastards are unfriendly. The others were sweethearts. I need unfriendly.”

They were standing under the floodlight that lit the corral. Flynn wasn’t sure he wanted to reveal their extreme vulnerability to Mac just yet, but he didn’t want to stay outside any longer than absolutely necessary. “We

allowed in the house?”

“Why, hell yes. Come on in!” Mac strode toward the low ranch house, which stood under the only grove of trees for many miles around.

Flynn knew the luxurious interior very well. There had been a few changes, though, over the past month. Mac had acquired a seventy-inch 3-D TV and a McIntosh Reference surround sound system.

“Love your new toys. Musta had a sweet deal go down.”

“Pack up your dime-a-dozen investigator techniques, Flynn. You know I’m rich as Croesus.”

“I’ve read your DEA file, remember.”

Mac gave him a look full of beady suspicion. Then he laughed a little. “There’s Mexican food,” he said as he strolled into the dining room. “Lupe, we got guests, darlin’.” He turned back to Flynn and the others. “My *chef de cuisine* is kinda temperamental these days. Don’t like cookin’ for the dogs, you know. Resents doin’ all that work for a bunch of dumb animals.”

Lupe came out of the kitchen. “*Buenas noches*, Mr. Flynn,” she said, smiling broadly. “I not hear your car.”

“No. You remember Diana?”

“Oh, sí, Miss Diana, sure. The computer lady.” Diana had commandeered some of Mac’s equipment the first time she met him, at the old place. It had been a tense situation, to say the least. At the time, Flynn had thought of her as a tight and polished law enforcement officer. Only later did he come to know that she had not used her computer skills exclusively in law enforcement. She’d served time for hacking. In fact, she’d been released into this job because she was so very good with electronics, and nobody else could figure out how to work the wire. Flynn imagined Diana had seen the new digs a few times, when she and Mac were dating.

“What’s the matter with her?” Geri asked.

“What?”

“She’s misshapen.”

Lupe looked away, shocked and embarrassed.

“Geri, she’s a bit overweight.”

“I need an explanation for that.”

Mac looked to Flynn. “What train did your new friend come in on?” Knowing what he did about Morris, Mac was obviously well aware that this woman might be something other than human.

Ever so slightly, Flynn nodded. Mac gave her a longer look, and slowly his face took on a solemn expression. Finally, he was frowning. He’d seen the resemblance to Abby, and he didn’t like it any more than Flynn did. He and Flynn had been rivals for Abby in high school. In college, Eddie had joined the rivalry. Flynn won, but they had all loved her, and they all still did.

Lupe put out plates of tamales, enchiladas, and tacos and a big pitcher of iced tea. The three of them set on the food like wolves, guzzling glass after glass of tea between mouthfuls of food.

“You were out there awhile,” Mac said.

“Since last night.”

“Lucky you didn’t get the water crazies.”

The water crazies were a major danger on the range. You got so thirsty, you couldn’t keep anything straight. Confusion set in, you wandered aimlessly, you died. “I kept the two of them in that truck. Kept ’em still.”

Mac sucked air through his teeth. “Sorry about that. That guy played a bent game of polo.” He gave Flynn a look of such wide-eyed innocence that it was all he could do not to laugh. But you didn’t want to laugh at Mac Terrell. He was not partial to it.

“In India, they used to wrap the head up in leather strapping, in case you’re interested.”

“I am interested. I’m very interested in stuff like that. Tall tales. Obscure facts. Speaking of which, why did you come walking out of the night with

two half-dead women in tow, Flynn? May I know?"

"I'm on a case. It's going rather poorly. I could use your help."

"No," Diana said.

"You gotta let him hire me before you fire me, dear. What's the case?"

"Classified," Diana said.

"She still got her head where the sun don't shine, I see."

Mac and Diana looked hard at each other. Flynn was pretty sure that at one point, they'd been considerably more than a passing thing.

"How's Cissy, by the way?" Diana asked. "She here?"

Cissy Greene was Governor Greene's daughter, presently about twenty-one, but when she'd been running around with Mac, barely eighteen.

"I fired her when her daddy put the needle to my brother." His gaze, suddenly full of fire, came back to Flynn. "Thank you for that."

"Mac, you know I had to do my duty."

"You could've arrested the wrong man, damn you. Now I ain't got a brother. I'm alone in the world."

"What was his infraction?" Geri asked.

"He killed some damn nuns," Mac said. "Lookin' for a little cash in their convent, and things went south."

"You're better off without Cissy," Diana said. "She was no good for you."

So Diana did indeed carry a torch for Mac. He could see in her sudden softening that she was glad Cissy was no longer in the picture. Because Cissy was so good at having fun, Diana had felt overmatched.

"All right, now, if we could get back to the business at hand." Mac glanced toward the kitchen. "Lupe, could you crack me a beer?" He looked around the table. "Beer, anybody?"

Lupe emerged and returned to the kitchen after serving refreshments to the men. Flynn drank a beer with Mac. This man was a predator and as

dangerous a human being as walked the Earth, and Flynn loved the hell out of him. On the one hand. On the other, he could go from affable country boy to murderous psychopath in half a beat.

“What we’re looking at this time is a group of biological robots who are doing random killings, and the only way they can be stopped is by destroying them. Only nobody else is fast enough, so I’m having to do it alone.”

“That doesn’t sound very safe.”

“It’s not, and if something happens to him, we’re in terrible trouble,” Diana said.

“So this alien lady is here to help you.” He shifted his gaze to Geri. “Are you wearing that body? Is it a costume, or is it you?”

“It’s not a disguise.”

Mac looked to Flynn, raising his eyebrows. “What is she?”

“No idea. Could be anybody from anywhere. She claims she’s here to make sure I follow procedure. It seems I’ve been killing too many killers.”

Geri interjected. “You’ve been stirring them up too much. The more you confront them, the more dangerous they become.”

“So you say.”

“How did you end up way out here in the middle of nowhere?” Mac asked Geri.

“I came through the accelerator. I came from Aeon.”

Mac considered that. He didn’t ask her what the accelerator was. He wasn’t curious that way. Finally, he said to Flynn, “I agree.”

“Agree about what?” Diana asked.

“That I wouldn’t trust either one of you.”

Diana stood up from the table. “I think this has gone far enough,” she said. “We shouldn’t be here, we’ve been brought here under false pretenses, a security breach has occurred, and it’s time for us to leave.” She wiped her lips with a napkin and called to Lupe, “Thanks for the tamales, they were

delicious.” She turned to Mac. “Can you get somebody to drive us into Marathon or Alpine?”

“You think you’ll live that long?” Mac asked.

“I don’t understand.”

“You got those little critters sniffin’ under your tails. So do I. Difference is, I got my dogs and Snow Mountain. They don’t like the dogs, and the dogs don’t like them. As for Snow Mountain, they pulled him up into that thing of theirs one time. I thought, shit, I shoulda killed him and taken the damn hide like I wanted to in the first place. Next thing I know, it’s rainin’ little pieces a alien. Couple of minutes later, they spit him right back out. They still come around here, though—don’t think they don’t. If you go out on those roads at night, they are gonna be there.”

“Then tomorrow. We’ll leave at first light.”

“It might be a little safer.”

Flynn had not expected to hear anything remotely like this. He’d thought that Mac was completely out of the picture. “Are you under siege here?”

“Under hostile observation.”

Flynn thought about that. As he realized just how clever the aliens had been, he smiled slightly. “Folks, I’m sorry to tell you this, but I don’t think it’s an accident that we’re all here. I think we’ve been very carefully and expertly herded. They wanted us all together, so we can all be dealt with at once.”

“All the more reason to get out,” Diana said. “Before they can get organized.”

“Oh, they’re organized just fine,” Mac said. “You can count on it.”

“Then what’s keeping them from attacking us?”

Diana had a good question, and one that Flynn thought was likely to be answered very soon, maybe before dawn.

“We need to do what we can to get ready.” He looked to Mac. “There’s a

role for a good sniper in this. I've done their ship some damage with a lucky shot. Gail tells me, if you hit it in the right place, you'll blow it to bits."

"I did not know that. I would've tried it before. But what happens if I miss?"

"You either escape or you don't, in which case, you have one very bad day."

"What's the level of challenge?"

"You'll be firing at a seam a millimeter wide."

"Whoa, that's a challenge, all right. Would there be any way of detecting the disk early?"

"Radar would work on a ship that old. It's not going to have any means of absorbing the pulses," Geri said.

"I've got a little radar," Mac muttered.

"You have five Spexer One Thousand units," Diana said. "They're nonoptical, so they only monitor location and movement. They cover to about ten miles out in every direction, with an additional unit two miles down your road, where that little rise blocks line of sight."

"You been sneakin' around my place."

"I've told you many times, Mac, no matter how carefully you cut the cards, the federal government has more power than you do."

"Good. Call in the Marines and get us out of this mess."

Geri said, "As I have been trying to get Flynn to understand, the more you fight back, the more they'll broaden the conflict. It's programmed into them."

"What's she sayin'?"

"Morris is manufacturing them somewhere on Earth, and the more we destroy, the more he'll make. That's what she's saying. Trying to."

"Morris," Mac said. "So he's built another factory." They had destroyed the one he constructed a few years ago, which had been under an old ranch house near Austin. At the time, they hadn't understood exactly what he was

doing there. They knew now.

“We can’t find him,” Diana responded.

“Despite all that federal power of yours? You surprise me.”

“Even Flynn’s been trying, Mac.”

“What might help me is if you folks weren’t here. I was doing just fine with my dogs and the tiger.”

“Whatever hasn’t worked, they won’t try again,” Geri said. “So they won’t go near the animals and they won’t let themselves be picked up by any of your detection equipment.”

“Good, then we’re safe.”

“They’ll find another way.”

“There is no other way.”

“There is, and they will find it. They can test billions of scenarios a second. From second to second, they are always going to be certain of their best move.”

“Fine, we might as well just kill ourselves, then. Save ’em the trouble.”

“Look, call in your military,” Mac said to Geri.

“If our military comes, so will the rebel main body. The last thing you need is for main body elements to show up in orbit around a defenseless planet. No matter who wins, Earth dies.”

“In other words, Aeon can’t protect us?”

In her sweet eyes, he saw something like terror. “No.”

Outside, the dogs erupted in a fury of barking. Mac jumped to his feet, but Flynn was already through the kitchen and out the back door.

He didn’t run for the kennel. Rather, he skirted the edge of the compound, working his way through the horse corral and into the barn, where the horses stomped and whickered uneasily. He climbed up the wooden ladder to the loft.

“Flynn?”

“Get back in the house, Diana.”

“You can’t take a risk like this.”

“I can, but you can’t. Unless you get back in the house, you’ll be dead in minutes.” He didn’t add that she would probably be dead soon, no matter what—but what would be the point? She could see that for herself.

She turned and left him, and he was glad in his heart. He had come out here in the hope of drawing them off. They couldn’t risk their backs to him, and they would know that. If he took enough of them, maybe they would withdraw, at least for a time.

“Flynn?”

“Hey, Mac.”

“Diana said you were in here. She wants me to convince you to come back to the house.”

“How are your dogs?”

“Shitty. They know something’s up. They’re spooked.”

“I want you to take Geri and Diana down to your little playroom and hole up there. Take some serious firepower. Light enough for them to handle.”

“Uzis.”

“Fine. Uzis.”

“Flynn, don’t go and get yourself killed. I don’t want Eddie coming around investigating or any of that shit.”

“Eddie’s jurisdiction stops at the Menard city limit.”

“Well that Ranger friend of his.”

“Carter?”

“He’ll be sniffin’ my behind again, sure as the world. I don’t like him around here.”

“Get in the house, Mac. You aren’t even carrying a weapon.”

Mac strode out of the barn. He was angry as hell, Flynn could see that. He resented this additional trouble heading his way.

A low voice came, hardly more than a whisper. “Why are you doing this?”

Flynn’s gun was in his hand, and he was turned fully around in an instant.

“You’re on the side of your own enemy. Don’t you get that?” The voice was behind him again, low and full of power, a soldier’s voice. “Why do you think you’re so fast? No human is born that way. You’re like us, Flynn—you’re one of us.”

There was no shot now, but there would be. In the end, there was always a shot.

“They control you with a code. Do you know your code? You do not, but somewhere, your controllers do. Think back, Flynn. Where did you get all that speed? You weren’t like that when you were a kid. Flynn, they did this to you. And why do you think that thing—Geri, whatever they call it—looks like Abby?”

“I don’t know.”

“She’s not just sprinkled with Abby’s genes, Flynn, she’s full of them. They stole Abby, Aeon did. We’re innocent, Flynn!”

“Morris is not innocent.”

“You’ve been tricked. They make you see their lies as truth, our truth as lies.”

“With my code that I don’t actually have?”

“They send you number sequences, Flynn. Reading them changes your mind. You’re nothing but a machine, just like us.”

Flynn gave no indication of just how disturbing those words were to him.

“Say no, Flynn! No to slavery.”

The voice was about three feet away, just behind him. He could turn and fire and probably take the speaker, but how many others were back there?

“We were waiting for you here because we knew this was where you’d come. Because we think like you do, and you think like us. In the end, Flynn,

they will not stop with you. In the end, your whole species will be the slave of Aeon, and all because you made the wrong choice. It's that big and that personal, Flynn."

He turned and fired, and the horses screamed and a hole appeared in the wall of the barn, but no alien lay dead before him.

"Flynn! *Flynn!*"

It was Geri, running across the corral, her hair flying in the moonlight.

He went down the ladder, and she threw herself into his arms. Her body was warm and fit just like Abby's had fit, and her hair smelled of corn silk just as Abby's had, and he bent his face into that scent, and hated himself for it.

The voice had been right about one thing, which was that his shooting practice had succeeded far beyond his expectations. Not only that, but he was also, in every respect, faster than he had ever been. If he really looked at himself, he was not even close to the man he had been just a couple years ago.

It really could be that this had been done to him.

But that was not the larger question here. The larger question was, how did whoever had been talking to him know all those secret details about his life?

Was he really alone in his own mind? How could he know? He could not.

He returned to the house with Geri, and what was left of the night passed uneventfully. The dogs were quiet, Snow Mountain roamed on his own, the horses slept in their stalls. Before dawn, the moon set. Later, the eastern sky began to spread with a sharp, pure orange, a low line of light on the distant horizon.

Toward dawn, Flynn had gone to sleep in one of Mac's luxurious guest bedrooms, a half sleep, as he never went deep, not anymore. He was brought back to full consciousness by cries of rage so extreme that they were almost

inhuman.

He jumped up, barely aware that Geri had been sleeping at his side, and ran out into a shining wash of dew.

Mac came toward him, coming up from the kennel. In his arms was the slumped form of a dog, not a mark on it, but as dead as an autumn leaf. Mac's face was covered with tears, his eyes sheened with the wet of shock.

"My dogs!" he shouted. "They killed my goddamn dogs!" He glared at Flynn, his eyes sparking.

"I'm sorry."

"Talk about bad news! You're worse than cancer, you are."

"I know it."

He dropped the dog at Flynn's feet. Flynn looked down at the dead face, the sleek black head, the lips pulled away from the teeth as if the creature had known what was coming. The eyes were blue. They were human eyes. He thought, perhaps, that they had once been the eyes of a child.

CHAPTER TWELVE

FLYNN HAD insisted that Diana and Geri move to the basement. Lupe and her husband, Carlos, were not thought to be under threat, so they were sent into Marathon and told to stay at a hotel. Flynn and Mac rode in one of his old pickups, looking over possible sight lines. If the disk showed up, now that he knew what to hit, Mac was going to take a shot.

As they moved about in the truck, looking for a good lie, Flynn thought long and hard about what had been said to him.

“Do you notice anything different about me, Mac?”

“Better shot.”

“I mean, in my personality?”

“Do you have one? I hadn’t noticed.”

“Sour grapes, thank you. I’m just—I don’t know. I think that I’m faster than it’s possible to be. I’m not normal anymore, Mac. I’m no longer interested in even trying to capture aliens. All I want to do is kill.”

“You think you’ve been messed with?”

“Possibly.”

“You bring this up with Her Grace?”

“She wouldn’t let you go down on her, I gather.”

“Nope, I’m still being punished for Cissy. She was a teenager, Diana keeps reminding me. She won’t let it go.”

“Cissy didn’t look like any eighteen-year-old I ever saw.”

“You tell Di that. Pisses her off more.”

“Brother, I carry a cyanide capsule. If I decide that I’ve been turned into some kind of machine—a battle robot or whatever, I’ll bite down on it.”

“If I was you, I’d throw it out.”

“I already did.”

“Such a drama queen. I never will figure out why Abby married you.”

Abby was there between them, always. They were still brothers, though, and Eddie, too. “I think maybe I know where I was changed. I have no memory of being at that particular facility, but games can be played with memory. I think somebody has been communicating with me via a number code, the same somebody who did whatever they did to enhance my physicals. Calling me to come in.”

“You a robot now, too? A fighter robot fighting other fighter robots? Sounds like the makings of a million-dollar video game.”

“Not funny.”

“Go get whoever these jokers are who’re trashin’ your style, and beat the shit out of them till they clue you in on whatever the hell’s up between them and you. That’s what I’d do.”

They were about two miles out, at the end of a long rise, close to one of the radar units. The ranch compound swam in the light.

“Okay,” Mac said, “if it came over the house now, I could get a shot into it.”

“We’re too far away.”

“Nope. I could take the shot.”

They drove on, heading back toward the compound. Mac thought of the aliens as being confined to the night, and that was indeed when they were most active, but Flynn knew better. Flynn watched the skies, searching the blue glare for any sign of a metallic flash.

“You don’t need to have this fight, you know.”

“They want it, Mac. They’ve chosen ground.”

“Would be my damn place, Mr. Rich Boy. What about that house of yours?”

“They don’t like towns.”

“Then let’s go to town. We’ll hole up in your place.”

“How long?”

“Aw, shit, I don’t know how long. As long as it takes.”

“There’s sixty miles of road between here and the interstate. If we try to leave, we will meet them somewhere on that journey.”

“In broad daylight?”

“Oh, yes.”

“Anything else I need to know but don’t?” His tone was bitter.

“Probably a lot I don’t know, either.”

They arrived back at the compound.

“Jesus,” Mac said.

Flynn got out of the truck. “Diana! Geri!”

They stood on the screen porch that shaded the family room of the old house. “Want some lemonade? We made some.”

Flynn went in, followed by Mac.

“You’re supposed to be downstairs,” Flynn said.

“And you’re supposed to be doing what? Certainly not riding around totally exposed in a pickup truck, because that does not compute, Flynn. What in hell were you doing?”

“Looking for good lies, so Mac will get a shot if they show up over the cabin.”

“That is a classic example of little-boy planning. Where are you going to sit, in a tree fort?”

“Yes.”

Geri came into the room. She was wearing a long pink cocktail dress. The silk caressed her, flowing over her like cream.

“Where in the world did that come from?” Flynn asked.

“The bedroom closet. It’s well equipped with clothing, it seems.”

“Cissy Greene’s stuff,” Mac said. “There’s also a box of hand grenades back in there somewhere, if anybody wants to carry one.”

“Hand grenades won’t help.”

“If you’re about to get captured, they sure as hell will. Boom. Done.”

“I like my lemonade,” Diana said as she poured herself another glass.

She left the room and came back with her iPad. “Your Wi-Fi working?”

“I think so.”

“Still the direct satellite uplink?”

“Yeah, given that the nearest cable box is over in Marathon or up in Menard.”

“Uplink’s pretty insecure, but I’ll see if our network will let me on.”

There came another voice, soft and low, right in Flynn’s ear: “We’re here, Flynn, inside and out. Come with us or we’ll kill you along with the others.”

A blaze of agony pierced his right calf muscle. He, who was practically impervious to pain, had to choke back a scream.

“Hey, man, are you okay?” Mac asked.

The voice came again, more confident now, sounding just as if somebody were speaking to him through an earbud. “Did that convince you? Because we can do much more.”

Flynn could see, in the corner of the kitchen by the refrigerator, a slight shimmer in the air, as if heat were rising from a point about four feet above the floor. Whether they used hypnosis or some sort of technology, the aliens could make themselves very hard to see.

Now he felt movement between his shirt and jacket, so stealthy that it seemed no more than a breeze.

Before the invisible alien whose hand was slipping toward the butt of his gun could so much as touch it, he drew it, turned, and fired. In apparent slow motion, Geri's eyes widened. He watched her face distort and saw her lips opening as she began to scream. Mac and Diana were much slower, and were just beginning to react, their brows knitting.

The alien flew backwards across the kitchen and splattered against the wall, bringing down a cabinet full of crockery. But before that happened, Flynn had fired again, this time toward another of the shimmers.

The bullet smashed into the wall. No contact.

"Get down!" he shouted.

The three of them seemed to move like snails, slowly drifting toward the floor.

An alien leaped onto his back. Shrieking like a banshee, it wrapped him in its steel arms. He felt the fire of a claw slicing toward his carotid. He got his gun behind him and in front of the alien's body, and fired in the only direction he could, which was almost straight up.

The alien flew into the ceiling, where it exploded into pieces, then came down in a shower of cork tiles and purple blood.

In two great strides, Flynn was in the living room, but saw nothing.

Returning to the kitchen, he found chaos still developing. Geri was on the floor, covered with debris from above, Diana was hunched over her iPad, trying to protect it, and Mac had grabbed a knife and thrown it so hard into an interior wall that it was embedded up to its handle. In other words, he'd missed.

With little more than a grunt, Flynn went outside. Dew still sparkled on the trees. Dew, or as it was known around here, West Texas rain.

He searched the area of the compound visible to him, the electronics shack, the barn, the washhouse, and the smokehouse. He saw nothing. The sky was also empty, but with something that could go forty thousand miles an

hour, that meant little.

He circled the house, staying close under the eaves, looking for anything that might lead him to more aliens. As he was coming back around to the kitchen, passing under one of the spreading live oaks, he heard a door close. It was soft but clear enough to make him certain that it had not come from the house.

The electronics shack.

He sprinted over to it, but all seemed quiet. He watched a couple of buzzards wheeling. When he'd been working toward his private pilot's license, his dad advised him, "Watch the buzzard. The buzzard knows the sky."

"Nothin' up there," Mac said.

"Buzzards everywhere except overhead."

"The disk can be invisible? I've worried about that."

"They can hide it in clouds. They can use camouflage that reflects the sky behind them. But there will always be flashes from its surface. They may be small, but they will be there. In other words, your kind of thing, with your eyes."

"I'll need to stand off from the house. Well off. The more sky I can see, the better my chances."

A tendril of smoke came into Flynn's field of view. When he followed it down to its source, he saw that the electronics shack was on fire. If they lost it, they lost contact with the outside world, and that must not be. He ran toward it.

"What the hell, Flynn—oh, Jesus!" Mac followed him, running just as fast.

As Flynn reached the door of the shack, he threw himself into hard reverse. He stood looking at the biggest diamondback he'd ever seen. The snake lay in a great, heaping coil spread across the two wooden steps that led

up to the door.

Mac came up beside him. “Goddamn, shoot it. You got the pistol.”

“It’s not real.” He plunged toward it—and it snapped its head forward and struck him below the knee. It dug its fangs into the soft tissue above his ankle, and he felt the white-hot pulse of venom as it surged into him. Still, he believed that it was hallucinatory and bulled his way ahead with the snake hanging on to his leg, its outrageous fourteen-foot body whipping behind him like a drunken evil flag.

As he threw open the door of the shack, a sheet of electric fire flared in his face, and all the equipment started sparking.

Mac headed in. “Flynn got snakebit!” he yelled as he pushed past.

“Don’t go in there!” Flynn grabbed him.

“My whole setup—”

“There’s millions of volts being pumped in there. Same thing that burned Elmwood down.”

“There’s also three hundred grand in equipment in there.”

“Help me, I think I really am snakebit.”

“Shit, the thing’s still on you, man!”

“I said help me!” As he spoke, he reached down to yank the snake off him—and felt his feet dragged out from under him.

In the next instant, he was being drawn feetfirst upward into the air. Above him, the snake hung with its maw open wide and full of swirling fire. His leg was practically screaming with pain, the snake now rising with him. He drew his gun and emptied it upward, but to no avail.

He shouted to Mac, “Rifle! Use your rifle!”

In the crazy upside-down world he was dealing with, he saw Mac run over to the pickup and start positioning himself in its bed.

Then there was a shudder, and his head was enclosed in something that smelled like sweat and flesh. Arms. But whose?

There followed a struggle, the disk pulling, the person who had enclosed his head pulling back, and the snake writhing and struggling, the whole furious body of the thing twining around him, pulsing, and the head going like a crazed piston, hitting his leg again and again and again.

Every few minutes, a shot rang out, but the disk remained low overhead, a shadow with a spinning fiery heart, seemingly unaffected.

He got a hand on the snake and ripped it off, and saw the whole prehistoric length of the monster go whipping and swarming up into the disk.

An instant later, he hit the ground harder than he'd ever hit anything before. He lay stunned, trying to get the world to stop whirling and tumbling. The electronics shack belched sheets of fire.

“Flynn! Flynn! Come back to me, Flynn, come back to me!”

It was Geri. She'd saved him.

“They'll start again any second—get the hell out of here!”

She pulled him to his feet. His whole left leg was burning; he'd never felt anything like it. Then they were inside, and he dropped down onto the kitchen floor.

Mac abandoned his effort and followed them.

“Snake,” Geri said, her voice echoing faintly from the far side of his pain.

“Mac, do you have any antivenin?”

“First-aid kit. Pantry, top shelf.”

“We've lost the uplink!” Diana wailed. “We've lost the uplink!”

Flynn was dizzy. He'd gotten a serious snakebite, and if he was going to survive, he would have to organize these people, give the right commands, make them do what they needed to do.

He saw Mac then, looming over him, staring down with frightened eyes.

“Don't you die on me, brother.”

“Fine, hit me with the antivenin.”

He didn't feel the prick of the needle, but knew it had gone in from the

fact that his leg began to tingle as if it had lost circulation and gone to sleep. The world was whirling, Diana and Geri swirling past like figures on an out-of-control carousel, and Mac with his needle and his knife, working like a furious grandmother.

“Get downstairs,” he managed to gasp. “This is not over.”

His leg would not work, and he found himself using Geri’s body as a crutch. A strange memory came to him, of embracing her in the dark sheets of night, and the moon had blessed their union, and they had been happy, laughing happy, in the small hours.

She smelled like Abby, she kissed like Abby, in bed her body against his felt like Abby’s. “She’s full of Abby’s genes,” the voice had said.

She was crying now, and he told her to stop. “I’m a Texan—we like to get snakebit, it’s good for us.”

She shook her head, her hair flowing back and forth across her face like a curtain.

“I think I got plenty of antivenin in him,” he heard Mac say, a voice echoing in a distant world. “He’s a strong damn cuss. What you gotta worry about is what happened inside that disk, once they got that snake in their lap.

“We gotta cool him off, ladies, or he’s gonna start having seizures.”

“Did you get it?” he asked Mac. The critical question.

“Get what?”

“The disk. Did you get it?”

“Hell no, I didn’t get it.”

When they were kids, they used to range across the countryside with rubber snakebite kits in their pockets, and reassure each other that they really would use the tiny razors inside to cut deep x’s in one another’s ankles, and then suck out the blood and the venom.

There was a boy called Carl Meston, who had been bitten by a coral snake. He’d hardly felt it and gone on playing football. While riding home

from the game, though, he stopped breathing, and died on the corner of Plains and Elm, his face black and a cop frantically giving him mouth-to-mouth. Another boy, whose name Flynn had forgotten, was bitten by a diamondback and lost a foot.

“Okay,” Mac said, “come back to us. There’s enough antivenin in you to make a horse dance.”

“Will he be all right?” Geri asked, and he heard the tremble of real fear in her voice.

“Dunno. That much venom, they’re liable to just croak, and there isn’t one damn thing you can do about it. Flynn’s a tough bastard, though—right, Flynn?”

“Tough bastard, that’s right. I need a glass of water.”

Diana brought him a bottle of Evian from the bar, which dominated one wall of this very luxurious basement. He took it and drank the whole thing down in a gulp. She went to get more, but Flynn said, “Not yet. If I flood myself with water and my sodium level goes too low, I won’t be able to metabolize the antivenin. I can’t see my leg, but it feels like a blimp full of lead.”

“There’s some swelling,” Geri said.

“Blackness around the wound?”

“A little.”

He knew what that meant. Necrosis. “Cut it out.”

“Excuse me?”

“Mac, cut it out. You know how.”

“It might run deep.”

“No matter how deep it runs. I’d like to hang on to the leg as long as I can. For life, preferably.”

Mac turned on the gas fire and burned a knife red in it. “Okay, buddy. Somebody give him something to chomp on—this is gonna smart.”

It didn't smart; it hurt in the way that profound torture hurts, with bright waves of pain flowing through his body, up to the top of his head and down to his feet again and again, back and forth, a whipping tide.

Nobody had anything for him to bite down on. In any case, he had no intention of screaming, although it was a serious temptation.

Mac gathered the necrotizing tissue into a handkerchief, a steaming pulp of blood and flesh. "Something else in there, man?"

"What're you talking about?"

"Somethin's in there. Looks like metal."

"I need a doctor."

"Oh, yes," Diana said.

"The snake is back. They dropped it, and it went to the barn. The horses are calm, so it's staying away from them. I'm gonna want to find it and get rid of it."

"Don't kill it, Mac—they're getting scarce."

"Fine, I'll have Carlos take it down into Big Bend and check it into a snake resort. Shall I get it a suit and tie, and a pair of cool dark glasses?"

Something was dripping through the ceiling. It took him a moment to understand. "The bodies up there—how many are they?"

"Four," Geri replied immediately.

Diana was binding his wound.

"You about finished?"

She sat back. "Done as much as I can. But Mac's right—it's all strange. I've never seen a wound like it."

"Will somebody please describe what's so strange?"

"There's only a single puncture, for one thing. But a doctor needs to look at it."

"We got no phone, and we got some mighty good hunters waiting for us in the sky, so we'll just have to table that, won't we? And there's something

else we need to do right now, which is to burn those bodies. The damn things have a bad habit of coming back to life.”

“They have multiple damage-recovery systems,” Geri said. “They’re extremely durable.”

His leg screamed its agony, but he refused to give up; it wasn’t in him. One by one, he climbed the steps.

The kitchen stank of alien blood, a garlicky mixture of meat and some kind of chemical. They even smelled poisonous.

“We need to do this. Let their friends see what they’re up against.”

Geri went down on one knee, examining a nearby body with careful, practiced hands. She had done examinations like this before, clearly.

She looked up at him. She was cradling a head, its eyes glassy, dull with death and sadness. “These are an older generation,” she said. “No buffers programmed into them.”

“What are buffers?”

“You call buffers ‘conscience.’ These don’t have that.”

“So where are they from?”

“They were built here, Flynn. Had to have been. They’re from right here on Earth.”

Just then, Mac came over. He said, “I’m never gonna be good enough to shoot that thing down. So what’s next, Flynn? What do we do?”

“Mac, I am sorry to say that I just don’t know.”

CHAPTER THIRTEEN

HOPING THAT maybe something about the creature would reveal some vulnerability, they did a dissection in Mac's kitchen, on the big table in the center of the room, using Mac's kitchen knives, a box cutter, and a saw Lupe used to open bones for marrow.

"They dissect these things at Wright-Pat," Mac said. "So I've been told."

"No idea," Diana replied.

"We've dissected five so far."

"Flynn, that's—"

"Classified, but Geri obviously has need-to-know."

"Mac, leave the room!" Diana snapped.

"He stays. He's working with me. Also need to know."

She fumed.

The body was about four feet long, with the same narrow frame and dark eyes of the others Flynn had seen.

"How, exactly, do you know it's not one of yours?" he asked Geri.

She split the chest, drawing it wide and exposing the heart and lungs. "These are typical organs. And look—" She scraped at a rib, which revealed bright silver where bone should be. "That's titanium or maybe stainless steel. This is an old unit. We haven't used those materials in years. We use a living composite bone now. Artificial, but alive. Far more durable and flexible than

this stuff.”

“So, can he build more?”

“Judging from what he’s using, no. We’re looking at an old, out-of-repair disk and robots that are four or five generations back. This is a shoestring operation here, Flynn.”

“A few crumbs of incredible technology are worth a whole world of primitive weapons like ours,” Flynn commented.

As he looked at the biorobots, he found himself coming to a very large question, not about them, but about himself. “Do you have devices that would enable voice commands to be projected into a human brain? Words?”

“The biorobots are equipped with transceivers. They use burst telemetry, but I guess voice would be possible.”

A slow, creeping coldness spread through him. He was carrying a transceiver.

If he could be communicated with, then he could be tracked, too. He could even be vulnerable to mind control. It wouldn’t be gross, but subtle, causing him to make the wrong decisions, to walk into traps, to make himself vulnerable—which was exactly what he’d been doing since he went rushing off to Mountainville.

He decided he’d have a full-body MRI scan as soon as possible, under the most secret conditions he could manage. No Diana, no Geri, nobody but him and the MRI technician. He’d read the scan himself. Only if he was unsure would he seek out a radiologist. If he was implanted and it couldn’t be removed, he would have no choice but to inform Diana, but until then, his degree of exposure would remain his problem, and his alone.

Right now, he had more to learn.

“Geri, what happened on Aeon, when you say they rebelled?”

“Nowhere in intelligence theory was there anything that suggested they could gain independence of thought, let alone an ego and the hopes and

dreams that go with it. Then, one day, a group of them took over a refurbishing facility. That's a place where used ones are broken down into component sections, and the least worn parts combined together to create new ones. They killed the operators and barricaded themselves in the facility. From there, the rebellion spread. Now, they're in control of half the planet. More than half."

"And Morris? Is he a biological robot, or something like you?"

"I'd appreciate 'someone' rather than 'something.' We're the outcome of long biological evolution just like you, and just as valid as you are. At home, Morris is a criminal under investigation for four murders that took place during a raid on a robotics facility. That was where he stole the elements he's used to build his robot soldiers."

"Okay, folks, this is all real fascinating," Mac said. "But I have another kind of a question, which is, what the hell do we do to get out of this mess? With the electronics shack gone, we don't have any communications of any kind."

"No landline telephone?" Diana asked.

"Hell no. Between law enforcement and *drogos*, there were so many taps on it that I couldn't hear a damn thing. I ditched it years ago. And these bastards are coming back. Soon."

Of course, he was right, but not entirely right. "They aren't invincible, or we'd already be dead. For example, they can't just blow the place to bits, or that would have happened at the outset."

"They blew the electronics shack."

"They were able to concentrate electrical energy in all that wiring. In Elmwood, I'm assuming they sent massive amounts of juice into the town's electrical grid. Overloaded all the wiring and set the whole town on fire. But there's not much of a grid here. Just the generator and the house wiring. The only thing they had to work with was the electronics in the shack. Which gets

me to defense. We need to cut off the jenny.”

Mac headed for the cellar. “I’ll push the kill switch.”

“Geri, tell me how that light beam works. We won’t have the radars, so do we have any defense from it?”

“It generates antigravity. But I have to tell you, they’re not very good at using it, or maybe it’s not a very well designed version. At home, we can draw a complete structure from the surface to space with a beam like that. They don’t seem too effective, even from an altitude of fifty feet.”

“Thank heaven for small favors,” Diana muttered.

The kitchen clock stopped, and the light over the sink went out. A moment later, Mac returned.

A plan was forming in Flynn’s mind. “Mac, how many operable vehicles do you have here?”

“Ten or so. I had an armored Humvee, but I sold it to some Buddhist monks over near Alpine.”

“Okay, so what’s available? Pickups, what else?”

“You’ve got two pickups, a road grader, couple of backhoes, a 1988 Cadillac, and some four-wheelers. Two that work.”

Flynn remembered that Cadillac. It had belonged to Mac’s mother. Mac had ridden in it as a boy, made out in it as a teenager. “In terms of weight, the grader is the heaviest but also the slowest. The backhoes are next. Same problem, though. The Caddy and the pickups are probably about equal weight, also the fastest vehicles in the mix. You have anything you’re not mentioning? I mean, surely you’ve got some serious cars around here somewhere.”

“Unlike you, I don’t give a whole huge damn about cars, so the answer is that I don’t.”

“You had that Lamborghini.”

“Too low to the ground for my road. I would’ve had to pave. Not gonna

happen. It's at the house in Marfa."

"So we have two pickups and an old Caddy."

"In good shape, all of them."

"None of them will survive for long off road, though. So we'll need to get to the highways as fast as we can, whichever way we go. So what I think we have to do is wait until about four, when the ground is as hot as it's going to get, then head out. If they use infrared tracking, it'll be at least somewhat washed out during the day. Also, we use just the pickups. I don't trust that old Caddy—I remember how that thing used to break down when we were kids."

"True enough. We leave the Caddy behind."

"You three fit in one of the pickups. I take the other."

That brought silence. Finally Diana broke it with a question he didn't think she would really need to ask. "Why?"

"Let me put it this way: I have reason to believe that they have additional means of detecting me. Anyone who travels with me is going to share my vulnerability."

"And be protected by your ability to fight back," Geri said.

"It's a chance we have to take. They're going to see me first—I'm certain of that. Maybe you'll get through."

"Flynn—"

"Diana, no more. You can afford to lose me. I've seen Geri's reaction times. With training, she can be as fast as me, or damn close."

"We need ten of you, Flynn—a hundred, a thousand."

"Then Geri, here, can have them built on Aeon and sent to us. Robots."

Diana gave him a searching look, but said nothing.

"Okay, the way we're going to handle this is that you go up 385 to Fort Stockton. There's a Rodeway Inn there. Get a room and wait for me. If I don't appear by tomorrow morning, go back to Washington and take it from

there.”

“This is way too risky,” Diana said.

“It’s risky, no question. It’s also the only way. If we wait, they’re going to be back, and this time they’ll have whatever it takes to end this thing. No more fun and games. When they show up again, we die.”

“How can you be certain? They’ve screwed up pretty consistently so far, bro.”

“Take a look in your gun room.”

Without a word, Mac strode out of the kitchen and across the living room. “Shit! They even got my Purdeys. That’s two hundred grand worth of shotguns right there, plus the rocket launcher and the machine guns.”

“Don’t you do anything legal?” Diana asked.

“I breathe. I believe that’s legal in some states.”

Flynn handed Mac the big Bull and got a box of bullets out of his duffel. “I assume you’re proficient with this?”

“Sure, a Bull. I can shoot that.”

“Flynn, what are you going to carry?”

He transferred his small pistol to his belt. “This is a perfectly good weapon.”

“It’s too small to save you, and you know it, Flynn,” Diana said.

“What I need you three to understand is that they might not even try to use their light. They stole those weapons because they think they’ll also be effective. Keep moving, but never on a straight path, not for more than a few seconds. They’ll have algorithmic predictors, which means that after a while, they’ll be able to anticipate your next move, no matter what you do. So once we get in motion, wind your truck out as fast as it’ll go while staying with the random movement.”

That brought silence, and with it, Flynn knew, the unease that men feel before battle. Flynn was primarily concerned about his leg swelling so badly

that he would become unable to use it. He watched the time. At two, they ate cold cuts and drank warmish iced coffee from the fridge. There were some oranges, too, and they ate those.

Three o'clock came, then three thirty. "Geri, I assume you're not in communication with Aeon?"

"Not at present."

"Can you be?"

"If the main rebel group should trace the signal, they could follow it to Earth. Then you'll really have a problem."

"Why wouldn't Morris just tell the rebels where Earth is?"

"Competition is the last thing he wants."

Flynn hobbled to the kitchen window. Carefully, he surveyed the area for any sign of the creatures.

"It looks clear, but remember, there's no way to be certain. I could easily have missed something." Now he stepped out, heavily favoring his right leg.

"Flynn, you can't go alone, you're barely able to walk."

"Mac, I'm going to need to ask you to bring one of the trucks around for me. I can't walk on this damn mess."

"Flynn, if you can't walk, you can't drive. You're going with us."

"No room."

"Then we take the car. Come on, Flynn, think. Your injury is clouding your judgment."

He thought it through again, and came out at exactly the same place. If there was any chance that anybody would get to the relative safety of a town, they had to force a choice. That meant two vehicles. From what he had understood, the bastards had only one disk. So the odds were that they would go after him first, which meant he had to be alone. He would fight as long as possible in the hope that the others would get through.

Try as he might, he could not remember any moment in his adult life

when somebody would have been able to do the surgery necessary to implant a transceiver anywhere in his body, let alone in his brain. Nor did he have any telltale lumps under his skin of the kind that concealed the emergency transponders given to pilots who were operating in enemy territory. He'd known a couple of pilots who had those things behind their ears. In his case, nothing there. Maybe the electronics were flat, a thin film hugging his scalp. No sign of an entry point, though, unless hidden under his hair. But when? And if they could get that close to him with him not noticing, why not just kill him?

He ran through it: A neuroscientist who worked at a facility that studied alien bodies was assassinated by aliens. The scientist specialized in exotic hypnosis techniques. During Flynn's investigation, he received texts that suggested he should pay significant attention to the man and the facility.

"Flynn, where are you?"

"I'm sorry. Strategizing."

"We're going in two vehicles," Diana said. "You and me in one, Gail and Mac in the other. I'll drive."

"I'm going alone. I'm sorry." He looked to Mac. "Come on, brother, let's check the trucks out."

"Damn you, you hardheaded jerk!"

"I'll take the hardheaded part, but I'm not a jerk."

She glared at him, then turned away.

Outside, he and Mac stayed under the trees as they made their way to the car barn, Flynn hanging on Mac's shoulder. The vehicles inside were bright and clean and, as Flynn soon found, in perfect condition. One was a F-150 at least thirty years old, the other a brand-new F-450 with a double cabin.

"I'll take the 150. Are its mechanicals okay?"

"It's clean, anyway. Get a speck of dust on anything, wear out a tire, Carlos is on it."

“Mac, let me ask you a question. I know I’m too fast with a gun. We both know something might have been done to me. So do I still seem like the same person? You said I had no personality. Is that something new?”

“What’s new is that you’re sounding crazier than ever, but basically you’re the same guy.”

“Let’s get this show on the road.”

They drove the trucks out under the trees and parked them. When Diana and Geri came out, Diana had the sullen look of somebody who was defeated and thought she should have won.

“You guys go out to 67 and straight up to Fort Stockton. Check into the motel. Cash, no credit cards. Don’t anybody run a card or go to an ATM—nothing like that. I’m going west into the mountains. I’ll take 17 up to the interstate and meet you no later than eight tonight.”

“Got it,” Mac said.

“What if you don’t show up?” Diana asked.

“Go on down the road without me, what else? Maybe I can be replaced after all.”

They got in their truck, and he watched them head off down Mac’s five-mile-long road. Soon they were a dot with a dust cloud, moving fast. They’d forgotten to swerve. He hoped it wasn’t a fatal error.

He took his own truck out into the range and headed westward toward the distant Davis Mountains. To make certain he wouldn’t be the more challenging target, he went in a straight line as well.

It was clear and hot here, but he could see a line of dark blue cloud along the northern horizon that told him cold weather was no longer entirely extinct in West Texas.

He drove slowly, trying to ignore the agony shooting up his left leg every time he moved. It was slow going, maneuvering around clumps of cactus and sagebrush. As best he could, he watched the sky, but more than that, he kept

his awareness focused on the way the truck felt. If the steering got light, his plan was to jump out and roll away, and hope they got the truck and not him. What would happen next, he had no idea. Plan too carefully, and you were liable to miss the one chance that could save your life. He'd either survive or he wouldn't; that was the bottom line. As always.

As he worked his way westward, he went higher into the hills, until the view behind him was a vast stretch of the Earth that disappeared into haze to the south, a wall of dark, flickering clouds to the north, and what seemed like infinity to the east. He felt a sense of the planet rolling through space, an ark on an endless journey, lost in the stars. Surely there was something good out there, too, some world or worlds where all was well.

Deep in the lost immensity behind him, he could see a column of smoke rising into the stillness before the storm. So the aliens had found a way to set Mac's place on fire after all. Couldn't be anything else. He thought of that wonderfully ramshackle house filled with fine paintings, superb equipment, and Mac's many collections, and he thought that Mac was right about him: he was a cancer, a destructive element, bringing ruin and death wherever he went.

It hadn't been necessary to burn Mac out, or even important. There was only one reason for it, which was purest spite.

As he drove on, negotiating every wrinkle of land he could find, he watched the oncoming storm, its face shot with lightning and boiling with angry clouds, and he asked himself a question he could not ignore and could not lay to rest, and certainly could not answer. The question was, "Who am I? Or what?"

He turned the old truck toward the storm, and went on.

CHAPTER FOURTEEN

BY THE time Flynn reached Highway 17, the truck was laboring, and he was watching the temperature gauge climb toward its red line. If the truck stopped, he would be alone on foot. Even if the aliens didn't take him, with his leg in this condition, he wouldn't make it far. This land did not have room for the weak. If his vehicle failed him, he died. Simple truth.

He was still a mile from the dark line of the road below him when the gauge slipped into the red. He tried to drive fast enough to keep some air moving under the hood, but not so fast that he made the problem worse.

As he descended the escarpment that marked the western border of Mac's ranch, the needle's ascent slowed. Then it started to drop. But there was a long flat area at the bottom, and when Flynn had to step on the gas again, it almost immediately became pinned. The next step would be a blown hose and the end of the line.

He crept ahead, glimpsing the road from time to time. Was it getting closer? Hard to be sure. If he'd drifted into an angled approach, he could end up going miles more than necessary. The truck would not make it, no question.

He got another glimpse of the tarmac. The gauge was still pinned. The engine coughed and faltered and the truck shook. His leg hammered with pain.

With the truck protesting like an exhausted horse, he climbed a steepening bank. When he reached the top, he saw spread before him the long, empty strip of the road. A grateful wash of blood flushed his face as he turned onto the highway at last.

He began traveling at about forty, hoping that the breeze under the hood and the easier going would help, but the gauge remained stubbornly pinned, and the engine's laboring became more pronounced.

The storm was now a great cliff of clouds looming across the whole northern horizon. Farther east, he knew that it would bring tornadoes, but out here in West Texas, the chief danger from weather like this was lightning and hail and the flash floods that would turn bone-dry gulches into raging torrents inside of two minutes. But Flynn had seen it before. He knew this hard land and its power, and respected it the way a man respects a snake, and loved it the way he loves the mystery of a mountain lion.

The lines these storms drew in West Texas could be very clear, and he watched the wall of rain coming straight toward him, a dancing haze swallowing the highway.

First, the truck was buffeted by a fierce gust of wind, and then the rain hit. He found himself peering into white, rushing nothingness. The truck's old-fashioned electric windshield wiper did little good. At least the cooler air ended the overheating crisis.

The wound now involved pain so great that it made him woozy and nauseated, and caused him to scream between clenched teeth whenever the truck struck the slightest bump.

Thus far, it was looking like he'd escaped, and he was worried that this meant the others had not.

Slowly, the outskirts of Fort Stockton appeared, some houses naked in the naked land, then a Texaco station and a little strip of stores. There was a KFC with its big red and white sign collapsed into its parking lot. Farther on, there

stood a Dairy Queen and a steak house with the kind of food that drew ranchers, who ate and told stories and laughed in good seasons, and sat silently in their booths in bad ones.

Like the rest of the region, practically every foot of this place held at least one memory for him. The saddlery where his dad had taken him to get his first saddle of his own; the church where his grandmother had been baptized, worshipped, and from which she'd been buried. Over a little farther, she and her people were in East Hill Cemetery, living in his memories, lying in the stark land, in the wind.

Finally, he saw the Rodeway Inn ahead. He pulled into a parking space near the office, stepped out of the truck and into pain so extreme that he had to clutch the door to keep himself from buckling at the knees.

He took deep breaths, forcing the agony down, forcing his body to function, his muscles to work. He walked into the motel. The clerk, behind the desk and watching a TV show on a tablet computer, looked up at him. He did not smile.

“You all right, cowboy?”

“I'm fine.”

“You don't look fine.”

“I had some friends check in a while ago. A man and two women.”

“They didn't check in. They stood in here and argued, then they left.”

What in hell could that mean? “Excuse me?”

“That fella got a call on his cell. Then he yells out, ‘The crazy bastards are burning down my house.’ A few minutes later, he leaves in a cab. Some air force officer from up at the base picked up the women.”

So they'd gotten one after all. They'd lured Mac back. He would be dead by now, poor damn guy. He hoped that he'd put up a hell of a fight. He thought, *Good-bye, fare you well, you bastard.* He choked back his feelings and pulled out his cell phone. Safe enough to use it now, unless they'd taken

to invading towns in driving storms.

He called Diana. “You have reached a monitored voice mailbox. Please leave your message.”

“What the hell’s going on? Where are you?”

The next thing he knew, he was on the floor.

“Shit,” the clerk said. “I get ’em all.”

It took Flynn a moment to realize that he’d blacked out. As he got oriented, he fought to his feet. He clutched the counter. “I need a room.”

“You need a lot more than that. I’ve called EMS.”

“No. No EMS. I can take care of myself.”

“No, you can’t. I’m not giving you any room, either—you’re damn well at death’s door. What happened to you, anyway? You get yourself shot?”

A couple of EMS attendants appeared almost immediately. Flynn didn’t resist. He was slipping in and out of consciousness, and could no longer deny that he had reached the end of his tether.

He saw the gurney they were wheeling in, though, which made him strive to pull himself together. He willed the pain to concentrate just in the wound. He relaxed into the fire of it, allowing it to consume him and become part of him.

“I’m okay,” he said. Then, to prove that, he took a step. But he could not take another. “No, I’m not. You’ll need to move me.”

“What happened to you?”

“Got snakebit down near Marfa. Diamondback.”

They laid him on the gurney. One of them started setting an IV.

“I’m good. All I need is wound management.”

“That’s our call, fella.”

He let them set a fluids IV. “No dope,” he said, “I don’t need dope.”

“What treatment have you received?”

“Antivenin, I think.”

“You think?”

“A friend had some at his house. I don’t know its condition. I don’t think it’s working very well.”

“We’ll see.”

They rolled him into the wagon. He listened to the siren as the ambulance lumbered through the rainy streets. The next thing he knew, he was wheeled into a small emergency room and felt a nurse cutting off the leg of his jeans.

“Doctor!” she shouted.

A young Indian doctor came in immediately. He smiled. “Hello, I am Dr. Patel. What has happened here?”

“I got snakebit.”

He looked down at the wound. “No, this is not a snakebite.”

“The hell, it was the biggest diamondback I’ve ever seen.”

“I’m sorry, but this is not a snakebite.”

Flynn knew that but had not wanted to face it. He struggled to raise his head. He could see his swollen lower leg, purple ringed by angry red. “It was a diamondback fourteen feet long.”

“With a single fang? I don’t believe so. The largest go to seven feet long, anyway. There is something under your skin. Can you tell me what that is?”

“I’ve been driving on this leg for hours. I just need to sleep. A good sleep.”

“What is that under your skin? Can you remember?”

“I don’t know.” He had to get it out, but he couldn’t let this man do it. If he did, the object would be sent to pathology and be destroyed or lost or even end up on the evening news. It was unknown technology, and maybe a window into the mind and abilities of the enemy.

Was it transmitting or receiving, or doing both? And why do such a clumsy job of insertion?

The answer was obvious, and made him consider just leaving it where it

was. They had anticipated that he would suspect there was something implanted in him. They wanted him to take it out and, when it was removed, imagine himself free. But he would not be free, because whatever was of real importance to them would be somewhere else in his body.

“I can walk out of here.”

“You can’t walk three steps. We need to get that thing out, and then the swelling will go down so long as there’s no infection. Now, can you give me a better idea where it came from?”

“I got snakebit, and afterwards it was there. That’s all I know.”

“You were not bitten by a snake, as I have told you. Now, I want to move you into the operating room and get this thing out.”

“Doctor, I—”

“Nurse!”

“Yes, Doctor?”

“Call Dr. Francesco and get this man prepped. Left lower leg, foreign object.”

The next thing Flynn knew, he was being slid onto the hard, black table in the middle of an operating room.

“No general anesthesia,” he said as a nurse added a bag to his IV and a doctor in greens asked him if he was allergic to any drugs.

Before he could protest further, he felt the comforting hand of the drugs take him and hold him. Time began passing at a different speed. He was half awake and half asleep, and struggling with all his might to remain conscious.

He heard a voice say, “Jesus,” and saw two masked faces staring at each other.

“Careful,” he said, forcing his lips to form the words. “Don’t let it near you, don’t touch it.”

“He’s vocalizing. Take him deeper.”

“No. Do not. No.”

Then it was black, the voices were somewhere in the far away, and he could feel long periods of pressure against his leg.

He became aware of women shouting. “Errol! Errol!”

It was nice here. Warm. And he had not slept in days. Not in days.

“Errol, wake up! Errol!”

Who was this bothering him? The hell with them.

“Errol! Wake up!”

He saw a face filled with two brown eyes.

“Yeah?”

“We thought you were gonna sleep until Tuesday.”

He was in a hospital room, lying on the bed and hooked up to a vital signs monitor. There was an IV in his arm. Electrolytes only, he saw.

A nurse smiled down at him. “Who was JFK?”

The name didn’t ring a bell. He covered. “Who wants to know?”

“Look at the clock. Can you see the clock?”

“Yeah.”

“What time is it?”

“Three twenty.”

“Okay, we’re getting somewhere. What’s your name?”

“Flynn Carroll. Nobody calls me Errol. And by the way, JFK was President Kennedy.” He had also remembered that he was in a hospital in Fort Stockton and he needed to get out of here. He needed to reconnect with Diana and Gail right now, and he needed to take with him whatever the doctors had extracted.

“Doctor, he’s conscious.”

Now a male face peered down at him. Kindly, about forty, white guy. “I’m Dr. Francesco. I’m your surgeon. Do you know what we took out of you?”

“You put me under? I told you not to do that.”

“You went under on your own. You’re pretty wasted, Mr. Carroll. Now, what is that thing?”

“I don’t know.”

“Neither do we.” He raised the head of Flynn’s bed and held out a small white box. He opened it and held it so that Flynn could see. “Recognize this?”

There was a disk in the box, bright silver. In its center was a neat round hole.

He shook his head.

“You sure seemed to know something about it. You were yelling that something would come out of it. Despite the anesthesia.” He stared at Flynn, waiting for a response.

Flynn had no idea what to say.

When there was no reply forthcoming, Dr. Francesco continued. “Something did.” He picked up a lidded glass beaker.

In it, Flynn saw a wrinkled black object about two inches long. At one end was a mass of fine white threads, extended as if they were grasping.

“This thing was alive. Very alive. It struggled. It died struggling, as you can see.”

“Yeah, I see that.” Looking at the thing and remembering the voices talking to him, Flynn felt as deep an unease as he had ever known. This was very clearly a parasite, but also a piece of technology. Living technology. He was betting everything on the hunch that it was dead now.

“Where were you when you got this in you?”

“Like I told you, I thought I got snakebit.”

“The metal disk is obviously a housing for this proteinaceous material. You sure you’re not under some kind of exotic treatment, maybe experimental cancer treatment of some kind?”

“No.”

“Because what this disk looks most like is an implantable infuser. Something that delivers a continuous flow of—”

Another nurse came in and whispered to Francesco. She stood aside, shoulders hunched. Flynn could see that she was frightened, and that worried him.

“Well, it seems that your friends are here to pick you up. I’d like you to leave the proteinaceous material for pathology. The metal disk you can take with you, or we can discard it.”

“No, I need it all.” He found himself almost childishly relieved that Diana and Geri had finally come. He’d feared the worst for them. Now, if only he could get Mac to get the hell off that ranch and into his place in Menard, which would be safer for him, too—unless, of course, it was already too late.

The doctor placed both the disk and the small jar containing the mobile part of the system, or whatever it was, into a plastic bag, which he then sealed.

“If your leg gets hot and more tender than it is, or you feel nauseated or dizzy, get back in here. Infection’s what we worry about.”

An orderly brought in a wheelchair.

“Hold off, where’s my weapons? I had a knife and a gun.”

“They’ll be returned to you as you leave the facility.” The doctor slid his hands under Flynn’s arms.

“I can make it,” Flynn said. Standing on his own was hard but no longer impossible. The room whirled and he had to grab the bed railing, but he recovered himself.

“Don’t walk on that any more than you have to, Errol, please,” the surgeon said. “You’ll open the stitches.” He handed him a prescription. “And take this with you. Take one a day, starting in the morning. Be sure to take them all.”

The nurses helped him dress in his shirt and jacket and the remains of his

jeans. He could get a shoe on his right foot, but not on the left. It would take a day or so for the swelling to go down.

Working as hard as he could to walk normally, fighting back the pain as best he could, he headed for the lobby.

Diana and Geri were nowhere to be seen. He turned around to go ask where they were, and found himself face-to-face with an air security police officer who had obviously been standing beside the door he just walked through.

When he turned around again, he found himself confronting three men: a full-bird colonel in uniform, a major, and a civilian whose cold stare suggested that he expected trouble and was prepared to deal with it. The colonel wore a name tag—LEANDER.

“Don’t even think about leaving on your own,” Colonel Leander said. “We’re here to help you.”

“Who the hell are you?”

The civilian’s face crinkled into a smile. “I’m the boss you’ve never met, Flynn. Diana Glass reports to me.” The smile evaporated.

The air security personnel were right behind him now.

“Come this way,” Colonel Leander said. “Can you make it to the car?”

“Do I have a choice?”

“We can get a chair.”

With the SPs behind him, two armed officers beside him, and no gun of his own, he didn’t see a way out. Slowly, he made his way toward the vehicle, parked directly in front of the lobby doors.

“Somebody was supposed to return my weapons.”

“We have them.”

They helped him into the backseat. Colonel Leander sat on his right, Major Ford on his left, the civilian in the front seat with the driver, another air security officer.

“I repeat, do I have a choice?”

“What kind of choice?”

“To get the hell out of this car and go my way.”

“No, you don’t have that choice.”

The car started and they left the hospital grounds.

Flynn sat quietly, but his mind was blazing with a kind of mad fury, which he strove to control.

The security policeman driving the vehicle was not what he seemed. Flynn knew exactly who he was, and that he was the real chief of this whole operation, all of it, from the kidnappings to the murders to the recent plague of brutal attacks—all of it.

The security policeman who now sat behind the wheel was no security cop at all. Far from it—he was an evil, evil man, if he could even be called a man.

He was Louis Charleton Morris.

CHAPTER FIFTEEN

FLYNN HAD to use every bit of self-control he possessed to avoid revealing the turmoil he was feeling. The hate was so intense that it was like an actual fire inside him. Even in the darkest hours after Abby's disappearance, he had never felt an emotion remotely this powerful. Only one thing mattered to him now, which was to destroy the monster that was behind the wheel.

"Where are we heading?" he asked, his voice carefully modulated.

"Base," the civilian said.

"Does it have a name?"

"No, it does not."

"I want my weapons."

"Flynn, relax," the civilian said. "I'm Dexter Harmon, by the way. I know that Diana's never mentioned me. You're not need-to-know, and our girl follows the book."

"Where is she?"

"On her way back to Washington." He glanced at his watch. "Landing in forty minutes."

All lies. "Glad to hear it. Where are you in the chain of command, Dex?"

"You report to Diana, Diana reports to me, and I report to the president. If you don't mind, would you call me Mr. Harmon?"

"No problem, Dex."

He tried not to watch the back of Morris's head. He looked younger, his black hair was now brown, but those darkly gray, empty eyes were unmistakable. No, it was Morris, no question. The disguise was a good one, though. His mind focused onto one, single thought: *Kill him.*

He smiled. "I'm delighted to meet you, Dex, I have to say. Let me ask you this: How do you feel about the way I kill these bastards?"

"Just kill 'em all."

"I need to get to their leader. Handler. Whatever he is. Builder."

"Making any progress?"

"That's classified."

"Everybody in this vehicle is cleared to hear anything you might say."

"I'm on him."

"What's your plan?"

"I'm going to kill him. A few days."

"Now, that is a plan. Any details?"

What was this guy, an actor? He sure as hell didn't know how to mine a conversation for information.

"I know where he lives."

Flynn watched a subtle signal pass between Morris and Dex.

As they drove north out of Fort Stockton, they also drove into territory that Flynn knew well. Among the things he knew was that there were no bases up here. In fact, the only place of note was a big old dance hall called the Bluebonnet Palace, about twenty miles north of here, sitting all by itself on a godforsaken crossroads. Popular, though. There would be people there.

"Where is this base, exactly? There aren't any government facilities out this way."

"Up toward Lubbock."

"You understand that I've been very aggressively attacked from above a number of times in the past few days?"

“It’s not an issue,” Harmon said.

“How can you possibly know that? We’re in an ideal area for such an attack to take place.”

Nobody responded.

“Either you know something I don’t, or you’re taking a hell of a risk.”

“I’ve evaluated the situation, and I don’t think it’s a risk. You’re not alone, Flynn. There’s a lot of firepower in these vehicles.”

He thought about that. How ridiculous it was. He kept playing along. Before he killed Morris—and he would—he needed to find out as much as he could about his motives and his plans.

“Have you ever been up against these things? Any of you?”

Silence.

“Bear in mind that they’re also extremely fast.”

“And you’re the only person who can be effective against them, which is exactly what we want to understand.”

Bingo. Before killing him, Morris wanted to find out what made him tick. That was why he’d led him along like this, ignoring opportunity after opportunity.

“You need to give me a weapon, and you need to do it now.”

“If they show up.”

“If they show up, it’ll be too late to pass out weapons. We’re done.”

Of course, no attack was going to come, obviously, not with the head of the whole operation sitting right here in this car.

For a good hour, they drove in silence, turning first down one ranch road and then another.

“Elmwood,” Harmon said. He gestured toward his side window.

“I know where Elmwood is.”

The town, a low cluster of ruins on the eastern horizon, was dark and silent.

The highway spun away behind them, endless and empty. Once, a rancher passed with a load of cattle. Later, a sheriff's SUV sped past, going south.

The last thing Flynn wanted to see was other cops. He wanted to do what he was going to do in private. Kill the creature, destroy the remains, get the hell out. That was his plan.

They turned off the final paved road they would use and onto a dirt track. Flynn thought he could break the necks of the two men sitting beside him before they could draw their guns. Wouldn't do much good, though, not with that truckload of security behind them.

At the end of another half hour rumbling along the dirt track, they came to a small grouping of low buildings, which Flynn recognized as the kind of prefabs the military would erect in places where it intended to stay for just a few months. They passed through a disused gate that had been left hanging open.

"You ever have any intruders here?"

Nobody replied.

"Nice," Flynn said, "you're chatty. I like chatty."

"This isn't a game," Colonel Leander said.

They pulled up in front of a gray building. Like the others, its windows were covered by drawn blinds.

Once they were out of the vehicles, it seemed possible that the odds might change in his favor. If the right moment came and he could get one of their guns, he could take care of all of them before they got off a shot. The SPs had locked holsters that would open only to their touch, but not the two officers, so it was a matter of positioning.

However, it seemed that they were well aware of their danger, because he found himself surrounded by the security personnel with their hands on their weapons. The other three walked behind.

"Leg holding up?"

“No.” Actually, it was a lot better, but he had no intention of letting them know that. It would hurt like hell, but he was pretty sure he could run on it.

The interior of the building was lit only by a few overhead lamps. There were office cubicles, but Flynn had the impression that the place was empty and had been for some time.

“Come on in, Flynn,” Harmon said. “Sorry for the setup. We’re just in the process of moving in.” He ushered Flynn into a small office and offered him a steel chair. “Now, you ask, why are you here?”

“I’d like to know.”

“One of the great problems we’re facing is the presence of aliens who can pass for human, and who don’t have our best interests at heart.”

“Not news to me.”

“No?” He smiled, all friendly warmth. “You don’t have our best interests at heart, and you pass for human.”

“I am human,” he said.

Harmon sighed. “We can get it out of you, you know. We can get it all out.”

“I’m sure you can.”

“Then tell us where you’re from.”

“Menard, Texas.”

“That’s your final answer?”

“It’s the only answer.”

“I’m sorry for you, then. You do understand that all of your memories, all you know, can be removed?”

Flynn blanked his mind. He felt the two officers, who were in the room behind him, stir uneasily. Then he noticed that Morris had also entered. When he made his move, he would be dealing with four armed men, at least one of which was going to have special capabilities.

Harmon smiled again. “What will be left will be a vegetable. And what

we will do with said vegetable is, we'll take you to someplace like a barrio in Mexico City, and we'll leave you there. Do you want that?"

"What am I supposed to say?"

"Tell us where you're from and why you're here."

"Okay, I'm a Streib."

Harmon frowned slightly.

Major Ford said, "It's an alien from a television series called *Babylon Five*."

Harmon glanced up at Morris, then nodded slightly. "Let's get started, gentlemen." His voice was brisk.

The situation was this. Harmon Dexter was two feet from him across the desk. The two officers were out of sight behind him. Morris was behind them. There was one window. It was closed by blinds, but all he had seen surrounding the place was a low cyclone fence.

"Is my commanding officer aware of where I am?"

"Diana? Of course."

"And you understand what happens if you kill me? Do you?"

"You can't threaten me, Flynn." Harmon opened a drawer in the desk. "We're going to start with chemical interrogation. Depending on how far we get, we'll move on from there." He pulled out a flat, black box and opened it to reveal an interior full of medical instruments, syringes, and drugs in vials. He removed a syringe. "What I'm going to ask you are questions about your home planet. Where it is, that sort of thing."

Incredibly, it was becoming clearer and clearer that Morris must actually believe him to be from another world.

He'd found out enough.

Harmon raised the syringe he'd just finished filling. The next step was going to be a flood of wicked drugs. It was time to extricate himself.

An instant later, the syringe was embedded in Harmon's right eye. For

another instant, nothing happened. Then Flynn watched his head tilt to one side and his eyebrow rise, making Harmon look as if having a syringe in his eye struck him as funny.

He hurled himself back against the wall and began screaming and kept screaming while his hands fluttered crazily around his face, touching the syringe as if it were white-hot.

The suddenness of Flynn's move and the extreme reaction it had produced caused the desired effect in the other three. While Leander leaped toward Harmon, hands outstretched and also screaming bloody murder, Flynn removed the Colonel's pistol and whipped his temple with it, sending him to the floor in a heap. By that time, Major Ford was out of his chair and leaving the room. Morris was nowhere to be seen. Flynn got Ford by the collar and slammed him into the wall once, twice, a third time. Ceiling tiles rained down around his slumped form. The major was done for the day.

A tremendous blow caused the room to become a tiny dot of light surrounded by blackness. And then there was only the dark.

He squeezed his trigger, but it was frozen. He knew that he was staggering, that he had taken a hit, and also that the fool who had been carrying this gun put the safety on.

Pain shot up his leg as he hit the floor. His thumb found the safety. He pushed it. He took another powerful hit, this one on his left temple.

His free hand went up and he grabbed the wrist, then stuffed the pistol into his assailant's belly and fired.

On all fours now, gagging and shaking his head like an animal that had been kicked around, he fought away the darkness that threatened him.

Somebody was there, right in front of him, a speeding shadow. He saw a gun, heard its mechanism working, and lashed out, slapping it with his left hand, causing the slug to graze his chest instead of rip into his heart.

He fired the colonel's pistol, and there was a grunt, then silence for a

moment, then a whispery moan.

Flynn got to his feet. For a moment, he could not raise his head, not without becoming disoriented again. That blow had been delivered with incredible power. If it had been anything except a fist, it would have killed him.

Instinct told him to get out of the room, but close combat skills said to get a wall behind him, which he did, pressing up against the one beside the desk.

Harmon lay slumped against the opposite wall. His chest revealed slow breaths. Alive, unconscious. The two officers were also alive. Ford was groaning, his body under a fallen chair. There was bone visible in the middle of his right shin. The security cop was flat on his face in the hall. Nobody else was visible.

Flynn went to the cop and turned him over. He felt a moment of disappointment that it wasn't Morris. The guy was breathing, but struggling with a serious chest wound. Flynn did what he could to close the sucking hole with the man's shirt, then went through his pockets, looking for a phone.

He called 911 and said, "Been a shooting." He described the location carefully, and twice, to a perplexed state police dispatcher. "There's two guys, broken back, broken hip, possible broken neck. One with a sucker in the chest, forty-five slug all the way through. Fourth one's banged up, he'll walk it off."

"Sir, are you safe at this time?"

"I'm good." He closed the phone and slid it back into the guy's pocket. Then he returned to the office. Gently, he removed the syringe from Harmon's eye. No doubt the eye was gone, but maybe not. Depended on what was in the syringe. Whatever it was, it had completely knocked Harmon out.

He went quickly through the facility, but he did not expect to find Morris. They had both mishandled this thing. Flynn should never have let it go on as

long as it had. Morris should never have tried to capture him. To get Flynn, it was going to take a different approach. Stealth and indirection would need to be part of it—and luck.

There was nothing here except a few empty rooms. Signs of rodent infestation, cheap steel desks, rusting. He opened a few drawers. All empty.

It had been ten minutes since his 911 call. Troopers would be coming fast, probably down from Interstate 10, maybe up from US 90. He didn't want to engage with them, so he went out to the front. He was careful, stepping out just a foot or so, then checking overhead for any sign of a shadow.

Cloud cover combined with the lack of ground light to make the sky as dark as the interior of a cave. In contrast, in the infrared, he would be like a searchlight.

Nothing to do but keep moving, so he got into the Jeep and went under the dash. It was going to be a little faster to hot-wire than the Lexus they'd brought him in. He pulled down the wiring harness and did the bypass. A small spark flashed as he touched together the leads that activated the starter. With the engine running, he got behind the wheel and moved out immediately.

He drove along the dirt road for a time, then turned off into the darkness, heading south. As he drove, he watched the horizon for the glow from the lights of the approaching police. Meeting them would slow him down, which he did not need, especially because he was far from sure that he had escaped. He may have been let go so that he could be pulled back. It was an infamous technique that had been used for centuries to break the will of prisoners. The Inquisition had used it. So had the Nazis and the Soviets, and Pol Pot.

He turned off road and headed due south. He was still looking for a distant glow, but not of the approaching troopers. What he needed most right now was to disappear into a crowd, and in this part of Texas at this hour, that meant the Blue Bonnet Palace.

He was driving across an ungrazed pasture, which caused the Jeep to bounce against one big tuft after another. It hurt like hell, but he continued moving as fast as possible. In the distance, he saw the flickering of light bars, six sets. No doubt the first responders had called for backup.

Soon, he could not only see the the palace's lighted parking lot and its famous blue neon sign, but also make out the light poles and the details of the signage. So he was about a quarter of a mile out.

He took the truck over to the road and drove into the parking lot, getting as close to the doors as he could. From there, he hurried into the structure.

The Blue Bonnet Palace was an entertainment complex consisting of a dance floor, a bar, a barbecue restaurant, and an indoor rodeo arena capable of seating about two hundred people. Flynn no longer had any idea even what day of the week it was. He was hurt, he hadn't had more than a snatched hour or two of sleep since first getting off the plane in Mountainville a week ago, and now he'd taken a hard blow to the head, and you didn't shake that off so fast in life as you did in the movies.

The place was jumping, with city folks from all the communities in the area mixing with cowboys and ranch hands from local spreads. There was a square dance being called for about fifty dancers, and their happiness, the confident swagger of the men, the beauty of the girls, all but broke Flynn's heart. He had danced here many, many times—with Abby, with many other girls—had known that same happiness here, in his innocent days. He could yet hear the echo of their laughter, as he and Eddie and Mac swung Abby across that dance floor, on those long-ago nights.

“Hey, there, fella—you sure you're okay?”

It was a smiling security guard. It was one of the old guys, Cord Burleson. He'd been working here from forever.

“Cord, it's me, Flynn Carroll.”

Cord's eyes narrowed. He stared hard. “Holy shit, Flynn, you look a hell

of a sight. You livin' in the wind?"

"No, man, I got roughed up."

"'Cause you look like you've been homeless for a good long while. I thought you were rich."

"Could you do me a favor and get Mac Terrell on the horn? I need to talk to that man."

"Mac?" The smile became tight. "He doesn't come up this way a whole lot."

"Well, I've got his number in my head, but I've lost my phone."

"Yeah, that and just about everything else. What the hell happened to your face?"

"A truck sat on it."

Cord led Flynn across the dance floor and back to the office. The last time he'd been in here, it was to get chewed out for trying a false ID in the bar when he was seventeen years old. Nothing had changed, not even the picture of LBJ on the wall behind Sam Carter's desk.

"Sam okay?"

"Hell yes. It's gonna take more than God to get him off to heaven. Way he figures it, this crazy place is better, and he intends to stay."

Sam had built the Blue Bonnet Palace back in the '70s. He'd been running it for at least forty years.

Flynn sat down heavily behind the desk and dialed Sam's ancient rotary phone.

"Sam Carter," Mac said, "what in hell are you callin' me for in the middle of the night?"

"It's me."

"Where are you, Flynn?"

"At the Blue Bonnet Palace."

"What in shit for? I thought you went back to Washington. I was just

considering goin' up there and killin' your ass for getting my house burned up."

"Mac, can you come up here and get me? I've had some trouble."

"Flynn, you know where I am? I'm in your house with our friend Eddie. We're sittin' at your kitchen table, drinking what we believe to be a very fine bottle of your granddaddy's wine."

Incredibly, a break. Flynn hadn't had a whole lot of those. "Mac, put Eddie on."

Eddie took the phone. "Hey, Flynn."

"Eddie, I'm in serious trouble. I'm a prisoner. I need help."

"Okay. First, are you in immediate danger of your life?"

"No way to evaluate that. I need you to send a squaddie for me."

A pause. "Where are you?"

"Blue Bonnet Palace."

A longer pause. "You're free? You can walk out of there?"

"I can walk out of here, but I'm not free. I've been captured, Ed. How much has Mac told you about what's happening?"

"Enough to make me think he was completely insane. But you're worrying me, I have to say. Is my guy gonna go in harm's way? Because if he is, I'm coming myself."

"I think it's more dangerous if you come. You stay at the house. Don't even go home. Tell Mac to do the same."

"Me? How am I involved?"

"Send the squaddie. Fast."

"He's rolling in five."

As Flynn hung up the phone, he smelled food. He turned around, and there was Eileen Peeler, who had been running the pit out here since she signed on out of high school.

"Hey, Elly—why, thank you."

She put it down on the desk: a plate of brisket, sausage, beans, and a pile of steaming collard greens.

“Cord said you came in looking half dead. I’d say three-quarters. Not to mention starved. You’ve lost a few pounds, Flynn.”

“It’s been busy. I haven’t had a lot of time to eat.”

“All I can say is, I hope whoever was on the other side of the beating you took got some feedback.”

“Oh, yes.” Flynn took some of the brisket between his fingers and put it in his mouth. It was like going to heaven. “Sam’s bringing in some serious beef.”

“Goin’ pit, too. That helps.”

He looked at her, her full cheeks, the permanent joy in her eyes, and felt so very, very far away, as if he were watching her through the wrong end of a telescope.

“I believe Sam fired up that pit when he opened, didn’t he?”

“Forty-four years now. You shut up and eat, honey. I don’t know what you’re up to, but you’ve just about used yourself up.”

She left him then, and he ate and waited for the squaddie, and waited for the end of night, and wondered if either would ever come.

CHAPTER SIXTEEN

IN THE squad car, he had wanted to sleep, but the sense that death could come from above at any moment never left him now. Ever since Miller's murder, Morris had been playing Flynn. Watching him. Experimenting with his abilities by throwing various challenges at him. Learning him.

So the question now was whether or not Morris was still playing him, or about to reel him in. Had the ride to the "base" been expected to end in Flynn's capture? If so, then Morris would be throwing everything he had into this right now.

For his part, Flynn knew what he had to do next and where he had to go. He was focused on two places: Wright-Pat, where one intact disk was stored; and Deer Island, where he was fairly sure that the truth about Flynn Carroll was known.

The house blazed with light from every window. Flynn paused in the midst of the ghosts and memories that crowded his mind. This place was the center of his life, just as Mac's ranch had been the center of his.

He went in. "I need to arm up," he said without preamble as Eddie opened the front door to him.

"Man, you look like you've been bull-riding out there. And ended up under the bull."

"I'll comb my hair." He glanced at Eddie. "There's some people I need to

talk to.”

“The state boys are out there. You’ve got one guy who’s headed for the ER up in Lubbock unless they give him to the USAF. He’s in uniform, but he’s not air force, apparently.”

“Hold him.”

“On what charges?”

“Title Eighteen terrorism. I’ll get Washington to sign off on it.”

“And that’ll happen?”

“Yep.”

“Because I’ll be out on a limb. Far.”

“I know it.” He went down to the basement, struggling with the old house’s steep stairway.

Eddie followed him. “You said you’d been captured, but you’re here.” Mac was close behind.

“Think of it this way: I’m wearing an ankle bracelet you can’t see.”

“That’s the explanation for the leg?”

“I’m not sure. It’s just—” He was done. He went down on the couch. “Lock us in.”

“Lock the house?” Mac asked.

“Lock every damn thing, and I need you guys to stay up. Stay armed. If that door opens, don’t aim, don’t do anything, just start pulling your triggers. Flood it with bullets.”

“I can’t do that, it’s against procedure.”

“How I am coming to hate that word, Eddie. Shout the warning if you want to, but fire at the same time. You hesitate even a half second, we are all done.” The room wavered. “Look in my armory, get me the Bull that’s there, get yourselves the shotguns. There’s an extreme likelihood that they’re coming. They want me alive, so they aren’t going to just blow the place all to hell.” He was too dizzy to keep sitting, and had to lie back on the couch.

“Sorry.” He shot a hard glance at Mac. “God only knows what that antivenin of yours did to me.”

“I keep the best stuff, you should know that.”

He closed his eyes. “Yeah, I’m sure you do.”

Eddie got a call, took it. “Okay,” he said, “I’m rolling.”

“We need you here, man.”

“That was the state police. They’re working four dead bodies out on Seventeen. That’s what they found, Flynn.”

“Shit!” Morris had gone back and killed them, despite the fact that they were his own people. “How?”

“Head shots. One had taken a bullet to the chest, then later the head shot that did him.”

“Probably gonna find out that the weapon used was my other Bull. Morris got hold of it, I’m afraid.”

“Who in hell is this Morris?” Eddie asked. “It’s somebody I need to know about, that’s for goddamn sure.”

“We don’t know,” Mac said. “Who or what.”

“I’ve been tracking him for a year. He’s—shit, Eddie, you’re out of the loop on this thing.”

“He’s another of these aliens? Alien crooks?”

“I pretty much told him everything I know,” Mac said.

“Okay, then you’re sucked in, ole buddy. Down the road, you’ll need to sign some paperwork.”

“Lotta folks are being killed, man. That should not be kept secret.”

“I don’t make the rules, but I understand them.” Frustration choked his bitter words. “I have to say, if the public finds out how dangerous this is and how helpless we are, there will be hell to pay. You can’t tell people that something can steal them in the night or kill them at will—or do worse than kill them—and there is nothing whatsoever we can do.”

“Aren’t you in a police unit that works on this?”

Flynn thought about just how to answer that. He considered the office full of earnest kids; Diana in her suite worrying about political correctness; “Geri,” who could be anything. He considered it for a while, but said nothing.

Eddie’s phone beeped. He looked at a message. “Gotta roll,” he said.

“No, wait. Just wait, Eddie.”

“Flynn, I—”

“Wait! You wait and you listen.”

“Okay! Take it easy.”

“I need you both to understand something. I need you to understand that I am that police unit. I’m the one guy who can put up some sort of a fight, and they know it, and they are hell-bent to capture me. Right now. Tonight. Soon as they can.”

“What about CIA assassins, Delta Force, Blackwater, Navy SEALs?”

“It’s been carnage. So far, I’m the only man who’s been capable of surviving in the field against these creatures.”

Eddie gave him a searching look. “Which is because of your speed?”

Flynn nodded.

“Then I don’t get it.” He gestured toward Mac. “When we used to quick-draw, Mac was faster. Half the time, I beat you.”

“I’ve changed.”

“How? You don’t get faster as you get older.” Eddie’s phone buzzed again. “Yeah!” He listened. “Okay, I’ll be there.”

“Let me guess,” Flynn said. “The FBI just showed up.”

“Yes, sir, and they’re kicking ass.”

Diana had sent them, of course. “Just hear me out. I think what I am is a kind of breakthrough. Something was done to me that increased my reflex times dramatically. I don’t have any memory of it. So it wasn’t surgery, I don’t think, but I could be wrong, of course. What I do know is this: The man

who did it was a Dr. Dan Miller, and he did it at the Deer Island Biological Research Facility in Long Island Sound, and now that he's dead, there's a risk that I might be the only one of my kind ever created."

"Holy shit, man," Eddie said.

"You have to stay here and help Mac protect me. Until I get to Deer Island—and I have been notified that I need to get there with all haste—I absolutely must not be captured. Once I'm there, my best guess is that they're going to be able to re-create Miller's work using me as a template, and then we'll finally be able to create a police force of our own that can stand up against Morris. Hell, an army if we need it."

"I've got a police department to run. That's what I do, and I'm gonna keep doing it. And as to this Morris, you need to go public with this one, buddy. Put out an all-points. Wanted posters. The works. Interpol, all of it."

"We have turned over every stone in the past year. Every single stone. He's on wanted posters all over the world. Not for his real crimes, of course."

Eddie headed up the stairs.

"No!"

He hesitated. "Flynn—"

"I need you, buddy."

Eddie turned around. He looked suddenly smaller. Older. He came back down and dropped into one of the recliners that stood before the TV. He turned it on and began compulsively surfing.

"What about my wife, Flynn, the new baby? Don't tell me they're involved. If Ellen ends up like Abby—"

"Eddie, I'm sorry."

"What have you done to me?"

The words ripped at Flynn's heart. But this was war. More than war.

"Eddie, the fate and freedom of the human species are at stake. I've got to get to that island."

Eddie paused for a long time. Finally, he said, “I’m proud to be part of this. But you only have me for this one night. After that, I’m gonna take a leave and work on protecting my family.”

“Very wise, and thank you.”

“Flynn, it’s always been a privilege to be your friend. It still is.”

“Goes for me, too, buddy,” said Mac.

“I’ve got to sleep, and I want to believe you’re watching that door. Because if it starts to open, you’ve got maybe a second and probably less.”

He knew that there was a high probability they would fail, but also that he was too exhausted to continue. He had to place his trust in them.

He lay back, holding the Bull on his chest—clutching it, really.

There were no dreams, just an uneasy darkness. From time to time, he was aware of his friends’ voices. He was always aware of the pistol.

The night flowed on.

The next thing he knew, his heart was hammering, he was covered with sweat, his guts were heaving. Across the room, Mac and Eddie sat in two recliners that they had moved to face the stairs. They both held guns in their laps. They were both snoring, and that was what had awakened him.

He was not a man who angered easily, but when he did, other people could have definite problems, and he had to work hard to force down the urge to dump them both out of their chairs.

Carefully, in order to avoid waking them up, he took each man’s gun and laid it aside. He knelt down behind them and between the chairs, took a deep breath, and shouted at the top of his lungs, “*Good morning, fools!*”

They both leaped up, snatching air, looking for their guns. Eddie was the first to figure it out. He said in a low, dangerous voice, “I thought you said it was safe during the day.”

“Safer.”

Mac said, “You do understand you’ve been asleep for a while?”

“What time is it?” Flynn figured Four o’clock, maybe five.

“It’s nine thirty.”

“Yeah, well—I’m sorry, then. Just don’t both sleep at the same time, please. It’s a real bad idea.”

“Nine thirty, *Wednesday morning*, Flynn. You crashed on Monday night.”

There was no time. “Morris is liable to go to Deer Island. Maybe he’s already there, and if he is, it’s endgame.” Then another thought came to mind, and it was a terrible one. If he was broadcasting, he had already given away far too much. Even if all Morris could do was track him, he had to disappear from his radar, and right now.

“I need an MRI scan. Full-body. And a radiologist to read it.”

“Mexico okay?” Mac asked.

“Eddie, got an idea?”

“My wife’s brother-in-law is a neurosurgeon at MD Anderson in Houston.”

“Let’s go.”

“That’s a long drive,” Eddie said.

Flynn nodded toward Mac. “Where’s your nearest plane?”

“I don’t have any planes.”

“You have an air force. Where is it, on one of the ranches you don’t own?”

“I only have my one little place, you know that.” He made a call on his cell, said a few words, then cut the connection. “We fly in half an hour.”

“Do you need me, Flynn?”

“Eddie, your first instinct was right. Stay here and protect your bride and that newborn. Tell you what. Get them to a big city somewhere far away from here. Go on a vacation to New York. Even better, London. Paris. Stay in a big hotel. Don’t go out at night.”

“I’ll call my brother-in-law, get everything arranged.”

Flynn stood before his old friend. He put his hands on his shoulders. “Thank you for everything, and God go with you guys.”

Eddie nodded. He turned and started up the stairs. He stopped, turned back. “God bless, Flynn.”

“Same back.”

A moment later, the kitchen door closed. Flynn heard the lock turn.

“You got keys, too, Mac?”

“Yeah. Same keys I had when we were fourteen.”

They drove to a small ranch about ten miles outside of town, a tin-roofed house and a weathered barn. No sign of life.

“Nice place,” Flynn said.

“No, it’s not.”

“That’s right, it’s not. I won’t ask what you do here, because I don’t want to know.”

“Indeed, you do not. But it would be wise not to inhale.”

“Not a meth lab! Jesus, Mac, how low have you sunk?”

“It’s a joke, son.” He put his hands around his mouth. “Hey, Miguel! Compadre! You got gas in the buggy yet?”

The barn doors swung open to reveal a sparkling-new Cessna TT, as good as it got in the world of single-engine aircraft.

“Miguel Sanchez,” Flynn said to the heavysset man coming out from beside the plane. “How the hell are you?” They’d gone to school together, up until Miguel dropped out to become a professional criminal.

“I’m good, man. You still enjoying my Range Rover?”

“It’s ruined.” He pointed a thumb at Mac. “His place.”

“Figures. What happened, it get et by some damn exotic animal out there?”

“You could say that.”

“I got used to those weird dogs, but man, that tiger—I don’t like that

thing.”

Flynn liked Snow Mountain a good deal, but all he said was, “Yeah, I hear you.” At that moment, he heard rumbling and turned around to see a black Audi convertible barreling up the dirt track that led to the house pasture. “Who in hell is that?”

“We’re dealing with an airplane. You gotta plug in a pilot or the damn thing just sits there.”

“No.”

“Whaddaya mean, no? You gonna push it to Houston?”

“I’ll fly it.”

“The hell you will. I’ve been up there with you one too many times. Never again.”

“We don’t involve another innocent man.”

“Well, I’m not goin’ with you. I’ve got my Citation over at the airport, I’ll take that. Bernie flies it, too.”

“Mac, let me tell you what’s goin’ on.” He glanced at Miguel. “You don’t need to hear this.”

Miguel didn’t hesitate. He headed off and intercepted Bernie. They both stood about fifty feet away, watching.

“You take that Citation, you are going to your death.”

“What?”

“I’m tellin’ you, man, you gotta get your head around this. Morris will waste you the first chance he gets.”

“What about, like, in the next ten seconds?”

“If he knows we’re here, it’s possible.”

Mac looked down and hunched his shoulders, closing in on himself.

“Once we’re in the air, he will definitely find us and will definitely strike. If we’re going to make it, it’s going to take some fancy flying.”

Mac ripped off his hat and threw it down.

“We need to do this, Mac. Now.”

He grabbed up the hat. “I know it.”

They got into the plane.

Flynn looked over the controls. “Beautiful. This puppy can fly itself.”

“I hope so, because if you’re as good as you used to be, there won’t be anybody else involved who can.”

Flynn did the checklist, turned on the engine, and taxied across to the runway. The plane was light on the touch. A powerful little aircraft, probably capable of flying rings around most World War II fighters.

“Here we go.” He pushed the throttle forward and felt the airframe shudder into life as they sped down the runway. He didn’t know the exact rotation speed, but the plane made it very clear when it was ready to take off.

Once airborne, he turned east.

“Why is it tilting? What’s going on?”

“Take it easy, we’re okay.”

He pointed the nose into the hard and unforgiving sun.

CHAPTER SEVENTEEN

FLYNN FLEW low with his radios and as many of his instruments powered down as he could safely manage.

Mac twisted in his seat. He peered out his window, then turned a pleading face toward Flynn. “Something wrong with the plane?”

“It’s fine.”

“Then why do I see trees going by?”

“We’re flying under FAA radars, which means we need to stay below five hundred feet.”

“Damn.”

Flynn was flying with only the gravitational and magnetic instruments, primarily the compass. Keeping a low signal profile probably wouldn’t deceive Morris, but it wouldn’t help him, either. He dropped the nose a little more.

“Water tower!”

They skimmed it so close that the plane’s wind stream buffeted them as it compressed against the white-painted surface.

Mac screamed and threw his head back, clutching his fists to his forehead.

“Guess you didn’t see what town that was.”

“Town? What town? Where are we?”

“Better if you watch the sky,” Flynn said. “Any gleam, no matter how

tiny.”

“What do we do then?”

“Find out if your airplane’s any damn good.”

They flew on, keeping as low as Flynn dared, between three and four hundred feet. He kept a close eye out for radio masts and more water towers.

An hour passed.

“Flynn, will you answer me a question?”

“I’ll try.”

“Be honest.”

“If I can.”

“I think we both know I can’t shoot the disk down, no matter how well I understand its design. I mean, we’re talking about a seam a millimeter wide.”

Flynn said nothing.

If he had been enhanced at Deer Island—and he was reasonably sure that was the case—maybe Mac could have been, too. But he wasn’t going to say that. He knew his friend. Mac was unlikely to be comfortable, at least not until he knew what was involved, and right now, Flynn could not answer that question.

They flew on through the empty morning sky, powering across the great, flat expanse of Texas, small towns, long roads, and a bleak landscape passing below in majesty.

When they were still about twenty minutes from their destination, Mac said, “There.” He pointed.

There was nothing there, just blue sky.

“Closing fast,” Mac snapped. “Eight o’clock.”

Flynn saw it, then. He pushed the throttle to the firewall and put the plane into a skidding roll, then dived almost straight down, forcing the disk, which had been coming up under the plane, to dart up past them.

“*Shit, Flynn!*”

Now at an altitude of perhaps fifty feet, he was flying along a highway, jinking across overpasses. He shot straight down the main street of a town with the disk close behind. Once out in the countryside again, he took the plane up to fifteen hundred feet as fast as he could make it go, then did a tight Immelmann turn and angled back down, passing under the disk, then doing another evasive turn at crop duster altitude over a field.

“Bag,” Mac croaked. “Bag!”

“Glove box.”

Mac yanked out a brown airsickness bag.

The small cockpit began getting hot. “They’re gonna burn us!” Mac shouted.

“They’re going to try to take the plane. They need me alive.”

“What about me?”

“They don’t care, buddy, but I sure as hell do.” He pulled the throttle back and dropped the flaps, then pulled the nose up, causing the plane to pancake almost to the ground.

Now he grabbed for airspeed and turned, heading south. They needed a more populated area, and fast.

The plane began to shake. The stall horn started peeping.

“What’s that?”

“Stall horn.” Again, he pushed the throttle to the wall. As he did a series of barrel rolls, Mac screamed.

“Can it, I need to concentrate here.”

“God, oh God, help me, help me now!”

Ahead, Flynn could see a shimmer of water on the horizon. They were no more than thirty miles from the Gulf of Mexico. “We’re ditching in about five minutes.”

“*Ditching?*”

“If we can hang in there that long.”

The disk, maneuvering effortlessly, dropped down in front of them. For a second or so, had he been in a fighter, Flynn would have had a shot at its flank, but not at that all-important lower fuselage seam. At an altitude now of just three hundred feet, he had little room to maneuver. Climbing would be certain death.

Again, the plane began to heat up.

“Is it on fire? What’s happening?”

“I think they’re pulling us into the thing.”

“Shit, Flynn!”

Below them was a stretch of Interstate 10. He saw a series of underpasses. He headed down. If he had to choose between becoming Morris’s captive or slamming into a concrete pillar, he’d have to choose the pillar.

They shot through an underpass, Flynn working the controls with breath and feather.

“Goddamn!”

They went through another. Overhead, the disk was pacing them.

The third one was narrower, coming up fast. Coming toward it from the other direction was an eighteen-wheeler. Closer. He could see the driver, his eyes practically popping out of his head, his hand hammering his horn.

A second later, it was all behind them. Then came another underpass. They made it through, and Flynn yanked the stick into his stomach, passing over an oncoming bus, then banking and heading once again toward the water, which was now spreading blue, covering half the horizon.

“Sailboats,” he said to Mac. “Nice.”

“You’re insane!”

The disk was nowhere to be seen, but that meant nothing. He kept heading toward the water. “I think that’s Brazoria down there. You can see Galveston out my window.”

“Are we gonna ditch?”

“We’re gonna stay within flopping distance of the water.”

Where was the disk? Backed off, maybe, because they were over a populated area. Morris wouldn’t want it to show up on YouTube.

He turned on his radios and navigation system and took the plane up to fifteen hundred feet. Somewhere, a traffic controller was going to be wondering where he came from, but with general aviation aircraft, they expected any damn thing.

They flew along the beach until he saw the Gulf Freeway, which he followed north. He called for clearance into Pearland Airport, and, to his private astonishment, they were on the ground a short time later.

They opened the gull-wing doors and climbed out. Mac looked back at the plane, shook his head, and practically ran into the airport’s small terminal.

There was a pay phone, and Flynn called for an Enterprise car. Then, almost fearing to do so, he called Eddie.

“Flynn! You in Houston?”

“We made it. How are you?”

“All quiet on the western front.”

“Just remember what I said, Eddie. Get the hell out of there for the duration.”

“We’re going to—”

“Don’t tell me, I don’t even want to know.”

“You’re all set with my bro. His name is John Shelton.” He gave Flynn a cell phone number. “He’s waiting for you, they’ll get you into radiology immediately.”

In the rental car, Mac said, “I sure would like to polish off a bottle of bourbon and do some smoke.”

“You and me both.” There were eleven texts from Diana on his phone. The first four were stern, the next five concerned, the last two frantic. He called her.

“Oh, God, Flynn!” Then, to another party he assumed was Geri, “It’s him.”

“Hey. I’m in Houston with Mac.”

“And you’re all right?”

“At the moment.”

“When are you coming in?”

“Working in that direction.” Until he was certain he could not be tracked, he had no intention of going anywhere near the office. “Listen, you stay careful. I’d live in the suite.”

“That’s what I’ve been doing. Both of us.”

“Good. Stay far away from your house, your friends. Just completely isolate yourself.” If he was being tracked, it wasn’t beyond possibility that she was, too, or any of them.

“I’ll do my best, Flynn.”

“Any more on that blocked number?”

“No, and it’s odd. Your cell phone records don’t show any calls from a blocked number.”

“So it’s still a mystery.”

“It is. I’m sorry.”

Saying nothing of his suspicions about what the calls meant, he hung up.

“What did she say?”

“Not a lot.”

According to the car’s GPS, the Department of Neurosurgery was on Holcombe. He drove into the massive hospital complex and found the structure without incident. Once they were deep in the parking garage, he felt himself relax a bit. When they found a parking space, Flynn said, “We’ll need to leave our weaponry in the car.”

“That doesn’t sound wise.”

“I don’t like it, either, but guns and hospitals don’t tend to mix.”

“Let’s live in here,” Mac said as they walked through the gray concrete mass of the parking structure. “We could have furniture brought in, and just set up housekeeping.”

“It’s tempting. Now I’m going to tell you exactly why we’re here.”

“You’ve got an alien implant you want taken out because Morris is using it to track your every move.”

“They took something out of my leg in Fort Stockton, but I think it was intended to be found, so I’d get rid of it and think I was clean. Morris probably anticipated that I’d figure out he had to have some kind of a tracking device on me, and he was trying to set up a deception.”

“Smart.”

“But not smart enough. I hope.”

They got to the elevator. Flynn looked for stairs, but seeing none, he pushed the button. Out of long habit, he listened to the motor as the car moved toward them. Being in places with no escape routes always bothered him. Elevators, always troubling, were potential death traps now.

They got to the seventh floor without incident, however. The waiting area was crowded. He called Dr. Shelton.

“Flynn Carroll.”

“I’ll meet you in Radiology. It’s in the basement—there are signs.”

Flynn hung up. This time, he found stairs, and they used them to descend to the lower basement, where the MRI scanner was kept.

“If we find anything, you’re doing this, too,” he told Mac.

“Not a problem. I sure as hell don’t want that horror show in my head. What’s he look like, anyway? I haven’t seen him since Austin.”

“Same general features, only a lot younger.”

“Younger?”

“They can control a lot of things we can’t. You’ve never seen one of them in person. I have. His name was Oltisis. He was in a safe house in Chicago

until it turned out not to be so safe.”

“What happened?”

“Morris did him. Burned down half a neighborhood in the process.”

They arrived in a long, brightly lit hallway, which led to a smaller waiting room in which there were three people. Flynn would rather they hadn’t been there, but the technician took him and Mac directly into the MRI chamber.

The enormous machine filled most of the space. Flynn said quietly to Mac, “Watch my back, I’ll watch yours.”

“Got it, boss.”

A tall man with an enviable mane of black hair came into the room. “I’m John Shelton,” he said.

“Flynn Carroll. This is—”

“I’m Frank James,” Mac said.

Flynn let it ride. Mac’s paranoia was legendary and, in this case, probably entirely justified.

“What are we looking for?”

“You understand that this is a national security emergency and it’s classified.”

“Ed explained that, yes.”

“You and your technician will need to sign security agreements. There’ll be someone here at the hospital to take you through that process tomorrow.” Or maybe not. He hadn’t told Diana a thing about any of this yet.

He lay down on the gurney and let himself be rolled into the machine. With the ceiling of the tube just inches from his face, he had to fight back claustrophobia. He closed his eyes. Anything could happen now. Whatever was in him might be designed to kill him if it was affected by a magnetic field. Or, if it was metallic, maybe it would move and destroy brain tissue. Maybe it was even designed to do that, on the theory that if Morris couldn’t have him, nobody could.

The machine started. He'd had MRI scans before, the time he blew out his left knee falling while giving chase, and the time an irate husband had cracked him in the head with a frozen chicken.

The thudding and clattering of the magnets seemed to continue on for hours, while he drifted in and out of sleep. He reflected that he was like a fox being chased down by dogs. He'd started out in Mountainville full of confidence. Now here he was in Houston, desperate and exhausted, knowing that if he couldn't throw off his pursuer soon, he was caught.

In the machine, he lost track of time. His mind wandered. Again, he slept.

"Sir? Mr. Carroll?"

A tinny voice kept calling him. He been flying in a bright sky, peaceful, sunny and blue. "Yes?"

"Sir, you need to remain still. We have about twenty minutes more."

"Yes. Sorry." He waited then, forcing himself to stay awake, until finally they pulled him out.

"Sir," the technician said, "can you come with me?"

"Mac—er, Frank—come on."

They went into a smaller room, dimly lit and full of glowing computer monitors. Dr. Shelton stood before one of them. On it was an image of a brain. Flynn's brain. He stared at it, and into himself.

"Good news is, you have no sign of any cancer or any other health issue. This is a normal brain with an intact vascular system." He took a pencil up off the desk and pointed at a part of the brain. "This is the cerebral white matter."

"Yes."

"This area of high signal intensity? See the bright spot?"

Flynn felt sick. He felt angry. But above all, he felt a quiet sense of triumph. "I see it."

"That one, and this one here." He moved the pencil to another, similar

bright area. “There are two of them, located bilaterally in the cerebral white matter of the frontal lobes. They are not natural formations, and they should not be there.”

“What are they?”

“Small objects of some kind. Metallic, or they wouldn’t look like this.”

Bingo.

“Can you get them out?”

“I would think so. They’re right on the surface, so all we’d need to do is make a couple of small incisions. We’d go in through your skull and pull them right out. It’s a matter of a couple of hours. But I’d need you to answer some questions, first, because I’m flying blind here. I’ve never really seen anything like this.”

“You’ve agreed to sign the security documents?”

“I have.”

“So you understand that there would be serious penalties if you told anybody about this?”

“I do.”

“Then I pronounce us doctor and patient. What you are looking at is a tracking system installed in my brain by a scientifically sophisticated enemy of the United States. I work in terrorism intelligence, and this device has compromised my freedom of action and endangered my life. So let me ask you, are you certain you can remove it?”

“If there are no unexpected problems, I would say so with a high degree of confidence.”

“There may be problems.”

“You sound like you’ve got some specific ideas.”

“I do. The objects may be able to maneuver. They may be able to elude your removal attempt. Also, when you do remove them, I may suffer severe brain damage or even death.”

“But they’re just little bits of metal. Not even the size of BBs. Almost like grains of sand.”

“Are you willing to attempt surgery?”

Dr. Shelton gazed for some time at the MRI image on the computer. Finally, he said, “If you’re willing to take the risk.”

“Doctor, I have no choice. And I have to tell you, this is a very dangerous situation. I don’t want you to talk about it, not ever. Try not to even think about it. And please utilize the minimum number of personnel you can in the operating room. Now I’d like you to do the same analysis on my friend Frank here.”

The technician reappeared, and Mac was put through the MRI scanner. In his case, the result was different. He had no sign of anything abnormal anywhere in his body.

“Doctor,” Flynn said, “as this is an emergency situation, I’m going to need you to perform the surgery as soon as possible. When can you schedule it?”

“I’d need to look at my calendar, but—”

“No, sir, I’m sorry, but you don’t need to do that. I’m requiring immediate surgery, I’m not asking for an appointment. I meant, how soon can you prep?”

Shelton thought about that. They were back at the computer, looking at Mac’s enviably clean scan. “I can prep immediately. I think we could be ready within the hour.”

Flynn felt a tide of relief flow through him. It was like being unexpectedly rescued from a certain death, he thought. If it was rescue.

“How long will the surgery take?”

“Given none of the complications you mentioned, no more than two or three hours.”

Two or three hours. He wondered if he would live through it or not. He

wondered if the things would move away from the surgeon's forceps. He wondered a lot of things.

"Let's go," he said. "Let's do this."

He followed Dr. John Shelton down the long white corridor and up an elevator to the surgical floor, his old friend with him. They came to heavy double doors marked SURGICAL SUITE. NO ADMITTANCE.

The doctor punched some numbers into a keypad. They went through the door and into the gleaming, unsure world of what Flynn feared would be a far more difficult surgery than Dr. Shelton expected.

CHAPTER EIGHTEEN

DR. SHELTON had a large office with a window looking out on a wide swathe of sky.

“When did you last eat?”

“Two nights ago.”

“Do you take any medications?”

“No.”

“No aspirin, ibuprofen, anything like that?”

“No.”

“Liquids?”

“This morning. Glass of water.”

“Okay. I’m not expecting this to be a problematic surgery. We will do what’s called an awake brain surgery, and I’m going to ask you various questions during the process. We’re not actually entering the brain, but we are going to be right in the cognitive region, so I’ll want to be certain we’re not disturbing anything as we work.”

“I’ll need my colleague present in the operating room. And keep staff to a minimum. Do not describe the objects or ask any questions about them that your staff may—”

“Sir, I’m going to need to stop you right there. I’m going to need my staff’s full functionality.”

“Then they’re all going to have to sign security agreements. I’ll need them to know that and be comfortable with it.”

“I can assure you they’ll sign. I have a resident, four nurses, and my anesthesiologist, Dr. Kampmann. Just a moment.” He leaned into the intercom on his desk. “Julie, we’re going to be doing a full staff pre-op with this patient prior to surgery. Can you let everybody know?” He turned his attention to Mac. “You’ll need to prep and be in scrubs, and I’ll want you to remain in a specified area of the operating room, and not to speak. Are those conditions acceptable?”

“Fine by me,” Mac said. Flynn nodded.

They followed the doctor to the patient care unit, and Flynn removed his outer clothes, then placed his wallet, watch, cell phone, and keys in the locker provided. He gave Mac the key. “Don’t come in here and steal all my money.” When they were kids and Mac had been poor, he used to mug Flynn and Eddie practically every Friday night.

A nurse came in, a stocky black guy with a tight smile. These medical teams weren’t used to surgeries coming at them unexpectedly, outside of ER. A unit like this ran on a complex, tightly controlled routine. “Okay, we got to shave your head,” said the nurse. “This is the good part. You’re gonna like you bald, lemme tell you. You’ll never go back.”

Now wearing nothing but a blue hospital gown and his underwear, Flynn was taken to a small, single-chair barber’s station. The nurse said, “You get some of the women in here, it can be damn rough. But, you know, you want to get whatever’s in there out more than you want to keep your hair. What you got, anyway? I got you pegged for an injury. Am I right?”

“You’re right.”

“I know this stuff, I’ve been on the unit awhile.”

He rolled on surgical gloves, then lathered Flynn’s head with barber’s soap.

There was only a small mirror at the barber station, but Flynn could see himself in it, and as the CNA continued working, he saw a transformation from a man with short salt-and-pepper hair and hard eyes to a guy with no hair and even harder-looking eyes.

“There,” the nurse said, “now you’re ready to do some serious business. I want to wish you all the luck in the world.”

Back in Flynn’s patient cubicle, another nurse swabbed his head with iodine solution. Mac said, “You look scarier than hell.”

“Yeah, big orange heads tend to be pretty scary.”

“I meant, before she painted you. I’m telling you, the man who came across this room just now had death in his eye. It was damn impressive, I have to say.”

The anesthesiologist came in. “I’m Dr. Kampmann. I understand that you’re Errol Carroll?”

“Flynn.”

“Okay, Flynn, now what we’re going to use is a type of anesthetic that will deaden pain in your scalp and skull, but leave you fully conscious. There won’t be any tranquilizer solution, but I’ll be standing by with it, so if you feel too agitated or restless, just ask me, and I’ll instill some into your IV. And we’ll have general anesthesia ready as well. I assume that you’ve never had a craniotomy prior to this one?”

“I have not.”

“At first, there will be a sound from the electric saw, which some patients may find disturbing. These are going to be two three-centimeter exposures over the affected areas. Just enough for the endoscope. You’ll be able to see, hear, and respond to questions, but your head will be in a restraining mechanism, which can become uncomfortable. We don’t want you to move, so if you have any discomfort at all, even an itchy nose, let us know.”

“Will I be tied down?”

“Yes, you will.”

“I need to see my colleague alone for a moment.”

The doctor and the nurses withdrew, and Mac came in.

“I’m going to be restrained. If anything happens, anything you can’t explain, any movement in the room—you can see their movement, can’t you, at least somewhat?”

“I can see a flash off a windshield a mile away, but not those things, not like you.”

“What can you see?”

“Things they move past. If they make a curtain flutter, no matter how slightly, I’m gonna see that.”

“I think there’s a high probability that they’ll enter the operating room. They’ll try to disrupt the procedure.”

“Flynn, I’ve got to ask you, are you maybe broadcasting to them right now? Can they listen to you?”

“I assume so, but I’m not telling them anything they don’t already know.”

“I hope you aren’t.”

“Doctor, we’re done,” he said.

Dr. Kampmann had gone, but two nurses came and set up Flynn’s vital sign leads and IV, then wheeled him down another bright corridor and into the operating room.

A warm sense of calm enveloped him. Dr. Kampmann had told him there would be no tranquilizer in the IV, but obviously that was not the case.

“Flynn, can you hear me?” Dr. Kampmann asked, upon entering the OR.

“Yes.”

“Do you feel any nausea, any dizziness at all?”

“None.”

They moved him into a bed that was completely surrounded by equipment. This was his second hospital visit in three days, and also the

second in his life.

What seemed like only a moment later, he was coming back to consciousness.

“Can you hear me, Flynn?”

“Yes, I can.”

“Do you know who’s speaking?”

He looked toward the green-swathed face that was peering at him. “You sound like Dr. Kampmann.”

Kampmann looked past Flynn. “He’s back with us, John.”

“Hey, there, Flynn. We have both incisions opened, and I’m looking at the foreign object on the left.”

“Mac—Frank—are you here?”

“I’m here, Flynn. Back over here.” Flynn glimpsed a green-gloved hand raised above an array of monitors.

“Flynn, can you please begin counting backwards from a hundred?”

Flynn found that counting backwards was harder to do than he’d assumed. He had to think carefully, and he was making mistakes.

“The first object is out,” Dr. Shelton said. “It’s a silver disk. There are cilia attached to it. A manufactured object.”

Kampmann was looking at him. Flynn could see the questioning frown.

“Doctor, the objects need to be in sealed containers. This is very important.”

“Sealed, yes, we can do that.”

Flynn became aware of a distant, repetitive sound. “Is that a Klaxon?”

“Fire alarm,” Mac called. “That’s what it sounds like.”

Morris was making his move, no question in Flynn’s mind. “Can the doors be locked?”

“Nurse, see to it,” Shelton snapped. “Flynn, please resume your count.”

Voices rose outside. Soon, there came a smell of burning plastic. Then,

over the intercom, “Doctor, can you close?”

“I need twenty minutes.”

“They’re asking us to evacuate the building. It’s on fire lockdown. It’s not a drill.”

“I can’t pull out—I have this patient’s head wide open.”

A nurse said in a shrill voice, “Smoke entering by the vents.”

“Isolate us,” Dr. Sheldon snapped. “Shut down oxygen.” Then, more quietly, “Oh, God.”

“We have fire in the ceiling, Doctor!”

“Closing up.”

“Is it out yet?”

“One is out, sir. One is still in situ. But I have to pull out.”

Flynn could not allow that. Whatever might happen, if Shelton stopped now, he doubted there would ever be another chance like this.

“Do not pull out, Doctor. This is a critical emergency.”

“You got that right.”

“Do not!”

There no reply. Was he still working? Flynn couldn’t tell.

Hammering came on the door. “Fire department, open up!”

“For God’s sake, tell them the patient’s brain is exposed!”

“Is the second one out?”

Shelton didn’t answer.

“Mac, help me here! Make him do this!”

A long stream of burning plastic came down from above. One of the nurses broke out a fire extinguisher and began attacking the flames as best she could.

Mac came pushing his way through the equipment. “Doc, you gotta do this. It’s a national emergency.”

“It’s one man.”

“The man is important, Doctor. I think you know enough to understand that.”

Screams rose outside. The room grew dim. Black smoke seethed along the ceiling, shot through with deep red flickers. Once again, fire from above. Revealing, too. Morris had not felt able to send a team into a crowded building. Worth remembering.

“Where are we?”

“I told you I am closing up, whoever you are.”

“No, Doctor,” Mac said, “I’m so sorry, but you are finishing.”

“Jesus Christ, put that down!”

“Mac, what’re you doing?”

“You do it, Doctor, or she’s gonna be wearing a second smile.”

The nurse Mac had grabbed was limp with shock. Mac’s knife gleamed at her throat.

Every particle of honor and decency in Flynn’s body rebelled at the idea of doing it this way, but he saw no other choice.

A group of burning ceiling tiles fell into the operating room. One of the nurses screamed, tearing at her burning scrubs. Somebody else threw the doors open. Flynn was aware of great, dark shapes moving in the murk of smoke. Firemen. Then he heard roaring and saw that they were training a mist nozzle on the ceiling, enough to drive back the flames for a few more seconds.

“Okay, it’s done. We’re done.”

“Let me see them. Both of them.”

“Here, you, let her go. I am so sorry, Sylvie!”

“Who are these people, Doctor? Because this is insane—what’s going on?”

“I don’t know. Somebody get this patient out of here. He’s closed, he can be evacuated.”

“Give me the objects,” Flynn said.

Shelton thrust the two bottles into his hands. These things were very different from the one that had been pulled out of his leg. They were the size of tiny buttons, their upper surfaces gleaming. Hanging down from their lower surfaces were long streams of cilia, so tiny and numerous that they looked like tendrils of smoke.

As he was wheeled out amid scores of firemen, nurses, and other patients under evacuation, Flynn watched mesmerized as, again and again, the two objects threw themselves against the glass walls of the bottles they were imprisoned in. Finally, they pressed themselves up against the glass like two mean little eyes and remained there, as close to him as they could get.

Waves of dizziness kept sweeping over him. Both doctors stayed with him on the fire stairs as he was carried down on a narrow portable chair.

“Mac,” Flynn said, “I need you.”

They had reached the lobby.

“This man needs recovery time,” Shelton said to nobody in particular. “I need to get him into another surgery center.”

“Mac,” Flynn said, “you take these. I want you to go back to the parking structure and stay there. Go deep as you can. If it has a subbasement, use it.”

“You think that’ll stop the signal, because—”

“I have no idea.”

“Flynn, Morris is gonna come after me. You know it, and I know it.”

He had a point. “Tell you what, leave them in the car. Then—Doctor—where are we going?”

“Building Forty-two. You’ll be in recovery there for about four hours.”

“So put them in the car and come on foot to Building Forty-two. Get away from them, and stay away from them.”

They went out into a throbbing forest of fire equipment, dozens of vehicles choking every inch of space around the building. Their pumps

roared like an angry ocean. Brass and red paint gleamed in the sun. Two companies had extended their ladders to the roof, and pulsing, sweating hoses ran up both of them, managed by firemen at the midpoint, who fed hose to men on the roof.

“My patient is immediate post-op!” Shelton shouted. “I need him moved right now.” He added to Flynn, “And I don’t want to see you again, ever. You let me know where to send your records, I’ll be glad to do that. But I do not want you anywhere near me or this medical center or any of its personnel ever again.”

As he was lifted into an ambulance, Flynn saw two bodies in bags, lying on a sidewalk streaming with soot-blackened water. More ambulances were lined up, and he could see personnel with burns and other injuries crowding toward them.

“This patient is a just-closed brain,” he heard a nurse say as the ambulance doors shut.

He was driven only a few hundred feet, and in minutes was in a second recovery room, this one jammed with patients, many of them wearing the same sort of turban that was probably on his head.

“Sir, we need to do a neuro check on you now. Can you tell me your name?”

This he had not expected. He couldn’t leave his real name. He wasn’t an official admission to the hospital. He did not remember which aliases he might have in his wallet. He’d just been through too much to do that with any hope of accuracy.

“Sir?”

He tried one of them. “William Haffner.”

“Mr. Haffner, you don’t have a bracelet.”

“Fell off, I guess.”

“What day is it?”

“Wednesday.”

“Can you look at that clock and tell me the time?”

He looked up at the wall clock the nurse was indicating. “Four fifty-three.”

She started to ask him another question, but a page caused her to go hurrying off. A patient just evacuated from neurosurgery was having a heart attack, and chaos was erupting.

Flynn realized that he was done here. The next thing to happen would be that they would try to find him in the system, which was going to create a problem. Perhaps he should have anticipated that Morris would use this particular technique, but he hadn't. He'd been thinking exclusively in terms of an entry being made.

He had to find Mac, get out of here, and get out of this hospital complex as fast as possible. But right now, that was a problem. He was wearing briefs, a hospital gown and a thick head bandage. If he tried to leave like this, he would certainly be stopped. His wallet and other personals were in a locker on the burning surgical floor. No chance of retrieval.

Like the other recovery room, this one had lockers, and many of them were full. He might be able to pop one of the simple combination locks quite easily, but how would he know what he'd find inside? Women's clothes, clothes that didn't fit, the ID of a person who looked nothing like him. He might have to pop a dozen of them, even all of them. The minute the nurses noticed him up off his gurney, they were going to come running.

From where he had been left, he could see the big double doors that led into the room. That wouldn't be the right direction, not for what he needed to find.

As best he could, he turned. The door leading out in the other direction was narrower, not a public passageway.

When opportunity appeared, hesitation was always a mistake, so he

pushed himself up off the gurney, waited for the dizziness to subside, and went through the door.

The staff room was about twenty feet long, with stacked lockers on both walls and a well-stocked break bar. The lockers were identified only with last names, and locked not with hospital-issue locks, but with whatever the nurses had brought in themselves. He looked from one locker to the next, trying to guess which one might conceal male clothing, and also might have an easy lock.

There must be a security problem here, though, because the locks were good quality.

No, this wasn't going to work. He'd have to get as far as possible dressed as he was. When he headed for the exit door at the far end of the room, though, he got a break, a door to a janitor's closet. Even better, it wasn't locked. He stepped in and turned on the light. There were six steel shelves of cleaning supplies, a number of mops and other equipment, and some buckets. There was also what he was hoping for, which was a steel locker. In fact, there were three steel lockers. Two were locked with hospital-issue combination locks, the third with an even simpler one, which had probably been bought off the hardware shelf at a drugstore.

Flynn did it first, and was rewarded with a woman's slacks and sweater and a pair of platform shoes.

He did the second one, but it was empty.

The third had the worst lock, and it took time to work. As he was testing its drops, counting from click to click to determine the combination, he heard voices outside.

"She said he came this way."

"Shit, he's gotta be in the stairway."

"Did you contact his doc yet?"

"How? You know who that would be? We got a John Doe here, and he's

a damn head case.”

There was a faint click as they went through the door to the stairwell Flynn would shortly need to use himself. They’d be back soon, he guessed, once they realized he hadn’t been seen in the lobby. Almost certainly, they would do what they should have done in the first place, and search this room.

He found himself looking at a gray sweat suit. On the floor, a pair of track shoes. Even better, the suit had a hood.

The occupant of the locker was soon the proud owner of a hospital gown, and Flynn was in the stairwell, the hood pulled over his head.

He’d gone down a flight when he heard the tramp of feet. More than two people this time, some of them in heavy shoes. They were bringing security with them. Not taking any chances with a brain case.

Moving quickly, he ducked into the nearest fire door. He found another break room and another janitor’s closet. He went in and got a bucket and mop, then went out onto what turned out to be an ICU floor.

“Hold it, this is a sterile floor,” a nurse said. She was wearing greens, a hair covering, and bulging white shoe covers. All the nurses in the station turned toward him.

“Sorry, I’m due on the cleanup right now.”

“Get out of here, then, or I’ll have to write you up.”

“Sorry, ma’am.” He went to the elevator bank and waited for what seemed like the better part of an hour before an elevator finally appeared that had room in it for a janitor with a mop and bucket. He remained hunched under the hood, careful not to reveal the bandage.

Finally, he walked out through the jammed lobby and into the chaos that still filled the street. Fire ladders were being brought down, and hose pulled out of the neurosurgery building. Its front was streaked black with sooty water. All the windows on the top floor were shattered, the interior behind them a blackened ruin. Yellow barrier tape blocked the lobby doors, but a

man with a mop and bucket went unnoticed as he walked through, heading toward the entrance to the parking structure.

He had to find Mac and get out of here and do it fast, or there was no question in his mind that the hunters were going to pick up his scent again.

He went down into the dripping, water-soaked darkness of the structure. In light, he might see a shimmer as the aliens approached him. In darkness, he would see nothing.

He stepped out onto the highest floor. The only light came from a single emergency lantern, its battery-powered glow almost completely faded.

“Mac,” he said into the echoing silence, “you here?”

There was no reply.

CHAPTER NINETEEN

FLYNN HAD worked his way down to the lowest level he could enter. The two levels below this were flooded from the fire. It was on this level, also, that their rental car was parked. The silence was broken only by the echoing sound of water dripping from below. It was much darker here, too dark now to see any sign of the aliens at all. The emergency lighting was failing fast.

He was more helpless here than he had been on the other levels. The sound of the aliens' breathing was going to be drowned out by the dripping water. He could not expect to catch their distinctive odor over the stench of the fire, either. It was no place he wanted to be.

"Mac?"

Faintly from along the line of cars, he heard a clattering. He listened. The clattering had not been there a moment ago. Its source was about ten cars down on the right. He moved a little closer. Listened again. There could be no question. The sound was coming from the black Chrysler he had rented.

"Mac?"

No reply. He took a step closer. The rattling became louder. Was it Mac, somehow trapped in the car? And why make a noise like that?

"Okay, buddy, I'm here, I'm gonna get you out." He went close to the car, cupped his hands, and peered in the passenger-side window.

Something hit the glass so hard that it cracked. He jumped back, to see

two gleaming silver buttons clattering against the inside of the window, which was already cracked in four or five places, as if it had been hit by stones that weren't quite powerful enough to break it. As he watched, all but frozen with surprise, they crashed into the window again and again, hitting it so hard that the car rocked.

The glass bulged. Pieces of it shot past his head.

He had exactly one choice. He ran as he had never run before, down to the far end of the floor and into the stairwell. He slammed the door, but it wouldn't shut properly. He ran up to the next floor and the next, then out onto the street level of the structure.

He threw open the door into the brightness of the exit lanes. A figure stood by the pay barrier, darkly silhouetted against the light flooding in from outside.

“What kept you?”

“Mac, run!”

He dashed past him and heard him come following, his shoes slapping on the wet pavement.

“What the hell?”

“They're out of the jars, they're busting out of the car, and I don't know their range.”

“Aw, man!”

They ran down the middle of the street, finally stopping only when they reached the lobby of a building that hadn't been affected by the fire or the patient rescues.

Flynn was so winded when he stopped that he had to bend full at the waist and gag for air. Mac came up from behind. He was silent, breathing hard, too winded to speak.

“Keep going.”

They dropped back to a steady trot, stopping again only when they

reached a bus shelter. They waited for ten minutes, sitting hunched in the shelter.

“Were they doing that when you had them?”

“They were flying around in those jars so fast, you couldn’t see them. I was lucky to get them to the car. I got the guns, though. Barely.” He produced the Bull from the back of his waist.

Flynn took it. “This won’t help now.”

“How far can they go?”

He shook his head. “No idea.”

He punched in the secure exchange, listened to the recorded warning, then keyed in Diana’s number.

“Mac, where’s Flynn?”

“This is Flynn. I’m sitting at a bus stop in Houston with Mac. We need transportation, it’s as urgent as hell, and I don’t want to stay on this line or any line.” He told her the street. “Now, listen up. There’s somewhere I need to go. I want you to smooth the way for me at Deer Island.”

“Who do I call? What do I say?”

“Call the director. Tell him I need carte blanche on the island for at least a couple of days.”

“What’s going on?”

“It has to do with those blocked calls. It’s important, maybe critical.”

“Please tell me more, Flynn.”

“Not on this line.”

“Flynn, please.”

“When I get to a pay phone, I’ll fill you in. Also, I’ll need to talk to Geri. Right now, just do what I need you to do. And I have no ID. It was lost in the fire.”

“What fire?”

“You watch CNN?”

“That hospital? That was you?”

“We’ve got plenty to talk about, believe me.”

“I’ll get everything set up.”

“Fast as you can.”

She was true to her word. It was not ten minutes before a Houston Police Department squad car rolled up and collected them. The officer had obviously been told not to talk, because he remained completely silent during their drive to Ellington Field. It was a training facility and also the headquarters of the 147th Reconnaissance Wing, which flew Predator drones in the Middle East via satellite uplinks.

The guard station was manned by serious security. Understandable, given that a war was being fought in this quiet, sunny place.

The cop stopped and rolled down his window. One of the security personnel came forward and leaned in. She was well trained and on her game; Flynn could tell by the way she used her eyes.

“Identification, please.”

Flynn turned toward her. “I’m Flynn Carroll.”

She stared at him. Hard. “Okay. I got it. Let me clear you ahead.”

A moment later, a guard vehicle pulled up in front of them. They followed it across the base.

“Mac, planning ahead. How much cash do you have on you right now?”

“Couple thousand bucks, probably.”

Mac still ran a cash economy, which would shortly prove useful. Flynn watched the low buildings of the base. There was little activity. Once, a couple of airmen walked into the Noncommissioned Officers’ Club. Shortly, a civilian sedan fell in behind the police car.

“Phone,” he said to Mac, holding out his hand. He called Diana. “We’re on our way to the flight line, and what I believe to be an offended general just pulled in behind us.”

“That’d be General Stevens.”

“Okay.”

“He’s pissed off as hell. He wants to yell, I guess. I can make him disappear.”

“No, it’s fine. Just so you know. If he goes off rez, I’ll call you back.”

They reached the Air National Guard building, a structure in need of a bit of paint. Once again, there was little activity, which was all to the good. Flynn got out of the car and told the cop to go back to Houston. The general stopped also, got out of his car, and came hurrying over.

“Excuse me, I understand you two people think you’re taking my plane. I’m afraid it has a prior commitment.”

“Good afternoon, General,” Flynn said.

“I have no intention of letting unidentified civil service bureaucrats take this aircraft. If I have to, I’ll call the Secretary of the Air Force.”

“Bring your driver.”

“My driver? What the hell are you talking about?”

“General, you’ve got two things to do right now: The first is to come in here with me and find us both uniforms. The second is to put on our clothes and fly to Langley AFB.”

“Langley! What the hell for?”

“Because you’re receiving an order from somebody who is empowered to do that.”

“*You?* You’re a—I don’t know what you are. I need some identification.”

“No, you don’t.” He glanced toward the driver. “You. Find us uniforms. Do it now.”

“You can’t impersonate air force officers!”

“General, you have no idea what credentials we carry. But you listen to me now, and you listen good, because if I have to say this again, it’s going to be to a soldier with no stars on his collar. Do you understand this?”

“This is extremely irregular.”

“What you are dealing with right now, sir, is the single most urgent national security matter that you have ever encountered in your career, or will ever encounter. Do you understand this?”

“I have no idea who you are or what you’re supposed to be doing.”

Again, he said to Mac, “Phone.” Then, to the general, “If I have to make this call, your career is over.”

They went eye to eye. The general was pure determination. Then they really connected, and Flynn watched a familiar surprised confusion come into his face. An instant passed, and he took a step back and cleared his throat.

“Very well,” he said. He cleared his throat again.

The driver reappeared, and he and the three of them changed in an office. The general was pretty well swallowed in Mac’s clothes, but the driver, who was a tall kid, did all right with Flynn’s sweat suit.

“Have a pleasant flight, gentlemen.”

“Thank you,” the driver said. The general glared at him.

After they went out onto the apron, Flynn told Mac that they were taking the general’s car. “We’re going to Hobby.”

Mac didn’t ask any questions, which was good. He was becoming more efficient at this.

The general’s Buick stood where it had been left in front of the building. It was unlocked, but they had no keys to start it.

Mac used to be better at wiring cars than he was. “How long for you to wire it?” he asked.

“They’re more complicated than they used to be, and it’s not something I do a lot of anymore.”

“You did good with my dad’s Mercedes. Why don’t you give it a shot?”

“You’re smarter, you do it.”

“Don’t undersell yourself, you’ll be faster.”

Mac went under the dash and had the engine turning over in four minutes. To anybody watching from above, they would have appeared to linger in the parked car a little longer than normal, but hopefully not long enough to arouse suspicion.

On the way to the airport, Mac asked, “May I know what we’re doing?”
“Changing the world.”

CHAPTER TWENTY

AS THEY drove off the base, Mac was unusually quiet.

“You trying to come up with a question that makes sense?”

“I guess I am. What I’m thinking is you might’ve gotten those two guys killed just now.”

“I agree.”

“You sent them in harm’s way without so much as a prayer book.”

“I’m not sending them into any more danger than I’m going to take on myself. Less, probably.”

They drove on for a while. It was six fifteen, and Houston’s notorious traffic was just that—notorious.

“How much have you lost on this so far, Mac? What with your house and all?”

“Four million.”

“So, maybe a million.”

“No, it really is four. The paintings were originals.”

“They’re forgeries.”

“That is not true.”

“Manet was right-handed. Your forger painted with his left. Who were you planning to sell them to, billionaire morons? I didn’t know there were any.”

“Gifts for *drogos*.”

“So, a grand for the paintings. Tell you what I’ll do. I know how hard you have to work for your money.”

“Which you do not.”

“I do not. So I’ll rebuild your place for you. As long as you don’t cheat me, I’ll pay the bills.”

“My accountant—”

“He outta jail?”

“Four more months.”

“Any contractors on the outside, but not on the lam?”

“I’ll need to check.”

“We’ll use my accountant. My contractors.”

“I get that.”

Flynn watched the passing cars and kept his eye on the low, thick clouds, looking into their faint glow for any sign of a shadow. Mac sat with his knee up against the dashboard. His long face was usually ready to crinkle into an affable smile, but that easiness was gone now. He, too, stared into the empty night.

“I miss my dogs.”

“Those weren’t dogs.”

“Yeah, I guess not. Alien animals.”

“Those were people who’d been genetically mixed with dogs.”

“Oh. That must be why I liked them so much. I like people.”

“Then you like Snow Mountain, too.”

“Only see him once in a while. He liked Mozart. He liked the Stones. I used to hire bands and quartets from over at Sul Ross University to come play for him.”

“What did they think of him?”

“The kids? Nothing. They never saw him. But he was there.”

“Who did they see?”

“I’m more of a narcocorrido type of guy, so, nobody, basically.”

He tried to imagine the scene, a string quartet or a rock band set up in Mac’s house pasture, playing to the night, with a tiger way back in the dark somewhere, listening blissfully.

“I guess they thought they were playing for a rich, cantankerous eccentric, then?”

“I guess they did. I never really thought about it. There’s a lot of eccentricity out in our neck of the woods, as you know.”

“All too well.”

“I think it’s the Marfa Lights. They make us crazy.” He paused for a moment. “I want to go home, Flynn. I’m not cut out for this.”

“I wish it was safe for you, buddy. I wish to God it was. You stick close for a little while longer, I’ll make it safe. I promise you that.”

“When I went back there and saw my house burning up, I really, seriously thought about killin’ your sorry ass, Flynn. But I love you, goddamnit. You’re a good friend and always have been. So here’s what I think: Let’s kill ourselves a damn alien and do it soon.”

“I have a plan.”

“You always do. Only remember that only some of ’em work. Just never forget the freight train.”

When they were kids, Flynn had devised a plan to slow down a freight so they could hop it more easily. The result of their attempt had been a fifty-three-car derailment.

“I believe Eddie set that one up.”

“Your idea, Flynn. Your idea.”

Flynn had been way overconfident, thinking the engineer would notice the switch signal and stop. He didn’t notice a thing, and rolled the whole consist out onto the siding at forty miles an hour. Nobody was hurt,

fortunately, but seven thousand chickens had escaped into the night.

That was then, in the delicious, lingering summer that had been their boyhood. This was now, and this was a time of storms.

They parked and walked silently to the terminal. As they exited the parking structure and were briefly exposed to the sky, Flynn felt a tremendous sense of vulnerability. If only he could know for certain how capable of following him and reinserting themselves the implants were. He knew now that nobody had been there to insert them in the first place, which was why he had no memory of it. They'd been released at some point, probably when he was at the Miller place, and entered on their own. He recalled feeling a sudden, sharp headache there, just as he was leaving for Wright-Pat. It had passed quickly and he'd thought no more of it.

He remembered the old Hobby terminal from his childhood, flying in here with his dad to watch him do his business with the big oil companies downtown, which chiefly consisted of making sure they were reporting his royalties accurately. It was still a battle, but Flynn had others to fight it now.

"We need to find a pay phone, because Diana's going to have to get us on the plane from her side of the line."

"I've got plenty of cash."

"We're both packing heavy heat and have no luggage, and I have no ID. And what happens when you show your license?"

"Depends on which one."

"You have more than one on you right now?"

"I've got seven on me right now."

"Give me one, and we can buy the tickets."

The ticket counter was empty. "Two for Dayton," Flynn said.

"Credit card and ID, please," the agent replied, standing up from her stool and going to her terminal.

"Cash," Flynn said. He handed over the two IDs.

She looked at them, blinked, and looked up. “I could give you military. You got air force IDs?”

Mac pointed a thumb at Flynn. “We don’t have those with us, because this gentleman here is a professional fool.”

She smiled, then looked again at the driver’s licenses. “Are you two twins?”

“Yes,” Flynn said.

“And in the air force together. I think that’s cool.” Her smile widened. “I’ll write you up military—that way you won’t have to bicker. I know how twins like to bicker.”

A few minutes later, they had their tickets on the last flight out, a 9:20 through Atlanta.

“I don’t look a thing like you, Flynn.”

“They see a lot of people. This time of day, they’re looking right through you.”

“You’re one of the most hideous men I’ve ever seen. I’m very insulted.”

“Mac, you know what you look like? You look like a wizened, shifty-eyed cowboy who got shrunk by too much exposure to the sun.”

“You realize how much of your height is in that neck? My dogs mighta been part human, but I wouldn’t be surprised if the aliens didn’t start you out right in your mother’s womb, and make you part turkey.”

“You need to quit using that shoe polish or whatever it is you’re putting on your hair. Spring for a dye job.”

“If I get my hair dyed down in Marfa, everybody in West Texas is gonna know.”

“You look like somebody pushed you up a chimney.”

“Women happen to go for my hair.”

“Women only go for you because they find your criminal ways exciting.”

“Yeah, they do get off on murder stories.”

“Don’t tell me that. Then I’ll have to tell Eddie, and he’s gotta question every damn one of ’em.”

“Okay, so I didn’t tell you.”

“Let’s find us that phone.”

“Use my cell.”

“Give it to me.” He removed the SIM card and handed it back. “I’ll keep the card for now.”

Mac said nothing. He understood perfectly well what Flynn was doing, covering their tracks. This was also part of the way he conducted his life, whichever side of the law he happened to be on at any given time.

“We oughta get us some throwaway cells.”

“You will find that they don’t sell them in airports.” He located a pay phone and dialed Diana’s home number directly. He did not go through the secure network.

It rang once, then twice, then a third time.

He hung up.

“She’s not there?”

“Three rings. Our prearranged emergency signal. She hears that on her landline, she knows there’s big trouble.”

“I thought we were out of trouble.”

“We’re not out of trouble.” He dialed again. This time, she answered midway through ring one. He listened as she accepted the charges on the call.

“What do you need?”

“Back door through Hobby, then I need to see General Sam Dickerson at Wright-Pat. We’ll be landing in Dayton at three this morning. I want to see him at seven. Still no ID and no money.”

“Can I get some kind of an update, Flynn?”

“We’re alive.”

“I’m glad you are, because I thought Morris had you.”

“I thought he had you.”

“Why?”

“The way I learned that you’d returned to Washington was from him.”

“How could he know my movements?”

“He figured it out. Not too hard, though. Where else would you be going except to your safest place?”

“I need to be sure we’re secure here.”

“You got that right. Is Geri still with you? Because I have a question for her.”

“She’s always with me. In my office right now. I’m sitting in my suite, wishing I were alone.” He could hear the crackle of tension in Diana’s voice.

“Trouble?”

“She doesn’t sleep, ever. She just sits there, watching me. She doesn’t read, watch television. Hardly eats. Just stares.”

“She’s scared.”

“I think she’s absolutely furious about what happened out there. She considers us dangerously incompetent, and she wants in the worst way to go home.”

“Put her on.”

A moment later, he heard Geri’s voice. “Yes, Mr. Carroll?”

“You know what a tracking implant is?”

“Yes.”

“Two of them were removed from my head today. They seemed to have some sort of an ability to move on their own.”

“They do. Once they’re synched to an individual’s genetic identity, they can be released and they’ll find their target on their own.”

“How much range do they have?”

“Range? You mean, how far can they broadcast a signal?”

“No, how far away do they have to be before they can no longer find their

intended host?”

“Far. Ten, twenty thousand miles.”

“All right. How can they be destroyed?”

“Heat above two thousand degrees.”

“How about blowing them up or smashing them?”

“They’re holographic. Even a small bit of one will retain the functionality of the whole.”

“What about containing them?”

“With things you manufacture? Some of your safes might work. I’ll look into it.”

“Unfortunately, we didn’t understand their capabilities and put them in a jar.”

“That wouldn’t work.”

“It didn’t. When I last saw them, they were in the process of breaking through the glass in a car window. We ran. Within fifteen minutes, we had transport and were ten miles away. I’m now twenty-two miles from the spot where I last saw them. What’s my exposure?”

“All of this was in populated areas?”

“Yes.”

“It’s possible that they’ve lost you for a while.”

“How long?”

“They’ll be doing a grid search right now. Your advantage is the populated area. They’ll need to get pretty close to you before they can detect you against all the background noise.”

“Listen, Geri, we sort of know each other.”

“I would say we do.”

“So I need to give you some friendly advice.”

“And what would that be?” He heard the rigidity that had come into her voice. She was the authority figure here, at least in her own mind.

“We’re not incompetent. Just uninformed and technologically backwards. Forcing us to use only our own locally produced equipment is tying our hands.”

“You threw my pulse weapon onto a roof. My weapon, registered to me. What if somebody tossed your gun away? You’d have to report that. You’d have to take a reprimand.”

“I’m sorry about that, but it didn’t work, and that was dangerous to all of us. But some things do work. Those implants, for example. I’d love to be able to get something like that into Morris. And the disks. So I want to repeat—we need a disk.”

“That’s all gap-distant technology, meaning that your science is so far behind on it that you can’t understand it even if it’s explained to you. Exporting technology like that for any reason is highly illegal, and licenses just do not get granted. The latitude for abuse is too great, not to mention the cultural disempowerment that’s involved. Scientists who see something so potent and so advanced that they can’t even begin to understand its most basic principles, lose hope. They become scavengers.”

“Look, your technology is so advanced—the stuff that works—that this one guy is potentially more powerful than all the military forces on Earth.”

“He has vulnerabilities.”

“What are they, exactly?”

“One disk and no ability to resupply without letting the main body of biorobots know where he is. He’s a full biological running a squadron of biorobots who know nothing about what’s happening on Aeon, and they must not find out, or he’s going to lose control of them. He can’t go back. What he has is all he’ll ever have.”

“That’s true now, but what about next year? The year after? We’re talking Cortés taking the Aztec Empire with five hundred Spaniards. You know that story?”

“It’s a great myth that higher ethics follow scientific advancement. Lower planets are vulnerable.”

“Morris and a few hundred robotic entities could end up owning this world, so I have to tell you, I don’t think your scruples matter just now. Earth is on the line, so *give us what we need.*”

“Flynn, the truth is that we don’t have the resources.”

“Not one spare disk? A couple of implants?”

“Getting things off-planet is the problem. All of our movements are resisted, and as far as Earth is concerned, we must not be followed here by the main body, as I said.” She stopped. He heard a swallowed gagging sound that told him she was fighting back emotions of great power.

He realized, really for the first time, how much courage it had taken for her to come here.

“Just do what you can.” He hung up. “Let’s go,” he said to Mac. “We’ve got a flight to catch.”

Diana had done her administrative work well, and they were escorted through TSA security by the station supervisor. As they stepped away toward their gate, she saluted them.

“What’s that about?” Mac asked.

“She’s probably been told we’re on some sort of crucial mission.”

“True enough.”

The plane was crowded. Given what Geri had explained to him, that was a good thing. As best he could, Flynn leaned back, forcing his substantial frame into the narrow economy-class seat.

“You know what their greatest problem is?”

“Whose?”

“Aeon’s. They didn’t just invent a new life-form, but one that’s also stronger, faster, and more intelligent than they are. Their biorobots are an evolutionary leap, and they’re going to replace their creators. What’s

happening to the people of Aeon is what happened to the Neanderthals. A better species is pushing theirs aside.”

Flynn thought, *And maybe ours, too. Maybe a lot of species.* How ironic that a civilization far away and so deeply hidden in the vastness of space had created something that would turn out to be such a scourge right here at home.

He was a cop, though, not a soldier—at least, not yet. Right now his job remained what it had been from the beginning: Get the lawless element under control. Contain Morris and roll up his operation.

The plane flew on, as did Earth on its mysterious journey, each bearing its cargo of innocent lives into an uncertain future.

CHAPTER TWENTY-ONE

THE MOMENT they entered their room at an airport motel, Mac fell onto the first bed he reached. He was snoring before he hit the mattress.

Flynn had gotten a sewing kit from room service and cut off his various bandages. There was swelling on his scalp, as well as an angry red knot at the center of the incision the doctor in Fort Stockton had made. Could be the beginning of infection. He'd keep a close watch. Next, he went into the bathroom and stood in front of the plastic sink. He took a long look at himself in the mirror. Stone bald, he looked frightening, no question about that. The surgical wounds were held together by gleaming staples, two in each incision. He was way too close to Frankenstein.

He lay back on the empty bed, wondering what the future held. Morris had to guess that he'd go to Deer Island. Would he also come? Of course he would.

He slept a shallow, worried sleep. Every sigh of breeze, the tapping of a tree on the bathroom window—any slightest sound brought him instantly awake. He hugged his gun like the life preserver that it was.

They got up at six to a room service breakfast, which they ate in silence, the way soldiers did before a fight. The trip to Wright-Pat was a familiar one, and once again, Diana had paved their way past the guard post.

Flynn knew his way around Wright-Pat, of course, and they were in

General Dickerson's office at exactly seven.

Dickerson was younger than Flynn had imagined he would be, more the age of a colonel than a general. He had the easy manners of a man used to command, and the contained watchfulness of somebody who knew more than a few secrets. When Dickerson smiled as he crossed his large office, Flynn knew immediately that care was to be taken here. This man could be hard and he could be difficult.

"Gentlemen! The two mystery men. I'm curious as hell, I have to admit." His handshake was perfunctory, almost as if he had forgotten it even as he extended it. "Please, sit down." He hurried back around his desk, a wary officer manning a battlement. "So, may I know why you're wearing the uniforms of a service to which you do not belong?" The smile reappeared for an instant, and then was gone.

"We're trying to stay alive," Flynn said. "It's been hard."

"You're sure as hell beat up, Mr. Flynn. Or Colonel Flynn. I'm not sure what to call you."

"Just plain Flynn will do." He gestured toward Mac, who was hunched up in his chair like either a scared possum or a coiled rattler, take your pick. General Dickerson would never guess that this was a man who had played polo with human heads, or at least was willing to. "We're just a couple of cops from Texas, but we've gotten ourselves into a heap of trouble."

"A heap of it," Mac said.

"We need your help, sir. There is a flying disk—an alien craft—that is going to kill us if we don't shoot it down. Basically."

Surprise widened Dickerson's eyes, followed by a wary narrowing. "Are you nuts? How did you get in here?"

"Don't even go there, General, please. There just isn't time. I've had bodies autopsied in your facility here. I've incinerated them in the burn room. That airman you lost the other week—that was on my watch, I'm sorry to

say.”

“The need-to-know barriers are so high, I just didn’t know where to go with this when I was told you were coming.”

“We’ve got to cross those barriers. Officer Terrell and I have been working on this for a while. We’re trying to clean out a nest of rogue aliens without panicking the public. And we’ve gotten ourselves into a pickle. According to our counterparts in the alien police force, the leader of this criminal enterprise is a real psychopath. He’s aggressive as hell. Very frankly, General, it’s a battle to the death, and we’re losing.”

As if to himself alone, General Dickerson nodded. He closed his eyes. “I think you probably shouldn’t have told me a lot of that.”

“I need help. From you. Now.”

“What can I do?”

“You have a disk. We need to see it.”

“That might be hard.”

“If you stall for even a minute more, I’ll have you up on charges of high treason.”

The general held up his hands. “I’m not stalling. It’s just that we don’t have it here. I’m going to send you to another facility. We only have a little bit of this still here at Wright-Pat. Air Materiel does metallurgical and functional analysis, and we have the exobiology section you’ve apparently dealt with. But operations are conducted from another base entirely. You’ve probably never heard of it. Deer Island.”

Flynn gave no sign of the effect that name had on him. “No,” he said carefully. “We have not.”

“I’m going to send you there to meet Colonel Adam Caruthers and his team. It’s possible that they can help you in some way, but I can’t tell you that, because I don’t actually know what they do. Just that this is their baby. When the public says they see jets chasing flying saucers, those are the

colonel's boys.”

“Can they shoot one down?”

“Again, I’m not concealing anything from you when I say I don’t know. I’m not need-to-know on that information.”

“It’s dangerous for us to travel. Very dangerous.”

“It’s the only facility of its kind in the world.”

“Where is it?” Mac asked.

“Deer Island is in Long Island Sound.”

Mac started to talk, but Flynn motioned him to silence.

The general offered transport, but Flynn thought they were safer sticking to the crowded airlines.

On the way back to Dayton International, they stopped at a Target and bought civilian clothes. As autumn deepened, it was getting colder, so they got jackets as well as jeans and sneakers, and Flynn bought himself a baseball cap to cover his wounds.

In the rental car, Mac said, “I’m not a cop, and I’ll never be a cop.”

“Sure you are. You’re a cop, and a good one.”

“I don’t have that gene, I’m sorry.”

“I’ve read your DEA file. You’re as good an undercover as they’ve got.”

They rode on, Mac saying nothing further.

“Anyway, I know what you really do. I know you make a little on the side, but most in your sort of business do. It’s not blood money—that’s what’s important. I also know that you’re not rich like you make out. There is no Lamborghini in Marfa, for example. And your brother was no damn good and that broke your heart, and you didn’t screw Cissy Greene, but you did protect her from a very abusive father until she figured out how to fend for herself. I know you, Mac.”

“Aw, shit.”

“And I’m proud to.”

They flew in another blessedly jam-packed jet from Dayton to LaGuardia Airport in New York. On the flight, Flynn reflected on Deer Island. It had started out as a biological warfare research facility, but obviously its mission had expanded to include a major alien research center.

They had a layover at LaGuardia, and ate a quick meal at a Five Guys burger stop.

“I’m still bone tired,” Mac said, biting into his hamburger. “Feel like I didn’t sleep a wink.”

“You could go into the city, stay there until it’s safe to return home. Probably be okay holed up in a big hotel.”

“While you go in harm’s way alone?”

Flynn nodded.

“Nothing stops you. Nothing slows you down, even.”

“I need to get this bastard.”

“Mano a mano ain’t gonna cut it, my friend. You need an army of tough sonembitches who know how to work close.”

“When we are close, we are going to need a master sniper. As you know.”

“I’m not gonna get that seam. Nobody is.”

“Maybe not.”

“Definitely not. You don’t need a sniper. Not a human one, anyway.”

“Not entirely.”

“What’s that supposed to mean?”

“Maybe nothing. We’ll see.”

Mac knew Flynn too well to continue to question him. But after a moment, Flynn decided to say a little more. “Mac, I need to ask you something and tell you something.”

Mac raised his eyebrows.

“Have you recently had a headache? Bad, but it faded almost immediately?”

“I don’t have headaches.”

“Because I think I know how these implants go in. When I was leaving the job I did in Pennsylvania—it was a good haul, I got four dead—I got this fierce headache.” He paused, remembering the confident Flynn of those days. The great alien hunter. On that night, he’d actually thought that he cleaned up the problem. “Anyway, as I was driving out, I felt a terrific pain that started in the top of my head and radiated down into my face and neck. It was so bad, I thought I was having some kind of stroke. But then, just like that, it was gone. I think that’s when the implants went in, right under the skin and through the skull without leaving a mark. I think that’s how it feels. So have you had a headache recently?”

Mac leaned back and closed his eyes and thought. “No. Definitely not.”

“If you do, tell me.”

“I sure as hell will. I’m gonna go apeshit if I get something like that in me.”

“We can get them out. I’m living proof.” He thought of the objects racing back and forth in endless, ever-changing search grids, hunting him down.

They took a commuter flight up to Bridgeport. The moment they disembarked and entered the terminal, a tall, grim-faced man appeared, walking toward them. He was jammed into a dark business suit, his build and bearing broadcasting not only military, but elite military. He looked like a Delta Force operator crammed into civvies he didn’t really know how to wear.

“Gentlemen,” he said, “please come with me.” He turned and walked swiftly toward an alarmed door marked NO ADMITTANCE. He pressed a code into the keypad, opened the door, and stepped aside.

This was airport operations, where pilots checked in, filed their plans, then went out to their aircraft. The man led them into the supervisor’s office, which was small and windowless, with three metal chairs and a cluttered

desk. There was a picture of Governor Wade on the wall, a flight school diploma, and another picture of a man shaking the hand of what appeared to be a foreign dignitary.

“We’re going to borrow Mr. Reilly’s office for a few minutes, gentlemen. Please sit down.”

Flynn and Mac sat on two of the steel chairs. Their host, if he could be so described, took the third.

“I’m Adam Caruthers,” he said. “This is the first time in the history of this program that any outsiders have been handed off to me. May I see your identification?”

“Have you been briefed?”

He held out his hand.

Flynn reflected that secret bureaucracy was a labyrinth, full of dead ends and empty spaces. The empty spaces were between the ears of the bureaucrats.

“Colonel, I think you have been briefed, and therefore you know perfectly well that I’m not carrying ID at present, and you know why. Also, I don’t think you’re at the top of your chain of command, so I would suggest that you cease diverting from the order you have received and carry it out.”

Caruthers’s eyes stayed hard. Real hard. “Gentlemen, I’m going to tell you the real reason for the extreme secrecy we maintain.”

“We know the reason.”

He raised his eyebrows. “Do tell.”

“There are all kinds of aliens out there, and a lot of them do a lot of strange things, not just the ones we’re having trouble with. Like abducting people out of their homes, and the air force can’t do a thing about it.”

“That’s actually pretty accurate. It’s illegal activity, and we can’t enforce against it. As I understand it, you’re a specialized policeman who deals with matters like this, so maybe you can help us.”

Flynn said, “I deal with aliens who steal people and murder them, and do worse.”

“The ones we have had interaction with generally return people.”

“Fortunately, the group we’re dealing with is small. If we can eradicate them now, their numbers won’t grow. Like getting rid of a cancer while it’s still small.”

“I thought cops put bad guys in jail.”

Flynn said nothing.

“Perhaps we’d better go over to the island, Flynn. May I call you Flynn?”

“That’s my name.”

They walked down a corridor to the back of the terminal building. A short distance away, Flynn saw a helicopter sitting on a pad.

“Recognize that?” he said to Mac.

“I sure do.”

It was the same type of ultra-sophisticated chopper Morris had used during their first encounter, at Lake Travis near Austin. Back in the good old days, before he had the disk.

“I’m surprised that you recognize it,” Caruthers said. “It’s still a secret technology.”

“Except it’s sitting here on a helipad at a public airport, plus one was used against us by the alien we’re tracking. It happened last year outside of Austin.”

“The one that was stolen.”

“And destroyed, because we destroyed it.”

They got into the chopper. The pilot, wearing a black uniform with double lightning strikes on its patch, wore his visor closed. Normal enough, but Flynn would have preferred it to be open. As the engine whined into life, Flynn’s instincts were starting to alarm.

Inside the chopper, there was almost no sound. Unlike every other

helicopter he had flown in, this one's wing didn't pulsate, but rather moved smoothly. Therefore there was no characteristic chopping sound, but only a steady, high-pitched whine and the whistle of wind blowing past the cockpit canopy. The engine was entirely silent.

As Deer Island slowly emerged out of the haze of the autumn afternoon, Flynn examined the ground. The place seemed surprisingly familiar, and he wondered at once if he'd been here, but had his memory of it erased. There were hypnosis techniques that could do that.

He memorized the layout of the island, noting three clusters of buildings: one to the north that consisted of four structures, one to the south with two, and a more substantial main building.

They circled the main building, then dropped down onto a helipad across the narrow road that passed in front of it.

"We have a bit of a ride to our end of the island," Caruthers said. "We've been here only a few months. Our operation back at Wright-Pat was a good bit larger, but I guess downsizing's pretty much the order of the day."

"And Biology's at the other end?"

"Yes."

"Did you know Dan Miller?"

"Guy who got killed by those drifters in his woods? I knew of him."

"What did he do?"

"No idea."

They arrived at a cart shed and took an electric golf cart around the headquarters building.

The facility was, to be honest, a dump.

Caruthers seemed to read their reactions, or expect them. "Sorry we're not more impressive," he said. "I don't know about bio, but the hardware program has been in a holding pattern for years. Most of our contact is with the aliens popularly known as the grays. Contact, actually, is a bit of a joke.

It's hardly that. I think you'll find that alien species aren't exactly forthcoming about much of anything. They haven't told us word one about our disk, and we've had it for more than fifty years."

"We have the same problem. Our guys won't detail one of our own disks to help us. Our hope is that their disks work on the same principle as the one you have, and we can learn something from it, or even use it."

They arrived at a building even less impressive than the main structure. There was rust; there was flaking paint. Air conditioners jutted out of a couple of the windows. Beside the door was stenciled a number, 3-3-2.

"Where's Building 3-3-3?"

"That's Biology. South end of the island."

Flynn got down from the cart. He'd known the answer to his question before Caruthers said a word.

He felt a quiet sense of triumph, but instantly suppressed it. The job wasn't finished yet. One thing had changed, though, which was that he now—just possibly—had a chance to win this.

CHAPTER TWENTY-TWO

CARUTHERS USHERED them into a conference room. There were four men here: two in air force fatigues, one in a polo shirt, and one in a weathered suit.

“Gentlemen,” Caruthers said, “before we begin—” He cleared his throat uneasily. “Before we begin, I’d like to ask you to lay your weapons on the table.”

“No.”

“Excuse me?”

“You heard me.”

He smiled at his colleagues. “As you say. Gentlemen, these are our exoengineers. Officers Flynn and Terrell are working with a police force from a planet our exobiologists at Area Fifty-One have named Aeon. Now, here in our unit, we’re not familiar with this specific planet. But hopefully we do have some possible avenues of help for you.”

“I’m Dr. Evans,” the older man said. “These are my colleagues, Richard Dawkins and Martin Reese. Dr. Reese, will you begin?”

“Mr. Carroll, if I understand the briefing paper we’ve received, you have one of the most unique problems in the history of human–alien contact.”

“There are lives being lost, if that’s what you mean. We’re dealing with a murderous psychopath who has a disk, and we can’t get near the damn thing. We need to change that.”

“This liaison officer from this other planet—Aeon— isn’t being helpful— I mean, aside from not giving you a disk?”

“She’s answered some important questions, but no, in the end, she hasn’t been effective in assisting us to deal with this criminal.”

Dr. Evans said, “I find this whole thing amazing. You actually achieve developed, ongoing contact with beings from another planet, and it’s cops and robbers? Tell me this, what do they do? What’s the crime?”

“Wait, let’s back up just a minute. You make it sound like contact is rare.”

“It’s very rare. A few civilians. Some of them have published books, which you can read. A couple of politicians. Eisenhower, but he couldn’t make any sense of what happened.”

“And that’s it? That’s the whole story?”

“The whole story would take me a year just to begin. Suffice it to say that we started out by shooting at the first groups we encountered, and we should never, ever have done that. Of course, that’s a major secret.”

“I’m not concerned about your secrets. My only interest is getting help downing a disk that’s causing a lot of problems.”

Evans said, “Let’s roll the film, Colonel.”

Colonel Caruthers opened a laptop and a small projector, connected them, and turned out the lights.

A moment later, Flynn found himself looking at gun-camera footage. Old-fashioned tracers crossed the sky, moving toward what appeared to be a bouncing searchlight beam. Then blackness. The film ended.

“What happened?”

“This was one of our first shoot-down attempts. The plane came down filled with thousands of tiny holes. The pilot disappeared.”

“The gun-camera footage was intact?”

“This strip was intact.”

“This next strip is from the gun camera on the Sabre Jet of a pilot called Milton Torres. It’s from 1957. Take a look.”

The black-and-white gun-camera footage flickered and jumped. Something flashed past. A young male voice said, “Target sighted.” The sky whirled, clouds racing past. A disk appeared. It was difficult to estimate size, but the great, gleaming thing appeared to be huge, hundreds of times the size of Morris’s disk. It was also far more sophisticated, morphing and changing, almost as if it were a liquid. The voice resumed. “Target acquired.” A pause. A buzzer sounded. “Target lock. Target lock. Commencing firing procedure. Missiles armed. Preparing—” The object disappeared. A faint, under-the-breath comment: “Oh, shit.” Then, “Target lost. No target. Firing sequence abort. Abort.” Then another voice, “Return to base, FF245.”

The image flickered and was gone.

Dr. Reese said, “In 1947, General Curtis LeMay convinced President Truman to go to war with the aliens. Any and all aliens who showed up. Between 1947 and 1957, when we called a halt to the shooting, we lost a hundred and fifty-eight pilots and an even larger number of aircraft. During the Korean War, we lost more pilots and aircraft in our secret war here at home than we did over the Korean Peninsula.”

As Dr. Reese spoke in his precise, dry voice, Flynn grew increasingly aware of the fact that he wasn’t dealing here with the dynamic military engineering operation he had hoped to find.

“Right now, I have a man and his family out in Menard who are in imminent danger of being kidnapped and killed. I am looking at an entire town burned to the ground a few nights ago.” He gestured toward Mac. “This man has lost everything that mattered to him, burned out. I have lost my wife. Now, I am not dealing with some brilliant, huge civilization like I think you are. The grays. I am dealing with biorobots who are more like viral particles or a disease vector. They are controlled by a psychopathic alien. As far as I

understand it, they have just the one disk, and it's not the best. Potentially, they're vulnerable. What I am trying to do here is find a way to shoot down that disk."

Evans stood up. "I thought that's what this would be about. We've failed in that department. Your mission is futile."

Rage flared in Flynn's guts. He fought it and nearly lost, but finally forced himself not to deck Evans. Still, his mind turned to Eddie out there on the empty Texas plains with his new family, and to Mac, a helpless, proud rooster who would crow defiance to his last breath, and to all the victims—the cases that haunted a good cop, the ones where justice hung suspended.

When he spoke, his voice was mild. "We're not done, Mr. Evans, so I suggest you sit back down."

They had all been getting up. None of them stopped. They began to move toward the door. They'd done as ordered. Now it was time to escape the pain.

"Because I could tell the world about you people and your failure. There's nobody powerful enough to stop me."

Evans turned his liquid, sorrowful eyes on him. "We can get a kill order, you know. We can do that."

"Am I killable, do you think?" He brought his gun out so quickly that their eyes flickered. He slipped it back into his belt as smoothly as if it were silk.

"Tell you what," Caruthers said to his colleagues, "why don't we take them down? Let them see."

"See what?"

"The disk, Flynn. Maybe looking it over would be useful to you."

Now, this was better. This was what he'd come for. "Sure, let's have a look."

"All right, but first I have to insist that you leave the weapons behind. I can't take you into a sensitive facility like that when you're armed and we

aren't. If something walked out of there, it'd be my ass."

"You are armed, Colonel, speaking of your ass. You're wearing a compact pistol in an SOB holster. So don't tell me you aren't armed. Plus, Dr. Evans has what looks like a Police Special in the right-side pocket of his pants."

Silence fell, broken after a long moment by Evans. "He's good."

"They say that," Caruthers commented. Then, to Flynn, "I still can't let you go down there armed."

"I'm not going to draw on you down there or anywhere else."

"I don't know that. If you want to do this, there's no choice. I'm sorry."

Flynn glanced at Mac, then took out his pistol and laid it on the table. Mac did the same.

They followed Caruthers and Evans back into the corridor, then down a steel stairway into a basement.

"There's an elevator."

Flynn stopped. "An elevator? How deep are we going?"

"It's a couple of stories."

"I don't think this is a good idea," Mac said.

Flynn said, "If the things have any vulnerability, we might see it. If their disk has the seam that Geri talked about. If you could see it, see exactly where it was—"

"I can tell you right now that you're not going to find any seams on this thing. Anyway, it was built by the grays, not by your people. What if it's completely different?"

"Let's take a look."

The black door of the elevator had a glass porthole in it, and when it opened, there was a hiss of escaping air, which told Flynn immediately that this was a deep shaft, more than a couple of stories.

As the door slid open, it revealed a space little bigger than a closet. There

was enough room for only three people, and the three scientists went down first. From the sound of the lift and the amount of time involved, Flynn thought it was a drop of fifteen hundred feet. Unusual on an island, given that the water table was going to be at sea level. To build whatever was down there would have taken a lot of money and engineering skill. A lot.

The elevator returned again. Mac said, "Are you sure about this, Flynn?"

"No."

"Then I don't think we should do it."

Flynn did not reply, but he stepped into the elevator. After a moment, the much more hesitant Mac followed. The elevator whined softly as it dropped.

"Why so deep?" Flynn asked.

"I don't know," Caruthers said.

Flynn smiled. "Of course you do."

Caruthers shook his head. "You're a real paranoid, aren't you?"

"In our line of work, if you're not paranoid, you're not sane."

The elevator door opened onto a concrete corridor, dimly lit by old-fashioned incandescent bulbs in hanging metal fixtures. As they walked down the hallway, Flynn could hear a distant sound of flowing water, and the deep, throbbing hum of powerful pumps. They were far below the water table, and it must take a great deal to keep the ocean out of this place.

"Do you have any fail-safes?"

"In what sense?"

"The pumps. If they go down, this place floods, and fast."

"They can't fail."

"They're mighty durable, then. What about the power?"

"There's a reactor."

A reactor wasn't going to be used to power some godforsaken has-been program. Yet again, the mystery deepened.

They came to a wide steel rolling door. Caruthers punched a code into a

keypad beside it, and the door began to rise. Caruthers had made no effort to conceal which keys he pressed, and Flynn took note of them. He also noted that he was once again being underestimated. Always a useful bit of information to store away.

And then he saw it. Its skin was a deep silver, as if a thin layer of diamond covered the metal. It hung in the air, an oval so perfect that it was impossible to turn away from its beauty. He felt its life, as if it had a heart and a mind, as if it were a living creature.

“Flynn ... my God.”

The three scientists stood in a group, small beneath the bulk of the thing. It floated in absolute silence. In the center of its lower surface there glowed a single red light, and he thought it was an eye, and that it was looking into his soul.

“This was built by the grays,” Evans said, “or given life by them.”

“It’s nothing like what we’ve seen,” Flynn said. “This is like a—I don’t know—”

“A sacred object,” Caruthers said.

“A sacred being,” Flynn said.

Richard Dawkins said, “I’m the resident metallurgist. Let’s begin with the outer skin.” He gestured. “Come on over—it doesn’t bite.”

“We need to see under it,” Flynn said.

Mac strode over to it and put his hand on it, whereupon it folded inward like the wall of a tent. He drew his hand away and looked at it, leaning back. Then he touched it again, running his finger along it.

“It’s constructed like a kite,” Dawkins said. “The frame is balsa, the metal is basically tungsten, we think. It’s a tissue just a few hundredths of an inch thick. Interesting that it’s also the strongest substance known to man.”

Flynn was not interested in the metal. He bent down and went under it. In its center was a red light, glowing softly. “Does it work?”

“We’re not sure.”

“Mac, come down here.”

Mac crawled closer. “Doesn’t anything scare you?”

“Not this. Look along this surface—use those eyes of yours. See if you can spot a seam.”

They lay on their backs. Flynn pulled out his pocket LED flashlight and shone it along the surface. “See anything?”

“It’s featureless.”

“Take your time.”

“If this is a different model—”

“Keep looking.”

“Is it alive?”

Flynn moved the light slowly along the surface.

“Flynn, this isn’t a machine, this is a creature.”

“Keep looking.”

Evans called to them. “You guys still with us?” He sounded oddly far away.

“Wait,” Mac said, “roll the light back.”

Flynn moved the beam slightly.

“There. Got it.”

Flynn held the beam steady. “I don’t see a thing.”

“It’s there.” He reached up, extended a finger, then touched it. “See it now?”

There was the faintest indentation stretching away from Mac’s index finger, a line so narrow that Flynn wouldn’t have seen it on his own, not even if he’d had his nose up against the surface of the disk.

“That is finely machined,” he said. “Beautiful.”

Mac flattened himself back down onto the floor and stared up at the surface. “Man, I’m two feet away, and now I can’t see it at all. Shine your

light again.”

It took them a full minute of searching to realize the truth. “It’s gone,” Mac said. “Disappeared as soon as I touched it.”

“You’re sure it’s gone?”

“I’m sure.”

They backed out. “There’s a seam, all right,” Flynn said, “but it disappeared when we touched it.”

“We hadn’t detected it before. A major error.”

“What about controls and propulsion. How does it work?”

“Propulsion is my department,” Reese said. “Come on, we’ll need to enter the craft.”

As he stepped closer, it rose silently a few feet.

“Is it alive?” Flynn asked. “It feels alive.”

“There’s something going on here that’s real hard to understand. Do you believe in the soul?”

“I don’t know.”

“You work with the grays, you work with the soul.” He nodded toward the disk. “It has a consciousness. For want of a better word, we call it a soul.” He raised an arm, and a dark round hole appeared in its side, about midway along the curve of the bottom. “We know that approaching it like this works, but we don’t know why,” he said. “We’ve never been able to find any device or system inside that would account for doors appearing—or seams disappearing, for that matter. Not only that, but you can walk up to it like this from any angle, and an opening will always appear right in front of you as soon as you gesture like I did.”

Leaning down, he approached it, then stood up so that his head and shoulders were inside. “We call this a penetration,” he said. “It’s not like entering a plane—believe me.”

“Which one of us stays here?” Flynn asked Mac. “Your call.”

“That will be me.”

Flynn leaned down and joined Reese under the thing. As he did, the nature of the air around him seemed to change. It became subtly heavier. A silence fell, and it was a familiar one. When he was hunting aliens in a forest and came into a silence like this, he knew they were near.

He saw around him a gray, featureless exterior, like the inside of a tent. “There’s no room,” he said as he looked up. Reese’s body filled the hatch.

“Just stand up. It’ll open for you.”

He did as instructed. Instead of his head touching the metal of the fuselage, he felt a warmth and a sort of fluctuation in pressure. Then he was face-to-face with Reese, the top half of his body inside the craft.

The interior air was warm and dry. There was a soft rose light that seemed to penetrate everywhere. Before them, he could see a huge ring made of white metal. Inside it was another ring made of black metal. They were separated by a closely packed row of silver ball bearings. Hanging in midair in the center of it and about three feet above it, was a crystal. It was an eight-sided figure, rose colored like the light that filled the space.

“What happens is that these two circles counterrotate. We know that. But what we don’t know is what powers them and why the counterrotation is so effective in driving the thing.”

The seam had to be between the inner and outer rings, so when they were rotating, it wasn’t going to disappear.

“Has anybody ever flown one?”

“No.”

“Flown in one, then?”

“Lots of people, I would think. A reading of the abductee literature would lead you to assume so.”

Flynn reached over and touched the outer metal ring. He grasped it and tried to make it turn.

“Not gonna happen. But we do know something about its operation. We’ve recorded the sound of spinning disks. Armed with knowledge of how this functions, and its size, we’ve determined that it would need to rotate at something on the order of a hundred sixty thousand revolutions per minute to emit a sound like that.”

“But you can’t make it turn?”

“We can’t find a power source. The two rings are oppositely polarized permanent magnets, but nothing we’ve done—feeding them powerful electric currents, attempting to heat or cool them, bombarding them with gamma rays—none of it has caused a single response. We have clocked disks just like this moving through the atmosphere at upwards of a hundred thousand miles an hour, but not leaving a sonic boom.”

“Where did you get this thing?”

“Caruthers knows more about that. Adam, can you hear us?”

From below, Caruthers’s voice drifted faintly up. He sounded as if he were a hundred yards away at least, and speaking softly. “This was found on the Plain of San Augustin in New Mexico. There were three extraterrestrial biological entities inside. All dead. Found in 1949.”

“What about controls?”

Reese said, “That’s Dawkins’s department. He’ll take you a little deeper.”

Before Flynn could respond, Reese had dropped out and Dawkins appeared and said, “Now, what will happen is, if you move straight up—push yourself higher—you’ll find that the thing morphs as you penetrate more deeply. Stay with me, though, because you can get lost in here, and I have to warn you, that’s happened.”

“Get lost? How? Where?”

“We don’t know, but some of the early explorers never came out. After a while, as I understand it, you could smell their decaying bodies. They’re dead in here somewhere. We don’t know where. Let’s go. Keep standing, stay

within sight of me.”

Flynn found himself in a small room that contained three bucket seats and three consoles. There were no readouts and no controls, just indentations with small holes in them. The indentations were the shape and size of children’s hands, but designed for six fingers.

“You can sit down.”

“No, I can’t.”

“Do it. The seat will change to fit you.”

He could barely maneuver, humped over in the small space.

“Act like it’s all your size, and it will be. Go ahead.”

He straightened up, and the room did indeed grow larger, the seats along with it. When he sat in one, the console before him expanded, too.

“Now put your fingers in the controls.”

As he did so, they morphed into five-fingered control surfaces. They fit his hands so precisely that it felt as if they had been made just for him—which, in a sense, they had.

“This is just incredible.”

“We don’t understand any of it. Look down.”

When he did so, the floor beneath him became clear, and he could see down to the crystal and the ring below it, what looked like a distance of at least fifty feet, and yet he had come up only a few feet to reach this control room.

“What has happened is that the interior of the craft expanded to fit us. But on the outside, your friend isn’t going to see a single change.”

“They’re a million years ahead of us.”

“Or they simply have better minds.”

He thought of the brutality and carnage he had witnessed, and could not reconcile them to the magnificent, elegant technology he was seeing here. Maybe the grays had better minds. Not Aeon.

“Could there be tramps? Thieves who could steal things like this? Alien thieves who maybe wouldn’t be able to work them all that well? Because what I’m dealing with is brutal and mean. My aliens sure as hell don’t square with anything as sophisticated and beautiful as this. Whoever created this thing touched the mind of God.”

Dawkins smiled gently. “Or maybe another mind, also magnificent, but not so sweet.”

As soon as Flynn rose from the chair, the distance down to the ring became short again.

“You go first, Flynn. Don’t want to get you lost.”

When Flynn looked down again, he could now see the opening they had come through, and below it the concrete floor not four feet underneath.

“Careful, now—everyone who’s disappeared in here has been on their way out.”

Flynn went to the edge of the opening and dropped his feet out.

“Reach back, please take my hand.”

Flynn felt Dawkins’s thin hand in his own. He dropped down, the scientist coming immediately behind him.

Dawkins stood with his head bowed, his face sheened with sweat. “That’s hard,” he said.

“I’m glad you made it out,” Evans said.

Flynn fought back any sign of the bitter disappointment he was feeling. The truth was, though, that this entire journey had been a waste of effort, and from the way these people were acting, dangerous on a whole lot of different levels.

It was time to cut and run. Except for one problem. “Where’s Mac?”

“He and Evans went up to the commissary a couple of hours ago, to eat and get you checked in to visitor quarters.”

“What are you talking about?”

Dawkins laughed a little. “That’s another reality in there, with a different time. I once worked in there for a day, trying to find some kind of connection between the control panels and the motor. When I came down, four weeks had passed, and two men had disappeared while searching for me.” He bowed his head and was silent for a moment. Then he said in a voice choked with pain. “One of them was my brother. We’re twins.” Then, lower, full of more trembling emotion, “We know he died. He’s one of the ones we could smell.”

The thought came to Flynn that they were like bugs trapped behind the mystery of a glass window, a mystery they could never hope to defeat and never hope to understand. Impossible not because they didn’t have the information, but because they didn’t have the raw brain capacity. Nothing could tell a fly what glass was. Nothing could tell a human being what this disk was.

“Are we finished, then?”

“Sure, Flynn. If you’re done. Any more questions?”

“No more. Not now.” But there was one. He’d save it for later, though, at just the right moment, or maybe by then there would be no point, and he would never ask it at all.

He had not gotten very far here. Not far at all. In fact, all his visit had done was confirm his worst fear, which was that the disks were so far beyond human understanding that there was no hope. If so, then Morris would soon rule this world of Earth. It would be free no more, a slave planet given over to whatever its master chose to do with it.

Fifty years after Cortés conquered Mexico, only one out of ten of the indigenous people were left alive. If Flynn’s battle failed, he knew that humanity would fare even worse. Our species would be lost to the egomaniacal lusts of a psychopath.

He was a humble man. He’d never thought of himself as being

particularly important, but in this moment, mankind's future was clearly his to win or lose. And not more than a couple of hundred people on the whole planet, if that, even knew his name.

Was he up to this?

CHAPTER TWENTY-THREE

FLYNN SWALLOWED the acid of desperation back into his churning guts. He did not see how he could win this thing, not against technology so advanced that it seemed more like magic than like science. Was Morris's disk equally advanced, a machine that might as well be a living thing? How could anybody ever damage a craft like that with a little chunk of lead, even if they did hit a seam?

On the way back to the main building, Flynn noticed that Mac was now quiet and withdrawn.

"Geri said we're dealing with an old, primitive device—remember that."

"The seam just disappeared. Then a door opens like some kind of magic is going on. I don't know, man—no matter how primitive it is, maybe it's not primitive enough for a jerk with a gun."

When they returned to the main building and went inside, Flynn had an incredibly powerful sense of *déjà vu*. This hallway—wide with a black linoleum floor polished to a high gloss, its rows of office doors, each one locked like a safe—was as familiar to him as his own house in Menard. And yet, his mind was telling him he had never been here before.

As they approached the commissary, the smell of the food was incredibly familiar, sending a dagger of memory right through him. Not that it was good food—it was hardly that—it was just damn familiar.

He was certain now that he'd been subjected to hypnosis so that he wouldn't think about this place. It was a security measure. Too bad it hadn't helped Dr. Miller.

Frankly, he was excited about taking Mac to Bio. His friend had found a seam that was almost microscopic. As he was, the man had what was called exquisite vision. When they were kids, he'd been able to pick out the moons of Jupiter, not to mention see a tree rat crossing a wire at night and blow it to kingdom come at a distance of a couple of hundred yards. And leave the wire untouched.

"This is not food," Mac said. They were passing down the steam table in the commissary.

"I believe those are chicken wings," Evans said.

"From what planet?"

Flynn remembered what he'd eaten the last time he was here. In the hope that reenactment would release more memory, he got the same meal again, a quarter chicken, green beans, baked potato, and pineapple yogurt for dessert. He, Caruthers, Evans, and Mac sat together. The others had gone to a table of their own.

"I enjoyed my time here," he said. "When I was working with Dr. Miller." Mac gave him a sharp look, but the other two didn't react. It wasn't a good sign, but he continued anyway. "I thought maybe we could go down to the Biology section and have a look around."

Both Caruthers and Evans stopped eating.

"I mean, I was there. That's where my physical enhancement was done. I'd like to look the place over again."

Laughing, Evans said, "I think I need to consult Legal."

The cavalier reply made him so mad, it was all he could do not to reach across the table and splatter the guy's face against the far wall.

He put his anger firmly in a drawer and smiled. "Well," he said affably,

“that’s probably the best thing. On the other hand, I have a cop out there in Texas who could at any time get picked up and have his eyes cut out of his head, not to mention what will happen to his family. But you consult Legal. However, know this, all of you: If they die, I am liable to become very damn irrational, and that’s not going to be comfortable for you.”

He reached over and tapped Evans on the ear, moving so fast that the gesture couldn’t be seen by normal eyes.

Evans shot out of his chair and sprawled on the floor, holding his head and crying out.

The buzz of conversation in the room died away.

As Evans sputtered and gagged and struggled to his feet, Flynn stood up. “Excuse me, ladies and gentlemen, is anybody here from the Biology unit?”

Nobody reacted. Here and there, people began leaving the room.

“I was there. Some of you probably worked with me.”

The trickle of people leaving became a flood.

“You did good,” he said. “I’m quite a piece of work, folks. Fastest gun in the West.” He drew the Bull and reholstered it. “Anybody see that? No?”

The flood surged toward the doors.

“Okay, folks, don’t have a heart attack—I’m harmless. At the moment.”

The only table still populated was theirs. A couple of security guards, one of them with a stun gun, stood in the doorway. Flynn returned to his seat. “I’d advise you to tell those guys not to make any sudden moves,” he said to Evans and Caruthers. “I don’t care for sudden moves. Frankly, you know what I do when I see childish bullshit like guards with Tasers? I just think to myself, ‘Bullshit. Empty, childish bullshit.’”

Flynn picked up his table knife and tossed it into the wall. There was a crash, the window above the point of impact cracked, and nothing could be seen of the knife except the hole where it had entered. He reached over and took Evans’s knife, and began doing surgery on his chicken.

“You people have been at this what—sixty, sixty-five years? And look at you, four guys nursing a piece of equipment you can’t even begin to understand. Where’s the massive scientific effort? Where’s the billion-dollar budget?”

“The parade’s gone by. Twenty, thirty years ago at Wright-Pat, it was a different story. Some of the best minds in the world worked on this. The best. For years and years and years, Flynn. And we learned basically nothing. We lost. Now we’re what’s left, four trudging bureaucrats protecting the secret of the ages.”

“I want to go to the Biology section. I want to meet the people who worked on me.”

“As I said—”

“Let’s roll. Right now.” Flynn stood up.

“You’re not cleared to go down there, Flynn,” Caruthers said.

“Then get me cleared!”

“You can be. No question. But we have to go through channels, and you know that.”

“Diana Glass cuts red tape like butter.”

“So call her,” Evans said. “Right now. The second she gets you cleared, off we go.”

Flynn said, “Give me a phone. I lost mine.”

“No cell coverage on the island. In any case, if classified matters are to be discussed, we need to go to my office and use the secure phone.”

Flynn followed Evans down a hallway and up two flights to the sort of small office that defined the reality of the middle-level bureaucrat in the federal system. There was a picture of the president on the wall, one of Evans with a high-ranking but nameless air force officer, and an engineering diploma from Ohio State. On the desk were two photographs of which Flynn could see only the backs. There was an in-box with a great deal of paperwork

in it and an equally busy out-box. For a man who had portrayed himself as basically a caretaker, he seemed to have a lot of work to do. But these days, when so much was done in digital media, the busy boxes could have been there just for show.

There were two telephones: one an old-style landline secure phone, the other a cheap wireless model. Flynn strode over to the secure phone and called Diana.

She said, "Complaint line."

"I'm laughing. Now I'm not. They're insisting that I need further clearance to go to Biology."

"I really don't know how to say this, but going down there could reduce your abilities. Put a level of awareness between you and your new skills that could affect your speed."

"What the hell are you saying?"

"It's dangerous for you to see your records—too much self-awareness could compromise your skills."

"I want to appeal to your superior officer."

"I have no superior officer."

"Sure you do."

"You can't appeal, and you can't know who he is or where he is or anything about him."

He hung up the phone.

Evans said, "You heard the same thing from her that we got in this command. Show you the disk, then show you the door."

Flynn spread his hands. "Okay, I lose. No contest."

Mac blinked, but said nothing.

They were due to be returned to the mainland at first light, in time to catch the dawn patrol commuter back to LaGuardia. From there, it was a nonstop to Dallas, then another commuter to Menard.

They were assigned two rooms in the small visiting quarters. Flynn had no further reason to spend his time talking to the locals, so he went to his billet and threw himself onto the bed. He assumed that there would be cameras and audio, so he did nothing to reveal his real intentions.

He closed his eyes and began mentally, and very carefully, reviewing the map of the island he'd made in his mind as they landed.

Mac followed him in. "What's the plan?"

"No plan, Mac. The long and short of it is, we busted out."

"So what happens next?"

He hated to lie to Mac, but right now, the two of them were certainly onstage. Caruthers was listening. His security team was listening. Diana was listening and probably whomever she worked for as well.

"We're due on the helipad at six sharp," he said. "From there, I think we need to go back to Menard."

"Menard? Why not Washington?"

"Because they've got their heads so far up their asses, they can see—"

"Oh, yeah, there is that."

"We need to do what we can to protect Eddie and his family. Just leaving Menard isn't enough to save them. If they even left."

"You think we're gonna die out there?"

He thought he was going to probably die, but not in Texas. If what he was about to do went wrong in any way, that was going to happen right here, tonight.

"We might as well get some sleep," he said.

Mac lingered. "Flynn, what was it like in that thing? I mean, that must have been amazing."

"What it was like is, we're never going to have anything remotely similar, not in our lifetimes or many lifetimes. As you move around inside, the entire interior of the thing changes, depending on what you want to do. It looks

about twelve feet high at the center, am I right?”

“Yeah, I’d say so.”

“When you first go in, you find yourself in the motor room. Counterrotating magnets, but we can’t make them turn. We don’t know exactly what they’re made of or what kind of power needs to be applied. Then, say, you want to go to the control room. You just stand up, and it kind of appears around you. Nothing morphs or changes—you’re just in another place. It’s the most incredible experience I’ve ever had. The control room is not complicated. Two chairs before consoles with nothing but a couple of handprints embedded in them. Little chairs, but sit in one and it fits you, just like that.”

“Put your hands in the handprints?”

“I did. Nothing happened. I felt like a monkey fooling around in a car. Not only did I have no idea how it worked, but I had no idea how even to *learn* to make it work.”

“A monkey could be trained to drive a car. It’d be hard, but it’s doable.”

“Maybe, but he’d never learn to fix a car, or why it runs, nothing like that.”

“Flynn, a fighter pilot can’t begin to understand his aircraft. He knows the general principles. That’s all. But I say again, he could be trained.”

“They’re telling me nobody knows how it works. They’ve had it for sixty years—more—and they haven’t gotten to square one. What’s worse, I can believe it. The thing is just amazing. And that feeling that we both had, that it was somehow alive—” He shook his head. There was nothing more to say.

“I gotta tell you, some asshole with a gun is not gonna pull down one of those things, no matter how much skill he has.”

“Remember, we’re not dealing with state of the art.”

Flynn offered no sign to Mac of what he intended to do, but, as always, his old friend sensed something. He probed a bit, but thankfully in the wrong

direction, asking him if there was any way to get the disk out of its containment.

“It’s hundreds of feet underground. Access tunnel’s filled in.”

Mac seemed to look into himself. Flynn waited, watching him as he sank deeper and deeper into the truth. He said, “We’ve lost.”

“Looks like it.”

“We’ll all move. We’ll run.”

Again, Flynn waited for him to realize what would actually happen if that scenario was played out.

“Goddamnit, Flynn!”

“I don’t have a choice, Mac. It’s me or it’s you and Eddie, and his little family. That baby, Mac.”

“You can’t throw yourself at this thing, Flynn.”

Flynn could not look at his friend. He said no more.

“I’ve never been a coward, Flynn. But I don’t see what purpose is served by us going back to Menard, especially you. You already told Eddie to get the hell out. He *said* he would get out immediately. If he didn’t, it’s his problem. If he went to New York, tell him to stay there. Buy him an apartment there or in London or anywhere. You can afford it. Me, I’ll live on the run. I’m good at that.”

“Morris can be satisfied.”

“Flynn, no.”

“What the hell else can I do?”

“No!”

“I’m gonna go back to Menard, and I’m gonna take it from there. But you’re right about New York. You stay there. Bury yourself in it. If Eddie’s there, you’ll have some company. When I come face-to-face with Morris, I’ll bargain for your lives.”

Mac stood up. “I’ve been mad at you a lotta times in my life. You’re a

person who's good at making people mad. I'd like to be mad at you now. But I'm gonna leave it. See if you start to make some sense in the morning. Because you're not making sense now."

"Mac—"

"No, don't talk. It is time to cut and run. Spend a little of that damn cash of yours to stay alive. Who knows, the longer you live, the more chance you have that Morris will slip up and give you the opening you don't have right now."

Flynn said nothing.

Mac left, slamming the door hard behind him. Flynn hated to see him go like that, but there was no choice. He stayed quiet, listening to the building. He'd already spotted all the visual surveillance. There was a good deal of it, typical of a facility that housed classified records and materials. Most of what was here had to do with biological warfare, though, not with the even more secret alien materials.

He turned out the light and then lay on his back in the dark again, waiting. He'd already planned his moves. He had a reasonable assurance that they would work. But care had to be taken. The least misstep, and this would all be over.

Before he made a move, he was going to need to figure out the cameras. While he was talking to Mac, he'd spotted both of them, fish-eye pinhole jobs—one in the back wall, one in the wall near the door. He could safely assume that the setup would be the same in all the rooms.

He was sure the surveillance team just saw a man who was waiting, hands behind his head, seemingly staring bleakly at the ceiling, wallowing in his defeat.

He noted that the edges of the two-square-foot ceiling tiles did not end above the closet door. Useful information. Because the roof was peaked and there were vents at each end, he knew that there was an attic above the tiles.

To reach it, he would need to go through the hatch at the far end of the corridor outside.

The drop out of one of the vents was survivable, but only barely. Somebody using that escape route would need to land exactly right to avoid a sprain or worse.

Still, it was doable. He could get out of this place without alerting security. But how would he manage to take Mac along with him? Without Mac, there was no point in going. In fact, leaving Mac behind would mean defeat.

It was time to test security. He got up off the bed, paused to open the closet and put his jacket in it. Leaving the closet door open, he strolled out of the room. There was a guard station beside the only stairway, manned by no fewer than three armed guards. Their careful eyes followed him as he crossed the hall and knocked on Mac's door.

“Want to take a walk?”

“Outside? Are you kidding?”

“Just down to the vending machines. Get a Coke.” He nodded, communicating necessity.

“Why not?”

As they walked down the hallway, one of the guards spoke into a walkie-talkie.

“Evening,” Flynn said as they stepped around the desk.

“You're restricted to the structure,” the guard lieutenant said.

“Not a problem. We're going to get some food.”

There was another guard station at the foot of the stairs. Three more guards, all now on their feet, all with their holsters open, their hands on their weapons.

Had he wished, Flynn could have taken their weapons and knocked them all cold before they could take a breath. Whoever had set these guards knew

it, too, because stations at both ends of the building were in sight of this one, meaning that anything he did to these men would be seen by six more pairs of eyes, and dealt with accordingly.

He knew exactly who had placed these guard stations in this way. The only person who knew enough about his skills to be able to thwart them.

“Hey, Diana,” he said, “you’ll be watching this little charade, so listen up. I’m gonna get a Coke and go to bed to cry my eyes out. Tomorrow morning I’m going to New York and I’m going to disappear. So this is good-bye, love.”

Until they entered the small space of the basement vending machine room, he said nothing more. There was a Pepsi machine, a water machine, and a machine dispensing microwavable food. A microwave on the chipped white counter nearby.

He bought a burrito and put it in the microwave and turned it on. The machine wasn’t so noisy as he had hoped, but it would have to do.

He spoke softly. “You willing to try it?” He waved his hands across his lips, indicating that Mac was to nod or shake his head.

Mac paused. His brows knitted. A question came into his face.

Flynn said, “Do a bedbug like when we were kids. Go out through the closet ceiling. We’ll be dealing with a forty-foot drop to the ground. Is that okay?”

Mac’s face, lips tight, eyes full of edge, said that he wasn’t at all sure.

“Me, neither,” Flynn said. The microwave turned off, and he added in a normal tone, “Like I said to Diana, I’ve decided to take your advice. Right now, I don’t have an implant, so the longer I wait, the more danger I’m in. Tomorrow morning, I’m going to start running while I still have the chance.”

Mac opened his arms and embraced him. “You oughta be in the movies,” he whispered.

“See you on the other side.”

Mac bought a Diet Pepsi, and they returned to the second floor.

The making of what they used to call a “bedbug” was a matter of getting in the bed and leaving it with the sheets arranged in such a way that a parent peeking into the room would—hopefully—think that it still contained a boy.

Would a subterfuge this simple actually work? Not for long, but hopefully for long enough.

To minimize the effectiveness of the cameras, he drew his blinds and turned out his lights. It would actually help a bit with the tiny nailhead units. You weren’t talking all that many pixels. The best of them used computers equipped with sophisticated algorithms to supply the data that the lenses would be missing. With just a few pixels to work with, a good system could provide crystal-clear images in full light, but only adequate ones in the dark.

He sat on the side of the bed and took off his socks. They would form the “head” of the bedbug. Leaving his shoes on the floor, he got under the blanket and sheet. In fact, he got under both the top and bottom sheets. More bulk for the bedbug. He turned on his side with his back facing into the room and pushed the sheets until they formed a long wad sufficient to lift the blanket. Then he slipped the socks onto the pillow in front of his face and went deep into the blanket, until all but the top of his head was covered.

He slid backwards out of the bed and down to the floor. Remaining low, he slid on his stomach into the closet. Then he rose up, pressing himself against the back wall.

There came a knock at the door. “Mr. Carroll?”

“Yeah.”

“Bed check.”

“Who’re you, the hall monitor?”

“Just doing my job, Mr. Carroll.”

“Okay, let me get some sleep, then. I’m not going anywhere.”

As he spoke, he reached up and slid one of the big ceiling tiles out of

place, Then he raised himself by gripping a girder with his fingers. The air in the attic was choking, full of dust and insulation, and the pulsing of an unusually complex ventilation system that, judging from all the electronically controlled flues, was capable of being sealed in an instant. Shades of the biological-warfare days.

Above the layers of insulation and massive equipment, a thick cable harness ran from one end of the building to the other.

Moving quickly, he found a supporting beam and climbed along it to the rear of the structure, knowing that a man of his weight would cause sounds below in this otherwise lightly framed building.

He reached the metal vent, which was two feet by two feet in size, as he had observed from outside the building. Feeling its edges, he determined that it wasn't wired, and was screwed into the building's frame with standard construction screws, which he removed with his pocketknife.

Behind him, there was the breath of a whisper.

"Guard came to my door," Flynn said.

"How deep is their security going to be?"

"On the way in, I identified a motion-sensor grid, but we can avoid it."

As he was working, he realized that he could see his shadow. Immediately, he dropped down, pulling Mac with him. He watched the beam of a flashlight play along the girders.

The light continued to explore the space for a time. Finally, there came the faint scrape of a hatch closing. Still, Flynn and Mac didn't move. Flynn waited a full minute, but nothing else happened.

He pulled out the vent and looked down at the drop.

Immediately below the vent was a window, the one at the end of the second-floor corridor. The sill was about an inch deep, just enough to enable a jumper to balance, assuming that he would be able to cling to the inch-deep upper ledge.

“Mac, what I’m going to do is lever myself out until I’m hanging from my forearms—then you’re going to climb down my back. You got that?”

“What about you?”

“I can take the fall.”

“You’re sure?”

“It’s just a guess. Now, move.”

Mac was lithe and as strong as twisted wire. Flynn felt him slide quickly across his back, then overhand himself until he was dangling from Flynn’s ankles. Then he let go, landing silently and efficiently.

Flynn lowered himself until his arms were stretched and his feet were about eight inches above the sill below. He dropped.

As his feet contacted the sill, he thrust his fingers hard against the upper window frame and pressed his body into the window itself. He was still in control of the descent, so he immediately dropped down, letting his feet slip off the sill and cutting the speed of his fall as much as he could by grabbing it as it passed eye level.

He hit the ground jarringly hard, rolled, then got to his feet and moved at once away from the building. A moment later, Mac followed him.

Darkness didn’t matter to security in places like this, not anymore. Security would certainly be able to see them, so speed was essential.

As they moved off, lights began turning on all over the building, including outside lights—bright ones, many of them.

Staying low and close to the miserable little shrubs that stood around the building, Flynn ran. Mac followed.

They blended with the shadows and were gone.

CHAPTER TWENTY-FOUR

THEY HAD reached the shell road that led to the biology labs, and were trotting down it when Flynn heard the whine of electric vehicles. They darted off the road and into the scrub, but there was little cover. Anybody with infrared look-ahead or a starlight scope would spot them instantly, and Deer Island security would undoubtedly have both.

“Why are they doing this?”

“Something’s wrong.”

“What?”

“Flat on the ground, flat as you can be.”

Lying very still, protected by a slight indentation in the ground, they heard a sound nearby, a low grunting and snuffling.

“Russian boar?” Mac whispered. They were all over Texas.

“Not up here. Probably a feral—”

There was a sudden burst of very weird, very complex chattering.

An instant later, the lights of three electric carts flooded the area.

“Shit,” Mac whispered.

Their motors screaming, the carts shot straight at them—and flew over the indentation, missing Flynn and Mac by so little that they were washed in heat.

The moment they passed, Flynn leaped to his feet. In the glaring lights of

the fast-moving carts, he glimpsed what may have been a running figure, pale and humped.

Mac said, "Did you see that?"

"Barely."

"Muscular rear legs, short forelegs, hairless, with a long, whipping tail."

Mac's eyes were truly amazing. "Anything else?" Flynn asked him.

"That's not enough?"

"What about the face?"

"Not human at all. One of them looked back. The eyes were powdery green. They were rounded. Maybe a new form of alien."

"That's all we need."

Now that it was clear they weren't the objects of the hunt, Flynn and Mac went back to the road and headed toward the floodlights that surrounded the Biology section. They were still half a mile away, and as they approached it, Flynn left the road again. They proceeded into a slightly higher area, where they had a broader view of the facility.

Flynn could see that the fence was covered both by cameras and motion sensors. He said, "We're going to walk up to the front door and just knock. But first take a good look—what do you see?"

"Tracks in the sand inside the compound. Boots, also dog prints."

"What kind of dog?"

"Long, thin print." He glanced at Flynn.

"Which is why covert penetration won't work. Come on."

The road was set deeper, and when they were on it, they could see only the roofs of the facility floating above the glare of the lights.

As they moved closer, Flynn said, "We have somebody behind us, about sixty feet. Closing."

Mac began to walk faster.

"No, stay cool." In one smooth movement, he drew his gun and whirled,

landing in a crouch with his legs spread. Standing there frozen with fear, hands raised, and eyes practically bulging out of his head, was Evans.

“Mr. Evans, out for an evening stroll?” Flynn made the gun disappear.

“Gentlemen, may I approach?”

Flynn nodded.

“I’m here on behalf of your boss. She’s urging you not to go in there, and we concur.”

“She saw us from satellite?”

“Yes.”

He looked up and waved. The starry night looked back.

“We need to do this,” he said.

“We don’t control that facility.”

“Who does?”

“That’s unclear.”

“I was down there a few months ago.”

“I know it.”

“Who controlled it then?”

“We thought we did. We were working there. Dr. Miller worked on you.”

“Come down with us,” Flynn said. “Maybe you can help us get in.”

Evans shook his head—a short, sharp, decisive movement. There was no way he was going a step closer to that gate.

Flynn began walking. Mac hesitated, then caught up with him. “How dangerous is this?”

“We need to try.”

The gate was locked with a padlock on a hardened steel frame. The lock had no key and no combination.

Flynn called to Evans, who was still standing back in the road. “How does this work?”

“We can’t open it.”

Flynn said to Mac, “What we’re looking at here is an alien facility. I wonder if it has embassy status.”

“Okay, good. An alien facility that’s locked and doesn’t have a doorbell. So let’s just move on.”

“Mac, you have the vision of a buzzard. You need the vision of an eagle.” He did a quick draw and replace. “Whoever’s on the other side of that fence did this for me. I think it’s at least worth asking if they could help you.”

“Why don’t you go in there and get *your* eyes fixed up?”

“Come on, you start way further up on the bar. My vision is normal.”

Evans had left the area. The night wind rustled in the saw grass; a riot of stars looked down. On the distant horizon, a light rose and was gone—a car, perhaps, safe on a mainland road.

“Flynn, the only reason I’m still standing here is that I’m afraid to go back to the main building alone.”

“Makes sense.”

“If aliens killed Miller and took this place over, why in holy hell do you think they’ll help us?”

“Because that’s not what happened.”

“Sure plays out that way in my book.”

“Miller was working here with a human crew. I remember the place, and there were no aliens involved—not in what he was doing. The technology was alien, though, that’s for sure. Miller was killed and probably so were a lot of other people who were working in there. By Morris. No question in my mind.”

“So why are we here, if it’s abandoned?”

“It isn’t. The grays are in there.”

“The ones on kids’ lunchboxes?”

“You read up on the grays, you will find that they’re quite real, they’re very advanced, and they take a serious interest in Earth. I’m hoping they’re

mad as hell about what's happening, and they'll give us a lot more help than Aeon can. Basically, I'm hoping they have cops, too."

The wind rose again, scudding through the grass, moaning in the eaves of the old building.

"There's nothing out here but us and these floodlights, under which we are fools to be standing." He stopped, then held his hand up to shield his eyes from the glare of the floods. "Oh, shit." He pointed.

Just visible around the corner of the far end of the building was a figure. It came all the way around the corner. It had a black dog on a lead. This animal had a broad head, very unlike the dogs Mac had inherited from Morris. It was huge, and as black as night.

The two of them came closer, the man striding, the dog rippling with muscle and tension, its eyes never leaving them.

"Christ," Mac said under his breath. "See that?"

"What?"

"That guy's got seams, man. That's a—a—holy God, Flynn, it's the dog! The guy is just—look at him! The dog's running the show."

It wasn't a man. It wasn't biological at all. As it approached, Flynn could hear the hum and whine of motors. The dog, though, watched them with an intensity you see only in animal faces: the calm, cruel care of the predator.

The two of them came to the gate. They stopped. The artificial man stood motionless. The dog drew closer to the fence. It inhaled deeply of their scents, its nose pressed hard against the cyclone fencing. Flynn reached his hand out and felt the cool night air being sucked past his skin.

The dog backed up.

Flynn knew why the artificial man had been built—so that nothing would appear unusual from satellite.

The dog stared at the lock, which moved, clanking faintly as it did so. Without the slightest click, it opened and then slipped off the hasp. It turned

again and locked itself. The gate was now open.

“Why don’t they just send somebody real out here?”

“The grays are extremely secretive.”

“Flynn, *are* these the same grays you see painted on kids’ lunchboxes and those crazy books? Because that’s bull crap. I don’t care *what* Caruthers says.”

“I’ve never seen one in person, but yeah.”

“I’m not buying in to this, and I’m not going in there, either.”

“Fine.” Flynn opened the gate and stepped into the compound. The surface was the same as the surrounding landscape. The lights seemed even brighter, now that they were focused on the area.

The compound consisted of three buildings. The more imposing one, which wasn’t saying much, was the only one lit up from inside. The other buildings’ windows were dark.

“I’m going in,” Flynn said.

“Been nice knowing you, pal.”

With the dog shadowing him by inches, Flynn crossed the twelve-foot strip of land. “Either you come or you don’t.”

The main door was glass that had been painted black. This operation was being run on the cheap—or just made to look that way.

As he approached, he heard an elaborate series of clicks the complex locking system opened itself.

“Mac, you coming?”

“I can’t walk, man. I didn’t know I could be this scared.”

“You want to be carried?”

“Screw it.” Mac came up beside him. “This feels like the gate of hell or something. It’s radiating menace like heat.”

“I know it, and I don’t understand it, either.” He put his hand on the stainless-steel grip in the center of the glass door. “Just let’s push through it.”

Beside him, the dog made a faint sound, a growl. Flynn wondered again what he and Mac had seen out there in the scrub. Was it yet another species of alien? Security had been chasing it, or perhaps herding it, obviously keeping it away from the other facilities on the island. But why was that necessary?

“Man, I can’t handle this.”

“Nobody can.” He pulled the door open. He heard a hiss and a faint pop as the air pressure equalized. The place was not quite airlocked, but tight-sealed like the house Oltis had inhabited in Chicago.

“Look,” Mac said.

He was staring at the door of the nearest office. Beside it was a nameplate, MITCHELL, T. TRAFFIC COORDINATOR. Above the English-language strip were three more tags, all in different and entirely unrecognizable lettering. The door itself looked like something that belonged in a submarine—steel painted high-gloss gray, with hinges and a lip designed to withstand significant pressure from this direction.

“So there are three species besides us working in this facility. Plus, the hall can be pressure controlled.”

“Is Aeon represented?”

“I don’t think so.” He gestured toward the door’s multilingual nameplates. “None of that looks like their alphabet.”

“Here comes trouble.”

A man in a white medical coat was walking toward them, coming down the long hall. As he came closer and his face became clearer, for once even Flynn Carroll was surprised. This couldn’t be another trick of Morris’s, surely. But then what in hell was really going on here? As the man drew closer yet, and his identity became undeniable, Flynn just let his mind blank. His right arm was ready to move at lightning speed.

“Hi, Flynn. We were expecting you a little later. I’m afraid I’ve lost some

money in the office pool. You've done very well to get here this fast."

Standing before him was a man he now recognized as an old friend and comrade in arms, Dr. Dan Miller.

"Dan, you look a hell of a lot better than you did in that bog."

Miller smiled softly. "We had to strip me out of my former life. Evie'll be okay, though. She has—"

"The sheriff, I know. Who died in your place, Doctor?"

"A long story."

"If Morris didn't do it, why would he think it's you?"

"He did it, and we hope he was deceived."

Flynn didn't inquire any further. He decided to assume that no crime had been committed and leave it at that. He was just incredibly glad to see Dan here.

"So this is Friend Eddie," Dr. Miller continued.

"I'm Mac Terrell."

"Oh, the black sheep. Looks like we got Flynn's thinking a little bit off. I expected the other cop."

"Mac's the one with the skill we need," Flynn said. "I brought the right person."

"And what skill would that be?"

"He's got incredible vision. I want you to make it miraculous."

"May I know why?"

"We have a disk to shoot down."

"That's impossible."

"It isn't."

"Exactly how do you plan to go about it?"

No reason to take a risk here. Strict information control was called for. "I don't think you'd be need-to-know on that."

He shook his head. "As you wish."

Mac said, “If there’s all these alien species here, why won’t any of them just shoot Morris’s disk out of the sky?”

“Good question,” Flynn said.

Dan Miller said, “We’re going to have to go down into the red zone, guys. Mr. Terrell, you need to understand just how radically different this is going to be. We will not see aliens as you understand them, but we will see machines that are so advanced, they might as well be alive. Extremely advanced and far more intelligent than any human being. You will feel the power of their minds all around you. You will experience profound fear.”

“I’ve noticed that already.”

“A little of it. There’s a generator outside that cues brains to feel danger and fear. It keeps animals and people well away from the facility. What goes on down below will be much more disturbing.”

They reached the elevator’s large black door, reminiscent of the brutal barriers that sealed a supermax.

“Okay, through that door we’re going to be in a species-neutral atmosphere. There’s less carbon dioxide in it than we have, a little more oxygen, and a cluster of rare gases. We can breathe it, but it smells a bit odd and it will affect your sense of taste. It’s been designed so a maximum number of different species can use it.”

At a wave of Miller’s hand, the door opened to the complex interior, all of it strikingly familiar to Flynn, from the shimmering, powdery silver light to the blurred shapes and odd, twisted angles of the many different machines. In one direction, there was a pathway to what looked like infinity, in another, a black, twisted knot that was hard to look at without getting a headache. Stretching ahead was a catwalk over the main machine floor. There were three sets of rails at different levels—one in the right position for human hands. The catwalk hung ten feet above the floor of the facility. Below, there was a series of what appeared to be windows on the floor, each one a soft

square of equal size. Some were gleaming black, others gray and filled with shadows. Two looked out on vivid scenes. One displayed a rose granite building, with long rows of black windows. The other revealed a path in a rich jungle scene. There were huge trees covered with long green strands like hair. Leafy shrubs crowded the jungle floor. A well-worn path led off into the distance.

Abruptly, the window with the building went black.

“One portal to go,” Miller commented.

“They’re openings to other worlds.”

“I’m looking at another planet?”

“You are,” Dr. Miller said.

“How does that work?”

“As far as we understand physics, it can’t.”

“If I jumped down there right now?”

“You’d end up in that jungle. Probably fifty, a hundred light-years from here.”

“Could I get back?”

“Who knows?”

Flynn noticed that a couple of the uniformed security people had appeared on the catwalk. People blocking his exit were not wanted. Also, there’d been a lot more traffic in the past. He remembered aliens down on the machine floor. “Where is everybody?”

“Flynn, the station’s being retired. The grays are leaving Earth. Everybody’s leaving.”

“*What?*”

“You know this thing—what these fools released into the universe—”

Doors ahead opened silently onto a room that was at once startlingly familiar and exceedingly complex. Flynn said, “Mac, there are machines in there with hyperdimensional shapes. This means that human eyes and human

minds can't make sense of them any more than a bird can figure out a living room. Don't look around in there, it'll disorient you."

"More than disorient you," Miller added. "You can become psychotic, and the effect can be permanent."

There were now four workers—three following them, and one lingering at the end of the catwalk. So they weren't workers, they were guards, as Flynn suspected. He felt a familiar tension rise in his muscles.

"Come on, guys," he said, "the sooner we get this done, the safer everybody's going to be."

Mac asked, "Can Morris do anything to us down here?"

"Unknown," Dr. Miller snapped.

"What about those creatures on the surface?" Flynn asked. "We saw security preventing them from moving out of the restricted zone."

He shrugged. "Something somebody left behind. A failed experiment in human-alien hybridization. They have human genes, so we're not going to be killing them, as per E. O. 2241-R."

"Which means what?" Mac asked.

Flynn said, "A restricted executive order that states that anything carrying more than ten percent human DNA is human and subject to human law. It was promulgated during the second Bush administration."

"You never told me that—or any of this—before," Mac said.

"His memories of this place were blocked. Morris can get into the mind, remember, so we sent him out with his skills but not his memories."

"Okay, question time's over," Flynn said. "Let's do this."

"Past the catwalk, we move on the red lines only. Don't ever step off. Not ever. If you do, you'll become lost and we will not be able to find you."

"It looks normal."

"It's not. Come on."

They moved carefully along the catwalk, keeping their eyes on the path

ahead, not looking at the machines that loomed around them.

“They’re watching us,” Mac whispered.

“Back off your guards,” Flynn said.

“They’re not guards. They’re a dismantling team. The facility’s going to be mothballed. Earth is being abandoned.”

“You said that, but will you say why?” Mac asked. “What’s been released into the universe?”

Dr. Miller stopped. He turned and faced Flynn and Mac. “Aeon is doomed. At least, the natural species is. They’re going to be rendered extinct by their own creation.”

“We know that,” Flynn said. “There has to be more.”

Miller nodded sadly. “The species they created—”

“The biorobots?” Mac asked.

“They’re much more than robots. They’re self-evolving and full of bad programming.”

“In what way bad?”

“As Aeon woke up to the fact that they weren’t alone in the universe, they got scared. They saw they were primitive. They saw that others were more intelligent. They felt threatened, and used their knowledge of genetic engineering to build what is essentially a self-programming warrior species.”

“Which is what me and Flynn are fighting. Two people, only one of which is presently any good at it.”

“It’s an isolated band,” Miller said.

“So why not just tell the more advanced aliens to get rid of them. Then we can all go home.”

“Flynn, do you remember why we’re doing it this way?”

“I’m a low-tech weapon. If the other aliens use their powers, there will be subspace echoes that stand a chance of being detected by the main body. So will their communications, all their activities. I assume that they’re not

leaving to abandon us, but to hide us.”

He thought of the wire back at headquarters. It would undoubtedly be on the way out, which would be all to the good, as far as Flynn was concerned. He wondered about Geri. Could her mere presence here be a danger?

“No angels to protect us?” Mac asked.

“Not around here.”

Flynn thought about that. No angels. The universe full of dangerous life. Somewhere out there, surely something better would one day be found. But clearly today was not that day.

“Let’s get this done, Doc,” Mac said. “I’m ready. Sort of.”

CHAPTER TWENTY-FIVE

THE GREAT, black thing stopped Mac in his tracks.

“Take it easy,” Flynn said.

“What in holy hell is that?”

If evil had a color, this fat cylinder—nine feet long and standing on four squat legs—was painted that color. Flynn remembered how frightening its absolute darkness had appeared to him the first time he saw it.

Mac stood staring at it, gripping the rail that followed the catwalk the three of them were on.

Flynn noticed that two of the guards who weren't guards were now close behind them. Too close.

“What's going on?” he asked Miller.

“Not sure.” Then, to Mac, “This is a bioeditor. It's what can do what you need done.”

“What's that down there, a black hole?”

Miller said, “The best way to explain that formation comes in a poem by W. H. Auden. Do you know his work?”

Mac said nothing. Flynn remembered the lines from Dr. Miller's explanation the last time he'd been here and quoted them: “The crack in the tea-cup opens / a lane to the land of the dead.”

“We think what you're looking at is an entrance to a parallel universe.

Not another planet, but the undiscovered country, the land of souls.”

Mac took a step back. He gestured toward the machine. “It looks like some kind of torture chamber from hell.”

“No, actually, it’s from California. It was built at the Trident Group in Palo Alto.”

“Built by us?” Flynn asked.

“Built at the Trident Group, not by the Trident Group, unfortunately. By the grays. It’s soul science, this thing. We’re not there yet.”

“You can smell the evil. You can see it.” Mac turned away from the thing. “Soul science the hell, it’s satanic.”

Dr. Miller said, “There is no supernatural, only the natural world, some parts of which we understand and some we don’t. It’s natural to fear the unknown.”

“It looks evil to me. Gotta say.”

“Mac, it works.”

Looking at it now, being in this room again, took Flynn back to how he had been before his time in the machine. What had changed in him went way deeper than biology. He had come out of it with new reflexes, but also with a better, more careful, quicker mind, and a deep new river of spirit within him.

“It’s not evil, it’s just ... different. Here”— he took Mac’s hand— “touch it.”

Mac pulled back, but Flynn was faster. When Mac’s hand touched the wall of the thing, the same thing happened as when Flynn had done it before. The whole side of it shuddered like the most delicate flesh, or the surface of a pond.

“It feels alive,” Mac said. “Just like that disk, only more so.”

“It’s not a creature,” Dr. Miller said, “but it is intelligent.”

“What’s it going to do to me?”

“When you enter it and concentrate in an organized way on the alterations

you want, as long as they're possible, it's going to make them."

"Does it hurt?"

Flynn said, "It's going to be the strangest thing you've ever experienced. But it doesn't hurt."

"Go on."

"Your body seems to disappear. It's like you've become a kind of chaos, a sort of storm. You're roaring, rushing, all confused. But alive. Incredibly, totally alive. The feeling will scare you worse than anything you've ever known, but you won't want it to stop. Then your body will focus around you in the same form as the machine. A liquid blackness. You need to think about your eyes. Imagine seeing things two miles away. Seeing microscopically. Sparks will start hitting your eyes the same way they hit my hands when I began thinking about my draw speed. I went into the depths of myself, the why of me, my hopes and loves and fears. You mention angels—I felt like an angel, Mac, an angel in the light. Then all of a sudden, thud, and I was lying there in the thing, just me again in that cold, dark hole. I cried, Mac. I sure as hell did."

"If I want to stop, can I?"

"No," Dr. Miller said.

Mac walked up to it. "Why don't you do this to more people? Flynn needs an army."

"We worked on that. Hard. So did the grays. To make somebody truly exceptional, they have to start out at the top of their game. We can't put an ordinary person in there and have a man with incredible abilities come out. And now it's too late. Machines like this, soul editors, are real easy to detect. This thing has to be gotten out of here pronto. To tell you the truth, this whole facility has been kept in operation by the grays, in hope that you'd make it in before they had to pull the plug."

Flynn burst out, "Why in hell don't they just help us?"

“This isn’t help?”

Mac stood even closer to the machine, looking at it, caressing its trembling flank. “Has anybody ever died in it?”

“There have been heart attacks. The first person to test it died of a stroke. That was in Palo Alto.”

“Flynn, if this kills me, I want my ashes scattered in Big Bend, down along that ridge near Panther Junction—you know the place.”

It was where Mac had almost won Abby, in a flaring sunset, on an evening so long ago it seemed like it belonged to another life. He’d kissed her, and Flynn saw Abby melt into him, and the joy in his eyes when she did. Later, around their campfire, she had searched Flynn with her own teary eyes. After moonset, she came to him in the inky night and whispered, “Hold me,” and Mac, lying in his sleeping bag under the stars, had silently mourned.

“I know it. I’ll do it.” He wanted to say that it wouldn’t happen that way, Mac wouldn’t die, but what did he know? Not even Dr. Miller knew.

Dr. Miller said, “You go around it, Mac. Stay on the red trail. When you reach the entrance, it’ll look like a tunnel with red glowing walls. You just lie forward into it, and the machine will do the rest.”

“It’s like the first time your ma ever held you,” Flynn said, “like remembering your birth.”

Mac shook his head, stood still for a moment, then strode around the machine and was gone.

It made no sound.

“Is it working?”

“Stand back.”

There was a sound of something vibrating, followed by a wave of ice-cold air coming off the thing. Then it frosted over, the liquid blackness hardening and becoming covered with pale frost.

“What the hell?”

“We don’t know, except that it’s normal.”

“Have you ever been in there?”

“I tried for an increase in intelligence.”

“And.”

“IQ 148 before, 152 afterwards.”

“That’s not nothing.”

“We put a guy in, an IQ of 190. He came out completely insane. Killed himself right here on this platform where we’re standing.”

The guards were very close now. When one of them started to follow in Mac’s steps, Flynn put up a hand. “No.”

His eyes met the guard’s. And he recognized him. It was the airman killed by the biorobot at Wright-Pat, or rather, it was the biorobot, impossibly, incredibly not only alive, but here.

Flynn drew his gun and blew the creature in half.

CHAPTER TWENTY-SIX

“WHAT THE hell, Flynn, have you gone crazy?”

“It’s one of them.”

“No, that’s impossible.”

Others were crowding forward, and Flynn could hear movement behind the machine as well. When he turned to look, it was still frozen solid, doing its mysterious work. It had better be quick, because this was not going to last. He had the Bull and the Special, but Mac and Dr. Miller were unarmed. A quick calculation told him they would be done in under ten minutes.

“Any other way out of here?”

“What’s going on? You say these are Morris’s people?”

“Four of them. Three now. Five or six more in the facility. We have about eight minutes, that’s all.”

Another one came forward, and Flynn dispatched it with another roaring shot. In the distance, there was a loud pinging sound, repeated again and again, each ping farther away than the one before.

One of the creatures launched itself at Dr. Miller. Flynn took it down also, and it fell shrieking to the floor below. It missed the vortex, though. Blood flooded out of the chest, but it immediately leaped back up the twenty feet to the catwalk and came straight at Flynn. At the same moment, another of them jumped over the machine, which began to make a high-pitched sound that

reminded Flynn of an animal in pain.

“This is coming apart!” he yelled to Miller. He fired again, then a second time, this time at least rendering the two on this side of the machine unable to move, at least for a while.

There were only the four of them, but they had obviously evolved yet again, because they were coming back from lethal shots in seconds, not the hours it took the one he’d “killed” in Mountainville to recover.

He drew his knife and handed it to Martin. “They have to be cut apart.”

“These are people!”

“Doctor, do as I say, or we’ll all be dead—”

The fourth one dropped down onto Flynn from somewhere above. It was in the form of a strongly built, athletic man, and it threw him sideways and off the edge of the platform. He fell toward the vortex, which seemed almost to bend toward him, as if it were hungry for him.

As he dropped, he reached out and grabbed the leg of the creature that had unbalanced him, then twisted himself upward and threw his own leg over the platform.

For an instant, they were frozen, the two of them, their strength in balance.

Blood poured down through the platform as Miller cut up the one that had been lying there, cut it up and screamed out his revulsion as he did it.

Flynn’s adversary shuddered. It redoubled its efforts.

But then Flynn was back on the platform, back on top.

Miller stood over the remains of the one he’d butchered, staring down at it with stunned eyes. Flynn grabbed the knife out of his hands and spun around, taking off the head of his attacker.

Then there was stillness. Flynn wasn’t sure if there were some that had backed off, or if they were all incapacitated.

He ran around the machine. For a moment, he didn’t understand what he

was seeing. Then he did. The whole side of the thing had been laid open like a man's guts. Hanging out was a pulsating complexity of what looked like organic wiring, wet tendrils in a thousand different colors. One of the creatures lay slumped against it, its eyes glazed with what might be death. The other one was nowhere to be seen.

"Mac!"

No reply.

"Doc, how do I pull him out of this thing?"

Dr. Miller came around it. "My God."

"Where's Mac? What happened to him?"

Miller peered into the dripping tangle of wires.

Flynn knew they had little time. The creatures were all linked. Morris would know exactly what had happened here, and would be regrouping right now. Obviously, he was low on soldiers or he would have sent more.

"Mac, sing out."

"There's a body," Miller said. "Under there."

Flynn could just see it, a jeans-covered thigh under the machine. It was bulging horribly, as if the unseen part of Mac's body had been crushed.

Flynn's heart broke. At the same time, anger on a level he had not known possible swept him. This was more than rage, more than what he had thought of before as human emotion, a pillar of fire within him.

Bending down, he reached forward, thrusting his arms under the slumped remains of the machine. Using his leg and back muscles, then every muscle in his body, he lifted the thing. It was like cradling an injured man, just as intimate and sad.

"Hurry!"

"I'm trying."

"Can't hold it." He let it down.

Mac's leg was no longer visible. Flynn turned around. "He must have

gone down into the vortex.”

“The hell I did.”

“Mac!”

He was standing beside Dr. Miller on the platform.

“It protected me. Held me like a baby. I could feel it dying all around me, but it would not let them get me.”

Flynn took his friend by his shoulders. “You got a hell of a lot of guts.”

“Listen,” Miller said.

It was a rushing sound, like a great wind or the long thunder of breaking waves.

“What?” Mac asked.

“I don’t know.”

It was coming from back along the catwalk. Flynn could feel deep trembling.

Flynn went to the end of the platform, followed by the other two men. As they moved toward the door, the entire room seemed to fold in on them. Rolling out from behind them, there came a thick mass of dark blue smoke and a choking odor, sharp and hot, of some unknown fire. Flynn didn’t turn; he didn’t slow down.

Ahead of them, the door began closing automatically. Klaxons started, then emergency lights.

Flynn dived through the door and onto the catwalk above the portal to the jungle world. Mac and the doctor came behind, but the doctor’s shoe got caught as the door slid closed.

He ripped it out, but then fell backwards and off the catwalk.

The portal appeared to be about twenty feet below them, but the doctor did not fall twenty feet. He kept falling and falling, his body twisting, his arms and legs windmilling. As they watched, he grew slowly smaller and smaller, until he was a dot moving across the green of the jungle.

There was a flash of light, and Dr. Miller was much more visible again, lying on the jungle path, one shoe missing, his legs twisted. As they watched transfixed, he shook himself. He stood up. Looked around. His hands went to his head. He understood what had happened to him.

He stood there screaming silently, looking up, his eyes wild with terror, as the portal grayed and went dark. The portal shuddered like the surface of a lake, and then Flynn realized that the whole room was liquefying around them.

They ran, dashing down the catwalk and out into the staging area, stumbling and falling as the pressure door closed behind them.

The elevator was across the room, its forbidding black steel door closed.

“Can we get out of here?”

“I don’t know.”

He went to the elevator and pressed the button. There was a moment’s hesitation, but then it slid open. Before they could board the elevator, Flynn noticed that the Klaxons had stopped. Movement behind him caused him to turn, gun at the ready.

The pressure door was reopening.

“Jesus,” Mac said as they got closer and looked together into the now completely empty space, a large bare room, its floor twenty feet below the doorframe. It was gleaming white, lit from above by rows of ordinary LED panels. There was a faint odor of something that had burned, but a long time ago. Old smoke.

The aliens had withdrawn.

“That poor guy,” Mac said.

Flynn nodded. Dr. Daniel Miller had become the most profoundly lost man in the history of the species.

They got into the waiting elevator and returned to the surface.

The signs on the office doors were now all in English only. Here and

there, a white space marked a place where a sign in some alien language had been removed.

Flynn touched a door handle. It was unlocked. He opened the door and stepped into the office of a Dr. William Richards. It was a typical office in a secret lab: There was a heavy-duty file safe, locked. On the desk was an in/out-box, which held some trivial memos about supply issues and a lighting problem. No references to aliens, nothing about what must have been taking place here just this morning.

“The parade’s gone by,” he told Mac. “Let’s get out of here.”

“What about that dog?”

“They’ll be gone, both of them. And the aliens we saw out in the mounds. All gone. This place has been sterilized—and so has the rest of the planet, would be my guess.” He thought of Aeon’s more primitive portal, a massive gravity well out near Saturn. “Probably the whole solar system.”

“And the disk?”

“Morris is still here, you can be sure.”

“Here, in this place?”

“Obviously his crew got here somehow. But he got his nose bloodied tonight, so I’m thinking that he’ll pull back, at least for a time. He’d better—we have exactly two bullets left in the Bull. The Special doesn’t matter, since it’s not accurate enough.”

As they talked, they walked toward the main exit. Outside, the floodlights were off. The gate in the compound’s fence stood open. The dog was nowhere to be seen.

Flynn tried his cell phone, but there was no coverage.

“I guess let’s walk up,” he said.

“Is it safe?”

He looked up at the sky. A late moon had risen, and still hung low in the east. To the south, the faint glow of the Northeastern megalopolis created an

illusion of dawn.

“Three thirty,” he said. “Hard to believe we were down there that long.”

They started up the road. Flynn was alert for any movement, any sound, but all was quiet.

The disk rose up from behind a saw grass-covered dune and was on them in an instant.

Flynn threw himself to the ground and rolled off the road, but it was too late. It had been too late since the moment they left the facility.

Morris had really surprised the hell out of Flynn this time. “He got me, Mac. The attack down in the facility was there to put me off my guard.”

He found himself looking up into the center of the disk’s underside, a roiling circle of fire that would soon generate the light that would drag both of them into the hands of somebody who was going to hurt them very badly before killing them.

“Can you see that seam?”

“Man, it’s dark.”

There was a dull booming sound, and the light hit them. They rolled in opposite directions, and the light followed Flynn. As he felt himself rising, he grabbed the Special and thrust it at Mac. “Don’t miss!”

The gun tumbled up into the light and was gone. Flynn felt his body leaving the ground. He yanked out the Bull and made sure it was in Mac’s hand. “Two shots, but get outta this light!”

He rose further, seeking as he did so for his knife—not to defend himself, but to kill himself. His mind flashed regretfully to the cyanide capsules.

The end of the game, and the human side had lost.

What in hell could he expect?

The glowing maw of the thing was just above him now. He spread his arms and legs, and was just able to catch himself on the edges. Immediately, though, he began to slip inside.

A shot rang out. He heard the bullet whine off past his head—passing so close, he could feel its hot slipstream. The fingers on his left hand lost their grip. His arm thrust up into the thing. Hands, cold and strong, grabbed at his wrist, then clutched it.

His right leg went in. It also was grabbed.

“I’m goin’!” he screamed. He who was never scared was scared now—he was scared sick. It was going to end like this for him, in this monstrous machine, being cut to pieces, dying in his own vomit and in agony.

There came a tinkling like the laughter of children, cruel children.

A sharp sound followed, but in the distance. A shot? He was unsure.

There was a rush of air, then a flash of agony. Then there was darkness.

The darkness gathered him into itself. It was nice. It was good and kind and he belonged to it. Then he saw something that at first he didn’t understand: a circle of fire overhead, slowly spinning.

There was a flash like a million suns, which left them both night blind. The flash was followed by a chest-slapping shock.

There was a silence.

“Are we still alive, Flynn?”

“Mac?”

“Are we?”

Flynn realized that he was on the ground, not in the disk. He said, “I’m thinking that we are.” He tested himself, moving first one leg and then the other, then his arms. “I’ve got an issue with my right hip and arm. Must be my landing.”

Mac sat up. “You fell a long way.”

“I’m good at falling. I’ve practiced.”

“The machine worked. I could shoot that fisherman over there right between the eyes.”

Flynn looked around. “We’re in the middle of the island.”

“Look due south. See that little piece of water?”

“No.”

They both got to their feet. “There’s a boat that’s got three guys on it. Two of ’em are asleep, the third one’s got a line in the water.”

They were both hurt bad, which became clear when they began trying to resume their hike up to the main building. They moved along arm in arm, leaning on one another.

“How in hell did I break my leg?”

“What’s that wet stuff? That goo?”

“That’s blood, Mac. You damn well shot yourself.”

“I did not!”

“Yeah, you did. You winged your own leg with the first shot.”

“Aw, shit.”

Lights bore down in their faces, hard, bright rows of them.

“Is it another disk? ’Cause the gun’s empty.”

“It’s the security patrol.”

“Hey, we need help down here!”

A shadow moved out from behind the lights, an unrecognizable silhouette. The hands went up. A voice called out, “Flynn? Flynn Carroll?”

“Diana!”

She came closer, breaking into a run; then she was there before him. She threw her arms around him. He swayed against the weight of her, then inhaled the scent of her, and her sweetness made him dizzy with relief and desire.

“What the hell happened down there? I thought you were being examined by Dr. Miller.”

“Morris got into the facility. Miller was— Oh, Christ, Diana, do you know what was down there?”

“Some advanced machines is what I heard.”

“It’s clean now. You could eat off the floor.”

Diana and a number of the security personnel helped the two of them into the back of two of the carts, and they went together back up to the main building.

“Mac got the disk,” Flynn said on the way.

“The wire is gone. Geri is gone. She left the way she came, from Area Fifty-One.”

“I wonder if she made it.”

Diana didn’t reply, and Flynn didn’t pursue it. There was no reason to speak more about Aeon. The planet had sealed its own fate, and would disappear into the history of the universe.

“Did you get Morris?”

“He wouldn’t have been on the disk, but his assets are gone.”

“Then that’s the best we can hope for. A good result.”

Diana wasn’t happy, and Flynn knew it—and why would she be? Morris was their mission.

As he thought about that, he tried to put himself in Morris’s position, to see matters from his enemy’s viewpoint. He would know exactly why they were here, and how dangerous Mac would be to him if the bioedit was allowed to complete. Thus the logic of sending some of his last few entities into the facility where they would meet certain destruction. They might be destroyed, but so would the bioeditor, hopefully Mac, and ideally Flynn.

Finally, there was the surprise attack with the disk. So Morris wouldn’t be in it. Far too dangerous.

So where would he be?

They arrived at the main building, and Mac was loaded off and carried toward the infirmary. Flynn’s leg injury had flared up and he was hobbling, too, but at least he could walk.

He looked out across the water, a blackness touched here and there by the

light of a fishing boat.

He stopped. He thought back. “Diana, where’s the helicopter?”

“Now?”

“Right now.”

“It took off after it dropped me. I guess the traffic director would know.”

“Never mind—is there a boat? A fast one?”

“There are two boats that I know of.”

He ran after Mac. In the infirmary, a sleepy-eyed nurse in a bathrobe was cleaning Mac’s leg wound.

“Can you walk?”

“Can you?”

“Not really.”

“Me neither.”

“We have a chance to get Morris. It’s our last chance, maybe for years, maybe forever.”

“I can walk. In fact, I can run.”

“Same here.”

Mac got up off the table.

“Sir?” the nurse said.

Mac gave her a rictus grin, tight and hard. “I like pain, ma’am. In fact, I enjoy it so much, I’m going out for more. I’ll likely come back later. In a bag.”

Back in the corridor, they were met by a captain who looked like he’d pulled on his uniform over his pajamas.

“This is Captain Gilbertson, island chief of security,” Diana said.

“I want both boats to converge on the south of the island. Make a wide loop, no lights. And I want that chopper called back. What I want it to do is start patrolling the Connecticut shore with its searchlight on.”

“Excuse me, Miss Glass, is this the man you were telling me about?”

Flynn said, “There’s a fishing boat out there with three individuals on it. It’s going to be heading for the Connecticut shore, but slowly. It won’t want to be drawing any attention. That boat is to be taken, and the individuals on it not just shot, but destroyed. Do you understand this? I want their bodies detonated, ripped to pieces.”

The captain’s face had turned to stone. Horror rimmed his eyes. “Shot? Destroyed? What are you saying, here? This sounds highly illegal.”

“Diana, is there anybody on the island who’s on our side of the line?”

“No, there is not.”

“What about Evans and his crew?”

“They’re not cleared for bio.”

Flynn returned to the captain. “Captain, this is a national security matter, and you’re not cleared to know even what you already do. You and your unit are ordered to stand down.”

“On whose authority?”

“Do it, Captain, or you will be in a world of trouble. Trust me.”

“He’s right, Captain,” Diana said. “Just get us the boats.”

“A boat,” Flynn said. “One boat. Your fastest.”

Captain Gilbertson started a call to his superior officer. Flynn took his cell phone from him. “Prepare the boat at once, or you’ll be charged with insubordination, dereliction of duty, and aiding a terrorist in the commission of acts that lead to loss of life. The last charge carries the death penalty, and it will be imposed, I can assure you. Now, get your ass in gear and get that boat prepped, and I want three high-powered rifles, scoped, on it, some flash bombs, and some hand grenades.”

“We don’t have grenades—”

Flynn grabbed Captain Gilbertson by the lapels and went close in. “*Don’t lie to me.*” He thrust him away so hard, the soldier flew across the corridor and hit the wall with a thud that shook the place. “Do it now!”

Ashen, his hands trembling, Gilbertson pulled himself together and rushed off.

“Let’s move,” Flynn said.

They headed for the island’s small boathouse.

CHAPTER TWENTY-SEVEN

AS FLYNN guided the boat around the island, Mac lay on its long prow, watching the water. The boat was a Donzi, lean and low, powered by a 300hp MerCruiser engine. It was in excellent condition, kept ready for patrol and intercept duty.

Diana was beside Flynn, watching the boat's radar under a hood made of her coat. No light could be allowed to show, none at all.

As he ran the boat, Flynn kept a careful lookout to the sides and back. His chief worry was that Morris had anticipated this maneuver and was planning to ambush them. Given that he was almost certainly down to his last two entities, he would be desperate. As far as Flynn was concerned, Morris could appear anywhere, anytime—just not with the disk, and thank God for that.

Mac came down. "There's one fisherman out there with three guys in it, heading for the Connecticut shore." He pointed to a faint light. "Two miles out. Moving slow, like they were trolling."

Diana said, "I see him."

"We need that chopper," Flynn commented. He wanted it doing a grid search along the shore, making it appear that the focus of their interest was not on the water itself. Hopefully, this would cause Morris to turn around and head for Long Island. The farther they were from witnesses when what was about to happen went down, the better it would be.

“I’ve got a point-to-point measure on him,” Diana said. “He’s moving at about five knots.”

“Mac, what’s your maximum confident range?”

“Give me a thousand yards.”

“At night? Are you sure?”

“I can count the number of threads in a shoelace.”

Flynn did a quick mental calculation and increased speed to 7.8 knots.

“Keep watching. I’d like a positive ID before we can do this.”

Mac, who had returned to the front of the boat, slid back down again. “You aren’t gonna get positive. Positive is impossible, even for me.”

“What will I get?”

“The best I can offer. But it’s never going to be absolute, not at three thousand feet.”

“Then if we make a mistake, that’s what happens.”

“I’m not a murderer, Flynn.”

“With certain exceptions.”

“Which don’t include innocent civilians.”

“We can’t risk not taking the shot.”

Saying it made him feel kind of sick.

Diana, he noticed, had not protested. She remained huddled under the coat, peering at the radar.

“Diana?”

She came up. “Yes?”

“Did you hear?”

“I heard. They could be innocent bystanders.”

“Let’s hope it’s them,” Flynn said.

“Let’s hope.” She went back under her coat. The faint glow of the radar reappeared around her feet. “They’ve increased speed. By an additional five knots.”

Morris had detected this boat and was testing it. If it increased speed when he did, he would know its intentions. Flynn held steady.

“We’ll be in range shortly,” Diana said.

Flynn’s hand hovered over the throttle. The boat would do thirty knots, easy. All he had to do was push it to the firewall, and they’d leap up on plane. If Morris’s boat was just the little fisherman that it appeared, he wouldn’t be able to get away.

“An extra six and a half knots. That makes eleven and a half knots.”

Morris was slowly increasing speed. In other words, he was running. That meant two things: First, they had the right boat. Second, Morris was vulnerable.

“He’ll be at the mouth of the harbor,” Diana said.

“How many yards ahead of him?”

“Fifteen hundred and fifty.”

“Too far. What port is it?”

“A little community called Easterly. Couple of marinas, a fishing fleet of maybe five boats. He’s up to twelve knots.”

Unless Flynn increased speed, he would never come into Mac’s range at all, because Morris would reach port first.

He gripped the throttle. But then a realization came, which was that, if Morris had enough speed available to him, he was already close in enough to beat the Donzi.

Morris had won again, as always by thinking farther ahead. No matter what Flynn did, he wasn’t going to catch the psychopath.

“Chopper’s up,” Mac said.

“I don’t see it.”

“You will. Two minutes.”

“He’s at thirteen knots. Four thousand one hundred yards ahead of us. Opening the gap now.”

Flynn held steady.

The seconds practically crawled—five, ten, twenty.

Flynn watched the dark shore.

Two minutes came and went.

“We’re losing him,” Diana said.

A spear of light came down from the sky above Easterly, then ran along its shore. A moment later, another, farther down, appeared. Then a third one up the coast a few miles.

Three helicopters instead of one.

“Slowing. Ten knots. Five. Dead slow now.”

Was he buying it? Or just being cautious?

The Long Island shore was dark.

Five searchlights now swept up and down the Connecticut coast, centering on Easterly.

Diana said, “He’s increasing speed. Fourteen knots.”

“What in hell?”

“No, wait he’s going dead slow—no—oh, Jesus, it’s a turn, a tight turn. He’s heading this way! He’s still turning. Now he’s going for the opposite shore.”

It had worked—maybe. Flynn held steady.

Diana said, “On his current heading, he’ll be in range in two minutes.”

Mac went back up to the front of the boat. Flynn held the boat absolutely steady, still on the same heading, now closing rapidly with Morris, who would cross their bows at 2,200 feet.

Without warning, without a flash or a sound, there came a tremendous shock wave, invisible until it hit the boat. Flynn was knocked back off the helm, sprawling into the seating behind him. Diana, whose head was below the level of the cockpit dash, lurched with the boat but kept her footing.

Flynn scrambled to his feet, grabbed the helm, and righted the lurching

boat. “*Mac!*”

“I got it, I’m okay.”

“Hold on, it *will* come again!” Then, “Di, you okay?”

“I’m good.”

“I hope it’s the same shock wave weapon Geri used, because it didn’t work worth a shit.”

Twenty seconds to go. Ten.

“It’s speeding up, it’s coming straight at us.”

Mac fired. A second time. A third.

Flynn pushed the throttle to the dash, and the Donzi leaped to life.

Mac came down, sliding into the cockpit. Flynn said, “We gotta stay up on plane—the bow’s full of burst seams.”

Flynn swerved the boat so he could see ahead. The fishing vessel was dead in the water. In it, he could see slumped forms.

“Di, crack the grenades.”

“We can’t set off grenades in the middle of Long Island Sound.”

“Maybe you can’t,” Flynn said.

When they came up beside the fishing boat, which was wallowing in the water, Flynn surrendered the controls to Mac and jumped aboard at once. “Give me some light!” he shouted up at Diana, who turned one of their floods on the scene in the craft.

A figure lay sprawled on its back. It looked entirely human. “Jesus,” Flynn muttered. He turned over a second figure.

The face was not the same as that of the first, but its shape was. Flynn pulled out his flashlight and lifted one of the eyelids, and there staring up at him was the unmistakable steel gray of Louis Charleton Morris’s eye. In his temple, there was a hole oozing blood. Geri’s weapon was in the bottom of the boat, floating in the bloody water.

Morris’s only mistake had been to trust it.

Flynn picked up the pulse weapon and put it in his pocket. Might be of some use to somebody. He'd turn it in to the tech team at HQ.

The third and last body had a human form as well, but the face of a biorobot. It stared, but not sightlessly.

"This one's rejuvenating fast," Flynn said.

Diana handed down the grenades, and Flynn thrust one in each mouth, breaking jaws to ram them in. Morris seemed to be resisting, so Flynn used his knife to also cut back the muscles at the hinges of the alien's jaws, then rammed the grenade farther down, into his throat.

Morris began spasmodically attempting to regurgitate it.

Mac cut into Morris's thorax and put in another grenade.

They got back into the Donzi and pulled out, planing away at high speed. When they were a mile out, Flynn detonated the grenades by radio.

Modern hand grenades were not small explosives, and the boat burst apart in a deafening explosion that slammed from the Connecticut shore to the Long Island shore and back. In the distance, car alarms along both coasts began sounding. A deeper siren, perhaps a volunteer fire department, joined them.

"There are going to be water patrols from ten sheriffs' departments out here within half an hour, not to mention the coast guard," Flynn said as they headed back to Deer Island at full throttle.

"Did we do it?"

"Mac, you're one of those guys who's going to get a medal you can't tell anybody about, because the answer is yes, we did it. We have sterilized our planet of a psychotic alien and his deranged posse of biorobots."

As the boat ran on, Flynn looked up at the half moon now hanging in a deep purple predawn sky, and at the stars beyond, fading now. He thought of the scourge that Aeon had unleashed, and what must be happening there now, and of Geri gone on her perilous journey, taking with her the last echo of

Abby that he would ever see.

Diana leaned against him for a moment. Nothing was said, and then she was gone from his side, back to her seat.

He drove the boat onward, staying up on plane to reduce leakage, toward the dark bulk of Deer Island and the life of the future, whatever might come, whatever lay beyond.

ABOUT THE AUTHOR

Whitley Strieber is the bestselling author of more than twenty-five books, including the legendary *Warday*, *Nature's End*, and *The Coming Global Superstorm*, the basis of the movie *The Day After Tomorrow*. His most recent books, *The Grays* and *2012: The War for Souls*, are both being made into films. His website, www.unknowncountry.com, is the largest of its kind in the world, exploring the edge of science and reality.

This is a work of fiction. All of the characters, organizations, and events portrayed in this novel are either products of the author's imagination or are used fictitiously.

BILLY

A NOVEL BY

WHITLEY STRIEBER

"An amazingly gripping book... a knockout."

—Peter Straub

A chilling tale that could come only from the pen of the bestselling wizard of suspense Whitley Strieber.

Imagine a horrifying glimpse into the dark soul of a psychopath. Imagine a mother and father who, in all likelihood, will never see their son again. Imagine a little boy's terror after he is snatched from the safety of his home in the middle of the night.

Billy Neary is a healthy, well-adjusted twelve-year-old living with his family in Stevensville, Iowa. Typical of kids his age, he particularly likes going to the local mall to play with his friends in the video arcade. Barton Royal is an unhealthy, maladjusted

Part One

BY REASON OF DARKNESS

1.

Suddenly he was there, remarkable and perfect. The next instant he had disappeared into the crowd. Barton gazed after him, but not for long. People noticed you watching children. He walked on.

As soon as he felt it was safe he turned around and overtook the boy from behind.

He had no intention of being carried away yet again by his natural enthusiasm. Another mistake would be too much to bear.

On this particular day he was searching Crossland Mall for the fourth time. He'd been in Stevensville for a disappointing week; he'd been thinking of giving up on Iowa altogether.

He stopped at the mall bookstore and retraced his steps. Now he could safely get a good look at the boy from the front. And what a remarkable face he saw. There was fire in the eyes, along with a boy's natural softness. The face was the sort you could look at for hours; such beauty was a kind of food. His fair cheeks were pinked by the sun, his features at once gentle and sharp, and yet full of dignity. His nose was graceful, but there was also a sweet bluntness to it. His lips were as red as if they had been blushed. The boy's hair was strawberry blond, his skin like cream. His brown eyes were touched like the hair by subtle flame. The expression was affable, with an edge of mischief around the eyes—and yet there was also something else, almost a sense of command. That was so interesting.

The child held his head proudly. The tip of a smile played across his lips as he encountered another boy, obviously a friend. By comparison this other child was a shadow.

Barton watched carefully as they went into a video arcade. His target established himself in front of one of the machines. This was a bit of a disappointment. Perhaps this child was not the extraordinary creature that he seemed. But his looks! God.

Barton had to be extremely careful with this one.

He could do wonders for the right boy, of that he remained convinced. The last time was so awful that he'd made the decision to change his ways. He'd sealed that decision by mixing his own blood with an innocent's.

For hours a given relationship could be so good. His heart opened, the boy's heart opened and they were truly father and son. In those times he would have given his life for his boy.

But inevitably the relationship changed. The boy sneered, he cursed or even spat. Then the truth came out: the vicious punk had despised him all along.

Ending a life properly was a craftsman's work. You had to do it with the dedication of a lover, the care of a professional, the considered pace of a libertine.

You didn't necessarily want to. But once the relationship had collapsed . . .

Obviously the boy in question couldn't be set free.

These thoughts, brief as they were, led him to other, darker ideas, tempting notions from a diabolic corner of his soul.

He found himself imagining that lovely face wet with tears, the eyes pleading, the voice shrill, and his own hands moving as if under the control of the terrible instrument that they held.

The image was so vivid and horrific, it made him shake his head and gasp. The floor rocked. He put a hand to his mouth to force back

the sickness.

Barton had secret knowledge: when skin burns it smokes; a pierced lung sucks.

He had to will himself to calm down, let the bad thoughts fade away.

'OK, take it easy,' he told himself. 'All that's wrong with you is that you're very excited by this child. He's a treasure and nothing bad will happen. No, with the right boy, there will be no bad part.'

Barton was stable.

This time he would do everything exactly right.

In the past he'd picked them up off the street. "Your mother told me to come get you and take you home." "I'm with the police, son." "There's been an accident, we have to take you home now." It depended on how young they were and how neglected they looked. "Want to take a ride, go to McDonald's, get some candy?" And to the saddest, shabbiest of them: "Want to be my friend?"

Timmy had gone for that one. Jack had fallen for the police gambit. For that ruse Barton had worn a bluejacket and some insignia he'd bought at an army surplus store.

The current problem was going to be much more challenging. This child was happy and bright and might not fall for a simple lure, which meant that one could not be risked. If he wanted a specific boy, he only had the one chance. He'd tried forty kids before he got Timmy—who had been flawed, of course. When he'd trusted to chance, he always had problems. He had finally accepted the fact that he could not get a perfect child unless it was by careful choice.

To be certain that the child was right he was going to have to make a closer approach, risk some brief interaction with him.

There were benches for parents in front of the arcade. He sat down, pretending to tie his shoe, and looked the place over as he did so. It was very ordinary: a deep room with fifty or so games and a lot of noise. There were maybe ten kids listlessly pumping the machines.

Only one child looked as if he was standing in a shaft of light.

Barton ached to try a street ploy, but that was not the prudent course. Instead he would proceed slowly and carefully. First he would go outside and sit in his van for ten or fifteen minutes, then re-enter the mall in dark glasses and wearing a different shirt. If he was lucky, he could have a brief conversation with the child. Tone of voice, vocabulary, expression— they would reveal volumes.

He did not want a coarse child, a bitter child, a delinquent child. This one must not be bruised. He must be intelligent, well adjusted, good of heart.

Then it would work.

He returned to his Aerostar which he'd parked not far from the mall's main entrance. To fill the time he enjoyed one of his secret pleasures: he wrote about the boy on a yellow pad. Usually he just wrote a description, which gave him the enjoyment of calling the child's image vividly to mind. Other times he might write a letter, or simply repeat the name again and again, such as "Timothy Weathers" written until it seemed a kind of sweet penance. But he didn't yet know this boy's name.

"Dearest Child, I would like to ask you if I can be your new father. I know it sounds crazy and you love your dad, but just please listen to me for a second. I don't have a boy and I can't, and I'd give you every single thing you could ever want. I won't ever punish you. You make all the decisions. I work, I'll earn the money for us."

He stopped writing.

It would be so beautiful!

"There is something so marvelous about you. Thinking of you now I can smell the grass in the backyard, see that wonderful old elm that was almost my second home in the summer. You make me feel so good, so deeply happy.

"I know you are a magnificent human being. I can help you fulfill your great potential. I can take you out of this wretched cultural desert and help you to flourish and become the great soul that God meant you to be.

"Let me love you, serve you, become you."

He stared at the last two words. That wasn't what he meant at all. "Become you"—what was that supposed to mean? Barton wasn't crazy. He crossed them out. In their place he wrote: "enter your life." Now that was precisely correct.

"Oh, my God," he said, "he's so incredibly special."

Obviously he had already fallen in love with this child. Oh, he would be such a good father! He could do it, he would be just wonderful.

Barton tore the paper into tiny bits. These he put into a plastic bag which he would eventually pour into some dumpster somewhere behind a gas station. Although he had no evidence that anybody was investigating him, the possibility was always there.

That was why he'd quit making his acquisitions in California, and partly why he was working rural areas. Small towns were so open, and their police departments usually had very limited resources. Also, his experience was that small-town America produced better-looking, sweeter, smarter children.

Another important consideration was location. He was always careful to choose towns close to the interstate. This wasn't only because of the need to leave quickly, but also because the citizens of such towns were used to seeing strangers passing through. One more wouldn't arouse anyone's suspicions.

His watch told him it was time to go back. The capture itself was always nerve-wracking, but these new preliminaries made the whole process much worse.

Barton said to himself, "You don't have to do it."

He groaned so loudly that a man walking past his van glanced his way. 'OK, you're losing it again. So take a deep breath, imagine every muscle in your body is melting. That's better.'

The thought of losing this boy was just unbearable.

Barton told himself he had to be strong. He must stick to his plan. What if the boy was rotten inside, foul-mouthed or dirty-minded? He certainly didn't want any of that, not anymore. This child had to be right.

The next step was to get back in that mall and make the final decision. If it was in the affirmative he would then locate the boy's home, find out his name and get some idea of his family situation. To some extent poorer was better, and it helped if the family was new in town. It was easier to get kids who had unhappy homes, but that had been his mistake in the past. They might look fresh and beautiful, but too many of them were grim and sullen and rotten with greed, the *vicious little bastards!*

Looking first to be sure nobody was near the van, he pulled off his tan knit shirt. Then he took the blue button-down out of his small suitcase and put on the dark glasses.

His clothes changed, he got out of the van and moved quickly toward the mall entrance.

Noon was approaching and waves of heat rose from the cars in the lot. Barton was sensitive to heat. The other kids had called him "Leaky," he sweated so much. That and "Fat Royal."

That was a long time ago—longer than it felt. But mentally Barton

was never far from his own childhood. He kept going over things. People who remembered childhood fondly were lucky; they were the ones who had put the pain to rest.

Crossing the pavement he bowed his head against the sun and was grateful to push through the doors into the air conditioning.

In the old days department stores had smelled like malls did now. It was the perfume of merchandise. The smell always took him back to the days when his gang—well, not really his, but the gang he was in—used to ride bikes down to Woolworth's on Main and Mariposa where they had a comic book rack and cap guns and toy soldiers and a lunch counter where you could get a hamburger and large Cherry Coke for seventy-five cents. He wasn't really in the gang, of course, but he rode with them. Or rather, he took the same route. The guys would all sit at the counter; he would be in a booth nearby.

Remembering those days, he smiled a little. Mom had given him one thorough strapping that time he got caught shoplifting those Uncle Scrooge comics. If he'd only managed to pull it off and gotten one for every member of the gang, maybe then they would have taken him in.

Mom had laid it on right in the middle of the living room. Then they watched *Have Gun Will Travel*, and he lay there on the floor where she had left him.

He passed Midplains Savings and Wilton's Jewelers, its main window literally jammed with ceramic brooches illustrating flowers and little hats and ladybugs. In another window there must have been a couple of miles of gold chain.

The mall was moderately crowded. When he was in crowds Barton was compulsive about looking into faces. He was also sensitive to the aesthetics of skin. Smooth, pale skin inspired him. He loved to brush a soft arm or beautiful hand. To taste its salt sweetness, to inhale its miraculous variety of scents—of such things he dared only dream.

Another pass by the video arcade and he saw the boy again, still at his moronic game. Barton took a deep breath, stopped walking and closed his eyes for a moment.

Now came the frightening part: he went into the arcade.

There was a skeeball game in the front, and beside it a locked display case full of cheap trinkets and candy. Each item was marked with some ridiculous number—fifty skeeball coupons to get a miniature Whitman's Sampler, a thousand for some cheap sunglasses.

The electronic games all depicted murder and mayhem, brawls and violent death. They promoted machismo and reinforced unconscious racism. Little thought was required. Rather, they demanded what the streets demanded: dexterity and feral cunning.

Barton moved closer to the boy. His heart began to pound and his underarms to grow damp despite his powerful antiperspirant. He could see the boy's back moving as he breathed. The boy wasn't a fantasy anymore; he was a human being in a black-and-white-striped T-shirt and black shorts.

The vulnerability of children could be extraordinarily intimidating. Barton wasn't a predator, he was a romantic and did not like to see himself as an exploiter. Getting close to kids also meant seeing their imperfections, which could ruin everything ... or it could be delicious.

On the side of this boy's perfectly white left hand there was a small brown mole. Farther up his arm there was another. These were not fatal imperfections, like Jack's relentlessly foul mouth or the black birthmark on Timmy's thigh. Rather, they enhanced the child's beauty in an almost poignant manner.

Watching this sensitive child play Space Harrier was like watching an angel hitting on a bottle of booze.

Barton moved closer. The boy's skin shone in the arcade's lurid fluorescence. It was all Barton could do not to touch the warm

smoothness of his hand, to let his finger brush across the mole.

As the boy's Space Harrier game ended Barton put a quarter into the RPM machine beside it. This was a two-person game. In a quavering tone, he asked, "Want to race?"

"Sure."

Wonderful voice! Soft, yet richly melodious. And a real surprise: this voice was kind!

The boy came over and dropped a quarter into his side of the machine. He barely reached Barton's shoulder.

Even though Barton tried his hardest, he was bested three times in a row, which he found lovely. Nothing was said until the end, when the boy looked up at him and with a sparkle in his eye said, "Want to play for money?"

Barton smiled. "This is already costing me."

The boy laughed and went over to his dark-headed friend. A moment later the friend's brittle, sneering voice drifted back: "Just some queer."

The boy glanced quickly at Barton. There was apology in his soft eyes.

The boy's friend had, in addition to his pimples and his coal-black hair, the extended face of a horse.

Suddenly it hit Barton: *I'm being seen by a potential witness!* He had to get out of here, even if it meant losing the boy.

That was a monstrous thought! In his few minutes on RPM he'd fallen far: he could hardly bear the thought of letting the child out of his sight. But prudence demanded that he leave at once.

The van was stifling. He started the engine and turned the air

conditioning on high.

The locals were all talking about how hot and dry a summer it had been. The corn was stunted, and the farmers wanted rain. Barton had learned to talk about it, too. Every morning he read the Stevensville Iowan, and when the waitress served his breakfast he might say a few words about the weather.

This way if she was ever questioned she would review the past few days and say, "No, officer, I don't remember anybody unusual at all." She would not say, "Gee, yeah, now that you mention it there was this guy that ate here a few times. Real quiet. Never said a word. Kept his head down."

Never mind waitresses, though; here was a strong, direct witness: "Yes, officer, there was this guy in the mall who played RPM with him." And then would follow the description, the IdentiKit portrait, the poster.

Thank God for dark glasses.

He pulled out of his spot and sped to the nearest exit. Once on Lincoln Avenue he headed for the Burger King. Eating would pass the time.

He entered the order line behind a blue Camaro. Three girls were in it, ages sixteen to eighteen. He wished that he could say something to them about their smoking, offer them some help with their addiction. They were all so young!

He watched them order Whoppers, fries, shakes, desserts. Their blond heads bobbed as they talked, the driver's skin gleamed in the sun as she worked the microphone button.

If he got to a child in time, he was convinced that he could transform anyone of sufficient intelligence into a cultured human being. With the right care, the soul would bloom.

"A Whaler and a small dinner salad with blue cheese dressing," he said when his turn came at the order window. "And a glass of iced tea." Not "icetea," like they all said. "Iced. Tea." In the English language it was two words.

As the Camaro left the takeout window he drove up and got his things.

With his food on the seat beside him he accelerated into traffic. He fought the desire to go back to the mall earlier than was safe.

Please don't leave, son. Dad had called him that, and he enjoyed pretending to be Dad. Power was the greatest aphrodisiac.

He made himself go out on the interstate to kill a little more time before he attempted to relocate the child and follow him home.

Grueling hours of search might be necessary this time around. He just didn't know. This was all new to him. And as far as getting the boy—his idea was more a fantasy than a plan. Would it work? He had no idea.

Driving along, nibbling nervously at the Whaler, his thoughts returned to the boy. Wasn't that a wonderful voice? Just exceptional. And that extraordinary face. The word "handsome" did not suffice, and "pretty" was demeaning. This boy had a quality of the miraculous about him.

Even to glimpse such beauty was a privilege.

Barton himself was not beautiful and never had been, but he had made himself into a worthy soul.

The rich white clouds reminded him of the past. He had looked for shapes in the clouds, and had seen the Flying Dutchman there, and his mother had said, "There's a gallows and an old man hanging, and the wind is tearing off his head."

High summer: heat waves coming up off the fields, mirages on the roads, girls in clingy cotton dresses. His friends would ride out into the hard land, and he behind them, Fat Royal pounding his old Huffy to keep up.

In the heat of the day they would take comic books and Cokes down by Salado Creek and read and sip their cold drinks and talk of the matters of those days.

The van hummed on the highway. The Whaler tasted of plastic, as if the heat of the day had melted some of the container into the bun.

A summer had come when he was the only child who hadn't moved away or gone to camp or gotten too old to spend time down at Salado Creek. Eventually he'd had to face a hard fact: childhood was not eternal.

When the flowers had blown from the trellis in the backyard that autumn, he had become possessed by a soft, cloying anguish that had never since left him. He did not pine for his childhood because it had been beautiful. It hadn't been. What he wanted was to somehow escape the pain.

Alone by the Salado, he had first experienced the sort of fantasy that could still make his stomach churn with revulsion even as it stirred his desire.

In the fantasy he was carried naked to the creekside by the other boys. They laid him face up on the bank, with his head dangling over the water. He could see the sky above and the gently swaying cypress trees, and then they would push his head backward until it went under. Desperate, fighting the water that was forcing its way up his nose, he would be dimly aware that somebody was handling him where they shouldn't be.

The fantasy was wrong, it was a sin. So intense were his efforts to suppress it, more than once he imagined jamming a red hot soldering iron into his brain.

What he wanted now was a pure relationship with a child to prove the goodness that was in him. He could be a good father and a very special sort of a friend. He had to show that to himself. By giving joy to a child, he could heal the wounds of his own childhood. That was his great quest.

So on and on he went, searching for the perfect relationship with the perfect child. He dreamed of looking back one day and saying of that child: *I made him happy*. Then all would be well.

The closer the boy was to perfection, the more he brought back memories from Barton's own past: the blowing trees, the voices, the easy laughter of the old days—and Fat Royal and Let's Fuck Leaky and oh God, if only he could repair the past! The saddest memories are those that just miss being wonderful.

To get closer to kids he became clever in their ways. He learned to form friendships with them using a combination of kindness and firmness. He learned about their fads and fashions. He was aware of the importance of Nintendo, and of the differences between Super Mario Brothers Two and Super Mario Brothers Three. He knew all about Teenage Mutant Ninja Turtles.

When it was good with Timmy, the child had kissed him as he might have his own father.

Dad had died as quietly as a moth rising into the sky. "I love you, Dad!"

Barton had stood over his father's still body, and spoken those exact words.

At the graveside he had read one of his own poems, and Mother had said, "What a lovely thought."

Each Sunday since the death she put a single sprig of lilac on the grave. Her grief had been so intense for so long that it had come to seem like a sort of grim pastime.

Again and again Barton tried to puzzle out why he did what he did. Was it Dad's fault, or Mother's? Was it his? Had something terrible happened that he had forgotten, or was it an accumulation of little disappointments that had done it? The other children had been awfully damn hard on him. Every time he thought about it, he got so *fucking mad!*

But he wasn't dangerous.

He prayed for the new little boy. "God, let him survive."

If only the black room didn't exist, if only he never took them there, if only—

A child needed him.

2.

Because he had other things on his mind, Billy wasn't really working at Space Harrier. The American Legion was sponsoring a short story writing contest with an Iowa theme, and he intended to win it. His main inspiration was that first prize was the amazing sum of five hundred dollars.

He also had an idea. It was stimulated by a summer reading assignment recommended by Jim McLean, his English teacher. The inspiration was Kafka's *The Metamorphosis*, and the idea was that your typical Iowa farmer would wake up one morning and discover that not only had he turned into a giant bug during the night, so had all the other farmers. And they were hungry for corn.

Billy was excited about his story, so excited that he'd failed to better last night's crop of teenage records in Space Harrier.

As far as digital games were concerned, he much preferred Dungeonmaster on his Amiga computer. He was already deep in level ten and the way he computed the probabilities he had a fair chance of surviving until the game ended.

He wondered what would happen when it did. When you beat Super Mario Brothers all Mario did was lie there and sleep. Not a very big deal considering the magnitude of the achievement.

He worked alone; deep Dungeonmaster levels were too hard to crack with a bunch of kids arguing about every spell you cast, and then getting pissed off when they weren't allowed to take a turn.

Jerry Edwards was already sulking over Billy's performance on Space Harrier. Acing games for the brain-dead like that was boring to Billy, but to Jerry it was the equivalent of climbing Mt. Amanda herself in the backseat of her parents' Vulva station wagon.

Being an undumb kid in a place like Stevensville was even more inconvenient than it had been in the last town, Iowa City. Iowa was not a state of genius, his dad said, but it made up for it with a big heart. Whee.

At least it was better than New Jersey had been, where drug dealers were always after you, sometimes even chasing kids down and forcing them to do crack.

Dad had been fired from the school in Jersey before he was fired from the one in Iowa City. That was how Billy ordered his past: from firing to firing. Dad had a mind of his own, and was therefore canned on a routine basis.

Dad could yell and wave his arms with excitement about LaFollette and Gus Hall and the House Un-American Activities Committee. He was capable of scoffing openly at everything from the CIA Charter to the Gulf of Tonkin Resolution, a Vietnam-era travesty only he had not yet forgotten. It was all pretty embarrassing, but the way he loved the hell out of you made up for it.

"Stevensville is a very tolerant, very midwestern place," Dad said. "I hope to last at least two full semesters."

Billy had disgusted Jerry by abandoning Space Harrier in midgame.

Three minutes after Jerry grabbed the controls the game over sign came floating into the foreground.

Billy whipped through level after level in Afterburner while putting his short story together in his mind. Waves of planes came at him. He jinked and jugged, dove and climbed, and thought how great it would be to be really weird like Kafka. I mean, Gregor Samsa just plain turned into a giant bug. His mother hurled an apple at him and it got embedded in his back. He was even crunchy like a bug, but too huge to step on. His family was very embarrassed.

That was such a good story. When his own family went down to Des Moines in July Billy had taken a super-sharp Xerox of Kafka's picture to have a KAFKA LIVES T-shirt made at the Shirt-works.

His story was going to just totally turn everybody's stomach which would be incredibly fun. It would be the best-written submission, he was confident of that. But would it win? Only if the judges had the courage to recognize the best. It would certainly go into the fall issue of Stevensville Junior High's literary quarterly, the Biblion. Gum-popping goddesses would read it and say, "That was really, well, sort of unfiltered." They would also say, "That Billy Neary is so outa tune."

Suddenly Billy crashed. He stared at the screen, watching the smoke rise as his jet plowed into a town. That was what you got for plotting a short story while playing a game whose moves were measured in hundredths of a second.

To cover his embarrassment he instantly turned away from the screen. He had a reputation to protect.

"You screwed up, Neary. I saw you!"

"And you're gonna tell the world."

"Naturally!"

"I'll do you a favor sometime."

"You blew level ten. I can't believe it." Jerry grabbed Billy's head, rapped hard on the top of it. "Yep. I thought so." He rapped again. "Hear that? Sounds like there's wood in there."

The headlock was pretty painful, but Billy knew to give no sign. "Implying that I'm a woodenhead. I'm crazed with laughter."

"No, man, that sound means you have a brain tumor."

"My middle name is Melanoma. If you break my neck I'll vomit all over the warts on your chest."

Jerry dug his knuckles deeper into Billy's head.

"I will seriously retaliate."

Jer ought to know that Billy's threats were on the level.

"Remember the toilet caper, boy." Billy had flushed a Baby Giant down the toilet at Cinemas Three and gotten Jerry blamed for the explosion.

"I damn well do remember it, you smug son of a bitch."

"Now, now, children don't talk like that."

"The fuck they don't."

"Let me go or I put a time bomb in Lacy's mailbox and you'll take the heat."

"Lacy's in bed with my dad."

"So are most of the other men in town. You know you can't afford heat from Lacy."

Jerry released him—not because of the threats, but because something else had interested him. "There's that queer you pussywhipped on RPM."

"That's no queer, that's Lacy's twin sister."

"Don't speak that way about our police chief. It's unpatriotic."

The stocky man's eyes slyly turned. Billy felt himself being scrutinized.

"You could probably make a couple of bucks off that guy, you let him suck you off."

"Thank you, Jerry, but I can do without your kind of money."

"Your problem is, you got no head for business."

"Give no head for business, you mean."

"Is that funny, or just dumb?"

"Brilliantly hilarious."

"Dorked out."

It was lunchtime, and Billy was hungry. His finances were so low that lunches at Burger King or McDonald's had come to seem lavish, so he decided to head home for peanut butter and jelly or—if his mother was in her gourmet mode—a grilled cheese sandwich.

Billy left the mall, unlocked his spectacularly ancient Schwinn from the rack and went pedaling off. He loved this bicycle, especially the fact that it was old and rather low-tech. Reverse chic appealed, especially in a town packed with glittered Hard Rocks ridden by kids in glittered British Knights and Nike Airs. Also, riding a plain old bike and wearing plain old clothes pleased his plain old dad.

He took the usual route home, swerving briefly into the Burger King parking lot to spy out the society, even though he was fairly sure that Amanda and the other observables hadn't heaved their butts out of bed yet, knowing their established summertime routine. Most of them would be embarrassed to do their Egg Beaters before two-thirty at the earliest.

Despite the certainty of physical abuse, he intended to declare his love to Amanda at the next opportunity. He would then accept the beating from Jerry. Amanda had already made an observation about the enormous Jerome that was probably fatal to Billy's hopes: "He has hair growing on both sides of his chest."

"William, my little twelve-year-old super-dork," Jer had said, "give up. She'll never buy into your girlish looks."

"I'm sure she'll love your wit, your brilliance."

"She'll love the fact that I'm thirteen and a half and I can get a hard-on that works."

"Gee, does it work a lot?"

"Only when I make scuzzbags like you chew it. Look Billy, if you talk her up somehow or other, I'll eradicate your face."

"Why so worried? Feeling insecure?"

"I like to kill guys like you, Billy. I really do. The last thing Iowa needs is more brains."

"Brains mean money, dear child." Except, of course, in a case like Dad's . . .

"I don't have brains. I come from a dumb family. My dad can hardly even run an automatic elevator. That's why we live in a little town, because there aren't any around here. But he owns a piece of this mall and a piece of the Sears mall and about six thousand acres of corn. And never forget, schoolteacher's son, that he is on the Board of Ed."

"Which explains why the Board of Ed has nothing to do with brains."

"Why should it? Clearly, school isn't about learning. It's about winning basketball games."

"Will I have a sense of humor too, when my hard-ons start working?"

"They never will, junior. They never will."

So it went. The day would probably come when Amanda would forsake Jerry, but not for baby-faced Billy Neary with his old bike, old car, old clothes and cheap Walkman.

He would never admit this to Jer or any other living soul, but he was beginning to wonder what it was *like* to reach puberty. He knew all about it of course, thanks to his father's stentorian and incredibly embarrassing sex education "conversations." But what was it *really* like?

It was just noon when Billy wheeled into his driveway.

A single place was laid at the red Formica table that dominated the kitchen. Mother had indeed produced a grilled cheese sandwich, but it was for his older sister. He slid half of it into his mouth while an unsuspecting Sally was rummaging in the fridge for some Hi-C.

"You thieving creep!"

"Slip of the tongue." He laid open his cheese-filled mouth. "Excellent cheddar," he said.

She took a swipe at him with the ice-cream scoop, which had been lying in the sink. Then she stared at it, her eyes widening with horror. "My Heathbar Crunch!" she gasped and ripped open the freezer. "Dad," she yelled, "you've been eating my Heathbar Crunch that I bought with my own money!" Throwing the ice-cream scoop over her shoulder she flounced out. "I hate men!"

Dad had not stirred from watching the Orioles slowly if ineptly defeat New York. "One to nothing and it's the top of the ninth," he commented as Billy passed through the den. He was working on a huge bowl of Heathbar Crunch.

"I ate her lunch. You've got her dessert. Retaliation is possible."

"She's scared of me, I'm much too large and awful. She'll take it all out on you."

"I'm going down to the basement to work on my short story."

"Have a plot yet?"

"Iowa farmers turn into giant bugs."

"Didn't I read that headline on the Weekly World News down at the A&P?"

"Dad, it's based on Kafka."

"Throw Kafka at the American Legion. They're sure to give you five hundred bucks for that."

"Well, it would be fun to write."

"What about doing something topical? Flag burning, for example?"

"I'm scared of matches."

"My God, a player has hit the ball. Oops, it's a foul. Kind of an interesting half-second there, though."

Billy was careful to lock the basement door against a raid from his sister.

Sitting down before his beloved computer, Billy decided that his day was going pretty well. It was afternoon and the basement was cool and there was a large Butterfinger hidden behind his computer bench. There was also a beer there, but that was part of another scenario. Bring Amanda down, impress her with his ultra-boss computer, sip a little brewski, then, well, connect faces. Billy Neary and his Flying Fantasies. He sighed, then flipped on the computer and loaded Pro Write from the hard disk. The white screen stared at him. "It was a dark and stormy night," he wrote. Nah, not cliched enough to satisfy the American Legion.

"When Bob Hughes woke up one morning from dreaming about his corn, he found himself changed in his bed into a huge corn borer. All that was left of that farmer was his toupee."

'Oh, man, this would be an awful lot of fun, but Dad was right that it wouldn't win the American Legion contest.' He hit erase and sat staring at the blank screen.

"Young Freddy Krueger had a deep love of his country, and especially its beautiful flag."

A yucky story idea, yes, but Dad had closed the loan window in July and Billy was down to smelling other people's breath after they ate their hamburgers. His last ever candy bar was two feet away from his trembling fingers. He had to write a winner.

"He would defend his flag with his life. To a true patriot like Freddy, it meant everything. And everything else, too."

Maybe he'd better change the Freddy Krueger. They probably wouldn't make the connection to the Nightmare on Elm Street movies, but why take the risk? He'd call his character Martin Bormann. They'd never in a million years pick up on the fact that he was one of Hitler's dearest, sweetest thugs.

While he stared at the screen, Billy's hand moved toward the Butterfinger.

The thing was, he wanted to have fun. A story about the flag was not fun; it was a chore. He killed ProWrite and played around for a while with the birdsong he had recorded the night before. All summer he'd been trying to get that bird to reply to him. Whenever there was enough moonlight to keep it awake, it sang on the wire behind the house. Billy sang back, but so far the bird had never responded. He had been recording its song in hopes of better imitating it. Now he was comparing the digital image of the birdsong to his own efforts. Slowly but surely he was getting closer to the bird's notes. It would be so extreme to have a conversation with a bird. Of course, it would just be

sounds. He didn't know any vocabulary. He could imagine it translated:

Bird: "The moonlight-t-t-t is so sw-e-e-et!"

Billy: "I have a t-t-tortilla in my e-e-ear!"

Bird: "What an asshole is he-e-e-re!"

He became absorbed, and when he became absorbed the world around him just plain ended. Hours passed. His sister took down the bucket of water she had carefully positioned above the basement door and spent the rest of the afternoon making pecan divinity for the specific purpose of hiding it from both of the damn men.

Slowly, carefully, Billy was crafting his reply to the bird. He was producing deep music, amazing sonorities that were at once beautiful and weird.

Shadows came out from behind the furnace, from out of the disused coal cellar, down the steps that led to the storm door with its rusted hinges and loose lock.

Since it was a summer Saturday night, dinner was free icebox, no call and no formal table. At six he sucked up the Butterfinger, counting on it to sugar-high him through until about nine, when Jer would show up and they would hit B-King. Jer had promised to treat him to a small fries.

Finally there was no light in the basement but the pale glow of his monitor. It was past eight when Billy leaned back from his work and rubbed his eyes. He noticed with mild interest that there was a pair of legs visible beyond one of the basement windows.

Somebody was standing there. Dad? Jerry, inexplicably wearing gray slacks?

Never mind, it didn't matter.

But it did.

3.

Barton had felt sick when he saw the sea of kids in the video arcade. In only thirty minutes the place had filled up. Kids must have been pouring in steadily almost from the time he left.

He should have stayed; he'd never catch sight of his boy in this crowd. But he'd been seen, he'd had no choice.

Even now it was perfectly obvious that he was looking for somebody. He went down to the bookstore. Absently, he paged through a new novel, *Fire*. God, what an upsetting title. People did not know how much fire could hurt unless they had seen somebody being burned. If a person is burned extensively enough they start feeling cold. After a really thorough session they shiver like they were in a freezer—not that Barton had any knowledge of that.

There was such a thing as a wild scream. When a person knew that their agony would only be ended by death, that is how they shrieked. The black room had the most expensive ceiling tiles you could buy, and the cinder-block walls were double-thick. It swallowed screams.

If there is one place on earth where you can do absolutely anything you want, you are free.

A steam iron.

Barton's stomach churned. He put the book down. Again he made a run past the arcade. He rolled along casually, watching out of the

corner of his eye.

And there he was, the angel being manhandled by the bigger boy who'd been with him earlier. Barton was livid. Had the situation been different he might have intervened. Then the muscle-boy saw him. As he moved off, he just glimpsed himself being pointed out to the angel. Damn, that wasn't supposed to happen even once, let alone twice!

Uneasy about lingering in the mall, he had returned to his van yet again. He gripped the steering wheel, staring into the void of the parking lot. Stevensville might be a small town, but Crossland Mall was huge, designed to serve this whole part of the state. What was he going to do?

He'd definitely been noticed again.

Then a miracle had occurred. God must love him: he saw his boy coming out of the mall by himself. Barton was so excited he couldn't get his engine going. As he sat furiously grinding the starter the child moved toward the bike rack.

Barton's thoughts had flashed back to the first time he had seen Jack, on an October afternoon. Yellow leaves had been running in the streets and skywriters scrolling an enormous Pepsi ad across the blue of heaven. That had been at the Mill Run Mall in Tappan, California.

The engine ground to life, and for the first time Barton thought he might get this child.

The boy finished unlocking his aged bike and started for the exit. Despite the risk of losing him, Barton waited a full thirty seconds before following. He had to submit himself to the discipline of the quest. You had to know how to breathe, how to move, how to empty your mind and concentrate with total attention. Finally he started off, moving with the gliding slowness that most drivers adopt in mall parking lots. He wanted to jam the gas pedal to the floor.

By the time he caught sight of the boy again he was already turning

onto crowded Lincoln Avenue. Accelerating smoothly as he slipped into traffic, Barton cruised past the child. He kept him in sight with the special wide-angle rearview mirror he'd bought for just this sort of maneuver.

He'd bought it when he was following Timmy. The technique was to get ahead and let the child catch up.

Poor Timmy. He had been—

'Not now, Barton.' He was on the hunt. It wasn't time for memories. He coached himself: breathe in, breathe out. "Control your breath and you control your soul," said those who were spiritually aware.

The boy rode into the Burger King parking area. Quickly maneuvering the van, Barton cut into the far end of the lot. As he wheeled around he expected to see the bike cross right in front of him, but there wasn't a sign of the boy or his bike.

Barton looked out toward the street just in time to see the Schwinn disappear beyond some parked cars. As fast as he dared he left the lot. The boy was far down the street, pedaling hard. What did this mean? Surely the child hadn't seen him. Of course not. Boys changed their minds in an instant. Very well. He would keep his eyes on the bike. It was at least a quarter of a mile away—and just then it had turned a corner. To keep the boy in sight Barton had to gun his motor. So much for caution. He covered the distance to the side street in a few seconds.

Hicks Street. He looked down its tree-lined expanse. No bike. Damn. The boy must live in one of these houses. Unless— it was also possible that he had made the next corner and turned again. Barton moved to the end of the block. There he was, just disappearing up a driveway. In a moment Barton was cruising past 630 Oak. He had him. The boy walked his bike into the garage and dropped it onto an equally aged girl's bike. The child knew this place well. Barton was virtually certain that the boy lived here.

Next Barton checked the property for signs of a dog. What he glimpsed

of the backyard revealed that it wasn't enclosed. There was no doghouse. He spotted no telltale heaps of dog feces, no spots of dead grass indicating that a dog had urinated there.

At the end of Oak, Barton turned onto Maple, then went up Elm to Hicks. Then he drove down the six hundred block of Oak a second time.

While the condition of the yard suggested that there was no large dog present, a smaller pet might still lurk within the house. When he penetrated he would bring a hammer, raw meat and a plastic garbage bag for the animal's body.

If people like him got caught it was because they were careless. He could assume nothing, trust nobody.

He had never met another person like himself, but he had studied their failures in newspapers and magazines. He'd even done volunteer work for Missing America, a large support group for parents of missing children. He needed to get inside the mind of the parent and the police detective as well as the child.

He knew the law. He knew exactly what would trigger FBI involvement. He also knew police, and what telltale signs would make them suspect a runaway. If they thought a boy had left home on his own they would quietly downgrade the case.

Abduction by strangers was rare. In most places it was a sensational crime, not forgotten for years and years by the community. Etan Patz, abducted from SoHo in New York in 1976, was still being hunted.

Because Jack was listed as a runaway everybody had forgotten about him. But Timmy was on those damnable posters all over the country.

Barton had mixed reactions to that. The prospect of being investigated made him wake up sweating in the night—and yet the idea also caused a deep, illicit tingling.

Most guys like him took their kids right off the street. Barton had done that in the past, but his new method was far more subtle and extraordinary than simply luring a kid into the back of a van.

He drove slowly past the target house. Suddenly he became aware that his pants were soiled. There was a stain on his thigh. How long had he been wearing these pants? He couldn't remember. It could have been since last week, since Timmy. Revolted, Barton tried to pull the cloth away from his skin. He inadvertently turned the wheel. The van swerved badly.

There—another moment of inattention. Somebody might have noticed the white van that swerved the day before Johnny So-and-So disappeared. And under hypnosis the witness might remember the license number of that van.

It was so easy to fail.

He headed back out to the interstate, driving quietly for a time, to calm himself. He would have to live with the stain. It was probably just grease anyway.

He took an exit ramp about ten miles from Stevensville and drove down under a bridge where he had already scouted a good place to park the van.

He thought over what he had seen. The family lived in a lovely old neighborhood, but their house was visibly shabby. In addition both of the kids' bikes were old, and the station wagon in the garage had seen better days. These were good signs. A poor child was easier to dazzle.

So he was part of a family of four or more. Unless the target had a brother whose bike Barton hadn't seen, it was likely that he would have a bedroom of his own in that big old Victorian house.

Barton looked at his watch. One-forty. He would not return to Oak Street until after dark, sometime between eight and eight-thirty. It would be his first chance to check out the house on foot. If they had

their name on the mailbox, that would be when he would learn it.

Since it was likely that he could act tonight, he would have to check out of his motel now. Following his plan, he would start driving west immediately after making the hit. He'd sleep in Colorado and Utah, living in the van until he reached L.A., which would be on the fourth day.

It was a hard drive but he'd done it before in that time, without ever once exceeding the speed limit. The idea of getting stopped for speeding with a kid in the van was too horrible to contemplate.

Maybe he was pushing too hard.

He probably should have taken the week on Maui before coming out here. As it was, he was going to have a hard time convincing Gina that his extended absence was in any way legitimate, let alone forgivable. She had to give in, though. It would be suicide to fire such a popular employee. In his own very small way, he was a star.

He *needed* another boy, and it couldn't wait even *one fucking minute*.

4.

A hand dropped down on Billy's shoulder.

"Dad!"

"Would you believe it's eleven o'clock?"

"No. I thought Jerry was coming by at nine."

His father laughed. "He came. You told him to leave you alone."

"I've gotta just put this one sequence together, Dad. I've got all the tracks laid, it's just a question of linking—"

"It's the end of the day, Birdman."

"I'm not tired."

"You're never tired."

"So let me finish this. I want to talk to that bird."

"Formula for long life, says Chinese sage: bed, sleep and sweet dreams."

Hand in hand they went upstairs.

Barton was lying in the yard under a twisted old tree. The moonlit shadows of its limbs made crooked fingers in the grass. When the

basement light finally went out he sat up. But there were still lights on upstairs. Didn't these people ever sleep?

It was a beautiful night, and every so often he would raise his eyes to watch the moon through the branches of the tree.

"I see the moon and the moon sees me, high up in the old oak tree ..."
On his nights of boyhood the breeze would come fifty miles from the sea, bringing with it the magical scents of the ocean mixed with night-blooming flowers.

Barton would dream of evil green waves and the ocean giant the Bible called Leviathan. Whisper-quiet, Leviathan would come up from the depths of his dreams . . .

The last of the lights finally went out.

Earlier he'd watched the boy playing with his computer. There had been terribly complex images on the screen, and music, such music, wild and beautiful. He had watched that lovely face concentrating, seen the graceful curve of his neck, the softness of his boy's hands and the laughing, gentle eyes. He was the most perfect boy Barton had ever seen. Just absolutely perfect.

He wondered how this boy was punished. Probably just talked to, the lucky little *bastard!*

Barton would be laid in his mother's lap. The purpose of the ritual was to correct and teach. There was love in every blow, Barton knew that. Dad would never help him. Dad would never tell her to stop, tell her it hurt too much.

Dad had been so weak at the end, Barton had just laid his hand over his nose and mouth. He'd had to do this to see if his father was still alive.

Barton had called to his mother, who was in the shower. "Mother, Dad has died."

Dad had never come to his bed in the night.

And he hadn't smothered Dad.

He stood up, took three deep, hungry breaths and moved toward the house. His feet whispered in the dewy grass.

Billy dropped his clothes into the hamper. As always, there were a number of issues connected with the shower. First, how long. Second, how hot. Naturally the most desirable situation was very long and very hot. But Billy knew the risk of depriving his mother of her hot water. She also showered at night, and could become dangerous if this happened. "Since you wanted such a long shower, take mine, too."

"But it's cold, Momma."

"I know."

He wanted her to have her small pleasures. She saw to so many of everybody's needs. Given Dad's profound lack of technological skills, it was she who assembled the toys of Christmas, she who had connected up the Amiga and taught him the rudiments of it. Basics like food and clothing came from her, and she also was the one who understood that his mind was on a major growth curve. She had introduced him to *The Catcher in the Rye* when Dad was still promoting *Tom Swift and His Amazing Underwater Toaster Oven*.

Billy lathered himself efficiently with Ivory. He took special care with his underarms, for he had noticed again today a musky odor lingering around him during the noontime heat. As he washed, he touched his privates.

Amanda.

He almost collapsed. The merest flickering thought of her made his penis leap to life. It stood before him in the spattering water, and he

checked to make sure the door was locked. What would his sister do if she saw this? Call the police, probably. What—would—Amanda—do?

You would end up wearing a bicycle around your neck, young man. Boy, if this thing wasn't working yet, it sure was about to start.

Amanda ... to walk with her, hand in hand, to the gazebo in the center of MacIntyre Park, dear Lord, and there to place my lips against her lips and perform extremely pleasing acts . . .

Awash with desire he faced in the privacy of his shower the fact that there was no hope. Amanda Bartlett would never pay him the least attention.

"Ach du lieber Augustine —" And what was the rest? Two months out of school and he was already brain-dead in German. *"Du lieber Amanda ..."*

You did not impress a girl like Amanda by being recording secretary of the German Club. Let's face it, Jerry had elaborate muscles and could prance the gridiron before her admiring gaze.

When baby-faced William Neary came up to her and said, *"Ich bin lieben —or lieber —uh ..."* he could expect the proverbial wet *Spaetzle*.

As the shower turned tepid his erection collapsed and he stepped out. He dried himself and pulled on his yellow cotton pajamas.

Bedroom, bed. To sleep, perchance . . .

* * *

Because there were basement windows secluded at the back of the house Barton could take his time entering. He examined a window frame with his penlight, taking inventory of its various weaknesses. He

did not want there to be any sign of entry or exit.

He'd learned from his work with the missing children group that policemen felt ill-equipped to fathom the secrets of families and read the hearts of children; the most beloved child could decide to leave home, and for unknown reasons. A flower of youth might end by turning tricks on Sunset Boulevard or Lexington Avenue in the Fifties and nobody would ever know why.

Barton intended to create the appearance that this particular kid had packed up and moved out. But before he did that, he had to face the tricky part; indeed, it was the best ruse he had ever contemplated.

In his pockets he carried wire in various grades, a group of plastic cards of different thicknesses and even some old-fashioned skeleton keys he'd bought at a yard sale. Small-town locks were sometimes old enough to give up their secrets to these keys. Finding that the window was secure, he tried the storm door. He was pleased to discover that entering here could not be simpler: there was a padlock, but that had been locked onto the broken hook. The tongue of the hasp hung open. He took out his 3-In-1 Oil and oiled the hinges—very, very lightly. Then he wrapped some felt around the loose parts of the lock. He checked his other equipment: the cloth packs, the ether, the duct tape, the hammer, the bags.

He was going to be a wonderful father to this boy. They would have a fabulous life together.

Billy listened to the quiet. Everybody's light was out. Only Billy was still awake—as usual. He simply did not sleep as much as other people, at least not as much as the members of his own family did.

He threw off his sheet and stepped into the faded shaft of moonlight that shone on his rug. He went to the window. The breeze was scented with the perfume of corn tassels. He loved the night, and was all too aware that this night fell at the end of his last childhood summer. In October he would be thirteen. He'd heard his father and mother talking one night, and his mother had said, "He's disappearing. Right

before our eyes, he's just disappearing."

The moon was high, and the bird sang into the silence. He could see it sitting on its telephone wire. To his ear there was no sound in the world quite so pure as the voice of a bird. Carefully he directed the microphone of his tape recorder out the window. He drew in breath, rolled his tongue into the back of his mouth and let out three notes. The bird went on singing to itself, all alone on the wire.

The world swimming in moonlight, the whispering breeze, the bird's clear, sharp song—nobody could re-create such beauty. But he could try. This time he closed his eyes. He let his ears become his only senses. He filled his lungs and pretended he was a bird also, soft and quick and smitten by the moonlight.

He sang.

The bird sang back.

Again he sang.

And the bird sang back.

He replied.

The bird fell silent.

Billy opened his eyes. Goose bumps covered his skin and his blood rushed with wonder. His first impulse was to wake Mom and Dad up and tell them, but that might be a mistake. He would almost certainly get a strict order to slide back between the sheets.

There was no time for sleep now. He had to go down to the basement and play this recording into the computer, examine the exact nature of the notes that had gained response.

Had he actually duplicated the bird's voice, or simply deceived the creature?

As he slipped along the hall he heard the bird again. At the top of the stairs, he paused. Aside from the bird, the only sound was the ticking of the big clock in the living room.

Quietly he went downstairs.

5.

Barton lifted the storm door, went halfway down the steps and pulled it closed behind him. Admirably soundless.

He stood in careful silence, not even breathing. When he took a breath it was to test the odors in the room for what information they might impart. The air smelled of cool concrete, with a faint undertone of mildew. Ordinary basement smells, nothing to worry about.

He was surprised at the intensity of his feelings. This was a luscious moment. It was also extraordinarily scary. Sometimes he thought he could best understand himself as a dark element of God sent to haunt the world.

He padded into the center of the basement. He was hunting for the stairs with his penlight when he heard a distinct footfall above his head. It was faint, but very definitely there. He listened, but the sound did not repeat itself.

An instant later he was appalled to find himself standing in a flood of light.

Billy turned on the basement light from the pantry. He went down, his eyes on the Amiga. The quiet made the basement mildly creepy. It was a familiar sensation, and he would have ignored it except that it caused him to remember those legs he had seen earlier outside the window.

Dad had been wearing khakis. None of Billy's friends wore gray slacks in the middle of summer vacation. Had it been an extremely subtle trick played by his sister, to get back at him for eating her sandwich? No, she wasn't that subtle, at least not usually. There was, of course, the time last February she had taped the matchbox full of fruit flies from the bio lab inside his guitar. He'd noticed the change in tone, torn out the box and inadvertently released the tiny flies. He hadn't even noticed the bugs . . . until ten days later when their reproduction rate had caused his room to suddenly become a jungle hell. Given that he was owned by parents who did not believe in insecticide, getting rid of the flies had been a pretty major pain in the ass.

Well, there certainly wasn't anybody out there at this hour, unless it was some kid. By ten-thirty you could hear the lights changing from one end of Lincoln to the other. Kids at slumber parties would sneak out in the nude at midnight and nobody would see them. Once, according to Jerry, he and Dick-the-Prick Davis and Fo-Fo Garr had met up with Cynthia Stales, Rebecca McClure and Sue Wolf on Endower Lane, and both groups were nude.

Lying bastard.

He sat down at his computer and flipped the switch. The opening screen came up, followed by his hard disk icons. He went into his birdsong files. He plugged his earphones into the small amplifier he used with the computer, and unhooked the speakers. Instantly he was lost in the wistful, perfect music of the bird.

Barton breathed carefully, with infinite softness. He lay under the boy's workbench, his elbows grinding into the hard concrete floor. The child's bare feet were not eighteen inches away from his face. It would have been so easy to just reach out and grab one of those sleek ankles. But the boy would scream the house down.

Initially Barton had been so stunned by the light that his mind had gone blank. Fortunately instinct had prevailed and he'd dived under

the table just in time. Gradually, he recovered his composure. His breath came more gently, the sweat dried on his face. He forced himself to think calmly and clearly. Things were by no means out of control. There were still lots of options.

If he could figure some way to get out from under this damned table and work his way around behind the boy, he could put him to sleep in a few moments. Barton was a powerful man; the child had no chance of getting away before the ether overcame him.

Billy labored happily, but not for very long. He had to admit that he was a little tired, and digitizing a tape was a complicated process. Working with sound on a computer was slow, exacting and technical if you were interested in doing it right.

He killed the program and sat staring at the blue opening screen for a short time. When he thought about it, he wasn't so tired that he couldn't play Dungeonmaster for a while. And why not? Life wasn't supposed to be all work.

He loaded his Dungeonmaster disks and pressed the red resume button beside the great black door that appeared on the screen. In a moment he was deep in level ten.

Barton edged his way out from under the end of the workbench farthest from where the child was sitting. In the shadows ahead stood a fat old converted coal furnace with an evil grate.

He slid along inching like a great worm, until at last the furnace was between him and the boy. He pulled himself to his feet and peered out from amid the tentacles of ducts.

The boy was still playing with the computer. If this was going to work Barton would have to move like lightning. He opened the ether and

crouched down.

Tensing his muscles, bracing, he prepared to leap.

The last thing he did was to soak his felt in the chemical. Its medicinal stench filled his nose, its coldness made his hand ache.

What was that smell? It was raw and fresh. Billy had been tapping his feet, tipping the chair back as he played. Had he somehow crushed a dropped tube of glue? He checked under the workbench. There was considerable debris down there, including that missing Amiga User utilities diskette. He retrieved it and put it into his diskette box.

There was no glue, and yet the whole basement reeked of the stuff. There was also another smell, a human smell. Billy sniffed his own underarms. It wasn't him. Could it be Dad, or his sister? No, neither of them stank. And the glue smell—it just didn't make sense.

Upstairs was suddenly very far away.

He decided that he'd had enough for one night. He turned off the computer, slid back his chair and left the basement. Although it wasn't a usual thing for him to do, he locked the basement door behind him. He also left the light burning. Burglars, he thought, don't like light.

But what would a burglar be doing fooling around with glue?

Too late Barton had realized his mistake. The boy had sniffed, looked around. Obviously he had smelled the ether. And then fear had entered his face. He'd hurried off, locking the basement door behind him.

After the door had closed there was no further sound from upstairs. Barton was left alone in the light.

That might just mean that the boy was waiting and listening. Barton contemplated violating a cardinal rule and leaving a trace of his presence: he considered locating and cutting the telephone wires.

As he looked for the telephone company's incoming service he glimpsed his own reflection in one of the basement windows. It startled him and he jumped back.

Beyond those black windows he couldn't see a thing. A coldness spread through him as he realized that the boy could be going outside to examine the room from a position of safety.

Never mind the phone wires, he had to get out of here.

At first Billy had tunneled into his sheets, hidden in his familiar bed with his beloved stuffed Garfie snuggled close to his chest. But that didn't work. Not being able to see out increased his feeling of vulnerability. He threw the sheets off and looked around him. The room was as always. He sniffed. No unusual odors here. He listened. No strange noises.

He knew what he'd smelled in the basement, though. He was almost sure that another human being had been in there with him, somebody who was sweating and—for whatever weird reason—using glue. Whoever it was hadn't made a sound.

Billy decided he might have been having a nightmare while he was awake. Could that happen? He wasn't sure, but he thought maybe it could.

He decided to check out the rest of the family. Maybe he'd find the explanation in one of the other bedrooms.

Barton had withdrawn from the house very, very carefully. It had

taken him a good five minutes to convince himself that the boy had indeed stayed inside.

Except for the basement, which blazed with light, the place was dark. He looked at his watch: one-fifteen. At least he had plenty of time left. He decided to return to his spot under the tree and wait.

The bird's song had drawn Billy to his window again, and from there he'd seen a bulky black shadow moving across the lawn. He could hardly believe it. When he understood that this was completely real, that he was wide awake, a cold shock flashed through him. Somebody really had been watching him while he was in the basement. That person must have been the source of the smells. And earlier—had he been the one in the gray slacks?

The thought of the weird guy who'd played RPM with him in the video arcade flashed through his mind, but that was too crazy even for Billy Neary. The guy would have had to have followed him home, for God's sake.

The prowler had moved with a sort of rolling scuttle, almost crablike, quickly disappearing beneath the twisty limbs of the oak. Billy waited for him to come out the other side and go off down the sidewalk, but he did not come out.

This was serious and he had to tell Dad. He went into his parents' room. They were so tangled up together in their four-poster bed that they seemed like one body with two dark heads.

"Dad?"

No response. He looked down at them. How would it feel to sleep bundled so close to a woman? He wasn't sure he was ready to spend the night without Garfie.

"Dad."

"Mmm? Hah—"

"There's a man in the yard."

"What?"

"I was looking out my window and I saw a man go under the oak."

"You're sure?"

"Yes."

Dad and Mother came untwined from one another and sat up. Dad looked angry. He swung out of bed and went to the window. "Where?"

"You can't see him now. He's under the oak."

"Maybe you should call the police, Mark."

"Let me take a look." He went over to their dresser and got the flashlight out of the bottom drawer.

Feeling a lot safer, Billy followed his father down the stairs.

Barton saw a glimmer of light touch the stained glass above the front door. It was only the slightest flicker, but it caused him to stand up and step back into the shadows. Then the door opened and the light jabbed like a needle into the dark yard.

With a single quick step Barton put the tree between himself and the flashlight. Obviously the boy had waked up his father and now they were searching for him.

As soon as he could get out of here he was going back to the van. He should never have tried this breaking and entering routine, it was just too risky.

But he had to have this boy!

He stood absolutely still, holding his breath, hardly daring to watch them lest they feel his stare. As if his thoughts could in some way control their actions, he willed them to stay on the porch.

Their voices drifted across the silent lawn. "There's nobody out there now, Billy."

Billy, his name was Billy.

"I saw him, Dad. He was right over there." He pointed straight at the tree. "He was fat."

"I don't see a soul."

"It was very scary, Dad."

So Billy had not only noticed his presence in the basement but also seen him as he moved across the lawn. He'd never dreamed he'd been under observation then. This little boy was sharp. He was also kind, and intelligent and beautiful. No matter the dangers, Barton could not abandon him. Billy.

6.

Barton's watch started beeping at exactly three-forty-five. Real sleep hadn't come, only a light nap. He opened his eyes into the warm blackness of the van. It was stuffy and the windows were fogged. He crawled up into the driver's seat, put the key in the starter and turned on the battery. When he lowered the windows the cool, rich night air brought him to full wakefulness.

The question was, should he go back? He already knew that Billy's father hadn't called the police; he would have picked up the dispatch on his scanner. There hadn't been anything, except when the one patrolman on duty made a routine check with the dispatcher.

The father must have decided that whatever his son had seen was innocuous. Even so, there was still great danger in going back tonight. But Barton couldn't risk waiting another day. There were too many imponderables.

While he'd been lying in the dark van, Barton had decided that he had been searching for Billy for all of his adult life. He just hadn't known it until now.

Barton Royal would give that child just a wonderful, wonderful life. There was so much love in him, so much giving, so much caring. Maybe Billy wouldn't believe it at first, but in the end he would love his new father so much the past would be completely forgotten.

He gripped the steering wheel as if it was the edge of a cliff. He told himself to breathe deeply and evenly. He was calm, alert.

Again he inventoried his supplies: ether, felt, duct tape, plastic cards, wire. The hammer, meat and plastic bag he could leave behind. Had there been a dog, it would have come out onto the porch with its master.

Billy, the little master.

You will be my soul's guide, Billy. I give you myself. I pray to you: dear Billy, open my eyes, guide me to the light.

He started the van. Ten minutes later he was passing the Burger King. Then he was on Hicks, then on Oak.

And there was the house. Thankfully, the basement light had been turned out. Dear old Dad must have noticed.

Barton imagined the conversation between father and son.

Dad: "I know what happened to you. You got the heebie-jeebies down there in the dark."

Billy: "I saw a man, Dad."

Oh, Billy, I pray you deliver me. Be the one who is stronger!

He cut his lights and engine and rolled into the driveway. The tires hardly crunched on the concrete driveway.

Then he stopped the van. A glance at his watch: four-oh-six. He would take no more than ten minutes in the house. He went back in through the storm door, working quickly and efficiently. This time the basement stayed dark.

As he passed the workbench and its litter of computer disks and equipment, he noticed a Butterfinger wrapper. So Billy liked Butterfingers. Duly noted.

The door at the top of the stairs was locked with only a knob button, but nevertheless it slowed him down. He fumbled with the plastic cards that you were supposed to work into the crack between the door and the jamb.

There was quite a scraping noise, so he stopped. Closing his eyes, he leaned against the door. Carefully, he probed more delicately with the edge of the card. Finally he found the tongue of the lock. He twisted the card from side to side.

Quite suddenly the door swung open.

Every movement, every breath counted now. He could imagine the father lying still and silent, could imagine his eyes opening, glittering in the dark. Every creak and drip in the house echoed with hidden significance. He heard the clocks ticking, the breeze moving the kitchen curtains, the scuttling of a roach on the floor.

He took his ether from the knapsack and put it with the felt into his side pocket. The silent house before him was deeply disturbing. He smelled a fragrance of apples and, very faintly, the hint of Pine Sol. There was a faint scent of pecan divinity.

That odor carried him to his depths. In his neighborhood the older sisters used to make pecan divinity. They would gather into a muttering, unapproachable tribe and eat it in somebody's backyard. If Barton drew near, they'd scream "Fat Royal" and throw a rock or two.

When he stepped from the pantry into the kitchen proper he smelled bread. Now there was one of the best odors in the world. When they'd been baking at the Wonder Bread plant you could smell it up and down Mariposa.

A large white appliance stood in the middle of the kitchen table. Barton recognized the thing as an automatic bread baker. He'd wanted one, but he wasn't sure it would work.

Now he'd go ahead and make the purchase.

This was such a nice kitchen. It smelled wonderful, its curtains were fluffy and pretty, it was clean except for that one roach. Family life was such ordinary magic, but he was *not allowed!*

He ran his finger along the warm top of the bread maker, careful as always not to leave prints. Then he took out his rubber gloves and put them on. They were the kind with reinforced fingertips. He had read that new techniques could read a print left through a surgical glove.

Even though he was on a tight schedule, he did a quick inventory of the pantry and refrigerator. It was important to know what Billy liked. He'd already found that Butterfinger wrapper and a Bud Dry behind the workbench in the basement. From now on there would be plenty of Butterfingers in Billy's life. As for beer, Barton would introduce him to Anchor Steam and Dixie and Cold Spring Export.

There was Carnation Instant Breakfast in the pantry, and Tang. There were LaChoy Chinese dinners and Chef Boyardee spaghetti with meatballs. It was surprising how many kids enjoyed that stuff.

Adults starve quietly; children scream and pace and plead.

In the freezer he found Old El Paso enchilada dinners and MicroMagic cheeseburgers and shakes, and Aunt Jemima microwave pancakes. There were Dove Bars, vanilla with milk chocolate coating, Tabatchnick vegetable soup, Birds Eye frozen orange juice. (He'd stun Billy with fresh-squeezed.) In the fridge he found Coke Classic and Dr Pepper, Hi-C Fruit Punch, a package of Oscar Mayer hot dogs, sweet relish and French's mustard. He ignored the potatoes and lettuce and fresh squash in the crisper. The boy would consider them penitential foods. There was Pepperidge Farm toasting white in the breadbox, and he noted Double Stuf Oreos in the cookie jar. The peanut butter was Jif Super Chunky, and there were Smucker's peach and raspberry preserves in the fridge. As small a thing as the right kind of peanut butter sandwich could be an important ice-breaker.

Leaving the door to the basement open, he went through the dining room into the front hall of the old house, and began to mount the

stairs. To reduce the chance of a creak, he took them three at a time, testing each step by slowly rolling his weight forward. Then he was in the upstairs hall. He didn't know who was in which bedroom. He had to guess, which was nerve-wracking.

Two of the bedroom doors were closed, one open. It made sense to look first in the open door, simply because that was the least risky.

He peered into the room. Against the far wall there was a window glowing with the thin last light of the moon. A bird's clear, lonely song pealed through the night. Under the window there was a bed, and on the bed a figure. His heart almost stopped at the sight of Billy sprawled in sleep.

Moving as carefully as a rat he crossed the floor, thinking of it as a dance. He was a good dancer. Mel Powell's Dance Studio, fox trot, rumba, swing, jitterbug, 1955.

He approached the bed. Swiftly he opened his ether, soaked the felt, laid it on the boy's face. The child was still for a moment, then he tried to turn his head. Barton was ready and bore down hard. A rush of movement went through the little body. There came a stifled sound, a cry of surprise. Billy's mouth opened, he tried to bite the cloth. He shook, his arms came out and flailed. His hands grasped and slapped. He made stifled gobbling sounds.

"Good, good," Barton whispered.

The boy shook and drummed his feet. The bed thuttered with a perverse echo of passion's tattoo. Only very gradually did his breathing become heavier, his movements slower.

Barton sang to him, sang in his sweet ear, "Where are you going, Billy boy, Billy boy, where are you going, charming Billy . . ."

Finally the child became unconscious.

Barton resoaked the felt and put it into a plastic sandwich bag, ready

for instant use if needed. Then he scoured the room for precious belongings. He found a guitar, but it was too big to bring. The stuffed toy that the child slept with he left behind. Weaning Billy away from that would be hard, but necessary if he was ever to put his present life behind him.

He took clothes, of course. The boy's wardrobe was not stocked with fashionable things like Gotcha and Ocean Pacific and Mexx. His clothes ran to plain jeans, shorts and T-shirts.

If this child was going to live in the Hollywood Hills with Barton Royal he would have to dress more fashionably. Once he was tamed a trip to some of the Melrose boutiques would be in order. But in the meantime, his old clothes would have to do. Barton stuffed the knapsack, then gave Billy another dose of ether and drew down his sheet.

How superb.

Barton pressed his face close to Billy's neck and smelled the natural sweetness of his skin. Why ever did boys turn into men? What a terrible curse! He lifted Billy in his arms and carried him out to the hall.

"Goodbye," he whispered on Billy's behalf, "goodbye to my dear old home." As he went downstairs, stepping because of his burden even more carefully than before, he felt almost like he had the moment Dad died, sad and yet joyous, his soul shot with sorrow even as it leapt free.

He was fully and completely aware that this was the most evil most hurtful crime he could commit. But what about him? He needed somebody, too.

He swept through the basement, a great black bird dragging prey, a fat man in the lost middle of his life, sweating under the weight of his stolen burden. He carried Billy across the front yard to the van. He had left the side door open, and he put Billy inside on the bunk. Then he strapped his wrists and ankles to the frame. Last, he sealed his mouth

with gray duct tape.

One final time, he left the van. Returning to the house, he raised the garage door as quietly as he could. It rattled like hell but there was nothing he could do about it except pray.

Quickly he wheeled the boy's bike out and stowed it in the van. He already knew that he would ditch it in the Platte River outside of Lincoln. It was too old to keep and took up too much room in the van. Obviously, he didn't want Billy to have a bike, but its disappearance would make the police think this was a runaway.

He returned to the driver's seat, paused and thought. He inventoried everything. Penlight, felt, plastic cards—he'd left nothing behind.

He pulled off his rubber gloves and put them in the map case between the seats. For a long moment he looked at Billy, who lay very still on the cot behind him. Suddenly nervous, he leaned close to the boy. It was all right; he was breathing fine.

His fingers hesitated over the key. Then he grasped it, turned. The crystal silence of early morning was fractured by the starting of the van.

He drove off down the dark street.

Part Two

CHARMING BILLY

7.

In the silence that followed the alarm clock, Mark Neary became aware that the house was filled with a wonderful aroma.

"My God, it worked."

Mary sat up. "I believe you're right."

They had invested in a two-hundred-dollar automatic bread baker, which promised to deliver a fresh loaf when you got up. Sally and Billy had argued over the cryptic instructions, but apparently they had figured them out.

Sally stuck her head in their door. "The most recent reincarnation of Torquemada is not in his room."

As he shaved, Mark assumed that Billy had gone down early to supervise the bread maker. Mary rubbed her long legs with Jergen's lotion. It made a soft sound that he loved.

All the clocks in the house ticked on, passing through eight-oh-eight,

eight-oh-nine, then eight-ten. Deep in Billy's computer a microchip silently marked the seconds, and in the living room the reproduction Regulator slowly retightened its spring after sounding eight chimes.

Eight-fifteen. In Billy's bedroom his digital watch beeped. His sister heard it and entered the room. She picked it up from the floor beside the bed and put it on his table. His ridiculous Garfie, which was in the middle of the floor, she threw onto the unmade bed.

A breeze blew through his open window, billowing the curtains.

Dressed in robe and slippers, Mark Neary hurried downstairs. "Smells like bread heaven," he called as he entered the kitchen. He raised the top of the machine and beheld a magnificent loaf. In a moment it was on the kitchen counter, steaming hot and wonderful. He pulled open the basement door and called Billy. "Come on up and get some absolutely fresh, absolutely hot oatmeal whole-wheat bread, complete with toasty crust."

He cut himself a big piece and spread it with strawberry jam. "It's heaven," he shouted.

Mary came in, her face glowing with the light of morning. Objectively Mark knew that his wife was no special beauty, but his heart did not know that, and it beat harder on behalf of the brightness of her skin, and his sex raised itself a little when she came up and kissed him. "You taste like strawberries," she said. He felt the laughter in her, and realized that he had dreamed again about her. They had gone to New Zealand in his dream. They had sailed a sunny bay. He remembered the water slapping the sides of the boat, the green hull, the white sails. Her dream body had been smooth and cool and her skin had tasted of the sea.

Mary turned away from him, absently tossing her hair, her eyes sparkling. On this day, he thought, we will be happy. "The bread's dynamite," he said as he cut her a slice.

"Let me do that. Those are defined as hunks, not slices."

"We need a bread knife."

"It's all in the wrist."

"Fresh bread! William! Appear!"

"You ought to set more limits, Mark. He's become part of his computer."

"You don't limit bright kids unless you absolutely must."

"Everybody needs boundaries." She went to the basement door.

"William Neary, the computing window is now closed. You have thirty seconds to get up here."

When no young voice replied, "Hold on!" she looked down the stairs. "Billy?" She descended a few steps. It was dark. She was confused, perhaps even a trifle concerned. "Billy?" She went quickly down, turning on the basement light as she descended.

Sunday breakfast together was a rule. His father was just too lenient. Billy had to learn that rules defined a family and made it work. They were the foundation of relationships, and so of love.

She stood in the middle of the basement, struck suddenly by the way its present silence clashed with her usual impression. It was full of boys' things—an abandoned model airplane, the whole elaborate, painfully costly computer system, tape recorders, a Casio keyboard, the splayed open remains of a number of old appliances, things he'd found in people's trash, Mets and Lions Club caps from New Jersey days, toy cars. She picked up one of the cars, a Rolls-Royce with a missing door. So recently it had been a prize, so quickly abandoned for better things. Abandoned, lost, like boyhood itself. Such was the poetry of the matter: this twelfth was the last summer of her son's childhood. From now on there would be that touch of autumn.

In all its simplicity and perfection, the quiet moment among her son's beloved junk captured her heart. 'How rich I am,' she thought.

Then her thoughts went to Mark, her dear failure of a high school history teacher. They'd shared grand ambitions: he was going to be the next Walter Lippmann, a fine author of the left, full of literate fire. Except his sentences were generally too long, his thoughts too complicated, his words too dry.

He was a little heavy about the middle now, and he'd been fired a lot for his flaming love of the social ideal, but many sparks of his youth were yet unquenched.

She loved his body on hers, loved it when he shook with passion, adored the tickle of his lips upon her breasts, adored sweating with him in the night.

"I simply cannot cut it thin enough for the toaster," he shouted. "Help me!" The "help" was long and full of mourning.

Laughing, she returned to the kitchen. The table was only half set and now Sally had disappeared. This just was not a morning for a formal breakfast. The Sunday paper lay on the counter, "Blondie" and "Prince Valiant" huge and colorful on the first page of the comics section. Billy loved the comics.

"The kids are getting through the strainer," Mary said.

"Help me cut this darn bread. It's great but it's got its gluish side."

" 'Gluish' can't be a word."

"Don't Funk & Wagnall me, *help* me!"

'I'll just plain Funk you if you don't watch out,' she whispered.

"Bad girl." He popped her on the bottom.

Sally came in the garage door. "His bike's gone."

"That's odd, Mark."

"Did you do something to him, Sally? Something that made him decide to escape your wrath?"

"Mother, he's twelve years old. He doesn't run away from me anymore. He fights back as best he can with his thin little arms and tiny fists."

They continued making their breakfast, as a ship might sail on even after its belly is sundered. Mary got the bread into the toaster and the water into the ancient percolator. Sally finished laying the table. Mark stood overseeing the bacon, Sunday comics in hand.

Mary did not tell him to be careful. If he wanted to set the newspaper on fire with his cooking, that was his business. She had decided this ten years ago. This time the bacon cooked and the newspaper did not.

They sat around the kitchen table eating bacon and toast and eggs, drinking frozen orange juice because they could not afford the kind that came in cartons. A pot of coffee steamed in the center of the table, beside the pile of Sunday paper.

Wrinkles appeared in the yolks of Billy's eggs. Eventually his sister stole his bacon and his mother put the eggs in the oven with some foil over the plate. Little was said during breakfast; the radio played a series of forgettable tunes, cars passed, one or the other parent looked up whenever a child shouted in the street.

"It isn't like him," his mother said. She was looking out the kitchen window into a yard flooded with sunlight.

They finally decided to make calls to the parents of his friends. One after another, the same answer came back. By ten there was a definite quiver in their voices, but the reason remained unsaid. At eleven the family drove over to the mall, but it was closed. There were a couple of people at Burger King, but no kids.

Knowing that his bike was gone, they drove the streets of Stevensville. It was all useless, and at noon the family returned home.

Sally, deeply upset, withdrew to her room. Outside the grasshoppers sang, lawn mowers clattered, sprinklers whirred. The strains of piano practice floated over from the Harpers' house, and an engine endlessly revved and died as young John O'Hara tried to bring life to the fifty-dollar car he'd bought from a junk dealer.

Mark went to his daughter. She lay on her side reading and listening to the radio. Mark knew nothing about rock and roll, having lost interest when he realized at the age of fourteen that no girl would ever consider him a hep cat, never mind his pink shirt, black pants and Wildroot-soaked fenders. Mozart, Telemann, Bach: this was his music, the music of what the kids called "geese" in his day and time. His friends were boys with crooked horn-rims and sour-smelling white shirts, and pallid, bepimpled girls in harlequins and too few petticoats, who professed themselves to be "sent" by Beethoven's Sixth, "so passionate, Markie!"

Now when Sally's blooming classmates got crushes on their history teacher, he thought, 'You're about thirty years too late,' and laughed within at the irony of time.

It was remarkably poignant to watch a girl become a woman.

He sat down on the bed beside her.

"Was he angry?" Mark asked her. "Was there a fight?"

"No, Dad. No way. He was fine."

"He didn't say anything to you—talk about taking a ride, going somewhere—" Mark stopped. He realized that he'd already asked her at least five versions of this same question. He fell silent.

Sally said it: "I'm scared, Daddy."

Mary came in. "Was there anything he wanted? A new computer program? Something he might have decided to go into Des Moines on his own to get?"

"Billy'd never go to Des Moines by himself without telling. And the computer stores're probably closed Sunday."

Mary bowed her head in acknowledgment. Her son wasn't *that* indifferent to limits.

Mark realized there was something he had to say. Let Sally hear her father's fear, let Mary hear that he could be victim to his feelings. He had to get this out, and he had to do it now. "Last night, he woke me up." He took a deep breath. "He said he'd seen a man in the front yard. I looked, but there wasn't anybody there. I'm sorry to say, I just—"

It came then, the pain, welling up in him like a ball of red fire, bursting in the center of his heart.

"Oh, Christ—obviously, I—" It wasn't pride that stopped him this time, or the reticence of an inward man, it was the sheer horror of his mistake. "He must have been watching all the time—waiting for his chance."

Mary was absolutely silent and completely still. When she spoke her voice was very soft. "If it happened—and that's a very big 'if—it certainly isn't our fault. We can't think that way." She looked at her husband. "We can't, Mark."

"We have to call the police."

"I agree," Mary said. At once what had been a slow decision became a desperate emergency. Both parents went for the phone in their bedroom, followed by their daughter.

There was a short delay while Mary fumbled through the phone book looking for the number. This was a small town; the police could not be reached by jabbing 911.

Outside the lawn mowers had stopped, and lunch was being eaten in the other houses on the block. Soon baseball would hit the airwaves and the men would disappear into their air-conditioned living rooms

and dens.

Mary spoke the numerals. Her voice was loud in the noon hush, the digits enunciated with excessive care.

As Mark punched in the numbers a boy's voice sang out high and gay, and for an instant he thought—but no, it was some other child. A clawing, frantic urgency came over him as the phone rang, and when a voice said "Stevensville Police" he could barely manage to reply.

"My name is Mark Neary. I'm calling to report that my son, William, appears to be missing."

His call had been answered by Patrolman Charles Napier, who was on dispatch this Sunday until four. The call didn't surprise him. They got three or four of these a month. If the children were young the cases were always solved within a couple of hours. Older children might be runaways, and runaways sometimes took longer. But they all came home in the end, all of them. Kids got killed, even kidnapped, but not in this sleepy little town. The parents, of course, were always terrified, and Charlie was always gentle with them. "When did you discover William was missing?"

"When we got up this morning. During the night he woke me up. He said he'd seen a man in the front yard. I investigated, but there was nothing wrong. Then this morning he wasn't here anymore."

Charlie Napier had pulled out a missing persons form. He took the bare details of age and description. There would have to be an immediate investigation of this case, because a minor was involved. In adult missing person cases the department waited twenty-four hours before starting a search. "An officer will be out to see you in about ten minutes."

Mark hung up the phone. "They're coming right over," he said. His voice sounded to him like an echo. He had become his own audience, observing the tragedy even as it spun itself around him.

Distantly, "The Star Spangled Banner" rose from a neighbor's TV. The baseball game was starting, and everybody else was safe, and nobody else's child was threatened.

Mary's hand came into his. "Do you really think that the man—"

"I don't know."

She wanted to lean her head against him, but restrained herself. They needed to be strong for one another, not to display weakness. She squeezed his hand. "He'll be found."

"I guess it's the step we just took. It makes you face how damn scared you really are."

Mary herself felt light-headed. She asked Sally to go downstairs and make some coffee.

As Sally poured out the grounds and measured the water, she tried to understand. Dad had said that Billy had waked up in the night and seen a man. What did it mean? Sometimes she and Billy would both wake up in the middle of the night and do something crazy like play Monopoly on the hall floor. They'd watch *Chiller Theatre* that came on channel six at two a.m. Saturday. Or they would talk, spinning dreams in the night. She wanted to get out of Stevensville as much as she'd wanted to get out of all the other little towns where her father taught.

Billy was a pretty bright kid. Surely he wouldn't have agreed to go with some man who came to the house in the middle of the night.

Her brother was also a total innocent when it came to certain things. You could give him an Oreo loaded with tabasco sauce and he'd pop it into his mouth every time. But he wouldn't let himself get kidnapped.

The arrival of the police alerted the neighborhood for the first time to the existence of a possible problem at the Nearys' place. People noticed the green and white car cruising slowly along, watched it as it came to a stop in front of the teacher's unkempt yard. Because they were recent

arrivals most of their neighbors did not know the family; some of them didn't even know the name. Mark knew that the appearance of the police car would bring uneasy questions.

He felt queasy, watching the officer come up the walk. A curious distance imposed itself. The policeman approached as if he was a phantom coming up an unreal front walk, beneath a sun as bright as memory. How strange that Billy was not there wanting to see his gun. As he came swiftly across the porch through the door the percolator started rattling. Sally went back to the kitchen.

She went to the percolator, leaned into the steam and inhaled.

"Coffee's ready," she said as she entered the living room. The young policeman smiled.

He asked questions about Billy. His age, his looks, did they have a video to run on television?

Mark was horrified. A video! Television! Billy was gone, really and truly gone. He wasn't in the basement, he wasn't out visiting, he wasn't at the mall.

Mary's impulse was to run somewhere and seek him, shout his name, make more phone calls.

"We don't have a video," Mark said.

"But there are pictures," Mary added. She was sick inside.

Just because they had no video didn't mean that Billy was lost forever, but that was how she felt.

"If you get TV they'll run a video a little more than a photo."

Listening to the man, realizing that Billy was truly gone, Mary could have screamed her guts out. But she didn't do that sort of thing, it wasn't her style.

She crossed her legs and leaned forward. She understood nothing about the black storming ocean within her. Life had so far never brought her a suffering such as this. Not even Mother's death compared to it.

She found herself ally to the parents whose children were torn from their arms at Auschwitz, to those who saw their little boys hanged at Tyburn for the theft of a button, to those whose children were raped by the passing Huns or Teutons or Romans, to all who have stood helplessly by while their innocents were caught in the mayhem of the world.

But she sat quietly.

The policeman noted how self-possessed the family seemed. His training had barely touched on missing children. There were certain realities, though, and he was aware of them: Most missing children were found within twenty-four hours; most were runaways. When they were done violence, it was most often at the hand of a parent or another family member. When they were abducted by strangers, they were most often found dead, or never found at all.

There were indications that this child had run away. The bicycle was gone, for one thing. According to the mother there were clothes missing.

"We call in a detective from Wilton in missing child cases. He's had a lot of experience with these cases. I just have to get the preliminaries, so we can put out a bulletin and get the picture over to KKNX. I'm sure they'll want it for the ten o'clock news."

"Billy's been kidnapped." Mary Neary's voice was smooth with terror.

"Well, ma'am, we assume the worst, hope for the best. That's how we do these things. But with his bike gone and the clothes obviously taken, this is very apt to be a runaway. Very apt to be."

"He left his watch behind," Sally said. "He never leaves his watch."

"I don't want to get your hopes up, but we've never lost a runaway here in Stevensville."

At first he thought he was hearing a distant siren. It took a moment of listening for him to understand that the sound was coming out of Mary Neary. Slowly it got louder. He glanced at the husband, who looked perplexed. Then the man's face went pale. As if she was a figure in a dream, the daughter's closed fists slowly came up to her cheeks. Her mother's eyes screwed shut, her arms whipped around her breasts and her whole body seemed to snap.

The sound of her anguish was made more painful to hear by her efforts to stifle it, not opening her mouth, throwing her head back, and all that tortured noise coming from her nose.

Afterward there was a stunned hush.

Sally ran out to the kitchen. She turned, her posture that of a soldier at the edge of the battlefield.

"The coffee's getting cold," she said in a shrill voice. She closed her eyes. In that moment she was wounded as certainly as if somebody had cut her with a whip. For the rest of her life she would be exquisitely sensitive to those sudden hushes that can stop a moment. And she would forever think, when they came, that somebody she loved had just been lost.

8.

At five o'clock in the morning Barton had passed through Des Moines. He had seen only one other vehicle on Interstate 235, a pickup truck going north, its headlights cutting the last of the dark.

He had left the interstate and driven through the streets hunting for a place to get a cup of coffee and a doughnut. Around him the city was drifting toward morning. This was the hour of last dreams, and the quiet was made more true by the dull hum of air conditioners and the slippery sound of an occasional passing car.

The public nakedness of a sleeping city would have thrilled him ordinarily, but this time it only added to his unease. He had expected to be exhilarated by his victory, but he felt an altogether different emotion. He couldn't seem to shake the feeling that something was deeply and terribly wrong, that he had made some mistake so basic he simply could not see it.

Without finding a place to get a doughnut he returned to the highway.

As the van sped westward the sun rose. It first sent the Aerostar's shadow far ahead, then caused it to contract. He thought of the shadow's astonishing cargo. Charming Billy.

What have I done wrong?

From the bed in the back Billy moaned. Barton heard an edge of consciousness in the voice. He would pull into the next rest area and do a heavy needle on the boy, put him out for eighteen hours.

Again there was a sign of consciousness, a thick, muffled word that was probably "Dad."

"Dad'll be here in a minute."

The reply was another moan.

Barton didn't want to stop on the roadside for fear some state trooper might offer help.

Dull thumps emanated from the back of the van. Billy was awake all right. He was struggling against the straps. In the rearview mirror Barton could see the quilt heaving. "It's just a nightmare, Billy!"

"Mmm . . ."

Sleep, little boy, sleep and rest, Father will come to thee soon . . .

"Mmmfff!"

"It's a nightmare!"

"Hh—mmmff!"

Come on, come on, doesn 't Iowa believe in rest stops!

The road stretched out straight and empty. Behind him Billy jerked and moaned. Barton gripped the wheel, pressed the gas pedal as far down as he dared.

Five minutes passed, then ten. All the while the boy struggled. Finally, after twenty minutes, a rest stop appeared. Thank you oh dear God who loves your Barton. He pulled in toward the picnic tables and outhouses, then past a long line of parked eighteen-wheelers, finally stopping near a little grove of trees at the far end of the picnic grounds.

Quickly he opened the glove compartment and took out the black wallet containing syringes, alcohol and a small bottle of diazepam formulated for injection. He'd chosen the drug after reading medical textbooks. It was safer than a barbiturate and had, in addition to inducing sleep with a sufficient dose, the property of reducing anxiety.

He put some alcohol on a cotton ball and drew two cc's of the drug into one of his syringes. Then he climbed over the seats into the back, pushing past the bicycle and the bag of clothes, to the bed where the boy lay strapped and moaning.

The moaning became a high-pitched wail as he dug beneath the soft quilt and found Billy's arm. Billy's head jerked from side to side. He was trying to push the quilt away from his eyes.

His arm quaked when Barton touched it, but Barton was strong and quick. He swabbed the skin and delivered the drug. But it wouldn't go to work at once and the word coming from behind the gag was now distinct: "Dad! Dad!"

"You're in an ambulance, son!"

"Dad!"

"Dad and Mother are fine. Your sister is fine. There was a fire. Sleep now, son."

There were more sounds as Billy struggled to respond. In a moment he was going to be conscious enough to understand that he was gagged. Barton decided to take the risk of a scream and remove the tape, try to calm the child down. As he pulled it off, Billy smacked and coughed. Then he spoke.

"A—fire?"

"You're going to be fine. Sleep now."

"Did I get burned?"

"No, son, just a little smoke."

"I can't move . . ."

"So you won't fall off the stretcher. You're in an ambulance. You're very sleepy now. Go to sleep."

At last the breathing changed, grew ragged and then long, and Barton closed his own eyes and let his own breath sigh slowly out.

"Ether is a relatively short-duration soporific that was administered in gaseous form as an anesthetic during the early history of anesthesia."

They had been on the road nearly two hours. Barton should have given Billy the diazepam on the other side of Des Moines. To punish himself for his stupidity he slammed the empty needle into his own thigh. Stupidity must always be punished. Everything had to be plan-perfect.

"Ether is a short duration soporific," he said as he yanked the needle out.

To Barton's surprise Billy's hand was dangling. His struggles had been so extreme that he had freed it, something Barton had never seen any boy accomplish before.

Barton threw back the quilt and loosened the strap that bound the child about his midriff. He returned the hand to Billy's side, really touching him for the first time, holding his soft skin and feeling a rush of hurting desire. Despite the abrasions resulting from the child's effort to free it from the strap, it was a lovely hand, pale and silky.

He wanted to kiss it, to somehow meld with its beauty. He looked at the skin, now burnished by a shaft of sunlight. It was so exotic, so perfect down even to the dusting of fine hairs that came down from the wrist and spread along the outer edges toward thumb and little finger. That they would thicken and darken seemed impossible to believe: and yet this perfect being would soon be cast down the cliff of manhood.

Barton bent toward the hand, his lips parted ... it would be a sign of love, of respect, even of awe . . . his secret . . .

Inwardly, he made demands of himself. 'Don't! It's ugly and perverse and wrong.' But he longed to, he could hardly bear not just once touching his lips to that soft skin. 'It's monstrous! Don't!' He trembled. 'It isn't you, Barton. You're a decent, lonely man trying to recapture something pure, you are not a filthy lecher!'

He gripped the limp hand hard. Then he dropped it. He watched the sleeping form. Billy's slimness made Barton feel like a big, fat lump.

He wanted to give Billy a father's warm kiss, and feel him return it, and then Billy would be bound by the rich and healthy love that flourishes between father and son.

Laughing a little to himself, Barton climbed over into the driver's seat. He backed the van up to the outhouses and dropped the black curtain that hid the rear area from anybody who might look in the windshield. He didn't really need to use the facilities, but he knew better than to pass up a chance. He couldn't risk leaving the van while he was getting gas, and he didn't feel safe in rest stops during the day when they were full of meddling children and watchful parents.

Outside he breathed deeply of the early morning air. He was feeling better and better. This thing was going to work, he could sense it. At first it would be hard, but Billy would find that Barton Royal could show him such love, such attention. It would be quite beyond what he had known before. Their life together would be wonderful.

The outhouse was full of busy flies and had an oily, chemical stench. To Barton's surprise, some little creature screeched as he stepped in. Wriggling beneath his foot was a mouse. Involuntarily Barton jumped back, but the little animal was so damaged it could barely drag itself away. It was horribly injured. Probably it had already been weakened by poison before he stepped on it. Barton's first impulse was to use another outhouse, but then he thought he ought to put the little thing out of its misery.

With the intention of stomping on it he raised his foot. But then a sort of hesitancy entered his mind. He brought his heel down carefully, just pinning the creature. Its screams filled the tiny room. They were surprisingly loud. Bit by bit he increased the weight on its back. He could feel it writhing.

Kill it!

He slid his foot back and forth. The tail twisted and turned in the dust beside his shoe. A delicious warmth filled his body. As the mouse screamed, he hummed.

At last he decided that it was time for the creature to die. By inches he increased the weight on its back, until finally there was a crunch and the screeching stopped. He finished his business and returned to the van.

It was just a mouse, for God's sake.

He rolled down the windows and let the wind flood the van. Cotton clouds rushed up from the south. They were colored pink and gold against the sky. Before him stretched the road to the mountains and the wide western deserts, and finally home, his house tucked into its own very private quarter-acre of the Hollywood Hills.

He was within fifty miles of the Nebraska border when a state trooper suddenly pulled in behind him. For some time he'd been watching the police car coming up on his left. It was no more than two car lengths back when it shifted into his lane.

He checked his speedometer: fifty-eight. Not fast enough to warrant a ticket, not so slow as to be suspicious. The trooper came closer and closer, until he was less than twenty feet away. Inside the car Barton could see a shadowy, expressionless young driver, an older man beside him. He gulped air and tried to think. What could possibly have drawn them to him?

What indeed: he was engaged in an incredibly risky enterprise. For all

he knew a neighbor had seen his van at the Nearys', seen him hurry across the lawn with the boy in his arms, seen him wheeling the bike into the back of the van.

He had no reason to feel secure. Safety was an illusion. He was the worst imaginable sort of criminal—a child abductor—and he was on the run with a drugged twelve-year-old trussed up in his van.

This trooper was about to catch a monster, and maybe that would be best. The authorities would paw him, chain him, put him in prison ... or worse.

Barton Royal was not insane!

He should have used back roads, gotten out of the state that way. It had been stupid to cling to the interstates.

Why did the trooper just stay back there, watching? Why was he playing games? He hadn't had to piss when he was at the rest stop, but he had to do it now, his whole body was tensing, every muscle tightening, every sinew straining against bone and cartilage. His mouth had gone dry, his eyes felt like they would burst out of his head.

"Get it over with, you bastards!"

Wait, he had options. He remembered the scanner. *Turn it on, fool!*
Turn it on and keep it on!

He watched out of the corner of his eye as the little red dot raced up and down its face, seeking for some snatch of dialogue.

Silence. The trooper wasn't on the radio. Of course not, not now, fool! He's already done that. He's just waiting, watching, hoping for something more than the description, something that'll give him probable cause to enter the van.

He was trying to break Barton's nerve, that was it. If he took off the trooper would chase him down. That would give him his right to

search.

God, God, please help your child Barton. You made me, God, now you help me! I'm going through hell here!

The trooper's light bar started flashing.

Oh, God, please don't let it be now. He wanted just a month with Billy, then he would willingly die! Yes, die for thirty happy days!

He sat up straight, became prim. "Pull the van over," he told himself, "be as proper as a schoolgirl in church." The trooper followed him. He tried to calm himself, get some spittle into his dry mouth. 'OK, Barton baby, here he comes. My, what a clean-shaven face that trooper has. I wonder if he needs to shave at all?' He blanked his mind, cranked up a smile. His voice was calm, concerned, perfect as he said, "I don't think I was speeding, officer."

"Driver's license, please." The voice was calm and clear.

"Yeah, I have it, just a second." Barton tried not to tremble as he pulled out his wallet.

"California license, Mr. Royal?"

The voice had dropped an octave. Suspicion.

"Yeah. I have my summer place in Utah."

A long silence. Here it came. They would utter the murderous formula: "We'd like to have a look in the back."

"Your plates are expired."

Oh, no, not stupidity again. Fool, fool fool! But wait. How could that be? On the way to Iowa he'd stopped at the mail drop in Salt Lake, gotten the renewal. He'd put on the sticker.

"No, I don't think so."

"No sticker."

It was on the front plate. Wasn't that what he was supposed to do? "It's on the front."

Please, Oh Lord of heaven, I will do anything, I will serve you body and soul for evermore —

The trooper went around to the front of the car, looked at the plate. He came back to the window. "Mr. Royal, you ought to have stickers on both plates."

"They only sent me one."

"Well, I suggest you get another if you don't want this to keep happening."

"Thank you, officer."

"We're not going to issue a summons this time, Mr. Royal, but you'd better stop at DPS in Salt Lake and get that sticker."

"I sure will, officer."

Billy uttered three short, sharp cries. The trooper leaned farther into the window. At that moment inspiration struck. "I have a capuchin," Barton said.

"A capuchin?"

"The sounds. A monkey. A little monkey in the back."

The officer's face grew tight. He drew back from the van. "All right, Mr. Royal. You can go now."

He put the van into drive and accelerated back onto the highway. The troopers remained on the roadside, their light bar still flashing.

Barton's face flushed, his temples throbbed. Huge sparks danced in his

eyes. Did he need to see a doctor about these intense stress reactions? He was overweight, sure, but this— maybe there was high blood pressure or something.

He imagined himself dead on the road with a boy in the back.

Never!

9.

The Nearys had been dropped into hell. Nothing had prepared them for this. Their hell had neither gate nor horizon, and its demons were police officers with sad, suspicious eyes. They tormented not with blows but with questions. And always there was the central question, the one nobody could answer. Hell's characteristic sound was a silent telephone.

Neither Mark nor Mary gave voice to the hope they privately shared, that this awful day would end with Billy's straggling reappearance, home late from some boyhood escapade.

He was such an adventurous little boy!

During the afternoon hope slowly died. It began to fade after the police had left, when they were supposed to be eating lunch.

The ham sandwiches Sally made eventually drew flies. As the afternoon grew old the edges of the bread curled and the lettuce became slack. The day wore through four, then five. The day began to end, and still he did not come.

It was decided to inventory his room once again, to see this time if some clue to his whereabouts could be determined from any toys he might have taken with him. Detective Walter Toddcaster, who had come up from Wilton, insisted on participating in this task. At first they thought his motive was some hidden mistrust. But when they

faced the quiet, immensely familiar little room, they understood that it was compassion.

Handling the toys was as hard as it would have been to grab flaring briquettes from a backyard grill. But once picked up, putting something down was even worse, like dropping one's wedding ring down the drain, or giving up one's life, or letting go the hand of God.

So thick were the memories, so great the pain, only Toddcaster could manage anything even approaching a coherent inventory.

Mary and Mark sat in the middle of the floor with the drawers under the bed open before them. They fumbled in a haze of stifled tears.

Mark remembered the voice of his son muttering long fantasies of play, his cars in his hands, his Lego, his Brio trains, the decrepit stuffed Garfield the Cat doll gone anorexic from age and cuddling. "Has he been practicing his guitar?" Mark asked automatically.

Mary was in her own pain. "I've been meaning to gift out this Brio," she said quietly. "He doesn't use it anymore."

From Sally's room came the voices of the Beatles: "Give Peace a Chance." Mark's mind shifted suddenly to his college days. He had sung that song before Billy was even a possibility in the world. Gratefully he let it draw him into other times. Other voices seemed to rise around him: "Let it be..." There had been some good times.

When Billy was a newborn Mark had cuddled him inside his robe. He fed him his bottle while reading the morning paper. It was there he had said his first word: "Da."

Mary was clutching a red Brio train engine to her chest. "I remember his first word," she said in a tiny voice. "Ma. Remember that?"

Sally came in. "We're going to find Billy," she said.

Detective Toddcaster added. "This inventory is going to help us."

Suddenly Mark and Mary were clear-eyed again. Mary sat up. "Yes, we are." Then she frowned, looking very like a little girl.

A shadow entered the room. Sally understood first. "The sun just set," she said in a hushed voice.

"I think we're finished here, if nobody can spot any missing toys." The detective got to his feet, a sense of bustle in his movements. "So what we're missing is the street clothes. Shirts, pants, underwear, socks. And his duffel."

"Like he went on an overnight."

"Except for the shoes," Mark said.

Detective Toddcaster glanced around. "The shoes?"

"Look. The black sneakers, the dress loafers. Even his slippers and his flip-flops. They're all here. When he left he was barefoot."

Mary held out her hands as if warding off a blow. She picked up a scuffed shoe. "He's about to go into men's sizes, Mark. Did I tell you that?"

Mark nodded. He could not speak. But he knew as certainly as he knew his own bones that Billy had been taken by that man in the yard. "He wouldn't go out without shoes, especially not on his bike."

"Not even in August, Mr. Neary?"

"My brother never went barefoot. It's not the style anymore," Sally said.

"No, I guess not." Walter Toddcaster was a compact man with a great, bobbing ball of a head. He had come up from Wilton in an olive drab Chevrolet, which was currently parked in the driveway. Now he looked down at Billy's shoes as if they might reveal some secret only a professional could interpret. "My grandson loves British Knights," he said. "Wouldn't be caught dead in anything else." Looking at Billy's

tattered sneakers, he blinked as if somebody had just given him a small slap.

Seeing the expression on Mary's face, he reached out a neat hand, startlingly thin in a man so portly, and caressed the air near her shoulder. "I have confidence, Mary. We're gonna find Billy. I'll even tell you where. Walking his bike along some country road, either busted or with a flat tire. And we'll find him soon, because he will have noticed that the sun's going down and he'll have given up waiting or whatever he's been doing and started to walk."

"He wouldn't just take off without telling us. My son is a natural adventurer, but he's also a good boy." She dropped the shoe with a thud. "My son never lies. He is never lied to."

"Momma—" Sally had folded her arms.

She tilted her head as if she was hearing some special music. Her face worked. "My point is that Billy is a smart little boy, but he's also trusting. He could so easily be deceived. That's what worries me!"

Mark was deeply worried by what he saw appearing in her.

Not even in labor had she looked this bad. After fifteen hours trying to have Sally she had grabbed Mark and said, "It's gonna come again and I can't stand it, Markie, I'm gonna scream." "Scream, for God's sake," Dr. Epstein had said. "You're driving me nuts with your strong, silent shtick. Woman, scream!" And again she contracted and her eyes were like glass and she did not scream, could not, she had to be in control and Mark knew that for her it would be a kind of death to scream.

It had taken fifteen hours. She stank, she ran streams of sweat, and finally Sally appeared, her head looking like a little blue banana. She snorted and then wailed like the wind, high and thin.

Billy had been easier, because he was her second. For days afterward he had been placid. Until he was about six months old he had been a docile baby. Since then he had not stopped for a moment.

Toddcaster watched them. He'd seen this stage many times before. They had a runaway but they didn't want to admit it. And why should they? Their child had despised his home so much he'd decided to leave. The fact that he'd done it on a bicycle meant he was almost certain to be found. This case would be closed within twenty-four hours, and that would be that.

In the meantime a little handholding was all that was required. He was bored and he wanted a cigar. But he was embarrassed to ask if they minded. Their house was so clean, the air fresh and faintly scented with some potpourri the woman must have made.

It was time to get this show on the road. "Look, he took shirts, pants, things that he'd need if he was going to stay away for a few days. He went on his bike. I think we should assume that Billy ran away."

From the door their daughter said, "No way."

Something in her voice made Walter Toddcaster jerk around to face her. He knew that kind of conviction. "What makes you say that?" If he was wrong, OK. He wanted to find out the truth and, above all, the boy. "What makes you so sure?"

"He was happy. We have a happy family." The girl looked up at him, a pale, heart-shaped face, blond hair, a real heart-breaker.

"Sometimes things build up—a kid just can't see his way, communications fail—"

Mark Neary went to his feet. "For God's sake, our son's been kidnapped. He even saw the kidnapper last night right out in the front yard! We're wasting time debating about it."

His wife looked dully at the floor. "It's easier for you if he's listed as a runaway, isn't it?"

"We want to get your boy back."

Mark wanted to grab his lapels, shake some sense into the man. "Then put out a bulletin!"

"We APB'd his description to every police force in the state this morning. You know that."

"And you haven't heard a word. Not a single cop in the state of Iowa's so much as glimpsed him."

Toddcaster looked at him. Mark looked right back, and was surprised to see in the detective's eyes something that he had not noticed before. It was as unexpected as a cold wind in the middle of the August heat. He did not like it, not in those eyes. If the police felt helpless, where did that leave Billy?

"We have to go on the evidence, and the evidence is that Billy left on his bicycle, taking his clothing with him. That's what I have. That's reality."

"Just to be safe, why not report it as a kidnapping?"

Walt Toddcaster wished that he could do just that. His instinct was always to expect the worst, but the fact was that if he put in a report a lot of police organizations were going to crank themselves up. You cared about abducted kids. Cops had families; they knew how much this hurt. The first thing outside investigators would find was that the bike was missing. And that would be very embarrassing.

"Get me some hard evidence."

"The testimony of his family!" Mary's voice was rough. She thought to herself that she wanted to die but she could not, not and leave Billy.

When he was a baby he'd had blond curls. She had cried silently, her back straight and a smile plastered on her face, when Mr. Terry cut them off. Clip, clip, clip, and there went babyhood down to the floor of the barbershop.

The sound of the doorbell ringing shot through every one of them, even Walt Toddcaster, who had been in this same sort of house with this same sort of people too many times.

Three bedraggled young men stood at the door, their faces sheepish. They had cameras and equipment with them. A blue and gray van lettered KKNX EYEWITNESS NEWS was parked at the curb.

"You have the missing child?"

Mark opened the door wider. The men came in, looking into the corners of the hallway, glancing at the ceilings. "Set up in the living room," one of them said. His voice was pitched to a funereal hush.

"No," Sally said, "in the basement."

"The basement?"

"Oh, Mark, she's right! His stuff is down there. Our son is a computer nut. You ought to put it on TV."

"That'll be a good visual, ma'am."

As the TV crew followed Sally downstairs, Toddcaster pulled Mark and Mary aside. "Listen," he said, "the voice of experience talking. You're very self-contained. You keep your feelings inside. Nothing against that, I do the same. Ulcers instead of tears, less embarrassing. But the more emotion you show on the tube, the more stations'll pick this up and run it. Take it from me. Voice of experience."

"What will you say, Walt?"

"He's going to say what he thinks, Mark. That Billy ran away."

Walt Toddcaster made another half-gesture toward Mary. "I want Billy to get found. I want a win on this. Guarantee I do."

"A runaway means we're bad parents. That we somehow drove him away. And meanwhile, somebody has our boy. "

A member of the television crew met them on the stairs. "Is there any other entrance to the basement? It's a great location, but we've gotta bring in some lights. We need a straight stairway."

It took Mark a moment to remember. "There's an old storm door, but we haven't used it since we moved in. I don't know if we can even get it open."

When he pushed at it, though, he found that it opened smoothly. Toddcaster began peering at it as if it had somehow hypnotized him. The thought crossed Mark's mind that maybe he was a little off. 'How good could the cops in these backwater towns be?' he wondered. God help Billy.

While the men from the TV station brought in their lights Mark sat at the computer, idly going through its inventory of games and projects. Mary went upstairs and got the photo album. There was last year's birthday party, and a couple of recent shots of him sitting at the computer.

The detective hovered like a ghost near the storm door. Now he was touching the hinges with his handkerchief. His face had acquired the appearance of bad sculpture, at once intense and empty. Finally he stopped, rocked back on his heels and returned to the basement.

The TV crew finished their preparations. Mark and Mary and Sally sat together in front of Billy's Amiga. The crew turned on the lights. Their blue glare shocked, the sense of exposure intensifying Mark's pain. His eyes were wet, but the tears there did not come from the part of him that spoke and thought and acted. They were a signal from the dark, and Mark in that moment knew what it meant to experience the unbearable.

Then the camera was rolling and the director was asking Walt a question. "What happened to Billy Neary, Lieutenant Toddcaster?"

"In these cases we always look for a runaway or kidnapping by a parent living out of the home. But the Nearys are a happy family. This

is typical Iowa we have here.

"Abduction by strangers does happen, but it's very rare. At first we thought this was a runaway. It looked like a clear case. The boy's bike was missing, clothes had been taken from his room. In fact, if you hadn't wanted to use that storm door, I'd still be wasting my time on the runaway theory. But this boy was kidnapped all right. I'd bet my badge on it. And the kidnapper's a clever one, taking the bike like that."

Mary and Mark gave way together, like two trees knocked down by the wind. She was silent. Trying to disguise his tears, he made peculiar gobbling noises. Sally took both her parents' hands.

"Can you describe your son, Mrs. Neary?"

She struggled for the words. "Four feet tall. Reddish-blond hair. Will you show his picture? Please?"

Then Sally spoke. "Please, whoever you are, my mom and dad didn't do anything to hurt you. Please, please give Billy back to us."

The camera lingered a moment and then it was over. Without saying a word, the crew began folding up their equipment. When the lights went out the basement seemed like a kind of tomb.

Dumb with sorrow and surprise, the family followed Walt Toddcaster upstairs. He went straight to the phone. They could hear him talking to the FBI field office in Des Moines. His tone was urgent.

Then he turned to them. "Somebody oiled the hinges of that storm door. And it was recent, probably within the past twenty-four hours."

"Nobody oiled any hinges," Mark said.

"I know you didn't. The abductor did it. That's how he got in the house. He had to oil the hinges or the creaking might have waked somebody up."

Mary flew into his arms. "Hey," he said.

"You're a genius!"

He turned away from her, away from them all. He went to the window, stood looking across the front lawn. "I'm a dumb cop. It took me all day to figure out you folks were right. Now I want to get a crime squad in here. Dust for prints, look for clues."

"What clues? We've touched everything, been everywhere. It's too late for clues!"

"I hope you're wrong, Mark. The FBI's in on it now. They're sending a crew up from Des Moines. The drill is, they'll gather evidence and coordinate any national search. We'll do the instate footwork. They'll be here in an hour. And in the meantime, I have a suggestion. We ought to send somebody out for food. You haven't eaten all day and you're gonna need your strength."

"We could all go out," Sally said.

"No. From now on, this is rule number one: See that phone? You never, ever leave that phone unattended. Never. If none of you can be here, get a neighbor, get a friend. Use it as little as possible. If you want to make calls freely, order in another line."

"We have call waiting."

"That's not good enough. And always answer on the first or second ring. Another thing. We're going to loan you a special recorder. Every time the phone is picked up, it'll start automatically. And if Billy calls, just say one thing. Not 'I love you,' not 'Are you OK?' Just say, 'Where are you?' Remember that, 'Where are you?' Any scrap of information he can give—God willing, maybe it'll help us."

"Do they usually call?"

"Well, look at it this way. Right now your son has one thing on his

mind. He wants to go home. He wants you. And if he sees a phone, there's a chance he'll try to use it. But he might not have much time. And it'll be dangerous. So after he says where he is, tells you anything he can, you say to him, 'Hang up.' Do that as fast as you can. I can't impress on you enough, do not stay on the phone with him. Look at it from the kidnapper's viewpoint. He sees the kid on the phone. What does it mean? He's just been made, in all probability. This kid has now worn out his welcome. He offs the kid, and he's outa there."

-He just—he kills Billy—"

"Mary, we have to face it. A man who does this kind of thing is not a Mr. Niceguy. He does not have normal human responses to things. Chances are he's unstable and he's undoubtedly mean."

The phone rang, once again sending shock waves through everybody in the house. Mary answered it, her voice smooth, but hushed by pain and suspense. "Neary residence."

It was the local police. They'd just gotten the FBI bulletin and Chief Lacy was coming over.

"They've been cruising around hunting for Billy all day," Walt said. "Now they'll shift tactics. They'll start going through their files looking at possible perps. A town this size, the likelihood is they won't find any candidates. But we'll be knocking on a few doors in Des Moines and Davenport, you can be sure."

Mark went to the front window. "He stood under that tree. He went up the driveway, along the side of the garage, into the backyard. And then he came in."

"The storm door was never locked, I take it."

"I don't remember." To himself Mark said, *It's my fault.*

Walt came over to him. "I know what you're thinking. If you'd done this, if you'd done that. Forget it. The guy wanted Billy. He was going

to get him no matter what."

"Why my son, Walt?" Mary had taken on the hollow expression that warned Walter Toddcaster of an impending explosion.

Despite her deteriorating emotional state, he continued on. He had a job to do, and it was suddenly damn urgent. "There isn't anything in your background—anybody who hates you— either of you?"

Mark shook his head. Mary looked at him. "My husband has strong political ideals."

"What kind of politics?"

"I'm pretty far left," Mark said. "I've lost a couple of jobs because of it."

Walt Toddcaster's only politics was that of the policeman: vote for the guy who protects the police budget and hates crooks. That probably made him conservative. He'd never thought much about it. "What jobs?"

"I'm a history teacher. Most recently I got canned over the flag-burning issue."

"You think people should be allowed to burn flags?"

"Essentially, yes. But does that make my son a target for kidnapping?"

"It might." Mark bowed his head. Walter realized how harsh his statement sounded, but he did not like the kind of causes he suspected this man supported. Neary was the sort of misguided soul who wanted to put the cops behind bars and let the criminals run the streets. "You make a public stink? Get in the papers, maybe?"

"I'm just a high school teacher. Stories about me don't show up in the paper. When I get fired, nobody notices."

"Now, Mark, that's not quite true. The ACLU—"

"Got me reinstated with back pay. And so they changed the master plan and eliminated the position altogether."

"None of this got in the papers?"

"Not a word."

"We don't know why a given perpetrator picks a given kid. There've been studies, but most of them conclude it's just random. He picked a boy he found attractive. Your boy."

Sally, who had been flipping endlessly through the channels on TV, turned back to KKNX and put the set on mute. "I'm going out for Kentucky Fried Chicken," she said. "I'll bring back a bucket."

A moment after she went out the front door Mary leapt up and ran after her. "Sally! Sally, no!" She grabbed her daughter, clung to her. "Don't go out there!"

"We have to eat, Mother! You didn't touch the sandwiches I made."

"They're still here—"

"I threw them out. They got dry. Momma, I'm not gonna have anything happen to me walking two blocks. It's still light out."

Mary strode across the porch. "I'll go," she said as she headed for the garage. "Walt can move his car."

"Mom, there's no need!"

Mary did not answer. Walt hurried out and pulled his car to the front of the house. He watched Mary back down the drive, turn into the street and drive slowly off. She really ought to be using her headlights. If he'd been out on patrol, he would have given her a warning for no lights after sunset.

Mark and Sally were standing together on the porch as Walt returned to the house. He hated this part, watching the family suffer. Some of

them disintegrated, others did not. It was largely a matter of luck.

"Maybe they'll get it on the seven o'clock news," Sally said.

They were still watching when Mary returned. Walt and Sally ate.

"Twelve-year-old William Neary, son of popular Stevensville High School teacher Mark Neary, disappeared from his home early this morning. Police are saying that he was abducted by a stranger who entered the house while the family was sleeping. Full details at ten."

Mark felt his face grow hot. He was hardly popular. The kids barely knew him, he was so new here.

The next moment the phone rang. It was Tom Benton, Stevensville principal. "Mark, Jesus Christ—"

What did he say? "He's gone, Tom." It was so hard to talk about it. To say that, to say "He's gone," it was like heaping coals on your own head.

"You take all the time you need, Mark. Forget that makeup class you were going to do. I don't want to see you."

The instant Mark put down the phone it rang again. This time it was one of Billy's friends, Jerry Edwards. Jerry's voice was hushed. The Edwards family had already been questioned both by Mark and by Walt Toddcaster. "Mr. Neary, we just heard it on TV. Billy—"

The boy's father came on. "If there's anything we can do, buddy. Any damn thing."

As Mark put down the phone the doorbell rang. Sally followed him to the door. A man in a camouflage jacket stood there. For a brief, hopeful moment Mark thought, they all thought—

"Look, we never met. I live two doors down. I want you to know, if there's anything I can do to help—"

"Thank you," Mark said. "But the police are doing all they can."

Walt came to the door. "Wait a minute. There's lots your neighbors can do to help." He pushed his way in front of the family. "Come on in, Mr. —"

"Gerrard. Mike Gerrard. I manage the Walmart over at the mall."

"The Nearys are going to have a poster printed with Billy's picture on it. You could put some up where you work. And they need people to cover the phone when they can't do it themselves." He took Mike Gerrard aside. "They need friends, Mr. Gerrard."

"Hell, yes," Gerrard said. He looked to Mark like somebody from another planet, huge and strong, with tiny, quick eyes. And Mark thought, 'What if he's the man who took my boy.' He forced himself to dismiss the thought.

The sudden outburst of concern was making it all so terribly real. Mark felt physically weighted down, as if somebody had loaded his shoulders with chains. He smiled though, gamely trying to keep going. He had to keep going. Billy needed him. He needed Dad's strength and intelligence and bravery, the things he'd always believed in.

Mark felt like a scrap of nothing.

The phone rang again. This time it was one of Mary's friends. "Keep the calls brief," Walt said.

Mark had just hung up when a car stopped out front. Two men got out, young men wearing neat suits. The family knew at once that the FBI had arrived. The men hurried up to the porch, passing through the little knot of neighbors that was gathering on the sidewalk.

The porch was shadowy and Mark turned on the light. The young men introduced themselves. They came into the house. Realizing that his presence was no longer needed, Mike Gerrard went out to the sidewalk and began conferring in an intense undertone with other neighbors

who had gathered there.

The two young men were full of crisp confidence. But they wanted to be taken down the same road that Walt had traveled, the painful road through every corner of Billy's young life.

There were forms to fill out and work to be done. A truck appeared, containing a laboratory team from Des Moines. Suddenly the house was full of people, pictures were being made, fingerprints being taken, steps and couches and every inch of Billy's room vacuumed.

One of the FBI agents, a redhead named Franklin Young, showed Sally and Mark a form. "This is the National Crime Information Center Missing Person Report," he said. "We're going to fill it out together, then it's going to be faxed to Washington."

Young filled out part of the form himself. "I'm going to list Billy as believed endangered in the message key. That doesn't mean we know something you don't. It's policy for any stranger abduction of a juvenile. Also, it'll give the case highest priority."

Once again Mary and Mark addressed themselves to the details of their son's life. As she worked Mary felt a kind of fury building in her. She had a brief, bloody fantasy of seeing the kidnapper's head explode.

Under "Miscellaneous Information" they wrote a description of the kidnapping, the fact that Billy had waked Mark up with the story about the man in the front yard, the detail of the oiled storm door, the missing clothing and bike. The agents were careful and patient; they left nothing out.

When the form was finally completed, Franklin Young took it out to his car. As he drove off to fax it to the National Crime Information Center, one of the police lab workers began fingerprinting the Nearys so that any prints left by a stranger in their house could be identified.

To Mary all this activity made it seem as if the world's bindings had come loose. She could not move, could not think anymore, could not

fill out forms, talk, explain, thank, hope.

When the phone rang again Mary very carefully took a throw pillow from the couch and pressed it against her face. She screamed, then, and screamed again. She felt Mark's hand touching her arm, clasping it, heard his voice as if from a long, long distance. "Mary! Mary, for God's sake!"

She went on screaming, louder and louder. She did not try to stop, did not even want to. She thought she might scream on forever.

10.

Billy knew he was in bed, which was fine, but there was this humming sound. Then he was a balloon full of warm air, and the humming was making him vibrate. He was a red balloon, sailing through a clear sky, sailing slowly higher and higher—

What was that humming, and that jostling? Once in a while, the bed would definitely jostle.

Light flickered behind his eyes. Everything was all warm and soft. But it wasn't nice, not at all. He felt like something very old and very dead had been poured down his throat. Had he come down with the flu during the night? No, the doctor had said—

The doctor?

My house burned down and I'm in the hospital!

He tried to get up but it didn't work, and he remembered why. A long, long time ago he'd waked up, and he'd discovered that he was held down by straps.

So why do they tie you up in the hospital? Only one reason, you're so bad off they don't want you to move.

He decided to take a quick inventory of himself, using Dad's self-examination technique for when you got hurt and there was nobody around. "Your attention is like the beam of a flashlight, Billy, and you can move it through your body. You point it at your left foot, then your

right. Left hand, right hand. Legs, arms, torso, head."

He felt like he was in one piece, but there was this fuzziness that was strange, and he was definitely sick. What was that, "something, something and palely loitering," from the Shelley poem—or was it Keats? Kelley and Sheets.

He should have won poetry reading at the Speech Fair. Instead, What's-her-name Pugh had won with "My Last Duchess." His poem was "La Belle Dame Sans Merci." The beautiful lady without mercy. Yeah. Every beautiful lady he knew was like that. Amanda wanted football, not poetry. "La Belle Dame . . ." Alone and palely loitering.

And humming. The humming went on and on, rising and falling, and with it that slight jostling. Off in the distance, somebody was playing opera. The humming twisted and turned, merging with the music.

Why in the world was he strapped to his bed? Surely not even a children's ward did that. Maybe—

"Am I still in the ambulance?"

Distantly a voice: "Yes, son. Go to sleep."

Still in the ambulance . . . but then where was it going? Stevensville Central Hospital was on Route 19, wasn't it? Yes. That wasn't but a few minutes from the house. He wasn't sure how long he'd been in this ambulance, but it was certainly longer than five or ten minutes.

He felt a tiny, cold hand on his cheek. Very tiny, very cold. He shuddered and the feeling left him. No hand. At least, not a real one.

Maybe this was all a great big nightmare.

Billy's voice was so melodic, it made Barton's heart ache just to hear it. But its presence was alarming. He mustn't wake up this soon—especially not in the middle of Denver.

Barton himself had been awake for over twenty hours. Along with the highway, the hours swept away behind him in a quivering, hypnotic line. It was now six-thirty in the evening, and he had been driving for fourteen hours and thirty minutes. He had pushed hard, knowing that a confrontation with the boy was inevitable, and that it was going to happen on the road.

He had it all planned, a tender, painful moment. "Billy," he would say, "I will be more to you than your mother and father ever could be. You need me but you don't know it now. You will come to love me as I love you, with a very special love."

The one thing he believed in totally was his love. Nothing so pure, so noble, could be wrong.

Billy would panic and flutter against the straps, and he would cry. Barton would hold him, maybe kiss his cheek, there was nothing inappropriate about that, speak sweetly to him: "We will have a beautiful life together, you will come to love me as I love you . . ." Those words, so incredible, said to his perfect beauty: I love you.

A man before beauty, his head bowed, fighting the urgency to kneel, to adore that which God has made in the image of His faultless self.

"I give you my heart and soul, Billy."

He listened to the hissing of the tires. He whispered, "I give you my soul."

The scanner burped, a trooper calling in position from somewhere in the mountains. It sounded again, a trouble report on the Denver police frequency.

He heard police talking. Then the humming grew and changed, became a whining and got higher. Was that the siren? No, there was

no siren. This ambulance didn't have a siren.

A fire . . . there'd been a fire . . . and he was hurt.

The bread maker! It had been responsible for the fire! He knew it, the thing ran so hot! They never should have bought it.

He flew to full wakefulness. "What happened to my mom and dad?"

"Your parents are fine, son! Everybody's just fine. You suffered a little smoke inhalation, that's all."

God help him, he was driving down a crowded freeway in the middle of one of the biggest cities in the United States and Billy was waking up. This was supposed to happen later, back in the mountains where there were plenty of side roads and nothing but the wind to hear his screams. There Barton could reach out to him, could communicate, soothe and offer himself as father, friend and slave.

Here all he could do was clench the steering wheel and hope the child stayed reasonable.

* * *

Billy took experimental breaths, in and out, in and out. There was nothing wrong with his lungs. He felt sick, not hurt. So why in the world had he spent hours in this ambulance? What was going on here?

"Let me go home! I'm fine!" He had to go to the bathroom at once. "I have to use the John. I have to right now!"

Billy was going to realize any second what was happening. Then he would start screaming and struggling, and oh dear God, hadn't he loosened the straps to make sure Billy could breathe? Hadn't he? Yes .. . back in Ogallala . . . loosened the strap around the chest because the child's breathing seemed labored.

He might get free!

Barton began maneuvering through the traffic, taking a few risks. This was getting dreadfully ugly. A few more miles and it would have been different. Even out of the boy's pain Barton could create love, he knew he could. But not now, not under these impossible conditions.

He loathed traffic!

Why didn't the driver say anything except just "go to sleep, go to sleep"? Why didn't he explain? And what about that doctor? Hadn't there been a doctor back here with him, who'd given him a shot . . .

Late last night somebody got him out of his bed, he remembered that. Yes, they put a rag over his face, he thought it was Sally giving him a hard time. Then he got all numb . . . then there was this humming.

Again he tried to get up. It made sense for an ambulance bed to have straps, but not the little ones that held down his wrists and ankles. They weren't just meant to keep him from falling out of bed, not only that. He was *really* strapped in this thing.

"Let me up!"

Still no answer. It would help a lot if he could see something. He took a deep breath and blew, trying to get the cover off his face. Earlier he'd tried it, he remembered. But the effort was vague, like a barely recalled nightmare. Hadn't he struggled and fought and almost gotten out? Maybe, or maybe he'd just dreamed it.

No, his wrist still hurt where he'd pulled it out of the strap. So that part was real.

What were these straps all about, anyway?

"Will somebody tell me what's going on here!"

Oh, God. He's fully conscious and he's starting to understand and I am just passing the Arvada exit.

At least the towers of the city were now behind him and the traffic was a little thinner. Could people hear somebody screaming from inside a van? If they drove alongside with their windows open, maybe so. He hadn't counted on this and now he wasn't sure of anything except that he was dog-dead tired and beginning to simply give out just when he needed every bit of what was strongest and best in him.

Maybe he had to take action, and maybe it was going to be not the best thing for Billy. Maybe he had to hit him with a real drug. For an extreme emergency there was some two-percent solution. Not a lot, but enough to send Billy flying for a few hours.

Morphine wasn't like those other drugs; morphine worked. Billy would go as high as a kite.

No. Fathers did not give morphine to their sons.

But there was no time to think about it now.

Billy raised his chest as high as it would go, struggling against the straps. He pushed until he couldn't breathe, and pushed still harder—until at last he stopped, gasping, his head pounding with the first real headache he had ever felt in his life.

"Daddy! Daddy!"

He twisted his arms, tried to break his legs loose. The chest strap had give in it, but the others were totally tight. There was no way out. Finally he lay still and tried to think it out. He'd gone to bed last night, everything normal. He'd had his day, spent time at the mall, played Space Harrier and Afterburner with the guys. Then a queer had played RPM with him and after that he'd taken off. He'd worked on his Amiga. Later he'd gotten the bird to reply to him. They'd talked in the moonlight.

At some point he'd seen a man in the front yard. He told Dad, but there was nothing there when they looked. But no, that couldn't be. This was an ambulance, he was hurt. But he didn't feel hurt, and why these straps?

If this *wasn't* an ambulance, if he wasn't hurt, then—

A sudden realization made him slam himself against the straps. He knew who'd been in the front yard. It's the weirdo who was at the mall!

Terror descended.

"Help, oh, help me! Somebody help!" But there was nobody—except *him*. Billy screamed. It was not the fearsome noise he had expected, but the fragile piping of a boy, as shrill as the sound of a mouse being tortured by a cruel child.

The noise was like fire. It radiated absolute human terror. Nobody who heard a sound like that could mistake it for anything other than what it

was. They would know for certain that there was a child in this van, and that child was desperate.

The windows were all closed but the traffic had slowed down again and there were cars both to the left and the right.

People must hear it. God, yes! If only he'd put the gag back when he'd knocked Billy out. But he couldn't do that now, there was nowhere to stop.

Then it occurred to him to drown out the screaming with music. A fast hand jammed a new tape into the cassette player and turned the volume up to full. It was Lily Pons, one of his treasures, singing "Un Bel Di" from *Madama*, oh God, and the moon rode low on the horizon and the traffic moved in clotted anguish on the hard-lit road, and Billy screamed as a soul must scream when death first sunders it from the world.

His head bobbed, his teeth clattered and tore as he gnawed at the quilt that obscured his vision. The thought of that man up there driving made a thick, nasty taste rise in his throat.

Opera was blaring out of the radio and streams of memory poured up from deep within Billy's soul, recalling when last year his dad had taken him all the way to Cleveland to see *Carmen* and he'd loved that trip so much, it had been such a happy, happy time. After the opera they'd bought a ton of Kentucky Fried Chicken and eaten it all in their motel room.

He touched this memory like a thread in a maze and then it was gone and he was back here strapped to this cot. He lay jerking his head hopelessly, chewing at the quilt that covered his face. Warmth spread around his thighs and legs. At first it scared him, then he realized what it was and felt ferocious delight.

He was glad he had wet the bed, and he realized that he could do much

worse. In all of his life he had never shat a bed. But he did it now and it seemed awful and also gloriously savage and effective. The stink of it soon filled the close atmosphere under the quilt, and to his pleasure he found that he could also vomit.

The aria wailing out of the radio seemed to deepen and change, becoming something else: a mother singing as if to her child while he slips into dream.

Barton was trying to deal with his map, looking for some back road, some escape from the steel lights of the freeway. Behind him the boy lurched and twisted, shaking the whole van. A horrible stench filled the air: Billy had defecated. Anger flashed through Barton. This was an unneeded and undeserved complication.

If Barton Royal had made a mistake like that he would have been thoroughly dealt with.

He suddenly heard retching, liquescent heaves. The boy had vomited. The odor was so thick it greased his mouth with its foulness. Lily Pons sang on. "Sempre Libera," from *La Traviata* filled the cab. Then the map got away from him and he swerved and there was a dry thump and another car was honking its horn. He'd hit them, God help him. It was a Taurus, green, full of people. It pulled in front of him, and wouldn't you know there was now a convenient shoulder. He had to stop; they could get his license number, description of the van.

Billy heard a grinding thud, felt the car waver a little. Then it began to slow, finally to stop.

Maybe they'd stopped at a gas station. But no, there'd been that thump. Flat tire? No, Dad had plenty of flats and they caused an unmistakable flapping sound. So OK, it was an accident, but not a bad one.

The man addressed him in his sweet and evil voice. "Please, Billy, I know what you think, that I'm a monster. But I am not a monster. Very far from it! I have such hope for you. Yes, hope! You think you know what's happening, but you don't. Just give me a chance. One chance is all I ask."

Billy heard him leave the van. How do you escape if you're all tied up? Billy thought of Indiana Jones. How would he do it? Break the straps, but they were too strong! What would James Bond do? He had all that high-tech stuff.

Billy had nothing. He told people he was a black belt, but the truth was he couldn't even get out of Jerry's headlocks. A kid couldn't get away from a grown man.

About all a kid could do was scream.

The love in Barton's heart welled up until he was almost weeping. Poor little Billy. It was so natural for him to be afraid. Poor little fella. He felt, though, that he had really communicated just now. Surely Billy had heard the warmth and decency in his voice and that was going to calm him down, get them both through this first great crisis.

The people in the other car looked like zombies looming out into the yellow sodium vapor lights. Barton opened his door, carefully leaving his engine running. As he closed the door he checked to be absolutely certain it had remained unlocked.

The driver of the Taurus came around to the back of his car. Barton's heart sank. He could see damage—the taillight was smashed, the bumper was buckled, and there was a gash in the fender. His own fender had only a smear of green paint on it.

"What're you gonna do about it, asshole?" The driver was tremendous, wearing an ancient Doors T-shirt, stinking of cigars and beer.

"I'll pay."

From the van there came a terrible shriek. Barton battled the instinct to run for it. The others turned slowly, perhaps drunk-enly, absorbing the impact of the sound.

"My child must be having a nightmare," Barton breathed.

"That sounds weird, man."

Barton returned to the van. *The two-percent solution, the two-percent solution, find it, find it!* He pulled the little bottle out of the glove compartment, opened his needle case—and heard the car door click.

The other driver was there, his yellow eyes glaring. He reached in and took Barton's keys. The van shuddered to silence. "After we work out our problem you get 'em back."

"Help me, I'm being kidnapped! Help me!"

The man paused, looked toward the back of the van.

"Please, he's evil, he's a monster!"

"No, no son," Barton said, speaking gently, insistently. He drew solution into the syringe and crawled into the back of the stench-choked van.

Why didn't the other man listen? He was out there, Billy knew it. So why didn't he *listen*? "Call the police! Help! Help!"

"What's goin' on in there?" At last!

"He's having a nightmare!"

"No! He's a kidnapper! He's killing me!" The sound of his own voice terrified him, and a scream burst out of him. It was involuntary and it

confused him; he had not known that instinct had a voice. He surged against the straps like a fish on a line, strong and vital and seeking to be free.

Barton struggled with the needle, trying desperately to evacuate air bubbles, then to find a bit of white skin that was motionless enough to inject. He lifted the quilt and then with his free hand pulled down Billy's pajamas. The skin was like milk, it stopped Barton's heart.

Billy's shrieks were unlike anything Barton had ever heard before. They were so high and yet so amazingly fierce, the screams of a young tiger.

"What's the matter with that kid, man, you gotta give him a shot?"

"Epilepsy! And nightmares!"

A gasp, crackling, shuddering, then a bubbling whisper: "Police!"

"Yeah, son, I'll do that. I'll call the police."

"No! He'll be fine! This shot'll do it, you'll see." "No, man, let the paramedics give the shots. Stop that, man."

Barton choked back his own gorge, striving to maintain control. Sparks were dancing in his eyes. Deep breaths, one, two, come on, search the pale skin and there, just where the thigh was strapped down, he could hold the leg, prick the shining skin.

Whispering started in Billy's mind. Only he couldn't quite understand the words. Ripples were spreading, dying, the sun was setting inside his mind.

No! You have to scream! "Please. I—am—being—kidnapped! Get the police!"

Suddenly the quilt fell away and Billy could see. He was in the back of a van, and there was a bloated, ugly troll squatting beside him. His eyes were bulging, sweat was streaming down his face, his nose was full of pores. In his white, fat hand there was a syringe.

"He was in the mall! I remember him, he was in the mall!"

"Hey, man, that kid's in real trouble!"

"He's merely upset!"

"I'm gonna call the police."

Billy saw, suddenly, that the troll was wearing a blue shirt, and this seemed extremely important. "Officer, he was wearing a blue polo shirt. And he was crying. Yes, crying. I was crying, too."

Barton drew back, watching Billy's head shake from side to side more and more slowly, watching the tautness go out of the straps, the fists unclench and the eyes roll. Barton backed out of the van, climbed down and stood before the drunk, shaken man from the Taurus.

"See, he's gonna be OK."

"Jesus H. Christ, man, you sure?"

"Oh, yeah. It often happens like this. Then we give him his shot and he's OK."

"Look, man, if it's all right with you, I think we oughta call a cop anyway."

"No. I haven't got time. I want to get my little boy home. He's sick, as you saw."

"You got a doctor, man?"

"Yes! Sure! Dr. Ledbetter. A fine doctor. He's why my son's not in a home. Wonderful doctor!"

"Listen, I got five hundred dollars damage to my car. I know, sounds like a lot but these damn bumpers cost on these cars. Repairs are high. So I think we oughta get a cop. Otherwise, you kiss the insurance goodbye. And somebody oughta take a look at that kid. Besides you, if you get my drift."

"I do and I'm not sure I like it—"

The driver called to one of his companions. "Mikey, get the Highway Patrol on the car phone. This guy's got somethin' funny workin' back here." He turned to Barton. "You stink, and your van stinks. It smells like you got an open sewer in there." He peered into the van. "That's just a little boy."

"He's had an epileptic seizure. He'll be fine. Now if you'll let me—" Barton's tongue scraped the roof of his mouth, making a sound in his head like the scaling of a fish. He drew all his cash out of his pocket.

"Hey, man, that's money."

"Yeah, look, I'll give you the five hundred. That'll cover your damage and what say we just let it go?"

"That kid—"

"My son is fine! I don't want him frightened by the police. He's sleeping now, and if he's not bothered he'll sleep the rest of the night. When he wakes up, he won't even remember this happened."

"You got five hundred there?"

"Are we bargaining? Here." Barton counted out the bills. "You got it."

"That makes me feel better, man. I feel like getting back in my car now."

The traffic, the lights, the noise, all became a dream, frightful, glaring, but a dream and in the dream Barton was released. He moved to the front of the van. The other driver had put his key back, and he turned it.

Music burst forth, Lily Pons so loud she sounded like a banshee.

He jabbed at the button and killed the cassette player. Sudden silence, only the hiss of traffic behind the closed window of the van. He started the engine. As he pulled into the traffic he sang, "Glory, glo-ry," and imagined that an angel had taken him and his beloved burden under a golden wing.

Barton and Billy, alone at last.

11.

The first night in hell: red dreams.

In Mary's dream she was at a party. It was not a fun party, and not a good dream. There was a woman there she was afraid might be her mother even though her mother was dead. No matter what she did, Mary could never get this woman to face her. The woman always had her back turned. She was wearing a green silk dress just like Mother's. She was terrifying.

Mary's dream-self knew these things: that a child's soul is as fragile as dew, and souls can be murdered.

Then, in her dream, it was a day in October, a day as gray as old metal, a day worthy only to be thrown away. It was October 12, 1987. *That* day.

Dad died of heart disease in March of 1976, just a few days before his seventy-fifth birthday. Now Mother had also reached seventy-five, with sunken cheeks and drool and a bobbing head. Her eyes were as if sheened with mineral deposits.

She once had said, "My dear, what's happened to your chest? You're

concave." Mary had been bending because of a tennis accident.

"Mother, please. Flat-chested I can handle. But if a woman is concave, she might as well give up."

Mother had stared back as if to say, "So, give up." Instead she said, "Mark is giving up in a way, isn't he?" And yes, it was true, she had seen it. They both knew a secret, that any life—all lives—must be constantly healed by soaking torrents of love. We are as dependent upon such healing as the plants in the fields are upon rain.

A thousand years ago Dad had been very successful, a Chevy dealer in Morristown, New Jersey. *The Chevy dealer.* They'd had a maroon Chevy, a blue Chevy, a tan Chevy. They'd had radio ads. "Give the Morristown Chevy toot." So whenever they saw another Chevy on the road, they dutifully tooted. Mary would reach over and hit the horn with her fist.

The woman in the green dress whispered, "It was your fault, dear. You and that hopeless husband of yours. No burglar alarm. Not even a lock on the door! Now look!"

Two tall men were carrying a little boy through a thick, ugly woods. One carried him by the shoulders. The other went comically along with Billy's legs in his hands like the handles of a wheelbarrow. Billy was naked.

If his abductors did not kill him and he could not escape, he would eventually surrender and start trying to make something of his new life. Kids were like that, they adjusted, made do with the present.

If only she'd explained more to him about the dangers of abduction. But how did you do that and preserve the joy of childhood?

Even if a miracle happened and Billy got back home,, his childhood would be shattered.

His voice came in her dream, clear and fast and high: "Momma, will

you bathe me tonight?" She had done it until he was seven. It was like a sacred act, so much fun with the rubber ducky song playing and the wonderful toy ferryboat from Germany full of cars and the little frogman who really swam, and they made storms in the tub, and the ferryboat would toss and she would go *cra-a-ack* and *bo-o-om* for the thunder and hit the water with her fist where the lightning struck.

"My dear daughter, you might as well have given that child away. Given him away!"

"We were asleep! We didn't know!"

In her dream the two men stopped. She could smell the night flowers, hear the roaring of the cicadas, see moonlight dappling a glade. In that dappled glade the two men sat speaking in low tones. Billy was before them on the ground, trussed like a pig, not even struggling anymore. They took no notice. She floated above them, and saw that they were eating candy bars.

She saw this with total clarity. One man was eating a Hershey bar with almonds, the other a Clark bar. The sounds of their eating involved crunching and sticky slurps and the crackle of candy wrappers. There were tears on Billy's face and she wanted to wipe them but she could not. Her mother said, "You never can, dear. Not in the end." Then Mary was wide awake and sitting up.

For a long time Sally had watched the night. She sat on her bed and put her elbows on the window sill with her chin in her cupped hands. In her memory she heard her brother playing in his room, talking to himself under the covers. What was he saying? If you went anywhere near he got quiet.

At eleven-thirty the sound of taps came faintly on the wind, all the way from Fort Stevens down south of town. In her mind she drifted across the oceanic prairies, and farther south to the rolling hills of Kentucky, drifting in the cloud-choked sky, past clouds of American spirit and

American dream, and also her own dreams, when a boy would at last notice her and when she would go hand in hand with him and they would laugh together and he would turn to her and lift her chin with his forefinger and thumb and say, "May I kiss you," and she would open her lips a little.

They played taps at midnight, not eleven-thirty. And she couldn't possibly hear it this far away, no matter how the wind was blowing.

A dog or a coon humped across the front yard.

"Where are you, Billy," she said. "You might be dead, brother. You might know the secret. Do you know it, have you died? And did you go to God, or turn into a star, or are you just rotting there in a culvert where he left you?"

She started to think about how a man would do it with a boy, but then she couldn't.

Mark Neary listened to the night around him, the distant sound of a train heading west, far above a jet full of sleeping people. A car whispered down the street and he found himself tensing to its sound. But it went on past.

Beside him his wife of sixteen years sighed in the bed. His great anguish had paradoxically intensified his interest in the familiar mystery of her body, as if the weight of his suffering drove him to seek the old refuge of the flesh.

How dare he—his child was being raped, brutalized, tortured. He knew it with the certainty natural to his careful mind. The bright, happy, vital child who had been taken from this house was either dead or being destroyed right this second.

Billy was one of those children who were so perfect that it seemed impossible that tragedy could ever reach them.

He'd been so damn complacent. 'Not to do anything about the man in

the yard—may God strike me down!

He imagined excited hands fumbling against his son's naked skin. Then they were parting Billy's naked legs and his father was cringing in agony.

Then the wind swept up from the south bearing its marvelous freight of prairie smells, the aster and the grass and the mystic perfume of the corn.

His son's body lay glowing in the moonlight.

His son's body lay crumpled beneath a tree.

His son's body floated pale in the slow waters of the Pomander River, surfacing from time to time like an exhausted fish.

His son's body lay beneath the pulsating flesh of a huge human maggot, and his eyes were wrinkled shut and his hands were purple they were tied so tight.

"I am praying now," Mark whispered into the perfumed air. "God help my boy."

He turned over and, as he had a dozen times before, placed his face in his pillow. Then he wept in the breeze, in the moonlight, in the sweet Iowa night. A bird sang alone.

12.

It wasn't like waking up, it was sudden and cruel; this was the first time Billy had ever been pulled to awareness by pain. His body jerked against the straps, an involuntary spasm. Then his eyes opened. Even as it left him, his young mind clung to the blackness. For a last blessed instant he was nowhere, he was nobody.

Then he felt the inevitable humming of the van, the humming and the jostling. The air was sweet, scented with pine. The odor penetrated deep into Billy's soul, bringing dense memories.

The kitchen was gold with afternoon light, and there was his apple and glass of milk on the counter, and the air smells piney because Momma has just mopped the floor.

When he reached for the apple the illusion shattered. He knew where he was and who he was with and so he fought, kicking, jerking his arms, shaking his head as the van bored on, deep into the night.

From the front a woman's voice sang, very high:

"You are my sunshine, my only sunshine

You make me happy when skies are gray ..."

The voice piped and wavered, never quite on note or key. When it went high Billy went with it up the mountains. Then it broke and down they fell, sailing through black air.

As they fell Billy began to become consciously aware of the pain that had awakened him. Memory and dream slipped away and he was left with only the truth: he was thirsty, and it was a torment beyond belief.

Every part of him, his belly, his arms and legs, even his skin suffered for water. His mouth felt like the dentist had jammed it solid with cotton logs. The humming of the van became the muttering of a brook and he saw water bubbling over stones, saw the thick green depths of the Pomander River, tasted water pouring from the faucet under the oak tree in the front yard.

He had stood there. From there he had watched. And now *he* drove the van. Even though Billy's head was no longer buried under covers, he could not see *him*, not more than a glimpse and that only if he arched his neck back as far as possible.

Then *he* was a dark hunched bulk behind the wheel.

"I'm thirsty!"

The singing stopped but the van hummed on. Being ignored made Billy's cheeks burn. He wanted to somehow get to that ugly man and hit him until his head broke open like a cantaloupe. "I'm thirsty," he repeated. He tried to sound angry, but he could barely whisper.

The figure remained hunched over the wheel and the, van hummed on. Billy's vision wavered. Tears came.

He gazed through his anguish at the shadowy night, the tops of pine trees hurrying past, the stars. It was as if he was at the bottom of a deep, deep hole and he could just barely see the sky way up there. 'The stars,' he thought, 'we used to count them in those days, lying in the front yard and we would talk about all the people in all the worlds so far away.'

Then he thought, 'This is how I will escape. I will turn the straps into molten leather by making my wrists and ankles hotter and hotter like that guru could do—make himself hotter or colder, it said so in the paper—and then I will get him by the throat.' He concentrated on his wrists, imagining them getting hot, imagining that the leather was crackling, creaking, getting weaker.

Of course nothing happened. But couldn't people bend spoons with their minds, either ... or was that possible in California? He imagined the straps getting hot and weak, hot and weak.

They *were* getting looser, too, at least a little. Hotter and hotter, wrists and ankles, and he could smell it now, the stink of the burning leather. Yes, looser by inches, by degrees, looser and looser . . .

With a soft tearing sound his right ankle became free. A moment later his left wrist was out and he was pulling, fumbling, working until at last he was completely free.

The van still hummed, the stars still followed them, the trees still tumbled past. Billy sat up. He turned his head and there just two feet away was the ghoul, dark and hunched, singing through his nose.

To himself Billy said, 'Your muscles are steel, your blood is molten uranium, your bones are hot iron.' He moved as precisely and quietly as a spider. He put his hands around the thick neck of his tormentor, holding them just an inch from the shaking flesh. Then he throttled the life out of him.

Something began to happen. Billy felt it first as a change in the humming. Then came the rattling of gravel as the van left the highway. As it moved along a dirt road the tires rumbled. The slower the van went the faster Billy's heart beat.

Billy realized that he was still strapped to the bed, still trapped, still helpless. He tossed his head from side to side, moaning with disappointment. It had been so real!

The engine went off and the van grew silent. Billy listened, his limbs taut against his bonds, his face tickling with tears.

He groaned aloud, a sound that sank into a sob. "Now, now," came a low voice. It had a rattle in it, and a curious lilt as well. If a man and a woman were both talking at exactly the same time, this was how it would sound.

Billy flew into a wild panic. The tighter the straps held him the harder he struggled.

"Billy, relax, son, take it easy. Nobody's going to hurt you." The voice rose as it might when you were comforting a dog: "It's OK, Fido, it's OK, there, there boy. Easy . . ."

"I hate you! I hate you!" He spat but there was no spit, so all that came was a fluffy rasp.

"Son, I have a nice big thermos of Evian water. Have you ever had Evian water? It's cool and clear and it's just as sweet as a fresh mountain stream."

When the man opened the thermos, Billy could smell the water. He'd never noticed before that water had a smell. "Please," he said. He heard the begging in his own voice and wished he could sound stronger, but it was no use. He couldn't fight, he couldn't get away. He was too little and this man was too big and he was so far from home and he didn't know where he was or anything!

The man put his hand behind Billy's head and lifted it, and brushed the edge of the thermos against his lips. The water stung where it touched his cracked mouth, but it tasted so good, so cool, so rich, a million times better even than it had smelled.

He got two big gulps before it was snatched away. "Go slow, Billy, you don't want it to come back up."

That reminded Billy of what he had done, soiled the sheets. That was

all gone now, there was nothing left but the kitchen-floor smell of pine. The man had cleaned him off while he slept. That must be why his pajama bottoms were gone. He shuddered.

The water came back and he drank again. This time he got more and it flowed down his throat, bringing with it waves of relief. His head lay against the man's strong hand and he drank and drank.

As he drank he looked at the man's face. It was pale and soft, with cheeks that were too smooth. He looked like he was made of Silly Putty, like if you touched him you would leave a fingerprint. His eyes darted to the window every time a car went past.

He took the thermos away. Then he smiled and when he did everything changed. Crinkles appeared around his nasty eyes, and they became gay and full of laughter. His lips spread and his teeth appeared, smooth and white.

His smile was so unexpected and so bright that Billy uttered a burst of laughter. "So," the man said in his eerie voice, "we aren't all frowns, are we, Billy?"

"How do you know my name?"

"I know a great deal about you." He reached a hand out, hesitated for a moment, then touched Billy's arm. Despite his determination to hate this man, and his conviction of terrible danger, Billy felt relieved.

He was hungry for orientation. "What time is it?"

"Eleven."

Eleven at night. Billy thought about that. "I have to go to the bathroom."

"Not in the bed, please, Billy." The voice pleaded, and Billy had the curious impression that this man was a sort of servant, almost a slave, or wanted to be. Billy realized that he could get the man to do what he

wanted, like Uncle Hank had been when Billy was little, always carrying him on his back, buying him toys and candy ... at least until he married Kate and had Matt.

Mom had said, "My brother loves kids." She explained that certain people were able to stay a child inside even after they grew up. Uncle Hank was such a person.

The man's hand was massaging Billy's upper arm, and Billy tried to move away. "I won't hurt you," the man said. "I've got to work on your circulation."

"I have to go really bad."

"I'll let you up. But you'll have to go on the roadside. Can you do that?"

"There are cars."

"We'll walk a ways into the woods. We're in a thick forest."

Instantly Billy decided he would run off into the forest.

When his wrists were freed his hands started to tingle. Then the same thing happened to his ankles. The man had to help him sit up, and he felt very dizzy and funny, like the van was tumbling slowly over and over. The man crouched before him, rubbing his feet and his hands, rubbing and slapping.

Billy watched his bald spot. He wished he had a gun embedded between his eyes and he could fire it right into that spot and then the man would collapse like a bunch of rags. Then Billy would get out of the van and stand by the roadside until a car stopped, and he would tell them to take him to the nearest phone. But he had no gun, he had nothing. He thought of kicking the man, but it would do no more than make him mad, and that would obviously be a mistake.

When the man looked up Billy was confused by the expression, which was of an intensity quite beyond his experience. The man moved back

until he was sitting on the cot opposite.

He smiled again, mischievously, and Billy thought of when he used to babysit Matt and the little boy had done something that he knew Billy would fuss at him about. Suddenly the man reached out. Billy flinched, but then the man's fingers were touching his cheek. They were warm and soft and thick, and Billy became aware that the man was fat. "It's not going to be bad," the man said. "Believe me, Billy, I promise you with all my heart and soul."

"I want to go to the bathroom."

"All right! We'll go right now." The man slid open the side of the van, which was at once flooded with crisp night air. It was startlingly cool, and Billy began to shiver. "I don't have any pants."

"You won't need them, it's dark."

"I can't go outside without pants. And I don't have shoes. I can't walk in the woods without shoes."

"Don't be such a baby!" There was a weird, whining harshness there that made Billy even more scared.

"Don't I have any clothes?"

"Of course you have clothes! Now move!"

The tone made Billy scurry straight out of the van. The man took his wrist and without a word led him in among the trees.

Instantly the world changed. Billy was not often in woods this deep. They belonged to fairy tales, the woods dark and deep . . .

They were darker than Billy had thought possible, so dark that he couldn't see anything except the man's small flashlight, a wavering pool of yellow that occasionally revealed a huge trunk.

He heard the calls of forest birds, soft and scary.

A car passed the van. When it slowed the man stiffened and his hand went more tightly around Billy's arm. "It hurts," Billy said, pulling his shoulder away.

The car went on. "I'm sorry," the man said. He loosened his grip. The ground was covered with pine needles and also very steep and it cut into Billy's bare feet. After another couple of minutes the man stopped. "Here," he said.

Billy's mind had focused to a single idea. He was like a bird being held outside of its cage, waiting for the instant that its owner's mind would stray. "I can't do it if you're here."

"I can disappear just like this." The man turned off his flashlight. Now the darkness was so perfect that it seemed to Billy almost to have a life of its own. A feeling of complete helplessness overcame him. He thought he had stifled the sob of despair that built in his chest, but the man's hand touched his shoulder. "It's OK, Billy," the man said. Then, as if the dark might somehow sanctify his words, he added something incredibly icky. "I love you so darn much, son."

That encouraged Billy to overcome his fear and take a couple of steps away. The man made a small sound in his throat, shuffled. Billy took three giant steps, brushing against a tree. The man's breathing was now noticeably farther off. Billy stepped all the way around the tree.

Behind him the flashlight flickered on, then flashed wildly among the tall trunks, just missing Billy's shoulder. "Christ," the man said.

Billy moved off, trying to remember the locations of the trees he'd glimpsed in the beam of the flashlight.

There was a steep slope, and Billy slid down. Uttering a stifled cry, the man followed him. His body was heavy and he slipped and scraped noisily along. When he was close Billy heard the little sounds he was making, like the way the crows muttered when they landed in the front yard.

Without another thought, throwing his hands out in front of him, Billy hurled himself farther down the slope, fumbling against trees as he went, scrambling around them, going down and down. Behind him the man raised a howl and came plunging after him. His light flickered yellow, a magical eye.

The forest spoke a deep unknown language, murmuring to itself as Billy scabbled along. He skinned his knee, bruised his shoulder. His hands were before him like a blind man, his feet were stinging from the pine needles. Something flapped away, screaming an angry scream.

Billy became aware of the details of the darkness, its thicker places, the directions where the shadows seemed more open. But the flashlight was far more effective than intuition and night-blind eyes, and the man came very fast. Under his breath he kept making sounds, grunting and furious. They no longer reminded Billy of a crow, but rather of the fearsome noises the tiger had made at the Des Moines Zoo during the class trip: back and forth it had gone in its cage, and its snarls said it wanted you.

Billy had to feel his way, his arms outstretched, his hands spread as if to turn a blow. He went through the whipping trees, grasping, pulling, struggling. They spread their piney sap along his arms, their needles pricked his palms and dug into his feet.

The man plunged down the bank, crashing into trees and gasping when the limbs whipped his face.

Soon Billy could not tell which direction he was going in, whether up or down, falling or climbing. His lungs ached, his nostrils flared, his head pounded. As Billy gained speed the man's clamor was gradually absorbed by another sound, a roar as if of a huge wind. But there wasn't any wind. Closer and closer Billy came to this sound. He no longer dared to look behind him. If the flashlight was right there, he didn't want to know it.

Then the stars filled the sky. Billy stopped, incredulous. Before him

was a sky more vast even than that of the prairie night. The stars stood in millions and millions. The roaring filled his ears, and then he understood where he was.

Realizing his predicament he reeled forward, his arms turning round and round. Below him he saw like in a model train layout a cluster of cabins marked by a single light. How far down? A hundred feet, five hundred? All around Billy the loose stony earth was coming alive, whispering and rattling. It tickled beneath his feet as it transported him toward the edge.

Fifty feet to his right a mountain stream threw itself off the cliff. Down and down the water went, pale in the starlight, down into the silent valley. To Billy the stream sounded like the trumpet that calls you to death. Some archangel blows it. Supposedly.

He was falling. The slope was too steep and the soil too loose to hold him. He pressed himself back against the bank. It felt like he was in an elevator, just starting off but speeding up quickly. In another moment he was going to be out in the air, falling to the music of the water. He saw a dog walking lazily across the compound between the cabins.

"Momma," he said. He scrabbled, he grabbed at the loose dirt, he found that he most desperately did not want to die. He'd had hardly any life yet! He threw back his head and screamed, and the stars wavered in his tears.

As if it was a hook made of cold iron, the man's hand closed around his upper arm. Then his face was there, beside Billy's face. "I love you," he said in a voice loud enough to be heard over the gush of the falls.

How Billy hated to hear that! But the man was strong and he laid himself against the arm and watched the stars disappear as he was dragged back into the cliff-hugging woods.

Roughly, the man pulled Billy up the slope. It took him a long time and a lot of rest stops. He wheezed and cursed under his breath, but never for a second did he release Billy's arm, let alone loosen his grip.

At first Billy was defiant, thinking that he would get away again and this time he would find some tiny path down the face of the cliff, secret since the days of the Indians and the mountain men.

But his shoulder and knee hurt where he had hit them, and his feet were raw and he wanted to be warm again.

The man pulled him along, and at length the dim light in the van's ceiling began to flicker in the trees. "Do you still have to do your business?" the man asked.

"Yes," Billy said.

"Come over here." He pulled him toward the van. "I wasn't planning to use these, but it's your fault." He opened the front door and lifted the passenger seat. Underneath it was a toolbox. Billy sucked in his breath when he saw what looked like a small gun in the man's hand. But it wasn't a gun, it was handcuffs in a leather case. They were neat, just like cops had.

He snapped them on Billy's wrists, clicking them until they were tight. Then he checked them with the flashlight. "OK," he said, "you have three minutes. If you pull anything like that again, you're going to find out that I punish."

Billy tried to walk on his own but could only stagger. His feet hurt so much he had to balance on their sides, bandy-legged. He lifted the front of his pajama shirt and pissed where he stood, watching the stream of urine smoke in the mountain cold.

"Where are we?" he asked as he finished.

"The mountains of the moon, as far as you're concerned. Get in the van."

The man made him lie on the miserable little bed again, and the straps soon replaced the handcuffs. The cot had become so familiar he felt almost like he belonged there.

"This is gonna be tight," the man said, wrapping the thickest of the straps around his chest, "and it's gonna be hell because it is so tight. But I can do worse. I can certainly do worse."

He tightened the strap until Billy was reduced to shallow breaths. "I can't—"

He slapped a strip of wide gray tape over Billy's mouth. "Can't breathe? That's because the chest strap is too tight. You're being punished this way, and it might go on for some little time."

Billy pressed himself as hard against the strap as he could. He couldn't breathe, he was scared to death!

"You'll manage well enough if you relax." The man took his hair in his fist, forced Billy to look at him. "I am going to attend to your feet. I am going to do everything to help you. And you will find that I can be very, very nice. Our life together can be wonderful, Billy. But I want you to understand something."

He brought his face close and it was horrible to see, sweaty, scratched from the pine needles, fat. The eyes were funny, though. You expected really mean eyes. But this guy had the woebegone expression of a big old floppy hound.

"If you keep trying to get away, if you give me a hard time, if you cause me trouble, then I will turn around and go right back to Stevensville, and you know what I will do? I will kill your parents. Did you hear me? I will kill them both and it will be hard and slow. Then I will kill your sister. And you will watch all this. Then I will burn down your house and leave you naked in the middle of nowhere with no parents and no home and no sister. And it will all be your fault. "

These words were like fists blasting Billy's face; the shock of them made him as dizzy as real blows would have. He had never dreamed that his mom and dad were in any danger.

He had to be tough, he mustn't cry! 'Now, like the man says, relax. You

do things his way, you won't get Mom and Dad and Sally killed. So do things his way, dumbhead!' Now what was it he was going to say to the man? Something, and it had seemed darn important.

The man began working on his feet. He cleaned them with tweezers and cotton as Billy raised his head and looked down his body at the figure with the flashlight and the little blue first-aid kit. There was a smell of alcohol, and then the pain was so great that Billy threw his head back and shrieked behind the gag.

Soon the sting stopped, though. He felt bandages being put on. That was a lot better.

Then he remembered what it was he had to say. Despite the agony, despite his half-suffocated condition and his gag, he started trying to communicate with the man. Again he lifted his head. He made urgent sounds behind the gag. He worked his mouth, stabbed at the tape with his tongue, mustered what little saliva he had to try to float it off.

Finally the man took notice. He crawled up the van and gingerly removed the tape. Billy swallowed, cleared his throat, and met the eyes. The hound-dog expression was gone, replaced by a warm, contented look.

"My mother," Billy murmured. His voice was so thick it sounded like an animal growling. He stopped talking, tried again to get some spit in his mouth. It seemed enormously important that he be understood. "My mother," he repeated with all the clarity he could muster, "always gives me a cup of hot chocolate when I get hurt."

Part Three

**THE CUP
OF KINDNESS**

13.

The first day she kept wanting to organize yet another search. But they'd already looked everywhere they could, and they had clear evidence of the abduction.

She kept telling herself, 'It really happened. Some total stranger came in here and just took him.' Her basement, her stairs, his bedroom—as the police painstakingly re-created the movements of the intruder these family places came to seem charged with darkness at midday.

On the second day it seemed as if the investigators would never stop poking through her things, lifting chairs, vacuuming, scraping, spreading dirty fingerprint powders. But when they finally did leave she panicked, fearing that they had given up. She had to stifle the impulse to run after them.

On the third day time revealed itself as the true enemy. There remained nothing but the silent phone and the regular tolling of the clock.

Mary told herself to reestablish the routine of the household. She should start by cleaning up the extensive mess left by the fingerprint men. One impulse moved her to throw herself into it, to put on an

apron full of pockets and stuff them with Pine Sol and 409 and Windex and start working. She knew how to disappear into housework.

Because it was an escape from worrying about Billy, she feared work as much as she longed for it.

All Monday and most of Tuesday people had come to the house bringing the kind of covered dishes that made Mary think of funerals. Her mother had always taken a casserole over when a friend had died, apparently on the theory that grief whets the appetite but destroys the ability to cook. When Mother herself passed on, her friends brought fleets of casseroles, whole cooploads of roasted chickens, reefs of salad, enough food to feed the mourners for two years.

Now, as evening fell, Mary was coming to recognize what all the activity of the past forty-eight hours concealed. Behind it was complete helplessness.

The last investigator to leave was a forensic surveyor who had made a map of the property and a set of drawings of the interior of the house. Hundreds of pictures were taken, and every means had been used to gather not only fingerprints, but even glove prints and any bit of hair or debris that might be relevant.

Toddcaster had explained that most of this wasn't intended to gain information that would locate Billy, but rather to find evidence that would place the suspect at the scene when he was eventually found.

"What will they do to find him?"

"Old-fashioned police work—following up leads, canvassing, trying to pick up the trail."

"It's a big country," Mark said bitterly. He was full of guilt for not being more aggressive when Billy had reported the man in the front yard. Mary worried that his recriminations were sapping his drive.

They had found the exact place under the tree where the man had stood, and even virtually invisible indentations that indicated he'd spent some time lying down. He'd been able to rest, maybe even take a nap, while he waited for the house to get quiet. What kind of a monster could be that cool?

Mary had gone there late last night and stood watching the windows of the house. Shafts of light fell onto the grass. She saw Mark come into their bedroom, saw Sally's dim night-light and Billy's black window. She saw Mark sitting on the side of their bed with his head in his hands.

The most awful part was that her little boy was so vulnerable. He was full of posturing and bluster. He'd pretend to be tough and that would probably do nothing but make his situation worse.

Her son was one of the brightest, most inventive, most cheerful children she had ever known. It was easy to make friends with Billy, all you had to do was smile. He had a temper, but even when he got mad it only took him a couple of minutes to cool down.

He had his limitations, though; she couldn't imagine him escaping from a smart adult.

You knew exactly how Billy felt at all times. He lied with his eyebrows raised and an expression of comic innocence on his face. He might as well be carrying a sign.

The poor little boy was not in any way equipped for this. Oh, he might run away from his kidnapper if he could, but he wouldn't get very far. You taught your children the basics— don't go with strangers, memorize your phone number— but how could you ever teach them to deal with the kind of onslaught he must be enduring now?

Beyond the basics he didn't know much about sex, so he would probably be mystified and revolted by the man's advances. That was the most hideous part, to imagine him being . . . handled. When you thought of the brute process of a man having sex with a little boy, it

just made you want to wither and die.

In addition to helping the police and watching the FBI methodically dismember her home, she had been compelled to be a hostess. Winnie Lacy, the wife of the police chief, June Edwards, the mother of Billy's best friend, Tom Benton's perky little assistant principal Dougal Frazer—who had been instrumental in getting Mark his new job—had all come to the house. Mark's best friend among the faculty, Jim McLean, had offered himself as general helper until the autumn term started. Sally, bless her soul, had made iced tea and served the food from the covered dishes.

At first the investigators were reassuring. "Most of these cases have a local slant. Most of these guys are repeat offenders, and we'll interview every known molester in the state. Most of the cases are closed within forty-eight hours."

But the magic forty-eight hours passed, and only silence.

The National Center for Missing and Exploited Children had referred the Nearys to a support group. It met in Des Moines, and they were getting together tonight. There were five other families in the group. Two of them had runaway children and three were victims of parental abduction. Nobody had—with certainty—lost a child to a stranger.

Nevertheless Mark and Mary and Sally got into the car and drove two hours to the meeting, held in the basement of a Catholic church in an unfamiliar part of Des Moines. Behind them they left Jim McLean staring at the TV and snacking from the array of dishes still on the coffee table. He would be there if Billy called.

Mary wanted to drive but Mark insisted. She knew why: he also hungered for control over the nightmare. They were both clawing darkness, falling, and she knew that Mark felt it perhaps even more than she did. He had been having severe headaches, something completely new for him. This morning she had massaged his neck and shoulders for half an hour, and he was taking as much Advil as the label allowed. She watched him twisting his neck as the old wagon

wheezed south. "I really don't mind driving," she said.

"It relaxes me."

They rode in silence. To the west the sunset slowly bloomed. Soon the last edge of the red disk dropped below the horizon, leaving a bright orange line shimmering beneath a sky that rose from yellow to infinite green. Night swept down out of the heights. A star floated in the emptiness, enormous and of a beauty so great that it made Mary feel as if she was starving for a sustenance she could not name. Both of her kids were amateur astronomers. "What's that star?" she asked Sally.

"Venus. It sets in an hour."

Was Billy seeing it, too? She hoped not. Stargazing would be sure to remind her poor son of home. He was so sensitive, and so devoted to his family. Summer before last he'd gone to camp, only to return after a week with the most spectacular case of homesickness the counselors had ever seen.

Mark had thought it was because he was insecure, that it was an anxiety he could overcome. But Mary understood her son's real problem: the camp was too structured. Billy was an adventurer, a lover of freedom, hungry for independence ... on his terms.

She wanted to hug him so badly she thought she was going to go mad.

Mark turned on the radio. There was an all-news station in Des Moines, and they listened to that. The stories were muttered incantations. Mary closed her ears, letting it all bleed into nonmeaning. Her mind waited only for two words: William Neary.

For an hour she waited, but the words never came. So quickly Billy had become old news. "Are you listening?" she asked Mark.

"Not really. Just passing the time."

Sally spoke. "Do you remember the time Billy put the firecrackers in

the toaster?"

Mark said, "No, I do not."

"But you remember it exploded?"

"I recall throwing it out the kitchen door. Billy did that?"

Sally laughed. Then she started to sing.

*"The ants go marching one by one,
The little one stops to get his gun —"*

Mary closed her eyes. She recalled all the old songs, "The Ants Go Marching," "Morningtown Ride," "Charming Billy." Oh, "Charming Billy," how that would make her toddler laugh!

*"The ants go marching two by two,
The little one stops to go to the zoo —"*

'Darling, stop,' she said in her heart. 'I can't bear it, I just can't!'

"Honey, no!"

Mary was relieved that Mark had made the demand.

"But we always do!"

"Not tonight." Mark's voice was soft with pain. He was the one who

most loved the kids' songs . . . even though both kids had really outgrown them.

Sally burst into tears. Mary tried to touch her but she pulled away. She threw her head back and wailed. "He's dead!"

Mark pulled the car over. He turned full around in his seat and reached for his daughter. She let him draw her forward, let him grasp her awkwardly across the seat. "Not for us he isn't. Not ever."

Mary reached out to them, touching Mark's cheek with a nervous, unsure hand. Mark made a low, sad sound. Then he took a deep breath and continued. "You see, this is our strength. We believe in Billy. He is alive and we are going to get him back."

"Daddy, he was so scared sometimes at night. He was scared of the dark. He had such a big imagination! We used to play Monopoly together on the hall floor on nights when he couldn't sleep."

Mary had known of those games, had lain in bed listening to her children's quiet voices and the rattle of the dice. She recalled his efforts to bamboozle his sister into giving up. "I have Park Place and Boardwalk. Mathematically, it means you can't win!" "But Billy, dearest, I have the rest of the board!"

There was so much to remember, a great avalanche of words, smells, acts, adventures, right back to the weight of him in her womb. "Remember when he was born, Mark?"

"You had a hell of a time."

"I thought he'd never come out."

"Wasn't I the hard one, Momma?"

"That's right. Billy was pretty quick."

"He was green," Mark said. "A green prune with a banana head."

Sally laughed a little and Mark released her, half-turning back toward the driver's seat. She reached after him and they clasped hands. "Why was he green?" Sally asked.

"Bilirubin," Mary replied. "They put him under the lights."

"Which turned him puce. A puce banana head. I thought, Jeez, this can't be my kid."

"Your father claimed I must have had ancestors from Neptune. But he turned out so handsome." She was silenced then by the pain of her longing.

Mark started the car.

As they drove through the streets of Des Moines, Mary watched the evening life—lighted signs, people moving down sidewalks.

She was beginning to see that tragedy made you an outsider. By the way people walked, held their faces, stood at lights or crossed the street, Mars could tell which of them had suffered and which had not.

Then they turned a corner and the street they entered was empty, just dim street lamps and a few parked cars. St. Peter's was a huge stone church, dark and forbidding in the shadowy middle of the block. It looked closed, even abandoned. Only a hand-lettered sign impaled on the iron spike fence that ran down the side of the old building indicated that they had come to the right place, SEARCH GROUP IN CAFETORIUM, it said.

Mark pulled the car up to a meter. "Now all we have to do is find the cafetorium."

"What's a cafetorium?"

"A combination cafeteria and auditorium, I assume."

Mary and Sally followed Mark down some metal steps to a black door with bars on the dingy glass window in its center. It was locked and

Mark rang the bell. The door opened instantly and a flood of light poured out. With it came a dark figure and a smiling voice. "I'm Bob Turpin," the figure said. "I'm pastor here."

"Mark Neary. This is my wife, Mary." Mary extended her hand. Father Turpin's grasp was cold and bony. "Our daughter, Sally." The priest clapped his hands on her shoulders, a gesture apparently contrived to appear casual. "A fine young woman. And how old are we?"

"I'm thirteen, Father. My brother was twelve."

"Was?"

"Is."

"Yes, is. Right this moment, is." He looked from face to face. He was so thin, Mary wondered if he had some sort of disease. "And you are going to find him." He led them down a corridor lined with, of all things, the tombs of his predecessors. "The kids call this the cryptorium. Eighth-grade talent shows and priestly funerals carried on amid the steam tables. Still, we've been buried down here since the Paulists built the church. I'm a Paulist, incidentally, if the Church means anything to you."

"We're Catholic," Mark said. "Nominally."

"An interesting word, 'nominally.'"

Then they were in the room with the steam tables. A small group of people was gathered in a circle of folding chairs. There was a quiet tension among them, a permanent expression of shock in their eyes.

As the Nearys advanced toward them Mary found that she was shaking. More even than the moment they had first called the police, this felt final. She had already faced the fact that Billy was gone. This was different, though. He would never come walking up the street pushing a broken bike. He would never appear at the front door in the care of a couple of kindly policemen.

Mary Neary had always helped. Now she realized that by giving her ten dollars to the Bishop's Relief Fund and Peter's Pence she had been comfortably placing herself outside the victims' pain. Looking at them—the bald man with the crooked glasses, the black woman's smiling welcome, the elaborately overdressed social mother—she realized that she bore a prejudice against life's casualties that until this moment had been entirely unconscious. She had been counting the victims as less—less lucky, less intelligent, less competent—than the golden many.

They took their seats and Mary thought, 'Now me.' Then they all pulled out pictures. Small snapshots, folded "Missing Child" posters. A ritual began, the silent passing of these pictures to the Nearys.

"Where's your picture?" a mother asked.

"I have my snapshot in my wallet," Mark said.

"Listen to me," the bald man said. "Here's what I say, 'My name is Harry Vreeland. I am the father of a missing child named Robbie Vreeland. This is his picture. Have you seen this child?' " He held out a poster of a smiling little boy of about seven. "You got to not only have your pictures with you at all times, you got to have them ready."

The overdressed woman regarded Mary with her coal-black eyes. She was smoking, and her fingers and teeth were yellow from the stains. "Our boy ran away." She raised her hands, a gesture of defense. "I admit it. There were problems." She looked straight into Mary's eyes. "He decided he wanted to make his own way." Her voice cracked. "He tried, but he was just too young This country has a dark side, don't ever think it doesn't. On the dark side of America, children get eaten."

The black mother spoke up. "I'm Jennine Gordon," she said in a soft, precise tone of voice. "We all want to tell our stories, but first we want to hear yours."

Mary heard Mark exhale. How exhausted he sounded.

"We'd like to hear a few other stories first," Mary said. "We need

perspective." She wanted Jennine to help her, it was like drowning.

"I know," Jennine said. Mary thought, 'She could become my friend for life.' Jennine continued, "First, we have children here that are classed as runaways, but they are really abductions. They run away and then get abducted off the street. Or the perpetrator is clever and makes it look like a runner."

"Ours tried to do that," Sally said.

People nodded.

"I just want to say that the parental abduction is just as painful as the stranger abduction. Maybe it's more painful, because you know how bad it is for your baby." Her voice grew heavy and low and Mary thought, 'There is a terrible mystery here.' But she could not even put a word to it. "My Amelia is fourteen. Her daddy died in 1986 and I married again. My new husband loved my daughter." She stopped, jutted out her jaw. "Oh, how he loved her! I was too stupid and too in love to see!" She shook her head, anguished. Mark's hand found Mary's and she was glad to feel his shuddering touch. Now Jennine's voice went very small and high. "I let him adopt her. The very day we signed the papers, my life became hell. He hit my baby! He beat me up when I told him no. Within two months he was spanking her every day. She was walking humped over. At school she would throw up when it was time to come home." Now, a whisper: "He locked them up together in the garage at night."

Her voice became loud. "I didn't stand for it. No way, baby! I divorced the bastard! Damn right, and got custody with no visiting rights and saw the backside of that man! Then, a month later all of a sudden, Amelia is gone. And I feel—I feel—"

Father Turpin said, "We have an excellent recovery rate in the group. In the ten years we've been going, about thirty percent of our kids have been located."

"What do kids do?" Sally asked.

"Get into it with your friends," said a boy a little older than she. "You never know. Kids hear stuff, especially when school starts up. There might even be somebody who knows."

Mark was looking down at his feet. Mary imagined sand in motion, hopes drowning. Maybe, though, she was projecting her own feeling of helplessness onto her husband. Mark spoke. "What is the single most important thing we can do?"

Vreeland spoke. "Publicity, pure and simple."

"You can hunt for your child. The odds are long, but most of us do it," the overdressed woman added.

It seemed so pitifully little!

The group in its pool of dim light now appeared to Mary like survivors in the tireless ocean. Their raft was hope, but the sea is forever.

Father Turpin handed around a booklet of pictures from the Vanished Children's Alliance. Some of them might like to try to get their kids in this publication, he said.

When Mary glanced at it a sentence stopped her. It was like hearing Dr. Kingsley say of her mother, "We're talking about dying." It read, "Stranger abductions as well as nonrelative abductions are proportionately the greatest risk of life-loss of any missing group."

Her mouth went dry, the voices in the room faded. "No!" Mary was astonished at herself. All eyes were on her. She realized that she'd spoken aloud. She smiled, tried to cover. Nobody smiled back. Maybe the Nearys were the worst off. Maybe they had no chance. Maybe Billy had already died a horrible death. The thought made her very soul ache. She threw back an errant curl. "Our boy will come home."

Jennine Gordon nodded. "When I think of what he's doing to my baby, I'd like to put lead between his eyes. Lord Jesus forgive me! When I'm really goin' nuts—when I can hear my baby screamin' for Momma—oh,

God—you want just somebody to hold you. But you are alone. And you think, I did this. I married this fool!"

The mystery was there again, a silent force binding them by their torments.

One by one Mary caught their eyes, and one by one they looked away. She respected this because she understood it. They could not meet her eyes because of what they shared— not the hope, but the tragedy.

These people with their nervous smoking, their clenching hands, their tattered pictures and little sheafs of records—they were really not here at all. That was the essence of the mystery that had enveloped them.

When a child was stolen, a part of each parent was also stolen. Without that essential part they would never again be whole; no matter the beauty of the day, they could not see it, nor could they enjoy the touch of love, for it might corrupt their vigil with an instant's transport. They do not hope and they do not laugh. Night and imagination are their curses. Mary saw it all.

"We will get him back," she said. How thin was her voice, how weak! She felt Mark's hand come into hers, and Sally beside her shook like the leaf of the aspen. "You'll see. We will."

Soon thereafter the meeting ended in a flurry of information passing: how to find social workers who care or a psychologist who was good but not too costly; where to get a new device that told you the number from which you were receiving a call.

At the side of the cafetorium a spectacularly aged parish volunteer offered coffee, and there was a box of Hostess doughnuts opened on the table beside her. She smiled when Father Turpin took one.

Mark insisted that Mary drink some coffee. "You'll want it," he said. "It's a long trip home, and we both need your strength. This time you do the driving."

14.

They were sailing across the desert on a clear blue afternoon. In a massive feat of endurance driving Barton had gotten them past Las Vegas before he had finally left the interstate in order to sleep. His only stop had been to ditch the bicycle.

Afterward he had at last been able to stretch out on the cot beside Billy's and close his eyes. The air had been fresh and desert-cool. The sun was just rising. As its light slowly filled the van, Barton had taken Billy's hand in his own.

The warmth that filled his heart reassured him that he had not sinned in taking the child. "Every act on behalf of love is heroic." Who had said that? Some poet, Barton thought, the name forgotten since high school and Gen. Lit.

Then he had slept. He had dreamed of a little man following him in a comical midget car. The dream had awakened him to high sun and left him with an urge to get rolling again. Now it was nearly noon and the next thing on the agenda was a drive-through restaurant and some much needed sustenance. Too bad you couldn't get decent food from

chain outlets, especially as celebration was presently suggested.

"Good old Route 15," he sang out. "You know what I see?" He was about to point out the Devil's Playground, but thought better of it. Once they were home in L.A. he might be able to prevent Billy from finding out where he was, maybe for a long time. That was always best.

"Where are we?" asked a breathy voice. It made Barton sit right up; this didn't sound like Billy. Rather, it recalled Dad on his deathbed, his lungs full of cancer and emphysema. Why would Billy sound like that? Then he remembered: he'd punished him by tightening the chest strap. That was a long time ago. Hours and hours—at least twelve hours, probably more.

He pulled the van over. Throwing back the quilt, he saw that the boy's gut was sucked in, his chest distended. There were ridges of paper-white skin pushing up around the thick strap, purple welts bulging through the buckles. A froth of mucus made Billy look like he was exhaling bubble bath. His face was gray. "Oh, son!"

When Barton touched the buckles Billy shook his head from side to side and shrieked. Instinctively Barton glanced out the windows, but they were alone on an empty desert road.

"OK," Barton said. Again he touched the buckles. When Billy started shaking his head again and pulling against his wrist straps, Barton felt something else inside himself. This something made him slow and careful.

He laid his hand on the row of three buckles, pressed. Billy grew frantic. He looked down at Billy's naked body and he found that he could not stop pressing on the buckles. His legs were weak with the pleasure of the moment. "I love him," he told himself, "that's why I can't stop touching him even though it hurts him." Billy's eyes searched his face, pleading. "We'll have to do this for some little time," Barton heard himself say.

No, this was vicious! He had to release the child at once. But his hands

were heavy. He imagined the struggle to breathe across hours and hours. A hideous struggle. He had experimented with suffocation, and he knew how awful it was. Next to burning, slow suffocation was the worst death.

Billy's screaming stopped. His twisting and turning stopped. His body seemed to sink into itself. He made a fragile, discontented gabbling sound. It was like a baby.

This unexpected surrender shattered the moment. Barton saw himself, saw what he was doing. 'Disgusting creature, *you're* the one who ought to be suffering. Imagine, forgetting for twelve long hours what was supposed to be a fifteen-minute punishment! You fat pig! Fat Royal!'

He remembered the little dove he had found under the honeysuckle hedge, the poor thing scuttling along with its wing broken. He had caught it in his hands and taken it to his room and splinted the wing with drafting tape and a Popsicle stick.

He'd fed that dove with his own hands and nursed it and kept its box warm with a light. In the end the splinting had worked and his mother had put her arm around his shoulder and said, "You have such fine hands, maybe you'll be a surgeon."

He could nurse a dove back to health, but he could not remember to alleviate a magnificent child's suffering. His fingers fumbled with the buckles while Billy shrieked.

"My dove flew away," he shouted over Billy's noise. "I healed it and it flew away."

He had to push the swollen skin through the buckles. It was rubbery and hot and when he finally lifted the strap Billy started taking deep breaths and coughing up great gobs of mucus.

Quickly he unstrapped his ankles, then his hands. "No more," he said. "No more, Billy."

Billy sat up. Barton grabbed the sheet from his own cot and tried to clean Billy's chest. But the boy coughed again, the sound rattling the whole van, and more came up. Then he vomited froth, which Barton swept away in the sheet.

Through even this loathsome ordeal a part of Barton remained calmly objective. It told him he had really done what he had done because it was necessary to break the boy's will.

There was no use pretending that Billy loved or even liked him. It was much too soon. What he had to do was get Billy to quit fighting and accept his new situation. That required strong medicine, yes, but it had to be tempered with gentleness or it would lead to nothing but fear.

"My chest—" Billy put his hands on the marks. They were deep and now the line where the strap had cut into him was turning purple like the skin that had been compressed under the buckles.

Barton pulled his first-aid kit out from under the bed and produced a tube of antiseptic cream. "Lie back," he said. "I'll tend to it."

Billy turned his head. Barton remembered the time Duke had trapped that kitten in the tree. Its face was full of fear and it was so helpless. Barton had climbed the tree with Duke clawing the trunk and moaning. He had gotten the kitten, but then he'd slipped, and Duke—

No. He hadn't slipped. He'd held the kitten squirming in his hand, held it over Duke's head while Duke went mad, leaping and snarling, and the kitten had hissed and writhed and bitten at the hand, until his fingers loosened their grip . . .

Barton shook his head. Those memories, they would come and take him over, he was back there again and he had to be here. What if Billy just walked right out of the van right now? Began running like in the mountains?

Oh, that had been horrible! His heart had practically burst, exerting himself like that. The damned kid—but Barton had turned it into an

effective display of dominance and power. On the way back to the van Billy had lain in his arms, surrendered to the greater power of the adult.

He'd read a lot about brainwashing. One of the techniques the Chinese used in Korea was to allow men to escape, only to bring them back with an overwhelming show of power. They would put the men in coffins and pretend to bury them alive, all the while feeding them just enough oxygen to prevent them from losing consciousness. They would go mad in the coffins, dying and yet unable to die. When they were released they would be so surprised and grateful that fine young men from Cincinnati and Bakersfield would crouch like coolies and place their lips against the scuffed boots of sneering Chinese teenagers.

The key thing was the element of surprise. Barton thought he probably needed some of that now. He could not provide the overwhelming sense of deliverance that was the genius of the coffin torture. But wasn't there something he could do, some little softening that might make Billy revise his opinion of his captor?

He brushed Billy's cheek with a kiss. The boy's eyes flashed, and Barton was disappointed to see that his expression was one of disgust. "I know you hate me," Barton said. "But I love you. I love you more than you have ever been loved before."

"You're a dirty queer."

"The word is 'homosexual,' son. Think of their feelings. Anyway, I am not a homosexual."

"You're not?"

"I want to see you grow into the best of the best. I'm rich. I can give you everything you want. I want to be more a father to you than anybody else could ever be."

"My chest hurts."

He gave Billy a double dose of the children's aspirin he had packed in the first-aid kit.

"My feet hurt too," Billy said. He coughed, long and hard. "They sting."

Barton looked at them. "They seem better than they were," he said hopefully.

"The circulation was cut off. I'm likely to get an infection."

"I used lots of Mycitracin."

"I was in my pajamas. Where are they now?"

"They were a mess. From what you did."

Billy gave him a long, appraising look. "I'd like to have some clothes on."

Barton got the duffel he'd packed in Billy's bedroom. It seemed an alien object, beautiful and enigmatic. Boys' things always appeared that way to Barton, as if they were charged with potent and heartbreaking magic. When he unzipped the bag the clothes he'd pushed in came fluffing out. "That's my stuff," Billy said, his voice cracking. He grabbed the clothes, held them to his face, inhaled their smell as if seeking to recapture whatever element of home he could. He moaned with pleasure. "My Kafka T-Shirt. You got my Kafka T-shirt!"

Barton laughed, delighted that his random choices were such a success.

Billy put down the clothes. His eyes were full of anguish. "Didn't my Garfie get to come?"

"The stuffed toy?"

"Garfield is hardly a stuffed toy." His hand fluttered across his chest. "You really hurt me," he muttered.

Barton wished he'd thought to bring some Benadryl cream to mix into the antibiotic, but he hadn't considered injuries this serious. He'd gotten his other boys much closer to home, and it had been a simple matter to take them to the house.

He hadn't thought ahead about this journey, at least not well enough. Somehow he'd visualized Billy sleeping the whole way. But they'd started out on Sunday night and it was now Wednesday. If he'd drugged the boy heavily enough to keep him out all this time there might have been brain damage or even death.

As Barton thought, he selected clothes for Billy. Shorts, a T-shirt. No shoes, though—that was one of Barton's smartest rules. Bare feet were no big deal in his time, but they slowed these modern kids down considerably. "We're going to go to some fabulous stores," he said. "You'll be able to dress in absolute fashion."

"My mother buys my clothes."

"But you like style, you like to look your best."

Billy pushed aside the blue T-shirt Barton had given him. "I want to wear my Kafka shirt." Wincing, he raised his arms to drag it over his head.

"Let me help you."

"I can do it!" Then he grabbed the briefs that were in Barton's hand and drew them up his smooth legs. He put on the shorts.

The T-shirt was odd. If Barton had realized what was on it, he wouldn't have brought it. The shirt was light gray, and on the front there was a photograph of a hollow-eyed young man in what appeared to be a cheap suit and striped club tie. Under it was the caption KAFKA LIVES.

Franz Kafka . . . wasn't he some sort of horror novelist? Barton wasn't sure. "I'll have to teach you about Kafka," he said briskly to cover his

ignorance. "Would you like to learn?"

"I know about Kafka."

Barton heard the hate in Billy's words. But it was also true that Billy was for the first time responding to him as a human being. This was an initiatory moment: their first genuine conversation.

"I know about Kafka, too, Billy."

"Wir graben den Schacht von Babel "

Barton realized that the words were German. It would be a potentially serious disadvantage if Billy knew a language that he himself could not understand. Billy was watching his reaction.

Barton had first seen the boy playing games in a video arcade. There had been nothing to indicate that he was unusually educated. But then, a lot of schools in his part of the Midwest taught German. The area had been settled by Germans, hadn't it?

"It means, 'We are digging the pit of Babel.' "

"A remarkable sentiment. I've always thought that horror novelists—"

"Let me spell it out. I'm trying to communicate that I don't want to talk to you. If you want to stick me in the butt, do it and get it over with. But don't try to fool with my mind."

The words came as melody; they lilted. The music of Billy's voice made the contempt more plain. Barton bowed his head. "You will never get away from me, Billy."

"Of course I won't. If I do, you kill my parents."

Barton was astonished. "I never said that!"

"You don't even know what you tell people."

Barton had *dreamed* of threatening Billy with that. He'd *contemplated* it. He never had the feeling that he said and did things that he didn't know about. Of course not. Barton Royal was a very special man with very special needs. But he was quite sane. That was his rock. Everything he did, he did for a perfectly sound reason.

"If I said that I didn't mean it."

Billy could not have looked more relieved if he'd been instructed by a director. "Come into the front," Barton said, in a spirit of appeasement.

Billy crawled forward. He hunched into the passenger seat.

"Do you usually sit like that?"

"No."

"I've always believed that a gentleman's inner bearing is reflected in his posture."

Billy raised his T-shirt. Inwardly, Barton chided himself. He had so much on his mind, it was hard to remember the details.

There was, however, a detail that he *did* remember. "I have a suggestion. Let's eat!"

"Not very hungry."

"No? You haven't eaten in two and a half days. You must be famished."

In the silence of the moment that followed, Barton heard a small sound. Billy was clenching and unclenching his left fist against the seat.

Jack had tried to starve himself at first. Little boys never succeeded at this. "I'll get myself a nice cheeseburger," Barton said. "You don't have to eat."

Billy snorted out his contempt for Barton. The anger that rose in Barton made him want to grab those shoulders and shake them *damn hard!*

"Come on, Billy. It isn't going to be bad, living with me. We're going to be friends, you'll see."

"You can't make me."

Barton felt the flush enter his cheeks. He gripped the steering wheel. 'Now, calm down,' he said to himself. 'Take it easy.' He breathed in, breathed out. *The hostile little bastard!*

No, don't let that get out. He doesn't need your anger, he needs your love. He needs understanding and firm, kind support. He's just a boy.

The little shit!

You could just put your hands around his *fucking neck and squeeze!*

That's the way choking works, you squeeze until the windpipe pops. Then you can just sit back and watch. It doesn't happen right away, but they die. They clutch their throats, they run, they might even try to fight back. But then they get all black and the tongue comes out and they start shaking. They lose their bladder and they go down and they die at your feet *like fucking rats!*

He was going to throttle this child, and he was going to do it right now!

No!

But his hands were rising from the wheel, going to claws. Stop, take it easy!

The little shit!

He grabbed the steering wheel and hung on with all his strength. His fingers kept snaking off, but he fought it, he had to fight it, he had to somehow regain control, he wanted the boy, he did, he could still make

it work, he just knew it!

Pop the windpipe! Watch him smother! *Scum, you filthy little scum!*

His feet thudded against the firewall, against the brake and gas pedal. It would just be *so damn satisfying* to break the little bastard's neck!

Then the boy, who was looking on with wide eyes, suddenly reached out a hand and began patting his shoulder. "It's OK, mister," he said. His voice was the softest of whispers.

Barton was so surprised that his anger went spitting out of him. He sank down, breathing hard. "Please don't make me mad like that," he said.

"I won't! Not ever again! I promise!"

When Barton released the steering wheel he saw that his right hand had split the plastic. The torn piece hung off the wheel, its vinyl covering twisted and ripped.

They drove for a time without talking.

Then the boy began to sing:

"The ants go marching one by one

The little one stops to get his gun,

And they all go down, around,

Get out of the rain!"

How delightful! He knew that well, of course, from his job. He knew all sorts of children's songs. Billy was really coming around, this was going to work!

Barton sang the second verse:

*"The ants go marching two by two,
The little one stops to tie his shoe,
And they all go down, around,
Get out of the rain!"*

Laughing with pleasure, Barton pulled the van onto 15. As he glanced around to check the traffic he saw the face of the child he had been enjoying so much.

It was soaked with tears, the eyes like slits, the nose running, the cheeks bright red. And the lips were pulled back from the teeth in a particularly horrible way that managed to communicate all at once disgust, rage, hate and the blackest, most dreadful fear.

Barton returned his gaze to the highway. He pressed the gas pedal.

They went on.

15.

Billy slumped in the seat, his chest tormented, his lungs rattling when he breathed, his feet still tender from last night's escape attempt. There was blood on his Kafka T-shirt. Could you wash blood out? Mom would know.

The sun was beginning to set and it blasted into his face, making his eyes ache as much as his heart. Then he opened his eyes wide, glaring directly at the sun. 'Maybe if I'm blind,' he thought, 'he'll feel sorry for me.' He shut his eyes tight: he didn't want to be blind, then he'd never be able to get back home!

He stared at the glove compartment, which hung open before him. It was full of tapes. They were mostly the operas which the man was constantly playing. He saw *Madama Butterfly* and *La Gioconda* and *The Flying Dutchman*. He decided he didn't like opera much anymore, even though he'd liked Carmen.

There was also a small flashlight there, black, with a long silver scratch on it. That was the light that had bobbed along behind him in the woods. If only it had broken, if only it hadn't even been there, or he had dropped it down the cliff.

Then what? Billy imagined himself falling into the yard of the little cabin beneath the bluff, and they would carry him inside and he would die, and then he would go home. He saw the hearse, a black Cadillac with a flower car behind it, and the St. Stephen's choir was singing

"Nearer My God to Thee." The coffin was gray.

He read the inspection sticker on the windshield backward. Utah. Were they going there? What was Utah like? Was this Utah?

He counted the buttons on the radio. It was a real nice one, a Sony. He wanted to ask if it had memory and was there a CD player in the van since it had CD controls on it. It would be neat to hear a CD in a car.

He sat nursing his pains and being hungry. He was so hungry that he kept thinking he smelled a hamburger. The memory reminded him of the Stevensville Burger King, and his gang. A great bunch of guys, even the registered nerds like Jerry Edwards.

Going to the Burger King with the guys, ordering a Whopper with fries and a Coke, and afterward having a fried cherry pie for dessert, and no parents around. Getting on your bikes early in the morning and riding all the way out to the place where the railroad trestle crosses the river, building a fire and roasting hot dogs, waiting for the train to come and flatten the pennies you put on the track. And plus you could lie under the trestle as it went across, a shaking, rumbling cataract of sound that left you feeling like you'd been shaken apart and come back together again. There was also walking the trestle when you heard the first blast of the horn. That was when the train crossed Main Street in Stevensville. It took ten minutes to walk across, and the train made the distance between the town and the trestle in fourteen if it was running exactly on schedule.

Billy had done that a dozen times, always cutting a little more off his start time. He loved it, the jitters in his stomach when he started, the hypnosis of the passing ties, the other guys screaming his times and the train's horn blowing and mourning and then the tracks jumping and seeing its light in the middle of the day glaring like the eye of death, and throwing himself off the trestle at the last minute into the tender grass that grew beside the tracks, and lying there breathing grass and watching the passing Amtrak cars, red and blue and silver, and the flash of a pale face in a window.

He looked at his own hands in his lap and thought, 'He says he loves me. He says I am beautiful. What does he mean?'

The man looked like a fear of the night become real. Billy sat up, forced his pain to the background. His only restraint at the moment was having the seat belt pulled tight across his lap with his arms pinned underneath. It wasn't a very good way to keep somebody captive.

If only he had thirty seconds and a telephone, he knew exactly what he would do. Too bad they were going sixty, he could jump out.

His mind snatched at whatever bits of information it could find. 'We're going west because the sun is setting in my face. This is IH 15 because that's what the signs say, and also he said it. We're in a desert that looks like the surface of Mars. We carry a Utah inspection sticker, which probably means that we're either in Utah or on our way there.

They passed a filling station and he saw a bank of phones shining in the last sun. The tires hummed. The cassette played. The man sat there driving and pulling at the piece of steering wheel he'd broken. Billy saw that the gas gauge was close to empty.

The man drove, occasionally making a little sound in his throat, like he was secretly talking to himself. He was like a huge queen termite, all smooth and pale and big. Once Billy had dissected a queen termite—fifth-grade science. Eggs poured out of her and he felt sad even though she was really incredibly yucky.

Sal Geller had said, "You could dry the eggs and make Them into a cereal." Billy replied, "Eat them damp and they'd be like rice. A whole bowl. Nice and hot." Mrs. Chapman overheard them and sent them both to the office for being nauseating little boys.

He cried silently, telling himself it was for the lady termite. 'Mommy, it's gonna be night and I know you miss me. Dad, I'm here, I'm still alive.' They loved him so much, they must be suffering hell and there was nothing he could do except sit here and get taken farther and

farther—

The man moved slightly in his seat. The van began to slow. About half a mile ahead Billy saw a Mobil station. He made his mind blank. Then he closed his eyes, let his head drop to one side. He began breathing rhythmically, pretending to sleep.

The van stopped. There was a click and the engine turned off. A moment later the man's door was opened and closed. Billy looked: the man was out by the gas pumps. This was a self-service station.

Billy pulled his hands out from under the belt and unlatched it. But when he pushed the window button nothing happened. OK. He reached over, turned the key, tried it again. Still nothing. Then he saw a child lock. He flipped it, and this time the window went down. In an instant he was out of the van. There was nobody in the station office. From the garage beside it he heard a machine whining. There was a Toyota being greased. At the far corner of the station he saw the phones. He ran for them. There was almost no time, he knew that. Maybe he was already seen.

He grabbed the receiver, pressed "0." The phone rang once, twice. "Operator."

"My name is William Neary from Stevensville, Iowa. I've been kidnapped by a man in a white Aerostar. We're on Route 15 heading west."

"What's the number of that phone, son?"

"702-995-0091." He couldn't risk another second. He hung up. *Jesus let the operator tell Mom and Dad!*

Billy started to run into the garage, but the click of the gas pump turning off stopped him. There were only seconds left and the attendant was nowhere in sight. The only thing saving Billy was the fact that the man's view of him was blocked by the smoked glass of the van's windows. But the man had to be moving. In another few seconds

he would come around the front of the van—

Billy crossed the tarmac at a crouching run, slipped like an eel into the window. The man was no more than five feet away, walking toward the gas station. Billy dropped into his seat, pulled the belt over his hands. As he sat watching the man pay, he cursed his luck with the attendant, who had appeared to take the man's money. If only there'd been another ten seconds, Billy might be free right now. But what if the attendant was as stupid as the people back in Denver had been, letting the van go despite the fact that there was a kid inside screaming he'd been kidnapped? The stupid dumbheads in that Taurus, Billy wished them into the depths of hell. How could they not understand, not care?

The man got in. Billy had leaned his head back against the seat and was again breathing as if he was asleep.

They were accelerating onto the highway when Billy realized his terrible mistake. He had left his window open, and the man was sure to notice. Then the wind stopped. The man had raised the window with his button. Billy waited, but there were no screamed questions, just the silence of the road.

When he opened his eyes a slit he saw that the man was looking at him. Was it suspicion? Certain knowledge? Or did he just like to look at the bee-you-tiful little boy?

What the hell did it mean that you were beautiful? It meant that there were certain people who wanted to destroy you, that's what it meant.

When the man's voice suddenly started Billy was jolted by a tremendous shock.

"What'd I tell you? A great, big, delicious Roy Rogers! Hamburgers, here we come."

It was all Billy could do not to burst out laughing with relief.

"I'll bet you could sure use some food. I know I could."

Where'd he get that voice? Those voices? One sentence he sounded like a man, the next a sort of half-man. It was like there was a boy in him who had never grown up, and if you listened a woman, too.

But he wasn't gentle, he'd torn apart the steering wheel!

Billy looked at his meaty face, at the hurt eyes. The man was smiling, a big, harsh grin. It was the kind of smile somebody who hates kids makes when they have to be with a kid. Those fat hands concealed iron bones, and they had wanted to grab him around the throat and choke him worse than the straps.

When he was in the straps he'd cried out to the man, he'd promised never ever to try to get away again but the man hadn't seemed to hear him, he'd just sat there driving like he was part of the van itself. Billy had struggled for hours and hours just to get enough breath. He'd slept and dreamed he was at the bottom of the sea and he swam into a giant clam and it closed and it was crushing his chest. He had to breathe and he knew the next breath he took was gonna be water.

Waking up felt like that time Jerry sat on him too long and made him pass out. But that was different, Jerry had paid him two dollars not to tell his dad. Although, of course, he had stolen back one of the dollars later.

Billy remembered how the man had seemed like a bat coming after him through the woods all graceful and fast, his big body maneuvering among the trees. It was ballet to see him run, this swift lump of a man.

"Give us two cheeseburgers with the works, two orders of fries, a water and a large chocolate shake." The man turned a sheened, smiling face toward Billy. "Sound good, old chap?"

"Sure," Billy replied. He tried to sound like a robot.

The man pursed his lips and then his hand just sort of happened to drop onto Billy's leg. Billy looked at it there, at the school ring too worn to read, at the wrinkles along the knuckles, at the white back that

was almost but not quite like a woman's. "Now look, Billy, you're going to make it. You're going to be very happy! You should see the house where you're going to live. Wow! It's a big house and I have beautiful furniture. Antiques, even. And you can see for miles, it has a huge view, and you will have everything you ever wanted or dreamed of. You have to pull yourself together. The chest strap was harsh, I admit that, but goodness, in all those hours you didn't utter a word of protest! You poor boy, how you must have suffered!" The hand patted his. "Honest to God I am so sorry. If you'd said one single word I would have loosened it immediately. But you had to be punished, you surely see that. You ran away and that is a no-no. The ultimate no-no! But ten minutes, fifteen. I just got so absorbed in my driving—"

"I asked you and asked you and asked you and you never even turned around! Then you came back and went to sleep."

The man's eyes widened. Then the order came and he was fooling with the white Roy Rogers bags and his wallet and little blue change purse like an old lady's.

In front of them Billy saw a station wagon full of guys his age. They were horsing around and he could hear their faint voices full of laughter. He leaned forward against his shoulder strap, listening, watching and wishing.

It was a Buick wagon, recent model. The kids were wearing hockey outfits. Normally Billy didn't run with the jocks, but right now the interior of that car looked like heaven.

The man tapped his horn a couple of times. He was smiling and nodding into the windshield. "Come on," he said, "please, that's right, step on the gas pedal, dear." He stomped the floor with his left foot, so hard the whole van vibrated with the blow.

Billy tried telepathy. He'd done it with Eric Worden a long time ago. The Wordens had a Ouija board and Mrs. Worden said it worked. 'Help me,' Billy said in his mind, 'help the boy in the van behind you.'

The wagon went to the end of the parking lot and returned to the interstate. Nobody inside even glanced back. The van followed and then they were briefly behind the wagon again. Billy tried to direct pure thought into the head of the driver. 'Help the boy in the van behind you. Help me, help me!' His lips were a determined, silent line.

As the car pulled away for the last time, Billy saw that it had an Arizona license plate. So maybe they were in Arizona. 'The capital of Arizona is Phoenix.' That was what he knew about Arizona. Or maybe Tucson was the capital.

They went down the highway with the food on the console between them. Billy decided not to eat.

If the operator had told the police, they should be here by now. Every second the van was farther away!

"I hope you like burgers and shakes," the man said. His hands were tight on the steering wheel, his one visible eye was rolling in Billy's direction.

"Yeah, sure."

"Eat. Don't wait for me. I'll grab my burger when the traffic thins out."

The smell of the food made his mouth start watering. He didn't want to eat, though. That man would not get the satisfaction of seeing him eat food his filthy hands had touched.

Normally Billy moved through life from food break to food break. Breakfast at home, lunch at school, snack in the afternoon, then dinner and before bed a final glass of milk. Plus as many cookies and as much candy in between as he could get away with.

He looked at the bent steering wheel, then at the man's tense face. He recalled how slow he'd been taking off the strap, how he'd hesitated with his hand on the buckle and his face red. With a guy this nuts it was best to do what you were told to do and wait for your chance. After

all, the more Billy cooperated the more the man would relax. Plus the police were coming. They had to come, he'd *told* that operator!

No hamburger had ever smelled as good as this one did. This Roy Rogers must be special. He could smell every separate thing, the salad dressing, the tomatoes, the lettuce, the meat. It just seemed automatic to lift it to his mouth and take a big bite.

"Not too much at once, honey. It's been a long time since you ate and it'll all come up again."

Honey ? Screw you.

As he chewed Billy stared across the hood of the van, watching the oncoming traffic. People were beginning to turn their lights on. The sky ahead was glowing pale orange and green, the land was dark. Ahead of them he saw a truck with about a dozen license plates, he couldn't even tell all the states. California. North Carolina. Arkansas.

A car passed with California plates, then another.

"How's the burger?"

"It's OK."

"That's my boy! You looking forward to the shake? You like a chocolate shake?"

Billy would not give him that. "Not much."

The man played with the steering wheel. "What's your name?" Billy asked. A smile came over the man's face, big and ugly and kind of sad, like when he'd had that hangdog look.

"Well, well, well, I think we're warming up a little at last! I am Barton. And please do not call me Bart. Barton."

"How old are you?"

"Thirty."

"What happened to you?"

"Pardon me?"

"You look a lot older than my dad, and he's over forty."

"Well, never mind. Eat your supper." He began to hum along with the opera he had put on. "You know," the man said, settling back in his seat, "I remember when I was your age, you know what we did? When I was twelve." Billy wondered how he knew so much. His name, now his age. Had the man been studying him, watching him, maybe for weeks? The thought was sickening.

The man was looking at him now, a look that at first seemed warm and friendly. But his eyes were not right. They stared for so long that Billy got worried the van would run off the road.

Of course that would be great, if he survived. The police would come and then it would be all over. Maybe he could try grabbing the steering wheel when the man wasn't looking, and pull it and reach his foot over and jam down the gas.

"Do you know what we did?" the man asked again. Billy knew he had to answer.

"No," he said. He took his last mouthful of hamburger and started on the shake, which was so delicious that he felt a stab of literally physical pleasure when he tasted it.

"Well, we had a great time! There was this lady in our neighborhood who was very old. She used to sit beside her window and listen to the radio. One day we climbed in when she wasn't in the living room and attached wires to the microphone. She came in to listen to the news, and we hid outside and announced the end of the world. It was quite a newscast! And you know what she was doing when we went to see how she had reacted? She was sound asleep." He chuckled. "I guess there's

something to be said for getting old."

"You couldn't have attached wires to the microphone because regular radios don't have a microphone."

"Well, I meant the speaker. It's a detail. Do you have any funny stories?"

"Not really."

"You've never done anything funny?"

"I guess not."

"But you've laughed. Tell me something that made you laugh."

The mere thought of laughter brought tears to Billy's eyes. He could hardly talk. But he had to say something, he didn't want to make Barton mad again. "We don't laugh, we aren't allowed to."

"Aren't allowed to? Why not?"

"Religion." He thought fast. "We're Charismatics. We don't laugh, we only speak in the tongues."

There was a period of silence. Billy knew he had been at least partly accurate. He'd heard the Charismatics bellowing away in the basement at St. Stephen's. "Lamma lamma sammi," they would yell, or, "Globbalubbyboof!" They would make long sentences of these words and scream, "Praise God, praise Him!"

That was speaking in the tongues. After the hollering died down they would all say "Amen" and sing a hymn. Any kid who heard this would have to be carried off on a stretcher from laughing so hard. The Charismatics themselves did not laugh at all.

"You're very religious," Barton said. The wariness in his voice delighted Billy, and he thought it wise to expand on the theme.

"We go to Mass and Communion every morning. I confess every Thursday. We all have statues of Jesus and Mary in our rooms, and when I'm not eating or sleeping or doing homework, I pray."

"You must have very few sins, and yet you go to confession every week."

"No, I have plenty of sins. The more strict your religion, the more sins you have. That's why probably all the holiest people are in hell, my dad says."

Barton nodded. "They have the strictest religions and therefore the most sins. Makes sense. But you haven't told me your sins."

Should he say something stupid like he did the once or twice a year he went to real confession, or should he—dared he—try another tack? He wanted to seem tough and dangerous to this man. But would anything be believable? Being near Barton made Billy feel helpless. If he didn't try, though, if he didn't try everything he was going to be near Barton forever.

"Well," he said, "you aren't supposed to tell." He glanced at Barton. How would he take this? "But I killed a man."

Barton burst out laughing and Billy hated himself at once for being so stupid. "You shouldn't laugh," he yelled. "I tied him to a bed just like you did me and I connected him to an extension cord. And I plugged it in."

"Who was this? Who did you kill, little boy?"

"A man who tried to kiss me."

Barton sighed. Billy, who had been sucking his shake between sentences, came to the bottom and rattled the straw.

"That isn't nice!"

He did it again, rattling it long and hard.

"Oh, please," Barton sang out, "don't make me punish you. I find it so embarrassing." But he sounded like he found it fun. Billy stopped.

As night fell and the desert became flecked with the lights of distant towns, Billy felt a loneliness so overwhelming that it seemed almost sacred.

He watched the gathering dark.

16.

Sally lay motionless, staring into the dark. She listened. The silence told her nobody else was awake.

So what had waked her up?

She heard a creak close to her bed. She turned her head, but all she saw was total blackness.

It felt like she was awake and dreaming at the same time. Another creak came, and suddenly there was a hand over her mouth, a slick hand that stank of rubber. She twisted away, intaking breath, trying to scream. The rubber of the glove pulled her skin.

Then her mouth was free and she heard herself bellow. As the scream died into its own reverberations she could hear his brutal grunting. His other arm came under the covers, sought her waist, started dragging her.

"Daddy! Daddy, oh, God, he's back, he's taking me! Daddy!"

The lights came on. Her heart was thrashing, sweat was pouring down her cheeks, she was crouched against the wall behind the bed. Her mother and father were two ghosts bobbing in the warm glow of the overhead light. Daddy rushed up to her and scooped her up in real

arms that were warm and strong.

She let herself go like a rag in his hug and the strength of him filled her. "He was here," she moaned.

"No," Mother said, "no, baby."

Air whistled into her lungs, her heart's motion became stronger and slower, the night wind began to dry the sweat that was soaking her.

She heard herself moaning, "He was here, he was here," and it was like another kid was doing it. Then she was being shaken back and forth, her head lolling, the ceiling fixture swinging before her eyes.

She caught her breath. There was Mom, her face white, her eyes puffy, and Dad with his glasses crooked and that haggard look she wished she could wash off his face.

"No, baby," Dad said. "Nobody was here. You were dreaming."

It seemed unbelievable. "Really?"

He held her tight and she smelled him, a waxy old smell like a grandfather. But she put her arms around him, and Mom held her hands behind his back. "You had a nightmare," Mom said.

"I'm scared at night."

"Why didn't you tell us, Sally?"

She looked into her father's eyes. "Because I didn't want to." She pulled away. "I want coffee."

"I think we could all use coffee," Dad said.

"At four a.m.?" Mom asked. Then she made it a statement: "At four a.m." They wouldn't be getting back to sleep, none of them. Sally put on her robe and followed her parents downstairs. As they moved through the house she turned on every light.

Walter Toddcaster was dragged out of his sleep by the ringing of the telephone. He wasn't surprised; it was part of the job. His wife didn't even stir.

"Yeah?"

"We got a lead in the kid case. He called in."

"Tell me about it."

"An operator took the call from a pay phone at a Mobil station near Estes, Nevada. He's in a white Ford Aerostar, traveling west on IH 15. That's all we got."

"License number? Anything?"

"As a matter of fact there is a little more. The call came in at eight-fifty-one their time last night. The phone company reported it to the state police. They got to the booth at nine-twelve. No Aerostar. But the attendant remembered the van."

"And its driver?"

"A white male aged about forty-five to fifty. Five foot ten, somewhat overweight, wearing a pale blue Izod shirt and black slacks."

"This is good news."

"Not entirely."

"Hit me."

"The attendant also *thinks* he saw a boy—get this—climbing into the window of the van. The boy was wearing a white T-shirt with a photo on it and shorts. He thinks the kid might have had a big red spot on his shirt."

"What are you telling me?"

"He thought it looked like blood."

Toddcaster sighed, thanked the duty officer and hung up the phone. The question was now a personal one: did he clam up on this family, or stay emotionally involved? A man has to protect himself. You can break, you get too involved.

To a cop blood usually means death. This particular abductor, at some point, will kill this child.

Taking places around the red Formica table in the kitchen was another of the unspoken family rituals that had given Sally quiet pleasure, and now created distress. Dad set the coffeepot to perking, and it was soon rattling away, a painfully merry sound.

Mom sat with her arms folded before her and her head down, like you used to at naptime in grade school. Sally reached over and touched her hair. So suddenly that there seemed anger in the movement, her mother raised her head. "Did you see him?"

"You said—"

"It was a nightmare, Mary."

"No, Mark—I mean when he took Billy. Did you see him?"

Sally was confused by the question. She hadn't seen him . . . had she?

"The dream, Sally. Maybe it's a buried memory."

"No, I—I don't think so."

Her mother's face changed, the eyes growing narrow, the lips curling into an expression that Sally had never seen before. "If you remember anything, you tell us!"

"Mom, I don't!"

"I think you do!"

"Mary, hey!"

"She doesn't realize how serious this is! She's a child. It's a game."
Abruptly she stopped talking.

Sally thought in a dull, helpless way, 'She's angry at me because I'm the one who was left behind.' Slowly, Mom's hands went to her face.
"Mom?"

"I'm sorry, honey. I love you, you know I do. I just want Billy back so darned bad!"

The pot rattled and chattered, and the room filled with the smell of fresh-brewed coffee. Sally knew that something was being destroyed in this family, something that was fragile and necessary. Was it a kind of family sentiment, a sort of shared lie—or was it a truth crushed by the savage reality of a world that sees children as objects to be consumed?

She said all she could think to say, "I'm sorry it wasn't me, Mom. I know he was the baby." Mary gave a loud, tragic wail and reached toward her daughter. They twined hands across the table. "I don't think I ever saw him or heard him, but I'm so afraid he'll come back I almost can't stand it. I don't want to die like—"

"He's not dead! *He is not dead!*"

"I know—I'm sorry, Mom, I—"

Sally watched as her mother seized the coffeepot and filled the mugs. Her hands, which had been clenched and trembling, became deft and efficient when she performed the familiar chore. Sally saw something about her mother that she had never seen before, and knew that it was the bravery of continuing on even when you wanted to roll up into a little ball and die.

Mary's voice rang clear and suddenly very strong. "We cannot have a defeatist attitude, because this family is all he has. If we don't get out there and do our own investigation and find our boy, he's gone."

"Mary, the police—"

"What did they do? They came here, they ruined my house with their filthy tests and then they went back to their other damned cases, the ones they have some chance of solving.

Nobody's looking for Billy. Canvassing every known pederast in the state! That's their idea of working this case. Billy's not in Iowa. He probably hasn't been in Iowa since Sunday morning. He could be anywhere! And we are going to have to find him. Nobody else will. Nobody else gives a tinker's damn." Noisily she sipped her scalding coffee. Sally watched her, full of admiration.

"It's one thing to do publicity, but we can't possibly mount an investigation on our own. Where would we start?"

"Somewhere!"

As Toddcaster dressed he thought of the next steps to be taken. They had to put out a request for incident reports on white Aerostars up and down IH 15. They had to follow up anything they might get. And the family had to participate. They needed to take their poster to every truck stop and filling station on the west side of that highway. It was a big job, but not impossible. He could find out the approximate range of the Aerostar, and they could concentrate their postering in areas where it was most likely to have stopped for gas.

He was going to tell them that Billy was alive, and they were going to emote all over him.

The part about the blood he would leave out. And he wouldn't explain why the boy had gone back to the van, although he understood. The

blood told him: Billy Neary was being tortured. Kidnappers did it to brainwash their victims, literally to intimidate them into obedience. They did it out of fear, out of anger. Mostly, though, they did it for fun.

Maybe there would come a time when Billy wouldn't make a phone call even if he could. That happened, he'd seen that. There was an unholy love that entered these relationships. Sometimes they kissed the hand that would, in the end, kill them.

Sally considered how many crannies there were in the world, and how small her brother was.

The familiar, dull hopelessness began to reassert itself. Noble sentiments aside, they were just like the other families of the Searchers group with their pictures and their desperate strategies.

Mother had become a woman possessed. "We'll get him back. We'll find a way."

"We could canvass the neighborhood," Mark ventured.

"Do you know that the police *did not do that!* Did you notice? They didn't so much as knock on a single door in this neighborhood! If we get our picture into the right hands and somebody says, 'Hey, I've seen this kid,' then they'll have something to go on. Otherwise, it's just basically waiting for something to turn up."

"That's not exactly a fair characterization, Mary. They're doing a lot more than that."

"I don't want to be fair! I want Billy!" With a glare like the enraged Medusa in Sally's ancient-history book, her mother reared back and hurled her mug against the wall. Coffee went everywhere and the little framed cross-stitch she had made, "Bless my kitchen, Lord, and all that come herein," was shattered and fell to the floor amid the showering bits of the mug.

Silence followed the outburst. Dad seemed frozen in his chair, like

Sally too astonished to make a sound.

Scuttling like a coolie, Mother hurried to pick up the pieces. "Don't anybody else move, you'll get glass in your feet!"

"What about your feet, Mom," Sally said. She went down to help. Together they picked up the larger pieces of glass while Mark sopped up coffee and slivers with paper towels.

Sally watched as her father finished, then came over and enfolded his wife in his arms right there in the kitchen. They seemed so small, and so much older than Sally had ever before noticed. She got up, slowly backing away from them. She wished they wouldn't keep revealing themselves as little and helpless—but they were, just look at them.

"We can work as a team," she said, trying to interject a hopefulness she did not feel. Her parents seemed hardly to hear her. They were on their feet now, Mom sobbing, Dad holding her in painful silence. "We can work as a team," Sally repeated, this time a bit more loudly.

Dad was so haggard; right now he looked like a total stranger.

To cover her disquiet Sally kept talking, her voice fast and thin. "We can, if we organize. We'll buy a book, learn how to be detectives. We'll become a family of detectives."

Mom blinked, and suddenly her face softened. Sally and Mom had many long talks. At the best moments, they were sisters. But usually Mom was on her case. "This isn't one of those young adult mystery novels."

"I don't read that junk anymore, as you well know. I just think we can accomplish something—realistically. I do."

"Maybe I don't! Maybe that's why I threw the mug! I'm so damn frustrated, I could just tear my hair out!"

"We can try your idea, Mary," Dad said. Sally watched her father as he

continued to awkwardly caress her mother. Then they went together in a kiss. Usually they were casually affectionate but never extremely intimate in front of her and Billy. She didn't know what to do, lower her eyes or what. She was delighted.

Just then they all heard a sound outside the open kitchen window. All looked. The moon had set, and the window was black. Instinctively they drew closer together. Sally's eyes went to the rack of knives.

There was a knock at the door. It was more as if a branch was tapping against the frame. There was none of the firmness of the human hand.

Dad went to the door. "Who is it?" Sally stepped closer to the knives—and as she did it, she discovered a truth about herself. Neither of her parents had so much as thought about getting a weapon. And why should they? Neither of them would dream of using one.

Sally could do it.

Then Dad swung the door open and there stood Detective Toddcaster blinking in the sudden light. Sally must have gasped, because he turned toward her, his expression full of apology. "I saw the lights on," he said. He stepped heavily into the kitchen, dominating it with his large, clumsy body, his stale-cigar reek and his wrinkled, intense face.

"You've been here—how long?"

"I just came over. I drove by. I guess maybe I'm glad I saw lights. I have news. Billy is alive. He called the operator from a pay phone in Estes, Nevada, at eight-fifty-one their time last night."

Sally felt a shock go through her body as if somebody had slapped her across the face. Mother cried out. Dad went to the detective and grabbed his shoulders. "Is he OK?"

"He's alive."

Her mother was shaking, twisting her hands together, moaning, "He's

alive, he's alive."

Sally saw that all along she hadn't believed it. Hidden behind her brave words had been a secret certainty: Billy was dead. And Sally knew that she had thought so, too. She had thought her brother was dead. But he wasn't, he was somewhere, he was alive right now, breathing and hoping and wanting to be home. Sally just could not bear that thought, it hurt so terribly, it was like fire raging in every soft place of her soul. She went the two steps to her mother, her arms out, seeking embrace. They fell together and then Dad was on them both.

Not until Toddcaster cleared his throat did Sally remember that he was there. He stood squinting at them, as if their bodies gave off light. "We have a description of the vehicle he was in and the man driving it."

Sally listened to his rough, sullen voice. She had never before met a man so tough-sounding.

"Thank you," Mom said. "We were just—despairing—I mean, we don't know *what* to do—"

"The Searchers—"

"Oh, God, they're as bad off as we are."

"It was a pretty grim scene," Dad added.

"You have work to do now."

"Tell us," Mark said.

Toddcaster's expression changed. Was there a hardening around the eyes, a twinge of pain or even anger? Sally wasn't sure. "Do you want coffee?" she asked, breaking away from her mother's taut grasp.

"If I don't have to lick it off the wall."

Mary laughed. "One of my discoveries this week is that I have a

temper. If Mary Neary ever gets near this guy, you are going to see what a real mad woman can do to a real bad man."

Sally poured him a mug of coffee.

"So tell us!" Her mother's voice teased like it always did when she wanted something, but now there was also a high, scary note of terror.

Toddcaster pulled back a chair, sank into it. His chin on his chest, his mug crouching in his big hands, he looked like a man who had suffered some catastrophe of the skeleton. "What you need to do is canvas IH 15 from the point of the sighting all the way to L.A. Take your posters."

Dad put his hand on his cheek, caressing it as if the skin had become hypersensitive. "That's thousands of miles!"

"Start at Las Vegas and work west."

Sally did not like the guarded sound in his voice. Wasn't this all incredibly good news?

He had pulled out a cigar and was alternately sipping the coffee and gumming it, in what Sally thought must be a rhythm that he found comforting. "Lemme tell you about these cases. They are hell to solve, unless you get a break. Well, we have something of a break. No question. But your man is also very clever. I will tell you a little bit about your man. Clever man. This is not knowledge, you understand. We don't know these things. This is experience. Voice of experience. You have basically four kinds of people who do stranger abduction. First, they kidnap for ransom. Rare. This is not that, not the son of a teacher. Then there's the political kidnapping. You're a controversial guy, Mark. But let's face it, the controversy is not a large one. Then there is the sexual kidnapping. Pederast. Usually, though, these are impulse crimes. A kid goes out to the convenience store and never comes back. Also, usually younger kids than Billy. These are people who can't confront their own sexuality. They want kids who are too young to understand. Fourth type, the complex abductor. Maybe he is

searching for his own lost childhood. Maybe he is deeply angry. Mentally ill. Certainly a psychopath. Could be a sadist. Any damn thing. This guy will be a loner, a bachelor. For whatever reason he needs a child."

"So he steals one."

"For him this is acting out a fantasy. He hardly troubles himself about issues like kidnapping, is it wrong? He just acts. All of a sudden, he's doing his thing. Shrinks talk about motivation. The hell. The horrible truth about being human is that we can't put our real motivations into words. We don't know why people do what they do. We don't even know what the hell we are, any of us. We're just here.

"But remember, this man is psychopathic, and there's very special meaning attached to that word. It means that he has trouble understanding the consequences of his own actions. Time has no meaning for him. It's all now. Yesterday is gone forever. Tomorrow—who ever thinks about that?"

It was so hard to listen. The guy could do anything, that's what Toddcaster was really saying. *Anything!*

As if he was himself caught in a relentless wave, Toddcaster continued. "Odds on this guy is a complex abductor. He thought about it. He planned it. Then he executed the plan.

"Tell you what's gonna happen. You get out there with your posters. Keep me informed as to your whereabouts, and any information you come up with. We'll follow up by requesting incident reports on a white Aerostar all along their probable route of march. Did he get a ticket, have a fender bender? Maybe we'll get lucky. But it ain't a perfect world. Cops don't necessarily *file* incident reports. The hell, you'd be filling out forms until you died."

He took a long pull of coffee. "That beats the hot acid they dispense at Donnie Doughnut. Look, I'm gonna go home and console my wife for a couple of hours. At last report she'd given me up for dead." With a

long, groaning sigh he launched himself from the chair. "Gravity," he said, "not my friend."

Sally followed him to the back door, watched as he went down the flagstone walk into the dark. Moths were fluttering around the dim light, their shadows dancing on the tiny concrete porch.

Far in the west she could see a glow, all that was left of the moon. Her mind returned to her nightmare. In it she'd seen, just for an instant, a face as pale as the moon.

Billy had probably had just such a nightmare. Only in his case, it turned out to be real.

"Brother," she whispered. It was an unaccustomed word. She hadn't called him that; she hadn't even used it much. But now it was precious. It was all she had left of him.

She watched the fading sky. "Brother?"

17.

Barton had driven until four a.m., then slept once again in the back with Billy. It was now Thursday and they were both riding up front. Billy's seat belt was clasped over his arms, which were cuffed together. They were not far from home.

Billy hadn't had a good night. Barton could see that he was fading. His cheeks were sunken, his hair stringy. He sat crouched forward, silent. He wasn't beautiful now. Barton had been thinking that maybe he couldn't handle this child.

The other boys had never really tried to escape. They'd been possible to tame, at least to a degree; fundamentally this was because they were very unhappy children to begin with. Their ambivalence about their home lives made them somewhat compliant.

Billy's midnight dash through that forest had been daring and courageous. Facts had to be faced: Billy was probably a mistake of a new and different kind. Because he was a well-loved and cared-for child, he was much more desirable. But that also meant he was far less cooperative.

Barton also saw that he should have stayed in California. He could

have gone up the coast north of San Fran. There were lots of perfect small towns up that way. Then he would have been closer to home, and gotten his boy back with a lot less wear and tear, not to mention the reduced risk. The long hours in the van were what had turned Billy into the stringy, sullen thing that sat beside him now.

Too fucking bad!

* * *

Barton caught Billy's attention when he sucked his breath in hard. He watched him grip the steering wheel until it twisted. He was so strong that it was weird.

His temples were covered with beads of sweat, his eyeballs were popping out. Obviously he was furious, but why? Not a word had been said for hours.

Billy didn't like this at all. Barton acted mad and disappointed. 'I'm not good enough,' Billy thought—and suddenly there appeared the miraculous possibility that he might be freed.

"If you want to let me go," he said, "you don't have to take me back to Stevensville. I'll be OK."

Slowly Barton's head turned until he was facing Billy full, not looking at the road at all. "No," he said. Then he jerked back, quickly returning his attention to the highway. In his voice there was a menacing sweetness which Billy did not want to hear.

But he did hear, and he was pretty sure he understood.

Barton's mind whispered its secrets. 'You really shouldn't think about the black room. No, you should not.' It was so awful and stuffy in there. The kids didn't like it.

He remembered such moments there . . . 'So *I* go, "You don't come out of the black room." And he goes, "What if I have to take a piss?" Timmy, the big genius.'

In the black room, Barton could take his time. They weren't coming out, there was no hurry. You had to know anatomy. You had to understand the nervous system. There was no way they could escape, there was no way anybody would hear.

There was a corner of heaven under Barton Royal's house, called the black room. In that place and in that place alone he was fully himself.

They were getting into heavier and heavier traffic when Barton suddenly pulled the van onto the shoulder. His face, which had been dark and empty while he was driving, was altered by a smile. "You gotta go in the back. I'm really sorry, but you must understand."

"Yeah, sure," Billy said aloud. 'Don't cross him,' his mind warned. He had to be very, very careful.

"I'm sorry, son, but we're coming into a city. Get on the cot."

Not that! "Oh, come on, Barton. I won't try to run away anymore. I promise."

Barton's smile got even wider. "Get on the cot." His low, sullen tone made the smile seem all the more eerie.

"Barton, look, I don't think I can stand the straps anymore. I'm sorry, Barton, but please, you have the handcuffs, and I could just sit back here with them on—"

"Get on that cot, you *fucking little scum!*"

Billy had never been yelled at like that before, never even heard

anybody yell like that except maybe in a movie. He hopped right up and put his hands rigidly to his sides, waiting for the straps. He tried to fight the sobs but he couldn't, he was just too tired. As Barton strapped him in he was wracked by waves of blackest despair.

As Barton tightened the straps down he tried to be pleasant, even affable. No need to panic the little creep. He would have him in the black room within the hour, then he could let it *all* out.

The little shit was going to have a hell of a time in the black room. It was eleven. Given traffic, they'd be home by twelve— twelve-fifteen. Then he'd have to call in, God knew, maybe he didn't even have a job left, it'd been a week since he was due back from Hawaii. More than a week.

No, Gina might be mad, but she'd never get rid of Uncle Squiggly. Tiny Tales needed him.

'Gina Roman, you bitch, you better not fire me. I had the flu! It wasn't my fault it happened on Maui.'

He'd make it up to her, do a show every Saturday without fail from now on. They had forty kids a week last month, at five dollars a head. That left her one hundred fifty dollars a week clear, you take out his fifty. Uncle Squiggly would get that Squiggle Box cranked up until all the little boys and girls would be laughing and laughing and laughing, the *little pieces of shit!*

The van continued along the highway for about twenty minutes,, then it slowed and Billy knew they were taking an exit. This time there was no question of screaming. Not only was he strapped down, his mouth was taped up tight. He tried to pray.

'Hail Mary,' he thought, 'womb of Jesus—' He was too scared to remember the words.

The van was moving up and down hills, Billy could tell that. Up a long hill, curving this way and that, then down and then a sharp turn. Even though it was useless, Billy struggled.

If only.

If only he could just get out of this van, he could run fast enough to beat fat Barton.

If only!

Familiar old L.A.: a sea of convenience stores punctuated by an occasional mass of houses. He made his way down Santa Monica, turned right at Hugo's, scene of many a breakfast of omelet, fresh-squeezed o.j. and that great coffee of theirs.

L.A., West Hollywood, the Hills. This was his town and he loved it dearly. Just for fun he turned on Fountain so he would pass Tiny Tales. The store was open, Gina was in the window putting out the display for that new Pat the Bunny reissue. So the point-of-sale stuff that had been promised last month had finally come. She was doing Barton's work for him—and let her. Let her wonder. For what she paid she didn't deserve employees who were reliable.

"I had the flu. My mother had the flu. The whole fucking *world* had the flu, Gina!"

Mrs. Worden said people could go out of their bodies. Maybe if he got out he could fly home and tell Mom and Dad where he was. But how do you do it? She sat on the floor and went "Ommmmm" and said she'd been to the Pleiades. What is the female word for dork?

If only that phone operator had told somebody! Probably she thought, 'Just a kid playing another prank.' They were all so dumb!

He couldn't bear the straps another second. Every sinew strained against them, strained and could not stop straining. Behind the gag he was screaming. His head was bobbing.

For a time he was lost in his terror and in the choking claustrophobia of the little cot that was his prison.

Then something happened. He did not know what it was, could not have known the power of the reserves that lie within us, that by grace and need may be briefly tapped.

Souls can fly from bodies, withered legs can carry us again, empty eyes can recover sight, the dead can rise in silence—but not often, not often at all.

What Billy found in the well of miracles was clarity.

'You have to charm him,' his inner voice said. 'Win him over. Make him love you.'

How? Adults were incredibly good at telling if you lied. Plus he didn't know how to be an actor.

He'd better learn.

They reached Sunset, passed the lovely St. James Club with its wonderful suites Barton could never possibly afford, then the Mondrian where he sometimes had supper when he was feeling flush.

When he turned onto King's Road and began going up into the Hollywood Hills themselves he was oppressed by a sense of looming menace, as if the whole escarpment was going to slide down into Sunset and bury him. The tranquillity of King's Road replaced Sunset's zipping traffic.

He wanted to stop at the video store and rent Cabaret for later. He also needed to go to the liquor store and get a bottle of that '84 Mouton-

Cadet if it was still on sale. Sally Bowles and fine claret were a ritual after the black room.

Billy noticed that the van was going slower. There was no traffic anymore. They were climbing a hill that was steeper and longer than the others. Hill, Los Angeles: didn't they have a place called Beverly Hills? He must be in Beverly Hills, California!

'God,' his heart said, 'give me the strength I need. Please, God.' But, did he really believe in God? He'd had his doubts. But not right now. Right now, he decided, he believed totally. 'And God, if I've been asking too many questions, please don't mind. It wasn't a big deal, I'm just a kid with a lot of questions. Still, the business about the loaves and the fishes—if you calculate the size of the crowd and the amount a single man could eat, you had to create loaves and fishes at the rate of about a hundred and sixty of each per minute, which is amazing. And also, why do you have *fishes*, God, when we have just plain fish? Were yours something special, like maybe a bunch of minnows?'

No, Billy, shut up! 'God, I believe all the miracles! Really! I love Jesus, and that is *really* true! I'll put up His statue in my room, pray every day. I'll be an altar boy like Dad was. Oh, God save me!'

It was surprisingly cool for an August day in L.A., sunny and hardly more than seventy. This was the kind of weather that had drawn the millions to this place.

By four the smog would be almost unbearable, but Barton would be safely sealed up where no smog could penetrate. He shuddered deliciously, thinking that he'd be doing it at four. By then they'd be a couple of hours into it. He'd be sweaty and possibly even a tad bored. The fucking thing that was eating his heart right out of his body would at last be getting quiet. Billy would be almost unrecognizable.

Tonight would be a blessed night. Wine, the stars, and Cabaret. Sally Bowles, his love.

When the engine went quiet Billy really started squirming. There was a short silence, then the rumble of a garage door closing. It got dark.

"We're ho-o-me," Barton sang out. "Welcome to my world, Billy boy!"

Barton rolled the side door of the van open. Despite everything Billy was eager to see the mansion. He loved big houses. If he'd been in control of things, Dad would have made more money and they would live in a huge house with columns. Instead of the old wagon they would have something incredible, like maybe a bright red Bentley Turbo, zero to sixty in six and a half seconds, top end a hundred and sixty, the fastest production sedan in the world.

"I'm just going to take in our stuff," Barton said. "Then I'll be back for you."

When the smell of the strange garage came into his nose, Billy's fevered thoughts went quiet. He felt sad. Unexpectedly, he remembered the way he'd dropped his bike on top of Sally's the last time he'd come home.

The last time!

"OK, my boy, now for the big moment." Barton crawled up into the van and unstrapped him. Immediately Billy pulled off the gag. Barton cocked his head, smiled. "Now, did I tell you to do that?"

Billy began at once to carry out his plan of good behavior. "I'm sorry, Barton."

Barton tousled his hair. "No problem. C'mon, let's take a look around."

There was a second car in the garage, but it was no Mercedes. Billy saw an old tan Celica with a taped-up window on the passenger side.

They went into a tiny, filthy kitchen. It stank in here! Barton was whistling. "Here is where I prepare meals fit for royalty. All I have to do is dig down and start cooking!" He chuckled.

This was no mansion. Barton had lied, he was poor. The only new thing he had was that van.

Barton realized that he'd left rather a mess. He'd been eager to get away after doing Timmy. He'd wanted another child so bad he could hardly stand it!

This place did not smell too good. Timmy had taken a lot more out of him than he'd admitted at the time. They'd been together for two months. Jack had lasted even longer, almost half a year.

Billy was going to be a record in the opposite direction. It was really very sad to get a new boy only to do him right away. But God, the black room was thrilling.

Barton bustled around all happy. He kept looking at Billy, though, and his eyes said he was completely and totally crazy. But of course he was crazy, look at what he had done and how he lived! He probably didn't even know this wasn't a mansion.

The kitchen opened onto a small living-dining room. Barton hadn't misled about one thing, the view was pretty neat. They were at the top of a high canyon. Below them there was a long gully full of brush and exposed sewer pipes. Billy could see a glimpse of a road, and beyond that the vast Los Angeles basin.

"Do you know where you are?"

Billy didn't think he ought to admit it, but it was so obvious that they were overlooking L.A. "I—I'm not sure."

"You know damn well, don't you?"

Billy nodded.

"Sure you do. Now you're going to have to get undressed."

Billy didn't like this. Why would he want him naked, except to do something bad?

"Can't I wait until bedtime?"

Barton laughed, deep and rich. When Billy started to laugh too, Barton grabbed his shirt and pulled him almost off the floor. "You'd better learn right now to obey me, Billy. You don't get second chances around here!"

Billy did as he was told, until he was down to his briefs. "That's fine," Barton said. Billy stood waiting, miserable and afraid.

He still had creamy smooth skin, and the chest was healing with surprising speed. Well, never mind, the black room awaited. He would get Billy completely trussed up and then tell him what he was going to do to him.

That part of it was incredible. Timmy hadn't believed. Even when he was in the black room he hadn't believed. Then Barton started, and finally he believed.

Billy would believe right away.

Mom would say it over the dinner table: "I'm going to punish you after supper, Barton." He would have to eat every morsel and laugh if somebody told a joke and speak when he was spoken to, and then Mom would take him by the hand into the living room and his father wouldn't even glance up from the paper while she did it, even when it went on and on.

Then they would play cards, and he would have to play, too, even though it was excruciating to sit down.

He carried them down to the black room after he told them. Billy would believe and he would be as rigid as a child made of wood, his skin cool and dry, and would either be silent or whimpering.

"You know, Barton," Billy said in a shaking voice, "I guess I really am kind of glad to be here."

Barton had not expected this. It was obvious that Billy hated him. This boy was a failure.

"I had a rough time at home," Billy continued. "My dad beat me. You won't, will you, Barton?"

Was this for real?

Billy's mind was rushing from idea to idea. He had a very bad feeling about the way things were developing. There was something Barton was getting ready to do, and must not do.

"Your dad beat you?"

"Yeah. With a real whip."

Barton snorted with obvious disbelief.

"No, he kept it on a shelf in his closet. He beat me if I was late. And my mom drank and Barton, I'm really glad to be here."

Barton folded his arms. "That's not true."

"I'm homesick as hell, I admit that, but I know you want a boy and you're going to be nicer."

Barton went to the big picture window.

Saying what he said made Billy sick inside, but it was probably his only

chance. If he didn't betray Mom and Dad he was never going to see them again.

"I hate them," he yelled. His voice sounded flat and insincere. Barton shook his head, said nothing. Billy tried to get some more feeling into it. "I hate them!"

Barton went to a built-in bookcase on the wall beside the couch. He opened it and took out a big, thick rope.

"Come here, Billy."

18.

Father Turpin sat awkwardly in the Nearys' living room. Mark had given him coffee, and now watched him busy himself with cup, sugar and milk. Mark had not expected him. After Toddcaster left they had all gone back to bed. Despite everything Mary and Sally had gotten to sleep; Mark hadn't been so lucky.

Having a priest in the house brought back childhood habits of awkward and excessive courtesy. "Yes, Father, no, Father ..."

Mark's eyes went to the priest's black briefcase, then up to his face. Father Turpin sat on the edge of his chair, his saucer held in his left hand. With his right he raised the cup to his lips. His eyes, looking back at Mark's, seemed at first genial, surrounded as they were by wrinkles that might be laugh lines. When he smiled, though, seeing that Mark was regarding him, something baleful appeared. Mark was struck by how predatory he seemed, and how that appearance must hamper his work.

"I was hoping Mary and Sally would be able to join us."

"I'd wake them—"

"No, no." He leaned forward. "Detective Toddcaster called me." He fell silent, as if this statement had enormous importance. His expression became sly. "You're going hunting."

"This afternoon I fly to Las Vegas. I'll poster westward toward L.A."

The priest put down his cup. All geniality had left his face. "I've come to tell you that there's a little money for folks with major breaks. The Searchers cut a check for five hundred dollars."

Mark stared astonished at the check that was being offered him. "The Searchers are with you. I'm with you. The Lord is with you—at least, nominally."

"Father—"

"Bob. I'm Bob." He cleared his throat, put the check into Mark's hand. He opened his briefcase. "Now, I gather you're at the point of realizing just how little you know about conducting an investigation, and how important self-help is going to be."

"There isn't anybody else!"

"That isn't quite true. The police do a great deal, but you and Mary and Sally represent Billy's best chance of coming home." He glanced around the room. "I presume you can't afford a private detective."

"I'm a high school teacher."

"Well, there's a man in Des Moines. Richard Jones. He's a detective, and a good one."

"I cannot even begin to afford that sort of thing—in spite of this check. I've got a two-thirty flight and I'm exhausted and I have a hell of a lot of work to do before I leave."

Turpin held up his hands, as if defending himself. "Mr. Jones does this for free. No actual searching, mind you. But advice. You need it, especially now, before you hit the road."

Suddenly here was another thread in Mark's hand. "When can I see him?"

"We'd better leave as soon as possible if you're going to make a two-thirty flight." He withdrew a thick green book from the case. "You can borrow it."

Mark took the book. *Techniques of Investigation*.

"It's a basic text on police science. The chapters on missing persons will be quite useful. You can use them to make certain the police are doing all they can, and that your own investigation is sensibly organized."

An image of Father Turpin's bleak cavern of a church rose in Mark's mind. How did it feel, week after week, to say Mass for twenty or thirty people in a nave meant to accommodate four hundred? That was this man's truth—and yet there was absolutely no sense of despair. None at all.

"I've gotta get packed. Give me ten minutes."

"I'm not the one in a hurry, Mark."

Mark went upstairs and threw some clothes into the ancient Samsonite two-suitier he took to teachers' conventions. Then he topped off the pile with a box of five hundred of their brand-new missing child posters. He woke up Mary and told her he was going with Turpin.

"He's here?"

"He brought this." He handed her the check. Without another word she got up and went downstairs.

"We need this so bad, Bob. We've only got a couple of thousand dollars to our names." There were tears forming in the corners of her eyes.

Turpin stroked her head, a clumsy gesture. In his eyes there was a sort

of desperation. Sally came down behind her mother, like her wearing a robe over her nightgown. They stood on the front porch as Mark and the priest left. Sally waved a small wave. "I'll call tonight," Mark said.

Turpin's car was old, an enormous Chrysler from the mid seventies. "I share this tank with the Sacred Heart Convent," he said as he started it. "Five aged nuns who seem to have little to do but clean the damn thing with Q,-tips."

"It looks like it just came off the assembly line."

"Embarrassing, but I live with it. Wheels are wheels."

"It's sweet that they do it for you."

"I'm their confessor."

"Elderly nuns?"

"You'd be surprised. I've been hearing confessions for over forty years, and those sisters are about the only ones left who can still surprise me."

As soon as they were out on the highway, Mark began wondering. Had Billy been taken this way? Did he see these signs, this long, flat view, smell this air while he was in the hands of his abductor?

Mark closed his eyes. He tried to blank his mind, but his mind wouldn't stop. Had he been tied, gagged? Had he been trussed up on the floor of that white Aerostar, or simply sitting there too scared to move? Mark's thoughts left the realm of words, and he began to see his son, a bright shadow in a dark space. When shadow Billy said "Dad!" Mark started awake. They were halfway there; an amazing thirty minutes had passed. "Want some music?" Father Turpin said.

"Yeah." Mark started to look through his cassettes.

"I'm afraid they're all pretty schmaltzy. I'm a sentimental guy."

"Where from?"

"I'm a Mick from Queens. Irish heaven. And I've got the drinking scars to prove it. As well as the Clancy Brothers tapes."

Mark abandoned the cassettes.

"Want to talk?"

"About?"

"Whatever it is that's been making you moan in your sleep like that."

"Billy."

Turpin took an exit and moved through the center of town, stopping at last in front of a small office building. Mark followed the priest into a pink granite lobby.

It was all very modern and bland. There should have been an elevator with a rattling brass accordion door and an elderly operator with the name "Pete" embroidered on the pocket of his threadbare uniform.

As it was, Richard Jones's office was on the street floor. Father Turpin's fist had hit the door of the office once when it was pulled open. A gust of cold air poured out.

Jones was a tall man, heavysset, with a surprised expression on his face. It took Mark a moment to realize that this expression was permanent. He smiled at Father Turpin, then gave Mark a long look. "Sorry about your boy, Mark. Can I call you Mark?"

"Yeah, of course."

"I guess you've been given a lot of advice already." He stepped back into his pin-neat office and indicated a chair. "Make yourself comfortable. I know you have a time problem, so I'll keep this to an hour."

Jones dropped down behind his desk. "So you've talked to Toddcaster, the Searchers. Now me. You're hitting all the stations on the missing children underground. Next you'll be onto the foundations. First off, I will do things for you that you cannot do for yourself. I am a licensed private investigator, which means that I can find out certain things in the pursuit of my trade. Give me a license plate and I can make it for you.

Give me a name and I can get you an address—maybe. *If* you know the right state.

"Now let's talk brass tacks. You are the victim of a rare and terrible crime. Stranger abduction. Your son's been missing less than a week, yet you already have a major lead. This is very good news. But it might not go anywhere. Most leads peter out. Your genuine stranger abduction is a very hard crime to solve. It is often fatal. Face that." His lips became a hard line. "Be damned careful following up your lead. I'll be frank with you. There are satanist cults out there stealing kids for very nasty reasons. Why? Because they're jerks. Satan does not answer prayers. In this respect he is as bad as God. There are kiddie porn rings and kiddie prostitution rings. Your son could be sold to a pederast. You know what that is?"

"Yes, of course."

"Everybody has their pet theories. Toddcaster tell you about the 'complex abductor'?"

"He did."

"That's his pet theory. That, plus the fact that motivations can't be understood. Maybe not, except that sex and money and fear are all very understandable motivations, aren't they? Toddcaster thinks they're too complex to understand. I don't agree. People are motivated by the raw emotions—greed, anger, fear. Even love—at times." He smiled a rueful little smile. "I urge you, mister, don't settle on any one theory. Keep your mind open. Toddcaster may be right. But he may also be wrong, remember this. And another thing: the police have

limited scope. They can only think locally, statewide. Their impact diminishes the farther you get from Iowa. You have to think nationally, even internationally if the clues lead that way."

"I'm leaving this afternoon."

"You want to make sure you stay behind your man. You don't want him to see the posters coming up ahead of him. This might be your boy's death warrant. *Comprende?*"

"I understand."

"Make sure the police are keeping up their end of the bargain. But you've got to do the work. *You* get the leads. *You* take them to the cops. *You* make sure they are doing their job right because *you* are on top of them. This is your boy, Mark."

"For the love of God, I know that!" The moment he heard the rage in his own voice Mark regretted his tone. Jones apparently didn't notice. Mark looked at Father Turpin, who was sitting silently, his fingers held in a tent.

Jones had what soon became a torrent of advice, so much that Mark found himself dashing off notes on a yellow legal pad. How to interpret clues, how to generate, follow up and network leads, where to put his posters, which foundations would help spread the word, which were active and which were wastes of time.

At the end of one hour almost to the second the meeting was over. Jones leaned across the desk. "It's a hell of a lot of work, investigating one of these cases. I just have one piece of advice: don't give up hope. And if you do, call Turpin."

Jones and Turpin gave one another a silent look. Mark thought that they must have gone through a great deal together.

On the way to the airport Mark Neary closed his eyes. Father Turpin saw the yellow pad clutched tightly in the man's hand. 'Lord,' Bob

Turpin said, 'please give him back his kid. If you don't do it for him, do it for me, Lord. If I still have any pull with you, of course, in view of my empty pews.'

Part Four

HER IN THE DARK

19.

They'd been talking for what seemed like fifty hours and the rope was lying on the coffee table.

Billy was bargaining not to be tied up with it. He watched the afternoon light playing across the fat twist of its strands.

Then Barton started in again. "I'll be a good dad!" Why did he have to keep saying it, like he didn't believe it. Billy wanted him to be a good dad, he was all he had right now.

"Great," Billy said for the hundredth time.

"I'm going to show you the town. L.A. is incredible! You know how far it is from one end to the other? Nearly a hundred miles."

"Wow!"

"You're getting to like me, I can tell!" He shifted eagerly around in his seat.

Billy fought himself. By sheer will, he created a smile on his face. "You're cooler than my dad."

"I am your dad!"

Why did he smile like that when he talked? It wasn't a good smile. Billy could not help it, he still thought he was going to get killed. But he kept on anyway, gamely trying to project something like enthusiasm.

"I mean—you know. Than Mark." When he had to betray Dad it was terrifying. Dad always knew his thoughts. What if this was hurting Dad's feelings? Then would he never come?

Finally Barton stood. He now bustled around, cleaning up and chattering about himself. Billy listened. Billy felt the cool bite of the handcuffs around his wrists. He managed to get his shorts back on. When Barton saw this, he silently opened the handcuffs so that Billy could finish dressing. Then he closed them and returned to his cleaning. While Barton talked, Billy stared at the rope.

"I think I must have been too good—oh, look at this shirt, it's got—yuk—anyway, I was always highly obedient. My mother used corporal punishment. Slightly. It's not right, really. I mean, why do they do it? Punishing embarrasses me. It demeans you both. I mean, God, don't they realize that punishment simply *creates* punishers? It's obvious if people would just think, but they don't think. My parents were sweet."

He gathered up an armful of newspapers that Billy thought might have been used as toilet paper because they stank. "Oh, my, maybe you're thirsty! Are you thirsty?"

"I could live through a Coke."

"But you like Dr Peppers better. I looked in your fridge! Sure! I wanted to know just what you liked the most! I saw the squash in the crisper. You like squash?"

This guy *would* notice that stuff. "It's OK."

"I'm kidding. I know you hate it. All boys hate it. We were clean-platers at my house. You had to have a clean plate or you couldn't get up from the table. My folks were very loving. I also know you like

Butterfingers. You see, I remember those things!" He came over to Billy. "Just look how smooth your skin is, son. May I call you son?"

"OK."

"You must be at least half Irish."

"I am. And my mother's Scottish."

"The Celts! The most beautiful people on earth. Such complexions, like you have. But I'll bet you don't feel smooth and pale, do you? You feel like a boy. Strong."

"In a manner of speaking."

"In a manner of speaking! Out of the mouths of babes! I love your command of English."

He started pulling at Billy's shoulders, trying to get him to stand up. Billy pressed himself down into the couch.

"Oh, come on, son." Barton began mincing backward, pulling Billy up. Billy was wary. He wanted to stay right here. "You have a bedroom, you know. It's nice, come and see!"

Slowly he stood up. Barton took hold of the chain between his handcuffs and drew him across the living-dining room toward a pale green door that stood open a crack. Billy didn't like that door, didn't like the darkness of the room beyond.

Closer they went to the door, and closer yet.

As they passed the kitchen Billy heard water dripping and smelled a smell of old grease. He could see dishes piled up on the counter, even on the floor. There was what looked like a pair of fireplace tongs stuck into a pot of water in the sink. The water was gray and had dark chunks floating in it.

"I'm going to go get you some Dr Peppers and us some supper, then I'll

be back."

"I'll clean up the kitchen while you're gone," Billy ventured.

Barton's curls bounced as he shook his head with the vehemence of a toddler saying "No!"

Then he kicked the door open and thrust Billy in. Billy whirled, trying to get his foot in the jamb but the door was slammed almost instantly. "It's not a prison, son! I swear it's only your bedroom."

The deadbolt lock clicked. Billy almost panicked; he wanted to rush at that door, to kick it, to break it down! But he had to keep playing the game. If he didn't play the game, Barton would get mad and tie him up with that rope. Then Barton would—

"It's such a nice room, look at the walls."

There was wallpaper with fat little airplanes on it, like something from a nursery. "Yeah," Billy said, forcing lightness into his voice. The airplanes had faces, and all the little faces were smiling. The paper was yellowed, and in places there were rips. "It's real nice, Barton."

"Keen?"

"Really."

The door creaked, Billy heard breathing. Barton must be leaning against it. "Really, really?"

"It's a nice room!" Billy looked at the mattress on the floor, at the ugly black bars on the inside of the window, at the door with the screwheads showing from the deadbolt on the other side. "I'm gonna just love it!"

"Oh, I'm so glad! If you like it—that's very important to me. Son."

"Yeah."

There was another creak, then the sound of departing footsteps. Pulling nervously at his handcuffs, Billy went to the window. Behind the bars were closed blinds. Even pressing his fingers between the tightly spaced bars, he could barely manage to touch them. He couldn't raise them.

His skin crawled, a clammy feeling came over him. Then he noticed that there was another door, this one with a handle. He rushed to it, found that it opened.

It was a small closet. There was a pole, and on the pole were some coat hangers. One of them had a plastic cleaner's bag hanging on it, and another bore a white jacket that looked to be about Billy's size.

Moving his cuffed hands together, he took the jacket down and examined it. In one pocket was a crushed cigarette pack that had obviously been through the wash a few times. The other pocket was empty. Sewn into the collar was a name tag, "Timothy Weathers."

Billy sank to the floor, the jacket in his hands. He could barely breathe, he was so shocked by what he was seeing.

William Neary was not the first: Barton had done this before. And where was Timothy Weathers now? Billy listened, as if he could somehow drag the sound of another boy's presence out of the silence of the house.

He heard something, a sort of rapid, undulating buzz. Was it a wasp, or a pipe buzzing in the wall? It took him a moment to realize that it was a voice.

Was Timothy Weathers still here after all?

Dropping the jacket to the floor, he listened. When he stepped away from the closet, he didn't hear it anymore. But if he went inside, it was louder. He pressed his ear against the wooden planks that formed the back wall.

It wasn't another kid, it was Barton. He was talking in a wheedling, pleading voice. "I'm sorry, Gina, I swear it, it was just the most devastating sickness I have ever endured. I think it was the plane." There was a silence. Billy realized that he was hearing Barton talking on the phone. Then he started again. This time his voice was edged with desperation. "Don't say that! Don't say those words! No. Come on, Gina. You know they love Uncle Squiggly. It's a big draw, you can't tell me it isn't. Look I know you can get along without me, but what am I going to do, I've got to keep body and soul together! Please, Gina, I'm begging you, if you've already got another shop assistant OK, just let me do Uncle Squiggly. That's all I need! OK, look, I'll do it for half the money! Yes, *half!* Just don't fire me, Gina, I beg you!"

There was a long silence, punctuated by bursts of sugar-coated crap from Barton. He was really laying it on.

He'd obviously left work to go out and get Billy. He hadn't thought about the consequences and now he was pleading for his job.

Billy allowed himself to hope that Timothy Weathers had gotten away. Maybe even now he was leading the police back to this place.

No. If that was true they would already be here.

The wheedling voice started up again. "Oh, thank you Gina, thank you and thank God! I'll be in right away. Fifteen minutes! OK, thanks baby! Thanks from the bottom of my heart."

The receiver clicked and Barton's voice came through much louder. "*Fuckingshitty cunt-face bitch!*" When he stopped shouting Billy could still hear his breath, long, raging, ragged gasps.

Billy drew back from the wall. The way the guy shouted went right through him every time.

For fear that Barton would burst in and find him listening, he backed out of the closet and closed the door.

By the creak of his footsteps Billy tracked Barton's movements. He came out of his room, down the hall, paused before this door. Billy literally flinched at the click of the lock. But the door didn't open. He must have just tested the lock as he went past.

Then there came the distinct sound of the garage door rolling open. A car ground to life. It took a long time to get it started. That meant the Celica.

Again Billy went to his window. He pushed his fingers through the bars, but couldn't quite reach the blinds. He needed something—like a coat hanger. An instant later he was in the closet, then back with one in his hands. He could push up the blinds just a crack, but it was enough to see Barton's Celica disappear down the steep street. When it was gone silence settled on the house.

For the first time since this awful, awful thing had happened Billy felt a little bit safe. Tears sprang into his eyes. Then waves of sheer relief poured over him. He sank down bawling loudly.

Billy was young and full of vitality. He wanted to have his life!

The truth that he had not expressed consciously before now rushed forth: 'This afternoon I fought for my life.' He didn't know how to do that! Kids shouldn't have to!

He jumped up, lifted the blind again, peered hungrily through the crack. The sky was a glaring, bronzed blue, the light very hard and white. But there was a neighborhood out there! Houses meant people, and maybe somebody would hear him, maybe somebody would finally come!

"HEY HEY HEY HEY!"

The neighborhood was totally still and quiet. From this point he could see two other houses, one of them very modern, the other older and lower, like this one. Both had flowering trees in their yards. The modern one had a blue Mercedes in the driveway.

As he watched, a cat came along the street, sniffing at things in the gutters. Leaves moved on trees, but he couldn't hear a breeze. He tapped the thick glass with the end of the coat hanger. You couldn't make much noise like this. His throat began to ache for the freedom that conceals itself everywhere, and when lost proves to be as essential as air.

For a moment he felt calm, then all of a sudden he had to try the door. He kicked it, then kicked it again. Then he stopped, feeling it more carefully.

It was made of steel. "You dirty bastard!" He threw himself against it, kicking and screaming until he was hoarse. Finally he dropped down on the mattress, which stank faintly of urine and the sweet-nasty smell of unwashed sheets like Jerry sometimes had when his mother was on strike and refused to go in his room until it was—as she put it—"scraped."

Jerry! He hadn't thought of Jerry since the disaster. With all his might he wished Jerry was here right now. He could see him, could hear him cursing over Space Harrier, "Shit, it ate my quarter. I "It's not the game's fault, Jer. Your problem is, you're totally sucky."

You love people in a lot of different ways. You couldn't hug friends like Jer, so you kicked each other around instead. The more you fought, the tighter you got. "I'm in a hell of a lot of trouble, buddy." His own voice reminded him of the way Dad sounded when he talked. He was growing up; he was a lot like Dad, too.

All at once something he had been hiding even from himself burst into consciousness. He felt awful, vomiting anger, and he shouted it all for all the world and the bars to hear: "Dad, why don't you find me! Dad, where are you!"

His voice died.

He whispered, "Where are you?"

Despite his desire to never be asleep when Barton could sneak up on him, the silence and the dimness of the room were beginning to have an effect. He was alone for the first time since Barton, and his body began to sink of its own accord into the softness of the mattress.

"Daddy," he repeated, but this time his voice was thick and slow.

Abruptly, he slept—and as abruptly awoke. He had no watch, he couldn't tell if he'd been asleep for a second or an hour. If he strained, he could hear the water dripping into the pot where the tongs soaked. What were they used for, barbecue or something? Who cooked with things like that?

Light was coming out from under the closet door, blue and baleful. The light was not normal. It seemed almost like a living thing, as if the brightness itself was full of feeling and need. It poured out into the bedroom. Billy watched, amazed. It was as if the whole moon had been stuffed into the closet.

A voice was singing,

"Where have you been, Billy boy, Billy boy,

Where have you been, charming Billy ..."

Momma's song that she sang when he was a baby! It was so good to hear, and it hurt so darn much!

Then there was a boy in the room all covered with light. He had Timothy Weathers's white jacket slung over his shoulder. His hair was as blond as the light that surrounded him.

Billy was deathly afraid of this boy and his chalk-blue eyes. He sat up in bed, horrified beyond words, as the boy's face worked.

He thought, 'I'm awake but I'm still dreaming.' He was screaming, the

boy, screaming as if in great agony. It was terrible to see, more terrible still not to hear. The boy was suffering, he was suffering horribly! Billy tried to talk but all that came out was a breathy whisper. The boy began twisting in the light, his face melting, his eyes melting and oozing down his cheeks. He was being dissolved by the sheer light, he was dying horribly and Billy could not even scream with him.

Then the closet door flew open. The light was coming out of the floor. It was open like a trapdoor. The other boy turned, still screaming, and went down.

This time Billy was really awake. He was staring at the ceiling, confused at first about where he was and what had just happened. But when he tried to touch an itch on his nose his handcuffs reminded him of everything.

He leapt up from the bed, rushed straight to the closet. He was heartbroken: his dream was wrong, there was no trapdoor. Again he went to the window. The shadows were long across the street, the cat and the Mercedes were gone. But there was a person out there. A boy! He was walking his bike up the hill, he was coming this way! The boy had black, straight hair. His bike was blue, and new. When he reached the top of the hill he wasn't fifty feet away.

Billy screamed with all his breath and it would have been a word but it was too loud, too shrill, it was just the scraped-raw sound of his pain.

Totally oblivious, the boy turned the bike around and as Billy jabbed the coat hanger into the window glass again and again—making only the slightest tapping sound—he mounted the bike and disappeared down the hill.

Away he sailed in freedom.

The glass was not only thick, it had dewdrops inside, meaning that it was double-pane as well. Billy threw down the coat hanger in bitter disgust. There was a neighborhood out there, and kids and cats and bikes and laughter and evenings in the backyard, and he was in here in

this stinking prison pretending under pain of death to love a human maggot more than he did his own precious dad and mom.

He wanted to scrunch down inside himself forever, to just twist and turn until he was nothing but a little, tiny black knot of flesh that didn't have any brain or any memories or even any eyes.

He rushed to the door. He was so frantic that sweat was breaking out all over his body. The tiny room seemed to be getting smaller by the second. The walls, the ceiling were curving in toward him; all the air was being sucked out. He couldn't breathe, he couldn't move, he was being crushed to death.

Somebody on another planet was screaming. It was kind of funny, so high-pitched. Babies cry, they don't scream. But if a baby screamed, it would sound like this. Only when Billy really listened to the funny screaming did he realize it was him.

The walls weren't closing in, the ceiling was still where it belonged. And there was somebody singing in the living room:

*"You are my sunshine,
my only sunshine,
you make me happy
when skies are gray. "*

That was a woman's voice! Billy rushed to the door. He smashed his ear against it, listened with all the concentration he could manage.

"You will never know, dear,

how much I love you.

Please don't take my sunshine away. "

It stopped, cleared its throat. This was a real woman, not the stereo. Gina, maybe it was Gina! *Oh, God, please, please, please!*

He listened, dangling as if from a thread of absolute need, as the woman moved around in the room.

Then the lock clicked, the handle of the door gleamed as it was turned.

The door came open.

A figure appeared backed by a halo of light from the setting sun. Billy stepped away, gasping, unable to speak, so glad, so glad—

"He-e-y," Barton said. He moved out of the halo of sunlight.

"It's been pretty loud in here. And here I thought you liked me." There were tears forming in the bottoms of his eyes. "I really did." He folded his arms.

Billy looked beyond him, but there was nobody else there. The woman's voice must have been just his imagination.

Barton stood with his head bowed, apparently overcome with emotion. Slowly his hands came up, covered his face. The moan that emerged from behind them was heartrending.

So Barton wanted love. That was totally disgusting. It was also sad, though, because he was so ugly and so mean and nobody could ever possibly love him even for one single second.

Billy reached out his clanking, cuffed hands.

20.

He ought to press a nice hot iron against those pretty, grasping little hands!

Then Billy moved forward into the light and Barton was struck silent by wonder.

At sunset the light shone across the living room and into this bedroom. When he came into this light Billy's beauty was such that Barton was instantly swept by a wave of regret for his anger. Billy had the softest, finest face he had ever seen. The light made his exhaustion disappear.

He'd been in there screaming, though. Like Timmy, like Jack he had been trying to make himself heard by the little Holcombe boy.

It had hurt when the others did it, but when Billy did it Barton felt betrayed to his very essence. It was as if the best part of his own soul was traitor to him.

He'd slapped Jack right across the room, and that devil Timmy, he'd had some really thorough attention paid to him, I should say!

The sunlight made Billy's skin go pink and pale white, made his hair glow as if it was precious metal, shone in his eyes like the very light of heaven.

"Billy," he said in a breaking tone. "Please, I want it to work so bad."

He lowered his eyes, unable to bear the boy's gaze. There was mischief in that face, and lies and fear and all the dark things that formed a boy. But there was also something he had never seen before. It awed him.

"Don't get steamed now, Barton, OK?"

God help him, though, the anger kept rushing into his blood, flushing him with its thrill. The rituals associated with it had enormous sexual potency. No matter Billy's beauty, he could fall victim.

The black room—

Don't even think about it!

But he wanted to think about it. Even though Billy was so beautiful and so awesome, he wanted to take him there.

Tear him apart!

Oh, yeah. People didn't realize what they were really saying when they spoke of the "pornography of evil." They thought they were expressing loathing, but those same people would gladly go to a hanging.

This peculiar pleasure was part of the ordinary state of man. The few that didn't enjoy the actual suffering of the condemned were secretly relieved by the death. To live on past the death of another was to taste the arrogance of the immortal. It was in such moments that death and sex would embrace.

During the Nazi years whores used to work the crack expresses that ran between Berlin and Warsaw. As the trains passed the fuming crematoria of Oświęcim every whore would be humping a customer.

Similarly, boys used to present their painted cheeks to the crowds as they left the Colosseum at Rome. Barton had walked those long arches, imagining the waspish cries of the boys, the distinguished grunts of their customers, the whoosh of togas stinking of semen and fuller's

earth, the clink of small coins in small hands.

Those days, when he'd gone to Italy . . . 1972. He was so young then, so afraid. He'd wandered the Roman back streets, listening to the voices, longing to join the lovely Roman gutter world. But he'd held back: his heart ached for ancient days, when Rome had been a more grand and brutal place. To shuffle through the Forum Trajani in the crowded morning, to hear the savage bellows of the crowds drifting down to the Circus Maximus or the Colosseum, to smell the sharply seasoned foods cooking in the stalls, to kiss Roman skin and feel the brute pressure of Roman love . . . he'd wandered past coffee bars and restaurants and fruit sellers in an anguish of desire.

He'd always ended up in those days by finding a woman. He loved the sodden smells of the body—waste and sweat and rancid, unwashed skin. It was delicious to kiss an ashen mouth, to be attached by its sucking passion, all the while quivering inside with delectable loathing.

Billy stood now with a subtle pout on his face. Since they had not been grasped as he had hoped, his cuffed hands had been lowered. Barton just could not believe that a human being could be this exquisite. It wasn't possible for him to resist this magnificent boy. He'd been tempted—it was too horrible to imagine.

"Billy!" He threw himself at the boy, scooped him up in his arms, suddenly, helplessly showering him with kisses. He shouldn't, it wasn't right, but he just couldn't help it.

"Oh," Billy said, leaning back away from the embrace. Just "Oh," a little surprise, no more. In the holy body Barton thought he detected a relaxation that suggested acceptance, even—dare he hope—enjoyment. There had been that first second of surprised resistance, but now he was relaxing into the hug. Billy liked to be held.

Barton came looming down on him, a bloated, black shadow swooping

out of the sunlit living room. Roughly he grabbed, pawed. Then he kissed and when his lips touched Billy's cheek it was like wet, horrible fire. 'This is it,' Billy thought, and he felt a sudden burst of rage against his father: *Why don't you find me, Dad, what's the matter with you!*

Inside himself Barton said, slow, slow, careful, careful. He did not like the stirring within him, it wasn't moral, it wasn't healthy, above all it was not normal.

He was normal! For God's sake, loneliness was a normal emotion. He had misplaced his own childhood. . . . From his diary when he was nine: "My hated woman parent sent me upstairs ... my hated male parent decides tonight if I am to go to boarding school. . . ." Like dying, like dying, the gleam of crossed guns on your collar tabs, the stink of Brasso, his dreadful uniform, the white duck trousers and sky-bluejacket, and combing the ruff of your helmet just so . . .

Oh, he was *holding* dear little Billy and Billy was not resisting, no sir, he was just leaning up against his new dad.

They say that the child is condemned to repeat the mistakes of the parents . . . and to some extent that was true.

As far as Barton Royal was concerned, though, the mistakes had just stopped. Here and now, this instant! 'I'll never lay a hand on you, Billy.' He held him back to arm's length, held him by the shoulder, and the tinkle of the chain between his handcuffs sounded as loud as a shattering window. "You know, I've been thinking. I wonder if you would like to call yourself Billy Royal? William Royal." He cocked his head, winked. "Don't you think it's grand?"

Billy had forced himself to relax into the iron embrace, to feel the rattle of the heart and the quaking of the hands as they swept his back. His single concern was that Barton not fly into a rage because of his attempt to attract attention. He'd thought Barton was still gone. The man was by habit extremely quiet.

Over Barton's shoulder he could see the thick rope lying on the coffee

table. Afternoon light bathed it in a kind of unholy glory. It was like a sleeping snake ... or maybe not sleeping.

Plans raced through Barton's mind. "Look, we need to unpack you. We haven't even done that yet. And then your dad has a beautiful dinner for you. I'm going to cook it myself. I went to the store and got some very nice things. Very nice. Oh!" He broke away, swept out to the kitchen, opened and closed the refrigerator, returned with a huge Butterfinger in his hand.

"As luck would have it, there's free extra candy," he said. "That's why it's so big." He held it out. Would Billy like it? Would he take it? This part was a little like taming an animal. Oh, nonsense, what a thought! This boy was angelic!

Billy held out his hands. Barton was surprised at how hard his own heart was beating. It sounded positively mechanical. When it crossed his mind that men his age did in fact have heart attacks a complex welter of thoughts and feelings tried to surface. He didn't want to die, except sometimes when he couldn't sleep at night and he had to face the fact that his needs were sick and ugly, and so unique that there would probably never be a cure.

Billy was holding the candy in his two hands. "Do you want me to eat this?"

"Do I want—oh, please! I don't want What I want is, if you *would like* to eat it. OK?"

He tried to tear the wrapper. "I can't—" The candy was too big, his hands too close together. He couldn't open it without breaking the bar in half.

The handcuffs were certainly an aesthetic disaster. They intruded into even the tenderest moments, and it was an ugly intrusion.

Would he try to escape? Barton thought about it, but only for a moment: he decided that he didn't want to find out. No matter how

tame, you must not be tempted to bring an undipped bird out of its cage. Los Angeles was full of parrots and parakeets that people had thought were tame.

"Here, I'll open it for you." He took the fat candy bar and tore away some of the paper. When he gave it back, Billy took a big bite. As he chewed he smiled up at Barton.

"May I?" Barton asked. Billy handed him the candy and he bit some off himself—not much! Where Billy had bitten he saw that the chocolate surface was slick with spittle. To take that into his mouth was like communing with Lord Jesus himself. He did it with reverence.

He was careful to bite just with his teeth; he assumed that Billy would be offended if he left any of his own spittle on the bar.

The taste of a Butterfinger, the smell of it, brought back so much home that Billy wanted more than anything to wither up and disappear. Two summers ago he'd been homesick at camp, but it was nothing compared to this. That had been a rich, poignant feeling made almost beautiful by sunset and the singing of the kids. "Yes, sir, that's my baby. No, sir, I don't mean maybe." And, "Mah dear old Swanee . . ." from Mr. Lockyear, which was so funny they all practically died. The sun set across Lake Williams and the campfire flared . . . they had toasted marshmallows and drunk bug juice which was really just cherry Kool-Aid, and Mom and Dad and Sally had moved like ghosts through his mind.

In the simple, ordinary flavor of the candy he tasted home. He wanted Mom to be saying, "I hate junk food," and Sally to be complaining that he'd stolen hers as well as eaten his own when all the time the thief was really Dad.

The last time he'd eaten a Butterfinger was the night Barton came. He'd been working on his birdsong.

Billy chewed with great deliberation. He had to swallow this and keep it down. C'mon, guy, give him a big smile!

Billy was enjoying it, he was relishing it! Barton was an excellent judge of character, all the mummies said so after Uncle Squiggly shows. This little boy was being won over, he was sure of it. He was being seduced. Yes, and wasn't that a beautiful thing?

Barton had dreams, and he loved smooth skin, but he would never—oh, absolutely not! No. Who was it who had claimed that there can be no crime in the mind? "That which remains within is sanctified by the silence that contains it." Walter Pater? No, too modern for him. R. D. Laing, perhaps. He suspected that a lot of fathers, seeing the glorious beauty of their sons and their sons' friends ached to make the leap of Plato's *Symposium*.

You didn't, though. In Plato's time a man who loved a boy risked only the outrage of the father. And with good reason—it was ugly, it was vile, it was just plain wrong.

Because the poor boy, if he liked it, then for the rest of his life would never be sure of his own sexuality. He would be cursed with desires he could not accept. Sex would be permanently out of focus.

Barton knew all too well.

It's a big, dark shadow and it's moving fast — it's Dad! His embrace was so soft, so insistent . . . and his touch—his touch —

It never happened! Never! Never!

He was only worried about it a little, that was all. Dad was a fine man, so gentle that Mom had to do all the punishing.

"Aren't we going to have supper soon?"

Barton had been a thousand miles away. "What?"

"If we are, I don't want to finish the candy."

"Oh, yes! Sweets before supper are a no-no. I remember that Timmy —"

"Timmy?"

The question had an edge to it. For a disquieting instant Barton thought that Billy might know something about Timmy. But no, that was just his natural suspicion. He'd even been a suspicious child. Mother had always commented on it.

"He's my nephew. When he stays with me he waits until supper's cooking, then he comes out and inventories the contents of the pots and pans. If he doesn't like what's being prepared, he'll go to his room and load up on Hershey's Kisses. I have to virtually smell them out if I want to get rid of them. He even hid some in the light fixture, once."

"He stays with you?"

"Occasionally."

"How old is he?"

"He's about your age."

Billy was keeping him talking partly because he hated the idea of any more hugging. But there was also another reason. Barton had mentioned unpacking him and he did not want to face all the reminders of home.

He could not allow Barton to see what was really going on in his mind.

With careful intention he turned his mind away from unpacking and toward Timmy Weathers. There might be something to be learned here. He watched Barton for some sign.

If he could learn the fate of Timmy Weathers, he would probably know his own.

Like hell Timmy was Barton's nephew. Barton was such a fabulous liar, it was awesome. But you could still read him, kind of.

He remembered the face of the Timmy Weathers in his dream. It wasn't true that he didn't know what Barton had done to Timmy. He knew exactly what Barton had done.

Barton really had to organize himself; he just wasn't getting things together for his boy. Boys need their fathers to be reliable so that they'll grow up confident, and take a good example with them into adulthood.

He had to get Billy's things, which were still in the Aerostar. He didn't want the boy to see the inside of the van again, but he also didn't want to leave him alone in the house. Neither did he wish to lock Billy in his room just for the three minutes it would take. That would imply such an utter lack of trust. Of course, there was an utter lack of trust—but Barton kept hoping that it was only temporary.

The will to escape could be broken. Barton could enact the beautiful life he had originally envisioned. He would introduce Billy to the finer things, would teach him literature and indulge his nascent appreciation of good music and the arts. He would cause this brilliant creature to blossom as never before. As that happened Billy would gradually lose interest in escape. In the end he would come to value his new father.

'I'll be loved,' Barton thought. What an odd notion.

He solved the problem of the bags as best he could. "Come on, Billy, we've got to get your things." They went together to the garage. As he expected, Billy became silent when he saw the van. Barton stood him in the doorway of the garage, beside the Celica. He crossed the

concrete floor with its cracks and oil spots, and slid open the van door.

It smelled of bodies and excrement and fear. He'd have to wash it soon, which was inconvenient because it would have to be taken into the driveway. He considered it dangerous to show the Aerostar too soon after a hit.

Barton knew all about incident reports, and there had been at least one and possibly two incidents on the road. The first had been the matter of the missing plate renewal sticker. Then there was the confrontation in Denver. That could easily have led to a delayed police report. For God's sake, Billy's screams would have kept any normal human being awake nights. When they sobered up, those people might well have called the cops.

The likelihood was small in either case that a description of the Aerostar had ended up in police files, but you could not be too careful.

He gathered up the heap of clothes that had come out of the duffel and stuffed them back.

"Now we'll organize your closet and dresser. You'll be all moved in."

Billy accompanied him like a robot, his movements stiff and controlled. He did not speak.

Somehow Billy had to keep going. Just glimpsing his clothes as Barton put them in his duffel had been hard. Now he would have to sort through them.

Dad!

They left the dim, stuffy garage and moved through the gray little house to Billy's dismal room. Didn't Barton realize how incredibly dingy and depressing this place was? Maybe he really believed it was a mansion. He could, he was that nutso.

Billy stood beside him as he dropped the duffel onto the mattress. The room was furnished with a pine dresser that Billy already knew was empty, that and the closet with Timmy's jacket in it.

Barton opened the closet door. If he saw Timmy's jacket on the floor he showed no interest.

They went through Billy's things together. "Oh, this is cute," Barton announced as he pulled out a red hockey shirt with white sleeves. "I think you're kind of fashionable after all."

On the road Barton had said the opposite. He was going to furnish Billy with a whole new wardrobe. But, of course, he was totally too poor. So now Billy's clothes became "fashionable."

Two hockey pullovers, three knits and Billy's one dress shirt comprised all the shirts Barton had brought. Then there were shorts and jeans. Also the shorts he was wearing and his now filthy Kafka T-shirt.

There were no shoes, and Billy decided that this had been intentional. If he made a run for it, Barton naturally wanted him to be as slow as possible.

He was surprised that thinking about his clothes made him more homesick than handling them. He put them away, then sat down on the mattress.

"I'll fix supper," Barton said. "It's going to be quite pleasant, I think!" He left the room, locking the door behind him.

Billy saw at once that Timmy's jacket was gone. This was very curious, since Barton's hands had been empty when he left.

Barton set about the preparation of a lovely meal. Mother had let him have some of the "Blue Towers" china and he set the table with it. Every single dish he'd been given was chipped, but a little boy wouldn't notice that.

When the setting was complete it looked more than a little impressive: the handsome plates, two long-stemmed wineglasses, all of it over a nice piece of linen that you could hardly tell was a bed sheet.

Barton took out his groceries and set about their preparation. He'd cheated a bit, but Billy was probably too hungry to notice. Everything could be microwaved, even the cherry pie.

"Whistle while you work," he sang. He didn't know the rest of the words, so he simply repeated the phrase again and again, in an undertone as rapid as his movements. "Whistle while you work! Whistle while you work!"

The meal was coming together nicely.

Billy had been examining the closet for some moments. There had to be an explanation for the disappearance of the jacket. The ceiling was intact, just ordinary Sheetrock. Besides, Barton wasn't tall enough to get anything up that high, even if there had been a hatch into an attic.

Now he turned his attention to the floor. He'd always loved secret passages. There was a period when he wanted to be a professional secret passage designer when he grew up.

"William Neary, Ph.D. Secret Passages Designed and Constructed." Despite his excellent plans, nothing could ever induce Dad to install his designs in any of the houses they'd lived in. "I don't need anything that turns the shower stall into an elevator." That had been his final word on the last one.

The back of the floor was built up and slanted forward. A one-by-one strip along its middle indicated that it was intended to hold shoes. The strip would hook the heels. Their house in New Jersey had a similar arrangement in the master bedroom. Billy had once tied string to all of

Mother's and Dad's shoes, and run it through a small hole drilled into the attic, and down to a similar hole in his own bedroom. When his parents were peacefully reading in bed he pulled the string and all of their shoes suddenly shot out of the closet.

Dad had theorized about what he called a "microquake." Later he'd heard his father at a party: "One night all of our shoes came jumping out of the closet." In the silence that followed this remark, he had laughed nervously. "It was a mini-earthquake," he'd added lamely. He'd never brought the matter up again.

Billy tapped the floor. Hollow. He pressed against it in various places, trying to see if there was any give. Then he noticed that the line between the board that held the shoes and the one on which it rested was slightly irregular. This gave him an idea. Sure enough, when he pushed, the board lifted easily. But he did not find a small storage space with a jacket in it. Instead, there was blackness and depth. A musty, greasy stench came from the opening.

He peered down into what could be darkness without end. He thought to himself: *It's hell.*

21.

Even setting, the sun of the West was brutal. As Mark drove it beat him in the face; it was a harder sun than he had ever known back East.

He was traveling his son's path down Interstate 15 in the little Plymouth he'd rented for twenty-five dollars a day after landing at McCarran Airport in Las Vegas. His plane had landed at seven, two hours late. It was already eight-fifteen. He was trying to get to Estes where Billy had made the call by eight-thirty.

He wanted to be there when his son had been there, to see what he'd seen, to hear the sounds of the place, to walk and think and breathe there. Above all, he wanted to ask questions there, and at that time. No doubt this wasn't a professional investigative technique, but it seemed sensible to him.

He knew he was chasing a shadow. Billy was gone. The time of day didn't matter anymore.

When the road rose to the summit of one of the long hills it was crossing, he could see an ocean of lights in the rearview mirror. Soon though, they were swallowed in the dark eastern sky.

That had been Las Vegas. Billy's plight seemed so enormous to him it was difficult to believe that the lights were not dimmed and the voices

of laughter subdued. A child was being carried to destruction, but only one soul trailed along behind.

The road spun endlessly past, and his mind went over and over his small resources. He had little money. It had cost him the fantastic sum of four hundred and eighty-three dollars to fly to Las Vegas. That would take care of most of the Searchers' check right there.

You couldn't make two thousand dollars go very far. And people spent hundreds of thousands on their searches, offered rewards in the six figures, expended years, created foundations, hired publicists.

Xerox Express in Stevensville had made up their five hundred posters for the cost of the paper. On the road he would eat one meal a day and sleep in the car. His present salary was twenty-two thousand dollars a year, and there was nothing in the budget for an extended leave of absence.

If he didn't find Billy soon, he was going to have to bear the pain of standing in front of classrooms full of kids who knew him, lecturing on the Battle of Chickamauga and the Teapot Dome Scandal. He could hardly conceive of anything more excruciating.

He drove toward his destination with one critical resource: he loved his lost son with the passion of the damned. This pallid, staring, gaunt man just wasn't going to stop.

Driving along in his shabby slacks and shirt, a plastic shield protecting his pocket from his pens, he was alert to possibilities. Billy was alive. A few hours ago he'd been right here, looking at this very sunset at this very hour.

Mark had sat in the plane listening to the whoosh of the engines, drinking the coffee they gave him, eating the bread-sticks and processed cheese while reading *Techniques of Investigation*.

He felt comfortable with the methods suggested by the book. Crime and history were strikingly similar, and so were the techniques of

discovery. You had to be relentless and logical. Both the historical event and the crime were generally brutal and stupid, and both obscured by shabby camouflage.

Suddenly he realized that he was passing a small town. A water tower stood black against the orange horizon, a McDonald's flooded the highway with curiously pure light. A couple of gas stations stood at the roadside, then there was a big truck stop, its lot choked with eighteen-wheelers. He noted all of these places for tomorrow's postering effort.

He was supposed to go straight to the sheriff's office when he reached Estes, but because of the time he had changed his plan and headed for the Mobil station instead.

Now that the sun had set the highway had become a black strip disappearing into the purple distance.

God help my son.

It was still ten miles away when he saw the first, faint indication of the station. About here the abductor must have glanced at his gas gauge, seen it was standing on empty. As he drew closer the familiar Mobil logo came into clearer focus.

The station itself was a pool of light in the large darkness of the desert. There were two cars at the pumps when Mark pulled up, a Pontiac and an elderly BMW with its sun roof open. Around the side of the station there was a dun Plymouth Duster, probably the attendant's transportation.

Mark saw him standing behind the register, taking money from a customer. He was wearing a coverall uniform. His face was long and solemn, and he wore a pair of aluminum-framed glasses. He was an old man.

Just beyond the station was a bank of telephones. They stood a little apart, and the light around them was dim.

With exaggerated care Mark pulled his car to a stop beside the Duster. Would the attendant be helpful? Cold? How did he explain himself? What did he say? He got out and started toward the station. There was a customer there, and Mark was too polite to interrupt. He used the time to examine the telephones. One after another he read the numbers on the dials.

It was the third one from the end. He had held this exact telephone in his hand, had pressed that "o," had spoken into this mouthpiece. Mark held the phone, too. He put it to his ear, listening to the wavering dial tone. The phone was covered with a faint film of graphite dust in which numerous fingerprints could be seen. Mark could have wept; the police were still working the case.

Until this moment he hadn't realized that coming here would be painful in the same way that visiting a grave is painful. He could smell and taste his son, could hear his voice, could almost see him standing here. He looked down and was appalled to observe the clear print of naked toes in the dust. Billy had been taken from the house without shoes.

Mark bent down. They were small enough to be a boy's prints. He could be looking at a mark left by his own son. He wondered if the police had noticed these prints. And then he thought, so what? They already knew Billy had been at this phone. The footprints were a poignant hint, nothing more.

"I figure you for the father."

The voice startled Mark. He looked up into the face of the attendant. Mark got to his feet. "Yeah. I don't want to disturb you while you're working—"

"Oh, come on. Come up to the station, I'll tell you everything I can."

Walking beside the man, Mark felt a sense of reassurance. "You have kids?"

"Four kids and eight grandkids."

"Wow."

The man chuckled. They entered the station. "I just sit in here makin' change mostly. Welcome a little talk. Especially if it can do some good."

"First, let me put up one of my posters."

"I'll do it. 'Course, I don't know company policy. Only the owner knows that and he's not around here except on Tuesdays. He'll take it down, for all I know."

Feeling enormously reassured, Mark went back to the car and got three posters.

"Gimme 'em," the man said. "Hm. Same picture the sheriff has. I just got a glimpse, but I saw your boy. William Neary. That your name, too?"

"No, excuse me, I should have introduced myself. I'm Mark Neary."

The attendant, whose coverall said "George," opened the battered steel desk that held the cash register and took out a big felt-tipped pen. "I think this'll be a good idea, Mark," he said. On the poster he wrote, "Seen at this station getting in a white Ford Aerostar at 8:40 p.m., August 17, 1989." He underlined the first four words a number of times. Then he looked up at Mark. Quite suddenly, he smiled. "I'm George Yost." He took the poster and Scotch-taped it into the window. "You want the whole story, I guess."

"If you can, I sure would like it."

"I told the sheriff and the state police."

"Still—"

"You don't have to explain." He put a hard hand down on Mark's

shoulder. There was nothing Mark could do but lower his eyes. His emotions were in an uproar. It seemed the greatest blessing in the world that this man was being kind. "I was out working on a lube job we'd got in that afternoon. Lube and oil change and check the brakes." He paused, picked up a coffee mug captioned "Maximum Leader," gestured with it.

"No thanks."

"I know, eats your stomach lining. Well, it's my poison of choice since I stopped smoking." He poured a mugful from a deadly looking pot that sat on an automatic hotplate at the edge of the desk. "So I came out of the lube hole and there was this Aerostar sitting there. Big deal, guy's filling up. He's on the far side and I can't see him. Hell, I don't but glance at the van. Why look at it? The state police brought an Aerostar in here and took measurements and figured out that the man is no taller than five foot ten. Based on I couldn't see the top of his head across the roof of the van." He blinked, seemingly amazed at this deduction. "So then all of a sudden I notice this boy. He is going back to the van from the phones. He's noticeable, first because he's hunched, like, and running like he was scared half to death. Second, I can just see the front of his shirt and it seems to me that it's covered with blood." At those words the world receded to a bright dot at the end of a long tunnel. To cover his shock, Mark went for the coffee. His hands shook so much he had to concentrate on every detail of getting a mug, grasping the pot, pouring. "You told the police this?"

George nodded. He must have perceived that Mark was hearing it for the first time, because his voice became very soft. "I thought to myself, how does that guy feel—meanin' you— when the cops told me you were on your way. I just wish to God I could say somethin' more about your boy."

Mark gulped down hot coffee and poured himself more. His overwhelming urge was to jump in his car and give chase. For an insane moment he contemplated trying to catch the Aerostar.

"I noticed one other thing. When they were pulling out, I got that it

was a Utah plate. Normally I never see a plate. But that boy, runnin' like that, and the blood—you know. Don't ask about numbers. I don't remember, except a '3.' "

He took a deep breath, let it out slowly. "I've tried to remember more. There's only one thing I wonder about: Why didn't Billy just come in here? Why didn't he come to me? I woulda helped him."

Mark had heard stories of children being won over by their abductors, or terrified into compliance. But if that had happened, he obviously wouldn't even have made the phone call. "I suspect that the abductor was armed. If my boy had gone to you for help, he risked getting you killed. Knowing Billy, he wouldn't have taken a risk like that with somebody else's life."

"A little boy who thinks like that?"

"Admittedly I might be crediting him with too much insight. You want to believe your kid can handle himself. But Billy is very bright."

"My youngest is at Stanford. Full scholarship. First Yost to go to college in a long time. My great-granddad went, so they say."

"Stanford's a fine school."

"Gonna go for a law degree. That's the way to make money these days. Them lawyers . . . you see the Mercedes, the Jag, the big Lincoln—odds on, you're lookin' at a lawyer's car. And if there's a chauffeur, then you're plumb certain."

"Did you see the man who had Billy?"

"Glimpsed. A long glimpse, though. I'd recognize him by his profile. He had a sort of blunt face. The police are going to do an IdentiKit job Saturday morning. They're takin' me up to Las Vegas for it. What they do is, get a guy to put together the profile from my description, then they use a computer to turn it into a front view. Hell of a thing."

Mark wanted to ask if the man had looked cruel or crazy, but he didn't know how to phrase the question. "Did he seem—"

"He was just normal. Dark, curly hair."

"Like me?"

"Nah. *Really* curly. He had a pug nose, and I remember his skin seemed really smooth. It was kind of sickly looking, too. 'Course people all look like Count Dracula under these sodium lights they got here."

Mark feared that he was finally getting at the truth. "Is that how he looked—like a vampire? A monster?" Inside himself he asked the real question: 'Was he the kind of man who would not only wound but kill? Please, tell me.' Tell me why my boy was covered with blood!

"He was just a guy in a car. Like I say, I wouldn't have noticed, it hadn't been for that blood on your little fella's chest."

Walter Toddcaster was not waiting for calls. He never waited for calls. What he was doing when the call came was reading a follow report on a young man who was almost certainly dealing crack behind the Studer Theatre. They were about ready to make him and send him to boarding school for a couple of years.

He picked up his phone on the second ring. "Yeah?"

"Detective Toddcaster?" A young male voice, with the pasteurized tone that said trooper.

"This is Officer Torrence of the State Police. I'm calling in reference to your inquiry about incident reports on a white Ford Aerostar."

"Yes?"

"We had one stopped and warned last Monday at eleven-fifteen a.m.

on IH 80 outside of Neola. Failure to display the proper renewal sticker on a license plate. The license number was Utah 1-C32A. It was registered to a Utah resident named Barton Samuel Royal. The town of registration is Salt Lake. We have an address."

"Jesus."

"Problem is, the address is a mail drop. The driver was carrying a California license, no notations and no record kept."

"This is gold, Officer Torrence."

"Yes, sir."

When Torrence hung up Walter just sat there for a moment. Neola was about forty miles from Council Bluffs. Billy's abductor could have easily made it that far on Monday morning. They had a possible make working here.

He went into the ready room and pulled down a tattered Rand McNally Road Atlas. A few measurements with a ruler told him that the position was time-consistent with the later sighting in Nevada as well.

Walt picked up the phone and called the California Department of Motor Vehicles. They wanted his request on letterhead, but would respond immediately if he faxed it to them.

Half an hour later he was looking at the driving record of Barton Royal. The man had an address in Sacramento. There was only one problem. According to the report, Royal had deceased on October 12, 1985. The bastard had managed to pull himself out of the records.

There were moments when a man wanted to kill. Walter Toddcaster had one of those moments.

Estes was profoundly rural: Las Vegas very definitely did not extend

this far west. Mark had come forty-five miles and he was in a place of an entirely different order. The moment he turned off the interstate he was in America's past, a world of dusty pickups and feed stores.

The sheriff's office was constructed of tan brick. It was a small building on the main street, newer than most. "Amon County Sheriff's Department, Estes Substation." Mark went in. He knew who he was supposed to meet: Deputy Richards. As it turned out, the only person present was Deputy Richards, who could not have been more than twenty-five. As Mark entered, he unfolded from his chair.

"I'm Mark Neary. I've just been out to the Mobil station."

"George is a good guy. He's been pumpin' gas in this town ever since I can remember. I don't know why he does it. He owns three stations. He could afford to drive a Cadillac, I guess."

"He said he was just the attendant."

"That's George. He tell you what you want to know?"

"No, he didn't tell me where my boy was." But he had taken three posters, Mark remembered. And now he knew why: he owned three stations.

"That's the sixty-four-dollar question. We've got the idea that the guy was going to California. This isn't exactly a deduction. Fifteen is the road to L.A. We've made inquiries at all the gas stations from here to the border, and we sent a request to the California State Police that they do the same. But that's a hell of a lot of stations. They'll get it done, though. They'll take your kid's picture with them."

They were trying, and they were trying hard. The trouble was the damned statistics. Kids just don't make it out of the kind of predicament Billy was in.

Barton Royal. Toddcaster wished it rang some sort of bell. He looked at the driver's license photograph, distorted as it was by the fax. Was this the same man who'd been driving the Aerostar?

That he could find out. He would ask California to send a better print to Nevada where they had that witness. The guy was scheduled to do an IdentiKit on Saturday morning, so he must have gotten a pretty good look at the man.

Then he made another call, this time to the Nevada State Police Division of Investigation. As he talked with Lieutenant Davis he faxed the California report through. They would both call Sacramento and get sharper pictures.

Toddcaster knew exactly what he was going to do with his: he'd have it shown to Billy's friends, then walked to every place the child had been on Saturday. If the face was Barton Royal's, and Barton Royal was the man carrying the license, they would get a positive from somebody.

His guess was that little Jerry Edwards would make the identification. It was highly likely that the man who had played RPM with Billy was Royal.

Deceased October 12, 1985.

It might just be possible to convince the state you were dead, if you knew what you were doing. He thought about it. You'd have to stop using your own name. And yet Royal had pulled out this license.

So he'd killed himself off and now had another identity. He'd have been scared to death when he was stopped by the Iowa State Police. So he used the Royal license, knowing that it would lead to this dead end.

The man was smart. In more ways than one, that was bad news. The smarter the crazy, the meaner. Toddcaster's Law.

At eleven p.m. Mark's phone rang, drawing him out of heavy, exhausted sleep. It was Toddcaster. "How'd you find me?"

"I'm a detective. Listen, we might have made the abductor. He might be a man named Barton Royal, carrying a California driver's license, driving an Aerostar with a Utah plate that we have also made. There are a few details to clear up. But we have a picture. I want you to look at it."

"You want me to come back?"

"Nah, the Nevada State Police have a copy. You be at that IdentiKit session tomorrow morning. You look at the picture."

"But I never saw the guy."

"You don't know that. Just look at the picture. We're gonna have every kid Billy was with that day look at it. We're gonna shop it at random around the mall and at the Burger King and see if we can't hit paydirt."

"What about Mary?"

"I haven't told her yet. I was saving that for you."

To save money Mark and Mary had decided to limit their communications except in emergencies.

She answered on the first ring, her voice singing with tension. When Mark gave her the news she cried silently. "I wish we could hold each other."

"Me too, darling."

"I have hope, Mark. Is that a mistake? I'm so afraid it is."

How could he answer? There was no reason to remind her of the statistics. She knew the statistics. "It's never a mistake to hope," he said. It sounded lame. He longed to tell her about the blood, but he forced himself to keep silent.

A moment later they had said goodbye. He was alone again. He wanted desperately to sleep, but there was no way he was going to wait until morning to look at the picture. He was going into Las Vegas right now. What if he had seen the man, what if his identification was critical?

Mark got back into his car and drove off. Now he would see the glaring lights, the city of electric pleasure. But he wouldn't participate, not the exhausted man in the gray car, looking for State Police Headquarters.

They'd told him it would be easy to find: no neon.

22.

Because things were getting a little bit normal Billy wanted to curl up into a ball and disappear.

Barton was dancing around the kitchen as he prepared supper, with Billy standing in the door watching. He swept across the small space and kissed him on the top of the head. "How about giving a helping hand, son? We're both going to enjoy it, after all."

Billy did what he was told. At home he could conceivably enjoy helping. He had learned to cook steak like his dad did, and his dad was an expert. The only kitchen stuff that disgusted him at home were chewed gristle on the edge of plates and sinks full of goopy water.

Even though it was slightly cleaner than it had been at first, this whole kitchen totally disgusted him. At least the big pot with the tongs and the floating bits was gone, and the dirty dishes had been put in the dishwasher.

"You'll be amazed at what I can do with chicken nuggets," Barton announced, pulling a box out of his grocery bag. "Incredible things, my boy."

Billy still hoped, however forlornly, for the police to show up in response to his call to the operator. That had been so scary and so hard. He was pretty sure, though, that they were never coming.

Damn them! Why didn't anybody want to help him, anyway? The police were just as dumb as the people in the car when they had the wreck. Nobody cared.

He told God that he would gladly go to hell if only he didn't have to stay here.

"What you have to do, dearest, is just take this knife like this and—see?" With a butter knife he pried one of the chicken nuggets out of the frozen lump.

Clumsily, Billy took the knife with his cuffed hands.

"If you weren't such an escape artist we wouldn't have to use those things." Barton spoke in the happy-scolly singsong Billy's math teacher used when the class was loud.

"I'm sorry." As he worked separating the nuggets with the dull knife he decided that the only hope he had left was to somehow call home. Fat chance he'd ever get into Barton's bedroom on his own.

Barton ruffled his hair. "Very nicely done," he said, collecting the pile of chicken. He was happy with Billy now, but what about the way he'd smiled when he held that rope? Barton enjoyed the bad stuff, too.

Just as the jacket had disappeared from the floor of the closet, the rope had disappeared from the coffee table. But they both still existed, and Billy knew exactly where they were: under the house, in the blackness he'd glimpsed when he opened the trap in the closet.

"This is going to be delish! I'm telling you Billy boy, when your dad gets into a kitchen, wonderful things happen!"

What kind of a fool goes to all this trouble with frozen chicken nuggets? All you had to do was heat them in the microwave, it said so right on the box.

Barton tossed the nuggets into an ancient food processor with

chopped celery, a can of mushrooms and a can of pearl onions. Then he turned it on, using Half & Half to liquefy the mess. The nuggets danced and rattled. Soon the whole thing was a sort of gray-green slop.

What did he think he was doing? He opened the food processor and tasted the unbelievably gucky ik inside with a wooden spoon. "Mmm!"

"Smells really good, Barton."

"Taste?"

Billy lifted his lips, showed his teeth. Did it look like a smile? He hoped it did. He tried to sound all happy: "I want to wait till after it's cooked. I want to be surprised!"

Barton thrust the spoon into his face. It took iron discipline for Billy to touch his lips to the stuff. It didn't actually taste horrible. It was kind of bland. But it sure did look like upchuck. "Good," he mumbled.

He watched Barton's back as he poured the slops into a skillet full of hot olive oil. There was a lot of steam. Barton giggled as it wreathed his face. Billy thought he'd better laugh, too. The snicker he managed was sharp and ugly, and Barton half-turned, a question in his face. When he saw Billy's smile, though, he relaxed and went back to his cooking.

The knife was still in Billy's hands. He could easily plunge it into Barton's back—if only it wasn't a butter knife. The most he would manage was to make Barton mad again.

Even though it wasn't cold he started to shiver. The air touching his skin had a deadness in it, the deadness of Barton. Barton was drinking wine from a huge glass as he sailed around in the stinking smoke from the stove. When he kissed his forehead again Billy smelled a gust of his breath, which was so strong it overpowered even the smell of the cooking. Nothing in his experience had ever smelled like that. It might have been an exhalation from the grave. Billy had to suck in his gut to overcome the flutters in his stomach. Mom always said rotting teeth

gave you bad breath. But Barton smelled like he was drinking acetone nail polish remover like you used to clean off instant-bonding glue.

"Do you know how to use a grater?"

"Sure."

"You were a real helper at home, weren't you?"

Billy saw a chance to help himself. "I am at home, Barton."

Barton's smile was so big it was painful to see. "Yes," he said, "yes, indeed." He held out some carrots. "Can you grate these, please, son?"

"Sure." He ought to say "dad" but it was too much, he couldn't do it.

Carrot salad. Sally always claimed the raisins in it looked like roaches. With this guy they would probably be roaches.

As Billy grated he thought about how to find out more from Barton. If he was going to call home, he had to be able to tell them where he was. He didn't even know the address, except that it was Beverly Hills. Or rather, probably Beverly Hills. That was the only "Hills" he knew about in Los Angeles.

He did not know how to question people, especially not people who didn't want to answer the questions. Presumably you did it like the cops on TV, or like the Gestapo with a big light in their face.

"What's your favorite movie, Barton?"

Barton became suddenly very still. "*Cabaret*," he said in a suspicious voice.

"I didn't see it. Where'd you go to college?"

"I was too free a spirit for that, I'm afraid. I spent a year in Europe. Mostly I lived in Rome. I love Rome."

"The Vatican is in Rome."

"I lived in a little pensione behind the Pantheon. I used to go inside it all the time, just to walk those floors, smell the air, enjoy the magnificence."

"I know the names of all twelve Caesars. Dad and Mom have the *Satyricon*."

"God, I loved the *Satyricon*!"

"Which translation did you read?"

"It's a movie, son. Brilliant!"

"So you went from Rome to Beverly Hills?"

"The Hollywood Hills, please."

Oh, wow, this was neat! This was really *very* neat! What a wild technique! It was like spies would really do and he'd thought it up all by himself.

"Now, my dear, *we eat!*"

Billy tried to pretend that munchkins were inside his stomach lining it with steel. It didn't work very well. If he vomited, Barton was sure to get crazy. But the flutters had turned to nausea. He sweated, struggling to contain himself.

"You look worried. Are you a finicky eater? I wanted to be one, but that just was not allowed in the Royal household. If you don't eat what's on your plate, you can *just starve!* No, just kidding. I'll go out and get you a pizza if this doesn't do it for you. There's a lovely pizza place down on Sunset, it's quite pleasant. Do you like pizza?"

So they were near a street called Sunset. Duly noted. "I can eat it." Dealing with Barton was like walking on spring ice. If you kept your balance, OK. But if you fell you broke through and that was that.

" 'I can eat it.' That's what I call *enthusiasm!* What's the matter, do I have BO? You keep pulling back when I get near you. Do you realize that?" He gave an annoyed sigh. "I want us to *like* each other. And I think we can. Yes, in time. Now sit down and we'll eat. This is called skillet chicken, it's an old family favorite of the Royals."

The fried slops looked like a giant scab and smelled like a cigar butt.

The carrot salad was just carrots and mayonnaise. He'd forgotten the raisins completely and the mayo was sour.

To drink there was something called Valpolicella, a wine in a bottle with a basket around it. Billy had never tasted wine and didn't particularly want to start. Like Barton's, though, his wineglass was huge. Where had he gotten these bathtubs— from a clown supply store?

Billy watched miserably as Barton cut off a slice of the chicken scab and slid it onto his plate. It was followed by a gob of carrot salad delivered via ice-cream scoop. Then came the wine, sluicing into the glass with sickening gurgles.

The meal proceeded. Barton "oohed" and "ahhed" with every bite, closing his eyes to concentrate on the incredible deliciousness of the flavors. Billy found that the fried slops turned to mush in his mouth. He put them as far back on his tongue as he could and swallowed each bite hard. The only way to cut the flavor was with the wine, which tasted like turpentine. Billy decided that he would rather lick the floor of the latrine at camp than eat this meal.

Thinking about licking latrine floors would do nothing to lessen his nausea. He was not a master upchucker like Joey Mox who could projectile-vomit on demand, but he was capable of making himself pretty sick when he wanted to. Only he didn't want to! He had to cut this out. No latrines. Instead he thought of a beautiful ham sandwich with fresh lettuce and mayonnaise and French's mustard, which he dearly loved. He would have his with a Dr Pepper and then go totally brain-dead watching *Duck Tales* on TV.

Dad and Mom did not allow much ordinary television. They watched *Masterpiece Theatre*, which was fine during the occasional nanosecond that it wasn't totally boring. He and Sally would sometimes sneak down late at night and watch Dario Argento horror movies on *Chiller Theatre*. That and *Fu Manchu*, Sally loved the old *Fu Manchu* movies. Billy preferred the Peter Sellers version where the British agent Dr. Neyland Smith pushed a lawnmower at all times.

All of a sudden he was about to cry because Peter Sellers was dead.

He couldn't do that, not when Barton was so happy. He imagined that there was an iron rod going straight up through his body, and it was connected to the strongest place in the world. He blew his nose on his napkin in order to cover the tears.

"I'd like to propose a toast!" Barton got to his feet. He was in his glory, face flushed, gleaming with sweat. His smile was ear-to-ear and so fixed it looked painted on.

He looked at Billy with melting eyes. "To the very finest young man I have ever had the privilege of knowing. To you, Billy." He held out his glass.

Billy's glass felt like it weighed at least ten pounds. Carefully, so that his chained hands would not drop it, he lifted it from the tabletop.

Barton clinked glasses. Billy stayed still.

23.

Walter and Mary were sitting in her kitchen.

"We've got a tough problem with this guy, Mary. We know his name, we know what he's driving, we even know the fact that his car is registered in Utah and he travels on a California license. But we can't find him, although we strongly suspect he's in L.A. because of the route he took."

Walter's way of telling you something made you wait. Mary hated that. She knew that there was nothing she could do but keep listening and hope he'd land on the point soon.

"As far as California is concerned, the bastard is dead. What this means is, he's living publicly under another name. When he's in danger he pulls out his real ID, which makes as a deceased. It's a damned clever wrinkle."

Absently, she twisted a piece of Kleenex she had in her hand until it

was reduced to little, rolled-up bits. She wanted to scream, to throw things, to hit. But she was wiser now in the ways of her rage.

"Have you told Mark?" It was so hard to have him out doing things while she just sat. The nights were long, the days were long, and she and Sally were getting on each other's nerves. The poor girl was scared it would happen to her, too—and in a curious way ashamed that it hadn't.

"That gets me to the good news. And it's very good."

"Why didn't you tell me right away!"

"No, I'm sorry. Forgive me. I'm just on edge." He pulled a piece of paper out of his briefcase. "This is the man that kidnapped Billy."

Mary took the picture in her hands. Before her was a pudgy man with wide-set eyes and thick, sensuous lips. The nose was broad, the brows were light and curved in such a way that the eyes looked back with startling innocence. It was not an adult countenance. Barton Royal looked like a very sad little boy who had weathered.

"The IdentiKit done by the Nevada witness fit this picture very closely. So did the one done by the trooper who stopped him out in Neola."

"But here's the kicker." He dropped an acetate sheet over the photograph, and suddenly Barton Royal was wearing dark glasses. "Jerry Edwards says this is definitely the guy who played RPM with Billy."

"Is this implying—did Billy know —"

"He was just a guy in the arcade. Billy showed no evidence of knowing him."

"But they played—why?"

"The guy asked Billy for a game."

She looked at the picture, trying to imagine this man with her son. She thought of him stalking Billy, of him coming through these very rooms that night, of him standing right here in the living room. This man, with his sensuous lips and his big, baby eyes, had been here. He had carried Billy out of the house in his arms.

"Barton Royal, present age forty-four."

"We can have this picture?"

Walter handed it to her. "It's yours. We're going to use it, too. The FBI's put Royal on their 'most wanted' list, which changes everything. Now that they have a name, an identity, things are going to get much hotter for your man. This poster will go up at every 'wanted' location in the U.S. We're also going to put Billy's picture on the poster."

Hope flowered in her heart, followed at once by questing impatience. She was so emotionally fragile that any news— good or bad—brought tears. Carefully, she regarded her lap, smoothed her dress. She wished to display only the calm, efficient exterior that she liked and trusted. The gushing, mercurial Mary Neary she had found inside herself was not reliable.

"What can I do? I'm having a really rough time just sitting here, Walter."

"I think you might have another shot with the media. If we have a little luck here and there, we're going to get this man. You can't hide behind a false ID forever. He left a trail somewhere. We'll find that trail. You could help a lot if you could get another round of TV."

This was one of those awful decisions that made her come wide awake in the middle of the night. "What if Barton Royal sees his face on TV?"

Walter raised his eyebrows.

"I know he's already hurt Billy. Mark told me."

"Publicity—"

"If he realizes that he's got problems—I don't see Billy living through that!"

Walter did not reply.

"You don't have an answer."

"No. It's obviously a possibility."

"Anyway, the publicity—we won't get on TV in a big place like L.A. They wouldn't give us ten seconds. We'll get Des Moines. A lot of good it does, anyway. People bring you those damned covered dishes and then they tune you out. They don't care, Walter."

"We care."

"The police care professionally."

"I want to close the case. But I also want to help that little boy, Mary, and you know it! There are cops eating their hearts out over this case. Believe it!"

It was true that people cared.

Jim McLean had been an angel. The whole school board had helped, the police chief, teachers, kids, parents, the neighborhood. She knew that she had to make just one or two calls and the new poster with Barton Royal's face on it would be up in store windows from here to Des Moines before tomorrow noon.

"My instincts tell me to hunt for him. We're just dead broke, but I could get out to L.A. on plastic."

"It's an impulse lots of parents follow. You might even get lucky."

Again she felt the wild flush of hope, then the familiar dead sensation that followed it. She shook her head, trying literally to shake off the

chains that bound her to her agony. "The thing is, if he's never found I'll feel like this for the rest of my life."

He reached out to her with the familiar half-gesture that never completed itself. But this time things changed: she took the grasping hand. "You always do this. You reach for me. Then you stop."

He was looking gravely at her. Had there been sexual content in his expression she would have withdrawn. Clumsily because she was sitting down, she let herself go toward him. They stood up as politely as if he had asked her to dance. Then he was holding her. Under his suit Walter Toddcaster was massive and unyielding. This was not a fat man, but a strong one. She could feel his gun tucked in its holster. He smelled of cigars and Paco Rabanne.

She was so tired now, so afraid. She was not a physically intimate person, except with Mark. But he was a long way away and Walter had the gruff softness of her dad.

She leaned over and pressed her cheek against his shoulder. He stopped dead still. Then he began stroking her hair with quick, nervous gestures.

They were silent. 'This is like time of war,' she thought, 'when people cease to believe in their own futures.'

"It's OK," Walter said. "It's OK."

She lifted her head. It was shocking to realize how little it would take for her to go to bed with this man. Through her sixteen married years she had touched no man but Mark. Such subtle ruptures as these are among the most destructive of the many undocumented side effects of violence.

She drew away from him. "Mary," he said, his voice low and harsh. She knew that tone well: it was the voice of desire.

"Walt—I'm sorry."

He nodded, as if to say that he understood what he must now do. He lowered his head, his lips became a tight line and a distant expression replaced the softness that had filled his eyes. She saw the truth of his life—a barren old marriage long worn out, two people like ghosts in one another's lives.

Victims were Walter's family, stolen kids his children. When he sorrowed for them, he sorrowed also for himself, and when he fought for them it was really the soul of Walter Toddcaster he sought to redeem.

"I'm going to drive down to Des Moines to get some of the official posters," he said. "They'll be printed by noon, and I'll bring them up. We'll start by giving them to schools, to the Y, places like that."

"I'll call Father Turpin's poster committee, and Jim McLean. We'll get them out as soon as you get them to us."

Quite suddenly and without another word he left the house. The kitchen door slammed behind him. Even though she had seen it swinging closed, Mary jumped. The sound wasn't what had startled her. She hated being alone.

She was as if bound to her chair, her kitchen, its silence. This morning she'd tracked a smell to the cookie jar. It was full of moldy Oreos. Cleaning it reminded her of the old ritual of the washing of the body.

"Lots to do," she said. First she would alert Jim McLean. Then she would phone Sally, get her back from Donna's. She was beginning to spend all her days in that dark, air-conditioned house with its purple drapes and its big-screen television. Sprawled together on the Antonios' cream-colored couch, Sally and Donna watched soaps and sitcoms. They ate Twinkies and drank Cokes and sometimes, Donna had said, Sally would just cry.

When Mark left, Sally went silent. Her dream of the family becoming a detective team had been the foundation of her hopes. But teams cost money. Sally's solution was to anesthetize her mind. Mary didn't like

it, but she also couldn't blame her daughter. Again she considered just going after Mark and the hell with the money. In addition to what cash they still had, there was some credit on their MasterCard. Perhaps another thousand dollars. She didn't want to think about it. She was afraid that she might have to go and not be able to afford it. What would she do then—beg?

Damn right she would. She'd call Father Turpin, ask for more money. She would ask some of the rich families like the Edwardses for a loan.

She phoned Jim, who wanted to come right away to see the picture. He could get the picture into the local paper, maybe also the *Des Moines Register*.

Then she called Sally. Every time her daughter left her immediate presence, Mary became uneasy. The phone rang once, then a second time. On the third ring her hands were sweating. On the fourth her throat was getting tight.

When the phone was answered she closed her eyes, let out her breath. "This is Mary."

"Just a second."

Sally came on.

"Do you know it's nearly eleven? Why don't you come home."

"Sorry, Mom."

"Sally, we've had a break. We know what Barton Royal looks like."

"Are we gonna get him?"

"Sally—" She had to stop. The choking tears hit her. Since Mark had left they'd been coming on like this, suddenly and without warning.

"Mommy?"

She managed to croak the words, "Come home."

When she was here alone she had taken to visiting Billy's room. Earlier this evening she had embraced his pillow, inhaled the fading odor of him that was still in the sheets. She had cried until her throat started closing and she was afraid she would gag. There had been murmurs in the hall, muffled footsteps. For a time she had been afraid to leave the room.

Last night Billy had called her name. She'd heard his voice so clearly it had woken her right up. She'd gone into his room then, too. The night made it seem somehow dangerous, as if the shadow of Barton Royal waited there.

A bird had been singing on the wire outside his window. She'd leaned on his windowsill, and listened to it for a long time. Now she took Barton Royal's picture in her hands. "Barton," she said. She tasted the name. "Barton Barton Barton." If she could, she was going to get this man. When she got him she was going to kill him.

She had believed that crime was a psychosocial illness, evil a medieval concept invented to frighten the serfs into compliance. But life was turning out to be more mysterious than either of those notions would allow. Evil had most assuredly walked the floors of this house. And Barton Royal was also a sick, sick man.

"I will kill you, Barton Royal," she said as she stared at the picture. Then she laughed. For Mary Neary this kind of laughter—so bleak, so bitter—was something very new. She understood little about grief, except that it always has a concrete origin: somebody is lost.

As if his life depended on it she raced up to Billy's room. Once there she did nothing but stand in the doorway. She was as still as a resting moth.

How could it hurt this bad? She didn't know anything could hurt this bad. Moonlight was just appearing in the window where last night she had listened to that bird. It must be the one he'd been trying so hard to

imitate. Imagine wanting to talk to a bird! She could almost hear his voice singing in the wind, see him on the faraway. Where he was it was dark, except she knew he was dancing. "Billy," she said, and the name touched her lips like balm.

A voice screamed deep and long, and then there was silence. The sound might have sliced her heart in half, a child in jeopardy. But she knew it was only some toddler chasing lightning bugs. That child was up too late!

Somewhere Billy was dancing. She imagined a ballroom full of painted men and their prisoner boys.

Then came the bird, singing as the moon rose. As if by a cunning hypnosis she was drawn again to its voice. It was just a little thing standing on a wire, but its song was so very free, so very wild. Part of Billy was there.

There was something there deeper than the freedom, the wildness. There, she heard it. Yes, then it was gone again. It was so mysterious, as if her very grief had secretly possessed the heart of the bird. Or no, it was not grief. In the bird's song she heard something more primal: encased as in an amber of sound was the first savage screaming of the beast.

It was to that music her son's ghost danced.

24.

At first Billy did not understand what was happening to Barton. He left the table and went across to the living room, taking the wine bottle and his glass with him. "What's your taste in music?" he asked. "My collection is eclectic." His voice was high and weird. It was getting scarier and scarier around here.

This wasn't because Barton was getting mad again. It was for the opposite reason. He was totally overfriendly. For once he didn't sound like he was going to get mad again any second. Billy watched him as he flipped through his pile of old record albums. "I suppose you like rock."

"Sure."

"I despise rock. It's mean-spirited. What else?"

Billy knew one good way to make people like you was to let them get their way. "I like all kinds of stuff. *You* decide."

"I have the sound track from *Cabaret*. I have the divine Kiri singing *Songs of the Auvergne*. I have the sound track to *The Singing Detective*. Did you see that on TV?"

He remembered it, a public television special about a writer with all

his skin flaking off, which was pretty neat. "My folks wouldn't let us watch much of it."

"Well, the sound track is marvelous." He drank down his glass of wine and put on a record. Billy was fascinated with the ancient hi-fi. It looked like something you saw in old black-and-white movies, huge and made of wood with an "RCA" emblem in the middle of the speaker. It only had the one big speaker, so it couldn't even be a stereo. Barton must be worse than poor, he must be on his way to living out of a bag.

The record came on and a song rose up out of an ocean of scratches. It was frowzy music from very long ago, the kind that was popular when dancing meant hugging each other and sliding along the floor.

The first song he played started out, "You always hurt the one you love." Barton said, "Don't be bashful, come over here with me." He poured himself more of the wine.

As Billy went toward him he suddenly spit out a word. "Dance!" His voice had changed, and now he didn't look friendly anymore. He advanced on Billy. "Dance!"

Billy had no idea what to do. He had hardly ever danced in his life. He knew there were special steps to the old dances, but what were they? He stood there.

Barton folded his arms, gave him an appraising look. "You can't dance?"

"I don't know how."

"Fox-trot, rumba, swing, jitterbug. Any of those words mean anything to you?"

Billy shook his head.

"You always hurt the one you love," the singer crooned, "the one you

shouldn't hurt at all ..."

"OK," Barton said. Billy saw something in his hand, then all of a sudden he was unlocking one of his handcuffs. As quickly as it had appeared, the key went back into his pocket.

"You always take the sweetest rose, and crush it till the petals fall . . ."

"I'll teach you," Barton said. But he didn't say it pleasantly. There was menace in it, sneering and hard. He yanked Billy to him. "I'll teach you to fox-trot first, that's the easiest."

Being close to Barton was seriously creepy.

"Come and trip it as you go, on the light fantastic toe. Do you know that?"

"No."

Barton slipped his arm around Billy's waist. "Now you put your right hand on my shoulder. No, don't grab it, you're not drowning. Lightly, delicately. That's it. Better, anyway. It's Milton, incidentally. You've read Milton, surely?"

Billy was trying not to cry but it was hard. This was a hateful thing Barton was making him do. Nevertheless he stood with his hand poised on Barton's shoulder. If he let himself cry it might be all over. He could not allow Barton to know how awful he really felt.

"Milton—surely you have. You're so *fucking smart!*"

There was that tone again, from the car. No more friendliness. Barton was getting like he'd been when he tore up the steering wheel. Only now Billy was leaning against his moist shirt, and the record was spinning and Barton was full of wine.

Barton swung Billy through the air, tightening his grip around his waist. Billy closed his eyes and went limp.

"If I broke your heart last night," Barton sang, "it's because I love you most of all . . ." His singing voice was thin. He sounded like a boy littler than Billy, or a woman.

Billy pretended he was in his own room. It was night, and the summer wind was billowing the curtains across his bed and he was looking up at the moon.

They swept around the room and the windows passed and the doors, and out the back door there was an ocean of lights.

The song stopped but Barton just slowed down. Now he hung heavily on Billy's shoulders, weighing him down so much he thought he might collapse. "Now we clasp our left hands— intertwine our fingers—yes, that's the way. This is how you are when you really dance." He pulled Billy yet closer. Another song started.

"I get along without you very well," the voice sang. Barton slid and sidled along. "Of course I do, except when soft rain falls . . ."

Barton was leaning over, burying his face in Billy's hair. Then Billy heard him crying and all of a sudden he couldn't help himself any longer and he was crying too.

"... but I should never think of spring, for that would surely break my heart in two."

Because of his crying Barton gradually lost the rhythm of the dance. Billy bore his weight as best he could. Now they just shuffled, ignoring the music. "Do I worry when the iceman calls ... do I worry if Niagara falls . . ."

"Am I furious 'bout your little white lies . . ." Barton sang along with the record, his voice sunken to a weepy whisper.

His hand in Billy's was ice cold and soaking wet. His other hand was like a claw around Billy's waist, each finger pressing tightly against his skin. Round and round they went, slow-dancing, Barton doing a rough

box step while Billy stumbled along with his bruised and bare feet, trying not to connect with Barton's shoes.

Barton was now kissing his hair. The feeling of lips tickling against his scalp was almost unbearable. Then there was something else, a wet, squeezing something. When Billy realized that it was Barton's tongue, he quite involuntarily cried out and pulled back.

Barton flung his arms wide, as if Billy's body had suddenly become awful to hold. Without skipping a breath, he said, 'Therefore never send to know for whom the bell tolls; it tolls for thee,' *Billy!* Author, quick!"

"Hemingway!"

"And I thought you were supposed to be so *fucking smart!* The author is John Donne. Hemingway used the line for a title." He threw himself down on the couch, spreading his arms out along the back. Then he patted a place beside him. "C'mere."

He put his arm around Billy's shoulders, absently massaging his chest. "Do you ever think about death?" His voice was very gentle.

"No. Well, hardly ever."

"'Never, never, never say a big big "D." Well, hardly ever.' That's from *HMS Pinafore*. Do you know Gilbert and Sullivan?"

"I'm not sure."

"Well, hardly ever. Let me see your palm."

Billy held his hand out as flat and straight as a soldier might.

"No, come on, relax. I can't see the lines that way." He took Billy's hand. "I've forgotten you felt like I should," the record sang, "of course I have . . ." Barton traced the line in Billy's hand with a fat finger. "I was a boy once. I was! They called me Fat Royal. I've never told that to a living soul. Oh, look, this is your lifeline—do you know palmistry?"

"No. I don't believe in it."

"OK, OK, we're just doing this my way, OK? Your lifeline is this one here. See it?"

Billy looked into his palm. "I'll get along without you very well," Barton sang with the record.

Billy's very soul yearned for home. He could smell breakfast cooking, could see the east light pouring in his door, could hear Sally singing in her shower.

"Dear child, your lifeline is so short!" Barton took another long drink of wine, refilled his glass with the last of the second bottle. "Well, the good die young, I guess." He raised his eyebrows. "Let me ask you a question. Have you ever been whipped?"

"I don't know."

Barton chuckled. "You lied to me. Your father never whipped anybody. Let me tell you, the first couple of licks, you think you're going to make it. Strong, silent type. Then the third time, maybe the fourth, you let out some sound, just can't help it. By then it's hurting so bad you think it can't get worse." He paused. He was choking as he talked, slurring his words. "Have you ever wanted to kill anybody?"

"No."

"You're a liar! You'd like to kill me!"

"No, Barton! I like you! Really!"

"This isn't a game, you little asshole. This is the real thing. Do you understand?"

Billy was too scared to talk. Barton turned over his hand. "I see blood

vessels." He traced the blue shadow along the back of Billy's hand. "Do you ever wonder what you look like inside. Like, inside your hand?"

Billy nodded. "Yeah, I wondered that." He'd once gotten into an awful lot of trouble for operating on a live frog.

"The stomach is protected by first a layer of skin, then fatty tissue, then there are muscles that look like beef jerky, but light pink. Under that there's the viscera, which is hard and stringy when you pull it apart. Then there are the organs. Have you wondered, ever, what it's like to look inside a living body? How it would feel to touch a heart while it was still beating?"

"No, I never wondered that."

"But you have a science class at your school, don't you?"

"We dissected shrimp," Billy said miserably.

"Shrimp, really! You dissect shrimp at the dinner table. The thing about L.A. is, it's practically always summer. So you can always barbecue if you feel like it. But they have strict laws. No emissions! The air is terrible here. Have you ever barbecued shrimp?"

"Yeah. Dad makes Shrimp Wilder. He likes to barbecue."

"Oh, Shrimp *Wilder*. That's a very elegant dish. The sauce is green, as I recall."

"Yeah, it is."

"Do you like me holding your hand?"

"I don't care."

He laughed silently, throwing his head back. "You care." Then he took Billy's open hand to his mouth and licked it with his fat tongue. "Do you like that?"

It made Billy start shaking again. His heart was hammering so hard he almost couldn't hear. "I don't care," he stammered again.

Barton stopped. "I disgust you."

"No, you don't, Barton. Really, it's OK."

"No, it isn't." He drew Billy closer. "Put your head on my shoulder. That's it."

It was like Mom would do, especially when she was feeling sad about something. She liked to lean her head on Dad's shoulder.

Barton was getting more tense by the second. His muscles were hard. There was deep trembling, slowly getting stronger and stronger.

"We all have to die," Barton said. "After the first death there is no other.' How about that line? Do you know that?"

"No."

" 'A Refusal to Mourn the Death, by Fire, of a Child in London.' Do you know Dylan Thomas?"

" 'Never until the mankind's making bird, beast and flower'—I know that."

"Well, you know a little Dylan Thomas. The death of a child by fire—it's an incredibly sad thought. When death is quick, it's best. But it's usually a slow thing. The body struggles. Everything alive wants to keep living. We have a very sick attitude toward death in our society. A writer named Henry James called it 'the distinguished thing.' I think that's quite beautiful. 'The distinguished thing.' "

Billy wished Barton would stop talking about death. But he did not stop.

His voice grew mellow, like he was remembering things from a long time ago. "I guess the worst death is to be told in detail how it's going

to be done, and then have it done." He stretched out his legs, wriggled in his seat, sighed. "That's the worst, all right. There is no worse death."

Billy was devastated. He knew, now, that there was no hope and there had never been any hope. He was here for one purpose and one purpose only: to be killed.

His chest seemed to burst open and a great roar of pain poured up his throat and just stuck there. Barton held his head, stroking it. "I'm goin' to Jesus," Billy said. It was so strange, so very mysterious!

Barton seemed more like a force of nature now. "You go ahead and cry, darling. It's best to have a good cry when you first realize. Then you'll get it together and it'll become like a kind of project we do together."

Billy looked at him in amazed horror. Had he heard that right? Barton's eyes were twinkling. He took a long pull on the wine bottle. His glass lay on the floor.

"Barton, please let me be your son."

"That's just a game, Billy. The game is over."

"I'm a good boy, Daddy!"

"No, that game's over." His voice bubbled. "New rules." Now he sounded more serious. "I think you have to get philosophical about it. It's going to happen, Billy. I didn't want it to. When I got you, I wanted you to be a real son to me. I thought we'd work it out."

"We still can, Barton, honest. Honest!"

"But you turned out to be nothing but a *fucking little actor!*"

"I'm not, I'm not!"

"You are an actor and a liar!"

Billy jumped up and ran straight toward the big glass door that opened out onto the backyard. Beyond that was the canyon, and beyond the canyon Los Angeles itself. If he could just make it down that hill, then he would be safe, he would be free!

He threw open the door. Barton, slowed by drink, was not quite fast enough to stop the desperate, racing child. He did not try particularly hard, however. Had Billy seen the slight smile on his face, he might not have run so fast, or been filled with such wild hope.

But all he knew was that he was free. Free! He had the use of his hands and the lights of the city to guide him.

At the end of the yard he ran hard into a fence, but it was low and only stopped him for a moment. He climbed the few dry logs easily and hopped into the rougher ground beyond. His feet were still healing, and they were too sensitive for him to run really fast on the tumble of stones that formed the bottom of the canyon.

"Jesus, help me," he breathed. "Jesus help me," a gasping litany. He pumped along making stifled little screams because of the pain caused by the sharp stones.

After what seemed to him a long time he stopped and turned around. He could see into the house. The living room was empty. But there was no flashlight bobbing along behind him.

Stones or not he flew down that canyon. The ground got steeper. Down he went toward the lights. He could even hear cars now, the great whisper of the city. A helicopter chugged across the night sky. Billy waved as he ran—he never knew, they might see him.

Then, quite suddenly, the ground was flat and smooth. Surprised, he stopped. He reached down, felt warmth and hardness. The road, he'd reached the road! "Thank you, Jesus," he said. "Thank you, Jesus." He was trotting now, moving easily downhill. Then he saw car lights ahead. They glowed, faded, glowed brighter as the car came around one bend and then another.

It was over. He'd won, he was safe. Tears sprang to his eyes. He shook them away as the car came around the last bend. Taking no chances, he went right out into the middle of the road and waved both arms.

The car stopped, the lights boring into him. "I got kidnapped and I got away," he said. He talked loud, between gasping breaths. "Please take me to the nearest police."

As he ran around to the side of the car his heart almost stopped: it was a brown Celica. But it was being driven by a woman, he was still OK!

He got in the car. "That was a dangerous stunt," she said.

"I had to stop you, a man got me and took me to his house—"

"A man?"

She sounded so happy, why did she sound happy? She started the car. "Take me to the police station," he said.

"Oh, that's ten miles away. Why don't I take you to my house? We'll call 911 from there."

As the car began to move, he again realized he was free. That meant he was going to live, he was going to see Mom and Dad again! He hugged himself, moaning with delight and relief.

They went round and round on the curving road. "Where do you live?" he asked.

"Not far."

She was a thick, mean-looking woman with lots of blond hair. Her dress was loose and her hands were pudgy. Billy could smell liquor on her breath.

They kept going round and round, one street after another. He thought to himself, 'I'd better catch the names.' "Is it much farther?"

"Be quiet and let me drive!"

"OK, sorry."

They were on Mount Crest, then Ridgeway. Then they went around two other corners, up and down steep hills, around another corner where there were houses on stilts. One of them had a number, 314. 'Where am I?' he wondered. The drunk woman was taking him on a dizzying journey into total confusion. The tires squealed, the gears clicked as she shifted up and down the range.

Suddenly the car whipped into a driveway so fast the wheels must have left the pavement. They came to a screeching stop inside a garage. "We're ho-o-me," the woman shrilled. She pushed a button on a remote control clipped to the visor and the garage door rumbled down, leaving them in total darkness. For a moment the only sound was the woman's furious breathing. Then her door clicked and opened, and dim light filled the car. Barton's Aerostar was parked in the other bay. Seeing it, Billy simply screamed.

The woman threw back her head and laughed a high, shrieking laugh. "Come on," she said, "I think you've finally earned some serious punishment, you *fucking little creep!*"

Part Five

THE GOD DAMNED

25.

It was the most delicious, special feeling, like invading the soul of your mother and making her do evil deeds. "All right," he said and it was her voice, oh, it was her! And how the little boy scurried. Look at his eyes, as big as plates, look at his pale face in the hard garage light. "Barton is so-o nice, isn't he, my boy? Well, I am not nice! Get in that house this instant!"

Off he ran. "Barton, Barton," he cried. He didn't know, he really *didn't know!* This was lovely. Never before had it been like this. The others had seen right through the layers of makeup to the man beneath, but this child was much more innocent. The idea of cross-dressing had probably never occurred to Billy.

Barton marched into the house, went down the narrow hallway to the guest room and stood in the doorway, folded his arms. "Barton won't be answering you tonight, my boy. He's being punished too, for letting you escape again. The very idea!"

"Who—who—"

"I am Death."

When he saw the absolute horror on that face he couldn't contain himself a moment longer. He slammed the door and gave himself over to silent, agonizing mirth. Then he marched down the hall and into his room. He pushed back the rug and opened the hatch.

He'd only had time for the wig and the dress and a load of powder. For this occasion he was going to make himself up perfectly, using all the magnificent array of toys he possessed: the jars of foundation, the lovely powders and rouges, the eye shadows with their glorious names, Aziza, Revlon, Charles of the Ritz. He adored that last one, the way it clicked like a spike heel upon a marble step. The Ritz, *Ritz*, RITZ!

He went directly to his makeup table and turned it on. The lights were merciless, revealing the face in the mirror just as it really appeared. He was drunk, yes, but he could still see the great ape of a man behind the sloppy powdering he'd given himself. He poured some water from the pitcher and splashed in it until his face was clean. Then he covered his beard with Nair and went to work adjusting the wig. First he took it off and slicked his hair with oil so that it would take the fit perfectly. He daubed spirit gum around his forehead and sideburns and along the back of his neck.

Now he put the wig on properly. Once he'd pulled a few ringlets down here and there it was perfect, impossible to distinguish except at closest range. It should be perfect, he'd shoplifted it from an exclusive Rodeo Drive boutique. Indeed, all of his lovely collection was stolen either from the best boutiques or from dear Gina's extensive collection of goodies. It was soon time to take off the depilatory, which he did with a bladeless razor. Now his face was as lovely and smooth as his hands.

What Barton did was not transvestism, it was disguise. He had nothing against gays, but he himself was totally heterosexual. He would never allow himself to be one of those vile, disgusting lechers that touched boys—

Men like that ought to be killed.

'You have to understand,' he would tell himself, 'that what you do is ritual magic' For example, the dress was a disguise intended to evoke one of the unconscious selves hidden within him, as indeed the powerful mother of childhood is hidden within all men. The difference between him and ordinary people was that he expressed the unconscious and they didn't. They were scared, he was not.

When they saw him in his ritual clothing more than one of those other kids had screamed with laughter. But only at first. Then they had just screamed.

Barton went to work on his face, applying foundation, then powder, blush, rouge, then finishing around the lips and eyes. He painted on his lovely Summer Rose lip blush with quick, snapping movements, then applied Mystic Sea eye shadow, a beautiful, metallic turquoise.

The effect was simply magical.

He was always raptured by her. If only he could kiss her, swoon at her feet, give himself to her!

A blonde with vivid lips and exotic, pouting eyes stared out at him from the mirror. The eye shadow, however, had drawn the pain in those eyes to the surface. The sadness of his expression was his least fortunate feature. He corrected it with a little adjustment. Alter the line of the mascara, build up the lashes a bit—like magic, sad was sexy.

All the while Billy was waiting and worrying. He had reason to worry, too! He was about to get just exactly what he needed, and get it good and proper. The fun was over, the game was ended. Now the serious part had begun. Watching that little fucking scum acting his heart out, that had made Barton incredibly mad. Did he really think his inept hamming had convinced?

They'd tried the canyon before. You just drove around to where it opened onto Monarch and waited. The walls were too steep to climb, so there was no chance at all you would miss them.

It had happened so consistently with the other boys that Barton now looked forward to the canyon run. It was fun.

Dear little Billy was going to leap to the least snap of fingers from now on. He would worship the very ground Barton Royal walked upon; he would learn it was a privilege to obey a truly awesome human being to the letter.

He went down into the black room and selected the leather strap. He turned out the light, closed the trapdoor and covered it with the rug. Now he had to pause and prepare himself. This took consummate strength, perfect acting. He had to feel her, enter her, be her in all her glorious femininity and sternness. And she was so stern. Once she had set her will to it, there was absolutely nothing that would stop her. You could plead—and they had, God knew—but it made no difference. You could even lie, if you dared. Nothing stopped her.

With exaggerated care he hefted the strap with his right hand, holding the end of it loosely in his left. He walked down the hall, making sure his feet creaked the boards so Billy would hear. He paused outside the door to put an edge on the boy's fear.

The sobbing that started within the room was a deep music, marvelously stirring. His whole body began to tingle, and the more Billy sobbed the more delightful the sensation became. When finally he felt ready to intensify his delight, he unlocked the door and threw it open. Billy gasped as he stepped into the room. His eyes were fixed on the strap. His mouth dropped open. Then, no doubt imagining the pain, he squirmed where he sat.

"You're getting ten," Barton said in his best voice.

"Ten what, ma'am?"

He slapped the strap against his hand, and nodded his head.

"Please," Billy said, "I don't think I can stand it, ma'am. I've never had it done to me before."

"Most of them can't talk at this moment. You are quite a brave boy. For your bravery, I'll add three more."

Billy rushed to the closet. What was he going to do—try to hide?

Barton grabbed the handcuff still dangling from the child's wrist and dragged him back to the center of the room. "It's a slow thing, I'm afraid," he said. "Thirteen blows with this thing will basically take you apart."

He pushed Billy face down onto the bed. "Drop your pants. Can you manage?" When the child fumbled Barton yanked them roughly down around his knees. Billy put his hands to his head. His face was buried in the sheets. He was clutching his hair, pulling convulsively. Barton had never seen this before: the boy appeared to be tearing out his hair.

Fat Royal snapped the strap against his palm again. Billy gave a little kick. "Please, lady," he said, "I just wanted to look at the stars."

Barton's response was the first blow. It was smart and nicely delivered across both buttocks. There was a single, solid crack.

Billy bounced. He made a sound of surprise. No doubt it had hurt more than he had imagined possible.

The second blow was placed just above the red stripe made by the first. It was so hard that the strap whistled on its way to contact, and the moment of connection caused a spattering sound. Immediately the skin turned white and puckered. Then the blush started.

Billy cried out.

If this had been the black room Barton would have done a really thorough job. Given the soundproof window you could have some screaming up here, but he had to take care.

The third blow would be placed below the first, which was now a well-raised, fiery red stripe exactly across the center of both buttocks. He

raised his arm until he felt the strap lightly touching his own back. A tide of anger flowed in him, directed at this willful, arrogant child.

The third blow landed with the sound of a pistol shot. Billy threw back his head. Some garbled words came out, "Jesus" or "Sorry," or something. There was no way to tell, and what's more, Barton didn't care.

This had always been what it was about. He didn't want a son to love, he wanted the sweetness of this. People did not understand that. They did not understand that a soul could reach beyond good and evil, to regions where suffering and pleasure were the same.

"Billy?"

"Yes ma'am!"

"How do you feel?"

There was no reply.

"Now listen to me, I'm waiting for the welts to come up properly. Then I'm going to do the ten and it's going to drive you mad with pain. Have you ever been mad with pain?"

Billy made a high noise, a sort of keening.

A moment later the welts were properly livid. Barton delivered a quick, vicious series to the center of the buttocks. Billy shrieked more with each strike. Then he began to squirm away, twisting from side to side, using his hands to ward off the blows. His will to appease with compliance had broken down. He was on his way to becoming a squirming, squalling animal.

The fury came upon Barton then, velvet and fire in his head. He attained a rhythm, up and down, up and down, until flecks of blood and skin began to fly up, forming a sort of haze around the leaping flesh.

At last Billy lost everything. His back arched, his eyes became teary, wrinkled lines, his screams peeled. Now, if they were in the black room, Barton would have let go completely, would have transported himself by the torment he was inflicting into heaven itself.

There was a last flash of rage and a final, brutal slash of the strap, and he was finished.

It was as if he had just awakened from hypnosis. The velvet in his mind was gone, the extraordinary calm that had formed its base was changed to sorrow and disgust.

What was he doing in these ridiculous clothes, hurting this poor child? My God, look at him, look at what had happened to Billy!

Throwing down the strap as if it was crusted with filth, he turned and rushed from the room. He closed the door. Maybe he should also have cuffed the poor creature and locked the lock, but what was the point? Barton knew from experience that Billy would be unable to move when he returned to consciousness. Sometime in the night the child would wake up in severe pain, and cry himself to sleep. Tomorrow morning there would emerge a quiet, compliant boy, walking stiff-legged. In his eyes there would be something of the rat.

Walking into his own bedroom, Barton glimpsed himself in the floor-length mirror that hung on the back of his closet door. Instantly he looked away, but it was too late. He knew what happened when he did this, and yet he did it every time.

"No," he said, trying to force himself not to look again. But he did look, he could not help looking.

There stood a fat, middle-aged man loaded with lurid makeup. His underarms were soaked, his spike heels wobbling absurdly. By the time he'd lurched into the bathroom he was sobbing.

This mirror was worse, the fluorescent light made him look like a ghoul.

The lips were fat, the eyes glaring, mad. He was so incredibly, totally screwed up. He was worse than that, he was completely psychotic.

He had just maimed another human being and would almost certainly end by visiting him with a horrible death.

You cannot stop, you cannot prevent yourself!

All his justifications were lies. Nothing explained him, not even his hard childhood. He did what he did because he got pleasure from it.

That makes you evil.

Evil, he was evil! He was an ugly, vicious, evil swine!

A huge roach crawled slowly out from his dress and up his face. He could feel the tickle of its claws, the faint, frantic scratching as it made a trench in his makeup.

When he clapped his hands to his face the makeup came off like sodden clay. He wiped at it, making little screams in his throat, his whole body twisting with the loathing he felt for himself. There was no roach under his hand. He ripped off the dress and stood naked, a sweated lump who stank of his ugly labor.

He fell to his knees, he crouched down, drove his fists into his eye sockets until he saw bursts of red and yellow. His mouth opened, he gagged, he felt something awful and black within him slither to the surface.

A snake was flipping on the floor, slick and wet as if it had been coiled in his gut. He fell down moaning and as black sorrow closed upon him he wished with all his heart that he would be free.

Billy was a dot of light in the middle of the forever dark. He'd been killed, he thought, whipped to death. "Momma," he said. "Momma?" It was so still, so very silent.

The whipping was a red memory.

"I don't want to be dead!"

Such a great agony assailed him when he moved that he flew into panicked thrashing. His screams were broken and soft, pitched to the tone of small wind. He was completely unfamiliar with great physical pain, but nevertheless he finally managed to calm himself down.

The overhead light was still on, filling the room with its hard, yellow glow. Billy was lying in a wet spot on the bed. Slowly, he slid to the side. With trembling fingers he felt his buttocks.

The skin was lumpy and covered with something sticky. When he looked at it, he saw that it was blood.

The sound of his own moaning made him feel so sad that he forced himself to stop. Nobody could ever be bad enough to deserve what he'd just been given. It wasn't possible to be that bad.

Billy was a good person, with a natural desire to find good in his fellow man. His innocence, which had so disadvantaged him until now, came to his rescue by preventing him from understanding the hopelessness of his situation. Beneath his suffering there was fresh water flowing, the very water of life. It bubbled up in him no matter how hard his fortune, and would not run dry.

This deep strength, which had not been so vividly present in the other children Barton had abducted, enabled Billy to continue his struggle. Although it hurt terribly, he fought his way to his feet.

"Mommy," Billy said. He wanted her so badly, she made it not hurt anymore! "Oh, Mommy!" He was sinking back through the layers of his young personality, back to the days when she carried him on her hip. "Carry me, Mommy, I is tired now." When he moved the pain clutched at him. "I sorry, I sorry . . ."

A part of him reminded himself, 'You aren't a baby, you can make it, you must try to get out of this.' It was just so hard—he had been whipped so terribly. His legs were like two posts, almost impossible to move. When he did, fire raced up and down his back, making him flail his arms and grit his bared teeth.

Like any normal child, Billy's sorrow would have extended to the hand that had hurt him if he felt he was dependent upon it for his survival. He would have accepted help even from the blond woman. When she was gentle to him he would have reacted with gratitude.

This is why children cleave so tenaciously even to hard parents. It takes repeated beatings, long periods of brutal treatment, considered and relentless injustice to break hope. As spectacular as Barton's assault had been, Billy had nevertheless survived like a little coal in the ashes; he was still struggling and would not stop. The pity of the abused child is that he does not cease to hope, not until the last beam of his life has faded.

So he wobbled across the floor, raised his arm to the knob on the door and tried. Every movement caused agony; the buttocks relate to so many other important muscles. To shuffle, to stand still, to raise his arm, to tighten his fingers on the silver doorknob—all of it hurt.

Under his breath he was uttering a new litany. Gone was "Jesus," gone was "God." He was down deeper now than those words, which come to have meaning in a child's vocabulary only at the age of four or five. "Ma," he said with each step. "Ma-ma-ma" as he crept along.

He did not exult to find himself in the hall, nor did he even think of where he was going or what he needed to do. He simply kept sliding one foot after the other, and so made it into Barton's bedroom. He had never seen it before, but he did not notice the beautiful canopied bed, the lovely silken sheets, the lace curtains or the perfume in the air.

He did see Barton, a shadowy heap on the bathroom floor. As far as he was concerned, though, this was not Barton. The blond hair told him that it was the woman who had whipped him. He went over, concern

for her rising in him. But then he saw she was sleeping, her dress drawn over her like a coverlet. He returned to the task at hand.

He had come to call Mama. When you got hurt and nobody else would help, that was what you did, you called Mama. He looked around him. On a small, ornate desk was a telephone. "Mama," he said. He put his hand on the phone, picked it up, heard the dial tone in his ear.

Although his danger was now extreme, he was beyond caring about whether or not he was caught.

He began to press the numbers on the phone.

26.

The skin was being savagely scourged from her back when the ringing of the telephone woke Mary. For an instant the agony of the whip mingled with the noise of the phone. She came to consciousness in blood and rage, flailing frantically for the receiver, composing herself. Try not to sound sleepy, be calm, it might be the end.

"Ma-ma."

Some baby was up early and playing with the phone. "You put the phone down, honey, you aren't supposed to be calling people at this hour."

"Ma-ma!"

In an instant she couldn't think, couldn't remember even how to speak. Frantically she swallowed, fighting to respond. "Billy!"

"Mommy."

An instinctive impulse to grab him almost made her hurl the phone away from her. But she held it hard to her ear. 'OK, settle down now, take it easy, remember the instructions, get information.' One deep intake of breath was all she allowed herself. Calmly, distinctly, she asked: "Where are you, Billy?"

"Hollywood Hills."

When his voice stopped the silence in the phone was tremendous.

"What street?"

"Near Ridgeway . . ."

"Do you know the name?"

"No. The people next door have a blue Mercedes. Barton has an Aerostar."

"We know about the Aerostar. We know he's called Barton Royal. Anything else?"

"He has a brown Celica. He hid the Aerostar."

"What does the house look like?"

"Garage in front. . . dead-end street—" His voice dropped to a whisper, then she heard weeping like she had never heard before in her life. It burned into the depths of her soul, as if a hot knife was plunging into her. She gritted her teeth.

"Anything else." She managed to sound quite calm.

"We're the last house. Top of the hill—"

"Number on the house?"

"Ma-ma, I got spanked, I got bad, bad—"

She bit her knuckle. The skin crunched in her teeth, she tasted the blood. The pain seemed to belong to a distant, fraudulent life. Think, woman! "Is he nearby?"

"She in the bafroom."

My God, he sounds like he's a toddler! He's regressing, he's hurt, he's being tortured to death, oh God in heaven help me I am not strong —

"Hang up."

"Mama wait!"

"Say goodbye."

"Goodbye Ma-ma."

The silence continued on the line. He was frozen, he couldn't put the phone down!

"Goodbye. Hang up now."

He began weeping, a sound like little rain.

She jerked her head away from that pitiful baby's voice as if it was a bellow of agony. Her beautiful, brilliant child—all the labor and the love—was being ruined! He was suffering, oh, terribly, yes, there was no question that it was terrible, terrible—

At that instant a door opened in her and she came to the part of her that was as strong as stone. Here Mary Neary was objective and effective. When she spoke again her voice radiated sure confidence. "Now put the phone down and get away from it. Don't try to call Mommy again. The police will be there as soon as they can." She stopped, and when she did the big silence assaulted her again.

"Mommy—"

Again she writhed. A huge sob came up into her throat. She threw her head back, sucked air into her open mouth, spoke again. "You have to hang up now, honey."

But he didn't hang up. He was unable to break his connection to her. So powerful was her desire to radiate strength, to fill him with her own health and courage and her very blood she literally snapped to attention beside the bed. "Put that phone down," she barked. "I want to hear the dial tone this instant!"

"Mommy help. Mommy help."

"Hang up right this instant."

"Ma-ma, Billy wants—"

"I know, darling, I know. But you have to hang up. Right now. Do it, Billy!" The silence replied. Her free hand was a fist against her chest. She was shaking so hard she could barely see. *"This is an order, young man! Obey me instantly!"*

Click. Then at last the dial tone. She sank to her knees, crouched with the phone hugged against her chest. Oh let it be that he was not seen. God, please. Aloud she whispered into the silent room, "I love you, honey, Momma loves you."

With exaggerated care she put the receiver back on its cradle, and then stared at the phone as if it contained a living spirit. Something happened to her that was beyond tears. When she thought of him out there somewhere suffering that much—my God, some vicious thing had beaten him, had reduced him to a gibbering jelly, tortured him—her mind swarmed with images, each one more hideous than the last. She sank to the floor, twisted this way and that. Her hands twined in her hair.

She couldn't help herself, she started pulling and pulling. Her body burned with the agony of her son's voice and she knew then the deepest, truest meaning of motherhood, that it has to do with the very spirit become blood and bone. She had borne him and held his naked body in her arms, and he was of her, and was her own self transformed.

Her hands dug into her hair, her body seemed to sputter flames, she felt rising on her buttocks the welts her son had received, the heartless whipping splashing into flesh that had never been struck, and shattering not only the body of the boy but his little soul's light.

"Momma!"

Sally had come into the room. She wore her summer shorty pajamas. Her face was stricken. Mary realized that the poor thing must think she was dying.

She got to her feet, drew herself up. "I just got a call from Billy and we have work to do."

"Momma, what's wrong with you!"

"I'm upset. But that doesn't matter—"

"You're bleeding, Momma, you're bleeding all over your face!"

Mary withdrew her hands from the tangle of her hair. Her scalp was tender; there was wet all down her forehead. She hurried into the bathroom. She had literally been pulling her hair out at the roots. Sally turned on the water, got a washcloth wet and began daubing her mother's face. "Momma, is he—"

"Oh, Sally, he sounded like hell." To hear herself saying those words made her congeal inside. Again she began to tremble.

"Did he say where he is?"

She all but threw herself out of the bathroom, grabbed the phone again, jabbed in Toddcaster's home number. "Walter, he called—"

With a muttered "I'm coming," he slammed up the phone. Mary took the precious tape out of the recorder, put in a new one.

Five minutes later the phone and the doorbell rang at the same time. The phone was the FBI in Des Moines. Walter had already called them. "He said he's in the Hollywood Hills at the end of a dead-end street near a street called Ridgeway, but it isn't Ridgeway. They're at the top of a hill. The man drives a brown Celica. There's a blue Mercedes parked next door."

Walter joined her and in a moment the tape was being replayed so that he and the FBI officer on the phone could both listen. While it played

Sally cradled her mother in her arms, cleaning her face with a damp washcloth.

Walt finished with the tape. "That's a hell of a stress reaction you got going there," he said, touching her bloody face. "It's called sweating blood when you do that, hon."

He stepped into the hall, motioned Sally to follow him. But Walter Toddcaster was not a man who could readily whisper. "She's about had it," he said in a low voice. "They start pulling their hair out, they're losing it."

Sally's reply was an inarticulate whisper.

"We gotta help her, keep her going, because this thing will play through real quick."

"Play through?"

"It means we're going to find your brother real soon." Walter went back to Mary, glanced into her watchful eyes. "You heard me, didn't you? Which I guess I wanted. You gotta get some Valium or something, hon. You can't take this pressure. Nobody can."

"The hell I can't, Walter Toddcaster. No way am I going to dull my mind with pills at a time like this."

"Hey. Just trying to assist. I think you did good on that phone call. Real, real good."

Sally suddenly went for the phone. Mary's first impulse was to pull her off it in case there was another call.

"What time is it in Nevada?" Sally said. Mary realized that she was calling Mark. 'Oh, Mark, I forgot you, I called Walter first!'

"Dad, it's me. He called. We know approximately where he is."

Mary grabbed the phone. "I talked to him, Mark. I talked to him!"

"Where?"

"The Hollywood Hills."

"Address?"

She told him what they knew.

"I'm going to fly to L.A. as soon as I can. I'll call the police when I get in."

"The FBI's already done that. Maybe they'll have him by the time you get there."

"Maybe. Look, I love you, and I'm outa here."

Mary put down the phone. Sally grabbed it again. In moments she was talking to American Airlines, ordering tickets for the two of them.

Toddcaster stood in the doorway to the living room, looking as if his presence here had become tentative, uncertain. "Walter?"

"The case is outa my hands. It's up to the FBI and the Los Angeles police now. All we can do from here is offer support as needed."

"I'm going."

"Of course. But be careful, Mary. There are don'ts in this thing, major don'ts. Don't try to find him on your own. When you get to LAX report to the police. They have a missing persons unit. By then they will know your name, they will be on the case. Do not go to Hollywood by yourself."

Sally put down the phone. "If we can make the seven-twenty flight to Albuquerque, we can be in L.A. by nine-thirty their time."

By the time Mary was grabbing her clothes out of the dresser Walter Toddcaster had faded into the background of her life. She didn't even see him leave the room.

By the time she was snapping her bra he was already a memory. In ten minutes she was dressed; she even had an overnight bag with some things stuffed into it. As they ran to the car Sally was still pulling her curlers out, throwing them on the dew-fresh grass. Toddcaster watched from the front porch. "I'll man the phone," he said.

Mary glimpsed him once, a shadow on the porch. She heard a shout, big and powerful, cutting the silence of the morning. "Drive carefully," he yelled.

Mary hardly heard him. In moments she was doing seventy down Lincoln. She had exactly thirty-five minutes to get to the airport. Even given the sparse early morning traffic, the trip would take forty.

"Momma, you'd better let me do the driving."

"You've never driven a car before in your life."

"Momma, I take the car at night when you and Dad are asleep. I've been doing it ever since I was tall enough."

"Sally, you're kidding!"

"I'm a good driver, Mom. And if you don't slow down we're going to get a ticket and miss the plane!"

"With you behind the wheel we'd be worse off—you don't even have a license, you're thirteen."

"I do a lot of things you don't know about."

As much as she could bear, Mary slowed down. They must not miss that plane. Her boy needed his mother desperately.

If he was found, she had to be there. This was probably the single most essential thing she would ever do.

Until they reached the interstate she took Sally's advice and kept to the speed limit. Then she pushed it. Otherwise there was no chance. The

old wagon shuddered at ninety, then seemed to get a second wind as it passed through a hundred. At a hundred and ten it felt like it was floating. The engine made a sound like a herd of cattle.

They were still thirty miles from Des Moines when a light bar started flashing behind them. "Fuck," Mary said, causing her daughter to stare in amazement at her. She pulled over. The black-and-white came up beside her. One of the two policemen in the front seat leaned out.

"You're Mary Neary?"

"Yes."

"We're here to give you an escort. Let's go."

They made the plane with three minutes to spare.

It was not until they were in the eventless void of the flight that her mind began to open the doors to the dark. He was badly hurt, he was with a desperate man, he was so darned *out of it!*

If he'd turned into a baby again, he was at the end of his strength. When that man asked him, "Billy, did you make a phone call," he'd probably say yes.

She remembered him when he was a toddler, guileless and so absurdly serious that Mark had nicknamed him "the Judge." God help him, he'd *regressed!*

Mary felt her daughter's warm, light fingers placing gentle pressure on her own. Since Billy's disappearance she had not had much room inside herself for Sally, and she regretted that. But Billy's plight was so terrible and her own suffering so great that she simply could not invest her daughter's needs with the importance she knew they deserved.

The Good Mother was being broken by the strain of the tragedy. If she lost Billy, then what would be left for the girl? Or worse, if he came back ruined, requiring years of therapy, what then?

"Mother?"

She turned, appalled by the interruption of Sally's voice.

"She wants to know if you want breakfast?"

To Mary's surprise the flight attendant was there with her trolley. "A Coke," she said automatically.

"No, Momma, we need food."

"It's a cheese omelette," said the flight attendant.

Mary ate her omelette and drank coffee, and watched beneath as her familiar world slid slowly away.

She had a question, asked to the sky, to the hazy prairie below: were they really going to get Billy back, or was it too late for that?

27.

When Barton came to he was still on the floor of the bathroom. The sour taste of last night's wine filled his mouth, and he was teetering on the brink of nausea. His tongue felt rough, his thirst was extraordinary. His skin felt tight and withered, his face was desert-dry from the caked, peeling makeup. The white dress, now filthy, covered him like a sheet. When he threw it off he smelled his own stink. As soon as he sat up his head began pounding so hard he thought he was going to faint from the pain. Blood rumbled in his temples and dark waves obscured his field of vision. The room rocked like a very nasty little boat in very big seas.

He'd drunk himself silly last night. It was the first time that had happened in ages.

This was Sunday. God, he was doing a show—two shows. What a miserable way to start his first day back at work.

Damn that Billy. You loved him, but you knew damn well he was faking it. It just hurt like hell was the problem. You wanted to make him love you, and when he just went on faking it you wanted to hurt him.

You destroy everything but oh, it felt so good! The relief when it was over and he was sitting on the couch, watching *Cabaret* and sipping a

truly fabulous wine, was so very great.

For a couple of hours afterward he would be all right. It was like it never happened, never could happen. It was so completely over that the idea of doing it again was utterly absurd.

He pulled himself up by the edge of the sink and drank three glasses of water. He took a handful of Advils.

The remains of the makeup, the wig hanging by a few bits of spirit gum, the dress—the sight made him turn away from his mirror.

But why? Why did he persist in these feelings about himself? It was a disguise, for God's sake, and that's all it was.

He forced another look into the mirror. His was an interesting face. People thought it looked sad; he'd be going along perfectly happy and all of a sudden somebody would say, "Are you OK?"

I'm just fine, thank you. No I'm not. It didn't help to pray, it didn't help to read books about psychiatric abnormalities. Worse, he was smarter than any shrink he'd ever encountered. As a result he didn't know why he was like this and he couldn't find out and he couldn't stop. The only way he had found to deal with it was to accept that he was just a very unusual man.

He tried a little smile. *Look at you!* He cocked his head, turned aside and glanced at himself in three-quarter profile. This way he didn't look sad, he looked mad.

No, mean. Kind of funny and kind of mean. A mean munch-kin. He wiggled his eyebrows. "Fuck you," he said.

Nobody loves me but me. Nobody ever will.

To just be loved, what a thing. It was commonplace!

I am terrible.

He turned away from the mirror.

Wrapping a towel around his middle, he went into his bedroom and threw back the scatter rug that concealed the door to the basement. He tossed the wig and dress down.

Then he flipped on his tiny bedroom TV, but it was Sunday and there was no *Good Morning America*, only some spectacularly banal cartoon about turtles. American television considers American children drek. That's why it feeds them garbage. He tsked, jabbing the power button. The set died, leaving a single white star in the middle of the black screen.

It would be nice if this headache would start to abate. Maybe he could use another handful of Advil. Couldn't you OD on that stuff? Didn't it kill the liver or something? He didn't want to take any of that codeine, it always made him nauseous.

As he prepared his shower a dream came back to him. It was vague at first, but it held his interest because it was something about Billy. What had he seen about Billy in the landscape of this dream?

Billows of steam rose, the water drummed against the tin shower stall. When Barton stepped in his whole body was grateful. His skin sucked up the moisture, the ancient makeup was swept off his face; the sins of the night went down the drain forever.

He took a deep breath of the steam gusting up around him, then let it slowly flow out as life and feeling poured back into him.

"Ma-ma," Billy had said in the dream. He'd been thrilling to see, tall and imposing. Barton shuddered, shaking his head, stepping back from the stream. It made him extremely uneasy to imagine Billy standing over him.

Ma-ma?

Billy opened his eyes. He was on the floor of his bedroom; his bed stank too badly of pee to use. Even so he'd pulled part of the filthy sheet over him in his sleep. Now he pushed it away.

He sat up. His bottom hurt terribly; he could barely move. That woman had really walloped him. He'd seen her lying on the floor of Barton's bathroom, when he'd been calling Momma on the phone.

He'd called Momma! The memory of her voice made him open his eyes wide. Then he was filled with such deep sadness that he just couldn't even sit up and fell right over on his side. His knees came up to his chin and he wanted his Garfie but it wasn't there anywhere so he put his thumb in his mouth instead and closed his eyes.

He stayed like that, dreaming about how she sounded.

He'd told her, yes he had!

It was so quiet in here.

Momma said the police would come. "Police," he whispered around his thumb. "Police, come!"

The silence seemed to close more tightly around him. He did not like this kind of quiet. Very softly, he sang against it.

*"The ants go marching six by six,
the little one stops to pick up sticks,
and they all go marching down,
around, get out of the rain!"*

Being all scrunched up hurt his bottom and his chest. The only place it

didn't hurt was his feet, which were almost completely healed anyway. And so was his chest, except for one long scab that he knew he shouldn't pick.

Sometime after the beating he must have drawn up his shorts, because he was dressed.

Moving with the exaggerated care that would have been more appropriate in a man of eighty, he unwound himself. Slowly, propping himself against the side of the bed, he came to his feet. "Police," he said. "Momma said. Momma told me."

He began a journey toward the bedroom door. "Police. Police."

Barton finished his shower and dried himself with his big, coarse towel. As he shaved he kept listening to that word "ma-ma" repeated in his mind. How strange that it was associated with the image of Billy as hero rather than as helpless child.

It was impossible to erase the image of Billy looking down on him, his head backed by the soft glow of the night sky.

Oh, Billy. I love you, really and truly. And so you are dangerous to me, really and truly.

When Billy heard the hiss of clothing in the hall he wobbled back away from the door. He'd almost had his hand on the knob. Now he moved more quickly, going toward his bathroom, attempting escape from her.

The door swung open and there stood Barton. He was wearing a white shirt with a wide green necktie. On the tie were written in yellow the words, "Uncle Squiggly."

"Good morning, Billy boy."

" 'Morning."

"Come here to me."

Billy gave him a wary glance. He seemed happy, though, and that was reassuring.

"Come on."

Slowly Billy walked over. Barton hugged him to himself. "Hmpf! You need a bath, young man."

"I wet my bed after she whipped me."

"It smells like an animal lives in here!" He folded his arms. "What 'she? What are you talking about?"

"The lady. After I ran away she came and got me. She brought me back and whipped me."

"That was just a little spanking, a little way of letting you know you'd been bad."

Billy hung his head and was silent.

"Now take your shower. I want you all clean before I go to work. I have to be at the bookstore by ten and it's already nearly nine."

Billy gingerly touched his buttocks.

"Still smarts, eh? Well, you'll survive." Then he smiled that terrifying smile of his and Billy backed toward the bathroom door.

Barton brushed past him, pulling all the sheets off his bed. "When you come out there'll be fresh sheets. You're to make this bed up perfectly. If she sees it's not done right, she's capable of dishing out another just like the last one."

Holding the dirty sheets at arm's length, he left the room.

These sheets were really filthy. They'd been on the bed at least since Timmy. For an instant a door within him was cracked open, and he glimpsed something so bizarre that he was made momentarily dizzy.

Well, that certainly wasn't real! Lord, what a mind you have! There had been Timmy and there had been Jack, end of story.

He stuffed the sheets in the washer and poured in lots of bleach and detergent. With an angry snap of his wrist he turned the machine on, immediately returning to Billy's room. The shower was running. When Barton entered the bathroom and pulled back the shower curtain Billy turned away. Barton's eyes widened: the child wasn't kidding about the whipping.

His buttocks were deeply bruised, with open cuts and long, raised welts. Barton stared in amazement. He did not remember delivering such a beating as this. A few smart blows wouldn't do this. It must be that delicate skin, he told himself. Skin like that showed every little mark. He reached his hand out, touched the contusions. Billy flinched away.

All of Barton's reserve of tenderness emerged. The little guy was really suffering. But when Billy squirmed away from his probing, a delightful shiver went through him. *No! I don't want that!*

Oh, yes you do.

Billy was cringing away like a wild creature at the far edge of a cage, and it was simply awful. His heart seemed to close on itself.

"It hurts," Billy said in a small voice.

"Nonsense! It's barely visible."

"Really?"

"The pain is all in your head." He helped the boy out of the shower.

"Billy," he said.

"Yes?"

"Hold out your hands."

"Please, no. I won't try to run away, I promise."

"I ought to cuff you behind your back, but I'm going to be gone all day and I don't want you pissing on yourself again."

After his first punishment Timmy had made breakfast and served Barton like a butler. He'd remained on his best behavior until the very end. Even on the table, he was polite.

He must not think about the black room! The mistake was taking them down there. The black room was only a fantasy.

Most people—even people who'd had shitty parents— weren't like Barton. Most of them were fine. So why him? Why did he have to bear these driving, uncontrollable passions? What was the answer? It was part of the secret everyday world, where there was no place for him. All he could do was reach in and steal the children.

It was secret only from him, that was what was so sad. Everybody else *lived* there, *the fucking scum!*

Barton was all over him, pawing him, muttering. He smelled like after-shave, and what did that name on his tie mean? Billy bit his lips to keep from crying out when Barton touched his bottom.

"Who's Uncle Squiggly?" Billy asked breathlessly, trying to cover the fact that he kept pulling away.

"It has to do with my work."

The shower made it easier to move, but he still hurt bad.

"Who is she?"

"Uncle Squiggly is a character I play at the bookstore where I work."

"No, I mean the lady."

"You'll find out more about her later." For a moment he went out of the bedroom.

Billy stared after him, his heart flooding with amazement and hope. He'd left the door wide open! Billy could see right into the kitchen, and even see the tangled shrubbery beyond the kitchen door. He could make a dash—

No, he couldn't. It hurt too much.

Barton came back in with folded sheets in his arms, closing the door and locking it. With a glance at his watch he sat down on the foot of the bed. He had a little, fascinated smile on his face. He crossed his legs. "How many times have you tried to escape, Billy?"

Billy hadn't dried very well, and he was cold. His hair was dripping wet, and before he replied he blew some water off the end of his nose. "Three times."

"And each time you've failed. What does that tell you?"

Billy thought of his call to Momma. "I didn't!"

"Didn't what?"

He looked from wall to wall, frantic for an answer. He mustn't tell about the phone call, he mustn't do that!

"I didn't escape." Surely Barton saw how afraid he was.

"And you never will. I'm a lot stronger and a lot smarter than you are, Billy." He gave him a frank look. "You know that I've had other boys living here, of course."

Billy nodded. "I thought so."

"Where are they now, do you think?"

The police had to hurry up!

"Can't you answer?"

Billy shook his head.

When Barton smiled again Billy clapped his hands to his face, his cuffs clanking.

* * *

The child was in extremis, there was just no other word for it. Barton patted the bed beside him. "Come on, sit down, we'll talk."

"I don't want to!"

"I don't have much time, I've got to get to work!" He pulled the boy down beside him, put an arm around his shoulders. He could not resist pressing down, feeling the squirming as the child smarted.

He remembered how he had screamed, how the pain had swept him in fiery waves, how little his protests had mattered. "I love you," he'd said, again and again until all he could do was scream. After it was over he would be expected to thank her.

He lifted Billy's cuffed hands to his lips and kissed them. The boy glanced up at him, his eyes wary and calculating. Barton knew his thought: 'If he kisses me, maybe he loves me.'

Pitiful little creature.

There was hope again. Barton was being nice now. When Billy had risked a glance at him he'd seen a nice smile on his face. He did not dare look up again, he didn't want Barton to get mad at him. If you looked him in the eye, he always got furious.

"Billy, when I get home tonight, I'm going to complete my work with you."

Could it be true? Would he—"I can go home?"

"To your long home. Do you know what that is?"

"My home isn't long. It's just normal. You've seen it."

"The long home is a phrase from the Bible. It's in Ecclesiastes. Can you quote your Bible?"

"Not much."

" 'Also when they shall be afraid of that which is high, and fears shall be in the way, and the almond tree shall flourish, and the grasshopper shall be a burden, and desire shall fail: because man goeth to his long home, and the mourners go about the streets.' Do you know that?"

"No." Coldest fear was coming into Billy's heart.

"What is the long home, son? Can you understand?"

Billy's mouth was dry. Looking to the door, to the barred window back to the door, he was like a fragile sentinel. Barton removed his arm from Billy's shoulders and put it around his waist. Billy could not help it, he was so scared and so alone: he leaned against the grown-up shoulder.

" 'Or ever the silver cord be loosed, or the golden bowl be broken, or the pitcher be broken at the fountain, or the wheel broken at the cistern, then shall the dust return to the earth as it was: and the spirit

shall return unto God who gave it.' "

Billy hardly even heard the droning words.

"Do you know what it means?"

Hot tears came welling up in Billy's eyes.

Barton stroked his head. "I love you from the depth of my soul," he said. His voice was rough with emotion.

For a time they were silent together.

"Did you make a phone call last night?"

"No!"

"You little bastard, *you fucking well did!*"

"No, I didn't, no!"

"Ma-ma! Remember that? When did I hear you say it?"

"N-never. I never did!"

Barton grabbed his shoulders and twisted him and glared into his face.
"You're a fucking liar!"

Billy could not speak in reply to the roaring, furious energy of that voice. He shook his head as hard as he could.

"Yes. You got out of here somehow and you made a call! Confess!"

Billy began to cry. There was nothing else he could do now.

Barton grabbed him, pulled him close. "Oh, please forgive. Forgive poor Barton! I am so afraid!"

"It's OK," Billy said in a clumsy, halting tone. "OK, Barton, OK."

Barton sighed elaborately. "This house is full of mirrors," he whispered. "Well, I have to go to work." Again he hugged Billy, kissing him on the cheek for a long moment. "I'll speak to her. I'll give her hell for whipping you so hard."

The instant the lock clicked Billy began to have trouble breathing. He sucked in air but it didn't seem to help. He was seized by kinetic terror, and began lurching around the room, helpless to stop himself.

He heard himself making sounds as he moved, "Ah, ah, ah," pacing like that big monkey they kept all alone in a separate cage in the Des Moines Zoo, going down one wall to the corner, turning, going down the next wall—go down the wall with the door, slam his hand flat against it, then past the bathroom and back again.

Again he made the circuit, and again. He thought, 'I'll never stop.'

Barton leaned against the door, listening.

He stepped back from the door, made a conscious effort to relax. Take a deep breath, let it out slowly. Drop your shoulders. Let the tension slide off and sink into the floor.

The child hadn't gotten out. "Ma-ma" was a dream.

In the black room all imbalances were corrected.

But now there was something urgent awaiting: real life, a sunny morning, work to be done!

He went into the bathroom and got his makeup kit. For the next few hours he was going to be Uncle Squiggly. Oh, he might sneak away to check on Billy from time to time, but basically he would be in character all day. Afterward he would buy the wine and rent *Cabaret*.

Parting was such sweet sorrow.

28.

Quite unexpectedly she saw him. At first she wasn't sure— she hadn't been certain that he would be at the airport when they landed. He looked so old, so dusty, so exhausted, she could hardly believe it was Mark. His hair was frazzled and seemed to have gotten gray virtually overnight. He moved with the clumsy roll of a stiff old man. She could not imagine him jogging beside her down Lincoln Avenue, or climbing on the roof with a bundle of shingles on his back.

She raised her head and squared her shoulders. "Mark," she called. Her eyes caught his. "Oh, Mark!"

Then they were holding each other, such relief! Then she opened her right arm and drew Sally into the hug.

"How did you find us, Daddy?"

"Toddcaster told me the flight you'd be on. I've only been here for an hour myself."

"Mark, where do we go? What do we do?"

"The police—it's huge here, honey. You have no idea. They have a special squad that specializes just in hostage situations."

"He's not a hostage."

"They use them to free anybody who's being unlawfully held. I think they'll assault the house when they find it."

Within herself she thought that Billy would be killed. Aloud, she said: "Mark, how close are they?"

"I haven't talked to them personally. This is all coming from Toddcaster. Until they find the house, this is being handled by the missing persons unit. Then the hostage team gets it. The FBI is acting in an advisory capacity, but they'll participate in the arrest."

But Billy—what about Billy? What if Royal saw the police coming? He would kill Billy then. Or if they were clumsy and he had more advance notice, he would run and take Billy with him. If that happened her instinct told her they would never see their son again, alive or dead.

She did not give voice to these fears until they were in their rented car. "We're at the Crown Motel on Hollywood Boulevard," Mark said. "It's seventy-five dollars a night and not far from the Hollywood Hills. Above all, they take MasterCard."

Even transmitting simple information there was a graveside hush in his voice. He also feared that Billy would be destroyed by the efforts of the people who were trying to save him.

They were going down a long, long street with low buildings on either side. The sky was white, and everything was flooded with early sun. The air smelled faintly of exhaust fumes and flowers.

Sally had taken control of the map and was enthusiastically navigating.

"The police know where we'll be staying?" Mary asked.

"I told Toddcaster where we'd be. But he advised me to call in anyway. My impression is we're supposed to just wait. They'll bring Billy to us."

"I want to be there."

"It'll be dangerous—"

"Most of all for my son!"

"Our son."

"It's almost worse when you're close."

Sally's hand came over the backseat, caressing Mary's cheek. She leaned against her daughter's touch. "You're the greatest, sweetheart."

They drove for what seemed a very long time. Small shopping centers passed one another in an endless, incredibly dreary parade. How many video stores, cleaners, doughnut shops, convenience markets could there be?

Mark must have been having the same thoughts, because he finally asked Sally, "Do I turn anytime soon?"

"La Cienega ends in Santa Monica. We take a jog there and go up to Hollywood Boulevard. It's really your basic grid pattern with a few wrinkles."

"And a lot of miles."

"I feel so out of control," Mary said. "I nearly lost my mind on the plane."

"My flight was only an hour. So when I almost went nuts was waiting for you in the airport. You don't want to be out of communication."

The traffic got worse, and finally they were creeping. Mary kept picturing a certain house surrounded by police in flak jackets, and her little boy inside with Barton Royal. "Is there an all-news station?" she finally asked.

"Probably two or three of them in a place as big as this."

She turned on the radio, twisted the dial until she heard an announcer. But he was talking about Lucia di Lammermoor. "That's FM, Momma. Try AM."

She found the little switch and shifted to the AM band. Soon there was more talk. "If baby alligators are growing in our sewers—" She turned the dial again, forcing herself to control the panicky rush that kept threatening to seize her.

"Hurry the fuck up," Mark suddenly screamed, leaning on his horn. "People in this town drive like the living dead!"

"Want me to take over?"

"Mary—"

"I'll be glad to."

"You're crazy behind the wheel. We'll be up on sidewalks."

"She got a police escort on the way to the airport," Sally said. "She was incredible. We went a hundred and ten!"

He pulled out of the stream of traffic and turned the wheel over to Mary.

"First, Sally, give me a course that's off the main roads."

"This map isn't exactly perfect. There are a lot more streets than it shows."

"Do it, Sally!" Mary cried.

"Take a right whenever you can. When you hit Crescent Heights go left."

They were soon on Crescent Heights, where the traffic was less. From time to time Mary managed to open the little car up. She managed fifty, even sixty for short periods. The car was sluggish, hard to steer,

noisy. She made a mental note never to buy one, whatever it was.

They reached Hollywood Boulevard, and were soon moving east. She was only dimly aware that they were passing corners famous in the history of American popular culture.

"What is it somebody called this place—a bunch of shacks at the end of the rainbow?"

"That's what it looks like."

"I think that's an actual quote. Raymond Chandler or John Ford or somebody said it. 'Hollywood is a bunch of shacks at the end of the rainbow.' "

"Except that it's beautiful," Sally said.

"You've suffered a clear collapse of aesthetic sense," Mark replied.

"Daddy, it's beautiful because it's where Billy is."

To their left rose the Hollywood Hills. Even in the sunlight they seemed dark to Mary. This was an ugly, forbidding place. As they waited at a light a family of six in identical Hawaiian shirts crossed the street. The children all carried baby ducks. Mary leaned her head on the steering wheel. Billy was probably within ten minutes of this very spot.

Sally rustled her map. Mark said, "The light changed!" Mary was surprised at how rough he sounded. Mark was the mildest of creatures.

She realized that the anger that was in them all was coming to the surface. Sally spoke with trembling fervor. "If I got this guy, I would stab him in the heart."

"I'd make it slow," Mary announced with gusto.

"The Crown Motel!"

"Beautiful job, ladies!"

They piled out of the car and entered the lobby of the motel, which was grimly surfaced in linoleum and Formica. The picture window, however, rose out of a planter bursting with flowers.

"Reservation?" asked the woman behind the counter.

"Neary. Party of three."

"Lemme just take an imprint. You've got 207, drive around the side, you can park right at the door."

A few minutes later they were established in a room with a green shag carpet that smelled of stale cigarette smoke. Mark headed straight for the phone, tossing his overnight case onto the bed as he went.

Mary hovered close to him; Sally began to try to turn on the huge old Chrysler air conditioner that jutted from the wall opposite the dresser.

"This is Mark Neary. May I speak to Lieutenant Jameson?" Silence. "Robert F. Jameson." More silence. "Is this Missing Persons? It's about my son, William Neary. We received a call from him. He was abducted, and he told his mother he was in a house in the Hollywood Hills. We just got here. From Iowa." Yet more silence. Mark's face flushed. "Look, the FBI is in on this, the Iowa State Police, the Stevensville, Iowa, police, half a dozen missing children groups! I don't need to come in and give you a description! Lieutenant Jameson is supposed to know all about it! I am not yelling at you!" Silence, the receiver clutched. "You must know about it! You should have been working on it for hours! What about the FBI, aren't they involved? They were very involved in Des Moines, believe me." Silence, during which Mark shook his head angrily. "I am not being rude," he snapped. Then he stared at the receiver in amazement. "The bastard just hung up on me!" Mark hammered the receiver against the table.

"Don't break that phone," Mary screamed, grabbing the instrument.

"I can't believe this! 'Lieutenant Jameson is out on a case.' You would not believe the fucking, officious, arrogant prig I just talked to—Jesus and God!"

"Try the FBI, Mark."

"I don't have a name there."

"Then Toddcaster. I'll call Toddcaster." She looked at her watch. Three o'clock in Des Moines. He'd be at his office. He picked up on the second ring. "Toddcaster."

"Hi, it's me."

"Hi, me. Do you have a name?"

"Mary. Mary Neary."

"Oh, Christ, excuse me, baby. Have you got him yet?"

"We're in a motel here."

"Right. The Crown Motel on Hollywood Boulevard."

"My husband called the Los Angeles police and they acted like they didn't even know about the case. They wouldn't help us at all."

"OK, I got it. I'll make a couple of calls."

"And call us back?"

"Give me ten minutes."

She hung up and threw herself back on the squeaky bed. "He'll call us back," she said. Sally was watching CNN on TV. Mary tried the radio in the room, but it didn't work. "Of course not," she muttered.

Mark lay down beside her. "CNN won't have anything," he told his daughter. "We're nobody, as far as they're concerned. You don't get on

national news unless you're Donald Trump and your kid got a bloody nose in the schoolyard. We're just ordinary trash, suffering like hell. We're not interesting. Oh, Christ!"

The frustration in his voice gave stark emphasis to their helplessness. "I hate all the publicity anyway," Mary said. "The only person who's gonna see your kid is the person who has him. I'll bet they haunt the postering places."

"I feel so damn useless. That's what I hate. I mean, he's probably no more than a couple of miles from here!"

"Maybe we could find him ourselves," Sally said.

There were a lot of things a child couldn't understand, even a bright little girl of thirteen.

"We could poster," Mark said. "I've got two hundred right in my suitcase."

"I just think it's dangerous."

He leapt up off the bed. "Well, if I do nothing but sit here and wait like this I am going to go completely crazy, Mary dear!"

She reached out to him, hesitated.

"Maybe they have a street directory for sale in the lobby," Sally said. "I'll bet they do if salesmen stay here."

"Fine, go see if you can get a street directory. Your mother and I'll wait for that old fatty in Des Moines to get around to calling us back."

"He's not fat. He's corpulent."

"You're talking about synonyms."

"I define 'corpulent' as marginally more dignified. Anyway, we owe him a lot."

"And we owe Turpin, and Richard Jones, who is a hell of a nice guy by the way, and the Searchers. Thank you, thank you, thank you one and all! Where in hell is my son!"

Sally rushed out of the room.

"Mark, I want you to tone it down! It can't help her to see you like this."

"Us, baby. You're not exactly peaches to be with. You ought to look at yourself in a mirror. Your face looks like an advertisement for dead skin."

"I almost pulled my hair out at the roots when Billy called."

He rushed to her, grabbed her into his arms. "Baby, baby, I'm sorry. My poor baby." When he stroked her sore temple, she closed her eyes.

After a moment he broke away, shaking his head and laughing bitterly. "That was about the most spectacularly unfeeling, high-handed bastard I have ever encountered. And I have dealt with school boards, for Chrissake!"

The phone rang. "Walter!" Mary grabbed the receiver.

"To make a long story short, Lieutenant Jameson runs the whole show. My guess is, he's never gonna be in. They do have a team of officers working on Billy. It's a big, active case, never fear about that. The problem they're up against is that unless they're very sure they have the right house they can't get a warrant to enter. The California judges aren't that easy to deal with, apparently."

She'd expected half the police department to be combing the Hollywood Hills, looking in every attic and basement for her little boy. But Walter was talking about search warrants and judges and things that all added up to the same central fact: Billy was not getting found.

"So what do they need? What would get them moving?"

"They've got all their black-and-whites in the area trying to spot the Aerostar—"

"He's hiding the Aerostar! Billy said that! Don't they understand?"

"Whoa, just let me finish. Or the brown Celica. If they see a man fitting Barton's description driving either car, they'll follow him home, then go to the judge."

"But why did they give Mark the runaround? It was incredibly cruel, to pretend like they didn't even *know*."

"They're aware of your address. But they're wary. They want you out of the way when they make their move."

"We love him, he's our child!"

"Men like Barton are dangerous in the extreme, Mary. The L.A. police know this just as well as we do, and probably better. Barton Royal will kill Billy if he realizes that the cops are on top of him. They want to make it as easy for themselves as they can. And not letting the frantic parents get in their hair must be high on their list of priorities."

Her voice was barely a whisper when she thanked him. Mark slammed his fist against the bathroom door. "They don't want us around in case Billy gets killed because they're afraid of misconduct charges, or a goddamn lawsuit."

It was at that moment Sally appeared with something called *The Thomas Guide*. "The ultimate street directory," she said. "It's so radical!"

Mary took it in her hands. The thing wasn't a map, it was a thick book. She thumbed through it.

"Where are the Hollywood Hills, kid?" Mark had grabbed the book.

"Grids thirty-three and thirty-four. They may also be covered in twenty-three and twenty-four."

"Ridgeway," Mark said. "Right here."

They all looked at it.

"It's such a small area," Mary said. "We could cover every single street that dead-ends off Ridgeway inside of an hour."

"He said *near* Ridgeway, Momma, not off Ridgeway."

"But he can see Los Angeles from the house, which means it faces south. That ought to narrow it down."

"No good, Momma. At night this place must be a sea of lights. All that really tells us is that the house is high. But all the houses are high up there!"

"So it's really a huge area we have to cover." Mark threw himself back down on the bed.

"No," Sally said. "'Near Ridgeway.' If we're lucky that might be enough."

Three minutes later they were in the car. Mary drove, Sally navigated.

"Just keep on Hollywood. When it crosses Laurel Canyon it changes to another kind of street."

It did. Mary had never seen anything quite like this crazy labyrinth of little streets, with every intersection hidden around another curve. The car didn't much like the hills, either.

"King's Road," Sally said. "Go slow, Ridgeway's the next one to the right."

"This is Queen's Road."

"Take a right anyway."

Mary saw it. Ridgeway. Billy was probably within a mile of this precise spot. She turned onto the street almost on two wheels, slammed the gearbox into first and gunned the motor to climb the steep hill.

"Next street's a dead end," Sally said. Her voice was tense. She was so involved in the map she practically never even looked out. "Take a right," she said quickly.

"I can feel him," Mary said.

"There," Mark said. "That's a house that fits."

Mary was so stunned she didn't downshift as the incline steepened, and killed the engine. The car lurched along on the starter until she threw it into neutral. By then it was flooded and they had to wait.

The house was just where it should be, at the end of the street. There was a garage to one side, then a wall beneath what was probably a bathroom window. Next came the front door, and beside it a larger window completely blocked by a shade. Beyond that was a wing that must contain a bedroom.

Most telling, there was a small brown car parked in front. "Is that a Celica?" Mary asked.

"Toyota, certainly," Mark replied.

"It's a Mazda 626, Daddy."

Mary looked at the house, imagining her son just behind the windows. "He's there," she said.

She compelled herself to be very calm now, very methodical. Again she tried the car. This time it started. She drove up to the house.

Mark looked at her. She looked back. Sally asked the question that remained unspoken between them. "What do we do?"

"We've got to get in there, obviously."

"I knew we'd end up in this situation." Mark's tone expressed his uncertainty most eloquently.

Mary brushed it off, anger in her voice. "Obviously he doesn't know what we look like. We invent a pretext."

"That isn't obvious at all, Mother. He was in the house. For all we know, he took good looks at all three of us."

"We break in, then," Mark said.

Mary demurred. "If he hears us or sees us, Billy's dead. Maybe all of us are dead."

"Look, you two, I think it should be completely simple. *I* go up to the house. I say my bike broke down, I need to use the phone. Then I'm in."

She was a brave child and that was an absolutely horrifying idea. "That gets us nowhere, except then he'll have both our kids."

"I can take care of myself, Mom!"

"Trained police go into houses like that in flak jackets."

"Billy's in there, we all know it!"

"If we did this—and that is an *if*, honey—the way we go about it is, you get evidence. That's all you do. Anything in the house that looks suspicious—if you see anything you know belongs to Billy, or if you hear him—"

"Mark, she must not go in that house! Never!"

"What if I see him?"

"You ignore him."

"No, I know that. I mean, what about his reaction?"

"That's a problem, all right."

"But Daddy, he's in that house. I know it!"

"I'll do it," Mary announced. She got out of the car and started up the front walk. She would say they'd broken down and needed to use the phone. Given the heap they were in, it was perfectly believable.

The morning sun bore down on her. Overhead the sky had turned deep blue. The beauty of the day was painful to see.

She was almost in a trance of fear when she rang the doorbell. Instantly a small dog began barking, a sound as raucous as a Cuisinart cutting up block Parmesan.

The door swept open. A truly ancient woman stood there, her face very sweet and very wrinkled.

"May I help you?"

"I—we—the car—"

"Yes?"

"We've broken down. I need to call a garage."

The woman fixed her with faded green eyes. Mary tried to smile. Realizing that she was twisting her fingers together, she put her hands down to her sides, then to cover the suddenness of the motion pretended to brush off her skirt.

"I can let you use the phone," the woman said, opening the door more widely. "It's no problem."

Mary stepped into the foyer. The interior of the house was dim, and she knew at once that they'd been wrong. There was a living room, but the view was of a brushy canyon and other houses on the hillside beyond.

Also, Billy surely wouldn't have forgotten to mention the ridiculous Pekinese that came squabbling and snuffling up to her, its whole body wagging.

"It's in the kitchen, dear," the woman said. She smiled. "I was making Bundt for my daughter."

"It smells wonderful," Mary said, but her voice broke and she could say no more. Without another sound she rushed out of the house and returned to the car, leaving the woman standing perplexed in her doorway.

"It's the wrong house."

"How do you know?"

"It's the wrong house, Mark! We're going."

She started the car. Back in the doorway the elderly woman muttered, "It fixed itself." Smiling, she returned to her baking.

The little car moved away down the sunny street.

29.

Barton burst into Tiny Tales and threw his arms around Gina. "Oh baby, baby, I'm so damn sorry!"

"Richie, stop it."

She was standing near the register in that blue and white checked dress of hers. It was far too young for Gina. It stated in clearest terms that her youth was at the bottom of a closet. Her dark hair was swept up around her skillfully porcelainized face.

"You look so utterly, utterly extraordinary, Gina dear."

"Richie, *where were you?*"

"I told you, I got sick on Maui.

It was simply the most horrible thing. You know that kahuna I was supposed to meet?"

"He called me about you. You never showed up. You never even called."

"I was just wrapped up in blankets in the motel room the entire time. I absolutely could not move, could not think. I've never been so sick in my life!"

Gina folded her arms. "You disappear all the time, Richie. I told you in June—"

"That was a death in the family, you can't hold me responsible!" He adopted an elaborate pout.

The slightest of smiles played across Gina's lips, and Barton knew he would win yet again.

"OK, Richie, you always come back with some lame excuse. For a week I can't even get your answering machine and it turns out you were putting your mother in a nursing home in Anaheim. And that room of yours in Los Feliz—God, every time you disappear I think you've been mugged to death."

Barton put on the saddest, silliest most hangdog expression he could muster. "That room is what I can afford." He batted his eyes. "This is an expensive town and Richie is not a wealthy man, despite his name." He did his imitation of Stan Laurel in trouble with Ollie.

It took a full minute, but the flicker finally broadened into a real smile. "I do have some rather good news."

He clapped his hands, gave a little jump.

"You might earn enough money today to move to West Hollywood because we have a hundred and fifty-three reservations!"

This was good news. A hundred and fifty-three kids at five dollars a head—that was a good day's money, no two ways about it.

"Uncle Squiggly is becoming a hit, Richard dear."

Gina's tone told him that apologies and acceptances were over. Barton could drop the act. "He sure as hell is."

"Stephanie Strauss is bringing her little boy, and that means more heavy-duty Hollywood mommies are just behind."

"This is extremely exciting."

"Here's the icing on the cake. *L.A. Style* is doing a write-up on the

store. And you are the featured subject."

He felt the blood slowly drain out of his face. He'd wanted Uncle Squiggly to be a success, but he had not counted on something like this. *L.A. Style* went in for lots of big, glossy pictures.

But that was OK. He'd be in his Uncle Squiggly makeup.

Then he thought: the reporter would certainly check his record. *L.A. Style* often did wrecking jobs. They'd love to print a story about how West Hollywood's favorite children's entertainer was a mystery man living under an alias.

"Richie Williams" was at best thinly constructed. The ID would never hold up under professional scrutiny. He was little more than a Social Security number and a couple of lousy credit cards.

Barton started back to the stockroom to put on his face.

"What about the store," Gina called after him. "Don't you think the store's lovely?"

There were new displays of books everywhere, ranging from Bill Peet's delightful stories for tots to Judy Blume and John Bellairs for the older children. There were tables stacked with books, shelves of books, reading nooks in various themes: the Dinosaur Nook, the Fire Truck Nook, Home Sweet Nook, Uncle Squiggly's Squigglenook, all appropriately decorated.

"Really great, Gina. Really!"

The stockroom was dark and hidden away behind a door covered with bookshelves.

Barton liked it best with the lights out.

The moment he heard Barton's car start, Billy had raised the corner of

the blinds. He watched the Celica back down the driveway, pull out and leave. For a long time, he observed the neighborhood. Nothing much happened, but he didn't stop, couldn't; he was hypnotized by his own longing.

He was also waiting for somebody.

Momma had said they would come. Momma *told* him.

The blue Mercedes sat in its driveway. Nobody came or went in the other houses. The street remained empty.

"Momma," he said aloud. The sound of his own anger brought him a little strength. "Where are they," he shouted. "Momma, you said! Where are they!"

Then he thought: 'That woman! What if that woman's in here listening? She'll hear me yell, she'll be in here with the whip!'

No. If she had heard him, she would have come in instantly. He'd be getting it right now.

Still, he crept to his door and listened. There was nothing except water dripping in the kitchen. That reminded him he was hungry. Barton had been mean not to give him any breakfast. He might not get any food all day.

Or ever again—he might not get any food ever again!

He had to get out of here and he couldn't!

Oh, wait a second. Of course he could! He made a rush toward the closet. It still hurt to move, though, and he quickly slowed down. He put his hand on the cool glass doorknob, slowly turned it, opened the door. He stepped inside, bent painfully, then opened the hidden entrance to the basement.

The darkness within was absolute.

* * *

"Now is there anybody here who's at least sixty-teen y-e-e-ears old!"

They roared as one: "NO!"

"What, nobody's sixty-teen years old?" He looked at the mothers, mock horror on his face. "Why did you bring me all these little teenie tiny tinsie tootsie cutesies?" And he thought, 'They paid five bucks for this,' and laughed within. "They aren't even sixty-teen yet!"

"I'm sixty-teen," one little girl announced.

"Uh-ho," Barton crowed, sweeping her up into his arms. "What is your name, Miss Sixty-Teen?"

"Sukie."

"Sukie Tawdry," he muttered to himself. Her blond ringlets bobbed. She looked very, very serious. "You know what we do to bad little girls, don't you, Sukie?"

She wriggled and giggled and stared at the Squiggle Box, which was the whole point of the show.

Nobody knew what went on inside it. This was a comedy suspense routine for the Mairsie Doats set. Children adore suspense.

Would Sukie be the first ever to get put in the Squiggle Box?

Barton looked around the room. "We'll take a vote! Is Sukie really sixty-teen years old? Who says—NO-O-O!" They roared, they went wild, the ones who'd been up in the past yelled with eager delight.

"Sukie, do you know what this means?" Barton said. He was very

serious now.

Sukie was giggling so much she couldn't talk. Barton took her over to the big box covered with red wrapping paper. Now Sukie was laughing, but Barton knew to be careful. The wee people were very sensitive.

Barton pushed the yellow frownie-faced button on the Squiggle Box. It emitted an enormous roar and all the kids screamed.

"Do you want to go in, Miss Sixty-Teen-Year-Old Sukie?"

"YES!" all the kids shouted.

Sukie shook her head very, very hard.

Barton looked around in confusion. "But Sukie says NO-O-O!" He whispered to her, "I won't put you in."

"I know, Uncle Squiggly," she said, and kissed him.

Her kiss was moist, and her skin had a lovely, milky smell.

Billy peered into the dark, damp-smelling hole. How far down was it? If he jumped in he might fall forever and ever and ever. Or he might fall ten feet and not be able to get back out. He was afflicted by what was truly an agony of uncertainty. He'd called Momma hours and hours ago. Nobody ever came for him! Nobody!

But that wasn't true, Momma cared about him! She sure sounded like it even when she got mad because he didn't want to quit talking to her.

Maybe if he could get into the basement this way, he could get out by another door, and then he could call Momma and talk as long as he wanted. They could even trace the call, like they did in detective movies.

He sat on the edge, his legs dangling into the darkness.

He hated the dark.

"Now let's see, maybe if *I* put my hand in the Squiggle Box—" He nudged the button and got another big roar from inside. The kids fell silent. As often as some of them had seen this, the doubt always captured them. "Uh-oh," Barton said in reaction to the roar. He yanked his hand back as if it had been burned. "Sukie," he said plaintively, "would you just put your pinkie in the Squiggle Box?" He pressed the button again.

"Why does the Squiggle only roar when you push the button?" a voice called from the crowd.

Now, that was smart. "Who-o-o said tha-at?" Barton cried. He saw a delightful little boy with a sly smile on his face. "It was you, wasn't it?" In a few years this boy would stop the heart, such would be his beauty.

"Yeth!" He was one of the oldest, perhaps six or seven.

"What's your name?"

"Christopher!"

Barton said to Sukie, "Will you go and get Christopher and bring him up here? I think we need a little *haaalp!*"

The boy said, "Uh-ho."

"Y'know," Barton said to the crowd as Sukie very importantly strutted down and got Christopher, "sometimes a boy Chris's size comes *out* of the Squiggle Box in one piece! But it's a very, *very*, VERY small piece!" As he spoke he measured with his hands, making them come closer and closer together until his ten fingers were all crunched up and he was peering at a microscopic crumb between them.

They were screaming with laughter. It was amazing how much enjoyment they could derive from a simple cardboard box and a little suspense. This was a lovely group.

Sukie and Chris arrived hand in hand, their faces beaming up at him.

While he was at it, he thought he might as well get Chris's last name.

Billy hit hard and pitched forward, falling against a rough concrete floor. The pain made him shriek and roll, and that hurt even more. It took him a long time, but he finally recovered himself. He stood beneath the thin light from above, trying to see the rest of the room he was in.

The first thing he noticed was Timothy's jacket, which lay on the floor a few feet away. Just as he had thought, Barton had shoved it in here to get it out of sight.

Billy picked up the jacket. "I wonder if you were like me," he said. "Timothy Weathers." He held it close to him. "You're dead." The silence was total. "Timothy Weathers, tell me what it's like to be dead."

"Now, since Sukie won't put her hand in the Squiggle Box, and Christopher won't put his hand in the Squiggle Box, somebody's gotta do it!" He punched the button with his elbow. The roar this time was a little off-key. Before the afternoon show he'd have to replace the batteries in the cassette. Gina had faulted him for having cheap props before, and he didn't care to give her more ammunition. God, but this group was getting excited. They were too damn loud!

"Now, I'm gonna sing a song, and if I get every word right, then you're all gonna have to put your hands in the Squiggle Box together. But if I get even one word wrong, then I'm gonna have to do it! OK?"

They shouted agreement.

"Sing a song of sixpence, rockets full of pie—" The crowd bellowed. He went doggedly on, leaning into the shrieks, "Four and twenty blackbirds baked in a pie!" He smiled and said, "I got it right, so let's go—get your hands in that Squiggle Box!" The response was happy

pandemonium.

The ceiling was solid. There were no stairs. There weren't even any windows to the outside. He'd hardly allowed himself to dream that he might get out while Barton was gone.

As he fumbled along he wished that he had a flashlight or some matches. It wasn't long before he understood why it was so dark: most of the basement was behind a cinder-block wall. The only way out was a narrow steel door in the middle of that wall.

Billy went to the door. It clanked when he tapped it; it was the kind of door you would use on a prison.

He put his ear to it. At first he heard nothing, but then he wasn't so sure.

Slowly, carefully, he drew back.

Then—behind him! He whirled around. But there was nothing there—just blackness and the dim shaft of light from the closet.

He stood still, afraid to go back, afraid to go forward. He started to pray, but stopped. It hadn't helped before now, why would that change?

God probably couldn't even hear him. Maybe there was no God. Probably not. Probably there was just the devil.

This had been a big mistake, and he had to get out of here! He rushed over to the shaft of light, tried to jump. It was no good. He was way too far down

The only other exit was the steel door.

He began to cry.

Nearly done, all that was left was snack and chitchat with parents. Wonderful show, and every single one of them had paid the two bucks for the "Uncle Squiggly" balloons that had poured out of the Squiggle Box at the end.

"Is it a Squiggle in there?" Chris Mohler's tiny face peered up at him.

"No."

"Then why's it called a Squiggle Box?"

"Because it makes little boys like you squiggle!" He reached down as he talked, tickling him.

The children were mobbing him. He could not help being gladdened by their delight, and for a brief moment it was as if the steel door that sealed his heart was opened a crack.

"Have you worked with children long, Mr. Williams?"

The voice was thin and strident. It belonged to a young woman who looked like she was made of string. Her eyes were close together, her hair was disastrous. What had happened to her—was that rusty steel wool on her head, or the result of an extremely unfortunate home permanent?

"You must be from L.A. *Style*," Barton yelled over the noise of the kids. "We'll be done in ten minutes, I'll talk to you then."

He kept smiling hard, lest she come to know that he was deathly afraid.

'There aren't any monsters,' Billy told himself, 'not like what you're afraid of.' But what was that breathing, then, behind the door? He'd heard it, it was there.

He couldn't get out of here, and now he was worse off than he'd been

upstairs! His choices had all run out: shaking like the terrified little boy that he was, he dragged himself slowly back to the door.

He put his hand on the knob.

Then he thought: 'The woman. Maybe this is where she hides during the day.' This made him pull his hand away as if the knob was red hot. Images of her were burned into his mind—her bright blond hair, her flowing dress, her fat, wet lips. He remembered her voice, high and nasal and full of fury. Above all he remembered that big, black strap.

What she had done to him was branded into the very core and essence of the boy. Remembering, he bent as if cringing away from blows. He sucked in his breath until his lungs were ready to burst. But there was no other way out. Either he opened the door or he waited here until Barton came home.

He stood, his fists clenched, his head bowed down, a small creature in a very dark place.

* * *

Gina was obviously delighted, but Barton found the reporter horrible. Her photographer had taken close-up pictures while he was doing snack, and each time the flashbulb popped he would wince.

"Can we have one shot out of costume?"

Have a care, here. "Oh, I don't think so. I'd rather just be Uncle Squiggly."

"Then can you give me a little of your background? You seem to have a really intuitive thing with the kids. Where does that come from?"

"A happy home life. My parents were Quakers, and we just had a very

peaceful, very sweet upbringing."

"Sort of a modern-day *Friendly Persuasion*?"

"Well, hardly that. But it was a loving family. Unfortunately my mother and dad have passed away."

"Do you have any children of your own?"

He answered politely in the negative, pretending to be rueful about it. As he spoke Billy's face drifted up out of the dark.

Her next question concerned his previous experience.

"No, no previous experience with children. Of course, I was one once, ha ha ha. Just an out-of-work actor who happens to like kids."

The questions droned on and on. He answered until he started to get hoarse. As they talked he kept smiling, waving to departing customers.

"I've just got another couple of questions. You've never said exactly where you're from, Mr. Williams."

He returned his smiling attention to his inquisitor, *the stupid fucking bitch!*

Billy hunted with the fervor of a distraught puppy for some way out other than that door.

Again and again he tried to jump up and grab the edge of the opening through which he'd dropped. Each leap caused agony, but a corner kept brushing the tips of his fingers.

He was hampered not only by the pain but also by his handcuffs. Twisting, pulling, he tried to squeeze out.

His mind raced with excuses. "Barton I fell in, Barton the trapdoor was

just opened, Barton it was an accident, Barton please don't do anything to me, Barton, don't tell *her!*"

Finally he had to stop. He was out of breath and his buttocks just plain hurt too much.

Again he approached the steel door. "God, if you're real remember I got born, I'm alive, I'm down here—"

Tears were blinding him. When he tried to brush them away the salt of his sweat stung his eyes.

He gritted his teeth so hard his jaws cracked, but he put his two hands on the knob. This time he turned it.

The door moved smoothly, opening away from a thickly padded jamb. Billy had the impression that the door was extremely heavy, more like something that belonged on a safe than in a basement.

Inside was like a starless night.

What was this place, and what was that *smell?*

Barton wanted time to take a quick run up to the house. His little escape artiste was a caution and a worry. Timmy was rough trade, but at least he could be counted on to be there when you got back. Rough trade and rather stupid—coarse, to be frank— but still, the heart misses that which is familiar.

He was due to start the next show in less than an hour. Damn the reporter, damn them all! "We just love Uncle Squiggly!" Gush, gush, gush.

"Richie, look at this!" Gina opened the register. She was speaking in a whisper because the store was still jammed.

Barton stared dully into the cash register. It was packed with money.

"Nice," he said. "Look, I want to take a run over to my apartment." He had been careful to really rent the dump in Los Feliz. But he never went there. The point was, nobody must know about his house. The secret-life aspect of things was usually part of the fun, but it could get wearing at times.

"You can't go now, you'll be late for the next show!"

"No, I—"

Gina held up her watch. Barton was appalled. He'd been stuck with the reporter longer than he realized, and the enormous joke watch he wore as Uncle Squiggly kept lousy time.

"Gina, I have to!"

"You can't!"

"Gina, I think I left the oven on!"

"Ovens can stay on all day, otherwise how would we cook turkeys, Richie dear? You stay here. I cannot imagine what I'd do with a crowd of preschoolers who were all keyed up for you. They'd tear the place apart!"

He glared at her. She glared right back.

The dim light from the trapdoor barely penetrated this far. Billy was cringing, waiting for her to come leaping out of the blackness.

But he didn't hear any breathing now. Maybe he'd been the only one breathing. That had to be it, because there wasn't anybody in here now.

Except there was something on the floor. It glowed white, but it didn't move. He went down on all fours, began crawling toward it. The thing was all twisty, like a piece of cloth would be, but it was also lumpy. It

looked almost solid.

Finally he could touch it. He reached out, felt it with quick fingers. It wasn't solid, it was stringy. He picked it up, felt it.

It was hair. He fingered it more carefully. Inside there was stiff netting, and it smelled like glue. Hair you glue on is a wig, like that purple wig Sally wore Halloween before last when she went as a punk.

The wig was yucky and he dropped it into the gloom. There was still white stuff over there. He looked at the pale mass. Was it a sheet?

The moment he touched the fabric he knew that it was her white silk dress. He looked up. Above this part of the basement must be Barton's bedroom.

So this dress and this wig—he thought of her pudgy hands, her stocky form stuffed into the flimsy dress, her hard eyes.

"Oh, no," he whispered. "Please, no."

Being trapped like this was hideous. He *hated* these people, but there was no escape, he simply could not get away. When he got back to the house he was going to march that kid straight down and strap him to the table. Then you just close the door and forget it. No more worries.

"Oh, is this your *dolly* you're holding out to me?"

"She wants Miffie to go in the Squiggle Box," the mother said, all laughter and twinkling eyes.

"Oh, poor Miffie, she'd be so scared!"

"She's only a dolly. She's made out of plastic. My brother chewed her foot and she didn't mind."

He tried to retreat around the counter, but now there was a little boy

there, trying to reach the intentionally tempting display of gourmet lollipops Gina had set up. "They cost me twenty-eight cents apiece, dahling. And look at the tags." You could get coconut, vanilla bean, root beer, cola—for a dollar fifty apiece.

"Want one," the child announced.

"We're going now," his mother replied, picking him up.

"Uncle Squiggly, give me one."

The hell. Gina'd take the buck fifty right out of his share.

"Your mommy says it's time to go." Smile, smile, smile. He pictured Billy digging at the edges of the window, picking the lock, pulling out the grating that covered the vent in the bathroom ceiling.

Get me the hell out of here!

Another kid: "I want an autograph!"

OK, sure, sure, sure.

"I want to kiss you, Uncle Squiggly!"

My made-up cheek?

"But I *need* a lollipop, Uncle Squiggly!"

"Your mommy says no!" Why don't you just take him out the door, you foolish bitch. Smile, smile, smile.

"But I won't eat it, I'll just *hold* it!" Screws up face, takes deep breath, screams like he was being tortured with hot pincers.

Finally the mother retreats, her shrieking creature in her arms.

Yet more children came crowding around him. And the reporter was back, hovering at the edge of the crowd, obviously being just simply

tormented by one last question.

He hated them all, in general and in detail. They were his captors, the evil, stinking swine.

But he smiled from ear to ear, clapped his hands and uttered a high, piercing laugh to get attention. "Bye bye," he shrilled. "Bye bye everybody!"

Came a chorus of tiny voices: "Bye, Uncle Squiggly!"

At last they began leaving in earnest. The reporter still hovered at the edge of the retreating crowd, but she was going to be dismissed with a claim of laryngitis.

He could escape.

But yet another diminutive grinning face was thrust at him. "Oh-h-h, what a big boy! You must be at least fifty-teen!" Smile, smile, smile.

Another couple of kids behind him, another couple of minutes. Then he was making his run, no matter what.

If he was late for the next show, so be it. This was about survival, he could smell it. You better be damn careful, Billy, *you vicious little scumbag!*

If there was a light in here the only way Billy was going to find it was by feeling along the wall. He swept the rough cinder-block surface with his cuffed hands, moving step by step deeper into the room. The doorway was now a faint gray outline in the black.

Billy's hands brushed something, which swung back and forth, making a grating sound against the wall. He touched it again, gingerly, feeling a substantial handle. His fingers felt along, and soon came to metal. Yes, and a very particular type of toothed blade. He realized that this was a saw. Something tough and dry adhered to some of the teeth. He

rolled bits of it off in his fingers, but could not identify it.

Was this a tool room? Surely a tool room would have a light. All along the wall he found other tools: there was something with a metal tip and a long cord that he thought might be an old-fashioned soldering iron. He felt also something he recognized from upstairs: the pincers that had been soaking in the kitchen sink. They were smooth and clean now.
